Mr. LANCTOT (Translation): I would suggest to him to try the easiest work for the first day, and to take the place of one of the nine men on the strap. These nine men receive from the moulds the bricks which come out fully shaped on the strap and place them two at a time in a small hand car which holds 496 bricks; there is not only one car on the track for nine men, but never less than three or four; these cars when loaded are immediately transferred to the drying chamber and replaced by other empty cars, and this goes on for ten hours. Two bricks, one in each hand do not seem heavy for the first hour, however, they seem to increase in weight with every hour, up to the end of the tenth hour; the average wage, to-day, for the men is $3.60 per day, while two years ago these men earned from $5.50 to $6. Another job for my friend Ballantyne: the settlers. The latter transfer the cars from the drying chamber to what is known as the kiln. These settlers have not as easy a job as the strap men. They must take four bricks at a time and place them in spaced rows, so that the baking is thoroughly done. This kiln holds 96,000 bricks and these men work during ten hours with 22 pounds in their hands; and in order to finish filling up this kiln, they must throw these bricks like a ball, to a height of about twelve feet. It is the hardest work in the world that a man can be called upon to do, during the eight or eight and a half months the season lasts. Out of 100 men—let us suppose them all strong men—who would come to work at our brickyards, 10 per cent, but no more, might perhaps hold out through the season. These men earn, to-day, 35 cents per 1,000 bricks compared to 45 cents per 1,000 two years ago; the same thing applies to the car brick loaders. The latter push wheelbarrows filled with bricks from the kiln, on a platform 100 to 125 feet in length; they draw out with their hands the bricks from the kiln to load their wheelbarrows and when they reach the car they place these bricks in rows. The skilled labour then, up to 1923, earned from $5 to $6 per day and the unskilled hands from $3 to $3.50. To-day, the latter earn from $2.50 to $2.75—a few favoured ones $3 per day. All this happens with a tariff of 22½ per cent, and moreover with a general manager like Mr. C. C. Ballantyne, the leading protectionist in Montreal.

I must therefore, Mr. Speaker, conclude that it is a miserable wage which our men employed at the brickyards eight or eight and a half months, per year, receive. Is this an inducement to retain our young men in Canada, giving them a salary of $2.50 to $3.60 and even $4—the highest price paid by these companies. There are men who work thirteen hours per day and seven days in a week and others eleven hours; for instance, the night stoker begins at 6 p.m. and finishes at 7 a.m; the day stoker begins at 7 a.m. and finishes at 6 p.m. And, Sir, everybody recognizes the fact that the work in a brickyard is the hardest, the most exhausting and hottest of any work which a man is called upon to perform in our country.

I have very little complaints to make about conditions at home; very few of our young men have left the county. In my own county of Laprairie, I do not think that there are ten persons that have left for the United States or elsewhere. However, there are a few more in the county of Napierville because they are nearer the border; the old people have visited the United States, the younger generation take a trip over there and return, telling us they went over to the United States to learn English, and I believe them. At all events, we are fairly well provided for in our counties, being in the proximity of Montreal, and we have very little complaint to make. What we do find fault with, is that the country spent too much money during the war, too much money for the Ballantyne merchant marine and for other things.

Now, Sir, I am always astonished to hear the criticisms of our good friends of the opposition. When the government accomplishes something, it is always wrong. If the Liberals spend $100,000, I think, if it were in their power they would have us all thrown in gaol, but when they themselves spent, for instance, $112,000,000 for nothing, that is of no consequence. It is very strange to meet such people.

Has any one a notion of the cost of the Ballantyne merchant marine? My right hon. friend the leader of the opposition does not seem to have this item fixed in his mind since it has become an accomplished fact. We spent for the construction of this fleet $78,000,000. I have here the report. It is true that we have since sold six and lost three. We sold six for the sum of $600,000, that is $100,000 each. It is the maintenance of this fleet that is costly. We have increased our debt by $30,000,000 due to deficits, and this does not take into account the deficit of this year. The last report for 1924 has not been brought down, but it is said that it will amount to $9,000,000. Since Mr. Ballantyne had these ships built we have squandered $112,000,000 for this merchant marine and each year our losses become greater. I have already told our friends, members of the cabinet, that if these ships were mine, I would not keep them five hours. I would find some Jew, in Montreal, and sell them to him.

While on the subject, I must quickly state, lest I forget, that I am not, like my honorable colleagues of British Columbia, in favour of acquiring a navy. I am now strongly opposed to a naval policy of any kind, whether it be on the Pacific or Atlantic coasts; or in Montreal or in my own place; I do not want a navy, it is too costly. In my opinion, the time has not arrived to carry on war expenditure and make preparations for war. I even think that the hon. Minister of National Defence (Mr. Macdonald) spends too much for militia.

This reminds me of something very queer. A famous doctor by the name of Osler, from Toronto, has stated—I read this in a paper, I cannot vouch for it—that all men over 65 years should be shoved aside so as not to be in the way of others, and chloroformed. I would like something a little different, I do not wish to chloroform the men 65 years old, I am near that age myself—but I would strongly be in favour of chloroforming the politicians who would suggest waging war or building navies.

There is something which appears very strange to the people of this country. The nobs, the millionaires of this country, those who were in favour of war, for whom we had to win the war at all cost and protect the empire, the great loyalists of this country —who, themselves took care not to go to the trenches—loaned us many millions, since there is still $931,000,000 of bonds exempt of taxes I would, Sir, very much like to get at these people. I may be told that these people hold a written agreement from Sir Thomas White, the former Minister of Finance. To this, I would answer: But, we, the members of parliament at this time, had also signed a contract with Sir Robert Borden, in 1916. When the Prime Minister of that day came before parliament to ask for an extension of time to continue their mandate so as not to bring on an election during the war, we agreed to do so on one condition: that there should be no conscription in this country. Did Sir Robert Borden keep his word towards 87 members of this House, representing 87 counties of Canada? Did the Prime Minister carry out his given pledge? No. He forced conscription upon us as soon as he got a majority in the Senate, and we, the poor people of this country had to go to the war. I stated, at that time, in the House that if I had anything to do with the profiteers who had demanded conscription against the wish of everybody, against the humble people of this country, that if I became Prime Minister for half an hour, with the help of legal advisers, I would frame another bill—we were then discussing Bill No. 75—I would frame Bill No. 76 by which I would confiscate the nine-tenths of the wealth of these gentlemen to pay our soldiers $3 per day, and supply funds to the wives and children of our soldiers. That was not done. However, they loaned us money at 5½ per cent on government bonds

exempt from taxes. There is still $931,000,000 due to these gentlemen, on bonds which will mature in 1931, 1935 and in 1937. They still have about ten years of tax exemption, they who forced the government to pass conscription; but these people must prove their gratitude towards us. Why does the House, to-day, not ask, unanimously, the Minister of Finance, to borrow the necessary money to pay these people? I do not wish them to lose a cent on the capital they have lent us, but what I do want, is to pay them off. These gentlemen are responsible, to-day, for a loss of $18,400,000 in the income tax, that we could collect, and nearly $9,000,000 of interest that we should have less to pay.

So that, Mr. Speaker, I make the bold assertion that we are losing at least twenty-five to thirty million dollars per year, and this, all due to these magnates. Would these same gentlemen refuse to render a service to their country, which is practically ruined and has enormous deficits each year, if they were anyway grateful for what the poor people did for them, they who were exempt from conscription owing to the business they were transacting during the war? How did they earn the money they loaned the government? Through war transactions, by charging 300 and 400 per cent to the country for stocks on hand. To-day these people come and tell us: You passed a contract, therefore you must honour it. If that is the case, I want to know why the government of the day, when it obtained an extension of its mandate, in 1916, did not honour the pledge given to the House by its Prime Minister, which is certainly worth an agreement made by the Minister of Finance.

Is not the word of honour of a man who becomes Prime Minister of a country worth as much as an act passed before a notary? That is why I contend that these gentlemen should come to the Minister of Finance and say: We beg of you to make new loans between now and six months; as for us, we shall accept the amounts loaned to the state, we shall pay like the others the income tax on the above amounts just as we pay on advances made to private people. I do not know if this will take place, however, it is a request which I make to these gentlemen. I am not sure either if I would find a seconder in the House on this question; but nevertheless these are my views.

There is one subject which I dislike to mention here; but I am forced to do so, since Mr. Monty stated, in Montreal, that if his party came to power, he would abolish the British preference. I am told that a prominent member from New Brunswick made the same statement in a by-election which took place in that province. I understand it is Mr. Baxter, one of St. John's representatives I should very much like to see this question threshed out, in order that the people be not deceived. I for one am in favour of abolishing the British preference. If a member on the opposite benches wishes to introduce a resolution to that effect, I can assure him that I shall support it; however, I do not wish it to be meant as just a bluff for the people of this country. I make the suggestion. I once told an Englishman, who was not favourable to British preference: Only a Canadian like myself can make such a statement, you are too British to do so; even if this preference were detrimental to your business, you would put up with it. I am opposed to such a preference because England purchases goods from countries with a depreciated currency. I often visit Montreal; I meet wholesale merchants and hear the complaints made. Therefore, to remedy this state of affairs, why not abolish this preference. Oh! if England only sent us her own goods, there would probably be no cause for complaint; but when we are aware that she imports from Germany and other countries—where money has practically no value—at ridiculous prices, can we not blame England of being at the bottom of all our economic troubles? It is not that I think that the boots and shoes which come from Germany or elsewhere are sold cheap in Montreal,—my opinion is that they are expensive goods. However, it is our manufacturers that complain. Have they reason to do so? I cannot say. I believe that generally speaking there are too many middlemen in trade. The jobber adds 40 per cent—and thinks it is not too much—the retailer adds 60 per cent and he also thinks it is not too much; so that we generally pay exactly twice as much for the goods after they have left the factory.

I again state there are too many middlemen. The wholesale merchant should only sell to the retailer without having to deal with a jobber. On that point, I perfectly agree with my colleagues.

Now, Sir, my good friend from Fort William and Rainy River, (Mr. Manion), to whom I listened attentively, this afternoon, gave us certain facts which are not quite correct. He tells us that the United States levy a duty of 50 cents per bushel on potatoes while the Canadian duty is only 35 cents per bushel. He is wrong on that point. It is not 50 cents per bushel, but 50 cents and 35 cents per hundred pounds. The United States tariff on these articles is 50 cents. He preached a doctrine which seems rather odd. Protection first, protection second, protection all the

time. In my opinion, we are suffering in Canada from an evil which is common to all other countries. When a man is ruined, he has no more purchasing power. That is the cause of all our ills. All the European countries are ruined—except England—Germany is perhaps not ruined, but her money is worthless; Russia is in the same predicament; in France the franc is worth but five cents and a fraction; the same thing may be said of Austria and Italy. Often those people cannot buy the simple necessities of life. We, farmers, notwithstanding the crop being good, we only purchase the bare necessities of life. The cause of all the ills which, to-day, exist in this country is the loss of the purchasing power of pre-war days. The manufacturers of farming implements sell very little, because our Quebec farmer is thrifty, he is born thrifty, he is careful and does not get into debt when he knows beforehand that he will not be able to meet his liabilities within a reasonable time. Unfortunately, the same thing does not prevail in other parts of the country. In the west, for instance, the farmers made a great deal of money during the war, but they were somewhat extravagant. In those parts of Canada, the purchasing power is less than in Quebec. Why? Because the farmer of our province, I repeat it, is thrifty, and would never think of spending three or four thousand dollars to take a trip to California; he puts aside his savings and knows how to look after them. I have known old people around my home who never changed a $10 bill; they used to iron it well, give it the appearance of a new bill just issued by the bank and then they would put it away. Unfortunately those days are no more. What makes money so scarce in our rural districts? It is because our farmers have bought too many automobiles. They were very extravagant, during the war they bought cars, pianos and many other things of this kind; that is one reason why we are almost bankrupt in the country. We are the third country in the world possessing the most automobiles. I shall not refer to the United States; there are states that cannot produce enough to pay for their cars. One boasts of the prosperity of the United States; if they continue to be as extravagant as they are, they will be ruined within four or five years and the wealth of that country will be all in the hands of Henry Ford and other large manufacturers of automobiles. As I mentioned Ford, we should invite him to come to Canada, ask him to give up his factories and take hold of our railways. He is certainly a man who would make a success of them. I am, therefore, in favour of giving him our railways to manage.

I do not wish to detain the House much longer. However, I still have a subject to broach; I mean another scheme of my hon. friend, the leader of the opposition. We have spent, up to date, over $120,000,000 to settle our returned soldiers on lands. Many have given up farming. Owing to death, illness, the women not being suited for the land, perhaps for other reasons, they have given up farming. I have been told that last year, the collection of the various amounts that these soldiers pay to the treasury, cost 35 per cent of the total amount. This means that on the $120,000,000 that we have loaned, we shall receive, if we have luck, about $60,000,000. That proves that our ex-Prime Minister has not always been very lucky in his transactions. Yet, when I listen to him, I wonder if he is truly the premier of some time ago. A stranger listening to him would surely not recognize him by what he states in this House. His equal is not found under the sun! No one has ever seen such a man! However, having seen him at work, I know this is not the case. At all events, my hon. friend, whom I find, to-day, more amicable than he has ever been, must not think that everybody looks upon him as I do. He may try to flirt with Quebec, the people will never forget what one of his colleagues stated in this House. That colleague, is my old friend,—who by the way is still my friend—the hon. member for South Wellington (Mr. Guthrie). When conscription was being discussed in this House, in 1917, that hon. member stated that Australia had had no conscription because it was fortunate enough to have no province of Quebec within its boundaries. That is why, we hailing from Quebec, still feel the sting of the insult which was flung at us by one of the colleagues of the hon. leader of the opposition (Mr. Meighen). We have already rewarded him on two occasions and we are getting ready to inflict a third defeat when the time comes.

Mr. ALEXANDRE J. DOUCET (Kent, N.B.) (Translation): Mr. Speaker, in wishing to briefly discuss the budget brought down by the hon. Acting Minister of Finance (Mr. Robb), I do not intend to touch upon the various phases of the speech of my hon. friend from Laprairie and Napierville (Mr. Lanctôt). First of all, he reviewed the old political history of days previous to 1911, and after; he specialized on political questions under the Union government; so far as I am concerned the administration under the Union government of 1917 up to 1921 is not a question of

actuality; and moreover, a number of liberals who formed part of the Union government of that day, and who have returned to the Liberal ranks after the general convention of 1919, and who were elected as avowed Liberals, in 1921, have been generously rewarded by hon. gentlemen opposite; consequently, I question very much the fairness of my hon. friends on the opposite side who are prone to discuss the various measures and legislation introduced, adopted and unanimously agreed upon, as well as all the war budgets voted during this critical period.

Sir HENRY DRAYTON: Hear, hear.

Mr. DOUCET (Translation): Mr. Speaker, when our hon. friend (Mr. Lanctôt) discussed the brickyard of Laprairie, I was wondering if that factory produced many bricks that were exported out of the country? I was, therefore, led to believe that my hon. friend wished to give the government sound advice and ask them to levy a sufficiently high duty on products of United States brickyards so as to prevent their importation.

Mr. LANCTOT (Translation): Will my hon. friend allow me to ask him a question? I would remind the hon. member for Kent, N.B. that the products of our brickyards are protected by a duty of 22½ per cent and that foreign competition is impossible.

Mr. DOUCET (Translation): Mr. Speaker, I am glad to learn that there is such a measure of protection, and I think that the hon. member for Laprairie and Napierville should be, as the Conservatives on this side of the House, in favour of protection. However, I hasten to point out to you an importation of United States brickyard products to the amount of $1,907,521 in 1924—

Mr. LANCTOT (Translation): We are too far from large centres.

Mr. DOUCET (Translation): —against an exportation of $36,733 of Canadian products to the United States. If we are discussing, to-day, the enormous expenditures which are made by the Dominion government it is because, in my opinion, I contend that there is an awful waste of public money, and I wish to give a few instances so as to satisfy my colleagues in this House that such a waste exists. You must have noticed, Sir, that by certain questions put on the order paper, I was able to obtain some information, and through said information I note that the salaries of the Deputy Ministers and chiefs of departments, of which I have a list here to-night, amounts to $51,000 more for the year 1924 than it did for the year of 1921. It seems to me, Sir, that in the financial crisis through which we are passing, if we were bent on making substantial economies in the administration of the country, we should not increase, or at least we should not have increased the salaries of the deputy ministers from $6,000 to $10,000 as has happened in a number of cases. Moreover, Sir, I wish to further point out that the salaries of the Civil Service which amounted to $10,492,955 in 1921-22, will amount to $10,850,503 for the year 1925-26; there is therefore an increase of $357,547.50, and if you add to this the increase in the pensions which was $660,000 in 1921-22 and which to-day amounts to $1,539,000 it means an increase of $879,000. We therefore have an increase for both pensions and salaries of the employees of the various departments, of $1,236,547.50.

Mr. ARCHAMBAULT (Translation): Will the hon. member allow me to ask him a question? Would he be in favour of abolishing the Civil Service Commission?

Mr. DOUCET (Translation): I am not discussing the duties of the Civil Service Commission; I am discussing the increases in the salaries of the employees of the civil service and not the duties of the commission, nor the wisdom of abolishing it.

Mr. ARCHAMBAULT (Translation): Does the hon. member refuse to answer my question?

Mr. DOUCET (Translation): What is your question?

Mr. ARCHAMBAULT (Translation): I asked the hon. member if he would be in favour of abolishing the Civil Service Commission.

Mr. DOUCET (Translation): Mr Speaker, my hon. friend from Chambly and Verchères knows full well that being a new member, I have not yet had the opportunity of studying the duties, the administration and the merits of the commission.

Mr. ARCHAMBAULT (Translation): Then I take it for granted that my hon. friend cannot answer my question because he has no knowledge of the duties of the Civil Service Commission?

Mr. DOUCET (Translation): I shall take the liberty of telling the hon. member from Chambly and Vercheres, that he will not succeed, this evening, in making me say more than I feel like saying. I was not discussing the duties of the Civil Service Commission.

Mr. ARCHAMBAULT (Translation): Then the hon. member refuses to answer my question?

Sir HENRY DRAYTON (Translation): Order.

Mr. ARCHAMBAULT (Translation): I am awaiting the answer of the hon. member for Kent.

Mr. DOUCET (Translation): I have already given my answer and do not intend to repeat it.

Mr. ARCHAMBAULT (Translation): I did not catch it.

Mr. DOUCET (Translation): I was discussing, what seems to me, a waste of public money, and if we wish to retrench we should first strike at the high salaries; at those who could easily afford a decrease in salary, and not act as we did in 1923, even during the session of 1924, increase by $2,000 per year the salaries of the deputy ministers, and the high officials of each department. I think that a number of members to your right, Sir, would approve of this move. I do not wish, this evening, to discuss this question to any length. I would, however, ask, especially as I see two hon. French-Canadian ministers in their seats, that arrangements be made with the Statistical department to turn out more publications in the French language. You may recall, Sir, that last session I brought up this question in regard to the Department of Trade and Commerce; I requested that the Commercial Intelligence Journal which is printed in both languages—I mean there are French and English versions of this publication —I was asking, I said, that these two versions be published at the same time, seeing that they contain the same matter. On that date, the English version comprised 24 pages on the subject while the French version only contained 16 pages. I think, if you look up Hansard you would see that the hon. Minister of Trade and Commerce had promised to take the matter under consideration. Nevertheless, we notice that the French-speaking subscribers of the Commerical Intelligence Journal still receive a pamphlet of 16 pages while the English-speaking subscribers receive one of 24 pages and sometimes a pamphlet containing 32 pages. I want to infer that certain information is curtailed or left out in the French copy and I contend that there is a great deal of important matter of interest to the French-speaking population that should be published in both languages.

Mr. ARCHAMBAULT (Translation): Will the hon. member allow me to ask him a question? Is he aware that previous to 1921 there was no French version?

Mr. DOUCET (Translation): Mr. Speaker, this is always the constant theme of our friends opposite. "You have sinned, we shall do likewise."

Mr. ARCHAMBAULT (Translation): I have asked you a question.

Mr. DOUCET (Translation): I am not aware whether the Commercial Intelligence Journal was printed in the French language in 1921; I am even not aware whether the English version was published at that time. However, what I do know is that since the Confederation pact. there exists a bilingual system in the administration of this country. Notwithstanding all this, to-day, there is less than 30 per cent of the blue books which are translated into French, printed and placed at the disposal of members, of business firms and the general public. I state, Mr. Speaker, that we, that feel a pride in belonging to a bilingual country, where French and English are on an equal footing in the transaction of government affairs, should insist that all official publications be printed in both languages, published and distributed, at the same time, profusely throughout the country.

Mr. VIEN (Translation): Will the hon. member allow me to ask him a question? Will he not admit that the Tory government far from helping the French publication held it back in many ways, while the Liberal government endeavours in a thousand ways to distribute the government's publications in the mother tongue of my hon. friend?

Mr. DOUCET (Translation): My hon. friend from Lotbiniere, as usual, cannot refer to the party of the official opposition without giving it the surname of Tory party. I do not recognize that party.

Mr. ARCHAMBAULT (Translation): I congratulate the hon. member for having acknowledged this.

Mr. MERCIER (Translation): Would the hon. member tell us to what party he belongs?

Mr. DOUCET (Translation): It is not necessary for me to tell my hon. friend for Westmount-St. Henri to what party I belong. If I wore the same coloured glasses he does, I would be sitting on the other side of the House; however, not wearing such glasses, I am on this side. I am one of the official opposition, but I do not claim to be a Tory.

Now, Sir, to return to the subject. I state again that the distribution of all public documents should be made in both official languages of this country. It is useless for my

French-Canadian friends on the opposite side to say: well, your party or the Tory party, in the past did not give full and entire satisfaction. I may say, Sir, that probably the Tory party, if you wish to call it so, has done as much as the Liberal party for the French-Acadian people. I will point out to the hon. member who has just interrupted me as well as the ministers who represent the government in this House, that there is at present a vacancy in the Senate for Prince Edward Island, and that the old Conservative government of Sir John A. Macdonald in 1893, chose the Hon. Joseph-Octave Arsenault to represent the island in the upper House; I would point out to him that, in 1898, after the death of the Hon. Joseph Octave Arsenault, the Liberal party, who was then at the helm of the affairs of the country, chose the Hon. John Yeo to replace the former in the Senate. From that date, the French-Acadians of Prince Edward Island, to the number of 12,000, representing one-seventh of the population, have no representative in the Senate. To-day, our friends the French-Canadians who form part of the cabinet have the privilege and a duty to perform, and I trust that it will fall to their lot to do honour to the French Acadians by appointing one of our race to represent in the Senate the French-Acadian people of Prince Edward Island.

Mr. VIEN (Translation): Will the hon. member, then, cross over to this side of the House?

Mr. DOUCET (Translation): Mr. Speaker, the hon. member for Kent, as poor as he is, is not bought for nomination.

Mr. ARCHAMBAULT (Translation): I thought the matter important.

Mr. DOUCET (Translation): When, Sir, in 1885, Sir John A. Macdonald appointed the Hon. Pascal Poirier, from Shédiac, to the Senate, we did not ask the Liberals to cross over to the other side of the House; when in 1893, the Hon. Joseph Octave Arsenault was appointed to the Senate, to represent Prince Edward Island, we did not ask the Liberals to join the government; when, in 1912, the Hon. Edward Girouard was appointed to the Senate to represent Nova Scotia, when, in 1917, the Hon. Thomas Jean Bourque was appointed to the Senate to represent New Brunswick; when the Hon. Aubin E. Arsenault was appointed a justice of Prince Edward Island, when Judge Landry was appointed to the Supreme Court of New Brunswick, no conditions were stipulated, and I contend, that one should not dare or lower himself to put such a question to a French-Acadian member who occupies a seat on the Conservative side of the House. It is an appointment to which we are entitled, it is a preferment which we are not by any means willing to relinquish, and the French-Acadian population of the Maritime provinces expect that the government, through the intermediary of the hon. Minister of Justice (Mr. Lapointe), the hon. Minister of Marine and Fisheries (Mr. Cardin), the hon. Minister of Soldiers' Re-establishment (Mr. Beland), and the hon. Minister of Customs (Mr. Bureau), see that the French-Acadian population of Prince Edward Island has its quota, and that one of the two representatives who will be appointed to the Senate, shall be a French-Acadian.

Now, Mr. Speaker, I wish to close these few remarks which I have made in my mother tongue for I have to broach some questions which have cropped up during the last twenty-four hours relative to the economic situation of the country and especially of conditions existing, to-day, in the Maritime provinces; I shall discuss these questions in English as I have to answer members who have made use of Shakespeare's language; however, before asking for the adjournment of the debate, I would like to point out to the hon. Minister of Marine and Fisheries (Mr. Cardin), who is in his seat, in case I should not have the opportunity of discussing with him his estimates, that in the course of the 1924 session, on June 17, a resolution was adopted by the committee on Marine and Fisheries: that in view of the bad weather of October, the lobster fishermen of the Northumberland strait be granted the fishing privileges for a season beginning August 6 and ending October 6, instead of August 16 to October 16. This resolution was unanimously adopted. It was transmitted by the Secretary of the committee to the hon. Minister, and the lobster fishermen of that part of the coast, believed, and had reason to believe that the regulations would be changed so as to allow them the opportunity of trapping lobster from said date. Although this resolution to amend the regulations was carried unanimously, the minister did not think proper to acquiesce to the wishes of the committee and those of the fishermen interested. I would like to point out, Sir, that it would certainly be in the interest of the fishermen of that part of the coast that they should be given at least for one year the privilege to fish ten days earlier so as to ascertain if the fishing can be carried on in a profitable way without harming the industry and, consequent-

ly, spare a great many hardships to the fishermen of that coast.

Mr. Speaker, I think I have sufficiently threshed out these questions and seeing that it is late, I shall take the liberty of moving the adjournment of the debate.

Mr. GRAHAM: Mr. Speaker, a few moments ago I believe it was arranged with the Acting Minister of Finance that the hon. member at the conclusion of his remarks in French might adjourn the debate and proceed to-morrow in English. I think that was the arrangement.

Mr. DEPUTY SPEAKER: I had not learned that the change of plans had been agreed upon by the whips.

Motion agreed to and debate adjourned.

On motion of Mr. Graham the House adjourned at 10.55 p.m.

Friday, April 3, 1925.

The House met at three o'clock.

REPORTS

First report of the select standing committee on Agriculture and Colonization—Mr. Kay.

THE BUDGET

CONTINUANCE OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Thursday, April 2, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. ALEXANDRE J. DOUCET (Kent, N.B.): In rising to continue this debate upon the budget as presented by the Acting Minister of Finance (Mr. Robb) I must state first that the section of the country which I represent is of the opinion that the present government has failed to economize, has not practised any retrenchment, and is guilty of wholesale extravagance in connection with the spending of the public funds of the Dominion. In order to make good this statement I have gone to the trouble of consulting some of the reports that have been laid upon the table of the House since the beginning of this session. I find that numerous commissions have been journeying from one end of the country to the other at an enormous cost to the ratepayers of Canada; furthermore, other items of expenditure are in my opinion not in keeping with such a policy of retrenchment and economy as we should put into practice in this country in the crisis through which we are now passing. Let me mention a few of the expenditure to which I have reference. We find, for example, the pulpwood commission involving the country in an expenditure of $75,672; the grain commission at a cost of $170,610; the W. T. R. Preston roving commission costing over $12,800; and an expenditure on immigration within the last two years of over $2,000,000, notwithstanding that our own people have all this while been crossing the border going to the south of us.

Mr. SPENCER: Is not the statement rather low at $2,000,000?

Mr. DOUCET: My figures are going to be conservative in the extreme; I do not propose to exaggerate on that or any other point. Then we have an expenditure on the development of a golf course at Jasper park in Alberta of $124,290 and an expenditure on a golf course at Minaki of $94,631. In addition to these sums we find that advertising by the Minister of Trade and Commerce (Mr. Low), to the effect that "Canada is coming through", has cost us practically $3,000 while advertising contracts on the part of the Minister of Agriculture (Mr. Motherwell) amount to $55,000, amongst which I find an item of some $7,000 for insect pests. On that point, the people of this country think they have sufficient pests just now without advertising any more. And when we compare the salaries and contingencies of the civil service for the fiscal year 1921-22, with those of the year 1925-26, we find an increase of $1,236,547; while, comparing the salaries and remuneration paid to deputy ministers and heads of departments between the years 1921 and 1924, we discover a further increase of $51,000. Add to all that the numerous other expenditures entailed in the Scribe hotel deal, the Union club of London, the junketing trip to Wembley, and the completion of the tower of this building, which although a manifest necessity at some time is nevertheless unwarrantable at the present moment, an item that could very well be dispensed with until later on—adding all these things together, I say, we have an expenditure of millions of dollars that could have been avoided. There seems to be no attempt on the part of this administration to curtail expenditures or to retrench and economize in any direction; and in consequence, from every section of Can-

ada from the Atlantic to the Pacific, the cry goes up of hard times. It is no wonder that the electorate are anxious that the present government should appeal to them for their judgment.

Speaking on the budget, in the session of 1924, I was told by my hon. friend from Gloucester (Mr. Robichaud) that the amendment proposed to the budget was of such a nature that it would increase the taxation of the farming and fishing population of my section of the country. I thought otherwise, and I stated at the time that the reductions on fertilizers and farming implements proposed in the budget would not benefit the farmers of the Dominion. I have before me statistics to confirm my contention at that time. These statistics are published by the Department of Agriculture and show the prices of mixed fertilizers for 1924 and 1925. I am quoting from the issues of February 7, 1924, and February 5, 1925, of Seed, Feed and Fertilizers Markets, and I am confident that no hon. member will dispute these figures for mixed fertilizers at New Brunswick points:

	1924	1925
Fertilizer, 2-10-2..	$34 00	$36 63
Fertilizer, 4-8-4..	40 70	42 09
Fertilizer, 2-8-10..	38 80	40 50
And at Quebec points—		
Nitrate of Soda	62 50	68 00
Sulphate of Ammonia..	78 00	80 00
Muriate of Potash..	39 45	45 00
Sulphate of Potash..	47 00	62 50

Then again, while the 20 per cent duty was taken off acid phosphate, the price to Nova Scotia points in 1924 was $18.50 as against $20.75 this year, or an increase of $2.25 per ton.

Now, Mr. Speaker, the farmers of this country had been led to believe that the reduction of 5 per cent in the tariff on farming implements would benefit them greatly. I have taken pains to get the price lists of farm implements from manufacturers in Quebec and from the International Harvester Company in Ontario. I will not weary the House by reading a long list, I will content myself with a comparison of 1923 and 1925 prices on six implements which practically every farmer uses. This is the list:

	1923	1925
Disc harrow, American manufacture..	$ 51 00	$ 60 00
Disc harrow, Canadian manufacture..	45 50	50 50
Disc drill, American manufacture.. ..	143 00	150 00
Five-foot mower..	92 00	93 50
Ensilage blower..	225 00	250 00
Feed cutter..	75 00	80 00

Mr. LEADER: Why does the hon. gentleman skip 1924? I would respectfully ask him to give the prices for that year.

[Mr. Doucet.]

Mr. DOUCET: If the hon. member for Portage la Prairie (Mr. Leader) had waited half a minute I would have given him a similar comparison on other implements for 1924.

Mr. LEADER: You will excuse me. I contend that that is not fair. You should give prices on the implements you have included in your 1923 and 1925 comparison.

Sir HENRY DRAYTON: You get two reductions.

Mr. DOUCET: The increase over 1923 prices on the list I have given is $52.50, or 8½ per cent on the six implements. Now, a comparison as between 1924 and 1925 prices:

	1924	1925
Manure spreader, No. 10..	$189 50	$174 50
Potato planter..	169 75	155 00
Potato digger, No. 5-B..	213 40	195 00
Milwaukee gasoline engine, 12 h.p.	659 60	650 00
Threshing outfit, No. 5	500 00	490 00
Walking plow, No. 27..	22 00	22 00
Stump puller, No. 40-A..	345 00	330 00
	$2,098 90	$2,016 50

These totals show a reduction of $82.40, or less than 4 per cent, although the 6 per cent war tax was taken off and also customs duty. Why, it is nothing new, each and every farmer who has had to buy farm implements knows perfectly well that there has not been any reduction in price compared with the remission of the war tax and the reduction of 5 per cent in the tariff.

Mr. ARCHAMBAULT: Does my hon. friend favour a reduction of duty on gasoline engines?

Mr. DOUCET: Mr. Speaker, my hon. friend from Restigouche and Madawaska (Mr. Michaud) may be experienced in gasoline engines, but I doubt whether my hon. friend from Chambly and Verchères (Mr. Archambault) would care to discuss this article of machinery just now.

Mr. MICHAUD: I beg my hon. friend's pardon, the question put by my hon. friend from Chambly and Verchères did not originate with me, because I was sure my hon. friend—

Sir HENRY DRAYTON: Order.

Mr. ARCHAMBAULT: Will my hon. friend be kind enough to give me an answer?

Mr. SPEAKER: Order.

Mr. DOUCET: Mr. Speaker, I understand that there is an arrangement between the

whips to hasten this debate, and I have given my promise to make my remarks as short as possible.

Mr. ARCHAMBAULT: It will not take long to say yes or no.

Mr. SPEAKER: Order.

Mr. DOUCET: If my hon. friend wishes to take the floor and make a speech I will defer my further remarks. Now, the hon. member for Cape Breton South and Richmond (Mr. Carroll) in the course of his address on the budget referred to the express rates upon fresh fish from the Maritime provinces to the central provinces and contended that we had not been dealt with fairly. Thereupon the hon. member for Kings, P.E.I. (Mr. Hughes) said: "Why, the hon. member does not know that the present rates are very favourable?" I felt pretty confident that the hon. member for Kings, P.E.I. must be in error, but to be absolutely certain I made inquiries. True, there has been a reduction, but the Maritime provinces are still discriminated against, for while the express rate on fresh fish from Prince Rupert to Winnipeg is $4.28 per hundred pounds, from Halifax to Winnipeg, practically the same distance, the express rate is $5.35—a difference of over $1 per 100 pounds. It is scarcely necessary to add, that those who know the codfish market of this country are aware that a cent a pound is a great deal to pay over and above the rate paid by their competitors on the Pacific coast. There has been some reduction of express rates on fresh fish from the Atlantic ports to Montreal and Toronto, but that reduction is applicable only to carload lots. Now, probably every hon. member knows that it is not often that a full carload of fresh fish can be sent from the Maritime provinces to the central markets, because those markets are not as a rule in a position to handle a full carload shipment.

There is a matter in connection with the fishing industry about which I want to say a word, particularly in view of the fact that the amendments to the excise tax as contained in the budget proposals make no reference to it. I wish to point out that while ice cream, which is not a dire necessity, is placed on the free list, and while canned vegetables and fruits, jams, jellies and marmalades are given a rate of 2½ per cent; a 5 per cent excise tax is imposed upon the products of the fish canning industries of this country. There is a 5 per cent tax on canned clams, haddock, herring, lobsters, mackerel, pilchards, salmon, oysters and quahaugs. I submit that the fish canning industries of the Maritime provinces and of the Pacific coast are entitled to better treatment from this government than the imposition of a 5 per cent excise tax when such commodities as ice cream and fancy biscuits are placed on the free list.

An hon. gentleman asked me a moment ago if I was in favour of reducing the duty on gasoline engines. I expressed my view on that subject a few days ago in this House when I voted for a reduction of customs duties on motor trucks and automobiles. I believe, Mr. Speaker, that we must have in this country a fair measure of protection, but when there is too great a spread between the cost to the manufacturer and the price to the consumer, then I think we have a right to ask for a reduction. As I say, I did vote for a reduction in the duties on motor trucks and automobiles, which are much needed in our country where we have to travel in many cases great distances from railways in order to get our produce on the market. But unfortunately very few hon. members to your right who come from the Maritime provinces, Mr. Speaker, saw fit to vote for that reduction, although on all occasions they have proclaimed themselves as extreme free traders.

The people of this country did expect from this government, and will expect from any government, that sufficient protection be given against the importations of agricultural and vegetable products from the United States which enter into direct competition with our own produce. I need not labour that point; the hon. member for Fort William and Rainy River (Mr. Manion) dealt with it yesterday afternoon. Reference to the trade statistics published under the direction of the Minister of Trade and Commerce will show that for a period of nine months in 1922 the imports of agricultural and vegetable products from the United States were valued at $53,000,000 odd; in 1923, $57,000,000 odd; in 1924, $59,000,000 odd. During the same nine months we imported fruits to the value of $19,344,000 while the export to the United States was valued at only $687,000. We find to-day that hundreds of farmers in this country are unable to market their potatoes, their potatoes are decaying in their cellars; and that unless the market is revived—and the chances are not in that direction—there will be a total loss of the potato crop of 1924 before the summer is over. No hon. member of this House, no sane man in this country, will say that the potatoes or vegetables which came into Canada from the United States in December, 1924, were early vegetables or early potatoes; yet in that month 63,444 bushels of potatoes were imported from

the United States into Canada. In that same month the exports from Canada were 22,311 bushels; and these, Mr. Speaker, were for seed purposes, I venture to say that not a bushel of that total was used for table consumption in the United States. And in the month of January of this year, while our farmers were looking north, south, east and west for markets, and while enormous quantities of potatoes were in the cellars awaiting a market, there was an importation of over 50,000 bushels of potatoes from the United States, our exports in the same period consisting of 2,197 bushels. It can be seen, Sir, what a great handicap there is in connection with the marketing of our potatoes, because the customs tariff against United States potatoes coming into this country is only something like two-thirds of the customs tariff on Canadian potatoes going across the border to the south.

Now, while I have some other figures in connection with the agricultural industry, I do not intend to labour the question very long. The value of live horses imported from the United States in the year 1924 exceeded $1,750,000, and the value of the export was $232,000. Of salt pork, a product which we can produce to advantage in this country with benefit to the whole population, the import was valued at $1,288,418 and the export at $5,377. We can produce in this country all the eggs we need for our own purposes; take away the handicap against Canadian poultry to-day and you will find that a sufficient number of farmers will go into that business to make it productive and profitable and to make it unnecessary to import foreign eggs for table use throughout Canada. Of eggs, the import in 1924 was valued at practically $2,000,000—to be precise, $1,961,477; and the export was valued at $51,898. These figures show conclusively that the agricultural population of this Dominion are not getting justice at the hands of the present government; and if future governments should do likewise I would say the same thing. With our farming population, a hardy and industrious people, engaged in mixed farming and working a very fertile soil, we should be able to provide, and we do provide, sufficient quantities of these commodities to meet the needs of our own population without having to import them from other countries, and that at a lower rate of duty than is imposed upon similar commodities going from Canada across the line.

Mr. LOVIE: In regard to the importation of live horses to which my hon. friend refers, can he say whether they were breeding stock, or what they were?

Mr. DOUCET: No, I did not go into that. With regard to the importation of horses, it struck me as rather funny, if I may use the expression, when the hon. Minister of Agriculture (Mr. Motherwell) stated in this House that people had gone from Ontario to the prairie provinces to gather together numbers of horses to be shipped to the Maritime provinces and Quebec, in that way competing with those who raise horses in the Maritimes, and that in order to supply the rest of the Dominion they were importing ten times the value of horses from American territory.

Now may I speak for a moment of conditions in the Maritimes, as far as the development of natural resources is concerned? In order to lay a foundation for the few remarks I have to make, I have simply to quote from the statement of Hon. E. H. Armstrong, Liberal premier of the province of Nova Scotia, who when presenting his case before this government said in part:

> The allied coal and steel industries of Nova Scotia have been for some years in a depressed condition. At the present time unemployment and consequent distress among those dependent upon the industries for livelihood is more serious than in any recent period.

Further on he stated:

> At no previous time has employment been so scarce and insecure, the future so unpromising, and the industrial community so discouraged as at this date. Faced with a disappearing livelihood large numbers of skilled artisans may be forced to leave Nova Scotia unless relief is forthcoming.

That was the basis of the argument which the hon. premier of the province of Nova Scotia placed before this government. He went further. In order to relieve the situation, in order to remedy existing conditions in the province of Nova Scotia, which conditions also exist, to a smaller degree in the other provinces which are directly interested in the welfare and industrial prosperity of Nova Scotia, Premier Armstrong asked for a revision of the customs tariff on iron and steel and their products, in which consideration would be given to the difficulties now hampering the steel works in Nova Scotia. His representations included the following: the lower ad valorem effect of the specific duties on semi-finished steel that has been brought about by increased selling prices; the numerous exemption clauses in the existing steel tariff; application of the higher rates of duty now provided by the customs tariff upon rolled sections and steel plates that now are admitted into Canada under the lower scale

of duty, and a provision for protection against the importation of iron and steel from countries with a depreciated currency.

Now why did Premier Armstrong ask for a revision of the duties in connection with the iron and steel industry? I find that in the year 1924 there were importations of iron and its products, including pig iron, ingots, billets, castings, forgings, steel rails, rods, farm implements, small hardware, and other machinery excluding farm machinery, to a total value of $117,291,590, and with an exportation of $5,843,758. Now all those items which I have mentioned are manufactured and produced in this Dominion. All the semi-finished products of iron and steel can be produced, and have been produced, in the steel works at Sydney, in that industry which consumes the greater portion of the output of bituminous coal of the mining sections of Cape Breton and eastern Nova Scotia. Premier Armstrong had reasons to appeal to this government for a revision of the customs duties in connection with that industry. But what did he get?

Premier Armstrong also asked for a revision of the customs duties on slack coal and bituminous run of mine coal. It is true, the budget proposes an increase of 36 cents of duty on slack bituminous coal. Dissecting that resolution to place it in concrete form, let me say that this government has increased the customs duty on 20 per cent on the imports of coal and has decreased the duty on 80 per cent of the imports. So much so, that the hon. member for Cape Breton South and Richmond (Mr. Carroll) speaking in this House a few days ago, quoted from the Ottawa Citizen statements of coal and fuel dealers in this city, who said that the tariff arrangements would not cause any hardship, and the hon. member himself stated that the householders would be benefited thereby, because run of mine coal, which is being used in the homes, is subject to a reduction of 3 cents per ton, while there is an increased duty of 36 cents on bituminous slack. Let me point out, however, that newspaper reports have given us the information that the American railways are proposing, and have made application to Washington, to have the transportation rate on bituminous slack reduced by 36 cents per ton in order to face the situation created by the budget of this Dominion. So it is evident that the slack coal industry of the Maritime provinces is not going to benefit one iota by the increase in the tariff proposals of this budget. On the other hand, it will suffer because there is a reduction in the duty on bituminous run of mine coal.

Mr. GARLAND (Bow River): Would the hon. member be good enough to tell the House what he thinks of the drawback of 99 per cent of coal imported for conversion into coke?

Mr. DOUCET: Yes; I find that tariff item 1049 provides for a withdrawal of 99 per cent customs duty on bituminous coal when imported for the purpose of manufacture into coke. The hon. member for Cape Breton South and Richmond praised the government for bringing down legislation providing means for the establishment of a coke industry in this country. Surely he did not expect us to be so gullible as that. Why, the government can bring down all the legislation they want, they can employ all the law clerks of this House or of this country to prepare legislation, but if they allow a drawback of 99 per cent of the duty on bituminous coal that is imported for the purpose of converting it into coke, I say here and now, and I defy contradiction, that the coal mines of Cape Breton are not going to supply any more coal to the central provinces for manufacture into coke.

Mr. ARCHAMBAULT: What would my hon. friend suggest as a measure of relief?

Mr. DOUCET: I am going to suggest the measure of relief I would apply to the coal situation in Cape Breton and Nova Scotia in a very few words, and when I speak of the coal situation in Nova Scotia, I am possibly in a unique position in that I did work in the coal mines of Cape Breton for some time. I have lived in the shacks spoken of by the hon. member for Southeast Grey (Miss Macphail), and I know conditions as they have been in Nova Scotia. I know what conditions must be now from the conditions that have prevailed in the last three years in the bituminous coal industry in Nova Scotia. In my opinion, the proper remedy would be to place an ad valorem or specific duty on bituminous coal of all kinds, comparable with the ad valorem duty imposed in 1907. My hon. friend knows what that means. There was a specific duty of 53 cents per ton when bituminous run of mine coal was worth $1.14 per ton. To-day that same coal is worth $3.92 per ton, and there is a specific duty of 50 cents per ton. So this government, instead of increasing the duty on bituminous run of mine coal, has actually decreased it by 3 cents a ton. That is one proposition. A second proposition would be that, instead

of allowing anthracite dust and anthracite screenings to come into this country free of customs duty for the purpose of supplying our manufacturers, the same rate of duty should be imposed against anthracite dust as against bituminous coal. Nobody can dispute that proposition. It was advocated in the brief presented by Premier Armstrong to this government, and it was emphasized by the representatives of every board of trade in the Maritime provinces who accompanied the Premier of Nova Scotia when he interviewed the cabinet. What is regarded as the only remedy for the existing situation is to place the ad valorem duty on bituminous coal on a parity with what it was in 1907 and impose a similar duty on anthracite coal dust and screenings.

Mr. ARCHAMBAULT: Would that not have the effect of increasing the price of domestic coal?

Mr. DOUCET: Anthracite coal dust and anthracite screenings are not used for domestic purposes.

Mr. PARENT: Does the hon. gentleman mean to say that there are no industries in this country that are using anthracite coal or anthracite screenings?

Mr. DOUCET: I do not. What I stated was that anthracite dust and anthracite screenings are not being used for domestic purposes—that is they are not being used in the household, they are used in industries. If my hon. friends from Ontario and Quebec expect the coal mining and allied industries of Nova Scotia to succeed they must be willing to grant a reasonable measure of protection, otherwise we cannot have conditions as they should be in this country. I will go further and say that I believe the time has arrived when, if we wish to develop an all-British-Canadian fuel policy for Canada, we should impose a reasonable customs tariff on anthracite importations from the States.

Mr. ARCHAMBAULT: On any kind of coal?

Mr. DOUCET: On any kind of anthracite coal.

Mr. ARCHAMBAULT: That is, for domestic purposes?

Mr. DOUCET: Yes.

Mr. ARCHAMBAULT: That would increase the price, would it not?

Mr. DOUCET: A large percentage of the population of the Maritime provinces do not know what anthracite coal is. They are using an excellent product; Inverness run of mine; run of mine from the Drummond collieries; and run of mine from the old Sydney collieries. These form a very good fuel indeed for domestic purposes. Now I submit that in view of the deposits of lignite and semi-anthracite that we have in this country, in view of the possibility of developing the coke industry in Canada, and in view of the fine quality of bituminous run of mine that we have in certain portions of the Maritime provinces, it is about time, if we wish to see those sections of the country prosper, that a policy should be adopted which would prevent the importation of such large quantities of coal from the United States. In 1924 the Canadian National Railways bought 11,592,362 tons of bituminous coal for that system whilst from Nova Scotia, New Brunswick and Alberta they bought the insignificant quantity—I call it insignificant as compared with the importations from the United States—of 7,914,943 tons. Think of it—seven million tons bought in Canada as compared with practically twelve million tons bought from the United States for the purpose of the Canadian National railways; and our coal miners in the Maritime provinces are only working two and three days a week! Is it any wonder that we have such conditions in Nova Scotia, conditions previously unknown in the history of the coal industry of the Maritime provinces? This large amount of coal is brought in from the United States to supplant our own products, and our coal miners are only able to get two and three days' work a week in their own collieries. I submit that the policy which I have explained would be a fair and reasonable policy to adopt if we wish this country to go ahead and prosper. Let there be a spirit of give and take in connection with this as in connection with other matters. Geographically situated as we are we must pursue policies calculated to bring prosperity to the whole country, otherwise we shall never secure that unity for which we are striving. I could go on and quote figures to show the quantity of bituminous slack, bituminous run of mine, anthracite coal and anthracite screenings imported into Canada in the year 1924. It is appalling. We are more than ever impressed with the necessity of restricting these imports when we realize the large deposits of coal which we have in the provinces of Nova Scotia, New Brunswick and Alberta and remember the fact that our coal miners are only getting such a limited amount of employment. How can conditions be other-

wise than they are when we allow foreign coal to take the place of the domestic products in the Canadian market? I conclude my remarks on the question of coal with this statement: the tariff proposals submitted by the Acting Minister of Finance, in my humble opinion, are not going to be of benefit to the bituminous coal industry of this Dominion to the extent of one iota. It is true the customs duty is increased on 20 per cent of the importations, but it is reduced in the case of 80 per cent. Furthermore the American railways will reduce their rates so as to enable the coal operators of the United States to compete with Canadian coal producers.

Mr. ARCHAMBAULT: No such thing. Is my hon. friend in a position to state that the American railways will reduce their rates? That is only rumour.

Mr. HANSON: They are going to try it.

Mr. ARCHAMBAULT: Let my hon. friend be fair and state it is only rumour and not fact.

Mr. DOUCET: The hon. member for Chambly-Vercheres knows I am always fair.

Mr. ARCHAMBAULT: I know that, but I want you to continue to be fair.

Mr. DOUCET: When I state that the American railways are making application to Washington for authority to reduce the transportation rates on coal I state what is contained in the press reports, and therefore I am on pretty safe ground. Not only is the coal industry in the Maritime provinces suffering from the budget reductions of last year, but the steel industry has practically been put out of business for a period of eight months. In proof of that statement I need only quote from the monthly report of the production of iron and steel in Canada issued in January, 1925, and published by authority of Hon. Thomas A. Low, Minister of Trade and Commerce—surely that should be sufficient authority for the statement. In that report I read that the production of iron—basic, foundry and malleable—in blast furnaces in Canada in the year 1923 was over 880,000 tons; in the year 1924 the production was 593,024 tons of iron. The total steel ingots and steel castings production for 1923 was 884,770 and for the year 1924 it was 650,690 tons. This will give the House an idea of the reduction of production in the steel industry of this Dominion, which reduction was practically all in that section of the steel works of Sydney. There are fifteen blast furnaces in Canada, and in the month of January there were three of them in operation. This statement is prepared by the Statistical branch of the Department of Trade and Commerce. In resuming, speaking of the United States trade, this report says:

> In the United States the month of January showed the greatest production since March, 1924, and marked an increase of about twelve per cent over December, which in turn showed an increase over November of fourteen per cent. The average daily production was 108,621 tons, an increase of 13,082 tons per day over December. For the third consecutive month the net gain in active furnaces was twenty-three—

That is twenty-three new furnaces went into operation in the United States—

> —making a total of one hundred and seven new furnaces blown in since—

Mark the words—

> —since the upward trend started in July last.

Just corresponding with the date that the reductions in the customs duties were made applicable to the semi-finished products of iron and steel coming from the steel plants of the United States.

I do not intend to delay the House this afternoon in connection with the railways, but I see that there has been a reduction of 5,938 railway employees between the years 1923 and 1924. Those are figures given by returns to the House, as hon. gentlemen will find in Hansard of this year, page 1288. I should like to ask the Minister of Railways how many of those were officials. I suppose he would answer that it is not in the public interest of the railways to give that information. Every time in the last two sessions that we have asked for information in connection with officials, knowing as we did that they are constantly adding high-salaried officials to the staff of the Canadian National Railways while at the same time decreasing the number of employees among those who were in overalls, we have been met with the answer that it is not in the public interest that that information be given to the country. Why not? Do the government or the railways fear that if they give the salary of one man as $25,000 the Canadian Pacific Railway or the American railways would come in and try to get him, at an increase in salary? I doubt if any American railways would dream of offering any increase in the present salaries of the officials, because they are getting the highest salaries going. Were I to speak further on the railway question as it affects the Maritime provinces, I would only have to quote a speech made in this House in the dying days of the session of 1921, which hon. members will find at page 4561 of the revised Hansard, when the hon.

4 p.m.

member for Westmoreland (Mr. Copp), the present Secretary of State, spoke and covered some few pages of Hansard, dealing with conditions of the railways in the Maritime provinces, and after having quoted those remarks I would say "amen," and would state that every word uttered by him was applicable to-day. My hon. friend is a member of the government to-day. Why can he not have those grievances remedied? In those days he spoke loudly and at length from every housetop, I might say, stating that the best men were taken away from the city of Moncton and transported to Toronto. It is true that in those days a few officials or heads of departments were transferred from Moncton to Toronto, at an increase of salary. They were being given a promotion, and while we regretted that they sent some of our best talent to Toronto, we gloried in the fact that our loss was their gain, and that while they were leaving the Maritimes, they were going to a place where they were getting larger and better remuneration. What do we find to-day? In the spring of 1923 the present board removed from Moncton 450 odd families of men receiving from $95 to $130 a month. They were packed up bag and baggage and sent to the city of Montreal on the plea of economy, with what result? Men who had their homes in the city of Moncton, and who had everything that was near and dear to them in the Maritime provinces had to go to Montreal or hand in their resignation or be dismissed. With what result? They had hardly been there five weeks when the reclassification of office employees in those offices was made, and men who had left headquarters at Moncton in the Maritime provinces where they were receiving a salary of $130 a month, are working to-day for $95 a month or a reduction of about $35 a month. Those are the conditions put into effect by the new railway board. Some of them did not accept the reclassification, left the railway and are pursuing other occupations in the Maritime provinces and some in the territory to the south of us.

During the course of this debate it has been stated that a large population has been immigrating to this country from the country to the south of us. I have statistics which I have taken from the Veteran, from an article headed "Bread and butter versus patriotism". I do not propose to read this article, but I want to quote figures taken from reliable sources to show that while the total immigration from European countries and the United States in the eight months ending August 31, 1924 was 100,599, during the same period, according to United States figures, 115,042 Canadians left this country to go to the country to the south of us. We have Canadian figures which show that 23,861 Canadians, in five months, April, May, June, July and August, returned from the United States to live in this country. What do the American figures show. Instead of 23,861, we find the American figures are 1,128, and those figures, Mr. Speaker, are pretty nearly correct. There is not a member in this House who knows of any large influx of people from the United States; and the great majority, unfortunately, of those who have come back are men who were compelled to come back, and who are back in this country in a worse condition to-day than they were when they left Canada three or four years ago. They left the country within the last three years after selling all their household goods, their farming implements and their live stock and they went to the United States to spend those proceeds along with the earnings they made in that country; and now they are returning to us to-day in a poorer condition financially than when they left. Fortunately, the number is not as large as the statistics of this department show.

Before I conclude I have a few words to say regarding the conditions that exist to-day in the mining sections of eastern Nova Scotia and I believe I have laid the groundwork for a satisfactory discussion of this question. Indeed, I am no stranger to that part of the country. The hon. member for Southeast Grey (Miss Macphail) was chastised in this House because as an outsider she went down to the province of Nova Scotia and after an investigation dared to report conditions as she found them there. I was born in that province; I worked in the coal mines of Cape Breton and lived amongst the miners of that section; I also worked in the steel works at Sydney. So that I know all about Dominion Iron & Steel, about Besco, and about all the other matters that are mentioned in that connection; and when I undertake to reply to the hon. member for Lunenburg (Mr. Duff) I do not think that any hon. gentleman will accuse me of saying anything detrimental to the province of Nova Scotia. Why, it was on February 24 last that the Minister of Labour himself (Mr. Murdock) told us in this House that Cape Breton was suffering from a canker; the Minister of Labour, who is always gesticulating on questions of this kind, described that part of the Dominion as a canker. But what did he do to relieve the situation? All he was prepared to do was to feed the suffering people bit by bit with the British

North America Act. Well, there are very bad conditions in that section of Nova Scotia to-day, and while it is true that we Nova Scotians are a proud people I would remind the House that hunger knows no pride. And when people see thousands of young ones at the point of starvation it is only right that the facts should be placed before the people of this country so that some relief may be obtained. The hon. member for Southeast Grey was rather rebuked because she ventured to report upon conditions as she found them. I do not say, that she adopted the best possible course; but with the sympathy characteristic of her sex she determined, on reading the reports in the press, to look into the conditions for herself. And from the statements that have been made by some of the highest authorities in the Maritime provinces I believe that the hon. member's report is altogether according to the facts. The Roman Catholic Bishop of Antigonish, the Rev. Dr. John Morrison, on March 15 last issued an appeal to his people for relief for the suffering children of Cape Breton island and vicinity; Archbishop Worrell, of Halifax, also made an appeal on March 23; and the Sydney Ministerial Association, representing several protestant denominations of Nova Scotia, appealed similarly on March 22. So that my hon. friend from Southeast Grey is in very good company. A Canadian press despatch of March 26 reads:

> In the Glace Bay and Dominion No. 6 areas, 2,727 families representing approximately 13,000 people were supplied with food to-day. This represents about 40 per cent of the distribution for the whole district.

Then we have an appeal from Rev. Dr. John MacIntosh, a gentleman whom I know well, the Moderator of the Presbyterian Synod of the Maritime provinces. He says:

> The Presbyterian people have always been noted for their readiness to hear the cry of the destitute in any land, and I am sure they will not turn a deaf ear to the cry of their fellow citizens, especially of women and children, when the appeal is made to them.

Of course Dr. MacIntosh had not read the speech of the hon. member for Lunenburg when he said that. There is also a report from Miss S. Gold, social service worker for the Canadian Brotherhood of Railway Employees; after a personal tour of investigation she reported on conditions on March 29. There is also a report from the Central Relief committee of Glace Bay as follows:

> We greatly appreciate the generosity of the Canadian public, and on behalf of the poverty-stricken women and children hope for its continuance. Cash contributions for the purchase of foodstuffs are of paramount importance.—(Signed) Rev. M. A. MacAdam, P.P.; Rev. A. M. McLeod, Glace Bay Relief Committee.—Canadian Press Despatch, March 26.

These are the authorities on the situation that exists in Glace Bay and in the mining districts generally, and in view of the reports that we have had from them all I think it hardly becomes the hon. member for Lunenburg to criticize those who are applying for relief throughout the Dominion in behalf of these suffering people. It is enough to make one's heart bleed to know that there may be in that part of the country someone near and dear to him at the point of starvation. When, therefore, kind-hearted workers ask for relief they should be given something more than the British North America Act and statistics; certainly they should not be castigated on the floor of this House by an hon. member who knows no more about Glace Bay than I know about astronomy. Why did not the government and our friends opposite call upon the members representing that section of the country, who are thoroughly conversant with the facts as they exist, to reply to the hon. member for Southeast Grey, if they thought that her report of conditions down there was not altogether correct? They did not do that because they knew that those hon. members would not stoop to give anything but the facts; and they know that the facts as reported by the hon. member are absolutely correct, notwithstanding anything the hon. member for Lunenburg may say. The hon. member (Mr. Duff) in the course of his speech told his own leader the Prime Minister (Mr. Mackenzie King) that he had no business to contribute $100 to the relief of the poor in Glace Bay, and he informed the people of Ontario generally and the citizens of Ottawa that it was just as well for them to mind their own business; they had no right to interfere with affairs down there. And while the hon. gentleman was speaking thus to the House we find the central relief committee expressing the fear that unless they could get help from outside thousands upon thousands of young children would starve. Immediately, Mr. Speaker, the report was broadcast throughout that section by the Canadian Press that the hon. member for Lunenburg (Mr. Duff) had stated on the floor of this House that conditions, while not ideal, were not very much worse than they were in the larger cities of the Dominion, the chairman and secretary of the Central Relief committee of the Glace Bay district Rev. M. A. MacAdam, parish priest, and Rev. A. M. McLeod, Presbyterian clergyman, of the town of Glace Bay—by the way every time the

hon. member for Lunenburg mentioned Glace Bay he called it the "city" of Glace Bay; in Cape Breton we are proud to call it "the biggest town in Canada," for it has the largest population of any of our incorporated towns—immediately, I say, the chairman and secretary of the Central Relief committee sent this message:

Only relief from outside sources will save thousands of our Cape Breton people who are in dire need and on the verge of starvation. Far from resenting outside assistance, we appeal for it and hope it will be speedily given us by a generous Canadian people. We would welcome unbiased investigators to visit us and ascertain for themselves.

That is a direct answer to the remarks made by the hon. member for Lunenburg. True, he represents a constituency on the western shores of Nova Scotia, it is a west-shore constituency and he is not conversant with conditions in the mining section as are the hon. members for Cumberland (Mr. Logan), Inverness (Mr. Chisholm), Cape Breton North and Victoria (Mr. Kelly), Cape Breton South and Richmond (Mr. Carroll and Mr. Kyte), and the hon. Minister of National Defence (Mr. Macdonald). I have another telegram dated Halifax, April 2, and received last night:

Respectfully suggest that you refute statements made by Nova Scotia member yesterday regarding conditions in colliery towns. Had it not been for outside relief during the past three weeks hundreds would have died of starvation.

Now, the conditions are such that even if an amicable agreement is reached it will be some time before those in distress will be able to dispense with outside relief. I have not spoken of the trouble betwen the miners and Besco. I have worked with the miners and for the company, and I could say something very illuminating on both sides of the case, but I will not enter upon the merits now. Let us hope that the parties will come to an amicable agreement. But in the meantime there are thousands of people in that district in great need of relief, and let not the remarks of the hon. member for Lunenburg prevent any charitably inclined citizens from sending whatever measure of relief they can afford to give to the distressed population. It must not be forgotten that for the last three years the coal miners of that section have worked only two and three days a week. My hon. friend from Lunenburg may say: "Oh, if my people were getting the same wages as the coal miners, they would own their homes and have bank accounts." Yes, I admit the wage is satisfactory for six days a week, but when the miners have to feed and clothe their families for the whole week on what they earn during the two or three days they are at work, their remuneration is a very small pittance indeed.

I submit, Mr. Speaker, that we should send relief, and I think this government, which has been so generous in the past in assisting the people of Japan, China and other countries by substantial grants of money, might very well do something for the relief of suffering Canadians. I go further, Sir. Some of the people in that section are placing the blame on the government. I admit at once that they do not blame the government for the trouble between Besco and the miners. I think this parliament acted wisely in refusing to grant a charter to the British Empire Steel Corporation. Everyone knows that the corporation secured its charter from the legislature of Nova Scotia. I do not propose to discuss the charter, but I do say that the policy of this government in reducing the customs tariff on the iron and steel produced in the steel works at Sydney, which industry consumes the greater portion of the bituminous coal mined in the Cape Breton section, have placed the coal operators under a serious handicap, for without the markets, the coal areas cannot be developed and the miners cannot be given steady employment. Hence we have the condition of uncertain employment. In view of those facts, I submit that the government would be well advised to make a reasonable contribution to the relief fund to tide over the people until such time as a satisfactory arrangement may be arrived at between the coal miners and the British Empire Steel Corporation.

In conclusion, Mr. Speaker, let me say that we require more protection for the industries of the Maritime provinces, and that to this end there must be effected a readjustment of the duties on bituminous run of mine coal, and that the budget resolution for the drawback of 99 per cent duty on bituminous coal imported for coke making should be withdrawn, otherwise what little benefit is given by the increased duty on slack coal will be entirely wiped out. Given proper protection this industry would prosper. In the industrial sections of Nova Scotia there is a population of about 250,000 people, and I venture to say that if they were working six days a week at a satisfactory wage you would have a contented people—a people be it remembered, composed of the descendants of those highland Scotch, of those who came from Green Erin, of the descendants of the United Empire Loyalists, and, last but not least, of the descendants of that great tragedy of 1755.

Mr. ARTHUR DENIS (St. Denis) (Translation): Mr. Speaker, before broaching the subject matter of the budget, I want to congratulate the hon. member who has just taken his seat (Mr. Doucet) for his magnificent address in favour of our beautiful French language. He graciously offers us his generous co-operation and I extend to him my compliments. I am not one of those who think that the French language has received all the honours which are due to it, however, it pleases me to note, as the hon. member for Kent has stated himself, that under the present government there has been a great improvement toward giving to the French language a more conspicuous place in the affairs of the country. We have not completed the task, but we shall continue to work together to claim our rights, and before long, under the realm of justice of which we can now boast, we shall receive, I am well confident, full and entire satisfaction.

My hon. friend introduced some spice in his speech, but this must not astonish us; our good friends should not have quarreled with him, for, after all, he belongs to the Tory party, although he refuses to recognize the name; we, therefore, could not expect that he would express himself otherwise. The records of history have been handed down to us, and for a reason; we should draw beneficial lessons from them. Let us not forget, however, that although we must be firm and tenacious in our claims, we must act in a decent manner, without having recourse to vulgar expedient; which simply means that we must be dignified, in words as well as in deeds, and justice and common sense will end by exerting their beneficent influence.

With reference to the budget as brought down, the hon. Acting Minister of Finance (Mr. Robb) is entitled to our most sincere congratulations. We awaited this budget with some feeling of anxiety, as we feared that the reductions which were adopted last session, regarding the tariff on raw materials and the sale tax on products of first necessity, would show a great decrease in the revenues of the country. Fortunately, however, this reduction which favoured the masses, was not an impediment to the success of the country's administration.

The revenues, this year, are somewhat smaller; but this decrease was partly compensated by the economy applied to the expenditure, without, however, being detrimental to the development of our young country. It is with a feeling of joy and confidence that we learned from the hon. Acting Minister of Finance, that the budget of this year showed a favourable balance of $1,832,000 over the cost of the administration.

Since the outset of this debate certain criticisms were made by the loyal opposition, but they were not of a serious nature. Consequently, the government should not pay any more attention to them than it is necessary; but it should continue its ascending march in the path of progress and good feeling, a path which it has always followed since it has been at the helm of the affairs of this country. We might, perhaps, take our good friends the Conservatives more seriously, if we had not seen them at work from 1911 to 1921. How can they decently preach economy, knowing that during their administration, they had ruined the country, and what is worse destroyed the good feeling which existed between the races and classes of the Canadian community? We can recall that in 1911, when they assumed power, our fair Canada enjoyed great prosperity and we were happy and content to live on its soil; however, after a few years of their regime, we were thrown into the greatest distress. Our debt increased considerably, deficits followed favourable balances which we had under the wise administration of our great leader, Sir Wilfrid Laurier, and, the unavoidable consequence was that very heavy taxes were levied on the people to meet the obligations incurred and provide for the present needs of the country. Nobody was spared, if we except a few large profiteers who were friends of the government. We were living in a peaceful quietude, but war broke out and spread terror and desolation in our homes. More than that, under the cloak of false patriotism, these good Tories found means, to satisfy their destructive designs, of awakening certain prejudices almost extinct, under the previous Liberal government; only a few of these petty factions remained and their days were numbered; ridicule and their insignificance would have in the end made them entirely disappear to the great satisfaction of everybody.

I do not wish, Mr. Speaker, to criticize the expenditure which the war was responsible for, but I cannot help telling them, together with Sir Arthur Currie and Mr. Beatty, the president of the Canadian Pacific Railway, that they showed poor judgment. The 100,000 conscripts that they sent overseas, to help the cause of the allies, should have never left this country. It was a useless expense, but I may add very useful from the viewpoint of our over-zealous Imperialists whose sole ambition was to enrich themselves and to insult those who differed from their views. That was part of their work. I could

continue and give further instances, but I shall not do so; these recollections are too heart-breaking to all Canadians who love their country and wish to see it rich and prosperous. All countries have had their period of greatness and downfall, of prosperity and depression, and for us Canadians, from 1911 to 1921, was the most depressing period of our history. The great culprits are those who, to-day, are bold enough to rise and blame the government for not having practised economy. Hon. gentlemen, of the opposition, should not delude themselves into thinking that the public gulp these things down! You may drag your hearse across the whole country, even through Montreal with the Hon. Monty and company, the people are wise as to your frankness and sincerity and they have not forgotten your great success in the administration of public affairs.

Coming back to the budget speech itself, it is pleasing to note that the country, under the wise administration of the present government is from year to year making rapid progress. Our trade, this year, with the other nations, once more attests a favourable balance of $263,414,526. With the British Empire, we can show a favourable balance of $243,000,000. It is only with the United States that the trade balance is against us. However, every year, this adverse balance is getting smaller, and we can hope that before long we shall also have with them a favourable trade balance, notwithstanding their high protective tariff.

What a joke it is to contend that upholding that high protective tariff is the salvation of the country. I think it is more a clever trick to fool the workman by promising them that protection will give them employment, with more remunerative salaries. Never in the history of our country were the workmen happier and more prosperous than under the Laurier-Fielding tariff, which was not a high protective tariff, but one for revenue only. I admit, however, that there are industries which need some protection, but this protection must not hinder competition which is necessary to maintain the quality of the products and fair prices for the consumer.

The depression which, at present, exists in a few of our industries, is not caused by the lack of protection, but rather by the unbounded ambition of some manufacturers who wish to make too great a profit, and this without any compensation to the workman whom they intentionally allow to suffer to satisfy their greed for gold. Take, for instance, the manufacturer of boots and shoes. I do not accuse them all as I know there are a great number who are satisfied with the present conditions. For the past year, these manufacturers are carrying on an active campaign, in the press of the country, against the government, blaming it for not giving them more protection and state that their industry is being ruined.

If we look up the official figures supplied by the Trade and Commerce Statistical Bureau, we see that in 1924, the imports on boots and shoes amounted to $2,174,023, or 1,043,262 pairs; in 1923, the imports amounted to $1,740,351 or 704,762 pairs; in 1922, $1,670,858; but in 1921, under the administration of our good friends on the opposite side of the House, the imports amounted to $2,993,730, consequently $819,708 more than in 1924. It is only within the last year that our manufacturers complain. Do you not think, Sir, that they had far more reason to complain in 1921 than to-day? It is the change of government, which, I believe, is the cause of their complaints. Any reason will do, what they are after, is the government's scalps, to satisfy their political ambition.

I shall give you further figures: In 1924, $64,061,148 worth of boots and shoes were produced in this country or 32,204,943 pairs; in 1923, $60,484,449 or 29,271,133 pairs. You will note that, in 1924, more boots and shoes were manufactured than in 1923. I could give you the figures for 1922, but I think that the House is quite satisfied that the manufacturers of boots and shoes show bad faith, and I shall try to prove it now by their exports. In 1924, they exported for $2,283,609 worth of goods; in 1923 for $1,513,046; in 1922, for $1,009,198; in 1921, for $3,993,730. By comparing the imports with the exports, we find that, in 1924, they had a favourable balance of $109,586; in 1923, an adverse balance of $227,305; in 1922, also an adverse balance of $661,640; but in 1921, the last year of the Conservative government, they had a favourable balance of $62,563. This balance was not, however, as high as that of the year 1924 which, as I have just stated, was $109,586, or a difference of $47,023.

This only goes to show that these gentlemen are greedy and the more we shall feed them, the more their stomach will call for food which they hope to get through protection. However, I see that the government is not disposed to supply this food; and with reason, it rather prefers to help the consumers. There are other industries whose conditions are identical to those of the boot and shoe manufacture, and who claim a higher protective tariff, but I shall not

enumerate them as I do not wish to impose on the good nature of the House. Before closing my remarks, I should like to give a few advices of a nature to ease the task of the government in regard to the decreasing of the administration cost. I trust that they will be well received.

What I would recommend to the government is not the reduction of the parliamentary indemnity, such as was moved by a few hon. members of this House, because the indemnity we receive is certainly not too high for a member who attends regularly the sittings of the House, and who is not content with only putting in an appearance when large interests are involved or threatened; but what I would like to see is the abolishing of the Civil Service Commission which, each year, costs the country the nice sum of $194,580.40, an amount which would help to pay the yearly deficits of our National railways and merchant marine. It is well to observe, by the way, that the government has reduced the cost of that service by more than $100,000 since the year 1921-22. Neither do I wish to criticize the commissioners for their work; but looking at it from the point of view of usefulness, I state that this commission is a luxury that the country is unable to put up with. Moreover, no proof exists that, since the establishment of the commission, the service in the various departments has been more efficient and that the country has benefited proportionately to the cost of this commission. It perhaps served a purpose, under the previous government, owing to their incompetence and the habit contracted of indulging in patronage, however, under the present government which includes the best men of the country, it serves no purpose.

Another matter to which my attention was drawn in the budget, is the duty being levied on electric power. I am very conservative so far as our natural resources are concerned, but not in politics. I should like to see them developed for the benefit of our people only, and utilized on Canadian soil so as to feed our present-day industries and those that might come later on to establish themselves in this country. However, I do not find fault with this imposing of a duty, but I should not like to see this privilege to export power prolonged more than one year. Further, I do not want to see these companies export power to the detriment of the Canadian consumer by demanding from the latter a higher price per horse-power, as this is happening in the country, at present. I hope the government will take the necessary measures to prevent these companies from exploiting the Canadian consumer for the benefit of foreigners who come and take our electric power to meet the requirements of their industries.

I shall close my remarks, Mr. Speaker, by assuring the government of my entire confidence in them, if they continue, as they have done heretofore, to govern the country, first for the people and lastly for the magnates. Let us help our farmers, our producers and our consumers by lowering the cost of raw material, let us facilitate the marketing of their products by giving them a fair transportation tariff, let us try to create new markets, and I feel confident that in following that policy we shall all be happy and content with living on the sacred soil of Canada.

Mr. HANCE J. LOGAN (Cumberland): On the 12th June last, this House expressed a desire, concurred in by leading members of all parties that the trade and other relations between Canada and the West Indies and other southern countries, should be investigated. On the 26th November an order in council was passed appointing me as a commissioner to proceed to the West Indies and other islands and lands in and about the Caribbean sea. In a letter from the Prime Minister I was also instructed as follows:

> My colleagues and I would be pleased if you would convey to the governors and people of Bermuda, the British West Indies and British Guiana, a warm message of good-will and interest from the government and people of the Dominion of Canada. Would you kindly convey to the governments of the various Islands and of British Guiana, the cordial invitation of the Canadian government to attend a joint conference to be held at Ottawa in the spring of 1925, at a definite date to be agreed upon mutually, for the purpose of negotiating and concluding a new trade and transportation agreement between our respective countries. All further details of representation, scope of the conference, financial arrangements, etc., will be taken up by our officials upon intimation of the decision of the governments of Bermuda, the British West Indies and British Guiana, in this matter.
>
> Will you kindly express to the various governments mentioned the sincere desire of the Canadian government that they may be able to co-operate with us in the manner suggested, and our assurance of a cordial reception to their delegates in this country.

After conferring with a number of boards of trade, West Indian merchants and firms in several cities and towns, I proceeded from Halifax on the 14th December last. Owing to most tempestuous weather, I met with a severe accident on board ship, which caused a delay of several days at Hamilton, Bermuda. In the eleven weeks I was away from Canada, I travelled by sea and land over ten thousand miles; was thirty-nine days at sea; visited seventeen countries, under eight different flags; met with the governing bodies; addressed the

chambers of commerce, boards of trade, planters' and agricultural societies; and had an opportunity of discussing in private and public with legislators and other leading men in all walks of life in all these different lands. I was met with enthusiasm everywhere, and found a keen desire wherever I went for greater trade between our country and theirs. I also found, not only in foreign republics, but throughout the British West Indies, that, particularly since the war, the American nation has been making a determined drive to capture trade with these tropical countries. Everywhere I found American consular agents, vice-consuls and other representatives of the United States, all of whom are really trade agents, housed in splendid offices with efficient secretarial and other clerical staffs. I also found American commercial travellers hustling for trade. But in all the vast domain, where the total population amounts to some fourteen millions of people, and where the trade of the countries visited amounts to three hundred and seventy five millions of dollars annually—outside of Cuba, which has a vast trade, particularly with the United States of America—I found only two trade commissioners of Canada, each with a staff of one person, I met only two Canadian commercial travellers!

Let me give, in as few words as possible, a description of the countries I visited in company with Lieut.-Colonel Brown of the Canadian National Railways' staff as transportation adviser and Mr. H. C. Crowell, of Halifax, secretary, who were with me throughout the whole trip; and Mr. D. H. Ross, of the Trade and Commerce department, who was with me during part of the trip. We first visited Bermuda, which has been well-named the gem of the Atlantic ocean. The area of Bermuda is nineteen square miles, and the population 20,410. The imports and exports for the year 1923 were:

	Imports 1923 pounds sterling	Exports 1923 pounds sterling
Canada	239,048	40,160
United Kingdom	708,413	450
United States	913,576	125,035
Other countries	21,364	328,155
Total	1,882,401	493,800

The principal articles imported are flour, oats—of which nearly 200,000 bushels last year came from Canada,—bran, hay,—of which about fifty thousand dollars' worth was from Canada,—lumber, principally from the United States; potatoes, ten thousand barrels from Canada and three thousand one hundred barrels from the United States; and whisky, 25,873 gallons from Canada, and from other countries 269,393 gallons.

In regard to exports to Canada, the figure is not large, being valued at about forty thousand pounds for the year 1923, of which something under four thousand pounds in value was produce or manufactures of the colony, the bulk being onions. Until very recently, nearly all the onions raised in Bermuda went to the United States; but now that that country has placed a heavy duty on onions, there should be large increases to the Canadian market.

The harbour of Hamilton, the capital of Bermuda, is small, but it has deep water and is well sheltered. It is approached by a long winding channel, which has docking space for three good-sized ships, along a straight quay wall. The passenger traffic in and out of Bermuda is very large, and, contrary to what is generally thought, it is fairly well sustained throughout the year. According to tourist statistics of the island in 1923, the following were the number of tourists monthly:

January	2,239
February	3,273
March	3,758
April	2,613
May	524
June	1,262
July	1,697
August	2,524
September	2,206
October	2,315
November	2,097
December	2,253
Total for 1923	26,761

In fact, Bermuda's prosperity depends almost entirely upon the tourist traffic, and every possible facility is provided to assist and encourage it. There is no doubt that if there were proper passenger steamers plying between Canada and Bermuda, a large part of the tourist traffic from this country, which at the present generally goes via New York, would be diverted to Canadian ports.

While I was on the island I was honoured with a seat in the legislature beside the Speaker; and among the items of expenditure which were passed was one for about $121,000 as a subsidy to a line from New York, while no subsidy is paid to any line to Canada. I think it is one of the duties of Canada as a British country, to endeavour to counteract, as far as possible, the American influence, which is very apparent to anyone visiting the island. Upon arrival, we were welcomed by a large delegation, among them being the Mayor of Hamilton, the President of the Chamber of Commerce, the Chairman of the

Bermuda Development Board, and a number of other prominent citizens. During my stay, I had an opportunity of addressing many of the members of the Chamber of Commerce and the Bermuda Development Board. While the American influence, as I have said, is very strong, I am happy to say we have a number of very staunch friends in this island who desire better trade relations with Canada.

We arrived at the island of St. Christopher —better known as St. Kitts—on January 4. This island is in a group known as the Leeward Islands, which are divided between the British, French, Dutch and United States governments. The principal islands under British control are St. Christopher, Nevis, Antigua, Dominica and Montserrat. These form a crown colony under one Governor. The seat of government is St. Johns, Antigua; the other sections being governed by administrators subordinate to the Governor. There is also a General Legislative Council, composed of sixteen members appointed by the Governor. St. Christopher has an area of 68 square miles, and a population of 31,000. The principal port is Basseterre, with a population of about 10,000. The total trade for 1921 amounted to approximately $3,500,000. The principal exports are sugar, sea-island cotton, limes, tobacco and cocoa; but the largest export to Canada is sugar. There is one mill with an annual output of about 12,000 tons. St. Kitts and Antigua are ideal winter resorts. The weather is much warmer than in Bermuda. The islands are rich in historical lore, particularly Nevis, which is very near to St. Kitts. It was on this island—Nevis—that Captain Nelson, afterwards the great admiral of the British fleet was married.

The ship dropped anchor in the harbour of Basseterre at 8.30 a.m., and the Acting Administrator the Hon. H. M. Wigley came on board. During the day a meeting was held in the town, which I addressed. I met most of the leading men of the island, among them being Dr. Aitken, a brother of Lord Beaverbrook. The response to my address was delivered in a very eloquent manner, by Mr. P. Marshall, a clever coloured member of the Legislative and Executive Councils. A number of other leading men took part in the following discussion, including the president of the Agricultural Society. All of them strongly recommended the promotion of closer trade relations with Canada and the acceptance of Canada's invitation to a conference at Ottawa.

On January 5, we arrived in Antigua, and were met by a large delegation of prominent citizens, who extended a very cordial welcome. Antigua has an area of 108 square miles and a population of about 30,000. The principal port is St. Johns, with a population of about 8,000. The total trade of this island in 1921 was about $3,000,000. It is estimated that the sugar production of Antigua this year will amount to about 15,000 tons. In the days of Nelson, English harbour on this island was the largest and best equipped naval dock in the West Indies. It was here that Nelson refitted his fleet before starting on the cruise that ended with the battle of Trafalgar. A great need of Antigua, as well as St. Kitts, is better hotel accommodation; and it was urged at the meetings which I addressed that, in connection with steamship service, there might be combined a plan or a system of building bungalow hotels. A resolution urging the acceptance of the Leeward Islands of our invitation.

Dominica has an area of 291 square miles and a population of 38,000. The imports of this island in 1922 were valued at about $800,000, and the exports at nearly the same amount.

Montserrat has an area of 32½ square miles, with a population of 12,000. The principal town and port is Plymouth. The peculiarity of the people of this island is that while they are nearly all coloured, they speak with a decided Irish accent. Many years ago, an Irish regiment was stationed on this island. The principal products of Montserrat are sea-island cotton, limes, and lime juice.

From the point of view of natural beauty, the Leeward Islands are delightful. Their soils are fertile; and there can be no doubt that, with the expenditure of money, their resources could be developed and great prosperity brought to their peoples.

The next port of call of the steamer after leaving Antigua was Martinique, an island thoroughly French. It has a population of about 250,000 people, and is probably one of the most prosperous places I had the opportunity of visiting. Through the good offices of the Royal Bank at Fort-de-France, the capital of the island, I was able to meet several of the prominent citizens. Most of the textiles of the island are imported from France; but there is an opening for Canadian manufactures, and particularly flour, lumber and fertilizers. Their total imports of flour last year amounted to about 72,000 barrels, and of fertilizers about 100,000 tons. All of these fertilizers were secured from the west coast of South America.

Guadeloupe is another important French island. I did not have an opportunity to visit it; but I was informed that the prospects there of trade with Canada are good. The island has an area of 688 square miles, and a population of 229,000. I strongly recommend that there should be appointed a French-speaking Canadian trade agent to represent us in Martinique, Guadeloupe and Haiti where the people, with few exceptions, speak only French.

The Republic of Haiti has a population of over two millions of people. The soil is very fertile. Although I did not visit Haiti, I was informed by the inspector of the Royal Bank agencies in the West Indies, who had recently spent a considerable time there, that in his opinion the opportunities for increased trade with Canada were greater in that republic than in any other part of the West Indies; and I was assured by a Haitian representative whom I had the pleasure of meeting that there is a very keen desire in Haiti for better trade relations with Canada, and to that end he urged that they should be given a French-speaking Canadian trade agent, as all of the two millions of inhabitants speak French, and very few speak English.

We arrived at Bridgetown, Barbados, on the morning of January 7, and were met by a representative delegation consisting of governmental officials, business men, agriculturists and others. In Bridgetown, on January 8, I addressed a very large and enthusiastic joint meeting of the Chamber of Commerce, the Agricultural Society and planters, at which a resolution was passed with great enthusiasm, accepting the invitation of the Canadian government to a new conference. Barbados has an area of 166 square miles, nearly all of which is under cultivation. The population of the island is approximately 160,000. Its imports in 1923 amounted in value to about twelve and a half millions of dollars, of which three millions represented imports from Canada. Its exports in that year were about nine million dollars' worth, of which nearly seven million dollars' worth were to Canada. The exports of Barbados are almost entirely sugar and molasses. Canada is by far the best customer in molasses. In 1923 we took 4,752,120 gallons out of a total exportation of 6,359,158. Of sugar they exported to us 32,316 tons, out of a total export of 49,060. The average exportation for ten years, 1914 to 1923 inclusive, was 41,507 tons. The principal articles imported from Canada by Barbados are: cattle food, oil meal, bran, sulphate of ammonia, butter, cheese, salted fish, grain, oats, flour,; salted beef and pork; lumber, spruce and shingles. The total value of imports from Canada in 1923 was about two and a half million dollars. The imports of flour from Canada are evidently decreasing. In 1920 their value was approximately $1,400,000; in 1921 about one million dollars; in 1922 about $750,000; and in 1923 they had fallen to $600,000.

Passenger traffic from Canada to Barbados is very small, in spite of the fact that the island's climatic conditions make it a most wonderful health resort. A criticism of the people of Barbados as well as of other West Indian islands, is their lack of effort to advertise the beauties and attractions of the various islands. The type of tourist these islands need is not, I submit, the American "tripper," who remains for only a few days; but people who will make their homes in these wonderful sun-kissed lands during the winter months at least, and get to know the people, and to admire the islands so that they will return there year after year. A serious complaint was made by the people of Barbados that we had closed our Canadian trade agency in that island, and that they have no one on the spot to confer with officially in reference to Canadian matters. I was very much impressed with the productivity of this, the most easterly of the West Indian islands. It is composed of a limestone and coral formation; and unlike many of the other islands, has no volcanic characteristics. There are about four hundred miles of excellent motor roads, which being built of white coral are particularly free from mud and also produce very little dust.

The hospitality of the people of Barbados is well known, and the beauty of their homes is unexcelled. In no other part of the world will you find so many of the old planters' houses, many of them filled with beautiful antique mahogany furniture, homes maintained with all the style and ceremony of the old slavery days. Barbados is a little country of quiet dignity and refinement, and it possesses during most of the year a climate which is probably unsurpassed.

The Windward Islands constitute one crown colony, consisting of St. Lucia, St. Vincent and Grenada, with a small group of islands known as the Grenadines. There is one government for the entire group, the seat of government being at St. George, Grenada. The total area of these islands is about five hundred square miles, and the population about 165,000. The imports in 1923 amounted in value to about $3,200,000, and the exports to about $2,600,000.

On the morning of January 9th we arrived at Tobago, a dependency of the island of Trinidad, and were greeted by a reception com-

mittee which came out to the ship. I went ashore and met a number of prominent citizens, who keenly desire closer relations with Canada. We arrived at Port of Spain, the capital of Trinidad, the evening of that day, January 9, and were received by a large and very influential delegation, which came out to the ship—anchored two miles from the shore—and extended a warm welcome from the government and the people of Trinidad. On the following morning, January 10, I had an informal discussion with a committee composed of the Trinidad Chamber of Commerce, the Agricultural Society, and Sir S. Davson, president of the Associated Boards of Trade of the British West Indies, who stopped over on his way from Georgetown, to England. This was really a round table discussion, to formulate a programme of activities when I should return to Trinidad from British Guiana.

We arrived at Georgetown, the capital of British Guiana; otherwise known as Demerara, on the morning of January 13th, and were met by a deputation consisting of representatives of the government and leading business men, including Sir Alfred Sherlock and other prominent citizens of the capital. On the 14th a large meeting of the combined commercial and industrial interests of the colony was held, the meeting being presided over by the governor, Sir Graeme Thompson. I addressed this meeting, and extended the invitation of our government, which was received with great enthusiasm. That evening a banquet was given by the Georgetown Chamber of Commerce, at which over one hundred were present. Inspiring addresses were made. Canada has a warm place in the hearts of British Guiana. It is one of the most important of the British colonies. The area is 89,480 square miles, and the population nearly 300,000. The capital, as I have said, is Georgetown, with a population of 56,000. The imports in 1922 amounted in value to over $11,000,000; the exports to over $13,000,000. Canada is British Guiana's second best customer, her exports in 1922 to the Dominion being to the value of $5,029,143, and to the United Kingdom $5,722,675. Her imports are chiefly butter and cheese, coal, machinery, and implements, and fish—dried and pickled—grain and flour. The value of flour imported from Canada for the year ended December 31st, 1923, was $1,174,762. She also imports condensed milk, pork, hams, bacon, potatoes, tobacco and woollens.

The colony is on the northeast coast of South America, contiguous to French Guiana and Dutch Guiana. It was settled by the Dutch, who certainly picked out a country much like their homeland. Georgetown and the surrounding plantations lie some four feet below sea level, the country being protected for miles by strong sea walls and dykes. Sugar is the staple product of the colony, the annual output being around 85,000 tons. The area under cultivation of sugar is 50,000 acres. This area could, however, be greatly increased. In fact, I was informed by a reliable authority that the colony could easily produce two million tons of sugar annually, if they had sufficient market.

The colony has wonderful rivers, waterfalls, in the interior, fertile farms and grazing lands; also minerals, including diamonds. The diamond production last year was about $5,000,000. I heard in this colony also the complaint that they have no resident trade commissioner from Canada. I would recommend that such a commissioner be appointed, and that he be given jurisdiction over the French and Dutch Guianas as well.

On January 16 I arrived back at Port of Spain, Trinidad, which is the great big island on the west of the Caribbean sea. It possesses wonderful resources of various kinds, including cocoa lands, sugar cane plantations, vast cocoanut groves, oil wells and asphalt. The latter is procured from Pitch lake, where there seems to be an everlasting supply. Practically the world's supply of oil tar or asphalt has come from this lake in the past fifty years. The lake is about 114 acres in extent; but although millions of tons have been extracted, it is now only fourteen feet below its original level. The pitch is taken or mined from the lake by hand, workmen merely using ordinary picks and shovels to break it in pieces. The cavity formed during the day, disappears during the night. The annual output amounts to something like two hundred thousand tons. None of this asphalt is shipped direct to Canada.

The area of Trinidad, including its dependency of Tobago, is 1,976 square miles, and the population is 365,913. The population of the capital, Port of Spain, a wonderful and beautiful city, is 61,531. The imports of the island in 1923 were in value over twenty million dollars, of which over four millions were from Canada and about five millions from the United States. The exports in that year were over $23,000,000 worth, the amount to Canada being about $1,500,000. In 1923, the principal articles of import into Trinidad from Canada and the United States were; butter, cheese, fish—dried or salted—bran, corn meal, oats, flour, salt beef and pork, bacon, condensed milk, vegetables—dried and canned—fresh vegetables, potatoes, onions, and lumber.

On January 20 I addressed the Chamber of Commerce at Port of Spain. The meeting was a very large one. A strong resolution that the invitation of this government should be accepted was carried unanimously. On this island I visited several sugar plantations, and mills, among them being that situated at Usine Ste. Madeleine, where there are 22,000 acres under cane cultivation and 15,000 people employed. I also had the great privilege of visiting the city of San Fernandez, and seeing some of the results of the great work done by the Rev. Kenneth J. Grant, the devout Canadian who served thirty-seven years of his life as a missionary among the East India people of Trinidad. I am firmly convinced that the trade with Trinidad can be very materially increased. We are fortunate in having on this island as Canadian Trade Commissioner Mr. H. R. Poussette, who has lately moved into a suite of offices that do credit to our country.

On January 25 I sailed from Port of Spain on the Royal Dutch Mail Line Steamer Venezuela, for Venezuela, Colombia and Panama, en route to Jamaica. We arrived at the port of La Guayra on January 27, and a representative of the Venezuelan government immediately boarded the ship and accorded a very enthusiastic welcome. We proceeded to Caracas, the capital of the republic, which is a wonderful city, situated in the mountains and with a population of over one hundred thousand people. I had a conference with the Foreign Minister and other representatives of the government, the acting British Minister being the interpreter. I extended the greetings and felicitations of our government, which were reciprocated by the Foreign minister. I was very agreeably surprised by the expression of a very great desire for increased trade with Canada. The members of the government, as well as other leading men whom I met in Venezuela, complained that we had no resident representative of Canada in the whole republic, and also complained of the lack of steamship service, which compels them to transport their goods through American ports. As a matter of fact, in the trade returns of Venezuela, there is no mention made of Canada, although the republic consumed last year 128,000 barrels of Canadian flour, all shipped from the port of New York and treated by the Venezuelan customs authorities as American goods. The customs and shipping regulations are very strict. Many fines are imposed and at times goods have been confiscated. Before visiting that country, I had been frequently told that trade could not be carried on successfully with Venezuela on account of the customs officials. I took this matter up with the acting British minister at Caracas, and was informed that if shippers would observe the customs regulations properly no trouble would be met with from the Venezuelan customs authorities. In fact, he had decided, after investigation of complaints that had been made to him by British exporters to Venezuela, in favour of the Venezuelan customs authorities.

There is certainly a great need in this republic of a Spanish-speaking Canadian trade agent. It is a republic of great prosperity and of wonderful possibilities. There is in progress road building, principally cement, to the extent of many millions of dollars, which will reach all important trade centres of the country. The Maracaibo district, in the western part of the republic, is experiencing one of the world's greatest developments in oil, and the government derive from this oil development a very large amount of money in royalties.

I was surprised to find in Caracas that the business of the Royal Bank of Canada in that city requires a staff of over thirty people. Venezuela offers an excellent opportunity for the sale of Canadian products, expecially in such lines as flour, cement, spirits, cotton cloth, automobiles, and so forth: The population of the republic is 2,800,000. La Guayra is one of the most important harbours. The docking facilities are owned by an English company known as the La Guayra Harbour Corporation. The docks are well and substantially built, and the warehousing facilities are excellent. Cargo is transported to Caracas from La Guayra by a narrow-gauge railway—owned by the same interests owning the docks—and also by motor lorries over a wonderful cement highway.

The total trade of the republic is about sixty millions. Last year there was purchased from several countries as follows:

British Empire (except Canada)	$ 7,158,079
United States	$13,953,451
France	1,714,353
Holland	1,562,858
Spain	1,027,779
Germany	2,613,892

The next call of the Dutch liner was at Puerto Cabello, but we remained there only a few hours. Next to Le Guayra, this is the most important harbour in Venezuela. There is a splendid land-locked harbour, an excellent quay and good warehouse facilities. It is the sea port for Valencia and other large cities in the interior. The population is about twenty thousand people. Among the industries is a large abattoir owned by Vestey & Company, which is an English concern. I called upon the British consul and also upon

the Mission school being carried on by very zealous and earnest people from the city of Toronto.

While Venezuela trade returns show practically no trade or business being done with Canada, owing to our goods being shipped via New York, the figures published by the Canadian Department of Trade and Commerce for the fiscal year ended March 31st, 1924, show Canada's total trade with Venezuela to have been worth $1,044,388. Among our exports as set forth in our trade returns are flour, whisky, cotton, duck, wall paper, farm implements, automobiles—value $70,594—copper wire and calcium carbide, 4,519 cwt.; while our imports from Venezuela were principally cocoa (raw), and coffee (green). I have no doubt whatever that great expansion of trade is awaiting Canada as soon as proper steamship communication is provided. To give an example of what can be done, in the flour trade alone, it is interesting to note the extraordinary advance Canada has made in the last three years. The exports of flour from Canada to Venezuela have been as follows:

	Barrels
In 1921..	15,772
In 1922..	66,378
In 1923..	106,256
In 1924..	128,684

This is largely the result of keen work on the part of the flour milling companies. I suggest that their example might very well be followed by a large number of other manufacturing concerns in Canada. The Venezuelan tariff is an equal tariff to the whole world's with the exception of the West India Islands, whose goods are subject to thirty per cent extra charge.

From Puerto Cabello we proceeded to the Dutch island of Curacoa, about 110 miles north of Venezuela. Curacoa's chief claim to importance is the fact that it is the principal distributing port for a large part of Venezuela known as Maracaibo, where, as I mentioned before, there is being carried on one of the world's greatest oil developments. Another important fact regarding Curacoa is that it possesses a wonderful harbour at Willemstad, the capital, while the gulf of Maracaibo and lake Maracaibo are too shallow to permit the passage of vessels of more than twelve feet draft. At Curacoa I conferred with the governor of the colony, also the British consul, manager of Maduro's Bank, the most important financial institution in the colony; with the president of the Chamber of Commerce, with Mr. M. F. Saunders, a Canadian, assistant manager of the Royal Dutch Shell oil refinery, situated on the island—which turns out about thirty thousands barrels of oil per day—and with other prominent citizens. The harbour at Willemstad is one of the greatest ports in the whole West Indies. The total trade of Curacoa for 1923 amounted to $19,000,000, and in 1924 it had increased to $30,000,000. The imports, which amounted in 1924 to about $18,000,000 are credited in the Curacoa trade returns as coming from a large number of countries: for instance, from England to the value of $532,430; from France, $120,600; from the Netherlands, $1,967,200; from the United States, $2,681,600; but, unfortunately, from Canada according to these returns the imports amounted to only $200.

In the island are wonderful deposits of phosphate of lime. The output is about one hundred thousand tons annually, shipped principally to Germany, England and Sweden, for fertilizing purposes. The island last year imported flour to the amount of 2,684 metric tons, or, roughly speaking, 27,000 barrels. Corn meal for the same year was imported to the extent of 3,693 metric tons. Practically all the flour and corn meal comes from the United States. The only brand of flour I discovered made in Canada was known as "Olympic," exported by the Quaker Oats Company. The United States also supplies boots and shoes, groceries, hardware and so forth.

The customs duties of Curaco would not be complained of, even by our friends, the Progressives. The ad valorem duty is 3 per cent. There are some specific duties but none runs higher than 15 per cent.

From Curacoa we proceeded to Puerto Colombia, which is the seaport of Barranquilla, a city of about seventy thousand people, and which is the distributing point for the western part of the Republic of Colombia. There is a concrete pier at Puerto Colombia which is over four thousand feet in length. At the end of this pier there is berthing accommodation for four large or six small steamers. Cargoes are landed direct to railway trucks and shipped to Barranquilla.

Barranquilla, from a commercial point of view, is without doubt a very important city, by virtue of the fact that it is the distributing point for the traffic of the Magdalene river, which penetrates the interior for one thousand miles, but which is too shallow below Barranquilla to permit of navigation, although the river is navigable for shallow-draft steamers for about seven hundred miles above Barranquilla, with the exception of a few short

rapids, where railway lines have been built for transferring cargo. The goods are transported from Puerto Colombia to Barranquilla by a railway eighteen miles in length. This railway and the long concrete pier at Puerto Colombia are owned by a British concern. At Barranquilla we were received by the governor and the British consul, and other prominent citizens. We visited the points of interest, including a fairly large flour mill managed by a Canadian who is using some Canadian wheat and would use more if direct transportation from Canada were provided. The necessity was strongly urged for the call of Canadian boats at Puerto Colombia.

From Puerto Colombia the ship proceeded to Cartagena, a city of sixty thousand people, and with one of the finest natural harbours in the world. I was received by a delegation from the Chamber of Commerce, and by representatives of the president of the republic, as well as by the governor of the Province. Afterwards, I held a conference with the governor and the ex-governor and a number of other prominent men of the city, who expressed a very keen desire for increased trade with Canada. I was much impressed with Colombia. In the first place, it is a land with constitutional and stable government, and with a kindly feeling for any country that is British. In a speech delivered by the governor at a large luncheon given by him, he referred with evident delight to the fact that in the war for independence and for freedom from Spanish rule, their great liberator, Bolivar, was assisted by British forces. Development of the country is rapidly progressing. Railways are being built, canals extended, shipping facilities improved, and oil and other mineral fields are being developed. The Standard Oil interests are commencing the construction of four hundred miles of pipe line from the interior to Cartagena. At Cartagena there is berthing space for three or four good-sized ships and the depth of water is sufficient for the largest liners. At the time we were there, the big steamship Tuscania of the Anchor-Donaldson line was lying alongside.

The total trade of Colombia amounts to about one hundred million dollars annually. Canada's trade with this republic for the year ended March 31, 1924, amounted in value to $750,000, made up of: imports $480,000 and exports $240,000. The principal exports from Canada were aluminum, cement, cotton, duck, flour—2,568 barrels—structural steel, automobiles, tires, and wall paper.

The imports from Colombia consisted of bananas—8,378 stems,—coffee (green)—2,397,102 pounds,—coffee n.o.p. 13,484 pounds; and miscellaneous in value, $3,066,000.

The commercial conditions of Colombia are good, and a substantial increase should be effected in our trade with that country, with proper transportation facilities, representation by a trade commissioner, and a greater effort made to place Canadian goods on that market.

From Cartagena the ship proceeded to Cristobal and Colon, at the mouth of the Panama canal. I went next day to the city of Panama, on the Pacific coast, a distance of forty-two miles, and called upon the British ambassador to the Republic of Panama. Through him, a conference was arranged with the Minister for Foreign Affairs. The following day, in company with the British minister and the Minister of Foreign Affairs, I was received at the palace by the President of the Republic, a very bright and active young man who spoke excellent English. He expressed delight with the greetings which I carried to him on behalf of Canada. Both the President and the Minister of Foreign Affairs, and other representative men whom I met, expressed a keen desire for increased trade with this country, among the requirements of their importations particularly mentioning flour and fish. While in Panama I met some representative citizens from the Republic of Costa Rica, who pointed out the opportunities for Canadian trade with that country, which is one of the most prosperous of the Central American republics.

Among the ships I saw passing through the Panama canal was a Canadian Government Merchant Marine boat on her way from Halifax to Vancouver.

After returning to Colon and Cristobal, I proceeded to Jamaica on one of the boats of the Elders and Fyffe's line. In Jamaica I found a great deal of dissatisfaction with the way in which Canada has dealt with that country since the holding of the Canadian West Indian Conference in 1920. A claim is made that we have not carried out in good faith the terms of the treaty, particularly in reference to steamship service and cold storage facilities. They claim also that, while they were taking large quantities of Canadian goods, particularly flour, we were importing from the United States our tropical fruits, particularly bananas. Last year we purchased two thousand stems of bananas from Jamaica, and from the United States two million stems.

I spent some days conferring with prominent men of the island, both white and coloured; and, with the Governor-General, Sir Samuel

Wilson spoke at the opening of their Agricultural exhibition. The day following I was tendered a luncheon under the auspices of the Chamber of Commerce, presided over by the Governor-General. More than two hundred of the leading men from different parts of the island were present. I appealed to them as fellow Britishers, and pointed out that, as we had fought together in the Great war to preserve our empire, we should not be quarreling over small matters, such disagreements being generally due to misunderstandings which could be removed by friendly negotiations. At the conclusion of my remarks the Duke of Athol, who is developing a great sugar industry on the island with British capital, made a splendid speech, pointing out that greater trade with Canada would tend to empire-building as much as if the trade were with the Mother Country. A motion was made to accept the invitation of our government, which was enthusiastically and unanimously carried. And I am very glad to say that subsequently the Legislature of the island with but one dissenting voice voted $4,500 for the conference expenses.

Jamaica is the largest of the British West India islands, and the third largest of all the islands of the West Indies, having an area of four thousand four hundred and fifty square miles, and a population of well on to the million mark. Its imports in 1922 amounted to 4,835,393 pounds sterling, made up as follows:

United States..	2,209,774
United Kingdom..	1,373,252
Canada..	647,943
Other countries..	604,424

The island is a veritable tropical paradise, The heat in the lowlands is intense; but, on account of the mountainous character of the country, temperate zones are quickly reached. In a very short time one may travel by motor from the extreme heat of the lowlands, with their jungles and tropical vegetation, to an altitude where it is cool and at night almost cold. The possibilities of the island, particularly in the production of fruit, are enormous. But in some lines production has decreased, largely on account of lack of a steady market. However, I believe the conditions are now improved. Last year about 300,000 barrels of flour were imported, of which Canada supplied 202,048 barrels. The exportations of bananas from the island in 1923 were:

To the United States..	9,680,000 stems
To the United Kingdom..	2,758,205 stems
To Canada..	1,923 stems
To other countries..	4,562 stems

In sugar, 15,667 tons were exported in 1923 to Canada, 6,805 tons to the United Kingdom and 2,660 tons to other countries. These figures are for the calendar year.

The spread of prices from the producer to the consumer of fruit is startling. While I was in Jamaica, bananas were selling at about one-half a cent each. You know what we pay in Canada.

We consume in Canada about 18,000,000 pounds of grape fruit annually, nearly all of which comes from the United States. The price paid to the producer for grape fruit, of excellent quality and delicious flavour, in Jamaica is about two and a half cents for each grape fruit. In the leading hotels of Canada thirty cents—and in some cases not far away thirty-five cents—is being charged for one-half of a grape fruit.

From Jamaica we proceeded to Santiago de Cuba. The Republic of Cuba has an area of 44,164 square miles, with a population of about three millions, of whom 800,000 are coloured. The staple products are sugar and tobacco. It is the largest sugar-producing country in the world. The sugar crop in 1922-23 was 3,601,056 tons. The total area of the sugar plantations is 1,384,812 acres, and in 1923 there were 125 sugar mills in operation. The trade of the country amounts to nearly one billion dollars. Of course, the largest trade is with the United States, with which they have a preferential tariff—reciprocal—of 20 per cent, but the imports from countries other than the United States amount to over $100,000,000 annually. Their imports consist largely of foodstuffs. I remained in Santiago only from noon until the following morning. In that time I was able, through introductions by the manager of the Royal Bank, to discuss trade matters with some leading citizens. There were two complaints made by the people: first, a lack of sufficient steamship communication with Canada, and the fact that there is no one there to officially represent Canada in trade matters. I believe there are great possibilities for increased trade with Santiago de Cuba with its wonderful harbour, but there should be located there a Spanish-speaking trade commissioner, who would look after the eastern part of the island of Cuba. Pickford and Black boats call at this port.

From Santiago de Cuba we proceeded across the island by rail five hundred miles to Havana. Everywhere the land is fertile and the people seem to be prosperous. At Havana, which is a city of about 400,000 people, through the British minister, I held an interview with the Minister for Foreign Affairs, and also had an audience with the president, both of whom expressed warm friendship for Canada.

The consuming possibilities of Cuba are startling. For instance, they import a million dozens of eggs per month. The imports of potatoes for 1923 were valued at $5,482,283. Codfish was imported in 1923 to the value of $2,102,059; wheat flour $8,514,785; and condensed milk to the extent of fifty million pounds. Both cheese and eggs find a ready import market in Cuba, but Canada's share is entirely negligible, and practically all the eggs come from the United States. Salted pork, lard, ham and preserved meats, are imported from the United States to the value of about $5,000,000 per annum. Some Canadian hay comes to Havana by the steamers that bring potatoes. We have now one steamer sailing direct from Canada to Havana, and are able to underquote the United States price for hay by about three dollars per ton. Their present prices are from $25 to $27 per ton. Havana imports about 10,000 bales per month. I cannot too strongly urge the immediate appointment of a first-class trade commissioner at Havana, and there should be more frequent steamship communication between our ports and that city as well as other Cuban ports.

While in Havana I was given a luncheon by the Canadian Bankers, and a dinner at the British Legation; and I was able to confer with many leading importers and exporters.

From Cuba I proceeded to Key West and to Miami, and from Miami to Nassau in the Bahamas, where the steamer arrived on the morning of February 21st. The Bahamas are not of very great importance from a trade standpoint; and, like Bermuda, the American influence is very strong. Great attention is paid to the tourist traffic. The government has invested over $2,000,000 in the new Colonial hotel, which is managed and controlled by the Munson Steamship line. I was given a luncheon by the Governor, at which were present the Colonial Secretary, the Speaker of the Assembly, the manager of the Royal Bank, and others; and I was afterwards entertained at Government house and by the Hon. Harcourt Malcolm, who was one of the representatives of the Bahamas at the Canada West India Conference of 1920. I left Nassau, en route to Ottawa, on the 23rd, of February.

I regret I was not able to visit Haiti, the Dominican Republic and Porto Rico. From information which I have secured, I think it very important that we should have steamship communication with both the Republic of Haiti and the Dominican Republic. From the latter last year our imports of sugar were very large, but we sold them very little in return. We should have a Spanish speaking agent to officially represent Canada in trade matters. Haiti has a total population of over two millions, and the Dominican Republic a population of nearly one million. Haiti buys from the United States goods to the value of over $10,000,000 per year, but the amount purchased from Canada is almost negligible. In 1922 there entered and cleared at the port of Port-au-Prince 251 steam vessels. The imports into this republic from the United States amounted to $6,480,105; from the United Kingdom $2,085,055; but Canada is not mentioned in the Haitian trade returns. The chief imports are cotton goods, iron and steel manufactures, foodstuffs to the value of $4,336,201; machinery, oils, hides. The principal exports are: sugar, to the value of $9,192,172, a considerable portion of which went to Canada; cacao (cocoa) $3 054,071. In 1922, 741 steamers with a total tonnage of 911,596 tons (with cargo) entered in the foreign trade of this republic.

In view of our need of cheaper tropical fruits, and our desire to obtain them from countries under our flag, I beg to recommend that we go a long way in removing customs duties on such fruits coming from these British lands and entering Canada through Canadian seaports. There would be a loss of revenue, but a great blessing should come to the consumers of our country, and the revenues of our transportation systems both by sea and land would be greatly augmented. In fact, such an arrangement should, to a considerable extent, lessen the deficits of our national ships and railways.

I mentioned at the outset, Mr. Speaker, the invitations which I carried from the Prime Minister of this country to attend a conference in Ottawa this spring. I am very glad to say that official acceptances have been received from all with the exception of the Bahamas. And as acceptance has been recommended to the legislature of that colony, which is now in session, by the governor, no doubt a delegate will be appointed within a few days.

There is no doubt that among the requests which will be made by the delegates, will be the abolition of the Dutch standard sugar test, which in the whole world is now retained only by Canada—and Turkey. It is based upon the sugar colour, as established annually by the vision of certain men in Rotterdam, Holland. Among other things, the color standard tends to the importation into Canada from these British West Indies of a deteriorated quality of sugar. I saw, in one of the largest sugar mills, a sugar being produced of beautiful pure crystals, but which actually had to undergo a colouring process in order

to comply with the Dutch standard. I found, however, that the sugar producers are very reasonable. They realize the importance of the refining industry in Canada, and I do not think they would seriously object to a reasonable standard established by the polariscope test, which is both scientific and certain; but they do object most strenuously to a standard which depends upon the eyesight of any individual. If the Dutch standard has been abolished in such countries as Great Britain and the United States, why should Canada retain it—along with Turkey?

The two greatest needs to build up a great trade between our country and the British West Indies and other lands in and about the Caribbean sea, are efficient trade commissioners and better transportation facilities not only for freight but for passengers as well. Canadians rarely visit these wonderful countries, and their people rarely come to Canada. We should know each other better, and in the British lands pursue a common policy of trading within the empire.

In reference to trade commissioners, I beg to recommend that we establish agencies at Bermuda and in all the islands and other lands in and around the Caribbean Sea. I further recommend that in countries such as Martinique, Guadeloupe and Haiti, where only French is spoken, the agent should be a French-speaking Canadian; and that in lands such as Venezuela, Colombia, Panama, Costa Rica and the Dominican Republic as well as Santiago de Cuba, where only Spanish is spoken, the agents should be Spanish-speaking Canadians.

But probably the biggest of all questions is that of transportation. It is admitted by everybody that the present service is unsatisfactory, especially in the combined passenger and freight service to Jamaica. The routes were established and the ships made to suit the treaty. They are not proper freight boats, the passenger accommodation is very meagre, and there is a serious loss in operation. As a matter of fact, I think the annual loss to the Canadian government in operation of this service is in the vicinity of $465,000 and we are continually breaking the terms of the treaty. We agreed to give a fortnightly service. We do not pretend to give more than a three weekly service, and we have not provided, or tried to provide, cold storage.

No new treaty will be possible unless the delegates are assured the above conditions are to be greatly improved. They will ask for a fortnightly service the year round for first-class ships from St. John and Halifax via the eastern group to Demerara and return, and also a fortnightly service of the same class of ships from Montreal in summer and Halifax and St. John in winter, sailing to the western group, to Jamaica. This will mean the provision of at least six new ships —as well as a side service from Jamaica to British Honduras. These ships should have accommodation for 100 first-class, 30 second-class and 100 third-class, as well as deck passengers, also the most modern equipment for the handling of freight and cold storage for fruit. They should have a sea speed capable of being developed to at least sixteen knots.

There are two ways of providing this service by our government: by contracting with a private shipping company, or with the Canadian Government Merchant Marine Corporation.

The Royal Mail Steam Packet Company has tendered to put four new motor ships on the eastern group service for ten years at a subsidy which amounts to about $534,000 per year, and to maintain a fortnightly service between Halifax and St. John and Demerara. It may be presumed, if they were to tender for the western service, without considering South American ports, they would require an additional $300,000 annually. In other words, we would be called upon to pay subsidies amounting to $834,000 per year to a private company. We could hardly expect the British West Indies, British Guiana and British Honduras to contribute more than $200,000 of this amount annually, which would mean even if that amount were contributed there would have to be paid out of the Treasury of Canada, $634,000 per year. At the end of ten years we would have paid the private company, $6,340,000, and the company would own the ships, and all we would have to show would be subsidy receipts.

But suppose we should augment the present Canadian Government Merchant Marine West Indian fleet by the building of six ships, which, I am assured by those competent to know, would be quite sufficient—if the speed I have mentioned were provided—to serve both the eastern and western services, as well as calling at ports along the northern republics of South America. It is estimated they would cost $7,800,000, and would depreciate in value not over 50 per cent in ten years. If the British West Indies would provide an annual contribution of $200,000, we would have $2,000,000 paid to Canada in the ten years. We would therefore be out of pocket $5,800,000, but we would own the ships, which would be worth $3,900,000 making our total loss, even if the ships did not make any oper-

ating profit, $1,900,000, or $4,440,000 less than if we subsidize a private company. I believe that with the improved trade that is bound to come between Canada and these southern lands, thereby creating new shipping business, we soon would have large profits in operation. Personally I am of the opinion, if the Canadian Government Merchant Marine abandoned every other route on every other sea, the business with the West Indies should be carried on by it, in co-operation with the Canadian National Railways. Incidentally I would recommend that the name Canadian Government Merchant Marine be changed to the Canadian National Steamship Company.

The greatest opposition to the idea of operating this southern service by the Canadian Government Merchant Marine comes from Halifax and St. John. This arises from the fear that they would not have the same frequency of sailings as they have now between these ports and the West Indies. I submit, however, a scheme can be worked out by which the Maritime ports will receive a service far superior to anything they have ever had and that a great improvement would also be given to the St. Lawrence river route, and at the same time, traffic would be provided for the Canadian National Railways, which, we know, is seriously needed to cut down the tremendous deficits.

The proposition is that instead of employing five ships on two separate and distinct runs in two separate and distinct services, six ships be employed, which would make a complete circuit of the West Indies and the northern republics of South America, the ships to sail from Canada weekly and alternate the route. That is to say, in one week this service would be by the eastern group to Demerara, returning via northern South America, Jamaica, Haiti, Cuba and Nassau. The following week the voyage would be via the western route to Nassau, Haiti, Cuba, Jamaica, northern South America, returning via the eastern group. In winter the ships would sail weekly from Halifax and St. John and would alternate between these two ports and Montreal in summer. For instance, a ship would leave Halifax and St. John and proceed via the Leeward and Windward Islands, Barbados and Trinidad, to Demeara. On her return she would call at Trinidad, La Guaya (Venezuela), Curacoa, a port in Colombia, Jamaica, a Cuban and a Haitian port, Nassau, and thence to Montreal.

The week after the above sailing from Halifax and St. John, a ship would leave Montreal taking cargo now being handled by the Canadian Forester and the Canadian Fisher, and proceed, calling at Charlottetown, P.E.I., through the strait of Canso and on by the western group and the South American ports to Demerara, returning via Trinidad, Barbados and the Leeward and Windward Islands, and thence, not back to Montreal, but to St. John and Halifax. The next voyage a week later would start from Halifax and St. John finishing at Montreal, and the next from Montreal finishing at St. John and Halifax This would give a fortnightly service from Halifax and St. John and the same from Montreal, but it would also give a weekly service from Canada.

In the winter, sailings would be the same as in the summer, except that all the sailings would be from Halifax and St. John, thereby giving them a weekly service for the winter months, not only to the points reached now by the present service, but to countries where most important business only awaits direct transportation. The ships would have to be of at least 5,000 or 6,000 gross tons, and be built not only for freight, but for proper passenger accommodation. It may be pointed out that the entire traffic to and from Maritime ports could be handled over the lines of the Canadian National Railways.

This service would mean, first, a weekly passenger and freight service from Canada to all the West Indies and lands in and about the Caribbean sea, from Maritime province ports during the winter time, and a fortnightly service to all these countries from Montreal, Halifax and St. John in summer.

Countries situate on the southern side of the circle where ships would cross, would have a very frequent service, as they could go to or from Canada in either direction. It would give inter-communication between the eastern and western groups of the West Indies, where there is none at present.

A service by which a person could sail from a Canadian port and encircle the Caribbean sea calling at so many intensely interesting and historic places and return to Canada without changing ships would soon become one of the most popular tourist routes in the world.

The present Canadian Government Merchant Marine freight service, from Canada to Demerara, would still be maintained as there would be more tonnage coming north than the fast ships could handle, and if the Royal Mail Steam Packet Company should maintain their freight service, the people of the eastern group would have a weekly service, and even better if the Canadian Pacific Railway does not withdraw from that route.

If the service were performed by the Canadian Government Merchant Marine,

the new ships would be built in Canada and the crews employed would be Canadians, whereas, any private company would, in all probability, build their ships in England, or, as recently happened in an English company, in Germany where the cost of production is now very low. The present Royal Mail Steam Packet Company's ships, with the exception of the ship's surgeons, are not manned by Canadians.

Before closing this report, may I refer to the importation of bananas direct to Canada? In 1924 we imported 2,429,656 stems, practically all from the United States. Of these, 1,867,266 stems came into Canada between May and October inclusive. This is a part of the year when the port of Montreal is open, and of course the ports of Halifax and St. John in the east, and Vancouver and other Pacific ports in the west, are open the year round. Vancouver would be the logical distributing point for bananas used west of Winnipeg, while Montreal in the summer months would distribute as far west as, and including, that city. It would not cost more to distribute to central Canada and the middle west through Montreal and Vancouver than it does now from New York and a port on the Pacific. I am making this statement in view of the fact that the request may be made at the conference that there should be a customs duty of say fifty cents a stem imposed on bananas coming from the United States, while West Indian bananas should come in free of duty.

Let me say in conclusion, after my extensive travels and careful investigation, having endeavored to secure my information from the most reliable sources, I am more than ever convinced that in trade with these southern lands lies Canada's opportunity.

It means extensive and ever increasing markets for the products of our soil and our manufacturers, and a reduction in the cost of tropical products to the consumers of Canada.

We have one advantage in that the banks of Canada have blazed the trail. I submit it is up to us to follow.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS—SECOND READINGS

Bill No. 40, respecting the Ottawa Electric Railway Company.—Mr. Chevrier.

Bill No. 42, to amend the Toronto Harbour Commissioners Act, 1911.—Mr. Church.

MARCONI WIRELESS TELEGRAPH COMPANY OF CANADA

Mr. PIERRE F. CASGRAIN (Charlevoix-Montmorency) moved the second reading of Bill No. 21, respecting the Marconi Wireless Telegraph Company.

Mr. W. A. BOYS (South Simoce): I want to say that I am in no sense sponsor for this bill, but a friend of mine in Ottawa a solicitor, met me yesterday and asked me if I would do what I could to see that the bill was referred to the Private Bills committee. I asked him for a typewritten statement of the purposes and objects of the bill which he gave me and which I now have. I have since referred to the bill and I can see no reason whatever why it should not receive a second reading and be referred to the Private Bills committee. I might briefly refer to the clauses.

The first clause only proposes to change the name of the Marconi Wireless Telegraph Company of Canada, Limited, to the Canadian Marconi Company; its purpose is only to shorten the name. The object of the second clause is to confirm a by-law which received the assent of the shareholders and which reduces the par value of the shares from $2.50 to $1, the capital stock being maintained at the former figure. The third clause repeals the former clauses seven and eleven and as far as I can see the only change of consequence takes place in clause eleven where, under the former section, by-laws dealing with increasing or reducing the capital stock of the company required two-thirds of the value of the subscribed capital represented, whereas the clause that is new requires two-thirds of the votes cast at the meeting. The fourth clause of the bill permits the company to engage in a wireless or other system of telephony as well as in the work they are now engaged in. I cannot see how there can be much objection to the bill from anybody; it apparently deals almost entirely with internal management. Even if there were any objections they can all be threshed out in the usual way before the Private Bills committee where we can hear representatives of the company and those opposed to the bill, if any. In the absence of the sponsor of the bill I will move its second reading.

Motion agreed to and bill read the second time.

KNIGHTS OF PYTHIAS OF CANADA

Mr. FRED W. BOWEN (Durham, for Mr. Maybee) moved the second reading of bill No. 38, to incorporate the Knights of Pythias of Canada.

Mr. ROBB: Explain.

Sir HENRY DRAYTON: I have not studied the bill but apparently it is one which has for its object the incorporation of the Knights of Pythias, embodying most of the usual fraternal society provisions. Apparently from the powers desired it is sought to take over the United States society which hitherto, apparently, has been carrying on for the members here. The objects of the society are of a social and fraternal character, and there are the usual provisions with respect to insurance fund, death benefits, old age benefits, and the like. I think we might send the measure to the Private Bills committee.

Mr. ROBB: I should like to say before the second reading of the bill passes, in order that it might go on record on behalf of the department, that this is not the Knights of Pythias as understood in Canada. This is a new organization proposing an incorporation of a fraternal society of coloured people particularly. Hon. gentlemen will observe it is "the Knights of Pythias of Africa and Australia" and the department has had some objections filed from the Knights of Pythias incorporated in the United States. The department offers no objection to the bill. Indeed it recognizes that the people who are applying for this charter have the same rights as white people to become incorporated for fraternal purposes; but it is just possible that the name may have to be changed when the bill comes before the committee.

Sir HENRY DRAYTON: That would be a matter for the committee I should think.

Mr. T. W. CALDWELL (Victoria and Carleton): There is already a fraternal society known as the Knights of Pythias in Canada which also extends to the United States. I would regret very much if granting these people a charter would override the rights and privileges of the present organization in Canada. I think it will be a serious matter to grant a charter to these people without a full understanding of the bearing it might have on the present organization.

Mr. ROBB: That is a matter which can be dealt with in committee.

Motion agreed to and bill read the second time.

JOLIETTE AND NORTHERN RAILWAY COMPANY

Mr. CHARLES E. HANNA (West Hastings, for Mr. Denis (Joliette)) moved the second reading of bill No. 39, respecting Joliette and Northern Railway Company.

[Mr. Bowen.]

Sir HENRY DRAYTON: I should like to ask the Minister of Railways before the motion is adopted what the present limitation is under the government's policy, as to the amount of securities that may be issued per mile of railway? At one time it was $20,000 per mile, at another time $25,000 per mile, then $30,000 a mile, and then there were special cases where special costs were involved where it went beyond that amount. In this case it is $45,000 a mile. That is something that can be looked into in committee, but it is a matter for the government to deal with.

Mr. GRAHAM: I am told it will be quite expensive, but I am free to admit that I have not gone into the matter, and I will call the attention of the members of the committee especially to the fact that the question of the amount to which securities may be issued is a vital matter and to watch it closely.

Motion agreed to and bill read the second time.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means and the proposed amendment thereto of Sir Henry Drayton.

Mr. R. A. HOEY (Springfield): I desire to state, Mr. Speaker, what I feel any hon. member of this chamber would state if he enjoyed the privilege that I enjoy at the moment, and that is that the members of this House and the people of this country must feel deeply indebted to the hon. member for Cumberland (Mr. Logan) for the instructive and inspiring report he has just submitted to the chamber dealing with the desirability of closer trade relations between the West Indies and Canada. The hon. member is a stalwart Canadian, and even though he had never delivered an address on his mission, even though he had refused to partake of those sumptuous repasts to which he referred, I feel nevertheless, that his very presence must have created a profound impression upon the people he met and proved of great value as an advertisement of the Dominion of Canada.

The present budget, Mr. Speaker, is the second introduced by the Acting Minister of

Finance (Mr. Robb) and the fourth brought down by the present administration. I am one of those who believe that if the faith of the Canadian people in political institutions is to be maintained, if constitutional rather than revolutionary methods of procedure are to be adopted, the policy of a government, and particularly the policies of a government as embodied in their annual budget, must reflect measurably at least the platform upon which they were elected and the promises given at the time of their return to power to the electorate. Of the four budgets introduced three bear about the same resemblance to the Liberal platform of 1919 as a photograph of the Prime Minister (Mr. Mackenzie King) reproduced thereon would bear to the physiognomy of the right hon. leader of the opposition (Mr. Meighen). There may be points of resemblance, but so far I have failed to discover them.

The budget of last year was described as a step in the right direction. It was heralded as the forerunner and the harbinger of other budgets that would sound the death-knell of protection and result in the eradication of every element of protection from the programme of the Liberal party. As such it was supported by many hon. members in this section of the House, and ultimately carried by an overwhelming majority. Since then several by-elections have been held. The people were consulted, and the people when thus consulted endorsed by large majorities, with one single exception, the action taken by the government at that time. Viewed in the light of present-day events I cannot help but describe the budget of last year, not as a step in the right direction, but a shuffle—the shuffle of a manacled man towards a pillar, against which he intended temporarily to lean, knowing that if he fell in his manacled condition he might not easily regain his feet.

I take the position that never in the history of this country was the need for tariff revision more apparent and its necessity more universally recognized than at the present time. There are those who contend that the tariff should be revised upwards in the interests of Canadian industry. There are many who contend that the tariff should be revised downwards in an attempt to relieve the primary producers, but the necessity for revision is conceded by all. It may be considered a patriotic duty to-day to point to closed factories in eastern Canada and to the unemployed people there, but why should a man be described as a howling pessimist when he refers to the abandoned farms and to the agricultural conditions prevailing at this time in western Canada? I have realized for some time the hopelessness of a western member in this House making any pronouncement on the tariff that would not be considered biased and prejudiced, and so I want to call to my support certain outstanding business men of this country who are perhaps better fitted than I, by training, by the experience through which they have passed and by the positions of responsibility they occupy in this country to make a pronouncement on the tariff issue. The first one I want to quote is Mr. Angus McLean of Bathurst, New Brunswick. A letter was sent to Mr. McLean by the secretary of the Manufacturers' Association, Maritime provinces branch, and in reply to that letter Mr. McLean is reported as follows:

> We find that almost invariably the Canadian manufacturers charge the Canadian consumer the foreign price plus the protection they enjoy under the tariff. Until the Canadian manufacturer is brought to realize that this is taxing the consumer in the most unfair way and changes his ways we are going to have to struggle and work hard to carry on business in the Maritime Provinces. Our chief products are from the farms, forests, mines and seas and we must find a market for these products outside Canada.
>
> What we must have to become prosperous is an opportunity to buy our requirements cheaper than we now can do under a protective tariff; and, next, we need broader markets for the things we produce. We cannot get this broader market in Canada for two reasons. First, owing to our geographical position we cannot reach the Canadian markets where the chief consumption takes place, as our railway freight rates are too high, and, secondly, every part of Canada produces goods similar to our own and is also looking for a market for them.

And he concludes with this very pointed observation:

> The Canadian manufacturer who makes goods for the Canadian trade should stand on his own legs now and he should be able to do so if ever he will. There is absolutely no danger of the Canadian consumer buying foreign made goods if he can buy the home-made article as cheaply and as good.

The next authority I desire to quote—and this statement was quoted only in part by the hon. member for Northumberland (Mr. Snowball), who left out the best part of it—is Hon. F. B. McCurdy, former Minister of Public Works in the cabinet of my right hon. friend (Mr. Meighen). He says:

> And let me speak of the so-called National Policy, or system of protection, under and by virtue of which it is certainly true that the manufacturers of Ontario and Quebec have fattened and grown rich, even although they are now passing through a lean period.
>
> The mass production at the large industrial centres has driven to the wall the modest manufacturing establishments of this province, whose failure was the signal for the mass producers to raise their prices to the utmost limit permitted by the tariff. It has brought to Canada in 25 years the branches of 700 American manufactories, of which, however, the first has yet to be located in these provinces. It per-

mits an automobile industry that can export 60,000 motor cars in a year to foreign lands in competition with the States, while soaking consumers in these provinces and elsewhere in Canada from 50 to 60 per cent more than duplicate cars sell at retail in the United States—very fine, perhaps, for the Windsor and Oshawa districts where cars are made, but economic death to the people who pay.

He recognizes that the Maritime provinces and the west are handicapped and injured in exactly the same way by such a tariff policy. Neither can benefit by it because they must market their products abroad for the most part. Referring to the central provinces, he says rather bitterly:

"They do not need our beef, cheese, butter, eggs, lumber or fruit, and we must send our produce to other lands: potatoes to Cuba, fish to Brazil and the Mediterranean, lumber to foreign lands, and apples to England, all to be sold in competition with the world, and therefore at low prices, in order to provide the dollars wherewith to pay for goods from central Canada manufactured and sold to us behind a tariff wall, which keeps out competition. The tariff arrangements of the Dominion are naturally made to suit the centres of greatest population and no consideration is given to our needs."

"What we need, if we would thrive, is the opportunity to live our own lives, to develop our own resources and to increase our own culture under fiscal arrangements that are suited to our needs, that will ensure us a square deal, so lacking in the cumulatively unfair Canadian fiscal history of the past fifty years."

The third statement I want to quote comes not from the Maritime provinces but from the city of Montreal; for truth does occasionally come out of Nazareth. Mr. F. P. Jones, president and manager of the Canada Cement Company, in an address delivered before the Commercial Society of McGill University on January 22, expressed certain views which it will interest the House to hear. Mr. Jones does not belong to the Progressive party nor is he a supporter of it. He does not belong to western Canada but is a resident of the city of Montreal; and if there is a more successful business man in that city than Mr. Jones I have so far failed to meet him. On this occasion he is not discussing the tariff from the standpoint of a politician but from the standpoint of a successful Canadian business man. I have heard him use stronger language with regard to the present tariff than he uses here, but the words I shall quote are sufficiently strong for the purpose I have in mind.

I want to say that I am not going to attempt to discuss free trade versus tariff, and am not going to discuss tariff from any political standpoint, any remarks I may make about tariff, I think can be applied equally to our present government, its predecessor and all Canadian governments before that.

My contention is that if we are to have a tariff, and we have one in Canada, we should only have it for two objects;

1st. To produce revenue, which unfortunately in this country with our debt we very much require,

[Mr. Hoey.]

2nd. To employ labour and develop the country.

They are the only two logical reasons for a tariff, and if the tariff will accomplish these two objects, it will be all that it was ever intended to do.

Does our present tariff accomplish these two objects? I contend gentlemen that it falls far short,—I contend it does not even attempt to, and when I speak of the tariff, I am not speaking of the Mackenzie King tariff alone, but of the Canadian tariff as it is, and has been for years back.

I think to-day's tariff has been made by persons running to Ottawa and expressing their views, and the result is the tariff has been framed, not to produce revenue and employ labour, but to meet the views as expressed in Ottawa from time to time by different deputations.

Over 80 per cent of the goods which under our present tariff come in free, are free only to a privileged class, and not free to the people of Canada.

May I just pass on another brief quotation from a gentleman whose name is not unknown in this chamber and throughout the Dominion of Canada.

Mr. MEIGHEN: Before the hon. member does so would it not be fair to tell the House what Mr. Jones's opinion is?

Mr. HOEY: I intend to quote from Mr. Jones at greater length as I proceed. Now, Mr. Henri Bourassa in a recent statement has this to say:

We, of the east, should cease to regard the western provinces, as in days gone by England looked upon her colonies; profitable fields of investment, trade and exploitation for the parent-state.

In that light, some means should be devised to check the exeessive concentration of wealth and capital in a few cities of the east, and the practical control of all institutions of credit by two or three banks.

I wonder if I might add to these quotations my own opinions with regard to the tariff. Year after year I return to western Canada wondering if some compromise cannot be worked out, a compromise that would be measurably equitable to all sections of this Dominion. But when I come in contact,—when I come into close grips,—with western conditions, when I know the handicaps under which western agriculturists are labouring, I am forced to the conclusion that a compromise cannot be effected without encountering great, shall I say almost insurmountable, difficulties. The western agriculturist to-day is confronted with certain natural handicaps the effects of which we can never hope to overcome. There is first of all the long winter season which means substantial dwelling houses, substantial outbuildings, expensive clothing to save him from the rigours of the western winter. Apart from the long winter, there are periodical crop failures. We have had them in the past, we must expect them in the future; in fact we cannot avoid them. I make the statement that if the western agriculturist was

assured of an annual good average crop, I think he could make progress and perhaps make money under almost any fiscal policy you could evolve; but we have no such guarantee. Then there are the ravages of drouth, rust, grass-hoppers, hail, early frost and a hundred and one other things that might be mentioned. These are natural handicaps from which we cannot detach ourselves. And when I grasp their significance and attempt to understand what those natural handicaps mean, I am forced to the conclusion that if agriculture in western Canada is to be re-established upon a profitable basis, then the artificial handicaps must be reduced to the irreducible minimum. I make that statement because I remember that only one-third of our agricultural land in western Canada is yet under cultivation, and I remember also that we produced on the western plains in one season alone over 400,000,000 bushels of wheat. If western agriculture was re-established upon a profitable basis, and we could double the output in that country—if instead of having 400,000,000 bushels we had 800,000,000 bushels—I want you, Sir, to realize the effect that that would have on the purchasing power of the Canadian people and on our railroads; and it seems to me that unless rapid development takes place there, it cannot take place in any other section of the Dominion. The fact that the leader of the official opposition (Mr. Meighen), the hon. member for St. Lawrence-St. George (Mr. Marler), the hon. member for Fort William and Rainy River (Mr. Manion) and other hon. gentlemen recognize that for the time being at least our present fiscal policy is imposing burdens upon the primary producers, is in my judgment an indication that we have taken a real step forward towards the solution of this problem.

Now, what are the two chief reasons for inaction in the revision of the tariff schedules this year? Well, the first reason that I anticipate we shall hear from the government benches—when some member of the government breaks the long silence—will be from the consideration of revenue; we shall be told that they cannot revise the tariff because it would impoverish the financial resources of the country. Let me quote again from the address delivered by Mr. Jones on the occasion to which I have already referred:

> From a revenue standpoint our tariff is a complete failure. I am not going into details, but our importations into Canada, in round figures, are a billion dollars per year. In 1921, our imports reached $1,240,000,000, in 1922 they dropped to $747,000,000, in 1923 they were $802,000,000, so that they are now on the up-grade. In 1923 the revenue produced from customs was $130,000,000. Four-tenths of the imports come in free, or practically free; one-tenth bear a rate of duty of 5 per cent; another tenth a duty varying from 7½ to 12½ per cent; the balance, the remaining four-tenths or practically $400,000,000, produce practically all the revenue that is produced by our present tariff, and the rates of duty vary anywhere up to 40 per cent.

Mr. Jones goes on to advocate what he calls a uniform tariff not only on manufactured goods entering this country, but on raw material as well, which revision, he claims, would bring an added amount of revenue into the treasury of approximately $120,000,000. But he has this to state further:

> Does our present tariff give labour a fair opportunity? Does it give a uniform rate of protection on labour employed? Does it increase the cost of living to the detriment of the poor man in favour of the rich man? All specific duties as we have them put an unfair burden on the poor man as compared with the rich man. Take tea, for example. Tea has a duty of 10 cents a pound. You can buy tea from 50 cents to $1 a pound in Montreal to-day. When the poor man drinks tea he probably pays 50 cents a pound for it, therefore he contributes 20 per cent of the value of what he drinks to the revenue of the country. When the rich man drinks tea he probably drinks tea worth $1 a pound, he therefore contributes 10 per cent of the value of what he drinks to the revenue of the country. The same thing is true of figs—

And I should like the Acting Minister of Finance (Mr Robb) to keep this in mind when he is negotiating a trade treaty with the Australians:

> The same thing is true of figs, dates, raisins, currants and all goods which carry a specific duty, they are for the benefit of the rich man in this country rather than for the benefit of Canadians as a whole.

I do not think that any serious-minded Canadian will contend to-day that the tariff cannot be revised in a manner that will add to rather than subtract from the revenues of the country. The second objection to tariff revision that I am anticipating from the government benches—

Mr. ROBB: Mr. Speaker, before my hon. friend leaves that part of his argument, would he mind telling us, if he is speaking for the Progressive party and if he approves of Mr. Jones's policy as described?

Mr. HOEY: Mr. Speaker, I am speaking for no party. I am speaking as an individual in my own humble way trying to find a solution for some of the problems confronting the Canadian people in this crisis.

Mr. ROBB: Well, as an individual, does my hon. friend approve of Mr. Jones's policy?

Mr. HOEY: When the government has declared just what their position is in regard to Mr. Jones's policy, I will be ready to de-

clare mine. But I will state now without hesitation or equivocation that Mr. Jones's policy would mean an immeasurably better tariff than we have at the present time. The next objection that will in all probability come from the government benches is that which relates to the establishment of a tariff board: a tariff board that will be set apart, the members of which are to obtain information with respect to the tariff schedules, submit the information to the government, and the government will act in the light of the information thus obtained. I want to put a question to the Acting Minister of Finance. When this tariff board is appointed, is he going to ask them to submit information showing how the tariff can be revised on the principle of protection or on the principle of revenue, and if not, how can they act?

Mr. ROBB: The tariff board will report to the minister representing the government of the day, and the government of the day must take the responsibility of submitting to parliament what tariff changes they consider best in the interests of the country.

Mr. HOEY: I had considerable sympathy for the members of the tariff board prior to that answer on the part of the Acting Minister of Finance; I have even more sympathy for them now. Of all the proposals brought down by this government during its existence, this, to me, is by all odds the most objectionable. Here we have a tariff board that will review industry in this country. Here is an industry with up-to-date machinery, with capable management. Side by side with it is another industry with archaic and obsolete machinery, and inefficiently managed. How is the tariff board going to determine what protection both industries need in order to enable them to manufacture profitably? The acting minister must know that there are violent fluctuations to-day in the prices of raw material, violent fluctuations in the prices of cotton. Every business man knows that these violent fluctuations cannot always be reflected in the wholesale or retail prices. And not only that; this board, I presume, is not going to have any power over the tariff schedules of other countries. Other countries may reduce their tariff schedules against us or impose higher duties against us, all of which will exercise a profound influence upon Canadian industry. Nor is that all. I referred to crop failures in western Canada. Western Canada may have a crop failure in a given year that will reduce by two-thirds the purchasing power of the western Canadian people, and that being the case, the output of those factories enjoying protection must of necessity be curtailed in proportion. I object to this tariff board because it indicates, if it indicates anything, the triumph of the Conservative policy in this country

Mr. MEIGHEN: Hear, hear.

Mr. HOEY: If there is any hon. member in this House who should rejoice, it is the leader of the official opposition (Mr. Meighen). Why, this tariff board is going to rivet forever on the backs of the Canadian people the principle of protection. This tariff board is always going to lie on the lee side of public opinion. It is going to be a smoke screen behind which and in the midst of which governments are going to seek protection—I do not mean protection in the orthodox sense, but protection from the wrath of an aroused public. The acting minister who brings down such a proposal as this is, in my judgment, comparable to the man who would take shelter behind a cobweb to save himself from the violence of a prairie blizzard. I am convinced that this proposal to establish a tariff board and to rivet the principle of protection on the Canadian people will be resented by business men in this country because it is wholly impracticable, nebulous and meaningless; and will be resented by the agriculturists, the primary producers of this country, because they know from experience in the past that they have not obtained relief from the establishment of such boards.

Mr. ROBB: Before my hon. friend leaves that: a few moments ago I answered his question and stated that the tariff board would make inquiry and report to the government of the day—to the Minister of Finance of the government of the day—and that he would be responsible for such tariff changes as might be submitted to parliament. Suppose, for instance, my hon. friend was the Minister of Finance and the tariff board reported to him, would it mean that the tariff would be increased?

Mr. HOEY: Not necessarily. I take the position that such a board is wholly unnecessary. You cannot obtain the information that the Acting Minister of Finance is anxious to secure. Are the members of this board, for example, to have access to the income tax returns? The acting minister has access to them now, if he desires to avail himself of the opportunity. I object to it because it is superfluous. What are we paying our cabinet ministers for? Where has the theory of responsible government gone to? If the government wants more information on the tariff schedules, why not constitute the Solicitor General and the Secretary of State, who are

not overburdened with work in their respective departments, into a tariff board and set them apart to study the tariff schedules and submit to the Acting Minister of Finance the information that is necessary before a revision can take place?

The third objection to the tariff revision that I anticipate is that more drastic revisions should not be undertaken—in the language of the Prime Minister—until we have an opportunity to see how the last revision works out, what effect it is going to have on the industries of this country. Well, we have that information already; we do not require a board to tell us what happened to the industries that were most affected by the last revision. The Minister of the Interior (Mr. Stewart) has told us that the farm implement industry for the first time in many years paid a dividend this year of $68,000. I cannot see, if the revisions of last session were followed with such immediate and such beneficial results, why the policy has not been continued and carried out in the present budget.

I want to turn from this aspect of the discussion to deal with a statement made during the course of this debate which perhaps made a more profound impression upon my mind than any similar statement that has been made since my entry into this House. It was made by the ex-Minister of Finance (Sir Henry Drayton), and I want to congratulate him on the delivery of that speech; in my judgment it was the best speech that he has delivered during the life of the present parliament. He dealt with France; he compared France with Great Britain. I will quote his words in a moment or two. But if the conditions he portrayed in France can be traced to protection and the conditions he portrayed in England can be traced to free trade, then it seems to me, Mr. Speaker, that the time has come in this country for us to review very carefully and very minutely the arguments of the protectionists in the light of this new experience that has come to us. France, that played such a heroic part in the greatest crisis in human history, has now, according to the ex-Minister of Finance, emerged triumphantly from that crisis, and her emergence can be traced almost wholly to her protective policy. It may not be just in order for an Irishman to reprimand an Englishman for his unfairness to the Mother Country, but even at the risk of being considered somewhat unconventional I am afraid I will have to attempt the task. The ex-Minister of Finance abhors "isms"; they are to him anathema; they are the abomination of desolation spoken of by Daniel the Prophet—that is, all "isms" save Meighenism. Manufacturers such as I have quoted may dissent; agriculturists may rebel; the electors may remain stolid; by-elections may be lost; but the ex-Minister of Finance remains immovable. In the language of the new patriotism he exclaims: Give me protection or give me death! Speaking during the course of this debate, he said:

> Following out that principle of "never mind about employment," we see that labour that is fortunate enough to function to-day has strapped to its back the burden of 1,200,000 workers who unfortunately cannot find employment. There is the fruit of free trade. Go across the channel; just take the short trip to France and see what we find. Who will say that the land of the Mother Country is not good land? Who will say that her workers are not efficient? Who will say that her bankers are not capable? Who will say that her manufacturers, with their wits sharpened by "free trade, free trade, free trade," are not competent? Well, just take the little twenty mile trip to France and see the difference. On the one hand, doles, unemployment, want, plus a high cost of living; on the other hand, employment, plenty of it. Why, following the Armistice, and down to the first of January, 1924, France has received, provided with work and assimilated one and a half million immigrants. When I was there last summer she was receiving workers at the rate of 6,000 a week and there was still a lack of labour in the mines and for agriculture.

Now the words to which I should like to direct the attention of the House are these: "There is the fruit of free trade," and the word "agriculture" in the last line of the quotation. I wonder if the ex-Minister of Finance was altogether fair. Without attempting to make any invidious distinctions, but only in an attempt to determine just what the actual facts are, let us look at the war costs of these nations. In an Analysis of War and Post-war Finance, issued by the Bankers' Trust Company of New York and Paris—there were no Britishers concerned in the issuance of this report—a table is published showing the relative cost of the Great war to certain nations which took part therein. The table shows in each case the gross cost per head of population, and the percentage of national wealth in United States dollars at pre-war rates of exchange.

Country	Cost per capita	National wealth per cent
Great Britain	$524 84	34.49
France	280 20	19.36
Italy	124 59	20.59
Russia	44 01	13.11
United States	176 91	8.67
Austria-Hungary	108 76	18.13
Germany	292 57	24.71

It will be seen, Mr. Speaker, that there is a great disparity, first of all, in the war costs of the two nations compared by the ex-Minister of Finance. Let us look now for a moment at the taxes that are being paid by the two countries.

Sir HENRY DRAYTON: Has the hon. gentleman covered in that the costs of devastation and reparations? I do not think he has at all.

Mr. HOEY: I will come to that. I want first to look at the taxes that are being paid in the two countries.

Sir HENRY DRAYTON: That is another question entirely.

Mr. HOEY: I will take that question up now if the hon. member desires but I have my remarks in a kind of logical sequence, and would like to deal with the taxes first.

Mr. Snowden, Chancellor of the Exchequer, in reply to a question in the British parliament, gave the following figures of taxation per head in some of the leading countries of the world. Mr. Snowden added:

> International comparisons of this nature require to be used with great caution owing to the differing national wealth, financial systems, and social and economic structure of the countries compared.

The Chancellor of the Exchequer further pointed out that the figures for Germany, United States and Canada show the taxation to cover expenditure of the central government only, and do not include the expenditure for the states, for which information is not available. Let us look, then at the taxes:

Country	1913 or 1913-1914 (Actual) In Sterling at par	1923 or 1923-1924 (Estimated) In Sterling at par
United Kingdom	£ 3.11.0	£15.18.0
France	3.7 .0	6.18.2
United States	1.7 .11	6.14.10
Italy	2.2 .8	3.6 .11
Germany	1.10.8	4.1 .4

Next are the figures for the Dominion of Canada. Our taxation in 1913-1914, when our good Conservative friends were in office, was:

	1913 or 1913-1914	1923 or 1923-1924
Dominion of Canada	£3.8.2	£7.19.8
Australian Commonwealth	3.8.1	8.1 .9

You will observe that Australia's taxation to-day exceeds ours.

Sir HENRY DRAYTON: Would my hon. friend tell me how much of that is Dominion taxation, how much provincial, and how much municipal?

Mr. HOEY: I explained that Mr. Snowden points out that in the case of Canada, the United States and Germany, the taxation given is of the central government only. The figures for South Africa and New Zealand are as follows:

	1913 or 1913-1914	1923 or 1923-1924
New Zealand	£6.3.0	£12.5.3
South Africa	1.9.0	3.9.11

[Mr. Hoey.]

This is interesting in view of the statement made by the Minister of Justice during the budget debate of last year, when he claimed that the taxation of this country was the lowest perhaps in the world, certainly the lowest in the British Empire.

The ex-Minister of Finance is anxious to know if the figures I have given include reparations or any moneys paid to France to compensate for the devastated area. Some time ago, during this debate, someone made the statement that Germany was either unwilling or unable to pay. The Reparations Commission issued in July, 1924, a table showing the amount paid by Germany in reparations since the armistice, the total for the different allied countries paid in cash and deliveries in kind, as follows:

Great Britain	£64,876,400
France	86,230,050
Belgium	85,784,250

So that France has received a greater amount, according to the Reparations Commission, from Germany than has Great Britain.

Sir HENRY DRAYTON: Does my hon. friend know what proportion of the reparation damages that amount represents?

Mr. HOEY: I think it amounts to considerably over one-half.

Sir HENRY DRAYTON: I am sorry to tell my hon. friend that as a matter of fact it is less than one per cent.

Mr. HOEY: I will read this statement:

> Payments already made for the reconstruction of war damage of all kinds amount to 98 billion francs, and it is reckoned that another 84 billions will be necessary to complete the cost of compensation and reconstruction. Under annex V of the treaty, Germany also undertakes to deliver to France 7 million metric tons of coal annually for ten years, and to make good any deficiency due to war causes in the production of coal in the department of Nord and Pas de Calais. The most important manufactures are of metals, watches, jewellery, cabinet-work, carving, pottery, glass, chemicals, dyeing, paper making, woollens, carpets, linen, silk, and lace. Glass manufacture and pottery are also important, and the sardine fisheries and the culture of oysters are of a source of wealth.

So that according to the official statement of France reproduced in Whitaker's Almanack, page 785, over one-half the reparations have been paid.

Sir HENRY DRAYTON: I am afraid my hon. friend is very much astray according to the last report which I have. However, I do not wish to delay him.

Mr. HOEY: Now, let us look for a moment at the obligations of the two countries.

Mr. ROBB: Would my hon. friend allow me; it is only for information; he has made a study of this matter: As he knows England collects 26 per cent on the amount levied on imports into Germany applied to reparations. Can he tell us to what extent that is represented in the amount which has been paid?

Mr. HOEY: That would undoubtedly be included but I am sorry I have not got the figures.

Mr. ROBB: My hon. friend does not know to what extent?

Mr. HOEY: I am sorry I do not. Now I will read a statement showing the obligations of France and Great Britain to the United States:

Obligations of France and Great Britain to the United States

Great Britain	$ 4,630,500,000
Interest accrued and unpaid as of last interest paying dates. Great Britain	Nil
Interest heretofore paid Great Britain.	425,700,271
France—obligations	3,340,606,377
Interest accrued and unpaid	576,719,598
Interest heretofore paid	190,671,548

Now let us look for a moment at the loans made by Great Britain to some of the other countries who took part in the Great war:

Loans to Allies and Dominions

The amounts owing by the dominions and allies on March 31, 1924, were:

War loans—	
Dominions—	£
Australia	89,271,000
New Zealand	29,189,000
South Africa	11,884,000
Other dominions and colonies	1,146,000
Total	131,490,000
Allies—	£
Russia	722,546,000
France	623,279,000
Italy	553,300,000
Serb-Croat Slovene Kingdom	28,481,000

It may be interesting to know in view of these loans upon which no interest is being paid what Great Britain is attempting to do with her budget.

In 1921-22 the British budget showed a surplus of £101,516,000. In 1922-23 the British budget showed a surplus of £48,329,000. I have the budget figures for 1924-25 before me. It shows a reduction but the estimated surplus is £4,024,000.

Mr. CALDWELL: Before we get away from Great Britain's loans will the hon. member tell us if anything has been collected, either in interest or in principal, on the loans Britain made to her allies.

Mr. HOEY: I should not like to be dogmatic but my judgment is at the moment that nothing in the way of principal or interest has been paid.

Sir HENRY DRAYTON: There is but one exception, Poland, as I recollect—a very small proportion.

Mr. HOEY: I want to quote briefly from an article which appeared in the Saturday Evening Post of two weeks ago by Mr. Garet Garrett dealing with conditions in France:

On the state of visible and audible facts, the French people, who idolize reason, are suddenly very difficult to comprehend. What controls them is an event of the mind. It is not an idea; they seem unconscious of it. From this arises the complex probability that they do not comprehend themselves.

The three principal physical facts are these:

First, since the war, their ancient power of agriculture has declined. Yet one would have expected this to be the first power restored by all means.

Second, since the war, their industrial power has increased. It is now greater than ever before.

Third, the apparent economic prosperity of France is the first wonder of Europe.

It cannot be that the decline of French agriculture is owing to the scars of war. The scars are deep. Emotionally and politically, they are deep. Physically, as touching the product of the fields,

Nevertheless it is clear that France, hitherto potentially self-sustaining in food, with a precious economic equilibrium between industry and agriculture, has set her feet in a new road. If she pursues it, then more and more, like England, she will buy her food, exchanging for it the products of her fabricating skill and artistry.

It is the immemorial way of empire, already old in the time of ancient Greece.

Meanwhile, of course, the price of bread is rising, to everybody's wonder, and the French parliament, in the silly way of parliaments, votes 100,000,000 francs to make the price behave.

The food imports of France now are greater than before the war, amounting to nearly 4,500,000 tons annually; her exports are correspondingly greater of such things as wines, perfumes, soaps, silks, cotton and woollen textiles.

The spectacle is pleasing. It makes one feel very genial. And one asks what is wrong. Why is it said there is anything wrong? Is prosperity not its own witness? The people are better off. Therefore their new way is right. The method pays. They can afford to buy their food.

Yet there is a grotesque contradiction. What is wrong is intangible. You do not see it.

Notwithstanding the material prosperity that is the envy of other countries; notwithstanding the higher standards of living, the greater well-being of people, the brilliant trade record, the increase of industrial power of which the translation is what you see—despite or because—the financial condition of France is desperate.

Since the war the value of the franc has fallen from eighteen cents to less than five, and although it has recovered a little, nobody can imagine that it will ever go back to where it was. The government's credit is low and running out. Its bonds sell at a discount even among its own people; and how to balance the state budget—that is, how to make income equal outgo and bring the state back to a condition of solvency—is a problem of such difficulty that there seems no immediate solution. The rich have been discovered trying to get their capital out of France because they think it

will be safer in American dollars or Swiss francs, and the state has been hindering them by edicts of embargo. If you are caught taking money out of France, above a modest minimum for travelling expenses, you are legally liable to be stopped, Frenchman or foreigner. The government owes more than it knows how to pay. It keeps going by postponing the day, by giving new bonds for old ones, by straining its credit dangerously, and no one may say where the breaking point is.

Americans spend annually in France, frivolously, a sum of money more than enough to pay the principal and interest of the French debt to the United States treasury. It is probably not less than $200,000,000.

I cannot discern in French conditions to-day anything that would justify me in believing that France has been permanently helped by increasing her tariff schedules, certainly not helped to the extent that the remarks made by the ex-Minister of Finance would indicate. But if you say there is prosperity in France and unemployment in England—and there is—and if the ex-Minister of Finance had simply stated there is unemployment and destitution in England and there is prosperity and no unemployment in France, I for one would not challenge the statement. But in view of the fact that these conditions prevail, you ask why is there unemployment in England and why is there comparative prosperity in France? I think the figures I have given will throw some light on the subject. But I do not think anybody will question the authority of Sir George Paish, who is at present, if I mistake not, touring this country and is one of the world's most renowned statisticians and economists. Speaking of Great Britain, in summing up the situation—and I know of no greater authority—he has this to say in the Daily Mail Year Book:

Great Britain's Position

The financial position of Great Britain is one of great strength, in spite of all that has happened since 1914. Prior to the war, Great Britain had supplied other nations with no less than £4,000,000,000 of capital and banking money, and during the war she more than paid her way. It is quite true that she borrowed nearly £1,000,000,000 from the United States, but on the other hand she lent some £2,000,000,000 to her allies and Dominions. It is also true that early in the war she disposed of a large part of her American securities, but since the war she has lent to her colonies anl to foreign countries another £500,000,000, and this new investment has replaced the securities previously sold. Hence Great Britain's total foreign investments at the present time are about £6,000,000,000, while her foreign indebtedness is rather less than £1,000,000,000. Moreover, she is entitled to receive from Germany 22 per cent of the reparation payment. Were Germany able to pay the sum fixed, this would give Great Britain another £1,400,000,000 on foreign account, making a total sum owing to her from foreign and colonial countries of more than £7,000,000,000. After deducting the sum of nearly the £1,000,000,000 owing to the United States, the net sum is still £6,000,000,000. It is, however most improbable that she will receive the whole of the sums due to her from Germany, Russia, France, or Italy, but if these were entirely written off Great Britain would still possess £4,000,000,000 of good foreign investments, against which she would owe to the United States rather less than £1,000,000,000.

And then he touches what is to my mind the crux of the situation:

The World's Bad Credit

It may be said that while the war has injured Great Britain the injury is not really serious. The great injury from which the British people are suffering is not their loss of capital in consequence of the war, but the bad credit of the whole world, which is preventing them from granting anything like the credits they are capable of granting, or of selling the goods in anything like the volume they are capable of producing, and which they desire to produce and to sell. The recovery of Great Britain from the war depends upon the recovery of Europe and the world. When Europe recovers Great Britain will recover, and will be able to lend to Europe, to South America, and to her own colonies quite as much as she has been able to lend in the past. My calculation is that, when the world's credit is fully restored, and world trade expands as it should expand, Great Britain will be able to produce a far greater amount of goods than she has ever produced, and will be able to grant a far greater amount of credit to foreign and colonial nations year by year than she was able to grant in pre-war days. Great Britain cannot, however, grant the credit which foreign nations need until the world situation is very different from what it is to-day, until, indeed, real peace is restored. Inasmuch as the world's mentality is gradually changing from a war-like to a peaceful condition, and the nations are beginning to pursue a peaceful policy, the day does not seem far distant when conditions will improve, and when consequently Great Britain will be able freely to grant credit again, and to sell all the goods she is capable of producing.

The hon., the eloquent and ever genial member for Fort William and Rainy River (Mr. Manion) referred to that "magnificently wealthy" nation, the United States. I quoted to-night the figures of the cost of the war to Great Britain and to the United States. The hon. member for Fort William and Rainy River whose very history proves he has no desire to do the Old Country an injustice, spoke of the United States as an eminently wealthy nation, and the first creditor nation in the world; but in my judgment he was scarcely fair and was dealing very loosely with terms. I desire to quote again, Sir George Paish where he says:

On the other hand the war has brought into existence a new lending nation, one whose potential powers are very great—the United States. Since 1914 America has supplied foreign nations with about £4,000,000,000 of capital. Of this total about £1,000,000,000 is now of doubtful value. Nevertheless, to-day the United States is second only to Great Britain as a great creditor nation.

Mr. McMASTER: Not bad for a country ruined by free trade.

Mr. HOEY: During this debate statements were also made in an attempt to show

that American industries, French and German industries, were driving the industries of Great Britain into the sea. I do not know if that was the exact statement he used but that was the substance of it. The hon. member for Fort William and Rainy River in reply to a question some time ago made this statement:

I am not saying that it favours the manufacturer. England is a free trade country and the fact that they do not favour the manufacturer is one of the reasons that to-day the manufacturers of England are finding it difficult to carry on their business because protectionist Germany, the United States and France are dumping their stuff into England. That is the reason the manufacturers are being put out of business.

I have here a statement made by Sir Charles W. Macara on the cotton industry, and I do not think anyone will question his authority to speak on that industry, in Great Britain at least. Referring to the depressed condition of the industry at the time he spoke, he said:

I have shown again and again that Lancashire has nothing to fear in the matter of foreign competition, given an ample supply of the raw material and control of the output of yarn and cloth scientifically, to meet the vicissitudes inseparable from a great international trade.

I should like to direct the attention of the Acting Minister of Finance (Mr. Robb) to the next statement, "It is all a question of proper organization":

At the time of writing, a telling object lesson comes to my notice. Two important American spinners and manufacturers, with whom I have been discussing cotton trade matters, inform me that it is still impossible to put down mills in America, even with the considerable reduction in the price of machinery and building, at less than double the cost of building and equipping mills in Lancashire, and Lancashire mills still cost fully double the pre-war rate. To this has to be added the further handicap that Lancashire operatives can spin finer and better yarn than is produced in America from cotton of a somewhat cheaper and lower grade than is used in the United States. These two circumstances combined must give Lancashire an enormous advantage in the markets of the world, especially when it is taken into consideration that America is, perhaps, farther advanced in the art of cotton manufacture than any other foreign country.

I quote that statement actuated by a two-fold purpose. In the first place I want to show that the Americans are not driving British industries into the sea; indeed the Americans are demanding to-day higher tariffs on cotton goods coming from Great Britain into that country. But Sir Charles Macara attributes that, not to normal trade but to the fact that there was a price war amongst the cotton manufacturers of England which led to a slaughter of prices and to a consequent demand for greater protection on the part of the American manufacturer. I have quoted the passage, I say, to show that the industries in Great Britain are not being driven to the wall in the sense that some people think. No one will doubt the authorities I have quoted, and I believe I have established that contention. In the second place, I have submitted the quotation to base a question upon it. How can we possibly hope to build up a cotton industry in this country to compete with the cotton industry of Great Britain, organized as it is there, without imposing upon the Canadian consumers for perhaps half a century an almost unbearable load? It is quite true that there are certain lines in which the Americans excel and in which perhaps in a sense the Britishers are not quite on the same level. But unless our manufacturers here endeavour to specialize I cannot see that they have a chance in the world in the next half century of competing successfully with the British manufacturers. The only possible way in which they could compete would be by lifting our tariff schedules up considerably higher than they are at the present time.

Mr. ARTHURS: Has the hon. gentleman any figures as to how many industries in Great Britain are protected under the Safeguarding of Industries Act?

Mr. HOEY: The Safeguarding of Industries Act has been abolished. I will tell the hon. gentleman this, that the cotton industry has certainly not been protected under the Safeguarding of Industries Act. Now, Mr. Speaker, I have taken up altogether too much time but there are just a few general observations I desire to make before concluding. I have been thinking for some time that it might be wholesome if we had brought down and submitted to the House a statement showing the entire obligations of the Canadian people—a statement, I mean, showing not only our federal obligations but our provincial and municipal undertakings as well, together with other obligations of an almost private nature. If we had such a statement as that one might well pause and ask who is the real owner of this country. And I am of the opinion that the submission of such a statement would shock the Canadian people, as they have not so far been shocked, into a sense of the absolute need for drastic retrenchment and economies in public expenditures, economies not only in the federal field but in the provincial and municipal spheres as well. I may be growing unduly pessimistic in my old age but I cannot help feeling that this young nation is losing its enthusiasm; I cannot help feeling that Canada at this juncture is losing nerve and showing evidence of drift. I do not know to what extent governments are respon-

sible for that condition; they may not be responsible at all. It may be that the Canadian people are suffering too much from government intervention, from government subsidies and doles and from government interference; and it may be that a temporary withdrawal of interference in a great many of these respects would throw the Canadian people back upon their own initiative and upon their own resources and would exercise a wholesome influence on the public life of the country. During the course of a speech delivered before a convention of the United Farmers held in Brandon some months ago, after I had attempted for an hour to evolve and outline a policy which I considered would be measurably equitable to all sections of this country, I incidentally made the statement that if the different sections of Canada could not be held together on a basis of justice I did not see why they should be held together at all. I do not know why that statement was broadcast from ocean to ocean. There was no doubt in my mind at that time that such a policy could be evolved; I never doubted that for a moment. But if such a policy is going to be evolved it will require courage; it will require men of exceptional and outstanding ability, men who will have to displace some of us even if they come into public life at tremendous sacrifices.

It seems to me that unless such men are prepared to make the sacrifices and give this country a lead, the outlook is far from promising. If such men are prepared to come in—and frankly I do not care whether they come in as Liberals or Conservatives or Progressives or members of the Ginger group, provided they are men of ability, courageous and fearless men, and patriotic in the truest sense of the term—if such men are available in this crisis, then I have no fear as to the ultimate outcome. As my concluding statement, Mr. Speaker, allow me to read into the record an excerpt from a speech delivered of Ramsay MacDonald, ex-Prime Minister of Great Britain:

> There will be no more grand political days, no more political giants, until politics is raised from being a hasty auctioneering scramble to being an expression of large hope and inspiring ideals.

Mr. HUGH C. McKILLOP (West Elgin): Mr. Speaker, the budget which has been brought down by the Acting Minister of Finance (Mr. Robb) is, to say the least, quite a complicated affair. From the great jumble of figures it is hard for the average taxpayer to tell how much the Dominion is in debt. In fact, if it were to be shown to the average citizen without his being told what it was, he would at once come to the conclusion that it was the very latest in cross word puzzles. Unfortunately conditions in this country today are very serious, much more so than the average citizen dares admit. When we think of the great amount of money going out of the country every year for goods that we can produce, when we look around and see so many industrial plants standing idle, so many working men without work, taxes going higher each year, expenditure increasing apace, new forms of taxation being invented so as to raise more money from the already overburdened taxpayers,—when all these things are considered, is it any wonder that the people are getting so restless and murmuring, "When is there going to be a stop to this? When is the burden going to be lightened? When is the economy that the Prime Minister was so fond of recommending before coming into office going to be put into effect?" This government has been in power for four years, and as yet there is no sign of economy. To-day over 2,000 industrial plants are closed down, thousands of unemployed are walking our streets, thousands of our working men with their families have left Canada to reside in the country to the south of us. All this I claim is wrong. The loss of so many working men is nothing short of a national disaster. While we all realize that agriculture is our basic industry, yet I contend that a satisfied working man is one of Canada's best assets; and further, I contend that there is not a more loyal or more law-abiding class of citizens than our working men, and it should be the duty of the government to give them every encouragement to stay here. I am convinced that it is not doles that the working man wants. All he asks is a square deal, steady work and wages that he can live on, raise his family and educate them for the battle of life. That is all the average working man asks, and surely it is not too much. Now, let me say that I hold no brief for bolshevism or bolsheviks. The working man that I refer to is the sincere and honest working man, a man who wants to give an honest day's work for an honest day's pay, and I am satisfied that 90 per cent of our working men belong to that class.

Since the debate began, Mr. Speaker, a great mass of figures has been quoted to prove arguments, and while I do not intend to weary the House further along this line, still I wish to express my very strong opinion that practically all our manufacturing industries need protection, and I propose to refer to two of them to emphasize this need. Take our boot and shoe industry. As is well known,

we have 190 boot and shoe factories scattered over the Dominion from the Atlantic to the Pacific, representing an investment of millions of dollars and employing thousands of hands in the manufacture and marketing of their goods. These factories have a very heavy payroll and spend a lot of money for raw material, and I think all hon. members will agree with me that they are a great asset to the Dominion. But, unfortunately for them, the tariff has been lowered to an alarming extent, allowing outside competition from countries where labour is so much cheaper and other conditions so unequal that our factories cannot overcome the handicap. I would draw attention to the fact that while our duty on shoes from the United Kingdom is only 15¾ per cent, British shoes going into New Zealand have to meet a duty of 28½ per cent, and into Australia a duty of 38½ per cent. Anyone will understand what this means to the Canadian manufacturer. It simply means that the Canadian duty on imported British shoes barely offsets the difference in wage costs alone, leaving no protection to the Canadian industry against higher costs of material, higher taxes and other factors. In this connection let me read a clipping from a publication of recent date dealing with this matter:

> Importations of British boots and shoes into Canada increased remarkably during the 12 months ended February last, as compared with the preceding 12 months. Figures issued by the Dominion Bureau of Statistics show that the value of British boots and shoes imported sprang from $663,455 in the 12 months ended February, 1924, to $1,053,078 in the 12-month period just concluded.

This is one result of the lowering of the tariff protection, and there is the further result that the whole boot and shoe industry is headed for bankruptcy unless the present unhappy conditions are righted.

There is another class to whom I wish to refer briefly—our vegetable growers, more commonly known as truck gardeners. This is a business that a great many are engaged in throughout Canada, and especially in the counties of Essex, Kent and Elgin, in the province of Ontario, where many thousands of dollars are invested in greenhouses and land suitable for the production of this line of produce. Owing to the difference between the climatic conditions of this country and those of the southern part of the United States, where vegetation is much earlier, the southern producer has a great advantage—that of earlier marketing. As a consequence, when our producers here are ready to market their crops they find the home market flooded with vegetables from the southern states. One result is that many of our producers cannot find a market for their produce at all, and another is that thousands and thousands of good Canadian dollars find their way to the south for commodities which are produced here a little later in the season.

I contend, Mr. Speaker, that these truck gardeners should have protection, and plenty of it; I am convinced that they need it. In this connection I remember reading of an interview between a deputation of onion growers from Essex county a few years ago, in Windsor, with the then Minister of Finance (Mr. Fielding) and the hon. Minister of Railways (Mr. Graham)—and by the way, I am sorry the Minister of Railways is not in his seat at the moment. The deputation was from the constituency of the Minister of Railways himself, and they asked that more duty be put on onions coming into this country. The answer of the Minister of Finance was: "It is not our policy to put more duty on anything, is it, George?" The Minister of Railways replied: "I did not say that in my election campaign." I presume from that remark of the hon. Minister of Railways that he gave the Minister of Finance to understand that in his election campaign he had made promises to the electors in this connection. Well, it was only one of a good many promises made by members of this government to be elected on, but soon forgotten. The onion growers are still waiting for the minister to keep his word and give them the protection they so manifestly need.

Since coming to this House, Mr. Speaker, I have at every session asked the government to put a higher duty on beans coming into this country. At present the duty is twenty-five cents per bushel, while on beans going into the United States the duty is $1.05 per bushel, I contend that this is not fair to our bean producers, and why the government persists in leaving this duty where it is is beyond me. If there is any good reason, I would like to hear it. If any hon. member of the government can tell me the reason, I would like to hear him explain why this duty is left year after year the way it is. I will wait a moment for an answer. As no answer is forthcoming, I will take it for granted there is no reason, and that the government knows the bean producers should have more protection.

I wish to give the House, Mr. Speaker, a statement which will show the quantities of beans imported into this country during the fiscal year ended March 31, 1924, and

the countries from which they came. It is as follows:

Country of origin	Bushels	Value
United Kingdom	31,354	$ 70,495
Hong Kong	4,411	8,243
Belgium	81,155	197,492
China	408	941
France	14,003	54,071
Hungary	2,033	4,118
Italy	320	789
Japan	119,765	279,154
Netherlands	1,607	3,515
United States	43,587	135,268

Making a total import into this country during the last fiscal year of 298,643 bushels of beans, valued at $754,086, at the small duty of twenty-five cents per bushel. Of this amount $279,154 worth came from Japan, a country where a labourer in the fields does not receive as much for two weeks' work as a man here receives for one day's work. Not only that, but owing to climatic conditions Japan can produce two crops to Canada's one, and I claim it is not fair to our bean growers to ask them to compete against a country where wages are so low and the cost of living so much cheaper than here. Last year the United States exported to this country beans to the value of $135,268, paying duty at the rate of twenty-five cents per bushel, while the Canadian bean grower has to pay a duty of $1.05 for every bushel he sends to the United States. Now, Mr. Speaker, I leave it to hon. members of this House if that is a square deal to the bean producers of this country. I say it is not; and further, I claim it is the duty of the government to right this wrong as soon as possible and to keep the home market for our bean producers. "The home market for our own producers" is the motto of the Conservative party. I think it was Abraham Lincoln who, when asked about free trade, replied, "If you buy in another country you receive the goods, the other country receives the money; but if you produce the goods in your own country and buy there, then you have both the goods and the money." If that was true as applied to conditions in the time of Lincoln, it also applies with equal force to Canada to-day. I am convinced that this country is suffering from too much outside competition and not enough development of our own natural resources. Just think it over; $700,000,000 going out of this country for supplies which to a great extent should be furnished in this country if our resources were developed and a duty put on goods coming in that would keep our home markets for our own products. And I might further add that this applies with equal force to any production that takes place in Canada.

[Mr. McKillop.]

I am a firm believer in protection that protects not only the manufacturer and the agriculturist, but also the consumer. I believe also in the appointment of a tariff board consisting of three members, one representing agriculture, one representing labour and one representing the manufacturers. I would want them to be free of all political influences, and to be equally just to all, and adjust the tariff from time to time so that all would reap the benefits accruing from it. I am convinced that in this way, and in this way only, Canada will become the great nation she was intended to be.

Mr. C. G. POWER (Quebec South): Mr. Speaker, though I have been a member of this House for a number of years I have never yet ventured to address it on the budget. I only do so to-night because by custom and tradition it is the time-honoured occasion on which his subjects and followers lay before the King their grievances before they vote the supply necessary to carry on his government.

I wish to congratulate the government upon the budget as brought down, not because there was a great deal in it, but rather because there was very little in it. We have arrived at a stage in our country's development when it behooves the government to make haste slowly, to proceed with prudence and caution. Admittedly, and undoubtedly, conditions in this country are not good. Trade is bad, business is bad, and whatever we may say, the state of our national finances is not good. We have not reached the stage where we can afford to tinker with the tariff. Last year we did make certain changes in the tariff, and there are some who think no very great good was done, but at any rate there is one very sure thing, no very great harm was done.

I agree to a large extent with what has been said by my hon. friend from Springfield (Mr. Hoey) in his admirable address this evening, that we need tariff revision, but as I said before, we must proceed slowly. The tariff is full of contradictions, anomalies and inconsistencies. It must be revised, and it must be revised by persons who have the time and the ability to study it, and make recommendations with regard to it which will be for the general good of the country. They must study the conditions of every trade and of every industry to see that these industries and trades may be carried on in the best possible manner, always having reference to the general welfare of the country. To that end the government very wisely, I think, decided to create a tariff board, not a tariff board which

would be independent of the government, which of its own initiative would decide what should be the fiscal policy of this country, for our constitutional system does not permit of any outside dictation. The revenues to carry on the king's government must be raised by the king's ministers, who must decide upon the policy which is to be followed in order to raise those revenues. This board, as I understand it, is to be of a purely advisory nature, a board which will study the conditions of industry, and having studied those conditions and having obtained the fullest possible information, report to the Minister of Finance, who then with the aid of his colleagues will frame the government policy and be responsible for it on the floor of this House and in the country.

My hon. friend from Springfield asks whether this board is to be instructed to base their recommendations upon the principle either of free trade or of protection. So far as I am concerned, Sir, I would tell the tariff board to pay no attention to the principle either of free trade or of protection. I would tell the tariff board to give us advice as to the conditions of each industry, irrespective of whether the policy of the government should be one of free trade or of protection. To my mind, Sir, there is no such thing as principle in the tariff. The tariff is only a question of opportunity, after all. Each industry must be judged on its own merits, and on the conditions of the country at the particular time the study is made. If the tariff were based on principle, how is it that in a tariff such as we have, admittedly protectionist, there are so many articles on the free list? If it is based on principle, how is it that there are some articles on the free list, and yet those very same articles are dutiable when utilized in some other industry? It seems to me, Sir, this is to a large extent due to the very thing which we wish to get away from by the creation of a tariff board—to government by delegation. Delegations from some particular industry, delegations representing interested parties, call on the Minister of Finance before the budget is to be made, and very often meet with a sympathetic hearing, and various articles are placed on the free list, or are made dutiable, irrespective of their relation to the rest of the tariff. This has occurred, I think, under high protectionist Tories and under tariff stability Liberals. I think both parties have been remiss in this respect. A tariff board can make a clean-up of the whole situation, and make our tariff consistent all the way through. We shall then eventually arrive at some sort of a policy to which we may at any rate for a considerable time be able to adhere.

We have heard a great deal in this House during the past year on tariff stability. I think it is admitted that this very same system of government by deputation and delegation has on many occasions done away with tariff stability, and the very men in this House who have been urging us to stick to the Laurier-Fielding tariff as a suitable tariff would possibly be the very men who some day, when it suited a particular industry in which they were interested, would come before the Minister of Finance and the government of the day and ask for tariff changes.

I hope that when this tariff board comes into operation it will make a study of the British preference. As I understand, from my reading of recent political history, the British preference perhaps has been a good thing, perhaps is a good thing now; I do not know; but it has been said, and perhaps with truth, that after all the British preference was only introduced by Sir Wilfrid Laurier in 1896 in order to show the Tories that he could be as loyal as they were. It may have benefited the country too, incidentally, but I think the principal reason was a political one. That reproach to the Liberals now having disappeared it might be well for this tariff board to look into it carefully and to see if certain industries were not injuriously affected by the British preference.

One of the only things of importance introduced in the budget was the increase of duty on slack coal. I think the government deserves congratulations on that point, and I hope the provision will be of some benefit to Nova Scotia. That province is going through a period of hard times, owing to high freight rates, prohibitive tariffs on the American side, and other reasons too numerous to mention. For years Nova Scotia has not obtained much profit from confederation. It is, in fact, one of the few provinces which were coerced into confederation. It has suffered patiently, courageously; it has not attempted to form sectional groups with a view to bludgeoning or blackmailing either of the political parties into granting it special favours. It has, as I said, suffered courageously and patiently without complaint; and now, at the time of its trial I think it is the duty, as it should be the pleasure, of the remaining provinces of Canada to treat it fairly and generously; to attempt, in so far as possible, to equalize its opportunities with those of other provinces and to allow it to derive the best possible advantage from the resources which nature has given it. It is to be hoped, however, that the

miners of Nova Scotia will profit, in some degree at least, by the increase of duty which has been placed on the products on which they labour. It would be a calamity, a catastrophe, if schemers such as Wolvin, and bullies such as McLurg profit in any way from what it intended for the benefit of the whole people of that province. I do not desire to-night to enter into a discussion of the merits or demerits of the miners' case or that of the Besco company in the warfare in which they are at present engaged. But let me say this: Owing to a turn of the wheel of fortune, or perhaps through mismanagement on the part of the military authorities, I found myself at one time a lieutenant in the third Toronto battalion. Drafted to us there were sixty or seventy-five Nova Scotia miners. What men from Quebec and from Nova Scotia were doing in a Toronto battalion, and why we were sent there I have never been able to find out; but all those seventy-five were among the bravest, the truest, the most patient, the most hardworking and the most courageous of the whole battalion. I cannot believe, Sir, that those men—those that are left of them—their brothers and their fathers have here in Canada become malingerers and bolshevists. I cannot believe that men who were so brave on the field of battle and were so ready to do anything that was asked of them would be to-day deliberately committing sabotage and refusing to do the work which they could do.

Another innovation has been introduced into this year's budget, and I hope a successful one, that of placing an export tax on power. There are a number of theories which have been evolved in this country in relation to the disposal of our natural resources. It is not for me to go into these theories and to discuss them here to-night. Time does not permit of that and I do not think the occasion is ripe for it but I will say this: It ill becomes a party which allowed the whole cost of the war to be borne by future generations when it could have taxed its own friends the profiteers when it need not have issued tax-exempt bonds, to say what those future generations shall do with the resources which Providence has put at their disposal. It ill becomes also the party which for the past few years has been preaching up and down this country that we are bankrupt or on the verge of bankruptcy, to prevent us from using those natural resources which we have in order to put us on our feet. As well tell a man who has been ruined in his business but has victory bonds in the bank, that he must not sell those bonds but must allow himself to go bankrupt. We should be allowed if we are on the verge of bankruptcy, at any rate to use what we have in order to place ourselves once more in a sound position. Furthermore it is hardly the time, when trade is bad, when the same party of which I have spoken declares that business is bad throughout the country, to dislocate industries such as those carrying on the exportation of pulpwood, of nickel, or asbestos, until at least such times as we have attained a certain state of normalcy. Then the occasion will be propitious to discuss whether or not the export of our natural resources should be prohibited. The government has decided, wisely I think, to profit to some extent by the use of these natural resources, and by placing an export duty on power a certain amount of revenue will be derived. I hardly think however the tax will affect the people of Canada and we will have found one means at least which potentially will become of great value to the Dominion as a whole.

I had intended saying a word or two in reference to the Petersen contract seeing that I was unable to obtain an opportunity of speaking when the matter last came before the House. I am glad to say that the Prime Minister has enlarged the scope of the committee to which this matter has been referred so as to permit any suggestion other than that contained in the Petersen contract to be advanced. I would here make one suggestion and it is this: Let the government instead of entering into a contract with Sir William Petersen use its own Canadian mercantile marine. Not to administer it itself; rather than do that I would be prepared to vote the Minister of Defence two or three million dollars to sink the ships; but let them give the ships to Sir William Petersen. Let him run the ships. Apparently he is a very good man. In that way we might break the combine and we would save seven or eight million dollars a year. There is no doubt to my mind that there is a combine and that it has been disadvantageous to this country. That it has injuriously affected our trade I think there is no doubt. It has, I am sure, affected the interests of certain Canadian ports, and among others the port and harbour of Quebec, which brings me to a matter which I hardly like to mention at this stage, but which I am forced to bring to the notice of this House since I have no other means at my disposal of drawing to the attention of the government this very urgent matter. For years, Mr. Speaker, as you are probably aware, the equipment and development of the port of Quebec has been made a species of political

football at the hands of all parties, of all shades and colours.

Mr. FORKE: Not the Progressives.

Mr. POWER: They have not had a chance yet. Since very early childhood I have listened to glowing reports of the future of this port, as to what was to be done by this or that party, or what should be done by this or that party. We have lived on promises and we have hungered for achievement. Let me say, Sir, that I very much fear that our situation has not been very much improved of late. I took part in the elections of 1904, 1908 and 1911. I fought the elections of 1917 and 1921, and in all these elections the principal if not the only issue was the best means of awakening Quebec from its age-long slumber.

Mr. MANION: Change sides.

Mr. POWER: We tried that and did not succeed. My hon. friend has changed sides. I will say for my hon. friend right here and now that if I do change sides I will not show the same bitterness towards my former friends that he displays.

Mr. MANION: I am not bitter.

Mr. POWER: These questions have been before the public of Quebec as long as I can remember, and hitherto no party has succeeded in giving us the satisfaction to which we consider we are entitled. The matter has now become more than a local issue. The development of the port of Quebec is a matter of national interest. Not only this, but the members of parliament, representatives of the people, representatives of the cabinet and the government, have pledged themselves to perform certain works and to do certain things for the harbour and should these promises not be fulfilled and should this work not be done, a feeling of distrust and disappointment will spread through our body politic, which will be disastrous not only to our province but to the whole of Canada. To my mind a promise made to the electorate should be just as loyally observed as a promise made to the ordinary man in the ordinary course of business. Promises have been made and these promises have not been fulfilled. One of the promises I made shortly after the last election was that if the present government treats the people of Quebec in the same fashion as the past government treated them I will not be behindhand in criticizing it as bitterly, as harshly and as severely as I have criticized any government, and this promise I intend to keep. We have been told time and again that legislation in this regard is to come down. We have waited, as I have said, for almost a century. There is yet time to repair the blunder and to put a little more energy into the plans and projects of the government. But the time is short, and unless legislation is brought down within the next few days or weeks, I am very much afraid that everything which has been done hitherto will be of no avail. The money which was voted last year will be wasted, and the people of the city of Quebec will be profoundly disappointed. I hope for the honour of the representatives elected for that city, for the honour of its representatives in the cabinet, and for the honour of the party to which I belong, that some means will soon be taken to dissipate the distrust which is in the minds of the people of Quebec.

To return to a more pleasant subject. I hear in the corridors and I read in the press that we are about to have an election. Why we should have an election I do not know, but apparently the newspapers think we should have one. I do not know anybody who really wants one very badly, and I do not know that the country wants one; nor do I know that the country would benefit by one. I do not see that we on this side of the House would obtain a sufficient majority to control as we would wish, and as for the hon. gentleman leading the official opposition, he cannot win; the Progressives cannot win, and as for the thirteen goody-goodies, it is a ten-to-one chance that they will be left at the post. So that, as nobody is very greatly interested in having the elections, it might be just as well to postpone them until another year, when perhaps the goody-goodies will be sufficiently organized to force an election, and they might win. The state of politics at the present time reminds me somewhat of an anecdote which I read somewhere. It related to the days of good King Charles. In those days there was no Ontario Temperance Act, there were no Good resolutions, no Brown resolutions, and apparently people lived a very simple and happy life. King Charles, according to his own people, "never said a foolish thing and never did a wise one." There was someone who expected to succeed to his throne, James, Duke of York. James was dour.

Mr. FORKE: A Scotchman.

Mr. POWER: A Scotchman, bigoted, narrow. One day he complained to King Charles that there was a plot against the king's life, Charles said to him, "Never mind, James, they

will never kill me to make you king." The same remark might very easily be applied to a certain quarter of this House. Lest my hon. friends the Progressives take heart and think they may be called upon to play the role of William of Orange, I will tell them right now that the monopoly of that colour happens to be in Toronto. I rather suspect too that they will be more likely to play the role of one whom they resemble somewhat in their overwhelming ambition and possibly from the circumstances surrounding their birth—the Duke of Monmouth. And I warn them that they have a very fair chance of suffering the same fate and of being massacred by Kirk's Good Lambs. Seeing that such is the situation, I think we ought to have a quiet and peaceful session; we should not allow the fact that outside there is considerable noise of an election to disturb our equilibrium or the even tenor of our ways. We are a quiet parliament; we are doing very nicely; and there is no necessity for upsetting things. Let us by all means carry on. We were elected for a certain period of time and I do not think that anyone wants very much to throw us out, unless it is somebody who wants to get our job. But let him be patient and wait. Why should we not carry on a little while longer?

To be serious for a moment, I think the times are getting better and it is not in the interests of business to have business disturbed. We are on the eve possibly of a renewal of our ancient prosperity and the country needs above all to be left alone to work out its own destiny. Instead of squabbling over party politics, instead of wasting our time and the country's money by discussing theoretical questions, problems which may or may not arise, we should do the best we can to encourage every legitimate enterprise, every legitimate business and industry in the country. It is our duty to set our shoulders to the wheel and do everything possible to help the country out of the state in which it is at present. As my hon. friend from Springfield (Mr. Hoey) said, let us all do the best we can. It is impossible until a new parliament is elected to have these supermen of whom he speaks; but let us endeavour in the meantime to be, if not supermen, common ordinary men doing our duty by our constituents and by the country.

On motion of Mr. McMaster the debate was adjourned.

On motion of Mr. Graham the House adjourned at 10.25 p.m.

Monday, April 6, 1925

The House met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

MR. F. R. ANDERSON

Hon. Mr. STEVENS:

1. Did the Solicitor General of Canada, or any other person representing the Dominion government, retain the services of F. R. Anderson, lawyer, Vancouver, British Columbia, to prosecute the Standard Junk Company in regard to sales tax claim for the sale of empty beer bottles?

2. On whose recommendation was the said F. R. Anderson retained?

3. Is the government aware that the said F. R. Anderson is under indictment in the United States for violation of the 18th United States Amendment in connection with the notorious Quadra rum running case?

4. Is the government aware that the said F. R. Anderson was released on a bail of $10,000, which bail was officially and formally forfeited in the United States courts, San Francisco, on March 10th?

5. Was the engagement of the said F. R. Anderson entered into by the government as an evidence of good faith with the United States government under the recent treaty with that country for the suppression of rum running?

6. In the opinion of the government, is it conducive to respect for law, order and good government in Canada, for the government to retain as prosecuting attorney of minor offences, one who is charged with a serious offence in a friendly neighbouring country, and who has forfeited his bail of $10,000?

Hon. Mr. COPP:

1 and 2. The firm of Russell Hancox and Anderson was retained in this matter upon the recommendation of the Minister of Justice.

3. Information has been received from His Majesty's Ambassador at Washington that F. R. Anderson was indicted in the United States on the charge of having committed a felony, namely a conspiracy to violate the prohibition and tariff laws of the United States in connection with the seizure of the Quadra.

4. The ambassador also reported that Mr. Anderson was released on a bail of $10,000 and that owing to his departure for Vancouver such bail had been ordered by the court to be forfeited.

5 and 6. Answered by 1 and 2.

BLACKFOOT INDIAN RESERVE—WHEAT

Mr. GARLAND (Bow River):

1. What quantity of each grade of wheat made up the total of 136,114 bushels marketed by the Blackfoot Indian Reserve in 1923?

2. What quantity of each grade of wheat made up the total of 60,756 bushels marketed by the Blackfoot Indian Reserve in 1924?

Hon. Mr. STEWART:

1. 1923—	
Grade No. 1..	71,217
Grade No. 2..	12,918
Grade No. 3..	20,890
Grade No. 4..	3,875
Held for seed or sold by Indians on permit, no record of grades kept..	27,214
2. 1924—	
Grade No. 1..	15,154
Grade No. 2..	15,773
Grade No. 3..	12,900
Grade No. 4..	3,055
Held for seed or sold by Indians on permit, no record of grades kept..	13,874

THOMAS R. MAYBERRY

Mr. SUTHERLAND:

1. What was the date of the appointment of Thomas R. Mayberry, of Ingersoll, Ontario, as a commissioner to investigate charges of alleged political partisanship against employees in the civil service or other government employees?
2. What investigations have been made by said commissioner since his appointment and what has been the result in each case investigated?
3. Is he still acting in the capacity of a commissioner as above?
4. What amount has been paid or is to be paid to the said commissioner in connection with each charge investigated?
5. What are Mr. Mayberry's qualifications for the discharge of the duties as commissioner aforesaid?

Hon. Mr. COPP:

1. Mr. Mayberry was appointed a commissioner to investigate charges of alleged political partisanship against government employees in the province of Ontario by O.C., P.C. No. 128 dated January 26, 1923.

2. Dept. of Railways & Canals—

(a) Jas. F. Shields, Dickinson's Landing, Cornwall Canal, pleaded not guilty, evidence insufficient to establish charges.

(b) Augustus Blackburn, Dickinson's Landing, Cornwall Canal, admitted charges; services dispensed with.

(c) John Waldroff, Dickinson's Landing, Cornwall Canal, pleaded not guilty; evidence insufficient to establish charges.

Post Office Dept.—

Charges of political partisanship preferred against (a) W. L. Trotter, postmaster at Sheguindah, (b) S. Brickman, postmaster at Sebringville, (c) Wm. Boyd, Postmaster at Kagawong. Postmasters found guilty.

3. Yes.

4. Railways & Canals department.

The amount paid above commissioner in connection with the investigation referred to was $188.75.

Post Office Dept.

Amount paid in connection with each charge investigated—(a) $141.70 (b) $68.95, (c) $225.50.

5. No information.

DR. M. A. McAULAY—DR. O. G. DONOVAN

Mr. BLACK (Halifax):

1. Is Dr. M. A. McAulay employed at Camp Hill hospital as a full-time physician?
2. If so, what is his salary?
3. Is Dr. O. G. Donovan employed at Camp Hill hospital as a full-time physician?
4. If so, what is his salary?
5. Is the department aware that Dr. Donovan also holds another public position in Halifax?

Hon. Mr. BELAND:

1. Yes: in charge of medical services in Nova Scotia, New Brunswick and Prince Edward Island.

2. $4,800 per annum.

3. Yes: as Medical Superintendent.

4. $3,600 per annum.

5. Yes. His work at the provincial health clinic is performed after regular office hours and does not interfere with his duties at the Camp Hill hospital to which he gives full-time service.

BANK NOTE CIRCULATION

Mr. SPENCER:

1. What was the average amount of bank notes in circulation in January, 1925?
2. What was the average amount of gold held by the banks for redemption of such notes during January, 1925?

Hon. Mr. ROBB:

	Average for January, 1925
1. $153,962,397.	
2. Gold and subsidiary coin held by banks	$58,791,322
Gold in central gold reserves.	9,276,727

In addition, there were in the central gold reserves, and in the hands of banks, $205,405,381 of Dominion notes.

It cannot be said that gold in hand, any more than other cash resources, is held for redemption of notes in circulation.

PUBLIC DEBT

Mr. STEWART (Leeds):

1. What was the amount of the net public debt of Canada at the close of each of the fiscal years 1920-21, 1921-22, 1922-23, 1923-24?
2. What is the estimated amount of the public debt of Canada at the close of the fiscal year 1924-25?
3. What amounts have been advanced to the Canadian National Railways by way of loan or guarantee and not included in the public debt of Canada in each of the four fiscal years mentioned in question number one and including refunding loans?
4. What is the amount of such refunding loans in each of the said fiscal years?

Hon. Mr. ROBB:

1.

1920-21	$2,340,787,983 69
1921-22	2,422,135,801 73
1922-23	2,453,776,868 74
1923-24	2,417,783,274 88

2. 1924-25 (Est) $2,431,487,112.00.

3. All loans from government cash are included in the net debt. Guaranteed bond issues not included in the debt:

1920-21	$50,000,000
1921-22	61,000,000
1922-23	Nil
1923-24	50,000,000

Equipment issues: In 1920-21 $27,000,000 of equipment trust notes, not guaranteed by the government, were issued. In 1923-24, $22,500,000 of equipment trust notes were issued, and in addition to being secured by the equipment as in 1920-21, were guaranteed by the government.

4. The proceeds of guaranteed bonds and government loans in cash utilized by the railways for the redemption of debt due the public were as follows:

1920-21	$56,382,626 17
1921-22	48,871,443 41
1922-23	25,275,902 04
1923-24	11,469,369 69

RURAL DELIVERY ROUTES

Mr. SPENCER:

1. How many new rural delivery routes were established during 1924?
2. In what provinces were these organized?
3. How many in each province?

Hon. Mr. MURPHY:

The answers to these questions are contained in a return to an order of the House which was laid on the table on the 2nd instant.

GOVERNMENT ENDORSED LOANS

Sir HENRY DRAYTON:

What sums of money raised by loans endorsed by the government remained in the hands of the Department of Finance at the end of the fiscal years 1923-24 and 1924-25?

Hon. Mr. ROBB:

1923-24, $18,424,837.67; 1924-25, $21,110,096.19.

QUESTION PASSED AS ORDER FOR RETURN

IMPORTATIONS OF APPLES, ONIONS, ETC.

Mr. MORIN:

1. What have been during the fiscal year 1923-24, month by month and in each province separately, the imports of each of the following articles: apples, onions, potatoes, tomatoes, butter and eggs?
2. What is the United States duty on each of these articles?

[Mr. C. A. Stewart.]

UNOPPOSED MOTIONS FOR PAPERS

WESTERN FRUIT COMBINE

Mr. MEIGHEN:

For a copy of all papers, reports, writings, telegrams, and other documents, in connection with the recent investigation into the fruit combine in the west and particularly all communications with provincial governments in relation thereto.

Hon. JAMES MURDOCK (Minister of Labour): Mr. Speaker, this is rather a large order. I gather from a memo before me that it would take six employees four months to complete the return. I might add that within the last two or three weeks Mr. A. McLeod Sinclair, K.C., of Lougheed, McLaws, Sinclair and Redman, Calgary, who is counsel for the Nash and Mutual Brokers' interests, has undertaken to secure from the department practically what this motion calls for, and has been refused in accordance with what appeared to be the right of the minister under sections 15 and 22 of the Combines Investigation Act. It is feared that if this information were placed in the hands of the Nash and Mutual Brokers' interests there would be discrimination against many growers in British Columbia and distributors of green fruits in the prairie provinces. Therefore we could not comply with his request.

Mr. MEIGHEN: Mr. Speaker, I do not know anything about the solicitors for Nash Brothers—

Mr. MURDOCK: Nash and Mutual Brokers. Their solicitors are Lougheed, McLaws, Sinclair and Redman.

Mr. MEIGHEN: I rise only to say that I know nothing about Nash and Mutual Brokers' interests, I never heard from them, and I did not know they had asked for the information. I do not, however, want to impose any unnecessary expense on the department. I had no intention of getting communications from the different grocers or fruit dealers. What I wanted was a copy of the report and of the official documents in connection with it—not the correspondence with individuals throughout the country—and the correspondence between the government and the provincial governments; that is all.

Mr. MURDOCK: My right hon. friend will appreciate that less than three months have elapsed since the report was placed in the hands of the attorneys general of the four western provinces. Our understanding is that they are now deciding what further action, if any, should be taken. If they decide not to proceed, then it would devolve upon this government to determine, under

section 22, what further action, if any, should be taken. Therefore it would not appear advisable at the present time to disclose the correspondence that has passed between the attorneys general of the provinces and this government.

Mr. MEIGHEN: I do not see the force of the objection, but I know the motion is not debatable now. There is a section under which the government has a right to wait three months—it does not have to, though—before entering prosecution itself. That I do not dispute, but it has nothing at all to do with the point. What this House is surely entitled to is a copy of the report and of the official correspondence. What harm in the world can it do to bring down the correspondence, say, between this government and Manitoba? That will have nothing to do with determining either Manitoba's attitude, or this government's attitude after Manitoba's is determined.

Mr. MURDOCK: Mr. Speaker, I will undertake to give that information—certain information. Let it stand in that way.

Mr. DEPUTY SPEAKER: What is to be done with the motion?

Mr. MEIGHEN: Let the motion be carried, subject to the restriction which I have placed upon it.

Mr. DEPUTY SPEAKER: Carried, subject to the arrangement entered into between the Minister of Labour (Mr. Murdock) and the right hon. leader of the opposition (Mr. Meighen).

Motion agreed to.

CANADIAN NATIONAL RAILWAYS—INDUSTRIES ALONG FORT WILLIAM LINE

Mr. HOCKEN (for Sir Henry Drayton):

For a return giving a list of the 200 odd industries referred to by the Minister of the Interior in his speech at page 1748 of Hansard, 1925, as having been established along the line of the Canadian National railway from Fort William eastward, and the location of each.

Mr. STEWART (Argenteuil): I am perfectly willing to file the order, but the information will have to be obtained through the Minister of Railways (Mr. Graham). With that understanding the motion may pass.

Motion agreed to.

PRIVILEGE—MR. MEIGHEN

POINT OF ORDER—FORM OF ANSWER TO A QUESTION

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I wish at this juncture to rise to a question both of privilege and of order. Rule 37 of this House covers the procedure which must be followed both in the case of questions and in the case of answers. That rule reads:

Questions may be put to ministers of the crown relating to public affairs; and to members, relating to any bill, motion, or other public matter connected with the business of the House, in which such members may be concerned; but in putting any such question or in replying to the same no argument or opinion is to be offered, nor any facts stated, except so far as may be necessary to explain the same. And in answering any such question the matter to which the same refers shall not be debated.

In the light of this rule I beg to make reference to a question put and an answer given in this House on April 2. The question is put by the hon. member for Kent, New Brunswick (Mr. Doucet) and, with the answer, appears at page 1780 of Hansard as follows:

Mr. Doucet:

1. What was the amount paid by the government in connection with the investigation and report made by Sir Henry Drayton in regard to the North Atlantic Steamship Conference and ocean rates?

It is to that question I refer, but I may as well read the second question although it is irrelevant:

2. What is the amount already paid and payable to Mr. W. T. R. Preston in connection with his investigation and report with the said matters?

I shall repeat the first question upon which I base my objection, together with the answer as given by the Secretary of State (Mr. Copp). They are:

1. What was the amount paid by the government In connection with the investigation and report made by Sir Henry Drayton in regard to the North Atlantic Steamship Conference and ocean rates?

Hon. Mr. Copp:

1. Sir Henry Drayton was carried on the paylist of the Board of Railway Commissioners for the period from July 31, 1913, to September 21, 1913, when he was employed on the ocean rates inquiry, and he was paid during the inquiry his regular salary rate as chief commissioner, namely $12,500 per annum, and $1,074 expenses.

I again desire to read the rule relating to this matter:

(1) Questions may be put to ministers of the crown relating to public affairs; and to other members, relating to any bill, motion, or other public matter connected with the business of the House, in which such members may be concerned; but in putting any such question or in replying to the same no argument or opinion is to be offered, nor any facts stated, except so far as may be necessary to explain the same. And in answering any such question the matter to which the same refers shall not be debated.

First of all, I would observe that no answer is given to the question as asked. The government, of course, may refuse to answer the question; I do not contend that it is bound to answer it. But if it does answer it is

bound to state the facts, and the government, under the rule I have just read, had no right to make a statement which is entirely aside from the answer and not explanatory thereof. In the first place, there is no answer in the present instance of which anything could be explanatory; consequently, this alleged answer is beyond the rule. I submit therefore that it should be expunged. The government was bound, in reply to the question asked, if it answered at all, to state the fact, which is that Sir Henry Drayton got nothing whatever for his services in connection with that inquiry; nor did any other payment made to him in connection with his regular work as chief of the Board of Railway Commissioners have the slightest relation to, much less was it explanatory of, the fact that he got nothing for this particular work. The attempted answer, the gratuitous reference to his being on the paylist, is all the more ungracious when we remember that not only was this work done by him in his holiday time on the railway board and free to the country, but that later his entire work in connection with the Drayton-Acworth report, which was the basis of the railway policy followed by the administration and which was a prodigious achievement, was also done entirely free of charge. Indeed, a cheque for $15,000 having been sent to him was returned. The same is true in regard to the work done by him as power, light and electricity controller for a long period in 1917-18 and, as well, as controller of food transports. These services were all given without remuneration, and in the face of that I think that the government, apart from what its legal right may have been, was most ungracious and unfair in this reply. I appeal to you, Mr. Speaker, as having supervision over both questions and answers, to see that they come within the rule; that supervision is given you, Sir, under the rule of this House which I have cited. I appeal to you to order that this supposed answer be stricken out and that question No. 1 be restored.

Mr. DEPUTY SPEAKER: Does any other hon. member desire to speak to the point of order?

Hon. E. M. MACDONALD (Minister of National Defence): I quite agree with my right hon. friend (Mr. Meighen) that the habit of putting questions asking for opinions of all kinds, including opinions on matters of law, has become altogether too frequent of late. But I cannot follow the hon. member in his argument as to the irrelevancy of the answer given to the question:

[Mr. Meighen.]

What was the amount paid by the government in connection with the investigation and report made by Sir Henry Drayton in regard to the North Atlantic Steamship Conference and ocean rates?

This question was only one means by which the House and the country could ascertain what amount of money had been paid the hon. member for West York (Sir Henry Drayton) in a certain capacity, and the answer as given in Hansard is merely a statement of actual facts. Questions are put to the government in order that information may be searched for; and that is the only way that information can be got. The mere statement of the fact that the hon. member was at that time a member of the Board of Railway Commissioners in receipt of a salary of $12,000 or so a year—which I assume would indicate that he must have been available for the government of the day for any special work of the kind referred to—does not constitute any assertion of opinion on the part of the government, nor is it any violation of the particular rule applicable to this case. As to the information in regard to the question relating to expenses paid, that I think is perfectly proper. And the answer is given to it. It seems to me that my right hon. friend is unnecessarily worrying over this matter. No answer given by the government is intended in any way to reflect upon the hon. member for West York (Sir Henry Drayton), nor does it in my opinion constitute any argument or expression of opinion; it is merely a statement of fact. The answer in this instance is simply the statement that the hon. member received a certain salary and certain expenses in his capacity as Chief Commissioner of the Board of Railway Commissioners.

Mr. MEIGHEN: The only statement made by my hon. friend which is pertinent to the argument I sought to advance is this, that the hon. member for West York having been at the time a railway commissioner in receipt of a certain salary, he was available—as the hon. member "assumed"—for any other services the government wished him to perform. The hon. member could not assume any such thing. Sir Henry Drayton was employed as railway commissioner by this country. Those were his duties, and those alone, within the compass of his salary. Consequently that assertion was not correct. He was not to be available at all. His services were given gratuitously.

Mr. MACDONALD (Pictou): He became available.

Mr. MEIGHEN: He made himself available, but the fact that he was railway com-

missioner had nothing whatever to do with his claim for remuneration. My point is this: The correct answer to the question was, "Nothing." What is stated here can only be justified as an explanation of an answer. There is no answer given to explain. If it had been given, it is no explanation. It has nothing at all to do with the fact.

Mr. MACDONALD (Pictou): That is a question of opinion.

Mr. MEIGHEN: It is not a question of opinion at all. A man is employed to do certain work. When he does that work he earns the salary assigned. I think the government would have been better advised to admit the hasty reply, agree to expunge this from the record, and give the right answer.

Mr. THOMAS VIEN (Lotbiniere): Mr. Speaker, I for one fail to follow my right hon. friend in the trend of his argument on this point. Nobody will deny that the hon. member in whose behalf he spoke is very deserving of consideration for the services he rendered, but the question being put as it was "What was the amount paid by the government in connection with the investigation and report made by Sir Henry Drayton?—I do not believe that a clearer answer and one more to the point could have been given than the one that was given, which says in effect that from the 31st of July to the 21st of September, 1913, Sir Henry Drayton was carried on the pay sheet of the railway commissioners of Canada, and as such received his ordinary salary of $12,500. I think the question being put as it was, the country was entitled to know what was the remuneration paid to Sir Henry Drayton, and the answer is to the effect that he was employed from the 31st of July to the 21st of September, 1913, and that while he was employed on the Ocean Rates inquiry he was paid during that inquiry his regular salary as chief commissioner, which was $12,500. I do not think there is any room for dispute in respect to that. The answer was directly to the point, and I do not think it gives occasion to raise either a point of order or a question of privilege. I for one am fully satisfied that the answer covers the question, and that it is an answer in fact to a question of fact.

Mr. ROBERT FORKE (Brandon): I think perhaps the answer covers the question, but more is given than is actually necessary in answering the question. It was not necessary in making that reply to state the salary Sir Henry Drayton was receiving as railway commissioner. A proper answer, if I may venture to suggest it, would have been to state simply that he was commissioner of railways at that time, and that he received no further remuneration for his services on this inquiry, except his travelling and other expenses here set out. It is framed a little awkwardly, perhaps not intentionally; I think it could have been framed in better words than are used. It is quite easily understood in reading the answer what the facts were, but there is more said in the reply, I think, than was really necessary.

Mr. MACDONALD (Pictou): If my hon. friend suggests as an objection to the answer that it states what the salary of Sir Henry Drayton was, surely he will not think there was anything wrong in that, because the way questions are being put in the House, the very next question might have been: "What was the salary of Sir Henry Drayton at that time?"

Mr. FORKE: That is not pertinent to the question. No one was asking what his salary was.

Mr. VIEN: The question was, what was the amount paid?

Mr. JOHN MORRISON (Weyburn): I hold no brief whatever for the hon. member for West York (Sir Henry Drayton), but I do not think that justice has been done him in the way the answer has been given to this question. Sir Henry Drayton, it appears, gave his services in connection with this inquiry at a time when he was on his holidays. He is now back in political life, and that has a bearing on the matter. If a man did that much gratis, for his country, I think he has the right to get the credit for it, or at least it is only fair that the public should know on what conditions he gave this service. But by making the statement that he was drawing his salary as a railway commissioner, as the answer does, it implies that during this inquiry he was serving his time as railway commissioner and getting paid for it. Technically, perhaps, the government has answered aright, but I think there is a further explanation coming to Sir Henry Drayton. I think there is more in what has not been said in the reply, than in what was said. I think the explanation should have been fully and impartially given. The answer that was given was a biased answer, in my opinion. I do not think justice was done to the hon. member.

Mr. DEPUTY SPEAKER: If there is no objection, I would like to let this matter stand until I have given it further study. I did not know the point was to be raised.

INQUIRY FOR RETURN

TRANSFER OF NATURAL RESOURCES OF THE PROVINCES

On the Orders of the Day:

Mr. J. A. CLARK (Burrard): On the 23rd of February two questions appeared on the order paper in my name. Subsequently they were passed as orders for returns. They relate to the transfer of certain natural resources in the provinces of Ontario and Quebec, and also to the cost of administration in the North West Territories. I would like to ask the government when I may expect these returns.

Hon. CHARLES STEWART (Minister of the Interior): The officials of my department had this question of the transfer of natural resources up with me on Saturday, and I intended to speak to the hon. gentleman about it to-day. They informed me that it would take a very great deal of time to prepare the returns in the way the order reads, and if the officials could have a little conference with my hon. friend, I think we would be able to arrange so that he could get the information he requires. I am sure he does not want the information in the form one would infer from his question, and a little conference would settle the matter.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Friday, April 3, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. ANDREW McMASTER (Brome): Mr. Speaker, I wish first of all to take up certain matters connected with the budget, and to deal with certain statements in the budget and certain criticisms concerning such statements. In his short but clear budget speech, the Acting Minister of Finance (Mr. Robb) made this statement:

> In addition to this surplus on government business over the year's transactions, the sum of $4,000,162 must be taken into account as an improvement in our financial position by an additional active asset having been added to our balance sheet, arising from negotiations begun in 1922 by our High Commissioner in London with the governments of the kingdoms of Roumania and Greece for the consolidation of our loans to those countries, with arrears of interest, thus placing their obligations upon a sound financial basis. The arrears of interest were: Roumania $3,520,636, and Greece $749,526.

This would appear to be a very clear and a very natural statement. But it was the occasion for an outburst of oratory on the part of the hon. member for Fort William and Rainy River (Mr. Manion) which I think merits some attention. We all love to hear that hon. member who, I regret, is not in his seat; there is a certain freshness and boyish enthusiasm about everything he says which enables us to listen to his remarks with pleasure. But we must not take those remarks too seriously, because, as I will point out in the course of my remarks, his statements are often inaccurate—no doubt without the slightest intention—and therefore misleading. In reference to the statement made by the Acting Minister of Finance (Mr. Robb) the hon. member for Fort William and Rainy River used expressions such as these:

> What kind of gold brick financing, what kind of political shell game, is the Acting Minister of Finance trying to put over on the unsuspecting people of this country?

He compared the financial operations to the South Sea Bubble; and coming nearer to present day affairs he compared them to the Home Bank financing; and then leaving the realm of fact for the realm of fiction he compared the Acting Minister of Finance—than whom a more respectable personality does not exist in this House—to that prince of crooks Mr. Wallingford, whose exploits are generally found chronicled in the Saturday Evening Post. Was this correct? I must say as I listened to it that I thought the matter would be well worth some attention so I have looked into it. What was the situation? We loaned—I will not say in the halcyon days when the right hon. leader of the opposition (Mr. Meighen) led this country, but in those troublous times—we loaned to Roumania in round figures about $17,000,000 and to Greece about $7,000,000. We loaned it in this fashion: A number of manufacturers—some of whom were friendly, in fact I think most of them were friendly, to the government—sold goods to Roumania at prices no doubt profitable to themselves, and the Canadian people footed the bill,—and took what amounted to promissory notes of the kingdoms of Roumania and Greece. For some time there was no interest paid on those promissory notes. If I mistake not, Roumania paid interest for a few months, and then brushed aside the High Commissioner for Canada who was trying to get the interest on the debt; and Greece fell behindhand to the extent of about fifteen months' interest. That was the position when this government came into office, and when Hon. P. C. Larkin was made High Commissioner in London. We had these two debts, one against Roumania and one against Greece—one for about $17,000,000 and the other for about $7,000,000. We

had what amounted to the treasury bills of Roumania, and at that time the Roumanian government was not dealing seriously with our claim for our interest. What happened? The gentleman who has the honour to be High Commissioner for Canada, a gentleman who is devoting to the business of this country the same energy and the same skill which enabled him to make a great success of his own business, in common parlance "got after" the kingdom of Roumania and the kingdom of Greece. He got these debts secured, and I will tell you in a minute how they were secured. He also obtained evidences of the debt in the form of government bonds for the arrears of interest; those arrears had not been capitalized before that date. If you will look at the Public Accounts for the years 1921, 1922, 1923 and 1924 you will see practically the same figures for these two debts in all those four years. If it was right to make an active asset of these advances to Roumania in the year 1921, when the leader of the opposition and his friends were in charge of the financial affairs of this country, without providing for a reserve for them as being doubtful debts, it was perfectly right to continue this system. There was no capitalization of interest—there was no capitalization of interest necessary because the interest was paid and paid promptly after 1922; nay, in the case of Greece there were certain small payments made on account of capital. Now what has happened? Instead of the promissory note of Roumania we have got the bonds of Roumania. And that is not all. Among the governmental financial resources in Roumania are certain export duties. These export duties are applied to wheat, to oats, to barley, and to maize or Indian corn. Now we have obtained a prior lien upon what is produced by these duties. I have in my hand, and I will ask leave to place upon Hansard, a table wherein is found a list of the exports from Roumania in 1921, 1922 and 1923 in metric tons for wheat, oats, barley and maize:

Exports of Cereals from Roumania during years 1921, 1922 and 1923, on which duties are levied applicable for security of Canadian loan to that country with rates.

	Metric Tons			Rates
	1921	1922	1923	
Wheat..	75,691	28,110	30,369	4,500 lei per ton or say £4 per ton
Oats	165,466	228,673	168,467	£2—16/
Barley..	387,168	581,986	798,084	£2—16/
Maize..	769,149	291,649	669,382	£4—4

You find at the extreme right hand side of this table the rates of duties. One rate of duty in the currency of Roumania is called a lei. Four thousand five hundred lei per metric ton is the export duty which is imposed upon wheat. That works out to about four English pounds per ton, say $20 per metric ton; and a metric ton is three hundred and sixty bushels. The other duties are found also in this table. And these duties from this country with a population almost twice as large as our own—for Roumania now has a population of 17,000,000 and over—amount in my computation to $26,000,000. We have a first claim upon this revenue. I do not say we have got a sole claim; but our debt is secured upon this revenue. Roumania is one of the great food producing countries of central Europe, and it would look to me in view of the financial operations of this government and of our representative at London, that we have really good security for a debt which was at least doubtful before. I think that the government and its representative at London are to be congratulated, not criticized, for this operation; and I trust that after this explanation some member of the Conservative party will have the grace given him to get up in this House and withdraw these assertions which have been so recklessly advanced against the transactions of the government in this regard.

Now what about Greece?

Mr. HANSON: Does the hon. member think that the Acting Minister of Finance (Mr. Robb) was justified in taking these bonds into account, as part of a surplus for the fiscal year concerning which he was giving the House information, regarding them as actual receipts for the current year? Bonds, no matter how well secured, are simply promises to pay.

Mr. McMASTER: Bonds, no matter how well secured, are simply promises to pay; that is quite true. But while a bond which is well secured is not cash it is the next thing to it. The minister was most fair in the statement which he made, and unless it be to a mind searching out for evil that is looking into this situation there is nothing to mislead, nothing to deceive. The minister made it perfectly clear that this was something of an extraordinary nature, that it was not in the ordinary purview of the year's transactions. In one sense it is not part of the surplus; but in another sense it is an accurate statement that the financial position of this country, as disclosed by the books of the government, has been bettered to the extent of $4,000,000.

Mr. CHAPLIN: The Acting Minister of Finance, speaking of this matter, on page 1531 of Hansard, said:

This amount is available to be applied on account of our loan to the Canadian National Railways.

Will the hon. member kindly explain that?

Mr. McMASTER: I presume we cannot run the Canadian National Railway on Roumanian bonds. I agree with that. But you may pick out this portion of the speech, you may pick out that portion of the speech, and you may say, "Is this right?" or, "Is that right?" But I say that if the hon. member for Lincoln (Mr. Chaplin) who is a business man of experience, will sit down and read this budget carefully, he will not have the slightest misapprehension as to exactly the transactions which are set out there.

Mr. CHAPLIN: I would not expect to pay any debts with something that had not come in.

Mr. McMASTER: Perhaps not; I presume that perhaps my hon. friend's business is so prosperous that he does not have to do so, but I know many a merchant who takes to the bank debts due to him by his customers, endorses them to the bank, raises the money on the securities and does pay his debts in that way.

Mr. MEIGHEN: Will my hon. friend explain this point? He claims the debt is a good debt now, but was a bad debt before. I understand his reason is the fact that they have agreed that the debts would be charged against certain revenues. Suppose that Roumania does not do as she said she would do—and it would not be the first time—and does not pay it out of the revenue, what recourse has this country? Would we go into possession with our trawlers, or what would we do?

Mr. McMASTER: No. I see the line of humour which was on the bench behind has moved forward to the front bench. If Roumania "goes broke," this debt would not be a good debt any more.

Mr. MEIGHEN: That is not the point. We had the word of Roumania, the promise to pay, and we have that yet. Will the hon. member explain what else we have that we can enforce and how we can enforce it?

Mr. McMASTER: As a matter of fact, if war broke out, or if Roumania refused to pay, I suppose it would be extremely difficult for us to collect the debt.

Mr. MEIGHEN: We would have "the credit of Roumania."

Mr. McMASTER: We have the credit of Roumania, but we have certain revenues of Roumania specially earmarked for the payment of our debt. It is not a new thing at all. Before the war certain revenues of Turkey were placed in the hands of certain commissioners under earmark for certain advances given by European countries to Turkey. It is not an unknown method.

Mr. MEIGHEN: In both cases the countries in whose favour the charge was given were represented and had themselves power to enforce payment. We have none at all. We have just their word.

Mr. McMASTER: Of course the credit of Roumania is what we have to look to.

Mr. MEIGHEN: Hear, hear.

Mr. McMASTER: But it would seem to me an extraordinary thing that the hon. gentleman should endeavour to depreciate the security which we now have.

Mr. MEIGHEN: I do not.

Mr. McMASTER: That is the whole tenor and substance of the remark of the hon. member.

Mr. MEIGHEN: It is not of that nature whatever. What I say is that our security is now what it was before any action was taken. Therefore, the security should be treated the same.

Mr. McMASTER: I say the security has been improved by the earmarking of certain revenues, and by no means small revenues. I calculate that these export duties in the last year on wheat, oats, barley and Indian corn amounted to over $26,000,000. Those have been earmarked for the special payment of this as well as other debts, and that is an improvement, and especially is it worth something when we remember that Roumania has been paying since 1922 interest on the debt.

The next point to which I wish to advert is the question of the duty on coal. Certain coal duties on run of mine coal have been reduced from 53 cents to 50 cents per ton. The duties on bituminous slack coal have been increased from 14 cents to 50 cents a ton. I approve of the reduction, but I disapprove of the increase, and I propose to place before the House my reasons for my attitude in that regard, but before I enter upon a discussion of this question may I be allowed to offer a very respectful tribute to the member of this House who took upon herself the duty of going into the coal fields of Cape Breton and examining the situation there for herself? I say that nothing that concerns the welfare of the Canadian people can be an improper matter for attention by the members of this House. The condition of workers in any part of this coun-

try is a matter which concerns this House. If it does not concern this House, why have we a Minister of Labour, and why do we have appropriations every year for the carrying on of the Labour department? Now she brought to her study humanitarian feelings, for which her sex is pre-eminent, and I am sure that all those who listened to her would better appreciate how the situation appeals to a woman who went down there to look into it for herself. First of all, we have the reduction in coal duties. I do not want to minimize the reductions set out in this budget, I want to give them their full value; and the saving to the Canadian people by this budget in respect of bituminous coal will amount to about $315,000 in the next fiscal year, provided that the consumption be merely equal to the consumption of last year. If it should be increased—and of course a decrease of duty would make us expect an increase in consumption—then the saving to the Canadian people would be considerably more.

I wish to deal with the question of the increased duty on slack coal. But before I deal with it may I say a word as to how the coal areas of this continent are distributed? We have in the extreme east of Canada, in the island of Cape Breton, valuable beds of bituminous coal which have now been worked for many years. In mid and western Alberta we have beds of bituminous and anthracite coal. Within, a hundred miles south of lake Erie we have the great coal fields of Pennsylvania and further south those of West Virginia. This is, roughly speaking, how the coal beds of the North American continent which affect us economically are situated. Now, what will be the effect of raising the duty on bituminous slack coal? That class of coal is used generally for industries. First of all, let me make the point that freight rates are a determining factor in many cases, a more determining factor in the price to the consumer of coal than is the expense of mining the coal. That is something, which should never be forgotten in a discussion of the coal question. The raising of the duty on slack coal by thirty-six cents may enable the coal mines of Nova Scotia to sell to a greater extent than they do now in what is their natural area of supply. I take it that under present conditions their natural area of supply will extend up the St. Lawrence river about as far as Montreal, and the increased duty may enable them to meet American competition and to go as far west as Ottawa. From the best information which I have been able to obtain, I take it that that may mean an increase of some 400,000 tons in the sale of slack coal, and if you give them a profit on this of fifteen cents a ton, that would give them an advantage of $60,000. The question I wish to put to the House is this: Is there any assurance that that $60,000 which after all is not a very large sum, will enure to the benefit of the working miner in Nova Scotia? What is the other consequence? If one drew a line from, a point say, Windsor in Ontario, as far down as Montreal, then drew a line up to somewhere near Owen Sound, and finished up the triangle, there would be enclosed in that triangle most if not all, of industrial Canada. The city of Quebec has great industries; the flourishing and beautiful little city of Sherbrooke in the eastern townships has industries, but eighty-five or ninety per cent of the industries of Canada are inclosed in that triangle. How will the raising of the coal duties affect the industries in that part of the country? Let us suppose that the prices of bituminous coal remain as they are in West Virginia and in Pennsylvania—and I think the chances are that they will, because I am told that they are now on a low competitive basis. A man told me the other day that he paid for slack coal f.o.b mine head something like 90 cents a ton, and of course a tariff of 50 cents a ton is a tariff of over 50 per cent, as regards the price of the coal, not as regards the price of the coal plus the carriage of it. Let us suppose also that the railways of the United States maintain the rates which they have now. If both those conditions remain constant, this will mean that the price of American slack coal will be raised by 36 cents a ton to the Canadian manufacturer who uses it as a prime article entering into his cost of production. That, I take it, is not a good thing for the Canadian manufacturer.

Mr. MALCOLM: How many Ontario manufacturers in that district use slack coal?

Mr. McMASTER: I do not know.

Mr. MALCOLM: Very few.

Mr. McMASTER: There will be some. My hon. friend, who is a manufacturer, says there are very few. If there are few, those few are entitled, for reasons which I believe will commend themselves to the judgment of the House, to be treated with consideration and not to have a 50 per cent duty placed on something that enters into their cost of production.

Mr. LOGAN: Does the hon. gentleman not think the starving miners of Cape Breton also deserve some consideration?

Mr. McMASTER: I do, and if this government or any other government in power in this country had come forward with an appropriation for the starving miners of Nova Scotia, I would have voted for it with a great deal more enthusiasm than for a Hector celebration.

Mr. LOGAN: That might relieve an acute situation to-day, but what about the months and years to come?

Mr. McMASTER: Quite so. I am going to deal with that in a moment. It will raise the price of slack coal to those manufacturers who use it throughout that industrial area of Canada. That is a bad thing for the Canadian manufacturer and the Canadian consumers. It is bad for the Canadian manufacturer, not only when he is supplying the Canadian consumer, but when he is going out into the markets of the world, when he is taking, for instance, a shipload of goods down to South Africa, where I understand the government has made a contract for the purchase of coal, for the creation of electricity, at something under fifty cents a ton. This is the competition which our friends, the manufacturers, will have to meet and which, I believe, they should be given the best possible opportunities of meeting.

But there is another question. What is the result of this increase in price to the Canadian manufacturer? He will not be buying Nova Scotia coal because it will not pay him to buy it even when the duty is raised thirty-five cents a ton. He will buy the American slack coal and he will pay the increased price. That increased price will enter into this cost of production, and in the long run it will be borne by the Canadian people. Therefore, in that connection the Nova Scotia miner, whether employer or employee, will not benefit.

Mr. LOGAN: Is the hon. gentleman aware that the legislature of Alberta, which is supposed to be almost as near free trade as the hon. gentleman himself, passed a unanimous resolution in favour of increasing the duty on slack coal?

Mr. McMASTER: If that is a matter of fact, I am sorry they did, and they will be sorry they did.

Mr. GARLAND (Bow River): With all due respect to the speaker, I would suggest that the interrupter produce evidence that the Alberta legislature did pass such a resolution.

[Mr. McMaster.]

Mr. LOGAN: It has already been produced.

Mr. McMASTER: I did not understand that the legislature of Alberta had passed a resolution. I understood that the Premier of Alberta approved this raising of the duty. But the responsibility for the regulation of trade and commerce of the Dominion of Canada rests in this House and not in the hands of the Premier of Alberta, nor indeed in the legislature of Alberta. I would say this to the Premier of Alberta: There is hardly a part of this country which is not more affected by the protective principle, and I know nothing which will do more to destroy the tendency towards free trade in this country than for the protectionists to be able to point to how the leaders of the movement for lower duties have asked for raising of duties on things in which they are specially concerned. That applies as well to the Premier of Nova Scotia as the Premier of Alberta.

Another point I wish to make is this, and it was brought very graphically home to me by a gentleman who visited this city the other day. He said: "I am responsible for the management of a large office building in Montreal, and as soon as this proposed duty was brought down on bituminous coal, I changed over the grates of my furnaces so that I could burn low grade anthracite coal on which there is no duty." What may be the result—and this is a fact which will operate towards the result—is not to give more work to the miner in Nova Scotia, but to take work away from him, to force the use of a substitute article, the use of anthracite rather than that of bituminous.

4 p.m.

Mr. LOGAN: Why not put a duty on anthracite?

Mr. McMASTER: My learned and hon. friend from Cumberland says: "Why not put a duty on anthracite? That would be a revenue tariff." The hon. member for Kent, N.B. (Mr. Doucet) also proposes a duty on anthracite. I say this to these gentlemen: If there is one prime necessity in Canada after the clothes we put on our backs and the food we put into our stomachs, it is the warmth we put in our houses. I say that raising the price on fuel is a tax on, not only the comfort, but the health of the Canadian people. I believe those who advocate raising the duty on coal, especially the duty on coal which is burned in our houses, are making a grave mistake and they are following a policy which is modelled on madness.

Mr. LOGAN: Mr. Speaker, does the hon. gentleman contend that the householders of Canada burn slack coal, either bituminous or anthracite?

Mr. McMASTER: No, I do not. But I was answering not only the interjection of the member for Cumberland, (Mr. Logan) but also the argument of the member for Kent (Mr. Doucet) in the course of his speech on Friday. After all, the principle is exactly the same, and I will say this to the House, if this principle were carried out to its logical conclusion, and you raised the duties high enough to force us all to burn our own coal, hauling it to central Canada from the two extremes east and west, it would cost us for our warmth and power twice as much as it does to-day, and that burden in the long run would have to be borne by the consumers of Canada. What does that mean? You know, it was the last straw that broke the camel's back and if you raise the cost of living too much in this country you defeat your own object—the people do not stay; they go somewhere else.

Now I wish to address myself to what I consider to be the real remedy for the coal situation, and that is to take off all duties on coal. You ask me, why. I have endeavoured to point out where the great coal areas of this continent are found. They are found in the extreme east of Canada, in the extreme west of our middle west, and south of the Great Lakes in the United States. There is where we get our supplies. Now, there is no duty on coal going into the United States except against countries which impose a duty on American coal. Let me read paragraph 1548 of the American tariff, which will be found in the free list running from page 72 to page 85 in the Tariff Act of 1892. The United States is a high-tariff country in some regards, but it is also a country with a large and extensive free list. Now I read paragraph 1548:

> Coal anthracite, bituminous, culm, slack and shale; coke; compositions used for fuel in which coke or coal dust is the component material of chief value, whether in briquets or other form; provided, that if any country, dependency, province or other subdivision of government imposes a duty on any article specified in this paragraph, when imported from the United States, an equal duty shall be imposed upon such article coming into the United States from such country, dependency, province or other subdivision of government.

The natural markets for the mines of Nova Scotia are those parts of this continent which can be served by water carriage. It is quite true that many of the mines of Nova Scotia have been worked for a long time. I was told the other day by a gentleman who was formerly a member of this House that in one mine they have to pump out seven tons of water for every ton of coal mined.

Mr. LOGAN: In many cases it is more; in one it is thirty-five tons of water for every ton of coal.

Mr. McMASTER: One would think that mine belonged to Besco and that some of the water from the stock had got into the mine. But the point is this, it may be very expensive to mine coal in certain mines of Nova Scotia, it may be that in certain of those mines, notwithstanding the expense of mining the coal. the cheapness of carriage from the mines to the consumer may offset that cost. If it does not, if the operation is uneconomic, we are too poor a country to be able to carry on the uneconomic exploitation of coal mines or of anything else. But granted there is a great field for coal mined in Nova Scotia, that great field which under free trade conditions in coal, they can supply by water carriage in the summer as far west as Montreal, perhaps a little further—it is about a thousand miles from Cape Breton to Montreal by water—and within that distance to the south you will find Boston and the great manufacturing towns of the New England states, which do consume soft coal. There is the potential market for the coal of Nova Scotia, and I believe that in the long run there would be more money made in Nova Scotia if this policy I advocate were adopted than by trying to tax the Canadian people into burning coal from Nova Scotia when cheaper coal is near at hand. Now, let me turn to Alberta—

Mr. HANSON: Before the hon. member leaves that point, does he suggest that it would be possible for any coal mine in Nova Scotia or New Brunswick to meet the competition of the West Virginia bituminous mines where apparently they are able to raise their coal and put it on board ship at Newport News at $2 a ton run of mine?

Mr. McMASTER: It will depend entirely on where the customer is located. If they have a long haul by land to their customer, I would say that they might not be able to compete. I do not know. But for the purposes of my argument, I repeat, Canada is too poor a country to carry on coal mining operations in order that certain people who could get employment elsewhere may be employed in mining coal. And apparently from what we hear it is not just the richest blessing in God's world to be engaged in the coal mines of Nova Scotia. But that, I believe, is their potential market.

Now, what about Alberta? The potential market of Alberta is in Canada as far east as Winnipeg. I am told that under ordinary circumstances it is profitable and economic to ship Alberta coal into Winnipeg, and that at one time it was being shipped there, but that the Alberta mines lost a certain amount of the business through industrial disputes—through strikes, perhaps lock-outs. For the purpose of my argument I am not concerned whether it was the employers' fault or the employees'; it possibly was the fault of both; but what I say is, men in the coal mining industry or in any other industry cannot have a merry war between themselves and then ask the Canadian consuming public to foot the bill. If they are going to fight about the hours of work, if they are going to fight about wages, then I would urge them not to fight, but I would add, "If you do fight you will have to pay the piper yourselves, you cannot ask the Canadian public to do so."

Mr. DUFF: But you are willing that the government should vote money to encourage strikes?

Mr. McMASTER: I am not willing that this government should encourage strikes; but there is an occasion when even economic theory and practice that perhaps are as dear to me as to any man in this House give way, and that is when women and children are starving. I will drive a coach and four through all my ideas about free trade, non-interference of government and anything of that sort in order to keep women and children from starving—and I believe that 99 per cent of the Canadian people agree with me. Now I wish to turn to another phase—

Mr. GOOD: Before the hon. member proceeds, what about the possibilities of Alberta coal going south? That was not mentioned by him.

Mr. McMASTER: I want to mention that. I am told that even to-day Alberta coal is sold in North Dakota and Montana—in those northern states which fringe our southern boundary. If they go in there now they have to surmount a duty equivalent to the duty which American coal has to surmount coming into Canada.

Mr. STEWART (Argenteuil): More than the mere duty.

Mr. McMASTER: They will of course have to surmount the expense of carriage, but the duty will be the same.

[Mr. McMaster.]

Mr. DUFF: If there is a duty on coal going into the United States, how do you expect Nova Scotia coal to go into New England?

Mr. McMASTER: My hon. friend probably was not in the House when I made my statement.

Mr. DUFF: Yes, I was here.

Mr. McMASTER: The point is this. As soon as we take the duty off American coal coming into Canada the duty will automatically go off Canadian coal entering the United States. There is free trade in the United States, so far as coal is concerned, except with such countries as refuse to let American coal in duty free.

Mr. LADNER: If the hon. member's view is sound, how does he account for the fact that Premier Armstrong and the people who know the actual conditions in Nova Scotia advocate the very reverse proposition?

Mr. McMASTER: The government of Nova Scotia is the unfortunate landlord of Besco and it is to the advantage of that government, which collects a large amount of its revenue from the Nova Scotia coal mines, to keep those mines going. They think that the mines will be kept going through the imposition of this duty. But I think that if they took a long view of the matter they would be of the same opinion as myself. After all, I do not believe there can be any more dangerous doctrine for this House to accept than the doctrine that the trade policy of Canada must be governed by pulls and pushes from different parts of the country.

Mr. LADNER: Does the hon. gentleman know of any responsible person in either labour or business circles in Nova Scotia who advocates the policy he is bringing forward in this regard? Does he know of anyone who is in any responsible position there who does not advocate a protective tariff in the matter of coal?

Mr. McMASTER: I have not the acquaintance of all the responsible people of Nova Scotia but I will give the hon. gentleman one striking instance. Some years ago a gentleman named Carmichael was appointed a senator from the province of Nova Scotia. As far as I remember he never took his seat in the Senate, or if he did it was only for a short time. Before that he was a member of the House of Commons; and the question of coal duties coming up, although he represented a county in which there were coal mines, he took the view that a duty on coal was not in the interests of the Canadian

people and he voted against such a duty. I do not know whether he ever presented himself for re-election; perhaps he never got the nomination; if he did stand for election he was probably beaten. But I say that Senator Carmichael is a much sounder example for me in my humble capacity to follow than those who would be governed in their conduct here by interested advice that comes from different parts of the country.

Let me now deal with the question of the export of electrical power, upon which the government has placed a small duty. I have no objection to this duty so long as it is very small, but I would point out that any high duty will defeat the very object which I think we should have in view in connection with the development of our electrical power. We need in Canada every possible means for paying our way; let me put it in that homely fashion. And if we can, either through the use of our own capital or by means of capital that comes from abroad, develop the manufacture of electrical power which is more than sufficient for our own needs and have a surplus for export we are doing a wise thing in Canada to export that surplus; we are making money of the water which otherwise would flow away to waste. What are the objections to the export of this power? They are objections with which I have little patience; they are founded upon fear of the United States, fear that in some way or other which is not explained there will be difficulty when we need the power for our own use. Electric companies would rather supply industries close at hand than industries at a distance; that stands to reason. There is a certain wastage in electricity as it passes over the wire—not much wastage, it is true, thanks to recent scientific improvement. But the longer the line of electric wire you have to maintain the more the upkeep will be. So that any company that develops electrical power will always be glad to supply the home customer before it begins to export.

Sir HENRY DRAYTON: Can the hon. gentleman tell me what the power rates are in Montreal and just across the river here, the electricity in each case generated by Canadian water?

Mr. McMASTER: I cannot tell my hon. friend.

Sir HENRY DRAYTON: Would the hon. member like me to give him the information?

Mr. McMASTER: I shall be glad to have it. But the point I want to make is that the fears in this regard are idle; they are imaginary. How silly it is for us to talk that way, when we own a railway line running from Detroit to Chicago, our property. And we know that half if not more than half of our line from Portland to Montreal is in American territory. Why, the Americans have invested in this country, I think I am safe in saying, $2,500,000,000. We have both of us given hostages for our good behaviour, the one to the other. We cannot therefore afford to play the dog in the manger with the United States. The best thing for us to do if we want to be friends is to show ourselves friendly; that is the proper attitude, the only attitude which can make us a successful people on this continent. I have heard the argument advanced that if we ship electrical power to the United States we shall increase the prosperity of that country. Granted. But I want to see the United States prosperous. The farmers of my county send a lot of their cream down to Boston, and the richer the Boston people are the more will they be inclined to use cream rather than milk with their cereal—I understand they call porridge "cereal" in the United States. And the same thing applies to the county of Richmond; the people there are sending their cream to New York. I was in conversation the other day with a gentleman who is a large Jersey breeder in Richmond county and he told me that the farmers co-operating with him had sent to the American states during the past year $187,000 worth of cream and he hoped that during the coming season they would send a quarter of a million dollars' worth. We have real advantages in this regard over the United States. I may observe here that to-day milk is being taken to New York from incredible distances; my informant of the other day told me that milk was being shipped to New York from states as far west as Missouri. It seems almost incredible, but we can understand how it is done when we know that the product is sent in great glass tank cars which are constructed on the principle of thermos bottles. Now, the milk which is got from cows feeding in the hotter parts of the United States has not the flavour of the milk that comes from cows that browse on the hills of our beautiful eastern townships and that drink our spring water. In New York a premium is given on what is known as state of Maine milk, and the milk that comes from our eastern townships is very much of the same nature and is able to command the same premium. It seems to me therefore that the policy of allowing the export of electrical power, if we have it to sell, is a sound one. We are not dissipating our re-

sources in any way in so doing but are rather increasing them and turning them to account. And the blessed thing about the export of such power is that at the end of the year we have as much to send out as we had when the year began.

I am afraid I am detaining the House somewhat, but I have now to deal with some of the remarks made by the former Minister of Finance (Sir Henry Drayton) and by the hon. member for Fort William and Rainy River (Mr. Manion). If my hon. friend who is always so genial will forgive me, I will say this thought occurred to me: That a firm had been established, Drayton, Manion & Co., Purveyors to the Canadian people of Inaccurate Historical and Unsound Economic Information. So that I will not be held in any way to misquote my hon. friend from Fort William and Rainy River, especially in his absence, I would like to quote what he said concerning the introduction of free trade into Britain. Some will ask, what is the use of threshing that old straw? What is the use of this historical information? Why can't you let your poor friends Richard Cobden and John Bright lie quietly in their graves without bringing them out on all and sundry occasions? I will tell you why I refer to them. I refer to them because I believe that at some time in this country we are going to have the same sort of struggle as they had eighty years ago in Great Britain, as to whether special privilege in the interests of the few is to govern this country, or whether the country is to be governed in the interests of the mass of the people, and I think that anything which will give us information as to that great struggle in the Old Land is of great value to us. The hon. member for Fort William and Rainy River said:

> The lessons of history teach me that there has been no country in the world that has ever progressed and reached prosperity except under a protective tariff. I make no exception when I say that. I do not wish to be diverted again, because I have taken up too much time now. But Great Britain, up till 1846, had the highest kind of protection, so high that she at times prohibited imports into Britain of lines of goods that interfered with home producers. She did not bring in free trade until 1865.

Now that is particularly inaccurate, and being particularly inaccurate is most alarmingly misleading. What are the facts? The facts are that Great Britain, like nearly all countries in the world, interfered with trade and commerce in its early days. The idea that trade should flow freely, that the law of supply and demand should receive its application, is a comparatively modern idea. The old kings who governed the nations of the earth in days gone by were always interfering with

the trade and commerce of their respective nations, and Great Britain, instead of being one who the longest retained protective duties, was one of the first to start to get rid of them. Sir Robert Walpole in 1721 removed the duties on 106 articles of export, and on 38 articles of imported raw material. There was the beginning of the free trade movement. Then about the time of the American revolution there appeared in Great Britain a revolutionary book. It was written by a Scotch college professor, whose name was Adam Smith, and he exploded a great many of the fallacies which had lain at the basis of the thinking of statesmen in the years which had gone before, and he made a convert—of whom? I heard the genial member from Nanaimo (Mr. Dickie) the other night say that free trade was only believed in by old-fashioned professors and people of that description. Well, one of the converts Adam Smith made by his monumental work was one of the greatest statesmen Great Britain has ever produced, the younger Pitt. He thoroughly appreciated the views of Adam Smith, and he started putting them into practice. And what happened? Wars stopped his process in that regard, as war stops most beneficent reforms for the good of humanity, but prior to the breaking out of the Revolutionary war which with the Napoleonic wars kept Great Britain and France at daggers drawn from about 1793 to 1815, William Pitt had made substantial reductions in the British tariff. Then Huskisson came in 1823, and removed a large number of duties. So that, in 1840, when Great Britain was collecting a little over £20,000,000 in customs duties, only £1,000,000, or five per cent, was collected on manufactured goods. If gentlemen of the House would care to examine this question, I would invite them to study the proceedings of the select committee of the British House of Commons which in 1840 examined into this question. Then Peel reduced the tariff on 750 articles in 1842, and again on 450 more in 1845. In 1846 Peel used these words:

> Notwithstanding the history of the tariffs of foreign countries the declared value of British exports has increased above £10,000,000 during the period that has elapsed since the relaxation of duties on your part in 1842.

True it is that all duties were not removed until the sixties, and even the seventies, but I would appeal to this House to agree with me that possibly Disraeli, the Conservative leader of his time, is a better authority as to what happened in Great Britain then than even the new convert to the Conservative party in this country, the hon. member for

Fort William and Rainy River. In 1850, on one occasion, Disraeli dined with John Bright. There was a strange friendship between these men. They were absolutely different. They regarded public questions in an entirely different manner, but they had something in common, and they had a liking for each other. They sometimes dined together, and John Bright mentions in his diary how in 1850 he dined with Disraeli, and Disraeli said that protection was dead. When, two years after, the Conservative government was formed under Lord Derby, it was Disraeli who said that protection was not only dead but was damned.

My hon. friend from Fort William and Rainy River went on to say:

> No country has grown great industrially or commercially except under a system of protection.

I suppose his inference is that the greatness of countries was bound up in their having adopted and continued the principle of protection. All the great countries were protectionist, and the majority are yet, but the great trading countries of the world have become the great trading countries of the world and the great commercial countries of the world because they did not adhere as closely as others did to the system of protection, because by their geographical position they were able to trade with more freedom than other nations were. Who were the great carriers of the middle ages? Was it not the republic of Venice, situated right on the sea, partially in the sea, in fact? Then the carrying trade moved to Portugal, situated on the sea. Then again to Holland. Holland is one of the great examples of a country which for centuries has followed a low tariff policy. Then we have the great example of Great Britain. After the masterly address of the hon. member for Springfield (Mr. Hoey), I need not labour the point that one of the greatest examples of the beneficent effects of free trade, how it makes a country solid, commercially and industrially, has been in that great country. Where is the lire, where is the franc, where is the mark, where is the rouble, and where is the pound sterling? There is your answer.

My learned and hon. friends of the Conservative party have been calling for protection during this session. They are like the Bourbons of old—they forget nothing, and they learn nothing. Years ago there were hard times in Canada. I speak of the seventies; '74, '75 and '76 were hard times in Canada, and at that time the Conservative party nailed its protectionist colours to the mast. They were somewhat different, and still they were somewhat the same as the protectionist colours of to-day. They did not accept the protectionist doctrine as a matter of economic knowledge or as a matter of principle. History tells us that the Conservative party in 1876 was prepared to become the free trade party if Sir Richard Cartwright had only put up the tariff 2 1-2 per cent. But when Sir Richard Cartwright did not put up the tariff 2 1-2 per cent then the Conservative party at that time brought into the House this resolution. I am going to ask leave of the House to read it, because it has such a familiar sound to anyone who has been looking at the order paper for the last two weeks:

> This House is of the opinion that the welfare of Canada requires the adoption of National Policy, which by a judicious readjustment of the tariff will benefit and foster the agricultural, the mining, the manufacturing and other interests of the Dominion: that such a policy will retain in Canada thousands of our fellow countrymen who are now obliged to expatriate themselves in search of the employment denied them at home; will restore prosperity of our struggling industry now so sadly depressed; will prevent Canada from being made a sacrifice market; will encourage and develop an active interprovincial trade; and moving as it ought to do in the direction of reciprocity of tariffs with our neighbours so far as the varied interests of Canada may demand, will greatly tend to procure for this country eventually a reciprocity of trade.

That was the policy of the Conservative party almost fifty years ago, and fifty years' experience of the protective principle has not taught them that as far as Canada is concerned this is a fallacious policy and one on which the country cannot succeed.

Now, there are three fallacies with which I should like to deal. The first theory is the favourable balance of trade fallacy. The theory of the favourable balance of trade is one which was exploded by Adam Smith about a century and a half ago. It was founded on the idea of the mercantilists that a country only grew rich in so far as it absorbed and kept for itself gold and silver. Now just look what a ridiculous policy it is. A ship leaves Montreal with $100,000 worth of merchandise on board, and when it gets to Liverpool it exchanges that $100,000 worth of goods for something which is worth $120,000, because, of course, the goods are worth more in Liverpool than they were in Montreal or they would not be sent to Liverpool. You put on board ship $120,000 worth of goods and when you bring them back to Montreal they are worth, let us say, $130,000. Now that means exports $100,000, imports $130,000 an unfavourable balance of trade of $30,000 and that, according to these gentlemen, is a bad

thing for the country. But let us suppose that the ship on her next voyage, loaded with the same kind of goods, is lost off the coasts of Newfoundland, is a total wreck. Exports $100,000; imports nil; favourable balance of trade, $100,000. And that is the policy which is preached by sensible people in this country to-day and on which we are asked to base the fiscal policy of Canada. It is almost as absurd as the fallacy which says we should aim to be a self-contained country. That theory was also raised by Sir John A. Macdonald in the days gone by. "Shall we not say Canada is for the Canadians, and protect our markets for ourselves?" quoth he at Stanstead, in the next country to my own, in 1877. "Shall we not say if we have a short crop, our own people shall consume it and pay a fair price for it?" As a matter of interest and curiosity I took the export of wheat to all countries from Canada for the years 1920, 1921, 1922, and 1923, and then I calculated what population we would have to have in this country in order to eat all that wheat, and I found if we counted flour also in our calculations—I think that would be fair—we would have had to have in 1920, fifty-three millions more people; in 1921, eighty-three millions more people; in 1922, fifty-two millions more people; and in 1923, seventy-three millions more people. I will ask for leave to put this statement on Hansard.

Exports of wheat to all countries:

		With Flour
1920,	185,000,000, 46 millions extra,	53 millions extra
1921,	311,000,000, 77 millions extra,	83 millions extra
1922,	180,000,000, 45 millions extra,	52 millions extra
1923,	252,000,000, 63 millions extra,	73 millions extra

The attack has been made upon the government that it has not raised the duties—not that it has not sufficiently lowered them. The attacks by the Conservative party are based on the charge that the government has not raised the duties although they say it should have done so, and a good deal of argument has been addressed to the farmers of this country in that connection. They are told that they are being betrayed and badly treated by this government because it has refused to put up the duties on agricultural products. Well, I am not going to emulate the fashion in which the hon. member for Fort William and Rainy River (Mr. Manion) has addressed the House; I am not going to talk of gold bricks, or of shell games, or anything of that sort; but I say this: that any attempt to pretend that the farmers, as a whole, can be benefited by the imposition of duties upon what they produce and of which they have a large exportable surplus is a cruel deception, it is something which cannot be done. The House will forgive me if I deal with this at some little length because it is a matter of real importance to this country.

The farmers should not be allowed to believe that they can be helped by the imposition of a protective duty on what they have to produce, because as long as this country has a vast exportable surplus of agricultural products to send to the markets of the world the price which we get in those markets for that surplus is what determines the price of the entire production. There may be cases here and there where the contrary obtains, there may be a few market gardeners near some large city who by means of the duties are able to get a little higher price at certain times of the year for what they have got to supply to their neighbours who live in the adjacent city. That may be true, but we are not here to look after special interests, we are here to look after the general interests; and so I say that the farmer cannot be benefited by a protective tariff. Now I am going to quote evidence not from Canada first but from the United States, because I take it I am in the sense of this House when I say that if that has proven to be impossible in the United States, if responsible people in the United States say it cannot be done in that country—which has in comparison to its production a far smaller exportable surplus than we have—then a fortiori it cannot be done in Canada. The first witness I will call in this regard is the man who was Democratic candidate for the position of president at the last election, and he spoke on September 7th, 1924, as follows:

> In order to delude the farmer with a false pretense of imaginary benefits and with utter disregard of economic law, those in control of the Republican party announced, in the Spring of 1921, that all his ills would be promptly cured by the enactment of a protective tariff for his benefit. They declared that high tariff rates on wheat, corn, livestock, meat products and so forth, would immediately raise the domestic price. Such a law as accordingly placed upon the statute books in May, 1921, but when wheat fell from $1.47 in May to $1 in December, and corn from 62 cents in May to 47 cents in October, the promised relief was seen to be a pure political fiction.
>
> Under cover of this pretense, however, the oppressive Fordney-McCumber bill was enacted in September, 1922. Lobbies representing greedy manufacturers stormed the nation's capital and wrote their own excessive and extortionate rates in utter disregard of every theory, even of protective tariff taxation. No consideration was given to the new and changed financial business and economic conditions.

Then further referring to the Fordney-McCumber law he said:

> This law is both a fence and an offense. It was a fence against reciprocal trade, no matter how profitable or desirable and shattered our trade structure

throughout the world. It was an offense to every consumer in the United States, and not least of all to the farmers who were left outside the scope of its pretended benefits. It might have been appropriately entitled "An act to obstruct our foreign commerce, to increase the prices of what the farmer buys and to reduce the prices of what he sells."

Thereafter, as an additional sop to the farmer, under the so-called flexible provision the duty on wheat was increased by Executive order and that ungrateful commodity promptly responded by a further fall in value. Surely the day when the farmer can be lulled to rest by a nominal tariff on the commodities of which he has a surplus to sell abroad has passed forever.

That is the argument made by the gentleman who presented himself as the presidential candidate of the great Democratic party, a gentleman distinguished at the bar of New York, a gentleman who represented his country at the Court of St. James in England, and possibly as attractive a candidate as appeared in the last election before the American people. But those were not only the views of the Democratic party but also the views of the Republican party, or at least of that section of the party who agreed with their vice-presidential candidate Colonel Dawes. He says:

It is an admitted fact that in the case of any agricultural commodity of which we raise a substantial surplus, the price obtainable for this surplus in the world's markets establishes in a general way the price level of the entire crop.

This is from the address delivered by Colonel Dawes, the Republican nominee for the office of vice-president at Lincoln, Nebraska, in August or September, 1924. But let me quote what I might term a collective witness. In the United States within the last few months a national association of commissioners, secretaries and departments of agriculture gathered together and they held a meeting on the 2nd December, 1924, and I quote the following:

The protective principle affects only those farm crops of which we produce less than we consume, examples of which are wool, flax and sugar. In the case of those crops of which there is an exportable surplus the case is quite different. The price of the exportable surplus is fixed by world-wide competition and is unaffected by a so-called protective tariff. The price level of exportable surplus in turn determines the price level of all that portion of the commodity required for domestic consumption. It is apparent, therefore, that the producer of these farm crops having a surplus available for export, sells at price levels determined by world-wide competition, buys in a market restricted by the operation of the protective principles. Examples are: wheat, corn, pork, and to some extent dairy products.

I also quote figures which appear in the Congressional Record, January 21, 1925, as follows:

Net loss to farmers of United States due to tariff:	
Gross cost to farmers..	$426,000,000
Gains to farmers as producers..	125,000,000
Net cost to agriculture..	301,000,000

Now if that is true in the United States it is a great deal truer in Canada.

Mr. ARTHURS: Will my hon. friend state who asked for protection for the farmers in the United States?

Mr. McMASTER: I think the farmers of the United States have been thoroughly fooled by the Republican party ever since the Civil war. They have been asking for protection and they have been getting it, and it has not done them on the whole the slightest bit of good, and it has enabled the protected manufacturers of the country to gouge the people of the United States.

Mr. LADNER: If the exportable surplus determines the price of the home market, how does the hon. member account for the fact that the United States had a surplus production in fruit that they dumped into Canada at a much lower price than the home market? That is why we have an anti-dumping law.

Mr. McMASTER: They are able in that case, I presume by some sort of combination, to maintain their home prices. But I say this: that you might in certain parts of the country find markets which might be rarely helped by the protective principle; but I was laying down the general principle which is true. It may suffer exceptions in the case of spring strawberries and other things at other times in different parts of the country. But I say as a general rule,—and in our fiscal policy we must be governed by general rules—it is true as a general principle. I appeal to my hon. friend who wishes to be fair to examine these things carefully, and I ask him to open any newspaper which quotes the prices of wheat in Liverpool and the price in Winnipeg, and he will find that the price in Liverpool will be the price at the head of the lakes, plus the cost of transportation. There have been fluctuations in the price of wheat which may have disturbed market conditions, but I say that at almost all times—and I appeal to those hon. members in this House who know more about marketing wheat than I do—you will find the cost of wheat in Great Britain is the cost of wheat at the head of the lakes, plus the cost of transportation to Liverpool.

Mr. LADNER: Is not the fallacy of the free trade argument the fact that there are so many barriers in the country that they are artificial interferences continually with trade and exportable surpluses and everything else, and you have to deal with it in a practical way in each particular case?

Mr. McMASTER: This is not a new argument. It was answered by Sir Robert Peel in the forties in the House of Commons, England. He said the best thing Great Britain could do in the face of tariff walls against her was to have a policy of free imports. The fact that you are interfered with when you go to sell is no reason why you should interfere with yourself when you come to buy. It is quite true that the protectionist tariff wall hurts us when we go into other countries to sell. It increases the cost to the consumer in the country to which we are taking our goods, and therefore decreases the demand. It is a hurtful thing to us, but let me give this specific illustration. I know that we free traders are often called theorists, but it is the protectionist who is the theorist. The free trader wants to consider things as they really are. A great many people in my county sell cream in Boston. It is true they have to pay a duty on the cream that goes in. It is paid by the American consumer of that cream. But if there were not a duty there would be a bigger demand for that cream, and therefore the duty hurts the farmer who exports cream from Brome. But is the fact that he is hurt when he is an exporter of cream any reason why he should hurt himself by raising the duties against himself when he wants to buy things which come from the United States?

Mr. LADNER: Does the hon. member say the incidence of tariff taxation always falls upon the consumer in the country to which the article is exported.

Mr. McMASTER: No, it depends on how keen the demand is. If I am trying to place my goods in a protected market, have got to get the goods in there, and it is the only available market, and the demand is not keen, I may in some cases pay the whole duty, or pay part of the duty, in order to get into the market. But I will always be looking for another market, and I think it will be found generally that the incidence of the tax usually falls upon the consumer. It would not be any use to be a protectionist unless that were true. If the exporter to a protected country paid the duty then there would be no protection for the home manufacturer. He would have to compete with the free trade price just the same as before.

Sir HENRY DRAYTON: Is my hon. friend serious about that?

Mr. McMASTER: That is absolutely true, and if my hon. friend with the smiling countenance would consider for a moment, he would see that it was true. Take woollens coming into Canada purchased by Greenshields, in a case where the British manufacturer so much desired to send the goods to Greenshields that he paid the 25 per cent duty, and that Greenshields was able to buy the British woollens just the same as if the duty was not on at all, what chance would the Canadian manufacturer have? He would be compelled to put out a better line of goods to get Greenshields to buy from him, when Greenshields could buy from the British firm without paying any duty.

Sir HENRY DRAYTON: I am delighted with my hon. friend's statement, and I am going to ask him another question. Does he think—and I followed him very closely—that the illustration that he is applying as to the reflex action in the domestic market of the outside cost of wheat would apply similarly as regards any other commodity in the world?

Mr. McMASTER: I think so. Our Dairy Commissioner, Mr. Ruddick, says that the price of dairy produce is, on the whole, governed by precisely the same rule. I say that wheat is the classic example of the theory which I am enunciating to this House. We examined that question with great care some two or three years ago in the agricultural committee.

Sir HENRY DRAYTON: I think it is not the example, it is the one exception. But perhaps my hon. friend will tell me as to the price of butter in New York as against the price of butter in any centre he desires to pick in Canada. I think he will find his principle does not work.

Mr. McMASTER: Of course, when you come to retail prices—

Sir HENRY DRAYTON: Wholesale.

Mr. McMASTER: I think you will find wholesale prices will be much more on an equality than retail prices because retail prices may vary from store to store. But I say this—and I believe I am correct when I say it—that if you have a great surplus for export, the price you get for that exportable surplus will determine, both generally as regards volume and generally in point of time, the price you have to accept for your home production.

Mr. LADNER: Supposing an exportable surplus from the United States was dumped into Canada at a price below that at which the goods can be produced in either Canada or the United States, would that be in the interest generally of the people of this country?

Mr. McMASTER: That would depend whether it was done continuously or not. If it was done continuously at a price lower than that at which we could produce the goods, I believe it would be greatly in our interest to get that and to devote our attention to producing something else.

Mr. LADNER: It would be intermittent, but enough to hurt business in this country.

Mr. McMASTER: I believe, in the long run, less harm would be done to the vast majority of the people of Canada whose interest we have to think of first, namely, the consumers, by allowing them to get the advantage of even such intermittent dumping as my hon. friend suggests.

Mr. GARLAND (Bow River): The hon. member in his very interesting discussion quoted figures, I think, to show that the net cost to agriculture in the United States of the tariff was $301,000,000. Does the hon. member mean that to be the net cost of the protective principle as applied in the United States or the net cost of simply the agricultural protection?

Mr. McMASTER: The figures which I have before me purport to show that the gross cost to the farmers of the protective principle is $426,000,000; that, in other words, what they have to buy has been artificially increased in price to the extent of $426,000,000; that the price of what they have to sell has been artificially increased to the extent of $125,000,000, and that, therefore, the net cost to agriculture is $301,000,000. That is dealing only with the matter in the large. That does not take into account the fact, I think, that the wheat farmer in the United States is not helped much by protection. He may be occasionally, but as a rule he is not helped by protection. Therefore, there is really no gain in protection for him at all. The United States exports, if I mistake not, about three bales of cotton for every four she produces, so that the price of cotton in the United States is unaffected by a tariff, and the cotton farmer, the farmer who grows only cotton, cannot be helped at all by a protective tariff. Therefore, he has to bear his share of the loss. This purports to give agriculture, as a whole, and tends to show, if these estimates are correct, that even in the highly industrialized United States, where, I think, the proportion of urban population to rural population is much greater than with us, the protective principle is disadvantageous to the farming interests.

Sir HENRY DRAYTON: Whose estimates are these? Where can we get them and where are they made up?

Mr. McMASTER: The whole matter is thoroughly discussed in the Congressional Record of the 21st January, 1925, just at the beginning.

Mr. SPENCER: What number of years would these figures cover?

Mr. McMASTER: I am unable to state, but it is a very recent compilation and a compilation which, I take it, was induced by the very disturbed condition of agriculture in the United States a year or two ago.

Mr. GOOD: That was the net loss per annum, was it not?

Mr. McMASTER: That was supposed to be the net loss per annum. Of course it is a mere computation, a mere estimate; but the point I wish to emphasize to this House is that even in the United States where, if in any place on this continent, the protective principle should be able to help the farmer, according to this authority it does nothing of the sort.

The next point which I wish to bring up is the argument made by protectionists that importations from abroad of goods diminish the demand for labour in Canada. We heard a great deal about how much more prosperous we would be if we could only shut goods out, and the inference was, in fact the assertion was made, that the Canadian wage earner would be more prosperous under a protective tariff than he would be if a protective tariff did not exist. That is a fallacy and I will endeavour to prove my statement. You may possibly help one special line of industry by protection; you may possibly help the men who are engaged in that particular line of industry by protection; but you cannot help industry or labour as a whole by protection and I will tell you why. What labour can get out of industry by way of either salary or wages is governed, first of all, by the wealth which is produced in the country. If a great deal of wealth is produced in a country, there is more to be divided between the capitalists and the workers. Of course protection cannot increase the wealth of the country. It can only direct labour and capital into certain channels rather than others. I think history shows and economics teach that it is more likely to misdirect than properly to direct labour and capital into channels away from those into which they would otherwise flow.

5 p.m.

Let me place this before the House. Protection, as a whole and generally speaking, will raise prices. If a man can save a dollar or two dollars on a pair of shoes and a woman two or three dollars on a dress, what are they going to do with that money? They are going to buy other things with it. They are going to create other demands and these other demands will have to be met by labour. Therefore, the more natural you get the channel in which labour and capital flow the more you force labour and capital into channels which will produce the greatest economic return, the greater will be your wealth and the greater will be the return for labour. I need not stress the point. I believe it to be sound.

Now, I have talked a long time and I mingled praise with blame, and perhaps the House will say, "You have spoken for an hour and a half; what have you practical to suggest?" Well, with all respect to this House, I am going to make a few practical suggestions. Our tariff problem, our railway problem, our immigration problem are inextricably mingled together; they all form parts of a larger problem—the condition-of-Canada problem. We want better conditions in Canada, and these problems, tariff, immigration, railway, are merely aspects of the one great problem. The government has proposed a tariff board. Well, a tariff board may be useful in getting certain information, but it will not determine, or it should not be allowed to determine, the policy of the country. This policy must be determined by the representatives of the people. It seems to me that what we must determine, before we can have a tariff board functioning usefully for us, is whether we are going to have a tariff which is primarily for the purpose of raising revenue, or primarily for the purpose of affording protection; because it cannot be properly designed to do both. Now, I hope that when the tariff board is chosen it will direct itself to the examination of the question: How we can raise more revenue through the tariff with the least dislocation of business and on the soundest principles of business and economics.

Sir HENRY DRAYTON: Will the hon. member allow me a question on that point? Has he considered the figures collected by the American government under their advanced and present high rates as against the figures that were collected before the emergency tariff?

Mr. McMASTER: No.

[Mr. McMaster.]

Sir HENRY DRAYTON: One is the multiple of the other.

Mr. McMASTER: But I have read a good deal as to the amount of dissatisfaction there is with the tariff board of the United States; how that tariff board has not prevented scandals, such as their woollen schedule K, which is a crime and a disgrace to any civilized country; how that tariff board is not recommending against the continuation of high duties in industries where by the application of automatic machinery and other labour saving devices the United States are able to compete on an equal footing with the whole world. I would pray the government in this regard not to establish a highly organized board with chairman, vice-chairman and commissioners and with a staff of stenographers and clerks; I implore them not to do that because when those gentlemen are appointed—if they are—their whole subconscious desire will be to maintain protection in order to retain their jobs and because no man when put in a position of that sort can refrain from trying to magnify his office. There are, however, men in the employ of the government whose fund of information and whose collection of data would be a great benefit to anyone who may be called upon to deal with the tariff question. I do not think I am going beyond the bounds of propriety when I say that a member of this tariff board should be our Dominion Statistician who, I think, knows more about the condition of trade and industry in this country than possibly any other man within the confines of the Dominion.

Now I am going to speak for a moment about immigration. The needs of the Canadian people in this regard demand such arrangements or rearrangements within the cabinet as will permit one member, and as able a man as can be got, to have charge of immigration, to devote his whole time and attention to it. I think it is a job for one man, and I do not believe that any man, I do not care how able, how devoted and how self-sacrificing he is, can ever carry on another department with the Department of Immigration. The work imposed on cabinet ministers by our system is onerous. They have a great deal of departmental work to attend to, a great deal of routine to look after, both in session and out of session, and for four or five months they have to spend a large portion of their time in this House. What we want to do is to set a man apart with the responsibilities of a minister who will think this question out. In this regard I

should like to make a few suggestions. I should like the man who is charged with immigration to realize that an immigrant is not only a potential producer, a competitor in the market of producers, he is also a potential consumer, and the fact that there is danger of him becoming unemployed should not have too much weight. Let us get in people strong of brain and strong of body, and let us give them a chance. That is the way to work out the salvation of this nation, because we are going to have hard times in Canada unless we can at least within the next few years substantially increase our population. I want to see the development of a national spirit, and I believe that the more we develop a national spirit the better type of immigrant will we induce to some to this country. I should like to see the abolition of the technical rules which even yet to a certain extent obtain in the department, in order that men may come in more freely. I should like to see use made of our own citizens, no matter from what part of the world they come, in order that they may get into this country friends and relatives who will be useful citizens. I had the pleasure of an instructive trip through the west about fifteen months ago, and I shall never forget as long as I live what one of my hosts said to me when I was visiting in one of the prairie provinces. As he drove me down to the station; he said: "My land marches a mile that way, it goes a mile and a half the other way, and four men and four families could get as good a living off that land as I get now, and there would be four men to pay taxes and four women to help the church organizations and the social life in the country." I think there in a nutshell is our problem. To a large extent we are yet an empty land, and until we fill it up, the burden of the national equipment we possess will hang heavy upon us.

Concerning the railway problem, I am not going to trench upon the ground which has been covered by the member for South York (Mr. Maclean) and the member for North Waterloo (Mr. Euler), namely, that there should be an amalgamation of some sort between the Canadian Pacific Railway, with their magnificent line of steamers, and the Canadian National Railway. That may be the proper thing to do; I should be glad to study it; but I say meanwhile something has to be done, and I make this suggestion: that the Minister of Railways and Canals (Mr. Graham) should say to the heads of our two great railway companies: "Gentlemen, cease useless competition, cease duplication of train services; find out what trains are paying you and then make arrangements to take off those that are not paying." I think we could save in the tens and twenties of millions of dollars if that policy were adopted. It will not be easy to put into effect, for people do not like to co-operate when they have been competing strongly against each other. But they have got to do it. We cannot allow things to go on as they are, we must elimate useless duplication.

Mr. CALDWELL: Might I ask a question at that point? Would the hon. member go so far as to suggest that railway rates be reduced until the two companies are compelled to do what he suggests, if they will not do it otherwise?

Mr. McMASTER: I should not like to hold out the big stick before I had allowed the estimable Minister of Railways and Canals to emulate Sir Wilfrid Laurier and his sunny ways, which I think on the whole would be more likely to bring about the desired result than a display of force. But in all seriousness, the people of this country demand that economy be the watchword. That does not mean economy merely in little things, it means economy in big things, and I think the line which I have suggested should be followed. For instance, I am told that the competition for business between these two lines is leading at least one of them to altogether too extravagant modes of collecting express shipments. I was told when I went west that in one city in that part of the Dominion where, before the competition had begun, there had been some five engines placing cars in the yards there were now twenty-two. And we all know that throughout the country there are through trains between large cities that could be eliminated. I believe that the people of Canada would be prepared to support any government that showed that it had at heart the interests of the people in the matter of economies in the management of our railways. We must however practise economy ourselves. Two years ago I protested against the tower going up at the present juncture at a further cost of $600,000. But the work was proceeded with and the top has not yet been reached. I do not believe that a government will make any enemies in this country if it shows that it really intends to economize, although I know it is not easy practising economy. I once defined extravagance myself as expenditure on the part of other people of which we do not approve. So that it is easy to talk economy. But what every member of this House has

got to do is to realize himself that he should not ask for his own constituency anything which he does not believe is justified by the financial condition of the country.

I will vote for the budget, not because I am particularly enthusiastic about it; there are features in it which I reserve to myself the right to vote against. But to vote against the budget might mean defeating the government.

Mr. GARLAND (Bow River): Hear, hear.

Mr. McMASTER: Well, that "hear, hear" does not commend itself to me; I do not want to see this government defeated. In many ways it is a very good government; for one thing, there has never been any government in Canada in many years which has stood up for the principle of Canadian nationality as this government has done. And that is something that is dearer to me almost than anything else. Burns has said:

> Then gently scan your brother man,
> Still gentler sister woman;
> Tho' they may gang a kennin wrang,
> To step aside is human: . . . .
> Then at the balance let's be mute,
> We never can adjust it;
> What's done we partly may compute,
> But know not what's resisted.

Well, we know what has been resisted; the government has resisted appeals for all sorts of increases in the tariff coming even from constituencies which some of its members represent. And that should be counted to them for righteousness. I will support the government because there have been some reductions in duties. It is true that these reductions are not so many as to tire one in the counting of them; but there have been some reductions on things that should be reduced. My estimable friends in the far corner of the chamber will forgive me if I am candid. They are always so kind and courteous, so smiling and debonair, that it is difficult for one to speak harsh words about them, but at this time one must be outspoken, and must say what is true; our words must be words of truth and soberness. This debate has shown that those hon. gentlemen have no appreciation of the condition of the country. A year or two ago they complained that the Progressives were crape hangers and calamity howlers, but when they themselves got into their stride Alberta was left nowhere. And with all their statements about the state of things in the country what is their proposal? They propose more taxation, more restrictions; that is the only proposal they have to bring forward. And that same proposal has been made for the last fifty years and found erroneous. I want to see the government succeed and lead the country along the paths of freedom. We must depend in this country on one school of political thought or the other, and this government will never be really loved by the protectionists; never. Well, I say to the government, be off with the old love and be on with the new.

An hon. MEMBER: What about coal?

Mr. McMASTER: I have not dissembled my views about coal. Indeed, I have been so frank about coal that I shall be afraid to meet some of my friends from Nova Scotia in the lobby after this speech. I think I hear one of them saying "hear, hear." However, I ask the government—if the trumpet blow an uncertain sound who shall prepare himself for the battle? Personally, I do not want any more uncertain sounds. Restriction has been tried in this country and has failed. Let the government take its courage in both hands and march forward in the ways of reduced duties and it will find itself supported, I believe, by the representatives of the vast majority of the people of this country.

Mr. JAMES STEEDSMAN (Souris): I am somewhat at a disadvantage coming after my eloquent and genial and extremely well informed friend (Mr. McMaster), but I am much indebted to him for some of the things he has dealt with in his speech. Some of them will save repetition on my part. I thank him particularly for what he had to say with regard to agriculture in Canada. What I have to say this afternoon will be largely in the interests of agriculture and particularly in the interests of western agriculture. While I could follow my hon. friend in most of his statements and while I agreed with him on a good deal of what he has advocated with regard to the tariff in particular, I am sorry to say that I cannot at this time see my way clear to go the whole way with him and support the budget. What I want to do particularly is to bring before the House the point of view of agriculture with regard not only to the budget but to some of the other more important questions that are agitating the minds of hon. gentlemen and of the people throughout this country to-day.

Perhaps nowhere in the world has a similar number of people been able to produce so much wealth in the same length of time as have the farmers of the prairie provinces, and with that been able to save so little of the proceeds of their labour. One reason for their great production is of course the ease with which the land is brought under cultiva-

tion. That coupled with the fertility of the soil has made it possible to raise more grain per man in the prairies than anywhere else in the world. Yet we must realize that wheat, the greatest of all our exportable commodities to-day, is being produced in the prairies at a loss, one year taken with another. Some of the things that are responsible for that state of affairs I intend to deal with as I proceed. Distance from markets where our products are ultimately sold brings up, of course, the question of transportation both by rail and by water. Then again the expensive system of handling and marketing our crops must be considered, such as the many tolls that are charged from time to time for various services rendered. Then again there is the question of the high interest rates that the farmers have to pay, the question of the cost of production, and the high cost of living—these are all matters that enter into this proposition of the production of wheat at a loss.

The question of railway rates, we are told, will be very thoroughly gone into by the House this year. Hence, Mr. Speaker, I do not wish to enter particularly into a discussion of that this afternoon. I just want to point out, however, in passing, that not only the agriculturists but all the people of western Canada stand solidly behind the Crowsnest pass agreement rates, and any attempt to interfere with those established rates on grain and grain products will be most strenuously opposed I think by all the people of the prairies.

With regard to the rates on the lakes, this was touched on the other day by the hon. member for Last Mountain (Mr. Johnston). Perhaps there has been no other service for which we have had to pay more than the service on the lakes. At times the rates have been out of proportion, and I would just like to suggest to the government that if at any future time there is any apparent approach to discrimination against Canadian shippers, they should at once apply the remedy they have now in their hands, that of suspending the coastal laws. We believe that that would result in eliminating such a state of affairs as we had, for instance, two years ago, when the rates went away beyond everything that was reasonable.

The matter of the control of ocean rates is also before the House. In regard to that I just wish to say that I trust the committee that has this inquiry in charge, if it does not approve of the Petersen contract, will introduce some other means whereby ocean rates may be brought down. We realize that the rates on beef cattle, for instance, to England are away out of proportion; they are much too high. We realize, too, that unless the rates are brought down, the beef cattle industry of Canada is doomed. In view of the fact that we are shut out of the American market, there is no other country our beef cattle can go to except Great Britain, and we cannot ship them there at a profit under the present rates. Any scheme that will result in the specific lowering of ocean rates not only on cattle but on other products will, if not at too great a cost to the people of Canada, meet at any rate with my approval.

Then as to the cost of production and the cost of living—and here is where our disappointment, shall I say, with the present budget comes in—last year a reduction was made, a step forward, as it was called, was taken, and in view of the enthusiasm with which those reductions were accepted in this House and in the country as well, I think we were justified in expecting that at least another further step would be taken this year, and not only in view of the enthusiasm with which that step was accepted by this House and the country, but also because of its enthusiastic reception by some members at least of the cabinet; in view of the fact also that we have the assurance of the Prime Minister himself, or if not his, we have the assurance of the Minister of the Interior (Mr. Stewart) that no harm was done to the industry the duties on whose products were reduced last year. In view of these circumstances I think we had reason to expect that the movement towards the lowering of the tariff on other articles might be continued.

Let me point out a few of the things on which we think the duties should be lowered —the food, the clothing and the footwear of the people, cooking utensils, heating appliances, and I was going to add coal, but my hon. friend from Brome (Mr. McMaster) has handled the coal situation so well that I do not propose to touch on that. On these things I have mentioned the prices should be as low as possible to the people of this country. We believe that on these articles at least the duties should be substantially reduced, and should have been reduced in the budget this year.

I should also like to call your attention, Mr. Speaker, to the resolution that was debated in this House a few days ago, which had for its object a lowering of the duty on automobiles and motor trucks. There may

be those who contend that automobiles are not a necessity to farmers. To those who hold that view, I would like to say that out on the prairie where I come from, where the distances are so great, and where the conditions prevail such as my hon. friend from Macleod (Mr. Coote) spoke of, where the large towns are far apart, and settlers live at a great distance from the railways, the post office, churches and so on, the automobile is not only a great convenience but an absolute necessity, and we had reason to hope that the government would accept the suggestion of my hon. friend and lower the duties there. The sale and distribution of automobiles and automobile service is the biggest thing in this city or in any other city in Canada to-day—unless possibly speculation in wheat in one or two cities. We have no fault to find with that, but we think that an industry that can make such a showing in the few short years in which it has been manufacturing automobiles does not require thirty-five per cent duty. I do not think that I would suggest any slashing reductions in the tariff—reductions that would probably demoralize certain industries and might have the effect of interfering with the revenues of the country. Rather I would think we should have a gradual reduction from year to year that would permit of industry adjusting itself to the changed conditions as we went along, a system that would bring us very shortly to that much to be desired condition where we would have a tariff for revenue only, if there is such a thing. I want to say that I am extremely doubtful if any tariff board can decide through inquiry just where or at what point the tariff would produce the greatest revenue. I am of the opinion that we can only find that out by experience; and unfortunately we have never had a government in this country that has been willing to make the experiment in order to discover where that point is.

The next matter on which I wish to say a few words is that of rural credits. I have already spoken of the high interest rates. It has not been my privilege to read the report of Dr. Tory who has been working on this matter now, for, I think, practically two years, but I have a fair idea of some of the proposals, at least, that will be submitted to the House. I am firmly of the opinion that agriculture cannot carry the interest charges on long term and other loans that we are called upon to pay at the present time, I do not think it can be done. I trust that the government will come to the assistance of the provinces in order that they may be placed in a position to extend such systems of rural credit as they have undertaken at the present time. Some of these systems, at least, are very good. Lack of funds, I think, is the only reason for their not being able to carry on. However, I trust the government will seriously consider this question and do so this year.

In conclusion I must say that I am very sorry that customs and the rules of the House made it impossible for you, Mr. Speaker, to accept the sub-amendment proposed by my leader, the hon. member for Brandon (Mr. Forke). That sub-amendment expresses my views on the budget more clearly than I have been able to give expression to them myself, and I am very sorry indeed that I will not have the privilege of voting for it. With regard to the amendment of my hon. friend the member for West York (Sir Henry Drayton) it contains little that would induce me to vote against it. On the other hand there is little in it that would induce me to vote for it. In fact, there is no declaration of principle or policy in it at all, other than perhaps a mild suggestion with regard to economy, and we are all in favour of that. With regard to the budget itself I cannot see my way clear to go to the length of the preceding speaker or to support the budget and therefore I intend to vote against it.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. J. E. FONTAINE (Hull) (Translation): With your leave, Mr. Speaker, before discussing the budget, I would like to make a few remarks with reference to the speech the hon. member for Kent, N.B. (Mr. Doucet) delivered in the House, on April 2, last. The general impression conveyed to us by his speech, is that the government is not fair to the French-Canadian element and that the latter are not given their rightful share in the administration of public affairs. I shall bring to bear a few facts to prove that the hon. member shows bad faith or that he is not well informed. To illustrate my point, I shall proceed by comparison: under the Tory government although such a designation does not seem to please my hon. friend for Kent—the French-Canadians had but one representative in the cabinet, Senator Blondin; to-day, under the Liberal government, we have five French-Canadian ministers: the hon. Messrs. Dandurand, Beland, Bureau, Lapointe

and Cardin. At the Imperial conference held in London, in 1916 and 1917, under the Tory regime, the French-Canadians were not represented; at the Versailles conference, when the Peace treaty was signed, in 1918 and 1919, there were no French-Canadians; at the meeting of the League of Nations, held in Geneva, in 1920, there were no French-Canadians; at the Imperial conference held in London, in 1921, again there were no French-Canadians; at the meeting of the League of Nations held in Geneva, in 1921, there were no French-Canadians; at the International Conference on Limitation of Armaments, held in Washington, in 1921, again there were no French-Canadians. Now, Sir, we come to the Liberal administration: At the meeting of the League of Nations, held in Geneva in 1922, the French-Canadians were represented by the Hon. Ernest Lapointe; at the Economic conference, held in Geneva in 1923, the French-Canadians were represented by Mr. Edouard Montpetit; at the meeting of the League of Nations, held in Geneva in 1923, the French-Canadians were represented by Sir Lomer Gouin; at the Economic conference, held in London in 1923, the French-Canadians were represented by Sir Lomer Gouin; at the Imperial conference, held in London in 1923, the French-Canadians were represented by Sir Lomer Gouin; at the Inter-Allies conference, held in London in 1924, the French-Canadians again were represented by the Hon. N. A. Belcourt; at the meeting of the League of Nations, held in Geneva in 1924, Canada was represented by the Hon. Raoul Dandurand; at the International Labour conference, held in Geneva in 1924, our representative was Mr. Pierre Beaulé, president of the Union Ouvrière Catholique de Québec; at the International Opium conference held in Geneva in 1924, the French-Canadians were represented by the Hon. Dr. Béland; and moreover, since 1921, the Hon. Ernest Lapointe has, on various occasions, gone to Washington, to sign four treaties between the United States and Canada.

On all the royal commissions which were appointed by the Liberal government; the French-Canadians were never left out: the Hon. Judge Turgeon acted as president of the grain commission; Mr. Picard, as president of the pulpwood commission; General Tremblay was appointed a member on the commission of the Grain and Transportation on the Great Lakes inquiry; Colonel O. E. Talbot and Mr. Ernest Décary are members of the National Railway Board; the Hon. A. Turgeon and Mr. Beaudry-Leman are also members of the commission appointed to inquire on the St. Lawrence waterway scheme, and Mr. Olivier Lefebvre figures on the staff of engineers of the latter commission.

I now come to the judges. In New Brunswick, precisely in the province of the hon. member who wished to lead us to believe by his speech that the government was ignoring the Acadians, I think that Judge Leblanc succeeded to Judge Chandler. In the province of Quebec, Judge Gonzalve Desaulniers succeeded Judge McDougall; in the province of Ontario a new judiciary district has been created and Mr. J. B. T. Caron received the appointment. In Saskatchewan, Judge Gravel succeeded to Judge Hutchison.

Now let us come to senators. In New Brunswick, the province, where the hon. member for Kent lives and which has just requested the appointment of a senator to represent the Acadians, the government, last year, appointed Mr. Turgeon to succeed Senator Thompson. So far as Prince Edward Island, I associate myself with the hon. member for Kent in his request and hope that the government will appoint an Acadian senator; however, what I regret, is that the hon. member for Kent, who is an old politician and has many claims owing to services to his party, did not make such a request to the Tories, his friends, when they held power; they would not have denied him that favour, perhaps, he was not as fond of his compatriots in those days as he is to-day; at all events, in 1912, Senator C. A. McDonald, from Prince Edward Island, died, and the Tories replaced him not by an Acadian, but by Mr. Murphy; and furthermore, in 1915, Senator D. V. Robertson died and again in this case the friends of the hon. member for Kent, did not appoint an Acadian but a gentleman by the name of McLean. I shall let you draw, Sir, your own conclusions from the above facts. In the Civil Service, Mr. Gonthier replaced Mr. Sutherland as Auditor General, the most responsible post in Canada, being given a salary equal to the one of the Prime Minister; Mr. Gaboury replaced Mr. Coulter as Deputy Postmaster General; Mr. Beauchesne replaced Mr. Northrup as Clerk of the House of Commons; Mr. Lucien Pacaud replaced Mr. Griffith as Secretary of the High Commissariat, in London; Mr. Dubuc replaced Mr. Bowden as Chief Engineer of the Railways and Canals Department, and so on. All these appointments tend to show that the Liberal government strives to be fair to the French Canadians. I am not ready to admit that we have obtained everything to which we are entitled; however, we should not expect that in the brief interval of three years, the government should have found it possible to right

all the wrongs perpetrated against our race under the Tory administrations, when our compatriots were entirely ignored.

If, instead of criticizing the present government, the hon. member for Kent, would only plead with his leader (Mr. Meighen) and his friends, Mr. Ferguson, Premier of Ontario, and the hon. member for West Toronto (Mr. Hocken), to disallow Article XVII, which forbids the teaching of French in the schools of Ontario, we could then believe in his sincerity, but until that time, we have reason to believe that there is a great lack of sincerity in his claims and that he wishes to make political capital with this question of race. Before leaving the subject, I wish to quote from an article which appeared in the newspaper L'Avenir du Nord on March 20, last, and is signed by Jules Edouard Prévost, member for Terrebonne; this article sizes up well our political situation:

When it is a matter of governing, struggling and progressing, it is necessary to face facts and not to allow ourself to be deluded by dreams.

Many of our compatriots lose sight of these things when they become exacting to the extreme, immovable and uncompromising in their claims, requests and desires we must admit that, a few years ago, we had to bear up with many a stormy day in the sphere of Dominion politics. The Tory and Orange parties let loose against us bigotry and insult.

The offsprings of the old Tory regime proved themselves worthy of their predecessors.

That belongs to the past. The French Canadian minority has again taken its place in the government of the country in the realm of public affairs and the various departments of the State.

We shall not pass in review the advantages realized within four years. This rehabilitation of our race is an acknowledged fact because it is evident.

Now, Mr. Speaker, at each session of Parliament the budget is anxiously expected, but especially this year, owing to the government, last year, having reduced and even entirely taken off the duty and sale tax on a great number of items, among these were farm implements and machinery in connection with the development of our natural resources. It was a question whether the revenues of the country would be affected by such a change, and what would be the financial result. Well, the hon. Acting Minister of Finance has just reassured us by informing us that, although the government had levied $52,900,000 less in sale taxes and $13,000,000 less in excise taxes, in the course of the last twelve months the fiscal year ended with a favourable balance of $1,800,000. It is a most gratifying result and tends to prove that the government's policy is sound, moreover, economic and consistent with our needs. Notwithstanding this satisfactory result, all the Conservatives, who have taken part in this debate, have criticized the government, and, the ex-Minister of Finance (Sir Henry Drayton) has introduced an amendment, asserting that it is to be regretted that taxation, especially the sales and excise taxes have not been reduced, when, as I have just mentioned, they were reduced by $52,900,000 and $13,000,000 respectively, in the course of the past year; he reproaches the government, charging it with having increased the national debt, with not having practised economy, and finally he ends up by denouncing British preference. It is, Sir, nothing but insolence and one cannot be further remote from the truth. Allow me to quote from an article taken from La Presse of Montreal, notwithstanding it being an independent newspaper which, if I am not mistaken, supported Mr. Birks, the Conservative candidate in the by-election of St. Antoine.

This is how this newspaper expressed itself on March 25, last:

There is no doubt, after hearing the Budget speech, that the Canadian people have saved $52,900,000 in sales tax and $13,000,000 in excise duty, last year. Such a relief of taxation is too precious to the workman, upon whom principally falls the sales tax, for the public to ignore the efforts displayed by the government so as to relieve the labourer already overburdened with taxation.

Notwithstanding this enormous decrease of revenue assumed by the government, Mr. Robb, however, shows us a favourable budget balance of $1,823,000 and a very significant step forward in our trade budget. Indeed, we notice that our exports overlap our imports by $165,000,000 and this new phase in our industrial life vouches for national prosperity and progress.

On the other hand, this is what the newspaper Le Devoir has to say in regard to the speech of the ex-Minister of Finance (Sir Henry Drayton) in an article bearing the following head-line "Foolish ventures:"

Sir Henry Drayton, on behalf of the Tory party under Mr. Meighen's leadership, repudiates the "British preference". . . . in words; however, he avoids in his motion of censure, to demand its repeal, not even in a modified form, as in Australia. As a set-off, he recommends in the same breath both a decrease of taxation and more "protection" (therefore, an increase in taxation).

So long as the Tory party will adopt these childishly crafty tactics, the high sounding creeds of its leaders, and their flag-waving, the consideration attached to them will amount to what Saint Simon termed in his picturesque language, foolish ventures, bubbles and toy pistols.

One cannot better describe the lack of sincerity of our opponents. Were we to believe in them, Sir, we might conclude that the Liberals are responsible for the debt increase and the taxes with which we are burdened. When the Conservatives assumed power in 1911, the national debt only amounted to $340,000,000, the interest came to $12,000,000 per year, and the debt per

capita, amounted to only $47; while in 1921, when they were driven out of power, our debt had increased by $2,000,000,000, the interest amounted to $140,000,000 per year, and the debt per capita came to $266. They are the same gentlemen, Sir, who, after having squandered the public's money, after having been so extravagant during their ten years of tenure of office, wish to preach economy and talk of decreasing the taxes. Nonsense! These gentlemen are shamming, they must take the people of this country for imbeciles. I know their answer: Yes, it is so, but it is due to the war. I do not wish to recall again all the useless expenses, all the scandals attributed to our opponents during the war to favour political friends; let me only point out that it is admitted to-day, that at least fifty per cent of the money spent during the war was squandered and used to enrich the friends of the government of that date; and, as a proof of my assertion, let me recall the statement made a short time ago by General Currie, who was in command of the Canadian troops: that there had been 100,000 Canadians who should never have been recruited.

What about the purchase of the Canadian National railway and the Grand Trunk railway, frightful and useless expenditure which had no other aim than to enrich Messrs. Mackenzie and Mann and the shareholders of the Grand Trunk Railway and which cost the country between $75,000,000 and $100,000,000? We must also mention the merchant marine, the work of the Hon. Mr. Ballantyne, which cost about $100,000,000 and is useless. In vain, Sir, do the Conservatives blame the present government, their scandals and bad administration will never be forgotten, and the people of this country are well aware that it is not in a period of three years that the Liberals were able to right all the wrongs perpetrated during the previous ten years. Let the government carry out its policy, let them continue to decrease the taxes, let them especially show a sense of fairplay to all classes, for protection must not only apply to the manufacturers and large interests, but also to farmers and workmen. Our opponents still contend that this unbounded protective policy would be the best remedy to cure all the present evils, yet, in 1921, at the general election, the people gave an unequivocal verdict on said policy, since hardly fifty Conservatives were returned, even their leader (Mr. Meighen) was carried away in the avalanche and defeated in his own county. Since the last session, we have had five by-elections which allowed the people an opportunity to give a verdict in favour of tariff reduction. Our opponents counted upon carrying the division of St. Antoine, an essentially manufacturing division, whose representative in the House, Mr. Mitchell, had resigned as a protest against tariff reduction which had just been put into effect by the Liberals. Notwithstanding a very stubborn fight which the Conservatives put up, during which the government had to give battle to all the large interests, the Liberal candidate, Mr. Hushion, was elected by a large majority. What are we to think of West Hastings, a riding which had always been represented by a Conservative since confederation, and a riding Mr. Porter had held for twenty-five years? He withdrew from the House as a protest against the conduct of the hon. Minister of Labour (Mr. Murdock) who, in his eyes, had committed the awful crime of having withdrawn from the Home Bank, before it closed its doors, the sum of four thousand dollars which he had previously deposited in that institution. The people of West Hastings did not share Mr. Porter's views, and there again, after a very hard fight, notwithstanding that the right hon. leader of the opposition personally went into the riding to preach his high protective tariff as a remedy to all evils, the Liberal candidate was elected by a large majority.

I wish to say a word with regard to the subamendment moved by the hon. leader of the Progressives (Mr. Forke), and which, Mr. Speaker, you declared was out of order. By this subamendment the Progressives reproach the government in quite a different way from that of the Conservatives. They find that the tariff has not been reduced enough. On the other hand the Minister of Finance tells us that the duty on farming implements and a few other items had brought down the revenue by more than fifty million dollars. Consequently, if we go any further in that direction, where shall we take the money to meet the country's obligations? We shall have to fall back on direct taxation. I am aware that this would suit the west very well, because the latter would be based on the value of prosperity, and as the east is far more developed than the west, we, from the east, would still have to pay for the west. I think that the government has gone far enough in that direction; it would be impossible to do more without sacrificing the east.

The subamendment of the hon. leader of the Progressives ends by stipulating that we should have a tariff for revenue only. I understand that it is just what we have now. I read in the newspapers that the Progressive

member for Springfield (Mr. Hoey) had stated at a public meeting that, if the western provinces did not obtain what they demanded, only one thing would remain for them to do: to drop confederation and annex themselves to the United States. Such language seems astonishing on the lips of a member, and the only excuse that can be found, is that this member, like a number of other Progressive members, has been in this country for but a few years and that he has not had time to attach himself to the Canadian soil.

Mr. BEAUBIEN (Translation): Mr. Speaker, will the hon. member allow me to tell him what the hon. member for Springfield (Mr. Hoey) actually stated at Brandon? He only asserted that, if confederation did not afford fair-play to certain parts of Canada, it was useless to try and keep it up. Those are the words of the hon. member for Springfield on that occasion; he did not mention annexation.

Mr. FONTAINE (Translation): I accept the correction made by the hon. member for Provencher (Mr. Beaubien).

I was saying that the hon. member for Springfield had not had time to become attached to the Canadian soil: in fact, if we look up the parliamentary guide, we find that he was born in Ireland, in 1883, from where he emigrated to Canada in 1909. He settled in Winnipeg, Manitoba, where he obtained his degree in theology in 1915, however, he gave up this calling in 1920, to take up the United Farmers' movement. They are free, Sir, to act as they please; for my part, I think the eastern provinces have done more than their share for the development of the west. What we now need in this country, is a policy of conciliation and compromise for which all the provinces will bear their share of sacrifice for the general welfare.

I also wish to congratulate the government for having undertaken to break up the monopoly which exacts too high rates for the transportation of our products to the European markets. For a number of years, this question of our railway transportation has been very much discussed. The Maritime provinces and especially the western provinces are incessantly urging freight rate reduction. I think this is only part of our needs, especially since the Americans have raised their tariff, and owing to that fact, have closed their doors to our products. We are actually forced, to-day, to ship our products to the European markets, and it is admitted that we are in the hands of trusts and we are paying too much on this freight. The government has decided to subsidize a company so as to control the rates. They have done the right thing. This will allow the farmers of this country to realize more profits on the sale of their products, by paying less for transportation, and this also applies to the transportation of manufactured goods. In a word, Sir, this means more money in the pockets of our farmers and manufacturers.

The government looking to the welfare of Canada's industries and anxious to help them out of the depression which has settled on the country since the war, has increased the duty on American coal, thereby giving an impetus to the development of our vast coalfields in Alberta and Nova Scotia. This policy has been well received and messages of congratulation have been pouring into Ottawa by the hundreds. I intend to quote only the opinion of one of our foremost coal merchants in this district, Mr. Napoleon Bélanger, president of the O'Reilly and Bélanger Company of Ottawa and also of the firm of Belanger Frères of Hull. Here is what he stated in The Citizen of March 25th, the day following the budget speech:

> I believe the increase in the duty on American coal is a very good thing: the mine-owners of Nova Scotia will now be able to sell more coal. The government deserves credit for having thus encouraged a Canadian industry.

This statement is all the more important to my mind as coming not from a friend of the government but from a follower of my right hon. friend the leader of the opposition (Mr. Meighen).

Mr. Speaker, I desire to say a word on the question of immigration. First of all let me say that I am utterly opposed to the resolution moved by the hon. member for Centre Winnipeg (Mr. Woodsworth) which was debated in the House last week and which asks that the government assume the responsibility of looking after the welfare of every immigrant unable to find employment within two years after their arrival in this country. I believe that every immigrant who, after two whole years finds it impossible to earn a living out of the land the government gives him should be sent back to his own country, so as to prevent him from competing against our Canadian workmen in the cities. I state here and now, Mr. Speaker, that I stand ready to vote against this government if it fail to protect our workmen. You know that at the present time work is hard to find, a great many of our workers are unemployed and those who have work earn only $2 or $2.50 a day. Do you think a family of five children together with the father and mother can live on a salary of from $15 to

$18 a week? I say it can't be done, and that it is the duty of this government to see to it that fair wages are paid our workers as also to prevent immigrants from replacing our Canadian workmen in the large cities. I was pleased to learn that the government intends to appoint a special committee to consider the matter of Old Age Pensions and look into the suggestions which the provincial governments have been invited to submit. This humanitarian plan is one that is very close to my heart and I trust the present session will see a bill of this kind become law. I earnestly wish to congratulate the Prime Minister (Mr. Mackenzie King) on having a truly Canadian policy. He never misses an opportunity of asserting our autonomy. And so to-day, Canada may sign treaties with foreign countries without necessarily going through the formality of having them witnessed by the British ambassador. What a contrast to the imperialist policy of the right hon. leader of the opposition who is ever ready to sacrifice our last man and our last dollar for the safety of the empire. Even had he nothing else to his credit, that would be sufficient, for the right hon. Prime Minister to feel assured of the support of my compatriots and my province.

I declare here and now that as long as the Liberal party follows that lead, as long as it is faithful to the policy of Sir Wilfrid Laurier, as long as it continues to govern in the interest of the masses and not of the classes, it will remain in power, for the greatest good of the Canadian people. Before resuming my seat, Mr. Speaker, I wish to say that I intend to vote against the amendment of the former Minister of Finance (Sir Henry Drayton) and for the budget brought down by the hon. Acting Minister of Finance. (Mr. Robb).

Mr. MURRAY MacLAREN (St. John City and Counties of St. John and Albert): Mr. Speaker, this afternoon the hon. member for Brome (Mr. McMaster) made reference to the Roumanian and Greek loans, and he was of opinion that it was fair to add these loans to the budget surplus, an opinion which he founded largely on the presumption that the security for these loans had improved. But I would submit that the greater or lesser security of these loans does not enter into the principle involved. If there has been an improvement in the security, so much the better; but that is not the principle upon which payment of the debt should be treated. Surely it is a simple matter and may be put thus: When should the debt be regarded as paid? The answer, I submit, is: When the debt has been paid.

Now, the member for Brome in his reference to free trade ran true to form. It seemed to me that he was pursuing a phantasmagoria—seeking for something that did not exist. He said that he would approve of the government voting assistance to the Cape Breton miners. At the same time he was unwilling to make such changes in the tariff as would relieve the local situation. Increases in the tariff on coal which would do away with the trade difficulties, and so relieve the distress of the miners, did not appeal to him as being the proper course to pursue. I notice that the hon. member did not regard these important factors which follow in the train of the encouragement of an industry: the increased use of our railway system by the augmented coal traffic; the national advantage to be gained by the increase in interprovincial trade; and the local advantage accruing by the increased employment of our coal miners and the spending of their wages in the district. I would submit that these and other advantages far outweigh any disadvantages that might arise from the increase in the price of coal.

During the debate we have been impressed with the large increase in our national liabilities, due mainly to railway deficits. The increase in the country's debt, estimated at about $100,000,000, is of particular importance in view of the high rate of income tax. As a consequence it will be noticed that many members in the course of their speeches made suggestions as to how the situation might be best dealt with. References have been made to extravagant expenditures by the government, and I think these were easily established. Undoubtedly there are many expenditures that might well have been postponed until a more favourable time. Then the export of raw materials and the benefits that might result to the Dominion from some export duty thereon were dealt with by several hon. members. Of course, protection as a policy to increase our manufactures and add to the prosperity of the country was fully discussed. On all these subjects suggestions have been offered to the government, and it would seem that all that was necessary to bring about national prosperity and reduce our heavy debt was for the government to avail themselves of these suggestions. Now, looking over the list that I have recited, it has occurred to me that certain words in the general confession would apply extremely well to the action of the government: It has done those things which it ought not to have done, it has left

undone those things which it ought to have done, and there is no health in it.

There is still another subject which I do not propose to discuss at present and that is the resolution which has been standing in my name on the order paper since the opening of the session, but so far there has been no opportunity of having it discussed, although I am optimistic enough to still hope that such an opportunity will be given to me before the session closes, for I feel that in that resolution dealing with the National Railway policy of Canada is contained a matter of great national importance, and I submit, Sir, that it would be a misfortune if no opportunity is given for its discussion by the House.

But there is a subject which I do propose to say something about. I refer to the customs tariff as it concerns imports from the preferential standpoint. And I do not apply the word "preference" in any narrow sense. I do not necessarily suggest that it must mean what is called the British preference; but by the words "preference" and "preferential customs tariff" I mean any tariff which gives an advantage or preference to a country sending its goods direct to us. Under this heading I will not enter into the merits of any trade treaty: that is a somewhat different subject, and there is, too, a great deal to criticize in some of the recent trade treaties that have been passed in this House. Nor have I any reference to the height of the tariff; that implies a discussion of free trade and protection. Apart from trade treaties or preferences, or the merits of them per se, and apart from any question of the height of the tariff, what I have in mind is something—a preference or advantage—that encourages any country to trade direct with us and to send its products here. In connection with this matter there is an interesting article in the thirty-second annual report of the Department of Trade and Commerce for the year 1924. At page seventeen there appears the following:

> What is Canada's greatest need to-day? No prolonged study is necessary to decide. It can be answered in one word: trade. Increase in trade distributes prosperity among those on the land, those engaged in transportation, in banking, in manufacturing and in other directions. . . . .
>
> Why should we continue to send our gold to a foreign country and depreciate our currency and buying power by paying outside for goods we could purchase at home or within the empire? And the extraordinary fact is true that frequently we pay, in and through a foreign country, for goods produced within the empire. We are thus building up foreign ports, contributing to the maintenance of foreign transportation companies, and paying commission to foreign commercial houses. We do not begrudge them prosperity and success, but such transactions are at the expense of our own people and our own country.

[Mr. MacLaren.]

> The services and facilities of a foreign country are frequently sought perhaps because it is the line of least resistance, because of inertia or of a dulled sense of what is due to Canada.

In that report there is stated very well the criticism which one, and indeed the report itself, has of the action of the government, "a dulled sense of what is due to Canada." In the course of my remarks I hope to illustrate that one of our difficulties has been simply this, a dulled sense of what is due to Canada by reason of inaction on the part of the government; an increased activity and greater courage in meeting these conditions will go far I think to solve many of our difficulties. I agree with what is contained in these extracts I have read. While I am referring almost entirely to what is connected with imports, incidentally I should like to give to the House two or three figures relating to exports. The total exports from Canada to overseas countries last year via Canadian seaports amounted to $393,441,998 as compared with Canadian exports through the United States of $223,678,390; that is to say, of the total exports overseas of Canadian products over one-third were sent through United States ports instead of going through Canadian ports. In other words, 36.2 per cent of our total exports overseas went through United States ports as against 63.8 per cent that were shipped via Canadian ports.

As regards the imports, goods coming into Canada indirect through United States ports amounted to $13,890,483, or 4.7 per cent. It will be noticed that this 4.7 per cent is much smaller in proportion in regard to imports than the figures I have given for the exports. But that does not convey an exact statement; the figures are no doubt right, but there is something more to be noted. All products that come to the United States, and are paid for in the United States irrespective of any ultimate designation to Canada, are placed to the credit of the United States, and we know as a matter of fact, nor is there any doubt, that a considerable amount of products coming from overseas into this country is credited to the United States and not to the country of origin.

I shall speak first of the British preference, which as we know applies to the United Kingdom, British India, North and South Rhodesia, Ceylon, New Zealand, South Africa, various British African possessions, Mauritius, Fiji, and other British countries. All of these British possessions may receive the preference if their products are sent to Canada whether through Canadian or United States ports. The

House will remember that two years ago a discount of 10 per cent was added to the British preference. It was found that a large amount of goods was coming through American ports, and to encourage the importation of these goods through our own ports east and west a discount of 10 per cent was added to the British preference, but that does not apply to spirits, sugar, tobacco, cigars and cigarettes. The 10 per cent also does not apply if the duty does not exceed 15 per cent, either ad valorem or specific, or ad valorem and specific combined. It will be noted then that the preference, even with the 10 per cent additional, does not cover a great deal of the goods that come to this country. It does not include, as I have stated, spirits, sugar, tobacco and cigars, nor does it include articles on which the duty does not exceed 15 per cent. Now we know that there is a large amount of products brought into this country which do not exceed the 15 per cent. For example, last year free imports amounted to $26,621,062. Then also under the general tariff last year we imported $22,374,078 of goods. Now if the products coming in under the general tariff and the products coming in free are added together it will be found that $49,000,000 of imports may come into Canada through Canadian ports or through American ports on exactly the same basis; in other words, there is no advantage in bringing them to our own ports and to our own rails.

Let me now state very briefly what are the advantages in doing our own business. One of the great weaknesses of this country is its failure to do its own business. Now here is one way of doing it. We have our own ports, with all the employment they can afford, and all the disbursements from the steamers. We have our own railways, which at the present time are not doing sufficient business. I am trying to point out to the House the advantages we would gain from a change in our customs tariff, which would help to bring about to a very large extent all these desirable objects. I have said that the British preference, even with the 10 per cent, does not include a very large amount of importations into this country.

Mr. ROBB: My hon. friend is quoting figures, I suppose, for the fiscal year ending March 31 last?

Mr. MacLAREN: Those are the figures for 1924.

Mr. ROBB: From figures compiled for the year ending December 31, it appears that less than one per cent of the importations of goods coming in under the British preference came by other than Canadian ports.

Mr. MacLAREN: I have the figures up to the end of February 1925, which I will give the House in a few minutes. I take it that what the Acting Minister of Finance is referring to is the 10 per cent discount to the preference, and I have not reached that yet. What I am pointing out now is this: Take the British preference as it is, without the 10 per cent. That is now in operation, and any of our British dominions that are within the preference can import their products, with certain exceptions, into this country either through United States ports or Canadian ports on equal terms. Now I said that in addition to that, there is a large importation that is not affected or covered by the preference, that is goods that come in under the general tariff, and those that come in free. These can come in, even with the preference in operation, either through American ports or Canadian ports on equal conditions.

Now we come to the 10 per cent discount. That does not affect spirits, sugar or tobacco. In other words, as it stands now, with the 10 per cent discount in operation all sugar, all spirits, all tobacco, can come into this country through United States ports or through Canadian ports on equal terms. The Acting Minister of Finance has referred to what I presume are the results of the 10 per cent discount which has been added to the preference, and I am glad to say that there is substantial evidence that that is having a very beneficial effect. It is satisfactory for the country, and it is additionally satisfactory as furnishing all the argument I need to show that not only does this preference, even a small preference add greatly to our trade, but it is capable of very material expansion. Last year the imports from the United Kingdom under the preferential tariff amounted to $102,944,427. The imports from the United Kingdom, under the preferential tariff, through United States ports amounted to $811,749, while the imports from the United Kingdom, under the preferential tariff, through Canadian ports, amounted to $102,132,678.

The figures as regards the effect of the 10 per cent discount have already been quoted. The statistics have only been kept during the last year, but notwithstanding that, if you look back over the different years and compare the amounts that have come through Canadian and through United States ports under the preference, when you find that the amount through United States ports has greatly diminished, it is a fair inference, when

the drop was so great and so sudden within the last year or two, that it is due very largely to the 10 per cent discount which has been added. The result is that last year 99.2 per cent of the imports under British preference came through our own ports. I have here the return for eleven months up to February 28 of this year. I think the statement of the Acting Minister of Finance only covered the period up to December. I am now referring to the showing to the end of February of this year, and the total imports from the United Kingdom were $135,430,030; and from the United States $350,635 with the returns for another month of the fiscal year still to come. I take it as fairly clear that the results this year will be even better than those for last year, even although they were particularly satisfactory. I would think no member of this House would ask for it to be otherwise. Surely no hon. member here regrets the ten per cent discount that was given, judging from the results that accrued from it. Satisfactory as it is I think the preference should be carefully considered still further and made use of to the extent that seems reasonable and advantageous to this country. I do not think that every possible exigency is covered by the British preference as it is. I am not arguing at all as to whether the preference is too high or too low, that is not the point. This inducement was offered in order that trade might be done through our own country, but there are some instances that I have mentioned where really the ten per cent discount does not meet the case fairly. It permits of forty-nine millions of imports coming equally well through the United States as through our own ports. I do not mean to say that all such imports are coming to the United States, I know they are not, but there is a considerable amount coming; the least that can be done in the case of imports coming free from overseas into Canada is to insist upon their coming through our own territory.

In the same class I would put the West India agreement, which is a special arrangement between those colonies and Canada for the mutual advantage of each. In the West India agreement it is laid down that the tariff shall not at any time be more than fifty per cent of the duties in the case of importations under the general tariff, but tobacco, cigars, cigarettes and spirits, with the exception of rum, are excepted from the provisions of this agreement. I would draw the attention of the House to the fact that under the West India agreement preference all or any West Indian products can be brought into this country just as well through the United States as they can through Canada. There is not a ten per cent discount and, as it stands, there is no discrimination in favour of Canadian ports as compared with United States ports. Under the circumstances the fortunate thing is that we do get so much trade through Canada. The amount of the West India products that come through the United States may be put down as two millions as against something over twenty millions. Let me say here that there is another point to be considered: the figures of the imports through the United States while accurate as to the method of book-keeping do not represent the actual conditions. We will take the case of bananas that has been so well dealt with by my hon. friend from Cumberland (Mr. Logan). In the case of the importation of bananas into Canada, what country is it charged up against? Not the West Indies although the bananas may come from there; they are credited to the United States. Why? Because they are bought and paid for in the United States. Therefore I would warn hon. members in looking over these figures, and considering the features of the different preferential tariffs, to study the details carefully, otherwise they may get an entirely too favourable opinion of the existing facts. There are, I am informed, many articles imported into Canada as United States exports which are actually the products of other countries. I illustrated that by mentioning the case of bananas from the West Indies.

Mr. BROWN: Then in estimating the balance of trade between Canada and the United States the difference would not be as great as it seems on the surface—that is in considering simply the difference between the exports and the imports to and from the United States?

Mr. MacLAREN: I think that is no doubt correct, but I am a little doubtful as to whether the importation of bananas is a very important factor in the question of the balance of trade between Canada and the United States, the figures are so large. What I am pointing out is that looking at the statistics of the imports from the West Indies into Canada they do not actually represent what we are getting from that territory, and to that extent I think the present treaty is at fault. It is essentially a preferential treaty and it is capable of many improvements according to my judgment. I want to draw the attention of the House to article 8 in the Canadian and West India agreement which states:

The governments of any of the colonies aforesaid on giving six months' notice may provide that to be entitled to the concessions granted in articles 5 and 6 the products of Canada shall be conveyed by ship

direct without transhipment from a Canadian port into the said colony or by way of one of the other colonies entitled to the advantages of this agreement.

The government of Canada on giving six months' notice may provide that to be entitled to the concessions granted in articles 2 and 3, the products of any of the colonies aforesaid shall be conveyed by ship direct without transhipment from the said colony or from one of the other colonies entitled to the advantages of this agreement into a Canadian port.

No doubt the government are aware of that, but I trust that the matter will receive consideration at its hands—the advantage of giving that six months' notice and having the preference restricted to direct business done with our own country.

I observe that there is a notice on the order paper regarding a change in the tariff on grapefruit. It is proposed that grapefruit shall come into this country free. It may be pleasant for one to be able to have grapefruit at a very low cost, but I should like to ask, under what condition could it be considered as a necessity of life. Surely it is a luxury, and I think anyone who wishes to enjoy grapefruit should be prepared to pay a reasonable amount for it, and we shall be interested later on in hearing from the Acting Minister of Finance (Mr. Robb) his grounds for putting grapefruit on the free list. At the present time bananas come in free, either through the United States or direct to Canada, and the principle that has been introduced seems to me absolutely correct, that there be a preference given; that is what we wish the minister to do, but that does not mean that these things are necessarily to come in free. Surely there can be sufficient preference given to the importation of grapefruit from the West Indies to encourage them to come here, and yet not require us to go to the extreme of a free entry. A few days ago we listened with much interest to the report of the commissioner the hon. member from Cumberland (Mr. Logan), which report was well delivered in this House. I thought it was an admirably prepared report. It showed much evidence of the enthusiasm, the assiduity and the energy, with which the hon. member carried out his work. It must be our wish that his efforts shall be successful in increasing the trade with the West Indies. From such experience as I have had, I have no doubt the recommendations in his report in reference to the increase of trade agencies are necessary and essential things to encourage trade. When these offices are opened up, I hope they will not fall into the error that was made in regard to the offices in South Africa, Australia and New Zealand, where the offices are properly equipped and furnished, but where the decorations, including the pictures of our Prime Ministers, past and present, good-looking men as they are, as well as the pictures of Ministers of Trade and Commerce do not add to the trade. That is not what the people want. It is not business. By all means, let them be placed there, but at the same time let us have something illustrating the actual production, the activities, the manufacturing and the natural products of this country. I suggest that when we establish these additional offices and agents in the West Indies a little more care be taken really to make the pictures of some advantage and something worth while.

I am sure from what I know of the West India service that there is need for improvement in the ships. We want more cold storage, better ships, better accommodation, more speed. These things are most desirable. We are not getting the trade which we otherwise would get, because there is a better service via New York. At the same time I know the West Indian trade has been carried on between Halifax, St. John and the West Indies for many years. I suppose it goes back to confederation or before, and I know that the people, while they are anxious to improve the service, are most anxious that nothing should be done to break into a well-established route. The hon. member for Cumberland has spoken of the various routes proposed from Montreal, Charlottetown, St. John and Halifax to the West Indies, and has suggested that six boats be employed. To me that sounds rather attractive, but I think one would be wiser not to express an opinion regarding the suitability or feasibility of this proposed service until it has been carefully considered and discussed by men actually in the trade. At the same time, Mr. Speaker, I trust that the investigation held last year will be productive of results.

In addition to the British preference and the West Indian agreement, there are others which are somewhat different, but the principle I think is largely the same. For instance, the French treaty of 1922 applied not only to the French colonies but to many other countries, Norway, Switzerland, the Argentine, Denmark, Japan, Russia, Venezuela, and I believe that even Australia comes under that convention. I do not say anything in reference to the French treaty although I believe there are grounds for very grave criticism of the effects of that treaty. But that is not what I am dealing with. The principle introduced in the treaty that I venture to approve of is that which restricts the prefer-

ence to articles coming through our own ports and territory. Then there is the Italian treaty of the same year with a similar provision. Then there is the Belgian and the Netherland treaties which are really on the same basis. They are getting the intermediary tariff I believe, but they are getting an advantage. Imports under these treaties must come to our own ports and must use our own railways, and therefore I say we are on the right line. There may be points here and there which we could improve on. There may be too many imports that are escaping this provision, but in so far as it goes I think the principle is sound.

Then in addition to all these tariffs and these treaties there is what is called the general tariff, and that tariff is a free-for-all. It is free for every country to make use of. Let me mention the countries or most of the countries that come under the general tariff. We have Germany, China, Austria, Brazil, all of South American foreign countries—except Colombia, Venezuela and the Argentine—Mexico, Central America and Spain. These countries, and I think a few other countries, when they wish to import into Canada, pay the general tariff. It is optional whether the imports pass through Canadian or United States ports, or over American or Canadian railways. There are also certain imports from all countries, Great Britain and elsewhere, under the general tariff, and in those cases it is free to them to come by either country.

Neither the country nor the House has heard anything of a definite character from the government in reference to the Australian treaty. I hope that treaty will materialize. I had an opportunity of meeting Australians, New Zealanders and South Africans during the last year, and the report came out then to South Africa that the treaty had been signed and would come into operation. That is a good many months ago. Since then I have had opportunities of speaking to those in authority, and those in trade in those countries. They were pleased at that information which has not yet been verified, and they are anxious to do business with Canada. The Australians, while most anxious to trade with us, are rather bitterly disappointed at the small amount that we buy from them. The figures are not conveniently at hand, but I think I am right in saying that the Australians buy about twenty times as much from us as we do from them. The New Zealanders buy much more from us, although not as much as the Australians, than we buy from them, and about the same is true of South Africa. I know many

of them feel that we might fairly try to bring such treaties into force so that we might do more business with them, and I urge the minister, if possible, to expedite the Australian treaty. It will be most favourably received in those countries, and I think, if it is a proper treaty, it will be well accepted in this country.

What do I suggest as a result of what I have said? In the first place, I suggest that the British preference do away with the 10 per cent and that, whatever the advantage is, it apply only to Canada. Let it be made what it was originally intended to be, as it was originally drafted. Have the British preference apply to British possessions in the way it does now, but let us require that it be limited to the using of Canadian ports and Canadian railways, and that it shall not apply to products coming through a foreign country.

The second suggestion that I would make is in connection with the West Indian agreement. At the present moment, I am not aware of any real difficulty in giving six months notice and making the agreement with the West Indies apply in the same way as I propose for the British preference. The West Indies, as a matter of fact, may make use of the British preference if they choose, but it is their option to have that special agreement.

My third suggestion is that conditions governing importations from overseas under the general tariff and those in the free list which now can be made through either Canadian or United States ports be changed; that not necessarily a large advantage, but sufficient advantage to attain the object be given, and that all importations coming from overseas under the general tariff or under the free list have some preference in coming to Canada direct. Of course, in the case of free entries, one could not make any preference unless a bonus were given, nor is it necessary as regards what I am speaking of to change our tariff. If it is put the other way, if there is a higher tariff for goods coming any other way, there is no material difference. The essential principle is that there be a preference and an advantage in dealing with our own country through our sea ports.

That completes all that I have to say on this subject. In my opinion, a situation is never so bad that it cannot possibly be worse. I feel in this case there is a silver lining to the cloud and the silver lining is the disintegration that is now taking place in the left wing of the Liberal party. I feel that disintegration will spread to the other wing, and then when you have both wings involved

and incapacitated, we know what the natural result will be.

Mr. E. A. LAPIERRE (Nipissing): Mr. Speaker, I wish first to congratulate the Acting Minister of Finance (Mr. Robb) upon the budget he has brought down. The fact that the budget has been criticized by the Conservatives on the ground that the tariff is too low and by the Progressives because it is too high will satisfy the clear-thinking people of Canada that he has taken the only true course consistent with our economic conditions. Let us now examine the conditions which our Acting Minister of Finance had in front of him when he brought down this budget. Let us look at the European situation which has a tremendous influence on trade conditions in Canada. Nowhere in Europe have conditions become stabilized. Conditions are now as bad as they were immediately after the war. Our Conservative friends have attributed the Canadian situation to the tariff. Still, if we examine the European situation, we shall find that, notwithstanding the fact that many of the industrial nations of Europe have raised their tariffs, no stability has been brought to them, and even at the present moment the Herriot government in France finds itself in danger of its political life on account of the imposition of a ten per cent levy upon the wealth of that nation.

Our Conservative friends have also attributed the conditions existing in this country to our immigration policy. During the session of 1923 they were crying out about the exodus to the United States. The Conservative press was also carrying on a propaganda which painted in dismal colours conditions in Canada and in glowing colours the prosperity of our neighbours to the south. As a result hundreds of prosperous families in northern Ontario were induced to migrate to the United States. In proof of what I am stating, I may say that hundreds of those families have since applied to the Repatriation Bureau in Montreal for assistance to return to their homes. What were the conditions which confronted them when they reached the United States? I may say that the population engaged in agriculture in my section of Ontario are largely French Canadians, and generally their families are large. When those people reached the industrial centres of New England the cotton and woollen mills were paying off their employees by the tens of thousands.

Now, are conditions in Canada as bad as our Conservative friends would have the people believe? I have before me the last report made to the shareholders of the Bank of Montreal by the president, Sir Vincent Meredith, and the general manager, Sir Frederick Williams-Taylor. Sir Vincent Meredith said, in part:

While hesitating to prophesy, I am satisfied that a gradual improvement in the trade situation is occurring. Statistical returns support this view and while there is irregularity in the movement, in the main the trend is upward. There has been a better demand for steel in various forms, specially from railroads; textile trades are gradually recovering from the slump, and dealings in hides and leather have broadened. Other indices may be cited: thus, carloadings showed an increase until affected recently by the smaller prairie crop, while building operations have kept pace with last year, which in turn showed a substantial increase. Figures of foreign trade are encouraging. In the twelve months period to October 31, the aggregate value of this commerce was $160,000,000 greater than in the preceding year, the total being $1,895,000,000. We have been able to reach this large amount chiefly because of the enormous western grain crop in 1923, and in a survey of economic conditions there is no more satisfactory feature than the improvement in agricultural returns. Last year there was greater volume; this year there is greater value. Farm products have always made the largest contribution to Canada's export trade, being greater than the combined export value of all commodities. A gratifying feature of the statistics of foreign trade is the growth of favourable balance. In the last seven months the excess of exports over imports amounted to $120,000,000, as compared with an excess of $15,000,000 in the corresponding period last year, and if the comparison is carried over a twelve months period the favourable balance is found to be still greater. I regard this increase in Canada's foreign trade credits as an augury of a not distant improvement in domestic business. Canada offers inducements to immigrants vastly superior to those of other countries which are at present endeavouring to attract citizens. It stands third amongst the countries of the world in natural resources. We possess half the forest area of the British Empire; our mines produced in 1923, $214,000,000 worth of metals, and the surface is scarcely scratched. Canada stands second in the world in coal deposits. Her water powers are estimated at 18,000,000 h.p., and she enjoys unexcelled transportation facilities. For those with some capital and a willingness to work, the cheap rich lands of western Canada offer a means of healthful subsistence and, in time, a better competence than can be obtained elsewhere. Yet cardinal virtues must be practised, and I would again stress the necessity for hard work and economy, so often preached and seldom put into practice, and the need for immigration. Given these three things, I look forward with the utmost confidence to Canada's future.

Sir Frederick Williams-Taylor said:

Our favourable trade balance has been derived from the following exports; agricultural and animal products $619,000,000; wood and paper, including pulp, $256,000,000; minerals and their products, $158,000,000; other exports, $52,000,000.

Concluding, he said:

We in Canada have much to be thankful for. We have our riches in our forests, our fields, our fisheries and in our minerals, also in our mighty water powers and in the industry and ambition of our people. Where is there a country other than the United States where so high a standard of living prevails? A large portion of the community, notably farmers, who at an earlier day knew little of luxury, now have their electric light, telephones, motor cars and radio. We have no

doles, poorhouses are hard to find and, comparatively, there is little unemployment. The United States for the moment possesses a stronger attraction for emigrants from the Old World, but, taking a longer view, Canada still stands out as a land of opportunity. Nowhere else in the world can the desirable settler from Europe find such good land, such cheap land, under such stable conditions of government and so near to great purchasing markets for farm products.

I would call the attention of this House particularly to the figures quoted as to our favourable trade balance. We find that we exported agricultural and animal products to the value of $619,000,000. It will be seen that in order to have a balanced budget, in other words, a prosperous country, agriculture first of all must be made prosperous. It is Canada's basic industry and it is useless for the apostles of protection to think that Canada can be made prosperous unless the farmer is first given an opportunity of enjoying the same privileges and the same standard of living that obtain in the United States to-day. And how can that be obtained with the policy preached by hon. gentlemen opposite who demand an increase in the tariff? Will that benefit the farmer who has to find a market in Europe for the large surplus of his production? This is no complex question of economics; looked at from the point of view of the ordinary business man, it requires no deep study to realize that the manufacturer in the east depends wholly upon the prosperity of the western farmer. We often hear on this side of the House that the high protective tariff has made the United States prosperous. But, Mr. Speaker, there is now a new point of view; after one hundred and fifty years of protection the United States to-day has reached the stage where the wheat grower and the cotton grower are told that they must cease production, that the time has come when the United States, owing to economic conditions in Europe, must become a self-contained country consuming its own production and producing for its own consumption. This is the view taken by leaders of the Republican party in the United States to-day. I have here a report of the Coolidge Agricultural Commission which is to be made public in the United States in a few days and from which I shall read a few extracts. I am now quoting Mark Sullivan in his report to the New York Herald-Tribune:

> Any one who follows closely the current developments in government and business in America must recognize the beginnings of this trend. An essential part of the trend is that government and business, including agriculture, agree upon it. This sympathetic cooperation is itself a definite condition of the era on which we are entering. The purpose of it, as yet, is partly instinctive and not fully defined even in the minds of all the leaders of it. But it is apparent that the government and practically all lines of business in the United States are coming together in an impulse of mutual self-protection to meet the conditions of world-trade arising out of the economic rehabilitation of Europe and its increasing activity.
>
> The policy which America is moving toward, as yet gropingly, is one of withdrawing to itself, making itself a self-contained country, and trying to maintain our high standard of living by avoiding the competition of Europe, in either the role of buyer or of seller. A fairly certain result of that policy should express itself in advocacy of a tariff that will be protective beyond the previous standards of protective tariffs.
>
> The recommendations of the Agricultural Commission include this: "The American farmer can neither compete with imported agricultural products. . . nor can he compete in foreign markets for the sale of his products at world price-levels, created by foreign wages and standards of living. This means that the American farmer is to get out of Europe, both as a buyer and as a seller. That policy runs counter to the former farm leadership which looked to the revival of Europe as a revival of the market for American farm products.
>
> Running parallel to this, and implied in it, is the theory that the American farmer should at once have complete protection for his own products, and also be tolerant of complete protection for everybody else, the whole looking to a high standard of living for everybody in America.
>
> It is inherent in the policy the Agricultural Commission recommended that the high standard of living in America, both for farmers and for everybody else, be kept secure by a tariff on manufactures sufficient to safeguard America against competition from abroad. This, too runs counter to what has been the teaching of some farm leaders for years past, that the tariff on manufactures should be revised downward so as to bring about lower prices for what the farmer buys.
>
> This new policy proposed by the Agricultural Commission looks to two ends. One is that the American farmer should cease to raise more of any commodity than he can sell in America. To many farmers it will come as a startling suggestion that they should cease, for example, to raise wheat for export. The cotton-raising States will be surprized at any advice to ignore the foreign market, but competent judges in Washington say the rest of the world is already tending to buy less and less of the American cotton crop, and to turn for its supply to countries where it can be raised by lower-priced labor.

This is the situation to-day in the United States. The leaders of political opinion in that country have come to the stage where they are admitting to the world that they can no longer compete against the low wages and standard of living that obtain in Europe. What effect will that have on Canada? Can the Canadian farmer in the west adopt such a policy, or does the Canadian farmer in the west fully realize what is implied in that policy which is now being advocated in the United States? Canada must for the next century be an agricultural country and must depend upon its natural resources and upon its farm products to develop along the lines which all Canadians look forward to. The Liberal party when it came into power four years ago realized the situation, and it would be just as well for us now to analyze the results of four years of administration in

Canada by this government. When the Liberal party came into power it found the country going rapidly into bankruptcy. It is admitted by financiers who fully realize our position to-day that we were nearing the danger point, and the Liberal government that assumed office at that time did what any sound business man would have done under the circumstances. They found that in order to make the country prosperous our national debt must be consolidated; the administration of public affairs must be carried on economically; the railway deficits must be wiped out and a true balance found between the requirements of the east and the requirements of the west. And they put into effect the only policy which could restore prosperity to the country.

I find in the report of Sir Frederick Williams Taylor that the second item in our favourable trade balance is wood and paper, including pulp. There has within the last few years been a propaganda in Canada in favour of putting an embargo on pulpwood, and to those who have but a superficial knowledge of the conditions in northern Ontario this has appeared to be absolutely necessary in order to stop the complete depletion of our northern forests. There is no doubt that those who have had an opportunity of seeing northern Ontario transformed within the last few years from a sombre forest into bustling mining towns, prosperous villages, and large areas of fertile agricultural lands know that the depletion of our forests is going on very rapidly, and I was pleased to hear in the speech made by the Minister of Public Works (Mr. King) that the government fully realizes the seriousness of the situation and are studying means of preventing a further depletion of our forests. But when I see in the press and hear some of our leading public men advocating an embargo, I feel that we should hesitate before putting through any drastic legislation, and that we should first make a thorough survey of the whole situation.

Let us now examine the present situation in Canada with reference to the pulp and paper industry. The capital invested directly in forest industry is about $600,000,000. The total production value, including the lumber and pulp stage, is $266,000,000, and if paper products are included, $323,000,000. As against the latter figure, our exports of these products total $210,000,000, or nearly two-thirds of the total production.

Emphasizing the situation from another standpoint, our imports of the same products amount to $19,000,000 of our favourable trade balance, which was $191,000,000. If we include in the exports and imports, figures for furniture, doors, sashes, cooperage and other highly manufactured articles, it would be necessary to deduct some $3,000,000 from the favourable trade balance. Canada's grand total imports of all commodities for the calendar year 1922 was over $850,000,000. Of this amount, wood products contributed $210,000,000, or almost one-fourth of the total. Canada's exports of wood and wood products to the United States amounted to $175,000,000; that is to say five-sixths of all the wood products which we exported went to the United States. Finally, of Canada's total exports to the United States amounting to $340,000,000, wood products contributed one-half. In our trade with that country, therefore, the forest production plays an even greater part than agricultural products.

Let us now draw the trade balance as respects pulpwood in eastern Canada. We have on the debit side an annual cut of pulpwood for use in Canada of 4,700,000 cords; pulpwood exported, 1,000,000 cords; losses from fires, insects and diseases, 6,150,000 cords, making a total of 11,850,000 cords. On the credit side we have an annual increment in pulpwood forest of 4,615,000 cords. Net amount of depletion from forest capital 7,850,000 cords.

These figures will show that it will be absolutely necessary to devise some system of forest protection. There is no doubt in the minds of those who have watched the depletion of our forests that in the near future some system of controlling insect diseases and forest fires must be worked out in co-operation between the different provinces and the federal government, and that a large saving can thereby be effected. On the other hand, before considering any legislation that might endanger the American market, I would call the attention of the House to the fact that Canada has not and never did have a monopoly in pulpwood; Canada never had and never can have a monopoly in newspaper print. To illustrate this, I just wish to quote from the Manchester Guardian Commercial, which is not a Canadian paper biased by local conditions. It says:

> The Swedish pulp industry has made remarkable headway during 1924, the total exports during the first ten months exceeding the experts for the corresponding period of 1923 by some 270,000 tons. But what probably will appear as the most notable feature is the increasing extent to which America is drawing her supplies of wood pulp from Scandinavian countries. In the value of exports the United States ranks as Sweden's best customer, although Great Britain takes first place with regard to quantities, but this is mainly accounted for by a large proportion of Britain's purchases consisting of the less valuable but

more bulky, wet mechanical pulp. Producers in Sweden, having sold one-third of their output for 1925 at the beginning of the year, have good reason for regarding the outlook with an added measure of optimism. And the reports that American paper-makers have already placed large orders for spring shipments of sulphite and kraft pulp are significant, not only because they suggest that American paper-makers are not anticipating cheaper pulp in the near future, but also as an indication of the increasing inadequacy of American home supplies of raw material for the paper industry.

Mr. DICKIE: If it is a matter of such small moment to the American paper men, why are they spending so much money in sending delegations to Washington and lawyers throughout this country, and employing counsel to try and block any restrictions on the export of our raw material?

Mr. LAPIERRE: That is very easily answered. For the simple reason that the United States have now adapted themselves to the conditions that are existing at the present moment. They have found a market where pulpwood can be purchased just a shade lower than it can be anywhere else. But the slightest increase in the price of pulpwood in Canada to-day would divert those buyers to other markets. There is only a very narrow margin at which pulp can be taken profitably out of northern Ontario and Quebec; for my hon. friend's information I may say that the paper interests at the present moment are having the pulpwood limits of Newfoundland and Alaska cruised as possible sources of supply. I quoted a few moments ago an article from the Manchester Guardian Commercial. I have here also an article from the Financial Post of March 20. There has been some discussion as to the amount of sulphite and sulphate pulp and newsprint coming from Scandinavian countries, and in reply to a request made by people interested in this question the Financial Post on the date mentioned published the following details:

Swedish pulp and paper exports to all parts of the world.

	Tons.
Mechanical sulphite	240
Sulphite pulp	84,200
Sulphate pulp	266,000
Newspaper print	184,000
Imports into United States	
Sulphite pulp	326,477
Sulphate pulp	161,167
Newsprint	61,722
Total imports	
Sulphite pulp	934,536
Sulphate pulp	342,238
Newsprint	1,357,449

It will be seen that Sweden supplied more than one-third of the total imports of sulphite pulp into the United States last year. Canada's share was 367,753 tons or about 41,000 tons more than was supplied by Sweden. In sulphate pulp Sweden took a leading position supplying about fifty per cent of the total imports. Canada's contribution to the total under this heading was 140,000 tons or some 21,000 tons more than was supplied by Sweden. Newsprint was shipped from Sweden to the United States to the amount of 61,722 tons in 1924. In this respect, of course, Canada's position is well secured and Canadian mills supplied last year 1,107,008 tons. Sweden, however, held the leading position for newsprint among European countries, the total amount imported from Europe during the year being 156,600 tons so that approximately forty per cent of this entire amount came from Swedish mills. I am quoting these figures because there has been a tendency in Canada to believe that we had a monopoly in pulp and were gradually developing a control of the newspaper situation. The argument has been advanced that by putting an embargo or an export tax on pulpwood we would force the American paper manufacturer to transfer his plant to Canada. Now anyone familiar with the newspaper situation knows that improvements are being made daily in the treatment of different substances for the manufacture of paper; that in the United States at the present moment there still remains a very large quantity of hardwood, such as beech, birch and maple which can, at a very small advance over the price of spruce pulp, be converted by the soda process into pulp suitable for newspaper print. At the present moment also, experiments are being made as to the suitability of South American grass for this purpose. Experiments are likewise being made along other lines, which lead us to believe that within a very few years a substitute may be found for spruce in the manufacture of paper.

Now, Mr. Speaker, the chief objection I have to an embargo on pulpwood is based upon the fact that it will injuriously affect the settler in northern Ontario. It has been my privilege to live among the settlers of northern Ontario for thirty years. I saw the first settlers who went into that part of Canada cut and burn pulpwood which to-day brings them a sufficient return to enable them to clear their farms profitably. To show the House what the pulpwood industry means to the settlers of northern Ontario and Quebec I will quote figures here taken from the return of the Royal Commission on Pulpwood. In 1920 the total value of ordinary forest production

on the farms of Canada was $67,700,000. If to this figure there be added the value of maple syrup and maple sugar—obviously products of the forest—the total is over $72,000,000. This is of interest. The $72,000,000 of forest products represented more than eleven per cent of the total grain crops produced on the farms of Canada in 1920; it was over thirty-two per cent of the value of all forage crops; over eleven per cent greater in value than the value of all field crops other than the foregoing, namely greater than the aggregate of all root crops, tobacco, hops, flax and so on; more than two and three-quarter times the value of all fruit crops produced on the farms; and finally was considered greater in value than the total egg production. All of us who are familiar with the situation in northern Ontario realize the value of pulpwood to the farmer; and one of the inducements to the farmers from the older part of my constituency who have left their farms since the wood industry has moved farther north is the fact that they can clear their farms profitably by means of the pulpwood they take out and dispose of.

Mr. DICKIE: You say that after they clear their farms they move on?

Mr. LAPIERRE: In some parts of Nipissing, along the streams where the land was poor, the farmers left when the lumber camps moved because they had no market. When the lumber camps moved farther west they were too far away for the farmers without transportation facilities to reach them. Consequently they moved further out to new farms and they are to be found to-day all along the line of the Transcontinental from Quebec as far west as the boundary, Manitoba.

Mr. DICKIE: Would it be a fair inference that they moved from those farms as soon as the pulpwood was exhausted and went further back?

Mr. LAPIERRE: No, these farms were in the unproductive part of Nipissing. They moved away and to-day they are in the famous clay belt of northern Ontario, the most fertile land in the province of Ontario.

Mr. DICKIE: The pulpwood commission in their report referred specially to the bogus settler who cleared his farm of pulpwood, and when it was cleared he abandoned it, and went further away to some other district.

Mr. LAPIERRE: In reply to my hon. friend, I may say that all that land has been abandoned by the farmers. It is to-day the most suitable land that could be taken up by the government and used for reforestation. There are certain lands in northern Ontario which, when stripped of their timber, are not of any use for agriculture. In the olden days less care was taken in the selection of farm land owing to the high prices obtained for farm produce. Lumbering was being carried on on a large scale in Ontario. In the old days, timber was floated down the Ottawa and taken as far as Quebec, largely from that section. A tremendous market was created for the farmers in that district, but once the timber was cut and the lumber camps moved from that section of Ontario, the farmer had no market for his produce. In order to make this clear to my hon. friend I may say that in that section the farmers raised nothing except hay, oats and potatoes. Their land was hardly rich enough to make farms.

Now, Mr. Speaker, in this report of Sir Frederick Williams-Taylor I find the third item is, mineral products $158,000,000. It has been an annual habit of mine to quote figures illustrating the tremendous production of minerals in northern Ontario. Without taking up too much time I will quote a few figures to show what the mineral wealth of northern Ontario means to the future development of Canada. During the last few years tremendous developments have taken place in northern Quebec and northern Ontario. In the great pre-Cambrian range, the most important, the largest, and the most extraordinary deposit of mineralized rock has been discovered. That district, extending from the province of Quebec right around the shores of Hudson bay and reaching into the Yukon, with its southern extremity in Minnesota, will produce almost all the valuable metals known to science, and it has been said by the mineralogists of our Department of Mines that the surface of the country has only been scratched. Here are the figures of the production of northern Ontario for 1924:

Gold	$25,000,000
Silver	11,500,000
Copper	13,000,000
Nickel	20,000,000

Now it is interesting to note what this industry means to the other parts of Canada and I have here a table showing what the mines buy by provinces, as follows:

Nova Scotia	$ 821,288
New Brunswick	94,968
Quebec	310,790
Ontario	3,382,064
Manitoba	29,214
Saskachewan	31,536
Alberta	789,748
British Columbia	1,892,322
Total	$7,382,526

The wages paid were $33,000,000, supplies $25,000,000 and dividends $10,000,000. The following will show who benefits from the production of mineral wealth. Taking the northern Ontario mineral production of $68,284,658 and setting aside $10,000,000 for dividends, wages $33,000,000, the rest is spent as follows:

Meat	$3,692,700
Dairy produce	4,220,000
Flour, bread and cereals, etc.	2,299,000
Fruit	471,000
Sugar	990,000
Tea	380,000
Coffee	130,000
Vegetables	1,121,000
Fuel	3,105,000
Rent	4,309,000
Boots and shoes	943,000
Clothing	3,378,000

The mines spent the balance of $25,000,000 on supplies and equipment, and this is how it went:

Machine shop work	$3,250,000
Chemical and apparatus	2,340,000
Coal	1,070,000
Equipment	1,612,000
Explosives	3,000,000
Freight	2,050,000
Hardware	1,145,000
Lumber	1,080,000
Power	4,750,000

The mines in Ontario paid out in dividends in 1924 the sum of $7,797,043. The total since the opening of the northern Ontario mining area, gold and silver, is $139,780,125. The Hollinger mine, the principal gold producer, has already paid in dividends $22,904,000, and in silver the Nipissing $26,383,297, and the nickel mines $85,000,000.

In view of the far-reaching effect this must have on trade in Canada, I would call the attention of the House to the absolute necessity of developing the tremendously rich iron deposits which we have in northern Ontario. I have not the figures at hand in connection with these deposits, but I will refer to this again if I have an opportunity of discussing a resolution which I have on the order paper. What I wish to impress upon the government is the necessity of giving the development of our iron ore deposits the attention that it deserves. There are but few of us in Canada who realize how much the future development of this country depends upon the development of these iron ore deposits. It is known to people engaged in the business that magnetite and higher grades of ore in Minnesota are within calculable distance of exhaustion, and that at the present time those interested in iron deposits are now looking over the situation in Canada. I hope to see the day when this government in co-operation with the provincial governments will give to the iron industry all the consideration it deserves.

Mr. ANGUS McDONALD (Timiskaming): Mr. Speaker, I see by the trend of speeches made by hon. members who have preceded me in the budget debate, that it is the custom to congratulate the Acting Minister of Finance (Mr. Robb) on the budget he has been able to bring down. I cannot go as far as some of the speakers have gone in congratulating him upon his budget, but I must say that I congratulate him upon being able, in a little less than two short years, to bring down a budget, from my viewpoint, at least, somewhat similar in nature to many budgets brought down on this hill in many sessions that have passed into history since 1878. I cannot, for the life of me, see in the budget brought down by the Acting Minister of Finance anything that goes to help the class of people to which I belong, men who have to work out in the rigours of our northern climate, men who have to work on the farm and who are raising children. I do not see where any reductions are made in the burdens that are placed upon them by reducing duties on the stockings and other necessary clothes that have to be worn by those people who work hard, and who, after all, are the pedestal upon which society in this country is built.

The state of my health will not permit me to speak at any length in this debate. The reason that I venture to make a few remarks at all is to try to correct some statements that were made in this House not so very long ago. I crave your indulgence, Mr. Speaker, and I ask you to extend to me the same privilege that was extended to an hon. member last Wednesday afternoon, so that I may correct a few statements that he made and that I do not believe he would have made had he been in possession of the facts. I refer to the hon. member for Lunenburg (Mr. Duff), who stated in this House last Wednesday afternoon that $240,000 of hard-earned money had been filched from the poor miners of Nova Scotia, and that they were very hard up. The hon. member was somewhat out in his figures. Last year, $247,000 was collected from the miners of Nova Scotia, but the hon. member was not in possession of the facts, or he would not have said that eighty-five per cent of the $247,000 ever left Canada or went into the coffers of the United Mine Workers of America. Out of the portion of this sum that goes to the United Mine Workers' organization on the

per capita rating of fifty cents on the dollar, $100,000 went to pay merchants in Glace Bay and Sydney, N.S. for debts that had accrued there in January and February, 1924. The balance went into the treasuries of the district organizations and the locals in Nova Scotia. The dues are one dollar per month upon the miners of Nova Scotia. These are facts. I have paid my dollar a month dues for the last thirty-eight years into international unions, but in our organization we do not have quite as high a per capita going to the internationals. Fifty cents out of that dollar goes to the international of the United Mine Workers; thirty-five cents goes to the district organization and fifteen cents to the local. The thirty-five cents and the fifteen cents go to pay funeral benefits, sick benefits and to take care of other accidents that may happen from time to time.

I wish to put on Hansard this statement that can be verified by any member in this House who desires to seek for himself reliable information on this subject:

> I extend my thanks for your courtesy in writing me and forwarding clippings from the Montreal Star. The news item from Glace Bay contains information much distorted. As a matter of fact eighty-five per cent of the moneys collected by the United Mine Workers of America in Nova Scotia remained in that province and was expended for the use and benefit of Canadian citizens. One hundred thousand of the amount collected was used to pay Sydney and Glace Bay merchants' indebtedness incurred by the Nova Scotia mine workers in their strike of January and February, 1924. The Montreal Star is, of course, favourable to the interests of the British Empire Steel Corporation.
>
> Reciprocating your good wishes, I am,
>
> Yours very truly,
>
> JOHN L. LEWIS,
> President,
> United Mine Workers of America.

He is a man who knows what he is talking about and he does not make any rash statements. Those are the facts in connection with what money was collected, and I think I can leave it in the hands of the Minister of Labour (Mr. Murdock) to verify this statement for me right here.

Mr. PUTNAM: Does the hon. member know whether prior to the disbursements, the money went into the international fund?

Mr. McDONALD (Timiskaming): I have already stated the division that is made of the money collected in dues from the miners of Nova Scotia. Fifty cents per capita goes to the headquarters office.

Mr. PUTNAM: Is that first handled by the international union?

Mr. McDONALD (Timiskaming): No, it is handled by the local first, and then a pro rata share is sent on to the parent organization, the international.

Now I find at page 1772 of Hansard that the hon. member for Lunenburg (Mr. Duff) made this statement:

> It is quite true that there is more destitution and poverty there now owing to the fact that, although these poor miners in 1924 paid $240,000 into the United Mine Workers' fund, that organization has not come across with one dollar, so far, to relieve the suffering in Cape Breton.

I want to state that the international union has come across with at least $50 for every dollar of Canadian money sent across the line. I make that statement of my own positive knowledge, and I think the Minister of Labour will bear me out. I wish to get these statements on Hansard to correct what was said by the hon. member for Lunenburg, who I am sorry is not in his place, and who I believe would not have so expressed himself had he taken the time to become seized of the facts. That is all I have to say, Mr. Speaker.

Mr. D. A. MACKINNON (Queens): Mr. Speaker, the motion before the House is to go into committee of Ways and Means. I take that to mean the ways of spending money, and the means of obtaining money for the purpose. During the course of the debate all sorts of theories have been put forward and I hope they will be helpful to the Acting Minister of Finance (Mr. Robb). By increasing the duty on slack coal from 14 cents to 50 cents he will increase the revenue without making the tariff strictly protective on this commodity, because the coal is sold at $11 or $12 a ton, and 50 cents on that figure is a very small percentage.

While we are looking into means of increasing the revenue, I am going to offer a suggestion. Every year we import approximately $10,000,000 worth of bananas and oranges. Last session in the committee dealing with the National Railways we were told that it was almost impossible to look for trade from the West Indies to the Maritime provinces because the United Fruit Company was carrying the West Indian fruit to New York. I have been thinking this over, and my suggestion is that a 20 per cent tariff be imposed upon these fruits with a 10 per cent preference for those entered through Canadian ports either on the Pacific or the Atlantic. I think this would help solve the trouble we have in the Maritime provinces. Next session when the Acting Minister of Finance announces an addition to his surplus of $2,000,000 from this source, no doubt he will pass a vote of thanks to me for my suggestion. That is the only suggestion I would

make for an increase in tariff duties because my disposition is like that of the last speaker (Mr. McDonald)—I think all our tariff duties should be gradually reduced. But I am going to appeal to his Canadian common sense and ask him if we must not look at this question squarely in reaching a conclusion as to reducing all duties at the present time. During the six years from 1914 to 1920 the government that preceded the present government expended $3,292,000,000—a tremendous sum of money. Now, my friend should not call this government to task for not making further tariff reductions when it has to meet the colossal obligations incurred during that period. That total expenditure was over $600,000,000 more than all governments, Liberal or Conservative, expended from confederation down to 1914. I am not attacking or blaming our predecessors in office.

Mr. TOLMIE: May I ask the hon. gentleman what proportion of that expenditure was related to the war?

Mr. MACKINNON: I am coming to that. I say that I am not blaming our predecessors in office for the whole expenditure. Of that, $1,670,000,000 was related to the war. But I do blame them for not meeting more of the expenditure out of current revenue. In Great Britain during the same six years the government expended as much money as had been expended for over two hundred years before, but they collected 38 per cent of the expenditure while the people were making profits out of war supplies. Had our government of that day the same vision and collected a similar percentage from those who were making huge profits on war contracts, we would not be obliged to-day to retain the duties on this, that and the other commodity in order to meet our obligations. On the contrary, we would have been in a position to reduce the tariff all around. To ask the Acting Minister of Finance to make further tariff reductions at the present time is to put an impossible burden upon him. Look at those who have preceded him in the Department of Finance, look at the ex-Minister of Finance (Sir Henry Drayton) who brings in an amendment, which stultifies itself in that in the first part he asks the government to reduce the sales tax, and in the second part he says that the tax cannot be reduced because we have spent so much money. The amendment is self-contradictory. The ex-Minister of Finance states that the government have increased the national debt this year, but I submit that he is mistaken and that the amount due has been decreased by over $5,000,000.

[Mr. Mackinnon.]

I was sorry to note that the member for Vancouver Centre (Mr. Stevens)—coming from a city that has perhaps progressed more than any other city in Canada under this administration—cast aspersions on the Acting Minister of Finance by stating that in private life the Acting Minister of Finance would have been guilty of moral obloquy if he had published such a statement as he has submitted to the House. But we regard him as the soul of honour, and I contend that he has submitted a perfectly correct statement to the House, for any hon. member who examines the budget will agree that he has properly accounted for a cash surplus of $1,823,000. In addition there is $4,000,000 interest due from Greece and Roumania, and if he had not included that sum in the assets of the Dominion he would not have been doing his duty as a minister. I find that in 1921 a certificate was given by an auditor brought from the United States, and in it these loans to Greece and Roumania are included; and in the public accounts at the present time there is a certificate, which the minister produces, showing that this conforms with the account as given at that time. The question is asked why that $4,000,000 was put there. Well, it was earned on principal; part of the principal had been paid and part of the interest was due. It was adjusted and there was found to be $4,000,000 altogether due. And that is capitalized in the way that any mortgage is dealt with. That $4,000,000 as I understand it is interest-bearing as the $30,000,000 is. The thing is as simple as it can be and there is no attempt at dishonesty or anything of the kind.

Mr. FORKE: Does the hon. member wish to convey the idea that anyone disputed that this was an asset? We all recognize the fact that it is an asset but it went into the public accounts of the country as money received. That is the difference.

Mr. MACKINNON: No; I will explain it.

Mr. FORKE: You have a surplus of $1,800,000 and add $4,000,000, claiming $5,000,000 altogether of a surplus. That was the statement of the minister.

Mr. MACKINNON: That was not the way the minister put it; he said that the debt would be reduced by $5,000,000. And that is right. If the hon. member will look into the accounts for the year 1921 he will see at the beginning that the entry is cash so much; and the same applies to the year 1924. In 1923, the accounts for which appeared last

year, there was an entry, "by cash" $45,000,000. Under this are the Imperial loans and loans to foreign countries, Roumania and Greece. All these are set forth in the table, not as a cash balance but merely by way of a statement of the situation; and a certificate of the auditor brought from the United States when the hon. member for West York (Sir Henry Drayton) was Minister of Finance appears printed in the statement with these items included. The whole thing shows where the country stands; it is a statement of the capital debt in 1921 just as it is a statement of the balance of capital debt in 1925, and the situation could not be properly set forth unless this $4,000,000 were included as going to the reduction of the amount of the debt. Anyone who understands figures will appreciate that. As to the words "cash surplus", I do not think the minister used that expression.

Mr. FORKE: He certainly used the word surplus. There is no dispute about the amount being an asset, but if the hon. member will look up the speech in question he will find that the claim was made that there was a surplus of $5,000,000.

Mr. MACKINNON: That amount is so much ready to be subtracted from the debt of the country.

Mr. FORKE: No one is disputing the fact that it is an asset.

Mr. MACKINNON: What I find fault with is the language that is used, reflecting upon the honour of the man who heads the department at present (Mr. Robb) and who has burdens enough to bear. He fills an important office and should have the sympathy and support as well as the intellectual help of every man in this House. This country is too large and its problems are too great to be managed on the lines of recriminatory party politics; we have tremendous burdens to bear and it will require the courage of the best men we have to manage our affairs properly.

I have already referred to the question of increasing our revenue, which amounts to some $344,000,000. Now, the government has been blamed, in the amendment which has been proposed, for extravagance, for spending too much, and that sort of thing. Our expenditures amount to some $342,000,000 and of that amount $184,000,000 consists of interest and pensions as well as statutory payments to people who retire. The minister therefore can use no discretion whatever so far as this much of the expenditures is concerned; it is there in spite of anything he may do. The minister must meet interest charges and he must pay the pensions that are due, and those pensions will increase because more people throughout the country will have to be looked after. So that when this $184,000,000 is subtracted from the total expenditures, what is there left for the Minister of Finance to be extravagant with? There is only about $160,000,000 or less. And if we look back to the years 1914, 1912 and 1911 we shall find that the government of that time was expending that much money without any complaint. I think the expenditure in 1914 was some $127,000,000. But there is a great deal more reason to-day for spending money than there was at that time. Now, it is no use creating a feeling throughout the country that the government has been extravagant, because the fact of the matter is that the affairs of the country have been handled with exceeding care; and we should be pleased that the minister was able to come out with any surplus at all. It was estimated that with the falling revenue in customs, and in view of the condition of business in the country generally, the government would come out badly. And some of our critics, it seems to me, would have been better pleased if the government had announced a deficit of $25,000,000 or so. But surely that is not the attitude for hon. members to take. We should be proud indeed that the minister came down with a surplus; and he did not manage that without the greatest possible care, for he was pressed on every hand for increases in the expenditures. Every part of the country has been claiming some increase here and there and it speaks well for the control the minister exercised that the situation is as satisfactory as it is. I wonder what the hon. member for Timiskaming (Mr. McDonald) would do if he were in the minister's place. Reference has been made to the miners of Nova Scotia. Well, I have had a notion of asking the Minister of Finance for enough money to carry on mining investigations in our island, but after the fuss that has been experienced in the neighbouring island I think I shall give it up for a few years. We do not want any disturbance of that nature in Prince Edward Island where the people are doing very well.

There are a few things that have arisen in this debate to which I might refer in passing, and one is the argument that has been advanced that more protection would provide employment for a larger number of people. And France is taken as an example. But

France to-day has a deficit of four million or five million dollars. Perhaps that might please some hon. gentlemen who are anxious to have the tariff increased. I do not know that many hon. members would object to increasing the tariff here and there if the reasoning were sound. But hon. gentlemen forget when they take the United States and other countries as illustrations that we have our own experience in Canada to guide us; and I think our soundest judgment would be based on what has happened in this country itself. Let us go back to the time the National Policy was adopted and see what progress was made since then. At that time our manufactures amounted to some $350,000,000 and after ten years of protection it had increased only by $165,000,000. That was the first decade in the operation of the National Policy. Men of a different school of thought came into power in 1896, men who were in favour of reducing the tariff and making it one of revenue rather than of protection. They were condemned for doing it. It was said that it would injure the country, but still they went on, and what has been the result? We should base our judgment on experience, which is the best teacher we can have. We had an increase from 1901 to 1911 of $650,000,000 in manufacturing alone.

Mr. FORKE: Does the hon. member not think that the opening up of the northwest, the building of railways, and the large influx of settlers into that territory had more to do with the increase in manufacturing than the tariff had?

Mr. MACKINNON: I think the government was condemned for opening up the country with railways at that time.

Mr. FORKE: That is not the point.

Mr. MACKINNON: They began to come in in large numbers, not in 1901, but later. They came in in hundreds of thousands in 1907, 1911 and 1912.

Mr. FORKE: From 1901 to 1911 were the ten big years.

Mr. MACKINNON: If that helped, I am pleased to acknowledge it, but that development took place under a reduced tariff. The trade of the country increased by over half a billion dollars from 1896 to 1911. Everything was going right ahead at a rapid rate. Of course, the tariff for revenue did not do it all. The people had to do it, but it was under that system this growth took place. Having learned that lesson, I think it is up to us to have a tariff for revenue only, and to reduce it here and there as soon as we can get along with less revenue, but you cannot get along with less revenue than the minister is seeking this year to meet the country's requirements.

The United States is often quoted as an example of a high protectionist country that we should imitate. I am surprised that some speakers urge that, because to-day the United States is more free trade than protective. She imports 58 per cent of her merchandise entirely free of duty. If we were to imitate the United States, we would be allowing agricultural implements to come into this country free; we would also allow leather for boots and shoes, and manufactured boots and shoes to come into this country free. If some of those who urge us to follow the example of the United States knew that, they would not point so often to that country as an example. But that is the situation in the United States. They are handling more in the free trade line than in the protective line. They have, of course, high protective duties on different items, but taken as a whole their protection is not nearly so high as ours. If you will compare the two countries you will find that the duties in the United States amount to about $5 per capita, compared with $10 or $11 per capita in Canada. That is another reason for reducing the duty. What I maintain is that we are more protectionist to-day than is the United States by that per capita difference. Very few people think so, but if you will look at the statistics you will find they figure out that way. I think the time has gone by to talk of protection. We do not want to hurt any industry at all. Industries developed better under a tariff for revenue than they did under protection, and they will do it again. The manufacturers of this country will prosper a great deal more under that system.

On motion of Mr. Mackinnon the debate was adjourned.

PRIVILEGE—MR. MEIGHEN

POINT OF ORDER—FORM OF ANSWER TO A QUESTION—RULING BY MR. SPEAKER

Mr. SPEAKER: The House will allow me to give a ruling on the point of order raised this afternoon. On the 2nd April an answer was given by the hon. Secretary of State (Mr. Copp) to a question put by the hon. member for Kent, N.B., (Mr. Doucet). The question reads as follows:

1. What was the amount paid by the government in connection with the investigation and report made by Sir Henry Drayton in regard to the North Atlantic Steamship Conference and ocean rates?

A further question was asked by the hon. member for Kent, but it is the answer to the

first question to which exception has been taken. The answer to the first question, given by the hon. Secretary of State reads:

1. Sir Henry Drayton was carried on the pay-list of the Board of Railway Commissioners for the period from July 31, 1913, to September 21, 1913, when he was employed on the ocean rates inquiry, and he was paid during the inquiry his regular salary rate as Chief Commissioner, namely $12,500 per annum, and $1,074, expenses.

Objection was taken to this answer as not being the proper one to make to the distinct and specific question asked by the hon. member for Kent (Mr. Doucet). Rule of the House No. 37 reads:

(1) Questions may be put to ministers of the crown relating to public affairs; and to other members, relating to any bill, motion, or other public matter connected with the business of the House, in which such members may be concerned; but in putting any such question or in replying to the same no argument or opinion is to be offered, nor any facts stated, except so far as may be necessary to explain the same. And in answering any such question the matter to which the same refers shall not be debated.

The government, when questions are put, can always ask that the question should stand as an order for return, and when they deem that it is not in conformity with the public interest that an answer should be given they can decline to answer the question. In the present instance, however, the question is very simple, and very specific. I shall repeat it:

1. What was the amount paid by the government in connection with the investigation and report made by Sir Henry Drayton in regard to the North Atlantic Steamship Conference and ocean rates?

The question asked has reference to the amount which was paid Sir Henry Drayton es qualité of investigator in connection with the North Atlantic Steamship Conference and ocean rates, not as chairman of the railway board. The Railway Act clearly defines what were his powers and duties as chairman of the railway board. It states further—section 26—what salary was to be paid him es qualité of chairman of the railway board. In the present instance the answer is beside the issue, because the question put by the hon. member for Kent is, what was the amount paid by the government in connection with the investigation and report made by Sir Henry Drayton in regard to the North Atlantic Steamship Conference and ocean rates? It has no reference to his statutory duties as chairman of the railway board.

May, at page 249, says:

The purpose of a question is to obtain information, and not to supply it to the House. A question may not contain statements of facts, unless they be necessary to make the question intelligible, and can be authenticated; nor should a question contain arguments, inferences, imputations, epithets, or controversial or ironical expressions.

May here speaks of questions, but of course the same argument applies to answers. When a mere question of fact is stated in a question, the answer must refer to that fact without any inference. The present question, in my humble judgment, is clear and intelligible. There is a clear-cut question and it calls for a clear-cut answer or no answer at all. There was, in my judgment, only one of two answers to make: Either the government should have answered that Sir Henry Drayton had received nothing in his quality of investigator of oceanic rates, or that he had received something. The answer as it reads leaves an inference and equally it should not remain in Hansard. Bourinot, at page 314, states:

An answer to a question cannot be insisted upon, if the answer be refused by a minister on the ground of the public interest.

That is what I meant a moment ago when I said that the government could decline to answer on the ground of public policy. Bourinot continues:

The answer to a question should be brief and distinct.

In the present instance, in my humble judgment, the answer is not distinct. The question being specific; the answer should have been specific. I, therefore, rule that the answer be expunged from the Hansard and if the question is put again, a distinct answer should be given.

Mr. BELAND: It is impossible in this instance, without the question being asked again, to have another answer given.

Mr. SPEAKER: It is for the government to answer or not. As all authorities state, if the government thinks that the question should not be answered on the ground of public interest, they may decline to answer. But if a question is put as distinct and intelligible, as the one put on the 2nd April last was, the answer of the government if given must be as distinct, clear and precise.

Mr. BAXTER: In the absence of my leader (Mr. Meighen) may I suggest that the question, or that portion of it that is not answered, should be restored to the order paper, and an answer given in due course?

Mr. SPEAKER: The hon. member has only to give notice of his question again and it will be answered in due course.

On motion of Mr. Stewart (Argenteuil) the House adjourned at 11.05 p.m.

Tuesday, April 7, 1925

The House met at three o'clock.

OCEAN SHIPPING RATES

REPORTS OF SPECIAL COMMITTEE

Mr. A. R. McMASTER (Brome): Mr. Speaker, with your permission I would like to present on behalf of the special committee appointed to consider the resolution to give the government of Canada control over certain ocean rates, the following as their first, second, third and fourth reports:

Your committee recommend that they be authorized to have their minutes of proceedings and evidence printed from day to day for the use of the members of the committee and that rule 74 be suspended in reference thereto.

Your committee recommend that they be granted leave to sit while the House is in session.

Your committee recommend that the reports on freight rates made by the special committee to inquire into Agricultural Conditions during the 1923 session be referred to the committee.

Your committee recommend that all reports, letters, documents and other papers laid on the table of the House during the present session and referring in any respect to the order of reference to the committee, be referred to the committee.

May I crave your permission, Sir, and that of the House, to move the concurrence in these reports immediately? I do so because they are purely formal and it will tend to expedite the business at the next meeting of the committee, which will not be held until after the Easter recess, when we desire to proceed without delay.

Mr. MEIGHEN: May I ask the hon. member who christened the committee with this name?

Mr. McMASTER: To examine into ocean freight rates, or give control?

Mr. MEIGHEN: Yes.

Mr. McMASTER: I think it is a christening for which the clerk of the committee must be responsible. I presume he gathered his inspiration from the speeches delivered in the House in connection with the subject matter.

Mr. SPEAKER: This motion requires unanimous consent.

Motion agreed to.

PARLIAMENTARY REPRESENTATIVES AT WEMBLEY

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, can the acting leader of the House give us any information as to when we may expect a report from the delegates sent from this parliament to the Wembley exhibition, and the results of their tour of inspection?

Hon. J. A. ROBB (Acting Minister of Finance): I will inquire with regard to a report. Perhaps the deputy minister has it now.

CORRECTION—Mr. LOGAN

DUTY ON COAL

On the Orders of the Day:

Mr. HANCE J. LOGAN (Cumberland): Mr. Speaker, I desire to make an explanation: In the debate yesterday, when the hon. member for Brome (Mr. McMaster) was speaking, I interrupted and stated that the legislature of Alberta had passed a certain resolution in reference to coal duties. I find that I had been misled; it was not the legislature of Alberta that endorsed the increase of coal duties; it was the government of Alberta.

Mr. MEIGHEN: Is that the Progressive government?

Mr. GARLAND (Bow River): With all due respect to the question of privilege raised by my hon. friend opposite, I beg to point out to him that it was the Premier of Alberta, not necessarily the government.

Mr. LOGAN: When the premier speaks the government speaks.

RURAL CREDITS—REPORT OF DR. TORY

On the Orders of the Day:

Mr. M. N. CAMPBELL (Mackenzie): May I ask the Acting Minister of Finance if the government has any policy to announce with regard to the recent report received from Dr. Tory on rural credits?

Hon. J. A. ROBB (Acting Minister of Finance): No, not yet. I will be frank with my hon. friend and say to him that I have not had time to read the report, but I propose to read it during the Easter holiday.

OLD AGE PENSIONS

On the Orders of the Day:

Mr. WILLIAM IRVINE (East Calgary): May I ask whether the old age pensions bill is ready for presentation to the House?

Hon. JAMES MURDOCK (Minister of Labour): The hon. gentleman will note that there is on the order paper, under Government Notices of Motions, a resolution that is to come before the House as soon as we get the present business out of the way.

THE BUDGET

CONTINUANCE OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Monday, April 6, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. D. A. MACKINNON (Queens): Mr. Speaker, the problem of finance is always an important one in Canada, and it is getting more complex as the amounts involved become increasingly larger than those of olden times. I think the proposal of the minister who is chargeable with the finances of the country, having to do with methods of obtaining revenue, is a very good one, namely, to have the assistance of a board of experts who will be able to take up the different items that compose the imports of the country, go into them carefully, and, if they are men of ability and experience in handling tariffs, come to sound and reasonable conclusions. Such men should not be hard to find. In fact, the minister no doubt has in his own department men of ability and experience, but the volume of the work has increased so much that I think it would pay the country well to have such a commission as is proposed by the minister.

I have taken the trouble to look into some of the items of import with a view to understanding the matter thoroughly. I examined the figures with respect to entries for horses and I found that in one case there were $9,000,000 and in another $99,000. It might be thought from these figures that horses could be taxed very heavily and that quite a revenue could thus be provided, but I found upon investigation that most of these horses came in only temporarily, for exhibition purposes and for races, and had gone out of the country afterwards. In fact, the $99,000 was represented by only 123 horses, so that it would not be possible to obtain much of a revenue from an item like that. I mention this only to emphasize the fact that if a commission of, say, three men go into these matters item by item they will know where to recommend an increase and where to recommend a decrease in the duty without resulting disadvantage to any part of the country.

We may have different ideas. There is a school of thought very strongly for free trade, and there is a school of thought very strongly for protection. We have these two schools, and they are both entitled to their opinion. If the school for protection had had their way last year and had made the duties very high, so that we would have had, say, $100,000,000 of a surplus last year due to protection, it would of course be a great thing to reduce the public debt by that amount, but that burden would have had to come on the people in some way or other, and I think they are not able to stand $100,000,000 more being taken from them through higher tariff duties at the present time. But this board could consider, for instance, the question whether it would be advisable to have free trade within the empire, and propositions of that kind which might help us a great deal in working together. It might take up the proposition whether the tariff should be increased in any one item or another, or reduced. They could take up all these questions and advise the minister and the government on the matter. I need not say anything more on that subject. I think it is a good idea to have this board appointed, for it is a killing business for the Minister of Finance to undertake all this work alone as the head of the department, and we could not long expect to get good men to undertake all this work if the entire burden was left on their shoulders.

I think the Acting Minister of Finance (Mr. Robb) is also entitled to a great deal of credit in connection with the handling of some of these loans. He had made a saving of $2,500,000 in interest in the loans he has floated, and I think he is to be commended for that. I observe, however, that the loans are floated for short periods, some for so many months, and some for so many years. I would submit with all respect that in Canada to-day, or as soon after this as we can do, a loan of $1,000,000,000 at 3½ per cent should be floated for a term of fifty or sixty years. I think that loan would be taken up. A loan of that kind over a long period would shift the burden, as only the immediate interest would have to paid and there would be a provision for repayment of the principal of the loan in half that period, if need be; but I think we should look ahead and have a long-term loan made by our Finance department in Canada. I think it would be a great help to this country. We are now paying a large amount of interest on our loans, and it is too much for the country to do that and to keep the other necessary works of the country well in hand. In floating a loan like that, it may be a little difficult to find the money, and it will be more difficult still if we go round decrying the country.

Canada, is destined to be a great country and, I think, is fundamentally sound, if you compare our situation with that of the other nations of the world. Canada is no longer the small colony she was a few years ago. She stands to-day—such was the statement made by a noted man who is well up in finance—seventh amongst the nations of the world in wealth. I think his estimate was put at twenty-two billions of dollars. That is a very good standing for this country amongst the nations of the world, when we have been a nation for only fifty or sixty years. The wealth of the country is the first thing I look at, for in floating a large loan over a long period the wealth of the country would need to be looked into. During the past year we have heard people saying that the country is going back, that business is going back. Let us look at the trade of the country during the past year. I think you will find there is an increase in the totai trade of about $205,000,000 over the year before, and of about $450,000,000 over the year before that. That is very satisfactory. It does not show the country is going back if the trade is increasing. Our trade is up now to almost two billions of dollars, and a country that is doing two billion dollars of trade is no mean country. It is a great country, and it is a country we should do our utmost to clear the way for so that it will advance in commerce more rapidly and more clear of the difficulties which are in the way to-day, and to which I am going to refer a little later. Our imports and exports amount in round figures to $1,900,000,000, or almost $2,000,000,000. It is, I think, very gratifying that our trade should amount to such an immense sum. Not only that, but look at the different places where we carry on trade. We look first to our neighbours across the line, the United States. Some people do not like to deal there. I have heard some speakers express the view that they live within themselves over there. President Coolidge has said that they could produce enough within the country itself for their own needs. But that is a very selfish and limited life. We are going in for a larger life in this northern country, if that is their idea in the United States. If you look at what our people are doing to-day, and have been doing in the past year, you will find that we are dealing not only with the United States but with all the different parts of the world, with China, Japan, the countries beyond the South Sea Islands, with every continent, with Asia, Africa, and South America as well as Europe. It is wonderful the way our trade has expanded. I think it is a great proof of the shrewdness and ability of the business men of Canada. And the work of these business men is being helped to its utmost by the Minister of Trade and Commerce in this government.

Now look at our trade with the United States. I look upon them as a very fine people to trade with. Canada did break their windows at one time, about 1911, when they looked through for reciprocal trade, and I think by their Fordney-McCumber bill they retaliated and put their tariff a little bit higher than they might otherwise have done. You find that three and a half millions of the people across the line are Canadians or descendants of Canadians. I saw a precise statement as to the number some time ago, and I think it wonderful that so many of our people should be over there. They are good people to deal with, and they have not gone over there within the last year, but they have been going over continually ever since that country became a republic. The statement of which I have spoken gave the numbers of the people coming into the United States from all the countries outside, from Japan and the different countries in Europe. The people over there are our nearest and friendliest people to deal with, not only the American-Canadians but the Americans themselves. They are sympathetic in their dealings with us, and we are dealing with them to the extent of about one-half our foreign trade, to the amount of almost one billion dollars. We should do everything to make that trade grow. We should do everything to maintain fair and reasonable relations with them. We should take care that everything we send them is of the best workmanship, the very best our manufacturers can put up. We do not want shoes or boots to go across the line with their heels made of paper, as I heard one man down the street say the heels of a pair of Canadian boots he purchased the other day were.

Mr. LAPOINTE: They were not made in Quebec.

Mr. MACKINNON: They were made in Ottawa, I think. That is not the sort of thing that Canada wants. In addition to this importing and exporting business, the workmanship is a thing we should look after. Everything we make should be as perfect as it can be made. We should have the very best leather, and the boots and shoes we make and everything we send abroad should be of the very best workmanship, for you can send an article with a good name into the markets of the world, I care not to what part of the

world you send it, and you will get a good price for it and carry on a good trade there.

If we look at the other nations we have been dealing with, we find that about $664,000,000 of our trade is with the empire, with the different dominions and Great Britain. This is over half our trade with the United States. We carry on trade amounting to about six hundred and sixty-four millions. I think it is a good thing to promote that trade as much as we can; it will develop among us a spirit of co-operation and if we develop each other's trade it will be a splendid thing for the empire as a whole. France, Belgium and Germany do a trade with us of over $20,000,000. We also find that a large trade is developing between Japan and this country. I think we should have sympathy for the Japanese who have experienced such tremendous losses by earthquakes; we should feel glad that they are reanimated and are continuing to do business with this country in such a satisfactory way and with such good results.

I feel very much surprised at the action of the Mother Country in putting into force an embargo upon the export of potatoes from this country to Great Britain. I was going to say that I almost feel ashamed of the Mother Country in view of the reason for this embargo,—the presence of the Colorado beetle. Why, for fifty years the Colorado beetle has been after the potato plant and the remedy used against it is Paris green. I repeat that for fifty years the Colorado beetle has been extending its territory, and yet because of this pest, the Old Country is to-day placing this embargo against potatoes from the United States and Canada. The embargo comes at an inopportune time for us because our people have entered, in a systematic and scientific way, upon the development of the potato trade. During the past year millions of bushels of potatoes of the best quality were shipped from the Maritime provinces to outside markets, such splendid varieties as the Irish Cobbler and the Green Mountain. They were highly apreciated wherever sold and very appreciative notices appeared in the public press in London with respect to them. To show you the excellent quality of our potatoes, demands are made by Virginia upon our province for seed potatoes. The growers there buy about half a million bushels for planting. And here is an extraordinary thing that occurs: I go to Toronto and I find the people there buying the potatoes from Virginia produced from the seed we send down from Prince Edward Island. It is an illustration of the curious route that trade sometimes follows. For the Mother Country to adopt such a strange course with respect to Canada is very surprising, personally I am at a loss to understand it. The Colorado beetle is not found on the potatoes that go to England. The pest lodges on the plants; it does not stay on the potato itself, and the plants are not shipped to England. If the bug remains on the potato top what happens to the potato? It does not develop at all, and we get no potatoes. Some of the growers in our province have eighteen to twenty acres given up to potatoes; some of them as many as eighty acres. As soon as the bug appears on the plant Paris green is liberally used and the pest is destroyed. Then the plant has a chance to grow and produces a healthy and well developed potato. During the past year I saw many acres of potatoes in Prince Edward Island covered with vigorous and healthy plants without any sign of disease. These potato fields are all carefully inspected by inspectors sent down by the Department of Agriculture. Last year when those inspections were made everything was found to be all right, and shipments made to the Mother Country were consequently free from the Colorado beetle. I have looked into this matter somewhat. I found in the Parliamentary Library a work by an expert in Paris dealing with potato diseases. This work was published in 1923 in French, but I took the liberty of translating it for myself. According to this authority there are 150 species of potato bugs in Europe to-day and not simply one species, the Colorado beetle. When I read that I was more than surprised and felt that the Mother Country was not treating us quite nicely. Great Britain is importing potatoes from other countries in Europe where the potato bug exists, and yet she has blocked our trade in potatoes on the ground of the prevalence of the Colorado beetle. I can see no reasonable excuse for this action on the part of the Mother Country. I do find some excuse for the United States because that country put an embargo on shipment of potatoes from Ireland as far back as 1909. The latter country was shipping potatoes to the United States and competing successfully with the American growers. However, we shall be inspired by this experience to turn to other markets and it may have the result of developing greater initiative amongst us. Nevertheless it has been a costly experience during the past year. That is about all I have got to say with respect to the embargo. I speak upon this question with a great deal of feeling because I did not look for this treatment by our own kith and kin, toward those

who have been struggling to make a living after their European experiences.

One of the other questions which greatly affects our prosperity is that of transportation. I take it as an axiom that neither Canada nor any other country can prosper without cheap transportation. When I came up here in 1922 I did my best with the Minister of Railways to secure better treatment. He referred me to Mr. Hanna who at that time was at the head of the management of the National railways. He took up the matter with other officials but for some months no headway whatsoever was made with the matter. I do not say this for the purpose of censuring Mr. Hanna; he was a great financier and was devoting himself to making the railways pay. Later on, Mr. Dalrymple, who was in charge of freight matters for the Canadian National Railways under Sir Henry Thornton took action in the matter and we had reductions made. Some of you perhaps have heard of the appeal "Have a heart, Maggie" addressed to the old lady when she was spilling the beer in the coal scuttle. I think, perhaps, Sir Henry Thornton is of a sympathetic disposition. He has a heart and if he carries that feeling with him it greatly helps in the treatment of difficult questions. I think he has been managing the National railways in a very creditable manner, and that those railways are now going ahead due to the earnest desire of the officials, who are strongly interested in the progress of the country and in seeing the National railways prosper. I am not criticizing those officials in the past who found it impossible to do anything for us. They held office at the time of a great crisis and perhaps it was impossible for them to pursue any other course. At the present time it is very gratifying to note that there is a favourable balance in the operating of the National railways for the past year of over $17,000,000. I hope it will be possible to reduce the transportation rates at a very early date and still manage the railways with success.

It has been urged that immigrants should be brought into the country, and the argument is that they would help to pay the railway debt of the country and other indebtedness. I count that as nonsense. I think it is a very foolish proposition to advance, and it is a peculiar proposition for any public man to discuss. The point is, can an immigrant live well here, and is the country worth living in and worth fighting for? If a man can come here and earn a livelihood, it is a good country to live in. We think it is as good as any country in the world. A man can get along here on his merits. We do not want him to come in and bear the burden. We can shoulder our own burdens if it does take a long time to discharge them. We do not want people to come in for any such purpose; we want them to come in if they feel like coming, if not, we can get along without them. I desire to point out that from what I have observed, there is no doubt that a great many people have been going away from Canada. If we adopt a tariff as high as you like to make it, we would not prevent people leaving the country. But I think this is what persuaded them to leave. After the war, in the United States, there was a great fever for building. Hundreds of millions of dollars were expended throughout the United States in putting up buildings. For this purpose they obtained men from other countries. Men from Ottawa and from different parts of the country went to the States to work on buildings, putting roofs on buildings and so on. Many contractors and carpenters went down there. What took a great number of people from our country for a few years back was the expenditure of a large quantity of money which the government of the United States and the people of the United States had and it was used largely in the work of construction and in work and industries. Hundreds of millions were spent. But we find a change has taken place, and now many of the people are coming back to live in their own country. It strikes me that that is the reason for the great unrest and change which we have experienced. Matters became acute down in the Maritime provinces for this reason; when the tariff was imposed on our people and this National Policy was adopted, the people said: "Let this go through, we will try and get along if it is for the good of Canada." Some people say the same thing to-day. They say: "If you want an increase on this article of five per cent, or thirty per cent, all right; if it is for the good of Canada, we will suffer down here." That continued until conditions became acute. That policy centralized the factories and the capital, and then what occurred? If transportation had been cheap between the Maritime provinces and the central places where the factories were located, the trade would have gone on as usual, but when transportation became expensive we had to pay for the transportation of goods from the factories to the provinces, and the transportation of produce to other parts where it might be sold, and the condition in the Maritime provinces was rather acute. But the country is progressing. We have over a million people. We have industries

in the three provinces that produce $135,000,000 and we are not very badly off. We can carry on more industry and if we were able to ship goods to places throughout the world, the Maritime provinces would be able to carry on as well as any other part of Canada. In agriculture the production of the Maritime provinces realizes about $88,000,000 and the fisheries about $14,000,000. They have a very good field there. I think the fishermen will appreciate the removal of the duty on gasoline engines. This change will help them, and they deserve it, because it will help to build up the fishing industry.

Dairying is carried on in those provinces on a splendid scale and I think the cattle produced there are of a very good class. The Minister of Agriculture (Mr. Motherwell) has been taking a great deal of interest in Prince Edward Island, and he has decided to assist the industry of dairying in that province and to establish accredited herds in a restricted area. I am glad he settled that matter. I hope the House will approve of his proposition when the matter comes up, because it is a small province and the number of cattle is not very large. When the cows are tested there it will improve conditions in that area, so that the island will become a most healthful spot. I think it is the greatest blessing the Minister of Agriculture could bestow on that island, because it will do a great deal towards improving the health of the people. Sheep raising also deserves special attention. There are 83 million fewer sheep in the world than before the war, so that this field for development is attractive. The other minister who is going to assist in the improvement of the island is the Minister of Justice.

We have more to do with the Minister of Public Works with regard to the construction of works down there. We have very few public works to be put through on the island, on account of the economy that is being practised. The Minister of Marine and Fisheries has a great deal to do in looking after the coast. I mention these matters specially on this account, in order to show that they are acting economically. If in any other branch of the public service the ministers were too lavish, the country of necessity would not prosper as it has been doing.

In closing I may say that I think that the material success of the country is not in such bad shape. We have a good deal of interest in it, and we would all like to see every man and woman in Canada in a prosperous state, no matter on which side of politics they might be. If every one would lead a comfortable life we would all be happy, and it is our duty to do all we can to that end. We would like to progress, not only in our material interests, but in other respects. Hon. members must observe that in Canada we produce men of intellect, and their powers are not confined to our country alone. They are exercising an influence throughout the whole world in this way: that with the changes which are brought about we are going to see more daylight in the future, and what we have to do is just to clear the way.

> There's a fount about to stream,
> There's a light about to beam,
> There's a warmth about to glow,
> There's a flower about to blow;
> There's a midnight blackness changing into gray;
> Men of thought and men of action, clear the way!

Mr. J. D. CHAPLIN (Lincoln): I do not intend to follow throughout the speech of the hon. member for Queens (Mr. Mackinnon) who has just spoken. I find that he has been very moderate, and I concur in very much that he said. One thing, however, towards the close of his address caught my attention, and that was the fact that he had learned, owing to the treatment that he received at the hands of Sir Henry Thornton by way of reduced rates on potatoes, that Sir Henry Thornton had a heart. The people of Canada hope that Sir Henry Thornton has a heart. They call upon him to stop useless expenditure and the extravagance of establishing and paying a large staff in Paris. They ask him, along with this government, to practise more economy in the matter of transportation and to reduce costs, and by that means earn the approval of the people of this country. I am glad to know from the hon. member that Sir Henry Thornton has a heart. I think the people of the country will appreciate that very much. He might also cut out some of the useless expenditure on the radio and a whole lot more foolishness—the building of golf clubs all over the country, and foolishness of that kind. I call the attention of the Minister of Railways (Mr. Graham) to this matter. In common with other members of the House, I regret very much the absence of the Minister of Finance (Mr. Fielding) through illness. We think the country also regrets his absence. His guiding hand has been very much needed in this House, and there is no doubt that he has been missed more than ever during the presentation of the last two budgets. I intend to quote some of the last words uttered in this House on budget matters by the Minister of Finance. In 1922, as reported at page 2106 of Hansard, he said:

The Grand Trunk and the Canadian Northern are now virtually owned by the Dominion of Canada, and when we advance money to them we are, in a sense, lending money to ourselves.

Again in 1922, as reported at page 2107 of Hansard, he said:

During the year four Canadian government loans have been floated. Three of these have been in the names of the railway companies and one a direct government obligation.

Continuing, as reported on the same page, he said:

We still keep up the theory of corporations in regard to these railways; the railway loans are issued in the names of the railway companies, with guarantees by the government. As a matter of fact, the government to-day are both makers and endorsers of those securities; so that practically they are now government loans.

Let me quote further. In Hansard of 1923, under the head of income and expenditures, as reported at page 2640, the minister said:

The revenue for the year was $381,952,286.99 against ordinary expenditure of $347,560,690.63. If the surplus is to be ascertained by comparing the ordinary revenue with the ordinary expenditure—and that was the time-honoured way of determining surpluses—then on that year there was a surplus of $34,391,696.36. But there was a capital expenditure of $16,295,332.55. If we take that into account, both ordinary expenditure and capital expenditure, there was still a surplus of $18,096,363.81. Then there were certain special expenditures, including demobilization charges, of $1,526,583.22. So, if we take into account ordinary expenditure, capital expenditure and what is called special expenditure, there still was a surplus of $16,569,780.59. So far this is a story of surpluses; but there is a further statement to be made which quite destroys that happy picture. There were charges for advances to railways of $97,950,645.36. If we take, then, the whole expenditure for the year, ordinary, capital, special and railways, there was a deficit in that year of $81,380,864.77. After allowances for some deductions are made, the net result was that in that year we added to the public debt, $81,256,818.04.

The minister was reviewing in his budget speech the year 1921-1922. He continued:

We turn now to the year 1922-23 which closed not many days ago. We have not the complete accounts before us, but there is sufficient information to enable us practically to announce the result. Ordinary revenue amounted to $393,619,000. These are estimates, as the figures, are not absolutely final. Ordinary expenditure amounted to about $331,780,000. As between those two items, there was then a surplus of $61,839,000. Capital expenditure, however, represents $14,500,000; adjustment of war claims, $6,700,000; cost of loan floatations, $3,050,000; these representing in all, $24,250,000. There was thus a surplus over ordinary, capital and special expenditures, of $37,589,000. But again the railways have to be taken into account. We had to advance during that year $92,190,000 for railways, and $6,060,720 for the Canadian Government Merchant Marine, making in all for that charge, $98,250,720. This, of course, takes up all the surplus and leaves a large balance on the other side of the account. If we take everything into consideration for the year, the net result was that we added to the public debt in the year just closed, $49,293,086. The receipt of something over $8,000,000 from the British government on exchange account helped us to keep down what otherwise would have been a larger addition to the public debt.

That closes the minister's statement, and I may say that this statement of the minister, the total statement that I have read, giving a clear, distinct account of expenditures for the two years, covered one column of Hansard. It took ten columns of Hansard for us to get a confused, elongated statement from the Acting Minister of Finance (Mr. Robb) that was practically intended to confuse and that gave very little information. The Acting Minister of Finance is not in his seat and not many ministers are present. The Minister of Justice (Mr. Lapointe) is present and I assume that he knows something about the statement. For my part, I have never had any opportunity, although I have some acquaintance with accounts, of seeing these accounts, or of knowing what they contain or how they are made up, and we do not get a full statement of accounts. The Minister of Finance, whose statement I have just read, says that in 1921-22 we had a deficit of $81,000,000 which should be added to the public debt, and that in 1922-23 we had a further deficit of $49,000,000 that should be added to the public debt. I can find no evidence of those two amounts having been added to the public debt. Will the minister who is present tell me if he knows if those items have been added to the public debt? I am sorry I have not been able to engage the attention of the Minister of Justice.

Mr. LAPOINTE: I am listening to my hon. friend.

Mr. CHAPLIN: I see the Minister of Agriculture (Mr. Motherwell) in his seat and I hope he can answer the question whether this amount has been added to the public debt. Do any of the ministers know? Have they any knowledge of those accounts? I explained a moment ago when the Minister of Justice was not listening that I had no way of getting at the accounts and knowing for myself, and I am asking for information now. The hon. member for Brome (Mr. McMaster) is not in his seat, but he told us the other day that these accounts were very clear, and if he were present I would ask him if he knows if those amounts have been added to the public debt. Can any of the ministers tell me if those amounts have been added to the public debt? Are there any other accounts on the other side of the ledger that are not shown in this statement and that should be credited? Do they know that?

Mr. LAPOINTE: We are not sitting in committee.

Mr. CHAPLIN: I am sorry the minister, who says that we are not sitting in committee, does not know. This is a matter in which the people of Canada are interested. It is a matter that the members of parliament are interested in and I think that some minister should be able to answer the question, which is a fair one.

Mr. LAPOINTE: My hon. friend may know many things but he does not seem to know the rules of the House.

Mr. CHAPLIN: I may not know the rules of the House as well as the minister does, but one thing I do know and that is that the people of this country desire to learn something about these accounts. I shall refer again to the statement of the Acting Minister at page 1468 of this year's Hansard. I notice that the acting minister has given us a report for three years, 1922-3, 1923-4, and 1924-5; but has not included the year 1921-2. What was the reason for omitting that year, during a part of which they were in office? That was the year they prepared their first balance sheet and there does not seem to be any reason why it should not be included in this statement. Well, there is a reason; the first year they do include in this comparative statement shows that they paid $80,000,000 in cash to the railways. But had the government included the previous year the accounts would have shown that they had to borrow money for this purpose and it did not suit them to give the full information. That is the reason why the year 1921-2 is not included in this statement of loans to the railways. There is another question I want to ask the government but before I put it I shall quote the statement of the Minister of Finance (Mr. Fielding) regarding the actual figures for 1922-3. He says:

> But again, the railways have to be taken into account. We had to advance during that year $92,190,000 for railways and $6,060,720 for the Canadian Government Merchant Marine, making in all for that charge $98,250,720.

I find on referring to this statement that the acting minister gives us for the year 1922-3 the sum of $80,000,000 as having been paid to the railways in cash, whereas the Minister of Finance (Mr. Fielding) in his budget speech that year gives the sum of $98,000,000. I want to know, and I think the House is entitled to know, what became of the difference of $18,000,000. Where is it? But we are told that we are not in committee and that therefore the government cannot answer.

I referred a moment ago to the fact that the minister had devoted one column of Hansard to a succinct, definite, positive, straightforward statement of the affairs of this country for two years while the acting minister had taken up ten columns, two of which comprised political propaganda while in the remainder the accounts were so mixed up that nobody on the top of this earth, unless he were an accountant, could make them out. And yet we have hon. gentlemen in this House who will get up and tell us that the accounts are clear and understandable. I want to know just what they mean; but of course we are not in committee and the government cannot answer. So much for this statement. A statement has been sent forth to the country that we have a surplus this year of $1,800,000.

4 p.m.

But before I leave this point definitely I want to make a comparison between the alleged surplus of this year and the accounts as we have had them before; I want to compare the financial statement for 1923-4 with the present one. In the year 1923-4 the receipts amounted to $393,000,000; whereas our present receipts amount to $344,000,000; and in the previous year, the expenditures were $331,000,000 as against $342,000,000 for the past year. In the year 1923-4 there was a surplus of $37,000,000, with a very much larger revenue; and the acting minister now shows a surplus of $1,823,000 before the railways are considered. So that for last year this government does not take the railways into consideration at all, but in the previous year I mentioned the minister did; with a surplus of $37,000,000 in his hand he came through, after accounting for the railways, with a deficit of some $49,000,000; whereas this year the government comes through with a surplus of $1,800,000. If that is not the most ridiculous statement ever foisted upon an unsuspecting public I should like to know what is. And the acting minister in two pages of propaganda gives us a certificate that means nothing, from auditors who never audited.

I want now to come to the principal change in the tariff, and that is the duty on coal. Let me say at the outset that I am in favour of that duty. If the duty on coal is intended to stimulate production in the coal areas I am in favour of it; and if it is intended to take care of unemployment I am still in favour of it. But I wish to point out to the minister that there are other parts of Canada which are suffering to-day from unemployment, and if the government can make provision for one part of the country why can they not provide for others as well? Are they doing it in this case only because they are clubbed into it and not because they want to do it and

because it is right? There are in the provinces of Ontario and Quebec to-day people who are using coal on a large scale and who by this tariff have had an added burden placed upon them. They are willing to bear this burden; but at this very moment the government reduces, in many cases to as low as 6 per cent, the protection which they themselves need. If protection is a good thing on coal why should it not be good in the case of other commodities? If protection is a good thing for the employees in the coal mines why is it not good for other employees as well? If protection is a good thing for workers out of a job in Nova Scotia and Alberta why should it not be good for those in Ontario and Quebec? I had hoped that there would have been in this budget some provision for added protection to certain farmers of the country, and I refer especially to fruit and vegetable growers and to those who are interested in the production of eggs and butter and cheese. And I submit that we should have, in regard to these things, a duty approximating the American tariff. That is what we need in order to stimulate the production of these people. But what do we get? The farmers of Ontario and Quebec ask the government for bread, and they give them a stone in the shape of an export duty on power. Export duty on power? It seems to me the ex-Minister of Finance (Sir Henry Drayton) explained that situation pretty well: if that duty could be laid on the American consumer of power it would be all right; no objection would be taken. But that cannot be done; the duty will be paid by the people of Ontario and Quebec. Ontario power is being sold to-day on the basis of cost and any duty that is placed upon it will fall directly upon the people using the power. I miss my guess if the people do not hand the government a few doses back when they get the opportunity. We await very confidently the chance, and so will they.

I want to say a word in reference to the claim that the people of this country have had their taxes lessened by $52,000,000. Last year the Acting Minister of Finance (Mr. Robb) in his budget predicted that there would be a reduction of $24,000,000 because of the lessened sales tax and because of some slight reductions in the duties. He did not figure on a loss of revenue of $52,000,000. But he estimated wrongly; the reason the revenues went down was because the people did not have the means to buy the goods, and the government should claim credit for that too; they should claim credit for the forced economy of the people. I say the people did not have the money to buy. Many of them were forced out of employment by this government, and those still in the country were working half time. The government have solved this question in pretty much the same way as they have solved the housing proposition. "Canada is coming through," they say in this advertisement which appeared in a great many papers throughout the country. I quote from it:

> The housing scarcity, which was so serious as the result of the cessation of building during the war, has now been fairly met.

"Fairly met"! The people have been driven out of the country, and there are plenty of houses now. Go to Hamilton, Brantford and other places, and see what the condition is. My own city is better off because the government are spending money there on public works and the local people are getting the benefit. But in Hamilton, I understand, there are three thousand vacant houses; and it is the first time since the war that there have been any vacancies of consequence. And the government have solved the housing problem!

Speaking of miscalculations, in his budget speech of 1923 the Minister of Finance (Mr. Fielding) was very cautious, as he always was; when he came to the question of future business all he did was express a pious hope that business would be better. But the Acting Minister of Finance (Mr. Robb) was far more optimistic. In 1924 he said:

> The more of the products of the farm, the fisheries, the mines and the forest we have going to market, the greater will be the earnings of our transportation companies—the greater the purchasing power of the nation, and as a consequence we shall have factories running full time and tradesmen working overtime to supply the needs of those who have money to buy.

Fine sentiments! We have had in this country, Sir, three years of fairly average crops, with very large exports; probably as large as we have ever had in any three normal years. Have our factories been running full time? Have our tradesmen been working overtime? Again in 1924 he said:

> Our budget shows a reduction in debt of $30,000,000 last year and a reduction of taxation of $24,000,000 this year. It is confidently expected that this reduction will give such impetus to trade that it will result in greater development and prosperity to all the provinces of Canada.

Now the acting minister says that the reduction in taxation instead of being $24,000,000 is $53,000,000. Well, if it is reasonable to say that business would be stimulated by a reduction of taxes of $24,000,000, should it not have been far more stimulated with a reduction of $53,000,000? Where has this business stimulation taken place? Has it been in Nova Scotia? Has

it been in any of the Maritime provinces? Is business better in Quebec or Ontario? The truth is that this government have paralyzed business; they have driven thousands of people out of the country, and that is the real reason for our falling revenue and our lessened purchasing power.

I want to discuss for a few moments, Mr. Speaker, a question that is dear to the heart of my friends to the left, and one that has been discussed in this House more times than enough. Hon. gentlemen to my left have accepted it as an axiom that a tariff is a tax and is always paid by the consumer. The hon. member for Brome (Mr. McMaster) has similar views; and the Prime Minister (Mr. Mackenzie King) a few days ago said that the tariff is always a tax. Some years ago the United States put a duty on wheat of 42 cents a bushel. I would like to ask the Minister of Agriculture (Mr. Motherwell), for instance, who pays that tariff tax of 42 cents a bushel on wheat; I would like to ask any of my friends to the left who pays it? Nobody answers. What is the matter with hon. gentlemen? Are they mute?

Mr. FORKE: Nobody pays it.

Mr. CHAPLIN: Nobody pays it? Does this tax, then, come under the head of a prohibitive tax? How can the minister say, how can hon. members to my left say, that the tariff is always a tax? I ask the hon. member who just answered me, is this a prohibitive tax, if it is not paid? Why is it not paid? Why are hon. gentlemen so mute about it? They are not always so timorous.

Mr. SALES: Did the hon. member ever hear of a drawback of 99 per cent for export purposes?

Mr. CHAPLIN: Well, if that is an answer to my question as to who pays the tariff tax, then I must say it is a very intelligent answer, and I commend it to the rest of the hon. gentlemen.

Mr. SALES: That is exactly what happens.

Mr. FORKE: What is my hon. friend's question?

Mr. CHAPLIN: Who pays the tax?

Mr. FORKE: What tax?

Mr. CHAPLIN: The 42 cents a bushel on wheat.

Mr. FORKE: There is none going over.

Mr. CHAPLIN: Well, is it not going over because the 42 cents a bushel is a prohibitive tax?

Mr. BROWN: The flour that is ground out of that wheat is exported and commands a rebate.

Mr. CHAPLIN: I am glad I got my hon. friends moving; I am glad I have got under their skins just a little.

Some hon. MEMBERS: Oh, oh.

Mr. CHAPLIN: Let me read what they say about it in the primer which they put out to educate the people on tariff matters. Let me read for their own particular edification:

> If the rates are so high, on the other hand, that foreign goods are excluded from the country, a tax is still extorted from the people in the shape of higher prices for everything they use.

Now what answer have you got to make to that? They go further than that. Here is a further extract for my hon. friends to take note of, and you will notice, Mr. Speaker, that they do not refer to manufactured goods. It is the general principle. It does not make any difference whether it is manufactured articles or raw material. Here is the quotation:

> As already explained under a system of protection the consumer is compelled to pay a tax upon all imported goods that come under the tariff schedules—

Not on all the goods that come in, but on all goods that come in under the tariff schedules. It goes on:

> Upon all goods of domestic origin produced under a protective system the consumer must likewise pay a tax, although in this case the revenue finds its way to the bank account of private individuals alone.

Now what kind of a theory is that to put up?

Mr. EVANS: Is not that right?

Mr. CHAPLIN: Not at all. I ask you now the question: Who pays the tariff tax? But that does not exhaust the points I am going to bring out. I will take now the question of cattle, something that has been disturbing the gentlemen from the west for a long time. They find a difficulty now in selling their cattle. When they want to ship them to the United States, what hinders them? Is it the tax? If the consumer pays the tax, why not ship the goods in and let the consumer pay the tax?

Mr. MORRISON: Does not my hon. friend understand that the tax is so high that the people in the United States will not buy the goods? The tax is prohibitive.

Mr. CHAPLIN: My answer to the hon. gentleman is this: If the tax is prohibitive, let me read him what these people say in their own book:

If the rates are so high, on the other hand, that foreign goods are excluded from the country a tax is still extorted from the people in the shape of higher prices for everything they use.

Now let us get along. I heard in this House a gentleman from the northwest, whose name I do not recall at the moment, describe the situation concerning a carload of butter shipped from some point in Alberta to New York. By the time the freight and duty was paid, he said, there was very little left for the producer. Now what does that mean? Does that mean the consumer in the United States paid that duty on butter, or does it mean the producer paid it? But that does not by any means exhaust the matter. You can take almost any line of goods. I call as my next witness my very good friend the hon. member for Lunenburg (Mr. Duff), who, everybody will admit, is a perfect free trader, except on the matter of coal. What does he say?

The United States have a duty of from $1.60 to $2 per one hundred pounds on fish.

I ask this question: Do the United States people pay the duty on fish that goes in there from Nova Scotia? According to my friends from the west, they do; the consumer always pays the tax. The hon. member for Lunenburg goes on—Hansard 1923, page 112:

For instance, the business in which I am mostly interested, fish, is hard hit, a duty of $1.60 per hundred pounds having been imposed on salt dry fish, and on salt fish, herring, mackerel and so on, a prohibitive duty of 2 cents a pound. The result is that anybody who ships these goods to the United States receives that much less for them, because the price governing fish is not fixed in the same way as the price on grain or manufactured products, that is, the price of fish is fixed in the foreign market, and consequently the shipper has to pay the duty.

I hope I understand the English language.

Mr. EVANS: The hon. gentleman has been quoting from the Canadian Council of Agriculture, from their platform and the pamphlet written on it. If he reads the English language, he will find a correct answer to his question in that pamphlet.

Mr. CHAPLIN: Mr. Speaker, I think I know that pamphlet quite as well as the hon. member who has just spoken, and if he will indicate to me where that clause is to be found I will have very great pleasure in reading it. There is not a line in the platform that I do not know; I made it my business to know it; and if the hon. member can indicate to me where that is, I will be very glad to read it.

Mr. WOODS: Who pays the duty on the Ford cars coming from Detroit into Ontario?

Mr. CHAPLIN: Do not worry, I can come to that in a minute; but I do not propose to be taken away from my subject by any outside questions. I invited questions from my hon. friends a minute ago, and I found them pretty mute, pretty timorous, but of course they will do anything to get me away from my point.

Mr. BROWN: The hon. gentleman did not sit down long enough to allow us to put a question.

Mr. CHAPLIN: I am ready, Mr. Speaker, to sit down at any moment that any hon. gentleman wants to rise. Can it be made any plainer to anyone who wants to listen that this is still another case where the tariff is not always a tax? If so, I would like to know it.

Of course, the same thing can be illustrated in hundreds of cases of manufactured goods. Had I only at the inception taken certain cases of manufactured goods, my hon. friends—as one did a minute ago—would have tried to put me right out of business. I can tell him this. I have been in business forty years. I have grown up in a business from being the office boy to manager. I have during a period of ten or fifteen years occupied the buyer's desk, and I can say that for the period I was buyer, and it was followed up to a few years ago, on everything that was bought and that came in through the customs house the man that sent the goods in paid the full duty. That was part of the buyer's business to see that he got that, and I claim that you cannot have two parties paying the duty. Now as a finish to this—

Mr. BROWN: I suppose that was not added to the cost?

Mr. CHAPLIN: Mr. Speaker, I did not see the hon. gentleman rise, although he made some remark.

Mr. BROWN: I would like to rise and ask, if the buyer paid the duty in the first place, was not that added to the cost of the finished article, with overhead and so forth, and the consumer ultimately made to pay the duty?

Mr. CHAPLIN: I did not say that at all. The hon. gentleman misunderstood what I said. What I said was that the man who sent the goods in here, the seller, had to make a reduction in his price sufficient to pay the duty, and consequently there was no overhead and nothing else except the ordinary profit to be added.

Mr. EVANS: If that is the case, then in what way does the tariff become of benefit to the Canadian manufacturer?

Mr. CHAPLIN: I am relating something that happened for years under the operation of the tariff. To take care of that very thing the present Finance minister placed a law on the statute book; he enacted a dumping law to which these gentlemen profess to be so much opposed. That was the reason for the dumping clause. The present Finance minister realized the necessity for it because he sat at the helm and knew what was going on, and consequently he caused a law to be enacted to prevent it from continuing. That is the answer to my hon. friend. Is there anything more wanted in the way of proof that the consumer does not always pay the duty than the very law enacted by a Liberal Finance minister to prevent the seller from paying the duty?

Now, Mr. Speaker, I want to refer to another matter. The Acting Minister of Finance has told us that we have lost a lot of revenue. He has even taken that loss of revenue and put it to good account so as to enable him to say "Why, I have reduced taxation." I want to show as briefly as I can some losses that occurred that were not expected, especially when we entered into the French treaty. I have prepared a list—and I think perhaps this may interest the Minister of Justice (Mr. Lapointe)—of imports from France to Canada and of exports from Canada to France, based upon the ten months of the present fiscal year, 31st March, 1924 to 31st January, 1925, and the comparative figures I will give are for the corresponding ten months periods in each of the years quoted. I give the statement in that form so as to make a fair comparison for the ten-month period in question. The Canadian imports from France are as follows:

1923..	$10,255,000
1924..	13,113,000
1925...	15,167,000

So much for the imports; the gradually ascending scale will be noticed. The Canadian exports to France for the same period were:

1923..	$11,299,000
1924..	15,427,000
1925..	8,383,000

From the sum of $15,000,000 our exports to France dropped to $8,000,000. We started in 1923 with $1,000,000 more exports than imports, and ended in 1925 with nearly $7,000,000 less exports than imports. In other words we sold them this year goods to the value of $8,000,000 and we bought from them goods to the value of $15,000,000. Now I want to point out first of all what these exports consist of. They consist principally of wheat; pulp; lead; nickel and other ores; asbestos; coal tar; mica; some sugar; canned lobster and salmon; some agricultural implements; and a few scattered articles of manufacture every one of which—I refer to the manufactured articles—will disappear. Why do I say that these manufactured articles will disappear? Simply because the French minimum tariff is too high for us to take advantage of it; we are in exactly the same category in the case of France that my hon. friends from the west are with respect to cattle in the case of the United States. In respect of these exports that we have sold you will notice that in nearly every case they are raw materials: wheat, aluminum, lead, nickel, ores of different kinds; all raw materials. They buy from us a little sugar, a few agricultural implements, and some canned lobster and canned salmon in reduced quantities, because of the fact that the duties have been raised. The articles I have mentioned represent nine-tenths of the total exports and less than $200,000 of our total business was affected by the treaty. In other words, in new business we obtained less than $200,000 and in addition we lost several million dollars of old business. France wants these raw materials and she would take them anyway; and all we get in the way of new business is less than $250,000. Now, what did we give in return? When we made this treaty with France, Canada gave a list of goods which she could sell to France, and France gave a list of her goods that could be sold here. France gave us her minimum tariff whatever it might be and she got a fixed rate of duty on a lot of articles. That fixed rate of duty could not be altered by this parliament unless the treaty were abrogated. That is the position in which we are so far as the French treaty is concerned, and we get nothing in return to replace what we grant. When this treaty was being discussed I remember quite distinctly the right hon. leader of the opposition saying to the Minister of Finance, "You should have jacked up your tariff before you went over to France. You should have raised your minimum tariff to a scale that would enable you to trade with them and have something to trade with." I also remember that the hon. member for Lisgar (Mr. Brown)—he is not here this afternoon.

Mr. BROWN: He is right here.

Mr. CHAPLIN: Yes, I see the hon. gentleman now. Well, my hon. friend took exception to the statement of the hon. leader of the opposition when he said it would have

been better for the government to have raised the tariff before entering on negotiations, and said that was a principle of questionable soundness. I have no fault to find with my hon. friend's opinion, I think he gave that opinion honestly, but what has occurred? I want to draw the hon. member's attention to this fact. On looking up the British Board of Trade Journal of January 8, I find this statement:

> The Board of Trade have received, through the Foreign Office copy of the government bill—

Meaning a government bill in France.

> —to modify the French customs tariff duties on some three hundred articles.

And the paper goes on to say:

> The explanatory memorandum to the bill, after referring to the general tariff revision now in hand, describes the nature and purpose of the present proposal, which is not intended to replace or delay the normal tariff revision, but is necessary to enable France properly to negotiate the important commercial agreements now under consideration. The bill therefore proposes to increase tariff duties affecting French industries which owing to the burden resulting from the war, cannot face unlimited foreign competition with the present duties.

In other words, Mr. Speaker, what was a matter of questionable soundness for us to do has already been done by France right in our face, and we stand to-day with several hundred articles on which the minimum tariff is to be raised, and what chance have we to do business with them if the minimum tariff is raised, when we cannot do business now under the present tariff? Let me give the House some examples from this, so as to see what it means:

> The duty on blankets and camel hair belting is to be increased by over 100 per cent, and wool, etc., astrakans, plushes, sealskins, etc., would pay from 11 to 22 francs per kilog, instead of 8.82 francs per kilog as at present. The duties on elastic and rubbered clothing would be increased by from 50 to 100 per cent; and on felt hats by from 50 to 200 per cent. The duties on the thinner varieties of oilcloth and linoleum would be increased by 25 to 60 per cent, and other waxcloths would also pay heavier duties.
>
> As regards hardware, the proposed duties on locks, keys and nails are some 30 per cent higher than the present duties; those on saws, files and rasps some 200 per cent higher; and those on other tools, needles and certain cutlery about 100 per cent higher.

And so on through the list. There is no use taking up any more of the time of the House with this matter. The principle is there. Canadians as a matter of fact, have to learn to look after themselves, irrespective of the matter of questionable soundness. This may be all right for France, but it is not a good thing for us. This is the first real big joker in the treaty, and there are a lot of them. I am going to detain the House long enough to give hon. members some more of the jokers in this treaty.

Now, I wish to say a word or two as to the imports. As I said in my opening remarks on this question, the imports have increased from practically ten million dollars in 1923, for the ten months, to fifteen million dollars in these ten months. We have reduced our duty to France on a great many articles so that she could sell to this country. My hon. friends to my left will say, "Oh well, the people got a reduction in the tariff. It makes no difference as long as the people get the reduction in the tariff." On what articles was the tariff reduced? Let me give the House a rough list of them. They are:

> Brandy, champagne, wine, silks, satins, velveteens, laces, silk blouses, silk fabrics, silk clothing, gloves, toilet preparations, soaps, perfumery, statutes, china, jewelry, precious stones, ribbons, embroideries, artificial feathers, and flowers, curtains and shams portfolios, purses and pocketbooks.

No doubt, these purses are for the purpose of keeping some of the savings in taxes that the Acting Minister of Finance is giving back to the people. What did we lose? We reduced our duty to many people who could well afford to pay. If you are ever going to get taxes, you have to get them out of the people who can afford to buy luxuries. This is a rich man's treaty—never intended for the poor man at all. Let me give the House a few instances. I will tell hon. members how I figure the duty, because the Minister of Justice (Mr. Lapointe) with that even handed way of treating things, will tell you that I have not figured it properly, and if I tell hon. members how I figure it there will be no misunderstanding. First of all, I have taken the duties as they actually are. I prepared the figures actually paid for the ten months on the articles I have mentioned, and I had the customs house of Canada guarantee they are correct. I have contrasted with those figures the duties that would have been collected under the general tariff if we had no treaty. On that basis, we lose on champagne $80,000 in taxes.

Mr. ARCHAMBAULT: From Ontario?

Mr. CHAPLIN: I am not discussing Ontario matters; these are Dominion matters, and for the information of the hon. gentleman who asked the question, I say that we are discussing the budget. We are discussing the budget from the standpoint of the poor people of this country, the people who need to have taxes lifted from their shoulders, and are not discussing those people who are

consuming these goods. The losses are as follows:

Brandy	$142,000
Non-sparkling wines	108,000
Velvets, velveteens and plushes	65,000
Silk fabrics	104,000
Ribbons	31,000
Silk clothing	44,000
Gloves and mitts	37,000
Perfumery and toilet preparations	18,000
Tableware of china	10,000
Medicinal and Pharmaceutical preparations	11,000
Castile soap	7,000
Jewelry	5,000

What happened further was this: that under the terms of this treaty Japan and Switzerland did not hesitate to take advantage of it. France put her goods in at the same rate, and the people lost so much money in taxes, and those taxes that should have come out of the people who could afford to pay them have to be laid on others who probably cannot afford to pay them. I have not the figures for all the articles. If an item did not realize at least $1,000 I did not worry about it; it was not of any moment, so far as my argument was concerned. From France alone, on the goods we imported, we made a loss for the ten months of $991,000; from Switzerland we made a loss of $310,000; from Japan, $232,000; and from Norway $30,000. These figures are for ten months. When these gentlemen went over there to make this treaty they allowed French non-sparkling wines to come into Canada at fifteen cents a gallon. At the very time they did this the home producer of wine was paying thirty cents excise duty. And they allowed the competitor's goods to come in at fifteen cents. Consequently when the matter was called to their attention they had to adjust it; with this result, that, instead of charging the home producer of wine thirty cents, they had to reduce the tax to seven and a half cents in order to place the home producer on an equality. I say that anybody at home who can afford to buy an article like wine can afford to pay a tax, and the tax of thirty cents was reasonable and just. But owing to the treaty this tax had to be reduced, and we lost on that operation on that article the sum of $129,000. The total loss was $1,695,000 for the ten months which I have mentioned. If you add two months more on the same basis, it means a loss in revenue of over two million dollars.

Besides the one big joker in this treaty to which I have referred, there are some others. I have not time to refer to half of them here, but I will give the House a few just for the edification of hon. members. Take the item of gloves and mitts. We reduced our tariff and France gave us her new tariff on gloves and mitts to France to the minimum tariff, but the minimum tariff is so high that we did not ship any, while France shipped us $383,000 worth. We lost in duty over what we had sold to them before, $37,000.

As regards tableware of china, we reduced our duty to France, and France very accommodatingly reduced her duty to us. Just imagine reducing the duty for us to ship tableware of china into France! The result was that France sold us all the china, we did not sell her any; and we lost in revenue $11,000. The poor working man in this country saved $11,000 on his china. As regards perfumery and toilet preparations, we lost in revenue $18,000. We gave France fixed rates of duty and we could not change the duty to-morrow if we wanted to do so.

Let me give the House an idea of what comes into this country in the way of non-sparkling wines. In ten months of 1923 there were imported 56,000 gallons and, in 1924-5, 134,000 gallons. We lost in revenue on this item over $100,000. This is supposed to be a temperance country. The hon. member for Chambly and Vercheres (Mr. Archambault) asked: Was it in Ontario where this wine was used? Before he goes out I should like to give him the figures in regard to the item of brandy. I do not think it was in Ontario, but I will give him the result. In 1923 we imported 43,000 gallons, and in ten months of 1924-5 we imported 146,000 gallons. That is pretty good for a temperance country. Our loss in revenue on that item alone was $142,000.

Let us take the item of canned fruits and canned vegetables on which we gave France fixed rates of duties. We had a loss of revenue. We sold no fruits but we sold them $800 worth of canned vegetables. Just imagine! We sold France $800 worth of canned vegetables! In 1920, we sold France $1,000,000 of canned fruits and in 1924-5 we sold nothing. Why? Simply because the Minister of Finance (Mr. Fielding) and the then Minister of Marine and Fisheries, the present Minister of Justice (Mr. Lapointe) went to France and made a treaty with her by which France had fixed rates of duties on importations into Canada of canned fruits, and the duties that we have to pay on our importations into France are higher than those she has to pay on importations into Canada. That is another joker in the treaty.

On cutlery and jewellery we lost in revenue $8,000. The Minister of Justice in his address last year told us that he was going to sell

butter to France. He reduced the duty on fresh butter so that our butter would get in. This is what he said:

> We have not negotiated a treaty for the Pilgrim Fathers or for the farmers that came with Cartier or Champlain, we have negotiated a treaty for the farmers of the present.

Let me tell the Minister of Justice that the Pilgrim Fathers and the farmers that came with Cartier or Champlain shipped as much butter to France last year, as the present farmers did. Dead as they are, they shipped not a pound, and neither did the living farmers.

A few years ago we shipped condensed milk to France. In 1922, for instance, we shipped $568,000 worth. The duty was increased by fifty per cent, and last year we sold France $7,000 worth. That is another joker. The Acting Minister of Finance (Mr. Robb) whom I saw here a minute ago, made a prediction in 1923. He said:

> Canada will export boots and shoes to France.

I have looked up the records and I find that no leather boots and shoes went to France, although a few rubbers went. I suppose we shall have another shot about bronze powder from him too. Last year the story was: "Oh, well, we did not make the records." A lot of bronze powder was exported from this country. The minister produced a telegram from a manufacturer stating that they exported a lot of bronze powder. When I said to the minister: "This does not appear in the export records," he said: "We did not prepare those records; you prepared them." I have examined the records for the last four years and there are no exports of bronze powder. The minister should communicate with the manufacturers and find out where this stuff has gone. It must have gone somewhere and we cannot find it.

Let me mention a few other articles that we used to send to France. In 1920, we shipped $275,000 worth of dried apples; now this trade is gone. In 1922, we sold France $455,000 worth of oats; in 1925, there is no trade—nothing doing.

I cannot pass over this list of luxuries without reading an extract from a speech made by the hon. member for Brantford (Mr. Raymond). We all know that very delightful gentleman. We all have heard from him of the distress that exists in Brantford, and now that we look back on the matter, we come to the conclusion that the people of Brantford have not gone away because of lack of work. I will let hon. members conclude what the reason is when I read his speech. He said:

> In the part of the country that I came from, I beg to say that brandy and champagne are not luxuries, nor, Sir, is sparkling burgundy any luxury. On the contrary, these things are classed with blue pills, calomel and salts.

We had heard that its industries were languishing and its population was scattered, but we are glad to know that its necessities are well looked after. I am afraid that these gentlemen who are out of work in Brantford, instead of having gone away to other localities to look for work, have gone to California or to Florida, and may come back, who knows, in their luxurious motor cars, wearing the luxuries of which I have spoken . I regr t having taken up so much of the time of the House and I hope I have not tired hon. members too much.

Mr. MEIGHEN: What about that long list of drugs which appears in the treaty? Did we sell any of them?

Mr. CHAPLIN: Answering the question of the leader of the opposition, I beg to say that of all those padded sheets of drugs, several pages, containing some 150 articles, I think there is one on the list of exports, and others that we exported before, now disappear from the list.

Hon. W. R. MOTHERWELL (Minister of Agriculture): Mr. Speaker, the budget is one of the time-honoured institutions of this parliament. It affords an opportunity, not only of discussing the financial affairs of the country for and against the ministry's view of these matters, but further of ventilating grievances and especially of discussing problems which members would not get as good an opportunity of discussing later on in the session. I have to congratulate the official opposition upon their mathematical attainments while discussing this particular budget. They started off with a surplus of nearly two millions and by the time this had passed through various hands it had mounted considerably. First, some hon. gentlemen added gently to it making it five or six millions and then later on it was augmented very materially. I cannot recall just now the particular gentlemen who added to it but I remember that the hon member for Vancouver Centre (Mr. Stevens) and the hon. member for Fort William and Rainy River (Mr. Manion) as well as the hon. member for West York (Sir Henry Drayton) all had a hand in it. All these hon. gentlemen gave it the once-over, so to speak, and each time they made it a little more imposing until finally, when the hon. and genial member for Nanaimo (Mr. Dickie) had got through with it, it assumed the formidable proportions of $100,000,000.

Mr. MEIGHEN: That statement was made in the very first speech in the debate from this side of the House.

Mr. MOTHERWELL: I did not know that, but at all events some hon. gentlemen evidently receded from that bold position at first although ultimately they took it up again. And I am afraid that had it not been for the approach of the Easter season, which sometimes has a disciplinary effect on mortals, that $100,000,000 would before long have increased to several hundred millions. Heaven only knows now what it may be after Easter.

I shall now refer to some of the remarks made by the hon. member for Vancouver Centre and the hon. member for Fort William and Rainy River. Exception has been taken by these gentlemen to what they call extravagance on the part of the government, but it will be noted that very few individual items are cited; we have nothing but generalities. The government is brought under one wholesale charge of extravagance and it is said that so bad is this evil that taxation is mounting skyward. And how do hon. gentlemen opposite propose to bring down this mounting taxation? Why, they want to have more protection; high taxation is to be cured by higher taxation. And so these gentlemen go on proposing their nostrums indefinitely. But the only particular item to which the hon. member for Fort William and Rainy River objected, so far as I could notice, was the alleged extravagance in connection with commissions of investigation, one or two of which he mentioned. The hon. member referred for example to the grain inquiry. Now what is the history of that? It is merely a continuation of an inquiry that was started by the preceding government of which the hon. gentleman himself was for a short time a member. That investigating body created at that time perambulated the whole country,

5 p.m.

creating a good deal of consternation because of their crude methods; and things had reached such a pitch that an injunction was sought against their further inquiries. And between these injunctions and their waiting and hovering around, and the fact that the whole country at that time was upset over the prospects of an election, coupled with the further fact that their revenues had been exhausted, they simply hung on until by December 6 they and the government went out together. We had to do something in the matter; and, as will be recalled, the next year the hon. member for Qu'Appelle (Mr. Millar) voiced the opinion that the inquiry should be resumed; that was what he urged. So that we find one wing of the opposition, the official section, the year before starting an inquiry but achieving nothing, not even a report being presented, followed by another wing of the opposition, the unofficial section, recommending later to this government, through a resolution offered by one of its members and accepted, that the government take up the matter again and proceed with the investigation. And that has been done. Well, where is the extravagance in that? Have we not got value thus far? We have a report upon the subject and a bill will be introduced after the Easter holidays. But there was absolutely nothing to show as a result of the first inquiry started by the government of which the hon. member for Fort William and Rainy River was a member for a very short time. If this is the only extravagance to which hon. gentlemen can point it is surely a very minor one. But it has not been proved that even here there has been any extravagance, because after all, in view of the importance of the subject, the expenditure that has been involved is very small.

Mr. FORKE: I want to object to one expression the hon. member has used which I will not let pass: he referred to us in this part of the chamber as the "unofficial opposition." We are not an opposition.

Mr. MOTHERWELL: I do not know what the proper term should be. Hon. gentlemen say they are not a party and now the hon. gentleman says they are not an unofficial opposition. I suppose they are just neutral; maybe that word would do.

Mr. FORKE: Probably that would do.

Mr. MOTHERWELL: Yes, a neutral party ready to condone or condemn as the circumstances warrant.

Mr. FORKE: Complete the sentence.

Mr. MOTHERWELL: That is the complete sentence—a neutral party ready to condone or condemn as the circumstances warrant.

Mr. FORKE: Or to praise if necessary.

Mr. MOTHERWELL: Well, condone would be equivalent to that.

Some hon. MEMBERS: Oh, oh.

Mr. MOTHERWELL: We will accept that word praise too; I am ready to add that to the qualification. Now, to proceed. That was the extent of the extravagance with which the government was charged by the hon. member for Fort William and Rainy River. It will be remembered also that when the estimates of the Minister of Public

Works (Mr. King, Kootenay) were going through the House the hon. member for Vancouver Centre at one stage discussed the question of over-manning in the civil service, denouncing all and sundry. I do not think he said that the civil servants were paid too much but he did say that there were too many civil servants; he gave us that old chestnut—too much overlapping in the civil service. Well, I would take it as a friendly act on the part of the hon. member for Vancouver Centre or of any other hon. gentleman in this House if he would be good enough to point out where, among the 1,200 civil servants in the Department of Agriculture, the services of any one could be dispensed with without sacrificing in some measure the interests of the public service. If the hon. member for Victoria City (Mr. Tolmie) were in his place I would ask him, as one who is familiar with the work of the department, to point out where I could dispense with one man without some sacrifice. On the contrary, I know where I could engage a good many more men profitably. The hon. member for Vancouver Centre has himself pointed out on several occasions the disabilities arising in his constituency in connection with the shipment of certain goods packed in straw; and ultimately I believe we shall have to appoint a few more men at that point to take care of that situation. We do not want to do this if it is at all avoidable, but this is one answer to the charge of overlapping in the service. And this same thing is true all along the line; in a dozen directions, instead of there being too many public servants there are too few, to the detriment of the public interest. But the public do not think that; they hear a clamour from one side of the chamber to the other declaiming against the multitude of civil servants, all this talk often reflecting unwarrantably on the ability of these people. I leave the invitation open to any hon. gentleman in the House to show where any services can be dispensed with or economies effected in the votes presented to the House for the department. I speak more particularly for my own department because I am more familiar with it; but there is no member of this government who is not ready to give the same invitation and who would not be met with the same silence. So much for that. There are more remarks in this connection but I shall reserve them for more convenient seasons.

The hon. member for Fort William and Rainy River did take up the other day a question that required some explanation. He gave a part of the information practically correct, and that was as to the imports of a large number of agricultural commodities, which he said should have been grown in Canada; and for some reason or other he suggested that someone was to blame, the government presumably. I shall refer to the list, and I shall mention not only imports but exports as well, for unless you have the two you will not understand the situation in regard to the imports. I shall interject an explanation here and there as I go along. In the year ending March 31, 1924, we imported of butter, in round figures, 1,500,000 pounds and exported 13,000,000 pounds. This year we exported 20,000,000 pounds; the importations are decreasing while the exports are increasing. Of cheese we imported 1,500,000 pounds and exported 116,000,000 pounds. This is nearly all fancy cheese, made in Italy, Switzerland, and elsewhere, which we do not produce in Canada.

Of eggs, the number of dozens imported was 6,500,000 in round numbers, while the export was 2,890,000. This situation is improving yearly. The year before, the imports were 8,000,000 and the exports some 3,000,000. In addition to that, owing to the improved quality of our eggs the consumption in Canada has increased during the last four or five years from sixteen dozen per annum per capita to twenty-six dozen per capita, an increase of about 60 per cent. That is because the eggs are better. So that the exports and imports of this commodity do not at all show the production.

Mr. MARCIL (Bonaventure): Is the grading of eggs in country districts under the minister's department?

Mr. MOTHERWELL: Yes.

Mr. MARCIL (Bonaventure): The provincial governments have nothing to do with it?

Mr. MOTHERWELL: No, not now; they did a few years ago. There were a number of provincial methods of dealing with it, starting I think with Prince Edward Island about twelve years ago and then being taken up by the western provinces. On account of the expert character of the work it was thought wise to make it uniform and have the whole thing come under the federal Department of Agriculture. At another time when this matter is up I will perhaps make a fuller explanation.

Of fruits, $18,000,000 worth were imported in the year to which I refer, and nearly $9,000,000 worth were exported. Fruits are a very healthful commodity. A great many

of them come in free and are available at times when our own fruit is not available. But it will be noted that to offset the large amount of imports we have nearly $9,000,000 of exports.

The question of hides has been the subject of much discussion. The hon. member for Brandon (Mr. Forke) and one or two other Progressives drew attention to the comparatively small price of our hides and the large import. In the particular year to which I refer 46,000,000 pounds of hides were imported, chiefly from the United States, Argentine and New Zealand, and against that, 49,000,000 pounds were exported. Apparently the users of hides, the boot and shoe makers, buy foreign hides because of the greater uniformity in the article; it suits their trade better. Every farmer in this chamber is familiar with the irregularity of the quality of a great many of the country-killed hides, especially in the winter. I do not know whether that is the reason why these are exported; I suppose it is because it is to the advantage of the sellers to export them and that the quality of the product is perhaps more suitable to the export trade.

Mr. BROWN: On the question of hides, has the minister gone into the imports or exports of tanned leather made from these hides that are imported?

Mr. MOTHERWELL: No.

Mr. BROWN: It would be found very interesting.

Mr. MOTHERWELL: I took just the list that the hon. member for Fort William and Rainy River (Mr. Manion) dealt with; I did not go into that. I have no doubt that there is a very much longer and more interesting story with regard to this whole question than I am prepared to give in the time that is at my disposal now.

Of lard we imported 12,000,000, pounds and exported 8,000,000 pounds. Ever since the Canadian swine industry has been developed along the line of what we call the bacon type there has been a lessened production of lard. The fatter the animal is; the more it comes under the classification of "thick smooth," the less lard you will get from it, so that we need not be surprised if our lard importations increase as we develop the bacon type of hog for the British market. You cannot get it both ways; you cannot have a lean bacon type such as the foreign markets demand, and a fat animal at the same time. This is a good sign, because it is better to produce bacon than it is to produce lard. Anybody can produce lard, but anybody cannot produce bacon.

Of bacon and hams, 6,000,000 pounds were imported and 99,000,000 pounds exported. There is a demand for the fat ham and the thicker bacon in certain markets throughout Canada, and that is imported because it is cheaper, while the other is exported because it caters to the more fastidious taste of the British market, which is prepared to pay the money for the good quality. That accounts for the difference between the import and the export.

Of fresh pork we imported 22,000,000 pounds and exported 1,000,000 pounds. This import, my information is, is to keep our abattoirs running during a shortage of live hogs on the Canadian market. They find it pays them better to import green pork from the United States, and thus keep the curing facilities going at the abattoir, than to close their packing plants; so that they make this import of green pork and then export the product. The pork is held in bond during the curing process.

Of pork in brine, we imported 9,000,000 pounds and exported only 430,000 pounds. This is the real, old-fashioned three or four inch thick stuff we used to see many years ago in the shanties. There was an idea that the shanty-men had lost their taste for this heavy meat and were demanding the tender cuts just like other people, but apparently there is still a considerable demand for it—so much so that we have not the supply to meet it and consequently we have had to import 9,000,000 pounds.

Of seed we imported nealy $4,000,000 worth and exported over $8,500,000 worth—over twice as much, so that the situation there is quite satisfactory. The seeds that we import are largely those that do not grow in Canada.

Mr. WARNER: May I ask a question? Is it not a fact that many of our heavy hogs that make the kind of pork referred to are shipped to the United States instead of being used here in Canada? I know of one firm in Wetaskiwin, not far from Edmonton, that claimed to have made $6,000 by shipping just that kind of hog to the United States and then importing the finished product.

Mr. MOTHERWELL: That is quite possible. In more than one case Canadian butter and eggs have been shipped to the British market, and in a month or two have been shipped back to Canada. It is a case of overshipment to the British market, and before the new, fresh, winter eggs come in they find it commercially possible and feasible to

have them shipped back again. This frequently happens.

The matter of vegetables is frequently discussed by many, particularly our Conservative friends. I want to say quite frankly I have some sympathy with them on the question of vegetables, but when you know the record, it does not look so bad. We imported $3,900,000, nearly $4,000,000 worth of vegetables, and we exported almost the same, $3,700,000, or a difference of $200,000, so it very nearly balances.

Take raw wool. That looks like a reflection on our disposition to diversify and take advantage of all the opportunities on our farms. We imported 19,000,000 pounds, and we exported only 6,000,000 pounds. I think that is easy to explain. These are largely merino wools, the finer wools of Australia that our Canadian woollen factories desire in order to make the finer cloths. We have not the population to make use of all our own coarse wool, and our wool therefore goes to Boston and other United States points, where they have a large population and there is a large and varied demand for all qualities of wool. There is no reflection there such as was apparently desired to be thrown upon the agricultural development of Canada.

There are more of these things we can do. This last year the west alone has produced for export over 10,000,000 additional pounds of butter. The west will develop year by year until in a short time, inside of another ten or fifteen years, it will be exporting 100,000,000 pounds of creamery butter, judging by the rate they are going now. We are getting away from specialized farming, which is not a safety first system at all. Even eastern Canada can develop enormously along the lines of diversification. This old province of Ontario, with a little more attention to winter dairying and improving the quality of the cows, could in ten years double its butter output. We are just awakening to the fact that we have to pay more attention to all these things, and not buy any more than we can help of what we can grow profitably at home. You know quite a wave went over the country ten or fifteen years ago—Oh, it is not worth while bothering with these things. Let us do the things that our farm and the community are specially adapted for, let us specialize. There is a lot to be said for specialization, but when you are specializing in a particularly precarious article, subject to climatic conditions, where do you stand if this specialty, due to climatic conditions or other reasons, falls down? You have nothing left. We are entering an era when people want to play safe. Why do we see such a tremendous development in our insurance business? People who were insured for $10,000 yesterday want $20,000 insurance to-day; people who were not insured at all yesterday are seeking insurance to-day. They want something that is safe. They do not want to make a big profit out of something, but simply to play safe. That is the result of the discipline we got in the debauch of the war period and for a year or two afterwards, and it is a good sign. We are also playing safe in agriculture by diversifying our farming, and it is a good sign; it is something to congratulate ourselves upon, rather than a reflection upon agriculture, because we find it convenient sometimes to export and sometimes to import. So much for that question.

I have been criticizing the official opposition for a short time—I usually do. I take far more delight in criticizing my regular traditional opponents, whose steel I always respect but whom I like, and I shall like them much better if we keep them just where they are, which it is our business to do. But just now I am under the necessity of criticizing my very good friend from Springfield (Mr. Hoey). I do not think enough attention is paid to him in this House. He is one of the most capable of the front benchers among our Progressive friends. Whenever he speaks he gives us a treat. Anybody, whether he is a literary man or not, who likes a well rounded speech, faultless rhetoric, beautiful sentences uttered in that rich Irish voice, which cannot be beat, cannot but be charmed by the hon. member for Springfield. I am not saying that for the purpose of paving the way for something terrible. I just wanted to point out that while his speech had all these beauties, it had also this danger, that it was misunderstood, I think, by some members of the House, and will be misunderstood by the country. There was not the point to it that seemed to lie on the surface. Take the eulogy, for instance, my hon. friend gave of Mr. Jones as a business man. It was deserving of Mr. Jones as a business man, but I am afraid Mr. Jones has been too much of a business man for my hon. friend. He was pretty nearly so for myself. I had the pleasure of being invited to the Country Club one night, on an occasion when the honoured guest was Mr. Jones, the manager of the Cement Company, the institution that we have heard so much about, and whose profits a great many Progressives, particularly the hon. member for Saskatoon (Mr. Evans), have complained so much about. I listened to Mr. Jones describing this uniform,

flat rate budget he was going to impose on the country, and unlike this formal occasion, his address was given informally around a table, after the dinner had been done full justice to, and then afterwards we were privileged to sit in committee of the whole, as it were, and ask questions, and after we started asking questions and began to find out what this flat rate budget meant, I was amazed. This flat rate budget was going to raise not only $130,000,000 that the present budget provides for, but $120,000,000 more, making in all $250,000,000, to be raised by a tariff applied on a flat rate basis to everything that comes into Canada—nothing coming in free at all, but just a flat uniform tariff on everything. I think the hon. member for Springfield quite understood that, because he drew particular attention to it. Not only that, but when my colleague the Acting Minister of Finance (Mr. Robb) mentioned it and asked the hon. member for Springfield if he was in favour of this "Jones" policy—shall I call it, just as we speak of the Dawes plan—the hon. member for Springfield started out to say that when the government declared just what their position was in regard to the Jones policy he would be ready to declare his. I did not know that hon. members expected the government to declare itself on the Jones plan. Maybe they had heard of this dinner at the Country Club and expected we were going to take over the Jones plan as part of our policy. But my hon. friend from Springfield did not stop there. He said:

I will state now without hesitation or equivocation—

Like a real Irishman he is afraid of nothing, he goes right to it:

—that Mr. Jones' policy would mean an immeasurably better tariff than we have at the present time.

That means a tariff whose good qualities cannot be measured as compared with ours; the Jones tariff was the best tariff the hon. member had in sight, immeasurably better than the present budget. Let us examine what the unequivocal statement means. It was also pointed out that the Jones plan would produce $250,000,000 of revenue, based on an importation of $800,000,000 worth of goods. Now anybody can take out his pencil and check up. The Jones flat rate tariff was to be levied on $800,000,000 worth of goods, and was to produce $250,000,000 of revenue. Divide $250,000,000 by $800,000,000, and you will find you get a uniform flat rate duty of thirty-one and a fraction per cent. No wonder the cement merger would like that arrangement. This man, Mr. Jones, is not as easy as he looks; he gets, as near as I can figure out, not quite ten per cent protection on cement. I did not know that at the time. I innocently sat at the feet of Mr. Jones learning the new national policy. Now we are having another policy proposed which is intended to replace the old one. Well, 31 per cent was to be levied on everything on the free list and Mr. Jones says that two-fifths of the goods we need are imported free. Take binder twine. I would not care to go into the constituency of Springfield and advocate a duty of 31 per cent on binder twine; but apparently the hon. member for that constituency (Mr. Hoey) is prepared for such a policy in order that he may "keep up with the Joneses." I cannot understand that. I am in doubt as to whether the hon. gentleman understood what that policy involved. You will recall, Mr. Speaker, that when my colleague asked the hon. member for Springfield whether he was speaking for the Progressive party he promptly said: "No, I am speaking for myself"; he was searching about for some betterment because he said "that the truth did sometimes come out of Nazareth," meaning in this instance, Montreal. So the rest of the Progressive party are in no way responsible for these statements and I am glad of that; I am sorry ever to have to criticize one of them. Here is a list of articles free of duty which I have prepared; they are comprised in part of the first half of the alphabet, from a to m:

Animals for improvement of stock—ewes and lambs for breeding purposes.

Everybody knows that these animals come in free. The commoner stock does not come in free; it is now proposed to subject the pure bred stock to a duty of 31 per cent in the interest of the live stock industry of Canada.

Animal manures.

One of my hon. friends from a constituency near Montreal is always talking about the heinousness of allowing our barnyard fertilizers to go to the United States, and here is a proposition to apply a 31 per cent tariff to manures.

Antitoxin.

Think of the advantages now enjoyed by human beings. This is one of the greatest boons open to mankind and yet my genial hearted Irish friend wishes to tax it 31 per cent.

Apparel wearing, settlers'.

Like my hon. friend I am an immigrant only I moved from eastern Canada to the west; my hon. friend crossed the Atlantic to Canada. Our apparel now comes in free but my hon. friend would make it subject to a duty of 31 per cent.

Apparatus for boring and drilling for water, gas oil or minerals of a class or kind not made in Canada—

And so forth. This is now free, but my hon. friend would have it subject to a duty of 31 per cent.

Apparatus, and glass ware for laboratory work and sterilizing purposes for hospitals.

I never was in a hospital until I was forty-five years of age. I had thought it was a disgrace for a man or woman to be found in such an institution. Now, I think it is one of the greatest humanitarian agencies in existence, possibly outside of the Christian church. All these things are to be taxed although formerly they were free. "Keeping up with the Joneses" is a terrible game to play.

Artificial limbs and parts thereof.

Hon. gentlemen will remember last year when the public gallery of this chamber was full of members of the Amputation Association. We also heard them as on wooden legs they stumped down the corridors keeping time with military precision. All these limbs now come in free but under my hon. friend's plan they would meet a duty of 31 per cent.

Artificial teeth not mounted.

What is a man to do when he gets old and loses his molars and grinders? I am approaching that age. But my hon. friend wants to charge me 31 per cent. I shall either have to "gum" my food or pay 31 per cent.

Asbestos roofing cement.

A very necessary article in building operations in a new district. It will have to pay 31 per cent under my hon. friend's plan.

Augurs, coal mining machinery.

Where are my hon. friends from the Maritime provinces who are so greatly interested in the question of coal? Where are those hon. members who are so constant in urging that the cost of the implements of production be kept down? Here is a proposition to jack up the cost by 31 per cent.

Barbed fencing wire
Binder twine.

I remember how in the good old Liberal days of Sir Wilfrid Laurier we made the welkin ring when we got binder twine and barbed wire on the free list. Our modern reformer, however, wants to place these under a duty of 31 per cent. I am going to exonerate my hon. friend from the responsibility for this; I think he must have been teetotally mesmerized. I sympathize with him because I was almost lured into the same boat. However, I went further into a study of the figures; I am Scotch and blest with a saving streak which my hon. friend has not got.

Mr. SPEAKMAN: Does the hon. minister remember at the time the hon. member for Springfield (Mr. Hoey) made the comparison between the Jones plan and the present budget it was before the latest amendment to the dumping act had been brought down?

Mr. MOTHERWELL: Oh, no, it was not, and anyhow the dumping act has nothing to do with this particular question; it is a matter which stands by itself.

Boards, sawn etc., dressed on one side only, sawn, or split only.

Books, namely books on the application of science to industries of all kinds, including books on agriculture, horticulture, forestry and so on.

When people want to know a little more about agriculture, horticulture and forestry and wish to import works on these subjects from any part of the globe they will not be free to do so without paying a duty of 31 per cent.

Bowls for cream separators, steel.
Cream separators.

That was another thing good Sir Wilfrid got for us, but my hon. friend is seeking to put it back at 31 per cent.

Coals, briquettes, anthracite, cutting machines, except percussion coal cutters.

How will the Minister of the Interior (Mr. Stewart) be able to carry out his briquetting proposition when my Progressive friend from Springfield gets a duty of 31 per cent placed on anthracite?

Mr. HOEY: The minister is talking about 31 per cent duty. Who is advocating that?

Mr. MOTHERWELL: Well, that is the Jones' plan.

Mr. HOEY: I defy the minister to quote any such thing from Mr. Jones' statement.

Mr. MOTHERWELL: I will have to quote the figures again.

Mr. HOEY: I defy you to quote any such thing from Mr. Jones' statement.

Mr. MOTHERWELL: I am just brushing aside the rhetorical phrases and letting the statement stand out in bold, naked outline. My hon. friend from Springfield in his speech a few days ago declared:

But I will state now without hesitation or equivocation that Mr. Jones' policy would mean an immeasurably better tariff than we have at the present time.

Mr. HOEY: Hear, hear.

Mr. MOTHERWELL: That is what my hon. friend himself said. Now I will quote what Mr. Jones said:

From a revenue standpoint our tariff is a complete failure. I am not going into details, but our importations into Canada, in round figures, are a billion dollars per year. In 1921 our imports reached $1,240,000,000, in 1922 they dropped to $774,000,000, in 1923 they were $802,000,000, so that they are now on the up grade.

Then my hon. friend from Springfield makes this comment:

Mr. Jones goes on to advocate what he calls a uniform tariff not only on manufactured goods entering the country, but on raw material as well, which revision he claims would bring an added amount of revenue into treasury of approximately $120,000,000.

And my hon. friend says that such a tariff would be immeasurably better than ours. He does not say what his plan is, but he accepts that as the best he can think of. It is the production of one of the super-men who is summoned to our aid.

Mr. HOEY: Will the minister tell us where Mr. Jones advocated a 31 per cent tariff.

Mr. MOTHERWELL: He did not go that far. That is why he pretty nearly caught some people.

Mr. HOEY: Hear, hear.

Mr. MOTHERWELL: No, he did not go that far. His estimate, as far as I can recall it, was about 25 per cent. He did not figure it out minutely apparently, nor did I. But I take this document and this is what I am going by now. I assume they were all in a proper frame of mind at the dinner referred to, but it is safer to take the actual document.

Mr. HOEY: The minister refers to a dinner. The speech I quoted was given before the students of McGill University.

Mr. MOTHERWELL: That does not make any difference.

Mr. HOEY: There was no dinner.

Mr. MOTHERWELL: It makes no difference. I say I had the pleasure of hearing Mr. Jones at the dinner mentioned at the Country Club. If he did not quote it properly at the university, I may say it is almost item by item the same speech I heard. It must be a favourite speech of his. No, that explanation will not go. Then we have coal, heading machines and we have crutches and specially constructed staffs for the cripples. I won my first election on crutches, and I have great sympathy for those who have to use them. I got my leg broken in the campaign and I did not wish to stand. It was the best vote-getter I ever had. Then we have:

Furnaces blast for copper or nickel.
Hemp seed for agricultural purposes.

I remember when we were making strenuous efforts to establish a hemp factory in Winnipeg, my hon. friend (Mr. Hoey) could not see his way to support it, but actually spoke against it. Now he does not want the seed to come in free. What are we to do? I thought we had a real, genuine Cobden talk from the hon. member for Brome (Mr. McMaster). Sometimes we fail to be able to follow his speech in its entirety, but we have to respect the old teachings. The teachings of our forefathers were great, but when you apply them in all their logical details they are a terror. Now if hon. members have any tears, prepare to shed them now.

Hymn books and Bibles.

These are on the free list. It is now proposed to make the duty on them 31 per cent. Cut that in two and make it fifteen if you will. The hon. member who has so creditably filled the pulpit for so many years cannot be accused of wanting to make the way to the celestial city more difficult. I think we will retire to-night with free Bibles and free hymn books, and if the Jones plan were to be followed we would wake up to-morrow with a taxation. Maybe we would think more of them if we did not get them so easily. Then the next item:

Machines, ditching (traction) (not being ploughs) adapted for tile drainage on farm.

That was another thing in Ontario that they wanted. They wished to get ditching machines, and you cannot get away from this. I have thought this out. Blood is thicker than water. I am always drawn to an Irishman, at the same time I like to have a little round out of him if he deserves it. And I think my hon. friend has been led away by this Jones plan. A flat rate would be a delightfully simple measure. I am sure the Acting Minister of Finance would not mind continuing his occupation if he could say, "Put it on a flat basis and we will be through with it." Hon. gentlemen will recall that when out in the west land was very cheap; a certain number of cents tax per acre was placed on it. The Minister of the Interior will recall that. It amounted to about five dollars on a quarter-section. It was very easy, but when land became valuable, and people insisted on land values being taxed, in order to have any uniformity in the taxes, we found it necessary to provide for an assessment. A flat rate would be delightfully simple. We would be able to tax all raw material, whether hemp, tobacco, cotton or anything else. This

is the scheme to be followed out under Mr. Jones' modern plan of taxation. You cannot get away from it. I wish somebody would help me get away from it.

Mr. EVANS: The Minister of Agriculture is giving the House a wrong impression altogether.

Mr. MOTHERWELL: Correct me if I am wrong. I will sit down for half an hour while you explain how I am wrong, and if I am wrong I will retract.

Mr. EVANS: The hon. minister is giving a wrong impression to the House. Mr. Jones' words were that eighty per cent of the imports are coming in now for the already privileged class. He is not speaking of a one hundred per cent tariff on one hundred per cent of the goods coming in, but on eighty per cent, which is already coming in to the privileged class.

Mr. MOTHERWELL: Does anybody understand that? There is something wrong somewhere. I cannot understand it at all. I have got the wrong scent, or else my hon. friend who has just asked a question is on the wrong track.

Mr. EVANS: Will my hon. friend read the words himself?

Mr. MOTHERWELL: I am in the middle of a speech. I do not say this defiantly, but here is a magnificent speech broadcasted all over western Canada, made by one of the most capable men in the House, and I say the statement should be corrected. The Acting Minister of Finance brought down the budget speech. It does not matter where the document came from. It is my duty to defend the budget. If it were my brother or my father it would be my duty to defend it, and consequently my hon. friend from Springfield will not misunderstand me. He has not a greater admirer in this House than myself. I have never made a practice of taking advantage of anybody in the House. I will give hon. gentlemen an opportunity to explain, and nobody would take advantage of my sitting down and saying I am through with my speech, because I am not. I have only got to "M" in the list, and that is only the middle of the alphabet. There are hundreds of articles on the free list. Suppose we go to an excess in the matter of charitableness and say Mr. Jones only meant it was to apply to $130,000,000 of revenue—that he only meant that the present amount of revenue was to be raised. That will be sixteen per cent, or about half. If you like we will take it that way. But I do not see

that we could do that, because the hon. member for Springfield adopted the statement right off the bat. Now what about the articles in the tariff that caused my good friends from Brantford (Mr. Raymond), North Waterloo (Mr. Euler) and St. Lawrence-St. George (Mr. Marler) so much worry. Some of us had to sweat blood to get those duties reduced. Hon. members understand that when you get something by hard labour you do not let it slip away from your fingers. Here is a list of articles running from six per cent to ten per cent usually. That is pretty low. You cannot call that a protective tariff. Under the Jones plan that has to be raised to whichever you like now. If they only meant that we were to raise the $130,000,000 which we raise at present, and which they described as no revenue at all to come from the tariff we should have, that means sixteen per cent. If it is to be $250,000,000 it means thirty-one per cent, whichever you like. You pay your money and you take your choice. It makes no difference here. But here is the thing that hurts me more than anything else, because this was in my own time, and the Acting Minister of Finance understands the difficulty we had in getting some of these things. Then we have the item:

> Grain binders.

I can remember when they were pretty nearly thirty-one per cent. Then we have:

> Drills, mowing machines, cultivators, threshing machines.

I remember when the duty on threshing machines was 35 per cent. The duties on these are all less than 10 per cent now. Last year the Progressive party thought that the budget was not bad and they supported it, the only budget which they have supported in the last three years. The first two budgets they did not support, but they supported the budget last year, thus showing that as a party they confirmed it. But the hon. member for Springfield was not speaking for them; he made it quite plain that he was asking nobody to accept responsibility for his statement, and I want my hon. friends to understand that I am not asking them to accept responsibility for this because I am dealing with just the hon. member for Springfield now. These items are to be raised to a uniform tariff, after all the struggle, all the effort we went through to bring the duty down. This gentleman, Mr. Jones, is a business man, in the firm that produces the Beaverbrooks, and apparently you cannot produce them on a 9 per cent ad valorem duty. The duty is a specific one, but working it

out as an ad valorem duty, it comes to around 9 per cent. As I say, you cannot produce them apparently on a 9 per cent ad valorem duty and he would much prefer to have it 30 per cent. He has little dinners here and there and he unfolds a plan that, on the face of it, looks like a crackerjack, but which is meant to be something to make Beaverbrooks out of. That is the situation. I will sit down right now if the hon. member wants to question my statement, as I am not bluffing at all.

Mr. HOEY: Before the minister gets away from that, will he tell us what the rate of duty is on bituminous slack that he is supporting in the present budget? I think it works out a little over 50 per cent.

Mr. MOTHERWELL: It is a specific duty. I suppose some of them would come down, but look at the number that go up.

Mr. HOEY: Coal would come down anyway.

Mr. MOTHERWELL: We are not all manufacturers interested in bituminous slack.

Mr. HOEY: What about automobiles?

Mr. MOTHERWELL: There must be something on the other side of the ledger or the thing would certainly be a fierce frost. It is certainly a frost enough. I find another remarkable coincidence in regard to this matter. Three years ago when the Minister of the Interior was wrestling with his estimates on immigration hard and long into the night after five full days—and it was the morning of the sixth day before he got even one item through—I recall this fact because it is connected with cement—my good friend got up and advocated very ably that this government should introduce a scheme somewhat similar to the one which the old government introduced. He must have thought more of them than he does now. He wanted this government to adopt a housing plan for farm labourers in Canada, east or west or all over, similar to the housing plans of the cities which housing plans we were glad to drop. The buildings were to be made of concrete, indestructible, and worth $2,500 apiece. Labourers are certainly "some pumpkins" nowadays if you are going to build houses of that character for them on a farm when the farmer himself has a shack worth not a quarter of that amount. But we shall let that pass. Concrete is made out of broken stone, more or less coarse gravel and cement, but the greatest of all is cement. Keeping up with the Joneses! Keeping in with the Joneses, apparently! What a remarkable coincidence! I want to exonerate my hon. friend from anything associated with this at all. It is a purely extraordinary coincidence that he should advocate the construction of all these cement houses at a cost of $2,500 apiece, and then come down and advocate a tariff running up to 30 per cent. This Jones business is getting on my nerves. I am very fortunate I did not fall for it myself and I am just as sympathetic to my hon. friend because he fell for it. I think he was tempted. This is the explanation of the whole thing and it is easy. An Irishman is said never to be at a loss for an answer. A Scotchman, in this case the Acting Minister of Finance was one too many for the Irishman—sometimes they will get the better of them, but very seldom—and he up and asked the hon. member if he was in favour of this Jones proposition. The hon. member had to think quickly and he said: "When the government declared where they were." He knew that was absolutely no answer at all, but it gave him time to think, and in my opinion, he should have taken a little more time to think. I do not accept his answer without reservation, but he said: "It is immeasurably better than the plan we have." He cannot get away from that. He was desirous of keeping up his well known Irish characteristic of being always ready with an answer for the faith that was in him, but that time he failed, and that was all. He is one of the most honourable men in this House and a man to be admired, but that kind of devilment gets out and hurts the government, and I am one of the government.

That completes, Mr. Speaker, the first half of my remarks. Might I ask that half-time be called?

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILL

THE TORONTO HARBOUR COMMISSIONERS ACT AMENDMENT

Mr. T. L. CHURCH (North Toronto) moved the second reading of Bill No. 42, to amend The Toronto Harbour Commissioners Act, 1911.

He said: This is a private bill and it is introduced at the instance of the Toronto Harbour Commissioners who are rebuilding the port of Toronto. The commission comprises five members—three representatives appointed by the city and two by the federal

government. The bill seeks to amend the powers of the commission and I shall move, in accordance with a telegram I have received from the mayor and board of control of the city of Toronto, an amendment for this purpose. The telegram I have received reads:

April 6, 1925.

THOMAS L. CHURCH, M.P.,
House of Commons, Ottawa, Ont.

The city council this afternoon approved of amended bill as follows: The harbour commissioners shall have power to conduct on the lands of the commissioners at Sunnyside amusement recreation grounds and playgrounds or arrange with others to conduct said amusement recreation grounds and playgrounds under certain conditions as to compensation and management and also that the use of the said Sunnyside lands as amusement areas recreation grounds and playgrounds and the erection heretofore of buildings etc., on the said lands by or for the commissioners or the lessees or licensees of the commissioners etc., are by this bill confirmed and declared to be legal and valid.

W. A. LITTLEJOHN,
City Clerk.

The foregoing telegram has reference to the last clause of the bill (c), and in view of the agreement that has been reached between the city of Toronto through its council and the harbour commission I beg for leave to move an amendment to strike out clauses (a) and (b). The two parties concerned are the city and the harbour commission and at a joint meeting in Toronto last Thursday they decided upon an amendment which is offered as satisfactory to both sides namely, only to ask for clause (c) this session.

Mr. SPEAKER: If the hon. member will withhold his proposed amendment he can move it when the bill goes before the committee. It is customary at this stage, upon the adoption of the motion for second reading, to refer bills of this kind to the committee on Miscellaneous Private Bills.

Motion agreed to and bill read the second time.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Hon. W. R. MOTHERWELL (Minister of Agriculture): For some reason or other the country generally, including the press, seem to be of the opinion that we are on the eve of a general election. Speaking for myself

I do not see very many signs of an election, but the impression is there nevertheless. I can however discern some signs of an impending election in the fact that a great many of our friends in both opposing groups are apparently busy attending to their line fences. That is of course a quite legitimate business to engage in, and it may account for some of the speeches that are being made and the resolutions that are being proposed in this House. I am going to refer to one line fence indication now of a more pleasing nature. Our friends immediately opposite have been taking care recently of one line fence, in the amendment to the budget. I have not the amendment before me, but if I remember rightly it makes little if any reference whatever to the tariff; although our friends have been talking diligently of protection ever since the budget was introduced. It would seem therefore that they have two policies, one for the country outside, appearing in a manifesto issued through the press on January 4, a manifesto so-called, and distributed broadcast all over the country for outside consumption, and a second policy, more carefully worded in the amendment to the budget, apparently for the consumption of the House. I do not know what effect it is having on our Progressive friends, but even supposing that it avoids protection it evidently has no attraction for them.

I have here a clipping from the Montreal Star entitled:

Meighen demands tariff revision and commission. Broad policy of Conservative party outlined by leader. Save resources. Would make preferences conditional on use of Canadian ports.

Then is outlined a manifesto which I think I am justified in dealing with at this time inasmuch as it indicates, in some respects at least, far more plainly than does the amendment to the budget, the policy of the Conservative party. In this it is distinctly stated that the intention is to resurrect protection in all its various forms and ramifications. That is the centre of the whole manifesto; it aims to restore protection such as Sir John A. Macdonald preached and such as the leader of the opposition (Mr. Meighen) now advocates; it is going to restore and bring back to life that form of protection. Well, it reminds me of one of the sacred stories in Holy Writ in which the dry bones, strewn in the valley, will by the divine hand be restored to life. You will observe, Mr. Speaker, that it took the divine hand to do that. The bones were brought joint to joint and marrow to marrow, were clothed with muscle and flesh, and then covered over with skin and made to stand up and look like men.

Now my hon. friends are going to restore a number of obsolete things like protection. They are going to restore the old nostrum that they have been prescribing for the last twenty-five years; and a preference for preference is outlined here. Well, preference for preference means no British preference. And they are going to build up Canadian ports; that is another one. They are going to build up Canadian ports by shipping in goods under the British preference, although there will be none. Besides, they are two years late, even if they had that policy. The Minister of Finance adopted a policy two years ago whereby ten per cent addition was made to the British preference, but with the proviso that to obtain the advantage of it the goods must come in by Canadian ports. Under that policy 99⅛ per cent of the dutiable goods from Great Britain coming under the British preference come in by Canadian ports, leaving seven-eighths subject to the reforms of my hon. friends on the other side who are not in favour of a preference at all. Dry bones to be restored? Let us see some more, now.

My hon. friends are to have a tariff board, composed of what, Mr. Speaker? Composed of representatives of the manufacturers, of the farmers and of labour. Theoretically fine, but it really is surprising that a practical man like the right hon. leader of the opposition should be indulging in vagaries and fancies like this. Just imagine; we have been trying this for thirty years—I mean in a private way; many a time the proposal has been made in good faith, and acted upon, that the manufacturers and the farmers especially should get together and try to evolve a tariff that would be congenial and pleasant to both. It is utterly impossible, in my estimation; yet such is the personnel of the board that my right hon. friend would establish to look over the tariff, to revise the tariff, to make recommendations to the cabinet. Labour is to be represented, too; whether or not that will make it any easier I do not know. Well, you might as well take a dog and a cat, tie their tails together and hang them over the clothes line and expect harmony. I do not contend that the thing is impossible; I believe it would be a fine thing to aim at. But we have been aiming at it for a long while and we have failed. It is something like the shipping proposition; they have been aiming at a lot of things in the past and they have got us nowhere, and they want to keep on aiming at them. That is another dry bone that they want to restore, to endow with flesh and blood and sinew, and then to breathe into it the breath of life and make it stand up and look like something. Well, it cannot be done—not by the human hand at least, and no other hand is likely to intervene at this time for this particular purpose.

Mr. GOULD: I would like to ask the minister when the death occurred which accounts for these bones? I did not know there was any demise.

Mr. MOTHERWELL: They have been declining gradually; it is a case of slow but inevitable decay. Some few of them yet remain alive, hence the hope of life.

Mr. MEIGHEN: How about that duty on coal? Is it alive or dead?

Mr. MOTHERWELL: We will come to that after a while.

Mr. MEIGHEN: Take it now.

Mr. MOTHERWELL: That is the nicest morsel of all; I am leaving it until the last.

Mr. MEIGHEN: Do not forget it.

Mr. MOTHERWELL: When a little boy has a choice piece of bread with jam on it he always leaves it until the last. I hope my right hon. friend will not interrupt me like that. Now, here is the funny part of it: when you get these three parties represented on a congenial body of this kind, and protection is handed out under their auspices, then—will the Progressives listen to this?—if anyone takes unfair advantage of the protection given, this body will report the fact to my right hon. friend—that is, when my hon. friends opposite get into power, which is something I do not think we need be alarmed about to-night. But when they get into power this unfair advantage will be reported and the protection will be withdrawn. Why, you might as well set a man before a good meal and say that if he takes advantage of it the meal will be taken away! Is that not what protection is for, to be taken advantage of? What is the good of it, as some hon. gentleman over there asked the hon. member for Lincoln (Mr. Chaplin) this afternoon, if they do not take advantage of it? There are occasions when protection can go so far as to retain the market, in a measure, and the full advantage of it is sometimes taken; and occasionally the other party to the contract assumes the cost of protection. Not always, but nearly always, it goes to the consumer—that has been dealt with by the hon. member for Brome (Mr. McMaster).

Mr. ANDERSON: May I ask the minister what would be the personnel of the tariff board under the present government?

Mr. MOTHERWELL: The Acting Minister of Finance (Mr. Robb) has not disclosed that yet.

Mr. ANDERSON: What classes would be included?

Mr. MOTHERWELL: I can say it would not be a foolish one, such as is proposed by my hon. friend. That would simply mean a deadlock. It might be that some of those mentioned by my hon. friends would be represented on it, but not as such.

Mr. MEIGHEN: What ones?

Mr. MOTHERWELL: We have enough vocational and professional groups and institutions here without starting to establish more.

Mr. MEIGHEN: Will not the minister try to answer the question? Make a stab at it anyway.

Mr. MOTHERWELL: What did the right hon. gentleman say? I thought he promised to be good. Anyway, that is one more dry bone. Unfair advantage? We have heard of it for at least fifty years, and now it is restored, resurrected, renovated, rejuvenated, but by the hand of man only.

Now then, here we have another boneyard exhibit. My hon. friends make this proposal:

> That to enable the products of the western and Maritime provinces to reach more readily the markets so developed the special transportation burdens borne by those provinces should be shared by the whole Dominion either by contribution to long haul freight costs or by assistance in some other form.

And this coming from the right hon. leader of the opposition! He is going to assist the Maritimes by some special contribution that is to be provided by the whole of Canada. That, I say, from the same gentleman who did his best to remove the advantages that the western provinces were enjoying under the Crowsnest pass agreement. In fact, he did suspend it for three years, and when we restored part of it he opposed the measure tooth and nail in this House. Last year when he went through the western provinces he said again that he was opposed to it; it was not right; it was not fair that the eastern people should have their freight rates controlled by the railway commission while those of the west were controlled to some extent by act of parliament. Now he comes down at this eleventh hour and says: "We want some special consideration for the Maritime provinces, and we want the rest of the people to pay for it." I am not objecting to the principle; I simply want to get at the cause of this sudden conversion. There is another phase of it: the intercolonial rates that the Maritime provinces had were tantamount to a little "crow" of their own down there until my right hon. friend took them away in the consolidation of that road with the National railways. There is a slight increase, I understand, over the old low rates in the present day consolidated rates under the Canadian National. But my right hon. friend and his government—or it may have been under his former leader, Sir Robert Borden, I do not recall—took away the special privileges and the special rates which complied, I believe with the spirit of the understanding under which the Maritime provinces entered the confederation. Now the hon. gentleman and his party come along in this mealy-mouthed fashion and ask an opportunity to give them back. Too late. Why do they talk that way? Oh, their bones are dry and their hope is gone, and they are going back to wallow in protection again. Well, it cannot be done. Protection is not all gone yet; I do not know whether we will ever live to see it all abolished; it may not be possible to do away with it all, it may not be desirable; but at all events we do not want the brand of protection my right hon. friend and his party preach. So much for these relics, so much for this valley of bones. They seem sad over the impending fate of Canada. It is business depression that is preached by the hon. member for Fort William and Rainy River (Mr. Manion). It hangs over us, according to him, about as thick as a London fog. As a matter of fact, a little introspection will show us that the depression is in the Tory prospects in this country; that is where the depression has been ever since their defeat in the second battle of Hastings. Their spirits have been getting lower and lower ever since, and the last thing they want is an election. I do not know that anybody in this House is particularly pining for an election. People do not look for this heavy expense and turmoil before they have to. The regular term of parliament is five years. Why should we add twenty per cent to the cost of that by bringing on an election every four years? That is what the man in the street may be saying. The hearts of hon. gentlemen opposite, as a matter of fact, are frozen for fear an election might come. Hence the depression.

Mr. HANSON: What seat has the hon. gentleman decided to contest the next time?

Some hon. MEMBERS: York-Sunbury.

Mr. MOTHERWELL: If my hon. friend looks after his seat I will look after mine. I may say candidly I do not know where it will be, but I have had four or five seats offered to me. I do not know how many more there will be before the time comes.

As I was pointing out, Mr. Speaker, there was a time when hon. gentlemen opposite wanted an election, and that was a little over a year ago. I think they would have welcomed one at the end of our first year here, when we were sweltering between two forces that were grinding us to pieces, the Civil Service Commission and the upper chamber. My hon. friends were ready to jump in then and take advantage of our apparent helplessness. Last year, when they thought they had something terrible on three or four members of this government, maligning them and libelling them as anything but honest men, they would have liked to go into the country; in fact, they went to the country themselves in West Hastings, and they would have liked to go to the country all over Canada. But I am not going to bring out all the harrowing details of that disaster which they brought on themselves; but that is when they wanted an election, and they got it. They do not want one now, and no amount of bluff will prevail on me to believe they do. They are not ready. As a matter of fact, who is ready? But they are the least ready, Mr. Speaker, in the whole House. Now I think I am through with the valley of bones. We will have to get Ezekiel on the job if my hon. friends hope to resurrect all this dry timber and manufacture something out of it that will look like new.

Now, I have got in wrong with one of the Progressives at least, and I presume I have got in wrong with all the Conservatives. That is my luck. I suppose I am going to get in wrong with some of my own friends. I am going to talk now a little about two things, the Hudson Bay railway and the St. Lawrence route.

I was not an ardent advocate of the Hudson Bay railway until last year. This is a work that the people of western Canada have been looking for and sighing for and waiting for, for forty years. Sometimes our friends down here think we are not just right on that question, that we are a little bit sprung on it. Let me point out to you, Mr. Speaker, that ever since trade has been established between the nations, go away back to the early history of mankind, if you like, and you will find that people have sought the sea for the purpose of trade. That was the cheapest way to transport their goods, rather than by the combersome and expensive caravans travelling overland in those days. It is the inherited instinct of the human race to seek the shortest cut to tidewater in their endeavour to trade with other nations, and we are only exhibiting what is bred and born in us, that inherent instinct in the human race, in seeking this access to tidewater. The Dominion of Canada has committed itself to this work—both parties, all parties, if you like, in this House. Take a compass, if you can imagine one long enough, with one prong in the city of Regina and the other in Fort William, and then swing it around and it will land you at Port Nelson. Therefore, when you ship a cargo of goods from the west to Fort William, it is the same distance to take those goods to Port Nelson, and that route is 1,000 miles nearer the market than if you shipped them by Montreal. Do not blame us, Mr. Speaker, for entertaining these hopes. I remember less than fifteen years ago everybody smiled at the thought of Vancouver being a port through which to send our products to the Old Country via the Panama canal. The first article I ever read on the subject was by the present Senator Laird, and I thought he was plumb bug-house when I read it. Everybody told you the water was so warm down there that the wheat travelling that route would be all heated and fermented, and experts were sent with thermometers to test the wheat in transit. Well, anybody who knows anything about conduction knows perfectly well that heat and cold are not conducted in a granular body like wheat or sand. And now the complaint is made with regard to the Hudson bay route that that is too cold. Some people are never pleased. I have been studying the whole situation, and I want to say that so far as my judgment goes there is no more chance of failure in the building of the Hudson bay route than there was in the building of the Panama canal, or of the Suez canal, or in the building of the Canadian Pacific railway. Why should there be?

I am not going to deal with the question of when the Hudson Bay railway should be completed, because that matter is already in a resolution on the order paper. I would point out, however, this similarity. You remember the story, Mr. Speaker, of Christopher Columbus when he set sail some years ago, I do not remember just when, to cross the uncharted Atlantic, and when he arrived about the same distance across the Atlantic as we are towards Hudson bay, that is eighty per cent, his muntinous crew wanted him to turn back, but Columbus persevered

and landed on this continent. Well now, there are, I will not say mutinous, but faint-hearted Canadians who want us to turn back now we are four-fifths of the way to Hudson bay. Is that the kind of stuff we are made of? Does that in Canadians mean ambition? Ambition should be made of sterner stuff than that. Surely the country that built the Canadian Pacific railway across the lake region and the prairies and over the mountains should not falter at completing the Hudson Bay railway some time. I can only put it that way in respect to the hon. member for Prince Albert (Mr. Knox) and his resolution. This was a matter of public concern away back in Hugh Sutherland's time, over forty years ago, before the Canadian Pacific was built. As a matter of fact, it was in those early days that we got the real views of experts on the question. No other influences governed them, there were no other influences to govern them. Information was available on the question, and I am going to read some of that information after a while.

What I want to point out is this: Just as the Liberal party was the party to turn the first sod in the building of the Canadian Pacific railway under government construction, so the Liberal government under Sir Wilfrid Laurier was the first government to commence the building of the Hudson Bay railway. They started to build it in 1910, and were continuing the work in 1911; I remember there was only one constituency that went Conservative at that time. That was the year of the reciprocity treaty, and the reason that constituency went Conservative was because we were not, in its opinion, building that railway fast enough. I refer to the constituency of Prince Albert. When the Conservatives came in for good or for ill—we will say it was for good; we will have to take it that way anyway—when they came into power, to their credit, I think, they took the right course. The Minister of Railways of that time went on a tour through the Hudson bay district and around to Nelson. He came back and apparently reported favourably on the project because the then government went on building the line; we must give everyone his due. The bridge over the Kettle river was built by the preceding government; and then the subsequent government—Union government, Conservative government, hybrid government, or National Liberal and Conservative government; you know the one I mean, the one with the long name, longer than you can remember, that is the one—went on with the enterprise.

Well now, the country is committed to the project; there is no use in discussing at this late date the practicability of the Hudson bay route. Over 100 years ago the Selkirk settlers entered Canada that way. That was their route to the western plains—it was not by railway that they hoped to go in there—and people had been going in that way for 250 years. Why, there were fortifications on Prince of Wales island, at the mouth of Churchill river, equal almost to the fortifications at Quebec. They were splendid fortifications. When they were built they were built with an eye to the future. People believed in the route at that time. Then, look at the primitive sailing vessels of that day without any radio, without any fog horns, without any lights, or any of the aids to navigation such as we have to-day all along the St. Lawrence. Under those conditions, with comparatively few facilities, the primitive sailing vessels of that day followed that route for 250 years. Nowadays, we have modern steamships and all possible aids to navigation, and they do not need to run into ice jams. The ocean there is the same Atlantic that laves the shores of old England, it is an arm of the Atlantic, a bay and a strait that never freeze, in the sense that we understand the term and are jammed full of ice only for a comparatively short period. Well then, why do we fear? The question of the practicability of this route was decided long ago. The only question now before the country is when can we afford to build the line? I suppose, if I were to be quite candid, that if either the Hudson Bay railway or the Welland canal were mooted to-day for the first time, it is very unlikely that either would be commenced just at this period. But both enterprises have been started, we have got to take things as we find them; and it is very important to get the Welland canal finished. We have a big sum in the estimates for that purpose, and rightly so. But there are not enough of us in this House who think the Hudson Bay railway should be finished. Now, the reason I am saying this, and appealing to my hon. friends on this side particularly, is because I listened, with great interest, to the speech of the hon. member for St. Lawrence-St. George (Mr. Marler)—in the debate on the Address. I have watched that young man ever since he came to the House. Sometimes, he stumbles a bit from my standpoint, but he is groping for the truth, he is a true Canadian, and he is trying to evolve a balanced policy for Canada. Some weeks ago I noted some press reports of a speech made

by the hon. member and I asked him for a copy of that speech the other day and he gave me one. From a careful reading of the speech so far as I can understand, his heart's desire is that the strong should bear the burdens of the weak, and by reason of the dissimilarity of interests that exist, where the tariff is burdensome on a weak, outlying province, then Canada as a whole should come to the relief of that province. My right hon. friend the leader of the opposition is just coming to a realization of that policy but I am afraid he is too late. The hon. member for St. Lawrence-St. George is preaching the policy of equalization; preaching the policy that if you cannot treat all the provinces alike do something else by way of compensation. Although I do not think that I shall succeed as well as he did I am going to endorse the same principle.

I ask for the sympathetic consideration of members of this House on behalf of those of us in the west who are looking to get to tidewater by the shortest possible route. Now, I want hon. members to keep an open mind on this question. Personally I have gone up as far as the Kettle rapids on the Hudson bay route. I did not go to Nelson river; I had an engagement in Winnipeg and the trip that far would have occupied two or three weeks longer. Consequently I could not go there as I would like to have done. I suppose I do not know as much about the facilities of Nelson harbour as I should have if I had gone there and seen the harbour for myself. I am not a maritime man and do not pretend to know much about ports; I do know however, that some of them cost quite a little money. What information I have has been gathered from navigators, engineers, fishermen, settlers and trappers. I do not know why we are not now going to Churchill instead of going to Nelson, and I am going to read and put on Hansard some of the authorities whose testimony makes that question still more puzzling. Again I ask, in view of what these authorities say, why did they go to Nelson? I do not know. Some of our western friends are impatient on this subject, and I do not blame them because they have really been thwarted on this matter so long. I do not blame the late government for suspending work in 1917 and 1918. I recognize that I run the risk of being misunderstood in casting doubt on the practicability of Nelson as a proper harbour. I have come to the conclusion that there has been a big blunder made in going to Nelson. Why did they do it? Who am I that I should presume to have information on that point? Well, I am going to quote what was stated in an annual report of the Department of the Interior in 1884:

> The Nelson, in the last thirty miles of its course expands like a funnel, from half a mile to many miles in width at its mouth so that it offers no natural advantages or facilities for a harbour, but rather the reverse.

Why should we fight against nature? If we get nature on our side, all the forces of nature, it will be like going down hill with the wind at our backs; but fighting against nature is a different thing. When I passed through St. John I did not see Courtenay bay which is washed by the Fundy tides. That work is taking quite a lot of dredging. I have heard a lot about it but did not see the locality myself; I came through at night and took sail early in the morning. When I compare Nelson to Courtenay bay I do not know to which I am doing an injustice; but I think it will involve interminable dredging to keep open the channel of the Nelson as it enters Hudson bay. Now I quote from the report of the government expedition under Lieutenant Gordon in 1886:

> I consider the estuary of the Nelson river is one of the most dangerous places in the world for shipping to go.

What evil spirit directed our people to Nelson instead of Churchill where people have been going for over 250 years, where there is a land-locked harbour with a narrow entrance of less than half a mile, and with deep water; and if you want to enlarge it, it will take care of our shipping for a considerable length of time, being capable of being enlarged with comparative ease.

Lieut. Gordon continues:

> I can only repeat my previously expressed opinion that the Nelson harbour is no port, nor would the expenditure of any amount of money make it a desirable place for shipping.

If you wanted to queer this project you would shoot it into Nelson, and that is as far as it would go. Captain Bernier is one of the living apostles who gives evidence. I would like to meet him, but am sorry to say I never did. I believe he was in Ottawa a short time ago. He is a sailor and no theorist, a practical mariner, an explorer, a man who goes north every year or almost every year on Arctic expeditions. He knows what ice is and realizes what danger is. He has been captain of a vessel since he was seventeen years of age. I understand that in middle life he thought there was more money in farming. He tried it, but he is back now on the sea. Perhaps he was unfortunate. If we keep our business in hand I say that there are worse occupations than farming. Here is what Captain Bernier says:

In the Hudson bay, as far as my experience has gone, there are two ports—Port Nelson, which will never be a port, because the river gives so much sediment and every spring when there is a heavy thaw there is a wash-out which changes the channel of the previous year. Therefore, a vessel coming in would need to have full knowledge of the present spring before she could enter, and she might be obliged to discharge outside. I consider that Canada is too poor to maintain a port like Nelson.

Listen to this:

I consider Canada is too poor to maintain a port like Nelson.

Mr. BIRD: What date is that?

Mr. MOTHERWELL: That statement was made before the Royal Grain Commission in 1923 by Captain Bernier. Now, what about the engineers? I do not want to reflect upon the engineers, but after reading this evidence I will explain what I think the situation is:

At Nelson you have to build on sand or make foundation.

Hon. members know what happens to a foundation built on sand. Then he refers to Dr. Bell.

The difficulty of mapping the shore accurately is increased by the fact that the sea is receding at an appreciable rate.

It is shallow there. It is a tidal harbour with a very low tide, and they have to discharge their cargoes there. It has two advantages which I will deal with later. One does not count but the other does.

Mr. Joseph Robson, the surveyor of the Hudson's Bay Company reported:

Monday, the 15th July, 1745, fifteen minutes past seven in the morning, set sail in the factory's long boat, in company with Capt. Fowler, from on board the Sea-horse pink, then lying in Five-fathom hole, to sound and discover Port Nelson river. At thirty-eight minutes past seven, abreast of the beacon that stands at Five-fathom hole, the water fallen one foot, a neap tide, wind N.E., fresh gale.

* * *

At sixteen minutes past ten we had three fathom water; being on the north side of the sand that parts the fairway into the two rivers Nelson and Hayes.

And then he goes on and says:

We cut our names on the trees in the N.E. end of Seal island.

From eight fathom and a half we stood to the S. eastward about three miles, saw a point or ridge of stones on the south side, distance about three-quarters of a mile, sounded three fathoms; this point of stone dries three or four feet perpendicular and seems to lie two or three miles from shore; but there are flats that dry at low water all the way to the shore, so that a man may walk from these stones to the land.

This indicates that in the estimation of these gentlemen who are practical men, perhaps not engineers and may not know much about the theory of engineering, the project is practicable. These men are doing things and giving us a real opinion, and are like Captain Bernier in this respect; no matter what engineers say, he has done it himself. What he knows he tells under oath before the Royal Grain Commission. What I have been reading is against Port Nelson, but here is something in favour of Fort Churchill, written by Sir Henry Lefroy, secretary of the British Geographical Association:

It (Churchill) will undoubtedly be the future shipping port for the agricultural products of the vast Northwest territory, and the route by which immigrants will enter the country.

In Lord Selkirk's time that is the way they came through:

They wintered at a point between Kettle rapids and Nelson, proceeding to the Red river settlement in the spring. That was before the Canadian Pacific railway was built. Nobody thinks of going in that way, we do not have to, but it just shows they saw a vision of an entrance into the northwest via Hudson bay, a great arm of the Atlantic.

Dr. Bell, Director Geological Survey of Canada, in an address to the Royal Geographical Society, October, 1881—that is the year the Canadian Pacific railway contract was entered into says:

The Churchill river is remarkable for having at its mouth a splendid harbour, with deep water and every natural convenience for the purposes of modern commerce.

Ask a pilot on the St. Lawrence or a pilot anywhere what he wants. He will tell you good deep water and good coast line. He does not want to go any place where he has to hold his breath for fear of bumping on the rocks below. Then George A. Bayne, civil engineer, gave evidence before the Royal Grain Commission as follows:

The harbour of Churchill is one of the finest I have ever seen. Nature has done so much for it in the way of protection from storm and the depth of water, that without further improvements it is fitted to take rank among first-class ocean ports.

Mark that

It is fitted to take rank among the first ocean ports.

That means that it is fitted to take rank with Montreal, Quebec, Halifax and St. John. Why do we fear? What is going to happen if we have one more ocean port? Will anything but good happen to us?

Mr. William Smith Deputy Minister of Marine and Fisheries, in an article in the Nautical Magazine, August, 1892, said:

"Stone lies at the water's edge ready to be laid into the docks or piers, and nature seems to have left little to be done to make this a capacious port, capable of doing business on a large scale, and, what is of the greatest importance, an inlet by Hudson bay is the only thoroughly independent channel which can ever be established between Great Britain and her north American possessions."

The only channel? I wonder is that true? Let us see how our grain goes now. I know that I never realized till last summer that we are dependent on a friendly foreign nation

for every carload of grain which leaves Canada for Europe. If it goes via Vancouver it must go through the Panama canal, over which we have no control. I think there is some international arrangement, but hon. members know what happens to such arrangements. I am not fearful that they are going to be disturbed, but I have pointed out that the grain that goes west does not go through an independent channel, but through a splendid canal built by our friends to the south, and every bushel of grain that comes from Port Arthur and Fort William and goes down to Montreal and Buffalo has to go through the American Sault at Sault Ste. Marie. Why? Because the Canadian Sault is not sufficiently deep for the large vessels of the upper lakes or for any of these vessels. I was there last summer and I found that our boats drawing grain came down the American Sault. Consequently, strictly speaking, right off the bat, it is true, as has been stated, and no equivocation, that this is the only independent route worth speaking of, from the great plains of the west to the outside world. I do not think we will ever have any difficulty about it. I say to our friends from Montreal and from Quebec that we are all proud of those ports, and the better we do the better they do, but what makes Montreal great? It is the great fertile country that she serves.

Let me read this report about Churchill:

> A harbour such as that of Churchill on Hudson bay would have the advantage over Quebec or Montreal of connecting directly with the open sea, and here in the autumn vessels would not be liable to be frozen in, as occasionally happens in the St. Lawrence. There has been some discussion as to the length of time during which Hudson strait and bay might be navigated each year. There does not appear to be much evidence that the straits any more than the bay is closed at any season.

Why be faint-hearted in this matter, especially if we get a project in the manner described by the hon. member for St. Lawrence-St. George (Mr. Marler), and if we approach it in that way with the idea of having a great family of Canadian provinces, each with some regard for the interests of the other, the strong provinces of the centre, if they find it necessary to impose something on the weaker provinces, compensating them in some way? I try to speak for the western provinces when I say that we feel shut in there sometimes, like rats in a trap. We want to get out to the world by the short cut. Everybody in these days is always on the look-out for short cuts. In Ottawa, for instance, if a man can save half a step, he will cut across somebody's lot. That is what we want to do, but we want to do it legally and practically. This means a great development for us. We never can do our best in the west until we get that port, or until we know it is either a port or a bad dream. We want to make a spoon or spoil a horn and we believe we can make a spoon. These are some of the reasons why we believe we can, and if we do, you will hear no more of this croaking, some of it justified, that has been going on. Those who have studied out these matters know things are not going aright. They know the heft of opinion and influence is down here and they feel put upon, irritated. They look to the west, with the mountains rising up to the heavens. They look to the east; they have never lived here and it is a long distance away. They are afraid of the east; they do not like the look of it, because they do not know us The story takes a great deal of telling when many others are telling the other side of it. We want to get out through that way and nobody will prosper more as a result of that than the east. In that way you will get the old settlers with their hearts aglow with new hope, and that is what brings the new settlers. When the old settlers feel that they are doing something, getting somewhere, becoming a factor in the country, they will go home and tell the new ones to come out. They will say to them: This is a goodly land; we are well treated here; we have a good country and we are getting along nicely. You will not get new settlers in the right numbers until that happens, and when it happens Montreal will grow bigger and better than ever, so will Quebec, so will the Maritime provinces and all the east generally. Our purchasing capacity will be increased, and if you in the east make your prices reasonable, we shall buy Canadian goods in preference and not be doing as we did after reciprocity was defeated, when many of us, setting our teeth, said: Well, they cannot make us buy from them anyway. That is a bad spirit. I am glad to say we are getting ashamed of it and, wherever there is a disposition to make the duty reasonable, a duty for revenue, such as we have on agricultural implements now, the old spirit is coming back and we say: Other things being equal, we will buy Canadian goods. But after reciprocity was defeated, we did not have that spirit at all, far from it. I will not, however, go into that. Dr. Bell continues:

> The only harbours on the west side of Hudson bay are those formed by the mouths of the rivers, but none of them, with the exception of Churchill harbour can be entered by vessels drawing more than ten or eleven feet and only at high water even by these.

A harbour such as that of Churchill on Hudson bay would have the advantage over Quebec or Montreal of communicating directly with the open sea, and hence in the autumn vessels would not be liable to be frozen in.

That is similar to testimony that I have read by another party, so I will not repeat it:

Churchill harbour does not freeze up until November and the sea is open close to it during the whole winter.

Salt water! Many people have the idea that this is a fresh-water bay. It is not; it is the Atlantic ocean. You can be in the middle of the strait and not see land on either side. You would not know that you were not in the Atlantic if you were there in the summer time. Of course, at other times of the year, you would be aware that you were not in the Atlantic. Many icebergs can be seen in the north Atlantic as late as August. Why should you bump into them more in Hudson bay than on the Atlantic? This talk about icebergs has been just an excuse. Captain Bernier, in another place, says that the Hudson bay is navigable for at least four months in the year, and with a ten per cent addition to the cost of the construction of our boats by adding a proper plating to withstand the ice pressure, you would have another month added, making five, if not six months that the bay is navigable. Another quotation:

Hudson Bay. The western shore is low and affords but one well-sheltered spacious and perfectly safe harbour, Churchill, situated 200 miles from York factory.

Perfectly safe harbour! Would the mariner on the seven seas not sigh for a perfectly safe harbour when the storm from without threatens his vessel? Why do we not carry out this project? There is a story which I may as well tell now—I know the gentleman's name, but I will not mention it—that

9 p.m.

somebody got a homestead on Churchill harbour, securing all the water front, and that he sold many town lots. Hon. members will remember the boom time and some of us here probably got stung, perhaps not as regards that place, but as regards others which had existence only on paper. This was one of the great ports of the world! Possibly somebody had been reading this and thought the development was going to take place right away. He did not know that there were as many, not mutinous, but faint-hearted officers on board as Columbus had, who wanted to turn back. I do not know what government was responsible in this connection and feel quite free to speak about it; but somebody said that Churchill was not the port the man who homesteaded there thought it was, and some engineer advised them to go down to Nelson, at least to get away from the ambitious homesteader and to open the port at Nelson. What about the engineer? The only explanation I ever heard was this and I can understand it. An engineer would not have much of a job opening up Churchill. The Lord himself made Churchill and you cannot improve on His handiwork, but no such provision was made at Nelson and an engineer had opportunities there. Why go to Churchill? You will never make a record at Churchill for any engineer because the work is all done. Here is Nelson, exposed to the sea, an uncertain channel, better, it is true, than we thought it was a few years ago. The season opens up a little earlier at Nelson, but there are low tides, great mud flats, with a channel away off from dry land, with half a mile of steel trestling to get to it, quite a considerable quantity of dump to get to the steel trestling, and an artificial island at the end of that. Imagine that! Just a row like these desks for half a mile of steel trestles to go across a mud flat to the channel which is constantly changing at Nelson. Then you have to build a great island on which to erect elevators like those at Montreal. The man who built on sand was, it seems to me, a wise man in comparison with this one. Why did they go there? There has been spent on that harbour up to date about six million dollars, and it is believed that Churchill could be established as a port for one-half of what it would take to complete the harbour at Nelson. Those of you who know what dredging means will realize how slow a government dredge can be, especially if you have ever gone down the St. Lawrence and looked at some of the locks there: the lock-keepers have to put up a picket to see whether the dredges are moving or not. As to dredging Nelson harbour, you would have to wait from now till the crack of doom to get results. Those gentlemen who are familiar with the Saskatchewan river no doubt know that the channel is seldom twice in the same place, for it is nothing but shifting sand; and those who are still more familiar with the bay of Fundy know what it is like there: the tide digs in here and digs in there and the least little thing will divert the course, so that you have it goring into the opposite bank, sometimes beneficially to the land adjoining. The assumption is that the engineers in this instance, seeing an opportunity of doing something by which they could become famous, by making the impossible possible, decided upon Nelson. But as Captain Bernier says, Canada is too poor to carry out a stunt of that kind just now. Shall we therefore, in the face of these

evidences, persist in following what is apparently a hopeless course? Possibly I was waylaid by designing men when I was out there, but I met different classes of people from some of whom I gathered that the opinion was that Nelson was not regarded as satisfactory. I met some engineers who I am sure would not give me wrong information, but I will not give their names inasmuch as it might get them into trouble. They are men of high repute whose word I would take and they declared that a mistake had been made, although they did not want to talk much about it. But there was no doubt as to the opinion held by more talkative people such as trappers, miners and fishermen. Let me quote from Lieut. A. R. Gordon, of the government expedition of 1886:

> This (Churchill) harbour is admirably suited for a railway terminus. The necessary docks could be easily and cheaply built, and the deep water basin enlarged at small cost. Stone is lying at the water's edge ready to be laid into docks and piers and Nature seems to have left little to be done in order to make this a capacious port fit for doing a business of great magnitude."

There is no equivocation at all about that. Then why do we go to the other place? I do not know, and the explanation that is offered is not sound. The explanation, about shifting to Nelson to get ahead of that ambitious homesteader who squatted at Churchill, will not do. Can anyone imagine engineers arguing that they would risk their reputation by doing something that might prove a failure merely in the hope that that reputation would be enhanced if the undertaking were successful, when the chances of success were so very small? Can anyone imagine such a thing? That explanation I cannot understand. Human nature, Mr. Speaker, is so strangely contradictory that if Churchill had been decided upon some people would have advocated Nelson. But there is no doubt about the fact that the great majority of those who know anything about this matter are agreed that the evidences in favour of Churchill are incontrovertible; there is a great value there that we have overlooked.

One of the advantages about Nelson is that it is open ten days earlier owing to the fact that it is further south by 120 miles. But the deciding factor is not the earlier opening of Nelson harbour; the important thing is the navigation of the Hudson strait. So that the fact of Nelson being open ten days earlier is immaterial. On the other hand it is 90 miles nearer to tide-water to go by Nelson, that is to say, to go via Churchill a distance of 90 miles further by rail haul. The only compensating factor would be that much less of a water haul, which is not nearly so important as 90 miles by land. In addition to that there is from Churchill to Kettle rapids on this side a certain amount of muskeg. But there is no danger in that, because the muskeg is easily removed; you can roll it off like a carpet and let it freeze. There is no great engineering difficulty involved in it, and for that matter three of us could attend to it ourselves. It would not be true to say that it is not cold up there, because you do feel the cold; but it is sheltered and no wind breaks are required nor is there any need of snow fences. And it is some 400 miles with a drop of 800 feet towards the bay. It is the only road in North America that has not a bonded debt and there are no dangerous level crossings. I will quote from Captain S. W. Bartlett, in the Cruise of the Neptune, 1903-4:

> The mouths of all the large rivers to the southward of Churchill are more or less blocked by deposits of sand and clay brought down by the streams. In consequence of these obstructions only small craft can enter the harbours inside the mouths of these rivers, and larger ships are obliged to lay in the dangerous roadsteads usually several miles away from the nearest dry land.
>
> The approach to the harbour of Churchill, if aided by a few beacon lights, would be comparatively safe, as the channel of approach is fairly deep and wide. Once outside the points of the mouth, the harbour extends up stream about a mile and has an average width of half a mile, with a couple of shallow places in the upper part that might easily be removed by dredging; the general depth of the harbour being from four to four and one-half fathoms.

Now I am a believer in the Hudson bay route and I take some satisfaction after all in the thought that it has not been rushed on to Nelson, for if these statements are true it would have been a calamity to do that and would have meant the ruin of the whole project for the present generation. It is true that one generation has worn itself away in anticipation of the achievement of this great enterprise, but it would have worn another generation away waiting to get real practical developments via Nelson. That is my opinion and I have given my authorities. And there is no one authority amongst them that so convinces me as the evidence of Captain Bernier. I do not by any means despise our scientific men; indeed, I have a profound respect for men of science, men of engineering knowledge and skill; I think very highly of our experts. We could not possibly do without the experts and I respect them. But in this particular case I have still greater respect for a man like Captain Bernier who has been captain of vessels continuously from the age of seventeen. He knows what he is talking about, as only a man with actual experience can know. For these reasons I have some satisfaction in the

thought that the Nelson project has not been carried out. I want to see the road kept in shipshape as far as Kettle rapids, and I want to see the question settled for all time as to which port will be developed. It is not for me to go further on that point than I have gone; the Minister of Railways (Mr. Graham) will discuss this question among others in his annual statement on the railways. If we reach the resolution of the hon. member for Prince Albert (Mr. Knox) the Minister of Railways (Mr. Graham) will probably have something to say with regard to it.

I came back from Hudson bay and went to Fort William for the purpose of coming east by the St. Lawrence route. There was great congestion at that time, about the beginning of September, the wheat was going up; there was no demand for it from the British market, and it was accumulating rapidly at Montreal and backing up to Port Colborne. We could not get a wheat boat to Port Colborne, so we had to take an ordinary passenger boat. When we got there we found six or seven large upper lake vessels with a capacity of from three to five hundred thousand bushels apiece, which were unable to discharge their cargoes into the elevators. Our eastern route has become obsolete; it is ten or fifteen years behind the requirements of the country. When we get the Welland canal completed, however, you will have the upper lake boats passing right through to Brockville or Kingston or Prescott, wherever the terminus may be, and they will be able to carry grain more cheaply than they are doing now under present conditions. You will also have the railway facilities with only one divisional point to cover and it will be possible to avoid congestion at Prescott or wherever the terminus is. We have only half the storage space in Montreal that is available at Buffalo. People are wondering why the Saskatchewan Co-operative elevator people are building an elevator at Buffalo, but it is because they have so much more space there. They have abandoned practically all these obsolete canals and are getting the grain through to New York fast enough to prevent congestion. If a vessel has to wait three weeks at Port Colborne before the cargo can be discharged, sometimes even before the crew can be discharged, freight can never be drawn cheaply. We cannot expect cheap transportation on our inland waters until the Welland canal is completed. Some of the larger boats may not be able to go through the canal, but most of them will. Those that cannot go through will discharge at Port Colborne, and those that can go through will proceed to the terminal point and by that means nearly all the benefits of the deepened St. Lawrence can be secured without the large cost of additional improvements from Prescott to Montreal; because you have the Canadian National, you have the Canadian Pacific and the canal boats available to keep the grain moving. When we have more population to pay for it, the Welland canal project will one day be completed and I am satisfied that we should get a reduction of two or three cents in the cost of the carrying of grain to Montreal. It costs four times as much per mile to haul grain from Port Colborne to Montreal as it does to haul it from Fort William to Port Colborne. It took us nineteen hours to go through the Welland canal, and we were stopped for two hours by fog. If that occurred on the Hudson bay you would have heard about it all over the country, but you do not hear about it when it is on the Welland canal. All honour, I say, to the men of a hundred years ago who started the canal system. Some of our grandparents came up the rapids from Montreal by any means they could employ—paddled, poled or walked; and I cannot pay too high a tribute to the Canadians of that day who conceived and carried out the canal systems on the St. Lawrence. But they are inadequate to meet the greater needs of the present day. It took sixty-eight hours to go from Port Colborne to Montreal, a distance of 320 miles, which is at the rate of 4½ miles an hour. You cannot draw grain cheaply that way; it is only one and a half times faster than a relay of horses could do it. In the 64 miles of canal the rate was less than two miles an hour. Let us not look for cheap freight rates under these mediaeval conditions; they were fine in their time but they cannot meet the needs of to-day. It will take six years to finish the canal, and when it is completed I should say that three-quarters of the benefits of the deepened St. Lawrence system would not be any better than the facilities provided by the Welland canal when the upper lake boats can discharge at Prescott or the terminal point in that part of the St. Lawrence system.

We have discussed lake rates in this House, sometimes rather heatedly, and I had almost persuaded myself that the remedy was to remove the coastal laws. It sounds good; it is getting a crack at somebody. But when the conditions at Port Colborne, for instance, are such as I have described, six or seven big vessels finding it impossible to discharge cargo—and prices were not up at that time, because the carriers were under contract early in the season; some of the grain was being taken to Montreal at six cents a bushel—

would not the removal of the coastal laws and the operation of twice as many boats simply make the congestion worse? Unless you have actually seen the condition it is hard to grasp its significance, but let me illustrate it in this way: An elevator is receiving grain very rapidly; ten wagons are waiting to unload. Would it cure the situation to bring on ten more, or would it not make the congestion worse? Do not misunderstand me: at a time when there is no congestion at Montreal or Port Colborne and cargoes can be discharged with despatch, then if there is imposition, if there are excessive rates as there were two years ago, the admission of more tonnage would provide a measure of competition and possibly afford some relief. But only under those conditions should it be done.

It seems to me there is no justification for the upper lake boats charging more to haul grain to the bay ports or Port Colborne than is being charged to take it to Buffalo, just a little bit further. It is only when there is congestion that there is any justification for high charges. Consequently, when there is no congestion, the control that is provided for in the act should be exercised in some way to see that advantage is not taken and the freight rates put up and more charged for the shorter distance than for the long haul. I can imagine Port McNicoll and other ports being in the very same position that Port Colborne was, and not being able to unload, because a lot of our grain goes from these bay ports to Montreal. The year before last 26,000,000 bushels went by rail, and if there was congestion at the bay elevators the boats would have the same difficulty, idling around there for several days, not being able to get rid of their cargo, and not being able to haul as cheaply as if the grain went right through to Buffalo. You cannot have a crew doing nothing and getting their board and pay, and draw grain cheaply. So I have come to the conclusion that what we need is more storage at Montreal, quick despatch at Port Colborne, the Welland canal finished at least as far as Prescott, and then we will have cheap rates on our inland waters. In the meantime we have had some control. I do not want to go into any of the controversial phases of that question, but the fact that we have had no complaints for the last two years is the best evidence that there is not the situation to-day that there was two years ago, and it is attributable to our legislation and our control, and to the possible further use of that control. Two years ago, was not every newspaper in the west and every Progressive member in this House from the west shouting from the housetops of the exactions on the lakes? You have restored the Crowsnest rates, they said, but what you gave with one hand you took away with the other by these lake rates. You could not get that out of their heads, because they knew the pinch was there. Do you mean to say there is a pinch now, and that somebody has come along with an anaesthetic so that they do not feel the pinch? Can you find one newspaper in the west complaining about rates on the lakes to-day? So, Mr. Speaker, I say that if we can give as satisfactory control on the ocean as we are getting to-day on the inland waters of Canada, and with as little discontent on the ocean as we have to-day on the lakes, we will certainly have done a great work. I say, Mr. Speaker, that there cannot be exactions such as we heard described two years ago when the Minister of Trade and Commerce (Mr. Low) was putting through his bill, there cannot be these exactions and alleged losses by the farmers without them knowing it; and if they do know it, they have certainly been wonderfully quiet about it. No, Mr. Speaker, conditions are not the same to-day. We have not had occasion to use all the power we took in that bill. I admit frankly there were phases of that legislation that were not workable in the beginning, but where is the bill that has not some weakness in it? For two months it was unworkable; for two months the rates were admittedly higher while the negotiations were going on, but as soon as that was ironed out the whole matter was adjusted, and has stayed adjusted until this day. Will anybody tell me where there is a legislative body in the world to-day that can frame legislation which it never needs to change? I will admit we made mistakes, but we corrected the weaknesses, and we met the situation, and that is what we are going to do on the Atlantic and on the Pacific.

Mr. LADNER: Does the minister consider that the freight rates question in western Canada is in a satisfactory condition to-dav with the Crowsnest agreement in operation?

Mr. MOTHERWELL: I was speaking of water-borne transportation.

Mr. LADNER: But you referred to the other rates.

Mr. MOTHERWELL: I have been having an entirely new experience to-night, on the water. I have always been on the water wagon, you know, and I am trying how it goes on the ocean.

Mr. LADNER: We were trying to find out which way the minister's sails were set.

Mr. MOTHERWELL: Oh, bless your heart, you should not have much difficulty about that. I did not think anybody was in doubt about that. Sails were set for what?

Mr. MEIGHEN: Both ways.

Mr. MOTHERWELL: For what?

Mr. MEIGHEN: For everything.

Mr. LADNER: Many of us are interested in the Hudson bay question. I have listened for quite a long time to the merits and demerits of the two locations. May I ask if the minister's statement on the question can be taken as a declaration by the government that they will not bring down legislation on the Hudson Bay railway this year?

Mr. MOTHERWELL: No.

Mr. LADNER: Is that a declaration that they will?

Mr. MOTHERWELL: I had a talk with the Minister of Railways before he left, and he will make whatever official statement is to be made by the government on the Hudson Bay railway when he makes his annual statement. I am simply giving the House the result of my own researches up there, which were incomplete, it is true. I am afraid my hon. friend is putting his questions second hand just now. He is getting his bad ear next his prompter. Maybe the right hon. gentleman would like to have a chance to ask his questions direct.

Mr. MEIGHEN: I was just thinking from the speech of the minister on the Hudson bay that he probably expects to run for a seat in northern Saskatchewan.

Mr. MOTHERWELL: I may say I have had an offer from there, but it is not the seat of my hon. friend from Nelson (Mr. Bird).

Mr. LADNER: Has the minister given an answer?

Mr. MOTHERWELL: I do not think it lies with the right hon. gentleman to twit me on that. What happened in Portage la Prairie in 1921? Lots of better men than either of us have got licked in an election, although I am a great admirer of my right hon. friend, but he was a little unhappy in his choice that time. I think he had better let the hon. gentleman on his right (Mr. Ladner) ask his own questions.

[Mr. Motherwell.]

Mr. LADNER: The right hon. gentleman has not inspired my question. I am waiting for the minister to reply to one of my questions, as to whether his statement as to the Hudson Bay railway in any way indicates the attitude of the government, or whether he is forestalling the refusal of the government to bring down legislation.

Mr. MOTHERWELL: None whatever. I am simply giving the results of my own investigations from my own standpoint. I discussed this question from the point of view of agriculture and mining when the estimates were up, and I did not want to repeat what I said then. But the hon. member for Springfield reported that as he went through that district with Premier Bracken he found a small crop of land cultivated at Port Nelson, and suggested that we use that as a basis for some experiments. I have taken the necessary steps to do that. I recited all that on the estimates, and I am now giving the results of my further investigations not only with respect to the Hudson bay, but also the St. Lawrence route. No one can go over that country without being wiser than when he started. I do not mean to say that I have found out everything, but I have found out a lot more than I knew before. I have already indicated that the Minister of Railways will declare the government's policy on all these matters when he makes his annual statement. I am not forestalling or supplementing what he will say in any way.

Mr. LADNER: Has the minister come to a conclusion as to the location he thinks should be selected?

Mr. MOTHERWELL: All the evidence indicates Fort Churchill. I have not been there, but I have given you my evidence, and I have given you the facts of history for 250 years, and all the evidence points to Fort Churchill as the natural port.

Mr. LADNER: Has the minister convinced the government that that would be the best selection?

Mr. MOTHERWELL: No, I have not tried to yet. One at a time is good fishing. The budget came off first; that comes on later. We will just deal with things as they come. I think there are one or two more questions the right hon. leader of the opposition wants to put, and I may say that I never felt more accommodating in my life.

Mr. MEIGHEN: I am still waiting, I have waited two and a half hours now, to hear about that higher duty on coal.

Mr. MOTHERWELL: I am getting to it rapidly. I think I have now got to that point.

Mr. BIRD: Before the minister passes from that point, does he think the evidence he has quoted is sufficient to warrant the government in going ahead and building to Churchill without further investigation?

Mr. MOTHERWELL: I am not sure that I caught my hon. friend's question exactly. But does he think that—

Mr. BIRD: I am just asking if the minister considered the evidence—

Mr. MOTHERWELL: No, the evidence is not yet sufficiently strong to justify going ahead and building to Churchill. We must be sure of our ground before we take final steps. This muskeg that is spoken of must be investigated. As I understand it, there is really no muskeg in that country, but there is quagmire.

Some hon. MEMBERS: Oh, oh.

Mr. MOTHERWELL: I will await the pleasure of my hon. friends. If there is any joke in the matter, I want to hear it, because I want to take them all in.

Mr. BIRD: My question was asked in all sincerity because I thought the minister had expressed himself in that regard. I know that what he has said to-night will cause a flutter of public opinion in the west. I was at a meeting which was held in the board of trade building in Winnipeg the other night. It was a crowded and very enthusiastic meeting, and they were all in favour of Nelson. The minister's declaration to-night will cause considerable disturbance in the west and therefore I wondered if he had anything further to say.

Mr. MOTHERWELL: Even doctors will disagree; engineers also will disagree. I remember hearing a report at an annual meeting of engineers east of here; they had the most hilarious time in the world over it. I pin my faith, in what I said, on practical men who are doing things every day, and I have found such men to be reliable all through life, both on land and on water. I am quite aware of what will be said on the prairies. I know it will be said that I am trying to raise some objection to this project going forward. I know that. I have been long enough in public life to know the danger spots, but I am going to take a chance because I feel in my heart that I am right.

Now, I do not want to keep my right hon. friend the leader of the opposition any longer in a condition of suspense about the Maritime situation. All our opinions regarding these rate matters—those of us especially who do not live in the Maritimes—have to be given with some qualifications. I never visited the Maritimes but once in my life, and that was a year ago last summer. I spent three and a half weeks there, and I was certainly charmed with that country. I heard the grievances of the people at first hand, and they put me in mind very much of our own grievances in the west. As a result, my heart went out to the Maritime provinces. People who suffer similar adversity will be drawn together; adversity always draws men together better than prosperity—a common difficulty, a common danger, if you like, common troubles. I tried to analyze their difficulties to see if, in my own department, I could contribute anything towards alleviating those troubles; and do you know, Mr. Speaker, that after searching fore and aft, after searching all over the country and looking into rate troubles for a possible solution, I found that those troubles were not as numerous as we were told.

Now the freight question was a great difficulty; it has existed for years in connection with the mines. I am not a miner at all, but with my companions I went down into the Glace Bay mines. In fact, I visited the whole mining area there. I talked to the miners, I was in their homes, and I ate with them. As I say, I went down in the Glace Bay shaft for 900 feet where the mine goes under Sydney harbour, and I wondered to myself how much farther they were going to burrow there before they would, for economic reasons, have to quit? It was all very new and very wonderful to me. I noticed also that many of the miners lived in better houses, notwithstanding all that has been said, than I had lived in for twenty years. I saw beautiful shower baths there; you did not meet with many of those on the prairies in the first twenty years of its history. There was hardship, there always is hardship; the miners had a great many idle days, and there were a great many difficulties to be overcome. There is bound to be distress. There is distress there now, but I am not going to enter into that side of the question. What I want to point out is that the difficulties that could be remedied were few in number. The coal situation seemed to be one of them. The freight situation seemed to be another; the building up of the ports in the Maritime provinces seemed to be another. I could not help feeling that there was another difficulty there that nobody has said much about, and that is

the difficulty of getting a market for the potatoes of the Maritime provinces, not so grievous a situation at the time I speak of as it is now. The potato question was a difficult one for many years, but this year it was largely overcome by the system of certifying to the potatoes, which certification was so valuable that those products entered the United States, in spite of the duty, and good money was realized by the shippers. The difficulty in regard to the Maritime province ports was solved two years ago by the Minister of Finance through the medium of the preferential tariff. I am right in saying that difficulty is solved because now over 99 per cent of dutiable goods coming to Canada enter by our own ports. These are two difficulties out of the four that have been removed.

What is going to be done with regard to the mining difficulty? We have discussed the mining situation in this House every year since I came here. Two difficulties out of three have been solved, but the most acute one still exists. The Minister of the Interior has announced once or twice this session his plan with regard to the coking of bituminous coal from the Maritime provinces. Last year he announced a plan of subventions to permit of the transportation of Canadian coal much farther into the interior, and as a result of the increased demand to enable the miners to produce that much more coal. What more could we do? We could not keep on giving subventions. The Premier of Nova Scotia came up here at the head of a large delegation and interviewed the government. One of the most pressing requests he made was that the duty should be increased on slack coal. He pointed out that a great deal of fraud was being committed and I found out later that his argument in this connection was well founded. He charged that slack coal was being imported under the fourteen cent rate of duty and being mixed with run-of-mine under the 53 cent rate. He, therefore, asked that the duty on slack coal be raised to encourage the mining of that fuel. The Premier of Nova Scotia, accompanied as he was by a number of representatives of Cape Breton, presented a petition to the government on the question asking for that and other things. There was a very large delegation that entirely filled the railway committee room. They found that two or three of their grievances had been remedied before they had time to ask for their solution. However, the coal difficulty still remains. I do not take the ground that a national solution should always have to be discovered for a local difficulty, not at all.

[Mr. Motherwell.]

We were in the midst of working out some of the Maritime difficulties capable of solution when the present strike, or lockout, or whatever you choose to call it, occurred in these mines. The Besco people in the first place took the ground that they could not afford to pay the wages then prevailing. They had cut down the days of labour. There was not enough profit in it to be able to pay the wages the miners wanted, they got at loggerheads, and the whole thing was shut down, to the loss of all. What were we to do? The local authorities began to solve the distress question at the other end, and while this budget is a Canadian budget, it is essentially one designed to assist the Maritime provinces, not only in regard to coal but in regard to fishing industries and such like. We have adopted the policy of dropping the item of slack coal and lowering the duty on run-of-mine coal three cents; and otherwise we adjust the tariff, put it up on slack coal if you like, which represents about three million tons, and put it down on run-of-mine which represents about eleven million tons. Already in this House the hon. member for Kent, New Brunswick (Mr. Doucet) has reprimanded us for reducing the duty on run-of-mine coal. We have reduced the duty on run-of-mine coal and run up the duty on slack coal, removed it altogether from the tariff schedule, and put a straight fifty cents on the run-of-mine coal. Someone asks on what percentage would that be on the slack coal? There is no percentage in it. I do not know the price of coal, but it is not levied on the price. Hon. members can soon figure it out. It is a comparatively easy matter. It is a duty of fifty cents per ton. That is done with a two or threefold purpose. One is to encourage the Maritime province miners in the desire to reach further out into the markets of Ontario and Quebec. That was the original conception of confederation; and after violating the spirit of that contract at confederation, by taking away from them those special freight rates that they had all those years, and putting them into the consolidated system, then, if you are going to carry out the policy I have mentioned, of taking care of the smaller provinces, you must do something to compensate them for the thing that they had at confederation and which they lost.

Mr. LADNER: May I ask the minister a question?

Mr. MOTHERWELL: Has the hon. member received another radio message?

Mr. LADNER: From the way the minister was speaking I thought perhaps he had re-

ceived a message. I wanted to ask him if the granting of higher protection on coal to aid the Maritime provinces had his personal approval. We understand that from his remarks.

Mr. MOTHERWELL: Most decidedly. The tariff was made for man, and not man for the tariff. What is the tariff? Taxation. We will put it the other way. Taxation unfortunately is made for man and man is not made for taxation.

Mr. MEIGHEN: How does the minister hope to help the Maritimes by more taxation.

Mr. MOTHERWELL: It will not be taxing the Maritimes.

Mr. MEIGHEN: Oh.

Mr. MOTHERWELL: The manufacturers of Ontario and other parts of central Canada who insist upon their pound of flesh in the way of protection will have to pass some of it over to the coal mines. What is sauce for the goose cannot be too horribly bad for the gander. And so we deal with the Maritime provinces. As far as I can understand, we restore to them the protection they had when the fourteen cent rate was put on. That was put on what was then seventy cent coal and was equal to a twenty per cent ad valorem. We cannot tell, there is no item there, but I do not know what slack coal is worth now. Have we not restored it?

An hon. MEMBER: No, no.

Mr. MOTHERWELL: Have we restored to the people down there the same ad valorem duty that they had when the fourteen cent rate was put in? By reason of the increase in the value of the commodity that fourteen cent rate was getting less and less on an ad valorem basis. Perhaps I should have gone into it to find out the exact price on which that was levied. I do not know my self to-day whether we are getting more duty. I question very much if we are giving more protection than we were giving when it was fourteen cents when we had seventy cent coal. We have restored what was slipping away from us year by year as a result of the increased value of slack coal. Was that such a whale of a lot to do for them? I am one of those who believes that that is going to bring some redress. If the mines down there can be made more profitable it should benefit the labourer. I have hired too much labour in my time to be told that when an institution is profitable some of that profit will not go to the labourer. I know it will go to the labourer. I have hired labour all my life, and when I make money some more of it goes to my labourers. When I do not make money I have to make a hard bargain with my labourers if I am going to carry on. Everybody who employs labour knows that. I do not care who the Besco people are, I would not care if they were twice the steel corporation they claim to be, in their self interest they will keep their mines going if it is humanly possible, and if they are able to secure something better than they have had, if this is increased protection, and if they are enabled to carry on and make more money, part of it will go to the miners, and they will get to work and the trouble will be at an end. I am not accustomed to people going on strike. I am accustomed when a man will not work for me to have him quit and go somewhere else But that is not the way of organized labour. Now how are you going to improve things for the Besco people or for the miners? I have talked with a lot of miners who are not in favour of the strike. I have been in the mines and know some people there, and I know there is great distress there while they are on strike. Human nature is the same thing the world over. The local authorities are working with us from their own standpoint, and incidentally we are helping them from our standpoint. I would ask the Progressives, particularly those from the west who have been working in co-operation to some extent with the Maritime and eastern provinces during the last two or three years, especially the Maritimes, when the Crowsnest pass question was up, who were standing by the western men back on the prairies stronger than the Maritime province men or stronger than the Island men, and again when we were trying to work out the compulsory wheat board clause after the war was over? They said let the west have it if it is going to do them any good. Last year when nearly all the changes were favourable to the western men did anyone see any one of the Maritime men gag at it? Those from Ontario did some squirming about. They stood up for their rights. But one hon. member stood out too strongly, the gentleman from St. Antoine, he resigned and he was sorry afterwards. But it shows that we went as far as we could, as far as public sentiment would allow. In fact, we went so far that even one of the Progressive group voted with the Tories. The Maritime men stood to a man behind the west.

Long before I had the honour of coming to this House, I often wondered what evil

genius possessed the people of the three prairie provinces and of the three Maritime provinces, whose interests as regards the tariff and many other things are almost identical. I question if there are in this House sounder and more practical men on the tariff than those from the Maritime provinces. Why do we not have some more fellowship and understanding with each other when we have so many interests in common? The same is true of rural Quebec. Indeed, as a matter of fact, you might say that it is practically true now of almost all Quebec and I hope that will continue to be the case. Here is an oportunity for the men on the prairies to reciprocate. They say that they are in favour of reciprocity, but let them not say that they are in favour of it only if it is all their own way. When something is to be done for the Maritimes, let them have their protection. When protection ceases to be in existence in the Dominion of Canada, then they may cast a stone at this in the Maritimes. I do not know whether protection in Canada will ever cease or not; but if the west refuses to accept this budget on the ground of what is claimed to be high protection on coal, but which was agreed to by Premier Greenfield and many others in the west and as regards which the only kick came from protected Ontario, I am afraid our western friends are losing an opportunity of showing a reciprocal feeling for the Maritimes, for what the Maritimes have been prepared to do for the west at every opportunity since we have come down here. Is that a right attitude to cultivate as regards the Maritimes? Should men with common interests not work together in unison? When the delegation from the west went down to the Maritimes, as I read their after dinner speeches and learned of the good times they had, I understand their hearts went out to the Maritimes Did you see, Mr. Speaker, the accounts in regard to the delegation from the Maritime provinces that went to the west? Certain newspaper representatives from the Maritimes went through the western country. All our leading journals held out the right hand to them and were willing to solve their problems in any way humanly possible, because we felt that they were suffering under adverse conditions and we were willing to help them. Personally, I have been here long enough to know that we are all going to vote on this budget to suit our own interests We are all keeping an eye on the folks back home. Sometimes we do not do so but we should. There is another broader vision even than that. Are we going to shirk this first opportunity of working out in harmony with the eastern provinces, an incidental solution of this difficulty in Glace Bay, or are we going to refuse to reciprocate? I leave that there, feeling assured that possibly the difficulties may be solved. I understand my hon. friends' difficulties. We have all been born and bred, I was going to say, to hate protection, and it is hard to get over our early training. But as long as it is here—and it is here—some of these distressed places are surely justified in saying: Give us a little of what seems good for us, particularly when it saddles itself on to the protected industries of Ontario, and, if you like, Quebec. Is that a satisfactory answer to my hon. friend? Have I been candid enough?

Mr. MEIGHEN: I think the minister has been as amusing as he ever was in his life.

Mr. MOTHERWELL: I am glad to know that I have entertained if I have not instructed my right hon. friend. A person that has to go into the realms of the valley of dry bones requires some enlightening, and if I have succeeded even in entertaining him, I think I have done pretty well. But getting back to this more serious question, I do not want to refer to the well-intentioned efforts of some members of this House to assist in solving that question. I might refer to la belle représentante for Southeast Grey (Miss Macphail) and her efforts which were nothing but good. I have only words of approbation for her good intentions, but the matter was one primarily for consideration by the local authorities. We are doing our part. Are you going to mock at it because you think you scent an element of protection in it when we are surrounded by the same element?

Mr. WILLIAM IRVINE (East Calgary): Mr. Speaker, making a speech on the budget at this time of night is naturally enough rather a dry thing to do, and it is certainly deliciously refreshing to have had three hours' enjoyment of the kind that we have just been given by the Minister of Agriculture (Mr. Motherwell). I have listened to his speech with some interest and a good deal of amusement. I would say that after having listened to him making a prolonged speech on the Petersen contract and another prolonged speech on the budget, the Liberal party in the

10 p.m.

Minister of Agriculture has certainly waked to ecstacies the living lyre. He is certainly a very genial personality. He has the saving grace of humour. I believe he has a very excellent knowledge of agriculture. I believe he is also a very good administrator, but in matters of economics and of politics, he is not

seemingly quite so happy. He has likened himself unto a little boy with a slice of bread with some jam on it. He has played for at least an hour amongst dry bones in a bone yard. I think if he had stayed in the bone yard and not visited the coal mines in Nova Scotia and if he had kept away from Hudson bay, it would have been better for the party for which he was speaking. He reminds me of a river that, I believe, runs into Hudson bay, a river which is said to be one inch deep and a mile wide at the outflow. I would not like to undertake to navigate the treacherous shallows of that river, nor to launch out upon the bosom of the discussiveness of my hon. friend without the piloting power of the Prime Minister (Mr. Mackenzie King) armed with the chart of the Liberal party.

There is very great danger of speeches of the character just delivered by the Minister of Agriculture becoming merely words. It may be that what I have to offer myself will be characterized in a similar manner. It may be that I shall add little more to the already disturbed ocean of words, an ocean bestrewn with derelict proposals. I think it was Thomas Hobbes who remarked that "words are wise men's counters; they do but reckon with them, but they are the money of fools." I hope that we shall not inflate the currency overmuch before the debate is through.

An hon. MEMBER: Hear, hear.

Mr. IRVINE: I am glad to notice that one hon gentleman opposite has taken my counsel to heart. It is something of an ordeal for any one of us to make a speech in parliament and perhaps it is a little more so when one speaks on the budget. I have heard gentlemen who have had a long experience in and close connections with parliament deplore the passing of the great orators from Canadian public life. I do not know whether there is anything in that reflection. It may be that the style of oratory peculiar to the days in which we live is so distinctly different as to be considered by men of the older school as not rising to their conception of what real speeches should be. But I am not so sure that there is not a little more in the reflection than that; it is just possible that the suffocating influence of highly developed partyism has some effect upon hon. members of this House. I believe that an ordinary individual can make a fairly good speech even on the budget if one of two conditions is present: if on the one hand there is a very strong opposition or if on the other there is considerable sympathy. But when we have neither opposition nor sympathy, and when the clammy hand of cold indifference grips an hon. member, even the most ambitious man in the House is stifled. I do not think therefore that, unless an individual member should happen to be a student both by habit and by nature, there is any opportunity afforded in this parliament for encouraging a man to go into any very extended research work or to attempt to do any deep studying even on matters of public importance. This budget is more discouraging in this regard than perhaps any other. The Minister of Agriculture (Mr. Motherwell) has been talking a great deal about dry bones. It seems to me that the budget debate is but the rattling of the dry bones of issues long since dead. And that I think has been the character of the speech we have just been listening to. It is true that here and there we have heard a feeble echo of the great minds of the past; and on occasions the hon. member for Brome (Mr. McMaster) faintly echoes Cobden and Bright. But apart from that hon. members opposite have not so far given us any constructive thought, anything which would approach that initiative, that daring conception which ought to be characteristic of the representatives of a new country like Canada, and especially at a time like this when we are supposed to be standing on the threshold of a new era.

I want to comment on what would appear to be the reason for this stultifying, suffocating influence in parliamentary life. It is a well know axiom that a force cannot be destroyed; and the thoughts and feelings of individuals are natural forces. These thoughts seek expression in action and when they do not find such expression, being also indestructible, they are apt to develop political monstrosities; in other words, there is a tendency to develop politicians rather than statesmen. Thoughts and feelings which end only in words debilitate the emotions and overshadow the mind with deadly pessimism. Where is the fine idealism which flamed so warmly at the opening of this parliament? These children of our dreams are for the most part banished from their rightful parents. Some of them have been chained to political expediency, others of them have been shut up in caves of despair; a few of these ideals still make their unwelcome appearance in debate. I fancy I hear some hon. members say, "Oh yes; that idealism which some of the Progressives as well as some hon. members of the other groups tried to give expression to when they first come into parliament! That idealism! No wonder it is dead; it ought to be dead, because

idealism has no place in a practical institution of this kind." Parenthetically I would remark in regard to that attitude of mind, which I know is characteristic of very many hon. gentlemen, that the impractical is usually that which a stupid person is afraid to put to the test lest it might be found to work. For some to say that such and such is impractical is often the highest compliment that could be paid a proposal which is thoughtlessly dismissed, and it is at the same time the severest indictment of those who sit in judgment upon that proposal. The enthusiasm and idealism to which I have just alluded are manifestations of natural forces seeking to express themselves in action.

But the one thing that parliament seems to avoid more than anything else is action. I have been astounded at the repertoire of excuses from which the present government has been able to draw in the last three or four years; I have been astonished when I have compared their manner of receiving resolutions, suggestions and bills in this House with the most democratic and glowing programme which they themselves drew up and expounded in their appeal to the people of Canada in 1921. I say I have been very much surprised at the agility of their movements and their resourcefulness in finding excuses to get away from their own promises. When it comes to labour matters the government has most decidedly ignored every protest and every appeal that has been made. For a long time the Minister of Labour (Mr. Murdock) has thrown the British North America Act at our heads whenever we have made a proposal. When the right hon. leader of the opposition (Mr. Meighen) successfully disposed of that excuse during the discussion on the Nova Scotia distress the Minister of Labour, resorting to what we might call political etiquette, declared in the case of the miners of Nova Scotia in particular that it would be bad form for this parliament to do anything under the circumstances. Other things might be mentioned to show the unconcern of the government with Labour matters such as—I was almost going to say, quibbling in committees over the scope of a reference and so forth; parliament seems to try to do everything but take action. So I say it is not surprising that we find the psychological conditions which I have spoken of in this House. But there is one ambition which is fitted to survive in parliament, and that is the ambition to obtain power. For the present I am not criticizing that ambition; it may, indeed, be a noble one. But I merely comment upon the fact that the desire or the ambition to attain power peeps out of every argument. Perhaps the words of Milton's Satan appraised the situation admirably:

> Here we may reign secure, and in my choice
> To reign is worth ambition, though in hell:
> Better to reign in hell, than serve in heaven.

Of what member of a party or of what party might it not well be said:

> But man, proud man,
> Drest in a little brief authority,
> Most ignorant of what he's most assur'd,—
> His glassy essence,—like an angry ape,
> Plays such fantastic tricks before high heaven,
> As make the angels weep.

The hon. member for Brome (Mr. McMaster) who I am sorry is not in his seat at the moment; whom I have characterized as the exponent of Cobden and Bright; who in his enthusiasm for the free trade theories of old times has become the most conservative mind perhaps in the House on that subject, has found himself on this occasion in a very difficult position. I use the position of the hon. member for Brome as a means of illustrating what this desire for power on the part of parties sometimes leads an hon. member into. The hon. member for Brome, honoured, I am sure, by every member of this House, whose clearness of thought and integrity of character no hon. member who knows him will question for one minute—what position does he find himself in with regard to the budget that he is asked to vote upon? He finds himself in this position: he is asked to vote on two questions at the same time, and he has only one vote for the two. These two questions are, stating them very briefly: will the hon. member for Brome vote for an increase of the tariff on slack coal, or will he vote against the government? These two things have no connection; they are almost at the opposite poles, but he has to get them settled in some way with the one vote. Now the hon. member for Brome is an ardent free trader by profession. In his speech on the budget of this year he gives us the crystal-clear principles of Cobden and Bright and John Stuart Mill. There is no doubt about the philosophy of free trade so far as the speech of the hon. member for Brome is concerned. But he turns from his principles to criticize this particular item in the budget, the raising of the tariff on coal. He says virtually that he is opposed to raising the tariff on coal, but notwithstanding the fact that he is opposed to raising the tariff on coal; notwithstanding that he is a free trader, he is going to vote for a budget which raises the tariff on coal because he does not want to defeat the government. What does that mean? I do not know of

any hon. member who could better illustrate the situation than the hon. member for Brome, for the very reason that I have given, namely, that of his unquestionable integrity of character. Here he is on the horns of a dilemma, and, I say, notwithstanding his devotion to free trade he says he must vote first to save the government and vote for free trade at some other time or at some more convenient season.

Now, the major parties in this House, naming them in turn, are the Liberal party, now the custodians of office; the Conservative party, the official opposition; the Progressive party to my right; then, the other party which awaits the next election to be christened; then the Labour party, of which I am the biggest part—that is, to say, Mr. Speaker, excluding my leader. The Liberal party at present enjoys this power, the opposition party and the Progressive parties both aspire for power. The Labour party does not aspire for power. The obvious answer, I know, in your minds is that even with very keen imaginations, which we have been charged with on some occasions, we could not even visualize that for labour in this country at the present moment. But that is not really the answer. The real answer is that we do not believe that any party or any class or any group should have power; that the power in any country should be co-operatively wielded; so on principle I say we do not look for power even if from our political development we might be justified in expecting it. Therefore, Mr. Speaker, I am in this position as representative of labour, neither desiring power nor being within the possibility of reaching it; I have to turn first to one party and then to the other, examine their programme, examine their policies, examine their records, examine their leaderships, to see which of them in my opinion would be most favourable to the people I represent; to see which, by virtue of their leadership and administrative power and policy, would, in my opinion merit the support of the Canadian people. So I begin to examine these parties just before coming to the budget itself, and I want to deal first of all with the government.

I cannot be so gracious with the government as the hon. member for Brome was in his closing remarks. He feelingly quoted the immortal bard of Scotland to the effect that we should gently scan our brother man—I forget the actual quotation; at any rate the suggestion was that we should adopt a sympathetic attitude toward the government. In that connection I want to quote just another passage from the same great poet that is really more applicable inasmuch as it was actually written for parliamentarians. He says:

> Stand forth, an' tell yon Premier youth
> The honest, open, naked truth:
> The muckle devil blaw ye south,
> If ye dissemble!
> In gath'rin' votes you were na slack;
> Now stand as tightly by your tack;
> Ne'er claw your lug, an' fidge your back,
> An' hum an' haw;
> But raise your arm, an' tell your crack
> Before them a'.

Seeing that I do not happen to be embarrassed as the hon. member for Brome is, I can tell my crack before them a', and so I ask the government, first, what they have to offer in return for the power which they now enjoy, and which I have no doubt they will be seeking to continue at the next election whenever that may come. I would like to be very gracious in my criticism. The words of an unknown author come to my mind: "I can expect to pass through this world but once. Any good therefore that I can do or any kindness that I can show to my fellow creatures, let me do it now. Let me not defer and neglect it, for I shall not pass this way again." I think that is a fitting quotation before one emerges upon the precarious course of criticizing a government, especially on a budget that may be the last of this parliament.

I desire to affirm, that the government that is now in office is far below the average of Canadian governments. I have not been able to find one outstanding achievement to its credit. I know that the administration has gone on in the ordinary way, except when it was interfered with by some of the ministers perhaps; that is to say, the deputy ministers have been doing the work, as they will do after the next election and after the one after that. But when it comes to any daring legislation that would measure up to the verbose promises of pre-election speeches, I look in vain for anything whatsoever. I think perhaps the government can be described as mediocre. There has been no outstanding thing to put on the credit side of the balance sheet, but there happen to be some very outstanding things to be put on the debit side. I have already had an opportunity of criticizing one of those outstanding proposals which must go on the debit side, and perhaps if it survives the committee, we may have an opportunity of dealing with it again. I refer to the Petersen proposal.

There are some other outstanding things to be put on the debit side of the balance sheet,

and that is some of the items in the present budget. Perhaps the raising of the tariff on slack coal, which personally I am very glad to see done, is the best thing that is in the budget, but seeing that is the best thing that is in the budget, I think the government ought to have the generosity to give credit to the right hon. leader of the opposition and his followers for showing them how to meet the situation in the eastern provinces. There can be no doubt that the leaders of the government have argued that the best thing for the workingman was to reduce the tariff, and that by reducing the tariff they would reduce the cost of living. I am not now questioning their reasoning at all. What I am doing is questioning their sincerity when they say that to the people outside, and then come back to parliament, and when they have a really difficult situation to deal with, the only way out of it they can find is to raise the tariff on coal to 50 cents per ton. Since on a labour matter the government that preaches free trade practises protection as a remedy for labour difficulties, I think the least that the government can do is to give credit to the hon. gentlemen who have the courage to say they stand for protection. That is due to the opposition in common courtesy.

I am reminded of a story in describing this government's policy. A negro woman was taking her child to a circus, and the child had a nickel, which, like most other children, it was very anxious to spend. Seeing a merry-go-round the child proposed to the mother that the nickel should be spent on a ride. But the mother was a little more careful of her nickels, and opposed the idea. Finally, however, for the sake of peace she yielded to the importunity of the child and put him on the merry-go-round. The mother stood there until the circuit had been completed, and when the merry-go-round stopped just where she had put the child on, she lifted him off and said, "Now, yo' am spent your nickel and yo' am had your ride, but where hab yo' been?" The government has had office; it has expended public funds; it has had its innings of power; but what has it done? Where has it been? What has it accomplished? We will have to have another speech from the Minister of Agriculture to tell us what are the achievements of this government. I will have more to say of the government's attitude when I come to consider the budget in detail.

Now I must turn from the government and have a look at the next party that is aspiring for power, the Progressive party which I believe is the next largest party in numbers, and I have to ask, what has the Progressive party to offer from the labour point of view? In making this criticism, Mr. Speaker, I hope it is unnecessary for me to remark that I fully appreciate that the hon. gentlemen who sit to my immediate right are very high-minded and sincere gentlemen, that in very many respects they think as I do. I want to say also that many of them I regard as personal friends. More than that, some of the hon. gentlemen to my right are men of mind and culture and ability, men who some day we will perhaps find holding the highest offices in the land. These things, I hope, my hon. friends to my right will take for granted, notwithstanding the fact that I am going to criticize the Progressive party. When I criticize the Progressive party I do so as I have criticized the party opposite. I criticize it from the point of view of the aims of the party itself, the policy it seeks to enforce in the House, and what I as a representative of labour may expect from it were it returned to power at the next election. I know that some hon. members have prognosticated that this party is not coming back. I do not feel so sure of that, nor would I feel particularly happy to contemplate it. I am not very sure about coming back myself; I cannot make any prophecy of that character at all. I hope they will all come back so far as that is concerned, that is if they have got anything to give us when they do come back. But for the present I am going to criticize the Progressive party. That party took its place in this parliament on a certain programme which I will refrain, in my generosity to my hon. friends, from reading again. But I may characterize them as tariff haters. They hate the tariff very much on occasions; sometimes they do not hate it quite as bad as at other times. But I would say that Don Quixote tilting at a windmill is not any more ludicrous than the Progressive party tilting at a moderate tariff in the idea that they have found the solution for the economic problems of Canada in 1925. I have noticed that the leader of the Progressive party has registered his disapproval of the present budget.

Mr. KELLNER: Did not your leader move the Progressive tariff platform as an amendment to the budget last year, and did you not support it?

Mr. IRVINE: I am very glad that my hon. friend has called to my mind something I was not likely to forget. I hope before I am through, Mr. Speaker, that I will satisfy my hon. friend on that point. If he will permit me just to postpone his question for a few minutes I will answer it in its proper place

in my speech. If I fail, if I should happen to forget the question which I do not think I shall, I hope he will ask it again. I was saying when my hon. friend asked me the question that the leader of the Progressive party has registered his disapproval of the present budget, and I was wondering why. Why has he disapproved of this budget? This budget is just about as good as the last one, in fact I think I might just quote one passage from the speech of the leader of the Progressive party in the House a few days ago to prove this contention. The hon. gentleman said on that occasion:

> I think in commencing that I might characterize the budget as I have seen it characterized in the press—as a stand-pat budget, adopting the position "just as you were" and really leaving us in exactly the same position in which we found ourselves at the commencement of the year—no progress, nothing changed, we are left in the exact position we have been in during the last twelve months.

Well, this means that the budget which is now before the House is to all intents and purposes exactly the same budget that the Progressive party voted for last year by the confession of their leader himself. Well, not only did the Progressive party vote for the same budget last year, but they actually voted against a reduction of the tariff as proposed in a resolution which embodied their own programme. Not content with that, I believe that not very long ago the leader of the Progressive party in a speech, I think it was in Hamilton, made a declaration that he was in favour of a moderate tariff. Well, now, Mr. Speaker, that is just exactly what we have in this budget. We have a moderate tariff, and it is because of its moderation that I am opposed to it. If it was moved either down or up it might be a permissible thing; but seeing that it is just a moderate tariff it presents to the people of Canada a fiscal policy which retains all the weaknesses and all the bad points of both free trade and protection. That is the reason why I oppose it now, but why the Progressive party should oppose it I am not quite so clear.

Mr. SPEAKMAN: In what respect does this budget differ from the budget the hon. member supported last year?

Mr. IRVINE: Again I will have to postpone my answer. I will answer my hon. friend at the same time that I answer the hon member for East Edmonton (Mr. Kellner) and it will be partly the same answer. The one will be negative and the other will be positive, and when we combine a negative and a positive we get something substantial. I regard the amendment of the Progressive party, therefore, as a gesture which I regret to see coming from the party that I had hoped would abandon the political tactics of partyism. I say it is a gesture because its supporters know very well it could not even get a hearing. They need not argue that in moving the amendment they would, perhaps, at least register a protest against the rules of the House, because that has been done already and we have started the machinery going to amend the rules of the House if they can be amended. So I say I regret that such a gesture should have been made. I regret to find no bright hopes in the Progressive party so far as labour is concerned, and I abandon my hopes of it very reluctantly. Many forward-looking people in Canada to-day see in the Progressive party as it now is a fitting epitaph for the tomb of a lost opportunity. Of that party it may well be said:

> There is a tide in the affairs of men
> Which, taken at the flood, leads on to fortune;
> Omitted, all the voyage of their life
> Is bound in shallows and in miseries.

That flood time has passed, the ebb has set in, and the Progressive party is now gasping and wriggling like a fish left stranded on the beach before the receding tide. There I will leave them while I deal with the opposition.

Mr. BANCROFT: You forgot to answer the two questions.

Mr. IRVINE: I will come to the two questions at another point, and I promise my hon. friend that I will not forget them.

Turning then to the official opposition, I want to ask what policy they have to offer. I think that all hon. members will agree with me, when I say, to begin with, that the leadership of that party is one of its greatest assets. As to what the policy of that party is I want to ask some very pertinent questions, and I hope that the right hon. leader of the opposition, who I regret to say was unable to place before parliament his policy as indicated in a resolution, will take my questions as seriously as I am offering them, and when he makes his speech in this debate will favour the House with a reply to them. I am not going to put my questions at the moment; I shall do so when I am dealing with that part of the budget speech under which they will more fittingly come. I believe that the opposition party stands for protection. Does it mean that? That is one of the questions which perhaps I might put now. Does the Conservative party mean to be really a protectionist party? I do

not believe that Canada has ever had a real protection policy. On these questions, however, I will be more pointed a little later on.

I come now to the budget itself. I was rather struck with the government's attitude in dealing with the economic conditions of Canada. The government seeks to make out that Canada is good, bad or indifferent, according to the immediate purpose which the government has to serve at the time of making the speech. At the time of the Speech from the Throne Canada had passed through a wonderful year of prosperity. When it came to the Petersen subsidy then Canadian trade was in a terrible shape. When the hon. Acting Minister of Finance (Mr. Robb) presented his budget he took occasion to comment upon the very unfavourable condition of trade and commerce that he had had to contend with, as a means of emphasizing how well the government of the day had financed, and so I say that if there was no other evidence as to what the real conditions of Canada are than that which we could obtain by reading the speeches of the ministers of the crown, I do not know what conclusion we would come to at the end of the year. But what are the real conditions? I could not even deal with them as lightly as I am going to deal with them if it had not been for the real enjoyment the House has had this afternoon and evening, and that may enable hon. members to take a very different kind of medicine with good grace.

May I draw attention to the growing national debt, and in this connection I want to quote a very brief financial statement. I know that the House hates figures about as badly as I hate giving them, and so I will not inflict very many figures on it. Dealing with the national debt, we have a gross debt in the Dominion, according to the Canada Gazette, of $2,940,099,008.

An hon. MEMBER: No, it cannot be.

Mr. IRVINE: Yes, and there are some cents to be added—to be specific, thirty-five cents,—an ominious figure for my hon. friend. I received these figures from the Finance department and I will give them to the House now. The figures are as follows:

National Debt

Gross Debt Dominion (Dec. 31/24 Canada Gazette)..		$2,940,099,008 35
Securities guaranteed by Dominion:		
As to capital..	$423,161,713 83	
As to interest only ..	167,349,218 72	
		590,510,932 55
		$3,530,609,940 90

National Debt—*Concluded.*

Funded and floating debt of provinces including guaranteed securities but excluding sinking funds (Canada Year Book, 1923, pp. 792-3)..		697,785,627 00
Funded and floating debt of municipalities of 10,000 and over (Can. Year Book, 1923, pp. 796-7)..	$ 622,301,440 00	
Funded and floating debt of municipalities of 3,000 to 10,000 (1919) (Can. Year Book, 1923, p. 803)..	51,642,287 00	
Funded and floating debt of municipalities 1,000 to 3,000 (1920) (Can. Year Book 1923, p. 805)..	32,700,840 00	
		706,644,567 00
		$4,935,040,134 90

Or $548 per capita at population 9,000,000 or average capital debt of $2,740 for family of five paid for in taxes annually.

With a financial statement of that kind the balancing of the budget appears almost humorous, placing it alongside of the national debt, which is growing gradually, in spite of the efforts of the government at economy.

Let us take next the stagnation in industry and business depression. The government I notice has been claiming great credit for having reduced the taxation of Canada fifty-two million dollars. That fifty-two million dollar reduction, according to government figures, has all been occasioned by the fact that we have had less business and less industry in Canada this year than we had last year. That fact has been brought out very ably by other hon. members. Then we have unemployment unparalleled, and suffering among workers. We had, for instance, a march on Edmonton recorded in the public press some short time ago. We have the Nova Scotia situation knocking at the doors of the government for alleviation. So taking into consideration the enormous national debt that is still increasing, the paralysis in the industrial and business life of Canada, the unemployment which perhaps has never been so severe as it is at the present time, and the actual distress from which many people are suffering while I am speaking —that represents the conditions in Canada after four years of the present administration. This will contrast unfavourably with the address of the Prime Minister when dealing with the Speech from the Throne, but will come nearer his description of conditions when defending the Petersen contract. I know the

conditions in Nova Scotia have been denied by some hon. members on the government side of the House, and just at this juncture I have a few words to say with regard to the reply the hon. member for Lunenburg (Mr. Duff) made to the speech of the hon. member for Southeast Grey (Miss Macphail). I of course have no apology to make for Nova Scotia in replying to the hon. member for Lunenburg. The industrial situation in Nova Scotia is merely an exaggerated sample of general industrial conditions throughout Canada. It happens at that point that it is a little more apparent than at many other points throughout the west and throughout other parts of eastern Canada. This condition itself is I consider a national disgrace, and if Nova Scotia is as offended as the hon. member for Lunenburg would make her out to be, I hope its offence will stimulate it to immediate action. and that the province will remedy the industrial conditions which are so oppressive to the miners of Nova Scotia at the present time. I do not wish to criticize the hon. member for Lunenburg (Mr. Duff) very much, because I notice that he is not in his seat and, besides, I really think, after the speech he made, he is more an object of sympathy than of criticism. The nemesis which followed him came very speedily. He tried to convince the House that the distress in Nova Scotia was not serious enough to attract the charitable interference of the general public. The greatest credit which is due to the hon. member for his speech will be found in the fact that not only did he fail to convince the House, but he gave the greatest evidence that he had failed utterly in convincing himself that conditions in Nova Scotia were not as represented by the hon. member for Southeast Grey. I have no first-hand information. I have not been at Glace Bay. I must speak from the knowledge which I have gathered from the press and from the reports of citizens like the hon. member for Centre Winnipeg (Mr. Woodsworth) and the hon. member for Southeast Grey. But when I am called upon to decide whether I am to accept as truth the conditions as depicted by those two hon. members or as depicted by the hon. member for Lunenburg, I have no hesitation in deciding that personally I accept the statement of the hon. member for Southeast Grey and that of my leader from Centre Winnipeg. To answer the main contentions of the hon. member for Lunenburg after what has transpired in the last few days would be comparable to the whipping of a dead carcass, because he has received his answer very thoroughly. It came to him very speedily. In fact, before he had his breakfast next morning, I think he had his answer from representatives of the people in Glace Bay. He had his answer from interested, public-spirited officials throughout the province of Nova Scotia. He had his answer from his own sister whose appeals went out for aid to the suffering multitude of his own province. He had his answer from all parts of this country through the press. In fact, I do not know of any statement that the hon. member for Lunenburg made that has not been answered out of court already. Even his statement with regard to the Nova Scotia legislature and its taking action has been answered, for I understand that government has at last decided to give $20,000 for relief.

But there is one more point dealt with by the hon. member for Lunenburg upon which I desire to comment. He tried to place the whole blame for the distress in Glace Bay on the mayor of that town, who happens, I understand, to be a labour man. If hon. members are interested and will look up page 1774 of Hansard of April 1, they will find the statement of the hon. member for Lunenburg dealing with that phase of the question. He argued that there was a certain law respecting the borrowing powers of municipalities, and that it was not necessary for the municipality concerned to get legislation to enable it to make loans to relieve the starving people. But here is the answer to that. In making the speech, he said that the hon. member for Southeast Grey should get better information. I ask: Who requires to get the better information—the hon. member for Southeast Grey or the hon. member for Lunenburg? This despatch will give the answer to that question. It is a despatch from Glace Bay of April 6:

> At a special meeting of the Glace Bay town council it was decided to apply for legislation to empower the town to extend its overdraft at the local banks by $80,000. This step is rendered necessary by the financial condition resulting from the tie-up in the coal mines.

That is the final and crushing answer to the last point of the hon. member for Lunenburg.

Let me recapitulate my summary of the economic conditions in this country. There is the increase in our national debt; a business depression and an industrial paralysis that have become chronic under the attention of this government; and most alarming of all a wide-spread unemployment, not only in Nova Scotia, but in many other parts of Canada. In view of these facts I must say that the present government has no policy of any real

11 p.m.

value to labour. But I cannot refrain at this point from turning to the programme of the government with regard to labour. I think, in fairness to the government and also in fairness to labour, that may be asked in the near future to support the government with such a glowing programme as this happens to be, I ought to read the programme. In this Speakers' Handbook, prepared by the Liberal party and decorated on the front page with the picture of the Prime Minister himself I find the programme of the Liberal party and also the sister programme of the Progressive party, both within the bounds of the same volume. I find here what purports to be the Liberal party's programme for labour.

Mr. MARTELL: That will be unitarian, will it? If the Liberals and Progressives were put together, it would be unitarian almost if you add a third party to it.

Mr. IRVINE: I hope my hon. friend's suggestion will turn out to be true in the interest of both parties concerned. The resolution on Labour and Industry, which I find in this volume, constitutes the programme of labour as laid down by the Liberal party in 1921:

Resolved, that the committee recommends that the National Liberal convention accept in their entirety as a part of the Liberal platform, in the spirit they have been framed and so far as the special circumstances of the country will permit—

These I believe, in terms of poker, are called jokers.

—the terms of the Labour convention and general principles associated with the League of Nations and incorporated in the conditions of peace.

These methods and principles for regulating labour conditions so set forth in the treaty are as follows:

1. The guiding principle that labour should not be regarded merely as a commodity or article of commerce.

I wait for the government to tell me in what way and when during the last four years it has actually taken labour out of the market as a commodity. I think the surplus labour of Nova Scotia at the present time is in about the same position as a factory filled with manufactured goods for which there is no market. There is no alteration, there is no indication of any policy that would alter that condition.

2. The right of association for all lawful purposes by the employed as well as by the employers.

I think I must stop to make a remark about that plank. Hon. members will recall that last year when the leader of the Labour party moved in the committee on Banking and Commerce and, if I mistake not, on the floor of the House as well, that the bank clerks be allowed the privilege of organizing and forming a lawful association such as we have set forth in this plank of the Liberal platform, the government rejected the proposal. Did they give these people the right to organize? —a small thing to ask for. Why should they refuse the bank clerks this right? Even in this picayune thing the government refused to meet this class of labour.

3. The payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country.

Take the government's own figures in regard to this plank; take the cost of living in Canada to-day as estimated by the government itself. Take the average income of the wage earner and then let hon. gentlemen answer for themselves the question I am about to put: How has the government of the day implemented this promise to labour? How has the government brought the earning power of the working people of Canada up to a level with a decent standard of living?

4. The adoption of an eight-hour day or a forty-eight hour week as the standard to be aimed at where it has not already been attained.

That was very largely established before the government came into office. Certainly I know of no instance where the government has put it into operation.

5. The adoption of a weekly rest of at least twenty-four hours, which should include Sunday wherever practicable.

On this plank the government has come nearer fulfilment than on any other. It has given not only a twenty-four hour rest but a three hundred and sixty-five day rest to hundreds of people in this country.

6. The abolition of child labour and the imposition of such limitations on the labour of young persons as shall permit the continuation of their education and assure their proper physical development.

Again I ask the government or someone speaking for them to tell me what they have done in this regard. They have undoubtedly encouraged the bringing in of children from Great Britain and possibly from Europe, but as to what wages they are paying these children and what protection they have afforded them, that is a point on which I am not clear.

7. The principle that men and women should receive equal remuneration for work of equal value.

Where has that been implemented by the government? Have they put it into operation in connection with their own staffs in the Civil Service? Have they put it into operation in this House? I again must await the reply of the Minister of Labour (Mr. Mur-

dock), if he can tear himself away long enough from the British North America Act.

Mr. MURDOCK: Does my hon. friend not know that neither this government nor the preceding government has had any authority in fixing the wages of civil servants, that authority being entrusted under a specific law to a commission which has exclusive jurisdiction in the matter?

Mr. IRVINE: The reply is such as I anticipated. The minister states that the government has no power to deal with the wages of civil servants. He has also told the House on numerous occasions that the government has no right to interfere with the labour conditions of other provinces. Since, then, the government has no right nor power to interfere in matters of labour I want to ask two questions: Why have we a Minister of Labour at all and why does the government put this plank in its platform? It is absurd to put forth such a plank as this as a bait to the working people of the country and then to stand up in this House and say that the government that published it has neither the power nor the inclination to implement it.

Mr. MURDOCK: We shall be quite agreeable to having a real labour man discuss that question.

Mr. IRVINE: I am very glad that the hon. member admits, as he feels in his heart, that he himself is not a labour man and suggests that we ought to have one somewhere near to whom a question of this kind might be put. Let me proceed with the next proposition.

8. The standard set by law in each country with respect to the conditions of labour should have due regard to the equitable economic treatment of all workers lawfully resident therein.

I need not comment on that.

9. Each state should make provision for a system of inspection in which women should take part, in order to ensure the enforcement of the laws and regulations for the protection of the employed.

But what would be done with the British North America Act while this parliament was arranging for women to make "inspections"? We should have to apply for an amendment to that act. And note this, Mr. Speaker:

And further resolved:

1. The introduction into the government of industry or principles of representation whereby labour and the community, as well as capital, may be represented in industrial control, and their interests safeguarded and promoted in the shaping of industrial policies.

That sounds like an excerpt from a volume known as Industry and Humanity; it certainly breathes the same spirit and adumbrates the same fond hopes. But beyond that it means nothing to the labour men of Canada.

2. That in so far as may be practicable, having regard for Canada's financial position, an adequate system of insurance against unemployment, sickness, dependence in old age, and other disability, which would include old age pensions, widows' pensions, and maternity benefits, should be instituted by the federal government in conjunction with the governments of the several provinces.

Now there is a programme which would raise the standard of living to a great many people in this country, a programme which would be of material benefit to labour. But it is a programme; that is all we can say for it—a programme which has become a chart, a chart with the rather uncommon characteristic of being able to change itself whenever the occasion demands, so that when there is a rock ahead it is moved off the chart, so to speak, in the hope that in this way the rock might be avoided. What should be done, however, is to alter the course of the ship of state:

3. The representation of labour on federal commissions pertaining to labour matters.

I do not know that we have had any of these commissions.

4. Effective legislation for the conservation of human life and health.

I have not noticed anything of that kind.

5. The representation of labour on the Board of Directors of the Canadian National Railways.

In this regard I believe the government made good its promise.

6. That the system of re-training soldiers, unfitted for their past work because of physical injuries, be extended to disabled workers in industry.

I know of no such practical work carried on by the Dominion government.

7. More effective restriction of Chinese immigration.

I do not know that this has been implemented by the government, although the efforts of the hon. member for Comox-Alberni (Mr. Neill) may have had some effect. But I understand that there are ways of getting Chinese into the country which seem to escape the eyes of the government.

8. The federal incorporation of co-operative associations.

I hope the Minister of Labour will tell us how many of these have been incorporated.

9. The acceptance of the principle of proportional representation.

I have no doubt it has been accepted, but if it has been accepted it has been kept a secret by the government, for it has not been given to the people of Canada.

10. Immediate and drastic action by the government with respect to the high cost of living and profiteering.

Where is that drastic action? Where is that immediate action? What does the government mean by immediate? What does the government mean by drastic? Are these words in English, or in some foreign tongue? Have I got the right, then, to charge the government at this moment with a failure to implement their programme; to say either that they went to labour without sincerity at the time or that they somehow have absolutely failed to carry out these pledges? Which of the two is it? I do not know, but I do know that they have not carried this programme out. I quote further:

11. Restoration of the control of the executive by parliament and of parliament by the people through a discontinuance of government by order in council and a just franchise and its exercise under free conditions.

I refer to but one thing in that paragraph. I have noticed that this government has put forth orders in council. I have noticed that we have the same domination by cabinet in this government that we have had in other governments. I notice, too, that this government has resorted to a kind of closure which is much more undesirable than that which the present opposition introduced. That is to say, when a difficult resolution comes before this House the government talks until about this time of the night and then moves the adjournment of the debate, so that the closure is applied not only to the debate but to the decision as well, and we hear no more of it. That is the way, especially on labour matters, that this government implements its promise with regard to democracy in the "control of the executive by parliament" and the abandonment of orders in council for democratic legislation.

Now, Mr. Speaker, having made the introduction to my speech, and seeing that it is ten minutes past eleven I beg to move the adjournment of the debate.

Mr. ROBB: I understood that the whips had agreed that my hon. friend should complete his speech to-night. Of course, I have no desire to force him along; I am just as anxious to go to bed as he is.

Sir HENRY DRAYTON. Let us go.

Mr. ROBB: How much longer would my hon. friend take?

Mr. IRVINE: I am half way through, Mr. Speaker. I do not think there should be any objection to the adjournment, seeing that the hon. Minister of Agriculture (Mr. Motherwell) took three hours to-day.

[Mr. Irvine.]

Motion agreed to and debate adjourned.

On motion of Mr. Robb the House adjourned at 11.15 p.m.

Wednesday, April 8, 1925

The House met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk)

VANCOUVER HARBOUR COMMISSION—ELEVATORS

Hon. Mr. STEVENS:

1. In reference to Vancouver Harbour Commission elevator No. 2, what was the cost of the elevator complete, including all facilities and equipment necessary for the receiving, cleaning, storing and shipping of grain?
2. How were equipment and supplies for construction of No. 2 elevator purchased?
3. Were tenders called for all equipment?
4. What was the cost of the dust collecting system, No. 2 elevator?
5. What was the cost of the sheet metal work on No. 2 elevator?
6. What was the cost of the track receiving shed complete on No. 2 elevator?
7. What is the maximum electrical power required to operate No. 2 elevator?
8. What power is represented by motors now installed in No. 2 elevator, including track shed, conveyor galleries, etc?
9. When did No. 2 elevator commence operations?
10. How much grain has No. 2 elevator handled to February 28, 1925, inward?
11. What was the amount of payroll of No. 2 elevator from August 31, 1924, to February 28, 1925, including also: (a) Interest on investment; (b) Sinking fund; (c) Amount chargeable to No. 2 for superintendency, and all overhead?
12. How much grain has No. 2 elevator shipped during its operation until February 28, 1925?

Hon. Mr. CARDIN:

1. To last engineer's certificate:

Foundations	201,991 00
Superstructure	1,252,477 74
Car unloading	231,290 48
Total	1,685,759 22
Ball pier galleries	568,418 71
Substation	163,542 06
Total	731,960 77

2. By tender.
3. Yes.
4. $16,305.00, last engineer's certificate.
5. $79,942.52, last engineer's certificate.
6. $231,290.48, last engineer's certificate.
7. 1,935 H.P.

8. 2,950 H.P.
9. November 22, 1924.
10. 3,982,117 bushels.
11. $29,134.03; (a) $7,900.00 to operation; (b) $6,780.00 to operation; (c) $23,715.29.
12. 2,309,152 bushels.

Hon. Mr. STEVENS:

1. When was the Vancouver Harbour Commission elevator No. 3 to be completed in accordance with terms of the agreement with the British Oriental Grain Company?
2. Has the said elevator been completed and turned over for operation, if so, when?
3. What engineer drew the plans and designed the extension of harbour commission elevator No. 3, and on whose authority and instructions did he act?
4. Did any practical elevator superintendent, or operator pass on the plans, design and layout of No. 3 elevator annex and extensions, if so, who?
5. Was the said extensions, including jetty let by contract, and was the said work constructed under one contract or divided?
6. How many tenders were received and what was the amount of the lowest tender?
7. What was the estimated engineers cost of No. 3 elevator complete?
8. What has the said work cost to date, and what amount still remains unpaid?
9. What will be the total capacity of said elevator when completed?
10. If the said elevator is to be leased or rented to the British Oriental Grain Company, what is the rental of same to be?
11. Will the said lessee pay cargo rates for grain loaded out over No. 3 elevator galleries?

Hon. Mr. CARDIN:

1. December 31, 1924.
2. Workhouse: Yes—March 31, 1924. Storage house and jetty: No.
3. Messrs. Barnett McQueen Construction Co. Ltd. by authority of and on instructions from Vancouver Harbour Commissioners.
4. Yes, Colin McLean, superintendent, of elevators for Vancouver Harbour Commissioners at time plans were prepared.
5. Elevator extensions, jetty and dredging were let by separate contracts.
6. For jetty, four tenders were received, amount of lowest tender being $48,753.55 based on unit prices for material in place of estimated quantities furnished by chief engineer for jetty as originally designed. For elevator extension, seven tenders received, lowest being $160,000, for construction of storage house, dryer house and completion of shipping gallery.
7. Workhouse, storage house and dryer, which constitutes the elevator proper, $531,500. To include land purchase, jetty and conveyor gallery add $292,912.
8. Total cost including land purchase up to February 28th, 1925, $630,156.94. Estimated amount required to finally complete elevator and jetty $194,255.06.
9. Workhouse.. .. .. 125,000 bushels
Storage house.. .. .. .. 500,000 bushels

Total.. .. .. 625,000 bushels

10. The agreement provides that the lessee covenants that it will pay to the lessor as annual rental for the lands and premises an amount which shall be equal to the interest paid on the bonds issued by the lessor, the proceeds of which have been used in the acquiring of the said property and making improvements thereon as herein provided for, together with an additional amount to be paid into a sinking fund which paid in equal annual instalments will retire the said bonds within a period of twenty-one years, together with an additional annual amount of one per centum on the amount of the said bonds as a supervision charge. It being provided, however, that in no event shall the total charges as aforesaid be greater than nine per centum per annum on the amount of the said bonds, the proceeds of which have been used as aforesaid. The lessee in addition thereto covenants and agrees to pay all registration and solicitor's charges in connection with acquiring title to the said land and registration charges, solicitor's charges and trustee's charges in connection with the said bond issue. For the purpose of ensuring that the lessee will create a revenue of not less than twelve thousand dollars per annum over the said shipping facilities to be provided by the lessor as hereinbefore set out, the said amount of twelve thousand dollars has been included in the said annual rental herein provided to be paid by the lessee, it being understood and agreed between the parties hereto, however, that as against the said rental so to be paid, the lessee shall be credited with all amounts paid to the lessor by the lessee by way of cargo or other harbour rates up to but not exceeding an amount of twelve thousand dollars, per annum.

11. The agreement provides that the lessee covenants with the lessor that it will pay or cause to be paid all harbour rates and dues and tolls and all switching charges properly payable by it, it being understood and agreed that the switching of cars, on, to, or from the premises hereby demised, to be under the control of the lessor. For the purpose of ensuring that the lessee will create a revenue of not less than twelve thousand dollars per annum over the said shipping facilities to be provided by the lessor as hereinbefore set out, the said amount of twelve thousand dollars has been included in the said annual rental herein provided to be paid by the lessee, it being understood and agreed between the parties hereto, however, that as against the said rental so to

be paid, the lessee shall be credited with all amounts paid to the lessor by the lessee by way of cargo or other harbour rates up to but not exceeding an amount of twelve thousand dollars per annum.

Mr. COOTE:

1. What was the number of bushels of grain handled by the grain elevator belonging to the Vancouver Harbour Commission at Vancouver for the year ending July 31, 1924?
2. What was the handling charge per bushel?
3. What were the total receipts from handling charges of (a) Grain; (b) Other sources?
4. What was the number of employees at the elevator?
5. What was the total wage paid to said employees?
6. What other expenses, if any, were incurred in connection with the operation of this elevator?

Hon. Mr. CARDIN:

1. Total amount of grain shipped out 53,096,150 bushels.
2. Operating cost per bushel .941c.
3. Operating revenue:

Elevation	$533,646 32
Cleaning	116,568 87
Drying	462 00
Sacking	56,934 62
Storage	78,187 45
Sundry revenue	4,387 39
	$790,186 65

4. 151.
5. Superintendence $ 9,599 75
Office salaries 15,246 09
Maintenance labour 31,917 28
Operating labour 164,283 26
$221,046 38
6. Power $ 24,515 18
Operating miscellaneous expenses 14,666 04
Maintenance supplies 21,125 22
Improvements 50,033 04
Office supplies, expenses, etc. 22,428 05
Registration fees 2,215 16
Interest and exchange 12 98
Insurance 17,027 29
Water front charge on grain handled 71,284 11
Proportion miscellaneous expenses chargeable to elevator 55,544 00
$499,897 45

VANCOUVER HARBOUR COMMISSION—EMPLOYEES

Hon. Mr. STEVENS:

1. What number of employees of all ranks were in the service of the Vancouver Harbour Commission on December 31, 1921-22-23-24?
2. What was the total amount paid in salaries for services of all classes by the Vancouver Harbour Commissioners for calendar years 1921-22-23-24?

[Mr. Cardin.]

3. What was the total deep-sea tonnage inwards and outwards in the years 1921-22-23-24?
4. What was the total revenue of the harbour commissioners during the calendar years 1921-22-23-24?

Hon. Mr. CARDIN:

1. 1921, 38; 1922, 46; 1923, 347; 1924, 511.
2. 1921, $83,174.19; 1922, $90,690.31; 1923, $205,354.27; 1924, $687,093.80.
3. 1921, $1,237,687; 1922, $1,915,194; 1923, $2,631,888; 1924, $3,679,324.
4. 1921, $340,937.88; 1922, $425,076.48; 1923, $725,880.30; 1924, $1,870,521.00.

VANCOUVER HARBOUR—NO. 1 JETTY

Hon. Mr. STEVENS:

1. Having reference to the jetty at No. 1 Vancouver Harbour Commission elevator, has the superstructure of said jetty been completed?
2. Has the government received any intimation that this superstructure is improperly designed and constructed?
3. What is the total cost of (a) said No. 1 jetty, (b) superstructure, (c) equipment?
4. Who is the designing engineer and what was the engineer's estimate of the cost?
5. Was it constructed by contract?
6. If so, what was the amount of lowest tender and to whom was the contract awarded?

Hon. Mr. CARDIN:

1. No.
2. No.
3. Substructure to last engineer's certificate $448,558 86
Superstructure to last engineer's certificate 172,949 72
4. W. G. Swan, substructure. 462,059 18
John S. Metcalf Co., Ltd., superstructure and equipment 254,377 00
5. Yes.
6. Contract awarded Pacific Construction Co., Ltd., at unit prices for substructure. Contract awarded Northern Construction Co., Ltd. and J. W. Stewart for superstructure, $236,149.30. Contract awarded Northwestern Dredging Co., Ltd., for dredging at unit prices.

VANCOUVER HARBOUR CONSTRUCTION

Hon. Mr. STEVENS:

1. Does the government have an inspector on all works being constructed by the Vancouver Harbour Commissioners out of appropriation advanced by the Dominion government?
2. Who was the inspector on (a) No. 1 elevator extension, (b) No. 1 elevator jetty and superstructure, (c) No. 2 elevator, (d) No. 3 elevator extensions and jetty?

Hon. Mr. CARDIN:

1. No.
2. No.

STEAMSHIP SUBSIDIES

Mr. McQUARRIE:

1. What subsidies are being paid to steamship lines plying between South Africa and Canada, (a) as to Atlantic Ports, (b) as to Pacific ports?

2. What is the tonnage and value of cargoes carried between the said ports, by ships benefiting by such subsidies?

Hon. Mr. LOW:

1. (a) During the fiscal year 1924-25, which has just closed, a subsidy of $125,000 was paid for the Canada-South Africa service. This will be reduced to $100,000 for 1925-26. This subsidy includes calls at West Africa as well as South Africa. The service is an outward one only, from Canada to South Africa; (b) Nil.

2. During the last four calendar years, the origin, quantity, and value of cargoes carried by the subsidized line were as follows:—

Calendar Year	Canadian Origin Tons Weight	Canadian Origin Tons Measurement	Canadian Origin Value	United States Origin Tons Weight	United States Origin Tons Measurement	United States Origin Value	Total Tons Weight	Total Tons Measurement	Total Value
1921	16,262	14,395	$4,082,959	1,281	5,737	$ 677,720	18,243	20,132	$4,760,679
1922	22,217	22,777	4,108,142	989	4,239	499,811	23,206	27,016	4,557,953
1923	37,656	25,443	5,305,222	798	6,605	789,672	38,454	32,078	6,294,894
1924	40,157	19,114	6,511,160	1,958	15,939	1,828,195	42,115	35,053	8,339,355

SALES TAX COLLECTIONS

Mr. ROSS (Kingston):

What was the total amount collected by the government by means of the sales tax during each year of its enforcement?

Hon. Mr. CARDIN (for the Minister of Customs):

1920-21	$ 38,128,063 94
1921-22	61,520,683 79
1922-23	91,262,254 13
1923-24	100,990,076 80
1924-25	62,795,180 84

SALES TAX REBATES

Sir HENRY DRAYTON:

By a return dated February 21, 1925 to an order of the House dated July 3, 1924, it is shown that as of date October 16, 1924, out of a total number of 4,486 claims for rebates of sales taxes, 1,907 claims had been checked and paid, leaving 2,563 claims outstanding. How many of these outstanding claims have been checked since the date given in the said return, and how much money has been paid thereon?

Hon. Mr. CARDIN (for the Minister of Customs):

Two thousand two hundred and seventy-seven of the outstanding claims have been checked since the date of the return and sales tax deductions amounting to $3,164,281.98 have been allowed in respect of such claims.

CUSTOMS DUTIES—DRAWBACK

Mr. LUCAS:

1. What amounts have been paid to Canadian manufacturers by way of drawback of customs duty on articles purchased by manufacturers and wrought in Canada into goods to be exported from Canada, or by way of specific sums in lieu of such drawback during the fiscal years ending March 31, 1922, 1923, 1924 and 1925?

2. What amounts have been paid to such manufacturers by way of such drawback or by way of specific sums paid in lieu thereof on articles purchased by manufacturers and wrought in Canada into goods to be consumed in Canada, during the said years?

Hon. Mr. CARDIN (for the Minister of Customs):

1.

	Export
1921-22	$ 9,559,378 07
1922-23	13,306,503 27
1923-24	12,310,244 78
1924-25	10,280,403 72

2.

	Home Consumption
1921-22	$ 1,328,364 57
1922-23	1,199,774 54
1923-24	1,782,893 84
1924-25	1,964,508 84

CANADIAN NATIONAL RAILWAYS—MILEAGE

Mr. SENN:

1. What is the total mileage operated under the Canadian National railway system?

2. What is the total mileage operated under the Canadian Pacific railway system?

3. What is the total number of employees on the Canadian National railway system?

4. What is the total number of employees on the Canadian Pacific railway system?

5. What is the average number of employees per 100 miles on the Canadian National railway system?

6. What is the average number of employees per 100 miles on the Canadian Pacific railway system?

Hon. Mr. ROBB (for the Minister of Railways):

Average for year 1924 for Canadian Lines

1. 20,523 miles.
2. 13,784 miles.
3. 87,213 employees
4. 57,471 employees.
5. 425 employees.
6. 416 employees.

HUDSON BAY RAILWAY

Mr. SPENCER:

1. When was the last construction work done on the Hudson Bay railway?

2. Why was work continued on this railway during the war when other railway construction was withheld?

3. Was there any correspondence between the British and Canadian governments regarding the construction of the Hudson Bay railway during the war?

4. Was the British government interested in the completion of this railway?

5. If so, why?

Hon. Mr. ROBB (for the Minister of Railways):

1. Railway taken over from the contractor October 9, 1918.

2. During the war years the following new mileage was placed in operation on Canadian railway lines:—

Year ended	Miles
June 30, 1915	4,788
June 30, 1916	1,852
June 30, 1917	1,170
June 30, 1918	274

3. There is no record of any such correspondence.

4. No information.

5. See answer to No. 4.

GOVERNMENT PROPERTY IN VANCOUVER

Mr. BLACK (Yukon):

1. Having reference to the answers given on March 30, 1925, to questions concerning the government property situate on the southwest corner of Granville and Pender streets, Vancouver, known as the old post office property, from whom were such inquiries received?

2. Were any offers received for said property?

3. If so, from whom, and what were the said offers?

Hon. Mr. CARDIN (for the Minister of Public Works):

1. Sharples and Sharples, real estate agents, Vancouver.

2. No.

3. Answered by No. 2.

WEMBLEY DELEGATION—PRESS REPRESENTATIVES

Mr. CAMPBELL:

1. What members of the Press Gallery were included in the delegation to the exhibition at Wembley, England, in 1924, at the expense of the Dominion government?

2. What was the expense to the Dominion government in each case?

3. What members of the Senate were included in this delegation?

4. Were any other individuals except members of the House of Commons, the Senate, or the Press Gallery included in the delegation and whose expenses were paid by the Dominion government?

5. What was the total cost of the delegation?

Hon. Mr. ROBB:

1. Thos. Fraser, J. A. Fortier.

2. $899.94 each.

3. None.

[Mr. Spencer.]

4. Yes; two newspaper correspondents, one from British Columbia (Harry Hodges) and one from New Brunswick (C. C. Avard), the expenses of the former amounting to $900 and of the latter to $869.95.

5. $7,769.83.

INCOME AND BUSINESS PROFITS TAXES REMISSIONS

Sir HENRY DRAYTON:

What, if any, remissions or reductions of income taxes or excess business profit taxes have been made by order in council during the fiscal year last past?

Hon. Mr. CARDIN (for the Minister of Customs): Stand as an order for return.

Sir HENRY DRAYTON: This question is very short. I just want to point out to the government that I would have thought there was nothing there at all; I would expect nothing at all. I was hoping that would have been the answer, that nothing of the kind had been done. I never recollect it being done. We have had questions of the same kind before, and we have had them answered, as I recollect, without any trouble at all, but the minister wishes to make this an order for a return. There are, I admit, lots of cases of refunds of the sales tax and the like, but in this case, unless the government say there are a lot of them, I see no reason why the question should not be answered. If the government say there are a lot of them, it is a different matter.

Mr. CARDIN: I asked that this be made an order for a return at the request of the officers of the department. Personally I am not aware of the conditions, but I am informed that it would mean a considerable amount of work to obtain the information asked for. I have no objection to letting the question stand.

Sir HENRY DRAYTON: It will stand as a question?

Mr. CARDIN: Yes.

Question stands.

UNOPPOSED MOTIONS FOR PAPERS

DR. PETER McGIBBON

Mr. HAMMELL:

For a copy of all papers, reports, writings, telegrams and other documents written by Dr. Peter McGibbon in the year 1921 to the Canadian Government Merchant Marine, Limited, or to any of the officials of the then government mentioned in a letter dated, Bracebridge, October 6, 1921, and addressed to the Hon. J. H. Stewart, Minister of Railways, a copy of which was tabled some time ago; also a copy of all answers to such letters, telegrams, etc., forwarded to Dr. Peter McGibbon.

CRUDE PETROLEUM PRODUCTION INVESTIGATION

Mr. LESUEUR:

For a copy of instructions given to Dr. Hume and Mr. Russell in connection with their visit to the county of Lambton, and their investigations into the production of crude petroleum in that county, and of all letters or reports written or made by them or either of them thereon, and all correspondence relating thereto.

MINERS AND STEEL WORKERS

On the Orders of the Day:

Mr. W. C. GOOD (Brant): I should like to ask the Minister of Labour whether in case of an outbreak of violence in Cape Breton followed by an application from the provincial government for armed forces, the federal government would consider they were under any obligation to make an inquiry?

Mr. SPEAKER: I might remind the hon. gentleman that hypothetical questions are not allowed.

Miss AGNES C. MACPHAIL (Southeast Grey): I want to ask the government if in the face of the continued and ever increasing distress in Cape Breton they intend to calmly sit here while really thousands of people remain hungry?

Hon. J. A. ROBB (Acting Minister of Finance): The government have had no further word from Cape Breton, and I can give my hon. friend no other answer than that given by the Prime Minister, that we shall await a report from the premier of that province.

INQUIRY FOR RETURN

On the Orders of the Day:

Mr. D. F. KELLNER (East Edmonton): On the 19th of February an order of the House was passed for a return in connection with a question standing in my name. I should like to ask when I may expect that return. It related to the cost of acquiring land at Buffalo Park at Wainwright, and the total cost to date of Jasper and Buffalo parks.

Hon. CHARLES STEWART (Argenteuil, Minister of the Interior): I have not received the information from my department that my hon. friend has asked for, but I shall at once take up the matter with the officials and ask them to hasten the return.

THE BUDGET

CONTINUANCE OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE.

The House resumed from Tuesday, April 6, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. WILLIAM IRVINE (East Calgary): Mr. Speaker, at the time of the adjournment last night I was in the act of trying to balance the budget, a new kind of budget, a budget which shows a huge expenditure of promises, offset by a meagre income by way of fulfilment. During my attempt at balancing this budget I was interrupted by the Minister of Labour (Mr. Murdock), while quoting a plank in the platform of the Liberal party made at the last election as an appeal to labour. The interruption was caused by my quoting clause 7 in the first half of the platform, which says:

7. The principle that men and women should receive equal remuneration for work of equal value.

The Minister of Labour said:

Does my hon. friend not know that neither this government nor the preceding government has had any authority in fixing the wages of civil servants, that authority being entrusted under a specific law to a commission which has exclusive jurisdiction in the matter?

Now I understand that while the government may not have full authority as the Minister of Labour suggests, it must of necessity, according to the act referred to, give its approval to any proposal which the commission might make. If there are women civil servants who are not receiving the same salary as men in the civil service, has the government had any communication whatsoever with the commission in regard to that? Has the government made any effort at all to remove any such discrimination, if such discrimination exists?

I have one more suggestion to make in this regard: Supposing that what the Minister of Labour says is correct—namely, that the government has no authority to deal with the salaries of civil servants because of a certain act—has not the government full power to change that act? Why not bring in an amendment now to this particular act limiting, if necessary, the power of the Civil Service Commission, or giving the government such power as the Minister of Labour thinks it ought to have?

I referred last night to the different accounts given by the various members of the cabinet at different times in this parliament as to the condition of the health of the nation. I showed that the government presented a picture which was suitable to the aims which it sought to gain for the moment. I would say that the government has applied the same

kind of reasoning to the balancing of its budget. As a matter of fact it has over-balanced the budget. It has balanced a certain expenditure over against a problematical income. It has ignored huge liabilities of the government in the case of the National railways merely in order that it may be able to make a pretence of balancing its budget. Now in view of the fact, Mr. Speaker, that there are some hon. gentlemen to follow me who would like to complete their speeches and get away for the Easter holidays I am not going to go into the details of the budget as I had prepared to do. As a matter of fact it is really unnecessary for me to do it, because other hon. members already have done so, and I have no doubt that many who will follow me will also deal with the budget in detail.

There are two main questions with respect to the budget that I want to comment on. I think that I may divide the main features of this budget into two questions. First, how can expenditure be reduced; is there any possible way by which we can further economize? The next question is; how is the revenue required to be raised? These are really the sum and substance of the budget. With regard to the first question—how can we economize?—while the government has protested time and time again its anxiety to economize, it has not told the people very frankly that the major portion of the public expenditures is really composed of fixed charges and that the largest item of the fixed charges is interest and that it cannot be reduced; no amount of economy by this or any other government can reduce that charge. The only way that that charge can be effectively altered would be to make some alteration not in the fiscal policy in so far as it applies to the tariff, but to make some such fundamental change as the control of public credit and finance.

How is the revenue to be raised is the next question? This brings us to the most contentious of all questions that arise in discussion of a budget, and that is the question of tariffs. At the present time we raise our revenue by tariffs, income tax and sales tax chiefly. Here I would just stop for a moment to protest against the whole system of taxation that is applied in Canada at the present time. It is a duplication, it is unjust, it is expensive. Let me say further that I do not believe that there is any system of taxation which will ever solve the basic economic problems. The tariff is first of all as it is applied in Canada a means of collecting revenue. Secondly it might possibly be utilized as a protective agency to protect our industries; but I do not see how we can effectively do both at the same time. For if we had a tariff that was sufficiently high to protect our industries it appears to me that it would not be a very good revenue producer. If, on the other hand, we have a tariff that is good at producing revenue I fail to see how it can be a protection to industry. I have just said that I do not regard the question of tariffs as being fundamental, in fact I do not think that any fiscal policy is fundamentally an economic question. I readily admit that any fiscal policy will have an effect upon the industrial life of the country. It will have an effect like the weather would have on one of the Petersen ships coming across the Atlantic say; if it blows hard it will retard the ship somewhat but it will likely get across; if it is a fair wind it can help her to make a more speedy passage. And so with the ship of state; the fiscal policy may retard a little or may increase the speed, but the fiscal policy is not a fundamental driving force. The tariff is the most contentious question however. It is in Canada of major importance in politics; it is universally, I think, of minor importance in economics. We have found that in Canada no party really stands for the abolition of a tariff. It is used by all parties largely as a means of producing revenue; and as I have just pointed out if the Conservative party were to carry its principles to their logical conclusion, as I understand it, we would have a protective tariff so high that it would not yield any revenue. If, on the other hand, the Liberal party were to take its own programme seriously and carry it into effect we would have free trade ultimately and consequently could not look to a tariff for any revenue. I am not charging the Liberal party, of course, with any free trade inclinations; but if ever it did have them, it has not furnished the country with any substitute proposal for collecting revenue. It seems to me that that is just one of the chief weaknesses of the Liberal party; it claims that it wishes to make towards free trade, but finding that it has no other means of collecting a revenue it just keeps on with the same old tariff in order to be able to balance the budget at the end of the year. It appears to me that the tariff as it is fixed now is possibly at the best level for producing revenue. If we had a Conservative government it would not raise the tariff very much higher providing that it aimed to use the tariff as a revenue producer. The present Liberal government, that has professed to revise the tariff downwards, will not revise it downwards very much more because if this were done the income would be depleted. And so we have a tariff fixed, as it appears to me, at that point

where it can produce the greatest amount of revenue. That is my view of the question.

We have therefore the worst evils of both systems in force in Canada at the present time. That is to say we have the worst evils that could come from partial free trade, the worst evils that could come from partial protection, and we have not obtained the inherent virtues of either of the philosophies that underlie this practice. Let me be a little more plain in what I mean by saying we have the worst evils of the two systems. As I have pointed out the tariff is not low enough to cheapen goods. That has been the claim of the Liberal party—that it wanted to reduce the tariff in order to reduce the price of goods to the consumer. But the tariff is not low enough to do that; on the other hand it is not high enough to be a protection to our industries. Everyone will agree that, in so far as it is a collector of revenue, it is a most expensive system. It has been estimated that by this method of collecting revenue three or more dollars go into somebody else's pocket for every one that goes into the treasury. It is not only a very expensive way of raising money, but it appears to me to be a very unjust way, and I think the agricultural industry more than any other bears the burden of the present system of tariff taxation. Next to the farming industry comes the average man or woman, the consumer, who may not be engaged, perhaps, in a protected industry at all, but must pay an extra price for all protected goods. So that taking the tariff as it is today, this tariff that has been described as a moderate tariff is the most pernicious kind of a fiscal policy that any country could have. I wish to make the assertion that in my opinion the country can accommodate itself ultimately to any fiscal policy, providing that fiscal policy is stable. I think that a statement similar in character to that which I have just made was made in the budget debate in the British House of Commons by the former Premier, Lloyd George, just a few days ago. If further proof that a country can survive any fiscal policy were required, I would refer hon. members to Germany and to the United States. These countries have managed to survive, notwithstanding the fact that they have high protection. Next I will take you on the other side to Great Britain, as furnishing, I believe, the best example of a free trade country, and even Great Britain has managed to survive under free trade. But if you want the main outstanding example of all, I would point to Canada. Canada has been able to survive the worst kind of fiscal policy, a fiscal policy which I say is neither one thing nor another. It is neither hot nor cold. The fiscal policy which we have now has been described as moderate. I think I can recall the former leader of the Progressive party (Mr. Crerar) referring to the tariff as an immoral thing. Now we have a moderate tariff, but if it is an immoral thing, let us be done with it. If it is not an immoral thing, let us use it; but as it is now I say it is a most unjust thing and a most expensive method of raising the revenue of the country. It does not protect the industries. It does protect the manufacturer; that is to say it gives him an opportunity of charging a higher price for his goods, but it does not protect the industries, because it is never high enough to make them secure from the competition of the other countries. So that that is the tariff which we have now.

My contention then, Mr. Speaker, is that we must have one thing or the other. I am prepared with those hon. members opposite, to have free trade, if they are so prepared. But I think if any proof were needed more than we have had in the past we have it this year that they are not quite prepared to give the free trader anything approximating free trade. They are not even thinking about it, and I am not going to play "pussy wants a corner" with any government. If they are sincere about it, I am willing to give it a trial, because I believe if there is any science in government it must be experimental. But Canada has never experimented with anything like free trade, and seeing now that there is no opportunity of even having a chance to experiment with it, I turn away from it to try some other experiment. I am not going to fool with it at all. The tariff as we have it now reminds me of that fable which speaks of a donkey starving to death standing between two haystacks. But remember, Mr. Speaker, that was merely a fable. A donkey would have more sense than that. Here we are with our tariff policy; no one seems to want to make it any lower, but simply to keep it as it is, destructive and stupid. Still we stand there. That is the reason why I am turning from that policy.

That brings me to the question asked by two hon. members to my right last night. They asked, why did I last year vote for a policy making towards free trade, while on this occasion I have indicated my opposition to a budget that was somewhat similar? That is a fair question and I want to take a little time to answer it. I want to make quite clear the attitude that I have assumed, whether it be right or wrong, on the question of tariff. I have just stated that I personally and the labour people whom I represent do not look

upon the tariff as being of fundamental and economic importance. In this we may be mistaken, but that is the attitude we take. Therefore I had no tariff platform at the last election. I was elected on an entirely different platform. The very first and most important point in my election—in fact it was the only thing—was that I was elected as a representative of labour, and that I was to consult with them from time to time as to their attitude on public questions. That was the only plank in my platform. I have just consulted with labour on this point. I did not fail to make inquiries of the Trades and Labour Council of Calgary and did not fail to make inquiry of the Labour party of Canada as to the attitude I should adopt on this question and I received their instructions. I am their delegate. If I cannot out of principle obey their instructions I should resign. But having the conviction myself that the question of the tariff will not solve the labour problem, having the conviction that we ought to try the one thing or the other, namely, free trade or protection and not something that is half way between them both, my course seems to me to be clear. Last year I still had a faint hope that there was a strong party in this House that stood for ultimate free trade, and that they were willing to take a step towards getting that free trade, and so when my hon. colleague brought in the resolution pointing that way I hoped, in fact I never doubted at that time, that that programme, being the programme of the Progressive party, would be supported by every one of them, and that it would be a challenge to the government that the next budget that came down would have to be a budget making towards free trade. For that reason I voted for it, because I am willing to try free trade if anybody else is. But this year, finding that nobody wants free trade, that nobody is even looking towards free trade, and realizing as I do that the tariff as it now stands is an objectionable thing, I turn my eyes towards the other side, and I ask, what has protection to give? Is protection going to be as timorous in its policy as free trade has been? If it is I must turn from it also. But at present I do not know that it is. There is the answer to the question my hon. friend put to me last night.

Mr. GARLAND (Bow River): My hon. friend has claimed that there is not a single member in this House who is directing his attention towards free trade. I desire to assure my hon. friend that my allegiance to that principle has not been departed from as far as I am concerned.

[Mr. Irvine.]

Mr. IRVINE: I am very glad to hear the confession of my hon. friend. I should have said that no party in this House stood for free trade. If I said "no individual," I did not mean that. I believe there are still a few individuals who keep their first love burning bright, and all honour to them. I can understand them. But there is no major party in this House that seems to have any idea of standing for free trade.

Now I turn to the question of protection.

Mr. SPEAKMAN: The hon. gentleman has been answering a question I put to him last night, and I must confess he has not as yet made it clear to my mind by what course of reasoning he arrives at this conclusion, that it is a mark of sanity and consistency on his part to oppose a budget which he characterizes as the same in essence as the one he supported last year, and still considers that it is ludicrous in fact on the part of other members of the House to follow the same course, when these other members may also have discussed the matter with their constituents?

Mr. IRVINE: I did not undertake to make my position clear to my hon. friend. I undertook to express it in the hope that it would be clear to all hon. members in the House. The difference between my hon. friend's party and myself is this, that last year I voted the platform of the Progressive party and the Progressive party voted against it.

Mr. SPEAKMAN: Not all of them.

Mr. IRVINE: I did not say all of them. The Progressive party voted largely against that proposal. I turned away from the hope of getting free trade when the only party which had given any indication of standing for it threw it overboard. If that, with the explanation which I have given as to my relations with my constituents, the platform upon which I stood when elected and my personal views, is not sufficient to convince my hon. friend of my position, then I shall have to leave that for a later date.

Mr. EULER: I should like to be clear whether the hon. member is himself in favour of free trade or of high protection. He has not made that clear. Perhaps my question is premature.

Mr. IRVINE: I have made it clear, I hope, that I think no fiscal policy, economically considered, is of any great importance. My next point is, as I have tried to establish, that a country will survive any fiscal policy whatsoever; but the one that we have now is the worst kind of a policy, because it is half way

between free trade and protection, and it gives us the worst element of both. I am willing to try either of these. I am willing to try free trade.

Mr. EULER: Which does the hon. member prefer?

Mr. IRVINE: I do not know because free trade has never been tried. If my hon. friend is so convinced that free trade is a good thing, why does he not give it to us?

Mr. EULER: I did not say that.

Mr. IRVINE: If he is convinced that protection is a good thing, why not raise the tariff to that point? It is all very fine to talk in this way. If I believed in free trade and was Prime Minister of this country, I would take a chance at it. If I lost out, I would at least teach a lesson in history to all that would follow me. But to sit here and talk about free trade and take every opportunity of evading it—

Mr. EULER: As the hon. member is doing now.

Mr. IRVINE:—I cannot stand that kind of policy.

Mr. KELLNER: Who is the hon. member's authority for quoting the Progressives as being a free-trade party?

Mr. IRVINE: I have their platform here which I did not read last night

Mr. KELLNER: The hon. member will not find it in their platform.

Mr. IRVINE: If the Progressives never looked towards free trade in the hope of getting it I must apologize to them for having misrepresented them. In that case, I would not have needed to trouble to answer the question of my hon. friend. If the Progressives never looked toward free trade, they certainly have no dividing point at all between them and the other side of the House and they never could have had any. But I had assumed that there was at least that semblance of a difference between the Progressive party and the party to my left.

Mr. KELLNER: I should like to suggest that my hon. friend would fit into almost any corner of the House.

Mr. IRVINE: I might retort, if I wanted to adopt that kind of recrimination, that I do not think my hon. friend could fit into any corner of the House, but I do not wish to stoop to that kind of argument. I am not saying anything against the Progressive party that they have not said against themselves. I am not more unkind to them than they have been to themselves. I am trying simply to represent what they have done. I would have given them the credit of being a little different in their principles and policy from the party in charge.

Mr. GOULD: So we are.

Mr. IRVINE: I seem to have made a mistake in that assumption.

Mr. FORKE: I would like to suggest to the hon. member that if the course of the Progressive party has led him to dissociate himself from that party, that is not altogether without its advantages.

Mr. IRVINE: I am very glad the hon. member recognizes the advantages which accrue to me from that separation. I will now turn to the protective alternative. In this connection I want to put to the leader of the opposition (Mr. Meighen) the questions which I intimated last night I would put. The first thing I want to do is to repeat the question I asked last night: Does the Conservative party really mean to give us a policy that will be a protection to industry. I do not think I could say that the Conservative party in the past has succeeded in doing that. I will readily admit that it has always been a little more sincere and honest than other parties, because it has consistently stood for high protection. But I do not think it has ever given protection high enough to protect industry. I want, therefore, to know whether it is the intention of the leader of the opposition to pursue a policy which would result in really protecting Canadian industry.

Mr. HOEY: Is there any merit in standing for protection if the party does not carry it into effect, any more than in standing for free trade if the party does not carry it into effect?

Mr. IRVINE: I do not think so. That is why I am asking this question. The next question that I wish to put before the leader of the opposition is this: In the event of his giving us a protective policy that will protect our industries, will that not result in wiping out the revenue which is now being raised by the tariff as it exists at present? How will the leader of the opposition raise the revenue in the event of having placed upon Canadian industries a protection that will adequately protect them? The next question, and one that I think is more important to labour and, perhaps, the farmers than the others, although it arises out of the other two

questions, is this: Will protected goods, that is, goods manufactured under a protective policy, be sold to the consumer in Canada at a price that will be equal to that for which those goods might be bought in other countries? If that is the policy that is to be followed, I should like to know next how the leader of the opposition proposes to prevent protected interests from exploiting the masses of the consumers. In asking these questions, I do not think that any of them is unanswerable, and I hope the leader of the opposition will answer them. I am quite sure he will not side-step them; at least I have never known him to side-step any that I have ever asked him. If we cannot have a protective policy high enough to do what protection should do and if it is impossible to protect the consumers of Canada under such a policy, I think we shall have to scrap both policies. I believe, however, it might be possible to raise tariffs to such an extent that it would be prohibitive to bring goods into Canada. In that case, we would certainly protect the Canadian market, and in doing so we would pass some of the benefits on to the workers of Canada. At the present time, all the benefits of the protective tariff go to the individual manufacturer, but it leaves no protection to labour at all and the consumers generally pay the increase in the price. If we are going to have a protective policy—and I see we are not going to have a free trade policy—I would ask the exponent of that protective policy to tell us how high it is going to be, how the revenue is going to be raised, and how the exploitation of the Canadian public by a few protected industries is to be prevented?

Mr. PRITCHARD: May I ask the hon. member a question? He seems to be much interested in the question of unemployment. If he gets what he wants in the way of a high tariff policy, which will have a tendency to draw all the employment to a particular industry, how will he prevent unemployment when all the workers go to that industry and there will be no work anywhere else?

Mr. IRVINE: I am not sure I got my hon. friend's question. To begin with, I was not at the moment advocating a high tariff, neither was I presenting it as a solution of unemployment. But if I got his question at all, it is this—and he will correct me if I do not fairly express the idea he had in mind: where an industry was protected there would naturally be an increase of work in that particular industry because of the guarantee of the Canadian market, and that would draw a number of workers to that industry—so many that they would ultimately become unemployed. But I do not see that that is very good reasoning, because if workers come from other industries and are subsequently not required they can go back and get the jobs they had before. I do not quite see my hon. friend's point.

Mr. PRITCHARD: How will you protect the farmer, who has to compete in the open market? He will have to quit the business.

Mr. IRVINE: If I were the exponent of the protective policy I would say how the farmers would be protected. The farmer is the most heavily burdened in Canada to-day, and whether you go toward free trade or protection his burden will have to be relieved in some way. It has not been relieved by the government in power. The farmers think their way of relief lies in free trade or toward free trade—in making a bow to free trade, if you do not want to get any nearer than that. But under present conditions there is not even a courtesy made to free trade. Then if we had to turn to the other policy it would be part of the duty of the exponents of that policy to tell us how they were going to relieve the burden of the farmer, how they were going to protect the farmer. That is a question which I pass over to the chief exponent of that policy.

In conclusion, Mr. Speaker, I want to deal with a point which seems to me to be much more important than the tariff. I think it will be agreed that more and more the question of credit and finance is rising to the position of paramount consideration in all countries. The evidence of this comes from France just a day or two ago; I shall not quote the despatch but I merely refer to it as bearing out my point that the question of the control of credit and of proper financing is becoming increasingly important. In a despatch of April 6, I note that Premier Herriot of France is asking for an increase of some two billion francs in the circulation of money, and is making it his policy to impose a capital levy of ten per cent. I do not know what the details of either of these policies are, nor do I say that either of them is the right policy. I do say, however, that the fact that he is going to risk his government on a question of finance is proof to my mind that this question is becomnig a vital one for all nations to consider.

The government are talking a good deal about prosperity. Sometimes they have found it to exist; sometimes they are only confident that we are going to get it. But surely they will agree that there can be no prosperity in

any country while a large percentage of its plant equipment is lying idle. There can be no prosperity in any country that lives largely on wages when a large percentage of the population are unemployed. There can be no prosperity in a country where the plant equipment and natural resources are unused. But how are we going to start these factories and get the men to work and utilize our natural resources? Some say we will do it by a certain kind of tariff policy. It may be so; I do not think so. But I believe it can be done by a proper arrangement of national credit. So I make the suggestion to the government that they take one step in this direction; let the government begin by testing out this suggestion in a small way. At present the government hand the credit of the country over to financiers and borrow it back from them at a high rate of interest. Our interest account to-day amounts to nearly $200,000,000, which is more than comes in by the tariff. The government can save that much by proper financing. Let them begin by financing the next year the $400,000,000 or so that is required to meet the current expenditures by issuing that amount on the strength of the national credit instead of borrowing it from New York or some other p'ace. Having issued such credit instruments as may be required, they could balance the account at the end of the year by taxing to the extent of the amount issued. There will be no inflation then—not any more than if they sold bonds; and they will save the entire amount they would have to pay out in interest. And I suggest that when they do their taxing they do not go to the sales tax or to the tariff or even to the income tax, but that they try out the single tax and see what the results would be. The single tax has at least the virtue of simplicity and of fairness. It would be required as much under a protective as a free trade policy as in either case revenue would be required. I will not expound that system of taxation, because I believe the hon. member for Brant (Mr. Good), who is the best exponent of it in this House, will be dealing with the question when he speaks on the budget. But I suggest that as one method of taxation that is better than either that is in use at present.

Sir HENRY DRAYTON: Will the hon. gentleman allow me a question? I do not want to trouble him about it if he does not want to go into it, but perhaps he has considered it. He suggests we are to raise $400,000,000 by issuing that amount of legals and we are to get that back by the single tax. Is it my hon. friend's idea that that should go on year after year?

Mr. IRVINE: I do not see any reason why it would not, because that would be a case where the budget could be balanced. If $400,000,000 of new credits were issued and $400,000,000 were collected by taxes the one would balance the other at the end of the year, the country would be in the same position as when it started and could proceed to repeat the process. What would be the difficulty in continuing?

Sir HENRY DRAYTON: My hon. friend will see that the next year you would have to get $800,000,000, because you would have to get back the $400,000,000 of credits that were issued as well as get the $400,000,000 of the next year's taxes.

Mr. IRVINE: No, the $400,000,000 originally issued would be put in the waste paper basket after you taxed it in, and you would issue a new $400,000,000.

Sir HENRY DRAYTON: Yes, but that is not the point. It has to be brought back by taxation. In the first year there is just $400,000,000, but the expenses of the country are going on, so you have that $400,000,000 and then you have the $400,000,000 of paper which has also to be brought back, which would make $800,000,000 for that year.

Mr. IRVINE: No, the $800,000,000 basis is the basis of present day financing. I can quite understand the reasoning of the former Minister of Finance (Sir Henry Drayton), but just right at that point is where the difference comes in. That is what we are doing now. Every year we are increasing our debt and our interest just by that method, and there is nothing that can prevent this or any other country that is following such a system of finance from arriving at disaster ultimately. There is no use trying to camouflage that fact.

Now, Mr. Speaker, I do not wish to detain the House further. I hope, however, that more and more this parliament will come to the conclusion that fiscal policies are minor matters, compared with such questions as control of national credit, properly controlled finance, control and development of industry, and looking after our means of transportation, the correct solution of these questions is what will bring prosperity, not taxation. I do not suppose that any country can possibly tax itself into prosperity.

Mr. GARLAND (Bow River): May I interrupt my hon. friend with regard to the $400,000,000 of expenditure? We will assume that

the Acting Minister of Finance (Mr. Robb) is now proceeding to raise the revenue to meet expenditure for the coming year, say, $400,000,000. The plan of the hon. member, I take it, is that the minister shall also at once commence taxation with a view to retiring that total of $400,000,000 by the end of the year; therefore there would not be $400,000,000 in arrears when the year closed.

Mr. IRVINE: The hon. member has got my point exactly. I do not ask that we do anything different from what the government is now doing, only instead of borrowing what is required for current expenditure from any body on our credit, my suggestion is that we simply use our own credit. The government is doing the same thing now—it is retiring the paper that it is going to issue. That is all it would have to do under my suggeston.

An hon. MEMBER: They would save interest.

Mr. IRVINE: Yes.

Mr. A. B. HUDSON (South Winnipeg): Mr. Speaker, this session, as usual, the discussion on the budget has largely centred around the tariff; and that, I suppose, is inevitable. I propose therefore to follow up the discussion, but in a somewhat different way from that which has been adopted by most members up to the present. Appeals have been made to the authority of political economists and to the experience of other countries, but very little has been said about the experience of our own country. It is with that experience that I propose to deal. In 1868, the first year after confederation, the total external trade of Canada was $129,000,000, largely with the United States and the United Kingdom, just as it is now. At that time the tariff on all imported goods, whether free or dutiable, averaged 13.01 per cent. It fluctuated slightly but for the most part remained at about that figure until 1879. During the years following 1868 our external trade steadily increased; there were fluctuations, but on the whole the trend was upward until 1878 when it totalled $170,000,000. That year was a period of great business depression, and in 1879 our external trade dropped to $151,000,000, which was much lower than the average during the preceding ten years.

4 p.m.

Now, the depression of 1878 began in the preceding year and continued through 1879, and naturally the people became uneasy; unemployment was general, industry ceased to operate, and large numbers of Canadians went to the United States and elsewhere. Our population in 1871 was 3,689,257, and the increase during the decade was 635,553, making the population in 1881, 4,324,810. I have no means of ascertaining what the loss of population was by emigration; no doubt it was substantial, as it was before and as it has been since. But the public men of the time turned their attention to what they thought might be remedies for the situation, and in March 1878 Sir John Macdonald moved in the House of Commons an amendment to the budget, which was read by my hon. friend from Brome (Mr. McMaster) the other day, and which I should like to read again:

> That the Speaker do not now leave the chair but that this House is of the opinion that the welfare of Canada requires the adoption of National Policy, which by a judicious readjustment of the tariff will benefit and foster the agricultural, the mining, the manufacturing and other interests of the Dominion: that such a policy will retain in Canada thousands of our fellow countrymen who are now obliged to expatriate themselves in search of the employment denied them at home; will restore prosperity of our struggling industry now so sadly depressed; will prevent Canada from being made a sacrifice market; will encourage and develop an active interprovincial trade; and moving as it ought to do in the direction of reciprocity of tariffs with our neighbours so far as the varied interests of Canada may demand, will greatly tend to procure for this country eventually a reciprocity of trade.

Now, that is precisely the proposal which is suggested as a remedy for the existing situation in Canada.

Mr. GOOD: I should like to ask my hon. friend if the Conservative party is advocating reciprocity at the present time?

Mr. HUDSON: I was going to note that exception. My hon. friend is quite right.

Mr. GOOD: A notable exception, is it not?

Mr. HUDSON: Yes. The situation which then existed, the Conservative party claimed could be remedied only by putting up a high protective tariff, and it is the situation which they say exists to-day and can be remedied only by adopting similar means. Sir John Macdonald said further: We think reciprocity with the United States is a good thing, but we cannot get reciprocity unless we have a club to hold over the United States, and therefore we are going to raise the tariff. That is precisely the position which my hon. friends opposite take now. They do not say that they want reciprocity; they say they want to have a club to hold over the United States. Sir John Macdonald in the course of his statement in support of that amendment used almost all of the arguments which have been used by hon. gentlemen in this House during the present debate in support of a raising of the tariff for the purpose of remedying the

existing conditions. Sir John Macdonald and his colleagues came into power as a result of the election in the latter part of 1878, and in 1879 they proceeded to implement their promises. They passed a new tariff law, which was said by those supporting it to be for the purpose of protecting and encouraging industries, to keep men from going to the United States, and to cure unemployment.

Following this tariff of 1879, there was, of course, a period of adjustment. Business did improve. The depression which had existed in 1878 and 1879 passed away, both in Canada and elsewhere.

Mr. GOOD: Does my hon. friend attribute that to the tariff?

Mr. HUDSON: Certainly not. If my hon. friend will be patient for a moment he will see where I am coming to. Business did improve for several years, and by the year 1883 the total external trade of Canada had increased to $221,000,000. It had been in 1878, as you will remember, $170,000,000, and by 1883 it had increased to $221,000,000; that is, the depression was over, and some improvement had taken place.

Now at that time the average tariff on all imports, dutiable or otherwise, was 19.1 per cent; that is, there had been an average increase of tariff of 5 points from the tariff of 1878. It remained during the time from 1883 onwards to 1896 at that point or thereabouts, 19.1 to 19.2. That being so, let us consider whether or not this changed policy had the results which its authors anticipated.

Mr. LADNER: Might I ask whether the hon. gentleman is taking the average duty on all imports, or just on dutiable goods?

Mr. HUDSON: On all imports.

Mr. LADNER: Because he will find the average duty on dutiable goods imported into Canada was in 1870, 20.9 per cent, whereas the hon. gentleman's figure was 13 per cent. In 1880 the average duty on dutiable goods was 26.1, and in 1890, 31 per cent. It makes quite a difference whether you are taking the average duty on all goods or on dutiable goods only.

Mr. HUDSON: If my hon. friend has listened carefully, I stated very specifically that I was giving the percentage on all goods, dutiable or otherwise. My percentages are based on the entire imports, that is the percentage computed as if the total amount of duty had been paid on the total amount of imports. Now during those thirteen years the entire external trade of Canada increased from $221,000,000 to $231,000,000; that is, in thirteen years there was an increase of only $10,000,000. During those thirteen years the western wheat and the western cattle had come into the market for the first time. In 1883 there was no western wheat of any account moving eastward, certainly none being exported worth mentioning. In 1896 there was a substantial amount.

Mr. MEIGHEN: Before the hon. gentleman can have any argument complete, he would have to give us the figures of home trade and home production for the same time.

Mr. HUDSON: I am saying, as my right hon. friend must know, that a very considerable amount of western wheat was going to England at any rate by 1896. Now that was a new factor in the economic situation in Canada. I have not the figures to say just how much, but it is a factor which should be considered. There was an increase of $10,000,000 in the external trade of Canada in those thirteen years. That is what happened under this policy. Now it is perfectly true that that does not deal with the situation in Canada itself. We do not know from that whether the people in Canada were happy and prosperous or not. Some gentlemen who lived here at that time and who remember it may be able to say. But there is another factor which may be considered, and that is whether or not people stayed here.

Mr. LADNER: May I ask the hon. gentleman if he happens to have read the speech that Sir Leonard Tilley delivered in presenting his budget of 1882, in which he describes in great detail the very factors which the hon. gentleman has alluded to, and explains with figures the prosperity of the country, prices, labour, production, and the revenue that existed at that time.

Mr. HUDSON: I have not read the speech my hon. friend refers to, but it may be the Minister of Finance at that time had very rosy views as to what would happen. I have referred particularly to the period from 1883 to 1896. That is what I am dealing with now, and during that period let us see what the people who came to Canada and who lived here did.

In 1881 the population of Canada was 4,324,810. The natural increase we have not definite statistics on, but I have taken the estimated percentage used by the chief statistician for the years from 1901 to 1911, and that is a conservative percentage, because with a smaller population and a larger proportion in rural areas, the increase would be greater; but

taking the same percentage, the natural increase would be 648,621. Now the immigration into Canada during that period from 1881 to 1891 was surprisingly large, according to the statistics which were kept by the department of the then government. According to these statistics the immigration amounted to 886,177, making, if those people had all stayed in Canada, with the natural increase, plus the immigration, and the original number who were here, a total population at the end of 1891, when the census was taken, of 5,859,508.

Mr. GOOD: Before my hon. friend passes on, he means by the natural increase, I suppose, the excess of births over deaths?

Mr. HUDSON: Yes. Now according to the census of 1891, the actual number of people we had in Canada then was 4,833,239. That means that during those ten years when this high protective policy was in force there was a loss of population of 1,026,000. That was at a time when we had less than 5,000,000 people in Canada. That means that one person in every five that we had in Canada during that period left. Why did they leave? It may be that these figures as to immigration are not correct, but they are the figures taken from the government's own publication at that time. The loss of population during the years 1891 to 1896 cannot be calculated with any certainty, but it seems to have been in the same ratio. There was a further fact: Although we had considerable immigration from 1881 to 1891 even immigrants ceased to come here, because in 1896 we got only 16,000 new people. In that year there was an election as a result of which a new government was returned whose policy was that of reducing tariffs; and what was done in that respect I will say just in a moment. The average rate of duty on all commodities in 1896 was 19.2. In 1897 it was 18.7; in 1898 it was 17.5; and in 1911 it was 16.2.

Now let us take the trade. The trade of Canada in 1896 amounted to $231,000,000. In 1897 it was $249,000,000; in 1898 it was $294,000,000; in 1909 it was $559,000,000; and in 1911 $759,000,000. There is one curious thing to note here and that is in regard to the British preference. The British preference was part of a policy which was inaugurated in 1897 but in a large way it did not have very much effect; the amount of goods which we bought from England in 1896 was precisely the same amount as we bought in 1898, the reason suggested being that goods were so cheap in England prior to 1896 that we were buying all that we required of the kind of goods which Great Britain supplied. In 1898 imports from Great Britain did increase fairly steadily, but not in the same proportion as from the United States. The population of Canada in 1901 was 5,371,315. It increased to 7,296,643 in 1911, a net increase of 1,835,328. The chief statistician makes an estimated loss by emigration during this period of 865,889. That is all I wish to say about that period.

In 1911 we had another election, and we decided that we would have "no more truck or trade with the Yankees." Our total trade with the United States in 1911 was $388,000,000 In 1913 it was $575,000,000; and in 1914, $573,000,000. The war intervened then and the trade of Canada during the war was abnormal so it does not seem to me that we should spend time discussing it.

Mr. MEIGHEN: Is the hon. gentleman arguing that the increased trade from 1896 to 1911 was due to reduced tariffs?

Mr. HUDSON: If my right hon. friend will wait a minute he will learn all that I have to say in that regard.

Mr. MEIGHEN: That is pretty well dodged.

Mr. HUDSON: The question will not be dodged; I am quite ready to answer my right hon. friend. In 1923 the total trade of Canada had reached $1,733,000,000. Of this $918,000,000 was with the United States and $520,000,000 with the United Kingdom. In 1924 the total was $1,938,000,000; with the United States $1,031,000,000 and with the United Kingdom $513,000,000. Thus it will be seen that we buy from and sell more to the United States than any other country. The average duty in 1922 was 16.2; in 1923, 16.7; and in 1924, 15.1.

Mr. HOEY: That represents our total imports dutiable and otherwise?

Mr. HUDSON: Yes, certainly. I repeat again that the percentages I have used are the percentages of the total imports and not merely of the dutiable.

Mr. MEIGHEN: Then the hon. gentleman should also say that the duties were not lowered by a single fraction of a per cent as respects the United States; that is where the increases took place.

Mr. HUDSON: I do not know how much the duties were reduced; I do know that there was a relaxation in trade restrictions, taking the whole field, to the extent that I have mentioned.

Mr. MEIGHEN: No, just in part of that field.

Mr. HUDSON: No, taking the whole field.

Mr. MEIGHEN: No, just in part of the field; no increase there at all.

Mr. HUDSON: To summarize what I have said: In the first period, that is from 1868 to 1878, there was what was then called and what might still be called a revenue tariff, and there was a substantial increase in population and a moderate increase in trade. During the second period, that is from 1878 to 1896, there was what was called the protective tariff—what was adopted designedly as a protective tariff. During that period there was a small increase of population and an immense emigration, and there was stagnation in external trade. During the third period there was a slight lowering of tariffs, an immense increase in immigration and a very large increase in external trade. The fourth period is the war period with which I will not deal in detail. Now, my right hon. friend says "Do you mean to say that the slight decreases in the average duties in 1897 or 1901 had the effect of creating this immense increase in trade, this immense immigration?" I say that taking the figures as they stand alone I do not contend that it does. I do say this though, that one can easily underestimate the effect of a very slight marginal change in the price of a commodity. Sometimes a very slight change makes a tremendous difference in trade. My right hon. friend is probably familiar with the marginal theory of the mathematical economists.

Mr. MEIGHEN: My point, which I think the hon. member grasped, was this—that the increase of which he boasts took place with a country as respects which there was no decrease of duty at all; on the contrary there was a slight increase in duty.

Mr. HUDSON: I do not see that. You cannot take trade with one country alone; you have got to take trade with the world if you are going to estimate the effects of tariff changes.

Mr. MEIGHEN: You cannot do that. If as a matter of fact the trade which we have with one country comes under a lower tariff while the trade which we have with other countries is under a higher tariff you get nowhere at all by lumping the results together.

Mr. HUDSON: Certainly you do. I will leave with my right hon. friend the result of the facts I have given him. As I say, I do not contend that these changes in tariff were responsible for all the results. All that I say is that at any rate, at the very least, the effect of those tariff changes was not to depress trade. What was the cause of the increased trade and increased immigration, apart from tariff? There are only two other causes that I can think of. The first is that there was a very vigorous and able administration in Canada. The second is that the world conditions were such that they encouraged the investment of large capital in Canada and therefore immigration to Canada.

That is all I wish to say in regard to tariff; but now our external trade has become more important to us than it ever was. Canada has become in trade matters a world nation, and one of the great nations of the earth, in regard to international commerce. From 1868 until 1916 our trade balance was continually against us, with an aggregate of two billion dollars. That meant that we were borrowing money in immense sums and were not even paying interest. So that now the aggregate debt of Canada to the outside world is variously estimated at from three and a half billions to five billions of dollars. That means that we have an immense interest bill to pay to the outside world, and how are we going to pay it? Heretofore, or prior to 1916, we paid it by borrowing more money. We cannot do that now. We have got to a point where we cannot afford to do it. We have to pay our interest bill. We have a mortgage on the farm and have to pay our interest bill out of our earnings, and we are doing it this year—probably we may do it in the future—by virtue of the farmer, the forest man and the fisherman. They are the people who are supplying us with eighty-five per cent of our external trade, and they are the people we have to consider in the future. We have got to have industries in this country, it is true, but we have got to have industries that can do a little more than pull their own weight in the boat. We cannot afford to have industries that can only survive by artificial support.

Mr. MEIGHEN: What does the hon. member mean by saying that eighty-five per cent of our external trade is from the farm and the forest?

Mr. HUDSON: Exports.

Mr. MEIGHEN: Exports?

Mr. HUDSON: Yes. I think it is eighty-five per cent. Is that not correct?

Mr. ROBB: I have not the figures.

Mr. HUDSON: Somewhere about that.

Mr. MEIGHEN: It is not. The hon. gentleman must mean goods that have originated

on the farm and have gone through many processes of manufacture.

Mr. HUDSON: It would certainly include flour, butter, and so on.

Mr. MEIGHEN: But included in this class the hon. gentleman mentions alcohol, spirituous liquors and so on.

Mr. HUDSON: After all they do not amount to much.

Mr. MEIGHEN: The proportion of those manufactures would be over half.

Mr. HUDSON: Of the exports?

Mr. MEIGHEN: Of those things the hon. gentleman refers to as from the farm and forest.

Mr. HUDSON: Not at all. I have not the figures here, but I went into that two or three years ago, and the aggregate exports of agriculture, animal products and forest products —that is wood and wood pulp—amounted to eighty-five per cent. Yet the bulk of the agricultural products was wheat and flour, of course. Nearly forty per cent, if I recollect in the year I looked at—

Mr. MEIGHEN: Of the agricultural products, yes.

Mr. HUDSON: And animals and butter and cheese and all that sort of thing. I would include those in farm products.

Mr. MEIGHEN: And manufactured products too. When you add them all in it comes to far more than half of the eighty-five per cent.

Mr. HUDSON: They are in the early stage of manufacture. That stage of manufacture has a direct relation to the farmer.

Mr. MEIGHEN: Every stage has.

Mr. HUDSON: It is not a very direct relation sometimes. My right hon. friend referred to alcohol. I do not know what quantity of alcohol is manufactured in Canada and sold outside. I suppose there are a few million dollars' worth, but in the aggregate it would not be much.

Mr. MEIGHEN: I only give that as an example. There are hundreds of others.

Mr. HUDSON: What I say is that those are the industries. It is the industries that are based directly on the products of the farm and the forest that we have to pay attention to first, and these are the ones that really supply the life blood of our country. We want other industries of other kinds, but they must not be exotic. They must be able to pay their own way, or we will be paying out of our pockets for the maintenance of a luxury that we have no business to have.

Mr. MEIGHEN: For example, what? Can the hon. member give us an example?

Mr. HUDSON: I will say this: that any industry which is not able to support itself in the home market against competition from the outside world, providing that competition is not a dumping competition—

Mr. MEIGHEN: Dumping?

Mr. HUDSON: That is, if it is brought in at normal prices.

Mr. HOEY: Not at slaughter prices?

Mr. HUDSON: No.

Mr. MEIGHEN: The hon. member says that any industry that could not compete against German products, so long as those products are sold here at the prices at which they are sold in Germany should be allowed to die?

Mr. HUDSON: I say that it should not receive any special consideration from this government. I say that there are a lot of things we can do in this country better than any other people in the world, let us do them and let the people of other countries, who can do certain things better or cheaper than we can, do their part.

I should like to say just a word in regard to the kind of industries we ought to have here, the kind that are suitable to our climate and to our products.

Mr. LADNER: Before the hon. gentleman enters on that question, I thought he would touch upon the question of immigration, as to whether he had any idea as to why people left Canada and went to the United States during the period he was referring to. That seems to me to be an all-important question for solution to parliament.

Mr. HUDSON: I cannot do anything more than guess. I presume it is because they have been going into the United States ever since we have had a Canada. Perhaps it is because they had a better opportunity there, or thought they had a better opportunity, or because the lights are a little brighter over there, or the fortunes a little larger, or a hundred and one different things. That is the reason they pull out from here and go there, and the pull was stronger between 1881 and 1891 than at any other time.

Mr. HOEY: Climatic conditions.

Mr. LADNER: I do not wish to interrupt my hon. friend, but I think my question is pertinent to his remark. Does the hon. gentleman know that during the period he is referring to—take for example the year 1880, one of the periods he mentions—while the average duty on dutiable goods coming into Canada was 26 per cent the duty on goods going into the States was 44 per cent, and in 1901, while the average duty on goods coming into Canada was 27.5 per cent the duty was 49.64 per cent on goods going into the United States? My question is this: Would that not have an effect upon the wages and therefore would the reason why the people left here not be that they could get employment and salaries elsewhere?

Mr. HUDSON: I do not know why the Conservative party of that day did not raise the tariff to 40 or 50 per cent, if that were true.

Mr. LADNER: They would not know that fact until after the event.

Mr. HUDSON: They saw those people going away. There are one or two things that I would like to commend especially to the attention of the government. There are many industries that we have in this country and many that we ought to have which are based upon our basic productions, or which we are especially qualified to carry on and which ought to be able to compete successfully with the rest of the world. I think the government ought to give those industries all the support that it can in the way of providing for them markets, scientific research and support in other directions, and our Trade and Commerce department might very well be enlarged so as to provide for more and better trade commissioners in various parts of the world. We have an immense field for export trade in certain classes of manufactured goods, and those who undertake that work should get all the encouragement that the government can give them. I for one would be very glad to support an increased appropriation for the Trade and Commerce department for the purpose of doing what is being done by the Trade and Commerce department of the United States. Of course, we could not spend anything like the money they spend. but we could spend a great deal more with great advantage to this country. As regards our trade relations with the United States, that is a country where we ought to have people busy on the job day after day. The biggest and richest market in the world is there. and many opportunities might be available if we had the proper men there looking for them.

Mr. HOEY: How many trade commissioners have we down there now?

Mr. HUDSON: I got a return a short time ago showing that we had one trade commissioner in the United States and that the United States had in Canada ninety-eight representatives of various sorts, consuls, consuls-general, trade commissioners and so forth —ninety-eight to one. Of course those men are not necessarily all engaged in watching trade, but they are all on the job looking after the interests of the United States in a commercial way.

Mr. MEIGHEN: Is the hon. gentleman aware that in 1920 we brought in a proposal to follow the same policy as respects Canadian trade representatives in the United States that they follow here and that his party most bitterly opposed it?

Mr. HUDSON: I am not concerned with what was done by anybody in 1920. I do not care whether they opposed it or not. If the right hon. gentleman will submit a resolution supporting that, I shall be glad to vote with him. I think it is a necessary, useful and proper thing, and I do not think we can do anything better for the interests of this country.

Mr. ROBB: If I may make the record correct, the policy brought in by my right hon. friend was to bring in the equivalent of an export tax, because the policy of the United States is to charge a consular fee on all exports.

Mr. MEIGHEN: Yes, we proposed to do the same and to have agents in the same way. The hon. gentleman could not stand for it then. There is no other way of supporting them.

Mr. HUDSON: I have no authority to speak for this government. I vote against them sometimes and I vote for them sometimes. If they wish to take advice from me, I am giving it. If they will not take it, I have done my duty.

As regards the United States, another suggestion I would make is that we ought to have a representative at Washington. That is one thing that we need more than almost anything else, and I hope the government will find a way to send somebody there before very long.

From every quarter of this House there have come suggestions that there ought to be more co-operation between the railways; that they ought to cut out duplication of service, advertising and competition in various forms. I am firmly convinced that some-

thing of that sort must be done, because we cannot afford to go on as we are doing. I will not discuss this matter any further because it has already been referred to by a good many speakers. In that connection, I would suggest that the special Railway committee which is to sit on the Canadian National finances, and which has amongst its members many of the ablest men of all parties, should be specially instructed to take up that question and see what can be done. I do not think the government can be justified in standing still and saying: We asked these people to come together and they would not. It is up to the government to take a hand and enforce co-operation.

In conclusion, I think a high protective policy such as is advocated from some quarters is bad, because it failed before. It would be worse now than it was then because of our different position in the world, because we now have a great northwest filled with 2,000,000 people engaged in an industry which can be only impeded and not helped by any policy of that sort, because it has been abundantly proved that the Maritime provinces will be injured by it, because if such a policy were inaugurated, it would do more to drive a wedge between the different sections of this country than anything else that I can conceive of. For these reasons, I do not think the people of this country will ever support a protective policy.

Mr. M. E. MAYBEE (Northumberland, Ont.): Mr. Speaker, Canada to-day is in urgent need of some solution to our economic conditions that will bring about an industrial and agricultural awakening. This fact is forcibly brought to my attention by the condition in my own constituency.

The county of Northumberland, which I have the honour to represent, is engaged in various industrial pursuits as well as mixed farming. I regret to have to report that various industries have been compelled to close their doors owing to unfair competition from imports, and others are struggling on, holding by a mere thread. For instance, we have a shoe company located in the town of Campbellford of fifty years' standing, and in this connection I desire to read a letter addressed to me, dated March 7, 1925:

M. E. MAYBEE, Esq., M.P.,
Parliament Buildings,
Ottawa, Ont.

DEAR SIR,—In view of the depressed condition of trade through Canada, and the increasing importation of shoes from Great Britain, we are writing to ask you to use your influence for the purpose of attempting to remedy this condition of affairs.

[Mr. Hudson.]

We have been in business for 50 years and up until a couple of years ago our factory was run continuously without loss of a day's time. During the last two years, however, a change has been necessary, and particularly during the year that has just passed, we have only been able to give employment to our help for four days a week, and sometimes not even that.

You will easily see that this not only makes our help dissatisfied but also makes the cost of production very much greater, as instead of having steady production and a full week's time to carry our wages and overhead expenses, we are compelled to divide it over the four days in which we are working, and conditions are such that it seems impossible to make any headway.

We assure you that none in the shoe business is making excessive profits. During the past two years there have been a larger number of failures, we believe, than at any previous time. We, ourselves, lost more money during the past year than ever before.

We believe that if something can be done to remedy the present conditions so as to enable our workmen to work full time instead of losing time, as is being done at present, it will be a benefit to the workmen, to ourselves, and the general public, as things can then be produced at lower prices than they can be produced under present conditions.

Perhaps there is no necessity for us to write this to you as there is no doubt your influence would be exerted in the right direction in any case, but there will probably be no harm in keeping you informed as to the real conditions in the shoe trade.

Yours truly,

RICHARD WESTON
for
WESTON SHOE CO. LTD.

This is a striking illustration of the condition of the shoe industry. The statistics show that the quantity of shoes imported from Great Britain has increased 355 per cent in two years and 155 per cent in the last twelve months; a large quantity was also imported from Germany. Twenty more shoe factories have failed since the 1st of January, 1924. The wages paid to employees in Great Britain and Germany are much less than those paid here, and that consideration almost offsets the fifteen and three-quarter per cent preferential tariff on goods coming from Great Britain.

Another instance of the failure of industry in my constituency is that of the Cobourg Felt Company. The Cobourg Dye Company and the Cobourg Matting Company have been seriously affected by outside competition. Then, in the town of Trenton, adjoining my constituency, a very fine fertilizer plant has had to suspend operations due to the reductions in the duty on fertilizer. The Dominion Combing Mills in the same town have also had to struggle against the import of tops. Tops were imported during the year ending March 31st, 1924, according to the last trade returns available, to the amount of $4,047,674, and these came in free of duty. This concern is of great benefit to the farmers

of this community who are engaged in the production of wool. The closing of these industries or the reduction of their output has had a great deal to do with the unemployment situation in my county and is also seriously affecting the home market for our agricultural products.

With respect to agriculture we have one of the finest counties in the province of Ontario. We have a varied production, including dairying, fruit growing, bacon hogs, poultry products, vegetables, and beef cattle. Much interest is taken in dairying; our county has a good reputation in connection with the manufacture of butter and cheese. I think it would be preferable to have the cheese inspected and graded in the factories, from the point of view of the educational feature if for no other reason.

A great many dairy products are imported into Canada. According to the latest available trade returns the following milk products were imported during the year ending March 31, 1924:

	Value
Milk and cream	$ 30,570
Milk, condensed	45,907
Butter	613,041
Casein	53,354
Cheese	541,279
Total	$1,284,151

I consider that the tariff on butter and cheese should be increased until it is at least equal to that of the United States, which is eight cents a pound on butter and five cents a pound on cheese as against four cents a pound on butter and three cents a pound on cheese coming into Canada.

Many of our herds are being tested for accreditation and are making a good showing. We have many splendid herds of pure bred cattle, and I regret the action of the Minister of Agriculture (Mr. Motherwell) in lowering the scale of compensation.

Our county is one of the foremost in the province in the production of apples, as well as of numerous small fruits, having secured a wide reputation in many international exhibitions. Here again we are labouring under a decided disadvantage, owing to climatic conditions, especially in small fruits, as the United States growers, under natural conditions, can produce fruits much earlier than we can and by the time our fruits are on sale the markets are surfeited with United States fruits and our growers never get the top prices. According to the trade returns for the fiscal year ending March 31, 1924, the imports of fruit during that year were as follows:

	Value of Import
Apples (fresh)	$ 878,415
Apricots and quinces	105,443
Bananas	4,859,460
Wild berries	13,393
Berries	21,627
Cherries	105,978
Cranberries	220,013
Currants	241
Grapefruit	728,641
Grapes	874,941
Lemons	1,156,564
Melons	379,467
Oranges	5,871,752
Peaches	510,710
Pears	782,464
Pineapples	530,304
Plums	374,450
Strawberries	740,699
Other fruits	89,235

The total imports of fresh fruits from the British Empire was valued at $169,153, and of fresh fruits from foreign countries, $18,084,294. Total fruits including dried and canned fruits from the British Empire amounted to $774,683, and from foreign countries, $25,760,319. A great many of these fruits we ourselves can produce. A sufficient duty should be imposed to safeguard the Canadian market until Canadian fruit is available. I believe the fruit growers of Northumberland and Durham, as well as other organizations, have made representations to the government for relief, and I trust that these will be acted upon.

As a sideline with dairying, bacon hogs are being produced in considerable quantities in Northumberland. I think in this the grading system is producing beneficial results and while not yet perfect no doubt it will eventually attain success. We can produce just as good bacon as Denmark, and while the education of our producers may be slow, it will eventually be completed. Another sideline with dairying is the development of poultry products. Some are specializing in this line. Here again we are under a great handicap, accentuated largely by climatic conditions and lack of protection. Recently seven car loads of eggs arrived in Montreal on one day, and the effect was immediately felt in our market. While we are producing poultry under winter conditions, these products are being shipped in here from the south where they are produced under summer conditions. We impose a tariff of only 3 cents per dozen against them, while they charge 8 cents per dozen against ours. We find at the same time that eggs were imported for consumption to the value of $1,975,707, which includes $12,679 worth from Hong Kong, China. Adequate protection should be given the production of

day-old chicks. I believe that something over 1,000,000 of such chicks came into Canada last year. Rigid inspection should take place at the border for not only the European fowl pest but for all contagious diseases affecting fowl. The grading of eggs is imposing considerable hardship on the producer. Many local dealers are refusing to handle them altogether, due to the extra labor entailed, thereby curtailing the local market, and as the salaries of the inspectors for the last fiscal year were $42,112, some real advantage to the producer should be shown.

A great many potatoes, vegetables and garden stuffs are produced in Northumberland, and here we find unfair competition from United States imports, due to their climatic conditions, American products flooding our markets much earlier than we can produce the vegetables. I find for the same period that I quoted before we imported the following vegetables:

	Value
Cabbage	$ 273,933
Onions dutiable	362,358
Onions free	31,220
Potatoes	576,046
Tomatoes	1,033,154
Other vegetables	1,586,603

The total value of fresh vegetables imported from the British Empire amounted to $154,375, while from foreign countries our imports reached the huge total of $3,777,881. All of these vegetables could have been grown in Canada. Total vegetables during the same period including dried, canned and pickled vegetables from the British Empire to the value of $574,816, and from foreign countries, $4,904,884. While the grading of potatoes generally may be advisable, I see no reason why a market gardener, selling produce on a local market direct from producer to consumer, where the buyer can see what he is buying and in most cases knows the seller, should be obliged to grade and tag the commodity, thereby entailing considerable labour and expense.

The conditions existing in the county I represent apply very largely to Canada as a whole. There is a general demand throughout Canada for a consistent application of the tariff; first, for the raising of revenue, thereby obviating the necessity of objectionable direct taxation; and second, sufficient protection to stabilize our industrial and agricultural activities. A policy to develop our own natural resources is urgently required. From the port of Cobourg alone in my constituency, according to an answer to a question I placed on the order paper, in the fiscal years 1922, 1923, 1924 and

5 p.m.

up to February 28, 1925, 264,239 cords of pulpwood were exported. At $10 per cord this represents a value of $2,642,390. If we had exported this pulpwood in the form of newsprint, we would have received $18,496,730, and at least $13,211,950 would have gone into the pockets of Canadian workmen.

We would not know of the excellent conditions prevailing in Canada if we had not been told by the Prime Minister and his colleagues during their meanderings up and down this country. We do not require any novel ideas for constructive legislation to-day. Conditions are very similar to those of 1878, when the citizens of Canada decided by their franchise to inaugurate a National Policy to protect the industries and the people of this country. If they were wise in 1878, it does not take a great deal of acumen to see what would be wise in this present day. The depreciation of currency; the low cost of labour; the ruin of Europe—these things have exposed our markets in all directions, whether industrial or agricultural, to a competition that cannot survive under ordinary conditions. The question confronting us to-day is, what does Canada need to establish an atmosphere of confidence and prosperity? Something to encourage the investment of capital, primarily. Undoubtedly we need more population to assist us in our expenditure and produce commodities for railway transportation, but what folly to expend huge sums for immigration when we are unable to assimilate newcomers. British and American investors are awaiting the opportunity of consistent investments. But when thousands of industries have recently closed their doors, they do not appeal to these investors as consistent investments.

The present government is like a weather vane, constantly changing front according to the wind, promising all things to all people. As some of the people can be fooled all of the time, they have succeeded to that extent; but I believe the citizens of Canada are waiting for the opportunity to rise up in their might, as they did in 1911, and demand a sane policy for Canada. I do think that the situation in Canada at the present time is one which demands the most careful and earnest consideration of all classes of the people. I think we all agree that it is a grave one. There is a vein of discontent and of pessimistic feeling which is quite apparent as one travels through the country or listens to speeches made in the two Houses of Par-

liament; and there is also a buoyant and optimistic feeling, which refuses to lapse into pessimism—a feeling that if proper conditions are made to prevail the future of Canada is safe. The public debt has been increasing by millions since the war. Diminished indirect revenues mean greater direct taxation. The United States have greatly reduced their income tax, making this a greater incentive for investors to invest in United States. Other nations have reduced taxation and their indebtedness. We cannot live upon sentiment, and the average individual to-day does not believe he is prosperous unless he can see the actual returns for his labours. Sir Wilfrid Laurier once said in 1899 that if he became premier the people would not need statistics to tell them they were prosperous—"they would have the money in their pockets." The Prime Minister is trying to show we are wealthy by arithmetic, but all the figures in creation will not convince the Canadian people that they are prosperous because "they have not the money in their pockets." I think it was the hon. member for Fort William and Rainy River (Mr. Manion) who said: "Our unemployed are crying for bread and the premier gives them statistics."

To sum it all up we must have protection for all our activities. The hon. member for Queens (Mr. Mackinnon) referred to the British embargo on potatoes, which he considered an injustice. Great Britain also had an embargo on cattle. But I would direct the hon. member's attention to the fact that that is the most effective means of protection. While Great Britain's fiscal policy is generally known as the nearest approach to free trade of that of any nation, she does not hesitate to protect her agriculturists or her industrialists if found necessary.

The tariff is a weapon to defend ourselves, or an equalizer of conditions; a means whereby we can demand and get consideration in our trade agreements. It resolves itself into one of two things, either protection or annexation. The reduction on farm implements has proven to be a fiasco so far as any benefit to the farmer is concerned. As has been shown in this House:

Binders are $2 higher now than in 1921; disc drills, $10 higher; cultivators, $3 higher; harrows, $1.50 higher; disc harrows, $4 higher.

Production of farm machinery is greatly reduced, fully 50 per cent in 1924, partially due to the tariff, and partially due to general conditions and the present buying power of the farmer.

The fact that the government in their budget are proposing to raise the duty on a certain class of coal, goes to show that they recognize the fallacy of a free-trade policy, and the need of protecting our own resources, thereby admitting the wisdom of the national policy of protection. Canada is suffering from an impotent administration and until the sentiment of my right hon. leader's (Mr. Meighen) resolution is adopted will continue to suffer.

In conclusion, I wish to quote the words of Solomon in Proverbs XXIX, 2: "When the righteous are in authority the people rejoice, but when the wicked beareth rule the people mourn."

Mr. J. L. BROWN (Lisgar): Mr. Speaker, it was not my thought until a few minutes ago to take part in this debate at this time, but I thought that perhaps I might profitably, or unprofitably as the case may be, use up a few of the minutes that are left between now and six o'clock. There are a few thoughts that I would like to express on the budget that has been brought down, and on some of the questions that have been made matters of controversy.

In regard to the railway situation and the railway debt forming part of the debt of the country as a whole, it seems to me very desirable at the present time that there should be a distinction made in the two accounts. Some of us, of course, have very strongly advocated that the capitalization of the railways should be placed at its proper figure and the additional amount, of course, would be added to the ordinary debt of the country. Pending the coming of that time, it seems to me desirable that there should be a clear distinction made between our railway debt and the ordinary debt of the country. We all recognize that it really does not make any difference in the end, and it seems to me there has been a good deal of argument about things as to which there is in reality no difference of opinion. But still I can see some reasons why it is desirable that the two debts should be kept distinct. The railway obligations were incurred in a special manner, and apart from the ordinary financing of the country, and if the time comes when a portion of that should be put over against the consolidated debt of the country, I think it should be made very clear and distinct how much of the debt has been incurred because of our railway obligations. Therefore, until the time comes when we have done that, it seems to me very desirable that we should separate the two accounts. Indeed, I think it would be well if we could separate our accounts still further. I think it would be well if we had a clear and definite statement, or as near as possible as

it can be arrived at, of the debt that properly should be attributed to the war. That would enable us and those who come after us to know just what sacrifices Canada made in regard to the war, and know just how much of the debt was incurred because of the situation in which we found ourselves in regard to the railways.

As regards the other matter that has been in dispute, the question of the so-called surplus, I must say that notwithstanding all that has been said to justify the statement that was made by the hon. Acting Minister of Finance, (Mr. Robb), I cannot persuade myself that that particular account in regard to Roumania and Greece is anything more than possibly a good asset, possibly a better secured asset than it was before. Nevertheless that amount should not have been counted as either revenue or surplus.

There is one other matter that has been referred to and upon which I would like to express a few thoughts, and that is on the export of electrical power. I thought perhaps the hon. member for Brome (Mr. McMaster) would deal with a phase of the matter I have in mind when he spoke, but he did not do so.

So far as the exporting of power in itself is concerned, and the taking of a revenue therefrom, I would have no objection to that if it would not possibly involve us in difficulties in the future. I can well understand how the adoption of the principle of exporting power might possibly build up in the United States industries that depended upon that power, and if the time came, as we would all like it to come, when we would need all that power for ourselves, we might then very well find that vested interests had been created, and that we could not interfere with the export of power without creating a great deal of friction between ourselves and our neighbours to the south. I would therefore urge the utmost caution in that regard, for it seems to me that in this particular case we might possibly find ourselves involved in a situation that would be fraught with difficulties.

There are two or three things that I want to say in regard to the propositions that are being advanced by those who are traditionally the protectionist party. There have already been a good many gibes thrown at them over their panacea for every ill, but perhaps I may be pardoned for making another. About fifty yars ago or more, there was a craze in the Old Country in regard to the so-called curative properties of blue glass. It was supposed that if people could only live under blue glass they would be cured from almost any disease. There was a popular comic song that went the rounds of the music halls about it; and I know it got as far as the prairies forty years ago through an ex-music hall singer. I can only remember a little bit of it, but one line went something like this: "Put a single baby in a blue glass cradle, and it's sure to turn to twins," and the refrain went like this:

> Blue glass, blue glass,
> The great discovery sure,
> If you ever get sick
> You can cure it up quick
> By trying the blue glass cure.

It seems to me some such thought is behind the idea of those who advocate that high protection will be a cure for all our diseases and a remedy for all our economic ills.

I would like to pay a little attention to some of the things that were said by the hon. member for Fort William and Rainy River (Mr. Manion). I am sorry he is not here, but as I may not have an opportunity of speaking in his presence, I will have to say what I have to say now. Some time ago, in the early part of this session, the hon. member for Fort William and Rainy River undertook to prove that the tariff was not always a tax, and I should like to criticize some of the arguments that he used to support his contention. I only hope that the hon. member in question is a better doctor than he is a logician, and that for the sake of his patients he is more correct in his diagnoses than he is when he undertakes to handle some of these tariff matters in the House of Commons. You will remember that he undertook to prove that a tariff was not a tax by citing facts that were given by Mr. F. W. Stewart of Montreal. He cited the statement that certain articles of clothing were higher priced in the United States than they are in Canada. At the time I called his attention to the fact that a proper comparison would have been one made between the prices in Great Britain and in Canada. He certainly does not do anything to prove his point when he quotes the prices in Canada and compares them with prices in a country where they have still higher protection. So far as proving his point is concerned the hon. gentleman absolutely falls down. The tariff is a tax on us if the price that we have to pay is greater than we can secure the article for from the cheapest source of supply not from a country so highly protected as the United States. Therefore, from that standpoint the hon. member entirely failed to prove his point. He thought to further prove it by referring to the fact that steel rails at one

time had been imported into the United States at $150 a ton. In 1872, he says, five years after, they raised the duty on steel rails and instead of costing $150 a ton they cost $112 and he asked:

> Where in that case was the tax that the Prime Minister states the tariff is? In 1876, four years after that, steel rails cost only $39 a ton or about one-quarter of what they cost in 1867. In 1885, still under the same tariff, they were costing $27 a ton, at which price they practically remained until prior to the war.

Now when a person undertakes to deal with a problem he must take all the factors of the problem into account and unless the hon. member can show us that the prices in other places where they make rails were greater than in the United States—I have not the figures for the rails that might have been procured in Great Britain and Germany at the time—his argument fails. I contend it is up to the hon. gentleman to show us that $27 a ton, was less than steel rails could be procured for in other places, and until he can show that he certainly has not proved his point that the tariff is not a tax.

The hon. member for Lincoln (Mr. Chaplin) was a little exercised over this matter yesterday and he instanced and just as illogically the duty that is levied by the United States against our wheat. He wants to know who pays the duty. Well, for practical purposes, there is no duty paid by anybody. When the wheat enters the United States there is a duty paid and it is rebated when the flour is exported with very few exceptions. In that case, however, there is no duty paid, and if under the present conditions of the grain trade with the prices prevailing in Canada and the United States a small portion of that wheat enters the United States for consumption the United States consumer undoubtedly pays the duty. But so far as wheat is concerned nobody pays the duty at the present time to all practical purposes because it is rebated. Personally I have never been one, certainly for very many years, who has argued that the consumer pays the duty under all circumstances. That will depend in the first instance very largely upon where the market is made. If we are in a position to fix the prices, if the market is fixed here on the things that we import, then possibly we may find ourselves in a position to secure part of the duty from those who export to us; but that simply is not the case in regard to the great mass of Canadian imports and speaking generally, and with very few exceptions so far as Canada is concerned, the consumer pays the duty, because we are not in a position to exercise any very great influence upon the market prices of any of the commodities we purchase.

There is another matter which the hon. member for Fort William and Rainy River referred to in his address on the budget a few days ago, and that is in regard to the imports of produce that could be grown in Canada. The hon. member for Northumberland (Mr. Maybee) who spoke just before me qualified the statement by saying that much of this can be produced in Canada; but as I refer to the remarks of the hon. member for Fort William and Rainy River in Hansard I do not find he made any qualification at all. He simply made the statement that these commodities could be produced in Canada. Now, I took only a few items from the list that he quoted at that time, I only had time to go into those although possibly I might have found something very interesting if I had looked up some of the others. But if you turn up the speech of the hon. member (Mr. Manion) you will find that in the list of goods he quoted as goods which could be produced in Canada there were $25,000,000 worth of fruit. The hon. member did not make any qualification; he said "These can be produced in Canada." I took occasion to look up the trade returns from the same volume as that from which he quoted—the trade returns for the financial year ending March 31, 1924—and I find there were $27,285,773 worth of fruit imported, made up as follows:

Fresh fruits	$ 18,253,447
Dried fruits	6,095,388
Fruits otherwise prepared	1,936,938
Total	$ 27,285,773

Then I examined the list further—I wanted to examine it fairly and see just how much of this amount of fruit we could possibly expect to be produced in Canada—and I took the list very much as the hon. member who immediately preceded me this afternoon did; as far as I have taken the figures we both agree, except that he read the figures of the imports of grapefruit, oranges, and all such things, which nobody contends could be grown in Canada and which I have not heard anybody advocate should be excluded. Now let me take the figures of fruits that can be produced in Canada:

Fresh fruits

Apples	$ 878,415
Apricots, Quinces, Nectarines	105,443
Wild berries	12,304
Berries	21,627
Cherries	105,978
Cranberries	220,013
Grapes	874,941
Melons	379,467

Fresh fruits—*Concluded.*

Peaches	510,710
Pears	782,464
Plums	374,450
Strawberries	740,699
All other fruits	24,347
Total	$5,040,858

Now, in that respect I contend that I have been very liberal, and I have included $379,000 worth of melons. Will anybody seriously contend that Canada could produce the melons that come into Canada, both in eastern Canada and in the northwest, in many carloads? It may be contended that we should not use them, that we should exclude them, but no person would seriously contend that we could produce them in Canada. We can produce melons in Canada; we know that, but not in the quantities in which they are imported. The same may be said in regard to grapes. I find here an amount of $874,000, and yet we know that the Canadian fresh grapes are only on the market a very short time; therefore I imagine that that $874,000 is in very large measure made up of fruit that simply cannot be produced in Canada. We might say the same thing in regard to the $220,000 of cranberries, and possibly some of the other things as well. That is, the fresh fruit.

Now in regard to dried fruits I think I have been equally liberal in this matter. The figures are as follows:

Apples	$ 58,474
Apricots	167,933
Peaches	152,791
Prunes and plums	971,290
All others	96,664
Total	$ 1,647,152

That is for fresh fruits and dried fruits a total of $6,798,000. I am almost disposed to use some of the harsh language in regard to the hon. member for Fort William and Rainy River that he used in regard to the Acting Minister of Finance. There was another item in the list I gave that goes to make up the total of $27,000,000, in which I could not very well segregate those that might be produced in Canada from the total, and that is fruits otherwise prepared. But the total was less than $2,000,000. No person would seriously contend that Canada should cease the importation of oranges, bananas, grapefruit and melons. These contribute to and are necessary for the health of our people and are imported in large quantities, and we would continue to import them in large quantities even if a protectionist party should come into power.

[Mr. Brown.]

Another item which was referred to by the hon. member for Fort William and Rainy River is particularly interesting. He referred to hides imported into Canada. The figure given by the hon. member for that year was 49,000,000 pounds. Instead of taking it in pounds, I have taken it in dollars worth, and it is somewhat interesting.

The figures are:

Hides imported into Canada

Calf skins and kips (raw)	$ 1,189,535
Cattle skins (raw)	4,711,284
Sheep skins (raw)	722,551
Other hides, skins and pelts, (raw) n.o.p.	674,117
Total	$ 7,297,487

Then we have hides exported, because we cannot understand the matter by taking the imports alone. We must also take the leather that is manufactured from the hides. The hides exported are:

Calf, etc	$ 1,216,677
Cattle hides and skins, (raw) n.o.p	3,918,986
Horse hides	59,370
Sheep skins	417,434
Other hides and skins (raw) n.o.p	41,686
Total	$ 5,654,153

The excess of imports over exports of raw hides is $1,643,334. But we must consider the reason for the importation of these hides. What is the reason? Many of those raw hides that are imported are of varieties used only in the manufacture of such light leather wear as gloves, and so forth, which we do not produce in Canada. Then we must remember the situation as regards tanneries in the city of Kitchener. There are some large tanneries there. I am given to understand that those tanneries do not use a pound of Canadian hides. Now why? Because Canadian hides are not of a quality that suits their purpose. If Canadian hides were of a quality that suited their purpose, would these men go away down to the Argentine and bring hides from that country? It will be noted if these returns are examined that the great bulk of these cattle skins, the heavy hides, come from the Argentine and from the United States, and I think likely from the southern states, from the hot climates. I am given to understand by those who are familiar with this subject, that the cattle from the warm climates produce a heavier hide, more suitable for sole leather and heavy leather belting than our northern hides—that our northern hides are simply not suitable for this purpose. These tanneries import these cattle skins to the amount of $4,771,284. What do they do with the hides. They tan them and export them. It is surely good protectionist doctrine, is it not, to encourage industry, and to encourage

manufacturers, and surely these gentlemen who would advocate the exclusion of the hides or the putting of an impossible duty upon them, would not go so far as to deprive their factories that they are so fond of talking about of their raw product which it is necessary for them to have in order to continue operations.

What about the unmanufactured leather they export? These tanneries export leather to the amount of $5,633,581, and we import leather to the amount of $4,170,628. That means that there is an excess of exports over imports of $1,462,953, and remember that in those imports of leather are also large amounts that are made up of dressed glossed leather of various kinds that is not produced in Canada at all. So that the result of putting an embargo or a high protective duty against these hides from South America and from the United States would be that the tanneries—and I am told there are two very large ones in Kitchener, I understand among the largest in America—would be compelled to go out of business, because they could not get the raw product. That is the way our hon. friends to my right want to help some of our manufacturers.

But there is another figure here which is somewhat interesting. We exported to the United States $4,163,278 worth of leather and we imported from the United States $3,342,616 worth. That means an excess of exports over imports of leather to the United States of $820,662. I would advise the hon. member for Fort William and Rainy River and the hon. member for South Oxford (Mr. Sutherland), who is frequently harping upon this matter, to search into some of these things a little more closely and just see what would be the result of the application of the principle that they wish to apply as a remedy for all evils of the body politic.

Another matter I thought of dealing with has been dealt with so ably by the hon. member for Nipissing (Mr. Lapierre) that I do not think I will say much in regard to it. I refer to the question of the export of pulpwood and the placing of an embargo on the export of pulpwood. The hon. member who spoke on that subject has evidently given a great deal of thought to it, and I admit he is much more competent to speak with authority on it than I can be since he is intimately in touch with it, but he expressed admirably the sentiments that I hold in regard to it. The weakness of those who advocate the embargo lies in this that they tangle it up with the principle of conservation. They tell us, when we express opposition to an embargo, that new pulpmills coming in would take care of the products of the forests, of the interests of the backwood settlers, by the establishment of new mills. Then, as regards the conservation of the forests, it does not make a particle of difference whether that pulpwood is used by the mills we have in Canada or by the American mills where they are to-day. I listened with a great deal of interest to the hon. member for Nanaimo (Mr. Dickie) when he was speaking on this question the other night, and my attitude towards this whole question of forest conservation is intensely sympathetic. To me, there is no greater tragedy than to go through the great devastated areas that we see between here and Winnipeg, through British Columbia and along the Pacific coast. It is one of the greatest tragedies that we could possibly witness, and the generation that comes after us will hold as an account against us that we have been so prodigal in dissipating the tremendous timber resources that we fell heir to. So when I speak on this matter, I speak as one who cannot go to cut down a tree without feeling some qualms of conscience over it, because we live in a country where there are not very many trees. When I listened to the hon. member for Nanaimo, speaking sometimes almost with tears in his voice,—and I sympathized with him—of the destruction of our forests on the one hand and then, on the other, speaking with enthusiasm of the great manufacturing plants growing up on the Pacific coast that would take care of all the logs that could be cut, I wondered where he stood in the matter. The only remedy that will be useful in the conservation of timber is simply to cease cutting timber, and there is no more important duty that this parliament is faced with than that of devising some well-considered policy of conservation, fire protection and reforestation. This is a duty for parliaments, for governments. It is true that here and there are individuals who have done a great deal of valuable work in reforestation. But it is only the exceptional individual who will plant a forest for the benefit of posterity. This is a work that must be done by governments, and for my part I am prepared to support a very much larger appropriation than has ever yet been made for the prevention of fire and for the reforestation of those areas of Canada that have been so sadly swept by fire.

Mr. GOOD: Does the hon. member know the proportion between the quantity that is destroyed by fire and the quantity that is cut?

Mr. BROWN: I have seen the figures given, but just at present I would not like to make a statement. I understand, gener-

ally speaking, the quantity destroyed by fire is far in excess of what is used in all departments. If we are going to use export taxes or embargoes, since there are people who are so fond of advocating an export duty on wheat, I must say that it would not hurt us very much in the prairie provinces if they would put an export duty on rough lumber. I trust the Acting Minister of Finance will not misunderstand me as definitely advocating that.

Mr. ROBB: I was just going to ask that question to make the point clear.

Mr. BROWN: I am not going to advocate it. To do so would be a violation of our principles and we must be consistent in those matters.

Mr. MEIGHEN: It would not do to do that even if it was right.

Mr. BROWN: If it had the effect, as it might well have, of enabling us on the prairies to get cheaper lumber, perhaps we might be forgiven. The other day the hon. member for Southeast Grey (Miss Macphail) depicted the conditions in which the miners were living. I was thinking—and many of us can testify to this—that there are thousands of people in the western provinces who, because of the high prices of lumber, made high by the high freight rates, and because immense quantities of timber that we sometimes think we ought to have a share of, are shipped to foreign countries, are at present unable to buy timber to make comfortable homes for themselves or for their cattle. Therefore, if we are going to talk about the principle of embargoes on exports or even export duties, we should take into account the question of export duty on rough lumber. After all, how much difference is there between shipping a log and shipping timber that has been sawn on four sides? I found out when I was at Vancouver a year ago that practically all the timber shipments to Japan are simply rough sawn. I am told that the logs are dressed down, sized a little. After all, there is not much difference between shipping a log and shipping a piece of timber sawn on four sides. The amount of labour involved in putting it into that condition is pitifully small.

There is another matter to which I should like some of our friends who are opposed to the exportation of raw material to give a little thought. A little pamphlet came into our hands yesterday, evidently sent to us by a good protectionist, and I wish to refer to this passage in it. It was pointed out that Canada exports to the United States five cents worth of timber and the United States takes that and makes a chair worth five dollars. Of course, the argument is that we should make all those chairs at home. It is like the old argument that we should turn a ton of steel into watch-springs and how much more valuable the steel would be if we would put enough work on it to turn it into watch-springs. The argument in this little pamphlet was evidently that we should manufacture all our lumber into chairs. When I read that I remembered what a former member of this House, a furniture manufacturer, told me a few weeks ago. He said that there were enough furniture factories in Canada to make furniture for twenty million people. If that statement is true, hon. members can see the absurdity of pointing out, as an argument against the export of our raw material, that the United States make $4.95 out of our five cents worth of lumber. These are some of the absurdities into which hon. gentlemen are led when they pursue their policy, as they evidently intend to pursue it, to the extreme.

Mr. MEIGHEN: Will the hon. member permit a question? Is it not equally true that there are enough lumber mills in Canada to make lumber for five times the farm homes we have?

Mr. BROWN: But unfortunately we cannot get it.

Mr. MEIGHEN: Is that not exactly the argument he is using now to show that we should not have any export duty on lumber?

Mr. BROWN: The question of export duty on lumber was only introduced as a side issue; I did not make a serious argument on that point. I may say that another document came into our hands just a day or two ago, issued by a man named Seeley—I do not know whether he is the Seeley referred to in a former debate—

Mr. MEIGHEN: It is not a question of what power we have to manufacture; it is a question of the preservation of our raw material, and it applies equally to any irreplaceable material, whether it is for farm homes or for chairs.

Mr. BROWN: There is where the right hon. gentleman and his party fall down; they tangle up the question of conservation with the question of the export.

Mr. MEIGHEN: It is the hon. member who is tangling it up. I was straightening him out.

Mr. BROWN: I am not at all tangled in the matter. I insist that the one argu-

ment contradicts the other. On the one hand my hon. friends come forward with a policy in regard to pulpwood which they say will tend to the conservation of the forests, and on the other hand they tell us that home industry will take care of an equal amount or perhaps more. That is the inconsistency of the argument.

Mr. MEIGHEN: No, not at all—preserve it for the future.

Mr. BROWN: Any logical policy of conservation of the forests will certainly meet with my support.

On motion of Mr. Murdock the debate was adjourned.

At six o'clock the House adjourned, without question being put, pursuant to rule, until Tuesday, April 14.

Tuesday, April 14, 1925

The House met at three o'clock.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Wednesday, April 8, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Hon. JAMES MURDOCK (Minister of Labour): Mr. Speaker, I am now going to undertake my maiden budget speech. I would not have undertaken to interject a number of thoughts into this debate except for the fact that there appear to have been very many things said on the opposite side of the House, very many matters referred to, that should be put right—matters upon which hon. members should at least have the viewpoint of others; and when I say others I do not mean particularly my own views. I shall deal with a number of subjects that have been under discussion in this House—unemployment, the tariff, and very many other questions that hon. gentlemen opposite have interested themselves in.

I want to commence—and I regret that the hon. member for East Calgary (Mr. Irvine) is not in his seat—by referring to certain matters that that hon. gentleman has brought before the House. During the debate here on Wednesday last the hon. gentleman referred to me. He was dealing with the question of the Civil Service Commission having exclusive jurisdiction over the fixing of the salaries of civil servants and he said: "Has the government made no effort at all to remove any such discrimination if such discrimination exists?" He had at the previous sitting of the House, as well as at the particular sitting in question, indicated that there was discrimination between the salaries of male and female employees in the civil service, and that the government should of its own motion remove that discrimination. I had stated that the government had no authority other than was given in the Civil Service Act, section 45B, which provides that the Civil Service Commission shall fix the rates of pay of civil servants, such rates to become effective on approval by the Governor in Council. And so my hon. friend at the last sitting of the House said: "Has the government made no effort at all to remove any such discrimination if discrimination exists?" I would respectfully refer my hon. friend to a perusal of the files of parliament last year wherein he will find that in the case of the postal workers the recommendation of the Civil Service Commission was sent back to that body three times by the Governor in Council without any result; and finally the recommendation of the commission was approved by the Governor in Council because evidently it was impossible to persuade the commission that any changes were advisable or necessary.

Then the same hon. gentleman, at a former sitting of the House, drew the attention of the government to a specific instance of distress and lack of employment on the part of a newly arrived immigrant into Canada. He cited a specific instance and read into the record a letter which will be found at page 1459 of Hansard. This letter referred to an individual immigrant who had come to Canada and who, according to the letter of that particular immigrant, had suffered great hardship and distress since his arrival. At the time I asked the hon. gentleman if he would give me the name of the immigrant in question and he very kindly sent the name to me across the floor. I at once took the matter up with the Deputy Minister of Immigration and, again without making public the name of the individual in this House, I want to read the reply of the deputy minister as it affects this particular individual in whom my hon. friend from East Calgary manifested such marked interest. The letter from the Deputy Minister of Immigration is dated March 24, and states:

> I have received your message, covering a letter read by one of the members of parliament in reference to an immigrant at Calgary, and, as the name was given to you in confidence, it is not mentioned in this memorandum. There is no question that the record is a proof that we should not have allowed this family entry into Canada. It is a pity that, with all we have endeavoured to do for this man, he has in no way attempted

to meet the conditions here. The family arrived in August of last year. It consisted of the father, mother and three children, aged 4 years, 2 years and 2 months. The father was 24 years and the mother 23. They were immediately placed in a vacant Land Settlement Board property near Condor, Alta. Work was obtained for the father with Mr. H. Meeres, a farmer of that district. The family had only $1.40 on landing and Mr. Meeres at once spent $50.50 towards getting furniture and supplies for them. They were only there two weeks when they became discontented and wrote in to the Land Settlement office that they wished to leave. The supervisor called on them on September 9th; talked the matter over with the family and they decided to remain.

On October 9th the Land Settlement office was advised that, despite all the advances made by Mr. Meeres, the head of the family had left his employment and had gone to work for another farmer. The latter he also left without giving any notice.

The man being out of work, our Land Settlement office took up for a second time the question of employment for him and secured work with a farmer named Bice at Condor, Alta. Mr. Bice undertook to give this man work not only during threshing and during the subsequent fall work but also undertook to give him employment during the winter months cutting posts, but Bice informed the supervisor on October 19th that the family was practically useless to him.

Another position was then found with a farmer at Blackfalds, where the family proceeded on November 4th. This farmer provided them with a cottage in which to reside. On November 13th the Land Settlement Supervisor visited them but the immigrant refused to accept work, stating that his wife would not go out to farm and that she wished to be deported.

The family were then taken to Red Deer, where work was procured for the father at Greencourt with a lumber company who offered to give him steady winter employment. Nothing further was heard by the Land Settlement office of either the man or family until the immigrant turned up in Calgary on December 20th. Two days later he called at the Land Settlement office and was informed that work could be obtained for him, although it would take a few days. The immigrant advised the officials that he did not wish to go out into the country until after Christmas. He called again on January 2nd and informed the Land Settlement officers that he had himself located a position and did not desire to go to the country.

According to letters, appearing in the press, this immigrant still wishes to be deported, although he has secured a permanent job with the Consumers' Milk Company at $75 per month.

The facts in connection with this case show that the immigrant has been placed in no less than seven different positions by the Land Settlement branch, none of which he retained for any length of time and in several instances leaving his employers in bad circumstances in so far as farm labour is concerned. Although in a permanent position at Calgary at $75 per month, he is still writing to the papers and wishing to be deported.

And those, Mr. Speaker, appear to be the facts of the case in regard to which we heard so much a short time ago, and on account of which this government was so wrongly condemned, in so far as its immigration policy was concerned. Again I am sorry my hon. friend is not in the House, because I have something that should be of special interest to him, considering that he is one of the representatives from Calgary. I notice that the hon. gentleman representing West Calgary (Mr. Shaw) is here and I am sure he will bring this matter to the attention of our hon. friend. I have here a clipping from the Calgary Herald dated April 3, 1925, and of course I would expect, if my hon. friend from East Calgary (Mr. Irvine) were in the House, that he might raise objection to the accuracy of anything emanating from the Calgary Herald. He might intimate that it was not altogether sound and fair in so far as these matters are concerned. Be that as it may, this article in the Calgary Herald of April 3 is captioned in large headlines and reads:

Refusing to accept jobs, two hundred men ordered out of labour bureau.

Majority of them alleged to be persistent idlers, and when Superintendent Carnill fails to persuade even one to take farm work, he closes door on them. Civic authorities checking up situation and police are making an investigation. Farm hands may have to be imported.

I notice in this article, which is of considerable length, a statement which is alleged to have been made by the acting mayor, Dr. T. W. Crawford and Commissioner A. G. Graves, in which they are supposed to have said:

"These men have been hanging around the city the best part of the winter", said the acting mayor, "and it will be necessary for the civic authorities to take some action to see that they either go to work or move on. You can say that we are going to take some action to get these loafers out of the city but we haven't definitely decided what that will be."

I would not, Mr. Speaker, for one moment suggest that this is even a fair sample of those citizens of Calgary who have been out of work during the past winter. I only call these particular circumstances to the attention of the House because my hon. friend from East Calgary laid so much stress upon the case of the individual in regard to whom I read a letter from the Deputy Minister of Immigration a short time ago, and I am sure my hon. friend from East Calgary would not undertake to justify actions or an attitude such as is indicated by the letter from the Deputy Minister of Immigration, or such as is indicated in this newspaper clipping which I have just read.

Mr. IRVINE: I understood my hon. friend to say that this man to whom he refers was really an unfit citizen. My point then was that the government should not have brought him here; and I understood that under the government's supervision he was collected and brought to this country.

Mr. MURDOCK: If my hon. friend had been in his seat he would not have had any such misunderstanding.

Mr. FORKE: He was in the gallery.

Mr. MURDOCK: There is nothing in the record that I can see that this young man of twenty-four years of age and his wife who

was twenty-three years of age were not perfectly fit and proper subjects for citizenship in this great Dominion. The only trouble appears to have been that, for what reason we do not know, the young man was offered seven jobs, and evidently, at the time my hon. friend was speaking in this House, was holding a job at $75 a month, and was still contending that Canada was no good to him and praying for deportation. I do not know but that deportation possibly is the best thing under the circumstances, and I think that that is what the department has now under consideration.

For a few moments now I will turn to certain references made by my hon. friend from East Calgary in his speech of April 7 on the budget. He proceeded, by various figures, which I assume are quite accurate, to show that the per capita debt of Canada is $548 per head, or an average per capita debt of $2,740 for a family of five. I regard it as rather unfortunate that the hon. gentleman did not in any way indicate how it came about that this country of ours has at this time such an enormous burden of debt. There was no criticism by the hon. member on account of the fact that during the war, when the government and Canadians as a whole were doing everything possible to win the war and were regarding the winning of the war as the most important thing to be accomplished, the government in power then and for several years after the war did not undertake to reasonably lighten that enormous burden of taxation of which the hon. gentleman makes so much, and places solely at the door of this government. It seems to me that if the hon. gentleman, speaking for labour, had desired to be reasonably fair and consistent, as my experience indicates representatives of labour do desire to be, he would in some slight measure have dealt with the question of whether the previous government should not have undertaken to pay their way as they went along during the period of the war, when millionaires in certain cases were being made over night, in very brief periods at least, on account of the exorbitant profits that they were enabled to make as a result of war conditions. That it seems to me would have been a fair position to take if the hon. gentleman had felt so inclined.

A little further on in the course of my hon. friend's speech he made reference to the Liberal platform, and hon. gentlemen will have observed with what sweeping haste he passed over each item of that platform one after the other, only in casual reference and away to one side, and not with the thought of dealing accurately and consistently with each item. He referred early in the course of his remarks to the obligations placed upon Canada as a member of the League of Nations, to the obligations placed upon Canada holding membership in the International Labour Office of the League of Nations, and he endeavoured, it seemed to me, to convince this House that no step and no action had been taken by Canada in order to ensure social justice for the workers of Canada, which was exactly what was contemplated when part XIII of the treaty of Peace was framed, to ensure social justice for the workers of the world. The hon. member for East Calgary (Mr. Irvine) never bothered to indicate that Canada, as he well knows if he cares to analyze, stands pretty high amongst the nations of the world in its considerate and decent treatment of labour, and that, even before it was found necessary to incorporate part XIII into the treaty of Peace for the purpose of ensuring social justice to the workers of the world, Canada had gone a long way in the direction of securing for the workers of the world many of the things which are only now being developed in certain other countries. So we find the hon. gentleman going to great lengths in order to show that this government had done nothing whatever. It seems to me that he made one mistake. While referring to the Liberal platform, he had occasion to read a part of its preamble and a number of its paragraph terms. He read this:

> Resolved, that the committee recommends that the National Liberal convention accept in their entirety as a part of the Liberal platform, in the spirit they have been framed and so far as the special circumstances of the country will permit.

Then he proceeded to enumerate; but the proposal which my hon. friend overlooked was that the agreement was that these were to be accepted—

> As a part of the Liberal platform, in the spirit they have been framed and so far as the special circumstances of the country will permit.

Does my hon. friend, claiming to represent labour in this House, come here and, just after arguing that the tax burden on a family of five in Canada was $2,740 per annum, contend that, even so, every one of the proposals in the platform of the Liberal party, regardless of how many millions of dollars were involved, was to be here and now inaugurated and made effective, and that this government was entitled to the condemnation of this House and of the people of Canada because that had not been done? I do not think my hon. friend even talked about the question sensibly and I can hardly believe he was serious. Let me assure my hon. friend that a number of the questions that he so casually refers to have been dealt with to a much greater extent than the hon.

member appeared to know when he was discussing the matter.

But there is one other matter upon which I wish to speak as referring to the hon. member for East Calgary. I accepted money for considerably over twenty years to represent labour. I was not fired in the final analysis. I understood and I have documentary evidence to the effect that my services were fairly satisfactory; but I know nothing of the aims, ambitions and contentions of labour, and all my experience in those twenty years has been for naught if the declarations and claims of my hon. friend are the real aims, claims and ambitions of labour. Let me, if I may, because time is passing, refer to one. We found the hon. gentleman preaching what, with my knowledge of the aims and claims of labour, is the rankest kind of heresy in this House, as we heard him on the floor of this House make this statement:

> All that I am contending for at the present time is that combines are necessary; combines are not necessarily evil, but combines cannot be broken, and even, if they could be broken, it would be very bad business.

If labour generally throughout the length and breadth of Canada does not repudiate that doctrine as the rankest kind of heresy, then I know nothing about the views of labour. We found the hon. gentleman, as he always is, extremely eloquent in asserting that the government had decided to attempt this reactionary move. What reactionary move? To undertake to interfere, I suppose he would say, with the natural and orderly processes of business in the form of a combination, no matter how much that combination might be sapping the life or industrial blood of this country.

Mr. IRVINE: Will the minister really say that it is not a viewpoint generally held by labour that combines are a natural outcome of the industrial process?

Mr. MURDOCK: Yes, I will go that far with my hon. friend and admit that combines are largely the outgrowth of our present industrial processes; but that does not for one moment prove that they should not be grappled with, if detrimental to the interests of the people of this country.

Mr. IRVINE: Did I not point out also that they should be grappled with, but in a different way from that in which the government was grappling with them?

Mr. MURDOCK: If my hon. friend did, I overlooked it entirely and I searched for evidence of that. I have read to the House the hon. gentleman's language. It is very specific and definite.

[Mr. Murdock.]

Mr. IRVINE: Let the minister read some more of it.

Mr. MURDOCK: I do not believe it stands for any qualification. It says:

> But combines cannot be broken, and even if they could be broken, it would be very bad business.

I will leave it for labour to determine whether that is proper gospel or just rank heresy.

Mr. IRVINE: I have no doubt what labour will think if they read the rest of the passage.

Mr. MURDOCK: I come now to another matter upon which I think some discussion should be held and that is the question that has been made so much of in this House and elsewhere throughout the country, a question upon which we note in the Tory papers gentlemen are speaking in various parts of Canada as aspirants for preferment in the next federal election. The leader of the opposition (Mr. Meighen) some time ago in this House intimated that some 2,000 factories had been closed and he was very insistent to the extent of saying, "By the figure 2,000 I am prepared to stand." It seems as though that deserves a little analysis. Last fall there was held in the city of Ottawa a convention composed of the mayors of eleven of the important cities of Canada, representatives of the two large railways, eight of the provinces, the Trade and Labour Congress of Canada, the Canadian Manufacturers' Association and some others, for the purpose of considering the advisability of determining in conference of those charged with the responsibility of expending public money, either in the provinces or the cities as well as representatives of the federal government, and to devise some uniform plan whereby winter work could be carried on to as great an extent as possible, even though such work had heretofore been done during summer only, for the reason that it was cheaper to do it that way. At the conference there were four representatives of the Canadian Manufacturers' Association, and rather early in the proceedings one of those gentlemen got away from the object of the conference and attempted to decide by resolution what was going to be the cure-all for the particular question we had under consideration. His proposal was to convene a special session of parliament to increase the tariff and by that means to take care of the ills which we were supposed to have met to deal with. During the course of his remarks this distinguished gentleman made a declaration which I desire to bring to the attention of the House. He said that 1,351 factories

had been closed down in Canada during the past two years—and the House will remember that this was in September, 1924. He was asked whether he would be good enough to give us the names of those factories and their location and he replied, "I shall be glad to supply that information but I have not got it here." We waited for some time for the information and as it was not forthcoming we wrote and asked him for it. On October 25 there came to the office in consequence a considerable list, but it showed simply the article affected as well as the place of manufacture: for instance, we found on the list, "Tools, Windsor, Ontario; chains, Hamilton, Ontario." So indefinite was the statement that it could not be checked and we felt that this was not the information that had been promised us. We therefore wrote for further information, calling the attention of the hon. gentleman to certain peculiarities in his statement in regard to the factories which it was claimed had been closed down. For example, a honey factory had been closed at Lambeth and another honey factory at Listowel.

Mr. MEIGHEN: The minister says that he wrote to "the hon. gentleman" calling his attention to certain things.

Mr. MURDOCK: I said, distinguished gentleman.

Mr. MEIGHEN: Oh, it can't be me then; who was it?

Mr. MURDOCK: My right hon. friend is too touchy; he will know that I am referring to him when I do so. In the meantime I am dealing with the statements of an officer of the Canadian Manufacturers' Association who at a conference in Ottawa had agreed to give us a list of the names, with the location in each case, of 1,351 factories which he said had been closed down. He gave certain information which we considered not all that had been promised and we therefore wrote him for additional facts. We found that a honey factory had been closed at Lambeth and another at Listowel; a shipyard had been closed at Canning, Nova Scotia, and a corn cure and foot comforts factory at Niagara Falls; an oleomargarine factory had also been closed at Quebec, and many others were on the list. We intimated, as I have said, that this was not satisfactory, so a little later, to be exact, on January 26, there was prepared a list signed by this gentleman and handed to me on January 31 by an officer of the Canadian Manufacturers' Association. This list disclosed on analysis some very peculiar oversights. In the first place there were only 1,251 names of factories, of which 761, or 61 per cent, were found not to be listed by R. G. Dun & Company as carrying on business on or after January 1, 1923. Then, 152, or 12 per cent—those gentlemen who have been talking about factories closing down might pay attention to this—were listed as in business in January 1923 and in January 1925, according to R. G. Dun & Company; while 22, or 1.7 per cent, were not listed in January 1923 but were in business in January 1925. Again, 307, or 24.5 per cent, went out of business between January 1923 and January 1925, this number including firms that failed and firms that withdrew from business for other reasons. The representative of the Canadian Manufacturers' Association had stated at the conference in September 1924 that the list of factories he had contained 1,351 names, but there were only 1,251 in the list which he later furnished to the department after several requests. But this does not necessarily prove the whole story and I shall therefore take occasion to place on the record more accurate data secured from the reports of R. G. Dun & Company.

Now, this government has been held up to ridicule throughout the length and breadth of Canada by certain gentlemen of the Tory party because of the deplorable, the awful conditions that have arisen in this country as a result of its low tariff or revenue tariff tendencies. Those gentlemen opposite would have the people of Canada believe that never at any time in the history of the country except when a Liberal government was in power could such conditions exist. In view of this, I am going to submit a comparative statement which at least will be illuminating to those who might believe any such thing. I have here a table showing the commercial failures in Canada by branches of business in the years 1914, 1915, 1920, 1921, 1922, 1923 and 1924. It is interesting and will bear some study, especially when you find the Tory press or a Tory aspirant to office contending that only under a Liberal government can any of these commercial failures take place. This list is as follows:

COMMERCIAL FAILURES IN CANADA BY BRANCHES OF BUSINESS

50% prices

Manufactures	1914		1915		1920		1921		1922		1923		1924		—

*Wholesale and retail stores, hotels, restaurants.
†Manufacturing establishments, wholesale and retail stores, and agents and brokers.

It will be noted that with respect to woollens, carpets and so forth, there were no failures in 1920, because of the fact that that particular industry was at that time making enormous and exorbitant profits at the expense of the people of this country. The same applies to cotton hosiery, and so forth, in 1920; there were no failures in that year for the reason that I have just given.

Mr. LADNER: Why does the minister take only the first two years of the war and leave the others out? Would it not have been sounder to take the years preceding the war and compare them with the years after the war?

Mr. MURDOCK: We wanted to get at least two full years of Tory rule, and in 1914, which, as is well known, was a panic year generally on this continent, there had at least been a measurable period of Tory government. I would not be unfair enough to indicate that the tail wagged the dog, or that the Tory government was responsible for the financial depression which prevailed on this continent in 1914. I would not do that; all I am trying to indicate is that here is a good, clear year, 1914, the larger part of it before the war—

Mr. LADNER: Will the minister not agree that 1915, after the Germans had made their terrific onslaught, was a year of great depression generally, and that as respects the reasons for the losses in the period to which he refers it is hardly fair to take the first two years of the war as a basis of comparison? There was no relationship to the actual facts, the conditions were so abnormal.

Mr. MURDOCK: I shall not take the slightest objection if my hon. friend makes that argument when he is dealing with these figures later. I realize that he can take whatever view he cares to take on the matter.

In view of the figures I have read, Mr. Speaker, when anyone starts to talk about the number of failures, yes, and the liabilities having regard to the worth of the dollar, it is evident that the figures for 1914 and 1924 will bear a very fair comparison.

What reams of eloquence we heard, Mr. Speaker, from the opposition benches last year, and I think the year before, about the deplorable and awful conditions under which the boot and shoe industry and the woollen and textile industries of this Canada of ours were suffering as a result of a Liberal government being in office. There had been so very much made of that, that it seemed to me advisable that we should place on Hansard some accurate figures for the various years to show whether there was anything really substantial to certain clamour that was made, or whether it was just simply a part of the Tory propaganda for protectionist friend purposes. If there is no objection, Mr. Speaker, I should like to place on Hansard a comparative statement showing the number of persons reported on the payrolls of thirty-seven mills engaged in the manufacture of woollen yarn and cloth and in wool pulling and carding, by months from 1920 to 1925, the figures and numbers of employees for three months of 1925 being included.

The statement is as follows:

Dominion Bureau of Statistics

General Statistics Branch

Number of persons reported on payrolls of thirty-seven mills engaged in the manufacture of woollen yarn and cloth and in wool pulling and carding, by months 1920-1925

	1920	1921	1922	1923	1924	1925
January 1.. ..	No	3,237	3,883	4,402	3,783	3,249
February 1. .	Records	3,489	4,146	4,734	4,661	3,685
March 1.. .. .		3,435	4,208	4,707	4,482	3,856
April 1..		3,166	4,383	4,583	3,945	
May 1..		3,193	4,307	4,540	3,952

		42,562	51,999	54,292	46,605	10,790

Index number of employees in manufacturing group—thread, yarn and cloth (includes silk and cotton): Jan. 1920, 100; Feb. 1921, 85.4; Feb. 1922, 97.8; Feb. 1923, 103.5; Feb. 1924, 94.6; Jan. 1925, 94.6; Feb. 1925, 99.3; March 1925, 101.3.

I should also like to place on Hansard another statement from the Dominion Bureau of Statistics showing the number of persons reported on the payrolls of ninety-one manufacturers of boots and shoes by months during the period from 1920 to 1925; also giving the index number of employees in the manufacturing group—leather and its products for the period in question.

The statement is as follows:

Dominion Bureau of Statistics

General Statistics Branch

Number of persons reported on payrolls of ninety-one manufacturers of boots and shoes, by months, 1920-1925

	1920	1921	1922	1923	1924	1925
Jan. 1. . .	No	5,561	11,653	10,950	10,333	9,732
Feb. 1. . .	Records	8,127	11,615	11,661	11,164	10,436
March 1. ..		8,920	11,399	11,568	11,031	10,552
April 1. . ..		9,275	10,906	10,899	10,988	
May 1.. . .		9,283	10,788	10,316	10,815	
June 1.. . .		9,852	10,321	9,944	10,391	
July 1.. . .		10,331	10,872	10,322	10,067	
August 1. .		10,564	10,773	10,153	10,269	
Sept. 1. . .		10,486	10,810	10,115	10,042	
Oct. 1. . .		10,837	10,710	10,634	10,263	
Nov. 1. . .		10,903	11,403	10,871	10,337	
Dec. 1. . .		11,529	11,633	11,307	10,295	
		115,668	132,883	128,740	125,995	30,720

Index number of employees in manufacturing group—leather and its products: Jan. 1920, 100; Feb. 1921, 66.1; Feb. 1922, 85.6; Feb. 1923, 84.7; Feb. 1924, 80.5; Jan. 1925, 71.0; Feb. 1925, 74.8; March 1925, 75.8.

I should also like to read, because it is rather illuminating, a statement giving figures with respect to the wool and textile industry in Canada for the period of 1910 to 1923. I have not been able to secure all of the essential figures for 1924. Again, these figures are for certain years of the adminstration of the previous government and of this government, details being given for the years 1910, 1915, 1919, 1920, 1921, 1922 and 1923:

Year	Number of establishments	Amount of capital	Number of wage earners	Value of Products
1910	162	$ 8,692,705	4,759	$ 7,072,360
1915	60	10,651,468	4,039	10,214,059
1919	122	$31,863,435	7,450	$43,254,749
1920	130	38,052,984	8,148	47,615,179
1921	170	34,639,936	6,234	22,895,750
1922	137	37,102,382	7,470	29,062,772
1923	141	43,148,218	8,264	33,472,087

It will be noticed that in 1923, when we were hearing about the terrible disaster that had come to the woollen and textile industry, there were 141 establishments with a capitalization of $43,148,218 and 8,264 employees, or more than had been recorded in the previous years, whilst the value of the products had increased to $33,472,087.

I should explain that in the case of wool pulling establishments a number were not reported in 1915. In 1910 there were four of these.

Now let us take the establishments manufacturing boots and shoes in Canada, taking the period from 1910 to 1923:

Establishments manufacturing Boots and Shoes in Canada 1910-1923

	1910	1915	1919	1920	1921	1922	1923
Number of establishments..	180	146	161	173	177	181	189
Capital..	$23,630,649	$30,881,172	$38,680,581	$34,347,026	$31,644,855	$29,881,921	$30,533,591
Wage earners	15,920	14,290	13,144	11,045	11,268	11,968	12,439
Number of pairs.. ..	.....	.....	18,891,860	17,693,966	15,046,985	17,194,206	18,123,894
Value of Products.. ..	$33,937,248	$34,064,696	$63,579,035	$66,817,174	$44,665,381	$45,503,858	$45,596,012

In 1920, in the first part of which boom times were said to be prevailing, we find the number of wage earners getting less and the number of pairs less. In 1922 we find an increase in the value of the products produced. In 1923 there was also an increase in the number of wage earners, in the number of pairs produced and in the value of products.

Now, Mr. Speaker, I undertook, because I realized that my hon. friends opposite might want to know something about 1924, to get as nearly as possible a comparative statement for the years 1923 and 1924. I have here an explanatory statement as regards wool and textiles for the years 1923 and 1924, and a comparative statement with respect to boot and shoe establishments for 1923 and 1924. These statements I should like to have placed on Hansard.

The statement is as follows:

Woollen Textiles—1923

Industry	Establishments No.	Capital	Employees No.	Salaries and wages	Value of Products
Woollen cloth..	47	$14,819,633	3,634	$3,343,575	11,640,694
Woollen yarn..	14	7,611,761	1,339	1,078,941	6,245,173
Carpets, mats and rugs..	13	3,327,805	889	889,906	3,283,964
Woollen goods, n.e.s..	25	6,608,677	998	1,001,902	5,103,977
Total woollen textiles..	99	$32,367,876	6,860	$6,314,324	$26,273,808

Woollen Textiles—1924

Industry	Establishments No.	Capital	Employees No.	Salaries and wages	Value of Products
Woollen cloth..	47	$15,648,594	3,163	$2,932,411	$10,466,032
Woollen yarn..	14	8,375,413	1,409	934,749	4,281,325
Carpets, mats and rugs..	13	4,078,387	702	722,157	2,396,226
Woollen goods, n.e.s..	25	7,458,504	947	953,825	5,257,710
Total woollen textiles..	99	$35,560,898	6,221	$5,543,142	$22,401,293

Boot and Shoe Industry

	1923	1924
Number of establishments..	121	121
Capital..	$24,043,716	24,433,099
Number of employees..	10,903	10,863
Salaries and wages..	11,047,985	10,716,974
Value of production..	36,436,966	33,010,490

The number of pairs of boots and shoes made by the above establishments in 1923 was 13,722,689; in 1924 the number was 13,496,830.

One point I desire to touch upon is the statement that in 1924 twelve boot and shoe establishments went out of business. That looks serious; that no doubt is the text upon which our Tory friends are basing the statement that disaster and ruin has overtaken the boot and shoe industry in various parts of the country. But that does not at all convey the real situation, because while twelve boot and shoe factories went out of business in 1924 there were sixteen new establishments which came into being. This would appear to indicate that the boot and shoe industry was not in such a serious situation as many hon. gentlemen would like to have us believe.

Mr. STEWART (Leeds): Can the minister give us the numbers of pairs and the value of boots and shoes imported in those years he is discussing?

Mr. MURDOCK: If my hon. friend would look at the customs record he could probably get that information for himself, and as I have a considerable way to go yet I would ask to be excused.

When I state that twelve boot and shoe factories went out of business and sixteen came into being in 1924, some distinguished gentleman in the opposition is liable to ask, what is the comparative number of employees of those that went out of business and those that came into being in the boot and shoe industry? Anticipating that inquiry I asked the Dominion Statistician for that information and received the following reply:

In reply to your letter, the twelve boot and shoe establishments which went out of business had a total of 326 employees, or an average of 27.1 per establishment. I might add that one of these establishments was burned down and another has resumed operations within the last month or two.

With regard to the new establishments, we have received to date returns from only 10, for which the average number of employees is 26.7 or practically the same as that for the establishments which ceased operations. I would add that at least one of the new establishments is quite large, but, as you know, we are not permitted to give out particulars regarding an individual concern.

Now, Mr. Speaker, that deals with certain references to factories closing and the serious conditions of the boot and shoe and textile industries which hon. gentlemen opposite are so anxious and so willing at times to talk of.

There is a further matter for which the right hon. leader of the opposition gave me the text some time ago. I refer to his remarks concerning certain comparative unemployment conditions in Canada and in the United States. In order that I may not misinterpret what he said let me quote his exact language. The right hon. gentleman was referring to the serious unemployment conditions in Canada in comparison with the conditions which he said existed in the United States, and on page 18 of Hansard we find the statement which he made, with the absolute degree of assurance which always characterizes the hon. gentleman's utterances. He said:

The index figure now is 83.9, showing that more than sixteen per cent less are employed now than on the 1st January, 1920.

He was referring to Canada. He continues:

I would like the corresponding figures to be produced from the United States and to ascertain if there has been sixteen per cent or even one per cent reduction in the same period in that country.

And meeting the challenge of the right hon. gentleman, we produce evidence in the form of the United States Department of Labour Monthly Labour Review for March, 1925, and we analyze to find out whether there was the one per cent which the hon. gentleman inquired for. The Monthly Labour Review, published by the United States Department of Labour, March, 1925, at page 129,

gives the necessary figures for comparative purposes, and we are therefore able to arrive at the following comparison between Canadian and United States change in employment conditions as between January 1920 and January 1925, as follows:

Canadian Index Number

January 1920	100
January 1925	83.9

United States Index Number

January 1920	116.1
January 1925	90

This shows that while there had been a change of 16.1 in Canada there had been a change of 26.1 in the United States and these figures are not from the Minister of Labour in Canada, but from the Secretary of Labour for the United States at page 129 of his March Labour Review. I realize that my hon. friend, with his ever readiness to get around the point, may take the position that that comparison of figures is not altogether accurate, because the figures which I quoted were for the general index of employment in United States manufacturing industries January 1914 to January 1925, while the figure 83.9 for Canada refers to all employment; so that we will have to concede that the hon. gentleman might make a point in that comparison, and therefore we will have to get right down to real concrete, comparative figures of manufacturing in the United States and in Canada. Returns from employers in Canada have not only been tabulated for all industries, producing the figure of 83.9, which I gave the House a little while ago, but they have been tabulated and index numbers worked out for each industry. One of the divisions of this tabulation is manufacturing which is the basis of the tabulation adopted in the United States. This comparison shows the following for the years 1924 and 1925:

Manufacturing Industries

	Canada	United States
1924 January	80.1	95.5
February	84.9	96.6
March	86	96.4
April	86.5	94.5
May	87.7	90.8
June	88.4	87.9
July	87.7	84.8
August	86.2	85.0
September	84.5	86.7
October	85.7	87.9
November	84.2	87.8
December	82.0	89.4
1925 January	75.5	90.0
February	79.03	
March	86.0	

[Mr. Murdock.]

Still a little better in January than the United States, although hon. members will recall that the figure 90 for the United States means a reduction of 26.1, whereas the figure 75.5 as regards the manufacturing industries of Canada for the month of January means a reduction of 24.5.

The figures for the United States are not available for the months of February and March.

Mr. STANSELL: Was the period when the figures for the United States were low as regards labour about the time of the presidential election?

Mr. MURDOCK: My hon. friend will note that in July and August last, the United States manufacturing figures were below those of Canada, although they started from a point 16.1 above those of Canada on January 1, 1920. The only thing I am at present endeavouring to do, hon. members will understand, is to reply to the leader of the opposition (Mr. Meighen), who desired to be shown if there had been a change of one point in the manufacturing figures of the United States. These figures prove conclusively that there has been a greater change in unemployment figures in the United States than in Canada.

On the same date that the right hon. gentleman asked for this information, he also produced what was supposed to be certain figures from Montreal indicating the condition of unemployment there. I am glad to read to the House an editorial from La Patrie of Montreal, dated January 15, 1925. I do not suppose that it will be charged that La Patrie is too distinctly favourable to this government. I think possibly it can be assumed that this is simply a reasonably accurate conception of existing conditions in Montreal as of January 15. The editorial, by the way, intimates that I said something which I do not recall ever having said, but that does not matter particularly. It reads:

Unemployment

We are at the present time, from the employment viewpoint, going through the worst period of the winter. All the work which the rough season interrupts is now suspended, and as the snowfall has been so far comparatively small, we are deprived of the best palliative against unemployment.

And yet, as La Patrie predicted in the early fall, we do not see the shortage of employment take in Montreal the character of a crisis, as was to happen according to the provisions of Hon. Mr. Murdock, Federal Minister of Labour. There are evidently

a number of workers who at the present time do not find any employment, as is always the case every season in a city as important as Montreal; but those who are without any employment are not without resources or are efficiently helped by our ordinary organization for public assistance, and we do not, as we did a few years ago, see bands of famished unemployed using force to have meals served to them in public eating houses.

We had stated, last fall, that the employment situation in Montreal was normal or even a little better than in 1923. We based that statement upon information received from the St. Vincent de Paul Society, which, in our judgment, always knows better than anybody else what position the popular class finds itself in when facing the subsistence problem.

This information, which we presented as trustworthy, is now confirmed by the Dominion Bureau of statistics. An official report just published tells us that employment in the province of Quebec was somewhat better in 1924 than in 1923. The statistician's index number, which was 95.2 in 1923, rose to 95.8 for 1924. The improvement is not considerable, but it is important if one considers that the public powers predicted an increase in the scarcity of employment.

Let us add that according to official statistics employment conditions, during 1924, were better in the province of Quebec than in any other province of the Dominion, with the only exception of British Columbia.

I do not subscribe personally to all that is stated in that editorial. I give it to the House as an indication of the view of a prominent publication in the city of Montreal and as an offset to some of the claims made by the leader of the opposition.

In the course of every opportunity that presents itself, we find hon. gentlemen referring to the very much better conditions existing in the United States and intimating that unemployment there is in no way comparable with that in the Dominion of Canada. Let us see and do not let it be the word of the Minister of Labour that determines the matter. Let us take the views of others. Let us take the facts, figures and analyses that come to us from sources official and otherwise. I hold in my hand a clipping from the New York Times of March 8, 1925, which states:

> United States ranks third in unemployment. Great Britain has largest total, Austria second, France and Finland lowest.

This is so good I think that it should be placed on Hansard. It is not very long:

> The latest figures on unemployment in various countries reveal the fact that the United States, where it is quite commonly said there is full employment of population, is third on the list of countries having the largest number of persons idle, with Great Britain first and Austria second.
>
> Figures obtained from the Foreign Department of Moody's Investors' Service support the fact that the unemployed in the United States number about twenty out of each 1,000 of population, while the number in Great Britain is twenty-six out of each 1,000 and Austria about the same as the United States. In Austria the total number since the first of the year has increased to 187,000, or about 29 per 1,000, but owing to fluctuations of employment the figure twenty represents an early 1925 average.
>
> The lowest rates are in France and Finland, which report practically no unemployment. Of the Central European countries, Hungary makes the best showing with only about three out of every 1,000 unemployed followed by Czechoslovakia and Poland, with about five and six per 1,000 respectively. In Germany out of every 1,000 inhabitants more than seven were out of work at the beginning of the year. Denmark leads the Scandinavian kingdoms with a rate of over eight per 1,000, while Sweden's unemployed number less than three per 1,000. The relatively low figures reported by Russia are of interest, although statisticians are inclined to question their reliability. In the Western European countries, Belgium makes the best showing with a rate of 2.39 per cent, as compared with 9.26 per cent in the Netherlands. The rate in Switzerland is only 2.42 per 1,000, while that in Italy is 3.36 per 1,000.
>
> The following table shows the number of unemployed in the principal countries at the beginning of 1925, together with the population:

	Estimated Population	Number of unemployed	Rate per 1,000 of pop.
Austria	6,500,000	130,000	20.00
Australia	5,800,000	32,708	5.64
Belgium	7,700,000	18,444	2.39
Canada	8,800,000	10,540	1.20
Czechoslovakia	13,600,000	73,006	5.37
Denmark	3,300,000	27,518	8.34
Finland	3,400,000	1,803	.53
France	39,200,000	11,863	.30
Germany	59,900,000	436,450	7.29
Great Britain	44,700,000	1,158,000	25.91
Hungary	8,000,000	26,020	3.25
Italy	40,000,000	134,719	3.36
Netherlands	7,100,000	65,740	9.26
Norway	2,700,000	20,500	7.60
Poland	27,200,000	155,245	5.71
Russia	132,000,000	1,300,000	9.85
Sweden	6,000,000	17,344	2.89
Switzerland	3,900,000	9,451	2.42
United States	110,000,000	2,100,000	19.09

I am sure my hon. friend from Fort William and Rainy River (Mr. Manion) will note that last item.

Mr. MANION: It is one-tenth of what the minister said before. I hope he is as close in all his other statements as he is in that one.

Mr. MURDOCK: My hon. friend goes out of his way a little to be unfair. If he will look up Hansard he will find that the quotations to which he is now referring were placed before him and the House only as newspaper reports for what they might be worth.

Mr. LADNER: Did the minister say that the unemployment figure in Canada was 10,000 or 100,000?

Mr. MURDOCK: I was just about to take up that point. Newspaper reports are not always reliable; for example, I do not agree

with the estimate of the New York Times which places the unemployment in Canada during that particular period at only 10,540. This article, by the way, was dated March 8, 1925, and in my judgment it would be unfair, indeed untrue, to suggest that this was the total number of unemployed in Canada at that time.

Mr. MEIGHEN: Does the minister think that any quotation which suggested that the unemployed in Canada in that period was only 10,000 is worth taking up the time of the House to give?

Mr. MURDOCK: I do not suppose that the right hon. gentleman would decline to concede to a humble member on this side of the House the right to take up the time of the House with such matters as he regards as sufficiently important. My right hon. friend is ever ready to jump in and take up all the time he wants, interrupting when he sees fit, and if he will kindly permit me to use my own judgment in this respect I think we shall all appreciate the courtesy.

Mr. LADNER: For information, may I ask what is the extent of unemployment in Canada according to the records of the department? The minister would probably know what the figure was at that time.

Mr. MURDOCK: As my hon. friend knows, there are no accurate records collected in Canada which are absolutely reliable and by which we could say definitely just what the number of unemployed were.

Mr. LADNER: But approximately.

Mr. MURDOCK: Or reasonably approximately even. Now, I do not think it would be unfair or inconsistent to admit that there were in Canada during the past winter at one time or another probably from forty-five to fifty thousand people unemployed; I do not think that would be beyond the mark. But if we had any number comparable with the figures which the United States admits—and I shall prove in a few moments that the United States does admit it—we should have had 200,000 unemployed in Canada for our 8,780,000, that is to say, in proportion to the number of unemployed across the line.

Mr. MEIGHEN: Who in the United States admits that there were 2,000,000 unemployed there? Is it the same newspaper?

[Mr. Murdock.]

Mr. MURDOCK: The figures are obtained from various sources of information. I will try to satisfy my right hon. friend if he will only possess his soul in patience.

Mr. MEIGHEN: The minister never answers a question at all; he simply smiles and talks around it. What is the use of quoting, as to the conditions of affairs in the United States, the same newspaper that talks such humbug about Canada?

Mr. MURDOCK: We shall quote something else besides newspapers before we go much further. This particular statement of the New York Times was commented on by the Regina Leader under date March 21, I shall not read the entire editorial but there is one passage that does strike me, as I think it will strike hon. gentlemen directly opposite as well as those to their left. I hope my right hon. friend will listen to this:

> The New York Times is, when it comes to business news, about the most conservative and ablest conducted daily newspaper in the United States, and for that reason the information it publishes on unemployment and business failures may be accepted as accurate. This information does not support the contention that all that a country requires to become prosperous is a high protective tariff. The tariff now in force in the United States is the highest in the history of that country; yet the United States is the third on the list of countries in the matter of unemployment, and its business failures do not show the improvement in business conditions which many had hoped for.

For what it may be worth, I give that to hon. gentlemen. Now, we find frequently that labour takes an interest in the conditions of unemployment; and hon. gentlemen opposite show great anxiety about the welfare and prosperity, present and future, of labour. They always stress the point that they want to get high protection for their friends, to be divided up reasonably with certain workmen, or at least that the workmen shall be given what they would describe as a fair wage. Here are some references that various labour representatives make to the condition of unemployment in the United States, as gleaned from various labour publications. This is from the Cleveland Federationist, February 19, 1925:

> The Department of Labour of the state of Illinois is authority for the statement that October, 1924, in Illinois was the worst October in four years. Thousands of people have been without jobs during the summer and fall, and the October survey conducted by the Free Employment Service showed that there were fewer people at work in the factories of Illinois than there were on the average in 1922.

The following reports from organizers of the American Federation of Labour as appearing in the January, 1925, issue of the American Federationist, in reporting on conditions in Illinois, stated:

John A. Cooley, Eldorado. One mine has been closed down, throwing 350 men out of employment.

Henry D. Felix, Litchfield. The American Radiator Company is working only about half time and 450 workers in this plant have been laid off.

Thomas Murphy, Murphysboro. Mine No. 9 in this section, which employed 185 men, has been abandoned. Times are very bad with much unemployment among all classes of labour.

The Labour Review, Portsmouth, Ohio, February 21, 1925, says:

Building mechanics in search of employment should remain away from California, particularly San Francisco and vicinity, where the supply of building mechanics is greatly in excess of the demand, according to an official announcement made by the officers of the State Building Trades Council of California.

The Trades Union News, Philadelphia, Pa., February 19, 1925, says:

The unemployment situation in Camden, New Jersey, has been so serious during the past few weeks that Mayor King deemed it advisable to call a conference to discuss remedial measures. . . . . "The woeful condition of unemployment in Camden is acute," Commissioner Staley stated. "Hearts are bursting in despair with men unable to find employment. The Bureau of Charities has exhausted its appropriation for the year, and nearly all who apply for groceries and coal are not men who beg charity. . . . . " More than 600 men recently applied for employment in one day at the Camden Bureau of Charity.

The Labour Advocate, Nashville, Tennessee, March 20, 1925, says:

There still is a labour surplus in the automobile and allied industries of Ohio, and the mining industry is below normal, but the building and steel industries are improved, according to a report released by the Employment Service of the United States Department of Labour.

The Union Advocate, St. Paul, Minnesota, January 1, 1925, says:

Of 15,544 applicants for jobs at the Cleveland branch of the State Employment Office in November, 1924, 4,724 were placed.

The following reports from organizers of the American Federation of Labour as appearing in the January, 1925, issue of the American Federationist, reporting on conditions in various localities in the state of Ohio, stated:

C. H. Grabham, Byseville. The mines in this locality are overcrowded and fully half of them are closed down.

John F. Bunce, Findlay. There has been no improvement in conditions in this section. The Adam Axle Company has laid off 200 workers and the Ditcher Company 30.

Dan. W. Wallace, Gloucester. Twenty-one employees of the County and State Highways Department have been laid off.

Stanley Ogg, Hamilton, Ohio. Many men have been laid off in the metal trades, and a few have been hired at the Ford plant. The foundries are working part time with reduced force.

The Union Advocate, St. Paul, Minnesota, February 26, 1925, says:

Losses in employment in the factories of New York state in January that are not entirely seasonal are reported by the state industrial commissioner. Employment is still 7½ per cent below January, 1924, and 10 per cent below January, 1923. This means that nearly 120,000 workers who had jobs in January, 1923, are out of a job to-day.

The Union Advocate, St. Paul, in its issue of February 19, 1925, says:

Unemployment indicates bad industrial conditions. The hoped for prosperity that was to follow the election of a Republican president has not materialized. Labour conditions in St. Paul are at a low ebb. Thousands of building tradesmen and others are out of work, and merchants complain about business conditions.

Collections are difficult, and merchants are obliged to carry the accounts of unemployed workers for food and other necessities. The general impression is that conditions have not held up since the election, and great disappointment and resentment exists.

Assurances given that the success of the Republican ticket would be the signal for great and permanent prosperity caused many to expect much and are now asking the question, where and when will the prosperity strike.

Following is an extract from the report of General Vice-President A. O. Anderson, of the International Brotherhood of Blacksmiths, appearing in the Blacksmiths' Journal, January, 1925:

In the Northwest, whether confidence has been restored or not restored I cannot say, nevertheless we have now an unusually large number of men who are unemployed, and presumably a large number of those same men who did all they could to further the election of Coolidge and his gang who are still looking for that confidence, so that they may be able to secure some kind of occupation whereby they may be able to keep the wolf from their doors during this winter, but in place of adding men to the various industries reductions are being made daily, so the prospects are rather slim for any improvements.

There are a great many other reports that I might give in that connection, but I am going to pass along hurriedly to one article which I think should be placed on Hansard, as it indicates the view that at least some labour men in the United States have of the tariff and its cure-all properties:

Some tariff buncombe—its lesson "ancient and fish-like smell" emanates from speech of Senator W. M. Butler.

William M. Butler is United States senator from Massachusetts. He is also president of a number of corporations and a director in many more, including textile industries. Senator Butler recently delivered an address before the Boston Chapter, Inc., American Institute of Banking, and this is what he is reported as saying to that body:

And this sounds very much like what we hear from across the chamber at times:

"In order to protect the American workman in his American wages and conditions of living, we must maintain the American protective tariff policy. This policy has given us our development and prosperity and any other policy would be destruction."

In Massachusetts, where Senator Butler is so keenly interested in industry and (maybe) the interest of the American workers, thousands of toilers in the textile mills for months drew no wages at all—American or other—because the mills were shut down.

Information from reliable sources indicate that many textile mills are shut down and that those working at all, are operating on greatly curtailed schedules. The workers in the textile industry surely, when they read Senator Butler's speech, will as the Indianapolis News in an editorial remarks, "think that it has an ancient and fishlike smell."

Now let us look elsewhere. Here is a book published by the National Industrial Conference Board, in New York City in 1925. It is captioned "Wages and Hours in American Industries." There is much good information in this book for the right hon. gentleman who leads the opposition, if he really thinks that conditions in the United States in 1924 were reasonably comparable with conditions in Canada. I think this book, if he peruses it sufficiently, will indicate to him that possibly we were well off in Canada in comparison with conditions prevailing in the United States, but in case the right hon. gentleman might not peruse the book, I am going to give just a few short extracts. The first is found on page 39, and is captioned "General Trend 1914-1924" and reads:

The spring of 1923 found industry operating close to capacity production in a few industries, notably automobiles, was exceeding any previous records. The textiles and metal trades were operating on an active basis and in fact nearly all industries found conditions highly satisfactory.

Between March and May, 1923, there was a widespread movement to increase wage rates, and advances of from 10 per cent to 15 per cent became general. Weekly earnings immediately responded to the higher hourly earnings and with continued full time operation, or in some cases overtime, they maintained an upward trend until the middle of the year.

That is for 1923. Then we go on to page 40 of the same publication:

By July, 1924, employment had dropped nearly 25 per cent from the total of the preceding July. Hours of work were substantially at 1921 levels and weekly earnings were considerably lower than in 1923.

I quote further from page 59 of the same publication:

A distinct change was noticeable in August—

This was in 1924.

—when the downward trend gave way to an increase of 2.4 per cent this was the more marked, since August is normally a poor industrial month, owing to midsummer conditions.

[Mr. Murdock.]

The upward trend was continued in September with a further gain of 1.9 per cent, bringing employment to a point 28 per cent lower than at the 1920 peak and 20 per cent lower than the average for 1923, but 4.4 per cent higher than in July 1924.

Then we come to the reference to the iron and steel industry in the United States, page 83:

The iron and steel industry enjoyed a considerable spurt of activity at the beginning of 1924. This is best indicated by the gains in employment, which advanced about 19 per cent between December, 1923, and March, 1924. After this brief period of improvement the recession was rapid until July, when total employment was hardly more than half that reported in June 1920, and 25 per cent lower than in March, 1924. In August there was a distinct reaction upward and in September a still more pronounced gain, bringing employment to within 61.7 per cent of the total for June, 1920.

Then we come further to the reference to the textile group:

Of the five industries included in the textile group, the cotton industry in the north faced the most difficult problems. The short crop of cotton forced prices up to a point which made the manufacture of fabrics at existing wage levels, to sell at current prices, next to impossible. The result was a progressive curtailment of working schedules until a point was reached where many mills were completely shut down for weeks at a time. Between July, 1923, and July, 1924, total employment fell off 32 per cent, and average hours of work per week declined from 46.1 hours to 40.0 hours.

That Mr. Speaker, is a further example of the conditions in the United States which we have been so often told are exceptionally good.

Let me now refer to a comparison between retail food prices in Canada and those in the United States and other countries. We have been chided by the opposition on every possible occasion on the ground of our alleged failure to do anything at all to reduce the cost of living. Let us see just what we have done in that respect; let us see what a comparison with other countries will show. I have here, on pages 46 and 47 of the Monthly Labour Review, which is the official publication of the Department of Labour of the United States, a comparison of retail price changes, giving the index number of the retail prices in the United States and in other countries. Some nineteen countries are included here, and Canada appears to be in about the second best condition of any of the countries referred to. If there is no objection, Mr. Speaker, I think it would be appropriate that this comparison should be placed on Hansard in order to show that Canada is at least in as favourable a position as almost any other country as regards the retail prices of food.

5 p.m.

The statement is as follows:

Comparison of Retail Price Changes in the United States and Foreign Countries

The principal index numbers of retail prices published by foreign countries have been brought together with those of this bureau in the subjoined table after having been reduced in most cases to a common base, namely, prices for July, 1914, equal 100. This base was selected instead of the average for the year 1913, which is used in other tables of index numbers compiled by the bureau, because of the fact that in numerous instances satisfactory information for 1913 was not available. A part of the countries shown in the table now publish index numbers of retail prices on the July, 1914, base. In such cases, therefore, the index numbers are reproduced as published. For other countries the index numbers here shown have been obtained by dividing the index for each month specified in the table by the index for July, 1914, or the nearest period thereto as published in the original sources. As stated in the table, the number of articles included in the index numbers for the different countries differs widely.

These results should not, therefore, be considered as closely comparable with one another. In certain instances, also, the figures are not absolutely comparable from month to month over the entire period, owing to slight changes in the list of commodities and the localities included at successive dates.

We have heard a great deal about the number of Canadians who have gone to the United States during the past few years. I have often thought that hon. gentlemen opposite—yes, and hon. gentlemen possibly in all parts of the House—have not given as much attention as they should to the actual causes that have brought about in many cases the emigration of Canadian workmen to the United States. A few years ago the United States inaugurated a quota restriction regulation, with the result that during the boom times, particularly the early part of 1923, industry in the United States found it difficult to get a sufficient number of workmen, and through friends of Canadians in the United States opportunities were frequently offered to Canadian workmen to go to that country. Another new condition in the United States is the immigration into that country of people from Mexico. I am going to ask permission to place on Hansard, Mr. Speaker, a statement showing the number of immigrant aliens admitted to the United States from Canada, Newfoundland and Mexico during the two years ended December 31, 1924, by months.

The statement is as follows:

Immigrant aliens admitted to the United States from Canada, Newfoundland, and Mexico, during the two years ended December 31, 1924, by months

	Country of Last Permanent Residence		
During 1923—	*Canada	Mexico	Newfoundland
January	7,995	3,238	
Feburay	7,405	5,506	
March	8,857	7,508	
April	16,427	7,097	
May	18,912	8,258	
June	19,157	8,248	
July	16,184	9,110	
August	16,396	9,322	
September	16,657	8,097	
October	15,858	6,131	
November	20,962	4,925	
December	17,559	4,184	
Total	182,369	81,624	
During 1924—			
January	15,598	4,920	
February	14,092	6,461	
March	13,474	12,954	
April	17,517	10,696	
May	17,216	7,587	
June	19,177	4,949	
July	7,768	2,001	46
August	10,154	2,385	87
September	9,905	2,325	174
October	10,143	1,870	236
November	12,321	1,631	281
December	11,733	1,489	259
Total	159,098	59,268	1,083

*Prior to July, 1924, Canada and Newfoundland were combined.

[Mr. Murdock.]

These figures show that in 1923 the number of Canadians who went to the United States was 182,369, and the number of Mexicans 81,000, while in 1924 the figures were 159,098 from Canada and 59,268 from Mexico. But there is another side to that question: not all the Canadians who went to the United States remained there, by any means. Many of them went there to work for a while and to return to Canada as soon as they could. I have here a report showing the number of Canadians who returned from the United States, after an absence of six months or longer, during the eleven months ended February 28, 1925, and I would ask permission to place it on Hansard.

The statement is as follows:

Report of returned Canadians from the United States, after an absence of six months or longer, during the eleven months ended February 28, 1925.

	Canadian-born citizens	British subjects who had acquired Canadian domicile	Naturalized Canadian citizens	Totals
April	3,608	289	190	4,087
May	4,170	505	261	4,936
June	3,962	447	311	4,720
July	4,426	405	296	5,127
August	4,023	552	416	4,991
September	2,952	434	239	3,625
October	2,844	394	242	3,480
November	2,614	357	215	3,186
December	2,618	353	194	3,165
January	1,395	199	121	1,715
February	1,641	239	132	2,012
Totals	34,253	4,174	2,617	41,044

I also have a statement of Canadians who went to the United States and returned within six months, each of whom paid the head tax of $8 on his admission to the adjoining republic, which amount was refunded when he returned to Canada.

The statement is as follows:

During	1923	1924
January	2,839	3,614
February	2,927	2,839
March	3,473	5,503
April	3,749	5,813
May	4,418	5,888
June	4,384	5,030
July	3,397	3,803
August	3,376	3,272
September	2,626	2,218
October	3,150	1,610
November	3,843	1,693
December	5,250	2,033
Total	43,432	43,316

These figures, which are very interesting show that in 1923 Canadians to the number of 43,432 returned from the United States and

secured a refund of their head tax payment having been in that country less than six months. In 1924, 43,316 Canadians returned under the same conditions. What do the figures indicate? Do they indicate a lack of employment in Canada? No, because a great many of the forty-three thousand odd who went to the United States in each of the years mentioned were eminent gentlemen, high in the business circles of Canada who, it may be with their families, went to California or Florida for a vacation of weeks or months, as the case may be, paid the head tax for themselves and their dependents, and on returning to their homes or places of business in the six months period had the head tax they had paid refunded to them. Yet these are cited by my hon. friends opposite as workmen leaving Canada to secure a job. In reality they were individual citizens of this country so well placed that they could go to the other side to take a holiday for several months.

Mr. MANION: I should like to ask my hon. friend a question in order to obtain information and not with a view to making an argument. Is it not true that people from Canada who go to the United States on a holiday are not entered as going there to live? I ask the question for information because I am certainly of that impression myself?

Mr. MURDOCK: My hon. friend may be right; in many cases that is so. I think, however, that it may depend upon the particular port of entry and how strict the immigration officer is. At any rate that used to be the case in years gone by. I have been through nearly every port of entry on the international boundary, and know something of the conditions. I know that sometimes they charge the head tax even although the person entering the United States says that he is only going across for a visit of a few weeks. Personally I was never charged the head tax, but what I have stated is the actual fact.

Now, Mr. Speaker, I must really hasten along. In doing so I find it necessary to refer to a question connected with the member for Fort William and Rainy River (Mr. Manion). It has to do with one of the most unfortunate episodes that has ever occurred in this House, at any rate since I have been a member of it. A discussion was under way here when my genial friend, with the enthusiasm that characterizes him, talked about one-third of Canada being ready for annexation and being ready to vote for it.

Mr. MANION: May I correct my hon. friend?

Mr. MURDOCK: I am quite sure that the hon. gentleman will not even now change his viewpoint.

Mr. MANION: I do not want my hon. friend to put into my mouth words that I did not make use of. He corrected me a few minutes ago in regard to the statement that I attributed to him wherein he was quoting somebody as saying that there were twenty million unemployed in the United States. Now I must correct the minister in the same way. I did not make the statement that one-third of Canada would vote for annexation; I said it was the statement of an outstanding man whose name was familiar to every hon. member in this House. I did not make the statement that one-third of Canada would vote that way and my hon. friend must not seek to put such words into my mouth.

Mr. MURDOCK: I will read the hon. gentleman's own words which are to be found at page 158 of Hansard:

> Mr. MANION: I am not so sure if at the present time a vote were taken in the section of which he speaks it might not carry, due to the terrible conditions brought about by the foolish policies of this government.

Mr. MANION: Wait a moment. Just before that, if my hon. friend will permit me, I quoted the authority for the statement.

Mr. MURDOCK: My hon. friend said on the occasion referred to:

> I did not give that as my own statement; I gave it as the statement of an outstanding gentleman in this country—

Mr. MANION: Hear, hear.

Mr. MURDOCK:

> —a gentleman whose name is familiar to everyone in the House. He said to me that if a vote for annexation were taken in this section of the country, which comprises one-third of the people of Canada, it would carry overwhelmingly.

Well, let us see what the result of that was. On the strength of a press despatch with reference to this statement going out from Ottawa the following item was published in the Chicago Tribune of February 15, 1925:

> Canada Hears Third of Nation Would Join U.S.
>
> Ottawa, Can., Feb. 14.—(United News.)—Talk of secession from the British empire was heard in the Canadian parliament last night when opposition speakers, battling with the government, declare that if a vote were taken "tomorrow in an area comprising one-third of the Dominion's population" it would be overwhelmingly in favour of annexation to the United States.
>
> Minister of Labour Murdock told the House of Commons that it was "criminal" for the opposition to bring this issue into the debate. But Dr. Manion,

one of the opposition leaders, stuck to his guns, declaring that he would back the secession statement with facts.

With the great trek of Canadians continuing across the international boundary line into the United States, Canada, according to many politicians, faces a crisis.

Mr. McQUARRIE: May I ask the minister if he is quoting from another American paper?

Mr. MURDOCK: I said I was quoting from the Chicago Tribune of February 15, 1925. The item was sent to me by a personal friend, a good old boy raised in Zorra in the county of Oxford, who loves Canada and everything in it, and who wanted to know if that was the kind of talk that was going on here because, he said, he did not believe it.

My hon. friend in his speech on the budget referred in very critical and unkind terms to this government. He said many things with respect to us, and among other criticisms referred to those hon. members who went over to the Wembley exhibition. He said something about his not having voted for the appropriation to meet the expenses of the trip but that he did not dodge the vote. "I do not dodge votes," said my hon. friend. At the time I could not see what the purpose was of a statement of that kind, or why the hon. gentleman should make such a positive declaration. Accordingly I took the trouble to have some figures compiled in order to find out if the hon. member for Fort William and Rainy River was always "on the job" when a vote was taken, because that is what he seemed to want us to understand. I find that in 1922 the hon. member voted on nine occasions, was paired on two occasions, and on two occasions missed the vote. In 1923 he voted on seven occasions, was paired on six occasions, and on twelve occasions did not vote. I find that in 1924 the hon. gentleman voted on ten occasions, was paired on six occasions, and on eight occasions did not vote. I do not know even yet what his statement at the time had to do with the particular question under discussion, but it seemed to me that it was quite proper the House should know what my hon. friend's record in the matter of voting had been. When attention is being called to these matters, it seems to me to be proper to bring to the notice of my hon. friend just what his record in the matter of voting had been.

Mr. MANION: Would the minister give his own record?

Mr. MURDOCK: I will be glad indeed to have it checked up.

[Mr. Murdock.]

Mr. MANION: I wish the hon. minister would go ahead and give it now. I venture to say it is not any better than mine.

Mr. MURDOCK: I am quite sure it is better than the record I have just read. I missed two or three votes last year, Mr. Speaker, because certain hon. gentlemen wanted "to uphold the honour and dignity of parliament;" otherwise I would have been able to vote.

We had a great deal of discussion on certain matters. I want if I can, Mr. Speaker, to see ourselves as others see us. We would get the blues absolutely if we ever came to the point of being convinced by our Tory friends opposite of what a bad job we were making of running this country, and how nearly to the merry bow-wows Canada has gone since the Liberal party came into power. Therefore I do not think it would do any harm if we digressed for a short time to ring a note of optimism into this discussion and to bring to the attention of the House what the press of Canada thinks of us and what are really the conditions as shown by the press. I am not going to deal only with papers that are favourable to the Liberal party. Let us take the other newspapers and go over them as briefly as we can. I will quote first Agricultural and Industrial Progress in Canada, published monthly by the Canadian Pacific Railway. It should be a reasonably conservative journal. In the issue of March 25, 1925 I find the following:

The coast province—British Columbia—is very active. Its building programme is of considerable dimensions; its lumber prospects are better with new sawmills and new logging camps opening up in districts that have been lying fallow. The mineral situation is active, showing all signs of a progressive year. Agricultural development along all lines is quite normal with a better outlook, and altogether British Columbia is looking forward to a first-class business year.

My hon. friend from New Westminster (Mr. McQuarrie) and my hon. friend from Vancouver South (Mr. Ladner) will be glad to hear that. Then, Dun's Review March 5, 1925—

Mr. McQUARRIE: Does the minister think the government is responsible for that?

Mr. MURDOCK: I did not say that.

Mr. McQUARRIE: I do not think so.

Mr. MURDOCK: No, but I think the government's policy has helped.

Mr. McQUARRIE: Then the hon. gentleman does think so.

Mr. MURDOCK: Then, Dun's Review published in Toronto has the following:

Industrial activity is growing slowly and the outlook appears quite bright. Lumbering companies are discontinuing operations for the season in so far as cutting is concerned but are still holding a number of employees in reserve for the spring drive. Lumber merchants anticipate a steady trade all through the summer and look with particular favour upon the prospects for export trade to the American side, where prices have been rising and supplies are in a narrow compass. An extensive building programme has been mapped out for the province and artisans and labourers in this line should be well employed until the snow flies. Overall and shirt factories in most cases have all the business their capacity allows.

Then referring to Quebec, Dun's Review states:

Clothing manufacturers have more spring orders on hand than at this time a year ago, but bookings for fall are coming in more slowly.

Car loadings reported by the Bureau of Statistics are:

The number of cars loaded in 1924 show an increase of 53,723 over 1923.

From the beginning of 1925 up to the week ending March 14, car loadings have exceeded those of a similar period in 1924 by 5,784, the totals for these periods being 564,662 and 558,878. It might be noted that in this period of 1925, there have been over 20,000 fewer grain cars than in 1924 and the increase in other cars must be considerably greater to offset this decrease.

The Toronto Financial Post, March 20, captions an article in these words:

West is getting back to a much sounder basis
What one good crop has helped to do for Manitoba.

Then the Ottawa Evening Journal, March 16, 1925:

Work is started in sulphite mill.

The Ottawa Citizen of March 18, 1925 says:

Kingston lead mines will open up again, Syndicate takes over plant and will instal modern equipment.

The Montreal Gazette, March 27, referring to the Brantford Cordage Company, says:

Brantford Cordage Company.
To issue block of first preferred stock.
This increases their productive capacity by about fifty per cent. At the present half of the Canadian requirements in binder twine are imported and this addition to the plant will enable the company to share, in a larger way, in supplying Canadian domestic requirements. The Brantford Cordage Company have since their inception grown until to-day they are the largest manufacturers of binder twine in the British Empire.

And I understand they are not using the bottle of protection any longer. Then the Montreal Gazette, March 27, captions an article in this manner:

Good showing by Steel of Canada.
Profits equal to 9.3 per cent on common after all charges.
Working capital up.
Increase of $664,000 brings excess of current assets to nearly twelve millions.

We have in the same paper on the same date an advertisement of the Brantford Cordage Company which has this to say about that concern:

The company is the largest manufacturer of binder twine in the British Empire and owns and operates a plant occupying seven and a half acres at Brantford, Ontario. There has been completed and put into operation last January a third mill with the most modern equipment, which increases the productive capacity of the company approximately fifty per cent. The business is largely domestic, but the company's product is also exported to practically all the grain-growing countries of the world. Owing to its low manufacturing costs, the business has been able to meet all competition.

The Vancouver Sun, of March 19, publishes an article captioned in this way:

New industry located here.
K. and L. Box Company to erect $100,000 plant in royal city.

The Kitchener-Waterloo Record of March 23, says:

New industry for Kitchener.
Threshing dust and fire preventer company will assemble machines in this city.

The Winnipeg Tribune, which will not be charged with being too favourable to this government, has an article in its issue of March 19, referring to unemployment in Canada, the last part of which says:

But just as the present industrial depression is being felt in all our cities, so will the period of prosperity which lies in the offing be equally general and widespread.

The Port Arthur News Chronicle, March 18, 1925, publishes an article on this question, and my hon. friend from Fort William and Rainy River ought to get this:

One hundred men will work from June to November on new dam.

The Hamilton Herald, February 17, 1925, says:

Plants here hum as large orders come.
McLaren's Limited now working night and day on output.
Steel of Canada, too.
Greening's working double shifts; government to spend fifty thousand dollars here.

The Toronto Globe of February 13, 1925, says:

Hamilton factories find business good.
Working full time and on Saturday afternoons. Extra hands engaged.
Steel plant also busy.

The Montreal Gazette, February 26, 1925:

January steel production up.
Ingots and castings output reached total of 27,126 long tons.
Pig iron advanced.
January output was 25 per cent above that of December. Prices moved upward.

The Hamilton Spectator, which is not too friendly to the government, on February 17, 1925, published the following:

More signs of prosperity in factories here.
McLaren's working day and night on orders.
Steel Company opens mill at Ontario plant.
B. Greening Wire is using some double shifts.

The Kitchener-Waterloo Record, February 13, 1925, says:

Cost of charity is much smaller.
Little being spent on relief this winter in comparison with last year; believe $9,000 will cover bill.

The Smiths Falls Record News, February 26, 1925, says:

Almost a record staff of men at work in the Frost and Wood Company's implement plant. Some excellent foreign orders have been received, which they are busy working on at present, and shipments of carloads are being made daily to the seaboard.

Reductions in the price of farm implements were made last April and further reductions became effective in December, and there is every evidence that these lower prices to the farmer have already stimulated the placing of orders that had been held back by the higher prices which prevailed during the past few years.

The Hamilton Herald of March 3, states:

Other Hamilton firms feel the return of better times.

The Globe of February 13, states:

Hamilton factories find business good. Working full time and on Saturday afternoons—extra hands engaged.

The Ottawa Citizen of March 31, says:

Profits practically doubled by Smelting Company of Canada.

The Hamilton Herald of March 27, states:

Industry in Hamilton to get impetus. Brightest outlook in years, says C. W. Kirkpatrick, New plants likely. Many delegations visiting city with an eye for industrial sites.

There have been more inquiries and delegations here during March than during any two months last year," said Mr. Kirkpatrick. "The department has had an average of one and two delegations studying the industrial situation and looking over industrial sites in this city every day this month."

This is all optimism, something that our hon. friends opposite should take a large dose of.

The Hamilton Spectator of March 28, under an editorial caption "Looking Up," has this to say:

The period of depression through which Canada has been passing has been extended longer than was really necessary, it is now admitted, because of the fact that money was both tight and afraid. If industrial representatives are now seeking sites for expansion, it can only be interpreted as meaning that investors realize the time to put their money to work again is at hand. The improvement in the local unemployment situation has not been sensational, but it has been steady. By ones and twos the army of the jobless is being depleted, as the men return to lathe and bench and make the acquaintance of pay envelopes again. It will not be a boom year, but there is every evidence that trade and commerce will be more brisk than it has been in any other year since the armistice. The greatest asset will be confidence.

I commend that to the consideration of my hon. friends opposite.

[Mr. Murdock.]

The Chatham News of March 28, says:

Chatham Sheet Metal Works well pleased with prospect for business this season.

The London Free Press of March 28, states:

Sheet Metal Works is opened in city.

The Toronto Globe of March 27, says:

Prosperous season for wool growers. Nice surplus for distribution among shareholders and shippers.

Then it goes on to say:

The Canadian Co-operative Wool Growers are smiling. After transferring $10,000 to reserve, paying an 8 per cent dividend on capital stock, and reserving over $2,000 for income taxes, the company still has sufficient surplus on the year's operation to pay bonus of one-third cent per pound to all 1924 shippers.

I come now to the monthly letter of the Royal Bank of Canada and I find this:

In Ontario, statements from 5,832 concerns, employing 709,878 people on February 1, 1925, indicate an increase of 16,821 over the number employed at the beginning of the year. The labour requirements, both in manufacturing and logging, are increasing.

Then we find in Agricultural and Industrial Progress in Canada, published by the Canadian Pacific, a publication which was referred to a short time ago, this article under date of April, 1925:

Montreal, Que.—An increase of approximately 50 per cent has taken place in the live cattle exports to the United Kingdom in the period January 1 to March 19, 1925, as compared with the corresponding period last year. Up to March 19 the exports of cattle in 1925 were 14,662 head, as compared with 10,531 in the same period in 1924 and 9,511 in 1923.

Ottawa, Ont.—Canada exported meats to the value of $2,528,070 during the month of February, as compared with exports of $1,294,046 in the corresponding month of 1924, according to a report of the External Trade Branch. Shipments for the twelve months ending February, 1925, had a total value of $27,843,848, compared with shipments worth $22,291,385 in the preceding twelve-month period.

That does not look like too bad business.

Ottawa, Ont.—Canada's exports of automobiles continue to increase and New Zealand is the Dominion's best customer for such vehicles. Last month a total of 4,008 passenger autos, valued at $1,843,551 were exported, and of these New Zealand took 1,114. These shipments compare favourably with January when 3,732 autos were exported and with February, 1924, when 3,230 were dispatched to foreign markets.

Hamilton, Ont.—There has been a noticeable revival of building activity in Hamilton since the beginning of the year and, if present anticipated business crystallizes, the city will experience in 1925 one of the best building seasons for some years. The latest project on foot here is the announcement that from forty to fifty residences will be built by one contractor in a new section of the city being developed.

Winnipeg, Man.—Approximately $1,000,000 ahead of last year, to date, in contracts let and buildings under construction.

Then we have the Montreal Star of April 6, which has an article captioned:

National Brick had more favourable year

It says:

C. C. Ballantyne, the president, remarks that while the sales for the fiscal year show only a slight improvement over the sales of the previous year, the higher profits were obtained through improvements made at the plants, which have resulted in greater efficiency and lower manufacturing costs. While the demand for brick has enabled the plants to operate only at 60 per cent of capacity, he stated that the directors consider the outlook for the coming year as favourable, and an improvement is anticipated.

Evidently, he has an optimism for the future of his company if not for that of his party. The Galt Reporter of April 3, has this to say:

Campbell Chrome Leather Belting Company, Limited, is Galt's newest industry.

The Monthly Commercial Letter, issued by the Bank of Commerce for March, 1925, makes this statement:

That general business has not receded is evidenced by the fact that car loadings continued to be equal to those of twelve months ago, although the grain crop is so much less in volume. In industrial districts of the Dominion there have been fewer complaints of unemployment in February. It may also be noted that permits for building construction issued during January exceeded by 22 per cent those of January, 1924.

I am very sorry the hon. member for Fort William and Rainy River (Mr. Manion) has left the chamber, because this is something that he should really hear. I would suggest that the hon. gentleman and some of his associates should get in step with their press. The Tory press and some of the members of the Tory party are entirely out of step. The hon. member for Fort William and Rainy River had this to say on April 2 as reported in Hansard, page 1795:

Now, Sir, what does the Conservative party offer the country in place of the policies which I have been criticizing? They offer a stable tariff policy which will bring about prosperity and success; and they offer it to all classes, to manufacturers and to farmers—to the 2,000,000 farmers of Ontario and Quebec who require protection.

And so forth. He goes on to complain bitterly about the tariff. This is an advertisement from the Montreal Gazette of April 6, 1925, over the signature of the "London Free Press, western Ontario's foremost newspaper." These two Tory papers are certainly out of step with the hon. member for Fort William and Rainy River and some of his colleagues. This is what the advertisement says:

A rich industrial area. The London market.

Then there is a picture of the belching smoke.

London itself is the home of four hundred and sixty-four thriving industries. And these thriving industries bring wealth to London and spend it there.

And in the territory surrounding London are to be found innumerable towns and cities, each with its quota of factories and factory workers. Ingersoll, Woodstock, St. Thomas, Aylmer, Tillsonburg, St. Mary's Stratford, Sarnia, Chatham, Glencoe, Petrolia, Clinton, Goderich, Wingham, Listowel and other towns are the sites of a great variety of thriving industries.

The wealth expended in these towns and paid to factory workers is no less important than the revenue from the rich agricultural districts in this territory. The whole of this territory, in town and country, is catered to by the London Free Press.

That is optimism in advertising; and it is to be hoped that the London Free Press and the Montreal Gazette will be just as optimistic in their news columns when referring to the budget debate and the work of this session of parliament.

I want now to refer to one other matter which I think we might call Tory propaganda. Here is a letter sent out by the Canadian Labour Press under date February 5; I presume it is a circular:

Attention General Manager

GENTLEMEN,—In view of the near approach of another general election the Canadian Labour Press deem it an opportune time to issue a series of bulletins (to be posted in different factories, labour temples and other prominent places in the country) dealing with the need of effective tariff protection in Canada.

The Canadian Labour Press realizes that without tariff protection Canadian industry and Canadian labour will be greatly handicapped and the various arguments presented in the bulletins will be with the idea of educating labour to a sound and sensible viewpoint on this important question. We know of no more effective manner of reaching Canadian workers than by a series of concise and forceful bulletins such as the one enclosed.

That is Tory propaganda, and it will be seen that in this they are sailing under false colours, for it is sought to give the impression that labour is back of it. It is well for this House to know that the Canadian Labour Press has no standing with organized labour; it is unauthorized; and it is handled by certain gentlemen for their own purposes and in their own interests. I think it can be shown that, generally speaking, they have been pretty sane and reasonable. Why not? Note their head offices—Room 25-A, 207 St. James street, Montreal, Quebec, and 79 Adelaide street east, Toronto, right in the heart of the Tory district in each case. They start out with this kind of propaganda, which is being disseminated among the various manufacturing interests in the industrial centres of the provinces. The document winds up thus:

Will you kindly advise us how many copies of each bulletin could be used to advantage in your plant? As we are anxious to complete our mailing list, a prompt reply will be appreciated.

Yours sincerely,

THE CANADIAN LABOUR PRESS LIMITED.

And here is the bulletin:

Canadian Labour Press Bulletin Service. Tariff protection: What it means to Canadian workers. Staple industrial conditions will result when the manufacturer is not obliged to meet unfair competition. Steady employment for the workers when the factories are operating full time. Higher wages are possible through increased production and increased consumption. Lower taxes and our capacity to take care of present taxation will be the natural result of Canada's increased prosperity.

It is all a part of Tory propaganda, the object of which is if possible to deceive the working people of this country. And who is paying for it? Here is an issue of the Canadian Labour Press, and as I have not the slightest desire to draw any improper inferences I shall just cite from this sheet some of the advertisements that are published and leave hon. gentlemen to make their own deductions. We can then see whence comes the money to pay for these advertisements. Is it from organized labour? No; I do not think a dollar of it comes from organized labour. And this journal has no connection with organized labour but is travelling under false colours for the purpose of trying to deceive labour in Canada. Here are some of the advertisements: Anglin Norcross, Limited, Montreal; Boulter-Redmond Limited, Montreal; Canadian Paperboard Co., Ltd.; Cunningham and Wells, Limited, Montreal; Canadian Car and Foundry Co., Limited, Montreal. Here is one advertisement:

Drink Cosgrave's beers!

This is from the Cosgrave's Export Brewery Co., Ltd. Then there is an advertisement by J. W. Cumming Manufacturing Co., Limited, New Glasgow, Nova Scotia, and one from The MacFarlane Shoe, Limited. Here is another one:

Insist on Goodyear Welts when purchasing your footwear.

There is also an advertisement from Congoleum Canada Limited, Montreal, and one from The News Pulp and Paper Co., Limited, Montreal, as well as one from The Bronson Company, Ottawa. Are these advertisements inserted by people who are interested in labour? No; that is not the way the game is played. In my judgment this is all part of a campaign to fool the workers of the country; and there will always be found those who will lend themselves to such a thing. But I think that organized labour is alive to the situation and it knows that there is nothing behind all this but propaganda. And it is the same sort of Tory propaganda that was rife throughout the length and breadth of Canada in 1921.

Now may I refer briefly to another bit of Tory propaganda. Certain newspapers in Canada, the Montreal Gazette and the Ottawa Citizen, among others, carried recently some statements like the following. First I quote from the Montreal Gazette:

Premier called anti-Canadian. Senator Robertson arraigns King government for broken promises.

The Ottawa Citizen had an item under the following caption:

Many thinking the Prime Minister not pro-Canadian.

In the course of its report of what that hon. gentleman is stated to have said, the item in question has the following statement:

He thought that this province—

That is, the province of Quebec.

—would be the last in the Dominion to look favourably on a pro-American policy.

Mr. MACKENZIE KING: Read the article.

Mr. MURDOCK: Perhaps I had better do so. The article in its entirety reads:

Says Many Thinking the Prime Minister not Pro-Canadian

Canadian Press Despatch

Montreal, April 7.—Frequency of the Prime Minister's visits to the United States was referred to in an address by Senator Gideon Robertson, late minister of labour in the Meighen government, in an address to the Liberal-Conservative Association here last night.

"Throughout Canada," said Senator Robertson, "many people are thinking that the policy of the Prime Minister is not pro-Canadian."

Senator Robertson declared that a year ago the budget was held up for four days while the Prime Minister went to the United States, and that last Friday when the budget was before parliament "the Prime Minister got suddenly tired and went to New York—and is there now."

The Speaker said there were many indications to prove this feeling, and he was amazed that Quebec did not take more interest in "that tendency on his part." He thought that this province would be the last in the Dominion to look favourably on a pro-American policy.

Senator Robertson denounced the government for the sums expended on royal commissions, and went exhaustively into the financial standing of the country.

That is Tory propaganda. But what are the facts? There was a slight delay last year in the discussion of the budget but it was due to bereavement in the home of a very responsible member of this House who desired to be present during the debate on the budget and who had a right so to wish. That was the only adjournment of the budget debate last year, and it ill becomes my distinguished

predecessor to have tried to make the situation appear otherwise.

But let us analyze it further. The distinguished gentleman who was telling this story for the purpose of trying to fool the people, and particularly those in the province of Quebec, receives his instructions from, makes his reports to, and receives his pay cheque monthly from an organization with headquarters in the city of St. Louis, Missouri. There is absolutely nothing wrong with that, so far as I know. I do not in the slightest object to the position that the hon. gentleman finds himself in, but how little indeed must our Tory friends have of reality to present to the people of the country when they have to resort to such camouflage and subterfuge in an effort to fool the electors in the event of an election coming in the future.

Mr. McMASTER: What international union is he connected with?

Mr. MURDOCK: He is vice-president of the Order of Railway Telegraphers. He holds the same position in the Order of Railway Telegraphers that his successor held in the Brotherhood of Railroad Trainmen. His successor's headquarters were at Cleveland, Ohio, up until the 9th day of January, 1922. The distinguished gentleman of whom we have been speaking has his headquarters at St. Louis, and his pay cheque comes from there monthly. That is all right. But why should he go out and start to talk about something that is not material or worth while?

I am sorry, Mr. Speaker, to have taken up so much time. I am not quite through yet, but I think I can finish in the few minutes remaining before six o'clock.

We have heard from the opposite side of the House, and particularly from our distinguished friend the former Minister of Finance (Sir Henry Drayton), about the terrible foolishness of this government in its tariff policies. We have been charged with everything that is unfair, even dishonest, I think, and untruthful in our declarations, and in our relations with the House and with the people of Canada. I think the distinguished gentleman who represents West York, and who was Minister of Finance in the previous government, should really give some attention to the position of his own government. When they had an opportunity to fix everything up ship-shape, what did they do? We find that in the Speech from the Throne which was delivered to this House on February 14, 1921, His Excellency was made to say:

> My advisers are convinced of the necessity for revision of the customs tariff. In order to secure the most complete information a committee has conducted an extensive and thorough inquiry, and has secured the views of all parties and interests in every province. The hearings necessary for this purpose have now been completed, and the conclusions founded thereon will be submitted to you in due course.

And, Mr. Speaker, they are still due. Those conclusions have never been submitted; they have never been, so far as I know, compiled. The bills for the inquiry, which covered the length and breadth of Canada, have been paid. My friend, the member for West York, the former Minister of Agriculture (Mr. Tolmie), and my predecessor in the office of Minister of Labour, toured this country to find out all about the tariff and what should be done about it, and they put words in the mouth of His Excellency on February 14, 1921, indicating that they were going to deal with the tariff; but let us come now to May 9, 1921, when we can visualize the distinguished member for West York on the floor of this parliament delivering his budget speech, and here is a portion of it:

> It is not proposed to put into effect now a general revision of the tariff schedules. While Canada must make her own tariff and while that tariff must be a tariff dictated in the interests of Canada and her people, it is not advisable that frequent changes should be made.

Did you ever hear of crawfishing? Is not that as fine an example of it as anyone ever heard? and it emanates from men who have—shall I say, to put it as kindly as possible—the nerve to get up here on the floor of the House and charge this government with this, that and every other thing. In other words, Mr. Speaker, the Tory party did not have the nerve to make the changes in the tariff that their friends wanted, because they knew the people of Canada would not stand for it, and now they are continually finding fault with this government because it has not done so, and does not propose to do so.

CANADIAN NATIONAL RAILWAYS—REPORT

Hon. J. A. ROBB (Acting Minister of Finance): Before you leave the chair, Mr. Speaker, by unanimous consent may I on behalf of my colleague the Minister of Railways (Mr. Graham), table the annual report, in English and in French, of the Canadian National Railway system for the year ending December 31, 1924.

Mr. SPEAKER: It must be by leave of the House, of course, because we would have to revert to Motions. I understand that the hon. gentleman is given leave to lay this report on the table.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

CONSIDERED IN COMMITTEE—THIRD READINGS

Bill No. 10, respecting the London Mutual Fire Insurance Company of Canada, and to change its name to London Fire Insurance Company of Canada.—Mr. Hocken.

Bill No. 36, to incorporate Guaranty Trust Company of Canada.—Mr. Chevrier.

Bill No. 34, to incorporate the British Consolidated General Insurance Corporation, and recommending that the title of said bill be changed to "An Act to incorporate the British Consolidated Insurance Corporation."—Mr. Irvine.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. W. G. McQUARRIE (New Westminster): I suppose I should congratulate the Minister of Labour on his "maiden budget speech" as he called it. A maiden speech should always be acknowledged, and even when a speech is so mature as this particular one was I presume there should be commendation. I do not wonder, however, that the minister apologized for it. It seems to me that a generous apology is due to the House for much of the material that was contained in the speech.

The minister in his introductory remarks told us that many matters had been referred to in the debate which should be "put right" and then he proceeded to put some of them right. The first thing he did was to rechristen the Immigration department. No doubt you noticed, Mr. Speaker, that he referred to it as the "Emigration" department. He spoke of the "Deputy Minister of Emigration" and also of the "emigration" policy of the government. I take it the characterization is most appropriate considering the fact that since this government came into power the number of people who have left Canada, as compared with those who have entered the Dominion, is rather alarming.

The minister entered into a discussion of conditions in Canada generally, and he quoted many statistics. He started by giving particulars as to the number of factories which had closed in Canada during certain years, and entered into a dispute with the Canadian Manufacturers' Association which amounted to this: It appears that the Canadian Manufacturers' Association had claimed that some thirteen hundred factories had closed in Canada, whereas, as a matter of fact, according to the list supplied to the minister there were only something like twelve hundred. The minister gave us all these figures. Personally I do not appreciate what he thought he was gaining by it, because even taking the minister's own figures conditions are bad enough in Canada. He referred to certain years, namely, 1914, 1915, 1920, 1921, 1922, 1923 and 1924. He was asked why he had chosen those particular years and made some kind of an explanation, but the real reason was obvious; he had taken a good deal of care in picking out those years and thought they would serve his purpose better than any other. It was quite obvious also that if the minister had intended to be fair he might have included the figures for the years 1912 and 1913 before the war.

The minister also gave some figures dealing with wool-pulling establishments. I wonder did he include in his statement the attempt of the government to pull the wool over the eyes of the people in the matter of the budget surplus, which has been referred to by someone as a cross-word puzzle, the answer being the seven-letter word spelling "deficit".

The minister spoke on matters connected with a great many departments of the government but said very little about his own. I think one subject which might be included in his department was that of unemployment. The minister pretended to show that there was no real unemployment in the Dominion, and in this respect that Canada was in a much better position than many other countries. The minister spoke of conditions in the United States as being bad, and he referred to the emigration to the United States from this country as not amounting to very much; in fact, as he put it himself, he wanted to dispel the theory which was being advanced in some quarters that Canada was going to the merry bow-wows, and, as he said, wished to sound a note of optimism. It seems to me the minister has gained the reputation of being the sunshine purveyor of this administration; he sought to diffuse sunshine all over the House. According to him everything is lovely in Canada, there is nothing to complain about; and, as he says himself, for that condition the government is responsible. However, he hedged a little later when

I asked him a question. When I referred particularly to British Columbia he at first, in reply to my question, admitted that the government had nothing whatever to do with whatever prosperity may exist in British Columbia at the present time. Afterwards he said: Oh, yes, it was the policy of the government that was responsible for it.

It seems to me that if we wish to get at the real conditions in Canada we might very well take the railways as being a fair index. Now what has happened in regard to the railways? Last year the gross receipts of the Canadian Pacific Railway were between thirteen and fourteen million dollars less than the previous year; as to the Canadian National Railways the decrease was something like seventeen millions. Reasons for the decrease are given in the annual statements of the respective companies. First as to the Canadian Pacific railway. On page 6 of its report it is stated that:

> The decrease in freight earnings is largely accounted for by the much smaller movement of grain and flour, particularly the former, owing to the smaller crop in western Canada. There was also a substantial decrease in the movement of manufactured articles due to the depression which existed in Canada during the major portion of the year.

As to the Canadian National railways it is stated that:

> Prevailing business conditions and the smaller crop reduced the gross receipts of the company in 1924, by $17,547,305.

This is taken from the Canadian National Railway Magazine, which contains a photograph of the president, Sir Henry W. Thornton, on the opposite page.

The minister referred to "Tory propaganda" and in this connection, quoting from the Labour Press, said that the Tories were travelling under false colours. Well, I do not know where he got his authority for that statement. I do not know how much truth there is in it; as a matter of fact I do not think there was any good reason for it at all, but the minister seemed to find it necessary to make the rash statement. The minister also referred to Senator Robertson, and insinuated that he should be criticized for having received a pay cheque from St. Louis.

Mr. KING (Kootenay): I do not think the minister indicated any such thing. He was very fair in his statement regarding Senator Robertson; he stated the senator was entitled to the money and made no insinuation at all.

Mr. McQUARRIE: No insinuation? The minister mentioned the matter and I presume had some reason for doing so.

The minister also referred to the tariff and claimed that there had been some "crawfishing," as he said, by the previous administration in regard to tariff revision. It is quite true, as the minister stated, that the Speech from the Throne in 1921 did contain a reference to tariff and tariff revision, but I think the minister should have been fair enough to explain to the House that there was a good reason why that revision was not proceeded with, namely the fact that certain changes were being made in the United States tariff and it was only right and proper that this country should wait to see what the changes were before bringing in a revision; and he should also have stated that an election took place shortly afterwards and that the Tory government had no opportunity to bring this revision into effect. No doubt, when the next election is held and the Conservative party is returned this tariff revision will be proceeded with.

As I stated previously the minister dealt with many departments, but said very little about his own. I have been wondering if the Labour department as at present administered is serving any useful purpose. If my memory is correct, during the last election the minister stated that the functions of the Labour department were three-fold at least: first, to break up combines, trusts and mergers; second to provide a cure for unemployment, and third to settle labour disputes. I remember in the budget debate of 1921 the Prime Minister filled quite a number of pages of Hansard in speaking about combines, trusts and mergers, and in commending the action of the same minister who was then plain Mr. Murdock, of the Board of Commerce, for the action which he had taken. I find on page 3606 of Hansard of that year the following by the Prime Minister:

> The interim report concludes with a minority report by Mr. Murdock, in which the following appears:
>
> My belief is that it would be very much in the public interest for the public of Canada to know something more of the reasons that prevented the Board of Commerce of Canada from performing its functions in controlling profiteering and combines against the public interest as by law intended.

I think we all remember that during that election the hon. gentleman (Mr. Murdock) paraded around this country and on platform after platform stated what he would do if he became Minister of Labour. I take it for granted that that was the reason why he was made Minister of Labour. The question then presents itself to the House, has he done anything to make good? So far as I know he has not done anything to break up any combines, trusts or mergers. Certainly there

have been no prosecutions. I think there have been demands for prosecutions made just lately. If my information is correct, boards of trade in British Columbia and other places have been bombarding the minister with requests that certain combines should be prosecuted. One of these combines is known as Nash or Mutual combine. What has the minister done about it? I hold in my hand a report which has been presented by a commissioner who was appointed. This report contains sufficient information and sufficient material to justify prosecutions being started. Nothing has been done. The minister says: We have put it up to the provinces; let the attorneys general of the provinces deal with this question. Well, the attorneys general of the provinces are considering what action they can take, but nothing is being done. Is that the proper course for the minister to have taken? I submit, it is not. I have authority for that statement, my authority being no less a person than a Supreme court judge in the province of Nova Scotia, Hon. D. D. McKenzie, who was at one time leader of the opposition and afterwards Solicitor-General in this administration, and who has now been elevated to the bench. He took part in the debate of 1921, and at page 3293 of Hansard, he said:

> I do not look to the municipal councils, or to the local governments, for the administration of the law governing matters of this kind. We have a federal law dealing with trusts and combines.

He went on to refer to the suggestion which had been made, or which he alleged had been made, that private individuals might lay informations, and then he said:

> Could anything be more absurd than to imagine that any man is going to bear the burden of carrying through the various courts a case against a combine, with the support of all the other combines in the land behind it, and nothing on the other side but an ordinary man who found that he was charged too much for a pair of boots, a keg of nails, or something else he bought from that combine. The best legal talent of the land would be arrayed against him, and counsel's fees would be running up—

And so on. And then he proceeds:

> I thank my good friend from York (Mr. Maclean) —pardon me for mentioning his name, but I wish to show him my appreciation—for standing up in this House and stating that there should be a public prosecutor to deal with these cases. I agree with him. Until that is done and the government have a secret service from one end of the country to the other, and the combines realize that there is power behind the presecutor, we will have the governing of prices just to suit these combines and trusts.

I wonder if any such prosecutor has been appointed. If so, who is he? So far as I am aware no such appointment has been made. Mr. McKenzie goes on to say:

> And the government says to its darling: "Don't be concerned; we knew it would die. Now be happy and contented, for we have carried out our promise to you. We were always behind you, and we will continue to be behind you, and you will have things absolutely your own way, except of course that, for appearance sake, we must ask the attorneys general in some of the provinces to do something, but we know there is nothing they can do."

That is exactly what the minister is doing now—asking the attorneys general of the provinces to do something. That is the minister's record as to combines, trusts and mergers. He did not say a word about that subject in his address.

Then we come to the second function, to provide a cure for unemployment. The minister's cure for unemployment is to say that there is practically no unemployment in the country. I wonder how many people in Toronto, in Montreal, in Hamilton and in other places will agree with him. I wonder what the provincial premiers will say when they hear of his statement that there is no unemployment in the country. Certainly this government has decided this question, to this extent—it has decided that it will do nothing to assist in relieving unemployment.

We come now to the third function of the Labour department, to settle labour disputes. We did not hear from the minister a word about the coal strike in Nova Scotia. You would think there was no strike down there. You would think there were not thousands of people starving in that province. You would think there was no trouble of any kind there. I suppose in his mind sunshine pervades that province just as it does other provinces in this Dominion and there is no cause for trouble there at all. It seems to me that, instead of being in this House at this very instant, the Minister of Labour should be in the coal fields of Nova Scotia trying to see if it is not possible to settle that strike. The minister is not down there and perhaps there is a reason for that. I am informed that there is a reason and that that reason is that some years ago, when the minister was an official of an international union, he visited Nova Scotia and assisted in a strike on the railway of the coal company, and that, as a result, as regards the coal mine and steel workers, he is the most unpopular man in Canada. I think it is a standing disgrace that the Minister and the Department of Labour are not trying to ameliorate conditions in Nova Scotia. It is true it might be injudicious for the government to take sides in this dispute; but when women and children are starving in those coal fields, the government should do something. We cannot disbelieve the statements which appear in

the press, from so many reliable people, and we know that in Ottawa it has been found necessary to open an office for the purpose of receiving relief for these miners. The Minister of Labour, instead of coming to this House and spreading sunshine, should be down in Nova Scotia trying to do something to settle that strike. This wonderful man, this Minister of Labour, it seems to me, has fallen down. When we consider the statements made by him prior to elections and when we consider and examine his record since he has been a minister, we wonder what has happened to this reincarnation of Jack the Giant-killer. I do not propose to deal at any further length with the "maiden budget speech" of the Minister of Labour.

I wish to take this opportunity of referring to a tour which I was privileged to take with other members of this House and members of the Senate to South Africa last year. It is only fit and proper that some member of that delegation in this House should acknowledge the courtesies extended to us in South Africa and elsewhere. You, Mr. Speaker, I think will be interested in what I am going to say, because of the fact that in 1910 you made a similar trip, and you will be able to follow my remarks and, I hope, will commend them. The tour was made under the auspices of the Empire Parliamentary Association, which has a branch in Canada. All the members of this House are not members of that association, but they should be; it is a splendid organization, and one that is worthy of the support of all parliamentarians in this country. This was the first united parliamentary delegation of its kind to an overseas dominion that had ever been attempted. The Empire Parliamentary Association was formed when many of the dominion statesmen were in London for the coronation. In 1913, a number of British members of parliament toured the whole of the dominions, and in 1916, representatives of the empire parliaments held a war-time conference in London, visited the munition-making areas and went over to France. Since the armistice an unofficial delegation has visited Canada. But the programme of this tour was the most ambitious of all inasmuch as members of all parliaments in the empire except Newfoundland were to spend two months together in South Africa studying the potentialities of the union on the spot and exchanging counsels as to the various problems affecting the empire. The delegation was headed by the Right Hon. J. H. Thomas, then Colonial Secretary, with Viscount Burnham as his deputy; and when the British delegates had to leave, when the delegates were at Victoria Falls, Sir George Foster was appointed chairman. I would like to pay a tribute to Sir George Foster. He was a credit to Canada on that tour. He was without doubt one of the most eloquent speakers on the whole delegation. He received a wonderful reception in South Africa, and considering the fact that he celebrated his seventy-seventh birthday in Zululand, it is truly remarkable that he was able to carry on so splendidly. I might mention that this was not a trade mission in any sense of the term. It was purely and simply a fraternal visit, if I might put it in that way. The Canadian delegates were chosen by a committee on which I think you, Sir, and the Speaker of the Senate acted. There was no politics about the matter. The whole tour was non-political, all parties being represented. The Canadian delegates were Sir George Foster, Senator Robert Watson of Manitoba, Senator Willoughby of Saskatchewan, Senator Gustave Boyer of Quebec, the junior member for Ottawa (Mr. Chevrier), the hon. member for L'Islet (Mr. Fafard) the hon. member for St. John City and Counties of St. John and Albert (Mr. MacLaren), and myself as representing New Westminster. I am sorry to have to report that when we were in the Transvaal, it was necessary for Senator Boyer, on account of ill-health, to return to Canada, and he was unable to complete the tour. All expenses were borne by the government of South Africa from whom the invitation was received. It originated with General Smuts. It is unnecessary for me, of course, to say anything about General Smuts' record, how he was one of the Boer generals who fought against us in the Boer war, how later on when peace was declared he became a thoroughly loyal British subject and how during the late Great war he took a very prominent part on the side of the allies. General Smuts is a very outstanding figure in South Africa. After the invitation had been received the elections were brought on in South Africa and a change of government took place. General Hertzog, the head of the Nationalist party, was returned to power. He was not considered an imperialist; in fact, during the election his party, according to their statements, stood for the secession of South Africa from the British Empire. It was expected therefore in view of these facts that the invitation might be withdrawn by General Hertzog, but on the contrary it was renewed.

We sailed from Quebec on July 25 on the Montroyal arriving at Liverpool the first of August. We were met by representatives of the Canadian Pacific Railway over there

and they were very kind to us. We arrived in London the same day. Of course, we visited the Houses of Parliament and we called at the office of the Empire Parliamentary Association which is in charge of Sir Howard d'Egville, K.B.E., secretary of the United Kingdom branch. There we received every courtesy and were furnished with cards of admission to the House of Commons and to the House of Lords, behind the rail. Everything was done to make our stay pleasant and we were accorded practically all the privileges of British members of parliament; in fact, we felt after having been there a short time that we were virtually members of the British House, so much at home did they make us feel. We were tendered a luncheon at the House of Commons at which we met the British delegates. The British delegates were twelve in number. There was the Right Hon. J. H. Thomas, Colonial Secretary, Labour. There was Mr. W. J. Baker, Labour for Bristol East. Captain W. Brass, M.P., was Conservative member for Lancashire, Clitheroe division, and among the British delegates was Viscount Burnham, who, as I have said, was Vice Chairman of the delegation. It is unnecessary for me to observe that Lord Burnham is one of the leading journalists of Great Britain, being proprietor of the Daily Telegraph of London. He has been president of the Empire Press Union since 1916. There was also on the British delegation Dr. W. A. Chapple, Liberal member for Dumfriesshire, who had previously been a member of the New Zealand House, and who is the author of a number of more or less technical works. Another member of the delegation was Captain D. H. Hacking, O.B.E., Conservative member for Lancashire, Chorley division. Then there was Sir Robert W. Hamilton, Liberal member for Orkney and Shetland, who had been for some years Chief Justice of the Court of Appeal in Eastern Africa. We had also the Right Hon. Sir Douglas Hogg, K.C., the Conservative member for Marylebone. He was Attorney General in Mr. Baldwin's first cabinet and now holds the same office in the present administration. Then there was Mr. Ramsay Muir, Liberal member for Rochdale, who is a well known university professor and a historian; he is also editor of the Saturday Westminster Gazette. On the delegation there was Mr. Harry Snell, Labour member for Woolwich East. Mr. Snell is a lecturer and is president of the British and American Ethical Society; he is quite well known. Lieutenant Colonel A. A. Somerville, Conservative member for Berkshire, Windsor division, who was also on the delegation, was for many years Master of Eton; and Mr. James C. Welsh, Labour member for Lanark, Coatbridge division, who was for a number of years a miner is the author of The Underworld and Songs of a Miner. The secretary of the British delegation was Sir Howard d'Egville. Sir Howard organized the visit of representatives of dominion parliaments to the coronation of King George V., 1911; visits of Lords and Commons delegation to Canada, Australia, New Zealand, and South Africa, 1913; and the war visit of representatives of dominion parliaments to United Kingdom, 1916. He is editor of the Journal of the Parliaments of the Empire and Reports on "Foreign Affairs", and author of many publications dealing with imperial affairs and the overseas dominions. Some of us visited Wembley and I must say a word of commendation with reference to the Canadian building there. I believe that Canada derives many benefits from having an exhibit in the Old Country, and I might give one instance. I was told by the manager of the Canadian building, Mr. Tolmie, who showed us around, that one Toronto firm, manufacturers of furniture, had sent over an exhibit unattended So much interest was taken in it that he cabled to the concern in Toronto and the manager of the firm went over to Wembley and as a result of his visit, after he had been there a very short time, the fixtures for thirty London shops were sold. I am glad that the government has decided to continue the Canadian building at Wembley for another year.

Through the kindness of Mr. F. C. Wade, K.C., Agent General for British Columbia, since deceased, the Canadian delegates were given seats in the royal box to witness the pageant of empire, and the night we were there we saw the pageant of Newfoundland and Canada, a splendid exhibition. I am not going to say much more about our stay in England, but before I pass on I should like to observe that so far as I could see England has got back to normal. There were no evidences whatever that would lead one to think that that country had ever gone through a great war. The people are wonderful and I came to the conclusion that the heart of the empire is sound. We sailed from Southampton on August 8 on the Union Castle liner Saxon. During the trip, which lasted seventeen days, conferences were held on board by the delegates; every morning at ten o'clock for an hour there was a meeting, Mr. Thomas in the chair, all delegates being present. Imperial problems were discussed and in particular empire settlement. I must say that the general opinion seemed to be that Canada presented the best

opportunities for emigrants from the Old Country and there were many evidences of a desire on the part of the Imperial authorities to co-operate with this country for the purpose of facilitating the entry into Canada of the proper type of immigrants. But Canada on its part must do something to take care of these people when they come. That was held to be imperative, and it was thought that possibly we had not been doing enough in that respect.

In this connection I might for a moment refer to Australia. In West Australia I heard something that appealed to me. There they have what is called an Ugly Men's Club. It was formed during the war, and its original purpose was to assist war widows and their families by building houses and letting them rent free. This club became a very powerful organization, with great resources and a large membership. Now that the war is over, this organization is taking hold of the immigrants as they come to West Australia, and is doing wonderful work in seeing that they are properly settled. I think we might well have an organization of that kind in this country to take care of the immigrants when they come here.

We made a short stop at Madeira. It was a very pleasant trip, and I found the Saxon, like the other British ships on which we travelled, did everything in the world to make the voyage pleasant. I did not look forward with any degree of pleasure to a seventeen days' trip on the sea, but I must say that I was sorry when the trip was over because it was indeed very pleasant all the way through.

We arrived at Cape Town on August 25. Cape Town is the seat of parliament, and they have another place, which is called the seat of government, at Pretoria, a thousand miles distant. The House was in session when we were at Cape Town. We were met by a large reception committee, including the Prime Minister, General Hertzog, and other representatives of the government, civic officials, and leading citizens. Our stay in Cape Town was very pleasant. We were tendered a luncheon by the Prime Minister in the parliament buildings. Later we had seats on the floor of the House. In that House the two languages, Dutch and English, are spoken, and the Dutch language is used there more frequently than French is used in this House. A speech is made in English and replied to in Dutch, a question is asked in Dutch and replied to in English; so it is very difficult to follow the proceedings. We were also entertained by the Governor General, the Earl of Athlone, at a dinner and reception. There we met a number of parliamentarians, including General Smuts. When I met General Smuts he asked me what part of Canada I came from, and when I told him British Columbia, he said, "You have an oriental problem there too, have you not?" "Yes", I said. "We have it in very acute form in this country," he said, "and we think they should be kept out. We agree with you that they should be kept out of Canada too." I found the same opinion expressed by all persons I met in South Africa. There are something like 165,000 orientals in the province of Natal alone.

We returned to the steamer and continued on our journey, reaching Port Elizabeth on the 27th of August, and East London on the 29th of August. At both these places addresses were presented, and we were accorded various courtesies. That trip along the coast is one that should not be taken by anyone who is subject to seasickness, because there is a very heavy swell all along the coast; in fact, it is so bad that at Port Elizabeth it is impossible for the ship to get into the dock and lighters have to be used. At East London it is impossible even to get on the lighters without the use of a huge basket which is swung out on the ship's crane. They told us that this operation was usually quite safe, but that sometimes the basket, with six or eight people in it, would drop into the sea, which I imagine would not be a very pleasant experience as those waters are infested with sharks. However, we negotiated the landing successfully.

There were more conferences on board ship, and I must say that it was a very splendid privilege for us to be able to converse at these conferences with the members from the Old Country on imperial problems. I might add that some regret was expressed that the Prime Minister of this country had refused to attend an imperial conference, and had also made some statements which were considered to be injudicious, to say the least. We were asked whether it was a fact that there was a tendency in Canada to break away from the empire, and we of course told them there was nothing in that whatever. At further conferences which were held on the trip between Cape Town and Durban, South African matters were discussed. We had with us certain South African representatives, and they discussed at length problems of their own in connection with the native races and with the orientals.

9 p.m.

We arrived at Durban on 30th August and were met by another large reception committee, and an address of welcome was

presented. In Durban we met the Australian and New Zealand delegates. The Australian delegates were eight in number; Senator the Hon. Thomas Givens, president of the Senate since 1913; Mr. J. G. Bayley, a Nationalist, representing Oxley, Queensland; Senator the Hon. J. F. Guthrie, representating Victoria. Senator Guthrie is also a very well known wool expert; he is the man who wrote the article on that topic in the Encyclopædia Britannica. Also the Hon. W. C. Hill, of the Country party, Minister of Works and Railways, representing Echuca, Victoria; Dr. W. R. N. Maloney, representing Labour in Victoria-Melbourne division; Senator the Hon. J. E. Ogden, Labour, representing Tasmania, ex-Treasurer and Minister of Mines and Labour, Tasmania; Major-General the Hon. Sir Granville Ryrie, K.C.M.G., a Nationalist, representing Warringah, New South Wales— who has a long and distinguished military record in the Boer war and the Great War— and Mr. W. A. Gale, C.M.G., Clerk of the House of Representatives, and Honorary Secretary of the Australian Branch of the Empire Parliamentary Association.

The New Zealand delegates were: Sir John P. Luke, C.M.G., of the Government party, representing Wellington North; the Hon. A. F. Hawke, representing Otago in the legislative council; Mr. James Horn, Liberal, representing Wakatipu in the House of Representatives; Mr. E. J. Howard, Labour, representing Christchurch South, in the House of Representatives. We were billeted in Durban with local residents. That was the case in quite a number of places in South Africa. The idea was not prompted by any sense of economy; it was rather to give us the opportunity of meeting the South Africans in their own homes —not only the men, but their wives and families—on more intimate terms than would otherwise be possible. It is a splendid idea, and if a similar delegation ever comes to this country I hope the same plan will be followed, because you can get more information in that way than in any other.

A civic banquet was tendered to the visiting delegates in the Royal hotel, and there was a meeting in the town hall. We were taken around and shown the city and suburbs. It is a wonderful city; it is simply marvellous what the comparatively few white residents in South Africa have done. Their town halls or city halls surpass by far anything we have in Canada. We were also shown the new Durban graving dock which is just about completed. The cost of this dock will be £1,300,000. A good deal of the labour has been done by convicts, and for that labour one shilling and threepence per man per day is charged up against the work. Now, a few days ago the hon. member for Southeast Grey (Miss Macphail) brought in a resolution dealing with the question of convict labour, and I have been given the credit of talking it out. As a matter of fact I wanted to discuss the subject but did not have the opportunity to do so because so many others got in ahead of me. The Durban dock was a remarkable example of the extent to which this kind of thing may be carried. In other places in South Africa —in the gold and diamond mines, for instance —convict labour is extensively used. I am opposed to that kind of thing. I am opposed also to bonusing convicts of certain types— dope peddlers for instance—who happen to be confined in our penal institutions. I would be prepared to support some measure of relief to families of convicts in necessitous cases where such a course would be considered proper, but I was not prepared to support my hon. friend's resolution as presented. It was not concrete in its character, it was not definite; we would not know what it would lead to. They do use convict labour extensively in South Africa, and I was very sorry to see it. Some of the members from other parts of the empire, too, seemed to be opposed to it.

The hospitality extended to us by our hosts was very cordial and very generous indeed; they did everything they possibly could to take care of us. My host gave up his whole time to me while I was in Durban, and did all in his power to make my stay there pleasant.

The next day we had lunch with the administrator of the province of Natal, Sir George Plowman, C.M.G., and there was another civic reception at night. We left Durban on September 2, on a special train, and that was really the beginning of our trip. The train was in charge of the secretary of the Empire Parliamentary Association, South Africa branch, Mr. E. M. O. Clough, C.M.G., who is also clerk of the Union Senate, and I must say that it was splendidly equipped; everything was provided for our convenience. They even had shower baths, a library, a writing room and a dark room for developing photographs. There was a post office on the train, and a supply of newspapers was brought to us at every point. The train also had a medical officer, a postmaster, an official photographer, a train despatcher and various other officials, all very competent.

The programme was a very extensive one and was carried out strictly according to schedule. Certain members of the South

African branch were assigned to us as hosts. These included Hon. E. G. Jansen, M.L.A., Speaker of the Union House of Assembly, Senator Reitz, who was President of the Orange Free State and was one of Kruger's righthand men in the Boer war; in fact, he was the man who wrote the ultimatum to Great Britain which preceded the war, a splendid man, thoroughly loyal now, and a very interesting person indeed. He recently celebrated his eightieth birthday. He represented the Nationalist party. Then there was his son, Colonel the Hon. Denijs Reitz, representing the South African party, and Senator P. Whiteside, representing the Labour party. At various points during the trip other parliamentarians joined the party. We had General Smuts with us for a while, and General Hertzog was also with us at various points. We travelled over 8,200 miles by rail in South Africa and over 3,000 miles by motor. Reception committees waited upon us at all points, and we attended something like one hundred official functions, most of which were of a formal character. We made a complete tour of the Union of South Africa and most of the native territories, including Zululand, Basutoland, Bechuanaland, Swaziland—the latter an imperial protectorate; also southern and northern Rhodesia. We also visited Lorenco Marques, Portuguese East Africa. It is a wonderful country—a land of sunshine and flowers, of beautiful scenery, and with a splendid climate. It has a great variety of vegetable, mineral and other products, including ostriches, sheep, angora goats, cattle, horses, tea, sugar, cotton, bananas, citrous fruits, pineapples, tobacco, maize, diamonds, gold, copper, tin, and so forth. In a great many places we visited tree plantations which have been put in by the government. They have gone in extensively for tree planting and highly beneficial results have been obtained. They have magnificent public buildings, municipal halls, art galleries, museums, parks, zoological gardens, and so on; also agricultural colleges and experimental farms. We found men in charge of some of these agricultural colleges who had taken their courses in Canada. "Darkest Africa" no longer exists. We used to hear of the fierce, warlike native tribes in South Africa but they have largely become civilized. We also used to hear about the wild animals in that country but wild animals are now confined to the game reserves. Generally speaking the white man has accomplished a great deal in South Africa, and when you consider the fact that there are only something like 1,500,000 whites in that dominion the results they have achieved are simply marvellous. Life in that country has many disadvantages as might be expected. For instance, there is a lack of moisture. Periods of very bad drought prevail in certain districts. At some places where we visited they had had no rain for over a year. However, a great deal is being done to overcome this disadvantage by constructing large irrigation dams, and in consequence a great change for the better has taken place in that country. In South Africa there are certain diseases of men and of cattle, for instance, malaria, blackwater fever, sleeping sickness, and so on. Malaria is very prevalent particularly in Rhodesia. All the time we were in southern and northern Rhodesia we were required by the doctor's orders to take ten grains of quinine a day. Then there is the tset'se fly and rind-erpest which cause diseases among horses and cattle. The tset'se also causes sleeping sickness. Someone has said the sleeping sickness is a combination of tuberculosis and leprosy; it certainly is a very terrible thing. Then there are insect pests, notably the white ant, which do a great deal of damage. The white ant attacks trees and the woodwork in houses; it literally eats the inside of a structure. A house will appear to be perfectly stable but some day will fall down because the inside of all its supports has been eaten away by these white ants. Then there are locusts; the locusts work terrible destruction in that country. There are also snakes of all kinds. At Port Elizabeth we saw a snake farm.

Some hon. MEMBERS: Hear, hear.

Mr. McQUARRIE: I was on the water wagon myself so I cannot be blamed for the snakes I saw. At this snake farm there were so many snakes that really I saw snakes for nights after that. There are snakes all over South Africa but the people pay no attention to them except to kill them when they cross their path. There is one snake called the Black Mamba which has earned the respect of all including the natives. If that snake bites a person he has no chance in the world to recover. They have serums of all kinds but there appears to be no real antidote for the Black Mamba. In going through the sugar and cotton plantations where snakes are very common, I for one was very careful where I stepped; I was really frightened. One South African said to me not to be frightened about them; that they would not attack us. I observed "What about the Black Mamba?" My informant said to me, "Never mind about the Black Mamba, he won't bite you either unless you happen to get between him and

his hole." The trouble was to know where the hole was located. In the rivers and streams of South Africa crocodiles abound. Generally speaking things may be very pleasant to all appearances but you have to be careful in that country.

Mr. FORKE: Have they got prohibition there?

Mr. McQUARRIE: Prohibition is not in force in South Africa; they say they do not require it. I may say that the use of tea has brought about quite a decrease in the consumption of alcohol and of intoxicating liquor generally. The tea habit has attained to wonderful proportions in South Africa. You are awakened at six o'clock in the morning to have tea, and at eleven a.m. everyone must have tea whether they want it or not. Tea is served in all the shops, the offices, the banks and other institutions; if it is not on hand there people go out and get it. Then they have afternoon tea, in fact tea on all occasions; it is a wonderful country for tea. But there is no prohibition of intoxicating liquor; the South Africans say it is not necessary and they aver that South Africa produces so many grapes that they never will have prohibition there. On the train on which we travelled there were liquid refreshments of all kinds,—whiskey, beer and wines, and, if you were fastidious, champagne. Everything was free including smokes of all kinds; it is a wonderful country.

On our trip we visited various places. I cannot specify them all but I might mention a few of them. First of all Tongaat, Umfolozi, Empangeni and Eshowe, in Zululand. Perhaps I might tell you something about Zululand if you are interested. They have certain peculiar customs which may appeal to hon. members. In Zululand they do not go in for much clothing. The families are quite large but it is unnecessary to buy clothing of any kind for children up to the age of about twelve years; they do not wear any because clothing is not needed. The climate is such that clothing is not a requisite; in any event the wearing of clothes is a habit. I saw a war dance of 2,000 Zulu warriors, dressed up in feathers and paint with their big shields and their assegais. It was most impressive to see those 2,000 Zulu warriors perform their war dance, and I can imagine they would be formidable opponents to encounter in actual conflict. This dance principally consisted of stamping with the feet. When those 2,000 Zulus stamped their feet in unison—and they are not small feet—the very ground where we were standing shook. There were also 200 Zulu ladies at this war dance; apparently they were there for decorative purposes. Their clothing consisted mainly of a string of beads.

Some hon. MEMBERS: Oh, oh.

Mr. McQUARRIE: They were perfectly modest about it; the standard of morality among the Zulus is very high indeed. As far as I could see those Zulu women were just as comfortable and as well satisfied with themselves as our ladies would be in a ball room.

Some hon. MEMBERS: Hear, hear.

Mr. McQUARRIE: There was nothing wrong about it. They were very fine looking women. Among the Zulus a man can have several wives but there is one disadvantage—he must buy his wives. If he sees a young lady whose charms appeal to him and he wishes to marry her he goes to her father and makes a deposit of a head of cattle and then becomes engaged to the young lady. He completes the transaction by paying from eight to ten head of cattle for his bride. But he has to work hard in order to get those cattle unless he has good credit. Of course they have their Duns and their Bradstreets over there, and if a man has a good rating he can get his wife first and pay for her afterwards. When a man gets three wives he does not have to do any work; he retires. We interviewed an old native there, and through an interpreter we asked him how long since he had done any work, and he said it was so long he could not remember. He did not do any work because he had three wives. I should explain to hon. members who may think of going over there that there is another disadvantage connected with this proposition, and that is that if you have three wives you must have three houses. They found over there that three women in the capacity of wives cannot live together. Their houses are not like ours. They are huts made of straw and mud and that kind of thing, but still at the same time they mean houses to them. As far as work is concerned, I might explain that even the white men are not supposed to work. As a general thing white men do not work in South Africa. It is no place for any white man to go if he wants to make a living by working, except as a skilled workman. There are too many blacks. The blacks outnumber the whites by eight or nine to one. They work for a very small wage, something like a shilling a day, and plenty of labourers are available. The South African literature states that it is inadvisable for any person to go to South Africa unless

he has at least two thousand pounds, which would be the equivalent of about ten thousand dollars. We also visited Pietermaritzburg, Cedera, Howick, and Ladysmith, where we saw some evidences of the seige. I personally had a conversation with an old gentleman who had been all through the seige. We also visited the battlefields of Colenso, Wagon Hill and Spion Kop. At Colenso we also visited the electric plant—a huge electric plant which has been put up by the South African Railways. It is not a water-power plant; they have to bring their coal for sixty miles, but they think it is going to pay them very handsomely. They will electrify their railways or part of their railways. It struck me that if it paid them to make power by coal brought that distance, it would be profitable in this country to electrify our railways where we can get water-power. Then we visited the Waschbank and Harrismith. At the latter place we saw a coal mine. We visited also Cocolan and Westminster. Westminster is an estate belonging to the Duke of Westminster. The Duke was in South Africa during the Boer war. He has spent a lot of money in that country in an endeavour to help British people to go there. He has a wonderful estate and sells land to settlers on long terms of payment. He is doing a great deal of good.

Then we went to Maseru in Basutoland. That is a different proposition from Zululand. It has an elevation something like 5,000 feet and sometimes gets quite cold. Therefore they have to wear clothes, and not only clothes but they wear blankets. At Maseru, we saw a wonderful sight, called a pitso, a gathering of the Basutos, something like 20,000 men on horseback and 25,000 women and old men not mounted. It was something like a pow-wow, as we understand it. The Governor General of South Africa was there. He is also the administrator of the native territories. The native chiefs of Basutoland were also present. There are about twenty-five or thirty of them. The Governor General and his party were on one platform, and facing them on another platform were the Basuto chiefs. They were dressed up in very unique costumes. Some of them wore long coats, top hats and spats. Others had uniforms. One man had a full colonel's uniform, and another man had a very fine uniform with brass buttons, and on his shoulders he had "Lift attendant". He was proud of his costume. We attended the pitso, and the speeches of the native chiefs were interpreted to us, or to the Governor, I suppose, but we heard them. The paramount chief made a speech there, which was something like this.

> We wish you to convey to His Majesty the King our expressions of loyalty. We wish you to tell him that we are perfectly satisfied with the administration which is being given to us by British officials, and we do not desire any change of status.

That same condition prevailed all through the native territories, and I take it that it is a remarkable commendation of the manner in which British officials govern those natives. They do govern them. They punish them when necessary, but they are fair and just. They display the ordinary British justice which appeals to the natives, and the natives are perfectly satisfied with that administration. We also attended a council of the chiefs of the Basutoland; that is, a parliament. They have their leader of the government and leader of the opposition and various ministers, and so forth. Parliament was opened by the Governor General in due form. The budget speech was made and proceedings took place in the ordinary way. They were very dignified about it. One old chief, the leader of the opposition, was quite a wonderful man in his way; that is, he weighed a good deal; he was something like 575 pounds in weight. He was so big that when somebody in South Africa ordered a suit for him from a Bond street tailor, the tailor wrote back saying there must be some mistake in the measurements because there could not be any man that large. Several letters passed between them before he was able to get the suit at all. The native chiefs are very dignified and very much interested in their work. Their indemnities are not very large, but they are provided with lodging and food and appear to have a very good time. The natives of South Africa are pretty well satisfied with themselves, as long as they are not educated. Then we went to Bloemfontein, and there we saw a war memorial which had been erected by the women of Canada as represented by the Daughters of the Empire. It is a noble column of Canadian granite, containing the names of places where engagements were fought by the men of the Dominion. It is supported by a rectangular base, carved with representations of the maple leaf, and contains the names of the men and their regiments. It was unveiled by the Governor General of South Africa, the Earl of Athlone, on the 17th September, 1924. The Prime Minister, General Hertzog, and many other public officials were present. I might say in this connection that there does not seem to be any feeling amongst the Boers in South Africa against Canadians. They do not seem to resent the fact that our

men went over there during the Boer war and fought against them, and they are very friendly to Canadians. We also went to Queenstown, Butterworth, Umtata, East London again, Kingwilliamstown, Alice, at the latter place we visited Lovedale Native College. This is a college where they have about 700 native men and 300 native women. They give them all kinds of technical courses and some of them also take arts' degrees. They are educating the natives. The natives go in for all the sports of the white people except golf. They play tennis, football, cricket and all those kinds of games. They have not got as far as golf yet, but I suppose in the near future they will take it up. There is a good deal of difference of opinion in South Africa as to the advisability of educating the natives. In fact, I was told by many that it was a great mistake and that the educated native was not as reliable as one who had received no education whatever. However that may be, of course I do not know. But the people who are conducting these colleges think sooner or later the natives will have to be educated and it is just as well to start educating them now.

We went to Grahamstown, then back again to Port Elizabeth and then to Oudtshoorn which is the centre of the ostrich industry. Ostriches are not as profitable to raise as they used to be and we were told that this was because the ladies found it impossible to wear ostrich feathers in their hats when driving in motor cars. At the same time they have many ostriches in South Africa. We went on to George and Knysna and at the latter place we visited an indigenous forest. We visited Graaff-Reinet, Cradock Middelburg, and Bulowayo. We also went to the Matoppos Hills and visited the grave of Cecil Rhodes, which is on the top of the mountain. The grave is of granite and there is a simple inscription "Here lie the remains of Cecil John Rhodes." The memory of Rhodes in South Africa is greatly revered, particularly by the British. Jameson's grave is also in the same place, close to Rhodes' grave. Then to Salisbury, which is the capital of southern Rhodesia. We were there entertained by the Governor General, Sir John Chancellor. We went on to the Zimbabwe Ruins, supposed to be the scene of King Solomon's mines, very ancient and interesting ruins. There has been a great deal of controversy as to when they were actually constructed, but it is supposed that the buildings were erected something like a thousand years ago. We went through the Sabie game reserve, which is about 200 miles across. The train stopped when any game appeared and we saw various species of South Africa wild animals. The engineer would toot one whistle when game was seen on the right hand side of the train and two whistles when game was seen on the left hand side of the train. When interesting animals were seen, the train would stop. On one occasion the train stopped and we saw a great black-maned lion about seventy-five yards from the train. It was very interesting to see the king of beasts in his native element.

We went on to Victoria Falls. I am not going to endeavour to describe them to the House, but they are broader and about twice as high as Niagara Falls. It is a wonderful sight. The Zambesi river above the falls with the coloration of the water, the tropical foliage, the sky effects and all that kind of thing is the most beautiful scene, I think, I ever saw in my life. At Victoria Falls, the British delegates left us. Word was received that the elections were about to take place and they started for the Old Country. We went on to Livingstone which is the capital of northern Rhodesia and we were there entertained by the Governor General, Sir Herbert Stanley, K.C.M.G. Then we went on to Mafeking and saw the alluvial deposits of diamonds. They are finding so many diamonds in South Africa now that they are afraid that, unless the output is further controlled, the price will not be maintained. Until recently the diamonds were got out of the mines owned by the big combines and they were able to control the output, but now they are finding diamonds also in the alluvial diggings which have been discovered all over South Africa and diamonds are becoming very common, so common, in fact, that since we left there, a bill has been introduced in the House for the purpose of controlling the output and sale of diamonds. The government is going to attempt to do that itself. The diamond output of South Africa has been over £222,000,000. The first diamond was discovered in South Africa in the year of Canadian confederation, and this £222,000,000 is the amount which the diamonds sold since that time have realized. We visited also the greatest diamond mine in the world, the Premier mine. At this mine we were entertained at a luncheon and the manager of the mine was asked to speak. Instead of making a speech he proposed this toast to the ladies: "The ladies, God bless them; if it were not for the ladies, the diamond would not be worth anything. May the ladies always desire diamonds and may they always find men ready to buy diamonds for them."

We visited Johannesburg and saw the gold mines there. South Africa has turned out something over £749,000,000 worth of gold. I notice in a despatch from Johannesburg, dated March 27, the following:

> After an absence of more than ten years the gold sovereign reappeared all along the reef to-day, and 400,000 of them were distributed to the miners in weekly wages.

So hon. members will see that this is a very big business. We went on to Pretoria where we saw the wonderful executive buildings of the government. Parliament sits in Cape Town, and after prorogation the ministers and their staffs go to Pretoria where they remain for the rest of the year, then Nelspruit. Then we went to Lorenco Marques in Portuguese East Africa, and after that we visited Messina and viewed the copper mine. Copper mining is a big industry in South Africa and we were much interested in our visit to this place. We then proceeded to Rustenburg, Potchefstroom and Kimberley. At Kimberley we saw some very large diamond mines; I saw more diamonds there than I had ever expected to see in my life. On one table alone there was £150,000 worth of diamonds but I was not able to get any for they watched us very closely; that no doubt was because they knew that we were politicians. Near Kimberley we visited the battlefield of Magersfontein. Then we went to Cape Town where we were entertained for four days, ending up with a farewell banquet in the parliament buildings. The chairman was the speaker of the House, who had accompanied us on the trip. We were told that from the standpoint of South Africa the visit had been very satisfactory, having had the effect of bringing the two races closer together, and it had also afforded an opportunity for the exchange of views between the South Africans and delegates from the Mother Country and the other dominions. In Maseru, Basutoland, there was a notable conference attended by the Governor General of South Africa, the Colonial Secretary and by all the delegates from the Mother Country and the other dominions, as well as the delegates of South Africa. At this meeting Mr. Thomas, on behalf of the United Kingdom branch, extended to the delegates from the dominions an invitation to visit the Old Country during the year 1925. Of course, the British government has changed since that time but I do not think the invitation will be withdrawn. There is therefore a chance for any hon. gentleman who desires to take a trip of that kind, if he is fortunate enough to be selected as one of the delegates, to go to England, not perhaps this year but no doubt some time later on. It is also contemplated that a tour should be made of Australia and New Zealand.

The trip was purely educational, and among the things I learned was the great future that lies ahead of South Africa. But there is a race problem and it is difficult to tell what will happen; the coloured races are increasing rapidly and the whites are barely holding their own. It is necessary to encourage white immigration to South Africa but unfortunately no white man can make a living there unless he has capital to start with. Then there is the oriental problem. I come back from South Africa stronger than ever in my views on the oriental question, and I might say that those of the delegates with whom I discussed the matter were at one with me. One very prominent man to whom I spoke declared that he was right with us; he said that Canada was essentially a white man's country and should be kept as such. So that I am more strongly convinced than ever that the proper policy for this country is to keep orientals out.

I came to the conclusion that South Africa would not secede from the British Empire. They talked that way during the last election but I gathered that this was for election purposes. I do not think that General Hertzog is any more in favour of South Africa seceding from the empire than I am in favour of Canada doing the same thing. In corroboration of this I want to quote from the report of an address delivered by Mr. Thomas at Kimberley:

> "I go back absolutely convinced that whatever may have been said in the days of political warfare, whatever apprehensions may have been felt as to what is called separation from the Union Jack it is only a foolish, insignificant minority of the people who hold the view seriously in South Africa," Mr. Thomas declared, amid applause, adding: "I am convinced from all I have seen that the Dutch and the British both love South Africa, and both are convinced that they must work together for its ultimate salvation." (Applause).
>
> "The second point is that there are great possibilities for South Africa. I would like to see more white population, but I am not going back to the Old Country to say that South Africa is a place for all unemployed to come to. You don't want to flood the towns of South Africa with unemployed labor. If people are to come here, we want people with sufficient capital that they can stand for a few years until they get on their feet. That is my impression of the immigration question."

The prospects are bright for increased trade between Canada and South Africa, and there is indeed considerable business done by Canada with that country at the present time. But it all seems to be one way; Canada sells to South Africa. In answer to certain questions which I asked in the House

a few days ago, I received replies which indicate that Canada subsidizes a steamship line from Atlantic ports to South Africa, but the trade is only one way; it is an outward service from Canada. The information goes to show also that this business is improving. Cargoes from Canada of Canadian origin to South Africa were valued in 1921 at $4,082,959; in 1922, $4,108,142; in 1923, $5,305,222; and in 1924, $6,511,160. It appears therefore that the trade is increasing; and this all comes from Atlantic ports. Nothing is going from the Pacific at all, apparently, and there is an excellent opportunity of encouraging trade from western Canada to South Africa. I believe that western Canada is being discriminated against to-day and there should be some kind of subsidized line from Pacific ports. There is going to be a big business over there in lumber, for one thing, and the people there want our box shooks. I visited many plantations and I found that there was a great demand for box shooks. I found also that these shooks were being obtained from Norway and Sweden. That is a big business, and will increase enormously in the future. I found that no quotations had been received from Canada by the growers, and that Canadian box shooks were not thought of at all by the South African growers. I was, however, told that all things being equal, the quality and the price being right, South Africans would prefer to buy Canadian box shooks instead of those from Norway and Sweden. As I say, there is a big business to be done there, and I think this government should investigate the possibilities.

The business in motor cars at the present time is quite large. We saw Canadian motor cars of various makes, and there is a chance of increasing that trade. South Africa is a country where a great many motor cars are used. You can go any place with a motor car. Distances do not count at all in that country, and the roads are fairly good. Every farmer has a motor car, or would like to have one, and the motor car is in general use for transportation purposes. The business is there. We are doing a big business now, but that business can be increased. In 1922 South Africa imported 4,840 motor cars valued at £926,512. The number of American cars imported was 1,944, British 139, and Canadian 2,625. The British manufacturer fails to make the kind of car that is required by the South Africans.

In many places we also saw farm implements which had been manufactured in Canada. There is an excellent opportunity for business there. That trade can be increased, but we must remember that trade should be both ways. We are receiving a preference at the present time from South Africa, and that is the reason why we are getting this business. But is South Africa going to continue that preference if Canada does not buy something from South Africa? South Africa can sell to Canada just as we can sell to her. We are buying from foreign countries, countries not in the empire at all, goods which are produced and grown in South Africa now. Why not buy from South Africa? I would strongly urge upon the government that we do something to retain the friendship of South Africa, because South Africa is a good customer of ours, and the South African people are very friendly towards Canadians.

Three of us, the member for St. John and Albert (Mr. MacLaren), Senator Willoughby and I, decided to return by way of Australia and New Zealand. We sailed from Cape Town with the Australian and New Zealand delegates on October 29, on the Euripides, of the Aberdeen Line, and arrived at Albany on the 13th of November, but could not disembark on account of quarantine regulations, and we missed train connections. It had been our intention to take a trip across the continent by rail, and arrangements had been made by the railway department of the government for our accommodation, but another department of the government would not allow us to get off the ship, and so we continued our journey on the ship across the great Australian Bight, and reached Melbourne on the 17th of November. We were met there by the secretary of the Australian branch of the Empire Parliamentary Association, who placed motor cars at our disposal, and we were entertained royally. We had luncheon at the parliament buildings at Melbourne, and various other forms of entertainment were provided. We also called on the Governor General, and we met many parliamentarians of South Australia at Melbourne, where the parliament buildings are situated at the present time, although a new capital is being built. We left for Sydney on the following day by the Sydney express. On the train we found waiting for us sample boxes of various kinds of Australian dried fruits, raisins and all that kind of thing, and I must say they compare very favourably with any dried fruits which I have ever seen.

At Sydney we were met by the secretary of the Prime Minister, and were shown the city, and a wonderful city it is. Melbourne has a population of 900,000, and
10 p.m. Sydney is a city with something over one million people. The Prime Minister of New South Wales, Sir

George Fuller, was very kind to us. When we thanked him for his kindness he said he was only trying to repay some of the hospitality that had been shown to him when he was in Canada a few years ago. We were invited to stay in Australia for some time as the guests of the Australian government. Australia is very prosperous. They have had a record crop of wool, and are receiving a record price. They also had a record crop of wheat, and prices, of course, are very good. We saw no orientals in Australia. We had a demonstration there that a country can get along very well indeed without orientals of any kind. My visit to Australia convinced me that there is no danger at all commercially for Canada if orientals are excluded, so far as the carrying on of the industrial work of the nation is concerned.

Great interest was manifested in Australia in the trade agreement between that country and Canada. It seems there is a good deal of propaganda against it in that country. They are telling the people there that Canada prefers to do business with the United States rather than with Australia, and that propaganda is having some effect. We did what we could to offset that propaganda, but I am afraid they will commence to think there is something in it because of the action of this government in delaying ratification of the treaty. I cannot understand why this government is acting in such an uncalled-for manner. The agreement apparently was entered into, but we have not been able to get the particulars of it in the House. The minister has not given us the details; he has declined or has failed to lay a copy of the agreement on the table. But I find in the Commercial Intelligence Journal, issued by his own department, under date of October 11 last, a statement to the effect that a trade agreement has been arrived at between Canada and Australia. We were told when the minister returned from Australia that he had made an agreement which would be of great assistance to Canada and which would promote trade between Canada and Australia. Well, what has happened to it in the meantime? The Australians are commencing to wonder what has happened to it, and so are the people of this country. I have in my hand telegrams from certain concerns in British Columbia; I will read one or two of them. Here is one dated March 25:

> We urge you use your influence without delay towards ratification by parliament of Australian trade agreement without change, not only because of its benefit to paper industry but to Canadian industries generally. Considering the large number of Canadians employed in paper industry, surely this industry is of more importance to Canada than California fruit industry.
>
> POWELL RIVER COMPANY LIMITED.

Then there is another one dated March 24:

> We urge you to give immediate attention to the Australian trade agreement and its ratification without change by the Canadian parliament, both as a measure of benefit to Canada and of particular value to the paper industry.
>
> PACIFIC MILLS LIMITED.

Why does the government not bring down this treaty for ratification? I am not prepared to say, but it has been rumoured that the California fruit interests have something to do with it; that they are opposed to this trade agreement. Surely, as stated in the first telegram I read, the interests of the paper industry and of other industries of Canada are of more importance than those of the California fruit industry. Why should we not get from Australia or South Africa or any other part of the British Empire all the fruit we can? Why should we not decrease as much as possible our purchases from the United States? There is every reason why that should be done.

Apparently this treaty has been objected to; it is said there is some objection from the Progressives. I do not know whether or not that is the case, but I cannot understand why they should object to the treaty unless they are opposed to the necessary increases of the tariff against the United States in that connection. I shall not take the time to go into the details of this agreement which is referred to in the Commercial Intelligence Journal, but I do say that a great deal of harm will be done as regards our relations with Australia if this agreement is not brought down promptly and dealt with in a proper way.

I think also that Canada should have more trade agents in Australia as well as in South Africa. There is a trade agent at Melbourne, but I do not think there is any at Sydney, and Sydney is the most important city in Australia.

We sailed from Sydney on November 20 on the Makura, of the Canadian-Australian line, and arrived at Auckland, New Zealand, on November 24. We were there met by civic officials and representatives of the government. We were well entertained in Auckland and enjoyed our stay there very much. The Minister of Justice and Education, then Hon., now Sir John Parr, was very kind indeed to us and invited us to stay a month in New Zealand as the guests of the government. We there met Mr. Croft, the Canadian trade commissioner, who is doing good work. New

Zealand is a very prosperous country. No orientals allowed in there. New Zealand can get along without them; why cannot Canada?

We continued our journey to Suva; and I may say that on this ship, as on others wireless publications are issued every day. Some news from Canada, sent out from the Victoria Times, was received, but there was practically no Canadian news. The only items I can remember during that whole trip were two—one regarding a snowstorm in Montreal, and another with regard to the accidental drowning of a man in one of the lakes in Ontario. This was on a ship subsidized by the Canadian government, and I wondered why we did not have Canadian news. I spoke to the captain, and he told me it was a matter for the Marconi company. I spoke to the wireless operator, and he told me the reason they did not give out Canadian news of any consequence was because it was not sent to them: that they would be glad to publish Canadian news if it was given to them. He told me also that Premier Massey on his last trip from Vancouver to New Zealand had found the same condition with regard to New Zealand news, and that on his return he had made arrangements for the New Zealand station to send out wireless news free, and now a good deal of New Zealand news is given out on the ships. The same should be done with regard to Canada. We are establishing a big wireless station at the coast, and that station should send out Canadian news of interest—attractive news, because there is a possibility of attracting people to Canada on a journey of that kind who otherwise would be diverted at Honolulu and go to San Francisco. There is a great opportunity to encourage and increase tourist trade between Australia, New Zealand and Canada. Something over 250,000 people go from those countries every year to the Old Country, so that you can see what could be done. If we could induce a small percentage of these to come by way of Canada, think what benefit it would be to us.

We arrived at Suva on November 28 and spent the day there. We were met by the Colonial Treasurer, Hon. H. H. Rushton, and were shown the sights. We were also entertained at luncheon by the Acting Governor of Fiji, Hon. T. E. Fell, who is also Colonial Secretary of Fiji. Fiji is going ahead and the people there are anxious to do more business with Canada. There is great opportunity for a larger trade between Canada and Fiji, and I think something should be done to encourage that desirable aim. We sailed for Honolulu and arrived there December 5. In Honolulu I saw the other side of the oriental question. I found so many Japanese in Honolulu, just outside of Honolulu particularly, that one would almost imagine he was in Japan. Honolulu and the Hawaiian islands are overrun by Japanese. The experience in Honolulu and the Hawaiian islands demonstrates what may happen in the case of Canada some day unless effective measures are taken to keep these people out. We were entertained at Honolulu by Mr. Waldron, head of a large shipping firm, and had a delightful day there. We arrived at Vancouver on December 12. We had completed a trip round the world, and had only touched at two points that were not British territory. We had not seen, of course, the whole of the British Empire; but the journey made me realize the magnitude, the strength, the solidarity, the extent, of the British Empire, and I returned from the trip prouder than ever of the fact that I am a British subject.

I should like to call the attention of hon. members to the Empire Parliamentary Association, to which I think we should all belong. I think it is only right and proper that we should join up with an association of this kind which is doing such an important work, and which tends so greatly to cement the bonds that unite us to the Mother Country and to the other sister nations composing the great British Empire.

Now, Mr. Speaker, I am afraid I have taken up a great deal of time in describing this trip. However, I offer no apologies for the time so occupied because I think it only fitting that appreciation should be expressed for the spirit that prompted the South African government to invite us to that Dominion and also of the many courtesies and the considerate treatment we received when we were in that country, as well as in Australia and New Zealand.

In regard to the matters which have been discussed during this debate I should like to refer particularly to the remarks of the Minister of Public Works (Mr. King, Kootenay). He, like the Minister of Labour (Mr. Murdock), tried to make conditions in British Columbia appear to be rosy. He dealt with that province in the same manner as the Minister of Labour did with the whole of Canada. The Minister of Public Works told us that things were very prosperous, that conditions were good in British Columbia; and he referred particularly to the timber industry, to the fisheries, to the mines, and pointed to the vast amount of business which is being done in these different lines. That is all right. I quite agree with the Minister of Public Works that things in British Columbia are.

in some respects, getting better. But what has the government got to do with it? The improvement in question has taken place not because of anything that the government has done but in spite of the government. British Columbia has resources and those resources are being developed; that is all there is to it. Those resources are bound to be developed and that development can only be retarded by a government to a certain extent. Now, the minister says, "We are responsible for those conditions."—At least I suppose he would say that. The Minister of Labour tried to contend that the government was responsible for the rosy conditions which he outlined, and I suppose the Minister of Public Works would do the same thing. I should like, however, to discuss for a moment the conditions in the timber industry. What has the government to do with the prosperity in that industry? Nothing whatever. Prosperity in the timber industry is due entirely to the export trade and not to the domestic trade at all. The government is certainly not entitled to any credit for the export trade; absolutely none. It may be responsible for an improvement in the domestic trade, but at present there is no domestic trade of any consequence. The government might claim credit for many things but I do not suppose it will claim credit for the construction of the Panama canal. Neither do I suppose the government will claim credit for the big stand of timber that we have in British Columbia, nor would it admit responsibility for the Japanese earthquake. All these things are elements, together with other things, which have created a demand for our lumber. It is our export trade, which consists largely of lumber, which has brought about the improvement in question and the government is not entitled to any credit for it. Is the government entitled to any credit in connection with the fisheries? I suppose the Minister of Public Works would say that the government should take credit for the unusally large run of salmon that we had in the northern Pacific waters last year. That is what has swollen the figures in the fisheries column, that is why the growth in connection with the fisheries was so marked last year; but the government had nothing whatever to do with it. Then we have our mines in British Columbia. What has the government done for the mines? The fact is that the mines are being developed. Mining is reviving again not only in Canada but in other countries, but our mines are being developed without any assistance from the government. In other countries they are doing things to assist in mining development. For example in South Africa the government is granting aid for the prospecting of minerals, it is subsidizing prospectors; but the Canadian government is not doing anything. The government is not assisting the mining industry; it is not even building a smelter on the Pacific coast which is so badly required; in fact the government is not doing anything at all to assist the mining industry. I say that any prosperity that may have come to the mining industry is not due to anything this government has done. In other lines the conditions in British Columbia are bad. In that connection, before I go any further, I would say there is one thing the government might have done to assist our industries in British Columbia, and that is remove the discrimination which exists in regard to our freight rates. What has the government done in connection with that issue? Nothing but side-track it, and as far as I can see it is not going to do anything else. There are thousands of our farmers engaged in the poultry industry. What is the government doing for them? Doing nothing. People are complaining about it. I have letters and telegrams from various organizations out west. Meetings are being held. Just recently a meeting was held at which representatives of some 15,000 poultry producers were present. What were they meeting for? Because the poultry industry is being ruined and is threatened with disaster because of the tariff which is maintained by this government, and because of the inaction of this government in the matter of remedying these conditions. What are the conditions and what are the facts? We find that the duty on eggs going into the United States is eight cents; on eggs coming into Canada the duty is three cents. Is there any fairness or equity in that? How can we expect our poultry raisers in this country to compete with the producers on the other side of the line, when the Americans can come into our markets with their surplus, paying three cents per dozen, and when we want to go into their market with our surplus we must pay eight cents? I say the tariff should be equalized and there is no reason in the world why it should not be done. The government is allowing American eggs and Chinese eggs to flood our markets.

Speaking of the tariff this same inequality exists in other lines. We have an unequal tariff on wheat, hay, fruit, potatoes, butter, cheese, eggs, cattle, woollens, silk fabrics, silks and many other things. The tariff is very much in favour of the United States in all cases, the United States duty being much

higher than the Canadian duty. When we compare the two countries and compare the progress made in the United States with the progress made in Canada, we look for reasons, and I say the reason is that we have not a proper tariff in this country. I might discuss many things in this line, but I am not going to do it. I could refer to other industries which are being handicapped because of the present tariff, which are crying out for some redress, but which are receiving absolutely no consideration from this government. The tariff has to be revised, but I do not believe this government is capable under present conditions of revising it satisfactorily, particularly in view of the fact that they are dependent upon the support of the Progressives to keep in power. We have been told time after time by the Prime Minister that his hands are tied, not only in regard to the tariff but as regards other matters, because he has such a small majority. I say that the Prime Minister should not have attempted to carry on a government without a proper majority. After the last election, when he found that he did not have a working majority he should have gone to the country immediately and either obtained a satisfactory majority or allowed some other party to obtain a majority. This feature of being dependent on another party for support is certainly not in the interests of any country, and it is most unfortunate, particularly in the case of Canada, under present conditions. I hope there will be an election soon. Out there in British Columbia the supporters of the government are in despair. They are finding great difficulty in obtaining candidates in the various constituencies for the Liberal party. They are so hard up that they are fighting to get the Minister of Public Works (Mr. King, Kootenay) to run as their candidate in different constituencies. They think that the Minister of Public Works, besides being a wonderful statesman and all that kind of thing, is the Minister of Public Works, and if they can get him to run they think they can elect their candidate perhaps, because the people may think they are going to get something in the way of public works. Otherwise they have no hope. The hon. minister shakes his head. It has got so bad out west that the Liberal organizer for British Columbia had to come down to Ottawa, and shortly afterwards we saw it announced in the press that the Minister of Public Works had decided to run in Vancouver Centre—mark you in Vancouver Centre and not in his own constituency. I think his own constituency is one place where they apparently do not want him. I do not know why, but evidently they do not seem to want him. The minister has finally decided to run in Vancouver Centre. All I can say to him is that if he decides to commit political suicide, there is the place for him to run. Notwithstanding his portfolio and all that kind of thing, when the votes are counted after the election I am afraid he will find he is away down in the list. Another feature is that the people of British Columbia do not think this government is going to come back. They think the people of Canada are sick and tired of a government so inactive, so helpless and useless as this government has proved itself to be—a government which has not been able to carry out any of its pledges, which has not been able to do anything, which is dependent entirely upon the say-so of another group in the House. When they go to the country—and I hope they will do it soon—the good old Conservative party will come back to power. In England they are talking of holding the next Imperial conference in Canada. They want to do something, I suppose, to bring Canada into line; but in any event they are friendly to Canada, they want to help us, they want to co-operate with us, to confer with us and all that kind of thing, and therefore the next Imperial conference may be held in Canada in 1927. May we hope that when that event happens there will be a Conservative government in power so that something may be accomplished.

Mr. JULES EDOUARD PRÉVOST (Terrebonne) (Translation): Mr. Speaker, nowhere, have I better understood than here this very old maxim: silence is golden. That is true in more than one respect, but this truth is especially exact in the strict meaning of the words since, according to the dictum which is dear to Americans, a practical nation; Time is money. I, therefore, intend to be brief in the few remarks which I propose to make with reference to the budget submitted to us.

All who inhabit this country acknowledge the fact that we are faced with serious problems which complicate our national existence. If these problems are self evidenced to all citizens, even though they may not fully understand our economic situation, even though they may be ignorant of the intricate ways of our finances, the more evident must they be to the well informed observer.

These problems are of two orders: first economic, secondly national.

I shall not linger over theories on political economy. I shall go straight to the point and admit that the financial situation of Canada is critical.

I do not wish to be placed among the pessimists for I still have faith in our future.

I recall that the United States, after the war of secession, found their debt which was only $64,000,000, in 1860, increased to $2,773,000,000, in 1866. Nevertheless, in twenty years, the United States paid off half of this debt. Canada, with its natural resources, its laborious and healthy population, its ever increasing industries and trade will face with as much fortitude as the United States did, the task which has fallen to her lot. It is nevertheless a fact that, at present, our debt is very burdensome. It has increased by $2,000,000,000 within the last ten years; our yearly interest has jumped from $14,000,000 to $140,000,000. It is stupendous for a country which has only 9,000,000 of a population. Therefore, it is not astonishing that the country's great financier is unable to announce some relief in our liabilities and another decrease in the taxation necessary to balance the budget.

What astonishes the country, is to hear the Tories make a crime of this state of affairs for which they are responsible. The leader of the opposition of whom it is justly said that he was a good debater but a poor loser, tried to disavow this charge and efface such an impression by visiting the province of Quebec, proclaiming everywhere that he bore no ill-feeling and could not stoop to reprisals. Nevertheless, the speeches which he delivers in the House are pregnant with them and nothing is forgotten in these bitter criticisms, these most unfair attacks not even the most perfidious innuendoes. Like the prophet whose heart-rending laments were chanted in our temples last week, the Tory ex-Prime Minister, driven from power and seated in the cold shades of the opposition, whines, sighs and moans to break one's heart. "Stranger compare your anguish to mine, for the people have been ungrateful to me and my party. Will you not have compassion on us, we that are so honest, so good, so thrifty, we, whose thoughts are filled with the welfare of Canadians! Cast your eyes around to see if you can find a worse government than the Liberal one!"

As a sequel to these laments, the leader of the opposition and his friends become denunciators, they call the members of the government to the bar, they demand an accounting: "What have you done with the finances of the state?" The ex-Minister of Finance usually so full of smiles, frowns, raises his voice and tells us, with a tragic countenance: "Under your government the debt is enormous and taxation overwhelming."

Taxation, Mr. Speaker, must not be reproached to those who levy them, but to those who made them necessary. Are the responsibilities of the pre-war, during war and post-war Tory government already so far in the past and so soon forgotten?

The business depression in Canada, did not begin with the war, it already was taking place long before that date. What happened, following the fifteen years of great prosperity which Canada experienced under the Laurier government? From 1911 to 1913, when the Borden government was at the helm of the affairs of this country, we were in the throes of a general crisis.

The Conservatives had fought the treaty of reciprocity with the United States in 1911, by having recourse to certain popular prejudices and by crying out that the Liberals wished to annex Canada to the United States. This battle-cry was then: "No truck nor trade with the Yankees." Now, in 1911, under the Laurier administration, our purchases from the United States amounted to $284,934,739, and our sales to them amounted to $104,115,823. In 1913, after two years of government by the good Tories who had such a fear of the United States our purchases amounted to $441,142,593, and our sales only amounted to $139,000,000!

For the first time since 1897 we heard of unemployment in Canada. Firms that had been prosperous up to 1911, now reduced the number of their employees and their working hours; others closed their doors. In Montreal, Toronto, Winnipeg, Regina, Calgary, Edmonton and Vancouver the unemployed numbered not less than 100,000.

The Conservative government of 1912 and 1913 ended in a crisis which attained its climax in 1914 previous to the war. This low ebb in business was felt everywhere, in the revenue of the state as well as in the returns of private enterprises. Although the balance of trade was adverse to us, we saw our customs return decrease by one million dollars per month during the six months which preceded the declaration of war. The railway returns showed a decrease of $13,000,000 in 1914. The demand for homesteads was continuously falling.

Yet, the government spent extravagantly. The Liberals, in the course of their fifteen years administration had increased the controllable expenditure by $43,000,000. The increase of the same expenditure in the course of the three first years of the Borden government, notwithstanding the decrease in the revenues, amounted exactly to $80,483,595. During a period of fifteen years, the Liberals gave $25,000,000 to the railways; in three years time, the Borden government granted them $29,163,250. The Public Works depart-

ment's estimates which amounted to $8,000,000 in 1891, came to $19,000,000 in 1914, and so forth. I shall go no further, for what I have just stated is sufficient to show or rather to remind us that the war expenditures were not the only cause nor the beginning of our deplorable financial situation. The Borden government in 1912 and 1913, witnessed a serious crisis, following a series of fifteen years of prosperity.

The Conservative government of that date admitted this crisis themselves, since in the Speech from the Throne, at the opening of the session, in January, 1914, they made the Governor General say:

> Canada has been favoured by a long series of properous years. (This was a compliment to the preceding Laurier government, which had been at the helm of the country's affairs during a number of years.)
>
> At the present moment business is slightly restricted by the financial stringency.

As a consequence of this crisis, the farming class complained then, and not without cause, of the dearness of farm labour and the lack of markets for agricultural products.

Everybody was complaining at that time of the high cost of living which had increased 50 per cent in Canada. And still the government made no move to meet such a crisis. That is why Sir Wilfrid Laurier, then leader of the Liberal opposition, moved to have the following words added to the Speech from the Throne of January, 1914:

> We regret to have to represent to your Royal Highness that in the gracious speech with which you have met Parliament, whilst it is admitted that business is in a depressed condition, yet there is no indication of any intention on the part of your advisers to take any steps towards relieving such a situation.

Such was the unfit and wasteful government which had the administration of public affairs during the war.

At that critical period, the Tory government's financial policy might have been summed up in the following words: "a continuous resort to loans"—a dangerous policy, because it incited to an everlasting wastefulness—a very short-sighted policy, because the continuous recurring loans have largely contributed to place us in the critical situation in which we are struggling, and are closely linked—even in peace time—with the constant increase of the cost of living. Furthermore, the Tory government had to resort to taxation, in addition to the loans, that makes up the whole of their financial scheme; it is simple and ruinous.

Let me, Sir, dwell a few moments on the war expenditure.

The Liberals are sometimes told: You are as guilty as the Tories and you equally share with them the responsibility of our financial mess since, in the House, you approved of all the war expenditure without a protest.

Such are not the facts. Certainly, the Liberals were not opposed to Canada taking part in the war. Our country could not remain neutral in the great struggle without losing its self-respect; the Liberals only performed their duty when voting the money necessary under the circumstances. However, they always stipulated that our participation in the war should be voluntary and reasonable. Among these war expenditures, some are legitimate and reasonable of which the Liberals, without fear, shoulder their share of responsibility. But they ceaselessly protested against the wastefulness of the Tory government. Look up Hansard for 1915, 1916, 1917 and 1918, and you will find therein the protests and criticisms of the Liberal opposition in regard to the scandalous war contracts, such as the contracts for remounts, boots, uniforms, equipment, drugs, shells, rifles, etc.; contracts that enriched the partisans of the Tory government from the sacred funds voted for the war. Two Conservative members were even forced to resign following the Liberal charges. The latter never ceased denouncing the reckless way the Tory government threw us into the war heedless of all bounds of sense of proportion, without any consideration for our interests or our needs.

Sir Wilfrid Laurier consistent with himself and true to his policy of wise and reasonable participation in the world war, stated in the House, July 24, 1917:

> But the question is how many men we can take from the life of the nation at the present time without imperilling the public services which are essential to this country, and essential to carry on our share of the war. This is a subject which, in my humble opinion has not been sufficiently considered by the government. They went into this war without taking any previous calculation whatever, without taking any census of our resources in men and in other respects.

A few days later, in a letter which Sir Wilfrid Laurier wrote, August 21, 1917, to Mr. Frank Wise, Secretary to the League "Win the War" at Toronto the Canadian statesman expressed himself as follows:

> In the new Parliament I hold that it must be the duty of the majority leader, whoever he may be: to confer immediately with Great Britain and her Allies, with a view to ascertaining how, and to what extent, the participation can be utilized to the greatest advantage in the prosecution of the war, regard being had, on the one hand, to the necessities of the Allies for men, and, on the other hand, to our population, resources, industries, geographical and other considerations.

We notice that Sir Wilfrid Laurier, although favourable to our voluntary participation in the war, did not lose sight of Canada's interests. His idea was to gauge our efforts in proportion to our resources rather than engage ourselves thoughtlessly in the war and to give up our last man and last dollar, as the Tories wished, first including the leader of the opposition (Mr. Meighen). The Liberals were opposed to conscription and to senseless recruiting. I, myself, at that time, wrote a number of newspaper articles, criticizing the government in this connection. I stated that useless recruiting was being carried on, which was unnecessary for the needs of our expeditionary army; that this excess in recruiting and the poor equipment of our troops would cost enormous sums to the country, without bringing any advantage to the Allies. The Liberal's contentions are, to-day, fully justified. On September 11th, 1924, at the Windsor hotel, in Montreal, at a dinner given by the Citizen Research Institute of Canada, Sir Arthur Currie, at present Principal of McGill University, and ex-Commander in Chief of the Canadian Army during the Great war, stated:

1. That during the said war, the Canadian government enrolled and sent overseas at least 100,000 men who were of no help to the army; that the total cost of this useless expenditure amounted to at least $150,000,000, exclusive of the yearly disbursements which these men still cost and will in the future cost us in pensions and hospital expenses and that the opinion of medical experts has in many of these cases been ignored.

2. That in the opinion of experts the Ross rifle was worthless and that notwithstanding said advice, successive contingents were armed with said rifle.

3. That, in the opinion of experts, part of our equipment was worthless, nevertheless contingent after contingent were sent overseas with said equipment.

4. That, in the opinion of experts, the Oliver equipment was not what was required, nevertheless contingent after contingent were sent overseas with said Oliver equipment.

Mr. Speaker, let us not forget these things when we closely look over the country's sad financial plight and when we are trying to find out the parties responsible for the taxes which burden the Canadian people.

Yet, we are told, you approved of all the funds asked by the government for the prosecution of the war. No doubt, we could not do otherwise then, without endangering the success of our participation in the war. It was impossible at the time to separate the tares from the wheat. We had a two-fold duty to perform: that of condemning the waste that we could discover, we did so; and that of voting the appropriations required for the Canadian army; this we also did, from a patriotic standpoint. It is almost a crime, in war time, to cut off the government's supplies.

Mr. Henri Bourassa, although strongly opposed to our exaggerated participation in the war, himself wrote:

It is not the time for controversies, bitter recriminations, settling of petty quarrels, still less for party intrigues..... One may disapprove, on the whole or in part of the government's actions, deny the opportunity, the way or the reasons for its intervention in the European conflict, lay aside for the future all the principles involved, but we have no right, at present, to launch out into a bitter debate on this measure.

The hour to judge and condemn came later. The people in irons, in 1917, spoke freely in 1921.

One of the worst transactions carried out by the Tories and which the Liberals fought strongly against, was the purchase of the railways, which threw on the shoulders of the Canadian people the heaviest part of the burden that overwhelms them. Our opponents tell us that there was no other solution to the problem than to buy the Canadian Northern and the Grand Trunk which were bankrupt. Nonsense! The great majority of business men, without distinction of party, have condemned this purchase for which Canada paid many million dollars for shares which had not cost a cent to the holders, a transaction which has made the country responsible for a debt of many hundred million dollars and which has hurt our finances more than all the legitimate expenditures of the war. Has one forgotten the protests of the Chambres de Commerce and the Boards of Trade, especially those of Montreal, protests signed by prominent Conservatives, such as the Ekers, the Chaputs? And the merchant marine, established by the Tory government by lavishing millions, are they not also for the greater part, responsible for the financial mess in which we find ourselves? The Conservatives who are in the habit of trying to make us share the responsibility of their failures, tell us that we approved of this merchant marine scheme. Even if that be true, they alone, would not be less responsible for this act of poor administration since they were then in power.

However, such is not the case, and it is untrue to say that the Liberals approved of the establishment of a large merchant marine. They agreed to the construction of a few merchant ships during the war; however, they always condemned the government for having launched out into the costly venture of a merchant marine, without calculating and foreseeing what it would cost the country already crushed under by the burden of the state ownership of railways. In 1918, the government owned four ships and

when the Conservatives fell from power, the number had increased to sixty-three.

The Liberals never ceased condemning the merchant marine which will go down in history under the name of the "Ballantyne Marine." Not without cause have they reproached this ex-Minister of Marine for having given out without public tenders fifty-six contracts for the construction of merchant ships at a total cost of $43,704,962.

This merchant marine finally cost us $70,000,000! Therefore, this brief review of the facts, although incomplete, brings to light this undeniable truth: our deplorable financial situation, previous, during and after the war, is due to the Tory government; an unskilful and extravagant administration from 1912 and 1913; war contracts which have squandered many millions of the public funds; exaggerated and useless recruiting which—the fact being even admitted by Sir Arthur Currie—brought on a loss of $150,000,000 to the country; purchase of bankrupt railways which have overburdened our budget and show, each year, deficits amounting to 60 and 70 million dollars; the establishment of a merchant marine which has cost us 70 million dollars and entails a yearly loss of many million dollars.

Indeed, the heritage that the Tory government left to the Liberal government was pitiful. Nevertheless, the present government administers the public affairs in the best possible way; the management of the state railways, until we can find a purchaser or carry out a merger which will not throw the country into confusion, has been placed in the hands of a most competent man; the annual increase of our debt which, even two years after the war, amounted to almost $100,000,000 under the preceding government, has been substantially decreased; taxation has been diminished and the expenditures checked. The present government adminsters the affairs of the country at a cost less than in 1914, so far as controllable expenditures are concerned. The Liberal government's task is heavy and difficult and is certainly not at an end. The leader of the opposition and his followers who have left us in the lurch, not only reproach us for being there, but have no suggestions worth while to make toward improving the country's finances.

The Tories have but one remedy for all the ills they have caused and from which we suffer: it is protection! By mounting this old lanky horse, the leader of the Tory party remains what he was in 1921. He has not changed. There is, therefore, no earthly reason why the public should change their opinion of him. The Conservative party wants a high tariff rather than a broad one; the Liberal party favours a broad tariff rather than a high one, a protective tariff which benefits everybody.

Mr. LAPOINTE (Translation): Hear, hear!

Mr. PREVOST (Translation): They favour the masses instead of classes. It was Laurier's policy. The Tories are using the same weapons against the Liberal government of to-day, as they used in their attacks against the Laurier government. Our opponents are endeavouring to create a panic among the capitalists and the working classes by saying that the Liberals will ruin the Canadian industries. The same old tune. It is not of yesterday... Laurier responded to it by giving Canada an unheard of period of prosperity. The present government responds to it, in its turn, by helping the consumers without prejudicing the manufacturers.

It is amusing to read over the calamities which were prophesied last year by a number of Conservatives, because the government had dared to lower the duties on certain instruments of production.

The words of the member for Fort William and Rainy River (Mr. Manion) still linger in my memory, his magnificent voice with its great range, trills and variations have made him the first tenor of the group who chime in with the leader of the opposition, I still hear the hon. member exclaim in this House, on April 28, 1924:

> Someone has described this budget as national suicide. I should like to describe it as national homicide.

The hon. member denounced the government for wanting to crush the eastern industries; he stated that the 1924 budget would no doubt ruin a number of legitimate industries.

The member for Fort William and Rainy River, might tell us, this year, with the same certainty, what are the legitimate industries that have been ruined by the 1924 budget?

Other speakers contended that the manufacture of farm implements, in particular, would be ruined; now, the facts as well as statements emanating from the manufacturers themselves prove the contrary. Indeed, Sir, if we compared the stature of the men of the Tory group to their criticisms, there are no giants among them.

Although the financial outlook of our policy bears a great importance, it is not the only one to hold our attention. The national spirit by which our policy must be inspired and guided is still more intimately linked with our life and future than the wealth or poverty

of our finances. Money lost can be replaced, with regard to our tariff, it strikes me, that in a country like ours, the various interests will guide the more and more, and for the better our tariff policy towards a happy medium.

I do not deny that all these problems of an economic order are important, however, none of them are a question of life and death for Canada. While the failure of the true Canadian spirit would cause the disintegration of our national life. If the Canadians do not live up to their high ideals, they will disappear as a nation. That is why we should, above all things, be Canadian citizens. I feel, Sir, that it is an easy task for me to express in the same breath, this notion of Canadianship together with the Mackenzie King government, for both go hand in hand. The Canadian Premier, in his statements and, still more in his attitude, has expressed a national ideal in unequivocal terms, openly opposed to the disastrous influences of British Imperialism or to all other policy foreign to true Canadian interests. At the time of the Anglo-Turk difficulty, when English politicians... and Canadians wished to foolishly drag us again in a new war, the King government's stand was what it should be. The same thing happened, at the last Imperial conference, also when the question of the Lauzanne treaty came up, and the Geneva conference, the Liberal government's attitude has been entirely autonomous and sincerely Canadian. You will bear witness, Sir, that the Premier will be highly censured for it! Already, in certain Tory and Imperialist circles, a price is put on his head, as the Tories of 1837 and 1838, the ancestors of those of this day, put a price on the head of his grandfather, Lyon Mackenzie, the leader of the patriots of Upper-Canada, who fought the oligarchy and struggled to obtain responsible government.

The essentially national policy of the Liberal Premier has the support of all true Canadians. It is the policy of the future: a broad-minded and generous policy, considerate of all citizens, loyal to the empire, yes, but especially loyal to Canada itself, a great and rich country in partnership with England, and not a colony reduced to slavery.

Canada, is our great fatherland, it is our only fatherland. No doubt, I have like many others a special attachment for Quebec. What patriot, in any country, has not a preferred corner in his fatherland? Quebec is the corner of French Canadians and that is easily understood: that province is our cradle, and, that native soil will also be our tomb. The tender and emotional love with which it inspires us does certainly not exclude the expansive, deep and great love which we feel for the whole of Canada. Through the medium of Quebec, it is Canada that we love and wish to serve. In this parliament, where Canadians from everywhere meet, we feel that there must reign over political parties, races, various religious beliefs and private interests, a dominating thought: the Canadian spirit. As in the Forum of ancient Rome, where men of various races and social standing met, brushed against one another and were on an equal footing by the fact they could say: "Civis romanus sum"; in our Confederation, Canadian citizenship must make us all equal, united, proud and strong. The policy of those who govern and guide us must be inspired by such an ideal: To create this Canadian spirit where it does not exist and to watch its development and expansion where it exists, so that it may guide us in the right path, this broad and generous Canadian citizenship which is no more nor less than real love of our country.

Mr. W. T. LUCAS (Victoria, Alberta): Mr. Speaker, if the long-winded speeches that we have listened to during this session of parliament were a solution for many of our difficulties in Canada, I can assure you that I would have no fear in regard to the Canada of the future. At the outset of my remarks, I want to say that anything I have to offer will be, not in any spirit of antagonism, but rather in a tone of encouragement, in an endeavour to encourage the government that has now the management of this country in its charge to carry out the policies on which it was elected. The situation is too serious at the present time for any true Canadian to try to make political capital out of it. It ill behooves either of the two old parties to endeavour to make political capital out of the situation in which we find ourselves to-day, because they are both responsible for it. If we could cut out a great deal of politics from this House and get down to business in a businesslike way, we might be able to make some progress.

Coming for a moment to the financial statement which we had presented to us by the Acting Minister of Finance (Mr. Robb) in his budget address, I would like to suggest that we adopt a system of bookkeeping that the average man in the street might be able to understand. On the one hand, we have the Acting Minister of Finance stating that we have a surplus at this time, while on the other we have the ex-Minister of Finance (Sir Henry Drayton) denying that we have a surplus and asserting that, on the contrary, we have a very large deficit. Every hon. member will agree

that these are two hon. members of very high standing in this House, and if they cannot agree on this question, what is the man in the country going to do? This question should be settled once and for all, because I can picture what is going to happen in the country if an election takes place shortly, what statements are going to be made on the stump, one side holding up the splendid surplus that they advocate and the other side just as strenuously stating that there is no surplus but a huge deficit. The result will be confusion amongst the electorate in Canada.

As regards the Greek and Roumanian loans, it is Greek to many of us. I should like to commend the government for having placed those loans on a better financial basis, but further than that I do not see that they can take any credit at the present time. If, for instance, we should have a war in Europe in the near future—and such a thing is not unlikely under existing conditions overe there —what would be the chance of collecting anything on that loan? The government would be well-advised to leave that amount out of their surplus until they have made a collection, and that would be the proper time to apply it to reducing the debt of this country.

As regards the budget, I am badly disappointed with the government at this time in not carrying out their pledges to the people at the last election. The people of this country have placed in power a government, believing that they were truly standing for the pledges which they made to the people at that time. But we find that after taking a few side-steps they finally came to the position of stand-patters. I read, with some interest, on the morning after the budget was delivered this editorial in the Ottawa Citizen. It is headed "A Standpat Budget" and it goes on to say:

> Nobody expected the government to bring in any substantial changes in the method of raising revenue this session. None has been made. Although the great majority of members are committed to a fiscal policy of freer trade, they seem to have less power in the country than the small groups of special interests who oppose tariff reductions.
>
> Party leaders are allowed to talk about the national policy, but the economic policy of Canada is determined by interests outside of parliament. That becomes yearly more apparent: it will probably continue so until the people of Canada, thinking as consumers, really know what they want to get from the building up of Canadian industry.
>
> At the present time, the small groups of protected, bonused and subsidized interests know what they want. So far, they have succeeded in getting about everything they want from parliament.

It seems to me that that is the situation we have in Canada to-day, that while we have had governments in Canada ever since confederation going to the people and advocating certain policies, there has always been, I would almost feel like saying, another government behind the scenes pulling the strings. When we look back over the debates in this House since confederation, we find that the great arguments have been on the question of protection versus free trade. Politicians have laboured and have filled pages of Hansard on this question, and yet we find ourselves to-day in the same position, debating the same old question. Taking the figures supplied by the hon. member for South Winnipeg (Mr. Hudson) the other day, I find that the average tariff on all imported goods coming to Canada has been as follows: In 1878 the average was 13.1; from 1883 to 1896 it was 19.1; in 1898 17.5; in 1911 16.2; in 1922, 16.2; in 1923, 16.7; and in 1924, 15.1. Outside of the period from 1883 to 1896 when we had an average of 19.1 the tariff has not varied practically more than 1 per cent. I think there is something very striking in this for every member of this House as well as for every man in the country. It shows that we have had practically the same policy in this country during all these years, and I would ask any hon. gentleman in this House whether he would be prepared to stand up and express his satisfaction at the progress that Canada has made in the last half-century. Looking at our figures in the matter of population in that time we find that in 1871 we had in Canada 3,689,257 people. Our total immigration into Canada in the past fifty years has been 5,099,692 while our natural increase has amounted to 3,931,125, or a total of 12,720,074. Yet in 1921 at the last census we had a population of only 8,788,483. As I have said, we have had during the last fifty years practically the same policy, and we find that we have lost in that time 3,931,591 of our population. We have spent in our Immigration department over $30,000,000 and the results, as I have shown, are anything but satisfactory. Would any business concern put up with such a state of affairs? It seems to me that any business that had followed a certain policy for fifty years, practically without change, without making any greater progress than we have made under the policy that we have pursued would fire the whole management and adopt something new. Our Conservative friends say that we should have higher protection. Well, they have been in power a number of years during which this policy has been in effect, and yet we can see no very great change as a result of its operation. But suppose we did increase the tariff two or three per cent, what difference would that make?

Then our Liberal friends suggest that we might have the tariff a little lower. But if they reduced it by two or three per cent, would such a reduction show any appreciable difference? We have had practically the same policy all along, and in the case of either a reduction on this small scale or an increase there would be no great difference. I have come to the conclusion therefore that the time has arrived for some radical change in policy if we are to make any progress in the future.

This is a country of wonderful opportunities; we enjoy very many blessings. It is very seldom indeed that any hon. gentleman rises in this House who does not boast of our wonderful natural resources. So that when we think of these resources and reflect that this is a new country, it is disconcerting to realize what little progress we have made; we cannot help thinking that there is something wrong with the policy that we have followed. I want to ask the government to tell us why they have faltered in carrying out the policy upon which they were elected. Last year they made a fair attempt to implement it and several reductions were made. And our Conservative friends have not failed to seize every opportunity to inform the House that this partial adoption of the policy upon which the government was elected has been the ruin of industry in this country; they have told us how many industries have gone out of business. On the other hand, the Prime Minister (Mr. Mackenzie King) and the Minister of the Interior (Mr. Stewart, Argenteuil) have declared that these industries that were affected last year by the tariff are showing splendid progress; they say that the implement firms, one of them particularly, paid very substantial dividends during the past year. And on top of this, according to the government's own figures, a surplus is shown in the budget this year. Well, if that is the case, and if the reduction in the tariff last year did not hurt these industries, what excuse have the government for not applying the same policy to every other industry? The government were elected on this platform of freer trade. Last year out of six by-elections they won five, and this to my mind would seem to have been an endorsement of the policy which they adopted at that time.

Mr. LAPOINTE: Hear, hear.

Mr. LUCAS: The Minister of Justice says "hear, hear." I think the people who elected these candidates last year, if they had to pass upon them again, might vote differently.

An hon. MEMBER: They are better satisfied than ever.

Mr. LUCAS: I am glad to hear that. As I pointed out a few minutes ago, we have had practically the same policy, except for a variance of about one per cent, during a number of years and we have made no great progress. I invite hon. members therefore to consider the question whether the time has not come for the adoption of some radical change. If we could not make greater prosperity in the past fifty years than we have made, in a new country, with low taxation and the lure of free lands, in the name of heaven what is the hope for the next fifty years with things as they are to-day? To my mind, protection as we have had it during the last fifty years has proved a failure, and I for one should like to see the government take its courage in its hands and get behind the free trade policy on which it was elected, and put it into effect. If the government would do that and would come out boldly and stand by that policy, making a fairly substantial cut of three per cent a year for five years, our industries would know what they might expect and would be able to adjust themselves to these conditions. And any industry that refused to place its cards on the table and reveal the condition it was in would simply have to take the consequences. On the other hand, as regards the industries that are indigenous, if any could honestly show us that they were unable to carry on, I would be quite agreeable to some system of bonusing them for at least a period of years to see what they were costing the country and whether it was worth while to maintain them. In my opinion that which Canada most needs to-day is population. We have provided facilities in this country for a population of at least twenty-five or thirty millions, perhaps more; and nine millions of people are endeavouring to carry that load. We all know the condition our railroad systems are in to-day, and unless we can get more population in this country to produce more tonnage for our railroads, it seems to me it will be only a matter of a few years before they are facing a very serious situation.

Everybody admits we need population, but where are we going to put new immigrants? Can our cities absorb any more to-day? I think not. We have our bread lines, or at all events there is a great deal of unemployment at the present time. The only place where you can put these new immigrants is on the vast open spaces of this country. In my opinion we have had a policy which I might call a cart-before-the-horse policy. We have been trying to build up an industrial system

when what we needed was a policy that would develop those vast open spaces. You cannot put a settler on the land to-day and tell him that he has got to stay there. Unless he can make a fair return on his labour he is not going to stay on the land, and the result is that our cities are to-day overcrowded, and instead of our manufacturers building up a home market we find they have come to the point where they are now standing still and are waiting for more immigrants to come in to fill up the open spaces and build up a home market for them. Under those conditions I think the policy of this country should be directed right in line with the policy brought down by the Acting Minister of Finance last year. I believe that was a truly national policy, providing, as it did, for the development of our four basic industries—agriculture, mining, lumbering and fishing. I feel confident, Mr. Speaker, that if we develop those industries and make them prosperous, we shall not need to worry about our manufactures. If our agriculturists on the great plains in the west, and in fact throughout Canada, had the purchasing power to supply their needs to-day, I tell you, Mr. Speaker, our manufacturers, even working night and day, could not supply their needs. Yet we find our politicians scrapping away over the same old policy that we have tried out for fifty years and found wanting. There is no business concern in this or any other country which after having tried out the policy for half the time we have tried it out in this country, and with no better success than we have had, but would scrap it,—and scrap the men who were following such a policy if they did not make up their minds to change it. The United States have come to recognize that while their industries are important after all no one part of the country can prosper alone but all must move together. President Coolidge speaking at Chicago some time ago is reported as follows:

> Real and permanent prosperity for the United States depends on putting agriculture on its feet, President Coolidge declared in a message to the farmer-manufacturing convention which opened here to-day.
>
> "It is perfectly apparent to all of us that we shall not have real and permanent prosperity for the whole country, nor for the greater part of it, so long as any large and vitally important section of its productive industry is unable to prosper," Mr. Coolidge said in part.
>
> "The plight of the farmers in recent years has been and will continue to be a menace to the prosperity of every other element in the community until we find means of relieving agriculture."

I would like to take this opportunity of bringing home to the Acting Minister of Finance the fact that we are looking very anxiously to him to bring down this session legislation upon the question of rural credits. I am pleased to see that Dr. Tory has brought in his final report, and I sincerely trust that the government will hasten to bring down legislation bringing his recommendations into effect. The financing of the farmer must be approached from no ordinary angle. What would be the position of all the successful manufacturing plants, factories and corporations of eastern Canada, if they had to pay eight or ten per cent for money, and if the capital in their business was subject to call every three or four years? They could not function, of course; they do not do business that way. Their capital is raised by the sale of long term stocks, bonds or debentures in the open markets, in the ordinary way that modern, scientific investment machinery demands. What we are asking for is that the business of agriculture be placed in the same position, that the farmer be allowed to mobilize his security and go into the markets on an equal basis with all other corporations. It can be successfully shown that the security based on agriculture is second to none.

A survey of the national wealth of Canada as of 1921 put the capital invested in farms and live stock at $6,587,000,000. In 1923 the total agricultural output amounted to over $1,300,000,000. Over fifty per cent of Canada's population is rural and makes its living off the land. That the prosperity of the farmer is the basis for national prosperity is well known. The western farmer is the mainstay and backbone of eastern Canadian industry. Assuming that these statements are true, and they cannot be disputed, we find an industry with assets worth nearly $700,000,000, and an annual turnover of $1,500,000,000, with no modern method of handling their credit problems. The farmer is handicapped in having to function under a financial system that does not meet his requirements, is not only inadequate, but actually harmful economically, socially and politically.

The future of Canada does not depend upon the cities, and in saying that I am not disparaging our cities. It depends upon the farmer. Business is good when farmers have money to buy; but, going deeper, history has proven again and again that the strength of any nation lies in the number and prosperity of its small freehold farmers. It may not be generally known that Canada is the only important agricultural country in the world to-day that has not adopted a sound system for properly financing the business of agriculture. On the other hand, the western farmer must sell his products in the markets of the world in competition with countries

that enjoy the benefits derived from a scientific system of long-term loans, with a low rate of interest. In the United States, the Land Bank system has now functioned for seven years, including a period of great inflation, followed by one of drastic liquidation, and no serious weakness has appeared either in its theory or in its practical operation. It is universally agreed that the business of agriculture is entitled to capital on equal terms and at as good a rate of interest as any other manufacturer or corporation, providing the security is as good.

I should like to say to the Acting Minister of Finance that there will be great disappointment in western Canada if the government do not at this session bring down legislation providing for some system of rural credits to meet the situation in the west.

Mr. MOTHERWELL: Will the hon. member tell us why the Alberta government does not bring into force the rural credit scheme that is already on the statute books of that province? They have a rural credit scheme there, and so far as I know, it has never been put into force.

Mr. LUCAS: I think the answer is quite obvious. The provincial governments are not able to secure the money that is necessary for a scheme of this kind.

Mr. MOTHERWELL: The province of Saskatchewan has put out nine or ten million dollars.

Mr. LUCAS: I think it is generally understood that the Dominion government can provide money much cheaper than any provincial government. The securing of money at a low rate of interest is one of the chief considerations in this matter. Unless we can secure the money at a reasonable rate there is no use in adopting the system, because we would be practically no better off than we are at present.

Mr. WARNER: Is it not a fact that the Alberta government, before taking any further steps in the matter, were waiting to see what the Dominion government was going to do?

Mr. LUCAS: Yes, I think that is correct.

Mr. MOTHERWELL: My hon. friend surely does not mean to say that the province of Alberta cannot borrow money as cheaply under a Progressive government as the province of Saskatchewan can under a Liberal government?

Mr. LUCAS: What rate of interest are the government of Saskatchewan paying for their money?

Mr. MOTHERWELL: They are paying five per cent and charging slightly over six. That is my recollection.

Mr. LUCAS: I would like to say to the minister—

Mr. JELLIFF: I would like to ask the hon. gentleman whether it is not a fact that the Saskatchewan government have ceased to make further loans to the farmers because they could not get money enough to do it?

Mr. LUCAS: I heard that statement made. I would like to say to the Minister of Agriculture (Mr. Motherwell) that I understand the Saskatchewan government are very anxious to come in under the federal scheme.

Mr. MOTHERWELL: The reason they are not lending more, if my hon. friend wishes to know, is because there are no investors to put their money into the scheme, and, further, that the money is not coming back as quickly as they would like.

Mr. LUCAS: They are evidently short of money, then. There is another question I would like to deal with, one that I think is of vital importance to Canada, namely, the handling of our grain through our own Canadian channels. I would like to refer hon. gentlemen to the report of the Royal Grain Inquiry Commission presided over by Mr. Justice Turgeon. If they will turn to pages 203 and 204 they will find some information that is worth noting in this connection. I quote:—

> The report of the Minister of Trade and Commerce shows that in the crop year 1921-22 the exports of Canada wheat
>
> | | Bushels |
> |---|---|
> | From New York, Baltimore, Boston and Portland were.. .. .. | 100,009,466 |
> | From Montreal and Quebec.. .. .. | 28,030,051 |
> | From St. John, N.B... .. .. | 6,604,898 |
> | Total.. .. .. | 134,744,415 |
>
> So that the comparison between United States and Canadian seaports, in the export of Canadian wheat in that year was 74 per cent and 26 per cent.
>
> In addition to this, several million bushels were shipped by Vancouver and went to Japan and China, or through the Panama canal, to Europe.
>
> In the crop year, 1922-23 (1st September, 1922 to 31st August, 1923) the exports of Canadian wheat were—
>
> | | Bushels |
> |---|---|
> | To United States.. .. .. | 12,936,048 |
> | Via United States ports to United Kingdom and elsewhere.. .. .. | 129,871,095 |
> | Exported from Montreal and Quebec.. .. | 57,030,848 |
> | Exported from St. John, N.B... .. .. | 12,014,152 |
> | Exported from Vancouver.. .. .. | 17,829,671 |
>
> which makes the comparison between United States and Canadian Atlantic seaports 65 per cent and 35 per cent as regards exports overseas.

The figures are also now available with regard to the export of Canadian wheat for the crop year ending 31st August, 1924. They are as follows:

	Bushels
To United States for consumption	21,320,242
To United States seaports for export	141,079,337
Exported from Montreal and Quebec	63,568,444
Exported from St. John	9,412,533
Exported from Vancouver	53,809,505
Total	289,190,061

These figures show that the eastern coast exports continue as before, 66 per cent via United States seaports and 34 per cent via Montreal, Quebec and St. John. This is a very vital question, and these facts are in themselves a strong argument for the equalization of our freight rates through the mountains to Vancouver. In view of the percentage of grain that is going through American ports at present, to my mind there is no reason why we should not make every effort to encourage the shipment of that grain through our own Canadian ports. So far as the reduction of the mountain freight rate is concerned, I would point out that there are no mountains so far as grade is concerned from Edmonton to Vancouver, because we have as low a grade between those two points as prevails between Edmonton and Fort William.

According to the report of the grain commission the distance over which this great volume of business is being carried across the Atlantic are as follows:

Via New York—

	Miles
Winnipeg to Fort William, rail	420
Fort William to Buffalo, water	860
Buffalo to New York, rail	400
New York to Liverpool, ocean steamer	3,100
Total	4,780

Whereas if sent all rail to Quebec or Montreal, the figures would be:

Via St. Lawrence—

	Miles
Winnipeg to Quebec, rail (1,372 to Montreal)	1,350
Quebec to Liverpool, ocean steamer	2,633
Total	3,983

So that, as this report states, western province grain exported via New York has to be carried 800 miles further than if it were shipped at Quebec, or about 650 miles further than if sent all rail to Montreal. I quote further from the report of the commission:

It is true that the grain sent by New York has a shorter rail haul than that sent all rail to the St. Lawrence, but on the other hand, it is subject to two double transhipments, one at Fort William and one at Buffalo, which are not encountered on the other route. These additional elevator charges, combined with the lake freight and marine insurance from Fort William to Buffalo, not incurred on the all rail Canadian route, should more than compensate for the greater rail haul. For instance, the cost of handling wheat from Fort William to New York, in October, 1923, was:

	cents per bushel
Elevator charge, Fort William	1.25
Lake freight, Fort William to Buffalo	5.20
Marine insurance	0.30
Elevator, Buffalo	1.00
Railroad freight, Buffalo to New York	9.10
Elevator, New York	1.00
Total cents per bushel	17.85

The total by the Georgian bay route was 16.65 cents a bushel and by the all water route, 15.45. So that even if our grain went east through all-Canadian ports we find that it is a cheaper rate than going by New York. We find further from this report that in 1916 a rate of six cents a bushel from Winnipeg to Quebec was in effect on the National Transcontinental Railways, and Dr. Reid then Minister of Railways stated at that time that it was a profitable rate. A great deal of grain flowed that way under the six-cent rate. But later that rate was raised to 20¾ cents a bushel, and the result has been that the shipments have dried up. It seems to me that the government might well look into these questions and see whether a rate could not be provided that would keep more of our grain in Canadian channels. If we had a rate from Armstrong to Quebec in line with the Crowsnest rates from the west to Fort William, we would have a rate of 11 cents a bushel instead of 20¾ cents from Armstrong to Quebec. It seems to me that it would be good business to divert that traffic to our own Canadian railways rather than let it go through American ports. Moreover, the handling of this grain when it goes through our ports will provide a great deal of work for our own people.

Another matter that affects us vitally in the West is discrimination as between domestic and export rates. We find that in shipping grain through Vancouver the domestic rate is 41½ cents per hundred pounds, while the export rate is 22½ cents, a difference of 19 cents. Now when we come to ship that same grain, say to Montreal we find that the domestic rate is 63½ cents per hundredweight and the export rate 60½ cents or a difference of only 3 cents as compared to 19 cents at Vancouver. It certainly seems rather hard to understand why we should be penalized on the western route to that extent. I may say that our trade with the Orient is developing very largely so that rates on the western route are a matter of great importance.

I should like to revert for a few moments to the tariff question and to say that our manufacturing friends will have to adjust their business similarly to the adjustment the farmers have had to make in view of the conditions with which they have been faced. We have heard a great deal about the farmers adopting a system of mixed farming and they have been warned not to put all their eggs into one basket. Now, just to quote a few statistics from the province of Alberta, we find that while the total value of dairy products in 1905 amounted to only $1,000,000, in 1924 the value had grown to $22,928,750; and that whereas in 1905 the product of 13 creameries reached a total of 813,000 pounds in 1924 there was an output of 21,500,000 pounds from 89 creameries. Of cheese 13 factories in 1915 produced 381,832 pounds, and in 1924 the output of the same number of factories had increased to 1,675,000 pounds. Our export of butter in 1922 amounted to 1,000,000 pounds, while in 1924 it had increased to 4,100,000 pounds. Therefore it cannot be said that the farmers in the west are not adapting themselves to the changed condition which has arisen. On the other hand we find that our manufacturing friends, instead of trying to meet those changed conditions, are coming whining to parliament year after year and asking for more protection. We find that while the manufacturers believe in protection on what they have to sell they are really free traders themselves when it comes to what they have to buy. Last year I met several gentlemen representing manufacturing concerns engaged in the steel business. They were complaining about conditions in their industry and in conversation with them I found they were buying most of their steel in the United States. I asked them why they were doing this and they said because they could buy cheaper there. I said "I presume it is good business to buy wherever you can buy the cheapest?" and they answered "Certainly". Then I said "If it is good business for you to do that why is it not equally good business for the farmer?" We find, as I say, that while these gentlemen are protectionists where the other fellow is concerned they are looking for advantages of all kinds for themselves. I placed a question on the order paper a few days ago and I find from the answer to it that while these gentlemen advocate protection for their own industries they receive in drawbacks practically one-tenth of the whole amount of duty collected by this country. I was always under the impression that this drawback was only paid on goods manufactured in Canada for export, I was surprised to find that there is a very large amount of drawback paid on raw materials imported into this country and manufactured here for home consumption.

At this late hour I do not wish to delay the House any longer except to say this: I think that if we are ever going to have prosperity in Canada greater attention will have to be paid to the basic industries of this country. Personally I will be willing at all times to give my support to any government that will carry out a policy of that kind.

Mr. JEAN-FRANÇOIS POULIOT (Temiscouata): I should like to speak in French, in my own language, on rising to make my maiden speech, but I shall defer doing so until another occasion because I have certain views to express in the interests of my own constituency and wish to be clearly understood by every hon. member. I have been represented in certain quarters as an independent Liberal. Both words are synonymous and this is a case where the less is included in the greater. Ever since my boyhood I have been an ardent admirer of Sir Wilfrid Laurier who, in his immortal lecture on Liberalism in Quebec, declared that Liberalism was derived from two words—liberty and liberality. I shall always remember what Sir Wilfrid Laurier said and shall act accordingly. He was one of the greatest men in the Liberal party in Canada, and, for many years, one of the greatest statesmen in the British Empire. I am glad to pay this compliment to the right hon. the Prime Minister: He was faithful and true to Sir Wilfrid Laurier when, on an occasion which everybody remembers, others who had proclaimed themselves his friends had deserted him. As a newly elected member I wish to express my gratitude to the members of the government, to every hon. member of this House—including hon. gentlemen opposite—for their courtesy to me; and I think that my colleagues who were introduced with me at the beginning of the session share my views on this point. I wish not only to thank my fellow members but also the officers and employees of every department of the House for helping us in our work.

My county is a very large one, the population being about 50,000. It is one of the largest rural constituencies of the province of Quebec, and as my election took place only two months before the opening of the session I should like to put on Hansard an important resolution which was adopted at a meeting of the county council of my constituency:

March 11th, 1925

Province of Quebec

Municipality of the County of Temiscouata

At a general quarterly meeting of the municipal council of the county of Temiscouata held at the court house at l'Isle-Verte on Wednesday the eleventh day of March nineteen hundred and twenty-five at ten o'clock in the forenoon and held in accordance with the provisions of the Municipal Code of the province of Quebec, and at which meeting there was a quorum, the following resolution was carried:—

"Moved by Mr. Alphée Beaulieu seconded by Mr. J. A. Beaulieu:

"Whereas the county of Temiscouata is one of the largest and most thickly populated rural counties in the province of Quebec;

"Whereas the county of Temiscouata suffered heavily in the forest fires of 1923 which caused property loss and damages estimated at three million dollars;

"Whereas the crops harvested by the farmers of the county of Temiscouata in 1920, 1921, 1922 and 1923 were very poor and that trade was seriously affected thereby;

"Whereas, on this account, the farmers of the county of Temiscouata were compelled to incur heavy indebtedness during many years in order to live, purchase seed grains and winter their stock;

"Whereas, the county of Temiscouata faces a peculiar and critical situation and urgently requires assistance from the Dominion government in order to protect the farmers and to ensure of their living happily on native soil rather than migrating to the United States;

"Whereas, in 1923 the Dominion government gave monetary aid amounting to $100,000 to the earthquake sufferers of Japan;

This council prays the Right Honourable W. L. Mackenzie King, Prime Minister of Canada, and his honourable colleagues to deign include in the supplementary estimates of each department concerned, before the close of the present session, substantial amounts for each of the demands that shall be made by our member, Mr. Jean-François Pouliot, in the interests of the county of Temiscouata—Carried.

JULES LIZOTTE,
Warden.

J. W. ROY,
Sec.-Treas.

In the first place I should like to say something about the most urgent needs of my constituency. It is very important that we should have repairs made to the public buildings, all of which should be inspected by the officers of the department concerned, because a stitch in time saves nine. We need daily mail service everywhere. I wish to express my gratitude to the Postmaster General for the improvements he has made in this direction, but there is still something to be done in the southern part of the county, and I am sure he will give his attention to the matter. We need also a new station at Rivière du Loup. The present one is very old and too small for the traffic. We require a bigger station because Rivière du Loup is the terminus of the Temiscouata railway which connects the Intercolonial with the Transcontinental railway, New Brunswick and the state of Maine. We also require a new post office and customs office at Trois Pistoles and a customs office at Cabano. There is no proper post office at Trois Pistoles. The post office is in a small building, and a new post office should be built at that place. There should be some dredging done in my constituency at Rivière du Lour and Isle Verte. The wharves should be repaired, and there should be a telephone between Notre Dame de l'Isle Verte and Cacouna, because there is a powerful lighthouse on Notre Dame de l'Isle Verte and there is no connection between the lighthouse and the mainland. These are some of the needs of my constituency; I will insist upon them, and I hope that the government will give us a favourable answer to all our demands.

With regard to the tariff, we have listened to some very interesting speeches on both sides of the House, but experiments should be made in normal times only. The Acting Minister of Finance (Mr. Robb) deserves great credit for making the speech that should be made under the circumstances. He understands that, with the debt as big as it is, it is very dangerous to make a change without full consideration and without being sure of what will happen after a change in the tariff is made. The Acting Minister of Finance spoke as a bank manager and gave a clear and true statement of the financial standing of Canada. Could there be a standard tariff? I do not think so. The struggle between free traders and protectionists is a struggle between the Little-endians and the Big-endians. One does not remember that the government ever promised to establish free trade in this country; but the government promised to reduce taxes, and acted accordingly. It is impossible to reduce all taxes at the same time, but there is a good start made in that direction. Free trade had been established by England when she was mistress of the seas and when she had a big fleet to carry products to and from the British isles. This is the reason why free trade was established in England. But, on the contrary, when, after the war the United States had a surplus of production, it was impossible for them to sell those products outside of the country, and they established protection in order to sell them at home. The conditions in both countries were absolutely different. For example it is not reasonable to say that we should establish such a tariff, that we should lower the tariff or raise the tariff, simply because a certain tariff exists in another country. What suits one country might not be good for another one. The United States are favoured by tropical climates, semi-tropical climates and temperate climates; the United States are in a position to provide for

themselves. But it is not so in Canada. We have to buy several products from other countries. I see that an hon. member of this House has placed a resolution on the Order Paper to abolish the British preference. I have read recently in the papers that the parliament of South Africa has proposed to establish a quid pro quo tariff in regard to the British preference. This means that if England places an embargo on some of the products from South Africa, the parliament of South Africa will act accordingly with reference to British products. That is good horse sense. There should be no sentiment in tariff, and England has furnished us an example of that proposition. The hon. member for Queens (Mr. Mackinnon) complained in his speech that Great Britain had placed an embargo on potatoes from North America. The pretext was that those potatoes were not good and were the source of a disease with some scientific name. The same thing has been said with regard to cattle. Some people say that we shall continue to have a British preference even when England puts an embargo on our products. There should be a reciprocity of treatment. The fundamental law of political economy is that of supply and demand and it is in the interest of the country to look for an extension of trade. People talk protection, but protection for whom? It is all right to protect the industries, but the people should be protected at the same time. Protection is called by some people a national policy. A national policy should be national as a whole. We are not citizens of the world. Our country is Canada and we must consider everything from a national and Canadian point of view. We must have a Canadian spirit, and for my part I am glad and proud to say that I represent a French-Canadian constituency of the province of Quebec.

I wish to read a few quotations from what was written in some very big and important Ontario daily papers during the election of 1917 by the Unionist Party Publicity Committee.

This is one under date of December 15, 1917:

> Shall Quebec force her will on Canada? Quebec, who has spurned her duty to Canada in the war, made conscription necessary. Had the French-Canadian done his duty under the voluntary system of recruiting, the Military Service Act, 1917, would not be in force today.

This is signed: "Unionist Party Publicity Committee," Here is another under date of December 15, 1917:

> Your vote on Monday will return Union government or leave Canada to the will of Laurier, Bourassa and Quebec. If you are a true, loyal Canadian, your vote will be for the Unionist candidate.

These quotations and lots of others to the same effect have been signed by the "Unionist Party Publicity Committee." There was also the Citizens' Union Committee which wrote that "Quebec must not rule all Canada." Those people insinuated at the same time that Quebec was bought by German gold. The only trouble was that the people of Quebec did not lose their heads, and I cannot understand why that party which had power at that time assumed the responsibility of attacking one large part of the country in order to retain power. This is a quotation from a statute passed by this parliament, the Criminal Code of Canada, of which section 136 reads:

> Everyone is guilty of an indictable offence and liable to one year's imprisonment who wilfully and knowingly publishes any false news or tale whereby injury or mischief is or is likely to be occasioned to any public interest.

Those people who wrote wrongfully as they did against the loyal, respectable and reliable people of Quebec were acting contrary to that statute and contrary to the spirit of confederation. What we saw was that after they had won their election, they knelt down before Quebec and apologized for what had been said by their party which they had not denied before. No member of the Unionist party ever took the responsibility for the direct lies and seditious libels officially published under the name of their own party in daily papers throughout Ontario during the whole election campaign. The result was that at the following election the people of Quebec remembered what had been previously said in Ontario at that time and as a consequence not a single Unionist member was elected in Quebec in 1921.

The hon. member for Victoria, Alberta (Mr. Lucas) said that he did not know how the people of our constituencies were to judge us at the next election. The hon. member for Rimouski (Sir Eugene Fiset) made a strong protest and so did I, let him come home, and learn, and see that our friends in our constituencies are very well satisfied with the work which we are doing here for them. I am glad to say that the hon. member for Rimouski is the general who successfully led a delegation of a few hon. members of this House to the railway commissioners to obtain a reduction in the freight rates on potatoes, and this has proved to be a great help to the farmers of our district.

I should like to say a few words about the bonne entente. The people of this country

should know each other and they should also know our country. The people of Quebec are not at all sectional as they are represented to be by some Ontario papers. They are practical people. They have lived for generations on the soil of their province. They are happy to live there. They love their country and they understand quite well that their country is Canada. They are not narrow-minded, they would be ready to defend Canada at any time; but they do not understand how money can be spent for any war outside of the boundaries of Canada. I am sorry that only one member of the Unionist party is in the House at present, but I shall be glad to invite him to come down next summer into my constituency and to introduce him to the farmers of lower Quebec. I am sure he will appreciate them, realize that they are good and reliable people, and give the news to some of his colleagues sitting next to him so that no mistake should be made in the future.

The Canadian stock is the best stock we have in this country. Two years ago there were in my constituency terrible forest fires which caused damages to the extent of at least $3,000,000. Some parishes were completely ruined and those people who were Canadian-born and who had lived generation after generation on our soil, instead of migrating to the United States, remained where they used to live. Their houses, their buildings were burned; nothing was left besides their wonderful courage. They said: "We have had trouble, but we will start again here." So they did. This is the kind of people that we should help, that we should keep with us. Instead of spending money for immigration to bring people to this country at a high cost, we should use that money in keeping our people at home and helping them to live happily on Canadian soil.

The government is continuing to grant a subsidy to the provinces for the upkeep of the roads. There are three kinds of public roads: there are the local roads, for the local use of the municipalities; there are the provincial state roads and there should be the federal state roads which should be at least in part in the care of the federal government. In my opinion the government should grant the subsidy to the municipalities instead of giving it to the provinces. Under the law of the province of Quebec the municipality may obtain from the local government a sum equal to what it spends, paying a low rate of interest. If the municipalities could get some direct help from the federal government they might be enabled to improve all their roads, and at the same time communications would be improved between various parts of the country.

A ferry is needed between Riviere du Loup and Tadoussac. Some years ago a small wooden boat gave a regular service in winter as well as during the summer between Tadoussac and Riviere du Loup, taking advantage of one of the currents that would take it from Tadoussac to Riviere du Loup on one day, and the following day from Riviere du Loup to Tadoussac. Thus there was constant communication the year round. As one is fully aware, the north channel east of Tadoussac along the north coast is never closed up by ice fields as the south channel is, with the exception already mentioned between Riviere du Loup and Tadoussac. I hope therefore that the Minister of Trade and Commerce (Mr. Low) will grant the request of the people of that district and of the city of Riviere du Loup and provide the ferry which is asked for. It is most important as it is the only connecting link in winter between that vicinity and that part of the north shore east of the Saguenay river. While speaking about highways I desire to say a few words about our railways. In my constituency at Riviere du Loup we have fine shops, good workingmen, and the equipment is up to date. The people there should be given an opportunity to secure employment. The Canadian National Railways line from Ste. Rosalie to Mont-Joli is a paying branch, but it is very hard to understand why the cars and engines used on that branch line are repaired in Moncton and Amherst. Such a transportation is very costly, and some cheaper and better work could be done at cost price at the Riviere du Loup shops of the Canadian National Railways. Cars marked O.K. at Moncton, supposed to have been well repaired have had to be sent back to Riviere du Loup to be put into proper condition. Another thing which it is difficult to understand is the fact that sometimes the Canadian National Railways send their own cars for repairs to foreign shops not belonging to the National system. It seems to me that we should give work to our own Canadian people and employees of the Canadian National Railways should have the preference. The work could be done by them at cost price, and this would be in keeping with the policy of economy preached by officials of the National Railways. My hon. friend from Victoria, Alberta (Mr. Lucas), has insisted on the shipping of grain through Canadian ports. I felt it my duty to join the delegation from the Maritime provinces, when it came here, in the request that Canadian grain should be shipped

via ports in this country. The Grand Trunk Railway now belongs to the country and is under the management of the Canadian National Railways. The branch from Montreal to Portland is a very paying line. Such result does not help the shipping of grain via Canadian ports. The trouble with the Canadian National Railways, as my hon. friend from Terrebonne (Mr. Prevost) has said, started with the purchase of the Canadian Northern at the enormous price of $700,000,000. We now have to pay a big interest on that huge amount. Let us remember that it is not the present government that made that mistake; the responsibility must rest with the Unionist government and especially on the shoulders of Sir Thomas White who was the attorney of Mackenzie and Mann. I have a great respect for the officers of the Grand Trunk Railway as well as for the officers and the employees of the Intercolonial. The officers of the Grand Trunk were handicapped by the fact that their directors were living in England; and the Intercolonial had always shown a surplus before the amalgamation of the railways. But the only value of the whole Canadian Northern system was the tunnel at Montreal—a hole. Apart from that the equipment was not worth anything although it was figured at $700,000,000. That was a piece of real crookedness. I cannot see how that railway could ever have been purchased at that tremendous price when it was worth nothing. It seems to me that the trouble with the Canadian National Railways is, first, that the property is over-estimated and secondly that it provides soft jobs. I was speaking a moment ago of the Canadian Northern. I understand that Mr. Hanna, while president of the Canadian National Railways, appointed as chief detective an ordinary detective who before had received a salary of approximately $1,200 a year, and he gave him a salary of $12,000 a year besides the use of a special car.

There are also heaps of officers in the dining and sleeping car department, of which Mr. Pratt is general manager. He is not a Canadian-born man, and he is rather an immigration agent. He has brought many of his friends from the Old Country here to give them jobs as inspectors in his department. It is funny to see nearly every conductor and porter followed by a guardian angel in the shape of an inspector on the Canadian National Railways. All these soft jobs could be done away with, and it would mean that much less money for the country to pay.

Another handicap of the Canadian National Railways has been the higher grades ordered by the people who wanted to destroy Laurier's work. Sir Wilfrid Laurier planned the Transcontinental to be a connecting link between all provinces and to develop new parts of this country, but when the Tories replaced him in power they did not like the glory he had won as Prime Minister, and they wanted to destroy his work, as the Germans have destroyed the northern part of France. That is why they changed the plans of the Transcontinental railway and made the grades higher, so that the traffic would be much less. They used that trick to give themselves a chance to criticize the Laurier administration, and the country has to suffer in consequence.

No one can be surprised that the Canadian National Railways sometimes come to the government for help. The Canadian Pacific Railway, which is now a paying concern, has repeatedly come to the government for grants of lands and grants of millions of dollars. The Canadian Pacific has been very well administered, and it is now one of the most important companies in the world. Quite a number of people give credit to Sir Henry Thornton for the reorganization of the Canadian National Railways. He certainly deserves some, but he is being helped by very capable men from the Grand Trunk and from the Intercolonial. He is at present chairman and president of the Canadian National Railways. I belive the duties of those two positions are too much, and I would suggest that the position of chairman should be occupied by the hon. Minister of Railways, in order that he might survey the way the railway is administered by the board of directors. Moreover, there should be no mystery made of the details of the administration of the road when questions are asked by members of the House. Sometimes we are called on to vote subsidies, and it is only justice and fair play that we should know why we have to pay them.

Another thing I must insist upon is fair treatment for the employees of the Canadian National Railways. I ask that the system of promotions should be adopted all along the line, all the time. It encourages employees to work well and do their best in the interests of the railway. Then I also ask that the correspondence of the employees with the officials should be carried on in both languages, that the correspondence should be in French when the employee is French and writes in French. The officials of the Canadian National Railways should also have a little touch of kindness and they will be rewarded by the gratefulness of the employees. It is not impossible to make a railroad pay, even one which is in a bad position. I read

some time ago that Mr. Henry Ford had bought a railway which was far from being a paying proposition, and that he had reorganized it, and now it pays well.

Before closing, I would like to say a few words on the bankruptcy law. There have been strong protests against this law by people of every class in the province of Quebec—by the Prime Minister of our province and the Minister of Agriculture, as well as from the barristers and leading men in all walks of life in our province. We had a good law before. It was our own law. It was working properly, but now we have a law that nobody understands. It is one of the worst laws ever passed by parliament. When you start reading an article in it, it is impossible to understand it. It is like a crossword puzzle that nobody can solve. Some people are very well satisfied with that law. They say the western people want it, but I believe my western friends are too intelligent to like that law, and I would ask the hon. Minister of Justice (Mr. Lapointe) to pay special attention to my remarks on this subject.

The trouble is that when a man has a judgment registered against him he receives numerous letters from trustees offering to help him by putting him through bankruptcy. The trustees are privileged and so are the lawyers of the trustee, and on the sale of the goods quite often not even the privileged creditors get anything, so that farmers cannot get money on mortgage except from relatives or close friends. This law does not suit the province of Quebec. Moreover it gives other people a bad opinion of the province. Let me give the House two instances of what has been done by trustees in cases of this kind. In one case a man who had property worth abouth $1,500 or $1,800, had five or six notes at the bank, most of them endorsed by his father and his brothers, and he had another creditor who was a stranger to his family. He got tired of receiving notices from the bank and he went to see a notary with a view to borrowing money on a mortgage. The notary said, "We will help you; go and see my friend the trustee." The trustee received the man very cordially and said, "I will help you, my dear friend; I will make you bankrupt." But the bank manager heard about it and he saw the trustee and told him he would report him to the attorney general if he proceeded as he had suggested; because the notes due to the bank were endorsed by relatives who were solvent and were ready to continue the endorsement. So to his shame the trustee had to change his mind about the usefulness of becoming bankrupt. In another case a man had sold a small yacht and as a guarantee for the payment of the purchase price took a mortgage on the purchaser's land. The purchaser used the boat for two or three years and one fall he left it on the shore and during the winter it was wrecked by the ice. The only guarantee the vendor had was the mortgage on the purchaser's land. The purchaser sued the vendor for breach of contract, alleging that the boat was not according to the contract. When he saw that he was going to lose his case—the fees were then pretty high—he took out bankruptcy proceedings. The result will be this: The trustee will be paid, as a privileged creditor; the lawyers of the trustee, who were the lawyers of the man who took the action, will be paid, and the creditor will get practically nothing. That is the way the law operates in the province of Quebec. I can state from my seat in this House, without fear of contradiction, that nine times out of ten when a man is sued for debt in the province of Quebec he receives numerous letters from trustees asking him to correspond with them with a view to having his case settled to his own satisfaction. The result is that the bankrupt loses all he has and the trustee gets it. It is most serious for the farmers. Sometimes when the harvest is poor and they want to borrow money to buy grain or hay or registered cattle, they cannot get the money on mortgage because of the fear of a lack of guarantee under the operation of this law. Suppose a man lends a farmer $1,000 and takes a mortgage on the farmer's property, to which the title is clear. Under that law fraud may be presumed within ninety days of the date of the bankruptcy, and if the farmer who has borrowed the money goes bankrupt within ninety days, the man who has made the loan has no guarantee of repayment; he is just an ordinary creditor. He comes after the trustee and after the lawyers of the trustee. I do not know how that law operates in the western provinces. If the people there are satisfied with it, so much the better for them, all I can say is that in the province of Quebec they are strongly protesting against it. If it suits the western people I suggest that it could be left to them, but we in the province of Quebec feel that we should come back to our own law of the civil code of procedure, which worked very well and gave fair play to the creditors.

I am about to take my seat, Mr. Speaker; I have just two further words to say. To my mind the only two ways of ensuring the

future of our country are by conservation and co-operation. As in the case of all nations that are both rich and young, general indifference to the protection and preservation of its natural resources has marked the history of the United States. Roosevelt, who was one of the greatest Americans, called a conference of governors in May, 1908, at the White House in Washington, to consider the condition of the natural resources of the United States. It was the first time a conference on this question was held in the United States. The conference, after deliberating for some days, adopted a resolution containing the following passage:

> We agree that further action is advisable to ascertain the present condition of our natural resources and to promote the conservation of the same, and to that end we recommend the appointment by each state of a commission on the natural resources to co-operate with each other and with similar commissions of the federal government.

Hon. gentlemen will remember the controversy between Mr. Pinchot, the Chief Forester of the United States and Mr. Ballinger. It was a very important controversy upon the urgency of conserving the natural resources of the United States. And what was the result? The result was that Mr. Ballinger, who was secretary of one of the departments when Mr. Taft was President, failed to gain his point, and this is one reason why Mr. Taft was defeated when he sought election for a second term. Here in Canada we have followed the example of the United States in regard to conservation, and I insist upon a constructive policy of conservation, by wise use, without waste and without monopoly, of the valuable resources still in the hands of the public.

The other question to which I attach a great importance is co-operation. There are two sorts of co-operation—co-operation in trade and co-operation in thought. I have just observed in the Encyclopaedia Britannica something very important upon the question of co-operation in trade in Great Britain. Of 1,459 societies affiliated with the co-operative union in 1919 no less than 1,357 were consumers' societies and 95 producers' societies. The membership of the consumers' societies was 4,131,477, and their trade over £314,000,000, while in the producers societies the membership was 39,331 and the trade £7,000,000. I should like co-operation to be carried out to the greatest degree possible in this country; I think it would help the people and would contribute to a greater future for the country.

As for co-operation in thought, I think that we might use the words of the President of the United States, Mr. Coolidge, uttered lately in Washington when he said that he would be openly and candidly American. We must see to it that we shall be openly and candidly Canadian.

Let me say in conclusion that I shall do my best to be worthy of my great grandfather, my grandfather, and my father, who preceded me as representatives of Temiscouata in this House, and that I shall do my best to represent my constituents in the most acceptable manner.

On motion of Mr. Humphrey the debate was adjourned.

On motion of Mr. Lapointe the House adjourned at 12.55 a.m.

END OF VOLUME II.
