> What sum was paid to the manager as expenses, travelling and personal, in addition to this salary?

And the reply was:

> The management does not consider it in the public interest to publish this information.

Here we have a very curious situation, Mr. Speaker. We have the Canadian National railways branching out into all kinds of sidelines, among others into an immigration policy, a policy upon which this House is by no means unanimous, a policy which may very easily lead to duplication of effort on the part of the Colonization department of the railways and the government's own agents; and yet when we ask what are the salaries and the expenses connected with those departments of the railway's operations we are told that the management "does not consider it in the public interest to publish this information." As a

member of this House I protest against this view of the matter. I urge that it is decidedly "in the public interest" that we should know how much money is being spent by the Canadian National. It is of very little use scrutinizing the expenses of our own departments, very little use deciding what policy we shall follow, when any policy we determine upon may be overridden and much larger amounts spent by a board over which we have no control. I submit that the position taken by the Minister of Railways (Mr. Graham) the other day is quite indefensible. He laid it down as the policy of the government that this House should not interfere with the details of railway management. I submit that this is not one of the details of railway management. If the railway company embarks upon an immigration policy it seems to me it is high time we should understand that such a matter in all its details should come under the purview of this House.

It is not my purpose to go into any detail in considering what part of the responsibility for unemployment should be borne by the municipal, by the provincial, or by the federal authorities. That ought to be a matter of arrangement. But there are two factors which are very largely responsible for unemployment. First, financial policy of the government, and second, immigration. Perhaps, after the speech of the Prime Minister (Mr. Mackenzie King) the other day, I should add, ocean freight rates—I am not going into that matter. But in any case the federal government is definitely responsible for all these three. Under these conditions it is absolutely unfair to unload on the provinces or on the municipalities, the responsibility for immigrants who are unemployed shortly after their arrival in this country.

Why should the government refuse to accept responsibility for the effects of its own policies? That is a question which ought to be answered. If the government accept my motion it seems to me they would be simply showing their sincerity and good faith by admitting that if we bring people to this country, and those people are out of work within two years, the least we can do is to take care of them. I would not venture to suggest what form this care should take. Personally I think we might very well hold the railway companies responsible for that care, because even more than the federal government the railways are responsible for the propaganda that brings these immigrants here. In any case the responsibility for these new immigrants who are unemployed is placed directly with the government.

[Mr. Woodsworth.]

At the present time and for some time past we have had this question of unemployment tossed backward and forward between the provincial and federal authorities, and in the meantime the people themselves have suffered and are suffering to-day. I wish we in this House could sometimes get away—I have said it before now—from our statistics and from our thought of general policies, to picture to ourselves what unemployment really means—the discouraged men and the broken home, the under-privileged and in many cases under-nourished children. Surely we cannot go on indifferent to matters of this kind. So I would ask that even if the government are determined that the general matter of unemployment is not a federal concern; even if they are determined—and I do not acquiesce at all in that point of view—that they will not give relief but will leave that all to the provinces, I would urge that the least the government can do is to assume this little bit of the unemployment responsibility and care for the immigrants for two years after their arrival in this country.

Mr. PIUS MICHAUD (Restigouche and Madawaska): Mr. Speaker, there is no doubt that we need a larger population in Canada. There is a class of people that I know would be willing to come back to Canada if they could afford to do so; I refer to our Canadian-born who are now in the United States. These people would not require to be maintained or supported by the Dominion government, by the provincial government or by any cities or municipalities. Since 1911 a great many of our Canadian people have gone to the United States in the hope of finding better conditions, but I am informed that after a few years' experience in that country they would be willing to return if the conditions were favourable. I am aware that the federal government have done a good deal to try to get these people to come back, but I would urge upon the Minister of Immigration (Mr. Robb) that he renew his efforts in that direction. Those of our Canadians who are willing to come back from the United States are familiar with our laws, usages and customs; they have had the experience of earning their living in this country. They are fishermen, farmers' sons, men who have worked in the woods or in saw mills, and this class of men will not be a burden to the country.

It is not my intention to make any extended remarks on this subject, but I submit this is the class of people we should first look after. If immigrants from foreign

countries prove to be a burden then I hope we will not have too many. On the other hand I understand that the government has lately been making a careful choice of the immigrants coming into Canada, and I must congratulate them upon taking that step. In the past there has been a tendency to allow people to come into this country who could not become good Canadian citizens. I hope the minister will see to it that larger numbers of our Canadians who went to the United States will come back to Canada in the near future.

Mr. GOOD: What inducements, does my hon. friend suggest, should be held out to the Canadians who have gone to the States?

Mr. MICHAUD: Whatever money we would spend to bring foreigners to this country, we should first spend to bring our Canadian-born back from the United States.

Mr. SPENCER: In what way would the hon. member have the money spent?

Mr. MICHAUD: In different ways. In the first place I would suggest that their travelling expenses back to Canada should be paid. These people should be induced to go on the farms and not to the cities. In order to induce them to go on the farms we should adopt the policy of the province of Quebec where the government has to-day opened up the forest for settlers. The government is opening up little farms, putting up small houses, building barns, and clearing a few acres of land. They invite these people to come and settle down in the province. A part of that forest which has been opened to the settlers possesses a valuable resource in the form of lumber. A settler full of health and ambition is not afraid to go into the forest, chop down trees which he can sell as pulpwood or for manufacture into pulp, lumber or other products. The policy adopted in Quebec gives a great inducement to these men to come there. In the last few months this policy has been made known to a great many Canadian subjects who are now in the United States, and many of these people have accepted the invitation of the province and have come back to their homeland, and are good settlers.

Mr. H. C. HOCKEN (West Toronto): If there is any one phase of immigration that this government and the preceding government has carried on with energy, it has been the attempt to repatriate the French Canadian. If that policy has not succeeded up to the present time, I do not think there can be very much hope for success in the future. In the last ten years large sums of money have been spent to encourage colonization. Many people, mostly ecclesiastics, have gone to the New England states in order to personally endeavour to persuade those who have left Quebec to come back. They have offered them all kinds of inducements in the shape of farms in the province of Ontario and other places. If all these endeavours have not brought results, I do not think there can be very much hope for that particular kind of immigration in the future. My hon. friend from Restigouche and Madawaska (Mr. Michaud) says they are coming back and glad to get back, and that the province of Quebec is providing ready-made farms for them. My information is that they are not coming back in very large numbers, and judging from the statement of my hon. friend, they cannot afford to come back; they must have their fares paid. Perhaps they will ask for a return ticket. In that case they might come back, have a holiday in the village, and if they did not like it any better they could go away again.

Mr. MICHAUD: With reference to the settlers who come back to Canada, not only to the province of Quebec, but also to the province of New Brunswick, where I live, I would suggest that their travelling expenses should be paid, and they should not have a return ticket. They never had any return tickets, I am informed, and the suggestions from my hon. friends are not called for.

Mr. HOCKEN: This resolution presented by the hon. member for Centre Winnipeg (Mr. Woodsworth) is to my mind a most extraordinary proposal. I think we must assume that he anticipates unemployment as a permanent condition in Canada. He does not see any hope of relief from unemployment. He does not foresee a time when the people of Canada will all be employed. I know that there will always be some unemployment, but evidently my hon. friend anticipates that the condition that exists at the present time must be provided for by legislation continuously. I would be very sorry to have such an idea as that about our country. The conditions would be desperate indeed if we had at this time to provide for the maintenance of men who come into this country at least during the first three years of their residence here.

Mr. WOODSWORTH: Are there not already arrangements that an immigrant who is unsuitable in certain respects may be returned by the transportation company? And are there

not also provisions that the immigrant, no matter how long he is in this country, who labours under certain difficulties, may be deported at the will of the Immigration department? It is not a new idea that an indigent immigrant should be cared for.

Mr. HOCKEN: I think the maintenance of every person who comes into this country and does not get employment for two years is a new thing, and would have an effect which my hon. friend does not anticipate. Why should not the native-born citizen who cannot get work be maintained? Why should the man who has just come here be supported by the state because he cannot get work, and the man who is born in this country and unable to find work be compelled to make a living by some other means? Such an arrangement would discriminate against the native-born. Perhaps a little more may be expected of the men born in this country, but I do not think a solution for the unemployment is to be found in the direction my hon. friend suggests, and I do not think his resolution could be put into effect. I want to give my hon. friend credit for the motives which prompt him to make his proposal. I think we all have the deepest sympathy for the man who is willing to work and unable to find work. Perhaps those who have been through that experience would have more sympathy than any others. But, it is a desperate state of affairs for a man and for his family, when he is strong, willing and able to work, yet cannot find employment. What I think is needed, Mr. Speaker, in a new country like Canada is a national policy that will provide work instead of paying doles in the shape of maintenance. I hope the time will never come in Canada when we will pay doles, and certainly to begin now and take a considerable sum of money annually from the federal treasury to maintain men who are out of work—and I submit it could not be confined to men who have just entered the country—would create an additional tax upon industry, and thus still further depress conditions and postpone the day when there will be employment for all the citizens of Canada. This government has refused to accept any responsibility for unemployment. They will not relieve distress. They say that is the burden of the municipalities. When the unemployed march down here from Toronto and make their request, this government says, "We cannot do anything. Here is the British North America Act. If you can get anything out of that, why, feed on it, but we will take no further responsibility. That must come from the municipalities and private charities." Of course, private charity means that these men are put in the position of mendicants, and that is most dangerous for this or any other country. The development of the mendicant spirit is one of the bad features of the dole system, and I hope the time will not come in this country when men will be able to look forward to maintenance whether they work or not. You keep a man who is unable to obtain employment for a certain period until he loses more or less all his self-respect, then he is willing to take dole for the rest of his natural life. A trade policy such as we have to-day in Canada, which closes factories, produces the unemployment that exists in Canada. It is not so much the reduction of duties, not so much what is being done, as the threat of what is going to be done; with responsible ministers standing in their place and telling us that this is "the death knell of protection."

Mr. FORKE: Terrible!

Mr. HOCKEN: It is terrible. My hon. friend may use that word seriously, because the effect of it is to prevent capital from opening up new avenues of employment. Nothing can be worse in this country than that. What was the effect of the declarations from the other side of the House during last session? It was the curtailment of many extensions that otherwise would have taken place. It made capital fearful, and it has prevented many from going on with enterprises because they did not know what next would come from this government's policy.

Mr. SHAW: Presuming that my hon. friend's statement is correct, would the assurance of the Prime Minister, given, I think, at Toronto, that there was going to be no further interference with the tariff, not somewhat abate the feeling which my hon. friend suggests?

Mr. HOCKEN: I might remind my hon. friend that in 1919 the Prime Minister adopted a platform for his party or his party adopted a platform for him. Immediately afterwards, he went around this country telling the leaders of industry that that did not matter at all; that they were not going to put it into effect. The hon. member for St. Lawrence-St. George (Mr. Marler) stated that on the floor of this House. While that stood, things were not so bad in this country. My hon. friend will remember that, following the platform which was adopted in 1919 declaring for free trade, assurances were given that free trade would not be introduced; that the manufac-

turers would be perfectly satisfied. Following that again came the reduction and the threats that were made by the different ministers of the crown. After those threats were made, unemployment began to be serious in Canada. That unemployment has continued, and I am afraid it will continue. What is worse than men being brought out here who find themselves unemployed for a period, is the fact that tens of thousands, yes, hundreds of thousands of the native-born of this country, people born here, educated here, who have learned a trade or profession, by the time they are ready to work, have to go over the border to get employment. Conditions in Canada to-day are just what they were in 1876, 1877 and 1878.

Mr. SPENCER: Are they not somewhat similar to what they were in 1913 before this government began to tinker with the tariff?

Mr. HOCKEN: If my hon. friend lived in a city, in any centre of population, he would know that would be a perfectly silly question to ask. Unemployment in 1913 was not a fraction of what it is to-day, and unemployment that existed in 1913 was due to a depression in the United States as much as to any depression in Canada. That depression began over there, but what is happening now is that our neighbours are prosperous while we are in a state of depression.

Mr. JOHNSTON: My hon. friend speaks about unemployment in 1912 and 1913 being less severe than it is at the present time. The winter of 1912-13 was the only time when we had bread lines in the province from which I come.

Mr. HOCKEN: In 1912-13, I was personally responsible for the relief of anything in the shape of unemployment in one of the principal cities in this country. I was as close up against it as I am to my friend here, the hon. member for Strathcona (Mr. Warner), and I can assure my hon. friend that there was nothing at all to be compared with conditions that exist to-day. We had no bread lines in the city of Toronto. The House of Industry was not spending more than twenty-five per cent of what it is spending to-day in the relief of distress. We did not have missions throughout the city as there are to-day providing soup and meals for the unemployed and those who are hungry. There is one there conducted by a French-Canadian evangelist where they are feeding from one to three hundred men every night. That is going on now.

Mr. IRVINE: Did you have any donations from Russia in 1913 for the unemployed?

Mr. HOCKEN: I cannot recall any donations from Russia in 1913, but I can assure my hon. friend that conditions in 1913 are not to be compared with conditions to-day. Conditions to-day are twenty, yes a hundred, times worse than they were then.

Mr. SHAW: My hon. friend suggests that serious threats on this citadel of protection were the cause of much unemployment. I should like to know, as a matter of interest, where these serious threats came from.

Mr. HOCKEN: The first one came from the Prime Minister himself, but the most striking one came from the Minister of the Interior (Mr. Stewart). Then we had a very elegantly phrased one from the Minister of Agriculture (Mr. Motherwell).

Mr. IRVINE: Does my hon. friend really take them seriously?

Mr. HOCKEN: It would not matter so much about my taking them so seriously, but capital generally has taken them seriously. That is the point to which I direct the attention of the House. Almost from the day that these threats were made from that side of the House, there has been a tightening up of capital, a curtailment of industry and an increase of unemployment. My hon. friends may smile, but there is the fact and it cannot be controverted. Conditions to-day are worse than they have been in this Dominion to my knowledge since 1876.

Mr. STEWART (Argenteuil): I will take issue with my hon. friend there. I think my hon. friend was living in Toronto in 1891, 1892 and 1893, and he will remember if he thinks back, the procession of workmen carrying the black flag. He will also remember that a great portion of the city of Toronto, a very large portion of Parkdale was uninhabited at all. If conditions are as bad in Toronto to-day, I would like to know it.

Mr. HOCKEN: My hon. friend has raised a question that needs some explanation. He tells about the hard times that existed in Toronto in 1891. I can tell him the reasons very largely for that. From 1885 to 1890 there had been the wildest and craziest land speculation boom that ever took place in any part of this Dominion. By 1891 the bubble burst, and men who thought they were worth half a million or a million dollars were in poverty. When they had to meet their covenants they were completely insolvent.

Mr. STEWART (Argenteuil): Will my hon. friend not also admit that that was the period during which Canada enjoyed the highest protection?

Mr. MEIGHEN: I lived in Toronto at that time and I never saw that procession.

Mr. STEWART (Argenteuil): I did not live in Toronto. I happened to be there and I saw the procession take place.

Mr. MEIGHEN: Likely it was a funeral.

Mr. STEWART (Argenteuil): It was not a funeral. It was a funeral for some poor people, but my hon. friend will not deny it because he knows it very well.

Mr. HOCKEN: I can explain and describe it to my hon. friend. I remember 1891 and the processions that took place then were composed of, perhaps, a hundred or a hundred and fifty persons.

Mr. STEWART: No.

Mr. HOCKEN: I cannot remember any very large one. I will tell my hon. friend something else. The man who organized those processions under the black flag was offered a position to work on the building of the city hall. He would not take the work, and when that fact was published, we had no more carrying of black flags or processions. I happen to know that because at that time I was a reporter of the city hall, and it was my duty to describe those processions, to go over all the facts as to who organized them, what they were for and all the rest of it. They were organized by two or three men who did not want to work. That is proved by the fact that when work was offered they would not take it.

Mr. STEWART (Argenteuil): In all probability we shall be given an opportunity in the debate on the budget to rehearse some old history. I can tell my hon. friend that at the same time in the town of Barrie, Ontario, where I was living, mechanics came all the way from New Brunswick without being able to obtain employment. I do not want my hon. friend to evade the main question—that this was the period when we enjoyed the highest protection we ever had.

Mr. MEIGHEN: Does the hon. member propose to toll the bell for the death of protection in the coming debate?

Mr. STEWART (Argenteuil): I will toll the bell of protection when the time comes.

Mr. MEIGHEN: My guess is that he won't.

[Mr. Hocken.]

Mr. STEWART (Argenteuil): My right hon. friend used the bell vigorously in Montreal and St Antoine; he used it in Hastings.

Mr. MEIGHEN: The hon. member's friends did not use the bell; it was something a lot more filthy.

Mr. DEPUTY SPEAKER: Order. The hon. member for West Toronto (Mr. Hocken) is supposed to have the floor.

Mr. HOCKEN: I am always ready to give way to the Minister of the Interior.

Mr. STEWART (Argenteuil): Thank you.

Mr. HOCKEN: I have no more to say than this, that instead of the government preparing to pay out doles to men out of work it is the duty of parliament to provide work. I do not gather from that poster that men are being brought in to go into the cities; those who come in response to the poster are coming to do farming. And that is the best kind of immigration we can have, because we have lots of land in Ontario, thousands of farms that can be purchased for very much less than they are worth, including the buildings on them. This is due to the fact that the farmers have grown old and their children have gone away, so that they are unable any longer to work the land. There are thousands of farms in Ontario in that state which can be purchased for a great deal less than they are really worth, and these would be ideal places for immigrants to settle in. I say therefore that it is the duty of the government to make such arrangements as will make it possible for these men coming out with a knowledge of agriculture to go on the farms of Ontario. But I am opposed to any principle of paying maintenance money to men who come to this country. It is better a thousand times for the government to enter upon some extensive works to give them employment than to begin to turn them against work as soon as they get here.

Mr. ROBERT FORKE (Brandon): I did not intend to speak in this debate but a few remarks have been made upon which I feel obliged to make some observations. I recognize the sincerity of the mover of this resolution and I know that he wishes well in regard to this great question of unemployment. I have also listened to the remarks of the hon. member for West Toronto (Mr. Hocken), and I must say that I always feel disappointed that, in these trying times when so many difficult questions face us and when conditions are so troublesome, our friends to the right,

whose ability I would not question for a moment, have no other solution to offer us than the one panacea of higher protection.

Mr. MANION: What solution do you offer?

Mr. FORKE: Perhaps I should admit that I have no great solution to offer.

Mr. MANION: Then why criticize us?

Mr. FORKE: Have patience. I do not feel called upon to propose any solution irrespective of whether or not I am sure it is going to benefit us, simply because it happens to be the god that I have always worshipped in days gone by. As regards the steamship companies, I have a little experience gained a number of years ago in the way of getting immigration into Canada. I do not know what system the government follows, but I do think that if the Canadian government has an agent associated with any steamship company it should discontinue that policy. The government cannot interfere or find fault with propaganda issued by the steamship companies, but if there is a steamship company's agent who is also an agent for the Canadian government, then the government has some responsibility in the matter. The government has a responsibility so far as immigrants are concerned after they have come to Canada, but the steamship companies have none; consequently the companies want nothing but a certain amount of passenger traffic to make their business a paying proposition.

In connection with the class of immigrants that come to the country, we have heard a good deal about unemployment, and I take it that we all agree that this is deplorable. No one cares to hear of destitution or hard times or suffering on the part of women and children, or of men, for that matter. And we are up against a situation that calls for the most serious consideration. To begin with, ours is a large country, one that has room for an immense population. The country is traversed by railways; and as I mentioned not long ago our house in Canada is too large for us; its furnishings are too expensive and we cannot pay the rent. That is the condition we are in to-day. Are we going to sit idly by and do nothing? There is unemployment in Toronto, in Winnipeg and in the other larger cities, and are we to sit down and do nothing to provide work for these people, at the same time getting more immigrants into the country? I would point out that there has never been unemployment in the agricultural districts of Canada.

Mr. CARROLL: Will the hon. member mention any time in the history of this country when there was no unemployment in the large cities?

Mr. FORKE: I was going to say a few words on that.

Mr. WOODSWORTH: Is it not true that a very large number of the unemployed in the cities during the winter have been employed out on the farms in the summer until the land was frozen? Do they not work up to the harvest and then drift to the cities?

Mr. FORKE: That may be true to some extent, but I do not think that things are always what they are made out to be in this regard. I can only speak for one province, where I know men have been able to get good wages all summer. They have a large amount of money when the cold weather comes and they drift into the cities, and owing to the attractions of city life that money soon disappears after they have got there. They then become a burden on the city.

A good deal has been said about the industrial system, and it is my belief that its operations are responsible for a large amount of unemployment in Canada. If you foster industry by artificial means you are likely to have unemployment; if you could make all the factories of Canada really prosperous by such means, so that you could have more of them established, I believe the same question of unemployment would come up again. Let me tell the hon. member for West Toronto (Mr. Hocken) that the question is not one of production but of consumption. Canada can produce twice as much as the people of Canada can buy to-day. But under our present system we are unable to compete in the outside markets anywhere with our industrial products and consequently we must look to the home market to dispose of them. Our industries have been developed to such an extent that they can produce much more than the people can buy, and therefore the unemployment situation is inevitable. It is a vicious circle; however I have no doubt that my hon. friend from West Toronto is sincere in his belief that, if protection were given all these industries, the people would immediately be in a position to buy all that was produced.

Mr. HOCKEN: We are buying too much from the United States.

Mr. FORKE: I do not say they are buying too much. People are buying what they can afford to buy. The buying power of the

people, more especially of the agricultural community, has been reduced to such an extent that they are unable to purchase the goods they would purchase if conditions had been as prosperous as they had reason to expect. I claim, Mr. Speaker, that the great problem—it has been repeated again and again in this House, and it cannot be repeated too often—the great problem we have to-day is an agricultural problem, and that when we have solved it we shall find that our industrial problem will be to a large extent solved as well. My hon. friend from West Toronto (Mr. Hocken) says that we buy too much from the United States. Again I come back to the question—of course I know some of the arguments that will be advanced—why is it we cannot get Canadian goods that we are so anxious and willing to purchase? Why is it they cost so much more than similar goods coming from the United States? There must be some reason, and one is that Canada has been made one of the dearest countries of the world in which to live in. Consequently you find the cost of production gets so high that the product cannot be sold to compete with the similar product of other countries.

Mr. LADNER: Will the hon. member explain why goods are so cheap in the States?

Mr. HANSON: —a more highly protected country?

Mr. FORKE: My friends always get back to that cry, "A more highly protected country." The idea that is being promulgated in the States at the present time is, "America for the Americans." They are getting tired of Europe and all its troubles, and they are going to build a ring around the United States of America and protect agriculture, they are going to bring everything up to a certain level and forget all about the troubles and miseries of the outside world while they live in complete happiness themselves. Now, Mr. Speaker, that is not such a dream as it may appear to be on the surface.

Mr. MEIGHEN: Hear, hear.

Mr. FORKE: My right hon. friend says, "hear, hear." Such a policy may be possible in the United States, a country of immense distances and possessing a climate so varied that the soil is capable of producing everything necessary for the life of mankind even under the advanced civilization of to-day. But what are the circumstances in Canada? We are a debtor nation, we have a large indebtedness to Great Britain and other foreign countries—

[Mr. Forke.]

Mr. HOCKEN: Do you call Great Britain a foreign country?

Mr. FORKE: I said Great Britain and foreign countries.

Mr. HOCKEN: You said Great Britain and "other" foreign countries.

Mr. FORKE: That is a slip of the tongue. My hon. friend from West Toronto will never have to blame me for lack of love of my Motherland. But the right hon. leader of the opposition (Mr. Meighen) in the course of his speech on the Address pointed out that we had interest to pay to Great Britain and foreign countries to the amount of $300,000,000. How are we going to pay that immense sum every year unless we are able to sell our products to other countries? Now, the United States is in an entirely different position; and when you begin to compare Canada with the United States the comparison is useless because the conditions are not parallel. A policy that would work well in the United States would be entirely unworkable in the Dominion.

5 p.m.

But I am getting away a little from what I intended to say. There are two sides to this question, and I should like to meet them fairly and squarely. I am just as anxious as the hon. member for West Toronto not to see any unemployment, any hard times, but to have everyone prosperous and happy in this Dominion. I think we are all agreed upon that. The only trouble is, we cannot see eye to eye as to what remedy should be applied to bring about this desirable state of affairs.

Mr. MEIGHEN: Will my hon. friend explain how the United States ceased to be a debtor nation? He will admit that not many years ago it was not a creditor nation.

Mr. FORKE: The war was largely responsible for the United States getting out of debt.

Mr. MEIGHEN: They were out of debt before the war.

Mr. FORKE: Even supposing they were, their soil produces almost everything that its people require. The United States is not in the same position as Canada is to-day.

Mr. MEIGHEN: It is.

Mr. FORKE: They are the largest free trade area in the world.

Mr. MEIGHEN: They are no bigger than we are. We are just as big.

Mr. FORKE: We are in an entirely different position.

Mr. MEIGHEN: We have not so many people.

Mr. FORKE: If each state had been independent and had erected a tariff wall against its neighbour, does my right hon. friend say that the United States would be as prosperous a country as it is to-day?

Mr. MEIGHEN: Such a thing would be nonsense. Why in the world would a country have a tariff within its own borders? It does not matter where the business is done so long as it is done. The difference would be this, there would be a wider distribution of what the United States now has over the different states, but it would be accompanied by some expense, and I do not think it would be wise. If the hon. member will give us what the United States has we will be satisfied.

Mr. FORKE: I do not exactly follow my right hon. friend's argument.

Mr. MEIGHEN: Give us the kind of "free trade" they have and we will be satisfied.

Mr. FORKE: They have free trade among themselves,—

Mr. MEIGHEN: So have we.

Mr. FORKE: —and if we were in exactly the same position probably we could get along as well as they have done, although I do not think their prosperity has come from protective principles—I do not admit it for one moment. There are a great many other reasons why the United States should be so prosperous without going into the field of protection.

Mr. MEIGHEN: There is one disciple left.

Mr. STEWART (Argenteuil): My right hon. friend is aware that last Saturday morning there appeared in the newspapers a statement that the American steel industry have had the worst year in the past five years; and they are a highly protected industry.

Mr. HOCKEN: How does that compare with Nova Scotia?

Mr. FORKE: We will have sufficient time later to discuss free trade versus protection, or low versus high tariffs. In fact I do not think the subject would have been introduced so largely had it not been for my hon. friend from West Toronto, whose favourite theme protection seems to be. I have no doubt he sincerely believes that all our troubles to-day follow from the so-called low tariff now in force. It is simply a difference of opinion, and I hope some day my hon. friend will get more light upon the subject.

Mr. HOCKEN: Hear, hear.

Mr. FORKE: We have a vast country sparsely settled, and yet we have unemployment. We are all anxiously seeking for the light. Listening to the stories which the hon. member for Centre Winnipeg (Mr. Woodsworth) has recited to the House, I have no doubt they are true. But only last night I picked up an Old Country newspaper in which I read a letter written by a family in Toronto to friends in Berwickshire, saying, "We have been out in this new country just twelve months, and we are very happy." Only recently I read in another Old Country paper a speech made by a farmer from Alberta while visiting a town in Berwickshire in which he painted a most glowing picture of the prosperity of the Alberta farmer. I have no doubt that what he said was true in his particular case. At the same time—and I have mentioned this before—I have heard stories of destitution and want on the western prairies, and I also have no doubt that those stories unfortunately are true. I am perfectly certain that two members from the western provinces could tell directly opposite stories of conditions in their respective districts and both would be speaking the truth. This is a fact which no one can deny. Circumstances during the years which are past and gone have been not what they ought to have been in this country. But, Mr. Speaker I do believe that we have reached the point where if we get the proper class of immigrants and proper conditions we are going to see better times so far as agriculture is concerned. I also realize that the government has no right to bring more immigrants into the country unless they are prepared to find places for them on their arrival.

I am not so sure about the federal government not being responsible for unemployment. So long as it pursues what may be termed a vigorous immigration policy I question very much as a matter of equity and justice whether it is right in asserting that it has nothing to do with unemployment. Were no new people being poured into the provinces under a federal immigration policy, I think the provincial and municipal authorities would be entirely responsible and would have to look after those unfortunate people who are out of work. I merely make this remark in passing.

I have watched the whole process of immigration into a new country, and no matter under what circumstances the immigration is

conducted you will always find pathos and humour and tragedy in the immigration of a people into a new land. I would urge upon the government that the greatest of care should be taken in the handling of the immigrants immediately after they have landed upon the shores of Canada, and to see that they get located where they can earn a living.

I was rather astonished at the figures given by the hon. member for Centre Winnipeg (Mr. Woodsworth) showing that only about one-third of the male immigrants to this country belong to the agricultural class. I am sorry to hear that, because I do believe that immigrants who are unfitted for agricultural work are going to be a liability on this country for a good many years to come, if they come here in any large numbers. I am perfectly aware of the fact that a good many immigrants who were quite unacquainted with agriculture have come to this country, and have in the long run made good; but these are the exceptions, and not the rule. So I would like to see great care taken in the placing of the immigrants after they come to our shores.

But we shall never solve this question until we have made agriculture prosperous, until we have established an equilibrium between the wages paid in agriculture and the wages paid in other callings; the wages should be on a parity. We sometimes hear about the high wages that are paid to agricultural labourers, but, Mr. Speaker, I am one of those who believe that agricultural labourers are not paid high enough wages; and that is the trouble. We speak about farm labourers, and sometimes the phrase is used as if farm "labourers" were not of the very highest order. But in these modern times the farm labourer on the modern farm, if he is efficient, must be a man of intelligence, he must have some ability in the handling of machinery, and be a fairly good all-round man. I think an efficient farm servant is entitled to be well paid. But conditions have been such in farming as not to allow the wages to be paid which ought to be paid for what might be called efficient farm help. If we could put farming upon a paying basis with other industries, then I think a great many of our difficulties would be solved.

Why do people leave the farm and go to the cities to swell the ranks of the unemployed? It is because there are periodically boom times in the cities, and because wages are higher there for the time being, and consequently the young men and the young women on the farms become dissatisfied and go to the cities. Then a slack time comes, and we have the whole story of unemployment over and over again. That brings me back to where I began. We shall never solve this question of unemployment until we have made the farm an attractive place to live, and until the remuneration there is equal to the industry and energy expended on the farm. I know a great many people think that agricultural people are selfish in always advocating this as a remedy for our difficulties in Canada; but I do not advocate it for a single minute from a selfish point of view; I do it because I honestly believe this is the solution of our problem.

I have repeated again and again in this House that I have no quarrel with our industrial people. I would like to see the factories in this country prosperous. I am just as sorry as the hon. member for West Toronto (Mr. Hocken) to see people idle in Toronto or in other manufacturing cities. But we should realize that the system we are following is economically unsound, and that to preach a little higher protection will never solve our problem. I want to tell the right hon. leader of the opposition (Mr. Meighen) that I am very much disappointed in him that, with his great ability he does nothing more to help us out of our difficulties than to preach this one doctrine of high protection.

Mr. MEIGHEN: You won't do what I do request.

Mr. FORKE: I think probably I have said enough. I have not thrown very much light on the problem, I know that very well; but at the same time I am perfectly well aware that this doctrine of high protection will not solve the problem. Nor do I believe the hon. member for Centre Winnipeg is altogether right when he would stop all immigration until we have our unemployment problem solved.

Mr. WOODSWORTH: Mr. Speaker, did I suggest anything of the kind? That is not contained in the resolution.

Mr. FORKE: I am sorry if I have misunderstood my hon. friend, but that was the impression I got in listening to his remarks. I believe that it is quite right to get immigrants provided they are of the right class, and provided they reach the places where they can earn a living. And that will not be in the city of Toronto or in any other large centre of population. A small percentage, of course, can always be absorbed in the great cities, but I believe that those who are there now should first be taken care of before we get more in to swell the popu-

lation of our cities. One of the great problems of modern times is the continual drift of population from the rural districts into our large cities. And how can this be stopped? I do not know. I only hope that under modern conditions of life in the rural districts, where we have now the car, the telephone, radio, and easier communication with the great centres, rural life will become more and more attractive and people will stay on the farm. That would help to solve our difficulties.

In conclusion, my heart and sympathy are with the new immigrant, because I know just about how he feels when he plants his foot on an unknown shore.

Mr. JOHN PRITCHARD (North Wellington): Mr. Speaker, this problem of wages seems to be one of the biggest problems that we have to grapple with to-day. If we were to follow the advice of our friends to the right, we would boost our industries and keep them running full time, and thereby get rid of the problem of unemployment; but I fail to see any sound reasoning in that suggestion. Provided that industry prospers, as my leader (Mr. Forke) has said, industry adds to industry, and under the system of protection of our industries, organized labour and organized capital are able to demand the rate of return that each of them wants for the service it performs. Then when in addition we add interest on the capital invested, what is the position in which we find ourselves? We find that the man who is working where he has not the benefit of organized labour drifts to the place where he will get big wages. This drains not only the rural communities, but other countries as well where the wages are lower. I fail to see how—even if you had a tariff so high that it would prohibit everything coming in, and prohibit men drifting to the places where conditions were not advantageous to the worker—you can prevent unemployment even if you give protection to the limit and develop industry to the limit.

I listened with interest to the hon. member for Centre Winnipeg (Mr. Woodsworth) advocating the cause of the worker. I have as much sympathy with the worker perhaps as any man in this House. I have been a worker practically all my life, and at manual labour, I might say. I have studied the prevailing conditions in this country. The hon. member for Centre Winnipeg referred to a poster that was being broadcast in the old land advertising conditions in Canada. I have employed help myself, and as he showed that poster my mind went back to the nineties when times were rather hard on the farm as well as in industry in Ontario. I remember hiring a man at that time, twenty-one years of age, and without a dollar in his pocket. He worked five years on our farm, three years for my father, and two for myself. That man to-day owns his home, and it is the equal of the one described in that poster. He has paid for his home, for his stock, chattels, farm and everything. And he did it all by honest labour; he has played the part of a good citizen. I will cite some other cases. It was my privilege some years ago to go to Onoway in the province of Alberta, about forty miles northwest of Edmonton. I had occasion to go ten miles from Onoway, out into a section where the roads were not built at that time, and what did I find when I got there? I found a man from the centre of London, England, who had hewn out a home for himself in that place. He had good buildings, a comfortable home, and he was clerk of the municipality. I was more than astonished that a man of his intelligence should pass over so much of this vast country and go to such an undesirable section to settle. I have another case in mind, that of a man with whom I am very intimately acquainted, who came from the heart of London at sixteen years of age in those early nineties; came to our section of the country where work was very hard to get even in the rural sections. In those days he worked at fifty cents a day or whatever he could get. To-day he has just as nice a farm as the one described in the poster that has been referred to. He went home, by the way, the early part of this winter on a visit to England. That man never got a dollar that he did not earn by his own hard work, yet when he came here, as he said himself, he did not know how to put a set of whiffle-trees together.

I claim, as someone has already remarked in this debate, that land is just as cheap in the older parts of Ontario as it is anywhere else in Canada, when we consider the value of the improvements. We have free-grant land to-day in Ontario in close proximity to churches, schools, railways, markets and everything else. Why is it, therefore, that men are going to the cities? Organized labour has made certain demands. They will work only eight hours a day and at a certain rate; they will only do so much work for so much money. The farmer has to compete in the markets of the world, and he has to work longer hours and harder for less pay. Last session, a little less than a year ago, there was a strike of letter carriers in the city of Toronto. They were then getting about $1,500 a year,

while mail carriers in the rural sections were getting only $600 a year, and at that time we were endeavouring to get a little more for them. In other words, the man in the city was getting two and a half times as much as the man in the country. Now why is that? Why is it that wages are high in the city while in the country even the government persists in paying men less than they pay those who work in the cities? That is a thing I cannot understand. Until these wages are made more uniform by the government and by everybody concerned, the drift city-ward will continue and we will have unemployment. If wages were made lower in the city, in the governmental departments—even in the civil service—results would be beneficial so far as the movement to the city is concerned. Those in the civil service think they are not getting enough, but I claim that if the salaries paid by the government were lowered a little bit you would find less of a stampede from the rural sections and you would not have the competition of the bright, brainy boys and girls from the country who come into the cities and take up some of the best positions in the gift of the government. Moreover, many of those who love farming would stay on the farm; they now come to the city because of the mere pittance they get for their labours in the country. We want to make the conditions more difficult in the cities; we want to make them less attractive. Remuneration for work in the country must be made at least equal to wages paid in the city, otherwise we cannot hope to hold our people on the farms; we cannot hope to have a prosperous country or accomplish all that we should accomplish. It is right that industries should prosper, but they can only go so far when they have to call a halt and the agricultural sections of the country have to take the lead. So I say that if we are to have any real national prosperity we will have to bring about a reversal of the present conditions; those engaged in agriculture will have to get a little more for their labour, and employment in the cities will have to be made a little less attractive.

Hon. R. J. MANION (Fort William and Rainy River): Mr. Speaker, allow me first to say that I believe the hon. member who introduced the resolution (Mr. Woodsworth) is sincere in doing so and that undoubtedly he shows a very great interest in the working men of this country. Though I cannot agree with some of his conclusions, at the same time I am sure he deserves the gratitude of the unemployed in this country for the interest he takes on their behalf. I cannot support the resolution myself, because I can hardly see how you could provide a living for unemployed immigrants while you allowed our own Canadian unemployed to go without similar assistance. Practically the same argument was put up by the hon. member for West Toronto (Mr. Hocken) who spoke a little while ago. However, the resolution does bring before the House and the country the present conditions in Canada and shows the need for deep thought on the part of us all with regard to the solving of the problem.

Mr. MEIGHEN: There is this difference: that the native-born Canadian who is unemployed can go to the United States, but the poor fellow who is an immigrant cannot get through.

Mr. MANION: Well, unfortunately, in addition to the Canadian-born people who are going to the United States I happen to know that a number of the others are going also; they are both going out of the country at the present time.

It is rather interesting to sit here this afternoon and listen to various hon. members in different parts of the House describe the conditions as they exist in Canada. When my right hon. leader (Mr. Meighen), in moderate terms, described those conditions he was accused of being nothing but a pessimist; and when in my remarks on the Address I took the same attitude, pointed out exactly the conditions which we all know to exist, many of the Liberal papers and a number of Liberal speakers accused me of simply talking pessimism. But the country generally knows that these conditions exist and is crying for some remedy.

I consider the conditions worse than they have ever been so far back as my memory goes, and I have been taking an interest in business affairs in Canada, in the conditions of unemployment and business generally, for at least twenty-five years. I certainly have never known the conditions to equal those in Canada at present—the conditions of unemployment, of depression, and of exodus from the country. The very fact that last year, in October, a month when business and employment are usually at their best, fifty mayors of Ontario waited upon the provincial premier asking him for help on account of the unemployment or the threatened unemployment for the ensuing winter—that is something that never occurred before in the history of Canada so far as my memory carries me, and even so far as my knowledge of history carries me. So there is no doubt

that unemployment conditions are severe. There is also no doubt that there is no use bringing into this country labourers, at any rate of the ordinary kind, labourers who intend to work in the cities, to take up employment in industrial plants. It is true we may still continue to bring in—and I think we should do so—as many of those who are willing to go upon farms as it is possible to bring in and as it is possible to place upon the land.

May I say in regard to the remarks of the hon. member for Restigouche and Madawaska (Mr. Michaud) as to the bringing back to this country of the French Canadians who have gone to the United States, that I at least—and I believe I speak for the larger number of Canadians—would be only too happy to see those French Canadians who left the country brought back once more to take their place as good and useful citizens of this country.

But at the present time there is no use in attempting it, because there is no work for them any more than there is work for any other labourers who wish to come back. So far as it is possible to put them on the land they certainly should be brought back, but there is no use at the present time bringing into the industrial centres of the country either French Canadians or any other class of people who cannot get work, and who would consequently have to join the ranks of the unemployed.

What a tragedy it is, when one considers the immense area of the country;—Canada has an area greater than that of the United States, a country with a population of a hundred and ten million, Canada has twice the area of the whole of Europe, if you leave out Russia, yet in that part of Europe there are three hundred million people; and we have in double the area only nine million people! And when you consider all our magnificent resources, our millions of acres of fertile land and all the other resources of which we speak, what a tragedy it is that to-day, in this House of Commons of Canada, we are debating what can be done for the unemployed—for that is the basis of the resolution. It is certainly a terrible condition, in a new country with such possibilities and such potentialities, to be spending the time of the House of Commons wondering how we can help the terrible conditions of unemployment that exist. In spite of the criticisms of my hon. friend the member for Brandon (Mr. Forke) and the other hon. members who take the same attitude, I submit, after serious thought, that the chief cause of the depressed industrial conditions in our country is the unstable tariff policy of the government. I submit that that is the chief cause of the depression in the cities. I do not contend it is causing depression in the prairie provinces. I go so far as to admit that in the prairie provinces they have very good reason, from their individual and sectional standpoint, for arguing for a lower tariff. There is no doubt they would gain to a certain extent, temporarily at least, under lower tariff. But there is also no doubt that in the industrial centres of the country, in cities such as Toronto, Hamilton, Peterborough, Galt and Paris in the provinces of Ontario, and Sherbrooke, Montreal, Three Rivers, Quebec and other cities in the province of Quebec, they absolutely require protection in order to carry on their industries. And there is no doubt that the farmers surrounding those cities absolutely need protection for the cities for the maintenance of the home market of which the hon. member for Brandon (Mr. Forke), the leader of the Progressive party, spoke a few moments ago. If you have not protection for the industries you simply allow the cheap labour of a Europe and the low standards of living of a Europe to be imported into Canada. Without that proper protection you cannot keep out their goods.

Mr. FORKE: Might I point out to my hon. friend that the people who have this low standard of living he speaks about are the people who have to buy our goods?

Mr. MANION: They have to buy our exports whether they have a low standard or not, but there is no reason why we should buy from them goods that will put out of business our industrial concerns.

Mr. FORKE: Just another question—

Mr. MANION: I know what your question will be before you ask it.

Mr. FORKE: My hon. friend has such a logical mind that he can tell what question I am going to ask him. How are we going to pay for the exports if we do not buy anything from them?

Mr. MANION: We not only import the goods we produce in this country, but we import a lot we do not produce. This government in the past negotiated a trade treaty with France, and in that trade treaty we have lowered the tariff, for example, on a lot of luxuries. We are being paid by importing a greater amount of luxuries into Canada for the goods we export to France. But as to the goods we can produce in this country, lines of production in which our industries have been developed, I submit, it is far better

to have a little more expensive article if necessary and keep our own people employed, than to force them to go to the United States, the most highly protected country in the world, to earn a living. That is what I believe is necessary—we must have a stable tariff policy. As the hon. member for West Toronto said, it has not been so much the cuts in the tariff, but the continual threatening of cuts, although the cuts of course have done harm. The threatening of the further cuts, the absolute uncertainty, and the instability resulting to the business interests of the country have made those business interests fearful of investing money in industrial plants, and fearful of extending the plants and giving work by producing goods in our country. If you cannot give that certainty of the home market at least to your industrial plants, you cannot keep those plants going.

Referring to the United Kingdom, at the present time we find that there is probably greater unemployment in free-trade Great Britain than there is in any other country in the world. There are worse conditions of unemployment and worse conditions of depression in free-trade Britain than in any other country of the world, so far as my reading teaches me. Not only that, but you find within the last few days in the press of Canada and the press of the world that the British ship-builders, who were the greatest ship-builders in the world, have been losing contracts for construction of ships, and these contracts have gone to the highly protected German ship-builders. The Germans, who are the most highly protected people in the world, are under-bidding the British shipyards and putting those industries out of work.

Mr. LAPOINTE: A poor argument.

Mr. FORKE: Suppose all the countries in the world had a high protective policy, what would the condition be?

Mr. MANION: That is what we have at present, except Canada—not only high protective policies, but they are raising them higher; Canada is the only country with a low protective policy except free-trade England.

Mr. FORKE: Are we in a worse position than the other countries?

Mr. MANION: Worse than any other protected country. I think the only other country in the same position is Great Britain with her free trade.

Mr. MOTHERWELL: We are having the budget debate a day ahead.

[Mr. Manion.]

Mr. KENNEDY (Edmonton): Does the hon. member contend, as between Great Britain and Germany for instance, Germany being a protected country and Britain not a protected country, that Britain was losing contracts to Germany on account of the tariff?

Mr. MANION: I know that long before the war had anything to do with conditions that exist to-day, England was losing her trade to Germany. I can cite ten of the important countries of Europe, the greatest of them was Russia, the others being Norway, Sweden, Denmark, Holland, Austria-Hungary, Roumania, Bulgaria, Italy and Switzerland—every one of which was buying more from protected Germany before the war than from England. Practically the only countries that were left to whom England was selling more than Germany was selling before the war were France, Spain, Portugal and one or two small countries. England was driven out of the market by protectionist Germany, and why? Because Germany under her protected system was producing just as cheaply and—

Mr. BROWN: Is this discussion not out of order? There is a resolution on the order paper by the right hon. leader of the opposition (Mr. Meighen) dealing with the whole matter of tariff.

Mr. MEIGHEN: They would not let me move it.

Mr. BROWN: The hon. gentleman may get a chance yet. The particular question is, how should the Dominion deal with unemployment?

Mr. MANION: I am telling my hon. friend that if we put in a proper protective stable tariff policy, then we will be able to deal with the unemployment situation.

Mr. LAPOINTE: Did my hon. friend not read in the newspapers the other day that Mr. Green, the President of the American Federation of Labour, said that there were twenty million men unemployed in the United States?

Mr. MANION: I doubt if there are twenty million artisans in the whole United States in ordinary times.

Mr. LAPOINTE: That is a statement of Mr. Green.

Mr. MEIGHEN: Either the newspaperman or Mr. Green must have been suffering from delirium tremens.

Mr. MANION: My hon. friend was not looking at that article with his usual clear

mind, because if he will think for a moment he will realize that there are probably not more than twenty million artisans in the United States.

Mr. LAPOINTE: It is the statement of Mr. Green.

Mr. MANION: If my hon. friend believes that statement, he had better read some other statement. As a matter of fact the United States has unemployment, and I do not mean to argue that under any policy in the world we will ever get rid of unemployment entirely. But never in the history of Canada, so far as I can go back—and I can go back in memory at least to the beginning of the century—have conditions been as severe as they are at the present time, and never, I believe from my reading, have such bad conditions existed, except during the period when we were under low tariff between 1873 and 1878. While I am not arguing for a fence around the country to keep out goods, and while I go so far to say that when any manufacturer is taking an unfair advantage of the tariff, he should be penalized by having his protection wiped out, we should have a stable tariff policy which will give confidence to the industries in this country and make them produce as they used to produce. Within reason we should have a protective policy, as they have in other countries, to hold our home market for our Canadian people. If we have that, we shall have much less unemployment than we have at the present time.

Hon. J. A. ROBB (Minister of Immigration and Colonization): Mr. Speaker, the resolution as presented by the hon. member for Centre Winnipeg (Mr. Woodsworth) reads:

That, in the opinion of this House, if at any time during the first two years after his arrival in Canada any immigrant is unable to obtain employment, the federal government should accept full responsibility for his maintenance.

Around that resolution hon. gentlemen have debated the question of unemployment, the keeping of immigrants out of this country, the advertising for immigrants that we do in other countries, and largely the tariff. That shows the impatience of my hon. friends opposite to debate the tariff question.

Mr. MANION: The tariff changes are the cause of the trouble.

Mr. ROBB: Both wings of the opposition seem to be anxious to have the tariff question debated.

Mr. MEIGHEN: There is only one opposition.

Mr. ROBB: The question of immigration has always been a live question in Canada and there is no reason why it should not be. We are all immigrants either directly or as descendants of immigrants, and in considering the question of immigration we should assume a more friendly attitude towards the incoming settler. I will admit that conditions in Canada to-day for the immigrant who is desirous to establish himself on the land are somewhat different from what they were when my good friend the leader of the Progressive party (Mr. Forke) came to Canada. But I do not think at that time the government of Canada were under any obligation or made any commitments towards taking care of my hon. friend upon his arrival in Canada beyond advertising, as we did advertise in different countries of the world and in eastern Canada, that we had 160 acres of free land to give to any man who was ready to go on and develop the land. Much has been said this afternoon about the obligations of the Dominion in cutting out advertisements that are somewhat coloured. But hon. members must remember that it is not only the Department of Immigration of the Dominion that is advertising, particularly in the United Kingdom, for immigrants. The province of Ontario has a very complete immigration organization operating in the United Kingdom and some of the other provinces have organizations. We have an arrangement with most of the provinces, co-operating with them for immigration, and notwithstanding the arguments advanced to-day by the hon. member for Centre Winnipeg, we have requests from those provinces for more and still more immigrants to go on the land. It may surprise the hon. member for Fort William and Rainy River (Mr. Manion) to learn that I hold in my hand a letter dated the 8th December, 1924, from the Fort William Board of Trade, asking this government to see what we can do to send some immigrants to settle in the Fort William section of the north country.

Mr. MANION: I suggested that too.

Mr. ROBB: Why has my hon. friend gone back on that to-day and intimated—

Mr. MANION: I did not oppose immigration. Moreover, may I point out also that this government and previous governments have made the mistake of settling all immigrants in the prairie provinces and not in northern Ontario where we need immigration?

Mr. ROBB: I am glad my hon. friend is in favour of immigration. I have a letter from the Dysart, Saskatchewan, Board of Trade asking for immigration. I have not the records before me, but I am sure the hon. member for West Toronto (Mr. Hocken) will accept my word for it that I have in the department a resolution from the Toronto Board of Trade asking me to settle French-Canadians along the northern part of their province and pointing out that they are the most suitable people to settle there.

Mr. MANION: Has the minister yet received the resolution which the Great War Veterans' Association and the boards of trade and the city councils passed the other day as to the terrible conditions of unemployment that existed in the industrial centres of population in Fort William and Port Arthur?

Mr. ROBB: I have not that. It may be in the department. I was glad to hear the hon. member say that we would always have unemployment in this country. Particularly, we shall have unemployment in those cities that are tributary to the ocean, river and lake ports of Canada. Hon. gentlemen must remember that there are thousands, yes hundreds of thousands of people who find employment during the season of navigation, for instance sailors sailing on the boats. Among them are those who sail on vessels in the United States coastal service, but whose homes are in Canada. When navigation ceases in the fall they go back to their homes. In this way, you can always get up a parade of unemployed if you set out to undertake that particular job. This may sound somewhat contradictory, but I believe it is correct that the busier we are in the summer with navigation, the more traffic we have to move in the summer, the more unemployment will there be in the winter at those ocean ports, particularly those that are frozen up in the winter time, because there are hundreds of thousands of dock labourers who work at trimming the boats and so on. In that regard there always is some unemployment.

Mr. MEIGHEN: Does the hon. member say that there are hundreds of thousands of dock labourers in Canada at ports that are frozen up in the winter?

Mr. ROBB: Tens of thousands of dock labourers.

Mr. MEIGHEN: Tens of hundreds would be better.

Mr. ROBB: Has my hon. friend ever been along the docks at Montreal, Quebec, Toronto, Hamilton and Fort William?

[Mr. Manion.]

Mr. MEIGHEN: Yes.

Mr. ROBB: Let him ask his supporter behind him how many dock labourers there are around Fort William and Port Arthur moving grain and so on?

Mr. MEIGHEN: In getting my hon. friend down from hundreds of thousands to tens of thousands, I think I did pretty good work.

Mr. ROBB: My hon. friend retreated somewhat too.

Mr. HOCKEN: If these men are working all summer they will have enough saved up to tide them over the winter. They are not in distress.

Mr. ROBB: They are not, and for that reason, I contend there is not the unemployment or distress that has been represented throughout the country. I am not alone in that opinion. I think it was late in December or early in January I had occasion to sit in one day with a group of bankers of this country, gentlemen who are pretty well posted in the city of Montreal, and a man who is respected by everybody in this country, a prominent man, a man who never was recognized as a supporter of the Liberal party, but a man whose relatives were recognized as prominent supporters of the Conservative party, made the statement that he thought it was a crime upon our country, as he said, this overworking of the idea that there was unemployment in Canada. He said, "I am satisfied that here in the city of Montreal conditions are no worse than they have generally been from year to year." And he was most emphatic in the statement that these headlines in regard to unemployment were a calumny on the country.

Mr. IRVINE: Does the minister mean to say that he would rather take the word of a banker with regard to the unemployment situation in Canada than the word of organized labour throughout the country?

Mr. ROBB: I would rather take the word of that gentleman than of gentlemen who were organized for political purposes and who were interested in representing that there was unemployment throughout the country.

Mr. WOODSWORTH: Would the minister throw any doubt on the statistics from which I quoted, taken from the Bureau of Labour of the government of Manitoba, showing that this last year 11,304 persons were given relief at a cost of $180,790, and that this was considerably in excess of the amount spent the year before? I have the whole statement

which I could read giving the total. Does the minister say that these facts are drawn up for political purposes?

Mr. ROBB: I say that in these particular cities there is always unemployment to some extent.

Mr. SPENCER: I believe the minister was not here when the conference was held to inquire into the subject of unemployment. I would ask him whether the general opinion of that conference was similar to the opinion of the bankers to whom he has referred.

Mr. ROBB: That gathering was called by the department early in the year to lay down conditions so that there might be no misunderstanding as to where this government stood on the question of contributing to unemployment relief in the winter. Now, there is another gentleman who comes from western Canada and who is not opposed to immigration coming to this country. He is a pretty sane man and he does not lay down the proposition that we should provide, by any system of doles or unemployment insurance, for those who are out of work. I hold in my hand a copy of an address delivered on December 6 in Ottawa by the Hon. Herbert Greenfield, Premier of Alberta. He points out that his father had wanted him to be a tradesman but that he desired to be a farmer; and, coming to Canada, he has been and is recognized as a successful farmer. He lays down the principle that there are as good opportunities to-day for the man who wants to work as there were at the time he came.

Mr. IRVINE: What is the date of that report?

Mr. ROBB: It is an address delivered on December 6, 1924. Now, the government cannot accept this resolution as presented by the hon. member for Centre Winnipeg (Mr. Woodsworth). If it means anything at all it means that we are offering a premium to those who do not desire to work, and the men who are spoiled by doles in the Old Country would come here and expect the government to board them. This the government is opposed to, and speaking for the government I say that the resolution cannot be accepted.

Mr. L. J. LADNER (Vancouver South): In a portion of my constituency the problem of unemployment becomes acute every year; it has become a question, in the judgment of many people, of federal and national importance.

Mr. STEWART (Argenteuil): What time of year?

Mr. LADNER: About December, largely when the outdoor work in British Columbia closes down and the harvests of the prairies are reaped. At that time thousands of people come from the prairies into Vancouver and many settle down in the municipality of South Vancouver; and when the winter comes on we find, owing to the general conditions, a serious degree of unemployment.

Mr. FORKE: Is it not true that a large number of men come from Vancouver to the prairies to get work and take money back with them?

Mr. LADNER: Yes, but the trouble is that they do not take very much back; owing to difficulties of one kind and another. Through no fault either of their own or of the farmers, they have not much money left when they get through. They come into South Vancouver and it is exceedingly difficult for them to get along. There are men who come in response to such advertisements as hon. gentlemen have shown to the House; they move from one province to another, and finally end in the municipality. In British Columbia a large number of them find their way to South Vancouver. The result is that that municipality, burdened now with debt, has to shoulder a responsibility which really belongs to the federal government. This government advertises in all parts of Europe for people to come to Canada, and some of us hold that it is unfair to expect the responsibility for the hardships that ensue to rest on the municipal authorities. If these people are not helped by the municipalities they suffer conditions that are indescribable.

I commend the hon. member (Mr. Woodsworth) for having brought this resolution before the House. It is an important matter from the point of view of immigration and municipal administration, and it is of importance from the provincial standpoint as well. In British Columbia a large number of people who come into the municipalities find it impossible to obtain employment and they are naturally thrown upon the charitable institutions of that section of the country. There is one feature of the resolution which I do not exactly appreciate, if I interpret it correctly, and that is that the government should accept full responsibility for the maintenance of the immigrant in the sense of giving him money. It seems to me that if it means giving doles to the men, no hon. member will agree to it; I know for a fact that the worthy unemployed themselves would not agree to it, for they do not want doles but work.

Mr. WOODSWORTH: I agree with what the hon. member says, but my point is that if provision is not made for their employment they should not be left without some opportunity of securing maintenance.

Mr. LADNER: I am glad the hon. member makes that explanation. I think the resolution would be more commendable if he would embody in it words to the effect that work should be provided for such immigrants; because after all that is what they want. Now, the government of the day, not only in their pre-election promises but in one speech after another from the throne, have given undertakings to deal with immigration, with the tariff, with the railway problem, and so on, although in actual accomplishment—and I appeal to the judgment and the fairness of hon. members in this—they have not done very much in the last four years. When they deal with transportation, by restoring the Crowsnest pass agreement they unsettle and disturb the whole transportation system and create a confusion that is bad for the Dominion, and they still leave the problem unsolved. When they deal with the tariff, they introduce suggestions having a tendency to eliminate the protective system, and so disturb conditions that capital is frightened away, industry becomes timid, and the national welfare suffers. I see according to the predictions of the newspapers —and it is astonishing how accurate our journalists are in forecasting the plans of the government—the budget will contain proposals for raising the tariff on a number of commodities. How such proposals will appeal to hon. members on my left I shall be interested to know to-morrow.

As to unemployment, when the government took office there was an accepted responsibility on the part of the federal authorities for unemployment because it was considered a national problem arising to some extent out of the Great War. But this government on assuming office declared in breach of their primer promise that they would not deal with the unemployment question, and they gave as a reason that under the British North America Act it came under the jurisdiction of the provincial authorities. The provincial governments deny this responsibility, insisting that it is a national condition and arises to some extent out of war conditions, and that therefore the federal government must look after the unemployed. In the meantime our unemployed are suffering. I would ask the Acting Minister of Finance (Mr. Robb) to go through any of the poorer sections of our cities and see conditions for himself. He will then find that unemployment does exist and that many Canadians are suffering great hardship and privation. As a result of the inactivity of the federal authorities the suffering women and children of the unemployed have to be looked after by the municipal authorities and various charitable institutions. This is certainly not right when the responsibility is primarily upon the federal government, especially by reason of its immigration policy. I would suggest that before any more people are brought into this country to swell the ranks of the unemployed, the federal government should look after the destitute and suffering people already here.

It seems to me that one remedy for unemployment is the establishment of the sound principle of tariff protection I am sure hon. members to my left will dissent, but I believe my hon. friends opposite, although agreeing with me in their heart of hearts, would never have the courage to come forward and support such a proposal to relieve the present deplorable condition of affairs. I heard my hon. friend from Brandon (Mr. Forke), the leader of my friends to my left, remark this afternoon that protection is always brought into these discussions.

Some hon. MEMBERS: Hear, hear.

Mr. LADNER: Some hon. gentlemen say, "hear, hear." Well, Mr. Speaker, we introduce the protective idea into this and other discussions because we honestly believe that it is the only way of relieving the industrial and commerical stagnation which to-day afflicts the Dominion.

An hon. MEMBER: I wonder where you get that idea?

Mr. MEIGHEN: Don't laugh until to-morrow.

Mr. LADNER: When hon. friends to my left question the soundness of our views, and we refer them to the United States as an example of the benefits of a protective policy, they tell us that that country is entirely different from Canada. As a matter of fact there is only an imaginary line between the two countries, to a large extent they have similar geographical conditions, but while the population of the United States has grown to about 120,000,000 in the last 125 years, that of Canada has reached the meagre figure of only 9,000,000. Where is the explanation for this tremendous difference? It is not to be found altogether in immigration, because we know that the population of the United States has been augmented by immigration to the extent

of only 30 per cent, while 70 per cent is due to natural increase.

Mr. GARLAND: (Bow River): Is the hon. member under the delusion that we have not been applying the protective tariff for the past fifty years?

Mr. LADNER: No. The hon. member is himself under a delusion. The fact of the matter is we have not been under a real protective tariff, we have been under a very low tariff. Taking ten-year periods from 1870 to 1920, it will be found that the average duty on dutiable goods in the United States has been from 50 to 255 per cent higher than in Canada. It will also be found that wages have been higher in the United States and the cost of living lower than in Canada.

Mr. HOEY: Why was not the tariff increased then between 1911 and 1921?

Mr. MEIGHEN: It was.

Mr. LADNER: In my judgment the increase was not sufficient. The economic and political conditions in the country did not inspire the government of the day with sufficient courage to go ahead and make the increase which should have been made based on experience. It is regrettable that this government, through the Acting Minister of Finance, is unable to endorse the resolution of the hon. member for Centre Winnipeg, for it is a most important resolution, and in my view it should receive the earnest consideration of the government. I do not know whether we would be entitled—

Mr. BROWN: Is the hon. member in favour of the resolution or is he against it?

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. LADNER: At six o'clock the hon. member for Lisgar (Mr. Brown) had asked me the question whether or not I favoured the resolution under consideration, and I was just about to answer when the Speaker left the chair. The resolution as framed, and as one would understand it from its wording, would indicate that the federal government should provide doles or payments of money for the unemployed. The hon. member for Centre Winnipeg explained that that was not the intention at all, that the intention was to make proper provision for the unemployed by providing them with work or by establishing conditions in the country under which they could have work. On that interpretation of the resolution, I am in favour of it and would support it. The conditions in Canada are such that we cannot long continue to handle this unemployment question the way it has been dealt with since the present government took office.

Mr. GARLAND (Bow River): The last government too. They were just as much to blame.

Mr. LADNER: If the hon. member will recall, the last government appropriated large sums of money in an effort to assist in remedying unemployment conditions, and also, to their great credit, devised and used every means they could to get industries started in this country, and to have ships built in this country, and to have work provided for the people of this country rather than sending that work outside. In that respect the Conservative party has been consistent for the last seventy years. They have always endeavoured so to construct their economic policy that work would be provided for the people of this country, and that markets within this country would be provided for the consumption of our products before foreigners had an opportunity of taking them from us. I do not intend to engage in a dissertation on the protectionist idea, yet I am satisfied that a practical study of the question on this North American continent, faced as we are with the United States just across the line, will cause any hon. member to come to the conclusion that that policy is sound, and that it is the only one that will solve this unemployment question.

Mr. SPENCER: Does the hon. member include in that word "foreigners" Great Britain?

Mr. LADNER: I did not use the word in any opprobrious sense. We had a discussion in the House the other day whether the word "etranger" meant foreigner or stranger. By the word foreigner I mean somebody outside our gates, which, from an economic point of view, means everybody outside of Canada.

I want to draw the attention of the House to the fact that of the 590,000 men who enlisted to defend this country in the time of aggression on the part of Germany and her allies and who actually saved this country, the figures show that when they came to find a home in this country and claim their heritage and rights as Canadians, conditions were such that they were not able to earn a living here. Nearly 4,000 Canadian pensioners are now liv-

ing in the United States, and over 152,000 have been obliged to go to the United States to earn a living which they should have been able to earn at home in this country. Not only that, but we know perfectly well that, although the official figures show that some 182,000 people paid head tax, indicating their decision to make their residence in the United States, more like 350,000 people have gone to the United States during the past year—those are the figures which have been given me by responsible officials of the United States Immigration department—many people crossing to the United States have not had the money with which to pay the head tax. They have gone in by by-ways and side-ways, and passed through forests in order to gain admittance to the country to the south.

In the interval since six o'clock, I have got from my office a book which most hon. gentlemen I think should have before them on occasions like this. Extracts from this book have been read before in this House. It is called Industry and Humanity, and is written by the Prime Minister. Now if we consider his solemn and serious reflections before assuming his position as a political leader, if we consider his opinions as a student of political economy and economic conditions, we find that he had views very much along the lines of those advanced by the hon. member for Centre Winnipeg. At page 237 we find these words, I am not going to say that there is that precision and clarity which one would expect to find in his language, but on this particular occasion one can get an idea, at any rate as to the tendency of his mind:

> It is the fear of unemployment which lies at the root of most of the minor fears which labour entertain. The fear of unemployment is in reality the fear on the part of labour—

I would particularly draw the attention of hon. gentlemen opposite to these words:

> —that capital will not be provided to carry on industry continuously, and under conditions which will afford adequate remuneration to effort.

That is exactly the contention of this side of the House, that so disturbed are conditions in this country through the vacillation on the part of the government in dealing with the tariff that capital is apprehensive, and as any hon. gentleman who has consulted with those engaged in business or having investments in manufacturing industry knows, the one fear that capital has is that after having made an investment in some particular industry calculating that the tariff would remain where it is, they might suddenly find the tariff changed and their capital investment gone. Capital is something which walks very easily on its own legs from one country to another; you cannot hold it here, and the Prime Minister writing as an economist states very properly, capital will not be provided to carry on industry continuously and under conditions which will afford adequate remuneration to effort unless there is some prospect of stability.

Again, on page 346 of this book, there is another paragraph relating to unemployment. I have endeavoured to find all references in this book to unemployment. The book contains 548 pages, and all I have been able to find are two very short paragraphs, not more than ten or fifteen lines each. The other reads as follows:

> Insurance against unemployment recognizes that an isolated human being, not less than a machine, must be cared for when idle. It recognizes also that nothing is so dangerous to the standard of life, or so destructive of minimum conditions of healthy existence, as widespread or continued unemployment. Where idleness is the fault of the social order—

And I commend these words to hon. gentlemen opposite.

> —where idleness is the fault of the social order, rather than of the individual concerned, it places the onus on the state to safeguard its own assets, not more in the interests of the individual than in the interests of social well being.

If these words mean anything they mean, very largely, what is expressed in the resolution moved by the hon. member for Centre Winnipeg (Mr. Woodsworth): I do not know, Mr. Speaker, any example of a practical kind that better exemplifies the need of action on the part of the state than the trouble now prevailing in Nova Scotia. We have already had some discussion on that matter, but I commend to hon. members again the statement of the delegation which came here to interview the government in these words:

> At no previous time has employment been so scarce and insecure, the future so unpromising and the industrial community so discouraged, as at this date. Faced with a disappearing livelihood large numbers of skilled artisans may be forced to leave Nova Scotia unless relief is forthcoming.

I commend these words particularly to the Acting Minister of Finance (Mr. Robb) who in his remarks just before six o'clock said he found it difficult to detect unemployment in Canada. That delegation came to Ottawa not only to lay the complaint and the difficulties before the government but also to suggest a remedy. Now, what was the remedy suggested? An increase of duty upon slack coal, and a system of protection—for what purpose? To give employment to those who are out of work. It is all right for hon. members to discuss theories and to put forward hypothetical cases and then suggest a

solution, but in the world of affairs we must give consideration to actualities. Here is a concrete example of a bad state of unemployment, and we have men qualified to speak on the subject coming here and explaining the details to the government and also proposing a remedy—and it is the remedy of protection. I would like hon. gentlemen opposite and on my left who have been disagreeing with us this afternoon to comment on this and tell us if they can suggest some other way by which these people can find employment, without leaving the country as the ex-service men have done.

I think we must admit in a general way, Mr. Speaker, that in the state of society as organized through this industrial age we find capital sometimes in combines, sometimes in the form of companies or corporations, where a large number of small holdings—

Mr. WOODSWORTH: I rise to a point of order. I introduced this afternoon a resolution in very specific terms, as follows:

That, in the opinion of this House, if at any time during the first two years after his arrival in Canada any immigrant is unable to obtain employment, the federal government should accept full responsibility for his maintenance.

That deals with just one aspect of unemployment and calls upon the federal government to take one particular line of action in that regard. It seems to me that it is hardly in order that the debate should broaden out to a discussion of the whole general question of unemployment or that there should be substituted an altogether new means of dealing with this question.

Mr. DEPUTY SPEAKER: Does any other hon. gentleman desire to speak to the point of order?

Hon. H. H. STEVENS (Vancouver Centre): Mr. Speaker, I can see the desire of my hon. friend (Mr. Woodsworth) to limit attention to his resolution, but I submit that it is utterly impossible to discriminate between the unemployed who are recent arrivals and the unemployed generally. It is not possible in discussing the subject to limit one's remarks to the unemployed who happened to come in within two years. We shall be precluded from discussing the question altogether if that be the ruling.

Mr. LADNER: On the point of order, I submit that when such general words are used as "accept full responsibility for his maintenance," they have no meaning unless the responsibility is transferred into some form of remedy, and the form of remedy not being suggested in the resolution, it is within the right of hon. members to suggest the form of remedy they think the government should adopt. I do not see how the hon. member who has raised the point of order can deny that we have the liberty and the right to suggest what remedy we think should be provided.

Mr. ANDREW McMASTER (Brome): Mr. Speaker, I will not detain the House long with the few observations I have to make upon the point of order. The resolution is not an indirect one. It says:

That, in the opinion of this House, if at any time during the first two years after his arrival in Canada any immigrant is unable to obtain employment, the federal government should accept full responsibility for his maintenance.

The resolution is of the nature of a modified socialism in which the state shall for the first two years accept the responsibility for finding employment for newcomers. Now, our friends in the corner, with truly apostolic fervour, desire to take this text and then go everywhere preaching the gospel of protection, but to do so would be a flagrant violation of the rules of the House. I would submit that nothing would be easier than for people to put on the order paper some broad and vague generalization and then proceed to discuss anything and everything under the cover of such a resolution. Now, this resolution is not one of that sort. I think the rules of the House provide that discussions of this sort must be relevant to the point under discussion and to the resolution submitted to the House, and although I have not had the pleasure of listening to all the eloquent words of the member for Vancouver South (Mr. Ladner) I think he is out of order and should confine himself strictly to the point at issue.

Mr. DEPUTY SPEAKER: With respect to the point of order raised, the resolution states:

That, in the opinion of this House, if at any time during the first two years after his arrival in Canada any immigrant is unable to obtain employment, the federal government should accept full responsibility for his maintenance.

I think it is open to any hon. member, within certain limitations, to show that by reason of the failure of any federal government to take certain courses of action or adopt certain policies, or remedies or by reason of some matters being dealt with by the state in a certain way, immigrants were placed in such a position that they could not obtain employment within the two-year period, and that therefore the state was not relieved of the responsibility of taking care of them. It seems to me that the hon. member for Vancouver South (Mr. Ladner) is in order in setting forth

certain policies the adoption of which would in his opinion prevent these immigrants from being in a state of unemployment and so becoming a charge upon the revenue.

Mr. MARTELL: Your Honour referred to any federal government or parliament. May I suggest to you that there is only one federal parliament.

Mr. DEPUTY SPEAKER: There are several parliaments, but only one federal parliament.

Mr. LADNER: Under our system as we find it to-day capital has a very useful place in the business affairs of the country, and not only that, but under the present system of companies and corporations, thousands of people with small holdings, perhaps two or three hundred dollars each, are enabled to join together in a limited liability company, with a united management and with single directing force, in order to obtain a revenue and a profit from their investment. Sometimes these directing forces join together, and we have those institutions which the Minister of Labour (Mr. Murdock) is attacking now and again, combines, trusts and mergers. By the way, I might direct the attention of the Minister of Labour to the fact that the fruit combine, which is alleged to contribute to the difficulties of employment in British Columbia, still goes on, and that the provincial government states that they have no responsibility in the matter.

Mr. MURDOCK: Order.

Mr. LADNER: And they are leaving it to the Solicitor-General to take action against this particular combine. I believe that under a motion of this kind there are certain obligations of the state. It is a function of the state to take hold of the question of employment, to distinguish between the people who will not work and those who will work, to protect the innocent persons, the women and the children and the men who find themselves in a helpless condition on account of the intensified development of our industrial and commercial system. I suggest that at present the government are doing absolutely nothing. They do not pretend to do anything. They positively state it is the function of the provinces to solve this question of unemployment, a question which is of national importance. I notice in the Mail and Empire of March 23 a despatch dated Calgary, March 22, referring to this matter, and I was expecting to hear some words from the two members from that city (Mr. Irvine and Mr. Shaw). This despatch reads as follows:

[Mr. Deputy Speaker.]

Army of unemployed trudge for twenty-two miles. Calgary marching party board freight for Edmonton. Slush covers trail.

Men allege discrimination by the provincial government.

After twenty-two miles of the toughest trudging in the world, one hundred members of the army of one hundred and twenty-five unemployed single men who set out from Calgary on Saturday morning on a two hundred mile march to Edmonton, reached Airdrie last night and were filled with hot coffee and food by the hospitable villagers and given the basement of the Methodist church as sleeping quarters. This morning they learned that the Canadian Pacific Railway was sending a freight train through to Edmonton and when it pulled in about eleven they made a rush for choice locations, neither the crew nor the provincial police interfering. On board this freight they travelled about one hundred and twenty miles, where they were ordered to get off Canadian Pacific Railway property. The Canadian Pacific Railway police left Calgary on a passenger train at 4.45 for this purpose.

The little army had to make its Friday night bluff good on Saturday. General A. J. Boulter stalled around too long and his men missed a freight train which they had counted on taking. It was up to them to start their tramp or to back down. They hiked.

And yet the Acting Minister of Finance (Mr. Robb) says he has not heard of unemployment in the country.

In conclusion I submit that this is a matter of which the government should take hold. I think it is a question which should appeal to all hon. members, and with the interpretation that has been put upon the motion by the mover of the resolution I am in favour of it and will support it.

Mr. R. J. WOODS (Dufferin): I had no intention of saying anything on this question until I came into the House not very long ago. It strikes me that if we are going to build up a country we must have immigration. We cannot build up any nation or country without a population. With reference to the question of unemployment, I am convinced that no matter how you restrict immigration or cut down the population, you will always have a certain amount of unemployment. Certain individuals will work at certain occupations, and will refuse to work unless they can obtain the employment they wish to engage in. A great many of our large cities encourage the dole system too much. I have every sympathy with honest labourers who cannot get employment, particularly men in the cities who have families to keep. I have no sympathy with the strong, vigorous and energetic young men who will refuse to go into the country and take hold of honest manual toil in order to make a livelihood. If my memory serves me correctly, in the early part of the winter I saw in the public press where a certain number of unemployed, I think about five hundred, waited upon the government in Ottawa asking for employ-

ment. A lumberman came down from the woods and wanted to engage a number of men, about five hundred, to go into the woods and take out timber and logs.

Mr. LAPIERRE: What part of Ontario was that lumberman from?

Mr. WOODS: I am not prepared to say, but it strikes me he was from Quebec. At any rate, when he came to this delegation and offered employment for about two hundred, he was only able to secure one man to go into the woods to perform manual labour.

Mr. STEWART (Humboldt): It would be interesting to the House to learn how many of those unemployed would fall into the class which the hon. gentleman who introduced the resolution has in mind, that is how many had been in this country for less than two years.

Mr. WOODS: It would be almost impossible to keep track of immigrants that come into this country so as to state how many of the unemployed came to Canada inside of two years and how many did not. I was told just to-day by an hon. member who was going down to the Immigration department to try and procure labour for some people in his locality, that his time was taken up to quite an extent in trying to get men to go to the district where he lived to work on the farms. While we have in Ontario abundance of labour for many men, yet we find there are many who will not work unless they get some particular kind of employment, or who will refuse employment unless they get a job in our great cities. A session or two ago, a number of men walked from Toronto to Ottawa seeking assistance from the government, and we were informed that as they came along the road, nearly every one of them could have procured honest work on the farms, but they refused to work and came on to Ottawa. Had I had the ruling power, they would have had the privilege of walking back to Toronto again. That is my attitude in regard to labour. Many a day I worked for fifty cents and I have worked whole years for $150 a year. I have laboured and toiled in many different walks of life; I know all about labour and the strenuous difficulties of labour. But in my early days when I laboured, I never refused work. If I could get a dollar a day, I took it. If I could not get a dollar a day and I could get fifty cents a day, I went to work. I believe in that principle yet. Men who want work ought to accept it, when they can get it, at whatever remuneration they can get from those who are willing to engage them. I am opposed to the resolution.

Hon. JAMES MURDOCK (Minister of Labour): Mr. Speaker, the question now under discussion is a matter of sufficient importance in itself to warrant us in staying closely to the particular subject matter involved rather than in wandering far afield to discuss every real and imaginary ill that, in the opinion of hon. gentlemen opposite, this country is heir to. I am going to try to stick closely to the question under discussion, excepting for one moment to digress to refer to a point that was raised in this afternoon's discussion, when my colleague, the Minister of Justice (Mr. Lapointe) indicated to hon. gentlemen opposite conditions of unemployment existing in the United States, that well favoured and highly protected country, at the present time. This particular article, of course it will be said by hon. gentlemen, is incorrect, biased, untrue, but for what it may be worth, may I place it on Hansard? It appears in the Toronto Star Weekly of last Saturday, March 21, and it is headed:

Business future of United States appears bright. L.F. President—

That means, Labour Federation President.

—makes statement despite fact twenty million Americans are workless. Bad as in Austria. British and French show better ratio of unemployment—but conditions sound.

Cambridge, Mass., March 21.

In spite of an army of unemployed which he estimates at twenty million to-day, William Green, President of the American Federation of Labour, is optimistic over the business future of the United States.

President Green, now on a speaking tour of Massachusetts, said here that the number of unemployed in America to-day is surprising.

"While it is not generally known or realized," he said, "we have at the present time more than twenty million in our army of unemployed. In fact, we have a larger percentage than Germany, France or Great Britain at the present time, and our ratio per thousand is precisely the same as Austria."

This situation, he said, should give no cause for alarm, because of the generally good business outlook.

General conditions in industry, he said, are very good, with an inclination to seek slight increases in wages in some sections while a stand-pat policy is in force in others.

There are no visible indications of a strike in the coal fields in September, Green said. Rather there is a very good outlook for signing a new wage and working agreement at the expiration of the present agreement, he said.

Mr. MANION: Surely the Minister of Labour knows that it is impossible for twenty million men to be unemployed in the United States. In the same proportion, that would mean a million and a half unemployed in Canada. It would mean that practically all the artisans in the United States were unem-

ployed. The correct figure is probably two million.

Mr. MURDOCK: Not at all. No matter how much my hon. friend hopes there is a mistake—

Mr. MANION: I know there is.

Mr. MURDOCK: —I am firmly convinced that the figures are not in any way exaggerated, and a little later on I hope to have an opportunity of undertaking to prove that they are right, just to present the opposite view to that which has been presented ever since the debate on the Address and other debates have been brought forward in this House.

Mr. RYCKMAN: How many are unemployed in a family?

Mr. GRAHAM: That depends on the size of the family.

Mr. RYCKMAN: A larger family than the Minister of Railways and Canals has.

Mr. GRAHAM: Unfortunately he has not any family.

Mr. MURDOCK: This particular question that the hon. member for Centre Winnipeg (Mr. Woodsworth) brought before the House is not a question to joke about. I hope to do my share as a member of this House in discussing the particular question involved, with regard and concern for those who are directly interested, that is the unemployed people in Canada. Who are they? There are, and there have been for a number of years in Canada two classes of individuals unemployed, one class composed of men—and I am sorry to say there is a considerable number of them—who will not be and who have not been employed for the past several years—men who would not accept employment, no matter how plentiful jobs were. That, I think, can be proven as substantially correct from the fact that we find organized in certain parts of the country associations of unemployed, lodges Nos. 1, 2, 3, and so forth, organizations of individuals banded together, who do not work, some of whom, I think, to be as kindly as possible, cannot work, cannot steady themselves down to accepting a job and working at that job as their employer would like to have them work.

Mr. MARTELL: Will the minister state where they are? I do not know of any in Nova Scotia.

Mr. MURDOCK: These men are to be found in various parts of Canada.

[Mr. Manion.]

Mr. MARTELL: Say what part of Nova Scotia they are in.

Mr. MURDOCK: The hon. member for Vancouver South (Mr. Ladner), the hon. member for West Toronto (Mr. Hocken) and the hon. member for North Toronto (Mr. Church) all have some of these men in their constituencies.

Mr. MARTELL: There are none in mine.

Mr. MURDOCK: And there are some of them within less than a mile or two of these parliament buildings as well as in other towns and cities in Canada. Some of them are very unfortunate in that the condition I have just spoken of is a handicap in certain cases resulting from the war, just as truly as the loss of an arm or of a hand would be.

Mr. WOODSWORTH: Does the minister think there is anything wrong in any way about these unemployed men banding themselves together in associations and trying to secure work or to better their conditions in any degree?

Mr. MURDOCK: I certainly think that the forming of unemployed associations in the way this is carried out in two or three points, particularly in the way it has been done in my hon. friend's constituency, is not in the best interests either of those who are unemployed or of the country as a whole. If my hon. friend cares to do so, he may ascertain from the officials of the employment offices at Winnipeg that in the vicinity of those offices every day for the past three or four years, I think unemployed men have lined up apparently looking for a job. But many of them never find anything, summer or winter, which they feel they can accept or which they would like to undertake. I am not saying this, hon. gentlemen will understand, by way of harsh criticism; I am indeed expressing my sincere regret at the fact. But it is a fact that many of those who to-day are the noisiest about the condition of unemployment are men who are temperamentally so handicapped that they cannot accept a job and perform it as the average employer would expect them to.

Mr. WOODSWORTH: Does the minister deny that there are hundreds of able-bodied unemployed men in the city of Winnipeg for whom the employment offices have no work whatever at the present time?

Mr. MURDOCK: I was coming to that. My hon. friend is certainly quite correct in stating that there is at the present time, as there has been for the past several months, a

considerable number of able-bodied willing workers who have been unable to obtain employment and who certainly want to work —men who would make good employees.

Mr. IRVINE: Does the minister think that the class to whom he refers, namely, those that are seemingly unemployable, represent any considerable number of the men? If so, does he not think that some government, this government particularly, should be responsible for those who are unable to shoulder their own responsibility?

Mr. MURDOCK: The particular view which my hon. friend has in mind might be a question for proper consideration, that is to say, with the question of unemployment insurance. That question might be dealt with either by provinces or by the federal government or by whatever authority might be regarded as being most responsible, and some law might be enacted to provide unemployment insurance just as workmen's compensation against accident is provided at the present time. But that is a matter which must be considered at the proper time. Now let us come directly to the point of the resolution; the resolution relates to immigrants who have been here less than two years. During the latter part of February we received telegrams from certain points in the west, particularly from the mayor of Calgary, who indicated that there were certain—

Mr. ANDERSON: Does the minister know what proportion of those who will not work belong to the Anglo Saxon race?

Mr. MURDOCK: I am sorry to tell my hon. friend that I fear a considerable proportion of those who will not work, or who do not feel that they are able to work, or who do not like the job offered them at the wages stated, belong to the Anglo Saxon race. As I was about to say, in the latter part of February the mayor of Calgary wired indicating that there was a considerable number of immigrants unemployed requesting relief from the city of Calgary. Mayor Webster stated that they could not consider relief to the immigrants and that there were many cases of absolute destitution and suffering. That brought about an exchange of telegrams and a conference between the departments of the government, with the result that on February 27 the Deputy Minister of Immigration wrote to the mayor of Calgary the following letter, which I think it is worth while putting on the record. The letter is addressed to George H. Webster, Esq., mayor of Calgary, Alberta, is dated February 27, 1925, and reads:

> Dear Sir,—The Honourable James Murdock, Minister of Labour brought to my attention a day or two ago his exchange of telegrams with yourself respecting the relief of a number of immigrants recently arrived in Calgary and who were reported by you as in distressed circumstances. As a result of the representations made to the Minister of Labour I asked the director of our Land Settlement branch to let me have a report as to conditions at Calgary, as shown by the records of the branch, and I am informed that during recent months a British immigrant, following his alleged inability to obtain employment, directed a letter to the Calgary Herald complaining of his condition. Following the publication of this letter the district superintendent of the Land Settlement branch also wrote to the Herald to the effect that we were prepared to place at farm work the immigrant who had registered the complaint, or any other immigrant who was willing and able to take this particular class of employment. We obtained no reply to our communication but since then I may say we have placed on the farm a number of persons who were out of work. My information is moreover to the effect that the Land Settlement branch is in a position to find situations on the farms for all immigrants who are able and willing to accept the same; and that there is no necessity for any of these people to remain in want.
>
> If you will let me have a detailed statement of the position in Calgary, showing the names of parties who are in distress and giving some information as to the time of their arrival in Canada, I will be only too glad to have our Land Settlement branch take up their cases with a view to having them placed at work with the least possible delay.

The deputy minister also wrote to me about the same time stating:

> You may rest assured that this department will and can secure at any time situations on the farm for out of work immigrants who are ready to engage in the same.

Now then, if that is correct there is no particular necessity at present for the adoption of this resolution. The deputy minister states that they are able to find work on farms for all of these immigrants who are now unemployed.

While we are discussing this question, I think it is only fair to the people of Canada that I should also discuss the unemployment situation in the coal mine territory of Alberta and British Columbia. What has caused that unemployment? Only to-day I have received pitiful letters asking the assistance of the department to secure work for some miners in those coal fields who intimate that they have been out of work for many months. Let me analyze the reason why they have been idle, and I want to do so without either fault finding or criticism. The facts are that about a year ago a strike was called in district 18 of the western territory involving some 11,000 or 12,000 miners. What for? In order to maintain the same rates of pay that had been put into effect in 1919 and

1920 under practically war time conditions. The strike commenced on April 1 last year and continued for nearly seven months, the final outcome being that a settlement was reached on practically the exact terms that were proposed by the operators at the outset. But unfortunately during the intervening period the markets for western coal had been seriously curtailed and in many cases absolutely lost, and American coal had been banked up at points on the Canadian prairies—piles of coal that ought to have been built of Canadian coal mined by Canadian miners. Again I say, I do not want to be understood as fault finding, but it cannot be denied that a lot of unemployment in the west amongst the miners is the result of their own errors of judgment, errors which have been disastrous to them as workmen, disastrous to the coal operators and disastrous to western Canada in that the markets for Alberta and British Columbia coal have been lost and it may take many months, possibly years, to regain them.

Mr. WOODSWORTH: Will the minister say if the operators have observed their side of the agreement arrived at when the strike was settled?

Mr. MURDOCK: So far as I know they have. But if my friend is referring to whether the operators have been continuing to operate the mines since the settlement was made, I think it would be fair to say no. But in saying that it must be admitted that apparently one of the reasons why they were not able to operate the mines was that the markets had been to a greater or lesser extent lost during the strike period. My hon. friend may have in mind the condition in Fernie and Michel, where the miners have since made a settlement with their employers for a further substantial decrease of compensation, with the result, so the department is advised, that they are working almost steadily and some 130 coke ovens are active, a condition which had not obtained for a considerable length of time theretofore.

Mr. WOODSWORTH: But what has been the effect of that private agreement on work at Hillcrest and other mines?

Mr. MURDOCK: I do not know that there has been a private agreement made at Hillcrest. At any rate I have no details, neither has my department.

Mr. WOODSWORTH: I mean the agreement having been made at Fernie, what has been its effect on other mining camps such as Hillcrest?

[Mr. Murdock.]

Mr. MURDOCK: I do not believe that the agreement made at Fernie and Michel has in any way changed the situation at Hillcrest or at any other mining camp in the Crowsnest pass. I think they simply made an agreement which permitted the mines to operate and supply a certain buyer of the product.

Mr. IRVINE: Mr. Speaker, I should like to ask the minister if he thinks it is fair for him to go out of his way to place the blame for the present mining situation on the miners of Alberta, without giving us any reason for his statement and leaving the employers out of consideration entirely? Is it not reasonable to suppose that they are at least partly to blame for the strike, perhaps entirely?

Mr. MURDOCK: I did not intend, nor do I now, to unduly place the responsibility upon the workmen for the unfortunate condition of affairs. There has been a succession of disputes out there for which the workmen were not all to blame. The workmen a year ago now only did what the employers had done a couple of years before, and there is no desire on my part to unfairly criticize the workmen. I am simply stating as best I can some of the reasons for the unemployment that we have to consider to-day. Some of those workmen, I presume, would come within the scope of the resolution of the hon. member for Centre Winnipeg should it pass, for possibly they have not been in the country two years.

In conclusion, Mr. Speaker, I think this House could do no more unkindly act towards newly arrived immigrants and those who may follow them than to pass this resolution. In my judgment it would tend to stultify the ambition and the initiative that every newcomer to this country must have if he is going to make good and seize the opportunities that come to him. In substance this resolution proposes the adoption of the principle of socialism in our dealing with immigrants for the first two years of residence in this country. I repeat, it would be an unkindly act and also inconsiderate towards those we desire to become citizens of the Dominion, and I hope that with the statement of the Deputy Minister of Immigration before him the hon. member for Centre Winnipeg will withdraw his resolution, that statement being that every immigrant willing and ready to work can be placed in employment. What more is asked for?

9 p.m.

Mr. McDONALD (Timiskaming): Might I ask the hon. minister a question for my personal information, that I may get a line on

what is in his mind? Does he believe that a large percentage of the people who are idle in Canada to-day are idle because they are lazy, are not willing to work?

Mr. MURDOCK: Too large a percentage; not by any means the majority of them. There is a considerable number, particularly in some of our larger cities, individuals who cannot get away from the pool rooms, the movies and the bright lights, who will not go out into the open spaces as some of us immigrants in days gone by had to do.

Mr. McDONALD (Timiskaming): What are you going to do with the 60,000 or 70,000 men who are required for seasonal occupations in this country? When that seasonal work is over and they are thrown on the market, are you going to say that they are thrown on the market because they are lazy? They are thrown on the market at a time when other industries throughout the country are closing down. I am speaking of the 60,000 or 70,000 men who are required to take in the harvest in the west, to cut and thresh the grain and put it in the elevators.

Mr. MURDOCK: As my hon friend knows, many of those who gather in the western harvest come from the eastern provinces. When the harvest is over, they return to their homes in many cases, but many of them, it has been charged by certain gentlemen in Winnipeg, and I think quite properly, drift into the city of Winnipeg and become charges on the community because they cannot find work there. It is very hard for us to get any accurate figures as to the number involved in the question raised by my hon. friend.

There is a great deal more, Mr. Speaker, that might be said on this unemployment question; there will probably be a great deal more said on it this session; but the particular question involved in this resolution, it seems to me, has been met by the declaration of the Deputy Minister of Immigration, when he says, "You may rest assured that this department will and can secure at any time situations on the farm for out-of-work immigrants who are ready to engage in the same."

Mr. MURRAY MacLAREN (St. John City and Counties of St. John and Albert): From the wording of the resolution I think one can conclude that it is within the knowledge of the mover (Mr. Woodsworth) that there is a substantial difficulty in immigrants securing employment at the present time. Otherwise he would not, I think, have brought the resolution before the House. If that is the case, it means that the country, or rather that portion of the country where these men are being sent, is at the present time unable to absorb the number of immigrants who go there. The mover of the resolution, in order to meet this situation of immigrants being unemployed, or undergoing great difficulties in finding employment, proposes that the government substantially guarantee all immigrants who come to this country some form of employment or maintenance for the first two years. I cannot support a resolution of that character. There is such a thing as giving a man every fair and reasonable opportunity, within the powers of the country, of securing employment. There is such a thing as making fair statements, and avoiding undue promises to men who come to this country; but for the government to guarantee to every man who comes to this country that he shall receive employment I believe is contrary to the best interests of the country. Every man must take his chance. I do not mean a great chance, but he must take some chance. He must take the same chance perhaps, or nearly the same chance, as the men who are now living in the country. Therefore, Mr. Speaker, I cannot do otherwise than oppose the resolution.

But there is, I think, a proposal that one might make to the House and to the Minister of Immigration in reference to this matter. I take it that where there is a difficulty in securing employment at the present time, and I am speaking only of new immigrants who are being placed in the western portion of our country in large numbers, it is because they are being sent there in larger numbers than the country can absorb. What is the immigration policy of the government at the present time? It is undoubtedly to send a very, very large proportion of immigrants to the west; so much so, that some immigration agents in Great Britain are diverting some of the men who had thought of other sections of this country to which to emigrate, and are directing them to the west. Now we are all perfectly willing that the west should receive a substantial number, as many as they want, but not more than they are able to employ. I am satisfied that the men in the west do not wish immigrants there out of employment, or in difficulties, or poverty. Now what I suggest is that the Minister of Immigration develop and broaden his policy. Let him distribute the immigrants in proper proportions all over this country. In that way, not only will he do justice to the various sections of the country, but he will solve one of the difficulties in finding employment for the immigrant. The larger the area over

which they are distributed, the greater will be the power of the country to absorb them. We are not testing out the power of various portions of this country to absorb new immigrants. The immigrants are being concentrated in a certain section of the country. Now if, when they came here, they were more widely distributed over the country, if they were placed here and there where there was work, I believe that would help in solving the unemployment situation.

Mr. D. F. KELLNER (East Edmonton): I wish to add a word in support of this resolution moved by the hon. member for Centre Winnipeg (Mr. Woodsworth). I am sorry he did not make it a little more comprehensive, and as well as putting the onus on the government have included also some of the companies who are engaged in bringing immigrants to this country; for instance the two railroad companies and some land companies. At the present time we have the Canadian Pacific Railway in particular, whose agents solicit immigration in Europe, and we are told that it is their frequent policy to guarantee positions to immigrants landing in this country. I have heard the allegation made that when an immigrant comes out here, if he cannot get a position, quite frequently the Canadian Pacific will fire someone who is employed in one of their subsidiary companies and give the immigrant a job. The result is that some citizen of Canada is thrown out of his job to provide work for the immigrant. That simply means that when the government refuses to help the immigrant, he must be supported at the expense of the Canadian citizen, who loses his job. I do not think that is a fair policy to follow, but as a matter of fact, it is followed by the Dominion government itself. I think anyone who will go into our civil service here will find that a very large percentage of those employed in it are brought to this country from England, and if we have unemployment the Canadians who probably should occupy those positions are not there. Moreover, if they have any property at all they are taxed to support those immigrants who are brought here.

I think the Minister of Labour (Mr. Murdock) took an unfair attitude when he talked about the onus of the strike out in the west being on the miners. I should have liked to hear him tell us whom the onus was on when the subway strike in Edmonton took place last winter. At that time a contract had been let by the Department of Railways in the city of Edmonton, containing, I understand, a fair wage clause which was familiar to the minister, but the contractor employed men at twenty-five cents an hour. The men went on strike, and I do not think even the Minister of Labour will say it was the men's fault in that instance. So far as I have ever been able to learn, neither the Department of Railways nor the Department of Labour took any active part in settling the strike. Eventually when the city of Edmonton got behind the men's case and public sentiment was strongly in their favour the men won and the rate of wage was increased to forty cents an hour.

Mr. MURDOCK: If my hon. friend will inquire to-morrow at my office I will give him documentary evidence to prove that he has not all the facts.

Mr. GRAHAM: If he will call at mine I will give him some evidence to show that his facts as alleged are not facts.

Mr. IRVINE: If he will call at my office I will show that he is perfectly correct.

Mr. GRAHAM: Which office of yours?

Mr. KELLNER: I regret to have to inform both ministers that the statement which I have given the House just now is the one we have been led to believe is correct, and it is the allegation of the city council of Edmonton.

Mr. GRAHAM: I am sorry to inform my hon. friend that it is not the allegation of their mayor.

Mr. KELLNER: I do not wish to carry on the controversy. I am still convinced that the mayor has probably put some of the articles to which I have referred in the press of Edmonton, covering the point under discussion.

Mr. GRAHAM: Let us get it right; my hon. friend I know, does not want to have it wrong. The subway work at Edmonton was undertaken in the winter rather than in the spring, as an emergency work to give employment to the unemployed. Had the railway been left to itself that work would not have been taken up in the winter at all. Now, keep that in mind. The onus was not on the Minister of Labour at all but on the Minister of Railways to settle any dispute as to wages. That is a peculiarity of the Railway Act; it is a clause that has been in it for many years. The mayor, when the strike took place, communicated with the Minister of Railways, as under the statute he was the authority. The Minister of Railways submitted the case to the Minister of Labour, and the ruling of the

Minister of Railways was on the advice of the Minister of Labour. The men were given a certain wage which was absolutely fair and it was made retroactive. That is the whole story.

Mr. KELLNER: Forty cents an hour is the wage referred to as being absolutely fair, is it not?

Mr. GRAHAM: My hon. friend must have been wrong if I am right.

Mr. KELLNER: The minister is jumping at conclusions. I did not say he was right.

Mr. GRAHAM: My hon. friend said that neither the Minister of Labour nor the Minister of Railways had anything to do with settling the strike. That is all I wanted to correct.

Mr. KELLNER: I do not think I said that. The minister might have heard that, or heard what he thought was that, but it is not what I said.

Mr. GRAHAM: Read Hansard yourself.

Mr. KELLNER: Yes, I shall be pleased to do that.

Mr. GRAHAM: I will too. I like it.

Mr. KELLNER: However, I do not think the minister can very soundly argue that the Edmonton mayor or the Edmonton city council were satisfied with the treatment the men received in respect to the subway work last winter. Neither do I think they are satisfied with the treatment they have had in the whole work that was undertaken to relieve unemployment. In fact I have before me a resolution recently adopted by the Edmonton city council, and I hope the Minister of Railways will do me the honour of listening to it. It reads:

> Whereas the problem of unemployment is one that is generated or abated by the policies or lack of policy of the federal government;
>
> And whereas the burden placed on this municipality by taking care of the unemployed in this district is inequitable and unfair to the taxpayers of this city;
>
> And whereas three members of the House of Commons represent constituencies of which this city is a part;
>
> Therefore be it resolved that this city council instruct the city clerk to forward to the members representing the Edmonton constituencies an outline of the obligations undertaken on behalf of the unemployed by this city, with the request that they introduce at this session measures that will obligate the federal government to assume its fair share of the costs of relief work.

I take it from that that the Edmonton city council are not quite satisfied with the treatment they have received in connection with this relief for the unemployed. I also have before me a statement of what has been spent by the city in relief work. They have spent $111,715 this past winter, and added to that is $1,500, two-thirds of which went to the Welfare board and $500 to the Salvation Army to look after emergency cases.

When we were discussing this matter a little while ago the Acting Minister of Finance (Mr. Robb) stated that in his opinion there was very little unemployment in Canada, and his speech rather suggested that if there was any it was probably Conservative propaganda to affect the coming election. I hope such an insinuation will not be reflected against the council of the city of Edmonton because the mayor got very lenient treatment indeed from the government last year when he was negotiating with the Woodward elevator people at Vancouver. He is at the present time a candidate for election to the federal House and a supporter of the government in East Edmonton constituency. He stated only last week through the press there that he intended to run as a supporter of the King government in the next election. Then they also have an alderman there, Mr. Joseph Clarke, who, I understand, makes the boast that he was a playmate in his school days of the present Prime Minister and that he also will be a candidate in East Edmonton at the next election.

Mr. GRAHAM: There seem to be lots of people who want to run.

Mr. KELLNER: I did not catch the minister's remark.

Mr. GRAHAM: I say it is a healthy sign to have gentlemen desirous of being candidates for any party.

Mr. KELLNER: Yes, that is a very healthy sign. What I wanted to bring out in mentioning this was the fact that it is not Tory propaganda in this instance; it is Liberal, and unless there was a very real grievance these gentlemen would hardly embarrass the present government to that extent.

Mr. PELLETIER: Do I understand the hon. member to say it is Liberal propaganda?

Mr. KELLNER: If the hon. member was in the House this afternoon he would readily appreciate that I was not the one who made the accusation that it was propaganda. I am simply stating what took place earlier in the debate when propaganda was alleged—not by myself.

Mr. PELLETIER: And is my hon. friend repeating it now? Does he realize that at all

times, in the Dominion as well as elsewhere, in all large centres we have quite a number of I.W.W.'s, meaning I want work? That is not the fault of the Liberal party or any other party. Let us be fair in this debate.

Mr. KELLNER: I hope the hon. member is not accusing the mayor of Edmonton and the aldermen whom I have mentioned of being I. W. W. men. This afternoon during the discussion our friends to my right tried to convey the impression that this unemployment in the country—and I do not think there is any question about unemployment existing—was the effect of the policy, and particularly as it pertains to the tariff, of the present government, and the suggestion was made that conditions were very much better in the United States. I notice in to-day's Globe an article dealing with that very point, which reads:

"Coolidge Boom" has not arrived

Federation of Labor Officials Report Much Unemployment in U. S.

Canadian Workers Idle

Organizers of the American Federation of Labor agree with the statement made on Saturday by William Green, president of that body, that unemployment in the United States at the present time affected millions of workers. Mr. Green was optimistic of the future and the ability of industry to absorb the army of workless.

"Conditions appear to be a trifle better in the United States than in Canada just now," said William Powlesland, vice-president of the Blacksmiths and Boilermakers' International Union, who spent a month in the railroad shops of New York State. "The States did not get the boom it expected with the election of Coolidge. For the first time in years the New York Central closed its shop in Albany for a week."

Letters to union officials here reveal that Canadian mechanics in the States have had little work since October, while trade journals are warning men away from many cities of the United States on account of unemployment.

So that evidently unemployment is not a matter to be treated lightly. If they have it to that degree in the United States, and we know we have had it here all winter, it is evidently a matter that is not going to correct itself in the very near future. The statement was also advanced that we have got very far in debt in Canada and that our tax bills are exceedingly heavy in comparison with the United States. The American Review of Reviews for February has this to say:

In Iowa, for instance, while the farm mortgages in 1910 amounted to $26.83 per acre, in 1920 they had increased to $63.19 per acre. The governor asserts that farm lands can stand no more taxation, and he proposes a stiff gasoline tax, and perhaps levies on incomes and business profits. In Maine a million dollars a year has been lost by decreased assessments on the railways, due to lessened earnings.

Minnesota is to have a supertax on the tonnage of iron ore mined, which will yield $4,000,000.

[Mr. MacLaren.]

Incidentally Arkansas has an educational problem, because last year there were 57 school districts with 2,060 children in which not a day of school was held.

I might give many more instances. There is no question that in the United States at the moment conditions are no better materially than they are here. I think this government admitted an unemployment situation when they called this conference with regard to winter employment in Canada. Different ones who took part in that conference expressed the situation as it then existed, and invariably they credited a portion of that unemployment to immigration. For instance, H. T. Lockyer, general manager, B. C. Stores, Hudson's Bay Company, considers:

That a restricted immigration policy should be put into force at once by the federal government; that immigrants have been sent here under misrepresentation, and that conditions will be as bad here this winter as during past winters. He thinks that municipal, provincial and labour officials—

I presume that is the Department of Labour for the federal government—

—should publicly announce that conditions do not warrant an influx of immigrants.

Then Percy R. Bengough, secretary of the Vancouver Trades and Labour Council, considers:

That they will have as many unemployed this year as last and that the policy of spending public funds in bringing immigrants to this country when residents, for economic reasons, are leaving, is wrong.

Then the following resolution was passed by the council of the district of South Vancouver:

That whereas this council may be faced with a problem of unemployment during the winter months, and whereas we have a population of approximately 38,000 people, composed principally of artisans, and whereas it is impossible for this municipality to undertake to find employment or to provide relief for all who desire it, and whereas the Dominion government is directly responsible for the bringing in of any immigrants at a time when employment is scarce, be it resolved that we ask the Dominion government to give direct financial assistance in the providing of employment of a productive nature in the municipality of South Vancouver during the winter months; and that we ask Mayor Owen to present this resolution to the joint conference on unemployment at Ottawa.

Then the mayor and council of Vancouver further said:

Many hundreds of Scandinavians have lately arrived here, and we are glad to see them. But we admit it pains us often when young men and girls arrive without funds, no work, no friends, and not knowing the language. We try to find jobs for them, but with the city full of idle men, what chance has a newcomer? We find men among them who are educated. We find among them mechanics, chemists, musicians, almost starving. And this is what they tell us: that the government carries on propaganda in Norway, Sweden and Denmark, employing agents whose business is to induce as many as possible to migrate to Canada.

I will just quote one more extract from the proceedings before the national conference regarding winter employment in Canada, as follows:

> What is going to become of the large immigration that is coming into the west this year. They are a fine class of men that have come in, but some of them may not be able to speak the English language. We have not the wherewithal to provide for them. Our own citizens must come first.

I wish to point out that our own citizens, as a general thing, do not come first. Suppose a Canadian citizen and an immigrant are riding side by side on a train and both presumably looking for land. The immigrant will pay a railway fare of about a cent a mile, while the Canadian citizen will pay the usual fare. There is no question about it that the immigrant coming in to-day can get a better deal from the federal Immigration department, which now has control over the Soldier Settlement Board, than any Canadian citizen can get. I think this is very objectionable, and the Canadian citizen is bound to take exception to it. I could not help but think how pleased the Minister of Immigration (Mr. Robb) was this afternoon, when he read the telegram from the Premier of Alberta, which upheld the immigration policy which the government had entered into. I venture to say there are a certain number of individuals who actually think this immigration policy is going to solve the problems of the country. On the other hand, I think there are infinitely more people who think it is one of the most unlikely things to solve our immigration policy that any government could conceive of, and when you take the whole policy of the government under review, to bring in more immigrants, raise more wheat and subsidize ships, what will be the result? That is practically what the policy of the government is. When these immigrants are coming in I think the general stipulation is to make them promise that they will engage in farm employment for two years. You are getting very close to the old situation; when a man was convicted of some crime he was sentenced to the Siberian mines. Instead of that, to-day you will send him out to the west and tell him to engage in agriculture. That is a reflection on agriculture and such a policy can never be successful. It is somewhat of a reflection on any group of people who would be a party to supporting a policy of that kind.

In conclusion, I do not think the government is justified in bringing those people to Canada and leaving them to shift for themselves under the conditions which have been cited, and under which a man who knew the language and knew the conditions of the country could hardly hope to make good. One of two things is going to happen to him. Somebody has to provide or the man is going to starve. Surely, in a land of plenty such as Canada, it would be a national disgrace if we allowed people to starve on our hands. The commitments of the federal government are not nearly so heavy as those of the provinces or the municipalities. If the federal government ignores its responsibility in regard to those men, I am a little afraid that it is only a matter of time until the provincial governments and the municipalities cannot take care of the situation. When that day comes, of course starvation will be the lot of those men. I regret that the hon. member for Centre Winnipeg did not make his resolution a little broader, but I am glad to extend my support to it as it stands.

Mr. C. W. STEWART (Humboldt): Mr. Speaker, I wish to support this resolution presented by the hon. member for Centre Winnipeg (Mr. Woodsworth), but I also desire to make certain reservations. I do not think those reservations which I would make would be more than those which the hon. member himself stated when he placed the resolution before the House. I would not wish to support it as a panacea for all the ills that have been mentioned in connection with unemployment and the possible causes of unemployment this afternoon. I do not think his resolution is offered as a solution of the unemployment problem. I take it that it would be about as sure a remedy for our whole unemployment problem as possibly a cup of ginger tea for an acute case of appendicitis. We have an acute trouble in the way of unemployment in this country. I have my opinion as to the causes of that unemployment and the possible solution of the trouble; but contrary, apparently, to most of the members who have discussed the resolution this afternoon, I do not think this is the time or place to discuss the causes and solution of our problem of unemployment. I take issue, I may pause for a moment to say, with my friends to my right who have attributed that evil or ill that is upon us, to our lack of tariff protection. If I were going to take time to offer a solution for our troubles here, I would commend the action which the government themselves placed before us last year as being necessary, and which they made at least a gesture of supporting. That is the encouragement of the development and of those who are engaged in the development, of the natural resources of this country.

But I want to support this resolution because I think it is aimed at something that should be done, that is the transference of the responsibility that now rests upon local municipalities in connection with immigrants who come within their borders for possibly a short term. I think it will be admitted that very few of those who come from foreign countries and make their home within a municipality contribute much to the social or civic or economic basis of its existence in the first two years that they are there, and sometimes they become a great responsibility and load upon that municipality. It has been stated here this afternoon that this proposal is some advanced form of state socialism. I cannot see the force of that argument. I do not think it is true. At the present time, our municipalities are responsible for the maintenance of those who cannot secure a livelihood through employment. We do not call that state socialism. Some of our provinces have been forced to take action to support those who have unwillingly become a charge upon the country through lack of employment. We have not called that socialism. Why is it that when the problem is brought into this House, it becomes state socialism, and when it is before the municipalities, as at present, it is looked upon as a purely humanitarian matter?

Mr. MARTELL: Supposing, under the wording of this resolution, a man after he came to Canada received employment for one hour, what would be the situation?

An hon. MEMBER: If he went to Hants?

Mr. MARTELL: If he went to Hants he would get employment if he wanted to work.

Mr. STEWART (Humboldt): As has already been pointed out, there is employment in this country provided the men are placed in touch with that employment, not perhaps for all of our people, but at least for those immigrants who come here and for the first two years are with us.

Mr. MARTELL: Supposing there is unemployment, and supposing, under the wording of the resolution, a man received one hour's employment within the first two years after he came to Canada, then the state would not be responsible for his unkeep after the two years. If that is the case, then, as regards our own people in this Dominion who have no employment for two years, why not make the state support them?

Mr. STEWART (Humboldt): The hon. member again is reading into this resolution something that, I think, the hon. member who moved it had no intention of placing there. Perhaps the hon. member has been unfortunate in the phraseology he used in framing this resolution. If he had known the full interpretation that was going to be given to his resolution, perhaps he could have worded it so that it would not have lent itself to so much expansion as it has been given this afternoon.

When I was interrupted I was saying that I believed the responsibility that is now upon the municipalities should be borne by the government which brings the immigrants into this country; that it is logical that they should bear at least a share of this responsibility; that it is no more socialism that they should do so than that the municipalities should do so. I am not in favour of doles. If I thought supporting this resolution meant that the country was asked to commit itself to offering doles or anything of that kind, I certainly would not speak or vote in support of it.

Mr. MARTELL: I am not trying to be carping in my criticism. Supposing we did support this resolution, even if the House supported it unanimously and a man got five minutes employment in Canada, then the state would not be liable in the opinion of this House.

Mr. STEWART (Humboldt): I have already told my hon. friend that if that meaning can properly be taken out of this resolution, the phraseology is unfortunate, but I do not think it can. If an immigrant who comes to this country is brought here under the regulations which now exist, he is, in the majority of cases, directed to the provinces or to the parts of provinces where agricultural labour is required.

Mr. GRAHAM: Several of the provinces have very active immigration agencies. This resolution would ask the federal authorities to take care of immigrants under the provincial system as well as under our own.

Mr. STEWART (Humboldt): It might possibly require some hedging in that respect. Immigrants are brought into this country who were, perhaps, instigated to come here by the action of provincial agents over whom the federal authorities should assume a certain responsibility. I will give an illustration in a moment or two to convey my meaning in that respect. I was trying to point out that the immigration that comes to this country at the present time is directed to the fields of agricultural labour and that there is employment, or, if there is not, immigrants should not be permitted to enter the country

for whom there is no agricultural labour. If the Minister of Immigration (Mr. Robb) were in his seat he would no doubt take exception to any charge that his department was permitting immigrants to enter this country for whom agricultural labour was not in sight. And usually it is true that this does not occur. But it sometimes happens that these people lose the position or job they came to take up, and it is then the duty of the municipality in which they reside to maintain them till they get another job. That is an unfortunate condition, I maintain, inasmuch as the municipality is handicapped in placing these men when the work that offers is not within their own limits but miles removed. The Minister of Labour (Mr. Murdock) told us to-night that he had on the authority of the Deputy Minister of Immigration a statement to the effect that there was work for all immigrants who came provided they would take farm labour. I believe perhaps that is true; so far as my own observation goes it would be true. I have therefore very little sympathy with the man who refuses to take such labour as is offered him. I would suggest that if this resolution were accepted by the government such regulations as might be made should be so framed that any man who refused to take the work offered him, no matter what it was, should be removed from under the paternal care which the government would otherwise have for him for the period of time specified. But I want to point out an example that has come to my attention; and I am told by the officials of the Immigration department that it is not singular, there being a number of similar cases. An immigrant was brought into the country having passed the inspection of the federal department. And here I may say to the Minister of Railways (Mr. Graham) that possibly this man came in through the activities of some provincial agent, although I do not know. However, he came into the country, passed the immigration health inspection at port of entry, and then went on the province in which I reside where he secured farm labour. He had been there a very short time when he was taken ill and he was unfit to carry on the work for which he had been hired. He was sent to a hospital where he remained for some time, suffering from tuberculosis. All that time the hospital bill was growing. He had been in the municipality long enough to have established residence there under the regulations and so his bill had to be taken care of. His case did not improve with time and he was sent to a provincal sanitarium. The municipal authorities then complained to the federal department and steps were taken to have the man deported but the process of deportation was exceedingly slow. I am not critizing the officials in that regard for I do not know just what caused the delay; it might have been that he was not in a fit state to be deported. At any rate he remained about three years in this sanitarium and in that time his bill had amounted to a considerable sum, greater than any rural municipality in that part of the country could afford to have shouldered upon it. Now someone had to bear that burden. The immigration officials maintained that the man could not have been sent out of the country sooner and the fact was that in the long run that municipality, sparse in population and not very well off financially, was forced to bear the expense incurred in taking care of this man.

Mr. CARROLL: How long had the immigrant been in the country before he was taken ill?

Mr. STEWART (Humboldt): He remained in the sanitarium about three years.

Mr. GRAHAM: Would this resolution affect that case?

Mr. STEWART (Humboldt): It is because I believe that it would affect such a case as this that I support the resolution. And this is not a singular case either.

Mr. GRAHAM: But this resolution refers only to those who are unable to get work.

Mr. STEWART (Humboldt): This man was unable to take employment owing to sickness.

Mr. GRAHAM: But the resolution does not say anything about being unable to "take" employment; it relates to ability to get work.

Mr. STEWART (Humboldt): Well, no man in a sanitarium can get work.

Mr. GRAHAM: I am only stating my belief that the resolution would not affect such a case; that is all.

Mr. STEWART (Humboldt): The man had no one to depend on and the municipality had to foot the bill. I contend that the whole country should bear the expense in an unfortunate case like that, and when I am informed, as I am, that there are other cases of the same kind I hold that we need some provision such as is now proposed to meet the situation. Personally I do not favour paternalism in relation to immigrants, but we certainly do need to afford them some protection for at least two years until they have

a chance to contribute something to the municipality in which they live. After they have made a worth-while contribution to municipal funds, then the municipality might well be asked to take care of them in any extremity. I do not think that the time specified, namely two years, is too long, and as I believe it was the intention of the mover that the resolution should cover cases of the nature I have described I am going to support the motion.

Mr. T. L. CHURCH (North Toronto): I am not interested in propaganda either for or against the government or the Progressives in regard to the subject of unemployment, but I am interested in the city from which I come which is compelled to contribute nearly a million a year to the relief of the unemployed, and this through no fault of its own. I am also interested in humanity and in those out of work.

It is all very well for the Progressives to talk about the condition of the unemployed out in the west where these men can obtain employment while the harvest is on. But where do they go when the agricultural season is over? Why, they come down to the larger centres of population in central Canada which are used as dumping grounds and those cities are obliged to shoulder the burden of their upkeep although they are in no way responsible in the matter. I will not support any such resolution as that proposed by the hon. member for Centre Winnipeg (Mr. Woodsworth) because I do not believe it is the duty of the government to get anybody a job, although I do believe that it is the duty of governments, Dominion, provincial or municipal, to help those who are in trouble and out of work through no fault of their own. I further believe it is their duty to get together, solve the unemployment question and give Canada an adequate national policy which will make work plentiful.

I come from a large city where unemployment conditions are more acute than they are in any other part of Canada. It is a British city, an important industrial centre, and we have had serious unemployment conditions there this winter. I do not care who is to blame for this, and I do not say that the government is all to blame; nevertheless I have never known unemployment to be worse at any time in Toronto than it is to-day. The British immigrant's lot is not a happy one under our immigration laws. I have here a copy of Hansard reporting the debates in the British House of Commons three weeks ago. It shows that of forty-six questions asked in the House on the orders of the day some thirty-five related to unemployment, its cause and the tariff. I am sorry that the hon. member for Brome (Mr. McMaster) is not here; I would point out to him that according to a return given in the British House the agricultural labourer over there is paid twenty-nine shillings or a little over $5 per week. And this under free trade. As I said some time ago:

> Ill fares the land to hastening ills a prey,
> Where free trade flourishes and men decay.

It is significant that while the hon. member for Brome was a few weeks ago, speaking eloquently to the students of Varsity in Hart House Toronto on what free trade would do in the way of relieving unemployment here, some 1,200 men, British immigrants and others who could not find any place to which to go, were sleeping in the police stations and the House of Industry in Toronto, depending upon public charity. Let me quote the following news item in regard to conditions in Toronto and this illustrates something that is a daily occurrence:

> Many Hungry Men Fed
> Reveille Mission, Queen West, Scene of Hungry Crowd Saturday
>
> Pastor Charboneau opened the doors at Reveille Mission, 383 Queen street west, at 2.30 p.m., Saturday afternoon, to a crowd of 236 hungry people, who were waiting for a free meal. Everybody was fed, and some who could not get in, were fed at a restaurant nearby.

The city, House of Industry and the various charitable institutions of the city and the churches and charities have had a hard time this winter relieving unemployment and families in distress, and it is the duty of the governments, federal, provincial and municipal, the churches, and the social organizations to work in unison, to consecrate their best efforts, and intelligence, to an effort to solve this social disorder in our midst. The first duty of a government is to look after the health, peace, prosperity and comfort of its citizens.

It is cold comfort for the men out of work to read the discussion of their troubles in this House. I do not say the government is to blame altogether but primarily, as I said the other day, the question of unemployment comes within the federal jurisdiction. The control of banking, of immigration, of trade and commerce, of agriculture and other activities set out in section 91 are essentially federal activities, and if there is any agency which should devote itself to the solution of unemployment it is the federal government, for undoubtedly immigration and unemployment are closely linked together. If you find a flood of immigration, you are pretty sure to find some months afterwards a certain amount of

unemployment. Unemployment is not a local question, it is not a provincial question, it is absolutely a national question. Every country is more or less troubled with the difficulty of finding employment for many thousands of its working people. In Canada unemployment is to a certain extent seasonal, and for that reason I am strongly in favour of a close season for immigration. What is the use of bringing immigrants to this country in November, December, January, February and March? And yet many British immigrants are misled by the representations and greed of the transportation companies and even of our own immigration agents over in the Old Land who say that there is always plenty of work for every newcomer to the Dominion. A couple of hundred British immigrants reached Toronto as recently as the middle of January last. Do you think they went west? No, nearly all stayed right around Toronto. I had a few come in to see me, including a man—an ex-soldier—and his wife from Cheshire. They were two war workers who had been employed at a golf club in the Old Country, and they produced letters from the transportation companies and from the government agency that work was good in Toronto. They were in destitute circumstances. I am glad to say I was successful in getting them positions. This was not an isolated case; there are thousands of them. For that reason, I repeat, I am in favour of a close season for immigration.

I think the government have very little conception of their duty in helping to solve the unemployment problem. For instance, hon. members will observe on page 1316 of Hansard that in reply to a question of mine respecting money votes for agriculture and for unemployment I was informed that while millions of dollars had been granted in 1924 in aid of live stock, health of animals and other agricultural purposes, the expenditure on unemployment had for the same year amounted to only $5,700, while for the current year not a dollar has been given to relieve the situation. In contrast with this I am glad to say that we have in Ontario a government that is alive to the seriousness of the situation. When the Minister of Labour advised a large deputation from various municipalities and provinces that the federal government did not intend to grant any relief to ameliorate the unemployment trouble, the Premier of Ontario announced that his government would assist the Ontario municipalities to the extent of one-third of the excess cost over normal which any municipality might have to expend in unemployment relief. In addition, the attorney general has introduced a bill in the legislature enabling a municipality to devote a certain amount of taxation up to one mill for the relief of the unemployed. So the government of Ontario is endeavouring to do its part. The large deputation which interviewed the Minister of Labour last January, and to which I have already referred, included the representatives of several municipalities, of the G.W.V.A., of the Trades and Labour Council and of the Salvation Army. The Toronto section was headed by Alderman Miller who said:

> These people have been coming to us, and as we have gone to the limit ourselves, we bring them to the Dominion government to see what they'll do.

In a memorial from the unemployment association, A. E. Smith described unemployment as:

> A social disease arising out of a social system. The cause of unemployment is the possession of a private interest in the machinery of production on the part of a very small class who exercise it wholly at the impulse of their own advantage or caprice. I call for a public policy regarding unemployment so that there may be an accepted understanding beforehand of what may be expected whenever unemployment is forced on the workers.

Alexander Shields, of the Great War Veterans' Association, speaking for the ex-service men of Toronto, said:

> I estimate the unemployed at 40,000, of whom 60 per cent were ex-service men. I heard figures quoted the other day that out of over 3,000 registrations of single men in our local employment office only a little over 200 could be classed as bona fide residents of the city of Toronto and the figures from our own relief department show that out of 2,056 cases assisted there were 442 families of ex-Imperial soldiers, despite the fact that we have been forced to only grant relief to applicants who have been resident in the city for one year, unless in cases of extreme destitution.
>
> We have only been able to help one applicant in four, most refusals being for this reason, or through the necessity of conserving the funds for very extreme cases only, as relief has already been closed down in four of the most densely populated districts because the quota set aside for those areas has been distributed. It may also be noted that our records show that the average man helped has been unemployed for slightly under four months.
>
> The condition of thousands of single men is pitiable, many are sleeping in the police stations, railway depots, and so forth, and subsisting on meals supplied by the different organizations in the city of Toronto.

In my opinion unemployment is closely related to immigration, and the subject of immigration is deserving of the consideration of the best minds and the best hearts in this country. Social workers, federal, provincial and municipal governments should all get together and work in unison in an effort to solve this problem, which is one of the greatest problems we have in this country. I am not saying it is due altogether and en-

tirely to this government or to that, or to the Department of Trade and Commerce, the tariff or anything else. I am not prepared to go that far, but I do say there is a great deal of unemployment in this country, and in my opinion, and I have studied this question very carefully, unemployment in this country is caused very largely by our not developing our own natural rsources. No one knows that better than the grain growers in the west. Their grain is being taken across the line, to Buffalo, where there are now twenty-eight elevators, and their grain is being milled there, mixed with American wheat and exported overseas and the identity of Canada's fine hard wheat destroyed. All the employment that is furnished by those twenty-eight elevators in Buffalo would give work to 15,000 men at Port Colborne and other lake Ontario points, if a duty and embargo were placed up to 45 per cent on wheat and have it milled in Canada and exported through Canadian channels entirely. We are not developing our natural recources in this country, and Canada has become the happy hunting ground of American millionaires who are seizing our forest, timber and mineral wealth.

We are exporting mica, nickel, pulpwood, power and coal. If we manufactured or utilized these articles in this country, it would provide work for tens of thousands of men. Canada supplies 85 per cent of the mica of the world, and 95 per cent to the United States. In 1924 Canada sold 112,000 tons of mica to the United States in the mill fibre state, only one degree removed from the crude. For that we received $5,546,000. When that was manufactured in the United States, it realized $70,000,000 worth of the finer products of asbestos, and another $10,000,000 worth of rough asbestos. Had we developed our own mica, $80,000,000 would have been distributed among Canadians.

Canada controls the world's supply of nickel. We need fear no competition in this particular article. We should develop nickel in our own country and help provide employment here. Canada's great nickel deposits give the United States all its supply and the world 85 per cent of its supply.

According to a bulletin issued by the United States Department of Agriculture, the United States is consuming 75 per cent more pulpwood, and consequently is importing great quantities. Last year Canada sold 1,350,000 cords of pulpwood to the United States, receiving $13,000,000 for it, while this raw pulpwood was converted in the United States into a value of $67,000,000.

[Mr. Church.]

We are also sending to the United States $100,000,000 every year to the mine owners in Pennsylvania. We could use $56,000,000 of of that sum to provide work and wages in the maritime provinces, in Alberta and central Canada. So, Mr. Speaker, I contend that unemployment is due in a great measure to our not developing our own natural resources and to our lack of a national policy based on the principle of our own markets for our own products and our own work for our own workmen.

In the city of Toronto to-day we have many immigrants out of work through no fault of their own. Many of them have not been in Toronto one year and are a direct charge on the community. Here is a letter from the Rev. W. L. Baynes-Reed, Rural Dean, Toronto, a splendid returned soldier and patriot, in which he refers to these British immigrant harvesters coming down from the west a year ago and being dumped in the city of Toronto. An appeal is being made by the Anglican people of the city to take care of these British-born who are out of work. Over 9,500 meals have been provided, and over 3,500 beds.

This unemployment situation is not confined to the city of Toronto. We find practically the same conditions in Hamilton, London, Brantford, Ottawa and other cities. According to Social Service Commissioner R. W. Hopper of Ottawa, in January no fewer than 897 families in Ottawa have been given civic aid of some kind as against 685 in December. The number of children who shared in this relief was 2,646. There were 237 Protestant families given relief, 654 Roman Catholic families, and six families of other denominations.

The number of unemployed in Hamilton, Toronto and other cities has been steadily increasing. In Toronto the official records at one employment bureau show about 10,000 unemployed. Those are just civilians registered at one bureau, on Front street. The latest report from this bureau indicates that unemployment has been steadily mounting, and that includes unemployment among the immigrants. There is no evidence that the peak for this winter has been reached. There are 6,700 names on the record of the bureau, which is a considerable step up from a few weeks ago. Last year the peak was not reached till the middle of February. It is expected that this season will be somewhat worse than last year. This report goes on to refer to the large number of men from the west who have been dumped into the city, and whom the city has to look after.

The situation can be traced to some extent to an influx of men from other centres. Toronto's reputation of not letting any man go hungry appears to be a magnet to many of these people, although I might say that the city of Toronto has a rule that no man can get relief until he has lived in the city a certain length of time. Seventy-three thousand men in the past six months joined the exodus to the United States according to the United States Labour Bureau report for January last and intend to reside there permanently.

Here is a chart prepared by Mr. George Ross, of the city of Toronto. It shows the peak of unemployment and gives the amount of money that has been spent by the city and by the government on different works. It is well over 1¼ mills on the dollar a year.

I have here a return that was brought down to the House showing the amount that has been spent by this government in the relief of unemployment in the fiscal year 1919-1920. The figures are as follows:

Toronto..	$625,526 08
Hamilton..	58,069 59
Winnipeg..	249,944 16
Vancouver..	464,470 51
Montreal..	999,917 22

The attitude of this government is that they have nothing to do with unemployment, but under the British North America Act I contend that they have jurisdiction to deal with immigration, the trade and commerce of the country, the banking laws, the tariff and many other matters. I think the time has come when a new policy should be pursued regarding immigration. There should be a close season for immigration, and there should be some authority checking up the immigration authorities in the Old Country, and checking up the transportation companies who are so greedy to get people out here that they will bring them at almost any price. During the years 1918 to 1921 the government made a grant towards the relief of unemployment on the basis of paying part of the excess cost of certain public buildings. It worked out well and helped to relieve the situation. Unemployment relief always has been and must necessarily be a Dominion matter, in my opinion, for the reasons I have given. The municipalities are doing their part to relieve unemployment. Toronto has spent nearly a million dollars; it will be a million and a half if something is not done to help them before they get through.

This question is one of the most important that is before the people at the present time. It is one of the first principles of government that the government should look after the health, comfort and prosperity of its people. In the days of Lord Palmerston when a British subject got into difficulties in Africa in connection with the Ashanti expedition, the government spent several millions to relieve him, the policy of the British government was to maintain the principle expressed by the words civis Romanus sum—"I am a Roman citizen"; that is, in this case, "I am a British subject."

It is the duty of this government to do something for the liberty of the subject in regard to unemployment. It is to be noted that in the Old Country they are taking action in regard to emigration; a question was asked in the British House of Commons the other day on the subject. They are going to check up this matter and find out who is to blame for certain conditions with respect to emigration from England to Canada. Representations are being made there with a view to bringing agricultural labourers to Canada from the Old Country, where the average return for agricultural labourers is about twenty-nine shillings in wages a week. No wonder they are anxious to get away from England. These people are being told that times in Canada are good, that the conditions are favourable and that there is plenty of work, so that the responsibility is on the government, not only under section 91 of the British North America Act, but because of representations made in the agricultural counties in the Old Land by transportation and government agents with regard to conditions here. Many of the men who are coming here from the Old Land are returned soldiers. Figures available from Toronto indicate that 247 of the men out of employment there are Imperial ex-soldiers who were brought out to Canada on the understanding that work was good, but who when they came here found themselves a charge on the social and municipal institutions of the country. It is not fair to large centres of population in Canada which are bearing the peak load of the taxation of the country that this condition should exist. Forty-nine per cent of the total income tax collected throughout Canada is paid by Ontario. Twelve or thirteen millions of the total tax are paid by the city of Toronto. Toronto is an over-taxed city. The people of that city contribute over $100,000,000 to the federal exchequer and it is not their function, it is not their right, to pay for the upkeep of harvesters, for instance, who are sent back from the west, several thousand of them dumped there for the winter months.—

Toronto is a dumping ground for unemployed from all over. Many of these men are British born, many of them returned soldiers. We have a large number of social workers in Toronto. Almost every church has a social agency of its own and is endeavouring to take care of its own unemployed, but that is impossible. Thousands of people from all over Canada, from England, Ireland and Scotland and the west have been dumped in our city. I do submit that the government of Canada could be engaged in no better work than that of taking up with the governments of the provinces and with the municipalities, the churches and various social organizations, this question of unemployment. The best intelligence, the best thought, the heart and conscience of every one in Canada should be brought to bear upon the solution of this unemployment question and the immigration problem as it affects unemployment. If the government will do this they will be doing something to make Canada a happier and a better country to live in.

Mr. J. J. DENIS (Joliette): Mr. Speaker, I do not wish to be severe in my reference to the resolution introduced by the hon. member for Centre Winnipeg (Mr. Woodsworth), but it seems to me to be the most insignificant resolution that was ever presented to this House. Not only is it insignificant; it is unjust to the rest of the community. It is no credit to parliament that a resolution of this character should have been debated at such length; much less is it a credit to the hon. member who proposes it.

Now then, what is the resolution? It reads:

> That, in the opinion of this House, if at any time during the first two years after his arrival in Canada any immigrant is unable to obtain employment, the federal government should accept full responsibility for his maintenance.

Let us examine this proposal and see what it really means. First of all, I submit that it is a fallacy of the worst kind. If effect was given to this resolution by the Parliament of Canada and by the government it would mean that immediately thereafter any immigrant coming to Canada would be guaranteed for two years against any risk of unemployment. What would be the significance of that provision? Is it right and fair that the people who have come to this country and have shared the risks that every other citizen has shared should be discriminated against, should not have an equal chance with those who now come from other countries? What about the descendants of those who settled this country years ago? They are not covered by this resolution, though they may be two years or three years without employment. What about our forefathers who settled this country three hundred years ago?

Mr. IRVINE: Does my hon. friend suggest that they are out of a job?

Mr. DENIS (Joliette): Just a minute; I will answer that. The man who comes from the Old Country should come here on an equal footing with all other citizens; he should not be given a preference, as he would be given by this resolution. We have not in this country any insurance against unemployment; it does not exist for the descendants of those who came here three hundred years ago, yet the hon. member for Centre Winnipeg (Mr. Woodsworth) wants it to exist for those who have been here not for three hundred years, or one hundred years, or one year, or one month, but for one day. Is the man who comes to this country as an immigrant, to share the lot of the people of this country—is he to be protected over and above everyone else and at the expense of those who have been here for years and years? It is the most ridiculous proposal, Sir, that has ever been submitted to parliament.

Let us examine the situation as it exists in Canada. We have in the city of Montreal, in the province of Quebec, thousands of people who are without employment and who have been without employment for months and perhaps years. The same condition exists in Toronto and in all the large cities of Canada. Should the government take it upon themselves to accept full responsibility for the maintenance of these people? Not at all. Time and again the federal government have declared that unemployment is a matter to be dealt with first of all by the province; then by the Dominion. This resolution would place the problem of unemployment upon the shoulders of the federal government in so far as it concerns immigrants who have come into this country within two years, but so far as the rest of the community is concerned the government would not be responsible. This resolution goes further, and demands that a guarantee be given. If this resolution were passed into law, anyone coming to this country as an immigrant, would have a guarantee, a pledge, a contract, or an insurance policy that if he did not find employment within two years he would be supported by the government.

An hon. member said a minute ago that this resolution would not apply perhaps if the immigrant could get employment say for one day in two years. That is not my interpretation of it at all. If during the two years any immigrant is one week without employ-

ment, under this resolution he would be entitled to maintenance. In other words an immigrant is guaranteed employment for two years the moment he comes into Canada. We have had immigration into this country for a great many years and there has been immigration into the United States for many years, but never in this country or in the country to the south of us have we ever seen such a preposterous proposition as the resolution now before us. This resolution asks the government to pay a subsidy, pure and simple, to those who come to Canada and cannot get employment. I submit that this cannot be done. It would be unfair to the rest of the community. As I stated at the commencement of my remarks, this resolution had been discussed at too great length. I will take my own advice, resume my seat, and ask the House to reject this proposition.

Mr. WILLIAM IRVINE (East Calgary): The hon. member who has just spoken (Mr. Denis, Joliette) has made a bold effort to prove that the resolution the House has been considering all day is the most ridiculous thing that has ever been presented to this parliament,—did he add for a century or more? I do not know whether he included all parliaments or simply this one. But there are at least two other things that I could mention that are more ridiculous than this resolution, even granting it to be ridiculous. The first thing that appears to me to be more ridiculous is the position taken by my hon. friend himself (Mr. Denis, Joliette) in relation to the situation with which the resolution endeavours to deal, and the other thing that is more ridiculous is the position of the government itself, directly responsible as it is for the situation with which the resolution deals, and yet that government has absolutely nothing to say with regard to the condition which it has created. It has absolutely no solution for the problem that it has placed upon the shoulders of the people of the country.

Mr. MURDOCK: Is it not a solution for the government to state that it is in a position to place every man who is ready and willing to go on the land?

Mr. IRVINE: If solutions lie in what the government says, all the problems of Canada would have been solved long ago, but it is not what the government is saying that I am thinking of, it is more what they are not doing that concerns me. My hon. friend knows perfectly well that he is not in a position to place everyone that may apply for work. He might say so, but that is another thing that is more ridiculous than the resolution; so much more so that I shall not take time to answer it.

Let me turn now to the resolution itself. It may permit of a very wide discussion of the whole unemployment question, but the idea of my hon. colleague in moving it was to confine the discussion to the particular phase of the unemployment question as related directly to the government's policy on immigration. I have no quarrel with those who have widened the discussion. I am quite willing to admit that the whole question of unemployment involves government policy as well as other perhaps more fundamental conditions. But I am not going to deal with the question in a general sense. I will confine myself to dealing with that particular phase of the unemployment situation that is mentioned in the resolution.

May I say at the outset that I am not opposed to immigration, and I am quite sure that the hon. member for Centre Winnipeg (Mr. Woodsworth) is not opposed to immigration; neither have I heard anyone who has spoken on this resolution to-day express any opposition to immigration, all of them being willing to see the population of Canada grow. The position that we take is that we want to see an immigration policy that will be at least fair to the people who are here, fair to the people who come here, and that will have regard to the economic conditions pertaining in the country at the present time. Suppose that the government were in charge of a ferry boat; that ferry boat would carry only a hundred people, and there are a thousand people to go across. There is lots of room on the other side, but the ferry boat can only carry a hundred. The government insist on loading a thousand people on the boat, which would sink it. We advocate that they should take one hundred at a time until all are safely across. That is the kind of immigration policy we want. We want the government to adopt an immigration policy that will place people in Canada no faster than we can absorb them into our industrial life, whether they go to the farms or to any other part of our industrial life. That is our attitude towards immigration. We do not wish to close the doors of Canada against all immigrants, but we certainly do not wish to have immigrants brought into the country faster than they can be accommodated. Further than that, we not only advocate a carefully regulated immigration policy, but we are anxious to see this government adopt some economic policy which will provide, not only for those that are in Canada but also for as many as we can possibly bring in. The responsibility for the solution of our immigration policy rests on the should-

ers of the government. They must find an economic policy that will make it worth while for people to come here, and then the whole problem of immigration will be solved.

The expressed meaning of this resolution is to bring to the attention of the government some of the results of its own policy, and to urge upon it the necessity of accepting the responsibility for that policy. It may be ridiculous, as the hon. member who has just spoken (Mr. Denis) terms it, for the resolution to seek to guarantee either work or a living to all immigrants for two years, and it may be unfair, as he says, but it is equally ridiculous and equally unfair to bring thousands of people to this country when we already have more people than we can provide work for. That is unfair, not only to the people who are here workless, but equally, if not more unfair to the immigrants. Moreover, in Great Britain, the country from which the government pretends, at least, to seek the larger percentage of its immigrants, they already have a guarantee against unemployment, not for two years, but for all their life. If my hon. friend wants to have an immigration policy that is going to be attractive, he will pretty soon have to guarantee something more than election platforms because the present condition of affairs in Canada will not remain long unknown to the people of Great Britain.

Let me draw to the attention of the government a specific instance that will justify the resolution. I quote from a letter received from an immigrant in the city of Calgary, and I hope the Minister of Labour (Mr. Murdock) will see to it that this gentleman finds work quickly, or else finds what he is seeking in this letter. I will read it:

I came here with the third McDonnell party in August, 1924, to Red Deer, when I was taken to the farm to be employed; the farmer was not there and the S.S.B. agent, Mr. Smith, left me at another farmer's and when the man that was to employ me came, he told me I would have $25 and no board per month and I did not know where I was. I had to accept this pay for harvesting. Well, I was returned to Indian school and left for bush work but was called back owing to my wife threatening to take my children's life (a job I often think now of). After that episode our deportation was ordered and we started back to the Clyde, but the wily Rev. McDonnell met us and told us Mr. Woods, S.S.B. superintendent at Calgary, had a job for me, but when I went to him—no job, and for three weeks he left me going daily until he offered me five dollars per month and I have since put it in the Calgary Herald of the 7th instant. Well, sir, I am now up against it and I am not allowed relief here and I beg you to use your power—

Note the word:

—to have my temporarily suspended deportation put back into effect, before something very drastic happens, as I don't intend to see my wife and family starve, so please do your best for the sake of my children. I may state, sir, I was employed as a boiler man the day before I left Glasgow with the corporation.

[Mr. Irvine.]

I presume he means by "corporation" the group with which he came here under the Rev. Mr. McDonnell. If hon. members will recall the wire of Mayor Webster which was given to the House by the Minister of Labour, they will note that he referred to a large number in a position similar to that described in the letter, who had come to Calgary under the immigration policy of the government, but who had not been long enough in that city to come within the limits of the provisions made by the city with regard to relief. As a result these poor people were and are suffering. Surely it is ridiculous for hon. members on the other side of the House to object to this resolution on technical grounds, when men like the man whose letter I have just read, brought here by the policy of this government, are starving and threatening to destroy their families rather than see them starve.

Mr. MURDOCK: Will my hon. friend let us have privately the name and address of that family?

Mr. IRVINE: I am sorry that I forgot to read the name and address. It has just been whispered to me that I had better not make it public, but I shall be glad to pass the letter over to the Minister of Labour now. I do not, however, suppose the gentleman who wrote the letter would object to having his name published. That there is a direct connection between the government's immigration policy and the suffering of many people needs no argument. A large number of individuals as well as municipalities and cities are actually suffering to-day because of the blunders of the present government. I read to-day, before the orders of the day were called, a despatch from Lethbridge dealing with the importation of Japanese, Scotchmen and Russian-German families in connection with a new industry that is to be started in southern Alberta. I am glad to think that we are going to have another new industry in southern Alberta, but I think the position taken by the Trades and Labour Council of Calgary, whose letter I have in my hand, is one that ought to commend itself to the present government. This is a letter from the secretary of the Trades and Labour Council at Calgary:

The above council desire to know if the statement is correct—

That is the statement which I read to the House this afternoon from the press.

—and if that is so, would point out that there are at the present time thousands of able-bodied men unemployed in this province and have been for some considerable time, many of whom at the present are receiving relief from the provincial government to keep them from starvation.

We would therefore request (that is if the application has been made) that before it is conceded to that serious consideration will be given to the existing conditions here, as above stated.

The point in connection with this letter is that the company which is about to start a sugar factory in southern Alberta has, I understand, received a Dominion charter, and the Trades and Labour Council of Calgary urge upon this government to use its influence to the end that this company shall employ working men now in Alberta rather than import Russian, German, Japanese and Scotch labour. To that question this morning the government gave not an answer, but a sneer. They refused to recognize the relationship between conditions now existing in this country and the immigration policy which they have been following. It has been alleged by some hon. members who have spoken on this resolution that there is some idea of offering the resolution as a remedy for unemployment. Nothing, of course, could be further from the intention of the mover of the resolution.

The remedy for unemployment, we are aware, must be deeper than the resolution suggests. Again I will recall to the attention of hon. members the fact that this resolution intends to deal only with one small phase of the question, one that is pressing at the present time, and that is the question of those unemployment who have come within the last two years as a result of the present government's immigration policy and who are threatened with starvation because there is no municipality that can undertake their support, seeing that many of them have not been long enough in the community to come within the scope of the relief arrangements now existing.

The full intent of the resolution is to see whether the government is prepared to accept responsibility for its own policy. It does not necessarily imply, as the hon. gentleman who has just taken his seat would seem to indicate, that the only way that the government can discharge its responsibility for the immigrants who come in under its policy is to give doles. It does not imply that this is the only way. My colleague (Mr. Woodsworth) suggested some other means; I would suggest another, and that is that the government should deport every one of those immigrants for whom it is unable to find work. That would be accepting the responsibility for its policy, and perhaps it would cure the government, equally as fast as having to pay money out, if it had to haul thousands of people back every year whom it had been instrumental in bringing out. That in itself might be a means of bringing the government to a knowledge of the real situation.

After listening to the remarks that have been made so far in the debate I have summarized them in my own way. The government in dealing with the situation has no policy and is proud of the fact. The leader of the Progressive party (Mr. Forke) has no policy and frankly confesses so, and for his honesty I commend him. Honourable members of the official opposition profess to have a policy, whether it is good or bad. Now I would say that if the mere attempt to do something is any reason why this government should be supported in its policy of subsidizing ships as was alleged by government supporters, then perhaps one might vote in favour of the policy proposed by the opposition on the ground that at any rate it is something more than the government proposes to do in connection with this situation. The fact is that the government proposes nothing and appears to be rather glad of having nothing to propose.

Mr. MURDOCK: The government does propose something: it proposes to put any immigrant who is ready to work on a farm where he can get work.

Mr. SPENCER: Would the government do the same for the unemployed?

Mr. MURDOCK: It has not so indicated and my hon. friend knows that probably that might be impossible. But so far as immigrants are concerned the position of the government is that those who are ready and willing to work may get work.

Mr. IRVINE: I am going to deal with the proposals of the minister. But let me say in passing that if the government now proposes to find employment on the farms for all the unemployed of Canada I personally regret that they did not come to this conclusion some years ago.

Mr. MURDOCK: I did not make that statement. I know the hon. member does not want to misquote me but I must decline to let him put words into my mouth. I said no such thing. It would not be bad for the hon. member to stick to the truth if he has an argument.

Mr. IRVINE: My hon. friend is warm and he charges me with misquoting him. Perhaps he will state again exactly what he did say, because if he did not say what I have

stated he must have said something far less important.

Mr. MURDOCK: I stated that the policy of the government according to a statement of the Deputy Minister of Immigration in charge of matters appertaining to the Soldier Settlement Board, which statement I read to the House, was that any immigrant who was ready and willing to work could be placed on a farm to work.

Mr. IRVINE: I understand then that the government has developed a new policy, which is to put on a farm any immigrant who is willing to work. Well, I presume that the immigrant can find work there all right. But I wonder whether he will get union wages? I could not dream of the Minister of Labour, a labour man for twenty-three years, advocating the placing of men on farms to work for nothing or even to work for a cent less than union wages, and certainly not to work for less than would be required to maintain their families and themselves respectably. My hon. friend is quite aware, I have no doubt, that in winter in this country he cannot place men on the farms nor can he get wages for them there. He knows perfectly well that that is not a solution, and I venture to say that a month from now it will be necessary for hon. members of this House to be again asking the Minister of Labour what he will do with some of these people. The policy that he has just announced is as ridiculous as some of the supporters of the government think this resolution to be. The minister in dealing with the resolution began in his usual style. He told us that there was unemployment some ten or twelve years ago; and I think that question was first raised by the hon. member for Last Mountain (Mr. Johnston) when one hon. gentleman to my right was speaking, asking if there were not very many unemployed in the year 1913-14. There were many unemployed in 1913, I have no doubt. I am sure that all hon. members will agree with the Minister of Labour that there were many unemployed at that time.

Mr. MURDOCK: The hon. gentleman cannot show one word in Hansard—and we will send and get it—indicating that the Minister of Labour referred to the year 1913. Again he misquotes.

Mr. IRVINE: I do not think that the minister will gainsay my assertion that he referred to the unemployment situation at that time when the now official opposition was in power. Did he or did he not refer to that period? He may not have used the words 1913 but did he not refer to that period? If he did not I shall be ready to apologise; but I am quite sure he did. He dealt with unemployment in the United States, pointing out that there were twenty million people there out of work, and his logic was that since there were twenty millions unemployed in the United States there was ne reason why we should consider pressing this resolution. That is the reasoning of the Minister of Labour. But while he touched on the unemployment of the past, and while he was rather enthusiastic in describing the unemployment of the United States, he had very little to say, about unemployment in Canada —very little indeed. In dealing with that question he explained to us about great numbers of our unemployed being unwilling to work at all and who perhaps could not work if they tried. This unwillingness or inability to work he attributed largely to our returned soldiers. Then he explained about the errors of judgment on the part of the miners in Alberta, as the true reason why they were unemployed. But what of the real bona fide unemployed,—are there not any? Are all these resolutions that are coming to us, are all the stories in the public press, are all the deplorable conditions in Nova Scotia to which even Russia has responded to ameliorate—are all these pipe dreams, or is there some truth in them? The hon. Minister of Immigration (Mr. Robb) replying to the mover of the resolution (Mr. Woodsworth) is just about as vague and hopeless as the Minister of Labour. He says in effect: We have always had unemployment, and we always will have. And since we are always likely to have it, he seems to indicate that the best thing we can do is just to accept it as part of our philosophy and not pay much attention to it. Those were not the words of the hon. gentleman, but certainly they express the only logic that one can draw from his remarks.

Now, Mr. Speaker, in view of the fact that the government has no policy for unemployment, in view also of the fact that some of its own supporters have characterized this resolution as being ridiculous, and in view further of the fact that the Minister of Immigration positively refuses to have anything to do with the resolution and states his intention to oppose it, I beg to move, seconded by the hon. member for Bow River (Mr. Garland) the following amendment to the resolution:

That all the words after the word "House" be struck out and that the following be inserted: the government, having no satisfactory policy either for alleviating the suffering of the victims of unemployment, or for providing a remedy for the evil, shall resign.

Mr. H. E. SPENCER (Battle River): Mr. Speaker, the question before the House is in my opinion one of the very important questions that come annually before us and one that we cannot put aside. The problem has not only been with us in the past, but it is growing in the present and will grow to a still greater extent in the future. The resolution put forward by the hon. member for Centre Winnipeg (Mr. Woodsworth), to which an amendment has been moved by the hon. member for East Calgary (Mr. Irvine), is of such importance that I cannot see how any government can afford to ignore it. The federal government has a distinct responsibility with regard to unemployment, because it controls certain policies which have a direct relation to the subject. For instance, the federal government has complete control of fiscal policy, and it has complete control—if it cared to exercise it—of financial policy. Both of these policies, handled in certain ways, have no doubt been the means of increasing our unemployment from year to year, and will tend to still further increase it. The federal government also has control of our railway policy, and in that respect it has had a great deal more to do with the present unemployment than a good many members may appreciate. Some ten to fifteen years ago this country went wild over railway building—charters were granted very liberally, in fact too liberally, by this House, and promises were made all over the country that railways would be constructed, and these promises were particularly numerous for western Canada. Thousands of immigrants settled along the proposed railway routes, and to-day they are becoming discouraged because they still lack the long promised transportation facilities. In many cases these disappointed settlers will not continue farming; they will drift into the cities and help to fill the ranks of the unemployed either directly or indirectly. Only this morning I received a petition signed by several hundred people asking for certain transportation facilities in their district that I know cannot possibly be given them for at least three or four years. They have been promised those facilities for the last fifteen years, and at last they are tired of waiting and are saying that if something is not done large numbers of them will have to go elsewhere.

An hon. member to my right, I think the hon. member for West Toronto (Mr. Hocken), mentioned that some people seemed to think that unemployment is come to stay, but he hoped and believed they were not correct. I cannot agree with the hon. member. I claim that not only has unemployment come to stay, but that it will get worse in the future. It is a perfectly natural law that this should be so under our present system. To-day, science aided by invention is continually producing machinery to take the burden off the shoulders of men and transferring it to machines. We might say that on Mondays, Wednesdays and Fridays we invent new machines to do without labour, and on Tuesdays, Thursdays and Saturdays we labour to find some means of doing away with the consequent unemployment that follows from these inventions. The federal government have control of the patent office. I do not say that they should not grant patents. I think inventors should be encouraged. I think we should look forward to the time when man will have less work to do and machines will have more. But if this transfer of work is going to increase the army of unemployed, we must find some means whereby they may gain a livelihood.

10 p.m.

When all is said and done, unemployment is simply the reflex of the need of purchasing power. Whenever we have a great need for purchasing power we find the ranks of the unemployed increased. This is one of the problems that the government does not appear to have attempted to solve. The problem of financial reform has been brought forward in this House from time to time during the last few years. It has been something quite new, and has met with the usual fate of new suggestions. In the first year it was brought up, I think it was in 1922, members took no notice of the suggestion at all. In 1923 it was ridiculed. In 1924 the subject and the hon. members who proposed it had nothing but abuse thrown at them. But in future years I have not the slightest doubt the time will come when the government of the day will realize that this problem has got to be faced, and that the control of finance, with the control of other important matters must receive more attention from the government of the day. It is because the federal government have control of such important matters as the fiscal and financial policies of this country; control of the patent office, through which new machines are being continually permitted to be brought into action, and which are taking the place of man's labour; and because they also have control very largely if not entirely, of the matter of immigration, that I think the resolution before the House to-day is very much in order. I would have supported the resolution if an amendment had not been moved,

and I shall have pleasure also in supporting the amendment.

Mr. E. J. GARLAND (Bow River): The hon. member for Fort William and Rainy River (Mr. Manion) addressed some remarks to the House relative to the charges that had been made against the right hon. leader of the opposition, charges of being a pessimist, a blue-ruinist, and all that sort of thing, simply because he had described unemployment conditions in Canada. I thought the hon. member for Fort William and Rainy River was hardly justified in giving his leader credit for all the abuse that has been heaped upon him in that regard. If my memory serves me right, about three years ago members in this corner of the House pointed out the very things that are now agitating the mind of the opposition, and described the conditions as they existed then, and continue to exist to-day. We were called blue-ruinists too; we were called defamers of Canada; we were called grouchers, pessimists, and all the rest of it It did not hurt very much; it does not matter, when you know you are telling the truth, what others think of you These are the conditions that exist, and that must be faced by this government. The government does not want to face them; that is quite obvious; but they must face them sooner or later. The government's position reminds me very much of the definition of an optimist. A pessimist is an hon. gentleman like my hon. friend the leader of the opposition. If he has a toothache, he complains about it; so do I. He makes things pretty miserable for everybody around him until he gets that toothache cured or something happens to the tooth. But my hon. friends opposite thank heaven they have a tooth to ache. Just so it aches, let it keep on aching; it makes no difference so long as they have the tooth. But they forget that a tooth, like everything else, is subject to even worse conditions than mere aching, and if the trouble is not attended to, decay of the pulp sets in, and the tooth has to go. I would suggest that they take steps to change these conditions before the tooth goes. It is aching pretty badly. Some men are actually asking for deportation to-day.

I would like to quote a letter over the name of the Danish consul at Vancouver, Mr. W. W. Ward. This letter is a very striking one, coming from a person occupying the position this man does. He writes the mayor of Vancouver as follows:

> I have to submit to you the fact that owing to representation being made by the Dominion government, the Canadian National Railways, and the Canadian Pacific Railway, in Denmark, that a number of Danes are emigrating to Canada, and very many of them are coming to Vancouver, having been led to believe, so they tell me, that they can secure entrance to the United States through this port, and on arrival here find it impossible to do so. There being a very great lack of employment, and these men as a rule being without funds, come to this consulate for assistance, and despite the fact that they are willing to work if employment can be found for them, they cannot secure it, and I fear that during the winter many of these emigrated citizens will call at this consulate for assistance, and you can readily understand that the Danish government cannot undertake to take care of its emigrated citizens, and must maintain that it is the duty of every civilized community and country to provide food and lodging for all persons within their sphere. It is therefore my intention, in each case of Danes who are out of funds, to refer them for food and lodging to the municipal authorities, and I will furnish these citizens with a letter to you asking you to provide food and shelter for the party in question, and I feel sure that you will recognize that it is the duty of the city to provide board and lodging for all unemployed, and if you do not desire to do so for foreign subjects, to repatriate same.
>
> I have the honour to be, sir,
>
> Your obedient servant,
>
> W. W. WARD,
>
> Royal Danish Consul.

This letter was read at the unemployment conference by the mayor of the city of Vancouver, who said quite frankly that that city had its own problem in looking after its own Canadian citizens, without being compelled by this government to look after the unemployed immigrants brought in as a result of the government's immigration policy. This was submitted by the mayor as one of a long list of items of evidence which he brought to support his side of the subject. I will quote further from him. He says:

> I have here a statement from the Joint Sewage Board of the city of Vancouver, which shows that we have held back work to the extent of almost $400,000 for the winter months. But that is only a small amount. That will practically take care of only our own citizens, who are the deserving people, who have helped to build our city, and who must be considered first.

They were prepared apparently to look after their own Canadian citizens, but they certainly looked to this government, and in my opinion they were justified, to give them some relief in the matter of looking after the unemployed immigrants who were brought in here. Further on he says:

> So if the government is not in a position to assist materially in taking care of the unemployed this winter where work can be carried on, I can assure you that as far as the western provinces are concerned the municipalities are not in such a position. What is going to become of the large immigration that is coming into the west this year? They are a fine class of men that have come in, but some of them may not be able to speak the English language. We have not the wherewithal to provide for them. Our own citizens must come first.

Again:

So far as the Pacific coast and the province of British Columbia are concerned, being perhaps the only representative from there, and being instructed by practically all the municipal councils around there, I want to assure you that we are not in a position to take care of any unemployment outside of our regular citizens, and if those strangers within our gates are to be looked after this winter it devolves upon the powers that be, who brought them to our country, to feed them when they are hungry.

The mayor of Toronto, Mr. Hiltz, says:

I think that if there is any responsibility in connection with unemployment, we ought to consider also where the responsibility lies. If it is true that the federal government have been bringing immigrants out here and there is nothing for them to do when they get here, then it seems to me they have aggravated the situation, and the responsibilty is theirs to that extent.

If it is true—

And I would commend this to the attention of the Minister of Railways (Mr. Graham), who raised this point:

If it is true that the provincial government have done likewise, they are to blame. Men have been brought out presumably for the purpose of going on the farms. As someone has stated, they have said they wanted to go on the farm, but have said it simply for the purpose of getting here, and after they got here they went where they liked. If in that respect the provincial government have aggravated the situation, the responsibility is theirs.

And, by the way of digression, if it is true that the Canadian Pacific Railway have notices up at Wembley that there is plenty of work here in Canada for men, and if in Montreal they have notices up that they have no work for men, then it seems to me there is a share of responsibility on the Canadian Pacific railway. Whether it is their thought to get a lot of men out and because of the unemployment situation to get cheap labour, or not, I do not know. They know perhaps better than I.

And so on, Mr. Speaker, through this entire book, which is the report of the national conference regarding winter employment in Canada. We find mayors from cities east, cities west, cities central, bringing down the same story to this government, that so far as their own citizens were concerned they were prepared to consider looking after them, but so far as unemployment as the result of immigration policy was concerned they demanded that this government recognize this responsibility—and that is all that this resolution of the hon. member for Centre Winnipeg (Mr. Woodsworth) asks. We find that Mr. Blatchford, mayor of Edmonton says:

We have depending on us unemployed and sick trappers, traders, prospectors; pioneer settlers who went into the Peace river country and have been slowly going "broke" on account of poor transportation. We have all those to deal with. Our hospital facilities are the largest on the American continent. In taking care of the sick people in that particular part of the country our civic hospital, which is operated by the city, is costing the citizens of Edmonton $500 a day, not to mention what we donate to other hospitals. We have donated to charities in the neighbourhood of $300,000 a year, and this year we have doled out to welfare boards $42,000.

That city was looking after its own people. He says further:

As far as the city of Edmonton is concerned, we are quite willing to try to take care of our own—the married men first and the single men next—but we cannot take care of outsiders. We have a little work in view. If it is passed by the Canadian National Railway Board to-morrow, we shall have a half-million dollar subway to be built this winter. That will assist us greatly and will probably relieve the situation to such an extent that we can meet it; but at the present time, without some work in sight, we cannot do more than we are doing, and if we are going to be obliged to shoulder all the responsibility of looking after the Immigration Department's people, that are there now without work and without money, and also the harvesters who remain the year round, we shall be placed in a very embarrassing position and we absolutely cannot face it.

Again, Controller Tulley of Ottawa says:

We have a number of workers in the country to-day. We have not enough jobs for them. Yet there is a policy being carried on, I am led to believe, whereby more workers are being thrust upon the market, as it were—(I do not like to put it on the basis of the "market", but we will use that language as it is used) —and we have to provide more jobs; which we cannot do.

And so on, Mr. Speaker—oceans of that kind of testimony, not from one political party or the other but from mayors of cities, representing all political creeds; they have come here to this government and put up this story. Let me give just one illustration, one little individual case that I came across this winter in Calgary. A gentleman named Edward Evans writes as follows:

May I ask the pertinent question as to what is being done to provide work for the men now unemployed in the city of Calgary and in the province of Alberta?

I am a stranger in Calgary, having arrived here just a few days ago. I am also a stranger to Canada. I arrived in Montreal from Australia on July 1 of this year.

Now I am in your city seeking employment. I am prepared to take anything, anywhere, at a fair remuneration. The first thing, however, which I learned since arriving in Calgary is that right here in your city are hundreds of men situated as I am whose sole occupation is the seemingly hopeless one of attempting to find employment.

Is this quest to no purpose? Are the energies of these men to be spent in seeking what is not present? I ask the question for I don't know, I am a stranger within Canada's gates.

To me it all appears to be cruel, inhuman. In song and story, in alluring advertisements and in colourful newspaper and magazine articles I have heard and read of Canada, as the arcadia of the industrious, and of western Canada as the "Land of Opportunity" wherein no man need want. Is it all fable, is it all false, an intrigue and trick to lure the ambitious so that the competing force of their fellow men may grind them down in order that the wealth of a few be multiplied and the dollar-pile glorified above all things? Or am I mistaken? Perhaps I have entered Calgary at a particularly unfortunate

time; but I hardly think so, for if this were true there would be signs of public alarm. The quietude of press and public leads me to think that an unemployed army is a permanent condition in western Canada. That because it is normal there is no consternation, no thought, or little productive thought, as to how willing workers are to be provided with the means of decent, lawful livelihood.

You have only to walk the streets of the city to see hundreds of men aimlessly lounging about. These men want work, but there is none for them, yet daily this hunger-stricken class is enlarged and daily emigrants arrive in western Canada to swell the workless army.

Can you, Mr. Editor, explain matters, or can any of your readers offer a remedy? The welfare and lawful existence of hundreds depend upon it as well as

Yours faithfully,
Edward Evans.

A little time ago I picked up a report of the Publicity Commissioner of Alberta in which I found the following:

The sale has been announced of the 13,320 acre farm of George Lane at Namaka, Alberta, to a colonization company for an unnamed sum. The value of the farm is stated to be about $650,000. The sale is also announced of the Rosedale ranch in the Bittern lake district near Camrose, to colonization interests who it is stated, plan to divide the ranch into small farms for settlement purposes.

What does that tell us? It tells us that the old policy of exploitation of the settler who wants to go on the land is to continue. These colonization companies are not doing these things for their health, they are going to hold up the settler who comes in and wants to take up land, and this government is doing nothing to stop it—nothing at all.

Not long ago in Montreal a glass company applied for some men. What happened? I quote the following Canadian Press despatch describing this incident:

A near riot occurred this morning when several hundred men tried to get into the plant of the Dominion Glass Company, when it was announced help was wanted. The plant had been closed down for several weeks.

Early in the morning a crowd gathered in front of the plant. When the gate was finally opened the waiters found to their chagrin that former employees were given preference, while others were kept back by the watchmen on duty.

Those in the rear of the crowd becoming impatient as they saw men passing through the desired goal, commenced pushing and the men closed in more closely about the entrance to the property. The high fence around the property threatened to give way beneath their pressure.

It was at this critical moment that, after several warnings, fire hose kept in the plant was brought out and played upon the unfortunate and hungry mob.

It is this kind of incident, Mr. Speaker, that appeals to my sense of justice and my sense of the need of the making of some attempt to remedy this condition. The Acting Minister of Finance (Mr. Robb) rises in his place to-day and tries to dispose of this whole condition of unemployment as simply a matter of Conservative propaganda and non-existent, but a few hours later the Minister of Labour (Mr. Murdock) rises behind him and brands this very problem as the most important one that faces Canada to-day. Now, what is one to do with a government like that? What can be done with them? It is almost hopeless. We find in a Lethbridge paper, by the way, a paper which was quoted to-day, I think it was, by an hon. member and referred to by someone on the other side as a very good paper, the following:

The only work in these parts is to be found at the Lethbridge jail, remarked Magistrate Sanders in the police court Saturday, when Thomas McDougall, Alex Duncan, W. B. Lissett and Fred Vien were before him on charges of vagrancy. They explained that they had come into Calgary from Saskatchewan, looking for work. The magistrate told them that touring around from one place to another would hardly bring results, but he gave them a chance to get out of town.

That is the consolation the men got from the magistrate. They wanted work, that was clear. I have had men come to me on my farm; I have had men come to me at my apartment in Ottawa, pleading for work, evidently anxious for it—clean, upstanding, bright looking men, some Canadians, some immigrants, but no work for them. Yet hon. members to my left there—one in particular—talk about plenty of employment for everybody. I tell the hon. member who says it that some day he may join the ranks of those who are hunting for employment and he will not find it just as easy and pleasant a task as he appears to think it is and not so simple to secure a job.

I received the other day from one of the locals of the United Farmers of Alberta in my constituency a resolution which I desire to place on record. It indicates the attitude of the organized farmer towards this problem. It reads:

At a meeting of the Huxley U.F.A. a resolution was passed which I was instructed to forward to you with a hope that you may do your utmost in the matter.

Whereas there is a great amount of suffering in our province due to unemployment and whereas, among the sufferers there are many returned veterans, Be it resolved that:

We the Huxley branch of the U.F.A. ask our secretary to send this resolution to our federal member, asking him to use every effort in his power to help alleviate this suffering, especially among our returned soldiers.

There again you have another angle of the situation. The returned men from overseas who went over there to fight for their king and country, with that high idealism which inspired most of the young men at the outbreak of the war, now come back to find

that the country they fought for has not a job supplying a decent standard of living to offer them, and further we find that more than a hundred thousand returned Canadian Expeditionary Force men are now in the States. I think that is the statement of the hon. member for Vancouver South (Mr. Ladner). I noticed that one hon. gentleman said there was never unemployment in an agricultural district. Why, of course not. Why should there be? Just as soon as there is not a job on the farm, or the farm is dried out, the farmer has to go somewhere; he goes into the mines or to the United States or somewhere else. He cannot stay here and starve to death. He is not foolish enough to do that. A good deal of the work on the farm is work without pay. I remember an instance brought to my attention this last winter. A man came to me and said, "I went into Calgary and applied for a job, and a farmer came along and said "Come out to my place and work for ten dollars a month." The man said, "What do you expect me to do for that money?" "Oh," he said, "just a little hauling and choring around. It will not be hard." The man went out to the farm and found he was expected to milk ten cows and feed them night and morning, in addition to doing other chores. That was a deliberate attempt on the part of the farmer to exploit the unemployment situation and I am ashamed of that man. I would be ashamed of the manufacturer who would do the same thing in his factory. The Acting Minister of Finance (Mr. Robb) quoted with some unction a report of a speech made by Hon. Herbert Greenfield in Ottawa. I do not think the Acting Minister of Finance has seen the Greenfield resolution on immigration in the provincial house recently. I will just read one passage of it as follows:

> That while the responsibility for framing and carrying into effect immigration policies rests primarily with the Dominion government, the result of such policies seriously affects the welfare of the province in creating demand for extensions of provincial services, and making possible problems of unemployment.

So even Mr. Greenfield, the man accepted with such approval by the Acting Minister of Finance one moment, is quoted the next moment as having pointed out to the government their own responsibility in the matter. I think it is wiser for the government to divert the stream they have started flowing towards the shore, it is much wiser to divert it for a time than to float out our own people, and that is what is happening. These new immigrants cannot go over the line on account of the quota laws. They have got in here and the labour market is overstocked. There are many Canadians in this country who are anxious to get work at a decent standard of living, but they have to go somewhere else, and they go to the United States. The distant pasture looks green. In the Saturday edition of the Ottawa Citizen, page five, we find an interesting comparison, if hon. gentlemen would care to look at it. The first column is devoted to the story of the huge supply of food that was secured from the children of Ottawa to take care of the unemployed situation in Nova Scotia. It is headed:

> Huge supply of food brought on first pound day. Children expected to bring offerings directly to headquarters to-day. Twenty cases shipped.

Only three columns over we find another article:

> Large party of immigrants on the way to Canada.

In the one case the children gathering food voluntarily to help the unemployed conditions in this country, and in another column of the paper a part of the immigration policy of this administration—

Mr. McMASTER: Does the hon. gentleman not realize that when people come into this country they create a demand for goods, as well as being able to produce goods in the country?

Mr. GARLAND (Bow River): The imagination of my hon. friend for Brome (Mr. McMaster) is delightful. The men who come to this country only create a demand for goods when they have the funds with which to buy them, the purchasing power. Most of the people are brought in on an assisted passage scheme. That will be seen from this item in the citizen:

> Thirty families leave Liverpool under overseas settlement plan to work farms in Dominion.

And their passage is paid in advance. Now what is the use? How can these people implement the industrial activities of Canada. They have not the means to keep themselves. They require to have advances made to them. The government is as usual so far as policy is concerned vacant, empty. It is just not there, that is all. I have much pleasure in supporting the amendment of the hon. member for East Calgary (Mr. Irvine). I approve of the whole tone of the resolution, and it is quite evident from the speeches that we have from the government side that they have no constructive policy. They simply say, "We will promise we will put on a farm every man who wants to go there." What utter rubbish that is to those of us who know conditions out in the west. You cannot do that. You

could put men out there to work for nothing, but is that going to elevate the standard of men or improve conditions of the country? No. It is going to place in that district a lot of pauper labour which would be useless, and it would create conditions that are very undesirable. I have much pleasure in voting for the amendment to the motion.

Mr. W. F. CARROLL (Cape Breton South and Richmond): This is rather an important resolution. I do not think, if this House voted in the affirmative on this resolution tonight, it would be a cure for unemployment in Canada at the present time or in the future. There are some aspects of this question I would like to discuss, and as this is a late hour, I move the adjournment of the debate.

The House divided on the motion, (Mr. Carroll) which was agreed to on the following division:

Mr. KAY: I was paired with the hon. member for Wentworth (Mr. Wilson). Had I voted, I would have voted for the motion.

Mr. CHAPLIN: I was paired with the hon. member for Welland (Mr. German). Had I voted, I would have voted against the motion.

Mr. McCONICA: I was paired with the hon. member for Parry Sound (Mr. Arthurs). Had I voted, I would have voted for the motion.

Mr. STANSELL: I was paired with the hon. member for South Ontario (Mr. Clifford).

Had I voted, I would have voted against the motion.

Mr. GENDRON: I was paired with the hon. member for Carleton (Mr. Garland). Had I voted, I would have voted for the motion.

Debate adjourned.

On motion of Mr. Mackenzie King the House adjourned at 11.50 p.m.

Tuesday, March 24, 1925

The House met at three o'clock.

THE RECENT EARTHQUAKE

Hon. CHARLES STEWART (Minister of the Interior): Mr. Speaker, some days ago the hon. member for Charlevoix-Montmorency (Mr. Casgrain) asked a question of the government which was replied to by the Prime Minister, as to whether any information had been received by the government with respect to the effect of the earthquake in the province of Quebec. I have in my hand a report prepared by an official of the observatory who visited the earthquake area, and I shall be glad to read it out, or I can lay it on the table.

Report tabled.

CANADIAN NATIONAL RAILWAYS

BENGOUGH-WILLOWBUNCH

Hon. E. M. MACDONALD (For the Minister of Railways and Canals) moved that the House go into committee at the next sitting to consider a certain proposed resolution in favour of a measure with reference to a line of railway between Bengough and Willowbunch, in the province of Saskatchewan.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

REGINA-AVONLEA

Hon. E. M. MACDONALD (For the Minister of Railways and Canals) moved that the House go into committee at the next sitting to consider a certain proposed resolution in favour of a measure with reference to a line of railway from Regina to Avonlea in the province of Saskatchewan.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

DAIRY PRODUCE ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend The Dairy Produce Act, chapter 28 of the statutes of 1921, by providing that the Governor in Council shall have power to make regulations for refusing to grade dairy produce and for withholding grade certificates.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

MEAT AND CANNED FOODS ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend The Meat and Canned Foods Act, chapter 27 of the statutes of 1907, by providing,—

(a) That, for the purposes of the act, canned foods shall include foods that have been preheated, cooked, preserved, condensed, evaporated, dehydrated, dried or otherwise processed or prepared for food, and are placed in any closed can, bottle, package or container;

(b) That all canned fruit or vegetables or products thereof, or any food or food products which may be named by the Governor in Council, shall be offered for sale only in such cans or other containers as the Governor in Council may by regulations prescribe, and such cans or containers must contain the quality, quantity or weight prescribed by the regulations.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

DAIRY INDUSTRY ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend The Dairy Industry Act, chapter 7 of the statutes of 1914, for the following purposes:—

(a) to make further provision for definitions of Dominion Analyst, illegal dairy product, oleomargarine, package and renovated butter;

(b) to prevent the use of oil as an adulterant in butter, and to prohibit the keeping of foreign fats that might be used for adulterating purposes on the premises of any person engaged in the manufacture or manipulation of butter;

(c) to avoid the necessity of proving that foreign fats have been added to skimmed milk in cases of infraction;

(d) to provide heavier penalties for violation of the act;

(e) to authorize an inspector in addition to obtaining access to premises, to take samples, seize and remove illegal dairy products;

(f) to empower the Governor in Council to make regulations respecting the seizure and confiscation of materials and packages used illegally, and to control the size and dimensions of cheese hoops and cheese and butter boxes; and

(g) to permit of the registered number of any package being accepted as prima facie evidence of the identity of the manufacturer, and that costs of analysis shall, upon conviction, be included in the costs of prosecution.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

LIVE STOCK AND LIVE STOCK PRODUCTS ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend The Live Stock and Live Stock Products Act, chapter 18 of the statutes of 1923, by making provisions,—

(a) to facilitate business on the stock yards by providing that all moneys received on account of sales for live stock sold by a commission firm on behalf of the owner thereof shall be deposited in a shipper's live stock commission account instead of a shipper's trust account as at present;

(b) to provide for the licensing of egg buyers, egg collectors and dealers, and exporters of live stock, meat, poultry, eggs and wool;

(c) to amend the power to make regulations as to the manner in which eggs found to be unfit for human consumption shall be valued and disposed of.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

ROOT VEGETABLES ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend The Root Vegetables Act, chapter 43 of the statutes of 1922, and to provide,—

[Mr. Motherwell.]

(a) for a standard grade for onions or a uniform size, the abolition of the grade known as "sample quality" and the substitution of a grade to be known as "ungraded"; and for the definition of peeled onions;

(b) for permitting potatoes, onions, artichokes, beets, carrots, parsnips and turnips to be offered for sale by measure in quantities of one bushel or less instead of by weight, but the weight of the contents thereof shall be proportionate to the weight of the contents of one bushel of such vegetables, as prescribed;

(c) for making an inspection certificate signed by an official inspector prima facie evidence of the grade and condition of the vegetables or packages to which the certificate refers; and

(d) for exempting from the operation of the act certified seed potatoes only, as defined in the regulations under The Destructive Insect and Pest Act.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

GOVERNMENT PROPERTY, VANCOUVER

On the Orders of the Day:

Hon. H. H. STEVENS (Vancouver Centre): I would like to draw the attention of your Honour and also the attention of the government to a question on the order paper which I asked yesterday, as follows:

What amount of insurance is carried on property in Vancouver: (a) In the name of the Dominion government; (b) In the name of Vancouver Harbour Commissioners; (c) In the name of the Board of Grain Commissioners?

To which the hon. Secretary of State replied:

This information has to be received from Vancouver. It will therefore be some time before the question can be answered. The same applies to question No. 8.

Now, I am in possession to-day of a paid advertisement appearing in the Vancouver Province, and also an official letter to the Vancouver Daily Sun, of March 17, both signed officially by the secretary of the Harbour Commissioners, giving an answer to that portion of my question which the Secretary of State said would necessarily have to be referred to Vancouver. What I want to draw to your attention first, Mr. Speaker, is that I conceive it to be the duty of the government to see that information with regard to questions is given to the House prior to being published as an advertisement in the press; and secondly I desire to ask if the government will look into this matter and see that members of parliament are accorded the courtesy, which is their perfect right, of receiving these answers prior to the information

being given out in the form which I mentioned.

Some hon. MEMBERS: Order, order.

Mr. STEVENS: I will hand the Prime Minister (Mr. Mackenzie King) the document to which I refer.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am not cognizant of the facts, but I am pretty sure that the Secretary of State (Mr. Copp) gave to the House yesterday a statement in accordance with the memorandum sent to him from the department to acquaint him with the position. I have no doubt the Secretary of State gave to the House exactly the information given to him officially. Referring to what appears in the newspapers, I am unable to say whether it is correct or not. Certainly the government would not place its reliance on what appears in the press. We would like to have an official statement from the Board of Harbour Commissioners of Vancouver before making a statement to the House.

Mr. STEVENS: What I am bringing to my hon. friend's attention is that this is a public statement, signed by the Secretary of the Board of Harbour Commissioners, Vancouver, a servant of the government.

Mr. MACKENZIE KING: The point is as to whether the government itself has received this information from the harbour commissioners. I think there is no doubt whatever that the statement which the minister gave to the House is correct, and that so far official information has not come from the harbour commissioners. I hope that it may be possible to have it brought down speedily.

PORK—IMPORTATIONS AND RE-EXPORTATIONS

On the Orders of the Day:

Mr. R. K. ANDERSON (Halton): On March 4 last a question appearing in my name regarding the exportation of Canadian pork to England was changed to an order for return. Would the Minister of Agriculture (Mr. Motherwell) assure us he will bring down the return as soon as possible?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I assume the question my hon. friend refers to has been sent to the Minister of Customs (Mr. Bureau). His department has to do with the question of exports, and I will direct his attention to the matter.

THE BUDGET

ANNUAL FINANCIAL STATEMENT OF HON. J. A. ROBB, ACTING MINISTER OF FINANCE

Hon. J. A. ROBB (Acting Minister of Finance) moved:

That Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means.

He said: In presenting to-day the annual statement of the financial affairs of our Dominion, may I express the sincere regret, which I am sure we all share, that our hopes and wishes for a speedy recovery of the Minister of Finance, the Right Hon. Mr. Fielding, have not been fully realized.

The Public Accounts for the financial year 1923-24 were tabled in this House on the 9th of last month. The consolidated fund revenues or ordinary receipts are shown as $396,837,682.22, being $837,682.22 in excess of the estimate given to the House last session; and $2,222,782.22 over the corresponding receipts for the previous year. Other receipts amounted to $9,743,635.74, which brought the gross revenue to $406,581,317.96.

The expenditure side shows $324,813,189.75 for ordinary expenses, being a decrease of $7,480,542.34 under corresponding expenditures for the previous year. Capital, demobilization and other charges amounted to $19,208,597. The gross expenditure was $344,021,786.75, or $6,586,759.97 less than for similar services the previous year.

The public debt was decreased by the amount of $35,993,593.86. Since confederation decreases of debt have occurred in only nine of the fifty-seven years completed; $35,993,593.86 is the largest decrease of any of those nine years, being $10,375,758.83 greater than that for any previous year since confederation.

Debt Reduction—How Arrived at

May I, before dealing with the outcome of the year 1924-25, which ends on the 31st of this month, ask the indulgence of the House to refer for a moment to a contention advanced last session in this chamber that the reduction of debt by some $35,000,000 was arrived at by a departure from the practice heretofore followed in dealing with loans to the Canadian National Railway system. The fallacy of this contention was fully explained by the Prime Minister from his place in this House. My reasons for referring to this matter in a budget speech are not so much in the interests of the party to which I have the honour to belong as in the interests of all who make up our national life. The attack at the time was weakened by the fact that no two of the critics seemed able to agree on just how many millions were involved and

to what extent the debt should have been affected. During the recent recess of this House, these remarkable and fallacious charges have been reiterated in public speeches and also featured prominently in certain issues of the public press. Criticism of the public policies of any party is expected, but to step aside and charge an administration with altering the method of keeping our national records for the purpose of showing the financial position of the country to be other than it really is, brings with it a danger which I am sure is not fully realized by those carrying on such propaganda. We Canadians are in the process of becoming in the not far distant future a great nation. We are in the growing period. We must practise economy, but we must make such provision for the development of our country and of our transportation facilities as will be necessary to meet our growing needs. To meet the necessary capital charges required for national development we may need outside capital. If we require to go to a foreign money market for loans to be used for the development of this country, I submit there is danger that our credit, now at its highest point, may be damaged and that we may be called upon to pay higher rates for accommodation. It was not until I feared that such criticisms of the accuracy of our public records might result in impairing our national credit that I thought it worth while to take the necessary steps to have our balance sheet for 1923-24, the year concerned, examined by two of the most outstanding chartered accountants in Canada, men to whom no one could take exception. This was done for the double purpose of satisfying the people of Canada as well as those outside of Canada whose good-will and financial resources we might need in the developing of our country. On the 27th January, 1925, I received the auditors' certificate, a copy of which has been printed on the balance sheet on page 3 of the Public Accounts for 1923-24. The certificate reads as follows:

> We have examined the balance sheet of the Dominion of Canada as at March 31, 1924, and we certify that the balance sheet conforms to the balance sheets of previous years in not including in the net debt of the Dominion, issues of the Canadian National Railway company and companies included in its system, which carry the guarantee of the Dominion of Canada. Such guaranteed issues are shown year by year as indirect liabilities.

>
> Ottawa, Canada, 27th January, 1925.

[Mr. Robb.]

Canadian National Railways—Accounts

While guaranteed loans in the past have been issued for the purpose of taking care of deficits, capital and other charges, and treated in our public accounts as indirect obligations, I submit that it would be an ideal practice if, for the purpose of securing better terms in the flotation of Canadian National Railway loans, the guarantee of the Minister of Finance could be confined solely to loans raised for the betterment of the railway system; and in this respect this administration has been singularly successful. The railway system is now meeting its running expenses with a surplus left over for fixed charges. The railways are not called upon to pay out of their revenues interest on Dominion loans made to them by way of cash, although such is included in the annual railway budget as submitted from time to time by the Minister of Railways and Canals. They are thus relieved for the present from a very large annual commitment, and in consequence are able to carry on their capital and betterment requirements by loans guaranteed by the Minister of Finance. Net operating income surplus, together with the cash loans made by the government, meet the railway's fixed charges, which, of course, include interest charges on obligations held by the public.

May I here explain, for the information of this House and the country, the relationship of the Canadian National Railways' finances to the Dominion accounts? During war time stress it was deemed advisable, by the government of the day, in order to avoid a possible breakdown in our transportation facilities, to give substantial financial aid to the Canadian Northern Railway and its constituent companies. Very large sums of money were loaned to the company, the government taking as security railway interest-bearing bonds or demand notes. These interest-bearing bonds or demand notes were, until 1920, treated as active assets and they so appeared in the federal balance sheet, being deducted from our gross debt in determining the net debt of the Dominion. The present Minister of Finance, Mr. Fielding, in this connection made the following statement in the House:

> When the amount was not very great in proportion to our business, perhaps there was no need of any discrimination, but when these assets, under the operation of our railways, grew to very large figures, it became desirable or necessary that there should be discrimination.

He further stated:

> My predecessor in office very properly made that discrimination by dividing our assets into active and non-active.

The railway loans were, for the year 1919-1920, classified as non-active, thus increasing the net debt of the Dominion by the amount of the total of the then railway loans. The amount so added at that time by the immediate predecessor in office was $272,624,931.34. When the present Minister of Finance, (Mr. Fielding), took office, he continued the policy of his predecessor, and that policy is still being followed. Each year government loans to the railway company are added to our debt, and the company's own securities issued to the public carrying the guarantee of the Minister of Finance are, as formerly, set out in our public accounts as indirect obligations. To illustrate: on the 31st March, 1922, the net debt of the Dominion stood at $2,422,-135,801. On the 31st March, 1924, the net debt was $2,417,783,275, a decrease in the net debt of $4,352,526. The amount of loans to the railway company from the 31st March, 1923, to the 31st March, 1924, namely, $24,500,000, was added to the debt of the country. Fortunately, our financial condition was sufficient to more than offset this heavy addition to the net debt, and in spite of it we more than balanced our budget in that year by some $35,900,000. The total of our net debt, as of the 31st March, 1924, namely, $2,417,000,000, included the total amount of approximately $582,000,000 of railway indebtedness as up to that date.

The railway company from earnings are not yet able to meet the arrears of interest accumulated on our loans to the company. This government, following the policy of its predecessors, continues to relieve the company from the payment of interest. To do otherwise would require the increasing of our annual provisions in the estimates, thus adding to our debt on the one hand, and, after receiving back from the company the amount so provided in our estimates, crediting it to interest on investments account on the other hand, thus reducing our debt by the very amount by which we increased it. The total amount of these arrears of interest on the 31st March, 1924, was about $131,000,000, but it is not treated in our public accounts as an asset: it is held in abeyance only as an overdue account.

May I, before leaving this question of debt reduction, direct the attention of the House to the balance sheet of the Public Accounts at the close of the financial year 1923-24, page 2, where will be found among our assets an amount of $43,612,756.16, cash left in our hands after the closing of our accounts for that year; and I submit the question: Is not the actual possession of so much cash conclusive evidence that we ended that year with excellent results? For the information both of this House and the country, may I point out that of this amount—the savings made—$34,500,000 was segregated and deposited in an interest-bearing special account, until such time as the pressing needs of the country required it for our general purposes?

Last year the statement was made that during the fiscal year 1922-23 the Minister of Finance had paid out actual cash for all the requirements of the railway system for that year and that the same course should have been followed in the year 1923-24. It is perfectly true that during 1922-23 the Minister of Finance was able to meet the requirements in cash for all railway obligations including capital charges. In that year we received from the Imperial government $56,-000,000 towards liquidation of large outstanding obligations incurred by the Imperial government during the war. The Minister of Finance thus found himself in possession of a large amount of cash which was not the outcome of that year's taxation, and rather than issue securities to the public, and thus incur an additional obligation with its annual high interest charges, he wisely took the position that, in view of the high interest rates then prevailing, it would be better to utilize this cash for all the purposes of the railways and allow that part of it for capital requirements to enhance the value of the road.

Parliament has made provision for our railway requirements by authorizing the government to make loans to the railways for all purposes by way of cash or by way of guarantee, or partly one way and partly the other. This was the nature of the authority asked for by our predecessors in office and is still the form of authority given by parliament. Parliament does not authorize the government to issue loans for railway purposes, except by way of guarantee.

Mr. Speaker, I now ask that the courtesy of the House be extended to enable me to put into Hansard a tabulated statement supporting the remarks I have just made as to the allocation of government aid, by cash or guarantee, given to the railways:

Statement of Loans to Railways for 1922-23, 1923-24 and 1924-25 made in Cash and Guaranteed Bond Issue under Authority of the Appropriation Acts

	1922-23	1923-24	1924-25	Total
Deficit—Operating deficit, interest due public, and rentals of leased lines..	$36,722,181	$20,356,198	$21,343,940	$78,422,319
Redemption of debt—including equipment trust principal payments and sinking funds..	25,275,902	11,469,369	7,007,533	43,752,804
Capital—Investment in road and equipment including acquisition of property..	18,214,940	41,630,933	33,765,527	93,611,400
	$80,213,023	$73,456,500	$62,117,000	$215,786,523
Discount on Government Guaranteed Bond Issues	.....	1,093,500	1,910,000	3,003,500
	$80,213,023	$74,550,000	$64,027,000	$218,790,023
These totals are made up as follows:				
Loans by way of cash charged to the net debt of the Dominion..	$80,213,023	$24,550,000	$18,027,000	$122,790,023
Loans by way of Government Guaranteed bond issues..	.....	$50,000,000	46,000,000	96,000,000

While the estimated loans by way of cash of $18,027,000 for 1924-25 are short of the estimated deficits for this year by $3,316,940, the statement shows that for the three years under review the Government loans in cash have not only enabled the Railway Company to meet all deficits, including fixed charges due the public, but also left the substantial sum of $44,000,000 to be applied to capital requirements.

Financial Year 1924-25—World Conditions

Mr. Speaker, before dealing with the present financial year, which closes on the 31st of this month, I would like to refer to the disturbed world-wide economic conditions which affected all nations so disappointingly during the year 1924. Early in the year a still more pronounced business depression swept the European nations. Their vexed unsolved reparations problem, with no satisfactory suggestions towards effecting a readjustment of their difficulties, brought discouragement and depression. This gradually spread until it affected Canadian industrial and business activities. The ratification of the Dawes plan, providing for the establishment of an internationally controlled gold reserve bank of issue for the purpose of stabilizing the credits and currency of Germany, now carries with it a feeling of relief and hope as the first promising solution of the reparations problem.

Revenues, 1924-25

It will be some time before all returns for the fiscal year ending March 31, 1925, come to hand, but we are to-day in a position to estimate closely for the balance of the year's operations.

The actual revenues received by the Department of Finance up to and including 28th February last amounted to $308,994,207.71. The amount of revenues yet to come when the accounts for the year are finally closed is estimated at $35,005,792.29. This gives a total revenue of about $344,000,000, being a decrease of some $52,800,000 under the revenue of 1923-24.

The estimated revenue from customs duties will be $108,200,000, a decrease of some $13,300,000 under the previous year. From excise duties we expect $39,200,000, an increase of about $1,000,000. We estimate that the revenue from excise taxes will be $85,000,000, a decrease of about $35,600,000. From income taxes we estimate $56,550,000, being an increase of some $2,350,000. From delayed business profits tax we will receive some $2,400,000, a decrease of $2,350,000. From interest on investments we estimate a revenue of $9,350,000, being a decrease of about $2,550,000. We expect to receive $28,100,000 as Post Office receipts, being a decrease of about $750,000. From all other sources we estimate a total of about $15,200,000, being a decrease of about $1,500,000.

Mr. Speaker, I again request the courtesy of the House in order to place on record in the form of a summary the figures which I have just given.

	Estimated Receipts 1924-25	Actual Receipts 1923-24	Increase	Decrease
Customs..	$108,200,000	$121,500,798 49		$13,300,798 49
Excise Duty..	39,200,000	38,181,747 33	$1,018,252 67	
Excise Taxes..	85,000,000	120,676,375 89		35,676,375 89
Income Tax..	56,550,000	54,204,027 99	2,345,972 01	
Delayed Business Profits Tax.. ..	2,400,000	4,752,680 89		2,352,680 89
Interest on Investments..	9,350,000	11,916,479 11		2,566,479 11
Post Office..	28,100,000	28,866,808 41		766,808 41
All other Revenue..	15,200,000	16,738,764 11		1,538,764 11
	$344,000,000	$396,837,682 22	$3,364,224 68	$56,201,906 90
		344,000,000 00		3,364,224 68
		$ 52,837,682 22		$52,837,682 22

Expenditures, 1924-25

Coming now to expenditures, it is estimated that when all accounts are closed the expenditure for the year on ordinary account will be $319,700,000 a decrease, as compared with the previous year, of some $5,100,000.

Taking the estimated revenue for the year ending 31st March, 1925, as $344,000,000, and the estimated expenditure chargeable to Consolidated Fund as $319,700,000, there will be a surplus of revenue over the ordinary expenditure of $24,300,000 available for capital, special and other obligations.

Capital expenditure for public works, including Marine Department, will amount to some $6,697,000.

Capital expenditure for railways and canals will be $11,800,000, of which $11,000,000 is for the Welland Ship Canal. From this amount $420,000 is to be deducted as refunds from previous years' expenditures,—$180,000 on account of the Welland Ship Canal; $141,000 on account of Hudson Bay Railway; $47,000 National Transcontinental Railway; $36,000 Canadian Government Railways and $16,000 from other sundry railway and canal services—leaving the net capital charges at $11,380,000. The total net capital expenditures for the year would therefore be $18,077,000.

Special expenditures will amount to $4,400,000, made up of: adjustment of war claims $475,000; cost of and discount on loan flotations for refunding maturing loans $3,350,000; Consolidated Fund transfer charges $575,000.

Balance, 1924-25

Comparison therefore of the total of expenditures on all government services, namely, —$342,177,000, with our estimated revenue receipts for the year, $344,000,000, will show that we have more than balanced the year's business on government services by the sum of $1,823,000; a remarkable result, I submit, in which Canadians may feel a justifiable pride when we realize that this year, as a result in part of our policy last year in reducing the burdens of taxation, we will receive from the people $52,837,000 less than in 1923-24; and may I repeat that notwithstanding this large reduction in our revenues we will end the present year with a surplus of revenues over expenditures of $1,823,000.

In addition to this surplus on government business over the year's transactions, the sum of $4,000,162 must be taken into account as an improvement in our financial position by an additional active asset having been added to our balance sheet, arising from negotiations begun in 1922 by our High Commissioner in London with the governments of the kingdoms of Roumania and Greece for the consolidation of our loans to those countries, with arrears of interest, thus placing their obligations upon a sound financial basis. The arrears of interest were: Roumania $3,520,636, and Greece $479,526. The High Commisisoner was successful in coming to an arrangement with these countries whereby such arrears were capitalized and additional bonds issued and transferred to the Dominion of Canada. The debts at that date, with the interest added as capital, were: Roumania $23,969,720, and Greece $8,000,000, making a total of $31,969,720. This increased asset over the capital amount of their debt, which previously stood in our books, was $4,000,162. Treasury bills previously deposited to secure the debt were backed only by the general credit of these countries. New securities given to the Dominion for the total indebtedness are further secured by specific charges on certain revenues of these countries. In the case of Roumania the service of the new bonds is a first charge upon export duties collected on wheat exports and other products; in the case of Greece, their obligations are a charge upon the revenues of the International Financial Commission appointed to administer

certain specified revenues of the Greek government for the purpose of meeting charges in connection with their external indebtedness. These governments have, since 1922, been paying their interest charges regularly and promptly, and in the case of Greece part of the principal in addition.

This amount of $4,000,162, now classified in our books as an active asset, although resulting from previous years' operations pertaining to our own public business, must be added to our surplus of $1,823,000 previously referred to, thereby making a total of $5,823,-162 as the surplus of the results of the past year from government services.

Canadian National Railways—1924-25

If here I may digress for a moment, I would like to point out that in all budget speeches, as well as in the Public Accounts, the results of the country's own business transactions have always been dealt with separately and apart from other transactions, such as loans to the railways and merchant marine which, previous to 1918, were not provided for in our annual budget of estimates but were authorized by special acts of parliament. This year we presented our estimates for such services separately, in order to have them conform to the method followed in the submission of budget speeches and in the making up of our public accounts.

Parliament at its last session authorized $56,527,000 for loans to the Canadian National Railway Company. A further supplementary estimate has lately been placed on the table of the House amounting to $7,500,000, which will bring the total provision for 1924-25 up to $64,027,000.

As in previous years, provision has been made that the loans might be by way of cash or by way of guarantee of railway securities for any or all of the requirements. Cash loans, provided that the full amount will be required, will total $18,027,000. The difference between the $18,027,000 and the total amount asked for has been covered by way of bond issues, carrying the guarantee of the Minister of Finance:—$20,000,000 three-year, four per cent. (4%) notes; and $26,000,000 thirty-year, four and a half per cent. (4½%) bonds, issued on the New York market under conditions distinctly favourable to the railways.

Apart from the annual vote, the railways were required this year to raise additional funds for special purposes. An issue of $9,-375,000 four and a half per cent serial equipment trust bonds was sold. The money is being applied to the purchase of new equipment, which, following the usual plan of financing such issues, was pledged as security for the bonds. The government's guarantee was not required.

During the year securities of the Canadian Northern Railway Company, guaranteed by the Minister of Finance under the provisions of the acts of 1917 and 1918, respecting the acquisition of the Canadian Northern Railway system, fell due, as follows: $6,000,000 at five and one-half per cent; $11,000,000 at five per cent. These maturities were refinanced by a consolidated issue of $17,000,000 four and one-half per cent ten-year bonds guaranteed by the Minister of Finance under the same statutory authority. A further flotation of $18,000,000 four and one-half per cent five-year guaranteed bonds was made under the provisions of the acts of 1924 respecting branch lines and Toronto Terminals construction, the proceeds of which are to be paid out as expenditures thereon are incurred.

Public Debt

I now come to the public debt. On March 31, 1924, our net public debt stood at $2,417,-783,274.88.

We will deal first with the business transactions pertaining to government services proper. Our ordinary revenues for the current fiscal year will be $344,000,000. Our estimated ordinary, capital, special and other expenditures will amount to $342,177,000, leaving a favourable balance in the year's operations of $1,823,000. To this must be added the sum of $4,000,162 previously referred to, making a total of $5,823,162 as a reduction in dealing with our net debt, on account of government services proper. This amount is available to be applied on account of our loans to the Canadian National Railways of $18,027,000; to Canadian Government Merchant Marine of $900,000; and to the Quebec Harbour Commission of $600,000, all of which, while being assets, but for the present considered as non-active, are to be added, thereby making an increase of debt during the year of about $13,-703,838.

During the fiscal year obligations amounting to $199,270,650 matured. In addition provision had to be made for the meeting of obligations to the value of £5,000,000 falling due in London on the first day of May, 1925. In consequence the total sum of $223,603,983.33 had to be provided for. As a result of the successful financing of the government the maturing obligations were met by new issues totalling $223,333,333.33, a saving of $270,-650 and by re-financing at better rates of interest a saving of $2,643,264.92 has been made in the annual interest charges.

The securities which matured for which refunding loans were issued consisted of $91,315,000 five and a quarter per cent treasury bills held by the Canadian banks and $107,955,650 five and a half per cent bonds of the victory loan of 1919 due November 1st, 1924.

To meet these obligations, on September 15th, 1924, one-year four per cent notes amounting to $90,000,000 were sold to a New York syndicate at par. Later $35,000,000 four per cent two-year notes dated October 1st, 1924, and $50,000,000 four and a half per cent twenty-year bonds dated October 15th, 1924, were sold to a Canadian syndicate, realizing 99 for the two-year notes and 95 for the bonds. The syndicate made a public offering of the $50,000,000 twenty-year bonds, with conversion privileges to holders of maturing victory loan bonds.

On November 15, 1924, an issue was made of $24,000,000 one-, two- and three-year four per cent notes, $8,000,000 maturing in each year. This issue was sold to a Canadian syndicate at 99¼.

Advantage was taken of the low interest rates prevailing on short-term borrowings to sell in London £5,000,000 six months four per cent Dominion of Canada treasury bills, dated February 1st, 1925, and maturing August 1st, 1925, for the purpose of retiring our £5,000,000 four and a half per cent bond loan falling due in London May 1st, 1925, upon which we exercised an option to redeem in advance of the maturity date.

To sum up: The total of maturing obligations, including the sterling bonds, amounted to $223,603,983.33, while the new securities issued represent a par value of $223,333,333.33, being a reduction of $270,650 in our outstanding public debt. There will also be an annual reduction in the interest rate of the refunding issues under the interest rates of the matured loans which will result in an annual saving of $2,643,264.92.

Trade

I desire, Mr. Speaker, to place on record a statement showing our trade with the British Empire and with foreign countries. This statement shows that in our trade with the British Empire during the fiscal year ended 31st March, 1924, the balance of exports over imports was nearly $243,000,000, and in our trade with foreign countries the balance of imports over exports was nearly $78,000,000, making a net balance of exports over imports with all countries of $165,186,430. During the period of ten months ended the 31st January, 1925, the balance of exports over imports in our trade with all countries has increased to $263,414,526. During the first period there was a favourable balance with all countries excepting the United States of nearly $325,000,000 and an unfavourable balance with the United States of nearly $160,000,000; during the second period there was a favourable balance with these countries of nearly $328,000,000 and an unfavourable balance with the United States of nearly $65,000,000. With the permission of the House I shall place this statement on Hansard.

CANADIAN TRADE
DURING THE FISCAL YEAR ENDED 31ST MARCH, 1924

British Empire—	Imports	Exports Domestic & Foreign	Balance of Exports over Imports
United Kingdom	$153,613,003	$361,197,041	$207,584,038
Other British Countries	41,772,629	77,132,395	35,359,766
Total, British Empire	$195,385,632	$438,329,436	$242,943,804

Foreign Countries—	Imports	Exports Domestic & Foreign	Balance of Imports over Exports
United States	$601,295,121	$441,650,861	$159,644,260

			Balance of Exports over Imports
Other foreign countries	96,686,114	178,573,000	81,886,886

			Balance of Imports over Exports
Total, foreign countries	$697,981,235	$620,223,861	$ 77,757,374

All countries—	Imports	Exports Domestic & Foreign	Balance of Exports over Imports
Total, all countries	$893,366,867	$1,058,553,297	$165,186,430

CANADIAN TRADE

DURING THE PERIOD OF TEN MONTHS ENDED 31ST JANUARY, 1925

British Empire—	Imports	Exports Domestic & Foreign	Balance of Exports over Imports
United Kingdom	$121,884,189	$349,600,037	$227,715,848

Total, all countries	$650,894,554	$914,309,080	$263,414,526

Tariff Board

Since last session the revenue-collecting services of the government have been consolidated under one administrative head. Pending the removal of restrictions, imposed during the discussion of the estimates in this House, in the manner of appointment of its personnel, the formation of the board which it was proposed to constitute to investigate and study the various modes of taxation has not been proceeded with. It is now proposed to have this inquiry made as a part of the larger study of taxation in general, in conjunction with the survey of our customs tariff schedules upon which officers in the public service are already engaged. In order that an efficient organization may be effected, an item has been included in the estimates to provide for the salaries and expenses of a board of advisers to the Minister of Finance, whose duties are to inquire into all matters pertaining to the tariff and other forms of taxation and to advise the Minister of Finance in regard thereto. The policy of the government is that the board shall be made up in part of officers of the service having special knowledge of tariff and other taxation and trade problems, who will give a portion of their time to the work of the board. The remaining members will be persons specially qualified to advise upon such questions, who will give continuous time and attention to these and kindred matters. The government is of the opinion that expert and exact knowledge to be obtained in the manner mentioned should precede any general tariff revision and that, for the present, opportunity of unobstructed observation of the effect of the extensive tariff changes made last year should be afforded.

[Mr. Robb]

Section 10 of The Electricity and Fluid Exportation Act gives the Governor in Council power to impose export duties on electricity. An order in council has been passed imposing an export duty for revenue purposes of three one-hundredths of a cent per kilowatt hour upon power, as defined in the said act. This duty will be payable on and after the first day of April, 1925. The rate will be equal to about $1.95 per horse power year.

A bill will be introduced providing for amendments to The Customs Tariff Act for the better enforcement of the sections for the prevention of smuggling.

Customs Tariff Changes

It is proposed to make very few tariff changes. The principal change will be in bituminous coal. The item "slack coal" is repealed, which puts this class of coal into the item of "coal, n.o.p." This change will remove difficulties in the administration of the act. There will be a slight reduction on other bituminous coal. The changes should encourage greater production of Canadian coal and also be of considerable advantage to Canadian transportation companies.

4 p.m.

It is proposed to make a reduction in the rate on well-drilling machinery for deep wells and on engines for the propulsion of boats owned by individual fishermen.

The estimated increase in revenue from the amendments will be about $1,000,000.

During the recess rolling mill rolls were by order in council placed on the free list. It has since been represented to the government that these rolls are manufactured in Canada. It is proposed to repeal this order, thereby restoring the rolls to their former rate of duty.

An amendment will be proposed to section 6 of The Customs Tariff relating to the special—or dumping—duty.

It is proposed to amend The Special War Revenue Act, 1915, by providing for a better definition of cheque, bill of exchange, etc. It has been found that the intention of the Act is being evaded by the substitution of other documents which cannot be rated as cheques within the meaning of the act. Well-drilling machinery and engines for the propulsion of boats owned by individual fishermen will continue to be exempt from the consumption or sales tax. A few other slight changes will be proposed.

Summary and Review

Mr. Speaker, I have submitted a statement of the financial position and trade activities of Canada for the current fiscal year and have made some comparisons with other years. But in making any comparison it should never be forgotten that the problems of Canada to-day are not comparable with those of countries whose people were not in the war so early nor so long as were the Canadian people. Canada was in the war from the day the first gun was fired. Into that struggle we, in common with many other nations of the world, poured our treasure, and what was infinitely more dear, the life-blood of our country. Gloriously succeeding in our duty, our country four years later was freed from the struggle; but we found ourselves being borne along new and uncharted channels, channels which were strewn with and made dangerous by the wrecks of great nations, national discord and sectional strifes.

Moreover, upon the Dominion treasury had fallen the cost of our share in the war, the interest on the war debt, the pensions to our disabled soldiers and to the widows and orphans of our men who had fallen at the front. The present government, representing the will of the Canadian people, has constantly borne in mind the debt we owe to the disabled and the needs of the widows and orphans, which necessitated pension increases from year to year.

On the other hand, by reductions in general expenditures and by refinancing maturing loans, the government has succeeded in reducing the interest charges and also our annual expenditures, thus enabling us last year to report a material reduction in our net debt and this year a substantial reduction in taxation and a surplus in the government's own administrative services.

The government has attempted to give a lead, which it is hoped will encourage general support of our policy of practising rigid economy in all public services, so that the costs of such services throughout Canada may be still further reduced.

The past year was not without its difficulties. Trade depressions in Europe reduced the purchasing power of the people of many countries and have adversely affected business on this continent. Short crops in some parts of Canada and the United States resulted in less labour being required for the harvesting; it meant fewer car-loads to be hauled; it limited charters for vessels and curtailed employment among those who are usually engaged in the moving of the crops from the farm to the seaboard. But there is a bright spot. Agricultural industries, especially in the prairie provinces, are now receiving the benefits of greatly increased prices for last year's crops, and these increased revenues are being applied, not to luxuries or comforts, but to wiping off the indebtedness incurred during the lean years. The farm, free from debt, brings more general economic value to the owner and to Canada as a whole than would be obtained from the free spending of profits for other than actual requirements.

Summing up our prospects, the immediate future looks brighter. No world state has a more self reliant and virile people than has Canada. But to achieve our destiny we must remove all sectional, all provincial, jealousies from our hearts; we must keep faith; forget all differences of tongue and creed; remembering only and always that we enjoy a great heritage; that we are Canadians.

I beg to give notice that upon the House resolving into committee, I shall move the following resolutions:

CUSTOMS TARIFF

1. Resolved, That the first paragraph of subsection one of section six of The Customs Tariff, 1907, and subsection seven of said section six be repealed and the following substituted therefor:

In the case of articles exported to Canada of a class or kind made or produced in Canada, if the export or actual selling price to an importer in Canada is less than the value thereof for customs entry, there shall, in addition to the duties otherwise established, be levied, collected and paid on such article, on its importation into Canada, a special duty (or dumping duty) equal to the difference between the said selling price of the articles for export and the said value thereof for customs entry; and such special duty (or dumping duty) shall be levied, collected and paid on such article, although it is not otherwise dutiable.

7. Such regulations may also provide for the exemption from special duty of any article when the difference between the value for customs entry and the selling price thereof to the importer as aforesaid amounts only to a small percentage of its value for customs entry.

2. Resolved, That schedule A to The Customs Tariff, 1907, as amended by chapter forty-seven of the statutes of 1919, chapter twenty-seven of the statutes of 1921 and chapter thirty-eight of the statutes of 1924, and by order in council , be further amended by striking thereout tariff items 101a, 587, 588, 591 and 591a, the several enumerations of goods respectively, and the several rates of duties of customs, if any, set opposite each of said items and to repeal paragraph (a) of regulation 1 of order in council, P.C. 1344, dated 5th day of August, 1924, designated as item 774 of the customs tariff, and to provide that the following items, enumerations and rates of duty be inserted in said schedule A:—

Tariff Items	——	British Preferential Tariff	Intermediate Tariff	General Tariff
101a	Shaddocks or grape fruit, n.o.p. per one hundred pounds	50 cts.	$1.00	$1.00
101aa	Shaddocks or grape fruit, when imported from the place of growth, by ship, direct to a Canadian port, per one hundred pounds	Free	50 cts.	$1.00
453e	Engines to be used exclusively in the propulsion of boats bona fide owned by individual fishermen for their own use in the fisheries, under regulations prescribed by the Minister of Customs and Excise.	10 p.c.	12½ p.c.	15 p.c.
469a	Well-drilling machinery and apparatus and parts thereof, and rope twenty-one hundred feet and over in length, capable of drilling wells of two thousand feet and over in depth, of four inches and over in diameter, and of raising and lowering casing over four inches in diameter for such wells, for drilling for water, natural gas and oil, and for prospecting for minerals, not to include motive power	5 p.c.	5 p.c.	5 p.c.
553a	Braided candle-wick with or without wire centre or braided taper-wick with or without wire centre when imported by manufacturers of wax candles or wax tapers for use only in their own factories in the manufacture of wax candles or wax tapers	Free	Free	Free
588	Coal, bituminous and coal, n.o.p. per ton	35 cts.	45 cts.	50 cts.
588a	Gas for heating, cooking or illuminating per one thousand cubic feet	6 cts.	6 cts.	6 cts.
591	Farm wagons, farm sleds, logging wagons, logging sleds, and complete parts thereof	5 p.c.	10 p.c.	10 p.c.
591a	Freight wagons, drays, sleighs, n.o.p., and complete parts thereof	17½ p.c.	25 p.c.	25 p.c.

3. Resolved, That schedule B to The Customs Tariff, 1907, be amended by providing that the following items, enumerations, and rates of drawback of customs duties be inserted in said schedule B:—

Tariff Items	Goods	When Subject to Drawback	Portion of Duty (Not including Special Duty or Dumping Duty) Payable as Drawback
1045	Materials	When used in the manufacture of tubes enumerated in tariff item 397	99 p.c.
1046	Materials	When used in the manufacture of articles entitled to entry under tariff item 663b when such articles are sold to manufacturers to be used as specified in said item	99 p.c.
1047	Materials	When used in the manufacture of articles enumerated in tariff item 469a	99 p.c.
1048	Materials, including all parts	When used in the manufacture of goods enumerated in tariff item 453e	50 p.c.

SCHEDULE B—*Concluded*

Tariff Items	Goods	When Subject to Drawback	Portion of Duty (Not including Special Duty or Dumping Duty) Payable as Drawback
1049	Bituminous Coal.....	When imported after the twenty-fourth day of March, 1925, by proprietors of by-product recovery coke ovens and converted into coke at their by-product recovery coke ovens. Provided that no drawback shall be paid under this item during any calendar month when the average ratio during that period is less than thirteen hundred pounds of coke from two thousand pounds of coal, also provided that drawback payable under this item is in lieu of drawback payable under any other item.....	99 p.c.

4. Resolved, That any enactment founded on the foregoing resolutions shall be deemed to have come into force on the twenty-fifth day of March, one thousand, nine hundred and twenty-five, and to have applied to all goods mentioned in the foregoing resolutions imported or taken out of warehouse for consumption on and after that date, and to have applied to goods previously imported for which no entry for consumption was made before that day.

SPECIAL WAR REVENUE ACT

Resolved, That it is expedient to introduce a measure to amend The Special War Revenue Act, 1915, and to provide:—

1. That "cheque" shall be further defined to include any document or writing, not drawn upon or addressed to a bank, in exchange for which a bank makes payment of a sum of money, except a coupon and a document used solely for the purpose of settling or clearing any account between banks, and that such a cheque shall be liable to the stamp tax imposed on cheques by the said act.

2. That a bill of exchange transferred or delivered to a bank drawn upon a person outside of Canada shall, for the purpose of the value of the stamp to be affixed thereto, be deemed to be drawn for an amount not exceeding twenty-five hundred dollars.

3. That no person selling foreign exchange shall for the purpose issue a bill of exchange drawn upon a person outside of Canada unless there is affixed thereto a stamp of the value of two cents for every fifty dollars up to twenty-five hundred dollars.

4. That the stamp tax imposed by the said act on money orders or traveller's cheques shall be similarly imposed on money orders or traveller's cheques issued by a bank or other person.

5. That any bill of exchange or promissory note held by a bank as collateral security for an advance or other indebtedness and in respect of which advance or other indebtedness stamps of the requisite value under this section are affixed to the relevant bill, note or other proper document, shall not be subject to the provisions of this section. If such collateral is paid by a person liable thereon stamps of the requisite value according to subsection 3 (a) of this section shall before surrender thereof be affixed thereto and cancelled by the bank.

6. That a request in writing by a customer of a bank asking the bank to transfer from the account of the customer to another bank a sum certain for deposit only to the credit of the customer in such other bank, and an advice in writing by a bank to its customer that a sum certain is placed to the credit of the customer for transfer and deposit only to the customer's credit in another bank, shall not be subject to the stamp tax prescribed by section twelve of the said act.

7. That in the case of the first complaint to the minister or any officer of Customs and Excise against a person for failure to properly stamp a receipt given by such person the minister may permit the person to affix the stamp in the manner prescribed in section fourteen of the said act within one mnoth of the date of the permit on payment of a penalty of ten dollars.

8. That subsection four of section nineteen BBB of the said act as amended by section three of chapter sixty-eight of the statutes of 1924, being the list of excepted articles not liable to the consumption or sales tax, be amended by striking out of said section three of chapter sixty-eight the words "gasoline engines to be used in boats bona fide used by individual fishermen for their own personal use in the fisheries" where they occur in lines twenty, twenty-one and twenty-two, thirty-eight, thirty-nine and forty, and fifty-eight, fifty-nine and sixty of said section three; and that the said subsection four of section nineteen BBB be further amended by adding thereto the following:

"Vegetable plants; lasts for boots and shoes including rubber footwear and patterns for boots and shoes including rubber footwear; goods enumerated in Customs Tariff items 453e, 469a; articles and materials to be used exclusively in the manufacture of goods enumerated in Customs Tariff items 453e, 469a; materials, not to include plant equipment, consumed in process of manufacture or production which enter directly into the cost of goods enumerated in Customs Tariff items 453e, 469a."

9. That the bond required under the provisions of subsection seven of section nineteen BBB of the said act to be given by a licensed wholesaler or jobber shall be for an amount not more than fifteen thousand dollars and not less than two thousand dollars.

10. That any enactment founded on paragraph eight of this resolution shall be deemed to have come into force on the twenty-fifth day of March, 1925, and to have applied to all goods imported or taken out of warehouse for consumption on and after that day and to have applied to goods previously imported for which no entry for consumption was made before that day.

11. That any enactment founded on this resolution, excepting paragraph eight thereof, shall come into force on the first day of July, 1925.

Sir. HENRY DRAYTON (West York): Mr. Speaker I desire at the outset very heartily to associate myself with the opening sentence of the address of the Acting Minister of Finance (Mr. Robb). In no section of the House is the Minister of Finance (Mr. Fielding) more respected or more highly regarded than he is in this section. We are sorry—extremely sorry—that he is not with us to-day.

By arrangement with the Acting Minister of Finance. (Mr. Robb) Mr. Speaker, I have the right to adjourn the debate to-day until next Thursday. But the government are anxious that we should make whatever progress we can. I have not yet had an opportunity of reading the resolutions, but there are certain matters to which I can address myself now and I will endeavour to save time as much as possible by so doing.

In the first instance, let me make some reference to where we are left after the avalanche of my hon. friend's figures has passed over our heads. Just let us see what the great economies of the government amount to, on the basis of my hon. friend's own statement, in which he no doubt makes the best showing he can. This government, which he holds up as an example to other spending bodies, has actually spent this year, on the showing of the Acting Minister of Finance, $2,102,811 more than was spent last year. That is the extent of the "saving". It is made up by an increase in the government's capital accounts of $7,216,000 and by a decreased expenditure in other accounts of $5,113,000—yes, and in some of which accounts the activities have entirely fallen off; the former objects have been served, and the money could not well be spent unless it was thrown away. So much for that question of governmental economy.

Now let us see where we are emerging having regard to the debt—and I think that I have followed my hon. friend's figures correctly here; I ask him to be kind enough to check me in case I am wrong, because I certainly do not want to do any injustice to the government.

The estimated consolidated fund expenses are $319,700,000; the capital charges—I include marine, railways and canals—amount to $18,077,000; the government's special account amounts to $4,400,000; while the cash paid to railways amounts to $18,027,000. I think my hon. friend will agree with me that those figures are correct. Those figures make a total of $360,204,000, against my hon. friend's estimated revenue of $344,000,000, leaving a deficit of $16,204,000 on the year's operations. I desire to point out, in the first instance, that those figures are the figures of my hon. friend. I desire also to point out that only so late as yesterday I asked in the House for particulars as to the commitments of the government for this year. My hon. friend had not that information, and we have not got it to-day. He had not that information before him; he could not give that information; he himself, of course, never could give that information; he would have to go to the spending departments and find out exactly what the commitments were for marine, public works, and railways and canals. Well, we have not got those figures. My hon. friend may be right, and I hope he is right. I hope the situation is not worse than he paints it to be; but in expressing that hope, I hope also that this year he will be nearer the figures than he was last year. The estimates last year were not very satisfactory or successful. My hon. friend's estimated drop, for example, in receipts, was something very, very different to what the year has shown. The hon. gentleman was right in the basis of his estimates of last year, although he has been shown to be one hundred per cent out, if the country could have gone on functioning as the country was. Those figures were correct figures on the trade and commerce of the country as they were then. My hon. friend did not seek to deceive the House; he would not do it. No, he was then right. Why is it that this revenue has disappeared? It has not disappeared to the extent indicated by reason of government policy directly. It has disappeared, however, to the full extent as the result of government policies indirectly. It did not drop a multiple of two over the calculations of my hon. friend as a result of the fiscal proposals which the House was then considering; but it did drop that multiple of two as the result of the shrinking of Canadian activities everywhere locally. That is why, Mr. Speaker, we have to-day this deficit, this admitted increase of $16,000,000. It is simply owing to the benumbing influences of this government. Canadian industry in the several provinces of this country has shrunk, and the yardstick over which the taxes were to be collected has shrunk.

Mr. Speaker, this is an extraordinary government. One of the extraordinary things about this government is that they are always fond of making up their budgets, not based upon the activities of the current year, but helped and swollen by some fortuitous circumstances. I think they are very fortunate. They were very fortunate, for example, when my hon. friend the Minister of Finance was able to make the fine showing that he did as a result of exchange calculations, yes and payments, which were the result entirely of activities of other years. My hon. friend himself was very fortunate last year when he was able out of trust funds, the trust of which had disappeared, to add, and add largely, to the figures making his satisfactory showing in connection with the capital account. But, Mr. Speaker, I really think this year is the choicest morsel of them all. Just imagine what we here have. We have here got an increase of over $4,000,000 —nothing which evidences any new investment, nothing which evidences any new advance, nothing which evidences any new liability. The liability was there. Here we have loans, with the interest not met, interest in arrears, and is the interest paid? Oh no, not at all, and if the interest had been paid, would it go to capital? Oh no, not at all. It would be merely a matter of the current year's revenue. The interest was not paid, but we have a new obligation. It is extraordinary what a difference is made when we consider the particular angle from which one looks at things.

Mr. LAPOINTE: Hear, hear.

Sir HENRY DRAYTON: My hon. friend the Minister of Justice says "hear, hear". I would have thought that a lawyer like my hon. friend, lawyer as he is, and the legal adviser of this House, in connection with a matter like this would not want to change his opinion by reason of the angle from which he viewed it. No. What I am going to point out, Mr. Speaker, is this, that elsewhere, in other instances, it has been thought to be rather serious to capitalize interest that is never being paid, to consider a fictitious bookkeeping entry as a real entry. It is so easy to do these things. It is so easy for anybody to inflate their balances by charging up interest upon their uncollected or uncollectable debts, or their debts that are slow in collection. It is so very easy to do it, but some gentlemen who have done it today have been asked to do time at the public expense. What happened in the Home Bank case? One of the real charges against the directors of that institution was that they carried forward interest that had never been paid, that they capitalized it, and went on pyramiding it time and time again, as if the advances were actually being made. So here we have had not a single cent of extra advance—still the same two countries, and despite what my hon. friend said as to the distressful condition of Europe, I am inclined to think they are going to come through. I hope so, and I hope the whole of this is collected, but this is a new and novel principle in national finance. I hope it will not be imitated by any more banks, and I do submit, Mr. Speaker, that what is not good enough for banks certainly ought not to be good enough for the Dominion of Canada.

I am going to deal with another matter which can be dealt with without reference to these resolutions. My hon. friend talks about our debt. He goes further and rebukes us, and very soberly, for having dared to suggest that the obligations which we incurred last year in connection with our railways should be considered our obligations. I will ask hon. gentlemen just for a few minutes to consider what they themselves in the past have said, and ask them whether they were serious and whether they were honest in what they said. From every corner of this chamber we have had hon. members who, when speaking of this railway question, have pointed out, one after the other, that our railway capital accounts were unduly swollen, yes, that if we were going to give the management any chance of ever making good, we should remove from the management that incubus that was always hanging over their heads, that impossible task of making a showing against swollen and improper capital charges. Is there any doubt about it? Does a doubt exist in any part of the House? I have heard the Prime Minister (Mr. Mackenzie King) say that in his view there should be a re-valuation and cutting down. Is there any doubt about it? There is no doubt about it. Everybody in this country, as well as everybody in this chamber, knows that we have a vast sum represented in the capital account of our railway that does not represent value. I wonder if I can venture to carry the judgment of hon. members with me a step further. If that statement be true—and it is accepted as true—what possible good do we do—except to try and deceive ourselves and lift ourselves by our own bootstraps—by treating a further investment in a corporation which we admit to-day entirely over-invested, not as a liability but as something that is sure to be good when we know it is not? We have heard gentlemen here talk earnestly and well as to the evils

of watered stock and of watered capital. I wonder if any hon. member of the government will undertake the task of showing that there is not enough water in the capital of the national railway that is now being worked up by my hon. friend to employ the total activities of all the hydraulic engineers for a century. Why, it is there.

Mr. HOEY: They seem to have removed the tax from well-drilling machinery to encourage water.

Sir HENRY DRAYTON: That might help, but I doubt it, because my hon. friend will realize that that only makes more water, and we do not need it. Is this picture at all overdrawn? Do we not all really know that it is nonsense? Do we want to be parties to a fraud on the public? Is there anything else in it except that? I do not care what is done in the past in one particular year. The last year the former administration was in power, and when payments were being made, it has been shown that a certain sum—it does not matter how big it is, if it is wrong it is wrong—was paid out of one of these loans, the amount I forget. I have just two observations to make in that connection. I am not going to deny the statement one way or the other. I do not remember and do not know, but I know that when payments have to be made—and cash was none too free then—those payments are out of funds available and they go through. I do know that later on in the year accounts are marshalled, the payments are properly distributed; and in that particular year the marshalling of the accounts was not in the hands of the former administration but in the hands of this administration; and if those accounts were marshalled so as to show a payment out of moneys raised by loans for the railway company guaranteed by the government, which was not for a refunding purpose upon an obligation on which we were already liable, all I can say is that those accounts were wrongly classified. But never mind whether that is a fact or not, the question is not what was done one day, but what is right to-day. We are learning a little more all the time. We learn something this year. For example this year we learn that there is an increase in the capital debt of the railways of $118,000,000. And yet at the same time, with the piling up of capital of $118,000,000 in the one year—and these are not my figures, but the figures of the Minister of Railways (Mr. Graham) given in this House this session—this Chamber is asked to regard endorsation by the government of $81,000,000 this year, as a matter resulting in no obligation to the country. The idea is really too ludicrous to consider. My hon. friend says he has had accountants go over the matter for the purpose of showing that we are altogether wrong.

Mr. ROBB: For the purpose of showing that we have followed exactly the same procedure as my hon. friend followed when he was Minister of Finance.

Sir HENRY DRAYTON: I wonder if my hon. friend will go a little further with me. I have given him one case which I think existed during a long course of years, a course of years when the former government was met with this proposition; the railway was practically streaks of steel, disconnected lines, on which it was difficult to keep the trains, and the like, when we had to put up money by the hundreds of millions; and my recollection is that in all that time; and in the handling of all those millions, the only case the hon. gentleman has to refer to is one little tack which he has got to cling to namely what was done in connection with an advance or a loan—how much of it went that way I do not know—of $25,000,000 in the year 1921-22. If I am wrong, I ask my hon. friend to correct me. No, I am right. There it is, one little tack and that is all. If we are going to start in swapping improper practices, and this would be improper, surely my hon. friend has all the benefit that he ever ought to get out of it. If the amount was $25,000,000 in 1921-22, it was $50,000,000 last year in connection with a grant that was not for equipment. There was another grant last year of $22,500,000, but I am not referring to that. Does my hon. friend not honestly think that if he goes wrong one hundred per cent more than the wicked Tories went wrong, it is about time he quit? Would that not be a fair proposition? It strikes me that it would be fair, but there is something more than being fair to each other in this House. It is being fair to the Canadian taxpayer, to the public, to the country, and nothing done by any party or by any opponent can, for one instant, detract from our duty of being fair to the country at all times.

Once upon a time, the big annual additions to the railway debt were additions to the government debt. That is gone. Why? It is gone simply because, in order that the real state of affairs might not be known by the Canadian people, instead of paying railway obligations in cash, the government resorted to endorsations. The government in this respect outrivalled even the far-famed Mr. Micawber. He was very hopeful as to the

effect of giving a note—the awful liability was then paid. This government treated it even more lightly than that—the thing never existed—it is never to be considered at all—it is never to be brought into our accounts. Let us see where we are going and let me give an illustration of how the percentages are being changed. In 1922-23, the government met railway claims by cash to the extent of $80,000,000. I have not the figures before me for the previous year, but while the amount was not as large as that, my recollection is that it was somewhere in the neighbourhood of $50,000,000, and the amount was greater for the year before. I have not those figures and I speak entirely subject to my hon. friend's correction. The public accounts are all open to him in a way that they are not open to ordinary members, because it means a great deal of work to find these things out. My hon. friend has the figures, and I venture to say that he will find that the percentages were as I indicated, showing heavy cash payments by the government annually in connection with the railway system. We have the heavy cash payments by the Minister of Finance (Mr. Fielding) of $80,213,000, and we have this year my hon. friend's payment of $18,027,000. In like manner the increases of last year in the railway figures were heavily weighted, in so far as the public borrowings are concerned, by outside money being brought in instead of governmental money. Last year if I remember rightly—and I speak subject to my hon. friend's correction—we voted $24,000,000, but the public took on new obligations of the railway company of $90,000,000. What we are doing this year is just what was done last year, only a little worse. How much capital work was done last year? Hon. gentlemen who have sat upon the committee of Railways and Canals know that it is very easy to have items which might one day be in maintenance, another day in betterments and finally in capital account. It is very easy to say that we issued last year $50,000,000 for capital account, and find it in lines you have already got standing on your books for more than they are worth, and then find, as the whole expenditure for new operations and new work, an amount of $2,186,000 as we had last year. The Minister of Railways and Canals (Mr. Graham) brought down the other day a return which showed the whole amount of capital construction done on the new lines that we gave the railway company the right to construct as $1,650,000, whereas the whole increase last year in connection with new capital account was $118,000,000. Is it necessary for a reasonable man to go further than to point out that this company itself admits an increase in the current year of $118,000,000, when we affirm that that debt is our debt? Who owns the company? Surely, the country. Who is responsible for it? The country. Who has to finance it? The country. Who pays the money? Again, the country.

Mr. GOOD: What was the balance of the $118,000,000 spent for?

Sir HENRY DRAYTON: I am sorry I cannot tell by hon. friend. As yet I have not had a copy of the annual report and I do not think it has been distributed this year. If hon. members have copies, I have not received one. I quite agree with the hon. gentleman in what he implies in his question, that it is high time that we had the report. The only thing I can say is this, that the return was brought down showing the whole amount that was spent on new construction to be, as I have already stated, $1,650,000. If there is any justification for this course of conduct my hon. friend has not given it. Let me put the matter in very plain terms, and I have no desire to be in the slightest degree offensive: my hon. friend has not given any justification any more than any other wrongdoer gives when he tries to justify his action by saying—"You too." That is the only justification we have had, we have had no other; and that is no justification at all. My hon. friend has not shown us that there were sufficient assets in that company to protect the country; we have not had a single word of satisfactory explanation; all that the minister has done has been simply to say, "You too." And that I submit is absolutely no justification whatever.

Mr. CAMPBELL: Is the ex-Minister of Finance (Sir Henry Drayton) in favour of revaluing the assets of the Canadian National Railways and writing the capitalization down to actual value?

Sir HENRY DRAYTON: I am entirely in favour of doing anything which will make the situation clear and honest before the Canadian people. What I object to to-day is the practice of hiding liabilities, the practice of hiding commitments, the practice of hiding debts. I do not believe in it.

Mr. FORKE: It comes to this, that the hon. gentleman objects to charging these accounts against the railways instead of against the country.

Sir HENRY DRAYTON: Certainly. Let me go over it again for a moment.

Mr. FORKE: I think I understand it.

Sir HENRY DRAYTON: Very well. I might have to labour the point were it not for the fact that we were told only a few days ago of an addition of $118,000,000 in connection with this responsibility. Will hon. gentlemen stop and think for a moment what that means? That sum would build most new systems; indeed, all it cost to build the whole of the great National Transcontinental—and no money was skimped on that job—was some $164,000,000. And here we have a new capital cost in connection with the National Railways of $118,000,000, although we have spent altogether in the past year only $1,650,000, on new construction. I wonder whether there is a single hon. gentleman in this House except the Acting Minister of Finance (Mr. Robb)—no, I will not except him—who does not realize that this really means an increase in the debt of the country this year of approximately $100,000,000. Is there really anyone who would seriously challenge that statement? My hon. friend, it is true, shows only $81,000,000 of an endorsation; the railway company shows $118,000,000 of increase in capital; and he has shown, if I took down his figures correctly, a refunding of $17,000,000. If there is a refunding it should of course be taken off. But I would point out that we have a right to consider that the railway accounts as tabled by the Minister of Railways are true. That is the first thing. And if they are true and the increase is $118,000,000 then it is also true that this is a net increase covering, and being over and above, all refundings.

Mr. GOOD: May that not be represented by real railway assets at the present time, to some extent at least?

Sir HENRY DRAYTON: My hon. friend is quite right; I suppose it is covered by some assets. But there is certainly not enough of assets to cover it appreciably. And in any case, is it any more represented by a physical asset than would be the case either with a harbour or with a dry dock? Is there any more reason for showing honestly in our books the cost of our canals and the like? What difference is there, seeing that the railways are ours? We have in connection with them either assets or liabilities and if we are to be honest about it we should show the exact state of affairs. I submit therefore that my hon. friend's calculation as to debt is entirely wrong. There is just one modification which the situation may suggest, and it certainly is not apparent to us. The railways say that they advanced their capital $118,000,000, but I can hardly understand how that could take place unless they have some cash on hand; and to the extent that they have cash on hand I quite agree that that amount might be deducted.

Mr. HUGHES: Was there any of this large amount wasted through extravagance and bad management, or from any other cause whatever? And what is the remedy? What remedy can the Canadian people apply to meet the situation?

Sir HENRY DRAYTON: The first remedy to right a wrong is to let some light in; let the light in and let us know where we are. That is all I want to have done. And as for knowing anything about the matter, my hon. friend is in far closer touch with the situation than I am.

Mr. HUGHES: No. I was not on the committee that looked into these accounts last year; my hon. friend was.

Sir HENRY DRAYTON: But the hon. member will agree that last year we had not the accounts that are involved this year. If this budget had been held back until the railway annual account had come down I might be able to answer my hon. friend; I should at least have had an opportunity of going into the matter. Perhaps the hon. gentleman can suggest the reason for the budget being down in advance of that report.

Mr. STEVENS: Why the rush?

Mr. ROBB: May I be allowed to remind my hon. friend that in bringing down the budget to-day before the end of the year we are following precedent. In 1916 parliament met on January 12 and the budget was brought down on February 15; and in 1915 although parliament met on February 4 the budget was brought down on February 11. We are now within one week of the end of the year whereas my hon. friends brought their budget down six weeks in advance.

Sir HENRY DRAYTON: I have not quarrelled at all to-day about the budget coming down at this time. I have not the slightest objection. But the hon. gentleman from Kings, Prince Edward Island (Mr. Hughes) was asking me about the accounts of the railways, and I am simply pointing out this one thing, which is plain to everybody, that we cannot consider those accounts to-day because the accounts are not down, and the only information I have from the Minister of Railways and Canals (Mr. Graham) is that there

is an increase of $118,000,000 of debt. As I say, no one can tell what the real condition of the country's debt is. From the figures of my hon. friend it looks very much like an addition of eighty-one, plus that sixteen, minus the seventeen which he gave us as refunding, which would make it eighty. But if the railway company is right, all refundings are taken care of in their $118,000,000, and therefore it looks as if the total should be $118,000,000, plus the $16,000,000 my hon. friend admits. So much for that.

I now want to touch upon another point which my hon. friend stresses in his admirable collection of statistics, highly suitable for his budget, namely, the statistics showing the prosperous condition of trade. I congratulate him on the care he has taken in their compilation. He has selected just exactly the right kind of statistics to suit his text. At one time there was a controversy, which I am not going to renew now, as to business failures in Canada. I notice the accuracy of our figures has been mildly challenged because some of the businesses included in the list were too small. Well, I would have thought that this government would not want to take the position that they are only interested in the success of the big businesses, and that they would look after the little ones as well. I would point out that if ours were very small in Canada, they were even smaller in the United States, because the average liability of failing firms in Canada in 1924 was $58,467 as against $55,063 in the United States.

But, Mr. Speaker, I would direct the attention of my hon. friend and the House to the fact that the trade in which the country is immediately interested and which is more vital to it than anything else is its domestic trade, the trade which cannot be disturbed by customs laws or be put out of joint by ocean freight rates and the like; it is trade which is the country's own. My hon. friend has given us some very attractive statistics of big export business, and nobody will question those statistics, but it would really have been much more to the point if he had given us something showing our internal activities, something showing that the purchasing power in our home market was not a disappearing power. Now, there is one index which is considered authoritative and fundamental as showing these activities; I refer to the freight tonnage carried by our railways. The railways carry practically everything that we make or produce. In the first instance we have a great loss of wheat tonnage, amounting to 2,300,000 tons. That certainly was not the fault of this government any more than the great crop of the year before was their virtue; that is something which has nothing to do with their fiscal policy one way or the other. But the great mass of agricultural consumption in this country at any rate depends on local demand, the power of somebody in the local market to pay for the goods, and I am pointing out some startling declensions in railway tonnage as showing eloquently the decreased activities locally in Canada practically everywhere, decreases all the more marked in view of the increases in export trade, because while we have the decreases mirrored here those decreases would have been much greater had there not been increases in the export of the same articles carried over the same lines. Last year our railways carried 38,161 tons less of apples; 9,752 tons less of eggs—and there are many eggs to a ton; of hides and leather 17,922 tons less—and that means an awful lot, but it is a pretty good indication of the condition of the boot and shoe business. If you really want to see where the benumbing effect of tariff tinkering with its attendant uncertainty is at its worst you have only to look at the iron and steel industry.

Mr. FORKE: Where did the hides go?

Sir HENRY DRAYTON: They did not go. That is what I am complaining about. I am complaining that the demand fell down to such an extent in this country that 17,922 tons less of hides and leather were handled,—something, I take it, that a farmer ought to be interested in. Now then, the drop in iron ore tonnage was 443,403 tons; in pig iron and bloom 275,547 tons; in rails and fastenings 50,757 tons; in bar and sheet iron, structural iron and iron pipe 639,105 tons; in castings, machinery and boilers 144,858 tons. As hon. gentlemen well know, the activities of our foundries and other iron and steel plants depend to a large extent upon other manufacturing activities—and these other manufactories were not there to be looked after. The movement in coke, something which is almost entirely industrial, fell off 266,326 tons; the movement of raw cotton fell off 32,488 tons; cement 49,308 tons; brick and artificial stone 135,686 tons; lime and plaster 62,023 tons; agricultural implements and vehicles, other than automobiles, 58,458 tons—

Mr. GOOD: Between what calendar years is the comparison made?

Sir HENRY DRAYTON: Between the calendar years 1923 and 1924. These figures are given by the railways. The movement in household goods fell off 38,743 tons; in furni-

ture 4,008 tons; in canned meats 1,123 tons; other manufactures and miscellaneous 844,887 tons, and merchandise 327,538 tons. This list covers many diversified activities. But take forest products, which are divided into five headings: first, logs, posts, poles, cordwood; second, ties; third, pulpwood; fourth, lumber, timber, box shooks, staves, headings; fifth, other forest products. The only thing we are going ahead in is the depletion of our pulpwood reserves. While pulpwood shows a large increased tonnage, on the other hand there is a considerable decrease in logs, posts, poles and cordwood of 75,390 tons; in ties 16,287 tons; in lumber, timber, box shooks, staves and headings, 835,465 tons; and other forest products of 111,240 tons.

These reductions are serious in the extreme. For example, the reduction in tonnage in hides and leather was 9.3 per cent; coke, over 26 per cent; iron ores, 72 per cent; slate dimension or block stone, 57 per cent; lumber, timber, box shooks, staves, heading, 11.9 per cent; other forest products, 17.75 per cent; iron, pig and bloom, 43 per cent; rails and fastenings, 18 per cent; bar, sheet iron, and so forth, 38.6 per cent; castings, machinery and boilers, 23.6 per cent; agricultural implements and vehicles other than automobiles, 20.99 per cent; and household goods, 34.7 per cent.

My hon. friends say that the country is prosperous and that a lot of business is being done. Well, let us see what the figures with respect to railway employees show in this connection. In October, 1923, 177,876 men were employed in railway services in Canada, and in the same month in 1924 there were 156,338 employed, a decrease of 21,538 in respect to that one month. For November, 1923, the number employed was 164,724, and for November, 1924, 149,209, a decrease of 15,515, while in December, 1924, there was a decrease of 10,305 in the number employed as compared with the same month in 1923. We find that the decreases continue pretty steadily, because while in October 1923 there were 177,876 employed, in December, 1924, there were only 143,761. I am inclined to believe, Mr. Speaker, that the only person who really thinks that conditions are good, that production is good, that employment is good, must be my right hon. friend the Prime Minister.

Mr. Speaker, I move the adjournment of the debate.

Mr. MEIGHEN: May I suggest to the Acting Minister of Finance (Mr. Robb), before the motion carries, that he be prepared on Thursday before the resumption to give the House an estimate of the increased revenue which he anticipates from the increases in the tariff in the various schedules.

Mr. ROBB: Did I not make that statement?

Mr. MEIGHEN: I did not catch it, if it was in the address.

Mr. ROBB: About a million dollars.

Mr. MEIGHEN: That was one item, as I understood it, there are several others.

Mr. ROBB: I will check that up.

Motion (Sir Henry Drayton) agreed to and debate adjourned.

Right Hon. W. L. MACKENZIE KING (Prime Minister) **moved:**

That the order for consideration of the motion for Mr. Speaker to leave the chair for the House to go again into committee of Ways and Means have precedence over all other business except the introduction of bills, questions, and notices of motions for the production of papers, until disposed of.

Mr. SPEAKER: Except to-morrow?

Mr. MACKENZIE KING: Yes.

Mr. MANION: Does that supersede private members' day on Monday next?

Mr. MACKENZIE KING: It postpones that private members' day until after this budget debate is over.

Mr. MEIGHEN: I understood the Prime Minister to assure the House a week ago, or about that time, that there was no intention of superseding private members' day on the following Monday.

Mr. MACKENZIE KING: My assurance at that time was that Monday as private members' day would be continued for three additional Mondays. That, of course, the government intends to adhere to. I think I made it clear that when the budget debate commenced it would have precedence.

Mr. SPEAKER: Is it the pleasure of the House to adopt the motion, with the addition of the words, "except on Wednesday, March 25th instant?"

Motion (Mr. Mackenzie King), as amended, agreed to.

CANTEEN FUNDS

The House resumed, from March 5, consideration in committee of a proposed resolution with regard to the distribution of the canteen funds—Mr. Beland—Mr. Gordon in the chair.

Mr. MANION: I must confess I have not my thoughts quite in order regarding this resolution, because until last night I had no idea the matter was coming on quite so soon. We rather had the impression, due to the budget and other matters, that this question of canteen funds would not come up for a week or ten days. I am not criticizing the minister in that respect; I am simply mentioning it for the purpose of emphasizing the fact that I have not had an opportunity of going into it quite as thoroughly as I intended doing before dealing with it.

We are dealing, I presume with the resolution as a whole. With regard to the question of the taking of $100,000 from the canteen fund for the purposes of an adjustment bureau, I do not think there is any doubt in the minds of most of us that some form of adjustment bureau is needed in Ottawa; at least I have no evidence to the contrary. We will therefore take it for granted that there should be some form of adjustment bureau acting as an intermediary between the returned men or their dependents and the different departments of government. I am not convinced that the present adjustment bureau is the proper one, neither am I convinced that it is not; I have quite an open mind on the matter. But I am convinced that whatever adjustment bureau we have in Ottawa should be entirely independent of any department of government. In other words, the Minister of Soldiers' Civil Re-establishment or any other minister of this government or any other government should not have the right to dictate the policy of that bureau. The only proper method, it seems to me, is to have trustees appointed, not by this government nor by any government, but by this parliament or in part by this parliament, those appointed in that way to choose the rest of the members of the board. The choice should be so made that the members of the board shall not be influenced in the matters they have to deal with, either by the government or by the opposition, or by any political group. It is the desire of all of us, I believe, that this adjustment bureau shall be entirely for the benefit of returned soldiers and their dependents, and that in no manner, shape or form should politics have anything to do with it. I shall take occasion later to discuss that point more thoroughly; at this stage I simply put it forward as one of the suggestions that ought to be given consideration.

5 p.m.

There is another suggestion I have to offer with regard to clause 2, which provides:

> The sum of $100,000 to be paid to a Central Board of three trustees appointed by the Governor in Council—

My suggestion differs in the method of appointment. I believe that if these trustees are appointed by the Governor in Council, you will have them more or less in the hands of whatever government is in power, or in the hands of the department concerned. The clause goes on:

> —without remuneration, to be used in such amounts and such manner as it may deem best for the maintenance and assistance of an adjustment service and bureau for the benefit of ex-service men and their dependents.

I differ entirely with the proposal to take this $100,000 from the canteen funds for this purpose. If these canteen funds are a trust fund—and they are—then, to my mind, this $100,000 should not be taken from such funds for any services on behalf of the returned soldiers or their dependents. I admit, and I think most hon. members will also admit, and the government apparently admits by this resolution, that there is some need for an adjustment bureau for the returned soldiers and their dependents, that without such an adjustment bureau to deal directly with the Department of Soldiers' Civil Re-establishment or the pension commission they could not get full justice; if they could, there would be no need of this bureau. I am not saying that with the idea of any special criticism of the Department of Soldiers' Civil Re-establishment or the pension commission. But the government admits, and we all admit, that there is some need of an adjustment bureau in order to give justice and fair treatment to the returned men and their dependents. Then if there is that need, I do not think the cost of such a bureau should come out of the canteen funds, because these canteen funds belong to the returned soldiers themselves. They are made up of the moneys collected in the canteens as profit, and they are a trust fund which should be retained entirely for the returned soldiers and their dependents. Therefore, I do not believe that this $100,000 should be taken from the canteen funds at all. It should be put in with the balance of the fund and dealt with as the balance of the fund may ultimately be dealt with.

I submit that what we should do in connection with this adjustment bureau is to pay for its upkeep just as we would pay for the upkeep of the Department of Soldiers' Civil Re-establishment or any other department, with this exception, that whatever money it costs to keep up the bureau should not be doled out by the ordinary methods.

and be subject to criticism and checking up by parliament or by the department; it should be paid over as a trust confided by us, as the Parliament of Canada and the representatives of the returned soldiers, to these trustees to handle in an absolutely independent manner. I am informed that even the present type of adjustment bureau could be carried on for something under $20,000. Without knowing much about it, I think perhaps it might be carried on for this amount; I believe there has been an estimate by Mr. Grant MacNeil himself that such a bureau could be carried on for something under $20,000. Now if we decide that this sum is enough to carry on this bureau on behalf of the returned soldiers, I would say that that amount, $20,000, should be voted annually here in the ordinary way in the estimates, and be handed over to the trustees who are to act as the representatives of the returned soldiers, and act without remuneration. Men such as Sir Arthur Currie would be an excellent type to handle this fund, men who are acting absolutely independently of any government or opposition.

Those are two suggestions I offer for changes in this resolution, at least with regard to the bureau, and I presume those changes would have to be made in the resolution if they are to appear in the bill.

Mr. SPEAKMAN: Would not that suggestion be open to the same exception which was taken by the hon. member for the appointment of trustees by the government, in that it might leave the trustees susceptible to influence by the government, who in the final analysis must be held responsible?

Mr. MANION: There is always a possibility that the trustees might be influenced by the government or by the opposition, but they would be less likely to be influenced by the government or by the opposition if they were independently appointed.

Mr. SPEAKMAN: That was not my point. It was this: Could not the same exception be taken to the voting of the annual amount by this parliament and to the payment by parliament as the hon. member takes to the appointment of trustees by the government, in that the payment of that money by means of a government estimate might tend to influence the trustees in the use of that money?

Mr. MANION: I do not think they would be influenced by parliament voting the money. It is parliament that votes the money, not the government. If the people of Canada are to pay for the adjustment bureau, the money must come from some

place, and the only place it can come from is this parliament. It is not a proposition of the government or of anybody, but a method of handing over the $20,000 to be used by the trustees who are independent of anybody, on behalf of the returned soldiers and their dependents. What I am suggesting and endeavouring to do is to have no influence in any shape or form used upon the trustees by myself or by any group, but they should be as far as possible independent of the government and opposition and of the Progressive party or any other group in this House.

Mr. SPEAKMAN: I am afraid the suggested method of payment might make these trustees susceptible to influence by the government.

Mr. MANION: If my hon. friend can suggest a better method, I have an absolutely open mind. I do not know how we can give $20,000 per annum for the next two or three years for a board of trustees to handle except in the manner I have suggested; but if my hon. hon. friend can suggest a better method, I am quite open to conviction. I have simply offered my own suggestions.

There may be other matters in the resolution with which I do not agree. I am not convinced that the method of handling these funds is altogether correct, and suggestions may be made later with which I may agree. But I am offering these two particular suggestions for the consideration of the committee, and I repeat that so far as I am concerned I have an absolutely open mind on the matter. I have this desire, however, and I think it is the absolute desire of the majority, if not of all of us,—to handle this fund and the central adjustment bureau entirely—one hundred per cent—for the assistance of the returned soldiers and their dependents.

Hon. H. S. BELAND (Minister of Soldiers' Civil Re-establishment): I must thank my hon. friend for the spirit he has displayed in the submission of his remarks in connection with the disposal of the canteen funds. I note that he makes some suggestions in connection therewith, one in particular bearing upon the mode of appointment of the board of trustees to administer that portion of the fund, namely $100,000, destined for the maintenance of an adjustment bureau in the city of Ottawa. If I understood my hon. friend aright, he suggested that the trustees might be appointed by parliament. I have sat in the House of Commons for over twenty years, and I do not know of a single occasion upon

which an appointment has been made directly by the House of Commons. On numberless occasions parliament has clothed the Governor in Council with the power of making appointments either of a commission or of a board or of trustees, but I have not—and I can say this with certainty—known of a single instance in which appointment to public office has been made by parliament itself.

Mr. MANION: I do not wish to interrupt the minister, but if he will permit me, I would say that we have never had such a case as this before. This is the first time we have had canteen funds and the care of the returned soldiers and their dependents. In ordinary cases I admit my hon. friend is absolutely correct, but this is an extraordinary case such as we have never had in the past, and such as I hope we shall never have again. It is a trust for the benefit of the returned soldiers and their dependents, and I am sure my hon. friend is as desirous as I am of having it handled in a proper manner. I think that because of that fact it might be handled differently from the ordinary appointments of the government.

Mr. BELAND: The only way by which this could be accomplished would be to come back at the next session of parliament with a bill providing for the appointment of trustees by parliament. I do not see any other way.

Mr. MANION: I was not prepared to discuss this matter to-day and I did not have my thoughts arranged; but I wish to make one other suggestion. I am sure my hon. friend would not object, and as far as I am concerned I do not think anyone would object, to Sir Arthur Currie, for instance, being chosen as one of the trustees. Suppose we could get him to act, and then appoint some other man in whom people would have as much confidence as they have in Sir Arthur Currie, and make provision in the bill that they could appoint a third trustee; in that way we could put the matter through in very short order, possibly not this afternoon but by adjourning consideration of this matter for a day or two we could appoint two trustees and let them appoint a third.

Mr BELAND: I think the suggestion of my hon. friend deserves consideration. Speaking of Sir Arthur Currie, I may frankly say to the House that it was my intention to ask him to act as head of the trustee board. I have no objection to informing the House that I had gone so far as to draft a letter to him, which draft I have in my possession now. Of course if you appoint two trustees, and ask them to appoint a third, it might happen that one trustee might insist upon the appointment of a certain party as third trustee, and the other trustee might insist upon appointing another party, and if they were divided in that way I do not know exactly how the appointment could be made. This proposal I have brought before the committee, to appoint a board of trustees to be known as the central board of trustees, is in pursuance of a special recommendation of the royal commission which dealt with the question of the disposal of the canteen funds after investigation from one end of the country to the other. That commission recommended that a central board of trustees be appointed, and that an amount of one hundred thousand dollars be paid over to them. The statute would provide that they the board should administer that money as they deemed best, in the interests of returned men, for the maintenance of an adjustment bureau. I may say that my own particular party interest, if I have any strong party interest at heart, would lead me to keep far away from the administration of that hundred thousand dollars. There is no question that the task is not an easy one, and that the trustees to be appointed will have many difficulties to contend with, many claims and many appeals which will render their task rather onerous. The recommendation of the royal commission I think is the right one. I would invite my hon. friend to read the bill passed last year based on a similar resolution, and he will find that provision is made for the distribution of the residue of the canteen funds, some $2,300,000. That distribution is to be made to the different provincial governments in the following manner. Every provincial government will be invited to appoint a board of trustees. The lieutenant governor in council in each province will have the choice of the board of trustees, in that province. In the province of Ontario the board of trustees will be composed of five men; in each of the other provinces, of three men. In the case of the central board, as well as in the case of the other boards, the majority of the members must be ex-service men. If we apply to the central board of trustees the suggestion which my hon. friend has submitted, why should we not extend it to all the lieutenant governors in council. For the provincial board, in some cases deals with a much larger amount of money; forty-one per cent of the total sum goes to the province of Ontario, or about a million dollars; so that the board of trustees appointed by the lieutenant governor in council in Ontario will have

functions as important, if not more important, than the functions of the central board.

Mr. MANION: If the matter can be put through as the minister suggests I think it should be done. Let us place the boards of trustees in the provinces on the same plane as the central board. I am as anxious as the minister to get it out of politics in the provinces as well as in the Dominion. I am trying to get it out of politics in the country, and will go as far as the minister suggests, in this regard.

Mr. BELAND: I am not adverse to the idea, but dealing for the time being with an adjustment bureau and a central board of trustees, appointed for the purpose of distributing the money which is provided under this resolution, I am bound to say that this board cannot be functioning before another session of parliament has been called and has sat. If the bill passes the House of Commons and the Senate it will not be assented to before the day of prorogation. If it provides that a board of trustees shall be appointed by a special bill submitted to parliament reciting the names of each of the trustees, then of necessity the appointment of the central board will be postponed another year.

Mr. CLARK: If the trustees are actually named, why will that postpone the work under the bill for another year?

Mr. BELAND: If I did that for the central board of trustees, which might be possible, I would be precluded from doing it in the case of the provinces.

Mr. CLARK: I understood the minister was now considering the adjustment bureau. Let us consider that. If we can get something better than we have got under that heading, then let us consider the other when we come to it; but the fact that we are able to improve the adjustment bureau feature of it should not make it necessary to make any change in the next portion of it, though we may have some suggestions to make as to that when we have it under consideration.

Mr. BELAND: I do not know how it could be done unless we bring down a bill to appoint a board of trustees and name the trustees. And how can I be warranted in doing that when the legislation is not enacted?

Mr. CLARK: The second paragraph of the resolution reads:

> The sum of $100,000 to be paid to a central board of three trustees appointed by the Governor in council, without remuneration, to be used in such amounts and such manner as it may deem best for the maintenance and assistance of an adjustment service and bureau for the benefit of ex-service men and their dependents.

What connection has that paragraph with any other paragraph? If a bill is brought down, and as regards this particular portion of the resolution, the central board of three trustees are named in the bill, how is that going to prevent the operation of the bill for another year?

Mr. BELAND: What is exactly the concrete suggestion of my hon. friend?

Mr. CLARK: I am merely following what the hon. member for Fort William and Rainy River has said.

Mr. BELAND: In connection with this clause of the resolution, my hon. friend says that the difficulty can be overcome. I am willing to overcome the difficulty. I show my good disposition; will my hon. friend suggest to-day how it can be done?

Mr. CLARK: I will, right now. Supposing the hon. member for Fort William and Rainy River says that he will be satisfied with Sir Arthur Currie, I have a suggestion to add to that. Let the council of the Dominion Veterans' Alliance, constituting seven of the major soldiers' organizations, name two members of the board. Then we have two appointed and let them appoint a third. If they fail to agree, I have no objection to the Governor in Council making the third appointment. I am convinced, however, that those two would arrive at a decision, and then neither this government, nor the opposition, nor anybody else, can be under the charge of this fund being manipulated for political purposes.

Mr. BELAND: The suggestion of my hon. friend that this fund of $100,000 may be used for political purposes is not well founded. The resolution itself is a sure guarantee that it cannot be so used. No government would undertake to appoint a board of trustees composed of three men who would not be acceptable to the returned men, for the very reason that the government would suffer therefrom, to say nothing of the public interest or that of the returned men. I call my hon. friend's attention to this further point. Let us suppose that we insert the name of Sir Arthur Currie in a clause of this resolution. It remains to be seen whether Sir Arthur Currie is agreeable to act.

Mr. CLARK: That can be found out by telephone.

Mr. BELAND: I do not think we generally legislate by telephone. When we are engaged

on a piece of legislation in this House, I do not think we should adjourn the committee and go to the telephone and ask a certain party whether he is willing to act or not.

Mr. CLARK: The minister could get an answer between six and eight o'clock.

Mr. BELAND: I will do this, which will show the hon. member what an open mind and an impartial spirit I am bringing into this resolution. Let the resolution pass and I will try to draft a clause in the bill which will meet the wishes expressed by my hon. friend. I am not saying that Sir Arthur Currie is willing to act as such trustee or as head of such board, I cannot, of course, undertake to pledge myself as regards Sir Arthur Currie. If he is willing to act, I am willing to ask him. If I say here as a minister in charge of a bill that if this becomes legislation I shall ask Sir Arthur Currie to be head of the board of trustees, I think that should be sufficient for my hon. friend. Would anybody doubt my word in this regard.

Mr. LADNER: Does the minister approve the suggestion that two members be named by the Dominion Veterans' Alliance?

Mr. BELAND: I have no objection at all to receive a suggestion from them.

Mr. LADNER: And as the hon. member for Burrard (Mr. Clark) has suggested, to leave the appointment of the third to those two gentlemen?

Mr. BELAND: And if they cannot agree, the appointment of the third to be left to the Governor in Council. I am quite willing.

Mr. MANION: We are not in any way desiring to obstruct this legislation, so that if the minister thinks we are, he is drawing a wrong conclusion.

Mr. BELAND: I am not.

Mr. MANION: The minister asks us to let the resolution go through. It is now half past five and we have many things to discuss in regard to this resolution. Therefore, I am sure the minister does not expect that the resolution will pass before six o'clock. Let us think of these things between six o'clock and eight. I would not doubt the minister's remark that he would be willing to draft a clause in the bill, but I would want to think over the whole scheme before absolutely concurring in his statement. As it is now half past five, there is no reason why we should decide absolutely upon that point now. Might I read some of the remarks of Sir Arthur Currie which are contained in one of his letters to the Prime Minister of May 7, 1923. This deals with both aspects of the case as suggested by myself, so that I do not claim any originality in the matter. This is a letter which is in the return brought down the other day. Sir Arthur Currie says, speaking of the adjustment bureau:

> I am firmly convinced that such an organization is desirable and necessary and Mr. MacNeil informs me that the Hon. Dr. Béland and yourself—

This is to the Prime Minister.

> —hold similar views. I believe myself that such a service is a proper charge upon government funds and its maintenance could be justified to the members of the House. On the other hand, I do not believe it would be wise for the government to organize directly this proposed service, because if it did the service would soon become as bureaucratic as any other government organization and its decisions would not be as acceptably received as if the members of the organization constituting the service were entirely removed from government control.

This is absolutely along the lines mentioned. He continues:

> I suggested to Mr. MacNeil to put before you the idea of creating a small board of some three or four members who would not be paid for their services but who would be responsible for engaging the members of the adjustment service board or the advocates board, or whatever else you might call it. I, myself, would be glad to serve on such a board.

You have it on record that Sir Arthur Currie would be willing to act.

> And I suggest that men like Major-General J. H. MacBrien, C.B., C.M.G., D.S.O., Major W. H. Herridge, D.S.O., and almost anyone else you care to have, would constitute a suitable committee. This committee could arrange with the G.W.V.A. headquarters, or with certain members of it, to do the necessary work.

He goes on to discuss the financial arrangements. I read this to show that Sir Arthur Currie, who no doubt has the confidence of all classes in this country irrespective of his politics, is entirely of the same opinion that some of us have expressed here. In fact I rather think that idea came from Sir Arthur Currie because I read it before I expressed these views. It appears to me to be a very wise precaution, and I give the minister credit for being as anxious to make this non-political as the rest of us are. There is no desire on the part of any of us to get kudos or advertising in connection with the soldiers or anybody else, but there is in the minds of all hon. members a desire to have this fund handled in such a manner that it will give the soldiers and their dependents every service and at the same time, not be manipulated by the government or the opposition or the Progressive party or any other group in this House. That is my whole intention in offering the suggestion. As regards the proposal of the minister, I would ask him to

allow us to discuss other phases of the matter and let the discussion of this particular phase stand over until after supper. I do not see the difficulties in the matter that the minister puts forward. For example, he says that if two trustees are appointed, they assuredly will not decide upon a third; that one will want one man and another another man. I do not believe that is a correct statement.

Mr. BELAND: I said that they might.

Mr. MANION: I understand. I do not think that is a correct statement, because, as a matter of fact, we have good evidence that again and again in much more difficult matters to handle than this fund, this procedure has been undertaken and carried out. For instance, in the Lemieux Act which orders that conciliation, in certain cases of strikes be attempted, I think it is the law according to that act that one of the conciliators be appointed by the men, the second by the employer, the third to be appointed by the two; or in case of these two failing to agree, the Minister of Labour appoints the third. I would be willing to agree to the appointment of two men, one by parliament and one by the Dominion Veterans' Alliance, and if these two could not agree on the appointment of the third man then I would not object to allowing the minister or the Governor in Council to name that one. I do not want the minister to think that there is any desire on our part to hold the matter up on that account, but I would suggest that we allow the question to stand until after eight o'clock and in the meantime discuss other sections.

Mr. LADNER: The resolution differs in section (2) from the Ralston report, although in all other respects the two are identical. The Ralston report provides that the sum of $100,000 is to be paid to a central board of three trustees, at least two of whom have had overseas service. The resolution omits this proviso; there is no reference to those words, "at least two of whom have had overseas service."

Mr. BELAND: The hon. member will remember that last year there was a clause in the bill relating to that very point. This is a resolution we have under consideration, but the bill I have before me based upon it contains a clause providing that the majority of the board shall consist of ex-service men.

Mr. LADNER: That is the first point. The other point I think is even more important. The Ralston report provides specifically that the amount is to be used "by the central board of trustees" from time to time, in such amounts and in such manner as it may deem best, for the maintenance and assistance of an adjustment service and bureau for the benefit of ex-service men and their dependents. The resolution as submitted reads:

> The sum of $100,000 to be paid to a central board of three trustees appointed by the Governor in Council, without remuneration, etc.

The point I make is this. It is all important in this piece of legislation that the board be as far as possible detached from any government—

Mr. BELAND: We agree.

Mr. LADNER: —so as to avoid the possibility of bureaucratic domination which it is thought sometimes exists in government departments, although the belief is not always warranted. The success of the adjustment bureau conducted by the Great War Veterans' Association has been attributable largely to the confidence placed by the soldier body at large in that organization, in the conviction that it was not influenced nor dominated by either governments or governmental departments. As there seems to be a difference between the resolution and the report, I would ask the minister whether in his opinion the principle is that the money is to be used by the central board of trustees from time to time as they see fit and not as the Governor in Council may see fit.

Mr. BELAND: I am not supposed to say in advance what the bill contains but I will read the section of the bill relating to this matter, which as the hon. member will see is word for word what he has suggested:

> The sum of $100,000 shall be allotted and paid to the central board of trustees to be expended by such board from time to time in such amounts and in such manner as it may deem best for the maintenance and assistance of an adjustment service and bureau at Ottawa for the benefit of ex-members of the forces and their dependents.

Mr. LADNER: I presume there are no other clauses in the bill which would abrogate the principle that the central board of trustees is to control.

Mr. BELAND: Absolutely none.

Mr. LADNER: I bring this to the attention of the minister because the resolution omits the words, which are so clearly stated in the Ralston report, that the sum is to be used by the board.

Mr. BELAND: My hon. friend knows that the resolution is only a general review of what the bill will contain.

Mr. LADNER: But the resolution on other points, take for example section (3), is identical with the report.

Mr. HARRIS: With all the money that we are spending on the Department of Soldiers' Civil Re-establishment and on our appeal boards here, there and everywhere, it seems to me unfortunate that we should find it necessary to take this $100,000 and put it in the hands of either a central or an intermediate board for distribution. To my mind this does not permit of the money accruing directly to the ex-service men. We all agree that this money must be distributed, but as to the establishment of a board for its distribution, that is another matter. Section (2) of the resolution provides that the money is to be paid to the central board—

> To be used in such amounts and such manner as it may deem best for the maintenance and assistance of an adjustment service and bureau for the benefit of ex-service men and their dependents.

I think that the Department of Soldiers' Civil Re-establishment together with its branches is the institution that should function in this matter, and some other method should have been devised for distributing the money than handing over to a board $100,000 belonging to the ex-service men. I want to put on record for the information of the government two or three telegrams representing the feeling of some of my constituents in this regard, and it will be seen that their ideas are not entirely in accord with those expressed by my hon. friend (Mr. Manion) and by the hon. member for Burrard (Mr. Clark). I represent in this House 110,000 people and my constituency, which covers an area of 30 square miles, embraces centres of population one within a mile of the other, where there are organizations of returned men which exist for the purpose of looking after the dependents and widows of soldiers, as well as taking care of cases of distress. Some of these organizations call themselves Great War Veterans while others are known as returned men's clubs, veterans' clubs, and so on. I did not know that this matter was coming up or I could have been prepared with the facts in this regard. Speaking offhand, however, I may say that there are some seven different clubhouses in my district, one of which was honoured by His Excellency the Governor General who performed the ceremony of turning the key in the lock when the clubhouse was opened, another clubhouse His Excellency honoured by allowing his name to be used in christening it, and it is now known as the Byng Memorial Hall. I have heard it said, and I have seen it stated in the press that in these clubhouses perhaps a little personal or political strife is stirred up, but I would point to what they have achieved in the last few years and what they will continue to achieve—the taking care of cases of distress which would otherwise be neglected. When I place on Hansard what they say I want hon. members to consider that the messages are from men in the different communities who are trying to do their part as they see it. The first is dated February 27, and is from the Riverdale Great War Veterans' Association, 453 Broadview Avenue, Toronto, an institution which possesses assets worth perhaps $20,000 in the form of a modern clubhouse, and looks after upwards of five or six thousand returned men and their dependents. The president says:

> Government should retain canteen funds and interest intact. Veterans' Alliance not now recognized by Ontario command G.W.V.A. Kindly convey this information to your Toronto colleagues.
>
> DAVIDSON,
> President.

Here is another message from the same branch saying:

> Please strenuously oppose grant of one hundred thousand dollars from veterans' canteen funds to Veterans' Alliance.

The next is dated March 16, and is from the Beaches branch of the G.W.V.A., Toronto, which is in a thickly populated district and looks after the interests of about four thousand returned men and their dependents:

> Beaches branch G.W.V.A. strongly opposed to Veterans' Alliance application for one hundred thousand dollars from canteen funds to be used in operating a service bureau in Ottawa.
>
> ALEXANDER MAGEE,
> Secretary.

Then the East Toronto branch of the G.W.V.A., which owns a property valued at between $5,000 and $6,000, and serves a community of upwards of one thousand returned men and their dependents, sends me this message:

> Strongly protest government action regarding grant of canteen fund to Dominion Veterans' Alliance. Stand by us.

Another message under date of February 27, is from Mr. Shields, I think the secretary of the Toronto and district command. He says:

> Our contention is that canteen money should not be used for any organization that does not represent the returned soldiers.

My last message, Mr. Chairman, is from the Scarborough Returned Men's Club, and is dated March 13, 1925:

> At a special meeting at the hall, Birchcliffe Heights, on March 13, a resolution was passed strongly protesting against the proposed grant of $100,000 by the Dominion government to the Veterans' Alliance from

the canteen fund. We as veterans at a joint meeting think that the money belongs to the returned men and not to the government, and should not be spent otherwise unless sanctioned by the ex-service men as a whole in the Dominion. We trust you will do all in your power to avoid this action being taken.

I concede, Mr. Chairman, that these wires may not be drafted to meet the wording of the resolution, as I note that the government do not propose to grant the fund to the Veterans' Alliance, but I merely put these messages on record so the minister will have them as a guide in this connection. Before taking my seat, let me again emphasize what is uppermost in my mind, that surely the government has some body which would have the confidence of all sections of the House and which would not appear to be in any way political, even if it was appointed by the hon. minister, so that it would not be necessary to spend some of this money to appoint an intermediate bureau.

Mr. BELAND: In reply to my hon. friend, what he suggests is exactly the proposal to which my hon. friend from Rainy River (Mr. Manion) and my hon. friend from Burrard (Mr. Clark) take exception. If I understood my hon. friend (Mr. Harris) aright, he suggested that this $100,000 should be disposed of through some government agency—some department or some branch of the public service.

Mr. MANION: He suggested that, but the telegrams did not. The telegrams are in accord with what we suggested.

Mr. BELAND: I am dealing with the remarks of my hon. friend from East York (Mr. Harris). I do not agree with him that the government should dispose of the money direct. As a matter of principle I agree with my hon. friend from Rainy River, that it should be handed over to a board which is absolutely beyond governmental influence in every province as in Ottawa. That is the idea, and if the bill can be shaped to make that more certain than it is now, I am quite willing to accept any suggestion to that end.

Mr. HARRIS: Is it not possible to supply this $100,000 from government funds instead of taking it from the canteen funds?

Mr. MacLAREN: I think the minister will recognize that the general principle governing the canteen funds is that those funds are the property of the men. That being so, is he following out the principle in allocating $100,000 of the funds for the establishment of a bureau? If such a bureau is essential in the interests of the men to look after their pension and other interests, then the expense of its establishment comes fairly under governmental expenditure. To meet the expenses of the bureau out of funds belonging to the men I do not think is justified. Under the circumstances I should be glad to have the opinion of the minister on the point I have raised, namely, whether a portion of certain funds belonging to the men should be taken to establish a bureau the expenses in connection with which I think should properly be met by the government. We have had brought to our notice a number of objections raised by returned men in one part of the country regarding the proposal to set aside this $100,000 from the canteen funds. Perhaps the minister will inform us whether he has received similar protests. My view is that we are departing from the principle of regarding this money as the property of the men if we take a portion of it for the purpose of establishing a bureau. If that bureau is necessary, then I think the cost of it should be a governmental charge.

Mr. BELAND: I regard the adjustment bureau as a very useful agency. It affords the men a good deal more satisfaction to deal with the department or with the pension board through an agency of their own. Up to the present, aside from certain assistance given by the former government and this government to some of the returned men's associations, these duties have been carried out by the associations at the expense of the men. The recommendation of the royal commission that $100,000 of the canteen fund be set aside for the purposes of an adjustment bureau is animated by the same spirit as that in which my hon. friend's remarks are made, because the men will to that extent be relieved from contributing toward the maintenance of the bureau. This recommendation was made by the royal commission after an investigation extending over a year, during which they went into the whole problem and obtained the views of returned men from one end of the country to the other. I believe it is a proper recommendation. Indeed, I submitted it last year and I think the House unanimously agreed that it was a proper course to follow.

Mr. ROSS (Kingston): Not unanimously.

Mr. BELAND: Well, I did not hear any strenuous objection last year. The hon. member says he did not agree, but I understood that the resolution and the bill based upon it were adopted unanimously by the House. At all events I think the recommendation is a good one. As to the board of trustees, if some suggestion can be offered by which this

board will be made entirely independent of government control, I shall be willing to accept it.

Mr. CLARK: Before six o'clock is called, may I remind the minister that considerable information was requested at the last sitting of the committee and that it might be useful to have that information here after dinner?

Mr. BELAND: Is it with regard to the disablement cheques? These have been produced.

Mr. CLARK: Laid on the table?

Mr. BELAND: I think so, yes.

Mr. CLARK: There were other questions.

Mr. BELAND: I think all the information has been tabled.

At six o'clock the Speaker resumed the chair and the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

WEST VIRGINIA PULP AND PAPER COMPANY

The House resumed from March 20 consideration in committee of Bill No. 13, respecting a patent of West Virginia Pulp and Paper Company—Mr. Jacobs—Mr. Gordon in the chair.

On section 1—Extension of time for payment of fees.

The CHAIRMAN: Sections 1 and 2 were stricken out in the Private Bills committee and the following substituted therefor:

If the patentee designated by the patent mentioned in the preamble to this act or his assignee or other legal representative makes, within three months from the date of the passing of this act, an application to the Commissioner of Patents for an order restoring and reviving that patent notwithstanding non-payment of fees or failure to manufacture within Canada the invention covered by the said patent, the provisions of section forty-seven of The Patent Act, except the two years' limitation of time for such application contained in that section, shall apply to that patent, and complying with those provisions the Commissioner of Patents may make either an order restoring and reviving the patent or an order dismissing the application.

Mr. MANION: It has just been drawn to my attention that the hon. member for Vancouver Centre (Mr. Stevens) asked on the last evening this bill was up that it should stand. I do not know whether he wishes to discuss it or not, but perhaps if the hon. gentleman in whose name the bill stands has no objection, this bill could stand until the hon. member for Vancouver Centre is present.

Mr. JACOBS: I have no objection, provided it is understood that the bill will be proceeded with to-night. This bill usually comes up when I am not here. After all, the bill stands in my name, and not in the name of the hon. member for Vancouver Centre.

Mr. MANION: I quite understand that.

Bill stands.

PATENT ACT—EDGEWORTH GREENE

The House resumed from March 20 consideration in committee of Bill No. 14, respecting a patent of Edgeworth Greene—Mr. Jacobs—Mr. Gordon in the chair.

On section 1—Extension of the time for payment of fees.

The CHAIRMAN: Sections 1 and 2 were stricken out in the Private Bills committee and the following substituted therefor:

If the patentee designated by the patents mentioned in the preamble to this act or his assignee or other legal representative makes, within three months from the date of the passing of this act, an application to the Commissioner of Patents for an order restoring and reviving any or all of the patents mentioned in the preamble to this act, notwithstanding non-payment of fees or failure to manufacture within Canada, or the importation into Canada of the invention or inventions covered by said patents, the provisions of section forty-seven of The Patent Act, except the two years' limitation of time for such application contained in that section, shall apply to such patent or patents, and complying with those provisions the Commissioner of Patents may make either an order restoring and reviving the said patent or patents, or an order dismissing the application.

Mr. MACLEAN (York): I would like to ask if the Minister of Justice has looked into these bills to see if public rights are safeguarded.

Mr. LAPOINTE: When these bills were before the committee the other day, I think my hon. friend from Vancouver Centre (Mr. Stevens) took some objection, and when I came into the House he asked me to consult with the officers of the crown as to the legality of the things which are asked by these bills. I confess I have not had time myself to look into the bills, but I have submitted them to the officers of my department, this one and the one fathered by my hon. friend from Brome (Mr. McMaster) and they have reported to me that no public interest was being adversely affected by them.

Mr. MACLEAN (York): That is the very information I wanted. I am willing to take the minister's statement in that respect.

Mr. HANSON: As I understand it, the enacting clauses of both these bills that have been under discussion have been entirely stricken out in the Private Bills committee and new enacting clauses inserted in lieu thereof. We have not these amendments before us, and with all due respect to the chairman he is not the best reader in the world, and I must confess that what he read conveyed very little if anything to me. It seems to me these bills ought first to be reprinted if we are to know anything about what is being done. I do not think I could give an intelligent explanation of a single sentence the chairman read; perhaps that is my fault.

Mr. McGIVERIN: There may be a good deal in what my hon. friend says about having the bills reprinted. The point in connection with both these bills is that originally the promoters asked the committee to decide that the patent should be reinstated. But what the committee did was this: In both these cases there had been a failure to pay the money within the time limit. The money is paid in three different instalments covering eighteen years, one in six years, the second in the next six years, and the third instalment in the last six years. The people who appeared before my committee stated that they had overlooked this, and as well the provision that they could apply to the Commissioner of Patents, and what the committee did was to amend the bills and give these people power to appear before the Commissioner of Patents and to state their case, and he sitting as a judge, would decide whether any other rights were being interfered with. The commissioner was there himself and there was no objection from the department or the commissioner to that course. There was another bill at the same sitting of the committee which asked for an extension of time over and beyond the eighteen years, which the committee, in its wisdom and on the advice of the commissioner, decided should not be granted. But there is no objection on the part of the department or on the part of the commissioner to this bill as it now stands. The committee merely pass it back to the commissioner to take evidence and decide whether the parties have made out their case.

Mr. HANSON: With the explanation of my hon. friend it might very well go through, since the Commissioner of Patents has the final say as to what shall be done. I was not objecting to the bill or holding it up. I just wanted to understand what the situation was.

Bill reported, read the third time and passed.

WEST VIRGINIA PULP AND PAPER COMPANY

The House resumed from March 20, consideration in committee of Bill No. 13, respecting a patent of West Virginia Pulp and Paper Company—Mr. Jacobs—Mr. Gordon in the chair.

On section 1—Extension of time for payment of fees.

Mr. RYCKMAN: What is the amendment?

The CHAIRMAN: This is a bill respecting a patent of the West Virginia Pulp and Paper Company, amended in the same way as the former bill. It was referred to the Patent Commissioner to decide whether or not they are entitled to a reinstatement of the patent.

Bill reported, read the third time and passed.

PATENT ACT—WALTER W. WILLIAMS

Mr. ANDREW McMASTER (Brome) moved the second reading of Bill No. 26, respecting a patent of Walter W. Williams.

Mr. STEVENS: I do not know whether I am entitled to speak again on this bill, because this is the second reading, and I spoke the other night. I asked the Minister of Justice if he would look into the matter.

Mr. LAPOINTE: I have had the officers of the Department of Justice look into the bill and they report that perhaps this bill would not be necessary because they think the patent is still in existence, and yet on the other hand they do not see that any public interest is adversely affected by the bill.

Mr. STEVENS: The point I raised when I objected the other day was this: apparently the Patent Commissioner has granted a patent and declares that it is all in order and he is satisfied under the general statute. The petitioners for this bill are asking parliament to pass a special act which rather overrides the statute and the decision of the Patent Commissioner, and says that, no matter what he may say, parliament is saying in a private bill that the patent is valid. Is it not a bad precedent to establish, and particularly in view of the last clause and the observations I made the other day?

Mr. LAPOINTE: My hon. friend understands that if the patent is still valid there will be no harm in passing a bill that really

says so. As far as the last clause is concerned, it would be a matter for the Private Bills committee to deal with. I do not see why, on the principle of the bill the second reading should be opposed.

Mr. STEVENS: I object to the principle of passing a special bill where it affects the general statute.

Motion agreed to and bill read the second time.

CANTEEN FUNDS

The House resumed in committee consideration of a proposed resolution with regard to the distribution of canteen funds.—Mr. Beland —Mr. Gordon in the chair.

Mr. MACLEAN (York): Has the minister taken any steps to obtain the opinion of the Great War Veterans on this proposition?

Mr. BELAND: I explained before six o'clock that the opinion of the ex-service men had been obtained by the royal commission during their peregrinations through the country, and the resolution and bill are the result of the recommendations of that committee. As a matter of fact they are an exact reproduction of the recommendation.

Mr. MACLEAN (York): I grant all that, but the hon. member for East York (Mr. Harris) read a telegram stating that the veterans in many of their headquarters did object to this legislation. Has the minister heard any objections to this legislation from the war veterans?

Mr. BELAND: I have received also a number of despatches asking me not to allot one hundred thousand dollars to one particular organization. In some cases the G.W.V.A. were mentioned as not being agreeable to it. In some other matters the Dominion Veterans' Alliance was mentioned, but a delegation met some members of the government a few days ago and they submitted to members of the government that they were in favour of the resolution as introduced in this House this year and also of that of last year. The delegation was quite representative.

Mr. MANION: Of what organizations?

Mr. BELAND: The Great War Veterans' Association, the Tubercular Veterans' Association.

Mr. MANION: The Grand Army of United Veterans and the Amputation Association?

Mr. BELAND: I do not know that the Grand Army of United Veterans were represented, but I received a letter from their secretary stating that they endorsed the resolution as introduced.

Mr. CLARK: Were representatives of the Army and Navy Veterans there?

Mr. BELAND: They were not, but I had a long interview with their president, Mr. Brown, if I mistake not, when he explained to me that the desire of veterans' organizations in general should be secured before any appointment of the central board of trustees was made, and I agreed to that. It is my intention to consult the different organizations, and if they agree upon one association such as the Dominion Veterans' Alliance, to consult the Dominion Veterans' Alliance as to who would be an acceptable candidate for a member of the central board of trustees. This afternoon before six o'clock the hon. member for East York (Mr. Harris) read a despatch from Mr. Shields. I have before me the name of Mr. Shields as being one of the representatives on this delegation which endorsed the legislation. Whether it is the same Mr. Shields or not, I cannot say. Generally speaking, I would say that the legislation is acceptable to the returned men.

Mr. MANION: Apart from individual associations, has the minister received many telegrams from large organizations protesting against this $100,000 distribution that he speaks of, or are the protests just from local centres? Has he received any wide-spread protests?

Mr. BELAND: No wide-spread protests.

Mr. MANION: Could the minister give us a rough idea of the different organizations from which he has received protests, so that we may know? I have received a few, not many.

Mr. BELAND: So far as I know, there was no protest against this legislation being introduced for the distribution. The protest was against the apportionment of a sum of money to one particular association.

Mr. MANION: Exactly, but how wide-spread was the protest?

Mr. BELAND: I think it was mainly confined to Toronto and Ontario, not very much outside of that. If my hon. friend insists, I may give him the names of the members of the delegation.

Mr. MANION: No. I saw the names and I saw some of the members of the delegation which waited upon the minister. They

laid the memorandum before me and other hon. members. They were agreeable, but they comprise only the members of the Great War Veterans' Association and the Tubercular Veterans' Association. No others signed the memorandum, and I was curious to know if there was any wide-spread opposition outside of that expressed in telegrams from local organizations. If the minister has a list of them, I would be glad if he would tell us what he has in the way of protests.

Mr. BELAND: There is no such protest as that to which the hon. member refers. The Grand Army of United Veterans, I think, has also wired me, but I presume that they were unaware of the exact content of the resolution or the manner in which this apportionment of $100,000 was going to be made, because within the last week I received a letter —I have not the letter with me, but I can produce it—from the Grand Army of United Veterans endorsing this legislation. As regards the Army and Navy Veterans, I had a conversation with their president, Mr. Brown.

Mr. MANION: The Amputation Association?

Mr. BELAND: I have not heard either way from them. I do not think they would have any objection to it.

Mr. CHURCH: Coming as I do from a soldier city, I have quite a number of returned soldiers in my constituency including those at the Christie street hospital and a great deal of objection is expressed to the distribution of this fund as proposed in the resolution now before the committee. I sympathize with the minister. He has a most difficult task to perform in administering the distribution of the canteen fund. There are many ways in which this can be divided, and it may be almost impossible to please everybody. I understand that one has to be reasonable in the matter; in fact, there is only one other fund that one must be more careful about, and that is the campaign fund, if there be such a thing. I have received many protests from soldier organizations in Toronto, and I will read one from the Toronto and York County District Command of the Great War Veterans' Association. I have known Mr. Bray, the president, for many years, and I have found him a very reasonable and sensible soldier who would not want to give anyone any trouble. The record he has is that he has co-operated with the civic authorities to the best of his ability. He objects to this proposition and he has reasonable grounds for doing so. The soldiers of Toronto do not want to give the government any trouble and they want to help the minister and the department. They know the minister has been zealous in his work and that he is not responsible for mistakes that have been made in the past. The Toronto and York County District Command embraces all the district of Toronto and York and they are very much opposed to this division. I have a number of telegrams, but I will read only this one:

> Legislation in connection with canteen funds coming before the House to-day (Thursday) provide for the setting aside of one hundred thousand dollars from the canteen funds for the purpose of setting up veteran service bureau in Ottawa under the Dominion Veterans' Alliance. Toronto and York County District Command, Great War Veterans' Association, absolutely opposed to setting aside any moneys from the canteen fund which belongs to all ex-soldiers to the Veterans' Alliance. Veterans' Alliance is only paper organization and does not represent organized ex-soldiers. Toronto and district and the Ontario provincial command withdrew from Veterans' Alliance eight months ago. Suggest you make this known in the House when legislation is brought forward particularly the fact that we are opposed to setting aside of any moneys from the canteen fund to the Veterans' Alliance.

I know President Bray and the officers of this organization, and I am aware how they worked with the civic authorities during last winter when there was a great deal of distress among the returned men in Toronto. These men gave a great deal of service not only to the soldiers, but to the citizens at large that were in distress, and also to ex-soldiers from the Old Country who were in difficulties. As I say this telegram is from them.

Mr. BELAND: Who sent this last despatch which the hon. member has read?

Mr. CHURCH: It is signed by Harry Bray, president, and Alexander Shields, secretary.

Mr. BELAND: I see it is dated February 25. Later than this date, both gentlemen appeared before me and endorsed this legislation.

Mr. CHURCH: If the minister will come up to Toronto he will still find a lot of opposition—I was at a meeting of soldiers and they were all opposed to this legislation. The city of Toronto found it necessary to maintain a bureau of its own owing to the fact that the soldiers had found it impossible to obtain any relief from the department at Ottawa. They went to the city hall and applied for assistance and the city, at the expense of the tax-payers at large, was obliged to maintain a bureau of its own. There is such a vast amount of red tape in connection with the pension board that when the returned men, of the city of

Toronto at any rate—and I am able to speak particularly of them—endeavoured to secure some relief they encountered all sorts of obstacles in the shape of one technicality after another. There is also in Toronto the Ontario Soldiers' Aid Commission. It costs a lot of money, and I know for a fact that there are agencies of this commission in Hamilton, London and other places.

Now, I do not say that the minister is altogether to blame; as I observed in my opening remarks, I am quite aware that he has a difficult fund to handle, and even though he might devise ten or fifteen different ways of administering it, it is possible that there would still be dissatisfaction. The fact remains nevertheless that a considerable number of men in the city of Toronto are out of work and in a critical condition and something must be done to assist them. It was said the other night by Mr. Shields of the G.W.V.A., that 60 per cent of the men out of work in Toronto were returned men, and a large percentage of them do not come under the pension law as it is to-day. I recognize, of course, as everybody does, that this government, in common with its predecessors, has done a great deal for the returned men. There is no doubt about that. And I know also that there is nothing partisan at all about this question, for all parties are anxious to see the right thing done by the veterans. I do not believe that anyone has the interests of the veterans more at heart than the minister himself (Mr. Beland). There is another organization located in the riding of East Toronto, and I know that the hon. member who represents that district (Mr. Ryckman) has taken a great deal of interest in the situation there. Indeed, I do not know of anyone who has been more diligent in the endeavour to further the interests of the men than that hon. member has been. And this organization and others as well are all opposed to the assigning of this $100,000 to a central board for distribution. I have here a telegram from Riverdale branch of the Great War Veterans' Association, to the following effect:

T. L. CHURCH, M.P.,
Parliament Building,
Ottawa, Ontario.

Please strenuously oppose grant of $100,000 from veterans' canteen funds to Veterans' Alliance. Thanks.

And the hon. member for East York (Mr. Harris) read a number of telegrams this afternoon from various units on the same question.

I criticize the assigning of this $100,000 to the board on this ground, that the government is under no necessity so far as I can see of entrusting the fund to such a body. That fund in my opinion should be administered without cost to the soldiers. Surely in view of the fact that we have a department to look after the re-establishment of soldiers some means could have been devised of administering this fund without cost to the men. I do not go so far as to say that there has been any diversion of the fund, but I do strongly maintain that the government could have discovered some way of administering it without cost to the general body of returned men. I believe that if the minister had asked the House to vote $20,000 in his estimates for this purpose that vote would have carried; for if there is one fund more than another that should be administered free of cost to the returned men it is this one. I know of course that the minister is trying to effect economies, but it seems to me that in this particular department great care should be taken to see that whatever saving is made shall not be at the expense of the returned men.

I criticize the proposal on another ground: in handing over the $100,000 to this board the government is simply duplicating the work that is being carried on. I know of my own experience that such duplication does exist. For example, I know of a soldier who made application to five or six different persons for relief; he went first to the local district, and was referred to some other authority, and from that body he went to another, and so on. So that there is no question to my mind at least as to the existence of an expensive duplication; and when this board is charged with administering the fund this evil will only be aggravated.

As to handing over $50,000 to the American Red Cross, I do not know that we are going to do very much good. There are certainly a number of our returned men out of work in the United States, but my suggestion to the government would be to provide some general scheme of repatriation which would enable these men to come back to Canada. There are hundreds of them out of work in Detroit and other American cities and they are not likely to get work inasmuch as, before the American authorities will allow them to take any job, they must swear allegiance to the government of the United States. And returned Canadian soldiers after fighting for their king and flag will do no such thing. I would point out to the minister that after the Civil War in the United States the men of the Grand Army of the Republic did not have to leave that country to find employment, nor did they have to apply to any British organization such as the Red Cross, which did not then exist, for relief. They

did not have to go the government of a foreign country to look for help. I have a number of letters from returned Canadian soldiers telling of distress in the United States and many of them are unable to get work owing to the fact that they will not take the oath to a foreign flag. In my opinion this $50,000 should be placed under the control of the minister himself; I believe in responsible ministers discharging such duties as properly appertain to their office. It seems to me that it is unwise to hand over $100,000 to this province, $75,000 to another province, and so on, on the basis of the number of returned men resident in these places respectively. I think it would be far better for the minister himself to control the administration of the money under section (4) of the resolution; as the resolution stands the government simply divests itself of all control and leaves the matter subject to conflicting regulations in the various provinces. But where does the returned man come in on this thing? There should have been a vote on the proposition by provinces according to the military districts. What is the general officer in command of the district for? He knows the number of pensioners that are in his district and he ought to be able to give some idea to the minister as to how these moneys might be distributed under this section. We have a Department of National Defence, we have a Department of Soldiers' Civil Re-establishment, and we have local district commands with headquarters; and as I say, the general officer commanding the district knows just who his men are. On the whole, therefore, it would have been better to leave the matter to the minister. I am not here to criticize the minister, because my wish is to co-operate with him in every way possible. But one cannot help referring to these things. Again, what about the Amputation Association? I do not see any reference in this resolution to that large association. And what about the blind soldiers? And then there is the question of unemployment, which is a very serious matter among the returned men. I think that a great many of the soldiers, in the city from which I come at any rate, would rather see the recommendations of the Ralston report carried out, one of which provides for scholarships to promising children of ex-service men. I know of one case in which the father was killed, and the mother having died, the orphans were left with an aunt. This lady is trying her best to send two of them to high school and then to university, but her application for a pension for these children of sixteen and seventeen was denied. No doubt if the soldier-father had returned he would have given his children the best possible education within his power, and I think this is an excellent recommendation by the Ralston commission. Indeed, if the minister had administered the fund along the lines of the Ralston report I think he would have followed a very sensible course, because the commission took the views of soldiers all over the country and the recommendations contained in their report are doubtless founded on a consideration of those views. Coming from a city where there are large numbers of soldiers in distress, I sympathize with the minister in his endeavours to do all he can for the returned men, but I say to him now that the distribution of this fund as proposed is going to cause a lot of dissatisfaction among those interested. From my knowledge of the distress among many returned men in Toronto and elsewhere I believe one of the best uses to which this fund could be put would be to relieve that distress by way of finding the men employment or granting them financial assistance.

Mr. BELAND: Mr. Chairman, I always enjoy what my hon. friend from North Toronto (Mr. Church) has to say. His remarks are invariably interesting and worthy of consideration. He refers to what he terms the "protest" of the returned men against the legislation which has been introduced dealing with the canteen fund. All the despatches which have been sent to me and, I believe, to all other members of this House, deal with the apportionment of $100,000 to a particular organization. I have the despatch before me which my hon. friend has read, and in which I find the following:

> Legislation in connection with canteen funds coming before House to-day (Thursday) provide for the setting aside of $100,000 from canteen funds for the purpose of setting up veterans' service bureau in Ottawa under the Dominion Veterans' Alliance. Toronto and York county district command Great War Veterans' Association absolutely opposed to setting aside any moneys from the canteen fund, which belongs to all ex-soldiers, to the Veterans' Alliance. Veterans' Alliance is only paper organization and does not represent organized ex-soldiers.

And so on. All the despatches are couched in similar language. I have no objection to admitting that to-day the Dominion Veterans' Alliance—formerly it was the Great War Veterans' Association head office—is considered the principal agency through which claims are presented either to the Department of Soldiers' Civil Re-establishment, the pension board or other departments of the government. I am not at all concerned with the

internal dissensions in the soldiers' organizations, I do not want to share in them, and I am absolutely outside them. Whether one, two, three or four men are not satisfied with one secretary or one organization is something which should not concern either me or any other member of the House. What we should be concerned about is that we carry out as far as feasible the particular recommenddation of the royal commission in this connection. My hon. friend from North Toronto asked me, "Why don't you carry out the recommendation of the royal commission?" I have always believed that this resolution and the bill which is to follow it are based on the recommendation of the royal commission, which reads as follows:

Representations have been made that before there is any distribution of this fund—

The Ralston commission refer to the canteen fund.

—care should be taken to see that machinery is maintained for the accurate presentation and prosecution of claims which may arise from time to time on behalf of ex-service men and their dependents, concerning the various forms of assistance which the state provides in respect of pensions, re-establishment, and so forth.

Then they explain why this adjustment bureau is necessary, and that it is not to be regarded as a reflection upon either the Board of Pension Commissioners or the department. They conclude this particular part of their recommendation by saying:

The commission therefore recommends:—

1. That requisite legislative provision be made so that under direction of the Governor in Council any necessary accounting be had to ascertain and certify the amount, including interest, properly belonging to the funds and held by the receiver general—

And so on. Then they continue:

(a) The sum of $100,000 to be paid to a central board of three trustees, at least two of whom have had overseas service, to be appointed by the Governor in Council, without remuneration, such sum to be used by such central board of trustees from time to time in such amounts and in such manner as it may deem best for the maintenance and assistance of an adjustment service and bureau for the benefit of ex-service men and their dependents.

The balance of the recommendation deals with the further distribution of the fund in accordance with the resolution. Now, I think I can assure my hon. friend from North Toronto that this resolution is carrying out the recommendation of the royal commission. He has had his little tilt at the American Red Cross. Here again the royal commission, after having satisfied themselves that there were in the United States a large number of Canadian soldiers who had served in the C.E.F., thought it was only fair, just and equitable that a certain portion of the canteen fund should be placed at their disposal, and they recommended that $50,000 should be allotted to the American Red Cross for the purpose of relieving distressed cases amongst our returned men in the United States.

Mr. ROSS (Kingston): Is there a reciprocal arrangement on the part of the United States?

Mr. BELAND: No.

Mr. ROSS (Kingston): Why not?

Mr. BELAND: I do not know that in the United States they have any canteen fund to distribute. Perhaps my hon. friend knows.

Mr. ROSS (Kingston): If they have not a canteen fund they should have one.

Mr. BELAND: If they have such a fund I think they should allot to the Canadian Red Cross a certain amount for the benefit of American returned men living in Canada. Now, my hon. friend from North Toronto suggested to me that the opinion of the returned men throughout Canada should be secured as to the proper distribution of the canteen fund. We all agree on that. The former government, led by my right hon. friend who now leads the opposition (Mr. Meighen), passed an order in council on November 3, 1921, creating a committee which was known as the canteen fund disposal committee. The order in council recites that the opinion of all returned men in Canada should be obtained as to the proper disposal of the canteen fund. This committee issued a circular or ballot containing a number of questions, and through the post offices, the soldiers' hospitals and other agencies, over 500,000 of these were distributed among the returned men. The number of ballots received expressing an opinion as to the disposal of the fund was only 22,000 out of a possible total of 450,000 soldiers in Canada, therefore it was decided that owing to the relatively small number of opinions expressed the government would not be justified in taking any action. This was shortly after the present government came into office; I think it was in February, 1922. It was represented to me by the men who composed this committee, appointed by order in council under the former government, that in view of the fact that no one opinion had more than 5,000 supporters it would be inadvisable to proceed on that basis. The whole question was subsequently placed before the royal commission, the members of which would find it a relatively easy matter to secure the opinions of the men all over the country. They did that; they have made their report, and they

have recommended the distribution of the fund as proposed last year and again this year. The hon. member (Mr. Church), who is a personal friend of mine, says he is willing to leave the matter with me; that he would rather have the distribution of the funds placed in the hands of the minister. I thank him for his good intentions, but even if the whole House were willing to leave it to me I should refuse to accept the task, because I understand it is a most difficult one. The method that has been adopted is one that will give the greatest satisfaction to the greatest number, though I admit there will still be dissatisfaction.

So far as the central board of trustees is concerned, I repeat that since his name has been brought into the discussion this afternoon I am disposed to ask Sir Arthur Currie to be head of this board of trustees. I am willing also to take the suggestion of the soldiers' organizations, omitting none, as to a second member of the board. With regard to the third member I do not know to whom I should have recourse, but I think that could be left to the minister or to the government. On that point I may say that I have not heard a single word of complaint with regard to the personnel of the royal commission which I appointed. They were three returned men who commanded the respect and confidence of every soldier in Canada, and in this instance my only desire would be to act in the best interests of the returned men. I am also disposed to ask the board to obtain the opinion of the returned men as to who should be in charge of this office for which provision is being made. It is not for me to say it will be the Great War Veterans' Association, the Army and Navy Veterans, The Grand Army of United Veterans, The Dominion Veterans' Alliance, or the Tubercular Veterans Association. That is not for me to say, and I do not intend to say it. All I want to do is to request this board to refund to the disablement fund the $15,000 which has been advanced from that fund for the maintenance of the bureau. This bureau has been carried on by The Great War Veterans' Association—for some time as the Great War Veterans' Association, some time as the Dominion Veterans Alliance. I am not conversant with all the details of the functionings of these two associations. It is claimed that the Dominion Veterans' Alliance represents all the associations; some say it does not. I do know that Mr. MacNeil has from the day I came back from the Old Country been in charge of the soldiers' interests before every parliamentary committee, has had to do with the preparation of legislation and has generally represented them in all matters affecting their welfare. I think everybody will agree that he has discharged those duties to the satisfaction of all concerned. But if he is not the man it will be for the central board of trustees, not for me or the members of the government to decide.

9 p.m.

I say in all sincerity that a board of trustees consisting of three members will be appointed if the bill to be based on this resolution becomes law. Deducting then, the $15,000 which they will be requested to refund to the disablement fund, they may administer the balance of that money, $85,000, as they deem best. We have spent a good many hours upon this resolution and I hardly think the objections urged have been such as to warrant so lengthy a discussion. I am pleased, nevertheless that the discussion has taken place. I suggest that the committee now adopt the resolution in order that we may advance the legislation one step. When the bill is under consideration I shall have a few amendments to propose—I shall not say to correct some defects, but rather to make some changes based upon suggestions offered by hon. gentlemen opposite.

Mr. MacLAREN: Section 1 of the resolution refers to the payment of outstanding accounts. I understand that this money is in the hands of the Receiver General and I can hardly understand that there could be any outstanding expenses in connection with it. Will the minister explain the nature of these outstanding accounts?

Mr. BELAND: Last year when the resolution was before the House I remember giving an explanation on this point. I have not the reference before me at the moment, but in short it means that some accounts are outstanding against the fund for certain regimental units which have been disbanded. This sum is set aside at the request of the Minister of National Defence in order to provide for any outstanding accounts that might be presented against the fund. My hon. friend will find that the bill provides that if after four years all claims that have been presented have been paid, if there is a balance left, that balance shall fall into the general fund which is to be allotted to the different provinces. We have nothing to do with that.

Mr. STEVENS: But should not that have been ascertained during the last year? What my hon. friend speaks of now is the condition

that obtained a year ago in expectation of the bill passing. The bill did not pass. A year now has elapsed, and surely any outstanding accounts could have been ascertained in the period of a year.

Mr. BELAND: I would not say definitely, but I am informed that small accounts have been paid even during the past twelve months. It is a measure of prudence only, and it is not done at my request or suggestion.

Mr. ROSS (Kingston): I should like to say a few words on this proposal before it passes the committee. There seems to have been a change in the situation lately, because there certainly was a great deal of opposition amongst the returned men in regard to this section of the government's proposal, but within the last week that opposition seems to have faded away. Certain men have come here to Ottawa, and without any consultation with the members to whom telegrams were sent, consent has been given to this proposal, so we are informed by the minister. Now it would seem only natural that the service men who sent these telegrams should have conferred with the members to whom they were sent, if such approbation of the government's proposal has been obtained as the minister now suggests.

To what is the opposition due in regard to this matter? When the termination of the war was in sight, or immediately after, it was determined that the welfare and the interests of the returned men should not be left to a government department. One would naturally expect that the Militia department might have carried on that work, but it was proposed that a separate department should be created which would be composed of laymen, and would be, as it were, friendly towards the returned men. That organization was created, and became the immense organization we now know as the D.S.C.R., of which the minister is the head, and he should have at least something to say in regard to its administration. We all know how friendly and how genial he is. You have only to approach him to get a promise that everything will be set right, but then he suddenly bucks up against one of these iron-clad officials of his, his back weakens, and the returned soldiers are forgotten. Consequently the very department that was supposed to have sympathy for the returned men has become, one might almost say, their deadly enemy. Every member of this House knows how little sympathy he gets when he approaches that department in regard to a returned man. They will do nothing but carry out the strict letter of the law; sympathy they know little about. The result is that the returned man, instead of placing his whole case in their hands, has turned away from them, feeling that his only safety is outside of that department which should be his friend and sympathizer, and he leaves his case with an organization of this kind.

In the past Mr. MacNeil the secretary of the Great War Veterans' Association has fought this department through thick and thin till he was almost discouraged, but I would like the committee to remember that Mr. MacNeil did not do all the work. Outside of his work, there was the tubercular, amputation and the blind organizations, all with their own administration looking after the needs of their own men. I do not know whether they will be altogether satisfied to see the work taken out of their hands. The committee will readily understand that it requires some years of work to become acquainted with the technical problems coming up in the tubercular, amputation and blind cases, and I do not know that one general board can do that work. That work must be carried on. Whether or not there has been a secret understanding arrived at as to the redistribution of this fund, I do not know. But the fact remains that there was opposition, and I want to say that the proposal here is one that the government itself should take up.

I want to point out my opposition to this proposal. I may be alone in my views; I have not consulted with anyone else. My position is this. The returned man is the ward of the government and of this country, and we cannot get away from that responsibility. There is no use putting that responsibility on some other organization. The returned man in general is the ward of this country and of the government, I care not what government is in power, and he should get all the sympathy he deserves. I do not know whether the intention of the department now is to shift the responsibility on to some other body. We now have the Department of Soldiers Civil Re-establishment, the pension board, and the Federal appeal board, and now this other organization is to be started. If it is necessary for the returned men to have such an organization as this to advance their interests and present their case to the government, I think the government should pay for it. It looks to me as if the government has taken $100,000, to wash its hands of the interests of the returned man and say: We are done. Because in the future they will say that these cases have to come before this special board that is

to be appointed. I do not think this House should lose sight of the fact that the government and parliament and the country at large has to take care of the returned man. The returned men, the sick and disabled are the wards of the government, and the government should not get away from that responsibility by having this board appointed. If it is necessary for the returned men to go outside the Department of Soldiers Civil-Re-establishment, the government should pay for it, or provide some easier way, grease the way a little bit for the returned men to get the ear of the D.S.C.R. To-day if you go to the minister about a pension or something else affecting the soldiers, he will tell you he cannot do anything, that the pension board is absolutely independent. If you go to the pension board, they will tell you that their reports come from the D.S.C.R. medical men, and that they cannot help themselves; they have to take the D.S.C.R. reports. The thing is so tied up and connected and intermingled that the ordinary man cannot distinguish between them, and I do not know that they themselves know which of the medical men are pension men and which are D.S.C.R. men.

Now what are the matters to be taken up by this board? The report says:

> There is a variety of instances in connection with such questions as government employment.

Well, this government is not going to have anything to do with unemployment, so that part of the report is washed away. The government is not going to be responsible in any way for unemployment.

Mr. BELAND: I think that refers to the civil service.

Mr. ROSS (Kingston): I do not see why, because there is the provision made that the returned men must always get the preference in applying for a civil service position. Is not that a fact?

Mr. BELAND: It is a fact, but still I think that refers to the civil service.

Mr. ROSS (Kingston): But still the government does not do it.

Mr. CHURCH: First preference at a pick and shovel job.

Mr. BELAND: There may be a disabled man who will look for some man to present his case before the Civil Service Commission. I think what my hon. friend has read refers to the Civil Service Commission.

Mr. ROSS (Kingston): But the hon. minister is not sure.

Mr. BELAND: I think so.

Mr. ROSS (Kingston): The minister is not sure as to whether they get their preference or not.

Mr. BELAND: It refers to that.

Mr. ROSS (Kingston): The government is responsible and should look after them. As I say, the returned man is a ward of the government and should be looked after. We have the report in connection with that. This report says:

> There are a variety of instances in connection with such questions as government employment, land settlement, training, housing, and rehabilitation activities generally, the consideration affecting which depend on the presentation of the individual case rather than on the terms of a general regulation. There are also parliamentary matters not only affecting pensions but amendments to existing statutes.

And so on. It is most difficult for anyone to look after the interests of the blind and tubercular. I do not know whether the minister has had any information that these people will be looked after, or if there is any understanding between the three or four associations in regard to it.

Mr. BELAND: I know that most of the representatives of the organizations with whom I have come in contact favour this legislation. The moment they know that no particular organization is going to be favoured in the matter of employment in preference to another organization, they are in favour of the legislation. My idea of an employment bureau would be a place where the central board of trustees would consult all the associations; and more than one man is required for a bureau of that kind. I am satisfied that it takes at least five or six or seven men or employees to attend to such a bureau. My idea of the constitution of such a bureau would be that all the associations should have a representative on it, so that everybody would be represented.

Mr. ROSS (Kingston): So far, so good. That seems to be the opposition the minister heard of from the men who approached him, but at the same time at the beginning, those who put up the opposition, were given to understand that there was no place from where the funds for a bureau could be obtained. They believed the bureau was absolutely necessary, because they believed the Department of Soldiers' Civil Re-establishment had fallen down on the job, and there was a want of sympathy. The minister had all the sympathy, but that is as far as his department went. There was any amount of

sympathy with the minister, but he could not get any further. He was not responsible, and the returned men believed that a bureau was necessary, and there was no other money to be obtained for this bureau; therefore rather than see the bureau done away with and the possibility of it being destroyed they said, "Very good, we are willing to take that hundred thousand dollars"; but if there was sympathy in this House for the sentiment that the government should leave every cent of that money to the men who served overseas and who really put the money into the canteen fund, then being in sympathy with them, the government would say, "Very good, we will see that this bureau shall carry on; there is no sympathy with your case in the Department of Soldiers' Civil Re-establishment, and therefore we will see that there will be a bureau to carry on, and we will provide the very small amount necessary". When this hundred thousand dollars is disposed of —and it is not going to last very long, as fifteen thousand dollars has gone already— then what? Where will the returned men be then?

Mr. CHURCH: They will go to the labour bureau.

Mr. ROSS (Kingston): I want the House to keep in mind the position of this matter. It looks to me as if the government were saying, "We will start you off, what the end will be we do not care". After the hundred thousand dollars has been expended there will still be the returned men's case to be considered, unless there is a department more sympathetic than the department is at the present time. There will be the necessity for a bureau, and I think the proper thing now would be for the government to recognize that responsibility, sympathy having failed with the department, and say, "We will carry on the bureau, and meet the small amount of expenditure that would be required". When you can get three big men in this country to take upon themselves the responsibility of the work without any remuneration, then I think the government should be willing to pay for the office administration. That is my objection to this hundred thousand dollar scheme. In the first place, the government has no right to take it for a thing of this kind. The government should support this proposition, as sympathy has failed in the Department of Soldiers' Civil Re-establishment; and by voting the hundred thousand dollars you are making no provision for the carrying on of the bureau. That bureau will go on as long as there are disabled men in the country and that will be for many many years to come.

Mr. MANION: There are still a number of things, I imagine, about the resolution to be debated before we report it because the minister will remember the first day it came up we settled on the disablement fund, and this afternoon and evening we have discussed almost entirely the appointment of the trustees, but there was another matter I brought to the minister's attention upon which he has not made any remark. I will give him credit for his remarks about the trustees. He has certainly, I think, shown a willingness, which I sincerely hope he will live up to, to respond to the proposition made in good part by this side of the House to try to get the trustees appointed in such a manner that they will be above parties and that sort of thing, and will not make of themselves a political board. I was pleased to have him agree that Sir Arthur Currie might be chairman, because I think that is the wish of all those who have taken an interest in this fund. I think the suggestion of the hon. member for Burrard (Mr. Clark) in regard to the appointment of a second trustee is also a good one; that is to have the Dominion Veterans' Alliance appoint a second trustee, that alliance being made up of all the different associations in this country.

Mr. CARROLL: The Dominion Alliance which has been referred to I understand is doing the work which this board will be doing when it is formed. It may be the desire that this work may be done by the same board. Why ask this Dominion Alliance to appoint a man to the board which will deal with these cases and look after the interests of returned men?

Mr. MANION: The Dominion Veterans' Alliance is made up, according to my understanding—and I think it is correct—not only of the Great War Veterans' Association, but of all the other war veterans' associations in the country. It is a sort of combination of the Great War Veterans' associations, the Grand Army of United Veterans and all the other associations. I think it would be well to have all the veterans of the country included in this alliance. Not only are the Great War Veterans of this country interested in the canteen fund but all the veterans in Canada are interested in it. I made it my business the other day to look into the figures of the numbers of men belonging to this association. So far as I could get the figures —and frankly I got them from some of the officers of the Great War Veterans' Associa-

tion, they showed that something like 215,000 or 220,000 belonged to all the different associations in the country, so that this left around 200,000 returned soldiers who do not belong to any association. The latter are just as much interested in the canteen fund as those who do belong to an association, as I am sure my hon. friend will agree. The figures as given to me the other day, a copy of which I now have in my hand, are as follows:

Army and Navy Veterans..	60,000
Grand Army of United Veterans..	600
Tubercular Veterans' Association..	5,000
Amputation Veterans..	3,000
Canadian Legion..	600
Great War Veterans' Association..	150,000
Imperial Veterans..	4,000

According to these figures, 100,000 have gone to the United States, but even they are interested in this canteen fund. The point I wish to make is that all the different soldiers, so far as we can reach them, should have something to say with regard to the appointment of these trustees. While we cannot call in the 100,000 soldiers who have gone to the United States to take part in the voting, we can call in the organized veterans' associations of this country, and the proposal of the hon. member for Burrard (Mr. Clark) is that after Sir Arthur Currie, if he accepts, is appointed, the second trustee be appointed by the Dominion Veterans' Association, which includes the different associations of veterans in Canada.

Mr. HARRIS: I have received this telegram:

> Government should retain canteen funds and interest intact. Veterans' Alliance not now recognized by Ontario Great War Veterans' Association. And in fact is to-day only a paper organization with official seeking own aggrandizement and personal gain. Kindly convey this information to your Toronto colleagues.

Perhaps the hon. member can tell us who they are.

Mr. MANION: I am glad my hon. friend is trying to help me out so well. I am not married to the idea of the Dominion Veterans' Alliance. The only reason I suggested it was because until recently it was supposed to be an organization made up of a combination of the officers of all the different associations. The telegram which my hon. friend has may be correct, and the Dominion Veterans' Alliance may not be as represented. If it is not and if there be objection to it, the Great War Veterans' Association and these other associations which I have named should be asked to have their officers get together and pick a man. I do not know the Dominion Veterans' Alliance, and I am speaking subject to correction. After the second trustee has been appointed, the suggestion of the hon. member for Burrard is that the third trustee is to be appointed by the other two. I was pleased to have the minister appear to agree at least with the idea if it can be worked out, and I do not see any reason why it should not be worked out.

The hon. member for Cape Breton South and Richmond (Mr. Carroll) asked why some other organizations should be requested to assist in appointing a trustee who would be merely picking the present organized adjustment bureau. which is handled altogether by the Great War Veterans' Association. I do not intend to suggest that any strings be tied to the trustees in regard to an appointment. The appointment of the adjustment bureau should be left entirely in the hands of these trustees. I do not mean to suggest that we should insert in the bill a clause stating that the trustees must appoint So-and-so and So-and-so to handle the adjustment bureau. The matter would be entirely in their hands, and after the three trustees met and discussed the matter, if they decided to use the adjustment bureau that is in existence to-day, I have no quarrel with them, and I do not mean to quarrel with the adjustment bureau at all. I hope that whatever appointments are made, those men will look at this as a position of honour and of trust, and that they will carry out their duties without pay, in the same manner that, I think, most of us who are discussing this question are attempting to carry out ours, in other words, entirely for the benefit of the returned soldiers. I admit the minister has been exceedingly reasonable in regard to the appointment of the trustees. Of course the proposition was a fair one, and I do not see how he could have dealt with it otherwise.

Another question that comes up, one which I brought up earlier in the day, is that of the use of $100,000 from the canteen fund in order to carry on this bureau for the next three or four years. Before I touch on that, I must confess I rather think the question was brought up already to-night, but I was going over some correspondence dealing with this matter and I missed the explanation. Will the minister explain again what the $20,000 mentioned in clause 1 is to be used for.

Mr. BELAND: This amount is set aside at the request of the Department of National Defence to meet some accounts that might be presented to the Receiver General, accounts which would be chargeable against the fund.

Mr. MANION: From whom?

Mr. BELAND: From some of the units that have been disbanded. I understand. I

am not in a position to give details about that. This is what I said last year in reply to a question in this connection:

The National Defence department have submitted occasionally to the Finance department small accounts for payment. What these accounts are exactly I am not in a position to say, but I might suggest that they are accounts from trustees of former regimental units. Be that as it may, these accounts must be passed upon by the National Defence department and approved by the Finance department. As late as 1923 the Finance department had paid out on these accounts an amount of $2,000. The commission recommend—

That is the royal commission.

—that $20,000 be retained for this purpose, and I presume that if any balance should be left of this amount of $20,000 after a certain delay has elapsed, it would ultimately be distributed amongst the provinces on the pro rata scale mentioned.

There is in the bill, not in the resolution, this provision:

The sum of $20,000 shall be held by the Receiver General for Canada for the payment of any outstanding accounts or claims in respect of the units, the funds of which are included in the canteen funds, provided that should any portion of this amount remain unexpended on the 1st day of July 1929, such unexpended portion shall be disposed of as set forth in paragraph (e) of this section.

That is, distributed amongst the different provinces.

Mr. BLACK (Yukon): I was glad when this matter was up a few days ago to hear the pronouncement from the minister that he had altered his views in regard to the course that should be pursued in dealing with the share of the canteen fund to which the returned soldiers now in Yukon are entitled. The minister has said repeatedly during this discussion, not only to-day but on the former occasion, that the bill of last year passed the House and committee without protest. Its terms, as he put it, were quite satisfactory to all concerned. Perhaps I personally did not protest strongly enough, but I felt quite sure that I had protested. I should not like it to go out to my friends among the returned soldiers, not only in Yukon but elsewhere, that I had sat in my place and let the bill, as it was last session, go by without protest. Nor would I let the resolution as we have it now pass without voicing my objection to it. I find on consulting Hansard that my remarks were plain enough. On July 14 I asked:

Mr. Black (Yukon): Why is it the allotment for British Columbia and the Yukon are joined? This allotment is not made in accordance with military districts and the percentage returnable to the Yukon can be ascertained as accurately as the percentage returnable for any province. It will be a smaller amount, but why should it be tied up with British Columbia?

Mr. Béland: It is the recommendation of the royal commission.

Mr. Black (Yukon): I protest against that. I suggest that the exact percentage due to the Yukon be ascertained and allotted to the Yukon to be distributed by a local committee there, altogether separate and apart from British Columbia. Is it possible to do that? I submit there is no more reason why Yukon should be attached to British Columbia for this purpose than that Yukon should be attached to Prince Edward Island.

That is a plain protest but it was entirely disregarded, and I find I protested again on July 16, a few days later. Since then I have taken occasion to correspond with Colonel J. L. Ralston, the chairman of the Ralston commission, and I have discovered in that correspondence the basis on which these percentages of allotment are calculated. I endeavoured to get the information from the minister last session but I must confess I could not do it. Having got it from Colonel Ralston, however, I find it is quite simple to make the Yukon calculation. Colonel Ralston in a letter to me on November 22 last says

The total percentage fixed by our report for distribution to British Columbia and the Yukon Territory is 10.286, and dividing this percentage in the same ratio as the enlistments for British Columbia bear to those for the Yukon (that is to say as 51,430 is to 2,327) gives for British Columbia 9.841 per cent and for the Yukon .445 per cent.

I notice that the percentages in the resolution now before the House differ from those as quoted in the bill last year, and probably there is some good reason for that. But they do differ. Apparently the percentages given in the bill and in the Ralston report were not correct, otherwise they would not be changed this year; and taking it on this year's percentage the calculation for Yukon will be somewhat different. The percentage for British Columbia and Yukon this year, instead of 10.286 per cent is now 11.213 per cent, and calculated on that basis the Yukon percentage should be .503, or about $11,000 in money. After getting the information from Colonel Ralston I corresponded with the officials of the Dawson branch of the Great War Veterans' Association, submitting the whole question to them for suggestions. I have here a letter from the secretary-treasurer of that institution to the following effect:

Dear Sir,—The Dawson Branch G.W.V.A. have instructed me to thank you for communications regarding the canteen fund.

The enclosed copies of a resolution passed at a largely attended meeting of the branch along with a number of other returned men expresses the unanimous and emphatic opinion of all present.

This matter has further been discussed with a number of prominent citizens including Mr. Percy Reid, Acting Gold Commissioner, and all seem to hold the same opinion as we do.

The resolution of the Great War Veterans' Association reads:

Resolved, that notwithstanding the disadvantage to which the Yukon is put through having no percentage of discharges or pensions taken into consideration in arriving at the sum allotable to the Territory from the canteen fund, this meeting nevertheless, with a view to arriving at a practical and expeditious solution of the difficulty, acquiesce in the figure of .445 per cent of the whole quoted by Mr. Ralston, Chairman of the Royal Commission on Pensions and Re-establishment, in his letters to Captain George Black, federal member of parliament for the Yukon, such percentage being based on enlistments only and amounting at present to $10,242, as being reasonably satisfactory under the circumstances.

Be it further resolved, that, due to the isolated position of the Yukon Territory, the lack of adequate communication during the greater part of the year, and the absolute impossibility of a committee situate 2,000 miles from here being able to handle the local situation sympathetically or intelligently, this meeting is of the opinion that it is in the best interests of Yukon residents entitled to receive benefits under the canteen fund that the Yukon's pro rata share of .445 per cent of the whole be handled by a local committee and that the Gold Commissioner and Captain George Black, federal member of parliament, be requested to give every assistance with that object in view.

That is signed by the president and the secretary. On February 24 this year I wrote to the minister enclosing a copy of that resolution. I will not take the time of the House reading my letter but I should like to put it on Hansard in order to make clear my position in regard to the matter. The letter was dated Ottawa, February 24, addressed to the Minister of Soldiers' Civil Re-establishment.

[The letter from Mr. Black to the minister reads:

Hon. H. S. BELAND,
Minister of Soldiers' Civil Re-establishment,
Ottawa.

DEAR SIR:—

re Canteen Fund

Since the last session of parliament I have given the matter of the most advantageous way of handling Yukon's share of the above fund careful consideration, and have corresponded concerning the same with the G.W.V.A., of Yukon, and with Mr. J. L. Ralston, chairman of the Royal Commission on Pensions and Re-establishment, on whose recommendations the bill of last session, I understand, was drafted.

On the basis of calculation used in arriving at the sums to be allotted to the various provinces Yukon would be entitled to .445 of the whole, and amounting to at present $10,242 such percentage being based on enlistments only and not including pensions and discharges.

I enclose, herewith, an original copy of resolution passed at a representative meeting of the G.W.V.A. and other returned soldiers held at Dawson, January 14, 1925, in which it is declared that it would be more satisfactory to have the Yukon's share of the fund handled by a local committee than to have the same combined with that of British Columbia. I entirely agree with this resolution, and would respectfully urge that in the event of a bill to dispose of this canteen fund being introduced at this session of the House, the same shall provide for the handling of Yukon's share of the fund by a local committee to be appointed by the government. I would suggest as members of this committee, the Gold Commissioner of Yukon, who is the government's chief representative in that territory, and the president and secretary of the G.W.V.A. in Yukon. These officers have always been, and I believe will continue to be, representative citizens. At present the president of the G.W.V.A., Mr. D. C. Thomson, M.C., is manager of the Canadian Bank of Commerce at Dawson, and Mr. C. S. McKim, secretary, is a government official.

I hope to have Mr. Ralston's co-operation in this recommendation.]

I was disappointed at receiving on February 27 the following letter in reply:

Dear Captain BLACK,—I beg to acknowledge the receipt of your letter of the 24th instant with reference to the distribution of the Yukon's share of the canteen funds.

The change which is suggested would entail the making-up of a new scale for the whole country, and moreover the other provinces might submit that discrimination had been shown against them inasmuch as a different basis for computing the Yukon's share would have to be used.

It is difficult to see how this can be justified.

As I stated at the outset, I am glad to find that the minister has modified that opinion and told the House that if the committee favours it he will be willing to allow an alteration in the bill to provide that the Yukon share may be placed in the hands of a local committee. I would therefore suggest for the consideration of the minister the following amendment:

That the resolution be amended by adding after the word "provincial" in the fourth paragraph the words "and territorial" and by striking out the word "nine" and substituting the word "ten" in paragraph (4) and that the British Columbia proportion be 10.710 and the Yukon proportion .503 instead of the proportions now in the resolution stated; and that a new paragraph be added as—

(5) (a) The Yukon allotment to be paid to a board of trustees consisting of the Gold Commissioner of Yukon and the president and secretary of the Dawson branch of Great War Veterans' Association, without remuneration, empowered to receive and hold the territorial allotment and to ascertain the wishes of those interested and residing in the territory concerning the disposition of such allotment, and to determine the object to which the allotment should be devoted, and to administer the same for such object or to provide for such administration by others. The expenses in connection with the trust to be a charge on the allotment.

I am quite sure the charges on the allotment will not amount to anything. The figures are based on the information I received from Colonel Ralston, the chairman of the Ralston commission, giving the method of calculating these percentages and amending them in accordance with the figures now given in the resolution, which as I pointed out before differ from the percentages given in the bill last year. The other clauses of the resolution—

Mr. BELAND: Before my hon. friend proceeds, may I ask how he arrives at his percentage of 5.503 for the Yukon?

Mr. BLACK (Yukon): Taking the percentage of enlistments only, without taking into account the percentage of discharges or of pensions.

Mr. BELAND: Why not?

Mr. BLACK (Yukon): In leaving those percentages out Yukon gets something the worst of it, but even at that the people interested are willing to do so in order to have their allotment separate. The percentages of discharges and pensions are left out because there were practically no discharges in Yukon and a very small percentage of pensions, so small as not to be worth taking into account. The other provinces get the advantages of the three branches of calculation; the Yukon is willing to take only one, the percentage of enlistments, and as the chairman of the Ralston commission takes the percentage at this basis, that is to say, as the enlistments of British Columbia, 51,430, are to those of Yukon, 2,327, so is this percentage—

Mr. BELAND: As far as enlistments are concerned?

Mr. BLACK (Yukon): Yes.

Mr. BELAND: And as far as discharges are concerned how do you arrive at it?

Mr. BLACK (Yukon): I leave the discharges and pensions out of the calculation altogether.

Mr. BELAND: Why?

Mr. BLACK (Yukon): Because I do not think there were any discharges in Yukon, and the percentage of pensions was so small it was not worth considering.

Mr BELAND: Could we not take the same proportion between the discharges in British Columbia and those in Yukon as between the enlistments in British Columbia and those in Yukon?

Mr. BLACK (Yukon): I think that would be a fair basis of calculation, and I would be very willing indeed to have it adopted. As to the other clauses of the resolution and of the bill of last year, they did not pass without protest, at any rate on my part. After the splendid work done by the returned soldiers through their organizations and agencies had been discussed in the House, I said:

> If the work has been done so well in the past why create another agency now?

That was in reference to this proposed adjustment service and bureau.

> Surely the efforts of returned soldiers on their own behalf, coupled with the work done by the Department of Soldiers' Civil Re-establishment, ought to be sufficient, but if an additional bureau is needed, I submit that the expense should not be met by withdrawing $100,000 from the canteen fund. That should be a government expense coming on the whole people. This $100,000 is not a gift to the returned soldiers in fact the whole of this $2,296,936 is the returned soldiers' own money now. It does not belong to the government or to the general public, it belongs to the returned men, who overseas ran a canteen and made a profit out of it, and now the money is their own. I submit that neither the $100,000 or any other sum should be taken out for this purpose. The bureau, according to the minister's own words is not necessary because the soldiers' interests are being so well looked after by the government and by the soldiers themselves.

I quote that to show the minister was not altogether correct in saying the legislation passed without protest; and to-night we have heard protests from many returned soldiers' organizations read by members of the House. With all due deference to the minister, I do not think he has been quite frank with the House or with the committee in this matter.

Mr. BELAND: In what way may I ask?

Mr. BLACK (Yukon): As I say, with all due deference to the minister, I think at the outset he sought to make it appear that no payments had been made or were contemplated to be made from the canteen fund to the Dominion Veterans' Alliance. He was asked on February 26 and 27, and again on March 5, if an order in council allocating any part of this canteen fund to the Dominion Veterans' Alliance had been passed, and the answer was in the negative.

Mr. BELAND: That was strictly true.

Mr. BLACK (Yukon): Oh, perhaps in the letter, but not by any means in the spirit. It was only when an hon. member produced a copy of the order in council and read it that the minister admitted there was any order in council at all. No one can read that order in council without realizing from it that money to the extent of $15,000, perhaps $25,000, has already been expended in anticipation of this $100,000, and apparently the minister is going to see to it that the trustees, whoever they may be, undertake to return that $15,000 or $25,000, whichever it is, to the soldiers' disablement fund.

Mr. BELAND: If they do not think the money has been properly expended for the maintenance of the bureau, they may refuse to reimburse the disablement fund, and the situation will be that the disablement fund will have improperly contributed to the maintenance of the bureau during a year and a half or two years.

Mr. BLACK (Yukon): I think the minister is going to know his trustees pretty well before they are appointed, and if they are not prepared to do as he thinks they should do they are not apt to be appointed. The order in council in fact had been issued many months before hon. members in this House directed this question to the minister. An order in council was issued and $25,000 of the disablement fund was used.

Mr. BELAND: No, $15,000.

Mr. BLACK (Yukon): I submit it is fair to suppose from reading the order in council which finally came to light that these trustees are practically to be directed to take that amount out of the canteen fund and pay it over to the disablement fund. These are the words of the minister, in fact of the government, in the order in council:

—and he recommends that the trustees who may be appointed after the passage of the Canteen Funds Bill at the next session of parliament be requested to reimburse the disablement fund the amount of $15,000 out of any moneys transferred to such trustees under the authority of the said bill.

That, to say the least, is a pretty straight tip to those trustees before they are appointed as to what they are expected to do. I cannot satisfy myself from the wording of the order in council whether the amount advanced was $15,000 or $25,000. There are two amounts of $10,000 and one of $5,000 mentioned.

Mr. BELAND: I said to my hon. friend it is $15,000, and I wish he would accept my word.

Mr. BLACK (Yukon): I did not understand that before. The minister's word is clearer than the order in council.

Mr. BELAND: I admit that the wording is a little ambiguous.

Mr. BLACK (Yukon): I say, as I said last session, that this adjustment service and bureau, such as is contemplated by the resolution, is unnecessary, and if it is not unnecessary it ought to be unnecessary. The Department of Soldiers' Civil Re-establishment is after all an adjustment service and bureau. It is a soldiers' bureau, or it should be. If it is not, what is it? What was it designed for? It is not needed in the general government of this country. We had sufficient departments to carry on the government of Canada, perhaps a few too many, before the Department of Soldiers' Civil Re-establishment was ever thought of, and it was created simply because services of that sort were necessary for the returned soldiers.

If the department is not an adjustment bureau, a soldiers' service bureau—well, what is the minister doing? What is the reason for his continuance in office if that is not what the department is for? And what is the large and expensive staff of the department being maintained for if it does not constitute a soldiers' bureau, if it is not for the purpose of attending to the business of returned soldiers? I submit that it is an admission of incompetence on the part of the department and of the head of the department to say that any go-between, any special agency is necessary as a medium of intercourse between his department and the returned soldiers. The soldiers should not require special counsel; the members of the minister's staff ought to be special counsel to every man who has to do business with them.

10 p.m.

Mr. BELAND: I am afraid my hon. friend is sliding into politics.

Mr. BLACK (Yukon): Well, I do not know that the members of the government have always been unwilling to bring politics into matters affecting the soldiers. Friends of his party did what they could in the constituencies during the by-elections to inflame the returned soldiers against the Conservative party in the account they gave to the public of how the pension bill of last session was handled. Right here let me call attention to a very refreshing sentence in this order in council. Let me quote the words:

Owing to the fact that this measure was introduced during the last few days of the parliamentary session, it failed to become law.

Now that is a plain statement of fact, and it differs very widely from the statement I heard made in the constituencies during the elections last fall as to why that bill failed to pass. Every effort was made, as I say, to prejudice the returned soldiers against the Conservative party because the pension bill of last session failed to pass—owing, the government's canvassers said, to the antagonism of the Conservative majority in the Senate. Though if we look at the history of the respective parties we will find that returned soldiers and soldiers before they returned fared quite as well at the hands of the Conservative party as they did at the hands of my hon. friends opposite. If we are going to talk politics in connection with this matter I am quite willing to do so.

We have had complaints, and we are getting them right along, from returned soldiers all over the country as to the policy of the pension board and the Department of Soldiers'

Civil Re-establishment. The policy of the pension board and the policy of the department are just exactly what the minister makes them; the pension board, like government officials in other departments, take their lead from the minister. If the policy of the pension board was not to the liking of the minister it would very soon be changed. I say that if such an adjustment service and bureau is needed, let the public pay for it. We heard a lot about the gratitude of the public to the returned soldiers when they were overseas, and I do not think the great majority of the civilian population, taxpayers of this country, would be at all averse to putting up $100,000 if that amount were needed to give the soldiers the benefit of special counsel here at the capital—because that is what the taking of this $100,000 means. On the other hand, if there must be such an "adjustment service and bureau," as it is expressed in the resolution, and at the expense of the canteen fund, I say, put that fund in the hands of independent trustees, not trustees who will take orders from the minister, no matter how fair or how proper those orders may be. The trustees should be absolutely free and untrammelled; they should not be handicapped in any way. As I have already pointed out, this order in council indicates all too plainly that they will get orders, if they do not get orders they will get directions. They are going to get advice as to what they are to do with $15,000 of this fund, to start with. That is not the sort of trustees we want. Let me say, with all respect to members of this House and officers of the permanent force or the Canadian corps, that in selecting these trustees the government might very well consider the advisability of including among them one or two who perhaps are not generals in the army. I heard to-day nothing but the names of generals suggested. I have every respect for these gentlemen, for their rank and their military records; but I do say that in civilian life to-day are to be found men who never wore a brass hat, who never obtained the rank of an officer, yet who have the entire respect of the community in which they live, have a wide circle of acquaintance, and would be quite fit and proper persons to be on that board of trustees.

Mr. MANION: May I ask my hon. friend one question as a matter of information? I did not hear more than one general mentioned, and that was Sir Arthur Currie. Were there some others?

Mr. BLACK (Yukon): There were at least three others. I would rather not repeat their names; you will find it in Hansard to-morrow. I say it would be better to leave the $100,000 in the hands of the minister and allow him and his government to take the responsibility for the administration of this fund than to shift the responsibility to trustees who are not absolutely independent.

If the minister is bound to use this $100,000, and I suppose he is, for the establishment of this bureau, then let him safeguard it by the terms of the bill so that it will not be sloughed off or frittered away. So word the bill that in the first place the fund will not be plundered of that $15,000. That $15,000 should never go out of the canteen fund to the disablement fund. We heard it said with some heat on the floor of this House by gentlemen opposite on the last occasion on which this resolution was discussed that it was entirely proper to use the disablement fund to the extent of $15,000 for the purpose for which it was used. If that is so, let it go at that, write it off. There is no reason why it should be paid back from this canteen fund; and that is one thing that should be safeguarded by the terms of the bill. I would provide for the investment of this $100,000 so that the bureau could be maintained indefinitely by the interest earned by that sum. I do not see any necessity for establishing any very elaborate bureau or agency service here at the capital. One smart agent ought to be quite enough; this $100,000 should earn $5,000 a year, and you could get a good enough man for $5,000. It follows as a matter of course that the great majority of cases could be handled without the intervention of this agency at all. Only a few contentious cases will come before the bureau. We have a corps of paid soldiers' advocates across the country from Halifax to Vancouver, paid by the month I understand; they might do a little for the soldiers in return for their salaries. I say it could only and should only be a very exceptional case that this bureau would have to handle, and an agent of ordinary intelligence, with the co-operation of the minister and his staff, should be quite sufficient to handle the business. Therefore I say that the bill should provide that the principal amount of $100,000 be invested and that the bureau be conducted on the interest earned thereon. I do not want to be misunderstood: I am entirely opposed to the use of this $100,000 for the purpose proposed. But if the minister must have his way and must put it through, put it through with those safeguards. Although attention has already been called to this feature of the resolution reserving the sum of $20,000 for the payment of any outstanding accounts, I cannot bring myself to believe that any such amount of

outstanding accounts exists. This fund has been in the custody of the government now for some years. If there are any outstanding accounts, why have they not been paid? I think the government would be quite safe in cutting down this $20,000 to say $2,000, and I think that $2,000 would probably be more than they would ever use. It seems to me that an effort has been made to trim this canteen fund from start to finish, right down the line. I think the minister would be better advised to do everything possible to see that as much of the canteen fund remains intact as he possibly can. If he has decided to follow the recommendations of the Ralston commission, and I admit I have no alternative to suggest, and to allocate the fund to the different provinces and the Yukon territory, there to be handled by local committees, I say by all means swell the amount so to be distributed provincially. Then you will have the fund in the hands of the local people who are conversant with local needs, and the fund will then likely be administered much more in keeping with the wishes of the returned men than if it was being handled by a central board here in Ottawa. I trust the minister will see his way clear, as he intimated he would, to segregate the amount due to the Yukon territory, and also take into consideration the suggestions I have made as to the balance of the fund.

Mr. BELAND: Just a word in reply to my hon. friend. I understand that he does not want to press this amendment on the resolution.

Mr. BLACK (Yukon): No. I am suggesting it for the consideration of the minister in draughting the bill.

The CHAIRMAN: The hon. member for the Yukon (Mr. Black) has moved an amendment. I understand that he does not now wish to press it.

Mr. BLACK (Yukon): Except with the minister's approval.

Mr. BELAND: I do not approve of the amendment as it is, but I have made some suggestions to my hon. friend to which he has agreed, and we can go into a conference a little later and see whether we can draft a clause which will be acceptable to him. So much for that part of my hon. friend's remarks.

Of course, when my hon. friend speaks he always finds a way to have his little political innings. He has had a little fling to-night at the department, at the minister in charge, and at the government. I suppose that is all in order, but up to the present time we have very carefully avoided touching upon the political side at all in considering this resolution.

My hon. friend has criticized the creation of the adjustment bureau as an adjustment bureau. He claims that it is unnecessary. He is entitled to his opinion as a member of this House and as a citizen of Canada, and I respect his view, but I must say that there are very, very few people in the House or in Canada who share in it. Surely it is not shared by the returned men, surely it is not shared by the associations, surely it is not shared by the royal commission. I understand that they are all in favour of maintaining an adjustment bureau.

As to whether the money should come from the public or from the canteen fund, it was not for me to decide. The royal commission, after having consulted returned men from all over the country, came to the conclusion that they should recommend to parliament the adoption of legislation the purport of which would be to allow $100,000 for the maintenance of such a bureau, this amount to be placed in the hands of a central board of trustees. My hon. friend says it should not be necessary to have an adjustment bureau. What is the department for? he asks. Well, the returned men have had an office here in Ottawa since 1919; I am quite sure I am within the limit in stating that. Since that time they have had some association or other working in their interests, either to have claims recognized or to obtain employment for returned soldiers in the government service. They have done that. They have been assisted by the former government to a large extent; they have been assisted by this government to a smaller extent; and now here is a proposal which they approve, for I have already quoted to the committee that the principal associations have agreed that this legislation should go through. They are willing to accept the idea that $100,000 should be laid aside for the maintenance of the bureau. What they object to is that one particular association should be singled out for the purpose, and in that I am inclined to agree with them. I have been under the impression up to three or four weeks ago that the Dominion Veterans Alliance, or the Great War Veterans Association's head office represented all the ex-service men in Canada. I have repeated in this House that the secretary-treasurer of the Great War Veterans Association has been appointed as the soldiers' representative and appeared as such before

every parliamentary committee since 1919. I remember when we sat in the museum under the chairmanship of Mr. Calder, Mr. MacNeil was recognized on that occasion as the authorized representative of the ex-service men for the committee. This bureau has existed. It has expended undoubtedly a large sum of money, and now the royal commission recommends that a bureau should be maintained. They do not say it should be the Great War Veterans Association, or the Army and Navy Veterans, or the Tubercular Veterans Association, or the Dominion Veterans Alliance. They say: Maintain a bureau, and here is $100,000 that you will pass over to a central board of trustees, the majority of whom will be made up of ex-service men.

Now my idea is that this board should be composed of outstanding men commanding the respect and the confidence of all the returned men in Canada. I have stated that I had already thought of Sir Arthur Currie. As a matter of fact when the bill was under consideration last year I had drafted a letter to Sir Arthur Currie asking whether it would be agreeable to him to serve on such a board. I am disposed to ask him if he is agreeable to serve on this board. I have no objection to the different associations getting together and indicating whom they want appointed to this board. Further than that I cannot go. I have expressed my willingness to make all possible effort within my power to the end that this board shall be absolutely removed from political or governmental influence: I do not think I could go any further than that. Surely there is no reason why we should indulge in politics in considering a question of this kind.

Mr. CLARK: Did I understand the minister to say that the proposals contained in the amendment of the hon. member for the Yukon (Mr. Black) would be embodied in the bill?

Mr. BELAND: In an amendment to the bill.

Mr. CLARK: Has it been drafted?

Mr. BELAND: It will be before the House when the bill comes down.

Mr. CLARK: Would the minister mind reading it?

Mr. BELAND: I have no objection, but we are on the resolution now.

Mr. CLARK: I understand the minister proposes to amend the resolution now before the House when he introduces the bill by altering that portion of the resolution which is referred to in paragraph 4. He will provide in the bill that the share going to British Columbia and that going to the Yukon shall be separated.

Mr. BELAND: That is right.

Mr. CLARK: And British Columbia will get a proportion, and the Yukon will get a proportion. I was wondering in what respect the bill would alter the resolution before the House.

Mr. BLACK (Yukon): Perhaps the minister would let me answer. My suggestion was that taking the percentage of 11.213, as set out in section 4 of the resolution for British Columbia and the Yukon, the Yukon proportion be extracted and put in by itself, just exactly as the minister suggested, when we were discussing this matter previously in the House, that the share for Prince Edward Island, which is now grouped with Nova Scotia and is set out at 6.288, should be segregated, as it was in fact segregated in the bill of last year. It merely amounts to a separation.

Mr. BELAND: Does my hon. friend wish to know the nature of the amendment?

Mr. CLARK: Yes.

Mr. BELAND: There is now a certain percentage allotment to British Columbia and the Yukon together. The idea is to make them separate, to take the figures of enlistment, the figures of discharges and the number of pensioners in British Columbia, and to establish the same proportion between discharges and enlistments in British Columbia to those in the Yukon. This plan is somewhat generous to the Yukon. My hon. friend realizes that practically no discharges took place in the Yukon, though 2,700 enlistments were registered there. We take the number of enlistments in British Columbia and the number of enlistments in the Yukon, and then apply to the Yukon the same proportion between discharges and enlistments as exists in British Columbia between discharges and enlistments. That would make it of course somewhat more generous to the Yukon. As to the pensioners, of course the number is known. We do not know the number of discharges in the Yukon. There is no record in the Militia department of it; so we are allowing the same proportion between enlistment and discharges in the Yukon as exist in British Columbia.

Mr. CLARK: Do I understand there is no record whatever in the number of discharges in the Yukon?

Mr. BELAND: That is my information.

Mr. CLARK: Do I understand that the minister proposes to apply a different principle in arriving at the proportion in the Yukon from the principle applied to Ontario or Quebec or the other provinces?

Mr. BELAND: I do not say that it is altogether a different principle, but we must take into consideration the geographical conditions. It is realized that men coming from overseas, though they have enlisted in the Yukon, have taken their discharges somewhere in Canada this side of the Yukon; and for the purpose of re-establishing the proportion that would have existed but for this unfortunate circumstance, I would be agreeable to apply to the Yukon the same proportion between discharges and enlistments as exists in British Columbia between discharges and enlistments.

Mr. CLARK: But the share of the Yukon will be taken off British Columbia—not off the other provinces. Is that not a fact?

Mr. BELAND: I must say it will decrease to that extent the share of British Columbia.

Mr. CLARK: Will the minister state what proportion he proposes to give to the Yukon?

Mr. BELAND: I have not the figures just now. I thought I had them. I can obtain them.

Mr. CLARK: Can the minister give us any information as to the number of returned soldiers who are now in the Yukon?

Mr. BELAND: I have no idea.

Mr. CLARK: Will the minister give us the number of enlistments that took place in British Columbia and the number in the Yukon?

Mr. BELAND: The number of enlistments in British Columbia was 51,348, and the number of enlistments in the Yukon was 2,327.

Mr. CLARK: In connection with the proportions as they apply to all the provinces, will the minister tell us whether these proportions are worked out on the basis purely of enlistments, or whether the question of service in the theatre of war has anything whatever to do with the making out of those proportions?

Mr. BELAND: The figures relating to discharges apply only to those who were overseas, because the canteen fund is for them only. As to whether they served in the actual theatre of war or not, I do not think there is any difference.

[Mr. Béland.]

Mr. CLARK: First of all, the minister takes into consideration as I understand the enlistments, whether the men left Canada or not.

Mr. BELAND: I should think so, because the total enlistment here is 590,000, and I suppose that would include them all.

Mr. CLARK: Why does the minister take into consideration the enlistments? Why does he include in the proportion those who did not leave Canada, because those men who enlisted but did not leave Canada contributed nothing to the canteen fund, and are in no way interested in it. I am not quite sure that we would apply the same principle to those who enlisted and went to England but did not go to France. I do not know whether there was any contribution to the fund by those who were in England but not in France. So far as Canada is concerned, I understand those who enlisted and did not go overseas contributed nothing. I want to ask why, in working out the proportions, the minister takes into consideration the number of men enlisted who did not go to France.

Mr. BELAND: My hon. friend, of course, is aware that I am carrying out the suggestion that was made by the royal commission in this regard. They have decided that we should take the enlistments, whether the men went overseas or not, as one basis, then the discharges of those who saw service overseas as another figure and then the number of pensioners. Having arrived at this we should then strike an average for each province, for each territory, and I suppose it is because they thought it was the most equitable manner in which the question could be handled. Personally I have no inclination one way or the other.

Mr. CLARK: Before the minister introduces the bill, will he consult with Sir Arthur Currie, so that when the bill is introduced he may inform the House whether Sir Arthur Currie would be prepared to accept?

Mr. BELAND: Does my hon. friend mean that I should get in touch with Sir Arthur Currie between now and the date of the introduction of the bill? What is the object?

Mr. CLARK: So that the House would be informed then whether the desires of hon. members as expressed to-day can be carried out. If, for instance, Sir Arthur Currie said that he could not act, then we might have some other useful suggestions for the minister, and we might even have amendments to move to the bill. If the minister were in a

position to inform the House that he had consulted with Sir Arthur Currie and that the latter was prepared to act as one of the trustees in connection with the adjustment bureau fund, then we would be quite satisfied, in all probability, to allow those sections of the bill to be passed without further discussion or proposed amendments.

Mr. BELAND: I do not say exactly what I shall do in this connection. This is a most unusual procedure. My hon. friend will admit that it is something absolutely unknown in parliament that hon. gentlemen should request a minister, before he goes any further, to find out by telephone or by letter what the sentiments of one particular person would be in a certain connection. I had the assurance by letter a year ago that Sir Arthur Currie would be willing to serve on such a board. Sir Arthur Currie is living; he is in good health; he is a prominent man; he has to-day as much leisure as he had at that time, and I see no reason why he should refuse to-day. I am somewhat reluctant—I say this in all sincerity—to go to the telephone to ask Sir Arthur Currie whether he would serve on such a board or not. I am satisfied he will be willing. I can say to my hon. friend that it is my intention to ask Sir Arthur Currie to act on this board, but I somewhat hesitate to do it as it is suggested.

Mr. CLARK: The minister says that it is unusual to consult with a man and ask him whether he is prepared to do a thing. With all deference, I cannot see that it would be unusual because there has been a great deal of legislation where individuals have been named in the bills as trustees or in other positions. The minister need not go to the telephone; he need not telegraph. There will be ample time before the bill is introduced for the minister to write or to have his secretary write a letter to Sir Arthur Currie, or to send him a copy of Hansard if he wishes to inform him of the desires of hon. members and the details of the debate, and to get an answer from Sir Arthur Currie so that, if necessary, he can be named in the legislation as one of the trustees.

Mr. MANION: Might I in that regard again point out to the minister as I think I did this afternoon that, in his letter to the Prime Minister of May 7, 1923, Sir Arthur Currie said:

> I myself would be glad to serve on such a board.

He had described such a board as we have suggested, and he went on to suggest two or three other members. Therefore at that time he was quite willing to act as a trustee, and I think if the minister approaches him either by letter or telephone, he would probably accept. I am hoping so.

Mr. HUMPHREY: I rise not for the purpose of opposing this resolution, but to give it my support. This is a very old question, one which has been before the eyes and attention of returned men and others for a number of years. Nevertheless, in giving it my support, I fear it is not going to solve the difficulties of an adjustment bureau. Let us go back a few years to the after period of the war. Immediately after the war ended, adjustment bureaus, committees, and associations were formed throughout the Dominion of Canada to take up the various questions of returned men, and to do the best they could for them, their widows and orphans. These adjustment bureaus have laboured under many adverse conditions, but they have been able to accomplish a great deal. My experience has been that the function of these adjustment bureaus has been to adjust cases so far as they were able to do so, and in this regard they have fulfilled as far as possible their duties to returned men, the different representative bodies and the country.

Clause 2 of the resolution states that the sum of $100,000 is to be paid to a central board of three trustees for the purpose of maintaining an adjustment service and bureau for the benefit of ex-service men and their dependents. What would be the function of that bureau? I would gather that it would be similar to that of the different organizations that were formed in the past. I have always believed that it is the responsibility of the state and that it should never have been the responsibility of organizations of returned men to contribute to an adjustment bureau or service organization to bring forward their different needs and requirements. I am convinced that the question of giving to returned men, their widows and orphans their just dues and rights is a responsibility of the federal government. If we had had a department or a branch of a department in which the returned men had absolute confidence, it would not be necessary now to finance an adjustment bureau by the returned men or from the canteen fund. It is the duty of the state to give the returned men what is their due without their being obliged to put up a continual fight such as we have witnessed throughout the length and breadth of the country. It has been brought to the attention of parliament and of every government that has been in power since the war that the returned men

have had to finance their own organizations in order to obtain what has been regarded as their just due, and in that way it seems to me that the responsibility of the state has been shifted in the administration of some of our departments. In establishing another adjustment bureau we are only perpetuating a good deal of the dissatisfaction that now prevails. Nevertheless, it is my opinion that the bureau is absolutely necessary; I am not of the opinion that it can be done without. I will go so far as to say however that there should have been no necessity for it; it has been my candid opinion that the bureau should have been unnecessary, and we should not have had to pass legislation of this kind, taking money from the canteen funds that belongs to the returned men who enlisted and using it for the purpose of financing this institution.

On the other hand, in face of the conditions that exist, I am quite willing to support the resolution. From my experience gathered in the past few years in which I have been a member of the special committee investigating pensions and matters of re-establishment, I have come to the conclusion that something was necessary. It has been brought to the attention of parliament that there was a necessity for something in the shape of an investigation, and a commission was appointed, known as the Ralston commission, who after a thorough inquiry brought in a report recommending that steps be taken to provide funds for an adjustment service. I feel therefore that the bureau is necessary, and the next move is to provide the funds. I must frankly say however that I cannot agree that it is the duty of returned men's organizations to take their own funds to finance their adjustment service and bureau. I should think that the country would be of the opinion that these organizations deserve some contribution from the general funds to the extent of one hundred, or one hundred and fifty, or two hundred thousand dollars. In view of what is taking place, in view of the different investigations that have been held, I feel that the present is the next best move; but as I have stated before, it is my opinion that if the country had had confidence in the different tribunals that have been set up, this legislation would have been unnecessary.

Now, I do not wish to have it inferred from anything I have said, nor do I want it insinuated, that it is my desire to drag politics into this question in any way whatever, but I feel that I am bound to take this stand in view of all the circumstances. And I take it without prejudice and absolutely with no desire to reflect upon any of the administrators of the departments. The fact however is, it seems to me, that had the returned men and their organizations had confidence in the Board of Pension Commissioners, and had that body functioned in such a way as to overcome many of the difficulties that arise to-day, as they have arisen in the past few years, the present undertaking would have been obviated. What would be said if during the present session legislation were introduced to establish an adjustment bureau to take care of claims coming before the Civil Service Commission, or an adjustment bureau in connection with the Board of Railway Commissioners? Well, as I see it, the Board of Pension Commissioners is to some extent in the same category as the railway commission or the Civil Service Commission. Here we are providing machinery to enable the returned men to secure their just due, when there should be no necessity at all for it. It has been proved to my satisfaction that within the past four years particularly the vast majority of these cases have been adjusted by representatives of the organizations before the Board of Pension Commissioners, and I reiterate that if the Board of Pension Commissioners had functioned as the people believed it should have done this legislation would now be uncalled for. Under the circumstances, however, I am perfectly satisfied that this legislation is absolutely in the best interests of the returned men, especially in view of the thorough survey carried out by the Ralston commission. And so far as I have been able to ascertain it has the unanimous approval of the returned men. I am sure that there may be some objections to this legislation, but in view of all the conditions I feel that I can give it my hearty support as being in the very best interests of the returned men and of the country as a whole.

Mr. CHURCH: An afternoon and evening spent in this way in friendly debate in the interests of the returned men is well spent. As I have stated before, some of the men have sent telegrams on this question and I find that there is a great deal of objection to this particular division. The minister will remember that we had a Red Cross and a patriotic fund, involving some $44,000,000, the administration of which was carried out by a large number of prominent business men throughout Canada at a minimum of cost. Here is a canteen fund of about two and a quarter millions and I think it will be agreed that in these four or five sections of the resolution we have the costliest piece of adminis-

tration provided for. It is a waste of money, and after the various administrators, Dominion and provincial have got through, there will be very little left to be devoted to the objects of the Ralston report. Here we are in 1925 seven years after the war providing for an adjustment bureau with headquarters at Ottawa and with a paid staff. What it is necessary for I do not know, for I cannot see what it will adjust. I thought that one first result of the Ralston commission's inquiry would be the simplifying of the Pension Act; but there is such a vast amount of red tape connected with the whole thing that the functions of the central board have been largely frustrated. I fail to see what good this particular board can do in the case of a soldier living in London, in Hamilton or in St. Catharines. What is there to adjust?

Why should a soldier need somebody to fight his case for his pension with the government—seven years after the war? Why should we have to go before the D.S.C.R., the pension board, the Federal appeal board, this new bureau, the Soldiers' Aid Commission of Ontario, the municipality, the local soldiers' organizations, and the unit to which he belongs? Why all this red tape seven years after the war to get a small claim against the government adjusted? The soldier is not going to live forever; these returned men are dying off by hundreds every month. Here you have a canteen fund of two and a half million dollars to administer, and you have a complex system of red tape with five or six methods of disposing of it. In the case of the $45,000,000 patriotic fund the services of some of our prominent business men in Canada were enlisted free and the fund was administered with a minimum of cost to the country and the maximum of efficiency.

I think the minister would have been well advised if he had followed a similar course for the administration of the $2,250,000 canteen funds. And I hope he will not think any remarks made from this side of the House are made in an unfriendly way, because I am sure all three parties in the House are trying to do the best they can to help the minister and our returned men. One of the objects of forming the D.S.C.R., as I understand, was largely on account of the lack of sympathy and the red tape in the Militia department. It was felt that that department had not full sympathy with the returned men in some respects, although it gave a good account of itself during and after the war.

This so called central bureau is claiming for itself very large functions and powers—for the maintenance and assistance of ex-service men and their dependents. It will not do the work at all. Evidently that is the view of the provincial government of Ontario, for, acting on the report of the Ralston commission, they have voted, I think, $50,000 for the purpose of aiding the returned men of Ontario in presenting their applications before the Dominion government for pensions and relief. Therefore in my opinion, Mr. Chairman, any necessity for the establishment of this proposed bureau is largely taken away by the action of the Ontario government and of various local organizations of returned men who assist the returned soldier to present his case.

I notice that the sum of $20,000 is to be held for the payment of any outstanding accounts. That should never have been charged to this fund; it should have been looked after by the D.S.C.R. Why should a returned man seven years after the war have to retain a lawyer to get his rights which the people of Canada and this parliament are anxious that he should get? No narrow technical construction is now placed upon the Pension Act, and in my opinion there is no occasion for distributing the canteen funds in this way. I agree with the hon. member for Yukon (Mr. Black) that instead of allocating $100,000 to a central board, the work which this central board is to look after should be attended to by the Soldiers Civil Re-establishment department of the government. Indeed, I have every confidence that the minister himself would do far better work with this $100,000 than a central bureau of irresponsible people having no connection with the government and not accountable to the soldiers. As to the provincial boards to be appointed by the Lieutenant Governor in Council in each province, I fail to see what use such boards will be to the returned men. Last year when this matter was up the hon. member for Rainy River (Mr. Manion) asked what the duties of the readjustment board would be, and the minister (Mr. Beland) quoting from the Ralston report, said:

> There are a variety of instances in connection with such questions as government employment, land settlement, training, housing and rehabilitation activities generally, the considerations affecting which depend on the presentation of the individual case rather than on the terms of a general regulation. There are also parliamentary matters not only affecting pensions but amendments to existing statutes which may indirectly affect the rights and privileges of ex-service men, and in addition there is the desirability of having some agency completely detached from government organization to supply the necessary personal contact between ex-service men and dependents and those who deal with matters affecting their interests.

And he added:

This outline fully indicates what the duties of the service bureau will be and, I think, are, because at the present time those duties are being discharged here in Ottawa, and in my opinion to the general satisfaction of the men.

Well, as I have already said, the government of Ontario have offered to fight the cases of returned men before the appeal board, and with the new Pension Act provisions. There should not be any necessity for bureaus and a lot of organizations to get a returned man justice and his rights without all this trouble and annoyance.

The third clause proposes that $50,000 shall be paid to the United Services fund of Great Britain, and $50,000 to the American Red Cross. In my opinion any of our returned men in distress in the United States should be repatriated by the government of Canada and civilly re-established here. Many of them cannot get work there because they will not take out naturalization papers. After the Civil War the Grand Army of the Republic did not have to leave the United States to look for work; they found ample opportunities for their abilities and energies in their own country and members of which organization became President of the United States, state governors, presidents of railways, and filled other important executive positions all over the country, with the result that they dominated public life and the government of the United States for fifty years after Lee's surrender to Grant and the civil war of the North and South was ended. They got into politics and stayed there and the returned men in Canada should follow their noble example.

Rather than create a control board it would be better if the minister and his department did this work themselves. It was stated by the minister last year that the residue of the fund was quite a respectable sum, amounting to over $2,000,000. This, he said, was to be divided among the nine provinces on a pro rata basis. The Lieutenant Governor in Council in each province was to appoint a board to administer the fund. The minister was asked whether any ballot had been taken to ascertain the views of the returned men, and he replied that 5,000 ballots had been cast by returned men and that the largest number of votes was given in favour of the education of orphan children—schemes of education, and that the second largest favoured relieving meritorious cases or cases of unemployment and distress. These were the two main schemes suggested. If it is a question of relieving meritorious

11 p.m. cases and cases of unemployment, this money could far better be distributed among the municipalities throughout the country for that purpose.

The Ralston commission went into the whole question of the canteen fund. They investigated what the Mother Country had done and what methods had been adopted in Australia and the United States, and they made certain recommendations. The first principle the adoption of which the commission recommended was as follows:

Firstly, that the fund should, in the opinion of the commission, not be spent immediately but its use should be providently spread over a reasonable number of years so that there would be something available for children now very young who might later be benefited by special assistance in particularly distressing circumstances which might arise at any time until a wage-earning period is reached, or who might become eligible for school or university scholarships if such were created. Neither should the fund be kept perpetually.

I think that is a good principle. The report continues:

The report of the United Services fund in Great Britain contains the following:—

"It is preferable in a fund of this nature that the greatest amount of good should be done over a limited period of reasonable length rather than that any sum should be set aside for an indefinite period." In England the period decided on was fifteen years from 1923.

Then the other recommendations they make are as follows:

Secondly, any use of the fund for relief purposes from time to time should be limited to the class of cases for which no relief is then available from government sources; in other words, the money should not be used to relieve the state of any responsibility devolving on it.

I think that is a good principle, because many returned men who were over in France for two, three or four years get no relief under existing legislation. Such a fund as this would take care of some of these cases.

Thirdly, that only ex-members of the Canadian Expeditionary Forces below commissioned rank who served in France or England, and their dependents, should be eligible to participate in the benefits of the fund.

That is to give the rank and file the benefit of the fund; I think that is a very wise proviso. With these principles in mind the commission has two suggestions to make regarding schemes for disposition of the fund, as follows:

(a) Assistance to specially meritorious cases where ex-members of the forces and their dependents are in genuine distress. No elaboration is needed here. The experience of the United Services fund of Great Britain will afford valuable information and guidance. This is the purpose for which a similar fund is used in Australia, and has been frequently put forward as a suggestion.

(b) The provision of scholarships in schools (not necessarily confined to the higher grades) and universities, for specially promising children of ex-service men.

With regard to that educational clause, many children whose fathers were killed in the war can only with difficulty be sent to high school on the miserable pittance of $18 a month given for maintenance of high school children.

The main recommendation of the Ralston report is in respect to meritorious cases or cases of unemployment. Just the other day the Mayor of Brantford sent a communication to Ottawa addressed to the Prime Minister, in which he said:

> Situation among unemployed ex-service men and their families one of extreme seriousness. Local organizations, churches and municipal authorities doing everything possible to provide relief among the unemployed. We respectfully suggest that men who served overseas and their dependents have special right to look to federal government of Canada with reasonable confidence for asistance in such period of difficulty and distress. May we urge cabinet consideration.

The hon. member for Kingston said that returned men who were out of work were the wards of the state, and so they are. They should be and they are entitled to be looked after properly. They should not be obliged to go around the large cities, when they are out of work, begging for relief for themselves and their families. I believe the minister tried to do what he could last year in this connection, but all the government can do is a mere nothing when you consider the large number of men who are in need of assistance. I say again that either the minister should take charge of this fund himself or he should appoint two or three good business men, such as those who gave their services in connection with the patriotic fund and red cross activities, to administer the fund. If that was done a great deal of unnecessary and useless duplication and paid organization would be saved and a great deal of unnecessary work and red tape would be avoided.

Mr. MANION: Mr. Chairman, it is eleven o'clock, and I think we—

Some hon. MEMBERS: Go on.

Mr. MANION: We will go on if you wish, but I was going to suggest to the minister that there are a number of members who wish to take some part in this discussion.

Mr. McBRIDE: Bring them here.

Mr. MANION: I refer to such members as the hon. member for Parry Sound (Mr. Arthurs) an outstanding returned soldier member of this House, who has always been on the committees dealing with these matters and who is well posted on them. The reason he is not here is because none of us expected that this matter was to come up to-day. Until I got here this afternoon I had no idea that the resolution was to be taken up; I thought it was likely to go over until after the budget debate. There is no intention of holding the minister up, but I would like to point out to him, as I said to him privately a moment ago, that whatever time is taken up now on the resolution will be saved when the bill is before the House. I would ask the minister to let the resolution stand over for another day, if reasonably assured that it will not be further held up; I know of no reason why it should not carry the next time it is considered. There are quite a number of points about this resolution which we have not yet dealt with. I was going to speak just two hours ago on one aspect of the case; I was going to bring to the attention of the minister again the question of the $100,000, but I was interrupted, I think by the hon. member for Yukon; some others followed him, and I have not since had a chance to say a word. I do not wish to go on at this stage.

Some hon. MEMBERS: Go on.

Mr. MANION: That is for the minister to say; if he says so, we will go on. I think, however, he will not save any particular time by going on. He would probably be just as well advised to have the resolution held up another day.

Mr. BELAND: We discussed the resolution on a former occasion for two hours, and we have discussed it the whole of to-day with the exception of the hour given to the budget. Apparently only one clause of the resolution lends itself to objection on the part of certain hon. members. I think that almost every hon. member who has an interest in this resolution has addressed the House. The hon. member for Parry Sound (Mr. Arthurs) for whom I have the greatest admiration, was in his seat the other day and shared in the discussion. I say in reply to my hon. friend that if he is willing to allow the resolution to pass, we will introduce the bill this evening, and it will go down on the order paper for its second reading, and then the next time the bill comes up in the House there will be ample opportunity for discussion on the second reading, and again in committee of the Whole, when the whole bill will have to be considered clause by clause, and when any amendment may be proposed. I have supplied the House with all possible information in connection with this measure. It passed the House last year, and hon. members are perfectly conversant with the whole situation. I think the House has been given

the most generous treatment in connection with this bill. Now I appeal to my hon. friend to allow this resolution to pass. That does not commit him or his friends in any degree.

Mr. MANION: I am sorry to disagree with my hon. friend, but it does commit us. The resolution when passed absolutely commits us to the principles and there are two or three principles which I wish to discuss before agreeing with them. I have no intention at the present time of pressing some of the objections which I, and I think other hon. members, have to a vote, but we wish to discuss the resolution fairly before it passes. I do not wish to reply to the minister until he has finished his remarks, but I would ask him to bear in mind that if we vote for the resolution, we are voting for the principles of the resolution, and with some of them we do not agree at the present time.

Mr. BELAND: I take it for granted that my hon. friend agrees to the principle of the resolution.

Mr. MANION: The large principle, but not with smaller principles.

Mr. BELAND: If my hon. friend wants to have clauses of the bill amended, it will be open to him to move an amendment in committee of the Whole on the bill. I appeal to my hon. friend. I think in the interests of expedition of business in this House it will be better to allow this resolution to pass tonight. I think we have been most generous in regard to this measure, and if we allowed as much time on every other measure as we have allowed for discussion on this, the session would never come to an end.

Mr. CLARK: I would like to point this out to the minister. While it is quite true this discussion was introduced this afternoon after the budget speech was delivered, though I have a vital interest in this matter, I have been on my feet only twice since the budget speech was delivered, and each time it was merely to ask the minister a question, I have some rather extended observations to make first, on clause 2 of the resolution. There are several things that I do not agree with, and perhaps the minister knows my position on that clause fairly well from my questions. Again, clause 5, which refers to the whole fund, involving an amount of $2,000,000, has not had one word of discussion. I want to tell the minister now that I do not agree with the principle of his resolution, and before the bill is introduced I would like to have the opportunity of presenting my position to the House. There has been no objection taken by any member so far in regard to the principle involved in clause 5, which relates to the disposal of $2,000,000, and I do not think it is fair to ask any hon. member to make a presentation in regard to the principle of a clause involving the disposal of $2,000,000 at ten minutes after eleven.

Mr. VIEN: Why?

Mr. CLARK: Would it be fair to ask any minister to commence the discussion of any subject after eleven o'clock at night? Why not bring down the budget after eleven o'clock, and then go on with the budget debate? I am pointing out that there has not been one word of debate on clause 5 this afternoon or evening, and I assure the minister that it is perhaps the most vital portion of his resolution. Personally I have not been given one opportunity to speak on any portion of this resolution since it was introduced this afternoon. I have asked two or three questions but I certainly have not made any remarks on the resolution, because I have not had the opportunity.

Mr. BELAND: Is my hon. friend in a position to say how much longer time he would require, he and his friends, to dispose of the resolution or come to a vote on it?

Mr. CLARK: So far as I am concerned, I would certainly want three-quarters of an hour.

Some hon. MEMBERS: Go ahead.

Mr. CLARK: I assure the minister that the observations I will make will require some further discussion. I know there will be points brought out that certainly members on this side of the House will want to discuss, and I am quite certain that if hon. members opposite whom I now see thick in their seats, but who took no interest in this debate this afternoon and this evening—

An hon. MEMBER: We are having enough now.

Mr. CLARK: Hon. members are interrupting me now when I am attempting to present the matter in fairness to the minister. All I am asking is fair treatment, for an opportunity to discuss the disposal of the main portion of the canteen fund, involving $2,000,000, and which portion of the resolution has not received five minutes of discussion either to-day or at any time this year.

Mr. MANION: Before the minister replies, may I say further that my hon. friend from Burrard (Mr. Clark) is not the only one

who wishes to discuss this matter? The minister asked the hon. member for Burrard how long he would be likely to take, and the hon. member has indicated how long he would take. I have already suggested to the minister, and I repeat it, that I have no reason for believing that there would be any likelihood of holding this bill up further than possibly another afternoon. That means only three hours, and possibly part of the evening at most, of another day. The discussion that takes place on the resolution will mean that much less discussion on the bill, because we will have come to an agreement, I hope, with the minister. I am not criticizing the minister's attitude this afternoon in any way. He has been quite reasonable in his acceptance of suggestions that have been put forward, and I give him credit for that. There are other questions upon which, if we had more time, he would perhaps come to agree with us. I again suggest to the minister, and I make this suggestion just as much for the purpose of saving time as my hon. friend the minister desires it, that he hold this over for another day and discuss it on one more occasion, whenever he wishes; that is his privilege, of course. The discussion that takes place on the resolution will save time on the bill.

Mr. HUMPHREY: Just before the minister answers, we all know what took place in this House in regard to this legislation on a previous occasion. This House has been accused of not sending legislation forward early enough, and it seems to me that with all the discussion we have had, we really ought to be in a position to get down to some basis of co-operation, and advance some legislation. It would appear to me that there would be ample opportunity for making suggestions or even amendments when the bill comes down and is considered clause by clause in committee. I would be strongly in favour of asking the minister to go on with the resolution.

The CHAIRMAN: Shall I report the resolution?

Mr. MANION: I would like the minister to reply.

Mr. BELAND: May we expect to dispose of this resolution to-morrow?

Mr. MANION: To-morrow is private members' day, is it not?

Mr. LAPOINTE: No.

Mr. MANION: I understood it was.

Mr. STEWART (Argenteuil): We postponed the budget debate till Thursday in order to oblige hon. gentlemen opposite.

Mr. MANION: The hon. minister was not doing more than other governments have done. The request has never been refused. It has always been granted.

Mr. STEWART (Argenteuil): No.

Mr. MANION: The minister was doing the same as previous ministers have done.

Mr. STEWART (Argenteuil): Oh, no.

Mr. MANION: In fact if he had not done it, it would have been an act of discourtesy, because it has never been refused.

Mr. STEWART (Argenteuil): Oh no.

Mr. MANION: I would not like to promise that three hours would complete it. Possibly it would.

Mr. MACDONALD (Pictou): Tommy Church has been obstructing for an hour. Everybody knows that.

Mr. MANION: He has been doing nothing of the sort. The hon. member for North Toronto (Mr. Church) has been expressing his views, as any hon. member has a right to do. He has been making a speech. The last time he spoke he did not occupy more than half an hour. I appeal to the fairness of the minister and the fairness of the government in this matter. If they do not wish to accede to the request, I do not desire to make any threat about it, but we have a lot of material which would take some time if we went on with it.

Some hon. MEMBERS: Go on.

Mr. MANION: Might I ask the Prime Minister or the Minister of Soldiers' Civil Re-establishment, or our noisy friend from Hants (Mr. Martell) who is demanding that we should go on, what is all the rush this session? We are dealing here with a question which is of the utmost importance. I have seen the hon. gentleman who is Prime Minister at the present time, many times when in opposition, hold up the House for hours on one item.

Mr. MACDONALD (Pictou): No.

Mr. MANION: Yes, I think we had to put on closure a number of times. The Minister of Soldiers' Civil Re-establishment states that he has been very generous in his treatment of hon. members. Let me deal with his generosity. We dealt with this resolution the first time it came up for two

hours in the afternoon, then we dealt with it for an hour and a half in the evening, and we have discussed it for about five hours to-day, and this is a resolution dealing with a trust fund of a million dollars. I do not think that is a long time to spend upon such a matter. In fact it is a short time considering the importance of the resolution, and if we are to deal with the question properly we should have plenty of time to discuss it. I appeal to the minister to postpone the discussion.

Mr. BELAND: My hon. friend goes back on his agreement that he would dispose of this resolution at the next sitting or that we should occupy only one more sitting with it. If my hon. friend is not disposed to have this resolution decided by to-morrow night at six o'clock—and that would mean three hours' debate to-morrow—we might go on this evening—

Mr. MANION: I was only saying this because I was not certain. Some of my friends suggest it might be finished by six o'clock. I am willing to agree with the proposition. I will go half-way with the minister ,and agree that it be finished by six o'clock.

Progress reported.

SUPPLY

DEPARTMENT OF MINES

The House in committee of Supply, Mr. Gordon in the Chair.

Mines:

Salaries..	$529,670
Contingencies..	6,700

Hon. CHARLES STEWART (Argenteuil) (Minister of Mines): I may say, for the information of the committee that there is no change in the number of the staff. There is exactly the same staff as last year but we have a slight reduction which comes about by reason of readjustments in the staff, the young men being moved up. We have exactly the same number.

Mr. MEIGHEN: The reduction would be only a small fraction of the extra amount paid out no doubt for the superannuations.

Mr. STEWART (Argenteuil): I cannot give my hon. friend information as to that. I will do so later.

Mr. MEIGHEN: The amount would be very large, I think.

Mr. STEWART (Argenteuil): Not in that branch because we have had very few superannuations.

Mr. MEIGHEN: I am not very sure.

[Mr. Manion.]

Mr. STEWART (Argenteuil): There were very few. There was a considerable number in the Interior department.

Mr. MEIGHEN: Perhaps we can agree on what information we ought to have. The minister would have to get the number of employees who are now retired under the Calder Act and walking the streets of Ottawa.

Mr. STEWART (Argenteuil): If my hon. friend wants the retirements I will have to get them.

Mr. MEIGHEN: How is it the deputy minister does not come in for increase, with all the other deputies?

Mr. STEWART (Argenteuil): It is the intention to provide for an increase for the deputy. There has been an oversight or an error in the printing. It will be rectified when the supplementaries come in. I am going to ask for an addition of $2,000 to Mr. Camsell's salary. It was intended to place it in the original estimates, but through a printer's error the mistake occurred, and I wish to inform the committee that that will appear in the supplementary estimates.

Mr. MEIGHEN: That error wipes out about sixty per cent of the savings.

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: The savings are $3,600 and that increase wipes out $2,000 of the amount. I am not complaining in the case of Mr. Camsell. Is there any other salary raised?

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: I still adhere to my statement that there have been utterly indefensible increases to all the deputies in the last few years, but certainly there should be no discrimination against any of them. We cannot carry this item because we cannot get all the information to-night. I do not know why the minister wishes to go into Mines at this late hour of the night.

Mr. STEWART (Argenteuil): I will be very frank with my hon. friend. I am not in a position to bring every one of these items before the committee to-night. I simply want to get the Mines estimates before the committee, and I have no desire to go into a discussion of them. This item is the same as last year, and I did not conceive there would be any discussion about it.

Mr. MEIGHEN: What are the contingencies used for?

Mr. STEWART (Argenteuil): I do not know that I have the itemized statement, but this money is used for travelling expenses of officers of the department, stationery and other items that one cannot very well define.

Mr. MEIGHEN: There has been a substantial increase in the expenditures of this department of late years. I notice in 1920-21, the vote was $446,000; in 1921-22, $477,000, and it has now got up to $529,000. What extra work is being done?

Mr. STEWART (Argenteuil): We have not increased the field work very materially although it has been extended in some directions. My right hon. friend will recollect that this department was cut pretty fine—at least I found it in that condition—and some very important work has to be performed by the department. I should like to have a good deal more money to carry on this work. The geological survey work is very important in view of the fact that the mining industry of Canada is expanding all the time. Our fuel work has brought very good results. We have spent some $50,000 additional on research work of that character over and above what we were expending in former years, but I think we can show results for that inasmuch as in regard to the production of coke, in a bill which I will introduce later, we shall be able to show that we can cut the cost of domestic fuel in Canada very considerably through the research work that has been carried on. We have built this year an addition to the laboratory in which various testing processes are going on in connection with minerals and fuel.

Mr. MEIGHEN: That is in Ottawa?

Mr. STEWART (Argenteuil): Yes, at the central plant. We have not made extensions anywhere else. That accounts for the expansion of the department to that extent.

Mr. MEIGHEN: Is this a process that has been discovered of producing coke?

Mr. STEWART (Argenteuil): Yes.

Mr. MEIGHEN: From Canadian coal?

Mr. STEWART (Argenteuil): Yes, or from American coal. It is the transformation of bituminous coal into coke for domestic purposes.

Mr. MEIGHEN: What is the principle of the transformation?

Mr. STEWART (Argenteuil): Through the Semet-Solvay by-product ovens. After the experiments were carried on in the laboratory here, a plant was constructed at Hamilton and there is now one at Winnipeg manufacturing this fuel.

Mr. MANION: Is that the Solvay coke that is being put on the market at the present time?

Mr. STEWART (Argenteuil): Yes.

Mr. MEIGHEN: Those plants are government plants?

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: They are using the government discovery?

Mr. STEWART (Argenteuil): Not altogether, because the ovens were patented in the United States. We have carried on many experiments and spent some money in ascertaining where these coking plants could be established satisfactorily and what sized population would consume the by-products from one of those plants. That is very essential in the transformation process, because gas is one of the largest ingredients taken from the coal and it must be consumed on the spot. It cannot be transported.

Mr. MEIGHEN: Is the nature of the investigation to ascertain what population is required in proportion to the production of coke to use the by-products, or is the process itself a discovery of departmental officials?

Mr. STEWART (Argenteuil): It is not a discovery of departmental officials, but a good deal of research work has been carried on here in connection with the work. The Department of Mines of Canada and the Department of Mines of the United States are working very closely together in regard to all processes in which both are interested. To say that Canadian research work discovered this process would be entirely misleading. It is true that we have carried on a good deal of investigational work in connection with peat. My right hon. friend knows when that was started. That is completed and other experiments in research work are being carried on in connection with fuel development generally.

Mr. MEIGHEN: Is anybody producing peat now?

Mr. STEWART (Argenteuil): Not at the moment although we expect the manufacture to go on at Alfred.

Mr. SUTHERLAND: Has the plant referred to by the minister at Hamilton not been in existence for six or seven years?

Mr. STEWART (Argenteuil): No.

Mr. SUTHERLAND: Five years?

Mr. STEWART (Argenteuil): I think they began operations last March, if my memory serves me right.

Mr. SUTHERLAND: They were manufacturing coke in Hamilton at least five years ago.

Mr. STEWART (Argenteuil): That is metallurgical coke. The plant I speak of is an entirely new plant which began operations last March.

Mr. SUTHERLAND: I notice there has been an increase of 37 in the number of employees of this branch since 1921. A considerable amount of the increase under this vote would be for the increased number of employees.

Mr. STEWART (Argenteuil): That is quite true.

Mr. SUTHERLAND: And a considerable number at that time were employed in experiments that were being conducted with regard to the manufacture of peat. That has been discontinued.

Mr. STEWART (Argenteuil): I do not know that that is quite correct. We have been voting year by year certain sums of money for experimental purposes, and outside men have been employed from time to time on that work.

Mr. MEIGHEN: There is nobody at the peat investigation now?

Mr. STEWART (Argenteuil): Not for a year.

Mr. MEIGHEN: That is completed as far as the department is concerned. The government does not purpose re-establishing its experiments at Alfred?

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: Does the government expect private parties to come there and continue production with the machines it has provided?

Mr. STEWART (Argenteuil): Yes.

Mr. MEIGHEN: When?

Mr. STEWART (Argenteuil): The governments of Ontario and the Dominion entered into an arrangement with a company to take over the machinery and begin operations, but they have not succeeded in getting under way. Operations are expected to commence on the first of May I understand.

[Mr. C. A. Stewart.]

Mr. MEIGHEN: What is the nature of the arrangement?

Mr. STEWART (Argenteuil): They were to take over the plant and put in sufficient capital to equip it properly. I think they will operate it by electricity rather than steam, securing power from some nearby development. They are to operate for a period of years, and if they carry out their arrangement the plant is to be turned over to them.

Mr. MEIGHEN: What about the real estate?

Mr. STEWART (Argenteuil): We never owned the land, it was rented.

Mr. MEIGHEN: Has the coal investigation in Saskatchewan ceased?

Mr. STEWART (Argenteuil): Yes, so far as we are concerned that is to say, we are voting no more money for it. At the moment the property is under proposed lease to Mr. Hugh Sutherland.

Mr. MEIGHEN: The old man?

Mr. STEWART (Argenteuil): I do not know the gentleman, but he has the coal mines there in the vicinity. We succeeded in getting coal carbonized for briquetting purposes, but the difficulty was that in the early stages the test that had seemed to prove successful here in a small way did not work out commercially. This board that had the matter under control experienced a great deal of difficulty and spent considerable money. Later on there was tried a carbonization plant invented by the Hood-Odell people, associated with the United States Bureau of Mines, who were successful in experiments with low grade fuel in the Dakotas. We sent some of our raw material to be tested and we sent along our own men. The work was satisfactory, and we established a plant and made a thorough test ourselves. We found that with some improvements put in by our own men char could be successfully turned out and we briquetted that char. Some of the briquettes were distributed throughout the city here to those who were interested, and we concluded that the test had been successful and that the process could be used in a commercial way. As my hon. friend knows, the provincial governments of Manitoba and Saskatchewan as well as the federal government were interested in the plant at Bienfait. Mr. Sutherland pro-

posed to lease that property but I believe that at the moment he is not satisfied with the process we developed; he wants to test a German process which he has always had in mind and which he endeavoured to get the board to adopt. He has sent a quantity of the coal over to Germany to be tested and we are watching the experiment with interest. The plant will continue to operate with our process but if Mr. Sutherland thinks that the other method is preferable he will adopt it.

Mr. MEIGHEN: Is he the possessor of the government plant now?

Mr. STEWART (Argenteuil): He has control of it at the moment, yes.

Mr. JOHNSTON: Did the department carry its investigation far enough to satisfy itself that peat can be manufactured at a marketable price?

Mr. STEWART (Argenteuil): Yes, within a reasonable shipping distance.

Mr. JOHNSTON: To compete with coal?

Mr. STEWART (Argenteuil): Yes.

Mr. SUTHERLAND: In view of the discontinuance of its own experiments, is the government rendering any assistance to those who are still making tests? I have in mind a man in western Ontario who has been engaged in this work for at least fifteen years and at various times he has put a considerable quantity of the product on the market, having spent a lot of money in connection with the manufacturing of peat. This plant is located in the county of Middlesex near London. I wonder whether the government renders any assistance in a case of that kind where private individuals are conducting experiments on their own behalf. The briquettes placed on the market from this source have given very general satisfaction, but it seems a considerable undertaking for a private individual, as in this case, to carry on experiments of that kind over a number of years without receiving some assistance.

Mr. STEWART (Argenteuil): We are always ready to lend any assistance we can. There is an engineer in the city who thinks we are on the wrong track with our process, which is one of sun-drying; he thinks it is possible to squeeze the moisture out of peat by pressure. So far as we are able to discover, in Germany, in Great Britain and elsewhere, that process has never been successful although it would be very desirable if it were practicable. However, we have given him material to go on with in his experiments to see whether he can demonstrate the possibility of separating by pressure the fuel from the water content. I cannot say what success he has had. As to the remarks of my hon. friend (Mr. Sutherland), I have never heard of the gentleman to whom he has referred; at any rate, he has not applied to the department, so far as we know. Ontario is of course one of the acute fuel areas in Canada and there is an immense amount of peat in the province; so that if this peat can be manufactured by a perfected process we are certainly very much interested in the possibility.

Mr. JOHNSTON: Has not the pressure process been attempted in this country? I remember twenty-five years ago inspecting a plant in Toronto where they were attempting to eliminate the moisture by pressure. They spent many thousands of dollars without any result.

Mr. SUTHERLAND: It was a pressure process that was applied in the plant I have referred to. Of course, the peat is dried as much as possible before it is subjected to treatment and I know that the operator had great confidence in being eventually successful. During the past two years I have heard nothing further than that he was carrying on. I visited the plant at one time and was much interested in it; I was particularly impressed with the owner's confidence in his ability to make a success of it. I must say I was somewhat disappointed to learn that the government had almost given up hopes of being successful with the experiments carried on in the vicinity of Ottawa. The fuel question is of great importance to this country and every encouragement should be given in a case such as that to which I have referred, if any encouragement can be given by the government, for it would mean a great deal to the people of that locality.

Mr. STEWART (Argenteuil): Is it partly a pressure process?

Mr. SUTHERLAND: Yes, very largely, and the plant is considerable. The owner is Dr. Williams of London. He at one time resided in a place close by and acquired the property, and he has since spent a large amount of money developing the plant in the township of Dorchester.

Mr. MEIGHEN: Apparently the briquetting money spent did not result in very much.

Mr. STEWART (Argenteuil): At Bienfait?

Mr. MEIGHEN: Yes. As I understand, the process which the government developed did not prove practical when applied to large quantities of peat.

Mr. STEWART (Argenteuil): Oh, yes it is quite practical. There is the question perhaps of expense, but there is no question about the practicability of the process.

Mr. MEIGHEN: It was not commercially practicable. The process finally adopted was that in use in the States. This is not very encouraging for our research work, and it looks as if we would get along better if we just watched what other people were doing. Now the whole thing is taken over by Mr. Hugh Sutherland. If he is the man I take him to be, he is approximately 80 or 82 years of age.

Mr. STEWART (Argenteuil): He is the head of the company.

Mr MEIGHEN: I wish him success. I find in all these departments a list of officials that really makes one quail to read, but the Department of Mines has all the belts and records for strange names. I do not suppose any of us know anything about them, and I should like to have some of the officials produced to see what they look like. For instance, here is an archaeologist, followed by a zoologist (mammalia), an ornithologist, a chief botanist, several ethnologists, an associate invertebrate palæontologist. Then there is a head translator. One is at a loss to know what he can be translating.

Mr. STEWART (Argenteuil): He is translating for our French editions.

Mr. MEIGHEN: I do not know what he needs to be translating into French or English either in the Mines department. Then we have a peat specialist still, although the peat work is done; next we have a chief taxidermist and herpetologist, a cartographer, an artist in vertebrate palæontology and two assistant artists, an assistant ethnologist, two collector preparator specialists, an assistant invertebrate palæontologist, three senior collector preparators, and so on. Who is the real author of these names? I have not mentioned the herbarium assistant. Several officials have left the department I know, but it does really look as though there were a lot of men engaged in doing something which does not seem to me to be connected with mineralogy.

Mr. STEWART (Argenteuil): Quite true; all those strange names come from the museum.

Mr. MEIGHEN: That is where they ought to be.

Item agreed to.

On motion of Mr. Mackenzie King the House adjourned at 11.45 p.m.

Wednesday, March 25, 1925

The House met at three o'clock.

REPORT

Report of the commissioner appointed by the Governor General in Council to investigate under the Combines Investigation Act, 1923 an alleged combine among coal dealers of Winnipeg and other places in western Canada. —Hon. Mr. Murdock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

IMPORTS OF GLASS

*Mr. DESLAURIERS:

1. Has the government any knowledge that the Dominion Glass Company imports from the United States goods under item "unfinished article" when these are finished articles, and, that labels made in the United States are removed from the goods and those made in Canada substituted in its factory at Toronto, and that it distributes to the public said goods as thus received?

2. If so, is the government in a position to prevent this state of affairs which is contrary to the best interests of the Canadian workmen?

Hon. Mr. COPP: The government have not the information to answer No. 1, and the answer will therefore be, No.

CANADIAN NATIONAL RAILWAYS—TONNAGE

Sir HENRY DRAYTON:

1. What are the monthly percentages of tonnage originating in the different provinces on the Canadian National Railways and affiliated companies to the total traffic of the year for each of the years 1923 and 1924?

Hon. Mr. LOW:

CANADIAN NATIONAL RAILWAYS

Per cent of total revenue traffic for year originated in each province each month

REPORTS FROM DR. BIRCHARD

Mr. GOULD:

Referring to question No. 21 on the order paper of the 27th day of February, 1925, partly answered as follows by Minister of Trade and Commerce, "One report of a special nature had been received in 1924, and has not been printed".

1. Why was the special report submitted in 1924, not printed?

2. Are there any other reports from Dr. Birchard available?

3. If so, how many, and on what dates? If not, why?

4. Did the department ask for any report from the grain testing laboratory at Winnipeg or from Dr. Birchard during the years 1921, 1922, 1923 and 1924?

Hon. Mr. LOW:

1. As stated in part 6 of the answer to question No. 21 on the order paper of February 27, 1925, referred to above, the report referred to has not yet been printed, as it was referred to Dr. H. M. Tory, Chairman of the Honorary Advisory Council for Scientific and Industrial Research for consideration as to the value and practicability of the work covered therein. Dr. Tory was in the west at the time and stated he desired to discuss the matter further with the minister when he (Dr. Tory) was next in Ottawa. There the matter rests at the moment.

2. The only reports of Dr. Birchard published were: Report on trial shipments of bulk wheat from Vancouver via the Panama canal to the United Kingdom (1918); and a progress report dated December 31, 1919, covering the work of the Dominion Grain Research Laboratory since its inception in 1918. These were widely distributed at the time, and while there are no copies now available of the first mentioned, there are a few of the second.

As to the availability of other reports, there are on file numerous progress reports furnished the Board of Grain Commissioners by Dr. Birchard, many of which consist of one or more typewritten pages reciting the work done during the current month, and stating that certain experiments were under way or being continued, but at the time no conclusions could be drawn. Many other lengthy analytical and statistical reports were also sent to the board. There are also reports on file regarding tests made on specific samples furnished Dr. Birchard by the Chief Grain Inspector.

3. Answered by No. 2.

4. Dr. Birchard had standing instructions with regard to reports. In April 1914, he was informed by direction of the minister to make a monthly progress report, but no direct requests for reports in the years mentioned were sent to Dr. Birchard from the department, as by the terms of Dr. Birchard's instructions from Sir George Foster, Minister of Trade and Commerce, under date of February 8, 1916, Dr. Birchard was placed under the direction of the Board of Grain Commissioners, with whom he was "to co-operate and report results." Dr. Birchard was further informed that his instructions as to the line of work he was to carry out "would come from the Board of Grain Commissioners."

In 1921, however, the department wrote to Dr. Birchard asking him to revise the proofs of his booklet No. 2, the publication of which had been approved of by the Board of Grain

Commissioners in July 1920. Two thousand copies of this had been ordered printed in August 1920. It was impossible, however, to get the revised proofs back from Dr. Birchard; hence in November 1921, the department was obliged to instruct the Printing Bureau to cancel the requisition and disperse the type.

REPAIRS TO C.G.S. LAURENTIAN

Hon. Mr. BAXTER:

1. Were tenders called for repairs to C.G.S. Laurentian about the month of August, 1924, and, if so, when did such tenders close?
2. What tenders were received, what were the amounts of such tenders and who was the successful tenderer?
3. Within what time was the work required to be completed?
4. When was the work actually completed?

Hon. Mr. CARDIN:

1. Yes, in local St. John newspapers. Closed September 13, 1924 at 12 o'clock noon.

2. Tenders received and amounts of such tenders as follows:—

Woodwork and Caulking.—Chapman & Moore, St. John, N.B., $1,000; Herbert E. Stackhouse, St. John, N.B. $375; Union Foundry and Machine Works, Ltd., St. John, N.B. $350.

Canvas work.—Howard E. Holder, St. John, N.B., $350; George E. Holder, St. John, N.B., $287.

Upholstering work.—Emery's Ltd., St. John, N.B., $74.50.

Iron work.—Wm. Lewis & Son, St. John, N.B., $1,280; Union Foundry and Machine Works, Ltd., St. John, N.B., $1,500; St. John Iron Works, St. John, N.B., $1,800.

Painting.—John E. Courtney, St. John, N.B., $185; John Johnston & Son, St. John, N.B., $225; James Huey, St. John, N.B., $268; Red Cross Memorial Workshop, St. John, N.B., $325.

Machinery repairs.—St. John Iron Works, Ltd., St. John, N.B., $440.

Boiler.—St. John Iron Works, Ltd., St. John, N.B., $179.

Painting, Boiler, Ironwork, Machinery and Woodwork repairs.—St. John Dry Dock and Shipbuilding Co., Ltd., St. John, N.B., $4,600.

The successful tenderers were as follows:—

Machinery repairs.—St. John Iron Works, $440.

Woodwork and Caulking.—Union Foundry and Machine Works, Ltd., $350.

Canvas work.—George E. Holder, $287.

Upholstering work.—Emery's Ltd., $74.50.

Painting.—John E. Courtney, $185.

Boiler repairs.—St. John Iron Works, $179.

[Mr. Low.]

Iron work.—Wm. Lewis & Son's tender,—$1,280 was accepted but they later advised they could not complete work in time specified by the next lowest tenderer the Union Foundry & Machine Works, namely—15 days, therefore the latter tender was accepted their tender price being $1,500. Work completed in 10 days.

3. In calling for tenders there was no specified time required for work to be completed; tenderers were asked to state the number of days they would require to complete the work and the firm agreeing to perform the specific work tendered on in the shortest period was given preference, but not until the lower tenderer was offered the contract to be completed by the time specified by his competitor. The various contracts were to be completed within periods ranging from six to fifteen days depending on the extent of the work undertaken.

4. All contracts completed by November 1, 1924.

BRITISH EMPIRE STEAMSHIP CORPORATION—EMPLOYMENT OF CHINAMEN

Mr. NEILL:

Regarding the 105 Chinamen allowed into Nova Scotia to work on the steamers of the British Empire Steamship Corporation, and for whom a bond of $105,000 was put up by the said corporation, guaranteeing that the Chinamen would ultimately be checked out of Canada, as stated in this House on April 28, 1924.

Have any of these men been checked out, or are they all still employed by the said corporation?

Hon. Mr. ROBB: Ninety-five Chinese, only, have been employed as members of the crews of vessels operated by the British Empire Steel Corporation, Limited, since the deposit of the bond in the sum of $105,000. Of this number, 73 have been passed out of Canada, 5 deserted at Canadian ports, for which the British Empire Steel Corporation, Limited, have been penalized in the sum of $5,000; and 17 remain as members of the crew of the SS. Rosecastle.

VANCOUVER HARBOUR COMMISSION

Mr. BLACK (Yukon):

1. Do the members of the Vancouver Harbour Commission have to devote their entire time to duties of the harbour board?
2. Can the Harbour Comissioners have any interest, directly or indirectly, in any firm or corporation dealing with said harbour board?

Hon. Mr. CARDIN:

1. No.

2. By-law No. 8 of the Vancouver Harbour Commissioners, reads as follows:—

The corporation shall have no dealings of any kind with any of its members; nor shall any member thereof, or any officer or any person employed by, or in the service of the commissioners, be concerned, directly or indirectly, in any contract that may hereafter be entered into appertaining to any work carried on by the commissioners; but all transactions shall be conducted by and through the secretary or other officer specially authorized, subject to the approval of the commissioners.

KEMPT HEAD WHARF

Mr. HANSON:

1. What work was done on the Kempt Head wharf, Victoria county, Nova Scotia, during the calendar year 1924?
2. Was the work done by contract or day labour?
3. If by contract, who was the contractor, what was the contract price, and were tenders called for?
4. If more than one tender was received, what were the names of each tenderer and the amount of each tender?
5. If the work was done by day labour, how many persons were employed, what were their names, what was the rate of wages paid, the number of days each person worked and the number of horses employed?
6. If the work was done by day labour, what amount was paid for the different classes of material, to whom and at what rate?

Hon. Mr. KING (Kootenay):

For calendar year 1924

1. The outer face of wharf reinforced with native close piling driven along the face and fastened to the cribwork.
2. Day labour.
3. Answered by No. 2.
4. Answered by No. 2.
5. (a) 8 persons employed;

(b) J. W. McKenzie, Foreman, 28 days at $3.50 per day, $98.00; J. C. Smith, Labourer, 13 days at $2.50 per day, $32.50; James Fraser, Carpenter, 18 days at $3.00 per day, $54.00; Rod. McKenzie, Labourer, 1 day at $2.50 per day, $2.50; J. P. Morrison, Labourer, 4 days at $2.50 per day, $10.00; W. K. Morrison, Labourer, 6 days at $2.50 per day, $15.00; D. M. McKay, Labourer, 5 days at $2.50 per day, $12.50; Thos. McQueen, Labourer, 3 days at $2.50 per day, $7.50;

(c) Eight horses.

6. D. W. McKay, 243 lineal feet piles 27 x 7 at 10 cents lineal feet, $24.30; John C. Smith, 324 lineal feet piles 27 x 7 at 10 cents lineal feet, $32.40; Wm. Morrison, 324 lineal feet piles 27 x 7 at 10 cents lineal feet, $32.40; J. P. Morrison, 324 lineal feet piles 27 x 7 at 10 cents lineal feet, $32.40; A. K. McKenzie, 500 feet board measure lumber at $26.00 per miles deliverd, $13.00; Rod. McKenzie, 405 lineal feet piles 27 x 7 at 10 cents lineal feet, $40.50;

R. Musgrave & Sons:—

250-⅞ bolts 24″, 1,000 at $5.75 cwt.	$57 50
1 hook for pile driver	3 00
27 lbs. of 3″ rope at 25c. per lb...	6 75
4 lbs. of 1½″ rope at 25 c. per lb...	1 00
1 keg spikes at 6c. per lb...	6 00
1-3/16 auger	1 25
1 auger crank	1 25
2 gallons of paint at $5.50	11 00
1 brush	1 15
1 gallon oil	1 70
Glasses, 2	50
Prepaid freight	46
	$91 56

INCOME TAX FORMS IN FRENCH

Mr. DOUCET:

1. Why does the government refuse to give out forms in French to persons who ask for them at the income tax offices, in Montreal?
2. Is it the intention of the government to take legal action against these persons who do not fill in the English forms because forms in the French language have been denied them?

Hon. Mr. BUREAU:

1. Owing to necessary changes in forms distribution has been delayed but they will be supplied in both languages as formerly at the earliest possible date.

2. New forms will be ready for distribution in ample time to enable tax payers to comply with requirements of the act.

FISHING LICENSES TO FOREIGNERS

Mr McQUARRIE:

1. Has the Japanese government made any representations to the Canadian government in reference to the limitation of fishing licenses to other than white British subjects and Indians?
2. If so, what are the particulars of such representations?
3. What reply, if any, has the Canadian government sent to the Japanese government in connection with the matter referred to in the preceding question?
4. Is it true that the Japanese government has refused to make any modification in the agreement subsisting between Canada and Japan, as to the number of Japanese subjects to be allowed entry to Canada yearly?
5. Has the Japanese government made any proposal to the Canadian government in reference to the matters referred to in the preceding question?
6. If so, what are the particulars thereof?

Mr. CARDIN:

1. No.
2 and 3. Answered by No. 1.

CENTRAL EXPERIMENTAL FARM GREENHOUSE

Mr. SENN:

1. What was the total cost of the new greenhouse erected at the Central Experimental Farm in 1924?

2. What was the amount of the plumbing contract?
3. Did the plumbing prove satisfactory after the architect had accepted it?
4. If not, what was the cost of the necessary changes?

Hon. Mr. KING (Kootenay):

1. $18,032.39.

2, 3, and 4. There was no plumbing contract. Drains were put in by departmental staff at a cost of $152.95 and are in every way satisfactory. In the installation for heating the material was purchased and installation done by departmental staff at a cost of $4,-101.68. When cold weather set in the boiler proved too small as rating was too low for greenhouse work. Vendor took back old boiler at full cost and provided new one at an additional cost of $295; cost of labour installing $187.50.

MARGAREE FISH ASSOCIATION

Mr. HANSON:

1. Has the Department of Fisheries any information as to litigation brought in the courts of Nova Scotia by Mr. John C. LeBlanc and others of East Margaree, Nova Scotia, against the Margaree Fish Association in either the years 1922, 1923 or 1924?
2. If so, what was the nature of such litigation?
3. Was the government or any department thereof a party to such litigation?
4. Did the government or any department thereof, pay any portion of the costs, damages and/or expenses of such litigation?
5. If so, what amount or amounts, and why did the government or a department thereof pay any of said amounts?

Hon. Mr. CARDIN:

1. In 1923 John C. LeBlanc and others of East Margaree, N.S., brought an action in the Supreme court of the Judicature for the province of Nova Scotia as plantiffs against Severin J. Arseneau of Belle Cote, Inverness county, N.S., President of the Margaree River Salmon Fisheries Association, so-called, for the sum of $592.40 on the ground that they were, during the year 1922, members of the Margaree Fisheries Association and were entitled to equal shares with other members of the Association of the sum of $2,250 that it received for salmon supplied.

2. Answered by No. 1.

3. No.

4. No.

5. Answered by No. 4.

MR. ALBERT E. ROBICHAUD

Mr. DOUCET:

1. When was Albert E. Robichaud dismissed as postmaster of Lamèque, Gloucester county, New Brunswick?
2. What were the reasons for such dismissal?
3. Was it for political partisanship? If so, was an investigation held?
4. Who made the complaint to the government?
5. Who held the inquiry?
6. Were the charges proven?

Hon. Mr. MURPHY:

1. January 23, 1924.
2. Active political partisanship.
3. Yes.
4. J. G. Robichaud, M.P.
5. C. T. Richard, barrister, Bathurst, N. B.
6. Yes.

DUTIES ON FLOUR MILL MACHINERY

Mr. DOUCET:

1. Has the Department of Customs and Excise remitted, at any time, any customs duties on flour mill machinery imported from the United States?
2. What is the policy of the department in that respect?

Hon. Mr. CARDIN:

1. There is no record in the department of any remission of customs duties on flour mill machinery imported from the United States.

2. Not a matter of policy as respects the department which is required to administer the tariff as enacted by parliament.

REPAIRS TO WHARF AT MATANE

Mr. JONES:

1. Who was inspector of the repairs to public wharf at Matane, Quebec?
2. Did he have the necessary qualifications?
3. Who recommended his appointment?
4. Is he a son of the sitting member?
5. Is the government aware that serious damages have been done to that wharf?

Hon. Mr. KING (Kootenay):

1. Joseph R. Pelletier.

2. Yes.

3. Appointed by the Civil Service Commission.

4. No information.

5. Yes.

QUESTIONS PASSED AS ORDERS FOR RETURNS

SOLDIER SETTLEMENT

Mr. GOULD:

1. What is the total amount of money disbursed on account of soldier settlement, (a) land settlement; (b) fishermen and others?
2. What was the total cost of soldier settlement each year, to date, including wages, travelling and all other expenses?
3. What has been the total amount each year paid to the board by the soldier settlers?
4. What is the amount of the total yearly payments due by the said settlers?
5. What is the total amount outstanding, including interest, in this connection?

GRAIN TRADE COMMISSIONS

Mr. GOULD:

1. What is the official individual name of each of the last fourteen commissions appointed to look into the grain trade?

2. In what years were the various commissions appointed?

3. What is the cost of each of the said commissions?

UNOPPOSED MOTIONS FOR PAPERS

IMPORTATIONS OF CANNING MACHINERY

Mr. GRIMMER:

For a return for the months of May and June, 1924, showing invoiced value of importations into Canada of canning machinery, suitable for use as equipment in fruit or berry canning factories, which were released by the Customs department without duty being actually paid thereon, together with copies of all correspondence and documents received by the Department of Customs or any member of the government relating to such importations, together with a statement for the first six months of 1924, showing importations into Canada of canning machinery suitable for equipment in fruit or berry canning factories on which duty was paid, showing the amount of duty paid thereon and the invoiced value of such importations.

REPORTS OF WORK ON ELEVATORS AT VANCOUVER, B.C.

Hon. Mr. STEVENS:

For a copy of each and every report made by Inspectors of work at Vancouver, British Columbia, representing the Dominion government, or the Vancouver Harbour Commission, on (a) No. 1 elevator extension; (b) No. 1 elevator jetty and superstructure; (c) No. 2 elevator; (d) No. 3 elevator extension and jetty.

OCEAN SHIPPING RATES

APPOINTMENT OF SPECIAL COMMITTEE

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That a special committee consisting of Messrs. Black (Halifax), Sir Henry Drayton, Duff, Sir Eugene Fiset, Halbert, Johnston, Kennedy (Glengarry), Leader, McKay, McMaster, McMurray, Rinfret, Sinclair (Queens), Stevens and Stork, be appointed to consider the resolution to give the government of Canada control over certain ocean rates by confirming an agreement between His Majesty and Sir William Petersen, K.C.B., as set out in said resolution, with power to call for persons, papers and records and report from time to time.

Mr. GOOD: No notice has been given of this resolution and I think notice is required. I shall have to ask that it stand.

Mr. MACLEAN (York) I had intended to speak to this motion and I have not my memoranda here. If I do not get an opportunity to speak on it now, I shall have to make a statement, perhaps, on the budget. I should like to have an opportunity of speaking on this question.

Mr. MACKENZIE KING: Let it stand as a notice of motion.

Mr. SPEAKER: Stands as a notice of motion under rule 40.

Mr. MACLEAN (York): Will the Prime Minister say when this will be taken up?

Mr. MACKENZIE KING: At the next sitting of the House.

PENSION ACT AMENDMENT

Hon. H. S. BELAND (Minister of Soldiers Civil Re-establishment) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend the Pension Act and the amending acts and to provide,—

(1) For pension to be awarded for total disability at the time of discharge to an ex-member of the forces suffering from venereal disease who saw service in a theatre of actual war;

(2) For extending the period during which the dependents of a man in receipt of a pension—classes 1 to 5—may be pensioned after his death;

(3) For a definite pension irreducible for two years in cases of pulmonary tuberculosis;

(4) For what the final payment shall be in cases of disability between five and fourteen per cent, and what conditions may affect such final payments;

(5) For amending section 27 of the act to make provision for payment not provided for in the existing statute;

(6) For conditions under which pension may be continued to dependent parents;

(7) For the awarding or refusal of a pension to a widow of a pensioner taking into consideration his condition at the time of marriage, and under what conditions pensions may be paid to prospective widowed mothers;

(8) For non-cancellation of pension for immoral conduct until after an opportunity for defence has been given, and for reinstatement of cancelled pensions in certain cases;

(9) For increased pensions to mothers whose husbands are physically helpless or in a dependent condition;

(10) For the amendment of the schedules to the act in such a manner as to make pension equal to the actual rate plus bonus, and to make an equitable division of children's pensions;

(11) For the reappointment of retiring members of the Federal appeal board and the continuation of three as a quorum.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

FRUIT ACT AMENDMENT

Hon. W. R. MOTHERWELL (Minister of Agriculture) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend the Fruit Act, chapter 15 of the statutes of 1923, by providing,—

(a) For the abolition of combination grades of apples, crabapples and pears;

(b) That the minister, with the approval of the Governor in Council, may prescribe additional grades for individual kinds of fruit, and prescribe the kinds

of fruit to which such grades shall apply; and make such regulations as may be necessary to make effective the proposed provisions, from the date of their publication in the Canada Gazette;

(c) That every person who, by himself or through the agency of another person, packs fruit in closed or open packages intended for sale, or who offers for sale or sells fruit, and quotes or represents such fruit to be of any grade specified in section 3 of the act as amended or regulations made thereunder, shall cause to be shown on the package or on an approved label attached thereto, the grade and other marks required under the act, and in the event of such fruit not complying with the grade mark thus designated, such person shall be guilty of an offence under the provisions of the act.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

SOLDIER SETTLEMENT

On the Orders of the Day:

Mr. E. J. GARLAND (Bow River). I am glad to notice that the government has brought down legislation in connection with pensions. When may the House expect legislation regarding the land settlement question—revaluation of soldiers' lands?

Hon. J. A. ROBB (Acting Minister of Finance): I shall look into the question of my hon. friend. As the Prime Minister announced yesterday, we shall be proceeding with the budget from day to day. We hope to have this legislation, if any, down in ample time for consideration of the House.

AUSTRALIAN TRADE TREATY

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Can the Acting Minister of Finance report any progress in the matter of his difficulty with Australia over the Australian treaty?

Hon. J. A. ROBB (Acting Minister of Finance): No. I have no progress to report.

INQUIRIES FOR RETURNS

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): I should like to ask the Secretary of State as to an order for a return that was passed three weeks ago regarding the different royal commissions that were appointed. Some time ago when I asked in regard to two commissions, I got a reply the next day. I hardly see the reason for holding this up. When will the return be laid on the table?

[Mr. Motherwell.]

Hon. A. B. COPP (Secretary of State): I explained a few days ago that another order, covering a larger number of years, was passed several days after the one moved by my hon. friend was passed, and the two returns are being made up at the same time. I hope to have it down in a few days. I will draw the attention of my officials to it and get them to hurry it.

CANADA GRAIN ACT

On the Orders of the Day:

Mr. ROBERT GARDINER (Medicine Hat): Are the amendments to the Canada Grain Act completed? If so, when may we expect them to come before the House?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The Minister of Trade and Commerce (Mr. Low), I think, would like to answer that question. Perhaps my hon. friend would allow it to stand until he is in his seat.

MINERS AND STEEL WORKERS

On the Orders of the Day:

Mr. H. E. SPENCER (Battle River): I should like to read a telegram, a copy of which I have in my hand, and ask the government a question thereon. The telegram reads:

Relief situation Glace Bay to-day as follows: 2,045 families, over 12,000 persons are being supplied with rations. This number increasing daily, estimated $11,000 required for this week. Of this amount only $1,760 on hand, cash for bare foodstuffs our most urgent requirements, outside our province of Nova Scotia aid only from Ottawa except few small individual contributions.

This telegram was sent to Mrs. Freiman, who is convener, I understand, of the relief committee, and it is signed by the Rev. M. A. McAdam, Rev. A. M. McLeod and Mrs. B. Siegel.

Considering the seriousness of the Nova Scotia situation as outlined in the telegram read, I would like to ask the government if they have decided to take any action.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The position of the government is as I have stated it right along. I hope that, as a result of the reading of the telegram which my hon. friend has just given to the House, other communities will do as well as Ottawa has done in this situation.

Mr. W. C. GOOD (Brant): I notice in this morning's paper a copy of an open letter to the Prime Minister from Canon Scott regarding the Nova Scotia situation. Has this been brought to the attention of the Prime Minister, and does he realize how

dangerous the situation is and how far it is possible to escape the conclusion that the Nova Scotia miners have come to regard the Nova Scotia government as being an agent in the hands of the British Empire Steel Corporation?

Mr. MACKENZIE KING: I saw in this morning's paper the article to which my hon. friend refers, but I had not received any letter from Canon Scott at the time that I read it. I, however, thought it was important and I prepared an immediate reply. Just as I was leaving my office at five minutes to three o'clock, I was handed a letter, which I have in my hand at the moment, mailed at Quebec last night at ten p.m. It has Canon Scott's name on the envelope and I see from the contents it is signed by Canon Scott. I have not yet had an opportunity of reading the letter, but I have no doubt it is the same as the communication I read in the press. I will read to the House the reply which I gave to Canon Scott. Perhaps I should read first Canon Scott's letter to me. His letter reads as follows:

St. Matthew's Church
Quebec, March 24.

"Dear Sir:

"In the name of our country I appeal to you as the head of the federal government of Canada to take immediate steps to save the lives and stop the acute suffering of our 60,000 fellow citizens in Cape Breton.

"If there is no law in the constitution of Canada which gives you the right to avert the hideous calamity now very imminent the supreme law of common humanity empowers you to intervene.

"The funds of the relief committee, we are told by responsible people, including that of the Roman Catholic Bishop of Antigonish and the Anglican Archbishop of Halifax, are almost exhausted, and when they are gone, absolute starvation and death must ensue.

"Ultimately the responsibility of the fate of our fellow Canadians rests not upon one province only, but on the whole Dominion. The ancestor whose name you so proudly bear, was once judged a rebel because he stood for the rights of the oppressed in defiance of the law. An oppressed people is crying for a deliverer to-day. Never in the whole course of our history has there been a more wonderful example of patient heroism than is being manifested by the thousands of men, women and little children in Cape Breton at the present time.

"If the agony of human beings does not move your government to immediate action, perhaps the reflection that failure to save the lives of Canadians now will not only shake your government, but, what is worse, it will shake the ordered constitution of our country.

"It is merely playing into the hands of that Bolshevism which we all dread, and which is threatening the governments of the world to-day. This should not be the motive to lead us to play fairly with our fellow Canadians, but it ought to have weight with those whose self-interests shut their ears to the cry of the suffering.

"Yours faithfully,
F. G. SCOTT."

To that communication I have sent the following reply:

Prime Minister's Office
Ottawa, March 25, 1925.

Reverend Canon F. G. Scott, M.A., D.C.L.,
St. Matthew's Church,
Quebec, P.Q.

Reverend Sir,—I have read in this morning's paper an open letter, addressed by you to myself, the original of which has not yet been received. The letter constitutes an appeal on behalf of citizens in Cape Breton in need of relief.

Where in any emergency an appeal has been made by the government of any province of our Dominion on behalf of any of its citizens, the administration of which I have the honour to be the head has never failed to give such appeal careful and immediate consideration and to respond in the manner and to the extent circumstances appeared to warrant. I believe the provincial governments of our country have been equally ready to respond to appeals from municipalities within their jurisdiction where they were of the opinion that circumstances demanded such action in the name of their provinces.

Were it to be recognized that the government of Canada, without request from the government of the province concerned, more especially when its legislature is in session, upon appeal from a citizen of another province, thereby becomes obligated to use federal moneys of which it is the trustee to meet a purely local situation, however serious, I greatly fear the effect would soon be, if I may be permitted to quote the words of your letter, to "shake the ordered constitution of our country."

I share all your admiration for the patience of the men, women and children who have been called upon to endure privation and suffering in the present situation. I believe I am not less anxious than yourself to see existing distress speedily alleviated. I am equally cognizant of the fact that, as you intimate, our government may suffer politically through a misunderstanding of the motives which govern its action, should it hesitate to respond to your appeal. This, however, is not a circumstance which to my mind should influence the government in taking what appears to be the right and proper course in this matter.

The fact that federal moneys might, with the consent of parliament, be used towards relieving existing distress, possibly to the advantage of the government itself, does not free either my colleagues or myself from our responsibility of recommending to parliament a course of action which once adopted would open the door to inroads upon the federal treasury from every quarter of the Dominion, and which in the end might only serve to aggravate the present situation in Cape Breton and lead to similar conditions asserting themselves with increasing frequency wherever and whenever industrial troubles arise.

To avoid the very Bolshevism of which your letter makes mention, I feel that regard must be had by the federal government to what would appear to be the constitutional course of procedure in all matters which may involve rights and responsibilities on the part of municipalities, the governments of the several provinces and the government of the Dominion.

Yours sincerely,
W. L. Mackenzie King.

Mr. WOODSWORTH: Does the Prime Minister contend that there is any constitutional reason that prevents him from offering any aid to the people of Nova Scotia at this time?

Mr. MACKENZIE KING: I do not know that this is the time to discuss that question. I think I have clearly stated the position of the government in the letter I have just read.

ACCESS OF MEMBERS TO CHAMBER

On the Orders of the Day:

Mr. A. W. NEILL (Comox-Alberni): I should like to call your attention, Mr. Speaker, to a rule that prevents access to this chamber by members of the House unless the House is actually sitting. Sightseers, tourists and strangers have access here at any time of the day when the House is not sitting, but if a member wishes to come into the chamber to get something from his desk, or if he wishes to bring some of his friends in to view the chamber, he may not do so.

Some hon. MEMBERS: Why?

Mr. NEILL: I do not think that is reasonable. I am at a loss to know what the idea is.

Mr. SPEAKER: This is not the time to bring up a question of this kind. I understand that there has been some trouble in connection with the main door in front, which is reserved for members of the House, for ministers of the crown, and for deputy ministers and secretaries. I have studied the rules of many of the parliaments in the empire and on the continent of Europe, and there is no legislative body in the world, so far as I know, in which access to the chamber is as easy as it is in the case of the Canadian parliament. I have visited the House of Commons in England myself, and before reaching the gallery I have been obliged to pass through several cordons of policemen and men-at-arms. And the same is true of the continent. The rule governing entry into this chamber has existed since the opening of this building to members of parliament and to the public generally. I may observe that there is a general entrance for the public in the centre, while there are other entrances for the employees of the House of Commons and of the Senate.

Mr. NEILL: You misunderstand me, Mr. Speaker; I was not referring to any time during the actual sitting of the House. What I complain of is that at other times, in the morning for example, members are unable to come into the chamber to have access to their desks.

Mr. SPEAKER: I know of no rule that prevents any hon. member from coming in by the side door.

[Mr. Woodsworth.]

Mr. NEILL: There is only a small door in the rear of your chair, sir, by which we may enter the chamber.

Some hon. MEMBERS: Order.

Mr. NEILL: Am I not in order, Mr. Speaker?

Mr. SPEAKER: The hon. member may conclude his remarks.

Mr. NEILL: What I am pointing out is that members cannot readily get access to their desks except when the House is sitting, and that is unreasonable. I wanted to come in this morning to get something out of my desk and the only means of access was a small door at the rear of your chair. That is not convenient either to members or to their friends, if they happen to have any with them; I do not see why it should be necessary to poke them through a back door.

Some hon. MEMBERS: Order.

Mr. SPEAKER: I am informed that there is access to the House of Commons any day at any hour almost; the two side doors are open.

Mr. NEILL: I beg your pardon, Mr. Speaker, they are not open.

Some hon. MEMBERS: Order.

Mr. SPEAKER: I pass through them myself every morning.

CANTEEN FUNDS

The House resumed, from March 24, consideration in committee of a proposed resolution with regard to the distribution of the canteen funds—Hon. Mr. Beland—Mr. Gordon in the chair.

Mr. CLARK: There are two paragraphs particularly in the resolution which I desire to touch upon. The first is paragraph (2) which provides that the $100,000 shall be paid to a central board of three trustees appointed by the Governor in Council, without remuneration, to be used in such amounts and such manner—

> As it may deem best for the maintenance and assistance of an adjustment service and bureau for the benefit of ex-service men and their dependents.

The CHAIRMAN: Order. May I ask hon. members to desist from conversation? I am not able to hear the hon. member for Burrard (Mr. Clark) although I am within fifteen feet of him.

Mr. CLARK: I can go a long way towards endorsing the principle embodied in that part

of the resolution. There are, however, some minor details to which I take exception, and I hope that the minister will amend the bill to conform with the suggestions I am going to make, which suggestions also conform in the main, I think, with the suggestions already made by various members from both sides of the House, indeed, by the minister himself. In the first place I notice the resolution does not provide that the three trustees shall be returned men. I understand the minister proposes that at least two shall be returned men. My suggestion is that all the trustees should come within this category. The only people interested in the fund are returned men, and therefore it should be handled exclusively by them, and there is no justification for the appointment of anyone other than a returned man as trustee.

Secondly, I suggest that if there is necessity for an adjustment bureau—and I am prepared to go so far as to admit that there is—then the money for its establishment should not be provided out of the canteen funds but out of public funds, and I quote the minister himself in support of my suggestion. Recently he laid on the table a return, No. 126, and on page 10, paragraph 13 of that return, Mr. Scammell, reporting to the minister on the question of the adjustment fund, said:

> On my discussing the matter with you, however, you agreed with me and with the opinion expressed by Sir Arthur Currie after his interview with Mr. Carruthers, referred to in his letter of May 7, to the Prime Minister, that while the continuance of the service given by the headquarters of the Great War Veterans' Association, or the Veterans' Alliance, Ottawa, pending the establishment of an adjustment bureau, might be a proper charge against the disablement fund, it would also be a proper charge against public funds, and that this should, therefore, be handled in the form of a loan, and that you would make provision to reimburse the fund from a parliamentary appropriation. I advanced this money on May 16, 1923. Vote No. 543 was increased by $5,000 in order to provide for reimbursement. I received a cheque for $5,000 on August 25, 1923.

Therefore, Mr. Chairman, the minister has already recognized that the adjustment bureau is a proper charge on public funds. In fact on one occasion he secured a vote from this House for $5,000 towards that very adjustment service that he now proposes to constitute to be financed by the canteen funds.

An hon. MEMBER: How much will it cost?

Mr. CLARK: It is very difficult to give an exact estimate. In order to ascertain how much such service would cost, and to what extent it is necessary, I submit that the bureau must be independent of all soldier organizations and of the government itself. The work of the bureau must be carried on at the discretion of the trustees, and I submit that the minister's suggestion to employ a representative of each of the soldier organizations in the service of the bureau is wrong in principle. By following this course we will get neither economy nor efficiency in the management of the $100,000. I suggest that an independent board of trustees will be best able to investigate and determine the exact number of employees required to provide this adjustment service. The board of trustees would employ men independent of the government and of the soldier organizations. That is why I suggested yesterday that in addition to Sir Arthur Currie a second member of the board of trustees should be selected by the major soldier organizations. For instance, there is in existence now, although it has been challenged by several members, an organization known as the Dominion Veterans' Alliance. Now, if there is a council representing the seven major soldier organizations, the council of the Dominion Veterans' Alliance, it can nominate a second trustee, and those two can choose a third. When the board is constituted it will be in a position to employ a secretary and such other staff as may be necessary to give the adjustment service required. All soldier organizations would be entitled to use that adjustment bureau. I repeat, I think the minister's suggestion that the staff of the bureau be composed of seven employees, one from each of the soldier organizations, is unsound. Furthermore, if such a suggestion be carried into effect, the trustees will have no discretion and no authority in the matter, because everything is provided for by the government before they take office.

Now, the necessity of such a board of trustees being independent both of the government and of the soldier organizations is well illustrated by the order in council which was under discussion some days ago, P.C. 1596. It refers to the disablement fund, and recites that:

> This fund is being used generally for the purpose of small loans to pensioners and others who are in need of immediate assistance and who, in the opinion of the departmental investigations, would benefit by such assistance. The Dominion Veterans' Alliance, which represents the various veterans' organizations throughout Canada, has for a considerable time past maintained a service bureau in Ottawa for the purpose of assisting former members of the forces in the presentation of claims in respect of pension, medical treatment and other matters.

It was intended to utilize the Dominion Veterans' Alliance as the adjustment bureau under the provisions of the bill passed last year, as recited in this order in council. I

presume that the minister has since abandoned any thought of so using the Dominion Veterans' Alliance. Certain complications have arisen since that order in council was passed, which, I presume, will prohibit the utilization of the Dominion Veterans' Alliance or the G.W.V.A. As the minister has stated, the various soldier organizations other than the Great War Veterans' Association have objected to the providing of this adjustment service by any one organization. I think that objection is well founded; and it bears out my argument that the board of trustees should be independent both of the government and of the soldier organizations so that service can be given to all and each organization dealt with fairly and on an equal basis.

I would just like to reiterate the objections I have offered, and to express the wish that some of these suggestions may be embodied in the bill: First, that the $100,000 be provided from the public funds; second, that the three trustees be all returned men; third, that they be appointed independently of the Governor in Council and in the manner suggested by the hon. member for Fort William and Rainy River and others.

Mr. BELAND: I do not quite remember the suggestion that was made with regard to the appointment. Will my hon. friend recite that?

Mr. CLARK: The suggestion was that Sir Arthur Currie be one trustee and that the second trustee be chosen by the major soldier organizations. I suggested the Dominion Veterans' Alliance, if it is still in existence. If the council of that organization can get together and be truly representative of the seven soldier organizations I would be satisfied that a second trustee be selected by them.

Mr. BELAND: Unanimously, or by a majority?

Mr. CLARK: The majority, I should think. I am quite sure the council would soon agree on a man. Then, the two thus appointed could choose a third, and failing agreement, the Governor in Council should be resorted to respecting the third appointee.

There is one other very vital paragraph in this resolution which has not been debated at all, and that is paragraph 5, which provides that the balance of the canteen fund, consisting of about $2,000,000, shall be divided among the various provinces. It says:

> The provincial allotments to be paid to a provincial board of trustees, appointed by the Lieutenant-Governor in Council in each province, without remuneration, empowered to receive and hold the provincial allotment and to ascertain the wishes of those interested and residing in the province concerning the disposition of such allotment and to determine the object to which the allotment should be devoted, and to administer the same for such object or to provide for such administration by others, and to do such other things as may be indicated in the order in council appointing them. The expenses in connection with the trust to be a charge on the allotment.

In the first place I object to these allotments going into the provinces without the purposes for which the moneys are to be used being specifically stated. The Ralston commission investigated this matter and they made certain general recommendations as to the purposes to which the money might well be devoted. This resolution does not suggest that any specific recommendations made by the Ralston commission, or any recommendations at all, for that matter should be adopted. It leaves it to a board of trustees, without remuneration, to ascertain the wishes of the returned men. But what chance would a board have in a large province of ascertaining the wishes of the returned men as a body, when seven years have elasped since the men were last interested in the fund? It would be utterly impossible for the board to find out the wishes of the men at this stage. We have, however, sufficient evidence before us to suggest certain specific purposes to which the board of trustees in the various provinces might devote these moneys, and I will enumerate some of them in a few minutes.

I offer the same objection to the appointment of the provincial boards of trustees by the Lieutenant-Governor in Council in each province that I urged to the appointment of the central board by the federal authorities. It is true that we cannot name one man who will be acceptable to all in each province, but we know that in each province there are soldier organizations, represented by provincial units, and these might get together and agree upon one trustee. There are also in each of these provinces—and this is something which I think has been overlooked—the actual units that formed the Canadian corps in France.

Mr. BELAND: Are they still maintained?

Mr. CLARK: Still maintained, yes. I doubt whether there is any unit of the Canadian corps which served in France that is not in existence to-day in the defence force of Canada. In most instances they are commanded by men who either commanded the units in the field or were high up in those units. In each of those units you will find a large sprinkling of officers, non-commissioned officers and men who actually served in those very units in the Canadian expeditionary force. In addition to that there is in each of these units a reserve battalion in which many men

who served in the corps are enlisted. They do not belong to the active militia, it is true, but they belong to the reserve and they are interested in this fund, although they may not be associated with the various returned soldier organizations. In addition, these units have their clubs and their regimental institutes. For instance, I could not give the exact number of members in my own unit, but I do know that on April 9 of each year between three and four hundred of these men turn out to a dinner. If that is true of all the units throughout the country you will readily see that a very large percentage of the men of the Canadian corps are still identified with the units of that corps.

Now what I suggest in the provincial administration of this fund is that the units which served in the Canadian corps might very well be given the privilege of appointing one of these trustees. There would be no difficulty about getting them to agree on a nominee because the units in British Columbia, for instance, and it is the same in Ontario, are brigaded, and the wishes of each unit could be ascertained by the brigade commander, and passed on to the district commander. The same could be done in Ontario, where I believe the minister provides for the appointment of five trustees. There are, I believe, three military districts in Ontario. I do not know whether it is necessary to limit the number of these trustees to three in each province, or to five in Ontario; it might be well to have more than three. However, I have no serious objection on that score. I appeal to the minister to consider this because I believe it will react for the benefit of all of us who are engaged in public life to-day. It will clear us completely. It works both ways, because there are in the various provinces administrations of both parties in this House, and if we adopt this suggestion it will clear our skirts absolutely of any suggestion that any political influence is being brought to bear in any of these appointments. I think the result would be for the greater good of the returned men as a whole.

I would also suggest that in the bill the minister cite the purposes to which the fund in the various provinces might be devoted.

Mr. BELAND: That was done to a limited extent in the bill of last year, in the last clause, which is reproduced in the bill that is going to follow this year. I do not know whether my hon. friend remembers that clause, but it reads as follows, and I think it carries out to a certain degree the ideas which he is now advancing. It says:

> Without limiting the powers conferred on the lieutenant governors in council the following general principles shall govern any distribution or apportionment of the amounts allotted to the said provincial boards of trustees:—

Then follow the recommendations:

> (a) Any plans formulated should be based on the assumption that there will be prospective beneficiaries for several years to come.

In other words, this recommendation precludes the immediate capital distribution of the fund amongst men. Then follows:

> (b) Any use of the fund for relief purposes should be limited to the class of case for which no relief is then available from governmental sources, and in particular to specially meritorious cases;
>
> (c) If the provision of scholarships in schools and universities is undertaken for specially promising children of ex-members of the forces or of members of the forces who have died, this should not necessarily be confined to the higher grades.

These are the only limitations. There are some limitations placed upon the lieutenant governors in council. I do not know to what extent these recommendations accord with what my hon. friend has in mind, but I just wanted to bring these facts to his attention.

Mr. CLARK: I have what I think is a very strong authority which I think backs up every proposal I have made; I refer to the manner in which the United Services fund in England has been dealt with. True the two countries differ very much in area, but it will be noted that I have supplemented the proposals as to the provinces; in England there are no provinces. I would just like to read a short memorandum which summarizes the manner in which their fund has been dealt with:

> The United Services fund in England was incorporated by Royal Charter. This fund is the accumulated profits from sales in the Expeditionary Forces canteens, plus a proportion of similar profits of the Navy and Army Canteen Board, to which the Army and Royal Air Force are considered to be entitled. Added to this is the balance of the Central Regimental Institutes fund, which in the past has been administered by the War Office, and the balance of regimental funds of demobilized units, the personnel of which decided to transfer such funds to the United Services fund. The total amounts received from the above mentioned sources up to September 30, 1922, is made up as follows:
>
> Canteen profits.. .. .. £7,200,554/15/10
> Demobilized units.. .. .. 42,705/ 7/ 3
>
> Under the charter the governing body is a council of management consisting of a chairman, nominated by His Majesty the King—

Mr. BELAND: Not in council?

Mr. CLARK: No. It is an incorporated body. It is quite different from the present proposal. This is a corporation, and the

4 p.m.

corporation provides for the appointment of a chairman by His Majesty the King. That may be in council; in all probability it is. The first chairman appointed was His Excellency the present Governor General of Canada, who has since been succeeded by Field Marshal Earl Haig. To continue:

Under the charter the governing body is a council of management consisting of a chairman, nominated by His Majesty the King, and twelve members, of whom nine are nominated by the British Legion, and the remaining three by the chairman to represent the ex-service men who do not belong to the British Legion. The present chairman of the council of management is Field Marshal Earl Haig. The first chairman was the present Governor General of Canada.

It will be noted that the British government has nothing whatever to do with the disposal of the fund. The council of management meet periodically and decide all questions of principle that arise, and supervise generally the work that is being done.

Then there is a memorandum as to the Administration committee and the Advisory Finance committee and their special agents:

The money is distributed principally under the following schemes:

And these are the schemes I commend to the minister, and which I suggest might be embodied in his bill:

Sick ex-service men scheme.

Removal grants for ex-service men.

Care of children not provided for by one or other of the fund's schemes.

Clearing homes for children who could not be properly cared for in their own homes owing to the death of one or both of their parents, and for children living in undesirable surroundings.

Parental care in cases where it is deemed undesirable that the children should remain in the care of their parents, relatives or guardians, notably in the case of very young children, and where the financial circumstances of the family make impossible the provision of adequate food and clothing for the children.

Then under the heading of convalescent treatment:

It is frequently the case that the parents of children recovering from illnesses are prevented by their straitened circumstances from arranging for the all-necessary convalescent treatment.

Special medical treatment for those needing special medical or dental treatment.

Surgical tuberculosis which is responsible for terrible deformities in thousands of unfortunate children.

After care—by which it is hoped to afford every child an opportunity of becoming a useful member of the community.

Apprenticeships and special training for children under 16 years of age form part of the scheme.

Then there is a memorandum on an educational scheme. They do not approve of the institution of any special scholarships as it was considered that a sufficient number already existed, or could be created by the Board of Education to cover the cases of the children whose abilities warranted them. I think these are the main purposes to which the British fund is devoted, and purposes to which our fund might well be devoted, certainly in part.

Sir EUGENE FISET: Do the regulations which my hon. friend has just read form part of the trust, or were those regulations made by the trust itself after the trust was formed? I think these are only regulations. These were not embodied in the bill. I think they left it to their own trustees to make their own regulations.

Mr. CLARK: It was not a bill at all in England. It was an incorporation.

Sir EUGENE FISET: Incorporated by parliament, and I doubt very much if, in the letters patent, you would find all the details you have read. I think these details were arranged afterwards by the trustees.

Mr. CLARK: That is quite possible.

Sir EUGENE FISET: That is what the minister proposes to do here.

Mr. CLARK: But we are in a different position from that in which they were in England. They dealt with the matter expeditiously. These trustees in England have been in existence for quite a number of years, and we have the opportunity of profiting by their experience and eliminating such features as did not work, incorporating only the desirable features in our bill.

Sir EUGENE FISET: That is exactly where I think my hon. friend makes a mistake. I think the bill should be as broad as possible, and I think the trustees should be left to make their own regulations.

Mr. CLARK: That may be a matter of opinion, but a difficulty will confront these trustees in the various provinces from the fact that they will not be appointed until nearly seven years after the war is ended. Is that not right?

Sir EUGENE FISET: Quite right, but that does not matter.

Mr. CLARK: We have had two governments in power with an opportunity of studying the situation, and in all these years no scheme has been devised defining any purpose to which this fund might properly be devoted. When two governments have failed to devise a scheme which is approved by all, how can we expect three poor trustees, without any remuneration, probably living hundreds of miles apart, to devise suitable schemes for the administration and disposal of the fund?

Sir EUGENE FISET: But my hon. friend thinks this could be done in the House of Commons?

Mr. CLARK: I do.

Sir EUGENE FISET: I doubt it.

Mr. CLARK: That is what I am suggesting. I am now suggesting a method whereby these trustees might be appointed, and leave this parliament free from all possible suspicion of bringing influence to bear upon them as to the purposes for which they might use the funds. I want it to be broad.

Sir EUGENE FISET: I am afraid your first suggestion with regard to the hundred thousand dollars to be voted by this parliament would defeat entirely the object you have in view. If parliament votes a hundred thousand dollars, those who administer that fund will in the ordinary course be appointed by the Civil Service Commission.

Mr. CLARK: No.

Sir EUGENE FISET: If the money is voted by parliament the staff will have to be appointed by the Civil Service Commission.

Mr. MANION: The Department of Soldiers' Civil Re-establishment was not appointed by that commission.

Sir EUGENE FISET: But this will be a special case.

Mr. CLARK: I am not discussing the hundred thousand dollars at this moment.

Sir EUGENE FISET: But you did.

Mr. CLARK: Yes. My suggestion is that the three independent trustees be empowered by the bill to select and employ independently of parliament or the Civil Service Commission such persons as they see fit.

To come back to paragraph 5, I am suggesting similarly that trustees who are quite independent should be appointed; with general directions as to the purposes to which they may devote this fund. I think the position is so well expressed in a letter I received from a brother soldier that I might read a few words from the letter to show his opinion of it.

Mr. BELAND: A brother general or a brother soldier?

Mr. CLARK: A brother soldier; it could be both. He says:

> If, after six years this is the best suggestion the government can make for the disposal of the canteen funds, bearing in mind the expert staff which it has had at its disposal, what could you and two other trustees do to make a plan to dispose of the money that would be handed over to you with no expert staff at your disposal and with no remuneration for the time you would have to spend. Furthermore, if you were a trustee you would have out of work returned men sitting on your doorstep every night. You would be accused of favouritism, lack of sympathy, embezzlement and God knows what before you finish.

There are other very appropriate remarks in that letter, but I feel quite convinced that that will be the situation if we simply pass the fund to trustees in the various provinces and ask them to devise a scheme, when we have men here who have studied the problem and can give them broad suggestions which could be contained in the bill, some of which they might follow and some of which they might reject. We can make the suggestions broad enough so as to avoid the possibility of manipulation of this fund, because certainly from the time the trustees are appointed they will be the target of manipulators. Let us safeguard the trustees and safeguard the fund in the interests of returned men. That is my sole object and I ask the minister to take it under consideration. He can rest assured that he will have the hearty co-operation not only of myself but of all other returned members who are interested in the fund.

Mr. BELAND: Would the hon. member kindly elaborate the method he has suggested for the appointment of the trustees in the different provinces? Do I understand him to contend that the Lieutenant Governor in Council in each province should not be the party to make the appointment in the first instance? If that is so, if the Lieutenant Governor in Council should not make the appointment, who should make the appointment of the trustees? Also in the third place, amongst what classes should the trustees be selected in order to carry out the object which he has in view?

Mr. CLARK: From what classes?

Mr. BELAND: From what classes, whether of soldiers or civilians or organized bodies of some kind; in other words from where should the trustees be brought that would constitute the board which would come up to the expectations of my hon. friend?

Mr. CLARK: From what class? I say unhesitatingly, only one class—the returned soldiers. I feel quite sure that I could name three trustees who would be acceptable to the returned soldiers generally in British Columbia, and I could draw them all from my hon. friend's party or from my own, for that matter. That is not the point. The recommendations should come from the returned soldiers' institutions. The units of the Cana-

dian corps now in existence in each province might well select one of the trustees. The various soldiers' organizations in each province might well select one of the trustees. That would be two, and the third might be selected by these two, or, failing that, by the Lieutenant Governor in Council. Another scheme might be that the Lieutenant Governor in Council might name the chairman, and the chairman accept the recommendation of the various returned soldiers' organizations for one trustee and the recommendation of the units of the Canadian corps in the province for the other trustee. For instance, if by any possible chance—and I do not think there will be such a chance—the units of the Canadian corps could not agree on one man and there were two men equally well thought of by those units, then if those two recommendations were handed in to the chairman, I would be quite satisfied that he should choose one trustee from these two or from a number of recommendations. The matter would be very simple. In England that policy was followed out. Only one of twelve was named by the government. My memorandum says "By His Majesty the King," which I presume, as the minister suggests, means His Majesty the King in Council. If one is named by the Lieutenant Governor in Council, it will be quite satisfactory, as is done in England, to have the others named by the soldier's organizations or by the units of the Canadian corps in each province. That was done in England to the extent of twelve trustees.

Mr. BELAND: I do not know whether I have exactly understood my hon. friend. If I have grasped the meaning of his remarks with reference to the appointment of provincial boards, they would tend to convey the following idea. Let us take Ontario as an illustration. The Lieutenant Governor of Ontario in Council would ask the different units in Ontario to nominate a candidate, then the different soldiers' organizations to name another candidate, and then the Lieutenant Governor in Council would appoint these two men and the chairman. Since we deal with Ontario as an illustration, we must not lose sight of the fact that in that province it was intended to have five trustees, on account of the size of the province,—the large number of returned men who have enlisted from or been discharged in that province, and the large number of pensioners there. Would my hon. friend be agreeable to something along this line—that the different militia units still in existence in Ontario would nominate two candidates, the returned soldiers' organizations nominate two, and the Lieutenant Governor in Council appoint a chairman, a man naturally of outstanding reputation. Would that meet my hon. friend's views. As regards the other provinces, the suggestion is that the same method should be resorted to, that the units still in existence would recommend one candidate, the soldiers' organizations another and the Lieutenant Governor in Council appoint the chairman. This I think, is quite acceptable. I do not say at the present time that I accept the suggestion, but it is certainly worthy of consideration.

Mr. MacLAREN: May I offer the suggestion that all the trustees should be returned men?

Mr. BELAND: I would not say that. I did not say that.

Mr. MacLAREN: I am aware that the minister did not, but I want to be sure whether that is in his mind. I would suggest to the earnest consideration of the minister that all these trustees be returned men. There is a sufficiently large field to choose from and it seems a natural course to place this in the hands of returned men. There seems to be no cause for going outside of them, and I think it would be a source of satisfaction to the returned men to have the appointments made in this way.

Mr. BELAND: On general grounds I have no objection to the suggestion as it is made, but the recommendation was that the majority of each board should be made up of returned men. I have in mind, for instance, the case of the appointment of the royal commission. It was left open to the Governor in Council to appoint two returned men only and one civilian, but three returned men were appointed. I would submit the fact that an outstanding citizen, who would otherwise appear acceptable to the community at large as being eminently qualified for the position, should not be debarred because he did not happen to serve in the army, probably on account of his being disqualified by his age. A man of sixty or sixty-five occupying an exalted position amongst his co-citizens might be desirable as a member of that board. For instance, let us suppose the man who would be at the head of the patriotic fund—I do not know who he is, even by name—should be a man of sixty-five, eminently qualified for such a position. The fact that he did not serve in the army should not debar him from any appointment of this kind since he has served in a humanitarian capacity for a number of years. Although on general principle I agree that all trustees should be selected from amongst the men

themselves, I do not think that the selection should be confined entirely to the body of returned soldiers. So long as we adopt the principle that the majority of each board shall consist of returned men I think we should leave some room for selecting suitable outsiders.

Mr. MacLAREN: There is no difficulty about finding suitable men among the returned soldiers themselves; capable men I have no doubt could be found both within and without the soldier body. But as the fund is the property of the returned men it seems to me only proper and rational to hand over the administration of it to those who are directly and more particularly concerned. Undoubtedly all of us desire to do our utmost to satisfy the returned soldiers, and my interpretation of their feelings is that they wish to have the opportunity of administering their own funds rather than having someone assist them, however well qualified that assistant might be. Men can be found, I say, within the ranks of those who have been overseas who would be perfectly capable of handling the fund.

Mr. BELAND: The trustees will have to serve without remuneration under this legislation, and that provision in itself might be an obstacle in the way of some returned men who might on all other grounds be excellent members of the board. Some returned men might not be favoured with worldly things, and although they might be thoroughly qualified for the position they might find it impossible to serve without remuneration, losing probably a few days in the month. That is what I have in mind at the moment. My suggestion is that we do not bind the hands either of the federal government or of the provinces in the selection of the trustees. If it were found that some man might make an acceptable trustee, perfectly satisfactory to the returned men themselves, it would be unfortunate if some provision in the statute precluded his appointment. Since this resolution has been before the House one man has been suggested to me as acceptable to the returned men; I do not propose to give his name, but I have every reason to believe that he would be satisfactory. I do not think he would serve on the central board of trustees, although he might be asked to serve in Toronto; but I am quite sure that he would be an ideal man, quite acceptable to all ex-service men. If we provide in the statute that no man shall be appointed who has not been overseas we are going to tie the hands of those who may make the appointments, and in that way it seems to me we shall seriously handicap them. Generally speaking, the principle suggested by my hon. friend (Mr. MacLaren) is a good one, and one to which I subscribe myself. I should be sorry, however, to see the law so framed as to make it impossible for some outstanding man, who might do splendid service on the board, to be appointed merely because through age or ill health he had been unable to join the forces. That is the point I have in mind.

Mr. ARTHURS: I can see no reason why the amount allotted to each province should be hedged around with conditions of any kind. The minister knows as well as I do that we have had the fund under our care for a number of years and we have had representations from all quarters as to its disposal. A committee on soldiers' civil re-establishment has dealt with it more or less exhaustively for years and no decision has been arrived at; and it is now apparent that we are deciding to pass our responsibility over to the provinces. I can see no reason at all why this should be done. The minister mentioned the province of Ontario by way of illustration and I may refer to the same province also. I have no reason to suppose that the members of the Ontario government, present or future, would have the soldiers' interests less at heart than the members of this parliament or of the present government, and I do not see, therefore, why, if we are to divide the fund in the manner suggested, we should not hand it over to the men in every way untrammelled. As a matter of fact, when the minister brings down his bill I would suggest that it be entitled, "a bill for the purpose of passing the buck". We are simply trying to shirk our responsibility and to pass it on to someone else, hedged around with all sorts of difficulties, and I can see no possible reason for that.

Mr. BELAND: I am afraid that if the government decided to administer the fund the hon. member himself would object; he would want to know why we did not leave it to the provinces.

Mr. ARTHURS: There is absolutely no danger of hon. gentlemen taking that course; the government of which the minister is a member are so used to passing the buck that it is nothing new. I want to say a few words now regarding the $100,000. Let me point out that this canteen fund belongs to the rank and file of the Canadian army. I was not here yesterday while this question was being discussed, but as I said a few days ago, this

money belongs to the men entirely and I can see no possible reason why $100,000 or any sum at all should be taken from the fund for the purpose of creating a third or a fourth bureau at Ottawa. We must remember in the first place that the country undertook to place our returned wounded men in the same position relatively that they would have occupied had they not been wounded. And our pension officers are for that purpose. It is quite true that our pension board has been more or less a sell, and probably there is a good deal of reason in some cases; but to get over that difficulty we appointed another bureau, the Federal appeal board. And both of these institutions have been maintained at the public expense. Now it is necessary to have a third body to see that justice is done the returned men. Well, why not pay that body too? Why should this amount be abstracted from the canteen fund of the soldier himself? In the course of this debate I fancy most of us have wandered somewhat from the subject. This canteen fund does not belong to the disabled man alone but equally to the man who returned A-1. Everyone on returning from overseas was supposed to be placed in the same position, as regards earning power, as he held before the war. I am absolutely opposed therefore to the abstraction of this amount from the fund, and this is the view taken by the majority of the returned men. It is also the view taken by Sir Arthur Currie as quoted yesterday, although I have not the extract before me. He distinctly stated that the amount necessary for this adjustment bureau should be taken from the public fund.

Mr. HUMPHREY: Mr. Chairman, in my opinion no condition should be laid down by this House in regard to the appointment of trustees. I would leave it in such a way that any representations would be considered by the Lieutenant-Governor in Council. As to the suggestion by the hon. member for Burrard (Mr. Clark) that military units now in existence should have representation, I am not in agreement with him. There may be military units in Vancouver, but to-day throughout the interior of British Columbia there are practically none, and I am convinced that to lay down the condition that such military units should have representation would create dissatisfaction. I am sure every one in this House, and more especially the Minister of Soldiers' Civil Re-establishment, wishes to evolve a measure that will prove as near satisfactory to the returned men and to the country as is possible, but I do not think we are likely to reach this desirable result if we attempt to lay down conditions regarding the appointment of trustees. Certainly I cannot subscribe to such a course and I cannot agree that military units now in existence should be given representation.

Mr. CLARK: Would the hon. member deny to five hundred members of a military unit, all of whom served in France, any voice in the disposal of this fund? Furthermore, will he say there are no military units in existence in the upper country of British Columbia?

Mr. HUMPHREY: I would not debar the five hundred men identified with a military unit from any voice in the disposal of this fund, I would allow their representations to be considered to the fullest possible extent. But I contend that the representation of military units now in existence is a minor consideration, for these men are sure to be connected in some way with the different soldiers' organizations, through whom they can express their views.

Mr. CLARK: I would wager that not one in fifty of the five hundred men I have referred to belong to any soldier organization. How many paid-up subscriptions does the hon. member think all the soldier organizations have to-day?

Mr. HUMPHREY: I should not like to get into any controversy over soldier organizations.

Mr. CLARK: You are suggesting that they ought to belong to the soldier organizations if they are to have a voice in the disposal of these funds.

Mr. HUMPHREY: No. I want to see them have representation, but I think the administration of this money should not have any military aspect whatever. I believe I am safe in saying that a very high percentage of the returned men want to keep the fund free from military interference. The hon. member for Burrard would apparently bring the administration back to a war status. Replying to his second question, there are very few military units throughout the interior of British Columbia. So far as my knowledge goes, there is only a small nucleus of a military formation at Kamloops.

Mr. CLARK: How about the B.C. Horse?

Mr. HUMPHREY: Where throughout the interior does it exist?

Mr. CLARK: I am asking my hon. friend the question. It is in his neighbourhood.

Mr. HUMPHREY: West Kootenay is not anywhere near my neighbourhood. At one time there was a formation of the B.C. Horse, but we have no military units of that nature now. The consensus of opinion is that the time is not opportune for a military unit. But that is getting away from the question before the committee. I do not want to be identified with the laying down of certain conditions regarding the appointment of these trustees and the administration of the fund. I have the fullest trust that any outstanding man, whether he is connected with a military unit, a soldier organization or any other concern, will give his best efforts to the administration of this fund in the interests of the returned men and the country. I believe if we keep away from the laying down of the conditions to which I have referred it will be better not only for the returned men but for the country.

Mr. MANION: I do not wish to delay the resolution, but I desire to make a few points and to emphasize those I made yesterday, because we intend to keep faith with the minister that the resolution shall be permitted to go through before six o'clock. I think before the minister brings in the bill based on the resolution he should bear in mind the suggestions made from different parts of the House. I cannot agree with the hon. gentleman who has just sat down (Mr. Humphrey). He appears to think that we should not be discussing this resolution at all. But surely the time to discuss a resolution or a bill is before it is passed.

Mr. HUMPHREY: I do not wish to be misunderstood by my hon. friend. I did not imply that we should not discuss the resolution at all, I merely said that we should not lay down conditions respecting the appointment of the trustees and the administration of the fund.

Mr. MANION: It is better to lay down conditions before the resolution passes than to complain about them afterwards. My hon. friend said that the minister especially is anxious to get this matter arranged properly for the benefit of the returned men; but while giving him credit for this, I think we may take it for granted that we are all anxious to bring about a result wholly satisfactory to those concerned. There are two or three points I wish to make in regard to the $100,000 from the canteen fund. I dealt with this phase of the subject yesterday and was supported by the hon. member for Burrard, the member for Parry Sound and some others. The view we take is that this $100,000 should not be taken from the canteen fund and that the expenses of the adjustment bureau should be provided for by an estimate passed in this House, the appropriation to be handled entirely by the central board of trustees, independently of any department of the government. I am on solid ground in taking that attitude. It is the view not only of practically all members who have spoken, but also of Sir Arthur Currie, as the hon. member for Parry Sound pointed out a few moments ago. The hon. member did not have Sir Arthur Currie's comments on the subject before him, but I have them here and I would like to quote from some statements Sir Arthur Currie has made in this connection. I do this because if the minister agrees with what we are proposing I would like to see him arrange his bill so that we can avoid amendments afterwards. Sir Arthur Currie, writing to the Prime Minister in May, 1923, speaking of an adjustment bureau, says:

> I am firmly convinced that such an organization is desirable and necessary and Mr. MacNeil informs me that the Hon. Dr. Béland and yourself hold similar views. I believe myself that such a service is a proper charge upon government funds and its maintenance could be justified to the members of the House.

Then in another letter under date of May 19, a few days later, addressed to the Minister of Soldiers' Civil Re-establishment, he says:

> Such action I hold to have been illegal—

That is, the use of money from the canteen fund or the disablement fund for other purposes.

> The canteen funds are funds in which all the soldiers have an interest and they are trust funds and neither the government nor any department of the government has any mandate to expropriate one cent of those funds.

In another letter dated November 27th, 1924, he says to the minister:

> I am more than ever convinced that this service must be kept going and I take it the government has admitted the principle by its appointment of a soldiers' adviser in the large centres of population in the Dominion. There can be no question in the minds of all right thinking people that the adjustment service as carried on by the headquarters of the G.W.V.A. is urgently necessary and must not be allowed to lapse. You know that my opinion is that the cost of this service should be borne by the government.

Mr. BELAND: Would my hon. friend read further on?

Mr. MANION: I just quoted the words applicable to my remarks. That is the reason I stopped.

Mr. BELAND: I think he says something about taking such an adjustment bureau away from the control of the government.

Mr. MANION: Of course; he has said that a number of times. I think we all agree, the minister himself included, that that should be done. I continue the reading of the paragraph:

I believe that you are willing to bear this cost but that you cannot agree with the G.W.V.A. as to the organization which should be provided for that service.

No, he does not refer to it in that letter, but he may in some other letters. I quoted an opinion of his yesterday that the bureau should be independent of any branch of the government. I quote further from the same letter:

You know my views regarding the use of any part of the canteen fund or the disablement fund for this purpose.

That is, the purpose of an adjustment bureau.

I regard both funds as trust funds and I think that any disposal which has already been made, while perhaps justifiable, was not in accordance with the spirit of a trust.

I think these are sufficient quotations to show the attitude Sir Arthur Currie takes in the matter. Now, here is the statement of a prominent war veterans' organization as sent to a member of this House—to the leader of the opposition, as a matter of fact—from Toronto on March 6th, nineteen days ago. Mr. J. H. Davidson, President of the Riverdale Command, Great War Veterans' Association of Canada, says:

SIR,—The Command of the G.W.V.A. of which I have the honour to be the president most strenuously oppose the payment out of the canteen funds of any moneys to any association, the Great War Veterans' Association included. We maintain, sir, that no association of ex-service men no matter how strong in membership it may be has no right to receive from the canteen funds any moneys whatsoever.

He really contradicts himself there, but it is simply an inadvertence in the wording. A little further on he says—

Mr. BELAND: May I ask who writes that?

Mr. MANION: I gave the name a moment ago—J. H. Davidson, President of the Riverdale Command, Great War Veterans' Association. I am just giving it as an outside opinion.

Mr. BELAND: That association has already received funds from the canteen fund?

Mr. MANION: It is possible; I cannot help that. I am simply quoting his opinion.

Mr. BELAND: Does this gentleman say that should not be done?

Mr. MANION: Yes, he apparently opposes it very strenuously.

[Mr. Béland.]

Mr. BELAND: He was assuredly, then, not a member of the Great War Veterans' Association when that association received large amounts of money from the canteen funds, appropriated by a former government.

Mr. MANION: Well, he is opposing it, anyway. Apparently he opposes any moves that were made to convey moneys of the canteen fund to the Great War Veterans' Association or any other organization. He says:

We maintain, sir, that no association of ex-service men, no matter how strong in membership it may be, has the right to receive from the canteen funds any moneys whatsoever.

Then, a little further down:

If the bill, when introduced, or rather when it is voted upon next time, makes no reference to the payment of any moneys to the Veterans' Alliance or to any other service organization, but that it simply allocates the balance of the canteen funds now in the hands of the Receiver-General to the different provinces in the proportion as suggested last year, that is so much to each of the different provinces and the sums to the Red Cross of U.S.A. and Great Britain, this will be in line with our views. We feel that if at this time it is necessary for moneys to be available for the veterans to have a service bureau to assist them to prosecute their claims for pensions, adjustments, etc., it is the duty of the government of the day to set aside by parliamentary procedure the necessary moneys, and not that the returned men shall be called upon to furnish them from out of the small amount they were fortunate enought to accumulate whilst overseas by their purchase (out of their pay) in different canteens.

This gentleman represents a prominent organization of war veterans, and that is his opinion. So I think the minister should seriously consider the introduction into the bill of a clause which would permit the adjustment bureau to be handled not out of the canteen funds but out of the moneys of the people of Canada and by trustees independent of any branch of the government or of the opposition. That is the first point. Then, in regard to the trustees, this point has been dealt with also; I dealt with it yesterday myself and others have referred to it. I hope the minister will live up to what I think he agreed to yesterday in regard to arranging the appointment of the central trustees—and if he can carry it to the extent of arranging similarly the appointment of the provincial trustees I will follow him—namely, that no strings should be attached to them, politically or otherwise. In other words, if possible one trustee should be selected by this parliament and one by the different returned soldiers' organizations combined, and then let these two choose a third.

Mr. BELAND: My hon. friend would not allow the Governor in Council to appoint one?

Mr. MANION: If these two could not agree, I would say the Governor in Council should appoint a third member. But I do not see why the government should be particularly anxious to appoint one. It is not government money.

Mr. BELAND: If the government is to be distrusted as much as that, I wonder why the fund was placed in its hands.

Mr. MANION: There was nowhere else to place it, as far as I know.

Mr. BELAND: It could be put in a thousand other places. It could be deposited with a bank or trust company, for instance.

Mr. MANION: As a matter of fact somebody suggests that it was another government in whose hands the money was placed. However, I was not going to refer to that.

Mr. BELAND: And they dealt with the funds very poorly.

Mr. MANION: I do not agree with the minister; and I am willing to debate that point with him if he wants to take the time to do it. I think we dealt with them very honestly and fairly. Whatever distributions were made were in proportion to the numbers in the different organizations. As far as distrust is concerned, I think the minister is simply importing that into the discussion. It is not a case of distrust, it is simply a case of endeavouring to get these trustees appointed in such a way that they will be outside of politics altogether. This money does not belong to the government or to parliament; it belongs to the returned men entirely, and I think the returned men should handle it. It should not be handled in any way by this government or any other—I happen to speak of this government because this is the government which is arranging to distribute the funds. I am not making this suggestion because of any distrust, but because I think the trustees should be absolutely above anything in the shape of political influence. I have no doubt the minister could mention many names to the House that would absolutely satisfy me. I am not suggesting that the trustees should be Conservatives or anything of that sort. I have heard a number of names mentioned already, among them the name of Sir Arthur Currie, who I believe is a Liberal. Another very prominent man in this city I heard mentioned yesterday. He is an outstanding Liberal, and his brother is an exceptionally outstanding Liberal, and if this man was appointed he would certainly be satisfactory to me. So I am not thinking of the political side of it at all. My only desire is that so far as possible the trustees shall be appointed in such a way that they will be outside of politics altogether. If this money belonged to the Department of Soldiers' Civil Re-establishment that would be a different proposition. Then the government themselves should appoint the trustees. But this is money that belongs to the returned men, and I do not see any reason why the government should wish to appoint the trustees; I think they should welcome the opportunity to get rid of all responsibility in the matter.

In regard to the trustees, I rather lean to the idea of their being returned men, not because I have not the same respect as the minister has for many men who did not go overseas, particularly those who were too old to go. I know very many men who did not join the forces, and who never did anything directly in a military way, yet who are perhaps equally deserving with the men who went overseas. I would be the last to suggest any distrust of anybody who did not go overseas simply on that account. At the same time, I believe you would get more satisfaction among the returned men if this fund were handled by the returned men entirely; that is the only reason I have for making this suggestion. Otherwise, I should not care to put up a fight on the matter at all. I think the government would be wise, when they bring in the bill, to provide for returned men entirely handling the funds, especially in view of the fact that we have four or five hundred thousand returned men in the country; and though, of course, there are many able men outside the ranks of those who went overseas, certainly among four or five hundred thousand men you could get just as outstanding men as you would find outside. I think it is only a fair proposition, therefore, that this money, which belongs entirely to the men who served overseas, should be handled entirely by the returned men themselves.

There is one other point, and that is in regard to the passing of the resolution. There are some others who wish to speak, I presume, but I wish to point out this: Last evening we had a little bit of discussion about carrying this resolution over until this afternoon, and my good friend the Minister of Justice (Mr. Lapointe) argued that the principle of the resolution did not deal with the details. Perhaps he was right. At the same time, if by passing the resolution we are agreeing to the principle that there is to be a distribution

of the canteen funds, though I may be quite agreeable to that, I do not wish it to be understood that we will not move amendments if the government does not introduce some that have been suggested; for example, along the line of the allotment of the $100,000. I want it to be understood that when the resolution is presented, we are at liberty to move any amendments we think desirable to be made in the bill. I presume that is understood by the minister.

There is one other point, and that is the point made by my hon. friend from Burrard (Mr. Clark) regarding the putting of limitations on the trustees. I notice that clause 10 of the bill of last year, Bill No. 253, as passed by the House of Commons on the 16th of July, of last year, provides:

5 p.m.

(a) Any plans formulated should be based on the assumption that there will be prospective beneficiaries for several years to come;

(b) Any use of the fund for relief purposes should be limited to the class of case for which no relief is then available from governmental sources, and in particular to specially meritorious cases;

(c) If the provision of scholarships in schools and universities is undertaken for specially promising children of ex-members of the forces or of members of the forces who have died, this should not necessarily be confined to the higher grades.

Of course, I know these subclauses are put in partly conditional upon their adoption. At the same time, the fact remains that in last year's bill the government did introduce some limitations as to the manner in which these funds should be used by the different provinces, and if there are some good suggestions for us in the uses to which the funds in Great Britain have been put, which were cited by my hon. friend from Burrard—and I think some of the suggestions were good—there is no reason in the world why one or two subclauses might not be added to the bill of last year. I have not seen the bill of this year, and I do not know whether it contains these subclauses.

Mr. BELAND: Yes.

Mr. MANION: There is no reason, to my mind, why the minister could not add another subclause, or more, exactly on the same lines as this, to provide that the funds shall be used entirely for the benefit of the returned men and their dependents in the different provinces.

Sir EUGENE FISET: Suppose those restricting clauses are embodied in the bill who is going to prepare the further regulations that will be needed both for the provincial boards and the central board? Will the central board prepare them?

[Mr. Manion.]

Mr. MANION: They were incorporated in the bill of last year. Perhaps the minister could answer that.

Sir EUGENE FISET: What were incorporated in the bill of last year were the restrictions my hon. friend has mentioned. They were not what I might call absolute regulations to guide the provincial boards as well as the central board. The central board, in my opinion, should be the body that will provide the further regulations that will be needed either for the central board itself or for the provincial boards.

May I go a little bit further and suggest that the main body to be organized under this resolution is the central board. And the very fact that my hon. friend has mentioned Sir Arthur Currie's name as chairman of this board, is proof that this board is considered the most important board that will be appointed under this resolution. So why not leave to the central board the work of ascertaining from the different associations of returned men in the different provinces what men they would choose to sit on this board of appeal for each province? That is the proper body, in my opinion, to consult with the associations in the different provinces, and after consulting with them they could recommend to the Lieutenant Governor in Council of each province the names of those who should be appointed to form these boards. I think that meets the opinion of everybody, and I think also it is a concrete and practical proposal.

Mr. MANION: I would agree with that.

Mr. CHURCH: This discussion has gone on now for some four or five sittings—

Mr. BELAND: Will my hon. friend allow me first to reply? I understand he is entering upon another subject.

My hon. friend from Fort William and Rainy River (Mr. Manion) has referred to the limitations in clause 10 which were incorporated in the bill of last year. I will deal with that in a moment. But before we go any further, I would like to explain to the committee that the central board, though it is so named, will have nothing to do at all with the provincial allotments.

Sir EUGENE FISET: I did not mean that, but in the bill you can give power to the central board to prepare the way before the other bodies are appointed.

Mr. BELAND: My hon. friend from Rimouski (Sir Eugene Fiset) has suggested that the central board should be given certain

powers which it has not under the resolution or under the bill that is to come. However, that is worthy of consideration. I understand that at present, and as the matter stood last year, the function of the central board was to maintain to the best of its knowledge adjustment services out of an amount which was turned over to it by the Receiver-General, and in the premises the amount is $100,000. It is obvious to hon. members that some of the provincial boards will have very heavy functions to perform, inasmuch as amounts as large as $800,000 will be turned over to one province, and in some other instances two or three hundred thousands will be allotted to the provincial board. Their functions will be very important, as a matter of fact much more important than the functions of the central board, whose functions are limited to organizing here in Ottawa an adjustment bureau in the way they deem to be best in the interest of the returned men—fixing the number of people who should constitute it, and providing for the proper remuneration of the parties so engaged.

Let us deal with this central board in the first place. How should it be appointed? We all agree that it should be appointed in such a manner as to render it absolutely beyond governmental or ministerial influence. It has been my intention from the first to appoint a board that would be so outstanding in reputation that not one member of this House, and not one single man, could take exception to it. My idea was to ask Sir Arthur Currie to be the head of the board. I have reason to believe that he will accept, not that I have consulted him to-day or yesterday, but on account of his willingness to accept such position some ten or twelve months ago. Another idea of mine was that the president of the Canadian Red Cross, whoever he may be, should be ex-officio a member of that board; and that a third man should be nominated by the returned men's organizations. These three men would be absolutely beyond governmental influence. I think this suggestion of mine would be acceptable to everybody. But I do not think you can take from the Governor in Council the appointment of the board of trustees. It is the duty of the Governor in Council to make that appointment, and I think it is the duty, of course, of the House of Commons to vest the power in the Governor in Council.

Mr. MANION: We understand; the appointment is certainly in the hands of the Governor in Council, but we were speaking of the choice.

Mr. BELAND: If the bill should provide that the president of the Red Cross or the president of the Canadian Patriotic fund should be one of the trustees ex-officio, that one nominee from the returned soldiers' organization would be the second nominee, and that the third would be appointed by the Governor in Council, and if I say, as a minister, that it is my intention to request Sir Arthur Currie to act in that capacity, I believe that this clause at least, inasmuch as it refers to the appointment of the board of trustees, will be surrounded with all possible security. I have noticed all through this debate that my hon. friends on the other side were somewhat nervous over the appointment of the central board of trustees. If they feel that I have in my mind some evil design to appoint three staunch Liberals who would do exactly as I told them, I must remove that impression. I hope such an impression has not penetrated the mind of any hon. gentleman opposite. That never entered my head. I had no intention of appointing a board of that character. I deprecate the idea that such a board should be under the control of the government for the very reason that has been many times invoked during the debate, namely, that this money belongs to the returned men, and no government should try to interfere with the proper disposal of it. It has been suggested that this adjustment bureau should be supported by public funds. This is an idea that may be shared by a great many. Parliament has not been stingy in providing assistance to such services through Canada. Hon. gentlemen will remember that at the time of the appointment of the Federal appeal board, it was provided, I think in the Department of Soldiers' Civil Re-establishment Act amendment, that soldier advisers should be appointed all over the country.

Mr. ROSS (Kingston): As the minister appears to be so very generous as to throw away all the appointments, I ask him, will he be as generous as he was in regard to the appointments on the Federal appeal board?

Mr. BELAND: I think they were very fine appointments indeed, men of outstanding ability and reputation. I have not heard a single complaint as to the character or ability of any of these men.

Mr. ROSS (Kingston): How many Conservatives were appointed?

Mr. BELAND: I think, two.

Mr. ROSS (Kingston): Could the hon. minister name them?

Mr. BELAND: I am not going to name them in the House. I will name them after the House rises, if my hon. friend wants the names. They were at one time strong Conservatives, but perhaps they have gone back on my hon. friend because he has not lived up to their expectations. Speaking of soldiers' advisers, we have appointed, I think, thirteen or fourteen all over Canada, and in no instance have we appointed a man of our choice. We have asked the Dominion Veterans' Alliance to indicate to us in every unit a soldier who would be acceptable to them. They have submitted these names and all have been appointed. Lately, not more than two or three weeks ago, I again requested the Dominion Veterans' Alliance to submit the name of a man in New Brunswick because the soldiers' adviser had resigned, and a name was suggested to us and an appointment made. Everybody knows these men have not been selected for their political inclinations. There may be some Liberals among them; I would think the majority would be Liberals, because the majority of the people in the country is made up of Liberals.

Mr. MANION: Not now. That was three years ago.

Mr. BELAND: We will have to wait till a general election to find out about that. I know of some who are staunch Conservatives who are discharging their duties in a very creditable manner. In this case all the soldiers' advisers are paid from public funds. An appropriation is voted every year for the purpose and they are paid by the Department of Soldiers' Civil Re-establishment in every case. This is going a good way towards discharging this public function to which the hon. member for Fort William and Rainy River has alluded. What I want to impress upon the House is that, after consultation with the returned men throughout Canada, the royal commission has recommended this arrangement. It passed last year and since then I have not heard anybody criticize it, outside of this House at all events. For some months after that session was over, I did not receive from any organization throughout Canada any representation as to what should have been done instead of what had been done. In the present instance it is clear that the organizations are supporting the legislation. The only protest is against the allotment of any part of that $100,000 to one particular organization. They deprecate the idea that one special organization should be selected above the rest to be their representative here at headquarters. It is not for me to say whether they are right in their contention or not. But we say to the organizations, there is no intention—and I say that deliberately in spite of what you may read in the order in council—of having this money applied only to one soldiers' organization, but on the contrary it would be the intention of the government to say in the order in council appointing the trustees that they should make it a point to have an adjustment bureau that will be acceptable to every soldier in the country. That will not mean the application of the money to one particular organization. With a few exceptions, I believe this is acceptable generally to the soldiers in Canada.

Mr. MANION: The quotations I gave were not against the money being used by one organization, but against the money being taken from the canteen fund for any purpose.

Mr. BELAND: For the Dominion Veterans' Alliance.

Mr. MANION: For any purpose. The quotation I gave from Sir Arthur Currie was that the canteen fund should be left as the canteen fund. Perhaps one of the quotations was against one particular organization getting the money. I certainly did not offer, and I did not hear any other hon. member offer any criticism of the present adjustment bureau or the Great War Veterans' Association in any way. The only attitude I took was that this should be administered fairly and squarely.

Mr. BELAND: Be that as it may, the recommendation of the commission was to the effect that $100,000 should be allotted to a certain board of trustees for the purpose of maintaining a service bureau here at headquarters. How did the royal commission come to this view, I wonder? I have asked myself that question more than once. I have not questioned them in this connection, but I presume they have reached the conclusion because in every unit of the Department of Soldiers' Civil Re-establishment, the department is supporting one soldiers' adviser and is providing also some clerical assistance for him. I presume that the royal commission has said: The duty of maintaining a certain service throughout Canada, a service that would be ear-marked as it were for returned men, has been attended to by the government in the creation and in the remuneration of soldiers' advisers boards. It was undoubtedly pointed out to the commissioners that the soldiers were contributing throughout the country for the maintenance of a certain adjustment bureau at headquarters. It was

their money which was used largely for the maintenance of that bureau. Since the money of the returned men is being contributed to maintain an adjustment bureau at Ottawa, is it entirely beyond the mark to suppose that the commissioners have thought that a part of the canteen funds should be used for the purpose, because it would relieve at least the organizations and the members of the organizations from contributing for that service. I believe that is the main reason that has prompted the royal commission in making the recommendation which they have made. This is no bill of mine. I may have drafted it, but it is framed upon the recommendations of the royal commission. I imagine—and I am in the judgment of hon. members—that if on one particular occasion I had come before a committee of Supply with a proposal to appropriate $100,000 of the public money to maintain an adjustment bureau at Ottawa, the hon. member for Fort William and Rainy River or the hon. member for Burrard could have risen and said: This is another government agency; this money, whatever you do, will be paid out by the government and it will serve party purposes.

Mr. MANION: That would be correct if it were not handled by such a board of trustees as we propose.

Mr. BELAND: It would be said, as it has been pointed out and hinted on many occasions since the commencement of this debate, that in some way or another it will be possible to keep a string on that money because it is public money. Of course everybody is entitled to his opinion in this regard, but I hope the resolution as it is will pass, and that the bill, with certain amendments which will make the appointment of the board more secure from political influences, will be brought down and accepted by the House.

The hon. member for Fort William and Rainy River has referred to clause 10 in the bill of last year. My hon. friend was out of the House for a few moments when his colleague the hon. member for Burrard was discussing some phases of the resolution, particularly the appointment of provincial boards of trustees, and also the distribution amongst the provinces of certain amounts and the uses to be made of those sums. When my hon. friend was out of the House I quoted clause 10 of the bill of last year, which clause will also be incorporated in the bill of this year and which imposes upon provincial boards certain limitations. What are they? I have read them and the hon. member for Fort William and Rainy River has read them. Why are they to be incorporated in the bill of this year? Because the royal commission has pointed out that these limitations should be incorporated in the bill.

Mr. MANION: I understood that and I meant to mention it.

Mr. BELAND: What did the royal commission say in this connection? They said in the first place that the fund should not be spent immediately but that its use should be providently spread over a number of years. And what did the bill of last year contain? It contained a clause to the effect that, without limiting the powers conferred upon the lieutenant governors in council:

—the following general principles shall govern any distribution or apportionment of amounts allotted to such provincial boards and trustees:

(a) Any plans formulated should be based on the assumption that there will be prospective beneficiaries for several years to come.

The royal commission further recommended, in this connection, assistance to specially meritorious cases where ex-members of the forces and their dependents are in genuine distress; and there will be found in the bill a clause bearing upon this very subject. In the third place we have a recommendation that scholarships in schools not necessarily to be confined to the higher grades and universities, be provided for specially promising children of ex-service men. Again there is in the bill, in section (10), this limitation:

If the provision of scholarships in schools and universities is undertaken for specially promising children of ex-members of the forces and of members of the forces who have died, this should not necessarily be confined to the higher grades.

This is no impediment to the proper carrying out of a sound policy for the administration of the canteen fund in the various provinces; it will not prevent the provincial boards from doing everything possible in the interests of the returned men generally. But it does impose upon them certain limitations in the interests of the men themselves. Of course, it will be for every provincial board to elaborate its own policy with regard to the expenditure of the money that is given it by the Receiver General. It will not be for me to say, "You shall do this or that;" as a matter of fact the boards shall be appointed by order in council passed by the Lieutenant Governor in Council in each province. I do not know of any measure presented to this parliament in the last quarter of a century that has been surrounded with so many provisions to preclude, beyond any possibility of doubt, any influence on the part of the gov-

ernment in the administration of the particular law concerned. There has not been a measure surrounded with so many securities against governmental influence as there are in this legislation to prevent the government from influencing in any way the distribution of the money.

Mr. ARTHURS: The minister has referred to the provisions of last year's bill, and I notice that the word "shall" is used. That is certainly prohibitory so far as any other use of the money is concerned. Was there no difference of opinion among the witnesses before the Ralston commission as to the disposition of the fund?

Mr. BELAND: There is no question that a number of schemes were submitted to the commission. My hon. friend is quite right, for as many as twenty-seven different schemes for the use of the fund were considered.

Mr. ARTHURS: Does the minister condemn all the others except these three?

Mr. BELAND: No. But these are not schemes in themselves; they are only limitations. They simply say: Do not use the money all at once but spread it over a number of years. Of course, there may be ten or twenty different plans, but these are general limitations recommended by the commission, and they are wise limitations, I submit.

Mr. ARTHURS: Would it not be better to leave it to the discretion of the various provincial governments instead of laying down this provision?

Mr. BELAND: The Lieutenant Governor in every province will appoint the board of trustees and the province will draft its own order in council; I am not going to draft it. But as minister I want to relieve my colleagues and myself of the responsibility which was placed on our shoulders by the royal commission in the recommendation of these limitations. In section (10) of the bill we provide that the Lieutenant Governor in Council and the provincial government shall direct themselves according to the provisions of the act, and if they fail to do that they will be to blame; I shall not be responsible. That is the only explanation I can give.

Mr. ARTHURS: I still object to the word "shall" in regard to these provisions. The minister says that he is relieving himself of the responsibility imposed upon him by the commission in these particulars. Would that not be equally true of all the recommendations of the commission?—and if so why did he not have them before the House long before now?

[Mr. Béland.]

Mr. BELAND: My hon. friend cannot accuse me of having hidden anything in connection with this bill, which is exactly the same as the bill that was before the House last year. The hon. gentleman read last year's bill more than once and he knows it by heart. Section (10) declares that without limiting the powers conferred on the lieutenant governors in council certain general principles shall govern any distribution or apportionment of the amounts allotted to the provincial boards. The word used is "shall." Why not? We could not say "may" govern. It seems to me that these particular limitations recommended by the commission are such as to appeal to every member of the House, and I am sure my hon. friend is ready to subscribe to them. They are of a general nature and are most commendable. They say that any plans formulated should be based on the assumption that there will be prospective beneficiaries for years to come. That is to say, it suggests that the plans be so formulated as to ensure that benefits will be derived from the fund for a considerable time. In the second place, it is recommended that any use of the money for relief purposes should be limited to the class of cases for which no relief is at the time available from government sources, and particularly to specially meritorious cases. Surely I need not dwell on the wisdom of that; in a word, that provision is that we do not help those who are already helped and that we confine ourselves largely to the most meritorious cases. And the third recommendation is that if provision in regard to scholarships in schools and universities is undertaken for specially promising children of ex-members of the forces or of members of the forces who have died, this should not necessarily be confined to the higher grades. Could anything be more democratic than that? It provides that we shall have regard for the children not only of officers but of the private man himself. This is a wise limitation and it is democratic in the extreme; it recommends that the son of the ordinary soldier shall be dealt with in the same way as the son of the officer high in rank. These limitations were accepted last year and I am sure they will be accepted again.

Now, we have discussed this resolution extensively and there are some amendments which I intend to submit when the bill is before the House in committee of the Whole in connection with the appointment of the central board and probably as well of the provincial boards, largely in line with the suggestions that have been offered. Also I

intend to introduce an amendment to deal with the Yukon's share. I do not know whether it will satisfy my hon. friend (Mr. Black) entirely, but I can assure him that if it errs in any way it will be on the side of generosity for the Yukon.

Mr. MacLEAN (Prince): Mr. Chairman, I notice that Prince Edward Island and Nova Scotia are also grouped together. We take objection to that, and we sincerely trust that the minister will treat Prince Edward Island separately, so we will have the benefit of our own share of the funds.

Mr. BELAND: I shall be glad to submit an amendment making the allotment separate for Prince Edward Island as a province.

Mr. CHURCH: The minister has wrestled all day with this resolution and I do not intend to delay its passage. The only point before the committee is how the canteen fund is to be divided, by whom and when. There is room for a great deal of difference of opinion on this, and the more I hear the minister (Mr. Beland) speak on the resolution the more doubtful I am whether he is taking the right course. The city of Toronto is interested in this fund, having some 45,000 returned soldiers within her boundaries. We know it is the desire of the minister to help the returned men. He is a returned man himself, and he never looks to this part of the chamber without getting sympathy and help. My objection is to the administration of the fund. I would like to see him take example by the patriotic fund of $44,000,000, which was administered by outstanding business men at a minimum of cost and with a maximum of efficiency. There was never a single complaint about the administration of that fund. Here we have two and a half million dollars, and I fear that a large part of the fund will be spent in administration costs and the men will get only a small balance for their benefit. To-day, seven years after the war, we have the most cumbersome and complex system for the relief of our soldiers. What they want is direct relief. And goodness knows many of our returned men who are suffering to-day would find this fund a godsend and a blessing if it were administered by outstanding business men instead of being frittered away by a bureau here in Ottawa. I fail to see such a bureau can help a soldier in Toronto, Hamilton, Brantford or any other city. This bureau is simply a lot of red tape. I think it would be better if the minister administered the fund in his own department, or by three outstanding business men. I know one such man in Toronto, Mr. W. D. Ross, and there would be no difficulty in getting others to cooperate with him without expense to the country or to the soldiers. Then those for whom the money is intended would get every cent of it. We in this quarter of the House have every sympathy with the minister, notwithstanding the very unfair remarks of the hon. Minister of National Defence (Mr. Macdonald). He was not in the House last night and did not hear the reasons why I spoke. I did not occupy the attention of hon. members for more than ten minutes, and yet I heard him say, "Tommy Church has been obstructing for an hour. Everybody knows that that is not correct. I repeat, the minister should either deal with the fund through his own department or as the patriotic fund was administered, by a board of two or three prominent business men.

Mr. LADNER: I should like to say a few words on this question, having a large number, relatively speaking, of returned soldiers and their dependents in my constituency. One aspect of the question I do not think has been touched upon—the nature and need of the work of the adjustment bureau. I am in accord with the principle of the resolution, it being based upon the Ralston report. Since 1917, when the soldier organizations first became active on behalf of the returned men, it has been evident to anyone associated with those organizations that they were serving a good purpose. Taking the Great War Veterans' Association as an example, I am informed on good authority that they have dealt with more than 80,000 individual claims during the past six years, of which 32,000 were successful. The men have confidence in their own organization, which explained to the claimants the nature of their cases and the legal difficulties confronting them, and as a rule the claimants were satisfied. It has been suggested that perhaps the D.S.C.R. could carry on some of this work, but being a department under the goverment and having the taint of officialdom, it does not satisfy all the returned men The cases I have referred to cover a very wide range. They include matters connected with parliamentary legislation, cabinet action; departmental regulations; Employment Service Council; pensions; medical treatment; medical treatment—pay and allowances; dental treatment; military pay; working pay; separation allowance; burial expenses; badges and decorations; estates; exchange; transportation expenses; repatriation; whereabouts; war service gratuity; discharge cer-

tificates; medals; pleas for clemency—judicial; civil service appointments; divorce; educational exemptions; housing loans; soldier settlement; Dominion lands; insurance; mother's allowance; naturalization; patriotic fund; relief; general employment; vocational training; vocational loans; miscellaneous; appeals.

Now, the cost of maintenance of the legislative and adjustment service during this period amounted to $450,000.

Mr. ARTHURS: What is the hon. member quoting from?

Mr. LADNER: From a memorandum handed me by the secretary of the organization I am discussing. The amount expended, I am told, was $450,000, of which eighty per cent was borne by the Great War Veterans' Association from its internal revenue. Staffs are maintained in seven provinces. There are in this particular organization some 800 branches. I am told that about forty new claims per day are coming in and that over 8,000 files are in process of adjustment. I mention these facts in order to lay the groundwork for my contention that an independent adjustment bureau detached from the government does serve a good purpose and should be maintained in the future.

The resolution provides for the placing of $100,000, allotted from the canteen fund for the maintenance of an adjustment bureau, under the control of three trustees. As I understand it—at any rate, I hope the bill provides for this—the trustees may make the arrangements for the organization to be used in connection with the adjustment bureau. No doubt all the soldier organizations will be consulted so far as the formation of the bureau and the spending of the money is concerned and that the advice of the different organizations capable of assisting in the perfecting of such an adjustment bureau will be secured. I do not advocate, and I do not think anyone would, that the money should be applied to or given to any one particular organization. But it should be independent of the government, detached from any element of bureaucracy or officialdom and under the control of the trustees who themselves would appoint capable men selected perhaps from different organizations on account of their skill to carry out the work.

A reference to the Ralston report will show that a ballot taken with regard to the disposition of the fund disclosed such a variety of opinion that it was impossible to come to any conclusion upon it. The largest vote was in favour of the establishment of memorial workshops for the provision of sheltered employment and home employment for disabled ex-service men including the tuberculous. The number of votes for that scheme was 5,764. The votes for two other schemes, denominated in the report as schemes B and C, were 2,874 and 2,298 respectively, and there was a similar number of votes for scheme D. The parliamentary committee of 1922, in making their report regarding the disposition of the canteen funds, recommended a board which would consider the advisability of employing the canteen funds: (a) for the promotion of sheltered workshops, and (b) for providing further education facilities for children of ex-members of the forces who would otherwise be unable to enjoy the same. When the Ralston commission went to the different cities they found that various organizations had different ideas as to how the matter should be dealt with. The report states:

> To determine from the foregoing the common desire of the ex-service men concerning the ultimate use of the money is impossible, but the two clear-cut suggestions were, education of children whose fathers served in the war, and relief of distress among ex-service men and dependents.

I now come to a question that I do not think has been raised in this debate, and that is the question of pensions for old soldiers. We know there are many meritorious cases of men who served overseas and whose health has been shattered but who have not been able to claim pension on account of the peculiar operation of the rule of attributability, and who may find themselves destitute and dependent upon charity unless some provision is made for them. I would like to see some direction given to the provincial trustees which will bind them to certain definite purposes in the use of this fund. I would like to see something in the bill which would oblige the trustees to give primary regard to the two purposes which the commission found there was common agreement on, namely, the education of children whose fathers served in the war, and the relief of distress among ex-service men and dependents. I would also like to see a provision which would enable relief to be given to men of shattered health who require assistance in the evening of their life. It will be noted that the resolution is wanting in that respect. According to the resolution the trustees are empowered to receive and hold this allotment and to ascertain the wishes of those interested and residing in the province. Now, the royal commission sat in each province, at considerable expense to the public treasury, and they did ascertain to a large ex-

tent the views of representative organizations and interested parties in the provinces. I therefore hope that the minister will make provision in his bill for a recognition of those purposes in respect to which a definite conclusion has been arrived at. With regard to the appropriation of $100,000 out of the canteen fund, I do not entirely share the views expressed by some hon. members in this part of the House. The fund is primarily for the purposes of returned men and their dependents, and these purposes having been served to a large extent in the past, by the adjustment bureau of the Great War Veterans' Association, a portion of the money for the purpose coming out of these funds, I do not see why in the future also the canteen funds should not take care of an adjustment bureau under the trustees. The public have expended large sums of money in the establishment of the department, in the establishment of federal appeal boards, soldier advocates, and in a number of other ways, and I think the fairest and the most considerate way would be to appropriate $100,000 out of the canteen funds, because that apparently has already met with the agreement and consent of large sections at least of the soldier body and of the public, as well as being the judgment of the royal commission which investigated this matter.

Resolution reported, read the second time and concurred in. Mr. Beland thereupon moved for leave to introduce Bill No. 32 respecting the distribution of the Canteen Funds.

Motion agreed to and bill read the first time.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, March 26, 1925

The House met at three o'clock.

PRIVATE BILLS

FIRST READINGS

Bill No. 33, respecting the Restigouche Log Driving and Boom Company.—Mr. Michaud.

Bill No. 34, to incorporate the British Consolidated General Insurance Corporation. —Mr. Irvine.

Bill No. 35, respecting the Mutual Life Assurance Company of Canada.—Mr. Mewburn.

Bill No. 36, to incorporate Guaranty Trust Company of Canada.—Mr. Chevrier.

PATENT ACT AMENDMENT

Mr. ANDREW McMASTER (Brome) moved for leave to introduce Bill No. 37, to amend the Patent Act.

He said: The present Patent Act provides that if a person has invented any new or useful improvement or process, he may obtain a patent upon it; but as the law presently exists, that patent may be defeated and the real inventor deprived of the reward of his inventive faculty, if someone else has used this apparatus or process in any other part of the world. Thus a man might have an improvement, entirely unknown in Canada, for something in connection with an automobile, but someone in the south of Italy, altogether unknown to him, may have invented the same improvement. The object of this bill is to give a patent to anyone who is the first inventor in Canada. I am informed that this bill will place our patent law on the same basis as the patent laws of the United Kingdom and the patent laws of the United States. Our law, as it at present stands, is harder on the inventor than the patent law of either of those two countries.

The other part of the bill provides for the correction of what is not exactly a clerical error, but an error of inadvertence, in the drafting of the Patent Act some two years ago. The draftsman forgot that there had been carved out of what used to be known as the Northwest Territories two very important provinces named Saskatchewan and Alberta. The act provides that what was called the Supreme court of the Northwest Territories should have jurisdiction over patents until that court disappeared and supreme courts of the provinces carved out of this part of the Dominion took its place. When that patent law was passed Alberta and Saskatchewan had been in existence for a number of years. This part of the bill corrects what I might call an historical inexactitude.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

COMMITTEE ON AGRICULTURAL CONDITIONS

Mr. SUTHERLAND:

1. What is the total cost to Canada in connection with the special committee appointed by parliament February 28, 1923, to enquire into agricultural conditions?

2. What amount was paid to witnesses who appeared before the committee, for fees and travelling expenses?

3. What was the cost of printing reports of proceedings before the committee?

4. What was the cost of fees and travelling expenses for witnesses in connection with the inquiry into Atlantic ocean rates?

Hon Mr. COPP:

1. $21,402.53.

2. $2,674.15.

3. Cost of printing proceedings before the committee.. .. $ 7,019.29
Cost of printing report (English and French) of the committee.. .. .. 11,709.09

Total.. .. .. $18,728.38

4. Many witnesses gave evidence on various subjects under investigation. No separate accounts were kept for any subject.

MR. W. T. R. PRESTON

Hon. Mr. MANION:

What is the total amount of money paid by the government of Canada since January 1, 1922, to W. T. R. Preston for any services whatsoever?

Hon. Mr. COPP:

Department of Labour—

Date	Services
1922, April 21 to June 17. Chairman of board of conciliation in dispute of Algoma Eastern Railway and its employees..	$320
July 21 to September 15. Chairman of board of conciliation in dispute of Pere Marquette Railway Company and its shop employees..	425
August 10 to September 14. Chairman of board of conciliation in dispute of Pere Marquette Railway Company and its steamship clerks, freight handlers, etc.	235
	$980

Department of Trade and Commerce—
Inquiry re lake grain rates.. .. .. $ 3,270
Inquiry re ocean freight rates.. .. 1,305

$ 4,575

SOLDIERS' ADVISERS

Mr. BLACK (Yukon):

1. What are the names and addresses of each of the soldiers' advisers appointed by the Dominion government under the Department of Soldiers' Civil Re-establishment Act?

2. What amount has been paid each of the said advisers: (a) as salary; (b) as travelling and other expenses?

Hon. Mr. BELAND:

1 and 2.

Name and adress	Date of app't.	Authorized annual rates: (a) for part time services; (b) for steno. assistance	Paid as salary from date of appointment to 31/1/25	Other payments to 31/1/25 (a) for steno. assistance (b) for travelling and other expenses
H. D. Johnson, M.D., Charlottetown.. ..	3/10/23	(a) $1,200	$1,593 55	(a) 300 00

ROSS' FERRY WHARF

Mr. HANSON:

1. What work was done on Ross' Ferry wharf, Victoria county, Nova Scotia, during the calendar year 1924?
2. Was the work done by contract or day labour?
3. If by contract, who was the contractor, what was the contract price, and were tenders called for?
4. If more than one tender was received, what were the names of each tenderer and the amount of each tender?
5. If the work was done by day labour, how many persons were employed, what were their names, what was the rate of wage paid, the number of days each person worked, and the number of horses employed?
6. If the work was done by day labour, what amount was paid for the different classes of material, to whom and at what price?

Hon. Mr. KING (Kootenay):

For calendar year 1924.

1. Trestle approach to wharf reconstructed.
2. Day labour.
3. Answered by No. 2.
4. Answered by No. 2.
5. (a) 16 persons employed; (b) R. R. McKenzie, foreman, 19 days, $3.50 per day, $66.50; Dan Campbell, labourer, 3 days, $2.50 per day, $7.50; Donald McDonald, labourer, 3 1-2 days, $2.50 per day, $8.75; John Howatson, carpenter, 9 days, $2.75 per day, $24.75; Rod Morrison, labourer, 3 days, $2.50 per day, $7:50; Angus Morrison, carpenter, 8 days, $3.00 per day, $24.00; J. P. Morrison, carpenter, 5 days, $3.00 per day, $15.00; A. B. McDonald, labourer, 12 days, $2.50 per day, $30.00; Murdock M. McKenzie, labourer, 2 1-2 days, $2.50 per day, $6.25; D. H. Corbitt, labourer, 2 days, $2.50, per day, $5.00; John M. McKenzie, labourer, 3 days, $2.50 per day, $7.50; Murdock D. McDonald, carpenter, 1 day, $3.00 per day, $3.00; R. R. McDonald, labourer, 2 days, $2.50 per day, $5.00; Dan. McDonald, labourer, 1 day, $2.50 per day, $2.50; Dan Campbell, self and team 4 days at $6 and 1 day at $4, $28.00; Murdock McAskill, self and team 2 1-2 days at $4 per day, $10.00.

(c) 4 horses employed.

6. Dan Campbell.—36 round spruce logs, 612 lin. ft. at 10 cents 1 ft., $61.20; R. R. McDonald.—10 rounds spruce logs, 210 lin. ft. at 10 cents 1 ft., $21.00; Murdock McKenzie.—5 round spruce logs, 65 lin. ft. at 10 cents 1 ft., $6.50; 8 sticks 8x10 spruce 12 ft. long, $19.20; total, $25.70; Frank A. Bill & Sons.—1 peavey, $2.95; 2 kegs 8-inch spikes at $4.80, $9.60; 1 gallon white paint, $4.75; 450 pounds 18x3-4 drift bolts, headed and pointed 6c, $27; 1 brush, 95 cents, total, $45.25; J. P Morrison.—4 spruce stringers 8x10, 21 ft long, 560 feet. B. M. at $30, total, $16.80; A. K. McKenzie.—2,250 ft. B.M. 3 inch plank at $26 per M., $58.50; 630 ft. B.M. 2x4 at $26 per M., $16.38; total, $74.88.

DARTMOUTH PIER

Mr. BLACK (Halifax):

1. What was the size of the lot of land acquired at Dartmouth, Nova Scotia, from Beazley Brothers for the site of a pier?
2. Whose properties does the site adjoin?
3. Is there any property owned by the Dominion in the immediate vicinity of the pier, and, if so, does the pier site abut thereon?
4. Did the property acquired from Beazley Brothers include a right of way to the pier? If so, from what locality, and over whose property does the right of way run?
5. What price was paid per square yard for the work and other material used for filling in the approaches to the pier?
6. Was this work included in the contract for the construction of the pier?
7. If this work was separate, who had the contract for filling in the approaches?
8. What was the cost of this filling in?
9. What was the estimated cost of the pier exclusive of the site?

Hon. Mr. KING (Kootenay):

1. 2,464 square feet; 27,850 square feet covered with water; total, 30,314 square feet.
2. North and east Canadian Government Railways; west and south, Public Harbour of Halifax.
3. (a) Yes. (b) Yes.
4. (a) No. (b) Property adjoins public dock opposite foot of Mott street, Dartmouth.
5. $1.68 per cubic yard for stone and gravel fill in place.
6. Yes.
7. Answered by No. 6.
8. $43,844.64.
9. Approximately $158,006.20.

ST. MARY'S RIVER

Mr. SIMPSON:

1. Is the government aware that on account of the lowering of the water in the St. Mary's river many Canadian boats are unable to dock on the Canadian side of said river?
2. Is the government aware that as a result the coal and other supplies formerly purchased on the Canadian side for use on these boats is now being purchased on the American side of the river?
3. Is the government aware that the captains of these boats refuse to accept freight for delivery at Sault Ste. Marie, Ontario, greatly to the inconvenience of merchants and others residing in that city?
4. Have representations been made to the government or the Department of Public Works with the view of having these conditions improved? If so, by whom?
5. Is it the intention of the government to undertake this work during the present year?

Hon. Mr. KING (Kootenay):

1, 2 and 3. Representations to that effect have been made to the Department of Public Works, and the matter is being investigated.

4. Yes, by delegation, January 26, 1925.
5. The matter is under consideration.

IMMIGRATION STATISTICS

Mr. FORRESTER:

1. What was the total immigration into the Dominion of Canada from March 31 to December 31, 1924?

2. How many Canadians migrated to the United States during the year 1924?

3. How many Canadians returned to Canada from the United States during the said year?

Hon. Mr. ROBB:

1. 100,570 from March 31 to December 31, 1924.

2. No record is kept by the Department of Immigration and Colonization of outgoing Canadians.

3. A record of returning Canadians has been kept by the department since April 1, 1924. The number who returned to Canada, between April 1 and December 31, 1924, after an absence in the United States of six months or longer and with the intention of permanently remaining in Canada, was 37,317.

MONCTON POST OFFICE SITE

Mr. DOUCET:

1. Has the government purchased a site for the proposed new post office at Moncton, New Brunswick?

2. If so (a) What is the exact location of such site; (b) from whom was it purchased; (c) what is the purchase price; (d) what public bodies in Moncton recommended such site; (e) were representations made by any public bodies against such site, and, if so, what public bodies?

3. If no recommendations of public bodies were made in favour of such site, what person or persons recommended such site?

Hon. Mr. KING (Kootenay):

1, 2 and 3. No site has been purchased.

HEALTH OF ANIMALS REGULATIONS

On the Orders of the Day:

Hon. H. H. STEVENS (Vancouver Centre): I desire to bring to the attention of the government and particularly of the Minister of Agriculture (Mr. Motherwell) the very severe handicap under which importers are suffering in consequence of a certain regulation of the Department of Agriculture which provides that goods shall not be importd packed in hay or straw from areas in Great Britain and other countries infected with the foot and mouth disease. I wish the House would allow me to mention one circumstance and to base a question upon it. One shipment which has been ordered returned was packed and consigned in November last, but it missed its sailing and was held over until January. I understand that the final ruling of the department was not given until some time in January, fixing the fifteenth day of that month as the last on which such shipments would be received. The point I wish to bring to the attention of the government, and it is a serious one, is that innocent Canadian importers are suffering great handicaps, being in some cases threatened with losses, as a result of breaches of this regulation made before the final ruling of the department was known in the Old Country. Would the government not consider it wise to permit the unpacking of goods coming in the prohibited material, and the destruction of that material, so as to obviate any loss to the importer? This I think would completely safeguard the health of animals in this country and it would save the innocent Canadian importer very serious losses. It is a matter that affects more than the health of animals and I wish the government would take the point into consideration.

Hon. W. R. MOTHERWELL (Minister of Agriculture): I quite appreciate the embarrassing position which some of our importers have been in with regard to the matter raised by my hon. friend. Since he last brought the question up I have inquired into the whole situation in minute detail, discussing it with the Minister of Public Works (Mr. King, Kootenay) who also is familiar with the difficulties that are complained of. Last week again I took the matter up with my staff, especially with Dr. Hilton, whom I requested to prepare for me a statement regarding these shipments, which are coming not only to Vancouver but to every other open port in Canada as well. I wanted to see whether the shipments were diminishing at all under the present policy. I recognize that the fault is with the shipping companies, but how to remedy the evil I have not been able so far to find out. I have been making inquiries with regard to their culpability. I might point out that they are subject to prosecution; but so far I have had no opinion from the Department of Justice. In the meantime, however, we are obtaining a compilation of shipments from each port. At the port of St. John the difficulty has been almost eliminated, there are few shipments arriving there in the prohibited packing material; but at Halifax the situation is different, the shipments of prohibited form are increasing and there is no indication of improvement. I have not had any report so far from Vancouver, and do not know yet what the condition is there. However, in co-operation with my colleagues, particularly with the Minister of Public Works and others, I hope to devise some effective method of meeting the situation, although I do not know at this time

just what it will be. We are working on a policy now, and should our information indicate that these shipments are not coming in in as large numbers as before, the natural conclusion will be that in a few more weeks the situation will clear itself up. I am rather disposed to think that the evidence is in the opposite direction so far as the Atlantic ports are concerned.

Mr. STEVENS: Would it not be possible, in the case of the particular shipment to which I have referred, to permit the landing of the goods and their unpacking, afterwards destroying the packing material? This I should think would compose the difference between the department and the importer.

Mr. MOTHERWELL: If there is evidence that these goods were shipped before the announcement was made as to what the rule would be after January 15, there would be a good claim But my information is that there is no evidence of that nature.

Mr. STEVENS: In this case the shipment was actually consigned in November.

Mr. MOTHERWELL: I shall be glad to look into the merits of that case.

Mr. SPEAKER: I must remind the House that questions before the Orders of the Day are called should be brief and to the point. This also applies to answers.

THE BUDGET

FURTHER INFORMATION SUBMITTED BY THE MINISTER.

On the Orders of the Day:

Hon. J. A. ROBB (Acting Minister of Finance): On Tuesday last the right hon. the leader of the opposition (Mr. Meighen) requested some further information regarding the revenues we expected as a result of tariff changes. I submit the following statement:

Memorandum of Estimated Net Increases, Revenue:	
Customs	$ 914,618
The Special War Revenue Act	47,500
Export of electricity	400,000
Net increase	$1,362.118

Mr. MEIGHEN: Could the minister not give the details of what he expects from each customs subject affected, both by way of addition and deduction?

Mr. ROBB: I shall be able to give my hon. friend that information when we are in committee. He understands, it is purely an estimate based on last year's business.

Mr. MEIGHEN: I know that; but it is usual to give the information in the budget speech.

OCEAN SHIPPING RATES

On the Orders of the Day:

Mr. O. R. GOULD (Assiniboia): Referring to the motion of the Prime Minister (Mr. Mackenzie King) yesterday for the appointment of the committee to investigate the question of ocean shipping rates, I would ask the right hon. gentleman to give the House an assurance that the instructions to the committee will be comprehensive enough to enable it to inquire into other effective methods of control and to report back from time to time.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The motion indicates just what powers the committee will have and the resolution includes all that is in the bill. I think the committee will have all the power it will need to deal with the matter.

SOLDIER SETTLEMENT LANDS

On the Orders of the Day:

Mr. WILLIAM IRVINE (East Calgary): Does the government propose to introduce any legislation this session with regard to the revaluation of soldier settlement land and stock?

Hon. J. A. ROBB (Acting Minister of Finance): I answered that question a couple of days ago.

Mr. GARLAND (Bow River): May I remind the minister that he did not answer that question.

Some hon. MEMBERS: Order.

CANTEEN FUNDS—CORRECTION

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): I want to make a correction with regard to certain figures which I submitted to the House yesterday in the course of the debate on the canteen fund. The figures I gave to the House were given to me by the Great War Veterans' Association, and I should like to read to the House the following telegram which I have received from Mr. H. McLeod, the Secretary of the Grand Army Veterans:

Toronto, Ont., 26 March, 1925.

Hon Dr. MANION,
House of Commons, Ottawa.

Would ask you make correction re your statement in House March twenty-fourth Hansard. Figures supplied you reference this association entirely absurd. I appreciate source of supply. Our membership figures available but have not been asked for. Those supplying your information grossly exaggerated their own membership. Grand Army of United Veterans has a membership equal to that of any association in Canada.

H. McLEOD,
Secretary, Grand Army Veterans.

GREAT BRITAIN AND GERMANY SECURITY PACT

On the Orders of the Day:

Mr. JOS. T. SHAW (West Calgary): Mr Speaker, I should like to inquire if the government have been in communication with the British government regarding the proposed agreement with Germany referred to by the British Foreign Secretary in the course of the last few days? If so, has the Prime Minister any communication to give to the House and to the country in connection with the matter?

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend refers to the discussion which is taking place at the present time with regard to the security pact?

Mr. SHAW: Yes.

Mr. MACKENZIE KING: The British government have been keeping our government informed in a general way of the nature of the discussions which are taking place, but no communications have been received which could be given to the public at the present time. Speaking generally, the information we have received is almost identical with what has appeared in the press, but there is nothing concrete to report so far.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Tuesday, March 24, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means.

Sir HENRY DRAYTON (West York): Mr. Speaker, when speaking to the motion a couple of days ago I addressed myself, amongst other questions, to the alarming increase in the obligations of the Canadian National system, and pointed out the direct connection those obligations had with the country's financial responsibilities. I do not know that I should further labour that question to-day. I think it is something which is already absolutely clear to hon. gentlemen who have ever taken the trouble to look into the railway accounts, but I merely want to indicate to the House where this method of handling these debts is leading us. In the fiscal year 1922-23 my right hon. friend the Minister of Finance (Mr. Fielding) received from England $56,000,000. My hon. friend the Acting Minister of Finance (Mr. Robb) points out to-day that the only reason payments were made to the National Railways in cash, as they then were made, was because the Minister of Finance had that large sum of money. We had not last year, nor have we this year, any corresponding sums of money in the treasury. Let me pause for a moment to make this observation. As a usual thing in matters of business, surpluses on the one hand or deficits on the other have relation to the amount of cash available. Here we have this strange position: In the fiscal year 1922-3 the right hon. Minister of Finance pays his way, pays great sums of money to the National Railways, and reports —honestly reports—a deficit of $31,000,000: last year, without the cash and without the payments, we had, strange to say, a surplus claimed: and this year, not only without the cash but in face of heavy declensions in the country's revenue, we have again the claim of a surplus. Well, if my hon. friend's method of reasoning appeals to this House, we must have a new orientation, we must pray that we may have no cash, because in that case we will have a surplus—that is, the condition will be such that under such reasoning the government may claim a surplus. By contrast, with $56,000,000 of cash falling into the treasury and with proper accounting, we had a deficit of $31,000,000 in 1922-3. Now, Mr. Speaker, it does seem to me that the point is so clear that I ought not to insult the intelligence of hon. members and the intelligence of the country by further elaborating it.

I now propose, Mr. Speaker, to say something on the question of protection. I think it is due at this time to inquire why the government is again in the twilight zone, why there has been another wobble. And I am going to tell hon. gentlemen in advance that I still believe in protection, that I still feel it is the only policy for this country, and that I know that it is the only policy that can be adopted if we are going to do what we ought to do—have some proper regard for the Canadian workmen. The first observation I make is this. Hon. gentlemen to my left, and the hon. member for Brome (Mr. McMaster) in particular, delight in selecting some item in the tariff and talking about the tremendous degree of protection that under it some manufacturer enjoys, and what a high protective tariff we have in force. Now, at the outset I desire to submit that we have not a high protective tariff, and, what is more, have not had for many years; that, on the contrary, the tariff instead of being high is low. But I also desire to submit this

—and I think I can carry at least the judgment of the hon. member for Brome, because when things are pointed out to him he generally thinks them over—I venture to say that not one hon. member can take any item in the tariff and say, "That constitutes the protection which the particular industry manufacturing it enjoys." Why do I say that? Here again I think I can carry the judgment of the House. A duty, to be protective, must represent that percentage of net protection which the industry enjoys. Can there be any dispute at all about that? I do not think so; I do not think that even the hon. member for Brome will dispute that statement. But running through all the items in the tariff we have other charges, charges which are made upon this activity and upon that activity, protection carried along to those who supply the raw materials, machinery and the like of a particular industry. There is no question about it. As a matter of fact to-day, having regard to the change that has been worked as the result of currencies out of line here and wages out of line there, increased by a great multiple since the war, we have to-day this condition under our tariff: It would be in some instances cheaper to manufacture in the United States, close our factories here, and ship the goods in. I am going to give just one illustration; more can be given. The duty on manufactured brass is 10 per cent. If the ordinary course was followed, my hon. friends who are so fond of low tariff and free trade ideas would at once say, why can brass not be manufactured in Canada when there is a protection of 10 per cent to the brass manufacturers? Well what are the facts? Copper is the chief raw material entering into the manufacture of brass. Our copper mines enjoy a protection of one and a half cents per pound on their copper. During the greater part of last year copper sold at as low as 13 cents a pound. Here you have the spectacle of a so-called protected manufacturer paying 15 per cent on his raw material—because that is how it works out: one and a half cents per pound which sells at 13 cents a pound—and his whole protection is 10 per cent. Yet some people wonder why workmen are walking the streets! We used to have two brass factories in Canada. One is closed altogether and the machinery gone to the United States where it is doing useful work and giving employment to American workmen; the other has been bought by a large American brass company.

Is it not ridiculous to talk of this tariff being a high protective tariff, when you look at the figures of our imports? If it was such a high protective tariff, these imports could not be coming in; but they come; they persist; they are always with us. I am going to give the House a few figures as to our imports.

Mr. McMASTER: Before the hon. member proceeds further, would his proposal be to put up the duty on brass, or take down the duty on copper?

Sir HENRY DRAYTON: The hon. member (Mr. McMaster) asks what my policy would be, but I think he understands it by this time. I think he understands that that policy is such a measure of protection as will enable all Canadian industry, all Canadian mines, to function. If, for instance, we came to the conclusion that the large copper mines of British Columbia would, without the duty, be obliged to close, then that duty should stay.

Now, Mr. Speaker, I desire to give the House the figures as to our imports, and I do so with a view to showing how perfectly absurd it is, in view of the facts, to talk about Canada's high protective tariff. In 1924 we imported $173,795,660 worth of fibre textiles and textile products; of wood and wood products and paper, $40,976,833; iron and its products, $173,473,503; non-ferrous metals and their products, $43,432,617; non-metallic metals and their products, $155,899,393; chemicals and allied products, $26,088,041; miscellaneous commodities, $48,205,401, a total of $661,871,448. To this total have also to be added imports which have to do with things other than manufactures; which have to do with our own national production. And after all, are not the farmers of Canada such a people that they ought to be able to have and hold the market in their own country? So I add the imports of agricultural and vegetable products, amounting to $186,468,685, and of animal products, $45,026,734.

Mr. HOEY: Before the hon. gentleman departs from that, has he worked out the proportion of these goods that have come in free or upon which drawback has been paid?

Sir HENRY DRAYTON: No, I have not. That has nothing to do with the point I am making.

Mr. HOEY: It might show that there are some things upon which there is a very high tariff.

Sir HENRY DRAYTON: I do not think so. It might show that certain commodities which are supposed to come in under a tariff got the benefit of the drawback. But I am not interested in that at the moment. I am

not dealing with the question whether there is or is not a tariff on the commodities imported; I am considering the plight of the Canadian worker who is having his job taken away from him—that is all. Now, I admit at once that there are certain things we have to import. We have to import, for example, raw cotton, raw wool, raw silk, crude rubber, and so forth.

Mr. McMASTER: Will the ex-minister pardon me if I interject a question? He has said that we have to import raw wool. If the protective principle is sound, why should we import raw wool when we have plenty of sheep in this country?

Sir HENRY DRAYTON: I will answer that very quickly. There is not much question about it. As matters stand to-day there is practically no protection to the Canadian producer of wool. This country has boundless acres of magnificent pasture lands. Take, for example, British Columbia or, on the other hand, New Brunswick. The climate of British Columbia is such that those rich, soft wools, with the long, delicate fibres can be produced there. But we have not enough sheep. We have to import wool until we get sheep. We have to import wool until agriculture is put upon a proper basis in this country so far as wool production is concerned. It is just the same with coal: we have to import coal too. Why? Because so far Canadians have not solved the question of coal production and distribution. We ought to be able to get along without importing coal, but we cannot do it as yet; and the same applies to raw wools, in the absence of the production of wool crops in our own country. We ought to have them, but we have not. We may get them, and I hope we will. We also have to import iron ore, and will continue to do so until Canadians learn how to handle their iron deposits. So that a large number of our imports are quite essential. Some of them I hope will not be essential for so very long. I give the House those essential imports: raw cotton, $28,391,278; raw wool, $6,837,781; raw silk, $2,745,482.

Mr. FORKE: What is the duty on these commodities?

Sir HENRY DRAYTON: I wonder why the hon. member asks that question, if it is not simply to make for delay? What I am trying to point out is that the result of our importing a great many of the commodities that we do import is to take the day's job and the bread and butter away from the Canadian workman. I stated some exceptions; those exceptions included raw cotton, and the hon. gentleman asks what the duty is on raw cotton. What is that to do with it? We do not grow raw cotton in this country. The question has nothing at all to do with the point I am making. In addition, we import crude rubber, $8,047,394; coal, $88,432,856; iron ore, $5,437,604. We have in all, including these main raw materials which we must import, $139,892,395 worth of imports. Over and above these items—which are the main items—there are other commodities which we also require. I shall not take the time which would be required to give these in detail. But we require, for example, in the chemistry trades raw material, we require in the furniture trades raw material; and instead of taking up a lot of time I am going to assume that we have to import a sum much larger than the fact is, and I am going to suggest to the House that for the purposes of our consideration we should take these other raw materials at the total of $53,574,472, which would make a total for raw material necessities, and the like, of $193,366,867, leaving a balance of $700,000,000, which, as I desire to submit and do submit, with a policy the basis of which would be a proper regard for the Canadian workingman could be kept in this country. That is what protection means. To-day $700,000,000 is being sent out of Canada, on the one hand, and on the other: "Get out of here," to hundreds of thousands of workmen who cannot get jobs. The idea of protection is to change that state of affairs.

Just let us see what that would mean. Mr. Speaker, sixty per cent of the cost to the consumer is looked upon to-day as a low percentage which labour enjoys, and which represents wages. In many trades, trades where you have a finished product right down the line, a product involving several trade changes, the percentage can be easily shown to be eighty per cent; but I desire to be under the mark, and so I take sixty per cent. Let us see what sixty per cent of $700,000,000 means. Let us assume that the worker would get on an average $1,200 a year for his work. That means that if this $700,000,000 were kept in Canada we could give employment to 350,000 workers who have left Canada to seek employment or are idle in Canada. I will go a step further.

Mr. ROBB: May I ask my hon. friend in what regard has the tariff as between Canada and the United States been changed from the tariff he himself administered?

Sir HENRY DRAYTON: So often in this parliament we are met with the pitiful plea:

You too. Why, it is the only answer which we had all day the last time this matter was discussed—"You too." But does my hon. friend think that conditions are not changed? Does he not know the cumulative effect of mass production? Does he not know what the present dislocation of foreign trade and commerce is? Does he indeed not know that Canada under his administration is the only civilized nation in the world to-day that is reducing her tariff? Surely he knows it. Does he not also know this, that in business what is a fair price to-day may be an absolutely unfair price to-morrow? Does he not know that in connection with many articles where you have a fixed rate per pound, the multiplication of prices, with the protection given at a low price, becomes almost a premium on imports into this country to-day? Surely my hon. friend knows that.

I was going on to point out that, given four dependents for each worker, you would have in Canada to-day a population with means of subsistence and livelihood of 1,750,000 people; that is on the basis of last year's imports only. Is that worth while? Is it not worth while trying to keep Canadians in Canada? Is there any governmental responsibility to the worker? Well, if there is, there is only one way that has been found out so far in which that responsibility can be discharged, and that is by the country seeing to it that to the fullest extent possible the worker shall have the benefit of his own markets.

But then, of course, hon. gentlemen say—the hon. member for Brome (Mr. McMaster) has said it, and said it often in very eloquent terms and phrases—if you don't buy, you can't sell. He nods his head in complete approval. Now if goods can only be paid for by goods—

Mr. McMASTER: Or by service.

Sir HENRY DRAYTON: —or by service, and my hon. friend again nods his head. Now I am ready to admit at once that there is something in this ism;—there is something in every ism, but isms do everything except hold water. They are about the best things in the world for academic debates. Academic reasoning will run through them all.

Mr. McMASTER: Has not that principle been demonstrated in the findings of the Dawes commission, and in the finding that reparations are very difficult to get from Germany because Germany can only pay by services or goods?

Sir HENRY DRAYTON: Not at all. What my hon. friend does in his suggestion is to say: Here is Germany, who either cannot or will not pay. Germany who has got rid of all her ready assets and placed them in other countries, her investments and the like, cash gone and investments in other countries. How can she pay to-day except by goods? But to say that the ism as an ism is supported by that is to fly, as all these gentlemen who are fond of these theoretical doctrines do fly, absolutely in the face of history and all fact. It simply is not so.

Just let us take some facts, instead of isms, and see how it works out. Cuba—it is not so many years ago that Cuba got her independence, so I do not go back very far in this case—Cuba for the ten-year period commencing with 1908 had a large surplus of exports each year. For that period her excess amounted to £106,365,060.

Mr. McMASTER: She would be paying a lot of interest on capital invested from abroad.

Sir HENRY DRAYTON: I am so glad to get that admission from my hon. friend. That is something I have striven so long and so vainly to get from him. Why, with that admission, the whole of this hollow pretence goes. Do we not all know that Canada, like Cuba, is heavily indebted? It has been calculated—I do not know what the exact sum would be, nobody knows—it has been calculated by an authority that we pay out each year the enormous sum of $250,000,000 in connection with what might be termed this hidden trade, this hidden exchange; and when my hon. friend points out that that is exactly the same as buying goods he is very tardily recognizing what is an absolute economic fact. My hon. friend now shakes his head; I trust he is not going to dispute that.

Mr. McMASTER: No, no; I have always recognized that.

Sir HENRY DRAYTON: I am so glad to have that admission because if that fact be recognized so far as Canada is concerned we can forget the ism entirely; forget entirely that we will have to go on importing in view of the large sum of $250,000,000 which we have to pay out each year.

An hon. MEMBER: Forget what ism?

Sir HENRY DRAYTON: That goods can only be paid for by goods. So far as Canada is concerned she would pay for them to a very large extent by the payments which she has to make.

But I am going to give my hon. friend the balance of the figures which he interrupted

me in stating. For the next six-year period from 1918 to 1923, the excess of exports amounted to £213,458,818, a surplus in sixteen years of £319,823,878 odd, representing an approximate sum of $1,500,000,000, over and above all goods that Cuba bought. Now the Argentine Republic for the same years. For the first ten-year period the excess of exports was £205,891,541, and for the next six-year period £137,748,550, making a total favourable trade balance of £343,640,091, an even greater sum. I am quite free to admit that one of the methods by which those large favourable balances were met in the case of Cuba and Argentine was that those countries, like Canada, had to meet interest coupons, had to pay debts, had to pay debt interest. Does my hon. friend (Mr. McMaster) wish to say something?

Mr. McMASTER: I did not catch the word "coupons" which my hon. friend spoke of.

Sir HENRY DRAYTON: Yes, interest coupons.

Mr. McMASTER: Those coupons would be attached to bonds issued by the country of importation and taken by the country which had invested the money abroad and had sent money there in the form of goods.

Sir HENRY DRAYTON: But that has absolutely nothing to do with the question I am now discussing as to the necessity of buying before you can sell. In the case of Cuba and the Argentine the figures are there and speak for themselves, and I must point out that both countries have a smaller population than Canada. If Cuba and the Argentine can do what I have described is there any reason why Canada—with an equally tremendous drain on her in the form of interest coupons—cannot do the same? My hon. friend (Mr. McMaster) is driven to this point that the only case where it is not necessary to buy in order to be able to sell is where you are a heavy debtor. Then your interest payments create the credit which permits of the importation of goods. My hon. friend shakes his head. I wonder whether I am to take that as in affirmation of the principle?

Mr. McMASTER: Most of your interest payments will be on something which you have imported from abroad, perhaps years before, and on which payments have been deferred. The interest payments that Canada is making to-day represent, in large measure, vast amounts of foreign capital which were invested in this country between 1900 and 1911.

[Sir Henry Drayton.]

Sir HENRY DRAYTON: Oh, Mr. Speaker, my hon. friend will have lots of time—

Mr. McMASTER: We borrowed pretty heavily in the British market and created credits on which we bought goods from the United States when we were developing this country.

Sir HENRY DRAYTON: Mr. Speaker, I hope you will not look upon that as a speech from my hon. friend. I would like him very much to have the opportunity of discussing this question.

Mr. McMASTER: I did not want to have any misunderstanding in regard to what my hon. friend calls my "affirmation."

Sir HENRY DRAYTON: I do not object to my hon. friend making any speech he likes so long as he can speak again at the proper time. He has already spoken half a dozen times but I hope he has not exhausted his right to speak. I am going to develop the point which has been referred to in regard to the great importance of the interest coupons. What my hon. friend has stated as to the result of the railway debacle which existed in the ten years preceding 1913, is perfectly correct. My hon. friend shakes his shoulders but I am going to demonstrate the fact to him and if he is just as fair with me on that point as I hope he is going to be on another question in a minute, he will admit it.

I am going to invite my hon. friend to go to a country which is the greatest creditor nation of the world, the United States. There is a country that sells without buying very much; there is a country that is collecting the interest coupons of the world. She is not a debtor nation, she is a creditor nation. Let us see how the "ism" works out there? Well, the figures of the United States are progressive figures. For the ten years ending 1893 her excess of exports was $531,073,572; for the ten years ending 1903, $3,839,744,076; for the ten years ending 1913, $4,564,462,410; for the ten years ending 1923, $20,729,457,292. Let us apply our percentage for one minute and see what that means; let us apply the 60 per cent of the cost which goes to labour, low as it is. That means during the period mentioned that while the United States has taken out of all other countries the sum of $29,664,737,350 the workmen of the United States have been employed at the expense of the workmen in other countries with a resultant gain to themselves of fifteen billions of dollars. Is there any reason why anyone should wonder

4 p.m.

at the tremendous growth and the tremendous financial strength of the great republic? My hon. friends opposite will not say that that enormous balance has been met by the United States paying debts which she owes. Why, she is trying to collect debts.

How consistently Canada has worked to put her where she is! Let us come to that period of railway exploitation to which I was referring a moment ago. During the first ten years of that forty-year period our imports from the United States were $486,927,738. In the ten-year period ending 1903, they were $828,485,184. In the period of railway exploitation, Grand Trunk loans which smashed the property, transcontinentals, Grand Trunk Pacifics, Canadian Northern railways, the load of which to-day is bending our backs, how is that looked after? Our imports from the United States in the period ending in 1913 were $2,216,293,258. During the war period our imports rose to $5,986,957,558. We see where the world in general comes out as a result of the forty years' trading. Let us see where Canada comes out. The net result of the forty years' trading with the United States is an adverse trade balance for Canada amounting to $4,397,248,129. Was that not a remarkable achievement for a country of our population? Is it not remarkable evidence of—I am going to leave the naming of that action for the moment to the hon. member for Brome (Mr. McMaster). Let us see how much Canada helped the United States in the period of railway exploitation. In the period ending in 1913, the United States enjoyed the comfortable, favourable trade world balance of $4,564,000,000 odd and Canada accounted for no less than $1,303,000,000 odd of that enormous sum. Just think of it!—out of a favourable trade balance of $4,564,462,410, Canada accounts for $1,306,950,513. My hon. friend would think that sort of thing ought to go on; that it should be made still easier to exploit this market instead of something being done to keep Canadian money working for Canada. There is a great deal of it working for the United States. What we did in that ten-year period in helping to make the United States the world industrial colossus that she is, is indeed remarkable evidence of the resources and purchasing power of this people, but the thing can be done only at the expense of the purchasing power of to-day, and where is it? At the same time it is a monumental example of misapplied energy and wasted opportunity.

But there is another way in which this matter could be settled, and that is by gold imports. My hon. friend did not suggest that, and perhaps I had better come to it a little later on.

I would like the government to put this question to themselves: Is it not about time at least to try to secure some of this work for Canadian workers, some fairer and better share in the work of Canada for Canadians? What is government policy? Is government policy a policy which is to be a pro-Canadian policy or a pro-American policy? There ought to be a sharp difference between the two. Is there that sharp difference in the minds of some hon. gentlemen? The government, of course, could very well object to a Canadian answering this question: Is the government pro-Canadian or pro-American? They might very well say: Political bias, the desire for greed or something else renders you an unfair witness. The best way of judging policies is by their effect, and I am going to call as a witness, no Canadian, but expert American opinion. The United States Department of Commerce is a very well organized and complete department, and it has excellent publications which appear regularly. Its publication of November 3, 1924, has a great deal to say about Canada. It first reminds the reader that it is interested in extending his sales in our territory; that Canada affords the second best market for the American seller. At page 265 of this issue the article on the share of the United States in the foreign trade of Canada commences as follows:

> Economically and socially Canada may be considered as a northern extension of the United States and our trade with Canada is in many respects more like domestic trade than our foreign trade with other countries. The movement of industrial raw materials from Canada into United States and the return flow of a miscellaneous assortment of partly or wholly manufactured goods is not unlike a similar flow between the west and south, and the more industrialized northeastern part of the United States.

Here we have an expert, unbiased opinion as to the result of Canadian policies. This opinion is unpalatable in the extreme to any Canadian that thinks somewhat of his country, that sees in Canada, with her great resources and her virile people, a great nation of the future, strong and potential, if her resources are used for Canada and are not exploited by the foreigner, no matter who he may be, or for the benefit of other countries. Hon. gentlemen have all heard a great deal about the losses which this country to-day suffers from in the exportation of pulpwood at $10 a cord as against paper at $70, and they are familiar with the payroll that is lost to this country as a consequence. I

merely draw that matter in this connection to their attention. It is another confirmation of the correctness of this expert's opinion. I will give just one other case. Canada produces a very large share of the asbestos of the world. The hon. member for Brome (Mr. McMaster) nods his head in approval. I am gratified. It is true, she does. What does she get out of it? Exactly what this expert tells us. All we are getting out of it is simply the wage roll which the first rough operation provides. We are the providers of the raw material for our friends to the south.

Mr. McMASTER: Just as they supply the raw material for our cotton factories.

Sir HENRY DRAYTON: My hon. friend has great difficulty in making a point. In the minds of some hon. gentlemen, the fact that the United States supplies us with a little bit of raw material here and there is a sufficient warranty for this enormous inundation of imports. But that could never be accepted by the mass of the Canadian people. There is one thing however which the hon. gentleman forgets; he forgets that cotton is an annual crop while pulpwood is not and asbestos certainly is not. And this shows the reasonableness of most of the objections raised by the free trader. Here we have the suggestion that because the United States gets rid of a small portion of its annual crop, which it is quite anxious to dispose of, we should therefore send out in the raw state irreplaceable material which should be manufactured at home.

An hon. MEMBER: Won't pulpwood grow here?

Sir HENRY DRAYTON: If the hon. gentleman has some prescription whereby pulpwood may become an annual crop I shall be glad to know what it is, but until he produces it I will not discuss the question with him. Now, the United States tariff commission held an investigation into the asbestos factories and this is what they have to say on the subject:

> Known deposits of asbestos in the United States are entirely inadequate to supply domestic needs, and, although efforts are being made by the government to discover additional areas, it is probable that no very large deposit of the mineral exists in this country.
>
> At present our chief source of supply is Canada, which supplies fully 95 per cent of the total annual imports. The bulk of the imports from Canada consist of "mill" fibre, and the rest "crude" fibre. Imports from other countries consist wholly of crude fibre, and come in large quantity from southern Africa—Rhodesia and the Union of South Africa.
>
> Canada produces about 85 per cent of the total world output and exports about 90 per cent of its annual production to this country.
>
> The United States is the world's largest producer and consumer of asbestos manufactures. The total annual domestic production of asbestos textiles and manufactured textile products alone is estimated at from $60,000,000 to $70,000,000. This does not include the heavy asbestos products, such as shingles, slates, wood or lumber, paper and millboards, and pipe and boiler coverings, the production of which amounts to several million dollars annually.

In 1924 we exported to the United States $5,546,769 worth of raw asbestos and $994,500 worth of asbestos sand and waste. And that sum, considerably less than $7,000,000, is increased in the United States through process of manufacture to at least $75,000,000. Does any hon. gentleman think that this country with its exodus of population can afford to throw away a pay roll like that? How can anyone call it reasonable unless we proceed on the assumption that this country owes no debt whatever to its workers?

Then as to gold. In the ten year period ending 1893, the United States shipped out some $187,582,000 of gold more than she received, but in the next ten year period evidence of the payment of adverse balances by gold become apparent. The excess of gold received by the United States in this period was $98,088,000, in the period ending 1913, $86,698,000, and in the period ending 1923, $1,997,724,000. As a result, in these forty years when the United States has an excess balance in her world's trading of $29,664,737,350, she only receives in payment of this balance excess gold to the amount of $1,994,928,000. The war obligation of the Allies to the United States accounts for much more of the movement but a vast sum still remains to be accounted for. And there is another way in which payments can be made, which hon. gentlemen forget all about, and that is by debts, by loans, by the acquisition of property. That is how it is done, and it is also done by transfer of ownership. I saw a statement the other day, although I do not know just how true it is, that American investments in Canada were in excess of some $2,500,000,000. How does that come about? Why, it comes about as a result of these enormous adverse trade balances.

Mr. McMASTER: It has come about largely because the tariff enables the American manufacturer to come here and establish branch factories owned in the United States, whither the profit goes.

Sir HENRY DRAYTON: My hon. friend is very ingenious, but he is entirely wrong. The period in which that took place, a period of American expansion in building in Canada,

was not the period ending in the year 1913; my hon. friend will find that it was during the war.

Mr. McMASTER: It has been going on for the last twenty years.

Sir HENRY DRAYTON: Yes, but I am referring to the really big movement. After all, we might as well get down to rock bottom and deal with the situation as it really is. It is serious enough and we should try to get at the truth. What was really the cause of the big factories coming here? What for example brought the General Motors here? If my hon. friend wants evidence I will again quote an American authority from that same article. That great establishment was not completed here until 1921 or 1922, I forget which, and it was brought here in order that exportations could be made from the Canadian market so that they might get the benefit of the Canadian preference in Great Britain.

Mr. McMASTER: But that preference has existed only a very few years.

Sir HENRY DRAYTON: And I am giving investments that have been made within a very few years past. Now, the fact is this, that if our tremendous adverse balance does not account for these holdings it means something very much worse; for it is worse to pay for it by loans out of Canada than by factories established in Canada to afford Canadian workmen employment. I leave my hon. friend to take whatever horn of the dilemma he likes. I was helping him out, but I will take the argument his way. Let us say that the establishment of American factories here has nothing to do with the adverse balance, that they come as the result of tariff regulations.

Mr. McMASTER: The hon. member was dealing with investments in Canada; that was the question. I was pointing out that American branch factories had been induced to come here through tariff regulations; I pointed out that the tariff was responsible to a certain extent for that investment, whether it was a good thing or a bad thing.

Sir HENRY DRAYTON: I wonder what my hon. friend wants. I wonder if that is another grudge against the tariff. The whole effect is that we have got a tremendous adverse trade balance, which can only be paid for by acquisition by the Americans of great properties in this country, or by the floating of a large number of Canadian loans in the American market. I was just going to point out to my hon. friend how it is done. Hon. gentlemen, if they will take the trouble to look at the American Statistical Abstract, will find that at page 678 a singular compliment is paid to Canada; they will find that of all countries in the world Canada alone is named in connection with these issues. They deal with municipal bond issues in that great money market of the world as it is to-day and the form of the table is:

Municipal—Domestic
Canadian
United States Possessions

I have no idea whether we are so sandwiched there because we are regarded as more American than the United States possessions; but I do know that if the query was to be: Does the United States make more money out of Canada than it does out of its own possessions?—why, we would certainly have to come in front of them, for undoubtedly they do make more money out of the Dominion. So I submit that it is just about time that we gave serious consideration to this question. We have often heard it said that a nation cannot be both bond and free. This country is a perfect shandygaff to-day so far as its fiscal policies are concerned; it is neither one thing nor the other.

Mr. CALDWELL: Explain.

Sir HENRY DRAYTON: My hon. friend asks what is a shandygaff. I am afraid that if I ventured upon a definition it might lead to a discussion with the hon. member for Brome (Mr. McMaster).

Mr. McMASTER: No, we are agreed upon that.

Sir HENRY DRAYTON: Very good, everybody knows what it means. I want to say, Mr. Speaker, that no Canadian has the slightest right to blame the American people for this situation; we ought to admire them. That article, unpalatable as it is, was intended for the perusal of gentlemen who intend to further exploit this market. But the article is true, and being true, it ought not to be resented; on the contrary, I think that if the writer only succeeds in awakening this country, in making Canadians think for Canada, he is deserving not of the blame but of the thanks of the nation. Instead of blaming, we ought to extend to our friends to the south the sincerest expression of praise possible—imitation; we ought to imitate their tariff policy and the principles which they have so successfully put into effect.

There is another point that I desire to take up at some length, and it is an important one—I refer to the British preference. I realize, Mr. Speaker, that with conditions as

they are, with many thousands, yes, hundreds of thousands of our skilled workers to-day no longer with us, protection cannot immediately be put into operation everywhere and produce results at once. It will take time. You cannot create an industrial condition in a day, although you can destroy it in a very short time with ill-considered, ill-digested tariff resolutions tinkering with the foundation of your prosperity. But there is something which we can immediately look after. The British preference to-day is being used to the injury of the Canadian worker. Look at the position of the wool industry and of the boot and shoe industry. The British preference may be a great instrument in the hands of Canada at this minute. It ought to be used for the purpose of removing our tremendous excess purchases in the United States to the Mother Country and to Europe, putting them where we get our real market for our wheat and other products, and so aiding our ultimate purchasers' purchasing power and improving the position of every Canadian exporter. Sir Henry Thornton and other officials of the merchant service were examined before the committee on railways last session. The evidence which they gave, and there was absolutely no variance of opinion about it, was that the justification for high ocean rates on the eastern movement was that there were practically no loadings at all for the western movement, and that consequently the eastern movement had virtually to cover the cost of the round trip. Likewise we have a lopsided movement on land. We have a tremendous grain movement from the prairies, and we have also a tremendous movement of empty box cars into that territory to look after the grain movement. This absolutely lopsided condition would be very much counteracted if we were to transfer our excess purchases to Great Britain and the Continent so that to the fullest extent possible those box cars would go west loaded—or would run east loaded if the unloading was at Vancouver; in a word, with a balanced movement of freight infinitely more can be done in the reduction of freight rates than can ever be accomplished by a process of subvention, special privilege, or robbing Peter to pay Paul. There is no question whatever about it. There is the real economic grievance, and there is the remedy if we have the courage to apply it.

Mr. HOEY: Would the hon. member increase the British preference at the present time?

[Sir Henry Drayton.]

Sir HENRY DRAYTON: Mr. Speaker, I would have such a general tariff here as would leave lots of room to give Great Britain an opportunity for sharing these markets. And that sharing—let me be perfectly frank with my hon. friends—would not be at the expense of the Canadian workers. Because, as I see it, the first duty of this country is to the workers within her boundaries. But with the tremendous field we have to look after, the tremendous amount of excess purchases from our neighbours to the south, there is any amount of room to help British conditions.

My hon. friend (Mr. McMaster) is smiling at me. He is just thinking this—

Mr. McMASTER: I believe in reciprocity.

Sir HENRY DRAYTON: He is just thinking this—he has said it so often that I am going to say it for him, though not half as well, I know, as he would say it. Protection, he would say, will make the manufacturers inefficient. Protection will increase the cost of living. Protection will increase the cost of manufacture.

Mr. McMASTER: Hear, hear.

Sir HENRY DRAYTON: I thought I would get him going, Mr. Speaker. Protection, he says, would make our manufacturers unable to meet the competition of others in the export trade.

Mr. McMASTER: Hear, hear.

Sir HENRY DRAYTON: I am delighted to have my hon. friend's recognition that I so fairly express his views.

Mr. HOEY: —and bear heavily on the agriculturist.

Sir HENRY DRAYTON: Yes, and bear heavy on the agriculturist. Now, I think that completes the list. In the first place I desire to point out that it is extremely doubtful if protection does materially increase costs anywhere to-day. My hon. friend (Mr. McMaster) leans forward expectantly—I wait the blow, but it does not come. It does increase costs in the first instance, until the manufacture concerned can get going. But it is true that any country which removes local production and places itself in the hands of the foreign manufacturer will be exploited by that foreign manufacturer. I am going to tell my hon, friend, if he has not yet learned it by looking at the tariff regulations of every country except Canada, and to a certain extent except the Mother Country, that every country has realized it. While much was said about the

cost of agricultural implements in Canada, they were sold in Australia, where there were no factories, at a multiple of that sum, and so much was that condition felt in Australia, an agricultural country, that they put a duty on agricultural implements, if I remember rightly, of sixty per cent, so that they would be able to get home production and home competition. Again I am going to remind my hon. friend of something that he should not need to be reminded of. We had an up-to-date glass factory in Canada; I am reminded that it was at Hamilton. That glass factory was put out of business by competition from Belgium. Producers in Belgium sold window glass in this country at such a price that the Canadian factory could not continue. To-day the machinery is working in the United States, giving employment to United States workmen. And what has happened in Canada? The price of glass first came down, for the purpose of killing a Canadian industry, which was left defenceless by this government as a result of their repeal of the law as to debased currency; and when the job was done the price of glass went up and to-day it is greater than it was before the price cutting took place. My hon. friend should know that. But apart from all that, my hon. friend will not complain of protection as practised in England. I would say from personal observation and knowledge —yes, from the bills which I myself have had to pay—that the cost of living in England to-day is greater than it is in France. There you have the logical result of the application of my hon. friend's doctrines. It is a doctrine which does not care a bit about employment.

Mr. GARLAND (Bow River): May I ask my hon. friend a question? Is it not true that the difference between the cost of living in England and in France is due to the taxation imposed in England in an attempt to meet her debts?

Sir HENRY DRAYTON: My hon. friend is perfectly right. Direct taxation, according to hon. gentlemen here who are free traders, never hurts anybody—

Mr. FORKE: Nobody ever said that.

Sir HENRY DRAYTON: It is the indirect tax, the protective tax, which is such an evil.

Mr. McMASTER: Taxation always hurts, but it hurts worse when it is in favour of private profit rather than the public interest.

Sir HENRY DRAYTON: My hon. friend is now making a speech.

Mr. McMASTER: You invited it.

Sir HENRY DRAYTON: It is only another evidence of the manner in which one whose mind is sufficiently contracted by isms will approach the discussion of subjects of this kind—no consideration for the rights of a fellow man; no consideration for the rights of labour or for the national pay-roll. The whole truth of the matter is that the free trader, brought up and nourished on isms, is awfully solicitous about the workman who may have to pay twenty-five cents here or twenty-five cents there more than he thinks that workman ought to have to pay for a necessity of life, he is awfully anxious about that; but he does not care a snap of his finger for this problem: Where is the working man going to buy anything, even in the cheapest market, without wages? That is never thought of at all. Here is one of the reasons why living is so dear in England, and everybody knows it. Following out that principle of "never mind about employment," we see that labour that is fortunate enough to function to-day has strapped to its back the burden of 1,200,000 workers who unfortunately cannot find employment. There is the fruit of free trade. Go across the channel; just take the short trip to France and see what we find. Who will say that the land of the Mother Country is not good land? Who will say that her workers are not efficient? Who will say that her bankers are not capable? Who will say that her manufacturers, with their wits sharpened by "free trade, free trade, free trade," are not competent? Well, just take the little twenty mile trip to France and see the difference. On the one hand, doles, unemployment, want, plus a high cost of living; on the other hand, employment, plenty of it. Why, following the Armistice, and down to the first of January, 1924, France has received, provided with work and assimilated one and a half million immigrants. When I was there last summer she was receiving workers at the rate of 6,000 a week and there was still a lack of labour in the mines and for agriculture.

Mr. GOOD: Does my hon. friend attribute this wholly to tariff differences between the two countries?

Sir HENRY DRAYTON: It is the only thing I can see any difference in, except, of course, that taxation is lighter in France.

Mr. EVANS: May I ask a question there? How is France paying her national debt as compared with Britain?

Sir HENRY DRAYTON: We all know what the situation there is. She is not paying it.

Mr. McMASTER: If I did not pay my debts I would have lots of money to spend.

Sir HENRY DRAYTON: I wonder—

Mr. SPEAKER: If the hon. member who has the floor invites interruptions and is willing to answer any questions put, there is no objection, but such a practice may degenerate into an abuse. It seems to me that when an hon. member is addressing the House he should be given a free hand.

Sir HENRY DRAYTON: So far as I am concerned, Mr. Speaker, I assure you, I rather welcome the interruptions. I do not mind them in the slightest, but I bow entirely to your wise direction. Perhaps we have been having a little too much, but would you allow me to refer to the last interruption of the hon. member for Brome (Mr. McMaster). That hon. gentleman says he would have lots of money if he did not pay his debts. I wonder if the hon. gentleman really believes that France deserves that gibe?

Mr. McMASTER: I rise to a point of order. I implied nothing derogatory to France. I was endeavouring, perhaps improperly, by interjection to meet an argument which I thought was unsound. I am not going to interrupt again.

Sir HENRY DRAYTON: My hon. friend says nothing derogatory to France? What else were we talking about? If there be any sense in his remarks, it meant this surely: "If I do not pay my debts I will have money" was a reflection upon the country we were talking about as not paying her debts. Yes, it meant that, or it meant nothing. I would just like hon. gentlemen to attempt to visualize for one minute the position of France, and see what that wonderful country, the cockpit of the war, has done. Her forests and best countryside decimated and torn; 863,000 dwellings and erections of different kinds destroyed; 200 coal mines destroyed; 39 iron mines put out of business; the very soil so twisted and tortured as to be useless for agriculture; trees, disappeared, nothing left. Gentlemen talk about France's financial position. Why, what would they have? France over and above what every other country in the world suffered as a result of the war, over and above her tremendous war debts, over and above her tremendous losses, had a devastated countryside which represented a tremendous percentage of her whole production, the percentage running into staggering figures. What was she to do? What did it amount to? Over and above all other losses, there were claims of 130 billions of francs filed. Those claims were cut down. There were miles and miles of railway and railway bridges destroyed; highways and highway bridges, canals, locks, and the like, all gone. The material damage of public property, irrespective of churches and municipal buildings, that has been made good by France for public services alone on the 1st of January, 1924, was 20 billions of francs. Yes, and there was also paid at that time approximately 56 billions of francs for the restoration of all this property that was destroyed. I wonder how hon. gentlemen think that can be done? I wonder if that is a situation in which it is fair to say to France, "If you do not pay your debts, you will have lots of money." Why, France is out all that. It is a special charge against her, and she has to restore that damage before she can do anything.

Mr. IRVINE: I would ask, just for information, whether the hon. member knows if France deflated to the same extent as Great Britain, and if he thinks that would have any effect on the relative positions of the two countries.

Sir HENRY DRAYTON: The hon. gentleman is quite right. France could not deflate. France was put in this position, that she had to find the money to cover that enormous sum, and she has found the money to cover that enormous sum. It means a tremendous added financial burden thrown on the country. What was the first thing to be done under the treaty? France was to have her damages for destroyed property paid to her. She never got them. France making up her mind that she would again function, has spent all her money in reparations, and I wonder if any hon. gentleman honestly thinks that at the present time it would be decent, in view of the tremendous financial sacrifices thrown on France by reason of her special damages, to ask her, Why have you not started paying? But the hon. gentleman has carried me far from what I intended to say.

I am now going to give hon. gentlemen a few figures as to French tariffs, so that there will be no doubt as to what in France at least was thought to be the duty of the government to the French worker. There are two schedules in France; there is the minimum and the general tariff. I am going to

give the increases in the present minimum and general tariffs of France over the tariffs of 1913. These percentages which are worked out bring into them the coefficients which form part of the French system of customs taxation:

Article	Increase in Minimum Tariff per cent	Increase in General Tariff per cent
Finished aluminium..	200	700
Fine steel for tools..	160	600
Iron and steel wire..	300	900
Locomotive crank axles..	700	2,000
Prepared dyes (increases varying from)..	300	500
	650	1,400
Crude celluloid..	400	900
Ordinary window glass..	400	1,200
Linen yarns..	400	1,200
Cotton yarns..	350	1,100
Woollen piece goods..	300	1,000
Vehicles for commerce, agriculture and cartage..	500	1,500

These increases, Mr. Speaker, can be looked upon as very fairly characteristic. France maintains a very stringent policy of protection, and she does not stop with her customs tariff in that policy of protection. She uses embargoes. She would be horrified with our pulp situation for example, and with our asbestos situation. She either has an absolute embargo, or export taxes on hides and leather, wool, cotton, iron and steel scrap, copper and brass scrap, coal and coke, patent fuel, unworked fur skins and common woods. The whole idea is that France wants to get the additional pay roll which the fabrication of these commodities means to her if they are held in the country.

How has the plan worked? Look at the figures; look at the statistics showing the progress she is making; look at the great market France is working up for herself and the buying power of this market is measured by the number of workmen that have constant employment there in turning out their goods which she supplies. Take cotton piece goods. Hon. gentlemen know what a tremendous lead Great Britain has with respect to cotton. Well, France's importation of cotton piece goods which amounted to 240,000 quintals in 1919 dropped to 29,000 quintals in 1923, a reduction of 87 per cent.

Are her manufacturers being crippled, are they becoming inefficient, are they failing to meet the competition of the outside world, are they shackled by protection so that they cannot meet the costs of manufacturers in free trade England? Let hon. gentlemen consider these figures: Her exports to Great Britain in 1919 amounted to 2,116,000,000 francs, and in 1923 the total had grown to 6,155,000,000 francs. France sold Great Britain 14,000,000 francs worth of woollen goods in 1919, and in 1923 her sales of these goods amounted to 352,000,000 francs. Her export of automobiles grew from 12,000,000 to 165,000,000; her export of linen drapery from 101,000,000 to 760,000,000; of cotton goods from 30,000,000 to 109,000,000; and of wool and wool worsted from 24,000,000 to 92,000,000; of copper from 8,000,000 to 71,000,000; and—just imagine this, Mr. Speaker—her exportation of pig iron, steel and iron from 8,000,000 to 196,000,000 francs.

Mr. McMASTER: What was the value of the franc in 1919 and in 1923?

Sir HENRY DRAYTON: There have been fluctuations from time to time.

Mr. McMASTER: What was it in 1923?

Sir HENRY DRAYTON: If my hon. friend is not satisfied with the figures in francs I will give him the figures in weights. It makes no difference whether our yard stick is in francs or weights; French trade is advancing by leaps and bounds in spite of every single free trade theory in the world. Let me now give some figures in weights.

Mr. ROBB: I do not like to disturb my hon. friend in his argument but will he tell us what Great Britain did with the extra quantity of goods which she imported?

Sir HENRY DRAYTON: Every single million dollars worth of imports into England added just so many more English workmen to the throng of unemployed. You cannot at one and the same time support workmen in a foreign country and workmen in your own country. That is one of the elementary lessons I wish I could impress upon my hon. friend.

Mr. MEIGHEN: He sees it all right.

Sir HENRY DRAYTON: You cannot support your own workmen and the workmen of foreign countries at one and the same time. What has happened by reason of these important importations from France into England has been that the application of the dole has been extended and the number of unemployed increased.

Mr. HUGHES: How did Great Britain pay for those goods?

Sir HENRY DRAYTON: My hon. friend wants to know how they were paid for? I do not know by what theory he would provide for the payment, I do not know what kind of national policy he would suggest; but the

policy I would advocate would be a policy which would provide employment for the workmen of our own country.

Now as to aluminium: the whole export of France in finished aluminium amounted to 281 tons in 1921 and this grew to 903 tons in 1923. Again I ask, is France progressing? Well, the export of manufactured articles in 1923 exceeded the export of 1922 by 458,000 tons in weight and 3,900,000,000 francs in value. An added weight of 458,000 tons in manufactured articles in one year is a pretty wonderful accomplishment.

We all know, Mr. Speaker, the genesis of free trade. Free trade was introduced into England to ensure cheap labour. My hon. friend (Mr. McMaster) shakes his head. He might not find that in Cobden but if he disputes the statement he has not read aright the briefs of those materially interested in the question—that the free trade movement in Great Britain was forced by the efforts of the manufacturers who were interested in getting cheap food so that there would be cheap labour. Then, Mr. Speaker,

5 p.m.

I desire to point out that the whole underlying principle of free trade is the operation of the law of supply and demand. Does my hon. friend (Mr. McMaster) agree with me there, or not? I invite a contradiction if there is any room for contradiction. My hon. friend remains mute, and as he is not at all slow in speaking up on other occasions I take it that there is no room for dispute in this instance and that my statement is correct: Free trade is based upon the free operation of the law of supply and demand, of buying in the cheapest market and selling in the dearest, and so on. Very good. I desire to point out to to some hon. gentlemen opposite and to hon. gentlemen to my left something the significance of which they have as yet failed to grasp—that the principles of free trade in application to-day are as dead as the dodo; they do not exist; they cannot exist. Does the law of supply and demand apply in Great Britain? Theoretically?—yes; absolutely?—we all know it does not. The law of supply and demand is the law to regulate prices, costs. At least sixty per cent of the cost of production is labour. Every hon. gentleman knows that the time is long past for considering labour as a commodity to be judged and weighed by the law of supply and demand.

Mr. EVANS: What of agricultural exports from Canada?

Sir HENRY DRAYTON: My hon. friend is making an interruption which, perhaps, I shall have time to deal with later on, but not at the minute. I want to follow out in the free trade area what the real situation is, and we might as well try to get the real situation. Everybody knows that wages to-day in Great Britain are paid on a scale fixed either by trade unions, or by agreement, or by arbitration. They know that they are rates which are fixed, having at least some regard, as much regard as is possible perhaps, to the right of man, the right of the worker. Just imagine what remuneration would be to-day in England if the law of supply and demand were to operate on the labor market! What kind of pay would those who might get a job receive if the law of supply and demand were to operate in a market with a surplusage of one million two hundred thousand workers? It cannot apply at all. It is impossible to apply the principle of free trade in any country and maintain for any length of time a higher standard of living than the standard of living of your competitor. In the long run, you get down either to the standard of living of the lowest, or you will do what the Mother Country is doing to-day —you will be living to a large extent on your accumulated profits of past years.

I must apologize for the length of my remarks. They are far longer than I intended to make them, but we have had some very interesting interruptions. Might I return to the budget itself, having regard to its concrete proposals, and I am not going to detain the House very long in connection with them? There is not very much to talk about in this budget. There is a good deal of room in it for moralization . There is any amount of room for wondering how it is that, under a policy of no protection for anything which is to be used for development, production, instruments of production, we can have a protective duty on coal. There is certainly room for wondering whether it ever again could be said that the policies of the government and of the Progressive party are similar and synonymous except, of course, when the local Liberal orator is on the western platform. Can it really again be said? I had an idea that the gentlemen from the west called for free trade in coal, claiming that it was an essential of life, that it had to come in. There is some room for moralization there. There is, however, some room for hope even for this government.

Mr. HOEY: The hon. member is optimistic.

Sir HENRY DRAYTON: I agree with my hon. friend, there is very little, but I want to be fair. After all, for the first time since its

inception, this government has listened to the cry of labour. I wonder, however, if the awful conditions which prevail in Nova Scotia must prevail elsewhere before this government will do what its bounden duty is to do, to provide work for Canadian workmen. Is it to be necessary that the pain, suffering and turmoil of weeks and months must be gone through in order that that which ought to have been done long ago shall be done? If so, it is a melancholy outlook for labour in this country. The great difference between the coal worker, who is to-day to some extent recognized, and industrial workers who have already gone out of the country, is that while the latter had the money to pay for their fares and get out, the coal worker did not. That is the real difference, and if the industrial workers had not had that bit of money to get out with, we would have had to-day in the industrial towns, a repetition of what we see to-day in Nova Scotia.

Turning from the workers, I ask: Is it to be necessary that companies must have strikes of this character; should have to treat their employees in the way in which these miners have been treated in order that they may get some share of their own markets? Now that a little opening has been made, perhaps some of the light of reason may filter through, and the government, before it is entirely too late, will try to do something for Canada. In connection with the coal duty, my hon. friend does not do his act with justification. He seems to be ashamed of it. He does not submit this as a protective duty, as an increase in duty—this is just something that is going to make customs collections easier! That is all that is in the budget. I admit at once it is much easier to multiply a given sum by fifty than by fourteen, and this is easier just to that extent. What does it mean?—I think my hon. friend's figures are a little out. In 1924 our imports of slack coal from the United Kingdom were 200,427 tons. The duty on that was $20,047. Under the new tax the duty of $20,047 will become $60,165. We imported from the United States 3,823,753 odd tons, and the duty on that amounted to $535,325. That duty under the new tax becomes $1,911,876. In other words, there is an increase in the duty on American slack coal of 275 per cent, and in British slack coal of 250 per cent. The trouble with my hon. friend is that when he starts looking after somebody he does not apply any principle generally; he makes a little dab here or there in the name of suffering humanity. We imported in bituminous coal from the United Kingdom in 1924 69,399 tons on which there was a tax payment of $24,365.07, and from the United States we imported 11,544,184 tons on which there was a tax payment of $6,118,417. In the English rate of duty there is no reduction at all; it is the same now. But in the American rate, that payment of $6,118,417 will become $5,772,092 odd. In other words, there will be a reduction as regards bituminous coal of $346,325.52, as a result an increase in taxation of $1,416,668, with reductions noted making a net increase of $1,070,344.

There is another point to which I wish to refer for a moment, and that is the export of power. In my opinion the action of the government in this connection is ill-considered, and we have no statement of reasons which would enable one to come to any conclusion as to what actuated the government. I am rather afraid that the government has been moved by two things both of which I consider entirely wrong. Let me say in the first place that I am utterly and unalterably opposed to the further export of any electrical power from Canada, for it will not be so many years before we shall need it, and we know that we cannot get it back once it goes. Now, the tax in this regard appears fairly heavy, but that depends on the way you look at it. In most of the consuming centres of the United States, I think I am safe in saying, $36 a year per horse-power is considered fairly cheap, while the charge here is a mere fraction of that amount. Our rate could be doubled, trebled and quardrupled, and it would still pay the Americans in most instances to take power on that basis. But I am afraid that the government is preparing the way for an excuse which will enable it to consent to the export of power in large quantities. I would ask my hon. friend (Mr. Robb) if the government has not to-day applications for the export of power? I take it that his silence implies that I am right. It is common knowledge indeed that application has been made for an immense amount of power export, and I submit that it would be a crime against the country, under the shadow of this tupenny-ha'penny tax, having regard to present values, to allow one horse-power to leave the country. At any rate, it is something to which I am absolutely opposed. There is another angle from which we may look at the matter. Frankly, I am of the view that we should never have had any export allowed at all. But it was allowed under legislation, and rightly or wrongly the people who do business under an act that was law at one time have some right to consideration. And I submit that if anyone in this country is entitled to consideration in connection with the develop-

ment of electrical energy it is those who have developed it for themselves and given service. The Hydro Electric Commission of Ontario were obliged to enter into a contract with the American corporation that owned and controlled the development of the Niagara river on the Canadian side and which controlled the distribution of the system on the other side of the river, whereby they agreed to supply power at a very low rate. The rates in those days were absurdly low as compared with those that are now charged, and the mere fact that the hydro commission to-day has to supply power at those rates means a tremendous loss to it, a loss ranging probably from $120,000 to $180,000 a year, handling the power wholesale, and much more than that at retail. Now, the tax cannot be passed on under the contract, and this impost will simply mean an additional cost to every municipality in the province of Ontario which makes use of the Hydro Electric system. Why is this done? Is it done to injure public ownership on the one hand, or is it done, on the other hand, to facilitate the export of a whole lot of power which Canada in the comparatively near future will urgently require? I hope that the minister on giving the matter further consideration will withdraw that provision.

The minister has an interesting provision this year in connection with the dumping clause. I believe in protection, but I believe in a protection which everybody will enjoy alike; I believe in a protection which is passed upon by this House. I certainly am opposed to any measure of protection which will ask this House to abdicate its functions as a taxing power. I do not believe in a department deciding what the value shall be according to its own yardstick, and I want the minister to understand thoroughly that so far as we are concerned we want to-day to see some return to the principle of parliamentary responsibility rather than talking about it.

We ought not to have any dumping in this country; we ought not to have distress goods thrown on the public without benefit to the people. That only means that we are going to put out of business so many more Canadian workers without bringing down the general level of prices. My hon. friend is right in trying to do everything he can to prevent dumping, but I submit that the dump should be covered by some clearly expressed principle whereby this House will know what it is doing. There should not be a dumping clause enabling the valuation to be fixed by the department under regulations to be passed by the minister.

[Sir Henry Drayton.]

I apologize, Mr. Speaker, for taking up the time of the House at such length, but my task is pretty well finished. I have already spoken on the question of our debt, and I have pointed out the additions to it, as I see them. Again I point out that the addition of $100,000,000 is the only thing which can be deduced from my hon. friend's own figures and from the return of endorsements, if we are to be honest, unless we say, "We are not responsible for the railways, we are not responsible for our endorsations."

There is one other point I desire to refer to. We have debt on the one hand and taxation on the other—war taxation still going on without any reduction of our debt. We find that there is still a multiple of the sales tax which these hon. gentlemen found when they took office, and we also find that ever since their accession to power there have been heavy increases in the national debt. We find picayune taxes here, there and everywhere, nuisance taxes and the like, so that the House—

Mr. ROBB: But I would remind my hon. friend that we reduced taxes last year and took $52,000,000 less from the people.

Sir HENRY DRAYTON: My hon. friend did make some reduction, but, as I pointed out to him two days ago, the rest we got was by a slow process of strangulation; it was not got by any reductions made in taxation, it was got as a result of government policies stifling Canadian production and Canadian activities. The tax still stands. It is reductions in taxes that we want, and so that this question may be considered, Mr. Speaker, I beg to move, seconded by Mr. Baxter:

> That all the words after the word "that" be struck out and the following substituted therefor: "Conditions in Canada urgently demand reductions of taxation, especially of the sales tax and other levies which have been increased by the present government; and the House regrets that the financial statements now presented show no evidence of the economy necessary to make such reductions possible, but rather disclose an alarming increase in the public debt."

Mr. J. J. HUGHES (Kings, P.E.I.): Mr. Speaker, I believe it to be my duty to take part in this debate and to remove, so far as I can, some misconceptions and misunderstandings that seem to prevail in some quarters in regard to the trade conditions of the country as a whole and particularly in regard to trade conditions in the Maritime provinces. But before going further, I wish to make a very brief reference to the speech delivered by the hon. ex-Minister of Finance (Sir Henry Drayton) who has just taken his seat. The budget naturally contains a great

many official figures, and the hon. gentleman, while not questioning the accuracy of those figures, tried to draw from them different conclusions from those arrived at by the Acting Minister of Finance (Mr. Robb). It has been said that figures will not lie, but everybody knows that in the hands of a skilful manipulator they can be made to prove almost anything desired. The ex-Minister of Finance being a master mathematician plays very skilfully with figures and brings out some wonderful results. Still, with all his skill he did not seriously question any of the figures except those relating to the railway accounts. It must be borne in mind that two of the most prominent chartered accountants in Canada have declared over their signatures that the railway accounts as kept between the government and the railways are kept now exactly as they were kept when the hon. gentleman himself was Minister of Finance.

Mr. MEIGHEN: What difference does that make?

Mr. HUGHES: It makes a great deal of difference to the criticism of the ex-Minister of Finance.

Mr. MEIGHEN: It does not touch upon his criticism at all.

Mr. HUGHES: He had to meet that difficulty somehow, and he met it by saying he supposed he had been wrong. Well, I think I can leave that phase of the question there. The hon. gentleman seemed worried—perhaps that is too strong a word—he was concerned with the huge railway debt and with the large annual railway deficit. But is there a thinking man in Canada who is not concerned with the railway problem? If it were not for that problem we would be in a pretty good condition; we would be able to reduce considerably both the national debt and taxation. We cannot get clear of the railways. We are all demanding an up-to-date service, and we are getting it. What is the railway problem? When the hon. ex-Minister of Finance was speaking on that subject I asked him what he would suggest that the people of Canada could do to remedy the railway situation. He answered that he did not know, but that when he had the figures for the past calender year he perhaps would be able to answer the question. But surely there must be some answer to the question, and I think the government, as announced by the Minister of Railways (Mr. Graham) some days ago, has a policy that may perhaps bring results, if the heads of the two great railway systems can be brought together with the Minister of Railways and with perhaps leading business men and men of railway knowledge. Then surely some policy could be evolved that would cut out railway duplication to a very large extent, reduce railway operating costs, and at the same time give the people a sufficient railway service.

Mr. LADNER: Would the hon. member favour the Shaughnessy plan?

Mr. HUGHES. I would favour any plan that would bring results. In the early part of the session the right hon. leader of the opposition (Mr. Meighen) put a resolution on the order paper which he was very anxious to discuss before the budget would be introduced, because, I suppose, it embodies the platform upon which the Conservative party intends to go to the country at the next general election. I presume, therefore, that the right hon. gentleman would not object to having that resolution or the principles of it considered during the discussion of the budget.

Mr. MEIGHEN: Cannot give it enough consideration.

Mr. HUGHES: Because it cannot be reached in any other way during the present session. The Montreal Star stated that the ideas in the resolution were stolen or otherwise obtained from the hon. member for St. Lawrence-St. George (Mr. Marler).

Mr. MEIGHEN: I hope that will induce the hon. member to support it.

Mr. HUGHES: No, that makes no difference. If that statement on the part of the Star is correct, or even partly correct, and if this resolution is the joint production of these two hon. gentlemen, then all I have to say is that there are at least two hon. members of this House who are woefully lacking in knowledge respecting the trade conditions of the provinces on the Atlantic seaboard. As that resolution may be supposed to contain the principles of the platform upon which the Conservative party intends to go to the country at the next general election, I presume the subject matter was submitted at all events to the leaders of the party before it was adopted and published. I presume also that the hon. member for St. John and Albert (Mr. Baxter) saw it and approved of it, and if that is correct then there is a trinity of innocents abroad, as regards trade conditions in the provinces where confederation was born.

Mr. MARLER: The hon. member has made some very startling statements to this House. He has even intimated there was certain collusion in the matter to which he refers. Let me tell my hon. friend that if he made any such assertion it is wholly untrue.

Mr. JACOBS: He intimated there was theft.

Mr. HUGHES: I simply quoted a statement which appeared in the Montreal Star, a very well known newspaper in Canada. I am not sure I quoted the exact words, but I know I gave the sense of them. The Star simply stated that the ideas in the resolution which stands in the name of the right hon. leader of the opposition (Mr. Meighen) on the order paper were contributed in some way or another, by collusion or co-operation—I think co-operation would be the better word —with the hon. member for St. Lawrence-St. George. It may be altogether untrue, but if so the Star is to blame.

Mr. MARLER: I assure my hon. friend that there is no co-operation at all.

Mr. HUGHES: Then the Star is a very unreliable newspaper. I already had some idea along that line, but now I am confirmed in it.

Mr. HOEY: Perhaps they were communicated by telepathy.

Mr. MARLER: The hon. member does not understand what humour means.

Mr. HUGHES: Was the Star really making fun of my hon. friend when it made that statement?

Mr. MARLER: I think so, yes.

Mr. HUGHES: Or my two hon. friends? Then I am not acquainted with the humour of the Montreal Star.

Now, Mr. Speaker, I will take the case of Prince Edward Island, not because it is the smallest province in the Dominion, and the smallest in the Maritime provinces, but because it is the province with which naturally, I am best acquainted. All the producers in that province are farmers and fishermen. We have some professional men, some business men, and I suppose we have a few politicians. We have to sell the products of the land and the sea in the markets of the world wherever there is a demand for them; we have to take the money we get for these products and purchase in central Canada, at a price enhanced by the protective tariff, the things that we have to buy. We sell our pork products, such as bacon, ham and shoulders; also, very largely, our cheese, butter and eggs in Great Britain. We sell our fish and potatoes in the United States, in the West Indies and in Cuba. Potatoes are to us very largely what wheat is to the farmers of the prairie provinces. Our soil and climate are admirably adapted to the production of potatoes. We sell hay, grain and potatoes in Nova Scotia; we sell hay, grain, potatoes and live stock in Newfoundland. We sell our potatoes largely in the Cuban market, particularly since the Fordney tariff came into operation. That tariff being so high, half a cent a pound, it practically shut out our export to that market of low priced potatoes. Our farmers did not whine or did not come to Ottawa to look for any favours; they simply adapted themselves to the changed circumstances. The United States tariff, being a specific tariff, does not bear so heavily on the high priced article, and as there was a large demand in the United States for seed potatoes our farmers changed their method of production and produced potatoes for the markets of the southern states, where the farmers have to change their seed every year. They must change it every two years in order to get any results at all, and they must change it every year in order to get satisfactory results. It is to these markets that I have enumerated, the open markets of the world, that we have to go with our products, and as I have already said, we have to buy what we need in the markets of central Canada at an enhanced price. We cannot sell in central Canada anything that we produce, with few exceptions —perhaps a few dozen eggs occasionally in Montreal, or a few cars of potatoes in central Canada; that is all. The farmers of this part of Canada are our competitors in the small markets in St. John, New Brunswick, Halifax, the Sydneys, and particularly in St. Johns, Newfoundland. A few years ago steamers leaving Montreal for St. Johns, Newfoundland, carried hay, cattle, grain and other farm products at the same price they charged for carrying them from Charlottetown, which is about half the distance. At the present time there is a little difference in price but very little. Now we can never hope to get into this market in central Canada because the farmers in this part of Canada can supply, and more than supply, the cities and towns here, and that condition of things will remain for many, many years to come, because as the hinterlands of Ontario and Quebec are opened up for cultivation the production here will more than take care of the demand in this part of the

country. That being the case, we in the Maritime provinces having to compete with the farmers in this part of Canada, what advantage would it be to have the railway rates reduced? If the railway rates are reduced on products coming west, they must naturally be reduced on similar products going east, and the competition would be all the greater unless the local railway rates were correspondingly reduced. For these reasons protection never was, never will be, and never can be, of any advantage to the farmers and fishermen of Prince Edward Island.

Mr. MARLER: I do not see why you should base your policy for Canada on the policy for Prince Edward Island.

Mr. HUGHES: We should not treat any part unjustly.

Mr. MARLER: Treat them all fairly.

Mr. HUGHES: My hon. friend from St. Lawrence-St. George (Mr. Marler) has a policy that he calls a balanced policy, and I will have a few words to say in regard to that later on.

Mr. MARLER: You are not paying it a terrific amount of attention.

Mr. HUGHES: Well, I am very pleased at the attention my hon. friend is paying to me.

Now let me refer to Nova Scotia. The industries of that province are farming, fishing, mining, and lumbering. I do not know that I have mentioned them in the order of their importance, but that really makes no difference. Nova Scotia has, in addition, some small manufacturing industries some of which at all events I know are doing well, but which I need not mention. I do not think Nova Scotia raises enough farm products for her own use, because she buys grain, potatoes, hay and some dairy products from Prince Edward Island. I think she also buys similar products from New Brunswick, and possibly some from Quebec. Fishing is a very important industry in Nova Scotia, and Nova Scotia has a market for her fish in the United States of America, in the West Indies, in Cuba, in Porto Rico and in South America. Her fish is marketed on the open markets of the world.

A few days ago I read in the Montreal Gazette, a very respectable paper, an editorial to the effect that a market must be found in central Canada for the fruit and fish of Nova Scotia. Mr. Speaker, it is discouraging, it is distressing to read in a newspaper of the standing and respectability and supposed knowledge of the Montreal Gazette such arrant nonsense. The only fruit that Nova Scotia produces in any quantity is apples, and they are the best apples in the world probably; they are at all events excellent. She sells all her apples in Great Britain. As a matter of fact, we in the Maritime provinces import apples from Ontario. You will find apples in the markets of Nova Scotia and of the other Maritime provinces from Ontario and even from British Columbia. Yet we are told there must be a market found in central Canada for Nova Scotia apples.

We are also told that a market must be found in central Canada for Nova Scotia fish. Nova Scotia is supplying that market now. Do you know, Mr. Speaker, how much it takes of the catch of the Maritime provinces to supply the central markets of Canada? Not more than 4½ per cent. In other words, we can catch fish enough in the Maritime provinces in two weeks to supply the central Canadian market for fifty-two weeks. And yet the sapient editors of Montreal, Ottawa and Toronto papers tell us we must find a market in central Canada for fish from the Maritime provinces.

There is another commodity in Nova Scotia that is produced in large quantities, and that is coal. A few years ago the people of the Maritime provinces, and I think the people of Canada thought the coal mines of that province were an asset to that province, and perhaps to the whole of Canada, a provincial and a national asset. But a great many people are changing their minds on that subject. Coal for domestic consumption has become so dear in the Maritime provinces that it is beyond the purchasing power of many of the people in sufficient quantities to keep their houses reasonably warm in winter. It was not always so. Before the war, coal was sold on the cars at the mines in Nova Scotia at $2.90 per gross ton, which is equal to $2.60 per net ton. It has now more than doubled in price. A few days ago a representative of the mines in Nova Scotia was here, and he told us that since 1913 the rate of wages in the coal mines had increased by 92 per cent. The rate of wages and the actual wages may be two different things, but so far as the coal operators are concerned, perhaps they may be the same thing. But the salaries and other overhead expenses did not increase, or at least should not have increased in the same ratio. Therefore the increase in the cost should be less than 100 per cent; I do not know how much less but

it should be less. But, as I have already stated, coal has more than doubled in price. Coal from Nova Scotia was sold in Montreal last summer at $6 per ton. It would take between seventy and eighty cents to bring that coal to Montreal from Nova Scotia by water, we will say seventy cents a ton. Therefore the price in Nova Scotia would be $5.30. But the trade in Nova Scotia was charged $6.87 per ton on the average for the same quality of coal. Now assuming there was a fair profit on the coal sold in Montreal there would be an excess profit over the coal sold in the Maritime provinces of $1.57 or we will say $1.50. There are over one million people in the Maritime provinces, and the consumption of coal per year per head of the population there is about one ton. Therefore the people of the Maritime provinces are paying over a million and a half of dollars a year in excess profits for the support of the coal miners, and of that amount the people of Prince Edward Island are contributing about $140,000.

Mr. GOOD: May I ask my hon. friend if he has noticed the claim made by the miners in the Maritime Labour Herald that coal can be produced now at the pit mouth for a little over $3 per ton?

Mr. HUGHES: No, I have not seen the Maritime Labour Herald and I am not aware of any statement which it has made. I am giving facts here of which I have personal knowledge.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. HUGHES: Mr. Speaker, when the House rose at six o'clock, I was referring to the very high price of coal to the consumer in the Maritime provinces. I had mentioned the fact that it was costing the consumer in the provinces by the sea at least $1.50 a ton more than it was costing the consumer in Montreal and vicinity, and that this would amount to $1,500,000 to the people of the Maritimes. In other words, those engaged in the other industries of these provinces, the farmers, the fishermen and the lumbermen, who are getting no benefits whatever from the state, are paying about $1,500,000 a year for the support of the coal mines. The remedy that the leader of the opposition (Mr. Meighen) or the hon. member for St. John and Albert would suggest would be to increase the duty, to increase the price of coal, to add to the burdens of the other industries of these provinces. I know—and I may, perhaps, be reminded of it—that the present government a few days ago increased the duty on slack coal from fourteen cents to fifty cents a ton. There was an anomalous situation in regard to the duty on coal. There was no justifiable reason why there should be such a difference between the duty on slack coal and that on round or screened coal. I myself, as a free trader, would have preferred to see the duties reduced more on the round and screened coal, but most of us cannot get all we wish to have in this world. Slack coal is largely consumed in the St. Lawrence market. Many people in this part of Canada are continually crying out for more protection, and so if they get a dose of their own medicine, it will, perhaps, serve them right. They will then realize how it tastes. That is the situation in regard to duties on coal, but it is not the whole case in regard to the management. A few days ago I read in the Halifax Herald a letter from Colonel Cantley which was published in several papers in the Maritime provinces. Colonel Cantley is a well known citizen of Canada, a director of the British Empire Steel Corporation, a former director of the Nova Scotia Steel and Coal Company. He stated that the coal mines of Nova Scotia were being ruined by bad management. He stated that when the Nova Scotia Steel and Coal Company joined the British Empire Steel Corporation, they had surplus liquid assets amounting to $9,000,000, and that large surplus had disappeared in a few years. He stated further that those connected with the Nova Scotia Steel and Coal Company, who were instrumental in promoting the merger, had obtained lucrative positions in the merger, and he made other statements which I will not mention because I wish to let the officials of the British Empire Steel Corporation wash their own linen. He further stated that transportation and tariff conditions existing at the time the letter was written would be sufficient to enable the Nova Scotia Steel and Coal Company, if it could obtain a separate existence again, to take its place as a prosperous and a dividend paying enterprise. The fact of the matter, if we look at the whole situation, is that the coal mines of Nova Scotia under the present management, instead of being a provincial and national asset, have become a provincial and national liability. Moreover, they have become a festering sore on the body politic and the body commercial, and this sore must

be lanced to the bone and the bone scraped if necessary. If by reason of the physical formation of the coal mines of Nova Scotia, or if for any other natural reason they are not able to produce coal at a profit without state subvention, then it would be better, in my opinion, to forget that we have coal mines in Nova Scotia. If as Colonel Cantley suggests, a good part of the trouble is due to incapable management or worse, the remedy is obvious, but the state should not be called upon to make good the losses. The sooner all the industries of this country are given to understand that they must begin to stand and walk on their own feet, the better it will be for the Dominion of Canada.

Let me say a word or two about New Brunswick, and I speak with modesty in the presence of members from that province, and from Nova Scotia. I speak also subject to correction by those hon. members. The industries of New Brunswick, and all the conditions in that province, are similar to those in the two sister provinces. Farming I suppose is the chief industry in New Brunswick, I presume that lumbering comes next and then fishing. The people of New Brunswick have to sell their products just where the two sister provinces must sell theirs, and the same market and the same conditions largely prevail throughout these three eastern sections of the Dominion. The people of New Brunswick must sell the products of their lumbering industry, which is a very large business, either in Great Britain or in the United States in competition with the rest of the world. They sell a little in Prince Edward Island and perhaps a small quantity in the province of Quebec. But although all the industries of that province must meet the competition of the world, the people are obliged, as we are obliged, to go to the central provinces and buy what they need in the way of boots, shoes, clothing, farm implements, furniture, shelf hardware and numerous other necessities at prices enhanced by the protective tariff. And in the face of all this we heard this afternoon from the ex-Minister of Finance (Sir Henry Drayton) a speech in which he moved a resolution in accordance with a motion now on the order paper standing in the name of the leader of the opposition to the effect that what the country needs is more protection. He advises us to increase the price of everything that the people must buy and so increase their burden; in other words, he wants us to tax the whole of the people for the benefit of some of the people.

Now what are the wrongs of the Maritime provinces about which we have heard so much lately? I have read everything I could find on the subject but I have not yet seen a list of those wrongs nor any definite concrete proposal for their cure. The Conservative papers that feature these wrongs generally wind up with a statement something like this—"Everybody knows what our wrongs are, or they are well known at Ottawa, and a remedy must be found". It is generally supposed that, if more imports came in through Maritime province ports and if more exports went through them, the provinces on the Atlantic would be benefited in consequence. Well, there is no doubt about the fact that the cities of St. John and Halifax would be benefited by such through traffic, but such through traffic would not bring any great advantage to the Maritime provinces as a whole. I do not want for a moment to minimize the advantages of such trade, but I do not want our people to be disappointed at the result nor do I want anyone to think that this particular proposal will remove all our troubles. As a matter of fact the government more than two years ago introduced a resolution the adoption of which resulted in over 99 per cent of the imports under the British preference coming through Canadian ports. The delegation that came here from the Maritimes a few weeks ago requesting such legislation were surprised to find that the government more than two years previously had anticipated their wishes. Their want of knowledge is not to be wondered at when we remember that the hon. member for St. John and Albert, the Conservative leader from the Maritimes, when speaking on the Address called upon the government in tones of thunder to wake up and do something for the Maritime provinces. The hon. gentleman seemed to be oblivious of the fact that it was he who had been asleep in the cave with Rip Van Winkle, because the legislation he was asking for and so vehemently demanding had been passed two years previously. The delegation while it was here passed a resolution asking the governments to equip the ports east and west to take care of Canadian exports and imports. Well, the present government has certainly done a good deal in that direction; in fact, it is sometimes criticized for doing so much for the large places as to be unable to take care of the smaller ones. I want to point out the significant fact that the resolution which the delegation presented to the government was almost a copy of a paragraph in the Speech from the Throne which had been read to parliament some time before and

which was an outline of the policy the government intended to follow. Yet the leader of the opposition in criticizing the Speech from the Throne declared it to be nearly all water, the rest of it being indigestible, while the Conservative leader from the Maritime provinces was of the opinion that it contained only a few scrappy sentences which nobody could understand: he thought it should have contained a policy suitable to all Canada. But the Maritime delegation thought so much of the Speech that they copied it when preparing a resolution which in their opinion would be a policy suitable for the whole country. That was a cruel reply to the national leader and the Maritime leader of the Conservative party.

Let us for a moment consider the wrongs of the Maritime provinces which are now receiving so much attention, and let us see if we can what they are, and when and how they originated, and how they can be cured. If we can diagnose the case correctly the cure will almost suggest itself; and I will venture this assertion that there is not an intelligent, thoughtful honest man in the Maritime provinces—

Some hon. MEMBERS: Oh, oh.

Mr. HUGHES: Wait a moment. There is not an intelligent, thoughtful, honest man in the Dominion of Canada who will now say that, if the people of the Maritime provinces had been told in 1864, in 1865 or in 1866 that within a few years after their entry into the confederation pact the customs duties would be doubled and trebled, confederation would have taken place. Therefore the introduction of the so-called and the miscalled National Policy was the beginning of the wrongs of the Maritime provinces.

Mr. MEIGHEN: Is the hon. gentleman complaining about the trebling of the coal duties?

Mr. HUGHES: I have stated what I thought of the coal duties.

Mr. MEIGHEN: I did not catch that.

Mr. HUGHES: Had the hon. gentleman been paying attention he would have heard what I said in that regard, and I do not intend to repeat myself.

Mr. LOGAN: Coal is only on revenue tariff basis now.

Mr. HUGHES: The question may be asked, if my statement is correct, why did your people not show greater opposition to the introduction of the National Policy? And that question is a fair one. My reply is that we were cajoled, we were deceived, we believed the statements that were made to us. We were told that the intention was to support the infant industries, the idea being that when the infants grew to manhood, which would be only in a few years' time, they would more than pay us for all that they had cost us. We were told also that the introduction of this policy would develop the central provinces and that we in the east would find a market in those provinces for all that we produced. That idea has been held up so often. The golden fleece was just behind the western horizon, it was almost within our reach; but we were finally told that the National Policy would be only a weapon, and a strong weapon, to obtain within a few years reciprocity with the United States. Our people knew how they had prospered under that agreement between 1854 and 1866, and they were willing to undergo almost any temporary loss and disadvantage if thereby they might obtain that great boon. We know now to our sorrow that there was not a particle of honesty or sincerity in those promises, and I fear the "old party" is pursuing a similar course to-day.

You may ask me, Mr. Speaker, why it is that it is only within recent years that we have come to emphasize our wrongs so much. I will try to tell you. Before the war Europe was in a position to buy many of our products and pay good prices for them, and a high tariff had not made it so difficult for us to trade with the United States. The war changed everything. Europe could no longer buy in anything like the same quantity or pay the same prices for our products, and the Fordney tariff had made it more difficult for us to trade with the United States. In addition to that, the war had left us a colossal debt and a terrible load of taxation. All these burdens were thrown upon us at once, we could not carry them all, and we cried out in our agony. Before the war we could carry the burden of protection and live; after the war we cannot carry all these burdens and live. That is the condition in the Maritime provinces. Will anybody say that a cure or a remedy for this condition of things is more protection—higher taxation—an increased burden? Well, yes, there are some men who would say that—and they are credited with sanity and good intentions!

Now, what can the government do to help us? Not very much. I am one of those who do not believe that governments can help the people very much in trade matters.

I think the greatest help the government could give to the people of Canada would be to leave them alone largely and let them trade as and how it appears to themselves proper. The government can do very little to restore the markets of Europe. I think perhaps they are trying to do something in that direction now, and I hope they will succeed. Perhaps the government can do something, perhaps they can do nothing, to bring about better trading arrangements with the United States. I know the government would be willing to do anything and everything in their power to that end. The government can possibly do something to bring about better trading arrangements with the British West Indies and Cuba. They have that matter under consideration, I believe they will do everything in their power to effect that betterment, and I think that already they have made some progress.

There is one thing more the government can do: they can remove or reduce the protective tariff. It should be brought back to something like what it was when we entered confederation. But there are lions in the path, there are many difficulties that will be hard to overcome. The selfish and protected interests will not give up their special privileges without a struggle, and they are a power in this country. In this part of Canada the population is dense compared with other parts, capital is concentrated, organization is easy, and the wells of information can be poisoned at their source. I think it was Lincoln who said that his country could not continue to exist half slave and half free. In my opinion our country cannot continue to exist half slave and half free, and economic and commercial slavery is as bad as, and sometimes worse than, physical slavery. But, we are told protection has greatly benefited central Canada. Perhaps it has, although I have my own opinion about that. I sincerely believe that protection is the fruitful mother of inflation and deflation. It attracts capital and labour to some industries that could not exist on their own merits. This artificial stimulation makes for overproduction, glutting of markets, deflation of prices, stoppage of work and unemployment. Then comes a demand for more protection —larger doses of the medicine that produced the trouble! But let us admit for argument's sake that protection actually benefits Ontario and western Quebec. If it does, then I say in the name of all reason and fair play why should not the communities that receive the benefit pay the price? There are many ways in which this could be done. The municipalities that wish could remit local taxation and bonus industry. The provinces could do the same thing. This in my judgment would be fair and equitable.

Now I want to refer once more, and in a friendly way I hope, to my hon. friend from St. Lawrence-St. George (Mr. Marler). He has what he calls a balanced policy; and the Montreal Gazette and the Montreal Star praise it highly. To me it appears to be largely in accordance with the resolution on the order paper standing in the name of the leader of the opposition (Mr. Meighen).

Mr. MARLER: Not entirely.

Mr. HUGHES: Then perhaps it is a better policy?

Mr. MARLER: A much better policy.

Mr. HUGHES: All right. I think it corresponds to some extent with the speech made by the hon. ex-Minister of Finance (Sir Henry Drayton) this afternoon.

Mr. MARLER: My hon. friend has not read my address on the subject.

Mr. HUGHES: Well, Mr. Speaker, this is called a "scientific tariff". I suppose it would be a sort of jack-pot by which everybody would get out exactly what he put in. Such a tariff can be conceived as a picture in the mind, but I venture the statement that it would be beyond the power and wit of man to devise and operate any such tariff policy; I go further, I think it would be beyond the power of angels. But supposing such a tariff were devised and operated, what good would it do? When everybody was through would he not be just where he started? Well, he would not be exactly where he started; he would be out at least the cost of devising and operating the thing. I read a few days ago in Le Soleil an article which brings out the idea that I have been trying to present to the House, very much better than I am able to do it. The article reads, in part, as follows:

> To be worthy of the name, protection as a policy ought to be applied to the interests and well-being of society as a whole and not to the interests of the few. It ought to embrace all the professions, and all who fall within the categories of commerce, wholesale and retail; of all workers, whether they are engaged in stores or offices; of all women and children for whom the necessities of life are procured—provisions and clothing. In a word, protection ought to be for all classes of society. This provides a problem which cannot be solved in modifications of the tariffs of one kind and another, however important they may be.

In other words, protection to be fair, is an impossibility. We have heard it stated

on the other side of the House, particularly by the hon. member for Vancouver Centre (Mr. Stevens), the hon. member for Fort William and Rainy River (Mr. Manion) and several other hon. members, that Canadians cannot compete with the pauper labour and the inflated currencies of Europe, nor can they compete with the mass production of the United States.

Mr. STEVENS: May I just correct my hon. friend slightly? We say—at least I say—that Canadian labour should not be asked to compete with the low standard of living and the depreciated currency of Europe.

Mr. HUGHES: Canadian labour—

Mr. STEVENS: Should not be asked to compete. I do not say that Canadian labour has not the ability, but I say they should not be asked to compete with the low standard of living in Europe.

Mr. HUGHES: Well, "Canadian labour" is a very wide term. Most of us are labourers. If we cannot compete with the pauper labour of Europe or with the mass production of the United States, who in the world are we going to compete with?

Mr. MANION: Compete with each other; compete with our own producers, as is done in Germany, the United States and other protected countries of the world.

Mr. HUGHES: There is a people to the north of us called the Eskimos. I think we could compete with those fellows.

Mr. MANION: My hon. friend could, anyway.

Mr. HUGHES: We could stand up to that bunch and tell them to do their worst.

Mr. CARROLL: Not in the winter time.

Mr. HUGHES: Well, I will venture to say that the statement is not true. The people of the Maritime and prairie provinces are competing with the world in what they produce, and the people of the central provinces or of this part of Canada are not so helpless and so useless as their hopeless friends in this House would make us believe. Why, it was only last session that the hon. member for Brantford (Mr. Raymond) in eloquent and classical language, told us that the manufactured products of that city were to be found in every country of the civilized world. He told us they were to be found on the sunny slopes and the waving grain fields of the Argentine; on the fertile veldts of South Africa; in the intensively cultivated countries of Europe. They were even to be found in the republic to the south of us. Only a few days ago I saw it stated in an authoritative publication—I think it was the prospectus of a company—that in every country of the world where the saw milling industry was carried on the machinery of the Waterous Engine Works of Brantford was to be found. Now, what the people of Brantford can do surely other cities and towns in Canada can do.

Mr. MANION: Would my hon. friend permit me just a remark? I would like him, if he would, to ask the hon. member for Brantford (Mr. Raymond) at the first opportunity what the conditions are now in that city. I am told they are worse in Brantford than in any other city in Canada.

Mr. HUGHES: That was not the condition last year.

Mr. MANION: But there has been another year of this government since.

Mr. HUGHES: There is an industry in this part of Canada engaged in the manufacture of cream separators and dairy utensils. It is not protected at all, and I am credibly informed that it is the only industry in this part of the country that is running night and day. It sells its products in the United States. It has learned to stand on its own feet; it has learned to develop its business without depending on the state; and what that industry has done and other industries in central Canada have done I think the whole of them or most of them might do. But the conditions in central Canada are not what the hon. member for Fort William and Rainy River (Mr. Manion) would have us believe. The manufacturers of Canada are not in the deplorable condition that has been suggested. At least they appear to be making good progress, because the trade returns tell us that fifteen years ago, of the total exports of Canada sixty-three per cent were raw materials and that the manufactured and partly manufactured comprised only thirty seven per cent, whereas last year the raw materials exported were only forty-three per cent while the manufactured and partly manufactured rose to fifty-seven per cent. So the manufacturers seem to be holding their own and doing as well as other people. Our exports of manufactured and partly manufactured goods, which in 1922 amounted to $303,000,000, rose in 1923 to $364,000,000 and in 1924 to $415,000,000, and at the same time the imports of manufactured and semi-manufactured goods have steadily declined.

This goes far to prove that the manufacturers are well able to export increasingly large quantities of their products and at the same time to take care of the home market to a greater extent every year. Why, then, should there be such a demand for higher protection, which means heavier burdens upon all the people and particularly upon the people in the farming, fishing and lumbering districts; particularly upon the people in the Maritime provinces? Has the time not arrived when these burdens should be removed or reduced?

A few weeks ago I read in the Ottawa Journal an article which expressed great sympathy for the grievances of the Maritime provinces, but it wound up by telling us that we must not lean too heavily on the railways or on the people of the central provinces. Now, I desire to tell the esteemed Journal that the people of the Maritime provinces do not want to lean upon anybody or anything. If the Journal will get its friends to stop leaning on us, we will be delighted to call the leaning business off, and let by-gones be by-gones.

We are sometimes asked to look at the great prosperity and development in the United States that followed the Civil War, and the protectionists say that such prosperity is due to the policy of protection. There could be no greater fallacy, and he must be a shallow thinker who believes any such thing. The United States is prosperous in spite of protection, not because of it. It is prosperous because of its geographical position and formation, because it is a compact, self-contained, and self-sufficient nation, producing within itself everything, or nearly everything, necessary for man's use and benefit, and principally because it is the largest free trade area in the world. Free trade among the states of the American union is equal to and perhaps more than equal to what free trade would be in Europe. There is no other country in the world where protection can do less harm than in the United States, and per contra, owing to our geographical position and formation, there is no other country in the world where protection can do so much harm as in the Dominion of Canada. Protection, in this country, is bound to be sectional in its effects, and is bound to give rise to deep-seated unrest and dissatisfaction. When the delegation from the Maritime provinces was here a short time ago, Mayor Murphy of Halifax was the spokesman, and I want to call your attention, Mr. Speaker, to a statement he made. The language of that statement is guarded, perhaps diplomatic, but there is no doubt about its meaning. Here it is:—

> Privileged as I am to speak for the city of Halifax and the province of Nova Scotia, I do not hesitate to say that there is a gathering opinion there that conditions cannot longer continue; and that if after proper study at the hands of those entrusted to investigate the situation from every angle, it is found, for geographical or other reasons, that we cannot be made a prosperous partner of the Dominion under our present fiscal arrangements, then no objection can be raised or ill-will incurred it we, as a matter of self-preservation, ask that we be permitted to deal with whatever markets we can, relieved of the restrictions which now surround us in this regard.

In other words, they asked for the privilege of buying in the markets where we are obliged to sell without being penalized by high customs duties when we buy in those markets. We would rather trade with our brothers of Canada if we could do it, but we cannot. They simply cannot buy what we produce, and as I have already said, we have therefore to go to the markets of the world and sell what products we have at any price we can get, take what we receive for it, and then go to the markets of central Canada and buy what we want. We are obliged by legislation to do that.

Mr. GOOD: Is secession the remedy?

Mr. HUGHES: I think I will pass that over. I want to call your attention, Mr. Speaker, to the fact that this statement of Mayor Murphy was tumultuously applauded by the whole delegation, and it means that if protection is to be the policy of Canada, the Maritime provinces will insist on being allowed to buy where they are obliged to sell without being penalized by high customs duties when they do so. Another delegate mentioned the word secession, and the Prime Minister sternly rebuked the idea. Perhaps it was his duty to do so, but the Prime Minister is too intelligent a man, and too good a sociologist, not to know that rebuking an effect will not likely either remove or cure the cause; as a matter of fact, perhaps open discussion would be a good safety valve; the removal of the cause would, of course, be better.

I will give you, Mr. Speaker, and the House my opinion of the situation, and it is this: If the Conservative party should be victorious in the next general election, which is not likely, but if the selfish interests and trade restrictionists of central Canada should organize and use the devices that are sometimes employed in elections, and if the major portion of the press should be so short-sighted or so selfish, or so approachable, as to lend its aid, and if when elected the party

should carry out its promises and give the tariff screw a few turns upwards, in my opinion the end of confederation would be in sight. The prairie provinces would not, in my opinion, stand for it, and the Maritimes could not.

The emigration that is now taking place from the provinces fronting on the Atlantic, which is all too large, would then become an exodus. The stream that is now a rivulet would then become a river, because all hope would be abandoned. I will therefore appeal to my fellow-countrymen in this part of Canada to consider the situation carefully before deciding to make permanent a policy of injustice upon other parts of Canada.

The men who introduced the so-called National Policy may have been sincere and honest in their day, but we know now that they were mistaken, and if confederation ever comes to an end the introduction of the National Policy was the first step in that direction. The second step, and a very long step, was the rejection of the reciprocity agreement in 1911. That was a crime against the people of the North American continent; it was a greater crime against the people of Canada, and a still greater crime against the people of the Maritime provinces. It was an utter denial and repudiation of all the Tory promises, pledges and professions of the previous thirty odd years, and the means employed to win that election were as vicious as the end was bad, and should therefore never be forgiven by the people of Canada.

To be condemned to wander in the wilderness for forty times forty years would not be sufficient punishment for the great betrayal of 1911.

Mr. ROBERT FORKE (Brandon): Mr Speaker, in commencing the few remarks that I propose to make, I would like first of all to express my regret at the absence of the right hon. Minister of Finance (Mr Fielding). I am sure we are all sorry that he is not able to be back with us and take his accustomed place beside the Prime Minister on the other side of the House.

I have listened with a great deal of attention and pleasure to the speech that has been made by the hon. member who has just taken his seat (Mr. Hughes), and I think perhaps he has relieved me of some of the remarks I would have made along the lines of protection and low tariffs or free trade.

I also want to call attention to some remarks that were made this afternoon by the ex-Minister of Finance (Sir Henry Drayton), who I am sorry is not in his place, in connection with France and the condition that country finds herself in to-day. It struck me while he was speaking that if he thought seriously and just realized what the world conditions have been during the last few years he might perhaps see some relation between those conditions and the policy which he advocates—the policy of high protection, of one country building up high barriers against trade with another country. Everyone, I think, who has studied the causes of war and what leads to war, will acknowledge that it has a great deal to do with what may be called trade influences; and just as long as we have economic warfare between the nations of the world just so long will there be danger of actual warfare. But once people begin to trade with each other, once there is an exchange of commerce between one nation and another, an atmosphere of good will is created and the chances of war are very much diminished. That is about all I have to say in connection with the remarks that were made by the ex-Minister of Finance. Those remarks were a repetition of the arguments that we listen to here, day by day, month by month, as to what we should do to remedy existing conditions—just a little more protection, we are told, and everything will be lovely—everything will be all right. I am surprised at the barrenness of the suggestions that are being made from that part of the House.

Now, I want to say a few words in regard to the budget that was brought down by the hon Acting Minister of Finance (Mr. Robb) the other day. I think, perhaps, that budget reflected to some extent the conditions that exist in the country at the present time. Things are not very satisfactory. We have not progressed just as rapidly as we would have liked during the past year. The budget, upon the face of it, bears the impress that things are not very satisfactory; and I think in commencing that I might characterize the budget as I have seen it characterized in the press—as a stand-pat budget, adopting the position "just as you were" and really leaving us in exactly the same position in which we found ourselves at the commencement of the year—no progress, nothing changed, we are left in the exact position we have been in during the last twelve months. I am sure that the position of the country has been emphasized quite sufficiently by hon. members to my right. Sometimes I am surprised that they have so little faith in the capabilities of the people of Canada and in the country itself. I for one am not prepared to say that things are satisfactory—far from it—but I

do not for a moment suppose that they are quite as bad as we are continually hearing; unemployment everywhere and nothing but destitution and want in this great Dominion of Canada. I am quite prepared to admit that things might be better, but conditions are certainly not as bad as they are depicted by some of the members sitting to my right who have spoken this session. I agree with the hon. member for Kings (Mr. Hughes) that even in Brantford to-day conditions are not so deplorable as they are represented to be. I think the Prime Minister in his speech on the Address, at the beginning of the session, made the statement that things were better in Brantford than they had been for a number of years, and he also pointed out that the duties upon farm implements had been reduced. When we take that into consideration, and when we find that industries have been benefited by a reduction in the duties upon the implements which they produce, I am sure there should be no hesitation in travelling further along that line.

I also want to say, Mr. Speaker, that the financial statement given to the House does not reflect exactly and faithfully the conditions of the country at the present time, nor our financial standing either. First, I wish to say a few words in regard to the different methods of book-keeping that are practised by successive governments. Let me explain that in discussing this matter I speak as a plain man who has no knowledge of accounting; but it does seem to me that there should be no difficulty in the government making up the accounts in such a way that at the end of the year, the ordinary man, the man in the street, who after all represents the great majority of the people of this country, should be able to form some idea, a correct idea, as to the national finances. We had the spectacle here the other day of the Acting Minister of Finance presenting a statement purporting to show what the finances of the country actually were, and almost immediately afterward the ex-Minister of Finance getting up in his place and stating conclusions directly the opposite. If we have that conflict in the House of Commons what will the situation be out in the country? How are the ordinary people of Canada going to know whether we have a surplus or a deficit as a result of last year's administration of the country? I think, Mr. Speaker, that these positions are intentionally assumed. It is done for a purpose; one side wants to make things look just a little better than they are, and the other side wishes to represent them as just a little worse than they appear to be.

Mr. ROBB: My hon. friend will at least give us credit for having taken less money from the people, fifty-two millions less money.

Mr. FORKE: I am not going to do any injustice to the Acting Minister of Finance, or even to his critic, in saying that the statements they made were not true.

9 p.m. I have no doubt that what both gentlemen said was true; but they have such a way of manipulating figures and presenting them, putting them in different places and under different headings, that the result is to confuse the ordinary man; and when these gentlemen make their statements the ordinary man on the street, as I have already said, is no wiser than he was before.

Mr. JACOBS: Will the hon. gentleman tell us what the right figures are?

Mr. FORKE: Well, I am going to try and give you a few of the conclusions I have come to. I have already said that I have not much knowledge of accounting, but I have endeavoured to draw what inferences I could from the statements that were made in the House the other day.

Before going any further let me say that I noticed that the only thing which had brought an increase to the revenue of the country was the income tax, and we are told there has been an increase in the revenue from that source of $2,350,000. I wonder what that means; I am rather surprised at it. We are told that the country has not been prosperous, that we have not been travelling along the lines of progress just as rapidly as we would have liked to go, and on the other hand we are informed that the revenue from income tax is increasing.

Some hon. MEMBERS: Hear, hear.

Mr. FORKE: Hon. members may applaud but I should like to know the reason for this. We had no explanation from the Acting Minister of Finance when he brought the budget down; perhaps we will get it at some time in the future.

Mr. CARROLL: The country is more prosperous.

Mr. FORKE: Is it more prosperous? I hope it is true but I "hae ma doots" as they say in Scotland. There are several possible explanations. It may be that the wealth of the country is getting into fewer hands, that there is more wealth and also more poverty in Canada—that may be the explanation of the increased revenue from income tax. If that is true the fact is to be deplored; we do not want that condition

in Canada. I have often made the statement in this House that I believe the policy that we have adopted is leading towards that condition—that we will have wealthy people and that we will also have poverty. What we want in Canada is moderate wealth widely distributed and a large population fairly well-to-do; that is the condition that I would like to see prevail in this country. However, I should like at some time to get an explanation from the Acting Minister of Finance as to what he thinks is the reason that more income tax is being paid in Canada under present conditions than was paid in previous years. It is undoubtedly true that the people of Canada to-day are very much concerned about the magnitude of our national indebtedness. There is no denying that fact. On the street, on railway trains, everywhere you go, you will find people expressing anxiety about our indebtedness and inquiring where this is going to lead us. There must be a stop put to excessive public expenditure some day; we cannot go on year by year adding to our national debt. There must be a turning around, or it does not require a prophet to see that some day in the future this will be disastrous. We are continually hearing about economy. I am almost afraid to mention the word in this House because it is so often mentioned, but I sometimes think that governments, very much like individuals, acquire the spending habit and they cannot get out of it. Consequently we go on year after year very much as we have been doing in the past.

As regards the financial statement, the minister claims a surplus of $5,823,162 for the year ending March 31 next. Included in this is $4,000,162 of accrued interest on Greek and Roumanian loans that have now been transferred from an unsecured to a secured footing. Does the minister claim that we have any more money now than we had before, that anything has come into the treasury by transferring this amount from one account to another? That is all it amounts to. The security may, perhaps, be a little better, but it is a stretch of the imagination to put down $4,000,162 as an increase in the revenues of the country during the year that is past and gone. I cannot understand that system of financing; but, as I said before, I am a plain man who does not know much about accounting, and perhaps there may be some other explanation. If we subtract this amount from the $5,823,162, it will still leave a surplus of $1,820,000. After all, this is rather a creditable showing. I know it was anticipated throughout the country that there was going to be a deficit. Everyone was looking for a deficit. I heard it on the street; I saw it in the newspapers, and now the Acting Minister of Finance comes down with a statement that we have a surplus of $1,820,000. That was, indeed, a very pleasing surprise, and I was delighted to hear members on the other side applaud when that statement was made. I wonder if this is true, and this is where I get into trouble again in trying to understand something of the finances of the country. I noticed, after the Acting Minister of Finance had spoken for some time and read a few more items, it came out something like this that we almost had a deficit of $13,000,000. I am unable just to understand this. The ex-Minister of Finance, after making a careful survey, had it this way, that our expenditure was $360,000,000 and the receipts for the year were $344,000,000, and he figured out a deficit of $16,204,000 on the year's proceedings. How is an ordinary man to understand exactly where we stand when we find the two financial authorities in this House so completely disagreeing in regard to conditions as they are?

There is another item to which I would like to call the attention of the House. The estimates for the year 1924-25 were given as $329,086,305.97. The minister states that the expenditures, when the year closes on March 31, will amount to $319,000,000. There is a difference of $10,000,000 between what the expenditures will be and what the estimated expenditure was at the beginning of the year. This is very interesting—a saving of $10,000,000. The government estimated that our expenditure in round figures would be $329,000,000, and now we find they are going to get through with $319,000,000. I hope the minister will give us some explanation how this $10,000,000 has been saved because, if he does, we shall get some lessons in economy. The government must have been practising economy when they got through with so much less than they expected to spend after a careful estimate of expenditures at the beginning of the year. If it should turn out that our expenditure at the end of the year was anything like as large as the estimated expenditure at the beginning of the year, we would have a deficit of about $7,000,000 instead of a surplus of $5,000,000. These are some of the difficulties that I have met in trying to understand the budget statement that was brought down the other day.

There were expenditures in connection with the Canadian National Railways. During the year the government guaranteed bonds of the Canadian National to the amount of $81,-

000,000 and the total obligations for the year amounted to apparently something like $118,000,000. These may be called contingent liabilities—that is the term used by the minister—not a direct liability of the country. But who owns the Canadian National Railways? The people own them and the debt of the Canadian National Railways is a debt that the people of Canada must pay some day. That is a fact that I feel no great pleasure in stating, but I do not see any use in trying to blind ourselves as to the facts. We may as well face them and see what our present financial condition is and try to remedy this state of affairs. That is about all I have to say at the present time in connection with the finances of the country. In commencing, I said that I was a plain man, not very well posted in regard to finances or accounting, but these are some of the deductions that I have drawn from the statement made by the Acting Minister of Finance. I hope they may be more favourable but these are what I believe to be the facts of the case.

In connection with the Canadian National Railways, there is a suggestion which I would like to make at this time. It is not original; it has been stated in this House before. I believe it would be in the interest of all concerned if the capitalization of these railways were written down to their actual physical value. I see no good purpose being served by carrying them on at a fictitious capitalization. It is discouraging to the management; it gives a false impression, and if the capitalization were written down, we would be in a position to know exactly the capabilities of our National railways. If the amount was reduced, it is quite possible that in a few years the fixed charges of $40,000,000 may be met by these railways. We all look with hope to the future, and expect the day will not be far distant when these railways, instead of being a liability, will be an asset to the Dominion of Canada. We have in this country two railways that, I think, we may be proud of in some respects. We have a good system in the Canadian National Railways. I hope all of us are proud of the Canadian Pacific. I would not for one moment have the idea go out that any of the members of this House had any hostility to the Canadian Pacific. Its progress, its prosperity, its welfare is as essential to the country as that of the Canadian National. It would be a catastrophe, a calamity, should anything happen to the Canadian Pacific Railway, but there are some suggestions that might be handed out to the managements of both these railways. This also is not original, but it would be a good idea if someone could get the ear of President Beatty of the Canadian Pacific and the ear of Sir Henry Thornton of the Canadian National Railways and intimate to them that it is time they were getting together and cutting down some of the extra expenses that are incurred through duplication of services on these two railways. This idea that these two railways have to continue cutting each other's throats, trying the one to beat the other in getting traffic and all that sort of thing, will not get us out of the dilemma in which we are to-day. I am certain that a great deal of saving, of economy, could be effected were the managements of these two railways to work together harmoniously to this end. I think the Canadian Pacific Railway would be quite agreeable. I am sure they are anxious to make as profitable a showing as possible and I think that both railways as well as the country would be benefited by some arrangement of this kind. If this could not be done then I should be inclined to pay some attention to the suggestion offered by the hon. member for South York (Mr. Maclean) that there should be an amalgamation of the two railways. This may look like a dream to-day but I want to tell the House that there have been suggestions made by the hon. member for South York in days gone by which, however visionary they appeared then, later became realities. It is therefore not without the bounds of possibility that the suggestion he makes in this regard may be an accomplished fact some day. One thing is certain, and that is that we cannot go on as we are doing at present. It has been suggested sometimes that the remedy lies in an increased population which would provide greater traffic for the railways. That is one solution. But it seems to me that the railways could be more economically operated than they are at the present time. At any rate the condition is serious and drastic remedies are needed; and the opponents of government ownership can get no satisfaction out of things as they stand now. Even if we sold the Canadian National railways, does anyone think for a moment that anybody would buy them at their present capitalization? They would be sold at their physical value and the country would still have to bear the burden in connection with that overcapitalization; it would have to pay the interest that accrues on the bonds that were sold to build them. So that private ownership will not relieve us from any of our difficulties in that respect.

I want to say a few words now in regard to the tariff. I think that the hon. member for Kings (Mr. Hughes) has possibly voiced a great many of the sentiments that I might express myself, and I question whether any of us could say very much on the matter that is new. This question has been debated so often from every angle that perhaps my own views have already been well expressed. However, I shall offer a few remarks in this regard. I have in my hand some correspondence between the Minister of Trade and Commerce (Mr. Low) and Mr. H. G. Nickerson, of Prince Rupert, British Columbia. This correspondence relates to the purchasing of cement. There is apparently a regulation in the Department of Trade and Commerce which provides that where a firm tenders to sell cement and an opposing company outside Canada also tenders, even under more favourable conditions, the final decision of the matter shall rest in the hands of the Minister of Trade and Commerce. He has the last say as to what the specification shall be and what kind of cement shall be used in the erection of any buildings or dry docks, as I suppose it was in this case. I do not intend to read the correspondence, which possibly will be referred to during the debate, but it goes to show that a very large saving could have been effected in the purchase of this cement had it been obtained from either England or Belgium, and it would have been of the very same quality as the Canada Cement Company was supplying. But these other tenders were not allowed; they were ruled out of the specifications. This kind of thing cannot continue. When a cement company in this country gets a duty of 8 cents per sack on its product it should at least be content with that degree of protection and should then be prepared to take its chance without other interference from the department or from any other source. I have mentioned this matter only in passing; the facts of the case are before us and I have all the correspondence between the minister and the company who seem to think they have some reason for complaint.

It was hoped, at least in this quarter of the House, that the present budget would show reductions on the necessities of life for the masses of the people. That I think was emphasized several times in this House last year. It was pointed out that while we were thankful for a reduction on implements of production we were even more anxious to see some reduction on the necessities of life for the great masses of the people, and we had expected that something would be done along that line during the present session. With the permission of the House I am going to quote a few extracts from some of the speeches made by the Prime Minister (Mr. Mackenzie King) in 1921. Some of these extracts I have taken from Hansard. For example, the Prime Minister declared that the guiding principle of his party would be to increase production and thus decrease the cost of living, keeping in view not only producers but consumers. On October 7, speaking at Halifax, as reported in the Halifax Chronicle, he said:

> On the implements of production, and on the necessaries of life the tariff should bear lightly. The home and its needs will be our first consideration in revising the tariff.

On March 13 at Moncton, as reported in the Daily Times, he said:

> Reduction of the duty on implements of production was vitally important, as was also reduction as far as possible of the taxes on necessities of life and the needs of the home.

At St. John as reported in the St. John Times he said:

> The tax on necessities of life should be light. Along those lines the Liberals proposed to revise the tariff.

I come now to Ontario. Speaking at Sarnia he said, according to the Times of November 2:

> The implements of production should be taxed as lightly as possible. The same applies to certain classes of necessities of life, food, clothing, etcetera, and the masses of the people should not be overtaxed on cost of food, clothing and other necessities.

At Sudbury he spoke along the same line. He advocated the removal of taxation as far as possible from implements of production, and he said that the necessaries of life must also be freed of taxation to the greatest possible extent. At Port Arthur he declared that the Liberal party stood for downward revision of the tariff, to bear lightly on necessities of life and implements of production.

At Pembroke, Gananoque, Calgary, Edmonton and numerous other places the Prime Minister stressed the fact that it was necessary to reduce taxation on the necessities of life. Now the cost of living has not been reduced. Will any hon. member say to-day that the cost of living in Canada is lower than it has been all along? It is not. And as I have frequently stated, Canada is one of the dearest countries in the world to live in. That is one of the sources of our trouble; it is the cause of depression in trade and business so prevalent now. I have declared time and time again that the cost of living is so high that the high wages that must be paid are reflected in an increased cost of production, so that the products of the factories cannot be sold

in competition with those of other countries where the cost of living is cheaper. Hon. members to my right talk about low standards of living in the Old Country. I would not put it that way; I should say that what is low in the Old Country is the cost of living. I question very much if the working people of the Old Land live at a very much lower standard than the working people of Canada to-day. It is a glib phrase to use "The low standard of living over in England," and I think we are inclined to exaggerate conditions there. Personally I challenge the statement, and I question very much if our operatives in Brantford, Toronto, Hamilton or any other manufacturing centre of Canada are living any better than the great mass of the working people in great Britain.

Mr. CARROLL: Will the hon. gentleman say that the cost of living to-day is as high as it was in 1921 when the right hon. Prime Minister was making those statements?

Mr. FORKE: Mr. Speaker, I think there is very little difference. Some things have come down in price, but the great mass of commodities used in the home are not very much cheaper at the present time.

Now, I want to allude to some of our western conditions, because I believe that prosperity in the west is reflected all over this Dominion. The products of that part of Canada must find a market outside. The arguments we heard in connection with the Maritime provinces apply directly to the provinces of the west. No system of protection under the sun can help the prairie provinces, and I would be inclined to say that a good many of the farmers in the central provinces are not very much benefited by protection. There are two factors to be considered in the prosperity of the western provinces—the tariff and transportation. I admit that perhaps at this moment the most important question we have before the House is transportation. Our transportation difficulties must be settled at this session of parliament. The government cannot evade the problem, and consequently its right settlement is one of prime importance. As regards the tariff, we are anxious for proper conditions. But the tariff will probably be up next year,—I think it will from what I can understand of the opinion of the House at present. One section is not content with the tariff in one direction, another section is just as much discontented in another direction. We have to fight the issue elsewhere and come back to this House and settle it perhaps in a more conclusive manner than it has been settled for a great many years past.

It has been mentioned already this evening that our factories cannot compete owing to the underpaid labour in Europe and the high paid labour in the United States—two entirely different points of view. The fact is that until we get rid of the idea that our factories cannot compete I do not think they are ever likely to attain any degree of prosperity. I think they might succeed if they got a proper understanding of their position. They have repeated it so often that our industrialists have almost convinced themselves that they cannot compete with their rivals in other countries. But the battle is already half lost when you make up your mind that you cannot compete with the other fellow. Just as long as we find the manufacturers coming to Ottawa seeking for more protection for their industries, just so long will we find their factories not so well equipped as they might be, and not conducted as efficiently as they ought to be; in a word, they are looking for help in the wrong direction.

The burden of taxation to-day is pressing heavily on the shoulders of the people. Dominion, provincial and municipal taxation together make a very heavy load. That I think has probably held us back more than any other factor. Of course the tariff, as the Prime Minister has told us time and again is part of our taxation, and a big part. If we are going to succeed in this Dominion we must engage in industries where we can successfully compete, where our energies will give us the greatest economic returns. We might commence growing oranges if we had adequate protection and proper conditions. But would not that be the height of foolishness? We might apply that thought to some lines of manufacture in which we find other countries can produce so much more cheaply than we can. Why do we not devote our energies to those lines of industry in which we can compete with other countries and which will give us the greatest economic returns? Interchange of goods can be beneficial to both parties. Too often it seems to be the idea that in trade one must get the better of the other. That is not necessarily so in business or in commerce. The interchange of goods—and sometimes the interchange of ideas, Mr. Speaker,—is all right and can be of benefit to both parties. I am quite ready to admit that it is just as foolish to import goods that we can produce as satisfactorily as any other country as it is to continue making goods that it is not economically sound for us to manufacture.

Mr. MACLEAN (York): Will the hon. leader of the Progressive party allow me a question? He says that if we can produce anything as well as other countries we will succeed. I want to direct his attention to an industry in my constituency and to base a question upon it. I refer to market gardening. Those engaged in it can grow their products as cheaply as they can be grown in the United States, but by reason of the earlier season south of the border their home market goes to their competitors in the States, and consequently our market gardeners are large losers every year through this discrimination. I think they are entitled to some protection, and they think so too. What accounts for their disadvantage is the difference in climate, not what my hon. friend says.

Mr. FORKE: My hon. friend has referred to the climate. I think perhaps there he has struck the nail on the head. If our climate is not so well suited to the production of early vegetables as is the United States climate, then perhaps we had better let the people there produce them.

Mr. MACLEAN (York): No. It is the question of season rather than climate and the hon. gentleman would put a burden on those who have this disadvantage.

Mr. HOCKEN: Is that good Canadian policy?

Mr. FORKE: I do not see why. Mr. Speaker, I am sometimes surprised at the line of argument followed by my hon. friends. Our working people who produce the goods that are protected very rarely use the expensive luxuries that are imported from the United States. I should like to know if it is our working people who are using radishes and strawberries out of season?

An hon. MEMBER: No.

Mr. FORKE: Then why such a tremendous outcry on behalf of the working people? If some of those who want protection for our working people would quit using these luxuries the difficulty would be remedied in a very short time.

Mr. STEVENS: Is a cabbage a luxury?

Mr. FORKE: If you lived out west you would find it so sometimes. We have listened to quite an eloquent speech on some of the difficulties of the Maritime provinces. I have heard complaints made very frequently in the House about the lack of business in the maritime ports of Halifax and St. John. When a ship comes into one of those ports with $100,000 worth of goods she is penalized $20,000 in taxes, customs tariff. Now, Mr. Speaker, I do not think we are ever going to get very much trade through our maritime ports while that taxation continues, for the tariff imposts on cargo amount to taxation.

I do not think that a great many of our difficulties to-day are due to trade depression or the lack of protection, but to the lack of purchasing power on the part of the consumers of this country; they cannot buy the goods that we produce. That I think is the main trouble. I wonder what benefit would accrue to any manufacturing concern if they were unable to find a market for their output? I think I made the statement in the House the other afternoon that the trouble in Canada was not the question of production; our factories can produce in six months, I think it is safe to say, sufficient to meet the needs of the people of Canada for a year. The trouble is the lack of a market in which to sell our goods as they are produced. I know my hon. friends to my right will say, why buy goods from the United States? Well, I will present to you another picture. Imagine a mother with five or six children and a very limited income, trying to figure out how much she can buy with the means at her disposal in order to provide for their needs. I tell you that the "made in Canada" principle will not go very far with her if she can purchase goods cheaper somewhere else. It is all very well to put forward lofty sentiments, but when you come to the actual necessities of life, when it is a matter of providing the things that are essential to one's existence, the "made in Canada" doctrine will not stand unless it has something more to back it up than patriotism.

I would like to point out to some of our industrial friends what the agricultural people are doing in the west to-day. I have made the plain statement that protection cannot help the west. The member for Kings P.E.I., (Mr. Hughes) said that if this thing continued, if the protective tariff was made higher, the people of the Maritime provinces could not continue and succeed; and he said of the west that they would not continue. I do not know if we are any better able to stand it than the Maritime provinces, but I do know there will be dissatisfaction. But the farmers in the west to-day are studying agricultural conditions. They are trying to find out what crops they can best raise, to find out what the land is best suited for. They are studying co-operative methods of marketing; they are employing every means of eliminating

needless expense and of raising and marketing their crops under the best economic conditions. They are not simply sitting down and whining; in the meantime they are doing the very best they can for themselves, and I would hand that advice out to some of our manufacturers. I suggest that instead of continually looking for help they try to do what the farmers of the west are doing—try to find some solution for their troubles in the meantime and keep up an agitation for the removal of the difficulties which prevent them from doing all they might do for themselves.

I notice in the speech of the Acting Minister of Finance that a tariff board is to be appointed. I do not know exactly what that board will be. I can only express my own ideas on the subject, but I hope it will not be a permanent board that will make a scientific tariff for all time that the government can get behind. It may be all right to have an investigation in order to get some further knowledge on the subject, but in the final analysis the government must always be held responsible for tariff conditions. I say that only as my personal opinion; I do not know what the opinion of my people would be on that matter.

I wish in conclusion to endorse some of the sentiments expressed by the Acting Minister of Finance. We live in a country which lends itself to sectionalism. To repeat words that have been used in the House to-night, no country is less able to stand protection than is Canada, from the very fact that her interests are so diversified, her area is divided into so many sections which differ in their character, and the possibilities of the growth of sectionalism are so great. There is just one way of removing that difficulty, one way of preventing the growth of sectionalism, and that is to have the public policies of the country founded on the broad basis of equity and justice to all sections of our people.

I regret very much that the government in the present budget have not seen fit to further implement their promises. I wonder if they have not the courage to live up to their promises. What is the matter? Why do they not nail their colours to the mast and stand or fall by that policy? If they do that they will get enough of the people of Canada behind them; they will be secure where they are if they only have the courage to take that forward step. To my right we have a party whose principle is higher protection. They have no other doctrine; they say that high protection will solve all our problems. The people of Canada will never accept that doctrine, and my hon. friends will stay forever in the shades of opposition if they continue to preach it. I say that in no spirit of hostility, but I think I know something about the temper of the people of this Dominion.

Mr. STEVENS: That is a fatherly observation.

Mr. FORKE: I would remind my hon. friend that Vancouver Centre does not cover all of Canada.

Mr. HOCKEN: Neither does the province of Manitoba.

Mr. FORKE: Well, for myself at least I am going to nail my colours to the mast and stand or fall by, the policy that I believe to be the right one. Mr. Speaker, I wish to move an amendment to the amendment, as follows:

That all the words after the words "resolved that" in the amendment be struck out and the following be substituted therefor;

The House regrets that the budget presented by the Acting Minister of Finance contains evidence of the application of unsound principles of public finance, affords no relief from the excessive burdens of indirect taxation and constitutes a failure to carry into effect substantial economies in public expenditure and the fiscal policy of the Liberal party as from time to time enunciated.

And that the policy of protection maintained in the present budget, has greatly increased the cost of living and production and has failed to provide adequate revenues or to prevent serious depression in trade and industry,

And be it further resolved that a revision of the tariff schedules, based on the needs for revenue instead of on the principle of protection is long overdue and should be immediately undertaken in order to bring down the costs of living and to place our industries on a permanently sound basis.

Mr. SPEAKER: In connection with this motion I wish to remind the House that two years ago I ruled that on the motion "that Mr. Speaker do now leave the chair for the House to resolve itself into committee of Ways and Means" only one amendment was allowed. I will quote Bourinot on this point —page 420:

Only one amendment can be moved to the question, "that Mr. Speaker do now leave the chair". (g) If that amendment is negatived, a discussion on other questions may be raised but no other motion can be preposed. If the amendment is withdrawn, however, another amendment can be at once submitted to the House.

Then in the footnote (g) hon. gentlemen will find the following:

This limitation is peculiar to the Canadian Commons.

In my ruling of two years ago I quoted the decisions given by Mr. Speaker Smith and Mr. Speaker Wallbridge before confederation, by Mr. Speaker Cockburn, by Mr. Speaker Anglin, by Mr. Speaker Rhodes, my immediate predecessor, and also the opinions

given by Sir John Macdonald, the Hon. Alexander Mackenzie, the Hon. Edward Blake and Mr. Holton, who in his day and generation was considered the foremost authority on parliamentary procedure. All agreed that on the motion as now put to the House by the Acting Minister of Finance (Mr. Robb) only one amendment can be moved. I realize, however, as I did two years ago that the complexion of the House has changed since that time. In those days there were only two regular parties, the ministerial party and the opposition, the Conservative party and the Liberal party. I pointed out also that the same question had arisen in the British parliament over the Irish party, which was very prominent, and that there the Speaker had recognized only two parties, the ministerial party and the opposition. To-day a similar condition exists in England. There you have three groups, the Conservative or Unionist party, the old Liberal party, and the Labour party, which of late years has risen to great prominence in British politics. Yet the Speaker will not recognize groups outside of the government party and the opposition party.

I may add that this year the House has thought it proper,—and I say this because it is against my grain to reject an amendment moved by a group so important as is that represented by the mover of the subamendment,—to appoint a select committee with a view to revise its rules. All questions affecting the rules are coming before that committee. We have had two or three sittings already, and will hold two more next week, and will probably sit every week during the session. Questions of procedure will come before us, and possibly amendments may be made. If questions such as this should arise at another session perhaps the Speaker may then be at liberty to give a group in the House the right to move an amendment which would represent its views on the capital issues of the day.

I therefore rule once more that the amendment to the amendment is out of order. Of course, an appeal may be taken against the decision of the Chair, and I hasten to say that the Speaker will always accept the judgment of the House, and will not be affronted if that appeal is taken.

Mr. J. W. KENNEDY (Glengarry and Stormont): Mr. Speaker, in respect to the ruling that you have just given to the House, may I say that I have the greatest respect for your knowledge of parliamentary procedure and customs, and also for the authorities which you have quoted in this regard. Your ruling, and rulings of a similar nature which have been made in previous sessions, I am led to understand have been based not so much on any particular rule of our House, as on precedents and practices which have grown up in the years gone by, and have established themselves as recognized traditions and customs which we should follow. But may I point out what you have already observed, Sir, that a condition now exists and has existed in this House for the last five or six years which did not exist at the time those customs were becoming established. For that reason, and also for one other, that the subject matter of the amendment offered by my hon. leader (Mr. Forke), as compared with what was offered by the Acting Minister of Finance (Mr. Robb), or by the ex-Minister of Finance (Sir Henry Drayton), challenges my supreme confidence and respect, I could wish that after taking this subamendment into your consideration you had allowed it to stand. However, I appreciate the hope you have held out to us that at some future time subamendments of this kind may be permitted to be moved. If I may do so without seeming discourteous to yourself, Sir, I should like to appeal to the judgment of the House from the ruling you have just given.

Mr. HOEY: There is little doubt in my mind but that technically speaking—

Mr. SPEAKER: I wish to point out to the hon. gentleman that on an appeal there can be no debate.

The question having been put as follows:

The Speaker having decided that the amendment to the amendment moved by Mr. Forke and seconded by Mr. Hoey was out of order, Mr. Kennedy (Glengarry and Stormont) appeals from this ruling.

The House divided on the question: Shall the ruling of the Chair be sustained?

Ruling sustained.

Mr. W. K. BALDWIN (Stanstead): Mr. Speaker, when we consider the vast spaces in Canada which are at present unsettled and remember the conflict of interests which from time to time reveals itself in this country we are led to consider what would happen if the whole Dominion were peopled, including the great district of Mackenzie, the far northern territory of Franklin and the regions surrounding Hudson bay.

During the speech of the leader of the Progressive party (Mr. Forke) to-night the question was raised as to whether the unrestricted importation from the United States of strawberries and other fruits, as well as vegetables, should be permitted. Personally I believe in patronizing home products and in protecting home industries. We can grow everbearing strawberries, and the potatoes that are dug in October will last until the next crop is grown; therefore what is the use of importing these commodities from the south and paying fabulous prices for them?

The ex-Minister of Finance (Sir Henry Drayton) endeavoured to cast doubt upon the presentation of the country's financial standing by the Acting Minister of Finance (Mr. Robb). Personally, I prefer to accept the statement made by the latter whose conclusions have been verified by two of the best chartered accountants in this country.

The railway situation has been blamed for weakening Canada's financial position, but who is responsible for that situation? If we have the railway problem on our hands whose child is it? I think it is the child of the Conservative party, and if I remember rightly we fought the proposals of the late government for weeks and months. I think my hon. friend the member for Pontiac (Mr. Cahill) will recall the part he played in that struggle. I repeat that the present government were not to blame for the railway incubus but having been saddled with this responsibility the present Prime Minister searched the wide world for a man able enough to bring order out of the chaos which existed in respect to the railway situation, and in securing Sir Henry Thornton he secured the best railway man obtainable. I believe that Sir Henry Thornton's optimism, business ability and skilful administration will have the happiest results in connection with the Canadian National Railways. His great personal magnetism and his stirring appeals to the employees of that great system to be loyal to the National Railways and to render the most courteous and efficient service have already borne fruit, with the result that those employees, in my opinion, are even more loyal than are the staff of the Canadian Pacific to that system.

Hon. gentlemen opposite are continually raising the cry of more protection, and they describe in glowing colours the results which will flow from the adoption of their policy. In the old days in almost every hamlet and village on the American continent there was a unique character—a fantastic and whimsical character—who would invent things which never happened and describe them very graphically. He would tell these stories with such persistence that eventually he himself accepted them as true. The Conservative party are in the same position. They declare so frequently and so positively that the present government are neglecting to provide any protection for the industrial communities that they have almost come to believe in the statement themselves. For example as a result of the reductions in the duties on the implements of the basic industries in Canada made by the present government it was alleged by hon. gentlemen opposite that those industries had received a bad blow and that they would inevitably go to the wall. Now, I understand that the Massey-Harris Company are paying their first dividend for many years. This evidence of prosperity does not seem to be quite consonant with Conservative predictions. Furthermore, I understand the Dominion Textile Company of Canada are running to 90 per cent of their capacity. This important statement is made in the Financial Times of February 13. Now when we compare that condition with the fact that the New England Textile companies are running at less than 40 per cent of their capacity, is it not a striking tribute to the prosperity of the former.

10 p.m.

Last year, in consequence of the stand which I took on the fiscal policy of Canada certain big interests declared that "if Baldwin again undertook to edge himself into politics he would find where he would get off at." I wish to say that when Baldwin takes a stand on any question he does not edge, he comes out squarely and frankly.

I am here to defend the principles of Liberalism, the principles enunciated by the leader of the present government. Who can doubt the wisdom displayed by the Liberal convention in 1919 in this city when they made the choice they did of a man to lead them? It has been said that we on this side are not a courageous party. Well, it took some courage to take hold of the administration of the affairs in Canada in view of the chaotic condition in which we were left by the Meighen government. In view of the prevailing conditions and of the huge debt, the result of Conservative maladministration, it took some courage to grapple with the situation, and that the budget is as good at it is, is most surprising under the circumstances. That budget certainly is a credit to any party or any combination of men, and we are proud to re-affirm once more our loyalty to our leader and his colleagues. That the policy of the present government is supported by the country cannot be doubted in view of the results of the by-elections. The victory in St. Antoine was a most significant one.

Another evidence of the feeling throughout the country is what happened in West Hastings which was taken over from the man who resigned his seat. From my observations I am firmly convinced that there is confidence established in the country in the government that is now ruling our destinies. A great deal has been said about people leaving Canada. Is it any wonder that some people should leave the country after the "whispers of death" and the songs that have been sung by twelve or fifteen of the most eloquent members of the opposition who have been going up and down through the various constituencies telling the people what a terrible state the country is in? If the same men had upheld this country in a patriotic manner, what might they not have done in the way of bringing immigrants of the very best type to Canada? When they were travelling to the Wembley exhibition or south through the United States, why could they not have said that we have one of the noblest countries on God's earth and that we have none of those terrible, contagious diseases that ravage the southern parts of Europe and the southern states?

This is a wonderful country. We have an air that is purified—clarified with ozone that builds up a strong and virile people. We have no colour line except possibly in British Columbia. The hon. member for Vancouver Centre (Mr. Stevens) made the charge that people have been leaving that province and going down to Seattle, conducting their Canadian business from there. That was the most serious charge I heard, but there is some way of curing that. I cannot believe that such a situation exists to any great extent. On the whole I believe this country is doing well. I wish all the statistics could be kept of people who have returned from the United States as well as those who have come in as immigrants.

Something has been said about a great glass factory. I have been past that closed building, and I believe it was over-capitalized and

mismanaged. From time immemorial mismanagement has been the cause of failure in business. To-day a glass factory is being built in the province of Quebec which is going to employ several hundred people. The factory that was closed was not closed on account of a reduction in prices. I run a store and I handle everything from a needle to an anchor. Glass has declined very little in price since the days of the war. The chief thing that caused the closing of the glass factory was its taking over by the combine, and the combine have put up the price of lamp chimneys, window glass, and such articles that the common people of the whole world use, costs from four, five and six cents advanced to fifteen cents. The Dominion Glass Company have us by the throat. When anybody says that they put down the price of glass until they broke that factory and raised it again, that is a great mistake. The price of window glass or any other kind of glass has not been reduced to any appreciable extent.

Throughout Canada a good, substantial business is being done. We find, of course, some people who are keeping their capital in the banks or in their pockets rather than letting it go out to develop the resources of this country. I hope there are very few such cases in Canada, because it would be an appalling charge to bring against any people that they were doing that in order to gain a political advantage. I have a charge to bring against wealthy people for leaving this country to bask in the sunshine and enjoy the aroma of California roses. I expect that class of people will go to Florida now that she has exempted everyone from all kinds of taxation, I believe, except municipal taxation. It will be the Mecca of the rich. It is a winning card, and I think it will draw people from all parts of the United States. I hope, however, it will not draw one man from Canada. It is terrible to think that after the Great war some people are not willing to pay in their mite. They should be willing to pay their share of just, honourable taxation that was necessary in order that Canada along with the rest of the civilized world might defeat the Kaiser.

It has caused me great pain to see Canada in the condition it is owing to certain people endeavouring to pull it down. It would be far better if the same intellect, the same capabilities, the same energies, were used by the people and the press of the country to say a good word for Canada and to endeavour to bring people in. It is almost appalling to think of the rumours that float around the country and to hear everywhere you go people asking: What does this mean—Whispers of death? What motive people have for spreading abroad these rumours, I do not know. I say on the floor of this House to-night that such people should be arrested for treason. Such statements should not be allowed to be distributed throughout this country. It is not right that good, loyal citizens should be discouraged by any such rubbish as has been printed in some of these newspapers, and to have that followed up by such statements as that Canada is a poor languishing country that has no future. In days of old every man on both sides of the House talked about the great British Empire on which the sun never set, and depicted this great country of ours stretching from ocean to ocean, bigger than the United States including Alaska. Have we not something to be proud of in this country of ours? Are we not proud of our forefathers, of their memory, of the people who colonized the country, felled the forests and built these beautiful homes? We should be proud of the memory of those who protected us in our infancy, of the little red school-house, the little church and the old home where we were all protected. It is a wonder to me how some people who want to get on to the government benches, should go about this country befooling, be-fogging and be-fuddling the minds of the people. Such work is not patriotic and is unworthy of people who have any pride in their country.

If this country is to have the great future to which it is entitled, everyone must take some thought as to the welfare of others. If the rich people do not care whose baby cries so long as theirs is swathed in eiderdown, we cannot have a great country. That is the kind of thing that leads to bolshevism, and we know enough about that when we see what is going on in Russia. Things would be far better in this country if men of all political stripes would work together; if we had some real co-operation this would be a splendid country. And it is going to be, whatever may be done at present by those who are more interested in party than in the country at large. We have in Canada the greatest unoccupied domain that can be found anywhere; there is no other place on earth that can compare with these areas of uncultivated land which are just waiting for the population to develop them.

But we must economize. It is as natural for some people to live prudently and to save as it is for the vast majority to waste, and what we need is thrift both individually

and nationally. We have of course a demand for the Hudson Bay railway and for railways into the gold belts, and for one thing and another; and we have fifteen million acres of the best arable land now within fifteen miles of our present railway system. This land should in my opinion be developed. Railway construction in the United States began on the Atlantic coast and gradually forged its way to the west.

The trouble with us is that there is not enough national spirit. We have two old parties in this House, and now the Progressive party, and we also have a Ginger group, so-called. But I have no hesitation in saying that the party to which I belong has never been called upon at any time to sign on the dotted line, for we enjoy freedom of thought over here. Hon. gentlemen across the way are dictated to, and this is true more particularly of the old Conservative party. It has always been the same with Conservatives; if we study history five hundred years back we shall find that always at the crack of the whip they have fallen into line. Not so with us. The hon. member for South York (Mr. Maclean) is one thorn in the flesh of the Conservative party in this House, and although hon. gentlemen call him a visionary and declare that he is always visualizing the future, it has been suggested that his visions often come true. It seems to me that the architect in this case sees the structure before the foundation is laid. Nor is there anything wrong about that; I believe we have a right to visualize our future to some extent.

Let us consider the tariff for a moment. Members from the three Maritime provinces complain that the tariff operates to their disadvantage, and I think we all agree that no constituency of the two hundred and thirty-five in this country can prosper unless all make some progress. And I will go so far as to say that no part of this country can be successful or make progress without developing the county of Stanstead. We have thirty factories in that county one of which is the only factory of the kind to be found in Canada, and we have been brought up in the province of Quebec to believe that the building up of a community creates a market for the products of the farmers, while industries provide means of employment for their sons and daughters. Now, I believe in protection, although I am not a high protectionist; but I do think that there is too much autocracy and too much selfishness in the application of the protective principle generally. I do not think it will be doubted that we need some protection in view of the fact that we have beside us a highly protected country. With protection prevailing in the United States, how in the name of common sense could we exist unless we looked after ourselves? But, as I say, there should be no undue selfishness in applying the principle.

There is a tariff board in the United States which owing to its alertness has prevented many Canadian exporters from taking advantage of the market over there. I will give two illustrations. I was in the Niagara belt a short time ago and I learned that a certain jam factory after sending over six carloads to the United States was suddenly stopped; the United States Tariff Board got after them and put an end to that business with a substantial loss to the shipper. Again, there are certain furniture manufacturers in Ontario who turn out a special kind of furniture. They had been selling considerable quantities of their product in New York but the tariff board, always alert and on the job, got after them also and put an end to their business over there. We have no such board in Canada and it seems to me that we should have a commission to perform the same functions. The United States capitalists under our tariff come over here and invest money and we are glad to have them. But I do not think that there should be any pussyfooting on our part; their tariff board can put a spoke in our wheel in the way I have just illustrated, and I see no reason why we should cut any sissiefied figure before them. Let us wake up and follow their example in this regard.

Hon. gentlemen opposite have been saying a great deal about the pulpwood question. Well, let me refer them to some Canadian history; I remember when Sir John A. Macdonald's government on two occasions imposed an export duty on spruce logs. With very few exceptions the farmer who sold his spruce timber received a dollar less on his exports and it was only when the American lumbermen came here to operate that this country got any money out of United States citizens in this connection. But what happened at that time? In each instance the tax was taken off within a year. Hon. members opposite are kicking up a great fuss about the export of pulpwood from this country but what remedy are they prepared to offer? I know of one gentleman who in one election went throughout the eastern townships advocating a tax on the export of pulp wood and logs and he was defeated. I believe that not one candidate pledged to an embargo on pulpwood could be elected in one-half of Quebec, one-half of New Bruns-

wick, one third of Nova Scotia, one-half of British Columbia, and only a few in Manitoba and Alberta. Of course, in the cities where there are no trees a few candidates could be elected on such an issue. I would be in favour of an embargo if the paper mills of Canada would agree to pay the price for pulpwood that is paid in the United States. You might as well put an embargo on milk, on grain products, on meat products or any other commodity and so interfere with trade as try to steal away money from the man who bought his land. Let us see how the present policy is working under this government. One-half of the paper made on the American continent to-day is made in Canada. The member for Kings (Mr. Hughes) told us that a year ago fifty-seven of our raw products were exported, while to-day we are manufacturing forty-three of them, so we are making progress. It must be borne in mind that there can be no such thing as placing embargoes on what the vast majority of the people are interested in when they suffer as a consequence. Of course, it was the Conservative party that forced the government to appoint a commission to inquire into the question, and last session they howled at the awful expense. But it is altogether their fault. The government simply wanted to satisfy the people. The commission found invariably just what I say, practically everyone was against any embargo.

We have been told a lot about the labourer, the dear labourer. If I had fifty hands I could keep them busy twenty-four hours of the day. I want servants in the house and in my business. Talk about the scarcity of labour, why, there are thousands of people going up and down this world pretending they want work but hoping they will not get it; and the more you sympathize with them the worse they get. I hear people talking about the coal mines in Nova Scotia and the labour troubles there, and I wonder if it would not be well to deport McLachlan and other labour agitators, banish them to the isles of the sea, for they have caused all the trouble. It is an appalling thing,—there is plenty of work, but everything is unsettled by labour agitators. It is enough to kill business when labourers will not be just and equitable. Every Canadian wants to be fair and reasonable, but not so the internationalists. The poor miners of Cape Breton have contributed a quarter of a million dollars to the labour union at Indianapolis, and to-day they are living on the gifts of the Canadian people. That is the curse of labour unions. I maintain to-night that there never has been a strike by any labour union throughout the world that ever accomplished anything. I do not object to labour unions, but every difficulty should end in arbitration. Their stopping work has put up the cost of living mightily. I wish the leader of the Progressives (Mr. Forke) was in his seat. He says that the price of everything has gone up. Everything has declined with the exception of what the farmer raises, and I am glad for the farmer's sake that his commodities are going up in price. Does anyone know of any commodity that is not on the decline except eatables?

An hon. MEMBER: Whisky.

Mr. BALDWIN: The government might put $10 more on whisky. So long as the money goes into the treasury of our country. If the British Empire, consisting of over 500,000,000 people, could arrange for a tariff with a 50 or 60 per cent preference within the empire, we would bring Uncle Sam to his knees. If we could have such an arrangement as that, within ten years empire free trade might be practicable. How would Uncle Sam cope with over 500,000,000 people raising every product known in the world? We could raise all our cotton—we raise our rubber now—and we do not need to buy their corn or their coal. We have white coal in this country, and if I had the money I would not go south, I would go north and find the big timber limits and the water powers, and these I would develop. We can do this ourselves instead of paying $100,000,000 a year to the United States for coal.

I believe the British West Indies should be tied with us politically. We should also have Newfoundland as a province of this Dominion. In the days of Sir Mackenzie Bowell, Newfoundland could have been brought into confederation for $8,000,000. Would not every dollar of that money have been spent in the Dominion, and would not it have given us better coal mines and better iron mines than any we have now? We want millions of dollars worth of the products of the West Indies; they want our manufactured goods. When I put this suggestion to a well posted man on one occasion he said, "What do we want of fifteen million niggers?" Well, that showed his ignorance, as well as mine, as I did not contradict him. It all goes to show that we do not know as much as we ought to know about the British Empire. Subsequently I went to the library to find out just what the population of the British West Indies was, and I found that there are less than three million people down there, and that the language of the people

is about evenly divided between English, French and Spanish. When Stanley Baldwin was delegated to come and settle the matter of the indebtedness of Great Britain to the United States he may have acted too quickly; in fact it may be a characteristic of the Baldwin family to discharge obligations quickly. If Great Britain ceded to the United States these islands in the Caribbean sea, without a doubt the United States would discharge the debt Great Britain owes her and Great Britain would save $180,000,000 annually. But to do that would be against Britain's ideas and Britain's rule, because so long as her people are loyal to her she would not throw them into a republic against their will. The people down there are against trading with the Americans. Look at the United Fruit Company; they handle that country as the potter handles clay. The best bananas are grown in British Honduras; they raised shiploads of them. When they started to do this the United Fruit Company asked them, "Who told you to raise bananas?" The United States have included within their domain a tropical and semi-tropical country, and they are the richest nation on earth. Canada also needs a tropical and semi-tropical country to round her out and make her one of the greatest nations on earth. Patriotism and love of country should dominate the sentiment of every true Canadian citizen, Tory or Grit, Progressive or any other persuasion; the desire should be to make Canada a great country. Within the days of the rising generation—yes, even in our own days, this country should have a population of thirty millions. As to the representation of the West Indies in parliament, I do not know how that could be best carried out. They might have seats in the House of Commons or they might even have representation in the Senate, but that could be easily arranged. The people down there are British born and British bred and they want to remain within the British Empire. England has acquired vast areas of country and she should be willing to create that triple alliance, England, the West Indies and Canada, and to cede to us, by mutual agreement and after friendly conference, these islands. I hope the day will come when we can send our children to the stores and get fruit of every kind we want and of Canadian growth. That is the hope and the desire of a growing number of people in Canada.

Let us take as our motto Canada first, last and all the time. Let us aim to build up a great country by frugal living, by energy and industry, by good government, and by the fear of God—for there comes a time in the life of every human being when he needs more than human aid. This fighting and squabbling and scrapping over tariff policies could pass into oblivion, and much of it could be obviated by our having a tariff board of scientific men to act as watchmen of the night. I heard the member for Bruce (Mr. Malcolm) say he had sold a fine lot of furniture down in New York and that the transaction meant hundreds of thousands of dollars to him. Well, a tariff commission would solve all these problems. If we see a chance to promote trade with another country all we have to do is to write to the tariff commission and the thing is looked after. That is what we need; let us stop this fighting, stop this nonsense which has been going now since 1878.

On motion of Mr. Carroll the debate was adjourned.

On motion of Mr. Béland the House adjourned at 11 p.m.

Friday, March 27, 1925

The House met at three o'clock.

ALLEGED ARRANGEMENTS FOR GOVERNMENT OFFICES IN GENEVA

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): Mr. Speaker, I have a telegram from Toronto on which I wish to base a question. I presume it is an item in the Mail and Empire of this morning. It says:

> A Mail and Empire agency despatch from Geneva says: "Canadian government has rented pretentious offices in the Quai Woodrow Wilson, where Dr. W. A. Riddell, permanent envoy, expects to entertain Canadians all summer."
>
> Is this entertaining part of the policy of economy, or is it a correspondent's picturesque touch?

I want to ask the Prime Minister (Mr. Mackenzie King) if there is any truth in the statement made in this despatch with regard to the rental by the government of offices in Geneva, and if the government will make a statement in that regard.

Right Hon. W. L. MACKENZIE KING (Prime Minister): It sounds a good deal like some despatch the Mail and Empire might get. I do not know anything of the matter referred to. I will make inquiry.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Thursday, March 26, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. W. F. CARROLL (Cape Breton South and Richmond): Mr. Speaker, will you allow me to join with those who in this debate have expressed regret at the continued absence from the House of the Minister of Finance (Mr. Fielding). We all miss the gentleman whom the newspapers of this country in recent years have called the "little grey man from Nova Scotia", and who as a matter of fact is a great Canadian statesman, a man who has graced the political life and the legislative halls of this country for well nigh half a century; a man who has an international reputation and who is looked upon in all quarters as one of the empire's ablest and most astute statesmen. That being true, we are nevertheless deeply grateful that we have as Acting Minister of Finance the keen, alert, active and business-like member from the district of Huntingdon, (Mr. Robb), who in the two budget speeches he has delivered in this House has placed himself in the front rank of finance ministers in this country.

Coming to the subject matter of this debate, the budget, I wish to say at the outset that there is nothing startling or sensational in it. It is, however, a clear, brief, businesslike statement of the financial condition of Canada, delivered by a businesslike Acting Minister of Finance. It does contain some surprises. During the past year, especially in the last six months of it, we were told by the press of this country that a deficit would be shown in the budget statement. It is a matter of gratification, however, that notwithstanding the world-wide depression which Canada has unfortunately shared; notwithstanding a considerable decrease in revenue; notwithstanding the fact that we lifted from the shoulders of the Canadian people last year millions of dollars of the weight of taxation, the Acting Minister of Finance is able to come down to this House and announce—and announce truthfully—that we have a surplus of almost $2,000,000 of revenue over actual expenditure. That, Mr. Speaker, is a statement which will appeal to the people of this country and will give them renewed hope and renewed inspiration as to what Canada may be for the future.

Coming down more particularly to the items in the budget, representing as I do a maritime country where upon the success of our fishermen depends the success of the commercial and other interests of the province, it is a matter of gratification to me, as it must be to the fishermen of Nova Scotia, to know that the acting Finance minister has reduced from 27 1-2 per cent to 15 per cent the customs duties on engines to be used exclusively in the propulsion of boats bona fide owned by individual fishermen for their own use. This, Mr. Speaker, will be a benefit to the fishermen not only of Nova Scotia, New Brunswick and Prince Edward Island, but also of the province of Quebec along the Gaspe peninsula as well as of the Pacific coast. In addition, it is in keeping with the policy of this government in reducing the taxation on the implements of production.

Another proposal in this budget is the organization and appointment of a board which will act as expert advisers to the Finance department in matters of trade, tariff and taxation. This, I think, has been a long-felt want in Canada, and the proposal made is a move in the right direction. As I understand it, it is the intention to organize this board of experts from within the government departments and outside, men who will have special knowledge of trade, tariff and taxation, and who will be able after investigation to give the Finance department the very best advice on tariff matters. I agree, however, entirely with the hon. member for Brandon (Mr. Forke) in what he said yesterday, that notwithstanding the government has decided to create and organize this board of experts, yet in the final analysis now and for all time to come the responsibility for tariff changes must rest upon the government and the Parliament of Canada. So far as I am concerned, and I presume so far as the people of this country are concerned, they will not lightly stand for any independent board, however expert they may be, forming and putting into effect any tariff regulations until they have first been passed upon by the parliament of this country.

The next item in this budget, which to me and to the Maritime provinces, and especially to the province of Nova Scotia, is of supreme importance, is the regulation which will readjust the duties on bituminous coal. This government, Mr. Speaker, has done not a little toward giving this country a Canadian fuel policy. Let me point out a few of the problems which this government has tackled relating to our fuel resources and our coal development.

In the session of 1923 the Finance minister of the day in his budget speech announced that he was going to allow lignite to come into this country free. That was done to benefit the western operators and the miners in the province of Alberta. It was done also with a view to taking advantage of the reciprocal arrangement which a few years previously had been made in the tariff schedules of the United States, whereby any class of coal which was allowed to enter the United States free would have free entry into Canada, and vice versa. The hon. member for Bow River (Mr. Garland), in the session of 1923, in the course of a debate in this House on a resolution introduced by one of the members for Toronto, read a resolution passed by the Red Deer Valley Coal Operators' Association. I have no doubt that the government of the day was also approached, and as a result, in that session the Minister of Finance acted as I have said, and I am given to understand by a very reliable authority that this action has materially assisted the lignite coal industry in the province of Alberta.

In the session of 1924, after the Mines branch of this government had investigated the possibilities of getting coal from the east and from the west into our central provinces the Minister of Mines had an appropriation of $200,000, which in effect meant that a subvention of one-fifth of a cent per ton per mile was to be granted in the carriage of eastern coals west and western coals east. That had a very beneficial effect so far as the coal trade of Nova Scotia is concerned; I am not in a position to say whether or not Alberta reaped any benefit from that arrangement. The item was passed very late in the session of 1924, and it did not become effective, I believe, until the middle of August that year, but notwithstanding that, the operators in the province of Nova Scotia were enabled to market one hundred thousand tons of coal in markets which up to that time they had not been able to reach.

This year the government has brought down another policy, if I may call it such, respecting coal. They have levelled up the duties on slack coal and run of mine coal to 50 cents a ton. Previous to this, and for some years the duty on run of mine and screened bituminous coal was 53 cents a ton, and on slack bituminous coal 14 cents a ton. This had the effect of creating an anomalous condition in the coal trade. Bituminous coal run of mine is identically the same article as bituminous coal slack, though in a different condition. Yet there was this difference in the duties. It may be interesting, Mr. Speaker, to ascertain why the duties have remained in this anomalous position for very many years past. Well, slack coal up to seven or eight years ago was of very little market value. In the early days under our tariff the duty on slack and run of mine bituminous coal was identical. For some years it was 50 cents per ton, and for a few years 60 cents per ton. In 1907, I think it was, the duty on slack bituminous coal was fixed at 14 cents a ton, and the duty on the other 53 cents a ton. In 1897 the duty on round coal or run of mine bituminous was placed at 53 cents a ton, and the duty on the slack was put upon an ad valorem basis of 20 per cent. The value of this slack coal was so low and so variable, and the market for it so small, that the customs authorities decided to fix 65 cents a ton as the import price for duty purposes. That was not done by order in council, nor was it a part of a budget brought down in this House; it was a custom which grew up in the Customs department. Twenty per cent of 65 cents would be 13 cents a ton. In that way this anomalous condition of affairs grew up, and when the tariff of 1907 was brought down and a readjustment made in the duties on coal, instead of going back to the ad valorem rate, the duty on slack coal was placed at 14 cents, and the duty on the other was left as before.

Now, Mr. Speaker, the market for slack coal in this country has very materially increased in the last number of years. Our coal industry in the province of Nova Scotia has been in a very precarious condition since the war. In 1913 the sales of Nova Scotia coal amounted to 6,164,000 long tons; in 1914 the sales went up to 6,478,000 long tons. In 1918 the sales fell to 5,265,000 long tons; in 1923 they rose to 5,507,000 long tons, but in 1924 they declined again to 4,448,000 long tons. Was there any good reason why, during the period from 1914 to 1918 when the wheels of industry in this country were running faster than they ever did before, the sales of Nova Scotia coal should have decreased by 1,200,000 tons? The reason is not far to seek. In 1915 a line of steamships—a thoroughly up-to-date line with fine terminal facilities in Nova Scotia and at Montreal—was developed by the then Dominion Steel Corporation and placed 2,000,000 tons of coal in the Quebec market. During the war, between 1914 and 1916 those ships were commandeered. Thus we lost the Quebec market; it was captured by the United States; and up to this time we have not recovered it. There is another reason for the decline in the sale of Nova Scotia coal. The United States did not enter the war until some

years after hostilities had been commenced. When they did go into the war they had their men so picked that their industries would not be in any way injured by their war activities. Not so in this country. When the war broke out the men who supplied the bone and sinew to Canadian industries enlisted by thousands and tens of thousands, making such a drain upon those industries that the military authorities instructed their recruiting sergeants in the province of Nova Scotia in the year 1916 to keep away from the coal fields otherwise the coal mining industry would be ruined, and permanently ruined. It is true that many of our most expert miners who had enlisted returned from the front, but many never came back. I believe that the coal industry of Canada, having special reference to the province of Nova Scotia, was hurt by the war to a greater degree than any other productive industry in the Dominion; as a matter of fact it was practically destroyed. In the meantime, while the industry in Canada was being contracted, the coal industry in the United States was being developed to an enormous extent. That was the state of affairs we had to face in the province of Nova Scotia in 1918.

In 1923, or before, and for some time during that year, there was a great coal strike in the United States. In that year we shipped through the port of Louisburg almost 1,000,000 tons of bituminous coal for the New England market. But on the termination of the strike we lost that market and to-day not one ton of coal is being shipped to New England, a condition which has existed for some time. To illustrate further the actual situation, and to prove the contention which I have been making, let me point out that in 1914 the province of Quebec took 2,381,000 tons of bituminous Nova Scotia coal. In 1924 we had a market in the same province for 1,570,000 tons of coal, so that in that one market alone we lost practically the sale of a million tons of coal in that ten-year period In the last four or five years the price of slack coal has been increasing, and to-day it has practically the same market value in central Canada as run of mine coal. This improvement with respect to slack coal was brought about by innovations in our manufacturing industry in the way of installing new furnaces to use that kind of coal, and to-day practically every great manufacturing industry in Quebec and Ontario uses almost entirely slack bituminous coal in its operations. Last year there was an improved demand for our coal in the markets of Montreal and Ottawa; in fact 40,000 tons of our coal were sold to the E. B. Eddy Company just across the river here. That improvement was made possible by the efforts of the Department of Mines and the small subvention which was given us through the instrumentality of the Minister of the Interior.

As I have said, the United States mines developed wonderfully during the war period. They opened new mines over there and the cost of production decreased, whereas the cost of production in Nova Scotia increased. May I point out that in the province of Nova Scotia twenty per cent of the cost of operations is taken up with the pumping of water out of our mines, a difficulty which it is almost impossible to overcome. On the other hand in the case of many mines in the United States all they have to do to get the coal is to tunnel into the mountain; and as a matter of fact enormous quantities of coal are mined there without the help of man power at all, and consequently without the assistance of men who have become experienced miners. Again, we have an eight-hour day in the mines of Nova Scotia as a result of custom and of statutory enactment, but there is no such provision in the case of many mines in the United States. In the case of the Nova Scotia mines there is also a compensation law in force the funds for which are provided entirely by the manufacturers, operators and lumbermen in that province. Not one dollar of that compensation comes out of the pockets of the miners, operatives or workers in the lumber industry. Under the pension scheme in connection with the coal industry a miner who has worked for a company and reaches the age of sixty-five years may be given a pension which, in the cases which have come under my observation amounts on the average to from $40 to $45 a month. Not one dollar of this pension comes out of the pockets of the employees themselves. These are some of the burdens imposed upon the coal operators in the province of Nova Scotia. On the other hand the operators in the United States are free of these restrictions. And there is the further fact that in the case of some fifty per cent of the mines the men work as long as ten, twelve and fifteen hours a day.

I have given the reasons why the Nova Scotia coal industry finds it impossible, at the end of the war, to compete with United States coal in the Montreal market. Our greatest market, of course, is the little province of Nova Scotia itself where last year we consumed 2,000,000 tons of our own production but mostly run of mine coal. Now, to show how the physical difficulties of mining have in-

creased in Nova Scotia as compared with the United States, let me quote a few more figures. In 1908 the annual production per man in the province of Nova Scotia in the mines was 545 tons; in 1924 the average production per man in those mines per year was 369 tons. That is a falling off of more than a hundred tons a year. In the United States in 1908 the production per man per year was 603 tons, and in 1924 the production per man per year was 756 tons, an increase in the production per man of 153 tons, compared with the decrease of almost a hundred tons in the province of Nova Scotia.

Mr. GARLAND (Bow River): Would the hon. member have any objection to putting that on a day's basis—the production per eight-hour day, instead of per year?

Mr. CARROLL: I have not worked that out. I am afraid I am not a very good mathematician and will have to leave that to somebody else.

Mr. GARLAND (Bow River): Permit me to suggest that that would have a very important bearing on the conclusion my hon. friend is trying to reach.

Mr. CARROLL: I am arguing that the production of coal has become much more difficult in the province of Nova Scotia, while in the United States since the war, and since the opening up of the vast territories of coal in that country during the war, the production has become very much easier. That is the conclusion I am reaching, and it is a matter of fact. Anybody who knows anything about coal mining in either of these countries knows that as we produce coal year by year we are getting further and further into the bowels of the earth and further and further under the sea. The longer the haul the more the coal will cost, and the further we go under the sea the greater will be the cost. In the United States, they have not, up to the present, faced this serious handicap.

Mr. GARDINER: Can the hon. gentleman tell us the number of day's work per annum in Nova Scotia and the number of days' work per annum in the United States in the coal mines?

Mr. CARROLL: I have not the figures before me, Mr. Speaker, but I will admit that last year the days' work per annum per man in Nova Scotia were not up to the standard, especially in three or four mines, and I can say the same thing of the United States. Let me point out that to-day and for the past few months there have been in south-west Indiana alone 17,000 idle miners; so that they have their troubles in that country, as we have our troubles in Canada.

Mr. GARDINER: If there are 17,000 idle in the United States is it not because of the closing down of the mines?

Mr. CARROLL: I do not know. I am placing the facts before the House, and hon. members can draw their own conclusions. It may be that they are closing down the mines. I have no doubt in the world—and I want to be fair with the hon. member—that the vast coal production of the United States in the last number of years, especially during the last few years of the war and since then, cannot continue, because they were over-producing.

Mr. PRITCHARD: Does the hon. member think the increase in the cost of that coal has been brought about by the fact that there was no duty on it, or at least a very small duty, and that they began to improve the quality and got the business in better shape?

Mr. CARROLL: I am coming to that phase of the question. I think it is simply the demand for the slack coal that enhanced the price, because ten years ago slack coal was very little used in the industrial centres of Canada. However, I am going to touch on the question my hon. friend brought to my attention. I have many figures regarding importations from the United States, but I do not think I shall bother the House by placing them on Hansard. What is the reason that this government has been asked by the people of Nova Scotia to have a levelling up of the duty on slack coal, the same as on run of mine and bituminous coal? First of all, I support that proposition Mr. Speaker, because we were in an anomalous position for many years in that regard. I support it secondly because in the last number of years smuggling has become an art in the country, and the United States operators were using this anomaly in our coal duty to smuggle in run of mine coal under the heading of slack coal. That is a matter of which I have personal knowledge. I have personal knowledge that large lake boats come down to the city of Montreal, with two compartments, one loaded with slack coal and the other loaded with run of mine or screen coal. They screen that coal at the mine. They separate the slack from the run of mine. They bring it in, and the slack pays fourteen cents duty and the run of mine pays fifty-three or fifty-four cents. After the duty is paid they mix that coal and it becomes good run of mine coal, and they sell it in the city of Montreal as such. The imposition

of the duty on slack coal will prevent a fraud on the customs, because it will prevent smuggling of run of mine coal into this country in the way I have mentioned.

Mr. KELLNER: How do they mix it? It seems to me a hopeless proposition. I do not know how they can mix it.

Mr. CARROLL: It is not a hopeless proposition. I have mixed it myself in my own cellar. I have bought slack coal down there for fifty cents a ton and gone into my cellar and mixed it with run of mine coal or screened bituminous coal, and it makes a splendid furnace coal. It is almost as easy to mix the coal as to mix a western cocktail.

Mr. KELLNER: Would the hon. member tell us what percentage of it continues slack? It is stated in the press that there has been only a small percentage of American coal coming in as slack.

Mr. CARROLL: That is correct. Out of 15,000,000 tons of bituminous coal imported into this country, something over 3,500,000 was slack coal. If we get some of that slack coal into the province of Quebec and further west there will be a better market for it than there was last year. That is another reason why I support this change in the tariff. I support it also for the reason I intimated in an answer to the hon. minister the other day. I not only supported it, but I went to the government with two delegations from Nova Scotia in support of the proposition. If this thing works out as I think it will, we will have in Montreal a market for anywhere between 700,000 and 1,000,000 tons of slack coal more than we had last year. I support it also because it will give more work to the miners of Nova Scotia, and furthermore it means that we will be living up to what this government proceeded to do when they came down with their first coal policy in 1903, because it is a broad Canadian coal and fuel policy.

I might go on and develop the situation with regard to the announcement made the other night by the Minister of Mines in connection with coke ovens, but I do not know that the time is opportune and I will leave that until the bill comes down. What will be the result? May I read an article from the Ottawa Citizen? The gentleman who writes the editorials for this paper is a great admirer of mine. May I point out what the Premier of Nova Scotia thinks of this increased duty on slack coal? He has been for many years Minister of Mines of that province, and in a statement published in the Citizen of March 15, this appears:

> Premier E. H. Armstrong, for many years minister of mines in the Nova Scotia government, in a statement issued this afternoon, interpreted the change in the tariff to mean a direct saving to the Nova Scotia operator, competing in the St. Lawrence market of thirty-six cents per ton in the selling price of his product. It has been estimated that the ten per cent wage cut proposed by the British Empire Steel Corporation would effect a saving of twenty-two cents per ton in the selling price of coal. This is taken to mean, by close observers of the situation, that under the new tariff the British Empire Steel Corporation can afford to pay the 1924 wage scale, and at the same time enjoy a fourteen cents per ton advantage over the selling price they hoped to effect by reducing the wage scale by ten per cent.
>
> Moreover Premier Armstrong estimated this afternoon that tariff change would enable the Nova Scotia operators to market an additional amount of coal approximating anywhere from three to four hundred thousand tons.

I make the quantity considerably more than that. In this connection the householders of this country are not affected. As a matter of fact, their position is improved because no householders will use slack coal unless it is a mixture that I have mentioned before. For stove or cooking purposes they must use run of mine coal unless they are wealthy enough to buy anthracite. Therefore, this does not in any way affect the householder or the price of bituminous coal. As a matter of fact, it improves that condition by reducing the rate from 53 cents to 50 cents a ton. I wish to read some opinions, and first of all I will read the opinion of the Ottawa Journal in regard to this change in the tariff:

> The increase in the duty on slack coal, while expected to greatly increase the market for Maritime coal in eastern Canada as far west as Toronto, will not, it is believed, have any other effect on industrial centres west of Toronto than of greatly increasing the price of American coal it is necessary to import.

This slack coal will be used entirely by the manufacturers of Ontario, and whereas we are given to-day by this change in the duty an ad valorem duty of 16 per cent, on this coal, we in Nova Scotia and those in the western provinces are paying for goods on which there is a protective tariff of from 27 to 35 per cent ad valorem, so I think Ontario manufacturers can stand their share:

> The imposition of the tax is felt to be largely the result of representations by the Canadian Manufacturers' Association and others, who are anxious that Canadian coal fields in the Maritime provinces be fully developed. Nine thousand million tons of bituminous coal lie in the coal fields of the Martimes, but in spite of this huge mass, it is not felt that production there can equal the demand for the coal that the new tax is bound to produce, as the question of supply is largely a matter of the number of mine openings which can be economically operated, and it is generally admitted by experts that the number of openings which can thus be made there is greatly limited.
>
> Maritime coal in Ottawa was practically unknown a year or so ago, the total amount used in the industrial

plants of this district a year or so ago being around 14,000 tons.

And I may say that this came entirely from the province of New Brunswick, from the Minto mines:

At present however several of the large industrial plants, notably the E. B. Eddy Company, have been using the Maritime slack coal.

And that became possible through the intervention of this government last year. Last year the Eddy company took from the province of Nova Scotia some 40,000 tons of coal. What do the coal dealers in the city of Ottawa say?

Several local merchants are pleased with the imposition of the new tax. Mr. J. G. Butterworth last night stated that the tax was undoubtedly a good thing, and would work advantageously to the Canadian mines in Nova Scotia. He thought it would go far to rectify the present unsatisfactory conditions existing there through the men in the mines being able to work only part time.

Mr. Napoleon Belanger, of the firm of O'Reilly & Belanger, was also of the opinion that the tax was a good thing. It was impossible to state at this date just how the American dealers would meet the situation. They might reduce their prices so as to offset the tax. In any event, however, it would be good for the Canadian mines.

These people are dealers, I presume, entirely in fuel for domestic purposes, and slack coal is not such a fuel. I may be told that the Progressive party in the west and the low tariff men of the west will, of necessity, have to live up to their principles by opposing the imposition of this extra duty on slack coal. But I believe the western Progressives are just as broad in their Canadian point of view as are the Bluenoses of Nova Scotia or the corpulent men of Ontario and Quebec. I had serious doubt for some time as to how the operators and the people of western Canada would look on this subject of the putting up of the duty on slack coal to the same point as the duty on round coal. My fears in that respect have been dissipated, because long before the government brought down the budget, we had the views of western operators and the views of western politicians who, I presume, represent public opinion in western Canada. On the 11th February, 1925, the following appeared in the Edmonton Journal as being the policy of Mr. Greenfield and the Edmonton government, representing, I believe, public opinion in Alberta in regard to this subject:

The question of the dumping of coal at lake head, and the need for an adjustment of the duty as between slack coal and run of mine coal, is no new one to the government—

He was speaking for the government:

—said Premier Greenfield to-day, referring to the memorandum of the Edmonton Board of Trade now being drawn up by the coal section of that body. As a matter of fact, proceeded the premier, we have for the past eighteen months been taking up this subject with the Department of Customs at Ottawa,—

That is as long as I have been taking it up.

—and I have good reason to believe that ere long the duty on coal will be adjusted so that slack coal will pay the same duty as run of mine coal, thus preventing the separation of the two grades at Duluth,—

Their troubles are at Duluth; ours are farther east.

—shipping in the slack separately under the low duty, then re-mixing at Winnipeg and selling the mixture once again as run of mine coal.

The very proposition we have had to contend with in the Maritime provinces. He goes on:

Referring to the Anti-Dumping Act, Premier Greenfield said that in his opinion this should be made the same as the United States act, with the valuation for duty purposes made at point of production, instead of at the point of direct export. The Alberta government, he added, would continue to press for this concession also until it was secured.

I have not looked into the details of the revision so far as the anti-dumping clause goes but I think the wishes of Premier Greenfield are being complied with in this respect.

"If we can succeed in these two things," concluded the premier, "we shall have greatly improved the position of Alberta coal in the competitive Winnipeg market. Nova Scotia is also pressing for the same thing as Alberta, and we have every hope of ultimate success."

The Edmonton Board of Trade passed a resolution along similar lines, as did the Board of Trade of Calgary, whose resolution I have not with me, and Premier Greenfield took the matter up. And a week or ten days ago a delegation from Nova Scotia appeared in Ottawa to impress upon the government the necessity of doing exactly what they had done in regard to coal. The government of Alberta has a trade commissioner who is well and favourably known to many of us and he was on his way east when the Nova Scotia delegation was on the way to Ottawa. They got in touch with him to ascertain his views and those of the government he represents as trade commissioner, and a telegram came from Premier Greenfield, as follows:

Edmonton, Alberta, March 18, 1925.

HOWARD STUTCHBURY,
Chateau Laurier,
Ottawa, Ontario.

Replying your wire seventeenth please represent province with Nova Scotia delegation Thursday setting out our view in accordance with letters recently sent to Minister of Customs and Minister of Finance.

These are the very views which the Edmonton Board of Trade expressed in February or January of this year. It is the policy of the

Alberta government, who I have no doubt represent public opinion in the province of Alberta; they are with the people of Nova Scotia in the matter of this duty. Now what about the operators? I have heard it said both in this House and outside—

4 p.m.

Mr. KENNEDY (Edmonton): If I understand the first telegram which the hon. member read in regard to a statement of Mr. Greenfield's,—

Mr. CARROLL: It was not a telegram.

Mr. KENNEDY (Edmonton): It was a press report, I think. He asked for an equalization of the duty. Is there anything there to show by what means he would seek that equalization?

Mr. CARROLL: I do not think there is any secret about it. Mr. Stutchbury happened to arrive here when the Nova Scotia delegates were before the government; I met him that night and we discussed the situation. He wanted to interview the Prime Minister and other members of the government, and he declared that the desire of those he represented was that the duty on slack coal should be levelled to fifty-three cents a ton. Well, the government has not entirely complied with that request, having fixed the rate at fifty cents. But there is no doubt as to where the government of Alberta stands on this question and if any further documentary proof is needed it is to be found on the files of the Minister of Finance and the Minister of the Interior, which will give evidence as to what is the attitude of the Premier of Alberta.

Mr. GOULD: It has occurred to me that it would have been more in keeping with the professed free trade principles of the government of Alberta and of Mr. Greenfield if that gentleman had advocated a reduction of the tax on run of mine down to the level of slack coal.

Mr. CARROLL: I do not know about that. I do not know whether he has expressed any opinion publicly on that point, but I take it that Mr. Greenfield is an astute man. I had the pleasure of meeting him once, and while I am no judge of human nature I considered him in that light. I presume, therefore, that Mr. Greenfield was in accord with public opinion in the province of Alberta on this subject. My hon. friend shakes his head; well, I shall leave him to settle the point with the Premier of Alberta.

Mr. MEIGHEN: It looks as if the Progressives were no better than the Liberal party out there.

Mr. CARROLL: Both of them are very good. They are working hand in hand so far as this matter is concerned, and I am not referring to the members of this House. The Progressive party in Alberta is certainly co-operating with the Liberal party on the question of coal and I congratulate them; I have no doubt a great amount of good will follow. I was about to say when I was interrupted a moment ago that it has been suggested both in this House and outside that the coal operators of Alberta and British Columbia were opposed to the levelling-up of the duty on slack coal. I am not going to express any opinion held by the operators of Vancouver island, where there are big mines, but I will give the opinion of the mining operators of the Crowsnest pass as well as the operators in other parts of Alberta. I have here a copy of a telegram sent on March 17, 1925, from Calgary, Alberta, as follows:

HOWARD STUTCHBURY,
King Edward Hotel,
Toronto, Ontario.

Answering your wire of fifteenth stating that you are informed western operators opposed to equalization of duty on slack and run of mine bituminous coal, association to-day passed resolution favouring equalization of tariff on slack and mine run imports and favouring also the imposition of a duty on coke and briquettes manufactured from bituminous coal see my wire to Camsell January twenty-eighth.

R. M. YOUNG.

I have dealt at some length with this matter because I consider it important and I will now put on Hansard the comparative prices of run of mine coal in 1907, 1923 and 1924 to show how the ad valorem duties were affected. In 1907 the import valuation of slack coal was 65 cents a ton; in 1923, $3.63 and in 1924, $2.34. It fell to that extent in 1924 owing to the fact that coal was being dumped into this country at that time by the operators of the United States. And that is one of the grievances which the Premier of Alberta entertained in this matter. The quantity of slack coal imported into this country as compared with run of mine coal has increased tremendously in the last number of years. The import of slack coal from the United States as compared with the whole bulk of bituminous coal increased from 19 per cent to 26 per cent in the period of four years between 1920 and 1924. Here is another reason why something should be done to level up this duty.

Much has been said with regard to immigration into this country and emigration from this country. I do not think that this government or any other government should use the public funds to induce to immigrate to this country the carpet knights or the drawing

room dudes of London, Edinburgh, Paris, Vienna, or any other parts of Europe. What they should do, and what I hope they are doing, by their immigration policy is to bring in the robust European, I care not what nationality he is, who will be willing to go on our farms and into our forests, our fisheries and our mines, and to brave for a year or so the hardships which are natural to those industries; and who will not be discontented or discouraged as to his chances in this country if he does not become a millionaire the first year. We should do everything we can to keep our own people in our own country. There are some ways that this government can assist in keeping with us permanently the people we now have here. It is unfortunate that a great many of our best people go to the United States. We are trying to get them back, and many of them are coming back, but the proportion is not in favour of Canada. Part of the trouble in this country is that the calls and the claims and the clamours of our great industrial centres—I mean more particularly our great ocean and river ports—have been so strong and so insistent upon this government and other governments, and so much attention is therefore being paid to these larger projects, that the smaller things are sometimes forgotten. Let me suggest a few things which to my mind would help to keep our own people within our own borders, at little or no cost to the country.

First of all, the Post Office Department can do very much to help make our rural population happier and more contented. They could develop and extend the rural mail delivery far more than they are doing to-day, and at very little cost. Where personal mail delivery is impossible the government can do a great deal more than they are doing in giving the people of remote rural districts in every province a mail delivery at least once a day, excluding Sunday. That certainly would make for a happier and more contented people. I believe the Agriculture department also can do a great deal towards accomplishing this same end. Lines of communication should be established between the Agriculture department at Ottawa and all the remoter rural districts. One or two intelligence officers should be appointed by the Department of Agriculture in all such remote rural districts. These officers would receive instructions from the department, by mail, with suggestions as to remedies for many of the difficulties experienced by the farmers in those districts—suggestions as to how they might do better on their farms; how to conserve their forests; how generally to carry on their work in such a way as to make them happier and more contented. The Department of Marine and Fisheries could do very much to help the fishermen, without any great cost, by teaching them how better to prepare their fish for the market.

May I, without in the least desiring to reflect upon previous governments, or upon the present government, illustrate the point I tried to make a few minutes ago when I said that the wants and the claims and the clamours of our great ocean ports were overshadowing everything else and perhaps causing the government to forget that we have thousands of miles of coast line in Canada which are not being properly developed? There is a small fishing hamlet on the southern side of the district which I have the honour to represent. It was settled by French Huguenots and English and Scotch Catholics three years after the founding of Louisburg. They developed little farms there and lived contentedly by farming and fishing. The French engineers of the day, well trained in matters of practical value to the people in this little hamlet, built across the harbour for a distance of some five or six hundred feet a breakwater, I shall call it, which prevented the broad sweep of the Atlantic from destroying the fishermen's boats, fishing gear and so on in the inner harbour. For a hundred and twenty years that breakwater stood and triumphed over the assaults of the Atlantic. For a hundred and twenty years the people of that district made a living by farming and by fishing. They did not become wealthy, but they were happy and contented. Some little maintenance work was done after a hundred and twenty years, but finally in the tremendous storm that swept that country in 1910 the remaining portion of the breakwater was torn away, so that if there was any sign of a breeze from the the sea it was practically impossible for these people to get their fishing boats, of which they had about one hundred and fifty, out to the fishing grounds on the Atlantic. The government of the day were approached in the matter, and it was requested that an estimate be made of the cost of putting that breastwork into repair. It was estimated that $17,000 would do the work, and the government of the day placed in the estimates in 1911 the sum of $17,000 for that purpose. Well, bigger things eclipsed the needs of the poor fishermen of this hamlet. The reciprocity pact came on; the government went very hurriedly to the country, and a new government came in. Then

there was the war, during the period of which nothing was done. While the war was on, however, so high was the price of their product that these fishermen could live as well by fishing one day a week as they could when they fished five or six days a week before the war. Nothing much was said at that time. In 1922, however, I took the matter up with the government, but the answer was, "We have no money. We are trying to reduce expenses. We are retrenching. True, we are spending millions of dollars in bringing in immigrants, but we are retrenching." In 1923-1924 twenty-five families whose fathers and grandfathers and great-grandfathers had been the best citizens of Nova Scotia were obliged under the stress of circumstances I have related to pick up their beds and whatever they had and betake themselves to the fishing grounds of Gloucester and other parts of the United States. We are spending millions of dollars to bring in immigrants, but not a thousand dollars to prevent immigrants from going out. I am not criticizing the government in respect to this matter, nor am I criticizing former governments who refused to take action in this respect, but I am giving this note of warning that the needs and necessities of the small places in this country must not be overshadowed by the great things for which people in other parts of the country are asking.

We hear doleful tales of the present condition of Canada. We hear that the public debt is so great it is going to ruin us, that we will not be able to meet it. The public debt is well over two billions of dollars, an enormous amount, but, Mr. Speaker, if I owed two billions of dollars, and had assets of untold value mounting into the billions and billions of dollars, I would think I was fairly well off. Have we got the assets that this debt of two billions of dollars represents? Yes we have the assets, and our only lost assets are represented by the debt that was accumulated during the war, but I do not think any man in this House or in this country will say that the money we spent during the war, and the debt we thereby accumulated, was wrongly spent. Yes, we have a large debt, but our assets are enormous. Our imports are less than our exports, we are selling more than we are using, we have a surplus in that direction. I think that does not forbode disaster for this country, I think it shows that so far as trade is concerned, this country is in a healthy condition. And in that regard, Mr. Speaker, may I give the opinion of an English economist and expert in trade matters:

> Winnipeg, March 23, 1925. "I am confident the world is on the verge of the greatest expansion of trade ever seen, and in this movement towards prosperity Canada has obtained a running start,"

Those are the words of Sir George Paish. He says further:

> I anticipate higher prices for Canadian wheat over considerable period of years. Canada is ready now to increase her production greatly. The railways are there. All there is needed is farmers to till the soil, and these should be easy to get.

That is the opinion of a gentleman whom I personally do not know, but whom the Winnipeg Free Press designates as a well-known British economist.

I was somewhat surprised that even on this side of the House, in the midst even of the Liberal party, we have some people who are beginning to develop a tone of pessimism. Last night the hon. member for Kings (Mr. Hughes) in addressing this House in a very able speech suggested that the word "secession" was becoming more commonly heard in this country, and that the sentiment in favour of secession was becoming more pronounced in the Maritime provinces. Mr. Speaker, I come from the Maritime provinces, I am a Maritime province man, and I would ask: What have we got to gain by secession? What have we got to lose by secession? If there is any person either in the Maritime provinces or elsewhere who will show me that we are going to be winners by secession, I am not so hopeless in my way of thinking but that he might convert me. But I say, Mr. Speaker, we would be ten thousand times worse off than we are to-day in every one of the Maritime provinces.

My hon. friend from Kings says that we have no market in central Canada for our fish, that only two and a half per cent of our catch is marketed in central Canada. That may be true to-day, but that very condition is due to the war. Before the war, our railways carried fish from Cape Breton, Nova Scotia and New Brunswick in well-equipped refrigerator cars, and we developed a wonderful market in central Canada for our fish. When the war came, those cars were taken off. The service was resumed two years ago under the present management of the railways, and I am willing to assert that inside of two years, if this refrigerator car service is developed, we shall not have only two and a half per cent of that market in central Canada, but we shall get the great bulk of it.

Mr. HUGHES: We have the great bulk of it now.

Mr. CARROLL: No, you have not.

Mr. HUGHES: Oh yes, I have it from wholesale men in Montreal. Further, it is four and a half, not two and a half per cent. The wholesale men in Montreal tell me that less than one per cent of their fish comes from the United States.

Mr. CARROLL: Let me tell my hon. friend that Montreal does not comprise central Canada. He forgets that fact. Is his idea of the geographical situation of this country so limited that he immediately jumps to the conclusion that Montreal is central Canada?

Mr. HUGHES: Oh, no.

Mr. CARROLL: Let me tell my hon. friend that I have letters from people in Toronto, Hamilton, Guelph and several other cities in Ontario, telling me they require more fish and are not able to get it under the present freight rates that have existed during and since the war. I was surprised that my hon. friend from Kings should make those remarks.

Mr. HUGHES: The freight rates now on fish from Nova Scotia are very favourable.

Mr. CARROLL: Absolutely. But when did they become favourable? Can you establish a market in a year? We lost that market during the war. My hon. friend is like some other people in this country, who wish to become millionaires overnight. We are not capable of regaining that market in a year or two. It took eleven years to establish that market prior to the war, and it will take us ten years to re-establish it.

Let me say further with regard to this talk of secession, that in 1867 when Nova Scotia and New Brunswick joined confederation we had in Nova Scotia 330,000 of a population, and in New Brunswick 252,000, and for one hundred and twenty years those provinces had been established.

Mr. FORKE: If I may be allowed to impinge upon the debate for a moment, I would inform my hon. friend that Manitoba exports fish to St. Paul, Minneapolis and Chicago. I think we export more fish than the province of Nova Scotia. That may seem strange to my hon. friend from the Maritime provinces.

Mr. CARROLL: I am not surprised, then, that my friends in Minneapolis and other sections are so weak in brain power if they have to live on whitefish. In our part of the country we get the real stuff. I do not want to be discourteous to my hon. friend but I want to point out to him that I am not talking about duties at all; I am talking about freight rates and the available markets so far as Nova Scotia is concerned.

Mr. FORKE: I had no idea of finding fault with my hon. friend, I wanted to give him information so as to disabuse his mind of the idea that we do not grow anything but wheat out on the prairies.

Mr. CARROLL: Oh, I know. I have caught a few fish out in Saskatchewan and Manitoba and was caught as a fish out there myself too, but by gentlemen of a calibre different from that of the hon. member for Brandon.

I was saying, Mr. Speaker, that we are not in a hopeless mood in the Maritime provinces. In 1867 Nova Scotia had a population of 330,000 and New Brunswick had a population of 252,000. That was our population in those provinces after the lapse of one hundred and twenty years. In the next fifty years the population of Nova Scotia was increased to 523,827 and the population of New Brunswick, I think, to 387,860. In other words in fifty years Nova Scotia increased its population by 59 per cent, while New Brunswick increased its population by 54 per cent. Down there we are sometimes faced with serious problems as the people of other parts of Canade are. Nevertheless speaking as a Nova Scotian I want to see the great bulk of our population happy and contented. And they are going to be happy and contented. I do not believe you can find any fair-minded, thinking man in the province of Nova Scotia to-day who will see in secession any brighter days for that province than we have enjoyed and are still going to enjoy under confederation. The papers some time ago spoke of the hon. member for Springfield (Mr. Hoey) as a secessionist, which simply goes to show that when the public journals get an idea they broadcast it very freely irrespective in some instances, of whether it is right or wrong. The hon. member for Springfield is no more of a secessionist than I am. He is a broad-minded Canadian, a gentleman who has come to our shores and who has made good and will continue to make good. Speaking as a Canadian we invite millions of men of the mental and physical capacity of the hon. member to our shores.

Mr. FORKE: Hear, hear. You cannot get them, they are not made.

Mr. CARROLL: So far as I am personally concerned I shall persuade my four robust little Canadians to go on singing "O Canada, we stand on guard for thee." Let every father in Canada teach his children the same

refrain and we will have in this country in a few years, notwithstanding the present rivers and floods of pessimism, a very contented people. We have our problems but they are not insurmountable. We can solve them, we must solve them. We have the brains, we have the muscle, we have the driving force, and we have the intellectual vigour to enable us to do so. We have great natural resources, we have a wonderful country, and if we need capital we can get it both at home and abroad. What we want in order to develop in this Dominion is a tone of optimism and a feeling of broad Canadian patriotism. Speaking for the people of the province from which I come I think I can say that we have no fears for the future; it looks bright to us.

Mr. H. C. HOCKEN (West Toronto): Mr. Speaker, I join with my hon. friend who has just spoken in deploring the illness and absence of the Minister of Finance. I particularly deplored his absence last session, because I am convinced that if he had been here at that time we would not have heard "The death knell of protection" nor "The first crack out of the box." Hon. Mr. Fielding is too experienced in the work of the Finance department to have taken steps to frighten capital as was done in last year's budget. Ever since that budget was presented there has been a diffidence and a fear on the part of capital to invest in industrial enterprises which has brought us to our rather desperate industrial position.

Mr. Speaker, we have been told on several occasions that the policy of this government is "Wait and see." So far as the present budget is concerned I think I might add this much. "Wait and see, but we will not let you see it all," because the annual statement has been brought down before the end of the fiscal year. That being the case an accurate accounting of the year's business cannot be made. Instead of being provided with exact figures we are driven to estimates, and naturally these estimates have been prepared in accordance with the necessities of the government at the time. I submit, Mr. Speaker, that is an absolutely improper thing for the government to do. The national government should be an example to all business men in the country; and if any business man, or any incorporated company, prepared its annual statement in the way Canada's annual statement has been prepared for this House, that man, or that company, at least, would be liable to heavy penalties. The laws of the provinces of Canada would not permit estimated statements from incorporated companies. But this government I suppose, Sir, is above the law, and it tries to hoodwink the people by the methods that have been adopted. However, I do not think it will succeed. I, at least, will do what I can to show the people of Canada the way the government, in some particulars has attempted to hoodwink them. The government has been ably aided by its press, and has sent forth through its principal organ in this country a statement so misleading and inaccurate that I think attention ought to be called to it. In the issue of the Globe following the presentation of the budget, in 48-point type running right across the page, we find the statement that "Canadian taxpayers are $52,800,000 in pocket," the inference being that the government has saved them that amount in some mysterious way. In smaller type I read that this has been accomplished in the face of big reductions in taxation. I should like some person to tell me in what way taxation was reduced last year. In what way have taxes been reduced so as to account for the placing of this $52,000,000 in the pockets of the people? I take up the statement of the Acting Finance Minister (Mr. Robb) and I find that the loss of revenue consists chiefly in a reduction in the amount received from excise taxes,—the sales tax, the stamp tax and the receipt tax. Any person who can argue that that is a saving to the people of this country must have a very peculiar kind of mind. It indicates clearly that the volume of business transacted in this country was some hundreds of millions of dollars less last year than the year before. If that is an evidence of prosperity to any man's mind I submit he ought to take a course in elementary arithmetic and get some little understanding of business methods. The government has not reduced taxation. This government is imposing higher taxation to-day than has ever been imposed in the Dominion of Canada in all its history. It has a sales tax of five per cent against a sales tax of three per cent when it came into power. It raised the tax to six per cent and pretty nearly ruined the country, then reduced it to five per cent, and in addition to that it has imposed a stamp tax on receipts, which is an onerous and irritating tax upon the business of this country. So that, Mr. Speaker, instead of a reduction in taxation, we have an increase in taxation, and yet the journalistic representatives of this government have the mendacity to set out with the largest type they possess that the people are fifty two million dollars in pocket. The Acting Minister of Finance (Mr. Robb) did not say anything like that.

I do not think he would dare to say that, because he has a personal reputation to sustain. Indeed we have been informed this afternoon that he is something more than that. He is a superman. I admit cheerfully his agreeable qualities, and I have very high respect for his integrity, and therefore I am satisfied he would not be a party to such statements as have been made in the chief Liberal organ of the Dominion, a statement intended I verily believe to mislead, because I cannot conceive of any responsible newspaper man being in the position to write headings for a paper like the Toronto Globe being so dull of intellect as to imagine he could get away with a thing like that.

Much is made of the fact that the government claims a surplus. These claims of surpluses have been made by every legislature and every government we have had since confederation, and they are susceptible as a rule of many interpretations; but this is a very modest surplus, $1,800,000. It has to be observed that it is obtained by unwarranted estimates of the revenue for the present month, for if the revenues of the present month had been kept down to the average for the year, instead of showing a surplus they would have shown a deficit. This government says there is a surplus of $1,800,000, and it adds to that $4,000,000 of interest due from a frozen loan. Roumania and Greece owe to this country many millions of dollars. They have not paid the interest on it, and the interest now amounts to $4,000,000, a substantial sum, and the government has the audacity to say that this $4,000,000 which has been unpaid over a period of years is an asset. They do more than that, Mr. Speaker, they call it revenue.

Mr. MEIGHEN: A new asset.

Mr. HOCKEN: A new asset. They call it revenue, but they have not got it. Revenue is something you have, something that has been paid, but they put it in as revenue, added it to the surplus and make the surplus $5,800,000. I am afraid my hon. friends are following the example of the late managers of the Home Bank. They capitalized the interest on frozen loans, and that is what led them into trouble, and their eventual insolvency. We only have to carry this process a little further, up to a certain point where our natural resources will not suffice, and our assets will not be sufficient to meet the increased debt charges, then we will be as insolvent as the Home Bank. I have great confidence in the people of this country, and I do not think we are going that far, because I am looking forward in the course of the year, or possibly the next year, to the people changing their board of directors, and then we will have no more of this unpaid interest on frozen loans charged up to assets and revenues.

The government also makes a serious misstatement when it tells the country that the debt has been increased by thirteen million dollars. Well, it is something to have them admit that much. They might have added to the estimate of current revenues and reduced that a few million more, but they apparently went as far in that direction as they thought it was wise to go. But if we take the operations for the year we will find that, instead of the debt having increased thirteen million, it has increased a hundred and five millions. I will tell hon. members how it is made up and I will challenge anyone to deny the accuracy of my statement. Loans were made to the Canadian National Railway amounting to $82,000,000. Every bond has the guarantee of this government, and it is as much a national bond as if the name of the National Railway did not appear upon it at all. The credit of the country is pledged to meet those bonds to the extent of $82,000,000. Then we have an over-estimate of this month's revenue of at least $6,000,000. The minister estimates the revenue during March as $35,000,000. He has no warrant whatever for doing that. The fair thing to have done would have been to divide the year's revenue by twelve, and if he had done that he would have found his estimate $29,000,000 instead of $35,000,000, but he has added the revenue for this month which cannot be accurately revealed by any person until the end of the month, and has brought down his budget before absolute accuracy could be obtained. By that peculiar process—rather I think discreditable process—he has secured what he has presented as an asset of $6,000,000. I submit that will have to be added to the national debt, and the overdue interest of $4,000,000 which is an addition to the national debt and he has admitted $13,000,000. That makes altogether $105,000,000 which has been added to the debt of the country during the present year. I submit the Acting Minister of Finance (Mr. Robb) has offended seriously, first in capitalizing debts and calling them assets, and secondly in making excessive estimates of revenues to bolster up an annual statement which might have remained until he had presented it with the accurate figures.

I wonder, Sir, what any banker would say to a client who presented his annual state-

ment as the Acting Minister of Finance has presented his statement to this House, who laid before his banker an annual statement that was based on estimates of the last month's business. I have not a very extensive experience with bankers, but such as I have had leads me to the conclusion that the banker would say to me, "Mr. Hocken, you had better seriously and materially reduce your discounts. Your credit will be curtailed. A statement of this kind does not warrant us in giving you the credit we have been giving you in the past." Therefore, from the standpoint of the finances and the debt of this country, it is quite evident that the rosy reports that the Acting Minister of Finance (Mr. Robb) has presented to the House are not warranted by the facts. I go so far as to say that this taxation, and largely the taxation of this parliament, is strangling the business of this country It is proved in the return, in the fact that $35,000,000 less was collected this year than last year on excise account. There is no better indication of the state of business than the amount paid in sales tax, stamp tax and receipt tax. It is the most accurate barometer of business that can be produced. That reduction of $35,000,000 convicts the government of having imposed taxation that is altogether too heavy to be borne, and that it is resulting in a substantial decrease in the business of the country. It will be a great disappointment to business throughout Canada that there is no reduction in the sales tax this year. It is an impost that is hard to be borne, and it has ramifications of the most serious character upon general business.

I thought I would draw up, for the edification of the House and the special consideration of the Acting Minister of Finance, a list of taxes that business has to bear in my province, and I presume the same is true of other provinces. Every business man is under ten different taxes. He has ten different levies to meet upon his business. From the federal government he has the income tax, cheque tax, receipt tax and sales tax. From the provincial government he has the workmen's compensation tax and now he is to have a gasoline tax. In case that might be thought to be a trivial affair, there are not very large businesses in Toronto where the managers estimate that the gasoline tax means $1,000 a year in additional taxation. Those are six. Then, of course, he has the ordinary municipal taxation, real property, business tax, income tax and a frontage tax.

Mr. CALDWELL: Does the tax apply to gasoline used for commercial purposes?

Mr. HOCKEN: It applies to gasoline used for all purposes, because the tax is levied at the point of sale. There can be no differentiation between consumers.

Mr. MANION. The farmers are to be exempted.

Mr. HOCKEN: Yes. The danger of all this is that these taxes have to be added to the cost of production. My hon. friends will say that this is passed on to the consumer. No doubt most of it is.

Mr. KELLNER: I think the hon member has neglected to mention the customs tax.

Mr. HOCKEN: The hon. member can add the customs tax if he likes. I am citing direct taxes. These taxes are imposed and extensive statements have to be made with regard to all of them, so that this is another tax really because the labour involved by chartered accountants preparing these statements is a matter of heavy cost to a business of any size. Industry pays a larger proportion of the customs tax than any other portion of the people of Canada. But what I was referring to was direct taxation enforced upon business, which taxation has to be taken out of the receipts, and which makes it so difficult to do business. I know these taxes may be passed on to the consumer, but that makes the purchasing power of consumers in the cities that much less. It makes the product that the industry produces not only higher in price but smaller in volume, and this again increases the price. These taxes increase the cost of living. We are always talking about the cost of living. Everything that increases the cost of production of any article in general consumption must increase the cost of living. But these taxes also seriously embarrass trade in all its ramifications, and they make competition with the United States that much more difficult. My hon. friends have been reading the papers and they will know there have been substantial reductions in taxation in the United States. The aim of their President, Mr. Coolidge, is to reduce taxation to a per capita this year of $25. In the Dominion of Canada last year the taxation was $47 per capita. That is an additional burden upon the industry of this country and this adds to the difficulty of competing with the industries of the United States. It will not do to put that aside and say: That is immaterial; it does not count. It is one of the things that hampers industry in Canada

and that causes a great deal of trouble. It is leading to the economic penetration of the United States into the business of this country. I wonder if my hon. friends know to what extent that is going on? Business after business, some old-established concerns, are being taken over by American capital. We have one in Toronto, a business that was in operation, as I can recall, when I was five years of age. That is a good while for a business to be in operation, and it has grown to be the largest of its kind in this country I refer to the Christie-Brown Biscuit Company. That biscuit company is being taken over by the International Biscuit Company of the United States, a biscuit trust. That is only one example of the economic penetration by United States capital into the business affairs of this Dominion. It is a serious thing because, when the capital of one nation acquires control of the industry of another, it is then in a position seriously to injure that particular nation. It is not a safe proposition for any country, especially one the size of Canada, to be subject economically to a country like the United States and to have all the capital for the conduct of its industries supplied from that source. It would be a thousand times better for us if we had that capital supplied from Great Britain, with which country we are so closely related. I would not object to that so much, but I do not want the stars and stripes to wave over the biscuit factories or the factories of any other industry of this country. I have had letters recently from men doing business in Wall street, New York, drawing my attention to the extent to which American capital is invading this country and getting control of its industries, and I have been invited to express my opinion as to the future of Canada under those circumstances, because in financial circles in New York, as I am informed, this is regarded as simply a prelude to the political penetration of Canada by the United States. I am offering that, not as my opinion, but as that of a man who is doing business in the financial district of New York. At all events, I think it must be admitted by every person that it is a serious thing for Canada to have our industries controlled more largely than they are now by capital from the United States.

The result of all this excessive taxation is a general depression in industry which reacts on all classes of the community.

Mr. SPEAKMAN: Does the hon. gentleman contend that it is the excessive taxation in this country that is bringing American capital here?

[Mr. Hocken.]

Mr. HOCKEN: I am contending that the excessive taxation makes it difficult to carry on business.

Mr. FORKE: It would be the same for the British capitalist.

Mr. HOCKEN: I should be better satisfied to see British capitalists come here. Would the hon. member just as soon have American capital controlling Canadian industry?

Mr. FORKE: I have been trying to follow the drift of the hon. member's argument. I do not see what difference it makes whether we have British or American capital so far as taxation is concerned; they would both have to pay the taxes. Personally I am at one with the hon. member in this, that I would rather see British capitalists come here.

Mr. HOCKEN: Quite so. Now, the Canadian company finds it difficult to continue, and it falls into the hands of an international trust under which it can be operated cheaper than it can if conducted as a separate Canadian industry. I do not mean to say it will suffer any less from taxation because it is in American hands, but these large aggregations of capital controlling Canadian industry and operating under an American trust make it possible for them to carry on where Canadian industry would be unable to exist.

Mr. EVANS: Will the hon. gentleman say why so much Canadian capital finds its way into foreign countries? Take for
5 p.m. instance the financing of the sugar industry in Cuba and the tractor industry of Brazil, and so on.

Mr. HOCKEN: One of the faults I have to find with the present taxation is that Canadian capital will not go into industry. It gets from government guaranteed bonds of the National railways, at 5 per cent, a better return than it can receive from industry. And the capital invested in the industries of this country is at the mercy of further increases in taxation, which all makes it more difficult to operate.

Mr. ROBB: Is the hon. member aware that there is $900,000,000 of Canadian capital invested free of taxation as a result of the financing of the party he himself supported?

Mr. HOCKEN: There are government bonds exempted from taxation to that extent, yes. But I wonder how much of that is held in the United States. These big fortunes in the United States have been going into tax-free bonds at a rate to excite public attention over there on the part of the press. It is

regarded there as a serious thing, and these great aggregations of capital in the United States have purchased a large proportion of this $900,000,000 of Canadian bonds.

Mr. ROBB: Not a very large proportion.

Mr. HOCKEN: How much?

Mr. ROBB: My information is that the great bulk is held in Canada.

Mr. HOCKEN: That is broad. Let us take the case of a Canadian capitalist who is able to put his money into tax-free Canadian bonds at 5 per cent. If he put that money into anything else he would have to pay 30, 40 and 50 per cent income tax, whereas taking a low rate of interest on tax-free bonds he can still be a lot ahead.

Mr. ROBB: I admit that.

Mr. HOCKEN: And the money is being withheld from the development of industries; it is withheld from the development of our natural resources, by reason of the excessive taxation imposed upon it. I submit to the minister that in the circumstances there is nothing which this country needs so much to-day as a reduction in taxation. We cannot compete alongside the United States unless we have lower taxes. The present excessive taxation is seen in the general depression of industry and business, and we have that fully set out in the figures that have been submitted. We have for instance some $35,676,000 less collected in excise taxes than the year before; there is a shrinkage in business as represented by these figures. But the undue taxation is also seen in the departure of so many native-born Canadians to the United States to obtain employment.

My hon. friend (Mr. Forke) speaking the other night told us that the policy of the present government, as he understood it, was to reduce the cost of the necessities of life. Well, I thought while the hon. gentleman was speaking that the government had certainly succeeded in reducing one important necessity, and I will give them credit to that extent. They have undoubtedly succeeded in reducing what I consider to be the prime necessity of life, the one upon which all other necessities rest, and that is wages. The government have succeeded in reducing wages in this country. The pay envelope in Cape Breton is reduced to three days a week and it is the same in other parts of the country, while in some cases there is no pay envelope at all. So that the government is entitled to that much credit, and I freely accord it.

But not only are our people drifting over the line; unemployment has got to such a stage as to tax the resources of private charity, as well as the revenues of our municipalities. This government takes no responsibility for the unemployed; that is a matter that is not in the British North America Act. Private charity is obliged to take care of these people, and evangelists are opening soup kitchens and giving free lunches in our city. And the municipality is spending thousands weekly maintaining a house of industry. Every police station of the city is crowded each night with men who are unable to find any other place in which to lie. Not for years within my recollection have the police stations been so flooded with men who wanted beds as they have been during the past year. Now there is only one way to remedy this situation and that is by lower taxation, a little more encouragement for the industries to keep these men employed. I find no mention of these problems in the budget; they are treated as non-existent, and I am afraid that the government is not inclined to give to such matters the attention they deserve.

It is all right to talk optimism. Every little while someone who is properly heeled himself, who has a good salary, a man who perhaps is living under the protection of a public institution, makes a public speech to a Canadian club and says, "Let us be optimists". That is all right in a way; and there is no more pronounced optimist in this country than I am. But when a man has an empty stomach and nothing at all in his pocket, when he has no prospect, no bed, it is pretty hard to maintain that optimism. A man who is an optimist under these circumstances is certainly equal to that celebrated character in one of Dickens' books who thought it was a credit to himself to be cheerful only under the most adverse conditions that could possibly exist.

Mr. FORKE: Mark Tapley.

Mr. HOCKEN: That's the gentleman. It was only when he was trodden down into the ground that he felt he had a right to be proud of his cheerfulness. But it is pretty hard for a man whose stomach is empty to be optimistic. I have great faith in Canadians. I have seen them come through hard times. I have seen them tighten their belts when they could easily take up another hole in the belt without stretching it very much. On more than one occasion we have found our way back to prosperity.

Mr. CHARTERS: How about the reduction on grape fruit?

Mr. HOCKEN: Grape fruit is not very filling unless you eat the peel, and I do not know how that would agree with one's digestion. I have noticed that the usual way the people of this country return to prosperity is by way of the ballot, and I do not think that test can now be long deferred. That makes me feel optimistic.

This government seem to think that the highest type of statesmanship is to discover new sources of taxation. Instead of practising rigid economy, reducing the cost of government in every particular, they go along with no apparent effort in that direction. During the past year 1,572 new employees were appointed by the Civil Service Commission at the request of the government. Surely that is an excessive number to add to the service if the government are really desirous of reducing its cost.

I am glad, Mr. Speaker, to see that agriculture is prosperous. I am glad to see that agricultural products are commanding high prices. But I would like to see the market gardener, for whom the hon. member for South York (Mr. Maclean) spoke yesterday, prosperous as well as the grain grower. I would like to see the constituents of the hon. Minister of Railways and Canals (Mr. Graham) a little more prosperous, because he represents a market garden constituency too. All along lake Erie and in the southern counties bordering on lake Ontario there are market gardens, and I regard the people who are engaged in this work as agriculturists. I do not know what my hon. friends to my left would call them; but they are working the land; they are providing the things that the people want. But by reason of the present tariff the appetite of the public for these products is satiated before the products of our own market gardeners come in. The hon. member for Brandon (Mr. Forke) says that is the fault of the climate; you cannot beat the climate, therefore we cannot do anything to help it. But something could be done to help it. If a tax were put on these early vegetables, particularly the early fruits, then the people who wanted them could pay the tax; the country would get the revenue, and the people who are growing these things in Canada would also benefit.

Mr. PUTNAM: Would my hon. friend advocate that?

Mr. HOCKEN: Most assuredly I advocate it. I advocate higher duties on market garden produce and early fruits, with three cheers and a tiger.

[Mr. Charters.]

The government, Mr. Speaker, have acted like a body of men fearful of every step they take. The budget makes no decreases in duties because of the east, and no increases in duties because of the farmers of the west; so the government stand pat. They are like a lady who walks down one of our Ottawa streets on these slushy days and picks her steps very warily for fear her feet will get wet. But capital in this country has no confidence in the present government. The real Finance minister—the sick Finance minister, rather—would not have frightened capital as it was frightened last year by at least three members of the government. He would not have put capital in the position of being fearful of investment. On the contrary, I think he would have done what he had promised to do, maintain a stable tariff. He would thereby have incurred. perhaps, the disapproval of my hon. friends to my left, but his knowledge of affairs and his experience—

Mr. EVANS: They have seen the error of their way.

Mr. HOCKEN: Yes; the experience and the judgment and the ability, represented by the Minister of Finance, lay on a sick bed, and they saw the error of their way. They not only made reductions in the tariff, but they frightened to death anyone who could understand what was meant by "the first crack out of the box."

There is another matter to which I want to refer, namely, the export tax on power. Before dealing with that, however, I would like to suggest that if the government really wanted to encourage industry in this country; if they wanted to enable the country to get the maximum benefit from its natural resources, they might have put an export tax on pulpwood, or if you like, an embargo on pulpwood. There is nothing I can think of that would so certainly add to the industrial wealth of Canada, without in the slightest degree requiring a tariff, as the development of the paper making industry here. We allow our wood to be cut down and sent out as wood, by the cord, getting for it what is a mere trifle, instead of taking the legitimate and self-preserving method of saying, "This is a great natural resource of this country, and we are going to have it manufactured here; we are going to send out the finished product or we shall not send it out at all." If the government took that stand, paper mills would be established all over the provinces of Quebec and Ontario, and the favourable balance of trade would be very materially increased.

Mr. WARNER: Would that not likely be United States capital?

Mr. HOCKEN: If it was United States capital the pay envelope would go to Canadian workmen, and the Canadian grocer would get his trade, the Canadian shoemaker would get his trade and the Canadian farmer would get his trade.

Mr. WARNER: I thought the hon. gentleman was afraid of United States capital.

Mr. HOCKEN: I am not so sure it would be all United States capital. British capital is available for sure-fire industries, and there is no reason why others than the Sturgeon Falls mill, which is operated by British capital, should not be established on a similar basis all over the two provinces. You can only keep our own population at home by giving them work, and when you give them work and let them earn good wages, as paper mill men do, then you have a state of general prosperity for the merchant, for the farmer and for everyone concerned—even for the banker, although my hon. friends to my left do not care very much about him.

Mr. MacLEAN (Prince): I see by your own paper that they are coming home.

Mr. HOCKEN: Does my hon. friend deny there is a substantial exodus to the United States

Mr. MacLEAN (Prince): No, but they are coming home under this government, I am glad to see.

Mr. HOCKEN: How many are coming home?

Mr. MacLEAN (Prince): In the last month, 44,044.

Mr. HOCKEN: And 160,000 went away in the same period. If that is the kind of exchange that is going on, and if my hon. friend is satisfied with it, I beg to say that I am not.

I want to say a few words, Mr. Speaker, on the tax on power. This will produce a revenue, we are told, of $400,000. Well, $200,000 of that tax will be paid by the municipalities of Ontario. It will not be paid by those who use the power, because the power contracts that exist in the province of Ontario are for long periods, and it has been necessary for the municipalities to take over those contracts when they took over the plants which are providing the power sent across the line. The municipalities own those plants. The Toronto Power Company and the Ontario Power Company together are sending out approximately 100,000 horse-power. They must continue to send it out at the price they are now getting, and all that this tax means is that the consumers of power in Ontario will have to pay this $200,000 to the Dominion government. If the idea were to exact a tax and get some revenue from one of our natural resources sent out of the country—and I cannot conceive of any other reason—then it absolutely fails so far as the province of Ontario is concerned, because, as I say, these contracts exist and must be carried on for a considerable period by the municipalities that own these plants. But that is not the material objection. I want to say and I venture to assert, Mr. Speaker, that the time will come when what I say now will be recalled in this House. A real act of statesmanship, so far as this power is concerned, would be to place an embargo on the export of power. I do not know, and I do not care, whether anybody else in this House agrees with me, but I am prepared to stand by that proposition, because in my opinion it is one of the most important that faces Canada. Twenty years ago electrical power meant nothing to the people of this country. It was used in small quantities then, but since that time, and coming down to to-day, hydro-electric energy has become a commodity that is required in practically every home and every municipality and every industry, and for this country, which has a large quantity, and can develop much larger quantities, to go on exporting that power when it is as certain as that day follows night that in a short time we will be wanting it for our own purposes is a policy that I think is about as stupid as anything that could be adopted.

Mr. SNOWBALL: May I ask the hon. member if there is any loss in that power now going out? Will not the power be there next year, or has it gone forever once it has crossed the line?

Mr. HOCKEN: When that power is once exported it is practically gone forever. No man in the United States will make a contract for power unless it is for so long that at the end of that period it will be impossible for this country to recover its power. The cost of installation for the use of large units of power is so great that nobody on the other side could afford to invest capital in such an enterprise unless a continuous supply of power was assured over a long period.

There is a proposition for the development of power now at Carillon Falls. According to information that I have, they will develop there 400,000 horse-power, and only 100,000

of that horse-power is to be reserved for the use of the people of Canada. Three hundred thousand horse-power of the amount developed at that point is to be exported to the United States, and it is to be exported on a twenty-five year agreement.

Mr. ROBB: Where does my hon. friend get that information? What is the basis for making that statement?

Mr. HOCKEN: I got it out of one of the newspapers. That is the common talk. It was stated in the city of Quebec yesterday.

Mr. ROBB: The government have not heard of it.

Mr. HOCKEN: There are a great many things the government do not hear of first. There is no doubt they are developing the power there.

Mr. ROBB: So far as I know they have not put a pick in it yet. They have not got a contract.

Mr. HOCKEN: They have not got a contract? Well, it has been talked of for some time, and it has come down to definite propositions and definite figures in the press of yesterday; I am quoting from the press of yesterday. However, I am quite content, if it suits my hon. friend, to let that go, and I will make my argument on something else.

It may be argued that an embargo on power would offend the United States because it is an unusual proceeding to take. But the conditions are unusual with regard to power. Power is not like any other natural resource. It occupies a position all by itself. I want to point out that if an embargo is not put on now, an effective embargo cannot be put on later. After we have exported, and are exporting, large quantities of power to the United States for a considerable period, it will be impossible for us then to put an embargo on the export of power without grave international complications. While the United States might be offended at such an act on our part to-day, they would have much greater right to be offended if we took that action after a lapse of twenty or twenty-five years, when we discovered that we had made a mistake and wanted to undo it. I submit, Sir, that electric power generated by water is the greatest of all our natural resources. It is something that is perpetual. It is not like a mine that can be dug out, and then it is done; but it is something that runs on perpetually, and is of such a peculiar quality that there is no other natural resource the nation has to compare with it. It affords us in the Dominion of Canada perhaps the most substantial hope of successful competition with the United States in industry. Cheap power to a large industry is an important consideration, and with Canada possessing the tremendous volume that it does to-day we will be in a position as we develop to compete with the United States on a lower duty than would otherwise be the case, because this will act as some measure of protection.

Power is a commodity which is used in almost every phase of community life to-day. The municipalities add to the pleasures and comfort of life by electric lighting, and by the use of power for their municipal services, and in many other ways. It is used all over any city where there are elevators. It is used in industries so that western Ontario has become practically a hive of industry, with large developments since this power was available for industrial purposes. It has facilitated the growth of industry in western Ontario to a greater degree than any other single factor, and it is providing in our homes, and upon our farms—in farm homes as well as in city and town homes—conveniences for the wife, for the husband and for the whole family. There is nothing that touches the lives of our people more intimately to-day, financially, socially and municipally than this tremendous asset that we have, and for that reason I submit that it should not be exported.

Let me just indicate to my friends what a development there has been during the last few years. I take you back only about two years to the installation of the Chippawa plant when the first generator was installed—only two years and yet 400,000 horse-power is being generated now. Every horse-power is sold and the people are clamouring for more. There is a demand for more power notwithstanding that big development. That has not gone into industry because I venture to say there is less power being used by industries in western Ontario to-day than there was two years ago. There are fewer industries working and none of them are working double time. That has all gone into the homes and into the municipalities, into making life more pleasant and agreeable to the people of our country. I deduce from that, Mr. Speaker, that if we had a million horse-power developed in this province it would not be very long before every horse-power would be in demand in Ontario, and it would be used for the benefit of industry and for the benefit of the people in every walk of life.

I think we are only at the beginning of the advantages to be obtained from the generation and distribution of this wonderful new

agency of civilized life. I do not think any person can stand here to-day and forecast the future. In the future more electrical power will be needed in this Dominion if we can estimate from the experience of the past. We only have to go back about twenty years when Mr. P. W. Ellis, of Toronto, and Mr. Patinson of Brantford, made their first investigation as to whether it would be feasible to develop power at Niagara Falls and sell it to the people of Ontario. That is not more than twenty years ago, and while I have not got the figures I venture to say that there is a million horse-power being generated and sold in the province of Ontario to-day. If that has been our experience in the last twenty years what is going to be our experience in the next two decades? And have we not a right to look further than the next twenty years? Have we not the right to try and get a vision of the future needs of this country and prepare for them, protect those future needs by what we do to-day?

So far as my own province is concerned this export tax is not serious. It means $200,000 to the municipalities but I guess they can stand that better than they can stand some other things. I do not know that an export tax is going to hurt the province of Ontario seriously, but it may be different with the province of Quebec under the conditions that exist in this country to-day. I have no particular brief for the province of Quebec, except that I like to see every part of our country prospering to the highest degree possible. But I should like to try and convince my hon. friends who represent that province that they are in a dangerous position with regard to the export of power, and they need an embargo many times worse than does the province of Ontario. In the latter province the provincial government has given the municipalities control of the power developments, and they will control those power developments in the future. The province of Ontario, fortunately, is in a position to protect itself against the export of power, and all the power that is generated within its precincts will be used for the benefit of the people and for the development of industry in the province. But the conditions are different in the province of Quebec. There the legislature has been somewhat short-sighted; they never caught the vision of the public ownership of the generation and distribution of power, and all the power developments are now in the hands of private capital. I am not going to discuss the wisdom or otherwise of that except to point out that it leaves the province of Quebec in a hopeless plight so far as the preservation of its power is concerned unless there is an embargo. If the embargo is not put on until 50 or 75 per cent of the power generated in Quebec has been sold then the restriction will be impossible. What will be the result? That this great agent for industrial development, this extremely valuable accessory of the development of industry will be denied to the province of Quebec; it will be enjoyed by the adjoining province to the west.

Mr. CAHILL: Does my hon. friend argue that the province of Quebec has no right to put an export duty on power exported from that province, to put an additional tax on power used outside the province?

Mr. HOCKEN: I do not think the province has any such power.

Mr. CAHILL: They are doing it now.

Mr. HOCKEN: I do not think the province has any such power. I am not speaking as a constitutional authority, but it would surprise me if any province has the power to put an export duty on anything. However, I submit this in reply to my hon. friend; Let these private owners, these "power barons" as they are called, develop all the water powers of Quebec; let them make long-term contracts and send that power over to the United States. In that case I venture to predict it will never be recovered for the people and that province, which in some other particulars has advantages for industrial development, will lose what, after all, is the greatest advantage it could possibly have. I do not know whether those who represent the province of Quebec in this House will think it worth while to consider seriously the position as I present it, but I submit that it is one they ought to consider. If there were a man in the province of Quebec with the vision of Sir John A. Macdonald, who foresaw what the result of building the Canadian Pacific railway would be, who could arouse the people of that province to the necessity of the preservation of their own white coal, their own electric energy and power, he would be serving that province in a most eminent degree.

Mr. BELAND: May I interrupt my hon. friend for a moment. In his most interesting remarks he pointed out a few minutes ago that the province of Quebec had no power to impose an embargo on any resources of the province of Quebec exported to the United States. Strictly speaking that is

true, but I am certain my hon. friend will not hold the view that the government of the province of Quebec have not the right, for instance, to impose a larger stumpage duty on lumber or timber cut in Quebec which is not destined to be manufactured within the province. I think I am perfectly right in stating that if the province can exercise that power as regards timber it can also exercise the same power in respect of electric energy if that power is not intended to be used within the limits of the province. That is what I submit very humbly. I am not an authority on the subject but I presume the provinces have that right and power.

Mr. HOCKEN: Well, Mr. Speaker, I am not a constitutional authority on that particular point. I know, of course, that the government of a province can regulate the conditions under which its timber goes out. Still I submit this: Once that power is sold and sold on long-term contracts extending over a period, say, of twenty-five years certain vested interests are established, and the recovery of that power at the expiration of that time would be exceedingly difficult if not entirely impossible, and might result in serious complications with the neighbouring government. There would be immense sums invested in installations, we will say in Lynn, Massachusetts, where perhaps seventeen or twenty million dollars would be invested in transforming, and distribution plants. I say that these vast investments of United States capital would be most influential in preventing an embargo or a restriction being put upon the export of power that would keep it for the people of Quebec.

This is a question that I think should be considered, not from the standpoint of immediate profit, but from the standpoint of the future needs of this country, and I feel quite sure if it is treated in that way that the wisdom of placing an embargo upon the export of power will appeal to the business men of this country. Give Massachusetts cheap Canadian power—and they are getting it for sixteen dollars a horse-power, we are informed by the press, while they are paying thirty dollars in Montreal—give Massachusetts cheap Canadian energy, and deny that privilege in full measure and in sufficient quantity in Quebec, and how are they going to compete? My policy would be to keep in this country that one thing which will bring the industries of Massachusetts, to Three Rivers, St. Hyacinthe, and to Sherbrooke for instance, and provide labour for the people there. Retain the present population, bring in more population and thus add to the general prosperity of the country.

I will close with the prediction that the time will come in this House when it will be recalled that an effort was made on this occasion to persuade the government to place an embargo upon the export of electrical energy from this country to the United States.

Mr. A. E. MacLEAN (Prince): In rising, Mr. Speaker, to make some observations on the budget, I think I should be permitted to make reference to the passing away of two very distinguished men of the county which I have the honour to represent, gentlemen who were very well and favourably known not only in our own province but throughout the great Dominion, especially in the city of Ottawa. I refer to the deaths of the late Senators Yeo and Murphy. Needless to say, those men gave of their best to the public and did their utmost to promote the interests of the province which they had the honour to represent.

I wish to refer for a moment to some observations made by the hon. member for West Toronto (Mr. Hocken). It was not my pleasure to hear him all through his remarks, but this question of the export of power is possibly a very important one. However, I think we need not worry too much about the province of Quebec. If we look at the financial situation of that province we must be impressed with the fact that they are certainly well able to look after themselves. The policy which they have followed with such success in financial matters will no doubt impel them to look very carefully into matters of this kind before taking any action which will injure that province in any way. We know that our friends representing the Conservative party have been very eloquent in their different speeches and resolutions in reference to the development of our natural resources. The development of this power is the development of one of our natural resources, and if that excess power cannot be utilized in Canada at the present time to good advantage, I do not see anything wrong in having capital come in to develop this power and have it exported. I think the government has gone a step in the right direction in putting a tax on the export of this power, and perhaps an embargo might be all right. The tax is the first step along that line, and it shows that the government has not been negligent in its duty and has not overlooked this matter. My hon. friend generally presents to this House some arguments with which nearly all of us agree. One question on which we can agree with him,

and on which we can compliment him, is the stand he took with reference to the civil service question, and I am only sorry that more of his friends in that quarter of the House do not share his views in the matter, because I am quite sure that in that particular field, following his suggestions, a great saving could be made to the country.

Before attempting to make any further observation I wish to express my sincere regrets that the hon. Minister of Finance (Mr. Fielding) is not able to be present with us in the House again this session, but I wish to congratulate the Acting Minister of Finance (Mr. Robb) on the budget he has presented and on the splendid showing he has made in the face of conditions over which this government has no control which have caused a falling off in our public revenues. My hon. friend the ex-Minister of Finance (Sir Henry Drayton) may take exception to the statement "over which this government has no contral." I hope to be able to show as I proceed that what I have said is in exact accord with the facts. I wish at the outset to take exception to the statement by the hon. ex-Minister of Finance that the reduction in revenue can be laid at the door of this government. This is not a fact. It is more on account of there being less goods imported into this country than to any reduction in duty that has been brought about by this government. If we take the trade figures of last year and compare them with this year, we find that imports were about seventy millions in excess of this year. Then, if we take this year's importation and apply last year's duties, we find that the loss of thirteen millions is not due to the reduction of duty, but to falling off in importations. This he will admit.

I know my hon. friend is quite an expert at reasoning away certain facts and giving such facts as he accepts an altogether different meaning, but I do not think he will go quite so far as to try to reason that the reduction of duty is the cause of less importation. So he cannot attribute the loss of importation to reduced duty.

Sir HENRY DRAYTON: Does my hon. friend think he is representing my argument correctly in his attack?—because I want to disillusionize him of the idea. I did not argue anything of the kind, and I never drew any such conclusion. Perhaps it would be fair for me to put my hon. friend right. I said that the government were indirectly responsible for this tremendous loss of revenue, because they had by their policies stopped business, checked enterprise and created an exodus.

Mr. MacLEAN (Prince): I do not think I was very far astray in my observations. I find that the goods were not imported. My hon. friend has endeavoured to lay this at the door of this government. The point I wish to make is that it is impossible to do that. Does my hon. friend contend that it would be much better for the people of this country to buy goods which they do not need and to pay this $13,000,000 out in duties plus the cost of the goods?

Mr. MEIGHEN: The hon. gentleman is mistaken. We contend that it would be far better if the tens of thousands of people of this country who cannot buy the goods they need, were able to buy them.

Mr. MacLEAN (Prince): I will leave that to the judgment of the people themselves. As the old saying goes, they can cut their garment to suit the cloth.

Sir HENRY DRAYTON: That is what they are doing.

Mr. MEIGHEN: They have no cloth or garment either.

Mr. MacLEAN (Prince): If they do not need the goods they would be very foolish to buy them. The fact is that the people have not imported the goods and, therefore, it cannot be attributed to this government, it cannot be argued that the loss of revenue in that respect is due to a reduction in the duty. Our friends seem to be very much grieved that the people have not paid out this money. They would much rather that the people of this country were out this $13,000,000 plus the cost of goods—goods they possibly do not need. The people are to be congratulated on showing their good sense in not entering upon reckless and unnecessary expenditure in buying goods which they do not require. It is rather amusing that the only applause which my hon. friends in that section of the House generally get is when they can refer to some business closing down. I do not think that is a good spirit to show. We have always had business failures and we shall always have business failures, no matter what government is in power. I am quite certain that if my hon. friends look over the failures which have been reported for the last number of years and compare them with the failures of the last three years, they will find there is no difference in that regard.

Coming to the finances of the country, I find it rather amusing to see our friends in that corner of the House worrying in case there might be a small deficit. Last session they wasted a great deal of energy in trying

to wipe out a surplus of from thirty to thirty-five million dollars which was in the budget of that year. This year, with expenditures amounting to $342,177,000 and estimated receipts of $344,000,000, the government have again balanced their budget, and they are able to show a surplus over expenditure of $1,823,000. No wonder the Acting Minister of Finance (Mr. Robb) used the expression that this is something in which all Canadians may feel a justifiable pride. The leader of the opposition, I see, smiles very graciously at that statement.

Mr. MEIGHEN: He might as well have left out twenty or thirty million more and had a bigger surplus. It is too bad to have it as small as that.

Mr. MacLEAN (Prince): If my right hon. friend will have a little patience, I will deal with that subject later on. It is also gratifying to note that over $4,000,000 of an adjustment of loans to Roumania and Greece exists, and that bonds for this amount have been issued and transferred to this Dominion as an active asset, which, if added to the surplus of $1,823,000, makes a surplus of $5,823,162. In addition to this, it has been shown that there is a reduction of $270,650 in the standing public debt. All of this shows that we are making progress in the right direction. It is also shown that there is a reduction in interest charges on refunding loans, and this will mean a saving of over $2,600,000.

Our hon. friends opposite have endeavoured to argue this away, but under the signed declaration of chartered accountants it has been proved that these accounts are absolutely correct. How does this compare with the financial showing made by our friends opposite? Let us take the last year that they were in office. In 1920-21, their estimates for that year alone were $758,000,000, to be met with a revenue of less than $400,000,000. Will my hon. friends deny that?

Mr. MEIGHEN: I think it is all wrong.

Mr. MacLEAN (Prince): Had they been returned to office, the country would have been presented with another deficit of over $300,000,000, to be added to the long list which they had already left, which is as follows:

Date	Deficit
1914..	$ 21,000,000
1915..	113,000,000
1916..	165,000,000
1917..	264,000,000
1918..	312,000,000
1919..	382,000,000
1920..	674,000,000

[Mr A. E. MacLean.]

In 1920 they capped the climax with a deficit of $674,000,000. This was with the dollar below par and hundreds of thousands of dollars being paid out for soup-kitchens throughout the country. It is really amusing to have our friends come before the House at the present time and endeavour to read a lecture to the Acting Minister of Finance on financing. I think it comes with very poor grace from my hon. friend opposite to attempt anything along that line.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

THE RESTIGOUCHE LOG DRIVING AND BOOM COMPANY

Mr. PIUS MICHAUD (Restigouche and Madawaska) moved the second reading of Bill No. 33 respecting The Restigouche Log Driving and Boom Company.

Mr. MEIGHEN: Explain.

Mr. MICHAUD: This company was incorporated by act of the legislative assembly of New Brunswick in 1879, and by chapter 155 of the statutes of Canada 1910 the name was changed from The Restigouche Log Driving Company to The Restigouche Log Driving and Boom Company. The petitioners were incorporated, and chapter 155 of the statutes of Canada provides, as regards the powers of the company, as follows, in section (28):

> The company may construct, acquire, charter, navigate and maintain tugs, boats, dredges and other craft for towing logs and for other use in and about the said booms, and also may, for its own use, construct, acquire and operate telegraph, telephone and electric light lines in connection with its business and works upon the Restigouche river.

Section (29) provides:

> The directors may issue bonds of the company to the extent of $150,000 par value, which bonds shall be a first lien upon all the plant, property, assets, rights, credits and revenues of the company and upon all logs being the property of the members of the company, from year to year handled by the company while such logs are in the possession of the company or under its control, and shall be secured thereby.

Under the present legislation, it is provided:

> (1) In addition to the bonds authorized by chapter 155 of the statutes of 1910, the directors of The Restigouche Log Driving and Boom Company (hereinafter called "the Company") may issue bonds (hereinafter called "renewal bonds") of the company, not exceeding in the whole the sum of $150,000 par value. The directors may, at any time, issue a part of such renewal bonds equal, in the aggregate, to the par value of those of the bonds authorized by said chapter 155

(hereinafter called "old bonds") which have matured and have heretofore been paid by the company, and hereafter, as and when any old bond or old bonds mature and are paid by the company, the directors may issue in place thereof respectively a renewal bond or renewal bonds, from time to time, for an amount or amounts, not exceeding the par value of any such old bond or bonds so maturing.

The bill further provides:

Any such renewal bonds so issued to replace any old bond or bonds which have heretofore been paid by the company or which shall hereafter be paid by the company, shall be distributed pro rata to and amongst all those persons, firms and corporations who, as members of the company in the fiscal year in which any such old bond or bonds have been or shall be paid, have contributed, or shall contribute by tolls, or assessments towards the payment of each of such old bonds. Such renewal bonds shall be distributed to such persons, firms and corporations in the proportion that the amount paid by each such person, firm or corporation to the company for tolls, or assessments in such fiscal year bears to the total amount received by the company from its members therefor in such year.

What the petitioners desire is a renewal of the old bonds.

Motion agreed to and bill read the second time.

SECOND READINGS

Bill No. 34, to incorporate the British Consolidated General Insurance Corporation.—Mr. Irvine.

Bill No. 35, respecting The Mutual Life Assurance Company of Canada.—Mr. Mewburn.

Bill No. 36, to incorporate Guaranty Trust Company of Canada.—Mr. Chevrier.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means and the proposed amendment thereto of Sir Henry Drayton.

Mr. A. E. MacLEAN (Prince): Mr. Speaker, when the House rose at six o'clock I was referring to the financial situation and I had outlined some of the deficits that had been left by the previous government. I may be permitted to analyze briefly the cause of some of those deficits incurred under the regime of our hon. friends opposite. I made some reference to the consolidation of the interest which was due on the loan to Roumania and Greece. I think we can congratulate this government on attempting to do something to have this account put in a satisfactory condition. As you will remember, this loan was made at a time when the financial resources of Canada were taxed to their very utmost. Our friends who are today so critical of the country's finances seemed to be reckless of them at that time and were willing to plunge in and spend money in almost any way that could be found. In fact one would almost imagine they were looking for some channels into which they could turn the public moneys of Canada. In that connection I wish to refer briefly to Hansard of May 18, 1921, and to a speech made by the hon. member for Chambly and Vercheres (Mr. Archambault) on that day. He said:

I now come to a very interesting matter and one with which I dealt to some extent last year, I mean the credits extended by the government to Greece and Roumania. Although I spoke upon this question last year there have been some further developments, and I believe I shall be able to convince you, Sir, that the high standard of political morality in this country has remained unimpaired according to certain mentalities that we find in this House. Sir, in our efforts to probe the morality evidenced in connection with these credits let us examine the whole subject. It will be remembered that in the month of May, 1919, the then Minister of Finance, Sir Thomas White, asked this House to vote these credits because the population of Roumania was starving and needed food; and I can well remember the right hon. gentleman saying at that time, "Will the population of Canada remain unmoved and not help the population of Roumania which is now starving?" Well, Sir, two credits of $25,000,000 each were opened, one for Roumania and one for Greece. Of this amount, $26,989,000 has already gone and only $3,500,000 has been spent on food.

This very small loan, out of $50,000,000, was all that our hon. friends were able to spend on foodstuffs for the starving people of Roumania; and you will note, Mr. Speaker, that that was the excuse for granting the loan. I quote further:

The hon. member for Megantic (Mr. Pacaud) said the other night that the government of Canada, in answer to a merchant in Belgium who asked that food should be exported from these moneys, said that only one-fifth of the credit to Belgium could be devoted to the purchase and exportation of food. Now, Sir, a return was brought down last year to an order of the House—I refer to "Sessional Paper No. 147." This return shows conclusively that companies controlled by the Minister of Marine (Mr. Ballantyne), the hon. member for Haldimand (Mr. Lalor), the hon. member for Brantford (Mr. Cockshutt), the hon. member for Lincoln (Mr. Chaplin) and the hon. member for St. John (Mr. Elkin) had sold goods for export which had been paid for by the government. I was under the impression that the disclosures of last year would have had their effect and that there would not be a repetition of any such transactions; but although since April 19, the government of Roumania has defaulted in two or three payments of interest, and probably Greece also, more of this money has been going to favourites of the government, and a further sum of $5,342,077.32 has been advanced. On March 4 an order of the House was passed for a return showing:

1. The amounts loaned or the credits made by the government of Canada since the 19th of April, 1920, (a) to Greece, (b) to Roumania.

2. The respective dates of these loans or credits to (a) Greece, (b) Roumania.

3. The nature of goods bought by the government of Canada (a) for Greece, (b) for Roumania.

4. The names of corporations, firms or persons from whom these goods have been purchased, (a) the nature of the merchandise in each case, (b) the amounts paid by the government to these corporations, firms or persons in each case and also the date of said payments.

Mr. MEIGHEN: Will the hon. gentleman tell me what rubbish he is reading.

Mr. MacLEAN (Prince): I am reading from Hansard of May 18, 1921.

Mr. MEIGHEN: Whose speech?

Mr. MacLEAN (Prince): Under his own government—a speech, as I stated, delivered by the hon. member for Chambly and Vercheres. I suggest to my right hon. friend that that would have been a very good time to have applied the closure.

Mr. MEIGHEN: It would have been better applied.

Mr. MacLEAN (Prince): Yes, for my hon. friend. He said further:

Although the Minister of Militia in discussing the estimates of his department the other day denied that any goods belonging to the Militia department had been sold to Roumania or Greece, I find at page 3 of the report the following—I am giving the various sums in round figures:

Militia and Defence:	
March, 1920, military equipment	$ 36,000
May, 1920, military clothing..	325,000
April, 1920, dubbin..	3,000

I do not know that I need read it all, because I know it is not agreeable to our friends opposite to hear this history. But it is very important at this time that the House should know the causes of the huge deficits which were rolled up at that time. If hon. gentlemen opposite can give a satisfactory explanation of these expenditures I shall be glad to take my seat to hear what they have to say.

Mr. MEIGHEN: Will the hon. gentleman permit me?

Mr. MacLEAN (Prince): With pleasure.

Mr. MEIGHEN: I really wondered what imagination gifted with mendacity could possibly have prompted the utterance of such rubbish as the hon. member read. The government had nothing whatever to do with the placing of any contracts at all or with the selection of the goods, nor is it a fact that any company controlled by the gentlemen mentioned got even those contracts. The gentlemen mentioned, I presume, were interested in some companies whom the commission appointed by the Roumanian and Grecian governments bought goods from, but just as many Liberal members of parliament were connected with companies that sold as were Conservative members of parliament. That was demonstrated over and over again. The government had nothing whatever to do with it.

Mr. MacLEAN (Prince): I do not for one moment excuse any Liberal or any Conservative—

Mr. MEIGHEN: He does not need an excuse. The Liberal was just as honourable about it as the Conservative. It is the reading of such rubbish by the hon. gentleman that I object to.

Mr. MacLEAN (Prince): I thank my right hon. friend for reading me a lecture. I am ready to take all that he chooses to hand across, as it is emphasizing my point.

Mr. MEIGHEN: You need it.

Mr. MacLEAN (Prince): I wish to point out that the names are on record of the different parties who were interested and to whom large amounts were paid. The story is familiar to a great many members of the House, but when we are read a lecture on the financial situation of to-day as compared with the financial situation under hon. gentlemen opposite, I think it is time for some hon. member of this House to rise up and protest and show some of the things that have taken place under the regime of hon. gentlemen opposite. The hon. member for Chambly and Vercheres went on to ask a question about supplies, and said:

That is your opinion. I find also that the Department of Militia and Defence sold to Greece the following:

Brushes..	$ 11,728
Boots..	635,000
Braces..	8,320
Denim..	38,000
Sweaters..	150,000
Blankets..	876,000

These are all items which I do not think the government of Canada can escape responsibility for. They were sold either by the government or by a department which was, or should have been, under the government's control. I do not propose reading any further, but there is a great deal of information contained in this speech, and I refer hon. members and the country at large who wish to go into this matter any more fully to Hansard of May 18, 1921, and they will find many names of men of the government of that day in this interesting transaction.

Coming to the amendment that was moved by the hon. the ex-Minister of Finance (Sir Henry Drayton) the other day, I notice that one of the first items he mentioned in his amendment is the sales tax. He says:

> Conditions in Canada urgently demand reductions of taxation, especially of the sales tax and other levies which have been increased by the present government; the House regrets that the financial statements now presented show no evidence of the economy necessary to make such reductions possible, but rather disclose an alarming increase in the public debt.

My hon. friend refers in the first instance to the sales tax. I wish to submit a statement in that connection to show that there was a loss of revenue due directly to the reduction in the sales tax of last year.

The decrease in revenue this year is estimated to amount to about $52,800,000 brought about by a decrease in customs duties collected of about $13,300,000, a decrease of excise taxes of $35,676,000, the chief source of this tax being the sales tax and a decrease of about $2,353,000 from delayed business profits tax. These decreases were offset to some extent by an increase of about one million dollars in excise duty and about $2,300,000 in income taxes collected.

The revenue of this country, which is estimated to be about 344 million dollars, is taxation, and it is evident that a decrease in revenue is a decrease in taxation. Our estimated population at present is about 9,225,000. Therefore, this decrease in taxation means a saving in taxes of about $5.75 per head for each man, woman and child in this country.

This was brought about by reducing the duties on agricultural implements and on the materials imported for the manufacture of these implements, and by removing the sales tax from all the articles and materials consumed in the process of manufacture of these agricultural implements, as well as by reducing the sales tax from 6 to 5 per cent. Like reductions were made in the duty payable on articles relating to the fruit growing industry, poultry industry, dairying industry, mining and quarrying industries, the lumbering and fishing industries. The sales tax was removed also on these articles. The list of exemptions was increased among which we find, binder twine, cream separators and others.

These reductions have no doubt stimulated our Canadian industries, the result, as I have showed, being that we imported 70 million dollars less for the period covered by the eleven months ending February, 1925 than during the eleven months ending February, 1924. Although this meant a loss in revenue of about twenty million dollars, it decreased the burden of taxation on our Canadian people to that extent, as well as encouraged our Canadian people to supply the decrease in importation by enhancing Canadian production to supply our demands.

So I do not think that the ex-Minister of Finance could very well prove his contention that the sales tax was immaterial, or that the reductions that were effected last year did not mean a reduction in the revenue and also a big reduction in taxation.

I wish now to refer to another matter which always receives a great deal of attention in this House; I refer to the question of the tariff. I hold in my hand a resolution which has been standing on the order paper in the name of the right hon. leader of the opposition since February 5. It starts out by saying:

> This Dominion requires an immediate revision of the Canadian tariff on a definitely and consistently protective basis.

So evidently there is no doubt in his mind but that this is the proper course to pursue. Higher protection. He goes on to say:

> That such revision should apply to natural products such as farm products, fish, and coal with no less thoroughness than to manufactured goods.

I would like the hon. gentleman to explain to the House what benefit a protective tariff would be on agricultural products. A protective tariff against goods of which we have a surplus cannot be effective. The hon. gentleman will admit that water cannot rise above its own level, and this is a similar case; American agricultural products cannot come in here unless there is an absolute shortage on the Canadian market. As far as the duty is concerned on American fish coming into Canada, any man in the Maritime provinces or in any other part of Canada who has any knowledge of the fishing industry will admit that the only market in which the Canadian fisherman can obtain remunerative prices for his fish is the American market. Again, I would like any hon. gentleman in this House to point out where American fish is supplanting the Canadian article on the Canadian market. To my mind the mention of fish in this resolution is simply propaganda, an endeavour to appeal to the fishermen. It has really no significance.

If I wished to go into that a little further, I might submit figures to show that the total imports of fresh fish from across the border into the whole of Canada from the Atlantic to the Pacific amount to only $364,000, and of this amount, $233,000 is for oysters, or what are known as shelled oysters, which are imported into Canada under a duty of 10 cents per gallon. I leave it to the people

of Canada who consume this article whether in their opinion the policy advocated by the right hon. leader of the opposition in his resolution is in the interests of this country. Those oysters cannot come into the Maritime provinces because they would not be used there even if they were brought in and given away free. It is only in the extreme western sections of Canada where it is possible to sell these American oysters. The few oysters that we do have in the Maritime provinces to ship at the present time find a ready market in the cities of Quebec and Montreal and in the Maritime provinces themselves, so that the word fish in this resolution is pure political propaganda.

The next paragraph refers to the conservation and development of our natural resources. No fault can be found with that, but every member on this side is just as anxious to see our resources properly developed as hon. gentlemen opposite are.

The next paragraph is more or less of a surprise coming as it does from the Conservative party who on different occasions have endeavoured to make the people of this country believe they were the great imperialists and had a monopoly on this side of the water, of patriotism and loyalty to the Motherland. Still we find this paragraph goes so far as to state that hon. gentlemen opposite are in favour of withdrawing the British preference already granted to Great Britain and which is an inducement for goods to come through Canadian ports. Their excuse for this policy is that it is in the interest of the workers of the country. This again, to my mind, is purely political propaganda and an appeal to the workers and the manufacturing interests of the country. Well, I will venture the assertion that if hon. members opposite were in power to-morrow they would not dare to put such a proposition into effect.

In this connection I think it will be only fair to point out how the existing duty, even under the British preference, affects the Maritime provinces. We have two gentlemen in this House one the member for St. John and Albert (Mr. Baxter) and the other the junior member for Halifax (Mr. Black) who claim to be the champions of the rights of the Maritimes. Let me point out to these gentlemen how this policy of a withdrawal of the British preference would affect the Maritime provinces. Supposing a ship load of goods valued at $100,000 arrives at the port of St. John or the port of Montreal. Immediately that ship docks a crowd of customs officers at once patrol the docks. They pounce upon that ship and even under present conditions will ask to have handed over at least $20,000 in duties. Supposing you increase the present duty 10 or 15 per cent and instead of $20,000 the sum demanded would be $35,000. Will hon. friends opposite point out how they expect the ports of St. John and Halifax to flourish under such a proposition? They cannot answer this argument and the very suggestion would drive business from those ports. As I said before, if they held the reins of power to-morrow they would not dare to put any such proposition into effect. If they did I do not see how the orators of the Conservative party could go to the country and again fool the people by waving the flag of loyalty to the Mother Country.

Mr. GOOD: Would the hon. gentleman advocate taking off all the duties on British goods coming in so as to increase the trade entering Maritime province ports?

Mr. MacLEAN (Prince): It is all right for the hon. gentlemen who have not the responsibility of governing the country to advocate a policy of that kind but in view of the financial condition of the country regard must be had to ways and means whereby sufficient revenue can be raised to meet the needs of Canada. Even with the preference as low as it is there has been a greater increase in imports from countries which do not enjoy the preference than there has been in imports from Great Britain.

Mr. GOOD: Would that not be all the more reason why we should reduce the duty on British goods still further?

Mr. MacLEAN (Prince): My hon. friend might be justified in his view but the present arrangement is working out fairly well. The preference already granted has tended to bring goods to Canadian ports. Ninety-nine per cent of the goods imported from Great Britain now come to Canadian ports as a result of the 10 per cent additional preference that was granted last year. I certainly would be in favour of a further increase in the preference if it were at all possible; I am entirely opposed to the proposal of hon. gentlemen opposite to withdraw the preference and I think that when we take that stand the country is behind us.

There is this further fact, and it will perhaps be an effective answer to my hon. friend, that according to official figures the imports from Great Britain in Canada in 1924 actually decreased as compared with the previous year. I do not know how the hon. gentleman can explain that. At the same

time Canadian exports to Great Britain increased. Nevertheless the protectionist opposition will still argue that the British preference is responsible for admitting into Canada an increasing volume of British goods. I might further point out that during the same period while imports from Great Britain were decreasing imports from Germany were increasing at an enormous rate on which a high duty is charged. Canada grants no tariff preference to Germany yet that country supplied goods to Canada last year to the value of nearly $6,000,000 as compared with less than $5,000,000 in 1923 and $2,000,000 in 1922. When our friends of the opposition blame the Liberal policy of the British preference for the increased popularity of British goods in Canada they should also explain the reason for the growing volume of German goods to which no tariff preference is accorded. But the expounders of this protectionist policy are in the game for some other purpose than to enlighten the public. They cannot fool the people all the time but they look forward to fooling part of the people part of the time, and in that way to again put something over the Canadian public as they did in 1911.

The next paragraph in this resolution recommends the appointment of a tariff commission. Had that proposition been advanced by the government hon. gentlemen opposite would be the first to utter denunciations because of the appointment of another commission. However, if the present government did not get better results from the appointment of such a commission than the country obtained from the tariff commission of some years ago over which the ex-Minister of Finance presided the expenditure for the purpose would be a pure waste of money.

The last paragraph in the resolution contains the only sane proposition in the entire list. This has reference to transportation burdens, and suggests that relief be given to the western and Maritime provinces by way of a contribution from the government to reduce freight rates. I should like the House to take notice of that fact: The proposition of the right hon. leader of the opposition is that the western and Maritime provinces be given relief in freight rates by a contribution from the government of Canada. The proposition may be commendable but I cannot see how the originator of the proposition can reconcile that policy with the attitude he is taking with regard to the government's proposed control of ocean freight rates. What he is proposing is absolutely along the same line as the policy of the government contemplates. Would the right hon. gentleman be good enough to point out to the House and country, what benefit it would be to the producer of the Maritime or western provinces to grant a reduction of rates to Montreal only to find that when the goods arrived there the ocean rates were prohibitive and that the goods could not be exported at a profit. This is something I should like the right hon. gentleman to explain when he next comes to discuss the Petersen contract. I know that hon. gentlemen opposite are quite adept at changing their position in an endeavour to square themselves with their proposals, but it will take all the ability of the right hon. leader of the opposition to explain the really ridiculous position in which he finds himself by reading this clause of his resolution.

Mr. STEVENS: I should like to draw attention to the fact that this discussion is wholly out of order, but inasmuch as the hon. gentleman has been debating this resolution for some twenty minutes I trust that hon. gentlemen on this side of the House will also be accorded the privilege of discussing it when they come to reply.

Mr. MacLEAN (Prince): In reply to my hon. friend let me say that I am quite in order. I understood, when the hon. gentleman did not have a chance to discuss this resolution on private member's day, he would have a chance to discuss it on the budget, and I am quite sure he will avail himself of the opportunity.

I think I have paid enough attention to this rather peculiar document, and I pause for a moment to draw the attention of the House to another motion, and I only wish I could say that I thought it was prepared by some other member; but unfortunately the members of the House will find that it was prepared by the same hon. gentleman. I find the resolution which I have reference to stood in the name of the right hon. leader of the opposition (Mr. Meighen), who was then the member for Portage la Prairie, and in this connection I wish to read from page 1915 of the Debates of the House of Commons of January 18, 1911. The ex-Minister of Finance (Sir Henry Drayton), in addressing the House in one of his pedantic flights of oratory used the word "wobbled." I think he attributed that to the quality of this government, or possibly some of his friends on this side of the House. I wish to point out that this resolution to which I have just referred, which was submitted by the right hon. leader of

the opposition which I am about to read, is not wobbling at all. It is worse than that. It is an acrobatic feat which possibly very few of us can perform, and that is a complete somersault, or right about face, or looping the loop, as one hon. member suggests. This resolution of January 18, 1911 reads as follows:

That in the opinion of this House, a substanttial reduction in the import duties on agricultural implements is now due the agriculturists of Canada, and is in just accord with the true ends of a protective tariff.

He then goes on to say:

But the charge I have to make and which I hope to bring home to the government this afternoon is not that one, though it is the most serious; it is this, that in their attempts to continue the National Policy which had obtained for years before, they have overlooked, they have neglected one essential feature of that policy, they have quite forgotten its guiding principle, namely the principle that as our industrial institutions advanced in strength and as they were able with every advance to acquire a hold on the home market, the import duties were to be diminished and adjusted in order to meet the evolving and changing conditions. It is that restraining, guiding principle which I claim this government has entirely overlooked and as a consequence they have allowed, in the respect which I am discussing this afternoon, protection to run rampant, and they have for reasons which are only too obvious become the slaves of those who helped them into power, and who now maintain them there behind ramparts of gold.

And so on all through his speech. The leader of the opposition, the gentleman who proposed this resolution, now asks for a higher protective tariff. The maxim, "consistency thou art a jewel" is correct. I just imagine, if any hon. gentleman on this side of the House placed himself in this ridiculous position, to what flights of oratory our hon. friends opposite would rise in exposing his position to this House and to the country at large. But proceeding on this line a little further, I find that the hon. ex-Minister of Finance (Sir Henry Drayton), speaking on the budget on April 10, 1924, seemed to lament the fact that we were shut out of the American market. He said:

We would further expect something to be done to help the Canadian farmer who to-day is shut out by an absolute barrier from his natural market to the south.

If this statement which the hon. gentleman expressed in the debate last year was correct on April 10, 1924, was it not also correct in 1911, when hon. members opposite shut us out of that market, and shut us out in the Maritime provinces to the detriment of those provinces possibly for all time to come? Yet those hon. members to-day will stand up in this chamber and say: "The government should do something to let the Canadian farmer into the market to the south of them, which is their natural right." I think this is so amusing that we can hardly realize that the hon. gentleman would express such sentiments, and as an hon. member suggests, a real and national tragedy was enacted at that time involving the infliction of a great wrong on the people of Canada. Discussing the matter further the ex-Minister of Finance says:

The tariff has nothing to do with the difficulties of the farmer.

He gave us three causes for it, hard times, the practically prohibitive tariff of the United States directed in the main against farm products, the deflation of prices applicable to grain and live stock, and the loss of the purchasing power of the great consuming country due to the war. Here again the hon. gentleman stresses the fact that the United States is our only market, and again I ask, if it was right on April 10, 1924, what was wrong with it in 1911 when our friends, with the assistance of the Canadian Manufacturers' Association, shut us out of that market, probably for all time to come?

In this connection I wish to point out to my hon. friends in the section of the House almost directly opposite to me, what the manufacturers' attitude is to-day in regard to this same question, and I quote from the Financial Times of April 10, 1924, shortly after the last budget speech was delivered. This paper is published in Montreal, and the article reads:

The Manufacturers' Association at their meeting stated as follows: "The future seems clear for an out-and-out struggle between two"—

Mark these words:

—"between two, not three, political groups for the maintenance or destruction of the fiscal policy that was brought into effect in 1878."

The Manufacturers' Association realize that the aims and objects of our friends of the Progressive party and of a large majority, I must say, if not all, but, I hope, of all of the Liberal party, are the same, and it is their duty at the next election to go out and fight both the Progressive party and the Liberal party on this issue. The article continues:

It may be that the manufacturers and labour elements in eastern Canada will be forced to take up the gauge. The tariff, unfortunately, has been thrust again into the political arena. The manufacturers must remember, therefore, that it is votes that count, and they must be prepared to justify a protective policy to the electors, to the consumer, if they are to win out in the political fight.

If who is to win out? I ask hon. gentlemen whom this has reference to. Is it any political party that is going to win out? No, they say, if we are going to win out; if the

Manufacturers' Association are going to win out! It is their election and they say: We must join with the Labour party and go out and defeat those two other parties, the Liberals and the Progressives.

As their official champions in the federal field the Conservative leaders should be prepared to dispense with the extreme exaggerated attitude and statements that set forth their views on the present budget. Mr. Meighen's first interview was hardly the carefully considered, serious, statesmanlike opinion that the country had the right to expect. It too, was strongly tinged with political considerations.

As we have urged before, the Canadian Manufacturers' Association, if it enters the fight officially, must make it clear that it holds a reasonable view on "protection," and that it is quite prepared, and, indeed, will insist on periodic revisions of the tariff not only upwards—

Mark those words.

—but in a downward direction where manufacturers are taking advantage of excessive customs duties to bear too heavily on the average consumer. Extreme demands can only alienate support.

Hon. members will notice that they endeavour to camouflage that a little at the last, but let them go out and defeat those two parties at the next election, and I can assure the people of this country and hon. members of this House that the revision of the tariff will certainly not be downwards, but be upwards with a vengeance. I do not know whether I am within my rights or not, but I am going to take a long shot at it and say that whoever sees another campaign fought in this country will see the money which has been extracted from the pockets of the consumers by the Manufacturers' Association thrown into that campaign to defeat the two parties which I have just mentioned. I will not withdraw or qualify that statement, and if they succeed it will not be the Conservative party that will be in power but the Manufacturers' Association.

9 p.m.

We have endeavoured to deal with the tariff to some extent, and we have pointed out some of the reasons for the falling off in revenue. Hon. gentlemen opposite and especially the ex-Minister of Finance (Sir Henry Drayton) seemed to be very much concerned at the present time over the workmen. The hon. member seemed to be able to weave that word "workers" into his argument many times. I should like to ask that hon. gentleman if he has carefully considered the tariff revisions and what is the largest item in the whole tariff list of reductions. If the workers of this country are to succeed, the first essential is a reduction in the high cost of living. The largest item in the whole list of tariff reductions which became effective last year is on the importation of sausage casings which stand in the list at $55,000 as a loss of revenue to this country. Will my hon. friends say in this House that this duty should be restored on this article which enters into an article of food that is bought by the working man every day of the year. I do not think that they will venture such an assertion. I also wish to show that in the total imports the tariff reductions are largely in the general tariff. The next largest item to the one to which I have referred is that of agricultural machinery. But taking the tariff reductions as a whole the reductions and the loss in revenue on the general tariff amount to $15,000,000. In the preferential tariff, as I pointed out before, the amount is about the same as that of the previous year. The treaty rates which were largely criticized in this House this year and last and which we were told were not worth the paper on which they were written, have worked out splendidly and we find that the imports under the treaty arrangements of last year from the different countries show an increase of something over $2,000,000; or in round figures, the imports under treaty rates in 1924 amounted to $5,731,000, while for the first ten months of this year they amounted to $7,916,000. Therefore, it is obvious that the treaty arrangements that have been entered into by this government have not only worked out splendidly from the standpoint of bringing in cheaper goods, but have had the effect of increasing the revenue. As I pointed out in the first portion of my remarks, it cannot be laid at the door of this government that the reduction in the duty was the cause of loss in revenue, because it has been plainly shown, and anyone who glances over the returns will see that the great loss in revenue was due to lack of importations, and no government can force people to buy or import against their will.

A good deal of the time of the House has been taken up with a discussion of loans to the railways. As I discussed that matter somewhat fully last session, I will not trouble the House with any further remarks regarding that question. A clipping which I have in my hand referring to Sir Henry Thornton reads:

LONDON, June 30, 1924.

King George received the premiers of the Canadian provinces at a garden party at Buckingham Palace. In questioning the visitors on Canadian affairs, His Majesty expressed very particular pleasure at the success of Sir Henry Thornton as president of the Canadian National Railways. "You have taken a good man away from us in England," said the King.

I do not think we want any higher tribute to the gentleman who is president of the Canadian National system at the present time. We have our grievances in the Maritime provinces, but the president of the road has paid us several visits and has done a great deal in the direction of remedying the situation. He has been very painstaking in every detail that has been brought to his attention, and although we have not obtained all the reductions which we had hoped for, nevertheless certain reductions have been made by means of which the Maritime provinces have been placed on a very much better basis than in previous years. When we came into confederation we were supposed to receive certain rights but as time went on and so many different changes came about in the railway system those rights were gradually taken from us one by one until now they have almost completely disappeared. Have we ever studied the railway situation in this light? We have a great many government services in this country all of which possibly are essential; but I think hon. gentlemen will agree with me that perhaps there is no service that can be rendered by this government which is as essential to the people of Canada to-day as the service rendered by the Canadian National Railways. We spend millions on other services; do we get any returns? We may get returns in an indirect way, but it is a very indirect way indeed; and we do not get interest on our money nor do we see the results in any very tangible form. Now here is an institution which has given to the people of Canada a service which they could not possibly have got along without. We all hope the day is not far distant when this service will be on a paying basis; but until that time comes is it any crime that some assistance should be given to the Canadian National Railways by the government of Canada? I do not think it is. Someone will say, why is it that the Canadian Pacific Railway is able to get along and pay dividends while the Canadian National Railways are hardly able to meet operating expenses? My answer to that question is this: The Canadian Pacific Railway built its roads into those portions of the country where dividends were in sight, whereas the Canadian National system was built into those sections of Canada that needed to be opened up so that the great hinterlands of the north might be settled. That in my opinion is the answer to such a question. The Canadian Pacific Railway went after dividends, and in doing so they built their roads where they expected the traffic to pay. The Canadian National Railways on the other hand have up to the present time been operated in the interests of the country and if they have not been as successful as their rival the reason I think is just as I have stated.

It may not be of interest to the House to know this, but I may say that before coming to Ottawa to attend the present session I prepared at the request of the railway commissioners a brief which I submitted to the management of the Canadian National Railways in regard to reductions. We felt that we had certain grievances in Prince Edward Island which called for some remedy, and after gathering all the information that I could upon the subject I submitted this brief to the Canadian National and have received their reply. With the permission of the House, Mr. Speaker, I should like to place this statement on Hansard: It is most interesting to the people of the Maritime provinces and it deals with questions affecting not only Prince Edward Island but also the provinces of Nova Scotia and New Brunswick. The management endeavoured to meet us as best they could, and I may observe here that they have before them other items which they state will receive their careful consideration.

Mr. SPEAKER: I must point out to the hon. member that no statement not read in the House may be incorporated in Hansard without the consent of the House.

Mr. MacLEAN (Prince): I understood that, Mr. Speaker, and that is why I asked the permission of the House.

Mr. STEVENS: I suggest that the hon. member read the statement. We are interested in the views of his province in regard to these matters.

Mr. MacLEAN (Prince): I have no objection to reading it if the hon. member insists.

Mr. CALDWELL: Who wrote the document?

Mr. MacLEAN (Prince): Mr. Dalrymple of the Canadian National Railways. The management did not meet our views altogether and as I proceed I shall explain our case as we saw it. The document is dated February 27, 1925 and reads:

CANADIAN NATIONAL RAILWAYS

Traffic and Express Department
Montreal, Quebec,
February 27, 1925.

At Hamilton

A. E. MacLean, Esq., M.P.
House of Commons,
Ottawa, Ontario.

Dear Mr. MacLean:

In re Rates on Traffic—Prince Edward Island.

Your favour of February 13th, addressed to our president:

There has been some slight delay in answering the enquiries as several of the statements made were of an omnibus character and involved research.

I will, however, endeavour to answer the various complaints or comparisons in a tabulated manner, as follows:

(a) Railway insists on consignee discharging shipments of potatoes at Charlottetown—cars to warehouse—whereas work is performed at St. John without expense to consignee.

The statement is not quite correct; it is, nevertheless, a fact that we assume the expense of unloading potatoes, in packages, when for furtherance by water. We do not assume the cost of unloading shipments in bulk.

The situation at St. John is somewhat different to that existing at Charlottetown, for the reason that the potatoes originate practically at the outskirts of Charlottetown, paying to the transportation company a minimum rate, whereas the commodity destined to St. John travels a much longer distance,—besides, we do not absorb the handling charges on traffic which pays a rate less than 10 cents per hundred pounds.

With the opening of next season, at Charlottetown, we will see that the feature of handling is placed on a parity with St. John.

(b) Five days free time allowed at Charlottetown and ten days at St. John.

This is correct. The extra time allowed at St. John was for the purpose of over-coming irregularity in transportation, or, in other words, a railway disability caused by the fact that the potatoes moved for long distances, even in excess of 400 miles, whereas, at Charlottetown, the maximum distance is 117 miles. There would appear to be no good business reason for extending the time at Charlottetown and so far we have had the impression that the only reason why the extra time has been requested is for the purpose of utilizing railway equipment for storage, owing to the absence of adequate warehousing accommodation.

We are making a further investigation on this angle of the situation and are open to conviction.

(c) Distance tariff rates on potatoes are greater than in New Brunswick to St. John.

This statement is not correct. The local rates, between all stations in the Maritime provinces, are on a mileage basis and the one distance tariff applies throughout the territory. In the case of export, the rates to both St. John and Charlottetown are precisely the same for corresponding distances, except that the rate to Charlottetown for distances 100 miles to 120 miles is held to a maximum of 13 cents, while to St. John the rates go up to 14 and 14½ cents.

(d) Wants general reduction in rates on potatoes to Sydney, Montreal, Halifax and St. John, but as Prince Edward Island and New Brunswick rates from Dominion points are on same basis as lower provinces admits this means a general reduction throughout Dominion.

There is quite a long answer to that question, and I think I might be allowed to put it on Hansard without reading it.

Mr. STEVENS: We would like to hear it.

Mr. MacLEAN (Prince): My hon. friend is interested?

Mr. STEVENS: Yes indeed.

Mr. MacLEAN (Prince): I quote:

Rates on potatoes between and from points in the Maritime provinces have been subject to special consideration a great many times, during the past few years, and substantial reductions have already been made to assist the producer. The increases made since 1918, result of enhanced expenses due to things which need not be elaborated upon at this time, have, in so far as relates to potatoes for export, been entirely wiped out and in this respect the Maritime provinces have had preferential consideration.

Perhaps my hon. friend will not like to hear that.

Mr. STEVENS: No, I like to hear that. I am very glad to see it.

Mr. MacLEAN (Prince): Right here I want to pay a compliment to the hon. member for Vancouver Centre (Mr. Stevens). In connection with the trip which the men from the Maritime provinces took across Canada, I think my hon. friend made the best suggestion of any that were offered. If he was correctly reported, his statement was that the remedy for the difficulties of the Maritime provinces in this regard was to bring the Maritime provinces within 300 miles of Montreal. My hon. friend has a good grasp of the situation. I wish we could reciprocate by bringing the western districts within 300 miles of that same great city. I presume he meant a subsidy.

The Maritime provinces are handicapped in that whatever products they have for export to Great Britain must very largely be shipped first to Montreal, involving a long rail haul of about 700 mlies, and then these same products are loaded on the ships at Montreal and are again brought back right past our doors. That is a tremendous tax on the farmers of the Maritime provinces, and to a certain extent it is the fault of the Maritime provinces themselves. A few years ago the suggestion was made that stock-yards should be established somewhere in the Maritime provinces where stock for shipment across the ocean could be collected and where the buying could be done. There was this disagreement, however, among the different towns in the Maritime provinces as to where those stock-yards should be located, and in the meantime the thing went

by the board and the stock-yards were never established. It seems to me, to use the words of the hon. member for St. John and Albert (Mr. Baxter) when he thundered here a few nights ago, and suggested that the government should wake up, that we in the Maritime provinces should wake up. If St. John and Halifax want to retain the export trade of the Maritime provinces it is up to them to wake up and provide the facilities and to agree with one another when any proposal of this kind is made.

The next question is as follows:

(e) Wants potatoes carried at special or commodity rates and cites coal as a basis to shoot at and gives certain comparisons. Later advocates rates should not exceed rates on grain in western Canada.

In this connection I compared the rates on coal from the Maritime provinces to Prince Edward Island. I pointed out that it, to produce a ton of coal at the pit's mouth costs approximately $3, while it costs from $9 to $15 to produce a ton of potatoes, and that they sell at destination at about the same price. The rate on coal from Sydney to Tignish, Prince Edward Island, is 13 1-2 cents per 100 pounds, and the rate on potatoes from Tignish to Sydney is 38 cents per 100 pounds, a difference of 25 cents per 100 pounds or a preference of about 200 per cent on a commodity that costs 200 per cent less to produce. Coal has a commodity rate, and my contention in this case was that if coal was given that rate for Nova Scotia, then potatoes should get the commodity rate for Prince Edward Island. Another point brought out was that the freight on a carload of coal of 60,000 pounds, at 13 1-2 cents, delivered at Tignish, was $81, while the freight on a carload of potatoes of 60,000 pounds, at 38 cents, from Tignish to Sydney, was $228, although the values of the two carloads at destination were practically the same. Of course the railways will not take this into consideration; they say the two articles are so extremely different in character that that cannot be considered. The reference to that in this memorandum is as follows:

This proposition is so fundamentally unsound that nothing would be gained by discussing it.

In (f) we advocate general advances over the Dominion in the rates of luxuries and expensive goods, and a reduction on cheap or bulky articles. I think that is a proposition worthy of consideration. The reply to that suggestion is as follows:

In principle we quite agree with you as to advances on luxuries and expensive goods and this if consummated would have a natural tendency to enable us to reduce our rates on what we usually call basic commodities, but you will appreciate action even in respect to the latter would be controlled, as heretofore, by the result of our expenses in operation.

(g) Wants local rates on potatoes to St. John and Halifax reduced to same basis as export.

Reply to this is already covered by (d).

(h) Gives reference to certain statements made by Premier Armstrong.

Premier Armstrong stated that freight rate from Kentville to Sydney, 317 miles, was 53 cents, while from Toronto to Winnipeg, 1,232 miles, it was only 55 cents. In other words, there was a difference of only 2 cents over that long distance.

Mr. CALDWELL: Would that be on the same commodity?

Mr. MacLEAN (Prince): Yes.

Mr. SPENCE: And the same year?

Mr. MacLEAN (Prince): Yes, the same year. Another instance was quoted in connection with the shipment of a box of tomatoes from Hantsport to Halifax. The freight charge was at the rate of $12.80 per 100 miles, while the rate from Grimsby, Ontario, to Halifax, was $2.50 per 100 miles. In his address before the dairymen's meeting Premier Armstrong declared that he wanted to "burn it into the minds" of the convention that these inequalities "could not be permitted to continue." He gave another instance of discrimination in freight rates. Now, the reply made by Mr. Dalrymple to that point was as follows:

Comparison of rates from Kentville to Sydney is made with rate from Toronto to Winnipeg, on apples. The latter took what is known as the Crowsnest agreement rate, which the railways are not willingly subscribing to, and if, because of the existence of this low Crowsnest basis of rates the railways are obliged to reduce all of their tariffs throughout the entire country to the lower level of such agreement rates then I can say to you very frankly there will not be sufficient money left to enable the transportation companies to furnish adequate service for our Canadian commerce.

(1) Hay—Claimed should have flat rate from all stations on Prince Edward Island to Sydney, St. John and Halifax, as it loads so light to the carload that the rate to make it pay has to be out of all proportion to the value.

We will see what can be done in the matter of export rates on hay, from Prince Edward Island territory.

The next article dealt with is fox feed, which is an important commodity down there, and which should be fourth class instead of first class. He says:

These food stuffs consist of livers, beef hearts and horse meat shipped frozen and usually in refrigerator cars; same requires equal care to that of perishable traffic for human consumption, and we are decidedly of the opinion that the fox industry can well afford to pay first class rates. In fact, to use the argument contained in the papers which you were good enough to send us, this business might be classified as a luxury.

We went on to ask for a reduction of freights on mixed carloads of potatoes and turnips and other freight from points in the province of Prince Edward Island to the mainland. In summing up he says:

It will perhaps not be amiss for me, at this time, to call your attention to what has been done in the matter of freight rate adjustments, affecting Prince Edward Island, during the past two years;—amongst other things the following are for your information—

(1) Formerly rates were the combination of locals to and from island and main land, now all mileage tariffs applicable in the maritime provinces are on the flat main land basis with no additional charge for car ferry or narrow gauge line services. This involved considerable reduction in our revenue and without much increase in volume of tonnage.

(2) Prince Edward Island is now on the flat Halifax and Mulgrave bases on all traffic to and from points west of Quebec,—a reduction in railway revenue.

(3) Class rates between Prince Edward Island and territory west of Quebec have been readjusted on a lower level.

(4) Reduced mileage scales locally in the maritime provinces, including Prince Edward Island, on potatoes, grain and products, have been made effective.

(5) Rates on potatoes for export have been reduced to the point that all increases granted by the Board of Railway Commissioners since 1918 have been eliminated and such situation does not exist in any other part of the country that I know of.

(6) Reduced rates have been established on potatoes to western Canada.

I am simply mentioning the foregoing in an endeavour to convince you that we have not been neglecting the maritime situation.

I am sorry to detain the House, but this is a very live question with us down there, and I trust I have not wearied hon. gentlemen too much.

When I was speaking a few moments ago regarding the upkeep of the railways, into which we were throwing a great deal of money, I forgot to mention that the government supply and keep in repair the water roadbed, the canals, lock tenders, lighthouses, danger buoys, docks, unloading facilities, and so forth, free to the lake carrier vessels. Why not do the same with the railways, and figure the rate on cost of rolling stock and operation only, instead of trying to make it pay interest on the fabulous cost of construction and upkeep of roadbed, and so forth? This is a suggestion which I think is worthy of the consideration of this House.

It is not my intention at this time to discuss the Petersen contract. That has been discussed from very many angles. I just wish to say that I believe the government has brought this proposition down in good faith. They are submitting it to a committee that will look into the question from every angle, and as I said before, if this proposition of the government to reduce ocean rates is blocked, we must lay the responsibility at the door of hon. gentlemen opposite, and to my mind, it will be another national tragedy, comparable with the result of the 1911 election, when we were shut out of the market of the United States. The same people who did that are to-day endeavouring to shut us out of the markets of Great Britain, not perhaps in the same way, but in another way which will be probably just as effective.

The other night my hon. friend from Cape Breton South and Richmond (Mr. Carroll) was speaking in support of coal duties, to which I am very much opposed. Coal duties may be very much in the interest of the people of Nova Scotia. My hon. friend mentioned the fact that if I would not support this duty on coal, I was not a good maritime man. I wish to tell the hon. gentleman that if I am not a good maritime man, I am certainly a good Prince Edward Island man, because the imports of coal from Nova Scotia into our province, as has been pointed out by the hon. member for Kings (Mr. Hughes), are very large indeed, and the people of Prince Edward Island feel they are paying a very high premium to the coal mines of the province of Nova Scotia.

Another factor which has injured us greatly not only in the province of Prince Edward Island, but also in the province of New Brunswick is the embargo which has been placed on Canadian potatoes by Great Britain. This embargo became effective just at the time we were getting our shipments started nicely through that new channel of trade. I wish to thank the Minister of Trade and Commerce for what he did, and to say that I do not believe the people of this country are making the use of the Trade and Commerce department that they might. We were forced this fall to look abroad for markets for our surplus potatoes, and we took the matter up with the Department of Trade and Commerce here. They immediately took it up with the High Commissioner in London, and went into the matter so thoroughly that in the course of a very few weeks we had a stream of shipments going forward to Great Britain. Then what happened? The Americans, who have shut us out of their market by the Fordney tariff, immediately became jealous because our potatoes were going forward while there was an embargo on American potatoes, and they took the matter up with the British government and scared them so badly by telling them that our Canadian potatoes were affected in a certain way that it was not safe to allow them entry into Great Britain, that an embargo was put on our potatoes.

Mr. CALDWELL: Might I interject, not that our potatoes were affected, but that we had the Colorado beetles?

Mr. MacLEAN (Prince): My hon. friend is quite correct. We went into this question and found out that the Colorado beetle has been prevalent in Great Britain for a great many years, but I am sorry to say that the British government listened to the representations made by the American government, and extended the embargo they had put on American potatoes to Canadian as well. This is a matter that the Department of Agriculture are working on, and I hope that yet some relief may be found. Our potatoes had a splendid reception over there and turned out well. We were opening up a great trade, especially in view of the shortage that obtained in Great Britain. I sincerely trust the Department of Agriculture will be successful in persuading the British government to remove this embargo.

Another matter that has been discussed in the Maritime provinces is in regard to the car ferry steamer plying between Prince Edward Island and the mainland. To my mind there is no justification in the world for charging the cost of operating that ferry to the Canadian National railway system The car ferry was put into commission as part of the compact under which Prince Edward Island entered confederation, whereby continuous steam communication was to be maintained between that province and the mainland. Now, there is no more reason for charging the operating expense of that car ferry against the Prince Edward Island branch of the Canadian National railway system than there is for charging up in the same way any of the other subsidies which were granted to Prince Edward Island at the time of confederation. That car ferry has given splendid service. It cannot, however, go on forever and I hope the time is not far distant when a second steamer will be provided. I am credibly informed that the traffic on that route is so constant and so pressing that the steamer has not had a proper overhauling since she was first put into commission. The fact is that she cannot be taken off the service for a sufficient length of time to permit of a thorough overhauling, and I hope the government will not delay in seeing that a second vessel is provided for that service. It has been suggested that the present steamer should be converted into an oil burner. Under present conditions in winter time the vessel starts out on her trip. She has perhaps been out for five or six hours, it may be for eight or ten hours, and is almost at the point where she could make her landing. By that time however, owing to the ice conditions, her fires become dirty, her steam pressure is lowered, and she loses power just at the very moment when it is needed to push her through the ice into her dock. Consequently she is brought to a standstill and the fires have to be cleaned, with the result that she is carried by drifting ice sometimes eight or ten miles, or even fifteen or twenty miles, up the straits. If the steamer were converted into an oil burner this difficulty would be overcome; the vessel would have the same maximum of power all the time and, under proper conditions, could dock eight or ten hours earlier than she is able to do sometimes under existing conditions.

Mr. STEVENS: She would be good for the Petersen fleet.

Mr. MacLEAN (Prince): No doubt she would but we could not spare her for that purpose even to meet the wishes of my hon. friend.

A question brought up when the estimates of the Department of Agriculture were under consideration was the creation of a disease free area in Prince Edward Island. I am glad to say that the minister on that occasion gave us a very favourable answer, and I hope the work will be undertaken and pushed to a successful conclusion. I think the province as a whole is willing to adopt the suggestion of the government and endeavour to make Prince Edward Island a disease free area as far as tuberculosis is concerned. We have some of the best herds of dairy cattle in Canada, perhaps in that section. Our dairy products are unexcelled in quality, and with the assistance proposed for the eradication of anything in the nature of tuberculosis our live stock will be given a standing in the markets of the world which it could never attain in any other way. The opportunity will also be afforded of advertising the fact that the dairy products of Prince Edward Island come from a disease free area and consequently they will be able to command much better prices in the world's markets.

In conclusion let me say that I do not think the people of Canada need be downhearted. We hear a great deal of pessimism from members on the opposite side, especially from our Conservative friends. They are indulging in a lot of "blue ruin" talk as the result of the likelihood of this government being continued in power. I think, however, that Canada is making substantial progress, a fact which is confirmed by the budget so recently brought down, notwithstanding any-

thing which hon. gentlemen opposite may say to the contrary. Comparing other countries with Canada I notice that their per capita debt is very much in excess of ours. The per capita debt of Canada is given at $268, that of New Zealand at $792, Great Britain $791, France $540, and Australia $359. Notwithstanding the huge deficit rolled up at a time when hon. gentlemen opposite were in power I am glad to say that the per capita debt of Canada compares very favourably with other countries of the world.

I am proud of the party to which I belong, and am exceedingly proud of the leader of this great party, the Right Hon. Mackenzie King, who has not only proven himself competent to handle Canadian affairs but has attracted the attention of the nations of the world by the position which he has taken in world affairs. I am proud of this party which has a record unexcelled in any country on which the sun shines; a party which has given to the people legislation in the interests of the masses as against the classes; a party which has stood for the interests of the common people; a party which has considered all classes, not handing out special favours to any pet monopolies; a party which has stood by the agriculturist, the fisherman, the lumberman and the artisan; a party which has redeemed its pre-election pledge to the best of its ability under the handicaps with which it was faced when it took up the reins of office; a party which can appeal to the country on a clear cut policy which aims at the alleviation of burdens where they are the most pressing, still having due regard to placing Canada in a sound financial position before the countries of the world. I ask, are we downhearted? No. Our public debt per capita is much less than that of a great many other countries of the world. Our resources are unlimited. Let us bury forever the pessimistic views to which I have alluded and let our country go forward in its career of development with that optimism which is so essential to success.

Mr. R. J. WOODS (Dufferin): Mr. Speaker, in beginning the few remarks which I intend to offer I feel that I am in a very happy position from the fact that I am not bound by the shackles of any party, and that I am free, as I have been since I entered this House, to support legislation, from whatever quarter of the House it may come, if I deem it to be in the best interest of the country, or to oppose it if in my opinion it is likely to have the opposite effect. On two occasions since I have been a member of this House I opposed the budget, and voted against it, and on one occasion I supported it.

I am somewhat disappointed in the budget at this particular time. I was hopeful that we would get a budget something along the lines of the budget delivered in this House last session, but to my disappointment there is no evidence of any advance beyond the point reached by the budget last year. We had expected, from the statements made by hon. gentlemen on the other side of the House, that last year's budget would be the death knell of protection. And this session I had expected that there would be some further reductions in the customs tariff on the necessities of life. I did not expect a slashing reduction and a complete sweep of the tariff; but I looked for something more than we have received. One feature of the budget in my opinion will not meet the views of those deeply interested in a low tariff and a freer trade between the nations that we have to deal with. I refer to the dumping clause. In this budget we have had a revision of the dumping clause. I have been looking over the budget for 1907 and have also considered the present budget. I have not a legally trained mind, I am a common man from behind the plough, but in my view when the dumping clause was introduced in 1907, goods coming into this country were valued at the regular market value in the country from which they were exported. As I understand the present revision, goods imported from other countries to Canada will be valued on the basis of the value of such goods in this country, or on the value of the goods on sale in this country. What does that mean? It simply means that if you go to a foreign country, buy goods and import them into Canada, you are forced, regardless of the customs tariff, to pay for those goods the value of the same goods in this country. For example, if I go to the United States and buy an article which is sold in that country for a hundred dollars and bring that over, when I come in contact with the Customs department I find that the selling price of those goods in Canada is a hundred and twenty dollars, with no reference to the customs; whatever customs duty might be placed on them would not matter. The result is that when I bring goods into this country, for an article which was sold in the United States at the regular market value of a hundred dollars I would be forced to pay a hundred and twenty dollars, before I would be per-

mitted to use it after bringing it into this country.

Mr. CALDWELL: Plus the duty.

Mr. WOODS: Regardless of duty. As I understand it, the dumping clause governs the whole protective feature of the goods coming into this country.

Mr. FORKE: There is nothing in that clause that I can see that prevents the Minister of Customs putting any value he likes on the goods.

Mr. GARLAND (Bow River): Hear, hear.

Mr. WOODS: We would not assume that he would put any higher value than the market value in this country. But assuming he puts on the same value, what does it mean? It means that the combined organization of manufacturers in this country could fix the price almost at any level and prohibit the consumer in this country importing goods from a foreign country without paying the price the same goods would cost him in this country. If I am right in that assumption, it is the most vicious form of protection that the human mind is capable of conceiving.

The debt of this country has been discussed time and again, and possibly almost every person in the country knows that we are loaded with a debt of almost two and a half billion dollars, which has to be met. It is a most unfortunate thing that we are saddled with such a burden. It appears to me that this enormous debt is a result of the lack of vision in war-time and the failure to collect from the people who were then making abundance of money. At the time the war was on, the farmers, the labourers, manufacturers and all classes of people were making a very great deal of money, and could without any inconvenience whatever have paid almost the entire war debt as the war went on. But, for lack of vision, we are saddled with this debt and we are compelled in some way or another to pay it. The question is how are we going to meet that debt. One of the ordinary methods which assists the average individual when he gets into debt, whether rightly or wrongly, is to retrench. There are two methods. The first, is to increase our revenue and bring more money into our possession with which to liquidate our debt. The other method is to retrench. In my opinion, the government of to-day is not retrenching as rapidly as it might do. There are many departments connected with the government of this country, and possibly there is no department in which there could not be more retrenchment than there is at the present time. I am going to mention two or three departments out of the many in which there might be a cutting down of expenditures and a lessening of the estimates that go through this House. The estimates of the Department of National Defence might be cut down. I do not want to be misunderstood. I believe in a proper police force. I believe in our Royal Canadian Mounted Police and in a permanent militia to a certain extent, sufficient to look after the internal affairs of our country in case of any disturbance or need. But we have what is called the annual drill of the militia, and a considerable amount of money is spent on this. I had a little experience in my younger days in that regard, and I look upon it as almost a waste of money. A number of officers, some of whom do not take much from the revenues of this country for their services, take charge of the annual drill as the men go out into the various camps for one or two weeks, and some young men go out and have a fairly good time during this period. They continue that sort of thing each year for two or three years and then they are discharged. They are not trained to be soldiers, and a great number of them, as I saw them in my younger days, were not physically fit ever to make soldiers. I believe that branch of our Department of National Defence should be cut down. The hon. member for Comox-Alberni (Mr. Neill) brought in a resolution regarding the defence of the Pacific coast and he stated, I think, that there was a coast line on the Pacific of about 10,000 miles to be guarded. If we are going to guard that, against whom are we going to guard it? Against other nations that might come up against us? If we are to put on a force sufficient to stand against any of the surrounding nations that possibly might rise up in war against us, that would saddle us with another debt possibly almost equal to the one we are now carrying. When we were forced into the struggle some years ago, the Canadian people with their energy, their physical power and their willingness to defend their country, in a short time got ready an army to send overseas in defence of the British Empire. I believe a good deal could be saved by retrenching in the Department of National Defence.

Possibly the Department of Public Works might also be cut down a little. In the estimates I notice a great number of wharves —you would think there were wharves in almost every little part of the country—that have to be repaired and kept up. I am con-

versant with only a very few of them; but taking my cue from the Belle River wharf, as regards which I made it a point to make some inquiries, not from Conservatives particularly, but from Liberals, friends whom I know in that part of the country, I find that, in their opinion as they gave it to me, it was practically a waste of public money at this particular time to put the Belle River wharf item through last session.

Another department in which there might be retrenchment is that of the Auditor General. As we look over the Auditor General's report, we find that the late Auditor General was receiving a salary of $6,000. He came through the strenuous times of the war and he had no doubt a very efficient
10 p.m. staff with him. For some time there was no Auditor General, but the deputy and his staff took care of the work. We have now another Auditor General appointed at a salary of $15,000. If the late Auditor General could look after the work properly—and I understand it was looked after properly by him and the staff that he had with him during the strenuous period of the war—surely it is not necessary to add another $9,000 to the salary of one man to take the place of the man who is past and gone. I want to go just a little further along that line. On looking over the estimates for this year I find an added estimate of about $33,000 for the Auditor General's department to put new blood into the staff of that department. We have been talking about cutting down the civil service; but we see one department, instead of cutting down, adding to the extent of more than $33,000 during the present session. This looks as if something was wrong, as though there must be someone who wants a particular job, or someone in sight to be placed in a nice desirable position in that department. I think that is all I will specify in regard to the different departments, but I believe what I say is true of these departments, and what is true of these departments, I believe is true of every department. I believe there could be a retrenchment and a cutting down, specially when we consider the burden of debt and taxation that the people of this country are carrying.

The policy of the present government seems to be to increase the revenues. This was shown not very long ago when a resolution was brought forward by the hon. member for Macleod (Mr. Coote) for the reduction of the customs duty on automobiles. The Acting Minister of Finance (Mr. Robb) on that occasion gave as a reason for retaining the duty the necessity for revenue. It appears to me now that the government should not spend all its energies in loading and re-loading the people of Canada with extra taxation to the very limit, while there is a possibility of reducing our debt by retrenchment in a great many directions.

I am more favourable to the sales tax than I am to the customs duty. The sales tax is something in regard to which we are more in the light; we know what we are paying for. Although it may be shouldered on the consumer ultimately, we know at any rate more about this tax than we do about the customs tariff and the dumping clause that protects the various industries. Personally, I prefer direct taxation; I want to know exactly what I am paying for.

Let me refer now to the stamp tax on cheques, a matter I discussed when the legislation was put through this House in the first session I was here. At that time the Minister of Finance (Mr. Fielding) fixed the maximum at $2 but the following session he reduced it to $1. As I see this stamp tax, all it means is that the wealthy men of this country who are able to put their signature to cheques of over $2,500 will be exempt from a tax which others will have to pay. The tax now is 2 cents for every $50 or fraction of $50 up to $2,500, but above that sum it does not apply. It looks to me therefore as if we are legislating in the interests of the rich people of this country, and it borders very closely if not entirely on class legislation.

I want to touch for a moment now on protection, which has been the great cry of our friends to the right. One thing that has surprised me in this respect is that hon. gentlemen to our right have not put this principle in the form of a platform, as the hon. member for Kings (Mr. Hughes) observed last night, when he said that certain resolutions contained the issues upon which the Conservative party were likely to go to the country. Hon. members to my right moved an amendment to the budget and I must say that it strikes me as being very meaningless; it is not a resolution from which we can extract very much. So far as I can see, their amendment is not a policy at all. But if, as the hon. member said last night, our friends are going to go to the country and appeal to the people on a certain platform, it is a mystery to me at any rate why they have not submitted it to the House in the form of an amendment to the budget with a view to having it threshed out on the floor. Why do they not want to bring it to the attention of the

people as coming direct from the Parliament of Canada? Were hon. gentlemen timid, were they a little bit afraid to launch out on the great sea of protection in this way? At any rate, they seem to be holding back until some future time when no doubt they will bring forward their policy on the hustings. Now, protection does not always protect, and in this regard I want to read a brief statement I clipped from the public press written by Mr. Tom King who is the correspondent of the Globe at Washington and who writes in this instance touching the situation in the United States. We are told that there is a high protective tariff over there, and this perhaps is true in the case of a great many articles. But this is what that gentleman says about the situation as he sees it:

> The United States farmers already have tariff protection, but a customs wall is useless to producers of wheat, corn, cotton and hogs. They have a surplus for export and must take prices fixed in the world's market.

What is true of the United States is also true of Canada. We are a large agricultural nation and we are producing in excess, by millions of bushels, of what we can consume in wheat. Of hogs, cattle and farm produce we also have an excess of production over consumption; and as we must place those products on the markets of the world in competition with other countries, protection does not avail us very much. And this is the same in the United States. So that protection does not always protect.

Personally I am not a free trader; I never believed in absolute free trade so long as we were up against a tariff wall in other countries. But I do not believe in retaliation, and I do not believe that it would be wise for a moment for Canada to put up a tariff wall against the United States or any other country simply because they excluded our products in that way. I do not think however that we ought to regulate our tariff; we should regulate the duties on the necessities of life, in the interests of the masses. We should not make things harder for the general public by increasing the cost of living and so driving the people out of the country. I believe therefore that it is our duty to regulate our tariff with the principle in view of the greatest good to the greatest number and not in the interests of any class or small section of the people.

There is another point I would like to touch upon—and I am not sure that it is not a delicate one in some respects; I do not know what view my western friends who sit around me hold in regard to it. But following the idea that I have just expressed of doing the greatest good to the greatest number, my opinion is that the government would be acting wisely if it put an export duty on wheat. Let me give you my reasons. I have said that protection does not always protect, and that we have to put our surplus produce on the world's market. But the United States to-day has a protective tariff of forty-two cents a bushel against our Canadian wheat, and the result is that the millers of the United States buy our wheat, take it over to their mills in that country, mill it and export it. I am informed on good authority that when they export it they get the benefit of a drawback to the extent of 99 per cent of the duty paid. The duty that the United States has put against Canadian wheat does not help the farmers there but it does benefit the great milling companies of the United States, while it injures the millers of our own country. If our wheat was milled in our own country we would get the benefit of the by-products for feed, and we all know how necessary those by-products are in such a province as Ontario. We must have them for the feeding of young stock and in connection with our dairy operations. But when the United States get our wheat and export it, with practically no tariff charge when you consider the drawback of 99 per cent, our milling industries are preventing from handling it and sending it over to Great Britain in the form of flour, and we are deprived of the use of the by-products for our young stock and for dairy feed.

Mr. HOEY: Before the hon. member gets away from that, has he thought out what effect an export duty would have on the sale of our wheat in Europe? Would it not drive the Canadian exporter off the markets of the world? You cannot put an export duty against the United States without putting it on also against Europe.

Mr. WOODS: Well, it might have some effect in that way, but it would build up our milling industries and give us the by-products. Whether rightly or wrongly, I cannot help thinking that it would be a wise thing to do, because it would operate very much in the interests of this country; it would bring a great deal of revenue into the treasury and would help pay off our national debt as well as give us the other benefits that I have described.

During the recess we heard a great deal of the cry of blue ruin; we got it all over this country from the Atlantic to the Pacific. Let me read a despatch that appeared in the press with regard to a meeting held at Stratford last August and addressed by the right

hon. leader of the opposition (Mr. Meighen). It says:

"Workmen banished, homes boarded up, factories closed, stagnation in business, and despair in the hearts of our artisans, these are the fruits of the policy of Mr. King's Government," said Right Hon. Arthur Meighen in addressing a crowd of more than 4,000 at the big Conservative picnic in Queen's park here to-day. In his address he dealt largely with the record of the King government since it has been in power, the chief characteristic of which, he said, was "duplicity." He charged that changes in the tariff had closed more than 2,000 factories and had banished over 300,000 Canadians to the United States and prophesied that the coming winter would witness hardships untold which the government would be powerless to deal with without revoking all its pledges.

We have also been told by our friends to the right—and if my interpretation of the dumping clause is correct, there is some foundation for their statement—that the tariff reductions of a year ago did not decrease the price of farm implements. I assume that it is the manufacturers who are opposed to the reductions in the customs tariff and who are anxious to have the duties increased—that is, if we are to judge from the statements of our friends to the right. Well, if reduction of customs duties does not bring down the cost of implements in this country—and we are told that in some cases the prices are actually higher since the reductions of last year—why are the manufacturers up in arms against the customs tariff? If they can make as much money under a low tariff, why should they object to the reductions? From the time that I came to this House, there was no perceptible reduction in the tariff until last session, and if in three or four months the houses could be boarded up and men turned out of work and 300,000 people could slip over to the United States, and all that kind of thing, to me it would be a phenomenon. I cannot see how it all could happen in such a short time.

Mr. CALDWELL: The products of the factories did not come down in price. That is, the machinery had gone up.

Mr. WOODS: That is right. Now, I want to refer to a statement made recently in this House by the hon. member for Fort William and Rainy River (Mr. Manion). Referring to the present condition of affairs in Canada with regard to employment and so on, he said that he had never known it to be so bad. He went a little further and said that from his knowledge of history he had never known it to be so bad; that such a serious state of affairs had not existed since the period between 1873 and 1878. Now, perhaps I will be pardoned if I tell the House something of the conditions between 1878 and the close of the century, based on actual experience. In the latter part of the eighties and possibly all through the eighties, and in the early nineties, conditions to my mind, and I came through them, were much worse than they are at the present time. I was actively engaged in farming in the early nineties and part of the eighties. I was in the working class, and knew considerable about the conditions in 1878, and onward; so much so that I was interested in politics at that particular time while still a young man, and I was then a very ardent supporter, I must confess, of the policy of Sir John A. Macdonald, which our friends to my right always advocate. In the early nineties the farmers could hire a man on the farm for $15 and $16 a month. The farmers at that time received about $4 a hundred for dressed hogs, and about $3 to $3.50 a hundred for live hogs. They could sell beef cattle that had been stable fed for six months at a price—I was going to say at the enormous price of 4 cents or 4¼ cents a pound. I came through that particular period and have had actual experience of these conditions; I am speaking of Ontario; I do not know anything about the other provinces. I have had the actual experience in this province of selling dressed hogs, beautiful carcasses, for $4 a hundred, and of selling in May beef cattle that had been stable fed all winter for $4 a hundred. These were the conditions back in the nineties, when as I say we could hire our men for $15 and $16 a month. Compare that with conditions to-day. Hired men to-day on the farms in our locality and round about are getting from $30 to $40 and in some cases $43 a month the year round, and their board. In some cases they have a horse fed for them, and they have the opportunity of driving out with their own horse and rig supplied by the farmer, in addition to getting $40 a month the year round. There was no horse fed for them in the early nineties, and they were then only getting $15 and $16 a month. To-day while the farmers have difficulties to contend with, and high prices generally, we can sell live hogs at $12 and $13 a hundred, and beef cattle at from $6 to $8 a hundred in the province of Ontario. Of course, we may have got into a little extravagant way of living, which is all right in its place if we have the means to do it, but conditions to-day make it far easier to live on the same plane, and to have as few "outings" so to speak, than they did in the eighties and nineties, under this great protective policy, this panacea for all our ailments, that was launched in 1878 as the great National Policy for the Dominion of Canada.

But we are told by our friends to the right that the people are leaving this country. We have heard so much of that great cry of blue ruin, and in that connection I am going to quote from an editorial in the Toronto Mail and Empire in an issue of about a month ago. It says:

Why is it that people leaving Britain seek homes rather in the United States than in Canada?

That is the question put by the Mail and Empire, and this is its answer:

The answer is that they are influenced by continuous reports of abounding prosperity and opportunity for employment at high wages in the United States, whereas the reports from Canada are very discouraging to the British people looking abroad for work. They hear of hundreds of Canadian factories being closed down, of large numbers of our people brought to distress for want of employment, and of hundreds of thousands of them leaving the country to make a living in the now famed land of opportunity next door to us.

Mr. CALDWELL: They must have been reading Hansard.

Mr. WOODS: I do not know where they got it from, but that is what the Mail and Empire says in its issue of February 21, 1925.

Now I am going to read another statement contained in a despatch from the Canadian press, dated Hamilton, February 24, 1925:

Addressing the members of the Canadian Bankers' Association at a dinner here to-night presided over by A. R. Lancefield, Sir Joseph Flavelle, of Toronto—

A man we have all heard of and whose reputation we know, and whose statements carry some weight in this Dominion:

—declared that creeping into the national life of Canada was a spirit of whining, which reflected no credit on the "men of the northern zone." He was at a loss to know what had got into some men lately, for all they appeared to do was to whine and scold at this, that and everything. This attitude was neither Canadian nor courageous. While he disagreed partly with the method by which some of Canada's post-war taxation had been levied, he thought it was time to stop scolding and get on with the day's work.

But there is another side to it. We have heard a great deal lately about the lack of prosperity, but there is something to be said on the prosperity side, and I want to read one or two extracts I have here in regard to prosperity. I want also to say that if the reduction in the customs tariff last session brought prosperity to this country, it appears to me a terrible mistake that the government of the day did not continue and go a little further in the direction they went last session, in order to bring further prosperity to the Dominion of Canada:

The largest shipment of hardware ever made in Canada left the plant of Beatty Bros., Fergus, on Saturday afternoon in a special Canadian Pacific train of 24 cars, and was composed of more than 2,000 iron farm pumps, 1,000 step and extension ladders, and 1,000 electric and hand washing machines, and barn equipment, for spring delivery to 700 dealers throughout western Canada.

Mr. CALDWELL: What is the date of that?

Mr. WOODS: I do not know the date of the item but it occurred within the last two months. I am satisfied it is not more than two months since the shipment was made. Here is a further paragraph I desire to read:

Industrial conditions in Guelph, which have not been very satisfactory all summer, are beginning to pick up. The general opinion expressed by local manufacturers is that business is improving slowly, but surely, that the corner has been turned, that the industrial situation is on the mend, and the country on the road back to prosperity.

President John M. Taylor of the Taylor-Forbes Company, one of the largest industries in the city, is optimistic as regards the outlook. This company's radiator plant is working six days a week, and overtime every night, in an effort to fill orders on hand. Crowe's iron works, another important industry, is now operating five days a week. President C. R. Crowe reporting a noticeable inprovement in conditions. The Canadian Diamalt Company, a subsidiary of the Fleischman Yeast Company, is also busy.

That the peak of the depression has been reached and passed, is the opinion of R. Marsland of the Guelph Carpet and Worsted Spinning Mills Company, Limited, who is confident that industrial conditions will show a decided change for the better after the new year.

Here is another quotation from Ottawa:

The trend of employment at the beginning of October was upward, according to returns from 5,855 firms tabulated by the Dominion Bureau of Statistics. These employers increased their payrolls from 765,422 persons on September 1 to 771,932 at the first of this month.

Manufacturing showed considerable improvement, especially in the textile, iron and steel, canning and confectionery divisions. Logging, transportation and trade also were more active, while further, though smaller, declines were registered in construction.

I have another paragraph but I will not take the time to read it. I want to refer to a manufacturing concern in my own county. It is a woollen manufacturing industry and the only one we have in the county of Dufferin. That company to-day is running night and day shifts.

Mr. CALDWELL: I thought the woollen mills were all shut down last year.

Mr. WOODS: There were rumours to that effect. However the one in the county of Dufferin did not shut down but is running night and day shifts at the present time.

Mr. CALDWELL: Good.

Mr. WOODS: It employs one hundred and fifty hands—about sixty-five men and boys, and the remainder women and girls. That

does not bear out the argument that because the customs tariff was reduced last year the country is going to ruin.

Now, I want to refer to another point and that is that protection is driving small industries out of the country. I believe the protective policy has had more to do with driving small industries from our towns and villages than anything else which has taken place in Canada. It has depopulated the rural sections of the Dominion and is forcing the young men and women, and other workers, into the large centres. Then when conditions are not favourable in those centres they cross to the country to the south to look for employment there. At any rate I am convinced of the fact that protection has done more to break up our small towns and villages and to destroy our small industries than any other agency.

Now I am going to relate a condition which came to my notice very recently which, I think, will prove conclusively the statement I have made. It is a condition that was brought to my attention by some of the fence manufacturing companies of the province of Ontario, and it is this: The Canadian fence companies that weave wire fences for the farmers import certain lines of wire free of duty, and I approve of the Canadian manufacturers obtaining their raw material duty free because it should lower their production costs and enable them to put their products on the market at a reduced price. The companies that manufacture woven wire fences have the privilege of going into the open market buying No. 9, No. 12 and No. 13 wire and importing it free of duty. There is a No. 10 wire which is a shade lighter wire than No. 9, but which still makes a very good fence. There are, as far as I know, only two large companies in Canada that manufacture steel wire for fencing, and they also manufacture fences out of No. 10 wire. They import their raw material free for the manufacture of that wire, and they put their fences woven from No. 10 wire on the market in competition with fences woven from No. 9 wire, selling them as a light No. 9 wire fence or as a standard gauge wire fence. Now, the other companies that weave wire fences do not manufacture the wire. They can go to these two particular companies and buy No. 9, No. 12, and No. 13 wire at practically the same price at which they can buy it across the line and bring it into Canada; but when it is a case of getting No. 10 wire, which is protected by a 20 per cent duty, these two particular companies manufacturing this wire say to the other companies "We will give you that wire at so much" which represents the 20 per cent duty added to the price. It is a prohibitive price for other manufacturers desirous of weaving fences from No. 10 wire. So these two companies enjoying this special advantage sell No. 10 wire at a price fifty cents higher than the other companies who sell No. 9 wire fences and they also sell No. 9 wire as well. Now fencing in this country is a very important matter not only for the farmers on the western prairies but elsewhere in Canada. Fences made from No. 10 wire can be put on the market only by these two favoured companies; the other concerns are prohibited from weaving and selling No. 10 wire fence by the addition of the 20 per cent duty. What is going to be the result of this? The result will be to drive out the other woven wire fence companies and to give a monopoly of the business to the two companies that manufacture the wire and also turn out woven wire fences, but who are selling fences made from No. 10 wire at fifty cents a hundred higher than they sell fences made from No. 9 wire. That concrete case has been brought to my attention. I have laid the matter before the government, and they say it was an old thing and has been there for years; but I am hopeful that the government of the day will remove that discrimination against the small manufacturer in favour of the larger manufacturers of wire and fencing.

In conclusion I desire to state that we have had two old, historic political parties in this country but only one policy, and that is the reason that this group to which I belong sits in this corner of the House to-day. I have read the reports in the public press of the various speeches which have been made by members of the old political parties as they toured the country during the recess. An effort has been made by them all over the country, from the Atlantic to the Pacific, to get rid of the group in this corner of the House and to get back to the old party system.

Mr. FORKE: They will not succeed.

Mr. WOODS: Never. I believe that is the reason we are here to-day. In 1878 the Conservatives came into power on the National Policy. They held office for sixteen or eighteen years, and then the Liberals adopted another policy and fought for the Mackenzie tariff or the low tariff. What did they do when they got into power? They pulled their boat right up alongside the Conservatives,

and they launched out just in exactly the same direction. We must give them credit for having introduced the preferential tariff, which was a benefit to the country. On the whole, however, as the people in the country are aware, and as they have been told repeatedly in the back concessions, we have two parties in name but one party in policy. The hon. gentleman who preceded me (Mr. MacLean, Prince) quoted from an address by the right hon. leader of the opposition (Mr. Meighen) in regard to the lowering of the tariff. I quoted from the same address a year ago, about the manufacturers hiding behind the ramparts of gold, and it is time this was done away with. That was in 1910. The Conservative policy then was, "We must get down to a lower tariff". They were going to appeal to the people and wanted to get hold of the people on that low tariff policy. But what happened? The Liberals outwitted them, went over to the United States and stole the Conservative platform. We know that the Conservative policy back in the eighties and nineties was that as soon as the United States was willing to put the natural products of the country on the free list Canada would do the same, and that we would have reciprocity in the natural products of the country. But the United States refused to accede to that request until 1911, when the Liberals went over there and made an arrangement with them in regard to it. The Conservatives then felt that they were up against it, that the Liberals had taken the ground under their feet, and some scheme had to be launched. What were they to do? They wanted to get into power. At that particular time I knew a little of the workings of that historic party to my right, and I got into the caucus. I have not time to tell my hon. friends about it to-night, because I have to catch the train. I was in close touch with an hon. member who sat in the House for thirty years, who for a time occupied the position the hon. Speaker at present holds and who later was transferred to the Senate. He and I were very friendly. What did they do? They said, "There is one hope of getting into power, and that is the loyalty cry". They raised the Union Jack to the top of the mast. I do not know what they did in other localities, but I know that in my locality they fought the contest on that particular line and nothing else, and they succeeded in winning.

Mr. STEVENS: Was that not a good place for it?

Mr. WOODS: It was a good place. I can assure hon. members I have no objection to the Union Jack being hoisted to the top of the mast. They won the election and the Liberals were in the cold shades of opposition. In the year 1919 they adopted the old platform of a reduced tariff. They were elected in 1921. I must admit that we got a little, and that they made a nice move last session, but we have got to the starting point again, more particularly in reference to the matter which I mentioned, namely the dumping clause.

Mr. FORTIER (Labelle) (Translation): Mr. Speaker, the budget speech, this year, affords to the citizens of this country the satisfaction and joy of noticing a marked improvement in our finances. For a long time to come, we shall look forward with much anxiety to the yearly budget statement of the Minister of Finance, because we shall bear in mind the never to be forgotten days of the Great War, the sacrifices we bore up with and the heavy obligations incurred. These war debts must be met. The word of honour and pledges of our predecessors must be scrupulously adhered to. Therefore, this year as in previous years the Acting Minister of Finance rightly stated:

> However, upon the Dominion treasury had fallen the cost of our share in the war, the interest on the war debt, the pensions to our disabled soldiers and to the widows and orphans of our men who had fallen at the front. The present government, representing the will of the Canadian people, has constantly borne in mind the debt we owe to the disabled and the needs of the widows and orphans, which necessitated pension increases from year to year.

We therefore have cause to rejoice that the government has managed the affairs of the country with such foresight and economy that, after having discharged in full the heavy debts, which were a consequence of the war, and met the needs of the hour, it can bring down a budget which shows a favourable balance. The latter is the result of a wise administration. The government first of all deserves our confidence on the score of wise economy. The statement of the Minister of Finance will be received with much satisfaction by the electors. Among other things the minister said:

> On the other hand, by reductions in general expenditures and by refinancing maturing loans, the government has succeeded in reducing the interest charges and also our annual expenditures, thus enabling us last year to report a material reduction in our net debt and this year a substantial reduction in taxation and a surplus in the government's own administrative services.

The government's financial transactions may thus be summed up: debt decrease, taxation decrease, expenditure decrease and a favourable balance in this year's budget.

This financial success of the government is the vindication of the people of this country

who have entrusted the Liberal party with the ship of state. Had the government to its credit but this record of restoring the finances on a sound basis, it would be entitled to the confidence and gratitude of those who had entrusted to it the task of working for the reconstruction of the country shaken by the war. Deeds speak more eloquently than high sounding words or great promises. What did the people expect, in 1921, from the government? The post-war reconstruction, the balancing of our finances. The latter has just been done by the Minister of Finance. He has established this favourable balance notwithstanding a decrease in taxation, that is to say, in the revenue, although refunding more than $35,000,000 of the national debt. I do not know when we shall be called upon to go before the electors so as to obtain their endorsation of the acts of this government, but I feel certain that no administrative acts will commend themselves more to the consideration, the confidence and respect of the people than the great concern of our leaders to re-establish equilibrium in our finances. However, the management of our national railways will be the source, for some years to come, of considerable deficits as well as capital outlay necessitated by the improvements and equipment of the railway. However, we cannot do otherwise than shoulder all the responsibilities of said management which we have not sought, but that we have accepted with the solemn promise to give it a fair trial.

Discussing the chances of success of the State management of industries, in France the champions of this system assure us of good results, providing however that the undertaking be left in the hands of a permanent and responsible chief. The government was fortunate in entrusting the management of our National railways to Sir Henry Thornton. Indeed, since he was chosen president of the railway board, Sir Henry has carried out great improvements to the National railways. This railway ownership is to the advantage of our country and helps wonderfully to the development of the newer parts of the country and to the spreading of the population. I have the honour to represent in parliament a settlement, where for more than twenty-five years, the sturdy settlers have gradually conquered the virgin forests to establish on the mountain slopes and in all the valleys of the Rouge and Lievre rivers the flourishing farms and numerous parishes which make up a wonderful landscape in the Laurentian mountains. So as to meet the needs of the settlers, accommodate these far off settlements and open up the back country, the railway has become an indispensable thing. It has always been a wise policy for our federal as well as provincial governments, to grant to private companies the necessary subsidies to induce the latter to build railways through those settlements. But do these private companies, even encouraged by these various grants always meet the needs of those districts? Do they not often require subsidies representing a considerable proportion of the cost of construction? This being the case, would it not be wiser for the government to build themselves the railway rather than supply the funds to have them built by others and for others.

Railways, however, are so necessary to the exploitation of natural resources and the reasonable development of our country, that it would be expedient to complete, as circumstances would warrant, the National railways and to subsidize, when necessary private companies willing to build branch lines. At all events, we should congratulate ourselves in possessing a national railway which furthers so well the development and expansion of our young country, and we should not fear, for some time to come, the adverse financial situation which government ownership creates.

I realize that in certain quarters, these contentions may be challenged. Commercial centres, large cities do not feel the need, as settlements directly interested in the construction of branch lines do, of continuing state-ownership. Those who receive excellent service do not generally wish for more. But as their hopes, however, turn towards other fields of vantage, they seek for such ends funds which are otherwise invested. Let me point out to you that commercial centres and large cities have come in existence through these means of communication and in particular through these railways which link them with outside points, with neighbouring or far off regions, and which contribute largely to the wonderful development of trade and industry. The great voice of cities should equally mingle their appeals to that of those parts to be developed so as to support the claims of our rural districts for the extension of our railways.

Let me conclude these few remarks concerning the National Railways by the following assertions: 1. Railway ownership is an excellent thing and, at all events, it should be considered as such for the purpose of ensuring a fair trial to this undertaking.

2. In a young country like ours the railway is the forerunner of colonization activities.

3. It is a duty to stimulate by means of subsidies the building of railways in settled dis-

tricts and for stronger reason, it is the government's duty to build railways when circumstances demand it.

The Minister of Finance has given us a glimpse of the dawn of a brighter day in the revival of activities which agriculture seems to display. He says:

> But there is a bright spot. Agricultural industries, especially in the prairie provinces, are now receiving the benefits of greatly increased prices for last year's crops, and these increased revenues are being applied, not to luxuries or comforts, but to wiping off the indebtedness incurred during the lean years. The farm, free from debt, brings more general economic value to the owner and to Canada as a whole.

Now, agriculture is the oldest, the noblest and the most remunerating of all industries. Why do we give such prominence to agriculture? It is because we are aware that it is in this industry that humanity has its fountain-head of life. While all other industries confine themselves to transforming the raw materials of which they only utilize a part, agriculture multiplies its raw materials, increases them tenfold or even a hundredfold. The sun is its great assistant in this work of creation. Agriculture is therefore one of the main branches of human activity, it is the oldest. Fenelon says that, "agriculture which is the basis of life, is the source of real worldly goods." It has always been looked upon of such importance that all the ancient traditions agree in giving it a divine origin. The notion that we have formed of agriculture, in Quebec, is that it cannot be progressive or remunerative unless it has as its basis the dairy industry. When fifty years ago, the country was suffering under a general depression and it was in the throes of a most serious economic crisis, what was the remedy proposed? Our clergy, our statesmen rose and proclaimed an agricultural crusade. They founded, in 1882, a dairymen's association and they spread throughout all the parishes this truth: that the dairy industry is the principal means of salvation for the farm. Our fathers will bear witness to the fact. It is the dairy industry which saved us from ruin; it enriched the farm, the homestead, by first paying off the mortgage and by restoring to the soil its original fertility.

In what other parts more than in those old provinces of the Dominion, is it necessary to always proclaim that the dairy industry is indispensable to agricultural development. In our parishes economic conditions may be gauged by the state the farm values stand in direct ratio to the number of well equipped and well managed butter and cheese factories as well as to the high quality of the herds. In the interesting settlements which I have the honour to represent we realize that the example of prosperous agricultural centres must be followed, and that is why this industry has had such an awakening. Is it not there that dairy industry is most needed to complete and consolidate the national work of colonization performed by our worthy and heroic pioneers.

To retain these energetic sons on the Canadian soil, to keep the settler with us, to offer him as well as to his repatriated fellow-citizen, new lands to settle upon, that is the policy which thrills with enthusiasm the heart of those who love their province. I call as witnesses those who were the great servants of our country. Does not one read on the pedestals of Cartier's monument, the advice which he gave to his fellow citizens and which he expressed in these simple words, "Let us take possession of the soil." Let us listen to this other congenial voice, that of Manager Labelle, the apostle of colonization: "It is absolutely necessary"—he repeated to the pioneers he had settled in the new parishes—"that you devote your time to the development of your primitive clearings so as to make of these wonderful northern lands, watered by rivers and lakes, the excellent pastures which will make of your region the Switzerland of Canada."

Great and numerous are the advantages which the dairy industry brings to our farms. The land is bare and desolate when it is not stocked with a fine herd. And does it not seem to you that the landscape is more picturesque, farming life more charming and attractive when you discover on the hills or the plains, in the midst of extensive grazing lands, a magnificent herd of milch-cows. Their variegated colourings bring joy to one's heart. Every evening they slowly wind their way towards the home bringing to the family the best, the richest, the healthiest food: the good and unadulterated milk.

But this hope of a new dawn, through the revival of agriculture, would shine with a brighter light, if the government had been allowed to realize its policy of new markets for the output of our products. These markets are necessary to hasten larger production and to sell at profitable prices, all the products of our farming industry.

What we need, is a trade convention with our neighbours to the south, so as to allow us to export on that market, which is the natural and best outlet that we can hope for, our farm products suitable for exportation.

I have faith in the future and believe in the destinies of our party which the Canadian people will return to power at the next general election. I hope that the voting, by testifying to a greater confidence in the policy of our government, will allow them to realize this programme of trade intercourse with the United States, so as to favour the Canadian farm and, thereby, bring to this country a better economic situation.

Now, it is with the aim of reaching, with greater facility, the so necessary markets that the government has concluded a contract with English shippers so as to control and reduce the excessive freight charges on our exports to Europe. The government acted wisely for, in the Petersen contract, they showed both desire to meet the needs of the hour, by striking at the transportation trust, and the prudence which must attend such a vast undertaking. The government critics willingly admitted the need of breaking up the trust, but they fear that the project will not serve the ends sought. If their contentions are right, those yearly subsidies during the progress of the contract are the most economic, because in case of failure, they will prove the less expensive, providing that when this contract terminates we shall be free from all future responsibilities.

In closing my remarks I wish to congratulate the government on its praiseworthy effort to better our economic situation. The government have understood that it is by these means which I have just pointed out, and by others also, which they unflinchingly put into practice, that they may reach their goal. Let me remark, by the way, that in order to carry the burden of the debt and those obligations which are summed up in the taxes, we must necessarily adopt such means as to make a more general assessment of taxes. However, this assessment cannot be carried out with the present population. We must, therefore, increase our numbers.

It is with that aim in view that the government has adopted a sound immigration and repatriation policy. And, in order that this immigration be controlled, we must require at the port of embarkation a certificate from the immigrant establishing that he is sound of body and mind. It is a prudent and wise move to restrict the number of these ports of embarkation so as to stimulate a healthy immigration flowing from Belgium, France, Switzerland, the Scandinavian countries and the British Empire, and it will do away with many quite justifiable prejudices against unrestricted immigration.

And, to stem the emigration of our people, we have but to continue the policy so well established by the government which consists in obtaining all the advantages possible so as to encourage the Canadians to make their home on the land and help them in settling and farming.

In realizing the beginning of this task of restoration accomplished by the government since they are in power, I publicly reiterate my confidence in them. And I state that it is with pleasure that I shall support with my vote the budget which has just been delivered with such ability and eloquence by the hon. Acting Minister of Finance (Mr. Robb).

On motion of Mr. Stevens the debate was adjourned.

On motion of Mr. Beland the House adjourned at 11.10 p.m.

Monday, March 30, 1925

The House met at three o'clock.

PAPER PRESENTED

Copy of order in council dated March 24, 1925, relating to pay and allowance regulations in the navy, submitted under the provisions of section 47, chapter 43, Edward VII.—Hon. Mr. Macdonald.

ALLEGED ARRANGEMENTS FOR GOVERNMENT OFFICES IN GENEVA

On Motions.

Right Hon. W. L. MACKENZIE KING (Prime Minister): On Friday the hon. member for Fort William and Rainy River (Mr. Manion) read an extract from the Mail and Empire concerning which I said I would make inquiry and give a further statement to-day. The item was as follows:

> Canadian government has rented pretentious offices in the Quai Woodrow Wilson, where Dr. W. A. Riddell, permanent envoy, expects to entertain Canadians all summer.
>
> Is this entertaining part of the policy of economy, or is it a correspondent's picturesque touch?

As a matter of fact, no premises have been rented in the Quai Woodrow Wilson. Premises have been rented in the Quai de Mont Blanc, not pretentious at all, at a rental of $500 a year. This will be reduced by sub-letting to $340 a year, or less than $30 a month. These rooms will be used for office purposes only, and are not intended in any way for entertaining.

THE BUDGET

MOTION TO AMEND THE DUMPING CLAUSES TO BE WITHDRAWN

On motions.

Hon. J. A. ROBB (Acting Minister of Finance): In the presentation of the budget I gave notice of a certain resolution to amend the dumping clauses. Since that time I have had further consultation with the officers of the department and have reached the conclusion that the dumping clauses as now incorporated in our act are considered sufficient to properly determine the value for duty purposes. Consequently I take this opportunity of advising hon. members that when we reach the committee stage I shall withdraw that resolution.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

GOVERNMENT PROPERTY, VANCOUVER

Hon. Mr. STEVENS:

1. What amount of insurance is carried on property in Vancouver: (a) In the name of the Dominion government; (b) In the name of Vancouver Harbour Commissioners; (c) In the name of the Board of Grain Commissioners?
2. What was the total premium paid on said insurance for each of the years during 1922, 1923, 1924?
3. To whom was the said insurance given and who were the agents of the companies with whom said insurance was placed?

Right Hon. Mr. MACKENZIE KING: Stand.

Mr. STEVENS: May I direct the attention of the Prime Minister once again to the fact that the material for the answer to this question was published in the papers two weeks ago, and I see no reason why it should not be answered.

Mr. MACKENZIE KING: The answer I gave my hon. friend the other day was that the department had not officially received any word from the Vancouver Harbour Commissioners, and I assume that is still the case.

Mr. STEVENS: It was an official advertisement over the signature of the secretary of the Vancouver Harbour Board.

Mr. MACKENZIE KING: I will direct the attention of the minister to it.

APPOINTMENTS—D.S.C.R. AND SOLDIER SETTLEMENT

Mr. SPENCER:

1. Is it a fact that the appointments to the two large services, "Soldiers' Civil Re-establishment" and "Soldier Settlement Board," are exempt from the Civil Service Law and subject to political patronage? If so, why?
2. Was there an order in council passed in June, 1922, exempting 12,000 positions from the Civil Service Act, including all skilled and unskilled labour?

Hon. Mr. COPP: The Department of Soldiers' Civil Re-establishment and the Soldier Settlement Board were established in the year 1919, at which time, I gather, they were under the Civil Service Commission, but whether they were subject to patronage or not I do not know. They are not now, because these departments are being reduced year by year, and no appointments of any consequence are being made.

CANADIAN NATIONAL RAILWAYS—EXPRESS

Mr. WARD:

1. Are the officials in the various departments of the government instructed to send all packages by Canadian National Express, wherever possible?
2. If not, why?
3. Are the above officials also instructed to send all telegrams by the government line wherever possible?
4. If not, why?

Hon. Mr. COPP: Instructions have been given to the different departments of the government that preference be given if at all possible to the Canadian National Telegraph Company and the Canadian National Express Company by the different departments

MILITARY DISTRICT No. 10—COAL INQUIRY

Mr. CHARTERS:

1. Did the Solicitor General give, or cause to be given, to the Winnipeg Tribune, in November, 1924, a copy of the report of David Campbell, K.C.?
2. If so, why was such report handed to a newspaper before being submitted to parliament?

Hon. Mr. McMURRAY:

1. No.
2. Answered by No. 1.

Mr. COOTE:

1. To whom was the contract awarded for the supply of coal to the Tuxedo Military Barracks, Winnipeg, for the period of July 1st, 1920 to June 1st, 1921?
2. Was any particular coal named in the contract?
3. If so, what was the name of the coal specified?
4. What was the number of tons specified?

Hon. Mr. MACDONALD:

1. Halliday Brothers, 10 tons smith's coal, 120 tons "Lethbridge" stove; Winnipeg Supply & Fuel, 450 tons "Western Gem" stove size; Canadian Coal Sales Ltd., 6,500 tons "Blairmore" bituminous run of mine.

2, 3 and 4. Answered by No. 1.

POSTAL CLERKS AND LETTER CARRIERS

Mr. WOODSWORTH:

1. Is the government aware that the letter carriers and postal clerks of the United States have recently received an increase of $300 per year in salary, which places their minimum and maximum at $1,700 and $2,100 per annum?

2. Is it the intention of the government to introduce legislation at this session whereby the postal clerks and letter carriers of Canada will receive a similar amount of $300 on their present salaries, which are now much below the poverty line?

3. If not, why not?

Hon. Mr. MURPHY: This question contravenes rule 37 in that it contains an assertion of fact. If my hon. friend will have the question amended, it will be answered immediately.

JAPAN—ALIEN LAND OWNERSHIP

Hon. Mr. STEVENS:

1. Has the government noticed the Associated Press report of the passage by the Lower House of the Diet of Japan, of a bill entitled "Alien Land Ownership" Bill?

2. Has the government examined the terms of the said measure, in relation to the Commerce Treaty of 1913?

3. Is the said bill in conflict with the rights of Canadion nationals in Japan, and if so, has any representation been made to protect the said rights?

Right Hon. Mr. MACKENZIE KING:

1. No.

2 and 3. Answered by No. 1.

PEACE RIVER RAILWAY OUTLET

Hon. Mr. STEVENS:

1. Is the government thoroughly alive to the need of a rail outlet from the Peace River district to the Pacific coast?

2. Was an announcement made by the government last autumn that the question of a suitable route for such outlet should be submitted to the heads of the two great railway systems?

3. During the past two months, has the government endeavoured to secure the report or reply to the said question?

4. If so, what is the estimated cost of the said railway?

5. Is it the intention of the government to proceed with the construction of the said railway this year?

6. Is it the intention of the government to provide such outlet for the produce of the Peace River country, in order to prevent the depopulation of that district?

Hon. Mr. GRAHAM:

1. The Canadian National Railways have had a party investigating the Peace River district for the last two years.

2. Not so far as I am aware; but in January last a conference was held in the office of the Minister of Railways at which, among others, were present the heads of the railways with their engineers, and at that conference the heads of the Canadian National Railway and the Canadian Pacific Railway were asked to consult with each other, and if possible bring in a joint report as to what would be the wiser way to develop the Peace River district.

3. Yes.

4. The report has not yet been received.

5 and 6 under consideration.

CIVIL SERVICE COMMISSION

Mr. LOVETT:

1. What has been the total cost to Canada of the Civil Service Commission for each year since its inception, including 1924, giving an itemized statement of said expenditure?

2. What were the number of employees of the commission, their salaries and all attendant expenses?

3. How many positions in each province have been filled by said commission since its inception down to and including the year 1924?

4. How many positions in each province, in what is known as the outside service, have been filled by the Civil Service Commission since its inception to and including the year 1924, and what has been the total cost to Canada of same?

Hon. Mr. COPP:

1. The total cost to Canada of the Civil Service Commission for each year since its inception including 1924, giving an itemized statement of said expenditure.

1908-09 Civil government salaries		$ 7,947 47

2. (a) Number of employees of the Commission.

Year	Permanent	Temporary	Total
1908-09	6	0	6
1909-10	8	1	9
1910-11	10	0	10
1911-12	13	0	13
1912-13	12	0	12
1913-14	15	0	15
1914-15	15	1	16
1915-16	14	2	16
1916-17	14	0	14
1917-18	15	8	23
1918-19	25	53	78
1919-20	42	103	145
1920-21	73	163	236
1921-22	124	86	210
1922-23	128	52	180
1923-24	129	24	153
1924-25	125	20	145

(b) The amount paid for salaries and expenses is shown in answer to No. 1.

3. The number of positions in each province, filled by the Civil Service Commission since its inception down to and including the year 1924.

Alberta	1,837
British Columbia	1,748
Manitoba	1,618
New Brunswick	815
Nova Scotia	1,114
Ontario	4,109
Ottawa	5,495
Prince Edward Island	151
Quebec	2,436
Saskatchewan	1,817
Yukon and Northwest Territories	51
Outside Canada	31
Not stated	245
	21,467

4. (a) Prior to February 13th, 1918, appointments to the "Outside Service" were not made by the Civil Service Commission. Since that date the number of appointments to the "Outside Service," other than Postmasters, has been as follows, by provinces:—

Year ending	Alberta	British Columbia	Manitoba	New Brunswick	Nova Scotia	Ontario	Prince Edward Island	Quebec	Saskatchewan	Yukon and N.W.T.	Outside Canada	Not Stated
1. Aug. 31, 1918 (6ms)	20	16	35	8	10	69	2	31	13	..	1	9
2. Dec. 31, 1919 (15ms)	211	135	378	55	85	412	18	218	162	7	4	27
3. Dec. 31, 1920	114	146	164	93	118	335	24	172	84	4	5	57
4. Dec. 31, 1921	208	273	214	113	143	482	15	285	151	11	11	94
5. Dec. 31, 1922	173	136	160	85	99	455	18	235	128	3	2	8
6. Dec. 31, 1923	95	183	142	57	70	515	7	231	123	7	2	26
7. Dec. 31, 1924	110	192	90	62	74	393	8	190	116	6	6	24
	931	1,081	1,183	473	599	2,661	92	1,362	777	38	31	245

POSTMASTERS

Year ending	Alberta	British Columbia	Manitoba	New Brunswick	Nova Scotia	Ontario	Prince Edward Island	Quebec	Saskatchewan	Yukon and N.W.T.	Outside Canada	Not Stated
1. Aug. 31, 1918 (6ms)	117	51	46	45	47	148	4	115	108			
2. Dec. 31, 1919 (15ms)	142	101	76	51	101	230	11	163	183	1		
3. Dec. 31, 1920	271	208	124	111	174	345	15	268	307	1		
4. Dec. 31, 1921	249	195	122	100	137	389	14	316	288	4		
5. Dec. 31, 1922	39	50	30	18	29	151	3	57	62	6		
6. Dec. 31, 1923	38	37	19	7	11	99	7	92	46	1		
7. Dec. 31, 1924	30	25	18	10	16	86	5	63	46	..		
	906	667	435	342	515	1,448	59	1,074	1,040	13		

4. (b) The total cost of the commission is given in answer to No. 1. The making of appointments to the outside service is only one of many important functions administered by the commission and there is no way of apportioning the expenditure to the several branches of the commission's activities.

CAPITAL EXPENDITURE—COMMITMENTS

Sir HENRY DRAYTON:

1. What are the amounts of outstanding claims for capital expenditure for the current fiscal year received by February 28, 1925, and yet unpaid?

2. What is the total amount of commitments in respect of capital expenditure for the current fiscal year, and as yet unpaid?

Hon. Mr. COPP:

Department of Public Works—

1. Esquimalt New Dry Dock	
Due to the Peter Lyall & Sons Construction Co., Limited, for work done to 31st January, 1925	$ 11,040
Due to Hodgson King & Marble for work done to 31st January, 1925	7,270
2. Estimated commitments additional to those reported in connection with Question No. 1	
Public Buildings (Capital)	$320,000
Harbours "	284,000
	$604,000

CANADIAN NATIONAL RAILWAYS—FREIGHT

Sir HENRY DRAYTON:

What was the percentage of the movement of grain, ive stock, forest products, coal and ore to the total freight traffic in each of the years 1923 and 1924, in the different regions of the Canadian National Railways and affiliated companies in Canadian territory?

Hon. Mr. GRAHAM:

	Per cent of Movement	
Commodity	1924	1923
Grain	60.25	59.37
Other commodities	39.75	40.63
Total	100.00	100.00

Except as to grain carried in the western region, the Canadian National management state it is impossible to supply percentage of movements of separate commodities, either as to regions or provinces.

The Transportation branch of the Bureau of Statistics, Department of Trade and Commerce, is, similarly, unable to supply it.

CANADIAN WHEAT BOARD

Mr. ANDERSON:

1. Have all moneys accruing to the farmers of Canada from the sale of wheat, under the Canadian Wheat Board, been distributed?

[Mr. Copp.]

2. If not, what amount is still owing to the farmers of each province, respectively?

3. When does the government intend to distribute the balance?

Hon. Mr. LOW:

1. No.

2. The order in council of February 7, 1925, authorized the Minister of Finance to distribute $560,000 to the provinces in the following proportions, as set forth in the said order:—

	Per cent
Saskatchewan	50.75
Manitoba	23.00
Alberta	20.00
Ontario	4.75
Quebec	1.15
British Columbia	0.35

So far the Department of Finance has not distributed any portion of this amount.

In addition to the above, there were, on March 4, 1925, between 18,000 and 19,000 participation certificates outstanding, representing a value in round figures of $197,000.

The amounts still owing to the farmers of each province, in so far as participation certificates are concerned, cannot be indicated by provinces.

3. The participation certificates will be paid on presentation. In so far as the distribution of the moneys authorized by order in council of February 7, 1925, is concerned, this distribution will be made in due course.

COLONEL J. L. RALSTON

Mr. BLACK (Halifax):

What is the total amount paid to Colonel J. L. Ralston, individually, and his law firm Maclean, Burchell, Ralston and Paton, Halifax, Nova Scotia, for legal services since 1921?

Hon. Mr. COPP: Nothing.

EGG IMPORTATIONS

Mr. McQUARRIE:

1. Is the government aware that large shipments of American and Chinese eggs have recently arrived in Canada and have appreciably decreased the price of eggs in Canada, as reported in the Vancouver Province of March 8, 1925?

2. Have any representations been received by the government, as to the unfair competition confronting Canadian poultrymen by reason of the fact that the duty on eggs entering the United States from Canada is 8 cents, and the duty on eggs entering Canada from the United States is only 3 cents per dozen?

3. If so, from whom have such representations been received?

4. Does the government contemplate any, and what action, to effectively meet the situation complained of?

5. Have any representations been received by the government, as to the necessity for a proper system of egg marking to distinguish Canadian from American and Chinese eggs, when same are placed on the Canadian market?

6. If so, from whom have such representations been received?

7. Does the government contemplate any, and what action, to effectively meet the situation complained of?

Hon. Mr. MOTHERWELL:

1. Yes, but such imports are decreasing as is evidenced by the figures given below:

Fiscal year	United States	Chinese
1923	.. 8,256,168 dozen	.. nil
1924	.. 6,454,313 dozen	.. nil
*1925	.. 2,429,655 dozen	..†75,000 doz.

* April 1, 1924, March 23, 1925.

† Two other cars (30,000 dozens) of Chinese eggs arrived but failed to pass inspection and were refused entry.

2. Yes.

3. The Surrey Farmers' Institute, Cloverdale, B.C., and the Record of Performance Poultry Breeders' Association of Ontario.

4. The question of meeting this situation from a tariff standpoint has not been discussed. Regulations are at present in force respecting the marking and grading of eggs under the Live Stock and Live Stock Products Act, and Clauses 5, 25, 26, 27, 28, 29, 30, and 31, of these regulations cover foreign eggs imported into Canada.

5. Yes.

6. The Surrey Farmers' Institute Cloverdale, B.C.

7. Identification of foreign eggs entering Canada is provided for in Clauses 27 and 29 of the regulations referred to in Answer No. 4. Action, other than the policy embodied in these two sections has not been contemplated.

VITAL STATISTICS

Mr. FORRESTER:

What was the total number of deaths in the Dominion of Canada during the year 1924?

Hon. Mr. LOW:

The total number of deaths in the registration area of Canada, which includes all provinces excepting Quebec, for the eleven months of 1924 ended November 30, was 57,288. For the whole year they will approximate 69,000. In the year ended June 30, 1924, there were 35,149 deaths reported for Quebec.

CANADIAN NATIONAL RAILWAYS

Mr. McQUARRIE:

1. What is the distance between Edmonton, Alberta, and Port Mann, via the Canadian National railway?

2. What is the distance between Edmonton, Alberta, and Prince Rupert, via the Canadian National railway?

3. Has the government let a contract for the construction of a grain elevator at Prince Rupert? If so, what is the amount of said contract and what does it cover?

4. Were tenders called for, and what was the amount of the lowest tender?

5. What is the amount of the engineer's estimate of the cost of said elevator?

6. What will be the capacity of the said elevator when completed?

7. Is it the intention of the government to equip said elevator with automatic car dumps or standard power shovels for unloading of cars of grain?

Hon. Mr. LOW:

1. 755 miles.

2. 957 miles.

3. No. A contract has been let for the foundations only.

4. Tenders for the grain elevator have not yet been called for, apart from the foundations.

5. No estimate can be made until the plans are completed.

6. The capacity, as at present proposed, is approximately 1,350,000 bushels.

7. Yes.

CANADIAN NATIONAL RAILWAYS—NEW RADIO STATION

Mr. McQUARRIE:

1. Is it true that the Canadian National Railways is establishing a new radio station on Lulu island in the constituency of New Westminster, which will be one of the most powerful and modern plants on the Pacific Coast?

2. Is it the intention to broadcast from the said station, Canadian news to steamers plying on the Pacific?

3. Is the government aware that passenger steamers plying between Canadian ports on the Pacific, and Australia and other countries, publish in their daily wireless news, practically no Canadian news?

4. Is the government aware that the wireless operators on such passenger steamers would willingly accept and publish all important items of Canadian news when sent out free from such stations as the one referred to in the first question?

5. Is the government aware that the government of New Zealand has made arrangements for the New Zealand stations to broadcast New Zealand news to the steamers plying on the Pacific, and as a result thereof, New Zealand news appears conspicuously in the wireless publications issued on such steamers?

6. Why could not a similar arrangement be made so far as Canada is concerned?

Hon. Mr. GRAHAM:

1. Yes.

2. The broadcasting of news items to ships at sea is one of the features at present under consideration by the Canadian National Railway management in connection with the new radio station.

3. No information.

4. No information.

5. No information.

6. See answer to question No. 2.

MILITARY DISTRICT No. 2

Mr. CHURCH:

1. Who is the present head of No. 2 Military District, when was he appointed, and where did he reside previous to appointment?

2. Who was the last head of Military District No. 2, and where did he reside when appointed?

3. How many non-residents of Toronto have been appointed to positions in the Militia department in Toronto during the past five years, what are their names and where did they reside when appointed?

4. Why are suitable returned men, fully qualified, residing in Toronto, passed over for such positions?

Hon. Mr. MACDONALD:

1. Colonel (Temp. Colonel Commandant) (Hon. Brig. Genl.) A. H. Bell, C.M.G., D.S.O., date of appointment, 1st March, 1925, formerly District Officer Comm'd M.D. 13, Calgary, Alta.

2. Colonel (Temp. Col. Commondant) A. H. Borden, D.S.O., formerly General Staff Officer, Military District No. 10, Winnipeg, Manitoba.

3. Eight: Major General H. A. Panet, C.B., C.M.G., D.S.O., formerly commanding Military District No. 1, London; Col. (Temp. Col. Commdt.) A. H. Borden, D.S.O., formerly General Staff Officer, Military District No. 10, Winnipeg, Man.; Col. (Temp. Col Commdt.) (Hon. Br. Genl.) A. H. Bell, C.M.G., D.S.O., formerly commanding Military District No. 13, Calgary, Alberta; Major (Bvt. and Temp. Lt. Col) H. E. Boak, D.S.O., formerly serving with Royal Canadian Horse Artillery, Kingston; Capt. and Bvt. Colonel J. L. R. Parsons, C.M.G., D.S.O., formerly General Staff Officer, Military District No. 12, Regina, Sask.; Major and Bvt. Lt. Col. C. B. Russell, D.S.O., formerly District Engineer Officer, Mil. Dist. No. 11, Victoria, B.C.; Major and Bvt. Lt. Col. W. R. Robinson, O.B.E., formerly District Supply and Transport Officer, M.D. No. 1, London; Lt. Col N. A. McCrimmon, formerly District Cadet Officer, Military District No. 1, London.

4. Officers of the permanent force are changed from one station to another according to requirements of the service and promotions are made on officers' qualifications without regard to their places of residence.

POPULATION OF ONTARIO CONSTITUENCIES

Mr. CHURCH:

What is the estimated population of each of the constituencies of Ontario, under the Redistribution Act 1924, by constituencies, as estimated by the special committee of the House that dealt with this question in the last session of parliament?

Hon. Mr. LOW:

The estimated population of the electoral districts of Ontario, under the Redistribution Act 1924, as supplied to the special committee on Redistribution, is as follows:

[Mr. Church.]

Ontario

Algoma East	37,553

INSURANCE ON GOVERNMENT ELEVATORS

Hon. Mr. STEVENS:

1. What amount of insurance is carried on the Dominion government elevators, (a) at Fort William, (b) Moose Jaw, (c) at Calgary?
2. What was the total premium paid in each case?
3. What was rate charged in each case?

Hon. Mr. LOW:

1. None.
2. Answered by No. 1.
3. Answered by No. 1.

CANADA GRAIN ACT—MR. JUSTICE MACLEAN'S JUDGMENT

Hon. Mr. STEVENS:

1. Was judgment delivered by Mr. Justice A. K. Maclean in the Exchequer court, on June 25, last, declaring that subsection 7, section 95 of the Grain Act, was ultra vires of the federal parliament?
2. Has any appeal been made from the said decision?
3. What is the effect of the said judgment in regard to (a) the right of public terminal elevators to retain any overages that may be shown at the annual weigh-up, (b) the right of the shipper of grain to an accounting for the value of grain saved from the dockage made under official inspection?

Hon. Mr. LOW:

1. Yes.
2. Yes.
3. (a) The effect of the judgment is that elevators may retain overages as against the Board of Grain Commissioners or His Majesty.
(b) This question was not in issue.

GOVERNMENT PROPERTY IN VANCOUVER

Mr. BLACK (Yukon):

1. Has the government received an offer or offers to purchase or lease the government's property situated on the southwest corner of Granville and Pender streets, Vancouver, British Columbia?
2. If so, from whom have such offers been received and what are the offers?
3. Will the government before disposing of such property give public notice of its intention to dispose of same and call for tenders from the public?
4. Is the Government negotiating for the disposal of such property?
5. Is it the intention of the Government to dispose of said property and if so, in what manner?

Hon. Mr. KING (Kootenay):

Nos. 1, 2, 3, 4 and 5. A number of inquiries have been received regarding disposal of the government property situated on the southwest corner of Granville and Pender streets, Vancouver, known as the old post office. As a result, it is the intention to shortly call for tenders by public advertisement.

ALLEGED POTATO COMBINE

Mr. KENNEDY (Glengarry and Stormont):

1. Has an investigation been commenced under the Combines Investigation Act, into an alleged combine in connection with the marketing of the New Brunswick potato crop?
2. If so, is it still being carried on, or has it collapsed as stated in the press?
3. Is it true as reported in the press that this investigation will cost the country fifty or one hundred thousand dollars?
4. If not, what will the estimated cost be?
5. Who have been appointed to carry on the investigation and at what remuneration?
6. When will a report be made to the minister, and will such report be published?

Hon. Mr. MURDOCK:

1. Yes.
2. Inquiry is still being carried on.
3. See answer to question 4.
4. It is not possible to estimate the cost of the inquiry at this time, but it is thought that it will not exceed, $6,000.00.
5. No one has been especially appointed to conduct the investigation, which is being carried out by the Registrar of the Combines Investigation Act, who is a permanent civil servant and who receives no additional remuneration on account of this inquiry. Mr. P. J. Hughes, K.C., of Fredericton, N.B., has been instructed by the Department of Justice to act as counsel when desired, his remuneration being at the rate of fifty dollars per diem for the time his services are utilized.
6. A report will be made to the minister, in accordance with section 21 of the act, at the conclusion of the investigation. Publication of the report will be in accordance with section 22 of the act which states: "Within fifteen days after its receipt by the minister the report...shall be made public unless the commissioner is of the opinion that the public interest would be best served by withholding publication and so states in the report itself, in which case the minister may exercise his discretion as to the publicity to be given to the report in whole or in part."

ALBERTA COAL MINE ROYALTIES

Mr. GARLAND (Bow River):

1. What was the total amount of royalties collected from the coal mines of the province of Alberta in each of the past five years, by the Federal government?
2. What was the total amount of above royalties due in each of these years?
3. What is the total amount now outstanding.

Hon. Mr. STEWART:

1.

Year	Amount collected for royalties
1920	$ 190,545 80
1921	185,436 88
1922	171,723 83
1923	210,389 53
1924	148,933 30

2.

Year	Total amount due for royalties
1920	$ 35,010 64
1921	63,640 84
1922	31,658 60
1923	36,716 89
1924	34,829 67

3. The total amount now outstanding is—$34,829.67.

ELEVATOR MEN—CAPS

Mr. GARLAND (Carleton):

1. How many uniform caps were purchased for the elevator service men of the government buildings in 1923 and 1924?
2. From whom were these purchased?
3. Were tenders called for, and if so, was the lowest tender accepted?
4. What was the price paid?

Hon. Mr. KING (Kootenay):

1. 96.
2. William Scully, Ltd., Montreal, P.Q.
3. (a) Yes. (b) Yes.
4. 80 at $2.26 each, delivered at Ottawa; 16 at $2.25 each, delivered at Montreal.

FARM IMMIGRANTS

Mr. IRVINE:

(1) How many persons classified as farmers, or farm labourers, were admitted to Canada during 1924?
(2) Of the number so admitted, how many actually engaged in agricultural pursuits for a period of: (a) three months; (b) six months; (c) nine months?

Hon. Mr. ROBB:

1. During the calendar year 1924, immigrants classified as farmers and farm labourers, numbered 38,215 adult males, 6,060 adult females, and 6,660 children under fourteen years of age.

2. It is impossible to supply information on this point as to do so would mean the following up of each immigrant regardless of destination in Canada at the end of three, six and nine months.

FOREST PROTECTION

Hon. Mr. STEVENS:

1. Was the sum of $3,000,000 spent by the Dominion government of Canada in forest protection, as stated by the Minister of Interior to the Forestry Conservation Association in Montreal on the 24th instant?
2. If so, out of what appropriation was the said $3,000,000 expended?
3. How was the said $3,000,000 distributed and to what services?
4. What amount was spent in each of the provinces of Canada out of the said $3,000,000?

Hon. Mr. STEWART:

1. The Minister of the Interior made no speech in Montreal on Tuesday, March 24th.
2. Answered by No. 1.
3. Answered by No. 1.
4. Answered by No. 1.

PAYMENTS TO W. T. R. PRESTON

Hon. Mr. MANION:

Since January 1, 1922, what is the total amount of payments made to or on behalf of W. T. R. Preston for expenses, allowances or otherwise, in addition to the moneys paid to him as answered to my question in Hansard, number thirty-five?

Hon. Mr. COPP:

Department of Labour

	Expenses
1922, April 21 to June 17.—Chairman of Board of Conciliation in dispute of Algoma Eastern Railway and its employees	$159.80
July 21 to September 15.—Chairman of Board of Conciliation in dispute of Pere Marquette Railway Company and its shop employees	245.06
August 10 to Sept. 14.—Chairman of Board of Conciliation in dispute of Pere Marquette Railway Company and its steamship clerks, freight handlers, etc	202.16
	$607.02

Department of Trade and Commerce

	Travel and Living Hotel Exp.	Allowance	Sundries	Total
Inquiry re lake grain rates	$1,139 43	$1,905 00	$32 71	$3,077 14
Inquiry re ocean freight rates	864 85	2,390 00	310 23	3,565 08
Total	$2.004 28	$4,295 00	$342 94	$6,642 22

HOMESTEAD INSPECTORS

Mr. EVANS:

1. How many homestead inspectors are there in Manitoba, Saskatchewan and Alberta?
2. What are their names and addresses?
3. What are their respective salaries?

Hon. Mr. STEWART:

1. Manitoba, 5; Saskatchewan, 9; Alberta, 10.

2 and 3.

Manitoba:—

William Lagimodiere, Lorette, $1,800; F. J. Bigg, Winnipeg, $1,800; J. F. Drew, Winnipeg, $1,800; G. L. Speers, Roblin, $1,800; W. J. Mayberry, Ste. Rose, $1,740.

Saskatchewan:—

J. Furnis, Swift Current, $1,800; J. C. de-Balinhard, Yorkton, $1,800; J. A. McDonald, Shaunavon, $1,800; C. E. Barr, Assiniboia, $1,800; A. Smythe, Saskatoon, $1,800; A. E. Mosses, Dodsland, $1,800; S. Taylor, Prince Albert, $1,800; E. H. E. Webb-Bowen, Prince Albert, $1,740; W. Whelan, Prince Albert, $1,740.

Alberta:—

William Tempany, Cochrane, $1,800; R. A. Kembry, Calgary, $1,800; T. J. Cunningham, Edmonton, $1,800; I. S. Doze, Pakan, $1,800; A. McConnachie, Edmonton, $1,800; T. M. Newton, Grand Prairie, $1,800; L. T. Smith, Grand Prairie, $1,620; D. E. Wilcox, Lethbridge, $1,800; H. S. McCowan, Medicine Hat, $1,740; J. E. McMullen, Peace River, $1,800.

Timber Inspectors:—

Manitoba, 2; Saskatchewan, 2; Alberta, 5.

Manitoba:—

J. H. Thompson, Winnipeg, $1,800; W. S. Gordon, Dauphin, $1,800.

Saskatchewan:—

H. Browne, Melfort, $1,800; F. McKenzie, Prince Albert, $1,800.

Alberta:—

J. S. Coombs, Calgary, $1,800; R. S. Wyllie, Edmonton, $1,800; J. A. Merrigan, Edmonton, $1,800; F. W. Neilson, Westlock, $1,800; D. H. Minchin, Edmonton, $1,800.

Grazing Inspectors:—

Manitoba, 0; Saskatchewan, 1; Alberta, 3.

Saskatchewan:—

G. H. Lydiard, Moose Jaw, $1,800.

Alberta:—

Geo. H. Cloakey (Sr. Inspr.), Calgary, $2,280; H. L. Bowyer, Medicine Hat, $1,800; S. Grimwood, High Prairie, $1,680.

All inspectors above mentioned are required to make inspections in connection with homestead, timber or grazing matters, should the occasion arise, where such an arrangement would effect economy, but they are classed as above to indicate the work which forms the bulk of their duties.

QUESTIONS PASSED AS ORDERS FOR RETURNS

GRADING OF BUTTER AND CHEESE

Mr. STEWART (Leeds):

1. When did Federal grading of butter and cheese for export come into effect?
2. What are the names and salaries of the Dominion graders of butter and cheese?
3. What are the standard grades for butter and what determines each grade?
4. What is the recognized difference in price of the several grades?
5. From the time Federal grading went into effect, what quantity of (a) pasteurized, (b) unpasteurized butter was exported each year to the end of 1924?
6. Was the grade stamped on all packages of butter exported and what quantity of each grade was exported in each year?
7. What are the standard grades for cheese and what is the recognized difference in price of the several grades?
8. Has any cheese been exported to Great Britain since Federal grading went into effect without the grade being clearly indicated, and if so, when and what quantity?
9. What quantities of (a) graded and (b) ungraded cheese have been exported from Canada to Great Britain in each of the calendar years 1921, 1922, 1923 and 1924?
10. What quantities of each grade were exported to Great Britain in 1923 and 1924
11. Must the producer of the cheese abide by the decision of the Federal graders as to the grade of his cheese or is there any person or board to whom he can appeal against their classification?

CIVIL SERVICE—TOTAL COST

Mr. GARLAND (Bow River):

What was the total cost of the Civil Service for the year ending March 31st, 1924, in each of the following departments,—Agriculture, Public Archives, Auditor General, Civil Service Commission, Customs and Excise, External Affairs, Finance, Governor General's, Indian Affairs, Insurance, Interior, Justice, Labour, Marine and Fisheries, National Defence (Naval, Militia and Air), Mines, Royal Canadian Mounted Police, Post Office, Privy Council, Public Works, Printing and Stationery, Railways and Canals, Secretary of State, Trade and Commerce, Immigration and Colonization, Soldiers' Civil Re-establishment, Patents and Copyright, Soldier Settlement Board, and Health?

SOLDIER SETTLEMENT BOARD

Mr. IRVINE:

1. What is the annual cost of the Soldier Settlement Board since its inception?

(a) How much was spent on rent of offices, and where are the offices located?

(b) What amount was spent on salaries?

(c) How much did the head office in each province cost?

(d) How much was expended in other ways, as overhead?

2. How many farms have been purchased under the Soldier Settlement Board: (a) by provinces; (b) what

amount was paid per farm; (c) what is the area of each farm in acres?

3. How many farms are occupied under the Board, by provinces?

4. What is the total amount loaned to settlers?

(a) What amount of such loans was expended in permanent improvements?

(b) What amount of such loans was expended in purchasing live stock?

(c) What amounts were loaned by provinces?

(d) What rate of interest was charged?

(e) What was the nature of the securities on which loans were made?

(f) Who issued the currency on these loans?

(g) Who holds the mortgages?

5. What number of farms, by provinces, have been retained, and what is the present economic condition of these farms?

6. What number of farms, by provinces, have been vacated?

(a) What was done with such farms?

(b) What happened to the loans made on such farms?

7. Were all such settlers required to carry all overhead of both purchase and equipment loans?

8. If not, what percentage were they supposed to carry, and who carried the rest?

9. Who determined what advance should be made to settlers under the board?

TORONTO CIVIL SERVICE APPOINTMENTS

Mr. CHURCH:

1. How many non-residents of Toronto have been appointed to positions in the employ of the government in Toronto during each of the past three years in the various government departments?

2. By whom were these appointments made?

Mr. MACKENZIE KING: I would like to direct the attention of your Honour to this question. The government has not any objection to getting this information, but it would involve correspondence with all the departments of the government and considerable research in all the departments before the questions asked could be answered. For that reason I am going to ask that the question pass as an order for return. What I should like to direct the attention of the House to is the expense that will be involved in getting a very small amount of information for the hon. member (Mr. Church), I hope he will find it possible to state more specifically just what information he does want.

Mr. DEPUTY SPEAKER: Passed as an order for return.

UNOPPOSED MOTIONS FOR PAPERS

MILITARY DISTRICT No. 10—COAL INQUIRY

Mr. CHARTERS:

For a copy of the report made to the government, or any minister or officer thereof, by Lieutenant-Colonel Biggar, respecting the report of David Campbell, K.C., on charges recently investigated at Winnipeg.

Hon. ERNEST LAPOINTE (Minister of Justice): I am sorry I cannot agree with this motion being accepted by the House. Lieut.-Col. Biggar, apart from being chief electoral officer is also government counsel. Any report which he may have made in the matter referred to in this motion would be in the nature of a legal opinion and there is litigation now before the court pending in this matter. It is not the practice of the Department of Justice to give legal opinions, especially when a case is pending in court, and it would not be fair for the government to be asked to do so in this case.

Mr. STEVENS: I submit that the motion might stand.

Mr. LAPOINTE: We cannot accept it.

Mr. DEPUTY SPEAKER: Motion dropped.

Hon. Mr. STEVENS:

For a copy of correspondence passing between the Department of National Defence or the Department of Justice and the Canadian Coal Sales Company, Limited, in the years 1924 and 1925, and also, for a copy of all charges made, in relation to the sale of coal or otherwise, affecting Militia officers at Winnipeg in the said years with the name of the party making such charges, and also, for a copy of the reports of General Ketchen, with respect to said charges.

BIG BEACH POST OFFICE

Mr. JONES:

For a copy of all correspondence and other papers relating to the change of the post office at Big Beach, Cape Breton County, Nova Scotia.

QUEBEC HARBOUR COMMISSION—CONTRA ACCOUNTS

Hon. Mr. STEVENS:

For a return showing, in detail, "Contra accounts against the Dominion government for services rendered" by the Quebec Board of Harbour Commissioners, and referred to in answer to questions on page 1317 of Hansard.

CAPE BRETON MINE WORKERS

Hon. EDMUND BRISTOL (for Mr. Arthurs):

For a copy of all letters, telegrams, papers and other documents between the Government of Canada and the mine workers of Cape Breton, or received by the government on their behalf, and between the Government of Canada and the Government of Nova Scotia, respecting the condition of the mine workers, and between the Government of Canada and any towns or municipalities in Cape Breton, respecting the conditions of the mine workers and the necessity for relief owing to the labour troubles in that district.

Right Hon. Mr. MACKENZIE KING: I have no objection to the motion if the hon. member will specify the time for which this correspondence is desired. Last session a return was brought down of correspondence up to the end, I think, of that time. Unless the present motion is limited in the matter of time it will involve an enormous return

because the correspondence in regard to this matter goes back two or three years.

Right Hon. Mr. MEIGHEN: I will take the responsibility of saying that, provided what has been asked for has already been brought down to the end of last session or to whatever time the return covers, the present motion may be considered as a request for a continuation of that correspondence.

Mr. MACKENZIE KING: That is satisfactory.

Mr. DEPUTY SPEAKER: Is it the pleasure of the House that the motion as amended be carried?

Mr. MEIGHEN: There is no need for an amendment. The motion can be passed in accordance with the understanding arrived at.

Mr. DEPUTY SPEAKER: That will cover everything since the last return?

Mr. MEIGHEN: Provided the last return covers all that is asked for up to that time.

Motion agreed to.

PEACE RIVER RAILWAY OUTLET

On the Orders of the Day:

Mr. D. M. KENNEDY (West Edmonton): I should like to read a telegram I received this morning and to base a question upon it:

A mass meeting of the ratepayers of the rural municipalities of Bear Lake and Grande Prairie and town of Grande Prairie, Village of Clairmont held here to-day resolved as follows: Whereas a feeling of distrust pervades the Peace River county that forces are at work to delay immediate coast connection. This meeting accepts in good faith the promises of coast outlet made by Premier King on his western tour and in the Speech from the Throne also by Hon. George P. Graham that if the railway heads failed the government would come to our rescue. We therefore call upon the government of Canada to introduce legislation at the present session of parliament to fulfil these promises.

D. W. PATTERSON, Chairman.

Has the Minister of Railways and Canals (Mr. Graham) any comment to make in regard to this matter?

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): As far as I am concerned, I have no comment to make.

SOLDIER SETTLEMENT LANDS

On the Orders of the Day:

Mr. E. J. GARLAND (Bow River): On the 25th of this month I put the following question to the Acting Minister of Finance (Mr. Robb):

When may the House expect legislation regarding the land settlement question—revaluation of soldiers' lands?

The answer I received at that time was:

I shall look into the question of my hon. friend. As the Prime Minister announced the other day, we shall be proceeding with the budget from day to day. We hope to have this legislation, if any, down in ample time for consideration of the House.

May I ask the Acting Minister of Finance if the government has yet decided to introduce such legislation.

Hon. J. A. ROBB (Acting Minister of Finance): I have nothing to add to the answer just quoted by my hon. friend.

SEVEN-POWER TREATY

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): Has Canada as a member of the League of Nations entered any protest against the Seven-Power treaty?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The government has not seen the treaty to which my hon. friend has referred, and therefore has not taken any action.

FISHING LICENSES TO FOREIGNERS

On the Orders of the Day:

Mr. W. G. McQUARRIE (New Westminster): On the 25th March last I put six questions to the hon. Minister of Marine and Fisheries (Mr. Cardin) regarding fishing licenses to foreigners. The hon. minister gave answers to only three of these questions and nothing was said about the other three, and I had no information as to whether the other three were going to be answered later on or not.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I think the Minister of Marine and Fisheries (Mr. Cardin) endeavoured to give the hon. member the information he was seeking, and if the last three questions are not answered by the first three, I shall ask my hon. colleague to furnish the hon. member with the desired information.

CANADA GRAIN ACT AMENDMENT

On the Orders of the Day:

Mr. ROBERT GARDINER (Medicine Hat): Will the minister tell us whether the amendments to the Canada Grain Act are completed, and when may we expect to have them presented to the House?

Hon. T. A. LOW (Minister of Trade and Commerce): A rough draft of the amendments has been prepared, and it is the intention of the government to lay a copy of these amendments on the table. It is not the

intention of the government to proceed with these amendments this year, in order that all members of the House may have ample opportunity to study the bill and also to study the report of the Royal Grain Commission.

ALLEGED FRUIT COMBINE

On the Orders of the Day:

Mr. L. J. LADNER (Vancouver South): Will the hon. Minister of Labour (Mr. Murdock) or the Solicitor General (Mr. McMurray) inform the House if the government is contemplating any action in relation to the fruit combine referred to in the report from the commission or whether action will be left to the provinces?

Hon. JAMES MURDOCK (Minister of Labour): There does not at the moment appear to be any further action that this government could take. The federal government, as provided in section 25 of the Combines Investigation Act, submitted the interim report that was laid on the table of the House to the attorneys general of the four western provinces and we assume that they will take such action as appears to be desirable and necessary. As provided in the act, if within three months action is not taken and further representations are then made to us, consideration will be given by the government to such further action if any as should be taken.

Mr. LADNER: I want to find out from the minister if any of the provinces intimated the course of action which they intended to take with respect to the fruit combine, following upon this report.

Mr. MURDOCK: The Attorney General of British Columbia by correspondence indicated that he has taken a marked interest in the matter, and I presume he is proceeding in the proper way.

RURAL CREDITS—REPORT OF DR. TORY

On the Orders of the Day:

Mr. W. J. WARD (Dauphin): Will the government inform the House if they have taken any action with regard to the Tory report? Is it the intention of the government to bring in independent legislation bearing on that report?

Hon. J. A. ROBB (Acting Minister of Finance): I thought my hon. friend was referring to another class of Tories. I have not yet received that report, although it may be in the office. Dr. Tory told me on Saturday that he hoped to file it with me to-day.

APPOINTMENTS—D.S.C.R. AND SOLDIER SETTLEMENT

On the Orders of the Day:

Mr. H. E. SPENCER (Battle River): I desire to refer to answers given to question No. 7 by the Secretary of State (Mr. Copp). My hon. friend answered the first question but did not give an answer to the second.

Mr. MACDONALD (Pictou): Oh yes, he did.

Mr. SPENCER: Was it an oversight, or does he intend to reply at a later date?

Hon. A. B. COPP (Secretary of State): My hon. friend says I did not answer No. 2. There was no order in council passed in June, 1922, exempting twelve thousand positions from the Civil Service Act.

OCEAN SHIPPING RATES

APPOINTMENT OF SPECIAL COMMITTEE

On the Orders of the Day:

Mr. O. R. GOULD (Assiniboia): Would the Prime Minister intimate to the House when he will make the motion notice of which was given last Wednesday for the appointment of a committee to inquire into ocean rates?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I expect to make it tomorrow.

MINERS AND STEEL WORKERS

On the Orders of the Day:

Mr. W. A. BLACK (Halifax): A short time ago I referred to the situation of the miners and steel workers in Cape Breton, and I ask the Prime Minister (Mr. Mackenzie King) if he has had any communication at all from the Premier of Nova Scotia in reference to the matter; and if not, in view of the continuance of distress in that region, would he not reconsider his decision and grant a measure of relief to the suffering families, women and children, in that district?

Some hon. MEMBERS: Order, order.

Mr. DEPUTY SPEAKER: Order. The hon. member has a right to ask a question, but not to make a statement.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I have not received any communication from the Premier of Nova Scotia, and the position of the government with respect to relief remains the same as I stated to the House the last time I referred to the subject.

FEDERAL ELECTION

On the Orders of the Day:

Mr. ROBERT FORKE (Brandon): I have a rather interesting despatch in my hand sent by the Canadian Press to a local newspaper, and dated in Winnipeg. It states that a federal election is anticipated some time during the present year; in a letter to the Manitoba Liberal Association, written by E. J. McMurray, Solicitor General, it is suggested that the proper time for an election would be after the prorogation of the present session. Has the government any further information to give the House on that point?

Mr. GRAHAM: My hon. friend has just told them to keep their powder dry.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The government have not decided upon the date of an election, and, so far as I am aware, the matter has not been considered.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Friday, March 27, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Hon. H. H. STEVENS (Vancouver-Centre): The other afternoon the hon. member for Brandon (Mr. Forke) in his address in connection with this debate gave expression to these words:

> That the financial statement given to the House does not reflect exactly and faithfully the conditions of the country at the present time, nor our financial standing.

With these words I entirely agree, in so far as they reflect my view in connection with this budget. In making this statement the hon. member intimated that perhaps his failure to interpret and understand properly the financial statement as presented by the Acting Finance minister (Mr. Robb) was attributable to his lack of expert knowledge of accountancy. Let me assure my hon. friend that such is not the case. I am prepared to assert, with a good deal of positiveness, that the more expert the accountant is who will examine into this statement as presented to the House, the more convinced he will be that it does not accurately reflect the condition of the country or correctly present the existing state of public finances. As a matter of fact, it was a presentation that was hopeless in its confusion and baffling in its inaccuracies. This budget I cannot conceive as being other than deliberately designed to deceive the people as to the correct condition of affairs. It is a subtle expedient designed to shield a guilty and moribund government from the just indignation of an awakening public opinion.

Some hon. MEMBERS: Oh, oh.

Mr. STEVENS: The Minister of Agriculture (Mr. Motherwell) may burlesque these things when he has an opportunity, but I refuse to allow him to do so now. The public is demanding a showdown in connection with the financial affairs of this country. The government, through the lips of the Prime Minister, as chief spokesman, who has been passing through this country during the last year or two, has been promising an approximation of free trade to one section and has been assuring another section that this government is anxious to protect and care for industry. In despair, the government, realizing that these chickens are coming home to roost, realizing that in these two different sections where there is a conflict of opinion as to what the fiscal policy of this country should be, the people are demanding delivery of these promises, the carrying out of these pledges—

Mr. MACKENZIE KING: Two or three times my hon. friend has made these statements about different representations having been made in different parts of the country. Each time I have asked him to place on record the different representations. Until he is able to do that, I wish he would not repeat a statement which he knows not to be correct.

Mr. STEVENS: On the contrary, there is nothing in the way of public utterances that I am more certain of than the accuracy of the statement made, and that is, that in all of the Prime Minister's trips through western Canada, the key-note of all his addresses was that there was no difference between his policy and the policy of my hon. friends to my left, the policy of the Progressive party. That has been his assurance. He pleaded with them: let us join together; we are in the same boat. Will he for a moment suggest that, in his speech in York recently, he did not assure the people of the east that there was to be no more progress towards free trade?

Mr. MACKENZIE KING: Let my hon. friend bring down the statement of which he complains.

Mr. STEVENS: Had I thought my right hon. friend would question my statement, I would have brought plenty of evidence in support of it. I have none under my hand at the moment, but I have no doubt of the accuracy of what I have stated. What are the impressions sought to be conveyed by this budget? The Acting Minister of Finance (Mr. Robb) first assured the House that these accounts had been verified by two outside eminent chartered accountants. It is true he limited that verification of fact to certain things, but the impression that went forth to the public was that these accounts of the Dominion had been submitted to and approved by two outside, eminent chartered accountants. The next impression conveyed was that there was a surplus of $24,000,000, and some of my hon. friend's supporters are already claiming that such was the surplus. The third was that taxation had been reduced by $52,000,000, and the chief Liberal organ in the country the Globe, across the front page of its paper, the next day assured the taxpayers that there had been placed in their pockets by the government the enormous sum of $52,000,000. As regards the railways, there is an ominous silence, and I pause here to ask: Why, three months after the close of the railway fiscal year, we could not have had some accurate, definite, clear statement of the condition of our great railway investment. The next impression conveyed by the minister was that there was a favourable trade balance. Briefly, these statements summarize the impressions sought to be conveyed by the minister in his speech, and I purpose examining them at some length, step by step.

In the first place, let me examine the certificate of character which the minister presented to the House from the two eminent chartered accountants. I ask hon. members to listen to this certificate and to judge of its value. Personally, I assert before I read it that it is a perfectly meaningless and useless certificate. Will hon. members follow me for a moment while I read it? I shall not read what the minister said preceding it unless someone challenges me. I have the statement from the public accounts so that there will be no mistake about it. It is attached to the balance sheet of the Dominion of Canada for the last fiscal year ended March 31, 1924. This is what the accountants said:

> We have examined the balance sheet of the Dominion of Canada as at March 31, 1924, and we certify that the balance sheet conforms to the balance sheets of previous years in not including in the net debt of the Dominion, issues of the Canadian National Railway company and companies included in its system, which carry the guarantee of the Dominion of Canada. Such guaranteed issues are shown year by year as indirect liabilities.
>
> GEO. EDWARDS,
> Of the firm of Edwards, Morgan & Co.
> W. GARTH THOMSON,
> Of the firm of Peat, Marwick, Mitchell & Co.
> Ottawa, Canada, 27th January, 1925.

An absolutely meaningless, useless certificate —perfectly true!

Mr. ROBB: My hon. friend says now that it is perfectly true. I am glad to have that admission from a leader of the Tory party, because the only exception taken to our statement of last year was that it did not conform.

Mr. STEVENS: I will deal with that in just a moment. I will undertake to take any balance sheet the minister likes to present to me, at the same time giving me the other balance sheets preceding it, and in half an hour make the necessary comparisons and give a certificate of that kind. It is an absolutely worthless certificate for the purpose of assuring the public that the accounts are properly balanced. Let me give the statement in connection with the balance sheet of the Canadian Pacific Railway Company, signed by Price, Waterhouse & Company:

> We have examined the books and records of the Canadian Pacific Railway Company for the year ending December 31, 1924, and having compared the annexed balance sheet and income account herewith, we certify that, in our opinion, the balance sheet is properly drawn up so as to show the true financial position of the company at that date, and that the relative income account of the year is correct.

There is a certificate that would be of some value. It shows that the auditors have compared that balance sheet with the records and the income account, and asserts that the balance sheet reflects the true and proper condition of the company's affairs. That is a valuable certificate. The reason why the Acting Minister of Finance interjected these observations a moment ago was this: He wanted to suggest that this was merely in reply to a criticism of my leader that certain loans to the railway company now issued to the public and guaranteed by the government had previously been advanced out of the consolidated fund of Canada. That is a perfectly true statement, as the minister himself demonstrated further on in his speech on that occasion. In the year 1922-23 the cash advances amounted to $80,000,000 none of which were by way of guaranteed loans. The second year under my hon. friends opposite —1923-24—the cash advances totalled $24,000,000 and the guaranteed loans were $50,000,000. The next year the cash advanced had been re-

duced to $18,000,000 and the guaranteed loans to $46,000,000. And that is what we quarrel with. But what I want now to bring to the attention of the House is that the minister used this certificate with the idea of impressing upon the country, as has been quoted throughout the press, that independent auditors have examined the public accounts and verified them. I submit that no such verification can be found. I turn to the question now of the public debt. The minister in one part of his speech claimed a reduction in the debt of $35,000,000. It is true that referred to the previous year; it was so stated in the minister's speech and re-echoed in some sections where the reduction was accepted. The minister proceeded to show however that there was this year an estimated reduction of about $1,800,000. Let me examine the figures in connection with the public debt; and just here I would observe how exceedingly difficult it is with the material given to private members to form any accurate and proper opinion on this subject. Indeed, it is almost an impossibility, for I will defy any chartered accountant who is not in intimate touch with all the details of these accounts that appear in the Public Accounts to take up those accounts and, even after several days of concentrated examination, to tell the House exactly where the country stands. No man can do it, and that is what we complain of. What we ask is that the government bring down to the House a statement that will unfold to us precisely the financial condition of the country.

I shall now examine the public debt. And the question naturally presents itself, does the budget reveal to the country a fair estimate of our obligations? I say it does not. In the first place, it gives no idea of what our railway commitments are; and indeed you cannot get from the government any accurate information on that point. The minister however computes an interest of some $4,000,000 on some old past due debts and declares, to use his own words, that this sum is "now available to be applied on account of loans in connection with our railways." Mr. Speaker, what sort of moral obloquy is this? How can we compute interest on past due debts, debts that are in default, add that interest to the principal of the debts, and then say that we have that much that we can apply to live loans and obligations? Here is a business man, let us say, going steadily behind in his business and unable to meet his fixed charges. He is insolvent, and instead of facing the facts frankly and asking himself how he may reduce his expenditures and costs of operation in order to meet those fixed charges, he turns over the pages of his books and digs up a bundle of old accounts, on which he figures the interest over a period of years, entering those accounts in his profit and loss as earnings for the year. He does all that and then declares that he has met his fixed charges. And that is just what the minister did. It is true that the old debts in this case do not cover all the fixed charges, but the minister certainly did figure the interest on past due debts, entered them in his books as earnings for the year, and placed the total as an offset to obligations that he has to meet. How would the House describe a man who in private business did a thing like that in meeting his creditors and bankers and those who were lending him money? We would describe such a man as a cunning, unscrupulous rogue; there is no question about that. Yet that is the process followed by this government to the extent of some $4,000,000.

Now as to the debt. The net debt on March 31, 1924, as shown in the public accounts was, $2,417,000,000, and the minister gives an increase this year of $13,700,000 odd, making a total at the present time of $2,431,000,000. I would ask the government to compare the net debt now with the net debt of three years ago, March 31, 1922, and then to tell me what they have done with funds that came into their control and that should have been applied to the reduction of the debt. I find that on March 31, 1922, the net debt was $2,422,000,000, so that there has been an increase of $9,480,000 over a period of three years. I want hon. gentlemen to keep these figures roughly in mind and to follow me for a moment on some other points, after which I shall return to these amounts I have given. Now, in the first place, these figures wholly disregard our guarantee of railway bonds; they do not take them into consideration at all. The government keeps the guarantee of railway bonds out of sight as if we were not in any way responsible for them. The last four budgets presented by hon. gentlemen opposite have disclosed certain surpluses which the government has claimed. And I would impress on hon. members this fact, that the measure of confidence we can put in a public statement is simply to accept the figures given us and see where they lead. The surpluses which have been claimed by the government in the past four years as evidences of good administration are, as taken from their budget speeches, these: May 23, 1922, $33,000,000—I am giving round numbers; May

11, 1923, $61,000,000; April 10, 1924, $67,000,000; March 24, 1925, $24,000,000; or a total of $187,000,000. That is an accumulation of surplus revenue over ordinary expenditures for which the government has claimed credit during the last three years. From the Imperial government we have received the sum of $122,682,000. We received that during three years from Great Britain in the form of unsettled war obligations, and as this sum has been paid to this government the obligations involved have been wiped out. That amount I add to the cash surpluses claimed, the total being $309,000,000. Now these two sums are of such a character that they should have been applied under good government to the reduction of the public debt. That I think is a fair assumption. Now, take this sum of $309,000,000 and deduct it from the public debt as it stood at March 31, 1922, and it leaves a balance of $2,112,304,000. That is what the net debt should be to-day had the government applied to its reduction the alleged surpluses which they claimed, along with this sum received from the British government. But instead of that net debt, it is $2,431,000,000. In other words, had the so-called surpluses together with this payment from the British government been used for the reduction of the debt, the debt should have been some $300,000,000 less.

Now I turn to the railway situation. We have asked the government from time to time for information, and they have given us very little. I have asked the government why it is that three months after the close of the fiscal year of the National Railways, December 31, 1924, we could not have before us at least an outline statement of their financial condition. Now I find in the public accounts—and these by the way are not complete—that loans have been made by the government to the National Railways up to March 31, 1924, of $607,000,000, and by way of indirect loans, or in the form of guarantee on bonds, the government has advanced $694,000,000; or a total of $1,300,000,000 has been invested by the country in our National Railways within a comparatively few years. This huge total does not include unguaranteed advances by the public; I am including only the cash advances in the way of direct loans and our guarantee of bonds. Including operating deficit, interest and so on, the total mounts to $1,800,000,000. I am not asking the House to accept these latter figures because it is very difficult to arrive at them; but the first figures of $1,300,000,000 I took out of the public accounts and there should be no doubt as to their accuracy. I ask the government, Why not tell the House frankly what our obligations are, what we owe to the public in the way of national debt and in the way of guarantee of these railway loans? And let me at this point read what the Minister of Finance (Mr. Fielding) had to say. I wish he had been in his seat, but unfortunately he is prevented by illness from attending the House this session. I am almost certain that had be been here he would have presented a financial statement more approximating the truth than the one before us. In saying this I am not reflecting on the personal intentions of my hon. friend the Acting Minister of Finance (Mr. Robb), for he is simply the vehicle through which the government is presenting this statement, and I do not think he is very proud of it or has much sympathy with it. In 1922 Mr. Fielding said—and, Mr. Speaker, you will pardon me for using the right hon. gentleman's name, but I do so in order to make the proper distinction between him and the acting minister—at page 2106 of Hansard for that year:

> We treat these railway moneys as loans. Perhaps there can be some just objection to that. The Grand Trunk and the Canadian Northern are now virtually owned by the Dominion of Canada, and when we advance money to them we are, in a sense, lending money to ourselves.

In that he states what is perfectly right. Then he goes on:

> As a matter of fact, the government, to-day are both makers and endorsers of those securities.

That is the fact, we are makers and endorsers of every one of these bills upon which is the imprimatur of the government of Canada. To the extent of over $600,000,000 the National Railway loans should be shown as part of the net debt of this country. They are not so shown, and we are not treating them as a part of our national obligations.

4 p.m.

On one or two occasions the hon. member for Brandon (Mr. Forke) the leader of the Progressive party, has suggested that we should write down the capital cost of our National Railways. I have not any criticism of that suggestion, but I would point out that its adoption would not alter our position one iota. You could write the capital account of the National Railways down to one dollar, and it would not alter the position of the Dominion in its obligation to the public to the extent of one cent. I agree with my hon. friend that it would be far better for us to know just what this railway system is worth. That is prudent and wise for our own satisfaction. But let us get this clear, our obligations to the public to-day are the full value of the net debt as disclosed—and, by

the way, there are deductions from the net debt that should not be made in the public accounts, but it would involve too much detail for me to go into that now. But let us take the net debt as disclosed—to that must be added our guarantee on bonds amounting to over $600,000,000, and further, our moral obligation to meet public claims against our national railways which we have not guaranteed. It is true that against those obligations we have the assets of the system, but we do not know their value. Let me refer to the statement of last year of the National Railways, and I do so for the purpose of illustration. It discloses fixed assets of $1,800,000,000, but I call the attention of the House to this fact, that the depreciation provided for is contained in three items, one of two and a half million dollars, another of three and a half million dollars and a third of half a million dollars—about seven million dollars. If that process of depreciation has been followed for the past year, then the total of $1,800,000,000 does not correctly represent in any sense the value of your assets.

Now I turn to taxation. The government claim, and they have encouraged their followers to claim in the House and out of it, that there has been a reduction in taxation of $52,000,000.

Mr. CALDWELL: Before the hon. gentleman leaves the railway situation would he give us the direct loans in cash and the indirect loans on guarantee of bonds by years?

Mr. STEVENS: My hon. friend has put to me a perfectly proper question, and he will find the details set out in the voluminous schedules to the public accounts. I should rather not, however, pause now for it would take probably half an hour to read these very long, complicated and technical schedules, and they would only confuse the issue. The government's claim of $52,000,000 reduction in taxation went out as the main feature of the budget. I admit, Mr. Speaker, that I think a great many people are overtaking that hoax, for if ever there was a hoax perpetrated upon a long-suffering public it is that claim. It is absolutely false. What it amounts to is that the employee, the man who is fortunate enough to have a job to-day, is being called upon to pay taxes, and the man who is unemployed and unable to purchase is not thereby contributing any share of the burden.

Mr. BALDWIN: Has the hon. member any confidence in chartered accountants?

Mr. STEVENS: I do not know whether my hon. friend was in his seat when I opened my remarks. If he was not, and he will do me the honour of reading Hansard to-morrow, he will find I fully explained that point.

Mr. BALDWIN: Thank you.

Mr. STEVENS: I have great confidence in chartered accountants, and I have such confidence in the two chartered accountants referred to that I am certain they would never give a certificate of approval to the accounts of this government as presented to the House. Now, what a mockery it is to say to an unemployed man with five children, "It is true, my friend, you cannot buy nourishing food for your children; it is true you cannot buy boots to put on your children's feet or clothing for their backs, but we have reduced taxation; we have put into your pocket $52,000,000. Why, we are a friend of yours. We have actually added to your resources as taxpayers $52,000,000." I say, Mr. Speaker, the thing is a mockery. What does this $52,000,000 consist of? What is the interpretation of it? In the first place I ask, have taxes been reduced? Is there one item of reduction in taxation? Has the sales tax been reduced? Has this onerous tax upon business, not upon individual incomes, but upon business in Canada, been reduced? Has the stamp tax, or the receipt tax, or any other tax been reduced? Not a nickel, not one cent. Not only have they not been reduced, but as a matter of fact business is being strangled, thousands are out of work, and 2,200 factories, large and small, in the last three years, with a magnitude of liabilities of $100,000,000, have gone to the wall. That is the condition.

Now let me examine this tax question for a moment. I have under my hand figures from the Customs and Excise department, and I find this; that in excise taxes, that is chiefly the sales tax, with a little from the stamp tax, but it does not include the taxes on liquor, which are kept separate—we will keep our mind on the sales tax, because this excise tax is chiefly made up of that—in 1923-1924 there was a collection of $115,000,000 of sales tax. This year there was a collection of $78,000,000, or a reduction of $37,000,000 and by the way that is in eleven months only. The minister made an estimate for the year, but I have given the actual figures for the eleven months ending with February and they show a reduction of $37,000,000. If this is interpreted in the form of purchases, it means that there has been a falling off in purchases in Canada of $700,000,000. That is what it means. It simply means that business is not

being done. It does not matter what the government says to the public; it does not matter one iota how much they rebuke us for constantly calling attention to the condition of business; the stubborn fact is that there must have been a falling off in purchasing of $700,000,000. That is the interpretation of this saving of $52,000,000.

Now let me pass on to the income tax, of which I have particulars before me. I am not going to spend much time on it, but I want to show how we by our form and method of income taxation are militating against Canadian business men as compared with those against whom they are competing. I drew the attention of the House to this subject in the debate on the Address from the Throne, and I now have figures which I will give briefly because they are very illuminating. I will take the income tax of an individual doing business in Vancouver as against a man doing business in Seattle, and these figures are for personal income, not business income. On an income of $5,000 the Canadian would pay to the Dominion $126, and to British Columbia $95, or a total of $221. The man in Seattle would pay a tax of $50, or less than one-quarter of what his competitor in Vancouver has to pay. I bring it down to these intimate details so that we may appreciate more directly the onerous nature of this tax. I could go on down the list and give the income tax on incomes of $5,000, $6,000, $7,000, $8,000, $9,000, $10,000, $15,000, $20,000 and $25,000, but I shall take only a few to illustrate my point. The man in Vancouver or Canada with a salary of $7,000 pays in income tax a total of $493; the man in Seattle pays $100, or less than one-quarter, almost one-fifth. The man in Vancouver with an income of $10,000 pays $1,084; the man in Seattle pays $220. The point I want to make is this: We in Canada cannot expect to go on prospering and expanding in our business operations with the handicap of a tax of this kind. It is the application of this tax which I am asking the government to consider.

A moment ago I pointed out that a large number of firms had failed in business in Canada. On Friday last my hon. friend from Dufferin (Mr. Woods) made a statement in the House to which I wish to refer. I do not know whether he is in his seat; I think not, but he made this statement—Hansard page 1632:

> I want to refer to a manufacturing concern in my own county. It is a woollen manufacturing industry and the only one we have in the county of Dufferin. That company to-day is running night and day shifts.
>
> Mr. Caldwell: I thought the woollen mills were all shut down last year.
>
> [Mr. Stevens.]
>
> Mr. Woods: There were rumours to that effect. However the one in the county of Dufferin did not shut down but is running night and day shifts at the present time.

I thought that was strange, and I sought immediate and definite information. I have in my hand copies of wires received from Dods and Company, the firm referred to, in regard to this statement, and I shall read them, not because I want to embarrass the hon. member for Dufferin, but because I think it is well for us to face the facts. This is from the secretary of the association:

> Dods Knitting authorize me to inform you plant has not been operating night and day; that they are being forced to go on part time immediately. He is wiring explaining more fully.

Then I have this from Dods Knitting Company themselves:

> Dods Knitting Company are not working day and night and are arranging to close to part time.

Mr. HALBERT: Where did the hon. member say that was located?

Mr. STEVENS: In Orangeville, and the telegram is dated from there. I am not reading these telegrams merely to contradict, but what I do want to impress upon the House is this, that this falling off in the sales tax ought to be a warning to the House that business in Canada is not as it ought to be. To say that this reduction is a lowering of the burden of taxation upon the taxpayer is but a mockery to the taxpayer. The point we have to keep in mind is this, that when a man is out of work and on the streets he cannot buy goods, he cannot pay taxes, and he does not pay taxes. If he does not buy goods he pays no sales tax, and a reduction in sales tax, and such like, of $37,000,000 simply spells a falling off in business of some $700,000,000.

Mr. FORKE: Could the hon. member give any explanation why the income tax collected has been a little over $2,000,000 more than the preceding year, under the existing state of business?

Mr. STEVENS: That is quite simple of explanation, and I will tell my hon. friend exactly why it is. It is a very apt question he has asked. When we come to the end of a year and this applies with peculiar significance to the last session preceding an election—and I offer that merely as an indication of what we may look for in the future—it is the habit of any government to bring in all the resources it can, and show the highest realization on those resources, and at the same time to reduce their outstanding liabili-

ties all they can in order to make the best showing possible. In other words, towards the close of a year, a business firm will seek to collect in its debts, and put on a little pressure in collecting them, and probably take an inventory and reduce its stock as much as possible in order to make a good showing in its annual statement for the year. Now what is the government doing this year? Business men all over the country know this, and they are reflecting upon it, that this government has during the past six months put on onerous pressure for the collection of income tax, a pressure that in many cases is embarrassing the person who is called upon to pay. We all have to pay, yes; but here is a situation that always arises in connection with the income tax, and nobody knows it better than my hon. friend the Acting Minister of Finance (Mr. Robb). Very often the income tax is not assessed—and this is the iniquity of the thing—for a year after it is incurred. Often the assessment is delayed, not by the government, but by the machinery of government, and then suddenly the man is faced, at an inopportune moment with a tax of $5,000 or $10,000, or in the case of a large business it may run up into the hundreds of thousands, and he has not the money in hand or in the bank to immediately pay the tax. The government have been putting on pressure recently in collecting the income tax in order to make a showing, in order to offset what they knew as far back as last October would be a fearfully alarming financial situation.

Mr. GRAHAM: Does my hon. friend think that putting the screws to a man in order to make him pay his account would render him favourable to the government?

Mr. STEVENS: I do not, but I want to say this to the minister: There is a wave of indignation going over this country now that will be reflected in a very short time upon the heads of the government. This was a desperate effort on the part of desperate men to overcome a mighty awkward position.

Mr. BEAUBIEN: Have other governments done that before going to the country?

Mr. STEVENS: I will not say that, but I will repeat what I said a moment ago, that it is customary before a government goes to the country to make the best showing possible.

Mr. MANION: Very like what the Ontario Farmer government did.

Mr. BEAUBIEN: What I want to know is whether all previous governments have done the same, or is the practice confined to this government?

Mr. STEVENS: As it happens we are looking the present government in the eye just now.

Mr. SPENCER: May I ask the hon. member if he can inform the House whether this government has taken any note in lieu of taxes?

Mr. STEVENS: I did not catch my hon. friend's question.

Mr. SPENCER: I should like to ask my hon. friend if he knows whether this government has taken any note in lieu of taxes?

Mr. STEVENS: I am glad my hon. friend mentions that; it will answer the question of my hon friend to the left (Mr. Beaubien). What we did prior to 1921 was this: Here was a firm known to be in an embarrassed condition, with charges amounting to $500,000 against them in the way of income tax and business profits tax. The hon. member for West York (Sir Henry Drayton) then Minister of Finance, or his predecessor, accepted a note. Why? For this reason: He could have pushed that business to the wall, shut it up and sold out its assets and collected what was due, because he had a prior charge. He said "No, we will allow them time to pay." That is somewhat different to what is going on at the present time. We were charged by no less an authority than the Prime Minister himself, and members of the present government, with having deliberately sought to defraud the people. That may not have been the Prime Minister's actual words, but that was the inference given to the country, and I believe it contributed very largely to the defeat of the then government. We were charged with having sought to defraud the taxpayer of his just due by accepting notes in lieu of payment. What has the present government done? I want to know how long it took them to collect that note that they told us should have been paid and the payment of which they said should have been forced? I venture to say it was not paid for two years, and I do not know whether it has been paid yet or not. Why did they not on going into office at once collect that money? —because it was a demand note it was not a time note. Why did they not collect it? Because the judgment of the Prime Minister, the judgment of the Minister of Railways, the judgment of the Acting Minister of Finance, and the judgment of the Minister of Justice was that it would be unwise to force that company to the wall in order to collect that tax,

and therefore by their action they put the stamp of approval on the policy of their predecessors. That is an answer to my hon. friend's (Mr. Beaubien) question as to the policy and the action of the previous government.

Now I turn to the subject of Trade and Commerce and come to the claim of the Acting Minister of Finance that the exports showed a favourable balance over imports of $263,000,000. First, I want to ask the Acting Minister of Finance why he did not bring down particulars of the Australian treaty in his budget? I am going to venture a guess as to why he did not and it will be interesting, I think, to my hon. friends to my left. If that Australian treaty had been brought down and had showed some increases in the tariff—which we asked for and which we were anxious to see in it; we approve of it—it might have antagonized hon. members to my left. So the government said "No. Let us separate these matters. Let us confuse the Progressives. We will deal with the dumping clause in the budget and the Progressives will not be unduly alarmed. And we will bring down the Australian treaty separately. Although the Progressives may oppose it the Conservatives will support it, and so we will escape the vote of the combined opposition." But the budget ought to have contained the provisions of the Australian treaty, which treaty was concluded some months ago.

Now let me turn to an examination of the trade situation. The Acting Minister of Finance claims that there is a favourable balance of trade of $263,000,000. This sounds very well but I want to study the claim for a moment. I contend that we ought to look at our national business just as strictly as a private firm will scrutinize its business. What are the facts? In the first place I ask, is this favourable balance an actual balance, and what does it mean to Canada? I intend to examine it at some length in order to get a proper appreciation of the value of this supposed excess of exports over imports. We must remember that Canada is a very heavy borrowing country. We have borrowed from the United States upwards of two billion and a half dollars; we have borrowed from Great Britain upwards of two billion and a half dollars. The best authorities in the world fix the borrowings in each case at a higher sum than two and a half billion dollars. In addition we have borrowed from France and from one or two other countries as well, but I am leaving the smaller borrowings out and wish to focus attention for the moment on the large borrowings. Now when a nation borrows what is the import of it to that country? How is interest on the borrowing paid? It is paid in two ways: First it is paid by exports; secondly if the amount is not covered by exports then it is added to the debt of the country. Now here are some figures that are somewhat interesting. Our accounts with the United States and with Great Britain show about as follows: The Acting Minister of Finance told the House that we had $263,000,000 to the good, and hon. members all around him thumped their desks in ecstasy. But what is the actual situation? Here are the figures which strikingly illustrate it: The interest to the United States on investments in Canada, amounting to $2,500,000,000, at the rate of 6 per cent is $150,000,000 a year. A great many of these investments carry a much higher rate of interest. There are industrials paying 10 or 12 per cent; some of them pay very much higher than six and very few of them less than six; some of them pay 5½ per cent. I think our Dominion loans amount to only about $700,000,000, carrying about 5 per cent, so that I am well within the mark in my interest calculations. We owe the United States at the end of each year $150,000,000 of interest and we owed her last year on our trade transactions $159,000,000 or a total of $309,000,000 that we were to the bad in our transactions with the United States for last year. How was that paid? It was paid by simply increasing the mortgage hold of the United States on Canada. Whether it was by industrials or by financial concerns it does not matter; it means that the people of the United States have that much more hold upon Canada. In other words it reflects exactly what has happened in the last ten years—I think I should say more correctly twelve or fourteen years—our borrowings from the United States, or our indebtedness to that country, have increased from less than 1,000,000,000 to $2,500,000,000. So we went behind in our dealings with the United States last year to the extent of $309,000,000. Our account with Great Britain stands as follows: Great Britain owed us on trade $242,900,000 but we owed her $150,000,000 interest. If we deduct the interest that leaves $92,000,000. If we deduct the $92,000,000 from the $309,000,000 it shows that as a nation, as a business entity, as a corporate body we were $216,000,000 to the bad last year in our external business. And I want to point out that our dealings with other countries do not any more than offset our interest debt to them, and one will cancel the other. Now, if this is the state of affairs we ought to ask ourselves the question "Is the fiscal policy of this country of a char-

acter that is leading Canada into prosperity, or are we piling up and adding to our obligations to a point where there may be danger? Let me illustrate the case a little differently. Last year the balance of trade with the United States against us was the smallest it has been, I think, for perhaps fifteen years or more. If we take the average for sixteen years it will give us a better idea. The average adverse balance of trade with the United States for the last sixteen years is $223,000,000 per annum. Add that to the sum of $150,000,000 for interest and we find that we are going behind with the United States to the extent of $375,000,000 per annum, and the ratio is increasing because each year our interest debt is increasing. This is a serious situation and we have to face it.

Where are we drifting in this fiscal policy? Where are we drifting in our transactions with the other countries of the world? How long can we stand it? I gave a simple illustration not long ago, and I will repeat it now. A man has a farm or a small business. He has something he owns out of which he is getting a living, perhaps a very decent living. He wants to expand a little. He borrows five hundred dollars and gives a mortgage on his farm. The next year he wants an automobile and borrows one or two thousand dollars and adds that to the mortgage on his farm. It is true the five hundred and the thousand dollars, or the two thousand whatever it is, does not bother him much because his farm is worth it, but if he goes on year after year adding to the mortgage, the time will come when there will be a foreclosure, and those who have been lending him the money will say: "We want to cash in on this deal". The question is how long can Canada continue increasing its indebtedness abroad without embarrassing the economic life of the country. That is the question facing Canada. Whither are we drifting? It is true Great Britain and Greece, for fifty years or more have had an excess of imports over exports, and these cases have been cited as an answer to the argument I am presenting. But it must be borne in mind that Great Britain had an invisible revenue before the war, and still has a revenue now of perhaps four hundred million pounds per annum in shipping revenue. She goes out into the markets of the world, carries other people's goods, and obtains a large revenue from it. That is part of the excess of the imports. It is debts being paid to her. We owe her a hundred and fifty million dollars a year. How do we pay it? We send over grain or manufactured goods or whatever we can sell to her. For the last half century or century or perhaps two centuries Britain has been collecting revenue from all corners of the world, and it comes in in the form of imports; consequently she can stand an excess of imports over exports. But we cannot because we are not a loaning country. We are a borrowing country. The same thing applies to Greece as to Great Britain. The chief revenue of Greece is in the form of tourist traffic, and this traffic leaves considerable money in the country. We have no such sources of revenue. We have some tourists coming into the country, and I am glad to see that the number is increasing, and I think the Minister of the Interior (Mr. Stewart, Argenteuil) should keep his eye on the tourist traffic, in order to help the country pay its debts; but the revenue derived from that traffic will not be sufficient to meet the three hundred and seventy five million a year. That is the point we have to keep in mind.

The time will come in the history of all debts and all mortgages when the stage of foreclosure is reached. I am not saying that the point of foreclosure is reached in Canada. I say, speaking perhaps now for myself—and every hon. gentleman can take it as he likes—I would consider myself a little less than a madman if I waited until the point of foreclosure came before raising my voice in opposition to this policy of drifting which is in vogue in the country now. I would consider we were traitors to the country if we understood the problem, appreciated the danger and allowed the drifting to go on until we approximately reached the point of foreclosure. I do not think that point has been reached, but I say the evidence of increasing obligations abroad is such that every sensible man and woman in the country is called upon to face the problem. Whatever the remedy may be, let everyone face the situation and acknowledge its difficulties.

I desire to say a few words in regard to some of the resolutions. I have something to say in regard to the dumping clause, but I notice that the Acting Minister of Finance (Mr. Robb), recognizing that discretion is the better part of valour, decided to retreat hastily from the position assumed on the introduction of the budget in regard to the dumping clause. It reminds us of a budget introduced three years ago. If I recollect correctly, there were three distinct budgets—two absolutely distinct budget speeches in the one year. I wonder if we are to expect any further injection of new matter into the budget before a vote is taken. I think the minister, or whoever was responsible for devising these items, should have known be-

fore they introduced the resolution what they know now, and I think did know it. But the minister thought he could throw this sop out to some people other than my hon. friends to my left, and win a little support from them; but when he was greeted with the evident anger and indignation of my hon. friends to my left he thought perhaps he would not gain as much as he would lose. I think that is the secret of the whole story.

Regarding the export of power, I am not going to deal with the question in any detail. I shall reserve that till the resolution is in committee. But this resolution vertually establishes the principle of the export of power, and this is the point I want to bring to the attention of the House. This method of dealing with power and this public enunciation of the intention to increase revenue out of the export of power virtually establishes the principle or policy of the export of power, and further it will develop a vested right that will be mightily embarrassing in a few years to come. Then we have the fact that we have been exporting pulpwood. We have business men on the other side of the line going to the United States congress and government and demanding that the government of the United States shall put a heavy hand on the government of Canada to prevent us taking any action we wish to take. Why? Because they say that they have established mills depending on this resource, and have established a vested right which they say should be respected. I am not going to debate that question, but if this resolution carries as it stands now, it will be tantamount to a declaration to the public that we are going into the business of exporting power and will open the way to the establishment of a vested right that will be international in character.

That is not all. I desire to bring this to the attention of the Minister of Trade and Commerce (Mr. Low), under whose department this matter falls, although he is not in his seat just now. Power is not a product. It is a tool. You might just as well take the machinery out of some of your factories and ship it to the other side, as to export your power to the United States. I want to emphasize if I can the point that power is not a product but a tool. It is a tool with which we can accomplish things in the way of industrial development in this country. It is not a product in itself, and it should not be viewed as a product or as a commodity to export. It should be carefully guarded as a useful implement for Canadians. I am not saying that we should immediately cut off the permission to sell export power, but if any of it is to be exported, it should be done on the basis that if we have any excess that we are not using, we will lend this power or this tool or this implement, under license for a year, to the people on the other side, but we should not part with the control or the vested right in that resource. If this resolution passes it will fix a definite limitation to the extension of Canadian industry. I pause to emphasize that point and I want to draw your attention, Mr. Speaker, and the attention of your colleagues from Quebec, to the fact that it will affect that province more than it will affect any other section of Canada. And it will affect my own province. And why? In Quebec, and I take it in all the provinces outside of Ontario, power is in private hands. Once the principle is adopted and the vested interest is established, private interests will so develop for their own selfish ends the export of this power that the time will come when others in Canada desiring to use it will find that the point of limitation has been reached. I repeat to my hon. friend—and it is the duty of every hon. member to recognize and realize this—that it will fix the limitation of expansion of industry in Canada, and it is nothing more nor less than placing a noose around the neck of Canadian industry with United States capitalists on the free end of the rope, so that at any moment suitable to them the noose can be tightened and Canadian industry strangled. This may seem like strong language, but sometimes it takes strong language to offset the persistent intention and determination of a government to dissipate our heritage.

Mr. GRAHAM: How does my hon. friend argue that an export duty on pulpwood would decrease the quantity of export and at the same time argue that an export duty on power would increase the quantity of export? How do the two arguments coincide?

Mr. STEVENS: I have tried to make this clear to my hon. friend. I may have been a little obtuse in my reasoning, and if my hon. friend has not understood it, that is my fault. If this resolution passes, it virtually means that Canada publicly admits that she is to follow a policy of the sale of power as a product. I point out to the House that power should not be looked upon as a product for sale at all; that power is a tool, or a weapon, or an implement, if you like, in the hands of manufacturers for purposes of production. It is not in itself a product. If we establish a system of export upon a revenue basis, that

is upon the principle of producing revenue to the country, we shall establish vested rights on the other side of the line. Indeed, those rights are there now; they are raising their heads to-day, even though we have been exporting power only under license. There is a vast difference between the two—establishing the sale of power as a product, and merely lending it, as I said a moment ago, under a yearly license. My other criticisms have have been criticisms of the proposed policy of the government. I say this to the government, not in criticism, their present policy ought to be surveyed; we ought to look carefully into our license system of the present day and determine whether or not we should make it more clear than we have that any power we part with is simply as an act of grace for the time being. As a matter of fact, this is what this House should say: That we do not purpose permitting the continuance of the export of power. I do not say that we should cut off the export of power at a moment's notice.

Mr. BALDWIN: I do not wish to criticize in the least. It is only for information I am asking this question. There has been a great deal of dispute amongst scientific men and deep thinkers about the export of power because we cannot cancel contracts that we make with the United States. If we are permitted to impose an export duty of $1.95 per horse power per annum, is there anything to hinder this parliament from making it $20 per horse power?

Mr. STEVENS: Nothing in the world. I think I understand what my hon. friend has in mind. Recognizing that certain contracts have been entered into and appreciating, as we must, the moral value or ethics of good faith, let us carry out those contracts or permit the carrying out of them, but let us make clear to the public that it is not a policy we are adopting. Let the United States know that they are not going to build up industries over there under Canadian hydro-electric power. That is my contention.

I may be asked what suggestions I have to make, because I appreciate that if I spend nearly an hour, as I have, in offering criticisms, somewhat sharp, of the government, it is up to me to offer some constructive suggestions, and I shall do so. If I had anything to do with the matter. I would make these suggestions:

1. To switch some of our purchases from the United States to other sources and change an adverse balance of trade of some $223,000,000 per annum to a favourable one sufficient to meet our annual interest indebtedness to that country. There are two ways by which this adverse balance of trade can be changed. One is for the United States to increase her purchases from us and the other is for us to decrease our purchases from them. As I have stated on other occasions, the United States will understand the language of "dollars and cents" more quickly than anything else, and if we want our friends south of the line to appreciate the customer they have north of the line, the best way is to withdraw some business from them.

2. To encourage the investment of Canadian capital in industry by removing irritating and overburdensome types of taxation; by adjusting the tariff so as to direct our vast reserves of raw materials to use in Canadian factories, and by tax or embargo to discourage the reckless export of raw materials and make abundantly clear that Canadian power is to remain under control for Canadian industry.

3. Recognizing that Great Britain has for decades been our best customer, to adopt such an attitude towards the Motherland and sister dominions as will lead to closer co-operation within the empire in trade matters, and to avoid scrupulously all appearances of discord in relation to foreign affairs.

In conclusion, this budget is a delusion and a snare. It does not disclose the full extent of the nation's obligations and commitments; nor does it correctly interpret the revenue accounts of the country; nor does it show either the real value of costliness of our $2,000,000,000 railway investment. It gives us no syllable of information on that, nor does it give any adequate idea of the condition of our internal trade, as I think I have well shown. But, on the contrary, it deceives the public as to the public debt. It mocks the taxpayer as to his taxes. It seeks to bury all of this under a meaningless certificate from two eminent outside accountants. The minister offers in answer to this: "Remember our great heritage." I have his full statement, but he calls on us to remember our great heritage. Where do this government stand? Do they favour free trade? Then, let them say so. Do they intend to protect Canadian industry? If so, let them stop pussy-footing and cease tolling the "death knell of protection." I understand the Minister of the Interior (Mr. Stewart) may do me the honour of following me. If he does, I am going to listen very carefully for that "death knell of protection."

Mr. STEWART (Argenteuil): The hon. member will hear about it.

Mr. STEVENS: He says I shall hear it.

Mr. STEWART (Argenteuil): Will my hon. friend quote me correctly? I said that he would hear about it.

Mr. STEVENS: Probably we shall hear an apology for or a withdrawal of the death knell.

Mr. STEWART (Argenteuil): Will my hon. friend wait until the hon. member has an opportunity of speaking and then he will have an opportunity of hearing?

Mr. STEVENS: I am glad I am getting the minister cross, because he always makes a better speech when he is cross.

Mr. STEWART (Argenteuil): I am not cross.

Mr. STEVENS: I ask this question: Do the government favour making Canada an economic adjunct of the United States? If so, then let them come out into the open and declare themselves frankly. Let them say that Canadian power, Canadian resources, Canadian copper, Canadian pulpwood, Canadian nickel, Canadian asbestos are to be produced for the purpose of feeding the manufactories of the United States.

If it is not their policy let them face the fact that this condition exists and let them attempt to put an end to this drift which is undoubtedly making of this country a mere economic adjunct to the United States. If the government is concerned about this tendency and are anxious to arrest it let them face squarely the $309,000,000 of a deficit in our dealings with the United States and let them tell us what they intend to do to rectify that condition of things. The economic and social conditions in Canada to-day demand definite action. The people are sick and tired of the policy of drift and are anxious to see this country economically sound. Everyone knows that Canada has a great heritage and there was no necessity whatever for the minister to note that fact in his budget speech. But what is required is a proper administration of that heritage; what is required is effective management by the government of the heritage that has been placed in their hands as a trust. That heritage the Canadian people desire to see developed in the interests of this country and not in exploitation and spoliation by aliens. This government stands charged before the people of the country with crass indifference to its own pledges; with ruthless dissipation of our resources; with duplicity in policy and with utter disregard of governmental responsibility. And it stands charged further with administrative practices which will end in delivering Canada economically bound and shackled to the United States.

Mr. W. B. SNOWBALL (Northumberland, N. B.): I regret the evident disappointment of the hon. member (Mr. Stevens) at not being followed by a minister of the crown. In this instance, however, the government has chosen a back bencher to reply to the hon. member and I am pleased to have this opportunity of following so able a gentleman as my hon. friend who was an administrator in the government of which the leader of the opposition (Mr. Meighen) was head.

I wish at the outset to congratulate the Acting Minister of Finance (Mr. Robb) on the agreeable surprise he sprang on his Liberal followers by being able to show an actual credit balance for the year ending March 31, 1925, of $1,823,000. We need not for the moment take into consideration the $4,000,162, which might be subject to some criticism. The achievement is a creditable one without this item. I also wish to congratulate him on the bomb he thus throws into the Conservative corner. It was amusing, Mr. Speaker, to see the falling countenances that followed this declaration, as they were in anticipation of the opportunity of enjoying a substantial deficit.

In view of the trade conditions that prevailed in the early part of 1924 that warranted a revival of trade in "free trade England" and alike in "high protection United States," it was certainly a great disappointment to all business men to find that better conditions did not materialize but that in both countries, exemplifying the two opposing trade policies, similar conditions prevailed, that trade languished and unemployment was intensified.

It was therefore, Mr. Speaker, all the more to the credit of the acting minister and the Liberal administration, that they were able after having freed the Canadian people of a substantial burden of taxation by the reduced tariff last session, to accomplish what many large business concerns were unable to do—show a balance.

The hon. member (Mr. Stevens) implied that there were apparently no reductions this year of any account, or at any rate no reductions that would lead to any saving to the Canadian people. But the hon. gentleman overlooks a large number of items in connection with which the tariff has been reduced. For instance, the list includes mowing machines, cultivators and farm imple-

ments of different kinds as well as farm wagons; while reductions have been made on fertilizers. There are also reductions in the case of spraying machines, incubators for hatching eggs, brooders for young fowls, milking machines, and so on; and rock drills, saw mills, logging machinery and logging wagons are reduced. We find too that the sales tax is reduced on rubber boots from 6 per cent to 2½ per cent and it is proposed to remove the sales tax on cereals, while there is a reduction from 6 per cent to 2½ per cent on canned vegetables, canned fruits, jams and things of that kind. All along the line reductions have been made, thus removing a considerable burden from the shoulders of the people.

Now, Mr. Speaker, reverting to the Roumanian and Greece interest payment, I consider the acting minister deserves the commendation of this House for his efforts in more fully providing, not only protection for the original debts, contracted by our Conservative friends when in power, but for the inclusion in this security of the arrear interest. Would any business man tell the House where he would put the four million dollars interest item, except as placed by the financial statement? The interest paid on this money borrowed for this loan has been a debit item each year, and included in interest payment, and when a payment is made in cash, or security, it surely would go to credit of interest account. True, it is not actually paid in cash, but it stands a secured payment on interest to debit of Roumania, Greece and a credit to interest account—and not a capital sum. The security now is bonds with coupons attached. I believe, and members on the other side of the House have admitted, that it will now be paid.

In general business we would treat an adequately secured account in that way especially when they were paying interest regularly and would be justified in so doing. Now my hon. friend from West York (Sir Henry Drayton) refers to the Home Bank case, and almost by implication wishes to leave the impression that the hon. the Acting Minister of Finance may eventually do time. But, Mr. Speaker, the circumstances are different, and I hope the acting minister is not losing any sleep. The Home Bank accounts on which interest was charged and credited to show favourable balances were hopeless, admittedly so, by even the bank officials, and proven so by actual results—no interest paid for years —but in this case the hon. member for West York says, "I am inclined to think they are going to come through". And he has every reason to be pleased that such a reckless expenditure by his government has been so favourably placed through the vigilance of the Liberal administration. Quite a frank admission the above, and practically justifying as far as he could the action of the acting minister. In fact since 1922, or since this government has been in power, the interest has been regularly paid.

Now, Mr. Speaker, let us touch for a moment on the railway situation; and at the outset I wish to state that I am fully in sympathy with the suggestion made by the hon. leader of the Progressives (Mr. Forke), that the railways be re-valued and written down to actual valuation. But again there are difficulties, and after you have done so, then what? Have you changed the situation any as far as Canada is concerned? Can we repudiate the difference between actual value and the amount at which it now stands about —$1,200,000,000—one billion dollars for about 22,000 miles of railway. From data available the Canadian Pacific Railway owns and operates 13,350 miles of railway, with a capital liability of $650,500,000. I simply give these figures for comparison and thought. Suppose we re-value the Canadian National Railway system: Canada still has to assume the liability, but in one instance it is a direct liability, and the other an indirect, with an increasing physical value as our trade under Liberal regime improves. At present, with a direct liability of $2,417,000,000, is it wise to make any change?

Now let us analyze this public debt for a few minutes and see if we can trace its source. The hon. the Acting Minister of Finance stated that $582,000,000, belonged to the railway; that would leave $1,835,000,000, as the ordinary debt of Canada as compared with a debt of $474,941,487, in 1911 when the Liberals went out of power, or $544,391,369, in 1914 when the Great war began; an increase of $1,291,000,000, largely attributable to the war the expenditure of which amount I do not propose to criticize, as it has already been under review.

Now, how about the $582,000,000, chargeable to railways? Where did that come from and who is responsible for that amount? And we will start with the amount mentioned in the hon. minister's speech—as classified "non-active" by no less an authority than the hon. member for West York, which is $272,624,-931 for 1919-20; and we add $109,662,654, for 1920-21; $97,950,645, for 1921-22; or $480,238,-230, in three years. We therefore find that $480,238,230, was added to this account during the regime of the former government, and

$77,863,938, in 1922-23; $23,710,616, in 1923-24; $269,602, for transportation charges, or $101,844,156, in two years during the period of the present government—making a total of $582,082,386.

Now, let us go a little further. I have heard such remarks as, "Let us give this railway away for a dollar" or "Hand it over to the Canadian Pacific" and so on. But why do this? What do we further find by investigating the budget statement—that our railway, after considering operating deficit, interest due public and rental of leased lines, only went behind in 1922-23, $36,722,181.00; 1923-24, $20,356,198.00;—quite an improvement—and in 1924-25, $21,343,940.00—not so bad considering the business depression. In a word, a vast improvement on the year 1921-22 of $56,204,000.

With this railway operated in the interests of Canada, running to points no company would consider continuing, pioneering for her people, why give it to selfish interests, as all corporations must necessarily be? The economies that have been effected by capital expenditure made through moneys advanced are beginning to make themselves felt. And I look forward to seeing the Canadian National Railway, under present capable management, within ten years a financial asset to Canada. This will be accomplished more quickly by reducing freight and passenger rates and encouraging business.

Now, Mr. Speaker, I wish to refer for a few minutes to the tariff. I may say at the beginning, I am a free trader, but must also frankly admit that under existing conditions our free trade views are impossible and we must make the best of things as we find them. I was hoping to see some revision downward in the tariff on articles that enter into home expense so that cost of living might be reduced. We in the Maritime provinces, however, appreciate the reduction that has been made on gasoline engines for fishing boats from 27-1/2 per cent to 15 per cent, and the provision made to equalize the duty on bituminous coal.

Who pays the duties? As I said in a previous speech, 85 per cent of our people are farmers and labouring people—by the latter I mean on a daily wage. In that case $136,000,000.00 of our $160,000,000.00 in 1923-24 was paid by this class of people, leaving only $24,000,000.00 by the others, or based on 2,000,000 wage earners and farmers equal to $68.00 per person—quite a tax, but is that all? Who pays the protection on goods made in Canada and I venture to say that this would be double or $320,000,000.00—or equal to $136.00 based on wage earners, or the two together $204.00—quite a substantial tax to be paid by this class of people indirectly. They would squeal if presented with such a direct tax. That is what adds to the cost of living. That is what makes Canadian manufactures cost so much. Increase the purchasing power of the dollar and you promote happiness and the welfare of the country, increase exportation, and create employment. Factories will locate where conditions are favourable for cheap production. Here I want to refer to the fact mentioned by the previous speaker (Mr. Stevens) of our pulp wood going over to the United States to be manufactured. The other day I noticed the following paragraph in a local paper:

[Mr. Snowball.]

5 p.m.

New York, March 26—The opinion that the Canadian newsprint industry is due for wide expansion, is expressed by the Wall Street Journal to-day in commenting on the acquirement of the Riordon and Gatineau properties in Canada by the International Paper Company.

"A cogent reason why International will do its future expansion in Canada is furnished by newsprint production figures for February," the paper declares. "In that month, for the first time in history. Canadian mills turned out more newsprint than their competitors in the United States. Since 1912 production in this country has remained almost stationary. While Canada's tonnage grew to 1,353,000 tons last year, from 256,000 in 1912, our mills turned out 1,471,000 tons of newsprint, against 1,432,000 tons in the former years."

The paper is of the view that the absence of an import tariff on newsprint in the United States has been the chief factor in accelerating the Dominion's growing supremacy in the newsprint trade. "Lower costs arising from natural advantages have done their share, but lack of a protective tariff has worked to the disadvantage of the United States mills and enabled the Canadians to take advantage of natural resources," the Journal declares. "International is already participating in these benefits at its mill at Three Rivers, Quebec, which has been operating two full years and has shown substantial profits. Abundance of power, water and proximity to timber reserves combine to make a low cost product.

By the quotation I have given it will be seen that the mills are coming to the source of supply and cheap production.

That is not all. In another paper I noticed that the International Paper Company contemplate the enlargement of their business in New Brunswick and also the building of a pulp mill somewhere on the St. John river along the line of the Canadian National railway, provided the branch line to Kingsclear is completed. With our natural resources of farm produce, lumber, fish, asbestos, and so on, we can compete under such conditions.

I feel that two serious mistakes have been made by Canadians. The first in 1878 when they adopted the National Policy. My father defeated the Hon. Peter Mitchell, then Minister of Marine and Fisheries in Sir John A. Macdonald's government, on that issue in

our county, and I may say Mr. Mitchell accepted the defeat and became a Liberal. New Brunswick and the Maritimes were doing well at that time and did not need any such policy. We had easy markets at our door, both for selling and buying; we had our own Intercolonial railway—the promise of confederation—just started. The National Policy came into effect, and from then on for the next 18 years we had an exodus from our province to the eastern States—business was depressed, and in spite of the cry of the "full dinner pail" we saw a diminishing quantity as far as we were concerned. Discontent was rampant, and annexation was freely discussed by leading men as the only salvation of our people. However, saner minds prevailed. The hon. member for Dufferin (Mr. Woods), a former active Conservative, referred to similar conditions in his province, and as there were only two members of the official opposition in the House at the time I purpose reading what he said:

Now, I want to refer to a statement made recently in this House by the hon. member for Fort William and Rainy River (Mr. Manion). Referring to the present condition of affairs in Canada with regard to employment and so on, he said that he had never known it to be so bad. He went a little further and said that from his knowledge of history he had never known it to be so bad; that such a serious state of affairs had not existed since the period between 1873 and 1878. Now, perhaps I will be pardoned if I tell the House something of the conditions between 1878 and the close of the century, based on actual experience. In the latter part of the eighties and possibly all through the eighties, and in the early nineties, conditions to my mind, and I came through them, were much worse than they are at the present time. I was actively engaged in farming in the early nineties and part of the eighties. I was in the working class, and knew considerable about the conditions in 1878, and onward; so much so that I was interested in politics at that particular time while still a young man, and I was then a very ardent supporter, I must confess, of the policy of Sir John A. Macdonald, which our friends to my right always advocate. In the early nineties the farmers could hire a man on the farm for $15 and $16 a month. The farmers at that time received about $4 a hundred for dressed hogs, and about $3 to $3.50 a hundred for live hogs. They could sell beef cattle that had been stable fed for six months at a price—I was going to say at the enormous price of 4 cents or 4½ cents a pound. I came through that particular period and have had actual experience of these conditions; I am speaking of Ontario.....

I consider this, Mr. Speaker, a noble confession. I am glad the hon. member for Dufferin (Mr. Woods) has seen the error of his ways and is progressing towards Liberalism by way of the Progressives. I will favour the House with another extract from his speech later on, as I want to give them in homeopathic doses.

But the hon. member for Dufferin is not the only person on the other side who has seen the error of his ways. Hon. F. B. McCurdy, who occupied the portfolio of Public Works in the government of the present leader of the opposition, a gentleman who is well known in Nova Scotia, and who was considered of sufficiently outstanding ability to be chosen for the important portfolio he occupied in the Conservative government, said:

Let me speak of the so-called National Policy, or system of protection, under and by virtue of which it is certainly true that the manufacturers of Ontario and Quebec have fattened and grown rich, even although they are now passing through a lean period. But in what measure has this system of protection to industries alone helped us? It compels Canadians, east and west, to buy the manufactured goods of Ontario and Quebec, but it still permits them to use American ports of entry and export for their goods, if so be they can wring a further profit thereby—and we who live in the provinces by the sea must watch with what philosophy we can command the edifying sight of Canadian imports and exports being carried through a foreign country.

He goes on further to show his attitude towards the National Policy, which he as a member of the Conservative government was supposed to be supporting. He says:

The industrialists of Canada were casting covetous eyes on the markets of the maritime provinces years before confederation, and when confederation was formally proposed they were amongst its strongest advocates. Previous to confederation all natural products passed freely between Canada, New Brunswick and Nova Scotia. As long as five years before confederation, the government of Canada formally propounded the free interchange of manufactured articles also between the colonies, which was refused by Nova Scotia.

So, Mr. Speaker, even a man so prominent in the Conservative party as Hon. F. B. McCurdy has seen the error of his ways, and he evidently was tending towards Liberalism and favouring the policy which we are supporting.

Relief came with the return of the Liberal party to power under Sir Wilfrid Laurier in 1896. The people took courage. Tariff reductions were made on 147 articles, and 47 others were placed on the free list. The British preference was established and raised from 12½ per cent in 1897 to 33⅓ per cent in 1900. Trade jumped from $211,000,000 to $711,000,000; the eyes of the outside world were attracted to Canada, and immigration began to flow in, starting with 21,716 in 1897, and growing to 311,084 in 1911. And then came the greatest calamity that has overtaken Canada—the Reciprocity Treaty of 1911 was rejected by the people on a selfish flag-waving cry, and our troubles began. Those who did not desire it then because of sentimental considerations, would gladly have accepted it later, but it was too late. The Fordney tariff was passed and a duty of 2 cents per pound placed on

mackerel and salmon, and 1 cent on all other frozen fish, except smelts, which latter escaped by some error. We are hard hit in our provinces by this tariff which also includes our potatoes. Mackerel and salmon fishing is an important industry with us, and one large shipper advises me that there is no doubt about who pays the duty, as when quoted a price f.o.b. New Brunswick, the price is less the duty and freight invariably.

I wish now for the edification of the official opposition to read further from the speech of the hon. member for Dufferin. The extract is not very long, but shows what did take place within that party:

That was in 1910. The Conservative policy then was, "We must get down to a lower tariff". They were going to appeal to the people and wanted to get hold of the people on that low tariff policy. But what happened? The Liberals outwitted them, went over to the United States and stole the Conservative platform. We know that the Conservative policy back in the eighties and nineties was that as soon as the United States was willing to put the natural products of the country on the free list Canada would do the same, and that we would have reciprocity in the natural products of the country. But the United States refused to accede to that request until 1911, when the Liberals went over there and made an arrangement with them in regard to it. The Conservatives then felt that they were up against it, that the Liberals had taken the ground under their feet, and some scheme had to be launched. What were they to do? They wanted to get into power. At that particular time I knew a little of the workings of that historic party to my right, and I got into the caucus. I have not time to tell my hon. friends about it to-night, because I have to catch the train.

I am extremely sorry, Mr. Speaker, he had to catch a train, because I would like him to have unfolded to us all the doings of that caucus, which launched the flag-waving scheme of 1911. He goes on:

They said, "There is one hope of getting into power, and that is the loyalty cry". They raised the Union Jack to the top of the mast. I do not know what they did in other localities, but I know that in my locality they fought the contest on that particular line and nothing else, and they succeeded in winning.

We can see by these statements, Mr. Speaker, which are made by one who was in close touch with the party at that time, that the Conservatives were not sincere in their attitude towards reciprocity, but were willing at any time to sacrifice the interests of Canada in order to secure power and get on the treasury benches of Canada.

We in the Maritime provinces are against high tariffs. We would ask the government to seriously consider further reductions. I realize that we cannot make any radical changes, but I would ask the government to give notice to the manufacturers that we cannot afford always to have them as cripples on crutches, and that they should try and take a few steps without artificial support until they can eventually throw their crutches away. We do not want to be inhuman and ruthlessly kick them from underneath them, but we would advise them to take warning, improve their methods, if necessary, cut down their property values, and prepare for what may come in the very near future.

Trade is improving in this country, and to-day we are in a more sound and healthy condition than the country to the south. Every bank president in the country has sounded a hopeful note in his presidential address before the annual meeting, but at the same time every one of them has advised caution and economy, and we realize that is good advice, and the practice of both by government and people alike will the more quickly bring about a sound financial basis for this country.

Now I wish to read to the House some clippings I have recently taken from the Daily Telegraph-Journal, St. John, N.B.,—a paper that has done much to interest the rest of Canada in the Maritimes—another dated February 19, from the Citizen, and a third from a Conservative paper published in Fredericton, the Daily Gleaner, under date March 27. The clipping from the Daily Telegraph-Journal says:

Cotton Mills on Full Time Again

Cornwall and York now working six days a week

"Back again to full time" was the cheering news that about 400 employees of the Cornwall and York cotton mills received early this week after 18 months of curtailed operations. The change is effective at once so that instead of closing down yesterday as usual for the rest of the week the mills will operate until Saturday noon as they do under normal conditions.

Market is Better

An improvement in the cotton market and the securing of some additional contracts by the local mills, it was learned on good authority yesterday, have brought about the resumption of full time. While it is not definitely known for how long a period this will continue efforts will be made to keep the mills on full time during the next few months.

The congestion of the market more than a year and a half ago hit all the cotton mills throughout the country hard and in many cases they shut down altogether for a time. The local mills have been operating on part time during this period of depression. Lately both the Cornwall and York mills have been running four days a week.

Improves Conditions

Employees of the mills and their families greeted the return to full time, with the corresponding increase in the size of their pay envelopes, with relief. Struggling along as best they could with only part time at the mills and with the high cost of necessities it has been a time of hardship for many. Landlords, store keepers etc. in the vicinity of the mills will also benefit by the return to normal conditions. In fact the effect of the increased work will make itself felt more or less throughout the city, a citizen pointed out yesterday, and will help greatly in restoring better times around St. John.

The clipping from the Citizen reads:

Hardware Trade on Sound Footing

President of Sheet Metal Company Prophesies Bright Business Future

Toronto, Feb. 19.—Business has reached a sound footing, which will enable advance purchases and bring about business stability. T. A. Enslow, president of a sheet metal plant of Hamilton, told the Retail Hardware Merchants' Association here yesterday.

Canada was facing a steadily brightening outlook, he said, and retailers could look ahead for several months at prevailing prices.

Speaking in a broader sense, Mr. Enslow declared that Canada should go slow in the matter of immigration, for with the steady increase of "good times" there not only would be a return of the thousands of Canadians, who had crossed the border to the United States, but these would bring with them many Americans to become Canadians.

I find the following in the Gleaner with respect to loans:

Loans well met in the Maritimes

Plenty of money available and interest rates to be lower.

St. John, N. B., March 27.—George H. Smith, of Toronto, General Manager of the Canada Permanent Mortgage Corporation and the Canada Permanent Trust Company, while here to-day, suggested that the local Boards of Trade invite members of the Toronto, Montreal and western boards of trade to come to the Maritimes and study conditions at first hand.

Mr. Smith said that all over Canada there was the dawn of better times and there was much more hopeful feeling among the business men. He predicted cheaper money for industry and a plentiful supply. All that was needed now for real prosperity was population and an additional half million people would make the wheels of industry hum.

Mr. Smith said his company had over $3,000,000 invested in mortgage loans in the Maritime provinces and they were extremely gratified at the way payments had been met on both principal and interest. In no part of the Dominion had payments been better.

In the western provinces conditions were on the mend.

As to the whole situation, he said a person would be a great deal of a pessimist who could not see the prospect of real improvement.

Mr. Smith will sail to-day on the Montcalm to spend a couple of months in England, where he will make arrangements for a supply of English capital for Canada.

He could assure the Maritime province industries that plenty of money would be available on mortgage loans and that the interest rates were bound to be lower.

Let us give up our pessimistic whining attitude, throw back our shoulders, and go forward hopefully into the future. We in this parliament can injure Canada by our unwise utterances in this House, or we can help smooth the path towards prosperity. Which attitude are we going to take?

I was going to make some reference to the dumping clause, but I find the Acting Minister of Finance has made a change in the clause of which I am a little doubtful as to whether it was really in the interest of Canada or not. I want, however, to refer to the fact that there was a saving to Canada under the duties that we have had. I referred to that earlier in my remarks in reply to certain hon. members from the west. I showed the changes that had been made and pointed out that there was an actual saving to the people of Canada both in customs duties and in sales tax. There may have been some shrinkage of business but it does not represent a very large amount. The actual figures are obtainable and will show that notwithstanding this shrinkage there was a very large saving to the people through the reduction made in taxes. It may not have been as large as was anticipated at the time owing to the fact that we had a reduced trade this year which was not expected when the estimate was made to parliament of what the return would likely be. Still the saving is large and the people have benefited beyond all doubt from the policy pursued by the government. I am sure because of the government's record the people will have confidence in it just as they had in 1921; and whenever the present government decides to go to the country the public confidence in it will be shown by the substantial vote that will be recorded for the Liberal party all over Canada.

In conclusion I come to the consideration of a matter that was discussed more than any other during my recent campaign by my opponents who thought they enjoyed a monopoly of it and rang the changes on it just as they did in the case of the flag-waving cry of 1911. I refer to what has been wrongly termed "Maritime rights". I am in no sympathy with any such name being applied to our problems. We have no rights as such. We are part of a great Dominion and we have problems to overcome. But every province has problems, and our problems like the others are such as each of us can help the other to solve. We looked for great results to come from the Intercolonial railway. The space between Upper and Lower Canada was to be bridged, and it was expected that a flow of merchandise —our fish, our lumber, our produce—would go west and the manufactures of the west would come east. In one particular the expectation was fulfilled. The manufactures came east, but our goods had to go in the same old way to the markets of Europe and the United States. However the hon. member for Kings (Mr. Hughes) went fully into this and I need not discuss it.

Then railway and express rates were increased, and as an example of discrimination I want to put on Hansard lumber rates from Chatham to Toronto, January 1st, 1916, to the present, showing a jump from 21 cents to 31½ cents, or 60 per cent, and rates from

British Columbia to Toronto, August 5th, 1915, showing 67 cents per hundred pounds at that time as compared with 88½ cents at present, or an increase of 32 per cent.

Freight rates on lumber, in carloads, from Chatham, N.B. to Toronto, Ont., at various dates as indicated below.

January 1st, 1913 to December 31st, 1916..	21
January 1st, 1917 to March 14th, 1918..	21
March 15th, 1918 to August 11th, 1918..	24
August 12th, 1918 to September 12th, 1920..	27
September 13th, 1920 to December 31st, 1920.. ..	33
January 1st, 1921 to November 30th, 1921..	36½
December 1st, 1921 to July 31st, 1922..	34
August 1st, 1922 to date..	31½

Rates are in cents per 100 lbs.

Freight rates on lumber, in carloads, from British Columbia Coast points to Toronto, Ont., at various dates as indicated below.

August 5th, 1915 to September 15th, 1920.. ..	67
September 16th, 1920 to September 19th, 1920.	1.05½
September 20th, 1920 to December 31st, 1920..	1.05
January 1st, 1921 to April 20th, 1921..	1.03½
April 21st, 1921 to December 26th, 1921..	90
December 27th, 1921 to date..	88½

Rates are in cents per 100 lbs.

Let me also compare the rates on another product of our province, fresh fish, which must go by express. Here are the figures:

Express Rates on Fish

Express rates on fish, fresh, any quantity, from Chatham, N.B. to Winnipeg, Man., 1,773 miles

January 26th, 1914 to August 31st, 1919.	$4.50 per 100 lbs.
September 1st, 1919 to February 8th, 1921..	6.15 per 100 lbs.
February 9th, 1921 to date..	7.70 per 100 lbs.

Express rates on canned fish, any quantity, from Chatham, N.B. to Winnipeg, Man.

January 26th, 1914 to August 31st, 1919.	$6.25 per 100 lbs.
September 1st, 1919 to February 8th, 1921..	8.20 per 100 lbs.
February 9th, 1921 to date..	11.05 per 100 lbs.

Express rates on fresh fish, in carloads, from Vancouver to Winnipeg, 1,465 miles

September 1st, 1914 to August 31st, 1919...	$2.50 per 100 lbs.
September 1st, 1919 to March 10th, 1921...	2.85 per 100 lbs.
March 11th, 1921 to date..	3.59 per 100 lbs.

Express rates on fresh fish, in less than carloads, from Vancouver to Winnipeg, 1,465 miles

September 1st, 1914 to February 14th, 1922..	$3.60 per 100 lbs.
February 15th, 1922 to date..	4.30 per 100 lbs.

The above rates are based on Classification weight, viz., net weight plus 25 per cent, so that the rate charged would really be 25 per cent in excess of the figures above quoted.

Our great industries are certainly discriminated against. Do you not agree, Mr. Speaker, that we have just cause for complaint and that the other provinces should insist on such an unjust handicap being removed. We must have lower freight rates and passenger rates if we are going to make this country of ours grow. We cannot under the conditions as they exist at the present time develop industries or develop trade within Canada unless a very substantial reduction is made in our freight rates, and I trust such legislation will be brought in at the present session of parliament as will make it possible to bring about the equitable rates so necessary to develop trade not only in the Maritime provinces but in the western provinces as well. We are looking for such legislation and I hope it will be available at the present session of parliament. We have our winter ports, St. John and Halifax, and we were pleased to find that the action of the government in limiting the British preference to goods passing through Canadian ports had resulted in only a fraction of one per cent coming in otherwise, but we feel that every Canadian National employee should be a booster for Canada and Canadian ports, and should use his influence to have these Maritime ports used in the winter. Spend money on our harbour facilities, spend money on making the entrance to them safe, spend money on breakwaters or anything that will increase trade. Do not economize on matters of this kind as it would be false economy and would tend to retard the growth of our country. With reference to immigration, we have been very much neglected in this particular, the railways desiring the long haul. I would ask the government to be very careful in regard to the selection. Do not bring industrial workers to the industrial centres until industrial workers who are there now have been absorbed by the increase in industry which is sure to take place in the coming year. We can use the right kind of farmers in New Brunswick. We have many vacant farms which became vacant during the period between 1878 and 1896. We have farm lands that are available for these settlers, adjacent to the cities, towns and villages. We would ask the government, in considering their immigration policy, not to pass by the Maritime provinces, but to bring the immigrants into New Brunswick and Nova Scotia. We have to import too much farm produce in our province. We have good land and good opportunity, and we invite the government so to frame their immigration policy that they will bring to the Maritime provinces the number of people necessary for the upbuilding of eastern Canada. We need them as much as they do in the west. As Canada is built up in population, as we increase the number of people in the country, by the better class of people of our own

[Mr. Snowball.]

nationality, people from the British Isles as far as we can, we will be doing one of the best things we can do for the country. If five hundred or a thousand people are brought into these provinces you will find a difference in the trade and in the outlook. We are a responsible people down there, and we will be able to show these newcomers that we have a country equally as good as Ontario or Quebec or the great northwest. These people will realize that the Maritime provinces will give them homes and encourage others to come. The difficulty is that people have never come our way. The great northwest has loomed up big and many people have gone in that direction. I ask the government to take notice of this and have the Immigration department look into the matter. Some effort should be made to bring into this country the people we need to fill up our farms and our country to make our Maritime provinces what we consider they should be.

Men have been brought from the north of Scotland trained in the fishing industry and they were taken out into the western country where they will not see a halibut or a salmon.

My hon. friend from Brandon (Mr. Forke) spoke of the fish on the Great Lakes, and in the vicinity of Manitoba. If those men were brought to New Brunswick or Nova Scotia, and went into the counties on the sea shore, they would find a condition similar to what they had left, employment they were accustomed to, and they would have the bracing sea air that they will miss in the west.

Finally we have another railway problem in New Brunswick which I would like to bring to the attention of the government. Branch lines were taken over in New Brunswick in 1904, 1906, 1917, 1920 and 1922, and are a paying part of the Canadian National system. I say a paying part, because I have it on the best authority that some of the branch lines I know about are a creditable asset to the Canadian National Railways, and are producing a revenue better than that produced by many of the other parts of the railway in Canada.

I would like to direct the attention of the Minister of Railways and Canals (Mr. Graham) to this matter, and I would like him to take into consideration that the government of New Brunswick gave bonds to the promoters. While in other provinces they guaranteed the bonds and the guarantee bonds are now assumed by the Dominion and New Brunswick contributes its share. The amount so given by New Brunswick amounted to $1,834,000 as below.

Canada Eastern Railway Fredericton to Loggieville	$404,000
Petitcodiac-Elgin-Havelock Railway	106,000
St. Martin and Upham Railway	131,000
Albert County Railway	496,000
N.B. and P.E.I. Railway	105,000
Caraquet and Gulf Shore Railway	222,000
Moncton and Buctouche Railway	95,000
International Railway	275,000
	$1,834,000

These railways are a paying part of the Canadian National Railways. I think the New Brunswick government should be recouped, the bonds in connection with these railways should be taken off their hands and they should be placed in exactly the same position as the other provinces in connection with the transfer of railways. I think that is a fair proposition, and should appeal to every hon. member in this chamber, whether Liberal, Conservative or Progressive. All that we ask is that we be dealt with fairly, in the same way as the provinces of Ontario, Saskatchewan and Alberta were dealt with, and that the money advanced to the railways should be taken off the shoulders of the New Brunswick government and become a part and parcel of the indebtedness of the great National railway system. We have assumed our part and portion of these other guaranteed bonds. We are a part of Canada. Assuming that, I think we have every right to ask the government of this country to treat the Maritime provinces exactly as the other provinces have been treated, and we feel that our province should be relieved, as other provinces were relieved, of this responsibility.

Then we have the Valley railway, operated as a part of the Canadian National and under lease, having cost the province $7,111,977 for about 180 miles, or about $40,000 per mile. This line was built on the same standard as the National Transcontinental. It is now leased to the Canadian National, and I say this line should be taken over by the Canadian National Railways, and that the Canadian National should assume the liability of the province of New Brunswick. There is nothing unreasonable in this request. I know that this is a large order. I know that the government of the province of New Brunswick is not responsible for the condition as it exists at the present time, but that railway is hampering the growth and freedom of the people of the Maritime provinces, because they have not sufficient means within the province or available with which to raise revenue and pay interest on an investment of that nature. The government, having taken over

the other branch lines, I think could very well afford to take over this line, even with the large investment in railways, which was stated by one hon. member to be $1,800,000,000 It would enable the province to invest money which would then be available to them, for other works in the province. We have been considering the question of the water powers in the province of New Brunswick, and if these railways were taken off our hands it would make it possible for our people to develop the water-powers, having been relieved of these interest rates in connection with this railway enterprise.

I bring this to the attention of the government and I hope they will consider the matter. I think hon. members coming from the Maritime provinces, and members from the other provinces will agree that in all fairness the province of New Brunswick should be assisted in this way, and it would only be carrying out the understanding which was arrived at when the province came into confederation. Now is the time when the government can hold out the olive branch and say, "We are prepared to relieve you of your obligations in connection with the railways, as we did with the other provinces, and we know that the province will then prosper".

The Kingsclear branch bill was thrown out by the Senate last year. We hope that it will again pass the House and be favourably considered in the Senate. We need this branch. It will shorten the haul from northern New Brunswick to Boston points, some 350 miles. It will be the connecting link that will make the Valley railway a paying piece of road and it will encourage the establishment of industry along the Canadian National.

Another line of railway that we hope the government will seriously consider—and it has been brought before Sir Henry Thornton who looks upon it with favour—is the extension of what is known as the Caraquet and Gulf Shore road from Tracadie along towards Newcastle, a distance of about sixty miles through prosperous country and good farms, and would develop not only the fishing and lumbering industries, but would encourage the construction of pulp and paper mills, and assist one of the Fraser Companies pulp mills now on that side of the Miramichi river, without rail connection.

We are handicapped by the fact that there are no railways running on that shore. If the railway was constructed there it would tend to the development of the country, and farming would be carried on more extensively. I think that part of the country is more closely inhabited than any part of Canada. Many Acadians are in there and doing wonderful work in farming. They are developing the country, and if encouragement is extended, many more will come in, take up land, and make New Bunswick a desirable province from the farming standpoint.

There is a great opportunity for the extension of the pulp industry in that section, as power will be brought from Grand Falls in large quantities, and great developments will be made possible. We would have another pulp mill and possibly paper mills, as well as hardwood mills, in that section that would contribute very largely to the paying possibilities of that railroad. There is along the line that railway would cover, a pulp mill built by the Fraser Companies Limited one of the most energetic and progressive concerns that we have in New Brunswick, and one which has done a great deal for the industrial advancement of our province. This pulp mill is situated on the opposite side of the Miramichi river from Chatham, away from railway facilities. They would be wonderfully assisted and their industry would possibly be increased to a great extent if they were able to bring in their coal and ship out their manufactured product by a railway passing by their door. I would draw the attention of the government to this, because I think it is worthy of their consideration. I hope, in bringing in their branch line legislation for this year, they will not forget to put in a substantial item to make at least a beginning of the extension of that line of railway from Tracadie along towards Newcastle, to be finished and carried forward as an extension and loop of the Canadian National Railways.

We have our grievances and our burdens as hon. members can see. We are Canadians and shall remain Canadians, but let it not be forgotten that we are an important part of this great Dominion—the eastern door. As we enter this building, we see engraven on stone that it may ever be kept in mind:

> The wholesome sea is at her gates,
> Her gates both east and west.

We are that eastern gate. Canada needs both her gates and Canada will develop and be great as she passes the products of this country through her gates to distant lands.

Let us get together and solve our difficulties, harmoniously working together east and west and intervening parts, and let us make this Canada of ours what the Great Creator really intended when He placed us here and gave us such wonderful natural advantages—the greatest country in the world.

Mr. L. P. BANCROFT (Selkirk): Mr. Speaker, the budget has been presented much earlier this session than is the general custom. It may be that this accounts for the fact that some long overdue legislation has not yet been presented to the House.

The need for re-valuation of lands taken up under the Soldier Settlement Act was clearly demonstrated to the government in the committee which investigated this question last session. The Soldier Settlement Board began its operations in the province of Manitoba, and naturally the abuses, which crept into the locating of soldier settlers, were, perhaps, more pronounced in that province. I desire to bring to the attention of this House the government's obligation in this matter. When the returned soldier applied to the Soldier Settlement Board for a farm, he was shown a list of farms with descriptions and prices. These farms had been inspected by supposedly expert valuators, employed by the board for that purpose. If the valuator did not approve the price asked for the farm, he would naturally not allow it to be listed in the office of the board. The inclusion of a farm in the list shown to the applicant was in the nature of a guarantee that the list price represented the actual value of the land. Under this plan many returned men were settled on lands totally unfit for farming, and the board finally realized the situation which had developed and made a thorough house-cleaning after about two years operation. If there was nothing wrong with the valuation, there would have been no necessity for the clean-up which took place at that time. By their action the board admitted that there was something wrong with the valuation that had been carried on in certain districts in Manitoba.

The board is to be commended for its action, but it did not go far enough. What about the soldier settler who was the victim in these cases? Except for the amendments of 1922 which gave him more time in which to meet his payments, nothing has been done to lighten his burden of debt, which in many cases was improperly placed upon him. The board prevented a recurrence of the trouble, but it made no restitution for the wrongs already done. These facts must be considered together with the serious depression which the policy of deflation brought upon agriculture, and a re-valuation of lands, particularly in districts most affected by the early administration of the act, is imperative at this time, the alternative being more abandoned and untaxable lands and more men moving to the cities to increase the unemployment problem. I trust that the government being in possession of all the facts, will bring down the legislation necessary to meet this situation.

A somewhat similar situation has arisen among certain settlers in various parts of western Canada. In the constituency of Selkirk, which I have the honour to represent, quite a number of Scandinavians and Ruthenians were settled some years ago on land which should never have been thrown open for homestead entry. These lands consist of stony ridges, stony scrub land with a very shallow loam on a gravelly subsoil. The settlers on these lands have eked out an existence as long as there was cordwood available. Wood is getting scarce now, and the crop failure this year, which left them without even potatoes for their own use, has resulted in great hardship and destitution. The present condition of some of these people is serious, and I would suggest that, where they are settled on manifestly unsuitable land, they be granted the right to homestead again in a better district.

Mr. GARLAND (Bow River): Is it not true that they now have that right, that they can release their soldier settlement holdings and subsequently take up homesteads?

Mr. BANCROFT: Yes, but my hon. friend has misunderstood me. In the latter part of my remarks perhaps I did not make it clear, but I was referring to actual homesteaders, not to soldier settlers.

Turning to the arguments advanced in this discussion, the protectionists in this House have become greatly concerned over the working-man, and no doubt the full dinner pail will be their election cry. I do not think that the workers of Canada can be deceived in that way. They cannot be taxed into prosperity. Any system which places greater burdens of taxation upon a man with a family than upon a bachelor will never appeal seriously to the Canadian workman. Protection increases the cost of living, and therefore decreases the purchasing power of the consumer, lessens the worker's demand for his own product and at the same time places him under a handicap when competing with workmen in other countries. One might well ask of those who claim that protection protects labor: Why not exclude all who would compete against them in the labour market? But, very properly, these advocates of protection are in favor of an aggressive immigration policy. The value of their professions of concern for the interests of Canadian labour may be better judged by their actions. I would like to point out that those who stand for the protection of Canadian workmen embrace every oppor-

tunity to employ workmen of other nationalities when such employment means increased profits.

Has protection protected Canadian labour in the case of the canneries on the Pacific coast? If my memory serves me right, drastic regulations have had to be invoked to force the canners of British Columbia to employ even a small percentage of Canadian labour. The largest Canadian steamship companies operate under British instead of Canadian registry. They register in Great Britain to enable them to employ British seamen to compete with Canadian seamen. Canadian steamship companies operating between Vancouver and the Orient man their boats with coolies hired in China. The British Empire Steel Company operating boats between Montreal, Sydney, Halifax and St. John, and enjoying the fullest possible protection under the Canadian coastal navigation laws, brought in 105 Chinese coolies to replace Canadian seamen on their boats. In my judgment, Mr. Speaker, there can be no security for Canadian workmen until the purchasing power of this country is restored and until our industries are established on a natural rather than an artificial basis.

In discussing the budget last year I pointed out that the reduction of the sales tax offered less relief for the taxpayers than would an equal reduction of revenue from the customs tariff. If the $20,000,000 taken off the sales tax had been taken off the tariff a very much larger amount would have been saved to the consumers, since the hidden bonuses paid to the protected industries would have been proportionately lessened. A very large increase of purchasing power would have resulted and much of the existing depression in eastern industries might have been avoided.

In the same discussion, the government will recollect, we on this side of the House asked that there should be something in the nature of an appeal provided which would enable any importer who felt that the administration of the dumping clause was unjust to obtain a decision of the facts in the particular case by an impartial tribunal. My recollection is that the government expressed itself sympathetically to the proposal, but nothing has been done.

Mr. GRAHAM: If I remember rightly, there is under the present act an appeal to a tribunal known as the Customs Board.

Mr. BANCROFT: I remember there was a discussion of the subject last year, when the government was asked to make some provision for an appeal. I am glad to hear that this has been done.

Mr. GRAHAM: I think there is such an appeal.

Mr. FORKE: The trouble is that the Customs Board is the greatest protectionist board in the Dominion of Canada.

Mr. BANCROFT: I knew there was something wrong about it. This session we have had a proposal to widen the scope and application of the dumping clause. This proposal has now been withdrawn, but its withdrawal does not remove the original objection urged in this section of the House to the existence of the anti-dumping clause nor the suspicion that it is utilized to the injury of Canadian consumers. We welcome the change in the government's proposals, remarkable at it may be that so important a feature of the budget to which the government may be assumed to have given serious consideration before bringing the budget down should be destroyed by its sponsors so soon after its introduction. The history of the anti-dumping clause is illuminating as showing the necessity for unremitting vigilance to prevent encroachments by the protected interests. Clause 6 of the Customs Act of 1907 permitted the special duty to be levied when the actual selling price to an importer was less than the fair market value in the country of origin. This was amended in 1914 to allow a differential of five per cent between these two prices before the dumping duty was applied. Last year this differential was abolished by order in council but as the result of strong protest was again restored. This year's amendment would again have abolished the differential and would have given the Minister of Customs and his officials power to say what the value of any commodity imported would be for customs entry. The only definition we have of value for customs entry is that given by the minister in the amendment of 1922 relating to imports of natural products. The minister said it might be the price of the goods on the Canadian market. The old law placed a limit beyond which the minister could not go; that was, the fair market value in the country of origin. Had the amendment proposed in this budget carried the Minister of Customs would have had the power to increase protection to where it would become a practical embargo against the importation of goods, irrespective of the tariff schedule passed by this House. It is noteworthy also that goods which are listed in the tariff schedule as being free of customs duty, such as binder twine, cream

separators and barbed wire, would have come under the scope of this clause.

When the Prime Minister, (Mr. Mackenzie King) toured western Canada last fall he made an appeal for the low tariff forces to get together. I wonder if he had this proposal in mind at the time. I want to say to the right hon. gentleman that the low tariff forces in this country will get together, that every attempt to increase protection drives them together and assists very materially in bringing about a clear cut division between the low tariff advocates and the protectionists. And when this takes place the low tariff forces must choose between the budget proposals of the government and the principles outlined in the sub-amendment submitted by my leader the hon. member for Brandon (Mr. Forke).

Andrew Fletcher said:

Let me write a country's songs and I care not who makes its laws.

The Canadian manufacturers might well change this to read: "Let us draft the anti-dumping clause, we care not who makes the tariff schedule."

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Hon. CHARLES STEWART (Minister of the Interior): Mr. Speaker, with hon. members who have preceded me, I desire to express my regret that the Minister of Finance (Mr. Fielding) is unable to be in his place. I hoped he would have recovered long ere this.

I congratulate the Acting Minister of Finance (Mr. Robb) on the splendid showing he has been able to make under rather adverse circumstances. There can be no doubt that not Canada alone has passed through a rather serious depression during 1924, but also our neighbours to the south, in fact the whole world. It is a favourite pastime of my hon. friends opposite to dilate on the fact that Canada is suffering from a condition which they would have us believe is not also present in the United States. True, they admit that in Great Britain and on the continent difficulties have been encountered by the governments of the day, that unemployment is rampant, but they never state that a similar condition of affairs exists across the line. Of course, their panacea for all our troubles is an increase of tariff.

Before dealing with that matter I wish to congratulate the hon. member for Vancouver Centre (Mr. Stevens) on his address delivered this afternoon. Naturally it represents his standpoint. I must take issue with him for neglecting to ascertain that exactly the same system of accounting which is in existence to-day, and which he criticized so severely, has obtained for a number of years. I have taken the trouble to interview the Deputy Minister of Finance with respect to this system, for I confess that I shared with some other members the feeling that perhaps the country's accounts could be presented to the House in a somewhat more intelligible form. I am bound to say in fairness to him and to the officials of his department that I believe they are making a fair presentation of the facts respecting the country's accounts just as they stand in the books. Furthermore, that gentleman informs me that no Minister of Finance under whom he has acted has ever interfered with him in the slightest in the manner of making up these accounts, which he compiles in the same way every year, giving a true record of the receipts and expenditures for the fiscal year. Our public debt at the end of the last fiscal year was $2,417,734,274.88; the ordinary revenues—estimated for the current year—and apparently we have no dispute about this—will amount to $344,000,000; our consolidated fund expenses will amount to $319,700,000; our capital charges on public works—marine, railways and canals—will be $18,077,000; the special account mentioned by the Acting Minister of Finance is $4,400,000; leaving a favourable balance on the year's operations of $1,823,000. Now, if we entirely separate our railway accounting from the general accounting of the government, we have no difficulty in arriving at the result. I think we are agreed that there can be no difference of opinion about the accounts so far, but apparently there is a very considerable divergence of view when we come to our railway accounting and its application. I am not going to find any particular fault with the system adopted by our predecessors in office, but simply offer an explanation which I think will help to clarify the situation to some extent.

Treating our railway accounting entirely apart from the general accounting of the country, we find that up to 1920 bonds were issued to and notes taken from the railway companies to the extent of $272,000,000. Upon that occasion the then Minister of Finance, the hon. member for West York (Sir Henry Drayton) adopted a different system—I presume because the railway companies were unable to pay the interest charges on those advances—and while he charged the loans to the public debt, and

increased it accordingly, he treated them as non-active. His policy has been pursued ever since.

In 1921 that was the policy pursued. In 1922 that was the policy pursued except with this difference; in that year, as explained in the speech of the Acting Minister of Finance (Mr. Robb), the sum of $56,000,000 odd was received from loans made to the Imperial authorities for war purposes, and not being in a position to liquidate the bonds that were maturing, the Minister of Finance (Mr. Fielding), instead of placing that sum in a trust account to reduce the public debt, decided in view of the fact that he had to provide for the railways that year the sum of $80,000,000 odd that it would be better for him to advance the cash received from these loans to the Imperial government than to float new loans and to turn over the proceeds to the railways, as had been done in previous years. Therein lies the difference.

Again, in 1923, because of the peculiar provisions of the act, which permitted the government to loan by way of cash or by guaranteeing bonds, the government again floated a loan, partly guaranteed securities, and partly cash to carry the railways that year, and $24,000,000 was carried in that way from the cash account of the country.

In 1924 we provided $18,000,000 odd of cash in loans to the railway. Had it not been for the fact that in 1922 the whole of the railway obligation was taken care of by cash, and by receipts from loans which had been gathered not from the taxpayers of this country, but from the Imperial government, no difficulty would have been experienced in understanding the situation thoroughly. The difficulty comes about in having obligations, partly cash, and partly guaranteed loans.

Bear in mind also one other class of security that perhaps makes it somewhat confusing, That is the securities issued for the purchase of equipment. In that case the government does not guarantee. The security is taken upon the equipment itself, and there again you have another more or less special account. So you have three systems in vogue in the railway accounting: one of guaranteeing bonds by the government, another the issuing of cash, and the third the issuing of bonds by the railways for the purchase of equipment, the bonds not being always guaranteed, the security usually being taken upon the equipment.

All told we had accumulated in this way up to the end of last year in loans to the railways the sum of $582,000,000. That is the amount that has gone into the railways, and upon that we have delayed interest of $131,000,000. The total amount required annually for the payment of government loans and loans to the public, overhead and fixed charges, is $62,000,000 odd. Nearly $30,000,000 of these fixed charges is due the government, and of course not paid. Unfortunately, the railway company is not able out of its earnings to take care of even the fixed charges that are due to the public.

Mr. MEIGHEN: In view of that, will the minister say there is any real difference between the responsibility of the country in the case of a direct loan of the country for the purpose of the railway, and a guaranteed loan?

Mr. STEWART (Argenteuil): I am not making the claim that there is any difference whatever.

Mr. MEIGHEN: Hear, hear.

Mr. STEWART (Argenteuil): I do not make that claim. What I say is that in order to pay the total indebtedness of the railways, we require to raise annually $62,000,000 odd of interest. That must be raised either by the railways or by the country. Until we decide whether or not we are going to change the system of accounting, whether or not we are going to deduct from the railways, as has been suggested on many occasions by hon. gentlemen in this House and outside, what might be considered over and above what ought to be charged against the railways for overhead, it appears to me this system of accounting must continue. But what I do wish to point out is that there has been no change in the system. It is identically the same system, and the two sides of the ledger show very clearly what the railway indebtedness is, and what the government is responsible for. Indeed, the government is responsible for the whole obligations, because the country owns the whole railway so far as that is concerned. But there has been a difference in the accounting inasmuch as the loans from the government, both by way of cash and guarantees, are in a segregated account, and are charged to the public debt of the country.

Mr. MANION: Instead of claiming a surplus, would it not be fairer to the country generally to charge all the railway debts, if they cannot be paid, to the country generally?

Mr. STEWART (Argenteuil): That is just the difference between my hon. friend and myself. If that policy were adopted, we

should have to undertake to raise, in addition to the consolidated revenue fund, a sufficient amount to pay all the interest charges of the railways that they were unable to pay out of their earnings.

Mr. MEIGHEN: Or borrow the money.

Mr. STEWART (Argenteuil): They do borrow.

Mr. STEVENS: Will my hon. friend not take this into consideration? Last year, 1924, was the first year we had a consolidated balance sheet from the railways. Previous to that, the returns were divided up among the different railways. There is no excuse now for not presenting to parliament a complete statement of the consolidated railway balance sheet.

Mr. STEWART (Argenteuil): If my hon. friend has followed the statement of the Acting Minister of Finance, and I take it that he has—

Mr. STEVENS: I have studied it carefully.

Mr. STEWART (Argenteuil): —there should be no difficulty in arriving at the real indebtedness of the railways. Why should there be? On one side of the ledger you have a statement of the indebtedness of the railways to the public, and on the other a statement of the indebtedness of the railways to the government—two accounts, it is true, but they are perfectly clear and understandable. We know what the indebtedness of the railways is to the government of Canada, and what their indebtedness is to the public of Canada and elsewhere who have purchased their bonds. There is no difficulty in understanding that statement. I fail to understand how it could be more clearly shown.

Mr. MEIGHEN: In the face of what the minister has admitted, which is frank and honest, in view of the fact that the guaranteed liability is just the same precisely as the direct liability, how does he justify the claim last year of $35,000,000 surplus, and the making of that the basis for a reduction of taxation?

Mr. STEWART (Argenteuil): Let me take my hon. friend back to the provisions of the statute with reference to railway financing.

Mr. MEIGHEN: That is not the point at all.

Mr. STEWART (Argenteuil): Oh yes, I think I am right; I think I am perfectly right. If I take my right hon. friend back to the provisions of the statute it will be seen you can either borrow the amount by way of loan or by way of cash—

Mr. MEIGHEN: Exactly.

Mr. STEWART (Argenteuil):—and loan it to the railway—in other words loan it to yourself, because, in effect, that is what this transaction is to-day. So there can be no difficulty about it and the statement of last year was a perfectly clear statement. I want to say to my hon. friend from Vancouver Centre (Mr. Stevens)—

Mr. MEIGHEN: It is not clearness I am objecting to.

Mr. STEWART (Argenteuil): May I get this from my right hon. friend: If it is not clearness that my right hon. friend is objecting to—

Mr. MEIGHEN: It is dishonesty.

Mr. STEWART (Argenteuil): —is he objecting because we are taking moneys from the revenue of the country and placing them in a special account which is called "non-active?" There can be no difference of opinion about that surely?

Mr. MEIGHEN: Not at all.

Mr. STEWART (Argenteuil): Well then, the statement is very clear.

Mr. MEIGHEN: I am not complaining about clearness.

Mr. STEWART (Argenteuil): Would my right hon. friend not ask as the hon. member for Fort William and Rainy River (Mr. Manion) did, at least, I imagine that is what he was desirous of doing: Why do you not take from the consolidated revenue all the requirements to pay the interest on the fixed charges of the railways over and above the net earnings?

Mr. MANION: No, I was merely pointing out that a liability of the National Railways is as much a liability of the country as any other liability—for example money expended on harbour improvements, and expenditures of that class; and that that money should be charged up against the country generally just as much as these other expenditures are.

Mr. STEWART (Argenteuil): That is in effect what my right hon. friend is arguing. So long as we know clearly what the borrowings or loans of the country are, either by way of cash or a guarantee of bonds, then we know absolutely what the full indebtedness of the railways is to the public and to the government; there can be no question

about it. However, I do not want to get into a controversy about this. What I am trying to present to the House, in a clarified manner, if I can, is the exact situation but not to mix the railway accounting and the public accounting. I gave the details of the public accounting in the first instance where the government of the country had taken care of the capital charges as well as the general expenditure from the consolidated revenue, there being over $1,800,000 of a balance; and the loans to the National Railways whether by advances from the consolidated revenue or by way of borrowings are kept in a separate account and the exact standing of that account is shown absolutely. Until we adopt a different principle—the principle suggested by my hon. friend (Mr. Manion)—of taxing the public to pay for the overhead in its entirety I do not see how any radical change can be made in the accounting method.

Mr. MEIGHEN: The minister has missed the main point. The hon. member (Mr. Manion) did not suggest taxing the public. It is all a question of whether the advance takes the form of a direct loan or a guarantee upon the government's responsibility. My hon friend admits that in effect one is exactly the same as the other, as everybody knows. Now the point is this: When the money is borrowed by direct loan it becomes part of the national indebtedness, part of the year's expenditure but not necessarily part of the year's taxation.

Mr. GRAHAM: You never knew that before.

Mr. MEIGHEN: We have always known it.

Mr. GRAHAM: You did not practise it.

Mr. MEIGHEN: That is another question. If the minister will give me permission, and hon. gentlemen opposite are as good at listening to an argument as they are at laughing, I will take the privilege right now of showing the difference. I want to make clear the question I put to the minister. It was this: Inasmuch as the responsibility is the same for the capital indebtedness, whether it is by way of borrowing direct or by way of guaranteeing, what is the necessity of claiming a surplus because with a guarantee there would be as much of a deficit as if it was a direct debt.

Mr. STEWART (Argenteuil): I fail to follow my right hon. friend's reasoning. He argues in a rather roundabout way inasmuch as he seeks to set up a difference between a direct loan and a guarantee.

[Mr. C. A. Stewart.]

Mr. MEIGHEN: I say there is no difference. You say so too.

Mr. STEWART (Argenteuil): Exactly.

Mr. MEIGHEN: Then why are you claiming a surplus?

Mr. STEWART (Argenteuil): I have already said to my right hon. friend and I say to him again that until the moment arrives when we are prepared to take care of the difference between the earnings of the railways and the amount necessary to pay the overhead —until that time arrives when we are prepared to take it all out absolutely in cash and charge it to the taxpayers of the country the system of accounting and the system of making the charges are identically the same as they were before.

Mr. MEIGHEN That is not the point at all. It is not a matter of system, it is a matter of reality.

Mr. STEWART (Argenteuil): Then I shall have to leave the matter to my right hon. friend. No doubt he will speak in this debate and I shall follow him with a great deal of interest. I have gone into this matter very clearly—

Mr. MEIGHEN: Yes it is very clear.

Mr. STEWART (Argenteuil): —and I will leave it to my right hon. friend to deal with it when the time comes.

There is one other item which the Acting Minister of Finance has added to his surplus, namely, the item in connection with the Roumanian and Greek loans—I think it is an item of $4,162,000. I am only going to deal with the items that are in dispute. I am not going to attempt in any way to cover a great deal of ground, I shall simply deal with these items just as they arise. I think the Acting Minister of Finance gave a very clear statement with respect to the origin of this amount which he has applied to the reduction of debt. Hon. gentlemen opposite know that loans were made to the governments of Roumania and Greece. I cannot say what the securities were but I think I am correct in stating—and if I am not correct the ex-Minister of Finance will correct me—that they were never considered in the category of non-active assets. Apparently there are three items that do appear as non-active assets, namely, the loans to the railway companies, the loans to the Canadian Government Merchant Marine, and the loans to the Quebec Harbour Board. Those are all set out, but so far as I am able to ascertain the loans to Roumania and Greece

were never considered non-active assets although there was some doubt as to the security. Beyond that I think these have been always regarded as assets upon which we should realize some day or another. When Mr. Larkin went to London as High Commissioner he took the matter up with the governments of Roumania and Greece. The loans to Roumania were in the neighbourhood of twenty-three millions; those to Greece, I have forgotten the exact sum, were not anything like the same amount. The high commissioner was able to arrange for the payment of those loans, getting security upon the excise duties, I believe in the case of Roumania and upon a fund just as secure in the case of Greece. If there was doubt about the form of security in the past there can be no doubt as to the character of security now. Interest to the extent of $4,162,000—I think I am correct in the amount—had accrued in the meantime.

Mr. FORKE: No, $4,000,162.

Mr. STEWART (Argenteuil): What the commissioner did was this: He went back to the governments concerned and said, "We think we are entitled to have this interest or have it secured" and security was given for the interest. The interest was added to the principal so that the overdue interest now occupies identically the same position as the principal due by the governments of Roumania and Greece in the first instance. There can be no doubt that we will receive the same interest upon this amount as we are drawing upon the loan itself. We have absolute security and believe that this asset is worth every dollar it purports to be. The interest referred to has been added to the principal making the total loan, if I remember correctly some thirty-one millions, upon that we shall draw interest annually until the loans are repaid. Is there anything wrong in the Finance Minister taking credit for a security of that sort? I do not see anything wrong about it.

Mr. MANION: Not as far as he has gone, but go ahead.

Mr. STEWART (Argenteuil): It is not an asset to the country? Surely as it is going to draw interest it can be credited as a liquid asset. There can be no doubt about it, and the Acting Finance Minister (Mr. Robb) is quite in order in placing it in the list of active assets to credit against capital charge.

Mr. MANION: I doubt the statement as far as it goes, but is the minister quite honest in crediting it to surplus, adding it to the two million and making a sum of six million?

Mr. STEWART (Argenteuil): Where would he put it?

Mr. MEIGHEN: It is not a receipt at all.

Mr. STEWART (Argenteuil): My hon. friend speaks of honesty. I do not think the ex-Minister of Finance (Sir Henry Drayton) will say it is dishonest. I am certain he will not.

Sir HENRY DRAYTON: I would say it is very misleading.

Mr. STEWART (Argenteuil): It is not misleading now to the hon. gentleman.

Mr. MEIGHEN: It is misleading to the public.

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: Yes.

Mr. STEWART (Argenteuil): We have a perfect right to credit our liquid assets in this way, and so has every firm. I venture to say if my hon. friend from Vancouver Centre (Mr. Stevens) will ask Mr. Waugh, one of the auditors for whom he has such a high regard, whether the charge is not a proper one, he will be informed that it is.

Mr. STEVENS: I have had experience of my own based on similar matters.

Mr. STEWART (Argenteuil): I quoted the statement of the hon. gentleman this afternoon, and he said he had no doubt of the honesty of the certificate.

Mr. STEVENS: The auditors did not certify this account.

Mr. STEWART (Argenteuil): I did not say they did.

Mr. STEVENS: No, you bet they did not.

Mr. STEWART (Argenteuil): But that happens to be in this year's accounting. My hon. friend passed some very severe strictures upon the government and upon the officials who had charge of the accounting and upon the gentlemen who audited the accounts.

Mr. STEVENS: No, my hon. friend is wrong.

Some hon. MEMBERS: Order, order.

Mr. STEVENS: I have a right to make an explanation. I never reflected upon the gentlemen who audited the accounts. I said they never audited the accounts, and the certificate does not say they did. All they say is that they compared this year's balance

sheet with the previous one, and its form is the same. It is a meaningless certificate.

Mr. STEWART (Argenteuil): My hon. friend said all that this afternoon and something more. There has been no change in the system of accounting, as I pointed out clearly.

Mr. MEIGHEN: A change in the effect of it.

Mr. STEWART (Argenteuil): No.

Mr. MEIGHEN: A change in the application of the money.

Mr. STEWART (Argenteuil): Not at all.

Mr. LAPOINTE: A meaningless criticism.

Mr. STEWART (Argenteuil): Another matter which my hon. friend from Vancouver Centre dealt with this afternoon was the sales tax reduction, pointing out that it occurred because of the deflated condition of business in the country. He did not mention that last year there was a reduction in the sales tax estimated at almost twenty-four million dollars. We anticipated that in the beginning of the year. I am willing to admit a certain reduction, but I want to point out clearly that that did not come about because of the reduction in the tariff, nor because we happened to have a moderate tariff in Canada, as against the highly protective tariff in the United States which my hon. friends are always holding up as an example to be emulated by the Canadian people. The lessened taxation accounts in a very large measure for the reduction. The hon. member for Brandon (Mr. Forke) and the ex-Minister of Finance (Sir Henry Drayton) both regret the fact of there being no reduction in taxation. Their amendments state that specifically. I want to point out to those hon. gentlemen that we have made a very material reduction in taxation all along the line, and that to-day we are collecting less revenue than was collected in 1920.

I wish to deal with this matter for a moment or two. The uncontrollable and the controllable expenditure of the country was as follows:

	Uncontrollable	Controllable
1911..	$31,234,857	$ 90,422,977
1914..	51,696,661	133,172,958

I will just give the round figures, and I am not going to quote any war years, because I virtually said in this House that I never raised my voice in criticism of the administration during the war years. I have heard it severely criticized, but I was not here and know nothing about it, and I am not going to refer to it.

[Mr. Stevens.]

The expenditure for the following years was as follows:

	Uncontrollable	Controllable
1921..	$256,145,252	$162,475,292
1922..	222,618,240	143,083,550
1923..	223,189,751	127,418,795
1924..	215,000,796	129,020,991

When hon. members complain that there has been no reduction in the cost of running the country they must remember that $215,000,000 must be raised from the taxpayers of this country, over which this government have no more control than hon. members opposite. I think that is a fair statement to make.

Mr. MEIGHEN: Would the minister mention the items making up the $215,000,000?

Mr. STEWART (Argenteuil): No, I have not got them but I think my hon. friend will not dispute the items.

Mr. MEIGHEN: In the United States they have managed to control a great many of those items.

Mr. STEWART (Argenteuil): We are reducing just as fast as we can. These are mostly war expenditures—not all of them, but a very large proportion—and it may be a just and equitable criticism for my hon. friend to say that we are spending too much money as a result of the aftermath of the war and that we are not curtailing quickly enough in our expenditure. I am not going to say as to that. Perhaps the Minister of Soldiers' Civil Re-establishment (Mr. Beland) could answer that question very much better than I could, but I say that this sum is made up of what is uncontrollable expenditure, and it is made up by the same gentleman who makes up the public accounts of the country and who has been making them up for the past seven or eight years to the knowledge of hon. gentlemen in this House. They are exactly the same items that are contained in the expenditures of 1914 or 1911 that I have quoted for the information of the House. The charge that we have not reduced taxation and that we are not running the country economically is surely answered in its entirety when I say that we are running the country more cheaply, as far as controllable expenditure is concerned, than the government did in 1914, the year previous to the war. No sensible or sane man will argue that the country has not grown and that the public service of the country does not require more money to run it. That statement cannot be successfully controverted and I hope the controllable expenditure will continue to rise. Indeed I am bound to say that I believe it would lend encouragement to the people were the government to spend

more money; but we have been economical in administration. We have cut down expenses to such an extent—I see my hon. friend smiling; I do not know that he was a member of the government in 1914, but I know that he will not argue that the service of the country required more money and more controllable expenditure in 1914 than in 1924. We have cut and cut to the core, and I want it to go out to the country that that is what the government has done and is going to do all the time. We may be a moribund government; we may be guilty of misstatements, as the hon. member said this afternoon, but these are uncontrovertible facts that I commend to his attention and to that of hon. gentlemen opposite when they are criticizing this government in its administration of the country.

I want to deal for a moment or two with the vexed question of unemployment—unemployment in Canada and unemployment in the United States.

Mr. HANSON: Where?

Mr. STEWART (Argenteuil): If my hon. friend wants to know where, let him go to the state of Massachusetts which is, perhaps, the most densely populated state of the union, and where there is possibly more employment in the way of manufacturing pursuits than in any other state. Am I wrong in making that statement? What is the ratio between Canada and Massachusetts as regards employment? Does my hon. friend know that in Massachusetts to-day there are people who wish to emigrate to Canada, who are out of work, and that in a highly protected country like the United States? If he does not know that, he can get that information very quickly. There are more men walking the streets in the large manufacturing communities of Massachusetts and the central part of New York state than there are in Canada to-day. What do the employment figures show? I am not going into details because I do not want to deal with the question at any great length. Is it not striking that hon. gentlemen opposite are continually preaching to us about unemployment? Since January 1, 20,000 people have been added to the payrolls of Canada, according to the Bureau of Statistics. These people have gone, not into the logging camps, nor on to the farms, but into the manufacturing industries of Canada. My hon. friends are fond of talking about the exodus to the United States. During last year 41,000 Canadians who had been in the United States for six months and over returned to Canada. Are these figures worth while considering?

Mr. STEVENS: How many went south?

Mr. STEWART (Argenteuil): I have not the figures. I heard the leader of the opposition speak of almost 100,000.

Mr. MEIGHEN: The minister never heard me say that.

Mr. STEWART (Argenteuil): Then I will take it back.

Mr. MEIGHEN: The number is twice that.

Mr. STEWART (Argenteuil): It is growing.

Mr. HANSON: How many people left Canada in January according to the government reports?

Mr. STEWART (Argenteuil): A great many visitors go to Florida in January.

Mr. HANSON: Over 9,000 people left this country in January to locate permanently in the United States.

Mr. STEWART (Argenteuil): As regards the index figures of employment in the United States, based on January, 1920, as 100 per cent, I have gone carefully into the matter and I have been somewhat astounded at the results that are shown. The index figure shows 80.4 per cent, a reduction of 19.6 per cent from normal employment throughout the whole of the United States, while the index figure for Canada shows 80 per cent at the end of February this year. These figures are not so very far apart for a country so highly protected as the United States, where nobody is out of employment, but where everybody is happy, having a full dinner pail and sufficient to buy stockings for the children about which my hon. friend was complaining this afternoon. These are figures one cannot pass very well without comment. I have heard my hon. friends opposite refer frequently to the optimism of Sir Henry Thornton. I am not going to refer to anything he has said in an optimistic way, but I want to refer to one thing that he has said because it affects the hon. member for Fort William and Rainy River (Mr. Manion). Sir Henry Thornton, in making the financial statement which was published by the Montreal Gazette, which is a good Conservative paper, one not liable to quote any statements that are not reliable as regards business conditions, said that from Fort William eastward along the line of the Canadian National Railways in 1923, 112 new businesses were established, and in 1924, 200 odd. My hon. friend said this afternoon that something like 2,200 had gone out of

business. I want to tell him about some that have gone into business, and those 200 odd manufacturing institutions established in 1924 along the line of the Canadian National Railways employ 8,000 persons. I give that for the benefit of the hon. member for Fort William and Rainy River.

Mr. MANION: There is a great deal of unemployment in Fort William, and if the minister would give me a list of these places, I shall be glad to send it to Fort William.

Mr. STEWART (Argenteuil): I shall be glad to furnish my hon. friend with a list of those places.

Mr. MANION: A number of businesses in Fort William have gone out of business and we can supply those plants with men.

Mr. STEWART (Argenteuil): My hon friend said that we were going to ruin the implement business. What has happened to the Massey Harris Company this year? I do not know where they get the money; perhaps the hon. member for West Toronto (Mr. Hocken) will know; but for some unaccountable reason during 1924, that disastrous year, for the first time in four or five years they paid a dividend of $68,000.

Mr. SPENCE: They did not make it out of the business, for they did nothing. They are not doing half the business they used to do.

Mr. STEWART (Argenteuil): I have the greatest respect for my hon. friend, and I said I do not know where they got the money. They are anxious just now to secure some of the money they lost in Germany, but they did not get it from there.

Mr. CHAPLIN: Did they pay a dividend?

Mr. STEWART (Argenteuil): All I know is that that is the statement of the Massey Harris Company.

Mr. MEIGHEN: Not a cent.

Mr. SPENCE: They used to employ 4,000 people. To-day they are employing about 1,000, or 1,500 at the outside. I live near there and I know.

Mr. MEIGHEN: Did the minister observe in their statement that they had bought all the stock of the Batavia company which stock had risen to par?

Mr. STEWART (Argenteuil): I quite believe that.

Mr. MEIGHEN: That is where they got the money.

[Mr. C. A. Stewart.]

Mr. STEWART (Argenteuil): They got the money from Batavia and paid the dividends?

Mr. MEIGHEN: No, they own the stock. They found it profitable to buy the stock in the Batavia company at New York and the stock had risen to par adding to the assets and profits of the Canadian concern. They paid no dividend at all.

Mr. GRAHAM: They must have had some money to buy the stock.

Mr. STEWART (Argenteuil): I did not notice that the International Harvester Company, which is perhaps the best barometer of business conditions as regards industrial employment in the United States, were paying extensive dividends.

Mr. MEIGHEN: Did the minister notice that in the Massey-Harris report it was stated that Canadian business was 60 per cent last year of the year before.

Mr. STEWART (Argenteuil): No, I did not notice that.

Mr. MEIGHEN: It is important.

Mr. STEWART (Argenteuil): I am glad my hon. friend noticed the $68,000 because I thought that would be contradicted too. But this is a fair example of the arguments that are made in regard to this tale of woe which we hear from hon. gentlemen opposite as a result of the reduction in protection that has been inaugurated by this government. I was considerably interested in the speech of my hon. friend from Northumberland (Mr. Snowball) this afternoon, who gave us some ancient history. I want to refer to conditions that existed in this country in years gone by inasmuch as they were mentioned by the hon. member for West Toronto (Mr. Hocken) the other night in his speech. The hon. gentleman is not in his seat at the moment but he agreed the other day with what I said in this regard and I promised at the time that I would say something more about those conditions when I had an opportunity in this debate. During the period in which we enjoyed the highest protection that Canada has ever witnessed, that is to say, from 1888 to 1894, we saw the hardest times in this country which the people of Canada have ever experienced—times indeed such as I trust will never recur. My right hon. friend smiles.

Mr. MEIGHEN: Yes.

Mr. STEWART (Argenteuil): Well, he was in school in those days but a few of us old fellows still remember that period. Personally,

I recall those days with very distinct regret inasmuch as I lost any little money I did have up to that time. I sold pork dressed taken to the market in the town of Barrie for $4; I sold my wheat at 60 cents a bushel, my peas at 50 cents, and I sold three-year-old steers at $19 a head, and then I almost had to beg the butcher to take them. And my hon. friend from Northumberland this afternoon depicted exactly the same conditions as existing in the old province of New Brunswick in former days; he pointed out precisely the same thing. The other night I brought to the attention of the hon. member for West Toronto when he was speaking that in those days one could see on a visit to Toronto a line of men marching down Yonge street on their way to the parliament buildings and the city hall to ask for bread or work. Perhaps my hon. friend from Parkdale (Mr. Spence) will also remember those occasions; although he is not as old as I, his memory I think will carry him back pretty well to similar conditions. Now I mention this because it has a bearing on what hon. gentlemen opposite are always preaching, that is, that the panacea for all our ills is increased protection with a view to increasing manufactures and so providing employment. Well, protection did not bring about any such result at that time, and I know of no country in the world, nor can any hon. gentlemen opposite point to one, where protection can be carried on to better advantage than in the United States. That country does not export more than 8 per cent of all its products; except for that small quantity it consumes practically all its output, with a population of 120,000,000. But hon. gentlemen must remember that the United States enjoys climatic conditions which Canada does not; and I will venture the assertion that the position would be different here if it were not for our seasonal employment. In the building trades, in every outdoor work, in railway construction and maintenance and in a dozen different industries, in agriculture, where the men are thrown out of work for three or four months, there is bound to be unemployment during a part of the year. Such is not the case in the United States, nor can that country be compared to Canada in that respect. But after all are the people there any more happy than Canadians, or are they doing any better in the United States than the people are in Canada? Are conditions any better to-day in that country? Let me give one more example. The ex-Minister of Finance (Sir Henry Drayton) the other day, speaking of the railway situation, said: There is unemployment on the railways, and there has been a reduction in traffic, the true barometer of the business condition of the country. But while there have been reductions in the Canadian National Railways' net earnings

9 p.m.

the hon. gentleman forgot to mention that the reductions in the net earnings of the Canadian system had been twice as much on the American side as in Canada.

Mr. MEIGHEN: But the year before the increase in the earnings on the American side was several times what it was in Canada. That is why the reduction took place.

Mr. STEWART (Argenteuil): My hon. friend is always talking about the year 1924.

Mr. MEIGHEN: As compared with 1923.

Mr. STEWART (Argenteuil): Hon. gentlemen make the heavens ring with their denunciation of the wrongdoings of this government, whose policy they want the country to believe is bringing destruction to Canada. But I have shown conclusively that the United States is not the paradise hon. gentlemen paint it; it is not in the happy condition they would have us believe; and high protection there cannot prevent deflation. Indeed, they suffer from this in the United States practically to the same extent as we do in Canada, and the tariff has nothing to do with it. I agree with the statement of the hon. member for West Toronto, in answer to a remark of mine with respect to the condition of the country in 1893, that it was not a result of the tariff; it could not be attributed to that source but followed naturally a period of inflation. Let me say to hon. gentlemen opposite that protection will always bring inflation, over-capitalization and over-industrialization in any country whatever; and deflation will ensue as surely as night follows day.

Mr. STEVENS: The hon. gentleman says that protection always brings inflation.

Mr. STEWART (Argenteuil): Yes.

Mr. STEVENS: Will he say that the inflation that took place in all European countries during the last ten years was due to protection rather than to war conditions? Further, was protection the policy in those large European countries before the war?

Mr. STEWART (Argenteuil): I am not going to discuss the European countries but I will take the statement of the ex-Minister of Finance who the other day told us that

France was in the happiest condition of any country in the world by reason of the fact that she was highly protected and could therefore make splendid progress. He said that over 800,000 houses had to be reconstructed in France as a result of the war. Well, he could have gone on to tell us that millions upon millions of dollars had to be invested in France for the rehabilitation of the country. Undoubtedly that was true.

Sir HENRY DRAYTON: Should we have been better off in this country if we had had all our houses and factories destroyed?

Mr. STEWART (Argenteuil): Certainly not.

Sir HENRY DRAYTON: Then let me tell my hon. friend that the work was done almost entirely by the first of January 1924 and the men are all working now in the factories they built.

Mr. STEWART (Argenteuil): When the war ended, so far as Canada was concerned, we enjoyed for a period of a year or two considerable prosperity. Why was that? Because we were engaged in the re-establishment of civilian life, and that is why we had employment to such a marked degree at that time. And my hon friends did perfectly right to encourage it; in every province it was the same.

Mr. DUFF: And the very reason for building the Canadian merchant marine was to provide employment.

Mr. STEWART (Argenteuil): Throughout the length and breadth of the country the population was changing its labour from the making of war material to the manufacturing of depleted civilian supplies. That was what made us prosperous for a year or two after the war, and to the same fact we must attribute in large measure the prosperity at present enjoyed in France. Now, I have no quarrel with that; but undoubtedly such is the case. My hon. friend however is arguing that because of protection France is prosperous, whereas the condition that exists there at the present time is due to the fact I have stated. I have dealt with the United States. I think it is a fair assertion to make and a fair assumption to arrive at with respect to conditions in France.

Mr. SHAW: How could the hon. minister expect much unemployment in France with approximately one million men in the army?

Mr. STEWART (Argenteuil): Of course, that would help a great deal. My hon. friend (Mr. Stevens) this afternoon dealt with our adverse balance of trade with the United States, and while he was rather careful not to stress too much the question of protection, he did say that until we were in a position to pay the interest charges on the financial investments of American citizens in Canada by our trade with the United States, so long would we go on piling up the mortgage indebtedness that was being placed upon us by them. Well, complaint is constantly being made that we are allowing our raw materials to go to the United States in the shape of pulp, wheat and other products that might be manufactured in their entirety in Canada. So far as the pulp business is concerned, I think the situation will cure itself rapidly. If my information is correct, we are going to have two large mills established by American interests in the vicinity of this city, and efforts are being made for the manufacture of the product in Winnipeg, so that more and more we will be manufacturing our pulp supply. But that has nothing to do with the issue raised by my hon. friend. He would, as I take it, increase the tariff, he would manufacture more than ever, and he would ship the finished product into the United States. At once the question arises in my mind, if our neighbours to the south are such horrible sinners that invariably when they find a manufactured product coming into their country they raise the tariff against it, how in the world is my hon. friend going to increase our export trade with our neighbours by manufacturing these raw materials?

Mr. STEVENS: My hon. friend did not get my point correctly. I said that I would so frame our fiscal policy as to divert a substantial portion of the purchases now made in the United States either to goods manufactured in Canada or in Great Britain and on the continent.

Mr. STEWART (Argenteuil): My hon friend's contention, I take it, was that we export to the United States large quantities of our raw materials that we should manufacture ourselves.

Mr. STEVENS: My hon. friend has not got me correctly.

Mr. STEWART (Argenteuil): My hon. friend said: We will reduce our manufactured imports from the United States and increase our manufactured exports to them. Does he expect the United States to be more generous than they have been in the past? I have not noticed any generosity on the part of our American friends in matters of trade. But I am not concerned whether they are generous or not.

Mr. STEVENS: Neither am I.

Mr. STEWART (Argenteuil): The problem we are concerned with is how we can manage our own affairs in the best interests of the Canadian people, let them raise the tariff as high as they please in the United States. But my hon. friend will not cure the difficulty. If that is his solution for preventing the Americans taking a mortgage on this country, then I fear that in the way he stated it this afternoon, it will not be effective to any very appreciable degree at all events. Do we not want American investments in Canada? If we are going to succeed, shall we not require millions of dollars to develop our natural resources? They cannot be allowed to lie undeveloped. The money must come from somewhere, and I would be pleased, indeed delighted, if all of it were to come from the Old Land, but I do not believe we can expect this, although I think we may expect English capital in increasing volume. Needless to say, we cannot expect it at the rate we hope if we are to succeed in the development of our resources. Then if this argument for protection is not going to help us in that direction, I fail to see how it will help at all. I am not going to raise any wail about the agriculturists of Canada. I think in days gone by hon. gentlemen opposite have said some rather harsh things about conditions in the Dominion and the inactivity of this government because we did not reduce the tariff to help 50 per cent of our population engaged on the farms. Undoubtedly Canada is a desperately hard country to govern. I think everyone who has had a turn at the job will admit that. In central Canada we have a group of men who are engaged very largely in manufacturing, or at least who make the most noise about it and say, "We want protection." Not protection in a moderate degree, not protection that will put them on an equality, as they fondly remark, with their fellows in other countries, but protection that will give them special privileges. That is the demand throughout this part of the Dominion. But I cannot believe that their view is shared by a very large proportion of the people in eastern Canada. Then in the Maritimes the people are very much in the same position as they are in western Canada. My hon. friend from Northumberland (Mr. Snowball) quoted this afternoon a statement made by an ex-minister, Mr. McCurdy, who sat with the right hon. leader of the opposition in the government over which he had the honour to preside, that he did not believe a policy of protection was in the best interests of the people of Canada. So I think I am safe in assuming that the people of the Maritime provinces are a unit with the people of western Canada in desiring that we have at least only a moderate tariff for the benefit of Canadian industries.

It has been stated, Mr. Speaker, that I am an out-and-out free trader. If I ever entertained that idea I had to give it up during the war. I well realize that we cannot have free trade in Canada, I think I have stated that on more than one occasion since I came to this House, but I have been depicted as one member of this government who would wish to destroy every vestige of the tariff in order to bring about free trade. I never made any such statement; I do not make it now; but I most emphatically say I do not believe that adequate protection, or high protection, that our hon. friends are so fond of demanding, is either necessary or in the best interests of the country.

Mr. MEIGHEN: Does the hon. gentleman believe in protection at all?

Mr. STEWART (Argenteuil): Not if you define protection as "adequate protection." I believe in a tariff for revenue because I conceive that we cannot change conditions in this country.

Mr. MEIGHEN: Does the hon. gentleman believe in inadequate protection?

Mr. STEWART (Argenteuil): There is no such thing. "The animal does not exist."

Mr. MEIGHEN: Does he believe in protection at all? Does he want it continued in Canada?

Mr. STEWART (Argenteuil): Not as protection.

Mr. STEVENS: You want it disguised?

Mr. STEWART (Argenteuil): No, I do not want it disguised. That is where my hon. friends become absolutely ridiculous at times. There are only two things in their opinion. One is protection, as they call it. Whether it is a tariff for revenue or high or low protection, it is protection. The other is free trade. That is the argument they like to present, and that is what they would wish to mislead the public with.

Mr. MEIGHEN: Will the hon. gentleman explain why the government is increasing the duty on slack coal? Is that just for revenue?

Mr. STEWART (Argenteuil): Partly, yes.

Mr. MEIGHEN: What is the rest?

Mr. STEWART (Argenteuil): Mr. Speaker, I have tried to depict the difference between hon. gentlemen opposite and ourselves in respect to this matter. We are not going to jeopardize industries in this country. We carefully surveyed the whole field last year, and we did no injury to industry. What we did last year had the result of reducing prices on farm implements to the agricultural community, and the reductions then made did no injury to the business which they affected. Hon. gentlemen opposite have said: It is not what you have done, because you have not done anything—

Mr. MEIGHEN: Oh no.

Mr. STEWART (Argenteuil): If that is not a fair statement of what hon. gentlemen opposite have said, my hearing must be very defective. It is not what you have done, they say, because you have done nothing, but what you are going to do, and that man Stewart from western Canada is the biggest sinner of the lot; watch out for him! That is what has been said by hon. gentlemen opposite on more than one occasion; it has been said from platforms in this country. I want to say here and now that I do not wish to touch the tariff upon any industry until I know beyond any question of doubt that I am not going to do injury to that industry.

Mr. MEIGHEN: Is not that protection?

Mr. STEWART (Argenteuil): No, it is not.

Mr. MEIGHEN: What is it?

Mr. STEWART (Argenteuil): It is simply allowing an industry to get started and get under way.

Mr. MEIGHEN: By the tariff.

Mr. STEWART (Argenteuil): Not by imposing a tariff, for the tariffs are in existence already. My hon. friend would like to lead me away from the question I was attempting to discuss.

Mr. MEIGHEN: Oh no. Keep right on.

Mr. STEWART (Argenteuil): Yes, he would. He would be glad to lead me away from this question. What I was talking about was the tariffs that were in existence, and that have been in existence. I was not talking of tariffs on new industries, but of the tariffs in existence to-day. I made a plain statement. So far as I am concerned, I have been asking for the board that is to be established, in order that I and other members of this House might have full information as to the conditions of the manufacturing industries in this country, so that we might know absolutely what we were doing before we attempted tariff revision of any sort—usually downward, I admit, because the record of this government has been that ninety-nine and one-half per cent of its tariff revision has been downward. My hon. friend from Northumberland (Mr. Snowball) gave a list of articles this afternoon on which the tariff has been reduced; it will appear in Hansard, and I commend it to the consideration of hon. gentlemen who have been complaining that we have not given sufficient reductions in the tariff and that we have not made sufficient reductions in taxation. That is the answer that I desire to make to the members of this House and to the country.

Mr. GOULD: Would the minister kindly define what the phrase "the death knell of protection" means?

Mr. STEWART (Argenteuil): Yes, I shall be glad to do that. The death knell of protection has been heralded from every platform in every election in this country.

Mr. STEVENS: Do not forget where it originated.

Mr. STEWART (Argenteuil): I am not forgetting that, but hon. gentlemen have used the phrase not for the purpose of commending the government of this country.

Mr. STEVENS: No chance.

Mr. STEWART (Argenteuil): Nor for the purpose of commending the hon. gentleman who first used the phrase. They have used it in the hope that they could lead people to believe we had wreckers here in this government who would pay no attention to the industries of this country at all, and who had no thought whatever for the capital invested in those industries. That is the purpose for which the phrase has been used by hon. gentlemen opposite, but it did not have the desired result.

Mr. STEVENS: Did not the minister last year in the budget debate declare that the substantial reductions made last year were simply a movement in the direction the government was taking, and that it sounded the death knell of protection?

Mr. STEWART (Argenteuil): My hon. friend is probably fairly correct, yes. It did indicate the direction in which we were moving. I have never denied that, and I want to repeat now what I have said before, so that my hon. friend will not forget it, and so that hon. members of this House will know

exactly where I stand on this question. I do not believe in high protection. I do not like protection of any sort, but there is a condition in Canada that this government or any other government must take into consideration, and this government will have to move with caution, I hope, but always in the right direction.

Mr. STEVENS: What is the right direction?

Mr. STEWART (Argenteuil): Well, I differ with my hon. friend. His right direction is upward.

Mr. MEIGHEN: What is your direction?

Mr. STEWART (Argenteuil): My direction is downward wherever possible. I hope that after this speech there will be no misunderstanding in the minds of hon. gentlemen opposite.

Mr. MEIGHEN: Will the minister answer the hon. member for Assiniboia (Mr. Gould)?

Mr. STEWART (Argenteuil): I answered him.

Mr. MEIGHEN: I did not hear it. Nobody else did.

Mr. LAPOINTE: Mr. Speaker, cannot we have order? I want to listen to my hon. friend's speech, not to the leader of the opposition.

Mr. STEWART (Argenteuil): It will take me just a little longer. I have a few things to say and I am going to say them.

Mr. SPEAKER: I would again draw to the attention of the House that there should be no interruptions. Of course, now and then it is quite natural that an hon. member should ask of the gentleman who is addressing the House permission to put a question, or ask an explanation of something, but when the interruptions are too frequent, the privilege degenerates into an abuse. I hope the House will let the hon. gentleman continue his speech.

Mr. STEWART (Argenteuil): Mr. Speaker, I think I have said sufficient to indicate that the country is not in such a deplorable condition as hon. gentlemen opposite would have us believe. I think I have said sufficient to show that the accounting of the country is safe in the hands of the Acting Minister of Finance, and that the accounting reflects the true condition of the railway situation in Canada. I think I have said enough to convince even hon. gentlemen opposite that the panacea for all our ills, be they small or great, is not increased protection.

Now may I speak for a moment on the outlook for the future? We have to remember our situation, our climatic conditions our location upon the North American continent, with a rather small area northward, and a tremendous area east and west, with a population somewhat diverse, and with, I will admit, some difficulties, owing to the fact that markets have been shut off by our neighbours to the south; but I do not admit for a single moment that higher protection would be the cure for that difficulty. We have vast undeveloped natural resources, particularly of coal, and I want to say a word or two on that, because hon. gentlemen are anxious to know what we are going to do about the coal situation.

A great deal has been said about a national coal policy for Canada. For the last couple of years the officers of my department have been devoting some attention to the coal situation in Canada, and if I may be permitted to take a moment or two, I should like to mention a survey that we made last year in connection with coal mining operations in the United States as they affect Canada. We have an abundance of coal, but unfortunately it is situated in the extreme east, in Nova Scotia and New Brunswick, and in the far west, in western Alberta and British Columbia. Throughout the whole area of central Canada no discoveries of coal have been made up to date, and from year to year we have to import in the neighbourhood of twenty-two or twenty-three million tons of coal from the United States. It has been said that in a cold country coal is just as vital to the residents as bread. Having that in mind we thought the first problem to be tackled was that of domestic fuel. I find that year by year we import into Canada about 4,000,000 tons of domestic coal. This hard coal, or anthracite coal, comes into the country as far west as Winnipeg and even into the Maritime provinces. The quantity imported into the Maritime provinces is very small it is true, and the bulk of the imports go into the provinces of Ontario and Quebec. Last year we voted a sum of money for the purpose of assisting in the transportation of domestic coal from the Maritime provinces and western Canada. Owing to the strike nothing was done in western Canada last year, but we do hope, and I am going to ask that a sum be voted again for this purpose, that we shall have a movement of at least fifty or one hundred thousand tons of coal in train lots with full sized cars drawing capacity loads in order to establish a rate upon this coal, and that we shall get it moved during the summer months when the rolling stock is idle and when

it is a slack time in the mines of western Canada. If that coal can be mined for $3.50 a ton, and can be moved eastward at a rate of $6 a ton I think it can go into the territory of North Bay, and the country north of that in Ontario serving the territory from that point westward to the coal fields themselves. I think that this is about all we can expect in the way of an increased market for Alberta coal and I will give you my reasons for that assumption later. But I think that that will possibly mean the movement of a million or a million and a half tons of Canadian coal. Inasmuch as this is a new country in which a great mineral development is going on there will be undoubtedly a large field for Alberta coal if the developments which we expect take place there.

Now let us take the country to the east. No one will deny a difficult situation exists in the mining fields of Nova Scotia and New Brunswick. For some reason or another high costs are prevalent and this with the inaccessibility of the mines to their markets by railways make it difficult for them to meet American competition, the mines in the United States being more conveniently situated and the cost of production lower.

Let me now deal for a moment or two with the American situation. We made a careful investigation of the mining fields of the United States last year and we found that in the Pennsylvania field, in the Illinois field, in the Kentucky field, and in the Virginia field coal is being mined at a cost on the average of $2 per ton. That, of course, does not apply to anthracite coal with which I will deal later. The cost of the railway haul is on the average $3.50 per ton making it possible to bring that coal into Montreal, Toronto and even as far westward as Fort William. This being the case the evolving of a policy that will bring to the consumers in that part of Canada coal from the east to the west and meet the competition of the American mines is rendered very difficult. Furthermore we have discovered that they can mine about 800 million tons of coal a year in the United States, their annual consumption being about 500 million tons. From all that we can discover they have practically an inexhaustible supply, and with the facilities they have they can always supply their own market and have a surplus. I mention these facts because they would indicate that we cannot expect that in the near future at all events the cost of mining will go up in the United States; we can expect that for the next few years the production cost will be about $2 a ton and the railway rate to Canadian points what I have just mentioned. That being the case and there being this importation of 4,000,000 tons of anthracite—which is a very expensive fuel, used by rich and poor alike for the heating of their homes and for cooking purposes almost universally in this acute fuel area—we thought we would devote our attention to the domestic fuel problem, and we began to look into the possibilities of both peat and coke. Something was said the other day about our having discovered a process whereby peat can be manufactured economically and placed upon the market at a reasonable price within a short hauling distance of the point of manufacture. But our attention has been particularly directed to the substitution of coke for anthracite. High grade coke can be manufactured in the Solvay ovens, the by-product oven, to retail for at least $2 a ton less than the rate at which the acute fuel area is now being supplied with coal from the anthracite fields of the United States. So that in making this change we would reduce the fuel cost to the consumer by $2 a ton. There is one difficulty in the way and that is taking care of the by-products. The most prolific by-product is gas and the question arises of the amount of gas that can be consumed in a given locality. It must be borne in mind also that gas has to enter into keen competition with electrical energy that is now being used extensively for cooking, and of course gas must be sold at a reasonable price. But we think we can bring this about. We have had a practical demonstration in the city of Hamilton. The experiment has been in progress for over a year with splendid results. We know now that the production cost will allow the fuel to be sold for $2 or $2.50 a ton less to the consumer than the anthracite product which he has been buying in the past. That will mean a tremendous saving to the people in this area. I intend later on to bring down a bill to assist this project in some measure.

Mr. CARROLL: The minister said the cost of coal production in the United States was $4.

Mr. STEWART (Argenteuil): Not in the United States.

Sir HENRY DRAYTON: The minister said $4.

Mr. STEWART (Argenteuil): I am sorry if I made that statement.

Mr. FORKE: The minister mentioned $2 later on.

Mr. STEWART (Argenteuil): I meant to say that universally over there it was $2. If I mentioned $4 I meant to indicate that was

the cost—even a little more than that, it is nearly $4.50—of production per ton at the Canadian mines. I want to say frankly that I think something should be done, and can be done to reduce that production cost in Canada; it will mean a very extended market for the coal industry in this country. But coming to the situation as it exists, I said something about hoping to establish coking industries in the east—at Montreal, at Quebec, and at other large cities—in order that we might supplant as far as possible the importations of anthracite into the area in question by the substitution of the slack coal of Nova Scotia, which can be coked and makes a high grade product. That is what we hope to accomplish and thereby give to the Nova Scotia mines—in addition to the advantages they will otherwise get—an annual consumption in Canada of at least one and a half millions tons of a product that up to the moment has to go upon the dump very largely.

You will note Mr. Speaker, that there has been coming into Canada since 1921 particularly, an increased quantity of slack coal which is sold at the pit mouth in the United States for about $1 a ton and which makes a very cheap commodity and one which can be landed in Canada at an exceptionally low rate. There have been developments in the grates used in industry for the purpose of burning slack, roller grates having been placed in many of the manufacturing establishments, and no doubt fuel costs have been very largely met by this process. But we have discovered that there has been a tremendous increase in the consumption of slack, and one of the difficulties we have experienced at the border is that of preventing the entry into Ontario and Quebec markets of large quantities of slack that should be listed as run of mine. Consequently we have had a considerable loss of duty on importations of this product, so much so that this coal has penetrated into Winnipeg and westward and taken from the Alberta mines the bituminous markets that formerly at least for a few years, they held. I am bound to say that it has had a rather demoralizing effect both east and west upon the coal fields of Nova Scotia and the coal fields of Alberta. I hope that the increase of this duty will cure this situation and that we will not be troubled at least in the future with the difficulty of ascertaining whether or not a large quantity of this commodity has been coming into Canada paying only fourteen cents duty when it should have paid fifty-three. Three cents is not much of a reduction, but remember the Canadian railways that purchase their coal in the United States will benefit to an extent. Furthermore I wish to say that very careful investigation was made with respect to this particular increase and its effect upon the manufacturers, and I think I can assure the House that not one-fifth of one per cent will be added to the overhead by the increased duty even upon manufacturing industries using slack coal in its entirety. So that no particular harm will be done, but it will increase the market for the coal fields east and west, and thereby assist an industry which has been having a rather difficult time. It is true the duties are not always responsible for these difficulties. Strikes have been prevalent on these properties. We had a strike in Alberta during the whole of last summer and a strike is in process in Nova Scotia at the present time, and these strikes have a very demoralizing effect upon the coal industry. But I say—and I want to emphasize the point—that in some way or other there must be a reduction in mining costs both east and west in order that the operators may place their commodity on the market at a more reasonable price than they have been able to do in the past, I do not think they can complain very much about the railway rates.

Mr. MILNE: I notice by the press that the railway companies of the United States have contemplated a reduction of fifty cents a ton in freight. Has the minister heard anything of that?

Mr. STEWART (Argenteuil): I also noticed that statement. It was stated that it was in order to meet the increased duty, but so far no notification has gone out of any decrease, and I doubt if there will be any decrease for the very good reason that they are hauling coal as one of the cheapest commodities they move in the United States. Freight rates in the United States are somewhat higher than in Canada, but that is not true of the coal movement. I can give my hon. friend the figures, but I do not wish to detain the House longer in connection with the matter. It will be discussed at greater length when the bill is brought down.

In conclusion I do not see that we need have any gloomy forebodings of the future of Canada. In agriculture we have simply touched the fringe of things. I should like to make a brief statement in that connection. Referring to farm lands for example, as nearly as we can estimate we have about three hundred million acres of good farm land, suitable for agriculture and grazing.

The improved farm lands used for agricultural purposes do not aggregate more than sixty million acres. In agriculture there is room for tremendous expansion; we must have more than fifty per cent of our population engaged in that industry and I hope that ratio will always be maintained. A great deal has been said about the home market. No matter how rapidly that market will increase, it will not help the man upon the land to any appreciable extent because his price for the next decade or two upon the main articles of production will be fixed not in Canada, but very likely in Great Britain.

Mr. LADNER: Do those figures include all farm lands?

Mr. STEWART (Argenteuil): Those are all the farm lands of Canada. I mention that in order to show the possibilities of the tremendous expansion in this particular respect.

Something has been said about the water powers and I should have mentioned the question. My hon. friend from Vancouver Centre referred to that subject this afternoon. He said the imposition of an export tax on electric power meant but one thing in his estimation, namely that we intended to encourage the export of power. So far as I am concerned, Mr. Speaker, in my department, and so far as I am concerned as a member of this government, I have never heard anything of the kind; rather to the contrary. There is a law upon the statute book at the moment authorizing us to issue licenses for only one year, and so far as I can ascertain that is all that the government intend to do in that direction. Whatever their intention may be, as a member of the government I have not heard of any change of policy. What I do say is that notwithstanding the fact that we have only developed to the extent of three million odd horsepower out of a possible development of forty-one million horsepower, I think it is good business to keep the cheap power in Canada for the development of Canadian industry, and I see no objection, and my hon. friend opposite sees no objection, to the imposition of an export duty. They all have their peak loads and that is what they are exporting at the present moment to a large degree. I see my hon. friend opposite shaking his head. I believe the Hydro Electric Commission at Niagara have a long contract for the export of power, but I do not know of any other case. I was making inquiry as to that, and so far as I know there is only the one contract. I think that as one means of assisting the development of power we are entitled to an export tax on the power which goes out, to assist in the development of industries which will come into competition with our own. So that we have tremendous possibilities for developing this power, and there too do we not need the capital for Canada? We will find the capital in Canada for the development. We can point with some pride to the fact that eighty per cent of the debt of Canada is owed to the people of Canada, and the interest goes to the people of Canada. But we will need that money and additional millions of money for the development of water power alone in Canada, for the development of agriculture and for the development of our mining and fishing industries.

On the authority of the best mining authorities in Canada the statement is made that we are only at the beginning of things so far as mining is concerned, that there are immense possibilities in mining, that the development in the next few years will be phenomenal, that the eyes of the world are turned towards Canada, and that the increase in mining activities in Ontario and Quebec alone has been unprecedented.

So far as fishing is concerned, in my own province and in Saskatchewan and in the northern waters of Manitoba nothing has been done in the way of fishing development.

Mr. FORKE: Oh, yes.

Mr. STEWART (Argenteuil): My hon. friend is thinking of lake Manitoba. We are talking now of the country away beyond that. Hudson bay is teeming with fish, and what has been done there for the development of the fisheries? I point to these things with a spirit of optimism, in the hope that this gloomy foreboding with respect to the future of Canada is rapidly nearing cessation. Does it look as though we had reached the end of our tether? We are overbuilt in railways. That is quite true, but we have the necessary natural ressources to warrant the building of every one of these railways. All we need is the people to come in and assist us in developing. That is what is required in Canada.

Referring to our forest resources, perhaps we cannot be so optimistic, but I want to say that we must change the situation with respect to the destructive forces as they affect our forestry situation in Canada, in order that we may catch up with the depletion of the forests; in other words that we must grow annually as much as we cut. I should like to undertake, if it is at all possible, the establishment, in my hon. friend's province of Manitoba, of a plant that will manufacture

pulp and that will be under restriction to cut in such a way that after they have cut over the territory, they can begin again where they started and have a sufficient growth to carry on for an unlimited time in a forest that will be set aside for that purpose.

These are some of the facts that I wish to bring to the attention of hon. members. I have spoken at greater length than I intended. I have tried to point out to hon. gentlemen opposite that the picture they have painted is not the picture that should be painted of Canadian industry or agriculture, but rather that we in Canada are suffering only in common with the United States, Great Britain and the continent; that we are going through exactly the same experience. I wish to point out the fallacy that hon. gentlemen hold up to this House and the country, that a change in the tariff, high protection, will be the panacea and cure for all our ills. Upon that statement I rest content, leaving it to the judgment of the country and of the House.

Mr. M. C. SENN (Haldimand): Mr. Speaker, I wish to state very briefly my reasons for participating in this debate on the budget proposals which have been brought down by the Acting Minister of Finance (Mr. Robb). May I add my congratulations to those that have already been extended to him on the able and concise way in which he delivered his address to the House? I cannot, however, extend my congratulations any further. I am afraid that the government have failed to gauge public opinion correctly and to realize the needs of the country respecting economy and tariff adjustments. These proposals which are before the House at the present time are certainly not affording relief to industry which has been suffering from high taxation and which requires the help of protection. On the other hand, the statement made by the leader of the Progressive party (Mr. Forke) the other night proved clearly that those who are looking for further reductions in the tariff are not satisfied either. The unfortunate part of the whole situation is this, that the people of Canada look in vain for any measure of relief for the unfavourable conditions under which they are labouring, conditions which have, in a large measure, been brought about by the ineffective policy of the present government.

I listened with a good deal of attention and interest to the address just delivered by the Minister of the Interior (Mr. Stewart). He made a very serious attempt to prove that there is no cause for alarm and that Canada is prosperous, at least to a certain extent. But he will have a good deal of trouble in convincing the people of Canada of that. Wherever you go you will hear the people asking: What is the matter with Canada anyway? Why are we not prosperous? Why is there so much unemployment and hard times? It cannot avail for the government to shut their eyes to this situation and to sit quietly by without attempting to do anything to relieve it. There are plenty of indications of the lack of prosperity and of hard times. Let me indicate to the House a few which are apparent to everyone and about which there can be very little dispute. There has been enough talk in this House of unemployment to convince everyone that there is a certain amount of unemployment, altogether too much of it, in the country. Again, there has been a good deal of talk already in this session in regard to emigration. Everybody will admit that the number of people who are leaving the country is alarming. Again, we have closed factories, running up into the hundreds, and even into the thousands. We have business failures; we have vacant houses; we have railway deficits; we have decreased revenue such as was spoken of by the Acting Minister of Finance. By no means the least alarming of all these conditions is the lack of confidence which is being displayed by industry, and no amount of talk on the part of members of the government, no amount of statistics such as were given to the House by the Prime Minister during his speech on the Address, will serve to convince the people that Canada is in a prosperous condition. The people who have these conditions constantly before them will be led to contrast the statement of Liberal policy which is outlined in the budget address with the progressive and constructive policy embodied in the resolution that stands on the order paper in the name of the leader of the opposition (Mr. Meighen). That resolution specifies the urgent need for immediate tariff revision, and I am one of those who believes that the protective principle should be applied in any such revision. Customs duties which were adequate twenty years ago are not so to-day. I do not believe in a little dabbling here and there with the tariff, raising the duty a little on coal, making the duty a little lower on some other commodity and so on. That is not what should be done at all. We should have a scientific revision of the whole schedule of tariff rates. When I speak about a revision of tariff rates, I do not mean that in every case the revision should be in an upward

direction. There are some instances in which the revision might be downward and yet afford the necessary protection to allow those industries to exist.

Speaking however, about downward revision of the tariff, one cannot help wondering at the attitude of hon. members to the left of us this session. During the three sessions of parliament which have preceded this one, they made constant and effective attempts towards tariff reduction, and the government were compelled to accede to their demands because they needed Progressive support. But since the beginning of this session I have wondered why the Progressive party have not urged for any further tariff reduction and why they did not take a greater part in the debate on the Address. If they had made those demands during the debate on the Address, I am convinced the government would have been forced to concede them some further tariff reductions. It would appear, however, that they accepted the mandate of the Prime Minister, when he spoke in Toronto, that there would be no further tariff reductions this session. They seem to be making a gesture in the other direction at the present time, but the meekness with which they accepted that mandate would serve to convey to the House one of two things, either that their attitude on the tariff question is changing, or that there is some kind of an understanding between the two parties.

It is true that there have been one or two free-trade speeches from members of the Progressive group during this session. The hon. member for Saskatoon (Mr. Evans) made a free-trade speech during the debate on the Address. Amongst other things he mentioned the inferior quality of goods that were produced by a certain glass company situated in Hamilton that has had to go out of business. He also said that other industries were demanding higher protection because they were lying down on the quality of their goods. I wonder if he meant to convey to the House the impression that the United Farmers of Quebec, in their demand for protection for certain of their commodities, are producing an inferior quality of farm products. I have before me the report of the annual meeting of the Ontario Vegetable Growers' Association at which there was passed a resolution asking for higher protection on vegetables and some other farm commodities. I wonder if the hon. gentleman meant to suggest that they were lying down on the quality of their product. Then we have the woollen and knitted goods industry which has suffered severely as a result of the increase in the British preference and because of the French treaty. I want to deny most emphatically the imputation that the product of our woollen and knitted goods factories is inferior to the product of mills of a similar character elsewhere. It is true they do need protection but they need it for an entirely different reason which I shall attempt to make clear to the House later on.

I want to deal for a few moments with the need of protection, from two standpoints particularly, first from the standpoint of agriculture, and secondly from the standpoint of the woollen and knitted goods industry which I believe is more closely allied to agriculture than any other industry, because of the fact that its raw material is an agricultural product. If proof is required of the urgent need of tariff revision in agricultural products it should only be necessary to compare the Canadian tariff schedule with that of the United States. A year or two ago I made a comparison in the House in that very respect showing clearly that on almost every line of farm products the American commodities can enter this country at a much lower rate than is enjoyed by Canadian goods going into the United States. I have heard different members of the House, particularly to my left and sometimes across the way, make the statement that the farmer cannot be protected. I think my hon. friend from Mackenzie (Mr. Campbell) made that statement the other night. I cannot agree with that contention at all.

I believe that the farmer can be benefited by a proper protective policy in two ways: First, the protective policy should be such as to create confidence on the part of industries, which give employment to our consuming population, and by so doing help to create and maintain a large home market; secondly, if that policy is to be effective our home market must be protected from undue competition on the part of foreign products by imposing adequate duties on all classes of farm products.

By way of illustrating my first argument let me refer to the discussion which has taken place in the House as to the number of people who have left Canada during the past three years. No one will deny that the number is so large as to be alarming. The right hon. leader of the opposition (Mr. Meighen) proved to the satisfaction of the House the other day that a conservative estimate of the number would be approximately 600,000 people. I have with me copy of a bulletin issued by the Department of Labour, called Prices in Canada. On page 22 of that bulletin may be found a weekly family budget. I have made from that statement a list of commodities and the prices of those commodities,

such as are produced from Canadian farms, and I find that the average cost per person amounts to something like $1.66 per week. If these 600,000 people could have been retained in Canada by a wise protective policy they would have consumed at this rate something like $5,179,200 worth of agricultural products per year, or it would have meant they would have consumed $130 worth of products from each of 40,000 Canadian farms. Or, to illustrate this in another way, according to official returns which I have with me, we exported last year 13,648,000 pounds of butter. If each of these people had consumed twenty-three pounds in the year, or less than one-half pound per week, we would have had no exportable surplus at all and our home market would have been sufficient to absorb all our products. During the year 1923 we exported nearly 3,000,000 dozens of eggs, while we imported practically the same amount. If these people had been kept in our own country by a wise policy of tariff protection there would have been no need to export any of our eggs. The same effect would be produced to a greater or less extent in all other classes of farm products. Turning to the other side of the question, if tariff rates on farm products were sufficient in many lines, the American product would be kept out of our markets at a time when our prices are such as to allow a measure of profit over the cost of production. This is nowhere more apparent than in the case of fresh fruits and vegetables, butter and eggs and other farm commodities. The American product comes into Canada at a time when prices are particularly high, and the result is that by the time our own product is ready for market, prices are beginning to drop and the Canadian producer gets a less price in his own market than was obtained for the imported produce. If anyone should enjoy the benefits of the best prices it is our own Canadian producer. The 1919 platform of the Liberal party had free food stuffs as one of its planks. This was intended no doubt to appeal to the consuming population of our towns and cities; but free food stuffs cannot benefit people if their earning capacity is lessened by undue competition in their own line of product.

Customs duties which were adequate on farm products twenty years ago, when the prices of those commodities were very low, are not sufficient to-day, and there is some justification for the contention that the tariff discriminates to a certain extent against the Canadian farmer. If, however, the schedule of rates on agricultural products were thoroughly revised to assure adequate protection, I am sure that this contention would be entirely overcome.

The Minister of the Interior (Mr. Stewart, Argenteuil) to-night talked about a tariff for revenue, and I think the subamendment which was moved by the leader of the Progressive party (Mr. Forke) the other night also had reference to the same thing. Now I contend that a protective tariff is also a revenue tariff and to prove that contention I will give a few figures. Let us look at what happened following reductions in the tariff made by the present government particularly in 1922-23. In 1919 our dutiable imports amounted to $526,494,000, while the duty collected was $158,046,000. In 1924, following reductions made by the present government, our dutiable imports rose to $591,142,000, while the duty collected dropped to $124,114,000; showing that while we imported more dutiable goods, the revenue collected was greatly lessened. On the other hand, let us consider similar figures before and after the Fordney tariff came into effect in the United States. In 1920, their dutiable imports totalled $1,985,865,000, while the duty collected was $325,645,000. In 1923, after the Fordney tariff had come into effect, their dutiable imports were reduced to $1,651,110,000, while the revenue collected had increased to $582,764,000, or 75 per cent. This serves to show very clearly, Mr. Speaker, that a protective tariff is also a revenue producing tariff and is the best and most effective way of increasing our revenue from customs duties.

10 p.m.

A few minutes ago I said that the woollen industry was very closely allied to that of agriculture. Canada is a cold country in winter, and every Canadian is interested in the production and manufacture of wool. The estimated annual consumption of wool in Canada is 70,000,000 pounds on a grease basis, or as it comes from the back of the sheep, and that is the way in which the producer is paid for his wool. Our own product in 1924 was approximately 13,000,000 from sheep and lambs. We exported 6,300,000 pounds, or about one-half of this, while we imported 33,000,000 pounds of wool on a grease basis in the form of raw wool, tops, noils, waste and yarn, but we also imported 40,000,000 pounds on a grease basis in the form of woollen goods further manufactured than yarn. There are about 40,000 farmers keeping sheep in Canada, and they find it a very profitable kind of live stock. Anyone who follows the reports of our live stock markets will see that lambs are selling at a price that is uniform and fairly high. Our Canadian wool is also selling at a

much better price than it formerly did. It is said that the annual consumption of wool in the world to-day is 300,000,000 pounds per annum more than pre war consumption, and yet the number of sheep in the world is less than before the war. In a country with a climate like Canada where people must wear wool for comfort, it would seem that wool growing should appeal in a very direct way to agriculture. The tariff schedules are out of date so far as the wool tariff is concerned and were framed for conditions which no longer exist. What is required to build up the wool production of Canada for the benefit of our farmers and of the wool working industry is a scientific tariff on wool and woollen products to encourage the manufacture of wool in Canada from the raw material as it comes from the back of the sheep through all its processes to the finished article.

Many statistics have been given in this House during the past year or two to show the precarious condition not only of the woollen industry but of the knitted goods industry as well. Owing to the great increase in the British preference in 1922-23, the importation of woollen and knitted goods has largely increased. To show the effect of the increase in the British preference, I have taken from the monthly reports of the trade of Canada the total amount of imports of woollen and knitted goods from Great Britain for the calendar years 1921 and 1924. The amount in 1921 was $22,014,757, and in 1924 $31,430,902; or an increase of approximately 43 per cent. The import of knitted goods in 1921 from Great Britain was $2,897,072; in 1924 from the same source it was $4,369,354, an increase of a little over 50 per cent. A similar comparison may be made of importations of French woollen and knitted goods prior to the French treaty as against importations following that time. The French treaty came into effect in September 1923. For twelve months preceding that date importations from France of knitted and wollen goods amounted to $1,439,748. For the twelve months following that date, the imports were $3,246,813, or an increase of approximately 125 per cent.

This cannot help but have a decided influence upon the market for Canadian products. It is impossible for our knitting factories to pay wages such as they are paying and compete with the product of the cheap labour of Germany, France and Great Britain. I have with me two clippings, one from the Toronto Star of February 3rd of this year advertising French wool pullover sweaters at 98 cents, the other from Eatons spring catalogue of 1925, advertising Paris wool pullover sweaters, knitted of contrasting all wool yarns for 95 cents. It is needless for me to say that our factories in Canada cannot begin to compete with such prices. The result is that these companies which have been loyal to their employees and are endeavoring to carry on in the face of such merciless competition have met with business disaster and are still losing money. I have in my hand a copy of the annual report of one of the largest knitting companies in Canada, in which the company reports a loss of $52,000 in its operations during the past year. I want to appeal in the strongest terms to the Acting Finance Minister for relief. Surely the government will not sit by and see industries which have been built up by years of careful and painstaking effort driven out of existence by foreign competition with which they are entirely unable to contend. It is well known that the average wages of employees of woollen and knitting factories in France and Germany would not permit our Canadian employees to exist at all. I have with me a comparison of the wages paid to woollen operators in England and Canada:

	Yorkshire	Canada
Winders	$ 5 92	$13—$15
Twisters	6 34	13— 15
Spinners	5 77	13— 15
Reelers	6 52	17— 20
Overlookers	17 03	35— 60
Doffers	5 22	13— 15
Warehousemen	12 06	19— 22
Blenders, carbonizers, laborers	12 06	18— 20
Male help in grey room, stock room, packing department	12 30	19— 22
Firemen and greasers	13 89	30—

If we had any guarantee that cheap goods such as I have cited would continue to come into the country after our own factories had been closed down, there might be some possible excuse for allowing them to do so, but the danger is that when our own industries are driven out of business and our markets are in the hands of foreign manufacturers without any competition goods would be dearer than ever. Let me give what the Minister of Finance—whose absence I am sure we all regret—said in speaking about this subject in 1904. I am quoting from Hansard, volume 3, page 4634, of that year. He was referring to foreign manufacturers:

> They are not worrying about the good of the people of Canada. They send goods here with the hope and expectation that they will crush out the need of Canadian industry. If Canadian industry is crushed out, what would happen? The end of cheapness would come and the beginning of dearness would be at hand. Artificial cheapness obtained to-day under such conditions at the expense of dearness at a very near day in the future is not a system of which we

could approve, or that any of us on either side of the House could encourage.

This is exactly what is happening with some of our most important industries to-day. The woollen and knitted goods industry is slowly but surely being depressed and driven out of business by undue competition on the part of foreign competitors. When their resources are finally exhausted and their foreign competitors have our markets to themselves, and Canadian consumers are at their mercy, we will pay dearly I am afraid, for slight advantages we have enjoyed during the period of industrial depression. This will also prove a severe handicap to the production of Canadian wool, an industry which should rapidly increase and be a great source of revenue to the Canadian farmer.

The same is true of the agriculture implement industry, and of certain lines of agriculture as well. Our fruit and vegetable growers, our poultry keepers, cannot compete with produce from the warm climate and cheap negro labour of the southern states. When they are driven out of business by foreign competition, our Canadian consumers will pay dearly for the privilege they have had, of buying cheap foreign goods.

The argument that the public may benefit by the demoralized prices that prevail when an industry is being depressed is unsound, and it amounts to the proposition that the community benefits in the end by the ruin of all its members. According to such an impossible theory the sooner every farmer, manufacturer and labourer is ruined by selling goods under cost, the better off the country would be as a whole. It seems to me that is not a very sound argument.

There is an impression abroad which is too often repeated, that our woollen and knitting factories and other factories are getting a very large share of the cost of the finished article, that is, of the retail price. This is in a great many cases an erroneous statement. I want to give the House the proportional costs in a heavy suit made of Canadian wool, sold at a retail price of $20. The costs are as follows:

Heavy suit of Canadian wool costing, $20

Canadian wool..	$4 10
Cloth mill, wages, overhead, soap, dyestuffs, oils, freight and profit..	2 76
Buttons, trimmings, etc..	1 25
Clothing mfgr., wages, overhead and profit..	4 89
Government sales tax..	65
Retailer, wages, overhead, profit..	6 35
	$20 00

Heavy suit of Canadian Wool costing $35

Canadian wool..	$3 85	11 per cent
Cloth mill, wages, overhead soap, dyestuffs, oils, freight and profit	5 95	17 per cent
Clothing manufacturer, wages, overhead and profit..	13 65	39 per cent
Retailer, wages, overhead, profit..	11 55	33 per cent
	$35 00	

These are actual figures for the early part of 1924, and serve to show that our mills get a very small percentage of the retail price for manufacturing the raw material into the finished cloth.

I contend, and contend very strongly, that if the people of Canada consider it desirable to have a prosperous wool growing and wool working industry which will profitably employ a considerable number of workers to the benefit of the nation, who will consume as raw material a very large part of our own production, they will have to use the same methods as are being adopted by every other protectionist country.

I want to mention one of the budget proposals which I believe will meet with at least some measure of approval on this side of the House, and that is the provision for a tariff advisory board. I think the suspicion on the part of any industry that there is discrimination in the application of tariff rates would be overcome by the appointment of such a tariff board. This proposal is an admission on the part of the government that a tariff is necessary, and that it is only a matter of the amount of the custom duties that should be charged. Of course the success of such a board will depend very largely upon its personnel; they should be men who are fair-minded enough not to allow their prejudices in favour of protection or of free trade to influence them in their decisions. If such men are appointed, I have no fear but that tariff revision will be successfully and thoroughly carried out.

It is not my intention to say anything in regard to the railway situation further than this: that transportation rates are bearing very heavily upon all classes of industry, not only in the Canadian west and in the Maritime provinces, but upon the Ontario farmer as well. I feel very strongly that the management of the Canadian National railways are spending altogether too liberally on rolling stock and equipment. If they would exercise the same economy which other lines of industry are compelled to do in these hard times, we would not be called upon to guarantee bonds to the extent of eighty million dollars a year.

In my opinion there is only one solution of our transportation problem. There will

always be railroad deficits until such time as our population increases and more traffic, both freight and passenger, is obtained because of a denser population. We need more population, and we need more capital to develop our resources.

To encourage these necessities we should have an active immigration policy inaugurated, and I believe that it should be inaugurated simultaneously with the tariff revision which I have advocated. If confidence is restored throughout the country, Canada should develop very rapidly. I am convinced that when the people of this country have an opportunity they will place in power the party who will by means of the policy outlined in the resolution which stands in the name of the leader of the opposition restore confidence, build up industry, increase railway traffic, relieve unemployment, and gradually but effectively bring about an era of prosperity such as a great and growing country like Canada deserves.

Mr. JOHN G. ROBICHAUD (Gloucester): It was with a great degree of sorrow, Mr. Speaker, that at the opening of this session we again have had to make reference to the death of members of this House, and more especially for myself to a late member representing a constituency in my own province. That New Brunswick should have lost two of its federal members in the course of a few months, was a matter of great concern, and I cannot but avail myself of this first opportunity of paying a passing tribute to our late friend Hon. John Morrissy. Few public men in New Brunswick have commanded during their career a greater degree of respect and public confidence than the late member for Northumberland.

The electors of this good old constituency have certainly sustained a great loss, but it is gratifying that in their wisdom they have thought fit to send to parliament, as a successor to their departed member, a man of no less standing than the senior surviving member of the Snowball family. I am sure, Mr. Speaker, that the electors of Northumberland have every reason to be proud of their selection, and that they will continue for generations to adhere to the Liberal principles of those who have been so prominent in the political as well as the commercial history of that industrious and historic region of the Miramichi.

During the past three or four years, there has been a great deal of talk about Maritime rights, so called. Some of my hon. friends, representing constituencies in the province of New Brunswick, have unscrupulously permitted themselves to make this a political issue in various by-elections recently held in my province. That any one public man should attempt to monopolize or champion such a vital issue as the constitutional rights of the Maritime provinces, is a matter which should not be left unchallenged. I doubt very much, Mr. Speaker, the sincerity of these men. I doubt very much if it was not rather political power than Maritime rights that these agitators were trying to attain.

I stated, Mr. Speaker, on the floor of this House last year that if there was such an issue as Maritime rights, it was only in the abstract for, if really there existed a real issue, grievances which could be stated in concrete form, discrepancies would exist here and there, and either one or the other political party would have to assume the blame, but as it is, we are only suffering from the sequence of the national growth of Canada, the results of the great war and conditions unthought of by the Fathers of Confederation. The rights of the Maritime provinces, therefore, is a national issue. It should not be championed by any one political party and whatever the remedy may be, every one within the reach of my voice should be ready to assist in finding the solution for the problem. I still doubt if our troubles in the Maritimes are anomalous. But we are having and have had our troubles. Mr. Belding who has just arrived from a country-wide tour for the sole purpose of sizing up the situation in Canada as it relates to the existing conditions in the Maritimes terminated his trip only a few weeks ago and was tendered a banquet at St. John. Mr. Belding as is well known, was authorized to undertake this mission by the St. John Telegraph Journal, and is one of the ablest members of the editorial staff of that publication. After making an exhaustive resumé of his important mission, Mr. Belding winds up with the following remarks:

> Gentlemen, there is much I would like to say. There is a great deal I hope I will be able to say later in one form or another, but I must close. I would rather be the prophet of a new evangel than he who hangs crape on the door. I come back to you and to the Maritime provinces, not with a promise but a challenge. We were in at the birth of this confederation. We have an opportunity now to join in a great nation-wide movement to make that union permanent. Shall we say the path is too steep, the way too long and the darkness near? Or shall we turn our faces to the morning and go forward to the tasks of a great new day, building up on the northern half of this continent a prosperous Dominion, animated by a national spirit which will command success? That is our task, and I have faith to believe we shall not falter and we shall not fail.

I believe, Mr. Speaker, that there is a great deal to be learned from this declaration. In other words, I must emphatically persist in my contention that the troubles in the Maritime provinces are not peculiar to that section of Canada. They are not the troubles of one political class, but of the whole nation, that is to say, what affects the loyal citizens of the Maritime provinces should affect also the whole Canadian nation, and the alleviation of our burdens should be a matter of concern to each and every member of this House. We in New Brunswick have spent very generously to keep pace with the progress of our immediate neighbours; namely, the Americans of the New England states and our Canadian brothers of the province of Quebec. Few sections of the country possess better roads. New Brunswick provides ideal inducements to tourists. We have spent enormous sums of money for the building of railways and in this particular regard, I fear there has been a large degree of discrimination against our people. If the amount of subsidies paid to the different provinces by the federal government since confederation is to be regarded as a proper criterion in regarding the claims of each and every province which entered the union I believe that the province of New Brunswick has been discriminated against in so far as the subsidies which that province has received for the building of railways are concerned. I have before me no figures and have prepared no statement in this connection, but speaking from memory I think it will be found by referring to the available statistics that the province of New Brunswick has received since confederation some $24,000,000 in the shape of federal subsidies. The province of Ontario has received about five times that amount, and the grants to other provinces have been in like proportion, whereas if we refer to railway statistics we shall find that the subsidies paid for the building of roads in the province of New Brunswick have been very much less than they should have been on a proportionate basis. As regards road building we have been discriminated against in other respects. The people in my own constituency are served by branch lines which, I believe, should be brought to a proper standard in the immediate future. I have already brought this matter to the attention of Sir Henry Thornton, and in his consideration of the question the contention was advanced that the country served by the lines in question is perhaps too sparsely settled to warrant better equipment and better accommodation. Now the fact is that the population served by the Caraquet and Gulf Shore railway is one of the most industrious that can be found in any section of Canada. I do not believe that any railroad in the province of New Brunswick serves a larger number of inhabitants per mile than does the Caraquet and Gulf Shore railway, if we consider branch lines on the basis of meeting the necessities of rural districts. The Caraquet and Gulf Shore railway, serving as it does the southern coast of the Baie des Chaleurs, forms the only means of communication for a population of no less than 28,000 people. Now, Sir, I should like to find anywhere in Canada branch lines consisting of from ninety miles of railroad which serve a like number of people, especially in rural districts such as we have in my constituency. The hon. member for Northumberland, N.B. (Mr. Snowball) in the very eloquent speech he delivered this afternoon advocated the extension of this road from Tracadie to Newcastle. I believe the expenditure for such a purpose would be money well served. As I said before the lines already in existence provide accommodation for 28,000 people and the proposed extension, which would bridge a gap of fifty-two miles, would serve a class of very industrious people and carry the traffic of a country rich in natural resources—lumbering, fishing and agriculture. The building of this line would complete a contour around the north-eastern coast of New Brunswick, and I am sure that no better paying road could be found anywhere in the Maritime provinces.

I have read with very careful attention the extensive digest presented to this House by the hon. ex-Minister of Finance (Sir Henry Drayton), and one must admit that it was a wonderful attempt. The hon. member certainly has a command of figures above the ordinary, and as a financial critic I doubt if this parliament could find a better subject. But, Mr. Speaker, the twisting of figures and the distorting of facts will not extricate the country from the chaos into which it has been plunged by the inevitable result of the Great war and the reckless administration which preceded the present government. After such a lengthy speech from the ex-Minister of Finance, in the course of which this House heard a complete condemnation of the fiscal policy of this government and of anything that would tend to remove taxes from the shoulders of the consumers, one might have expected an amendment more effective and broader in its scope than that proposed by that hon. gentleman.

Conditions in Canada demand reduction of taxation, says the ex-Minister of Finance in

his amendment to the motion. Well! I wonder how these reductions can be effected by the imposition of higher customs duties on implements of production and on the immediate necessities of life. Did we not reduce the cost of living by cutting down taxes last year? Did we not give the consumer the advantage of lower tariffs which meant a deflation of some fifty million of dollars in our revenues? Whatever subterfuge our friends to your immediate left may invent, Mr. Speaker, the fact remains that the consumer has reaped the benefit of this vast reduction in taxation. But it is the sales tax that we wish to reduce, our hon. friends diagonally opposite will shout, and they declare that the orgy of extravagance on the part of this government renders that impossible. Our friends opposite will admit having expended lavishly without due regard to economy and in many cases it has been well demonstrated that they unscrupulously allowed political friends to make huge war profits and attempted to justify it on the plea that it was "to win the war." Now, Mr. Speaker, that we have won the war, was it not a wonderful achievement in itself? It was noble patriotism to help winning the Great war; so must it be highly patriotic and worthy of Canadian citizenship to meet our war obligations.

It has been demonstrated again and again that ordinary expenditures under the present administration are well within the mark and that the heavy burden on the tax payer is very largely made up, of extraordinary expenditures which neither this government nor any other that may come for a generation, will ever be in a position to eliminate or control. It would only cumber Hansard to go into this subject in detail. Figures have been given time and again and have never been refuted. But it will be said that the time has now arrived where war taxes could be reduced. It must be remembered Mr. Speaker, that war expenditures are as much of a drain on ordinary and extraordinary revenues to-day as they were when the world's greatest conflict was at its highest pitch. It does not sound very logical to say that war charges are as much of a drain on our revenue to-day as they were when war was on. In my point of view, Mr. Speaker, I am convinced that they are much more so. It is readily admitted that war expenditures were provided for by huge loans, and war taxation was resorted to for the redemption of these loans; or in other words, the whole war expenditures have been a drain on the present generation as they will be on future generations. At the end of the fiscal year of 1914 the interest charge on our debt was $14,687,797, whereas at the end of the fiscal year of 1923, on an interest bearing debt of $2,653,867,212 we had an interest charge of $136,007,667. I have not before me an exact statement of war expenditures, but it might fairly be stated that we have to meet in round figures interest on war charges amounting to over $100,000,000. If we add to this some $34,000,000 for soldiers' pensions, we will find that the drain on our ordinary revenues on these two items alone is greater than ever, and uncontrollable. Therefore the war burden on the tax payers of Canada is as cumbersome as ever and the question is more vital then ever. It thus behooves every Canadian citizen whatever his political affiliation may be, to shoulder his part of the burden and help the Canadian nation through.

The ordinary elector will say that we have no more war expenditures. It is true we have debts bearing huge interest, and we have to pay a large amount of soldiers' pensions; but the fact remains that during the years 1914 to 1918 inclusive, while we were struggling for the liberty of the civilized nations, this parliament resorted wholly and solely to war loans to pay war expenses. No provision was made for sinking fund and no provision was made for the conscription of wealth. Probably if there was a reason why, as an elector of this Dominion, I voted against conscription, it was solely because there was no conscription of wealth, which was a great mistake, and I believe that while huge profits and fortunes were made right and left in this country, the time was opportune to levy on the wealth of the country to pay war expenses. After all, when we sum up the situation in Canada, notwithstanding the lack of foresight on the part of our friends diagonally opposite when they were in power, notwithstanding the fact that they have failed to provide for the redemption of these war expenditures and notwithstanding the fact that they failed to enforce the conscription of wealth during this great conflict, I must admit, Mr. Speaker, that conditions in Canada are not at all so bad as they are sometimes represented. I believe it is a great mistake for the press of this country and for hon. members opposite, or to your immediate left, to advertise Canada as a country facing blue ruin; for after all our debt per capita is not greater than the debt of the United States. Although we have a huge debt, the main creditors of Canada are her own sons and daughters. No less than three-quarters of our debt is comprised of war loans which have been floated within Canada, and consequently we have as our creditors our own people. Surely those who have been patriotic enough to

subscribe to those war loans will, if ever the time comes that Canada will be forced to pay her debts, have enough of patriotism left to carry on our debt, to carry on Canada and the nation still further until, perhaps, in the future which, I hope, is not far distant, we shall see better times in this country, larger revenues as compared with our expenditures, and a time when our debts will be paid and wiped off the books of the nation.

Speaking of our hon. friends opposite some moments ago, I enumerated certain expedients to which they had resorted in order to try to win a few seats in the by-elections which have been held in this country since the last general election. Our hon. friends, in their political manoeuvres, have been trying to sink test wells into Canadian public opinion, but I am proud to say, without apparent results. The last amendment brought down by the ex-Minister of Finance is another striking example of their futile manoeuvres. With the one hand, they hold out the flag of high protection, calling to their colours the manufacturers and capitalists of this country, whereas with the other they are endeavouring to sink deep into the sentiments of the masses their abhorrence of taxation. I believe the time has come when the Canadian nation can no longer be duped by such insane and equivocal demonstrations. Canada is steadily and cautiously moving towards normal conditions. I have great hopes for the future of this country; I believe in the fiscal policy of the present administration; I have every faith in my honourable leader, and for these and other reasons which I have already enumerated, it shall be my duty to give to the motion my most wholehearted support.

On the motion of Mr. Johnston the debate was adjourned.

On motion of Mr. Graham the House adjourned at 10.45 p.m.

Tuesday, March 31, 1925

The House met at three o'clock.

Bill No. 38, to incorporate the Knights of Pythias of Canada.—Mr. Maybee.

Bill No. 39, respecting Joliette and Northern Railway Company.—Mr. Denis (Joliette).

Bill No. 40, respecting The Ottawa Electric Railway Company.—Mr. Chevrier.

RURAL CREDITS—REPORT OF DR. TORY

Hon. J. A. ROBB (Acting Minister of Finance): I lay on the table the supplementary report on agricultural credits by Dr. H. M. Tory. I move:

That 450 copies in English and 150 copies in French be printed for distribution, and that rule 74 in relation thereto be suspended.

Motion agreed to.

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—SPECIAL COMMITTEE

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg to move the motion of which I gave notice two or three days ago:

That a special committee consisting of Messrs. Black (Halifax), Sir Henry Drayton, Duff, Sir Eugene Fiset, Halbert, Johnston, Kennedy (Glengarry), Leader, McKay, McMaster, McMurray, Rinfret, Sinclair (Queens), Stevens, and Stork be appointed to consider the resolution to give the government of Canada control over certain ocean rates by confirming an agreement between His Majesty and Sir William Petersen, K.C.B.E., as set out in said resolution with power to call for persons, papers and records, and to report from time to time.

Before submitting the resolution, Mr. Speaker, may I say that my attention has been drawn to the fact that some hon. members of the House feel that the resolution as drafted is not worded in a manner which would permit the committee to inquire into any other method that offers effective control of ocean rates. The government had assumed that it would be impossible to decide on one method without considering other methods as well and therefore that the resolution was sufficiently broad as it stood. However, to remove any possible doubt as to the scope which the committee will have I should like, with the permission of the House, to add after the words "set out in said resolution", "or by any other method that offers effective control".

Mr. W. F. MACLEAN (South York): The addition of these words by the Prime Minister gives me an opportunity to speak to the resolution now before the House. I had intended if that opportunity did not come to me in this way that I would try and get it by moving an amendment to the proposal as has been the practice hitherto in this House; and if hon. gentlemen will bear with me I will try to show—and I will not take very long—why the scope of the committee should be widened in the direction of getting greater control of ocean rates, and having other means suggested to

the committee than the means contained in the resolution. To bring that out I am going to take the liberty of presenting my views to the House on this occasion, and to shorten the time I propose to read, with the permission of hon. gentlemen, a few observations. I have taken some time in preparing these observations, and I hope the House will pardon me if I read them. I will be prepared at the conclusion to answer any questions that may be put to me by any hon. members. I begin to read:

At a previous stage of this debate, when the Minister of Trade and Commerce asked approval of the Petersen contract in the matter of ocean freights, I took occasion not only to dissent to that proposal but to suggest on my own responsibility what I thought was a much better plan of getting control of freight rates on the north Atlantic and a much better means of disciplining this north Atlantic combine.

My suggestion was for the Canadian government to take the necessary steps to secure the consolidation of the Canadian Pacific and all its steamship services with the Canadian National railways, which latter was in the control of the Canadian merchant marine, a consolidation which would secure enormous savings to the two railways, as well as give to the people and shippers of Canada improved transportation, not only on land but on the high seas and our other waterways.

The House heard me in silence, but two days later the hon. member for North Waterloo (Mr. Euler) rose in his place and did me the honour of saying that my plan was the most feasible scheme he had yet heard for dealing with this great problem of sea and land transportation. Some other hon. members spoke in the same strain, and on March 19, the Toronto Globe which is certainly more than friendly to the administration, had a leading article dealing with what they called my "bold proposal of the Canadian Pacific and the Canadian National railways being consolidated into one system" and quoted still further in the editorial from the speech of the member for North Waterloo, that I have just mentioned. It said that "Mr. Euler had declared that he had it on the highest authority that if the two systems could be combined a saving of from fifty millions to seventy-five millions a year could be effected," and I believe the hon. member for North Waterloo had good authority for that view. And then the Globe went on to say that if there could not be immediate consolidation of the two systems, there was no reason why some kind of pool as between the two could not be effected, not only for their own benefit but for the benefit of Canada, and said further:

> If amalgamation is regarded as impossible at present, why should there not be co-operation? Why should not the two systems pool their advantages for their own benefit and that of Canada? Why not cease wasteful competition and useless duplication, and spend money on constructions only where it is needed for development? The interests of the Canadian National Railway and the Canadian Pacific Railway need not conflict. The bond of union between them is national service. They can prosper only as the country prospers and grows. A new era of prosperity for Canada might dawn if the two transcontinental systems were working heartily together for the common cause.
>
> Sir Henry Thornton has made good. He has completely answered those who contended that a railway publicly owned and operated could not be managed as successfully as a private concern. The National Railway System can now stand comparison with its rival in every respect. Rivalry in service, so long as it is not merely for show and prestige, is healthy. Rivalry should not interfere with co-operation which might save money for both systems and for the country.

But this is not all of the approvals of my plan. While I spoke in silence in the House, I knew that the members and country were with me both in scheme and in effect; and I continued to receive many words of approval in the lobbies and by mail and otherwise; and what strengthened me most of all was a letter from a very close observer of public affairs in Canada, who said:

> I should not be the least surprised if the future should vindicate your policy as to the fusion of the Canadian National and the Canadian Pacific; I see many signs that the Canadian Pacific are getting very nervous over the competition which they are experiencing from the Canadian National; and I should think it quite possible that the time will come when they will demand that the government take them over.

And another witness appeared in this House last Thursday in favour of my proposal to consolidate the Canadian Pacific with the Canadian National, namely, the hon. member for Brandon (Mr. Forke), leader of the Progressives. In his speech on the budget, he brought up the question of the finances of the National Railways and advocated amongst other things the fixing of a fair amount as the capitalization of the Canadian National and then, passing on, he came to my suggestion of the merging of the Canadian National and the Canadian Pacific systems; and while I take it that he declared himself in favour of some kind of working arrangement as between the two roads, the thing he had in his heart was the complete merging of the two and the immense saving that would accrue from such a consolidation. Hon. gentlemen who wish to know exactly what he did say will find it in Hansard, page 1581.

And now I want to quote another newspaper that, like the Toronto Globe and the

Winnipeg Free Press, believes in some kind of merger, and that is managed by a man very well known in this country and very well known in Montreal which city is supposed to be the home of the duplex system of railways; I refer to Mr. John R. Dougall who, in the Montreal Witness of the date of March 25, came out with this editorial:

> Reductions of the cost of needless duplication of railway service seems to be looming up in the Commons as a live question. As the big railway battle usually comes during the sessions of the committee on National Railway estimates, much may be heard of this problem in a few weeks. Mr. Maclean, of Toronto, has won a new disciple in the person of Mr. Euler, for the cause of railway amalgamation. The latter is quite certain that sixty millions annually could be saved by this course. Other members from the west tell of train after train leaving Winnipeg with only thirty passengers aboard. In the provincial arena, Mr. Taschereau asks, "How long must the people pay the cost of running nine trains per day between Montreal and Quebec when three or four would do? "It will be remembered that Mr. Beatty, of the Canadian Pacific Railway, in a speech at Boston last fall mentioned consolidation as a possible solution of the problem. He emphatically added, however, that he did not believe the country would consider this procedure at present. He is in an excellent position to know. But if there is no general approval of either consolidation under public or private ownership there most certainly is a demand for immediate elimination of expensive and needless duplication of service. Few are so blind or so thoughtless as to fail to see that, regardless of who owns the lines, the country pays for all extravagance in the end. Canada has faith in the efficiency of the Canadian Pacific. There is now confidence that the National management is determinedly meeting a difficult situation. For these reasons there is all the more reason to expect that the heads of the systems can get together and agree on a programme of drastic curtailment of needless extravagance, which neither road could make singly without losing business to its rival, but which if effected would benefit both as well as the country in general.

And if I must quote another witness, I am going to put E. W. Beatty, president of the Canadian Pacific, on the stand. He spoke of economy in Canadian public affairs; and in an interview given out at Toronto he is thus reported:

> If business principles prevailed, the national policy would be to render the discharge of all our obligations that are proper and possible, with due recognition of the necessity of the individual and corporate thrift.

Now these last words about "corporate thrift," if I may interpret them, ought to mean thrift on the part of the Canadian Pacific Railway, so as to fit in with the situation which confronts us, namely, the inability of this country to maintain two great transcontinental roads working in every province of Canada, in a condition of expensive, heedless and altogether unnecessary rivalry, when one system would be much better and would save the country seventy million dollars a year. This is not the day for duplex railways.

And while I criticize Mr. Beatty, I admit his outstanding ability, and that as a railway executive he is the equal of anyone on the continent; and, furthermore, he is a graduate of my own university and won his spurs by his own abilities; and I admit he believes in mergers; but he wants to be the one who does the merging and the one who takes the hand of the lady; while my view of it is that the Canadian National, which is absolutely a Canadian enterprise, should merge the Canadian Pacific, and that the Princess Eddy should gladly offer her hand to Sir Henry. And, speaking of Mr. Beatty in the personal sense, I can compliment him, if I may, by saying that his eyebrows are almost as pronounced as my own. He, too, may have "big eyes" as others have said of myself.

Mr. SPEAKER: Order. A routine motion is debatable, but I call the attention of the hon. member to the fact that a debate on the subject matter which the committee to be appointed will have to consider is not permissible. The committee will have to consider the question of establishing control over certain ocean rates, and that committee will study any other methods that will establish effective control. I hope the hon. gentleman will be able to connect the actions of the Canadian National Railways and the Canadian Pacific Railway with the question at issue. I do not say that he will not be able to do that, but he should not adopt a too circuitous method in demonstrating it to the House.

Mr. MACLEAN (York): I certainly intend to do that, but I have to frame up a case.

Mr. SPEAKER: May I observe that "frame-ups" are debarred?

Mr. MACLEAN (York): With all due respect to your correction, Sir, I stand by that. I will soon make the connection, but I want to come to it in such a way that the public as well as this House can appreciate it.

As for the Canadian Pacific itself, I have always been favourable to that railway, and, as a member of this House, and before I was a member of this House, I knew its chief promoters, Lord Mount Stephen, Lord Strathcona, Sir William Van Horne, Lord Shaughnessy, when they were ordinary men without title, but when they had the ability, the foresight, or shall I say the vision, to plan that great road and to make a splendid success of it, and it is with us to-day.

But the transportation problem now before Canada and before this House is bigger than the Canadian Pacific, and all I say is that it would be to the interest of the country, and I think, the interest of the shareholders of that company, that a merger of all the services of the Canadian Pacific with the Canadian National should take place to-day before there is more raiding of a good Canadian security on the New York stock exchange. The main weakness of the Canadian Pacific is that its stock to-day is owned outside of Canada, and kicked about the New York and London stock markets whenever they like, and the control thereof might pass any day into the hands of an American railway. The Canadian National is absolutely owned by the people of Canada; it is subject to our policy and our policy as a nation only, and finally we cannot keep up a duplex system of railways, one-half of which might be held in Canada and the other half outside of Canada.

But, as I said, you will not find in Canadian papers now anything about things like these that are going on in the United States. You will hardly find one telling in its financial columns what has really been going on in the New York stock exchange more or less for a month back, and that is that the great railroads of the United States, including the Union Pacific, the Northern Pacific, the New York Central and the Canadian Pacific, have had a significant fall in prices. The Canadian Pacific has probably dropped ten points within almost the same number of days; other American roads have come down much lower, and apparently the end has not been reached. So, I ask this House and the country why the newspapers of Canada do not tell of things going on in New York in regard to railway shares and mergers of the railways of America and Canada.

When I am speaking of the newspapers of this country and this proposal for the merging of the two great railways into one, I am reminded of the fact that we now have in Canada what are called "chain groceries." Extending that idea, I say there are some people who think we have chain newspapers in this country and that they are pretty well "chained" at the present time. They say even that one man sitting in a big job-printing establishment in Montreal, doing the printing for both the railways and some other big interests in this country, after he is through with the job-printing propositions before him, also undertakes to operate a chain of newspapers from the Atlantic to the Pacific with a duplex line of editorials to suit the circumstances of the locality in which the appeal is made. Great is the duplex idea in Montreal, as to railways, as to press, and as to sports and sport clothes for men and women. Public economies do not count these days.

[Mr. W. F. Maclean.]

Now I want to come to the question of mergers of railways and to deal with the innuendo that I am proposing something new. I want to tell the House and the country that the consolidation and merging of the railways of the United States is the most pressing question there to-day; that it is the fixed policy of the Coolidge administration, as it was the fixed policy of the McKinley administration and even of the Wilson administration, to wipe out hundreds of the smaller lines of the United States and to merge them at the most into eight regional organizations, some of them covering more than six or eight states of the union, in one consolidated system. This work has been going on for years and is pretty nearly completed. The duty has been imposed upon the Interstate Commerce Commission to effect these consolidations and they are at the work now every day. One of these consolidations is that of the Nickelplate with the Chesapeake and Ohio, which is now not only before the courts for decision, but also before the Interstate commission. But that is not all. As a matter of fact, the New York Central has completed its proposed regional system, so has the Pennsylvania, and in the New York World of March 26 there is a special from Washington which says:

> Special dispatch to the World, Washington, March 25. Comprehensive railway legislation—the most far-reaching undertaken since the passage of the Esch-Cummins Transportation Act—will be begun at the opening of the next session of Congress, leaders on both sides of the Capitol admitted to-day.
>
> Senator A. B. Cummins, author of the present act, already has a bill prepared calling for compulsory consolidation of the roads into a series of major Streams, while the House committee on Interstate Commerce will start hearings early in September to prepare a bill for presentation to Congress as soon as it convenes.
>
> The tax reduction bill and farm relief legislation will be submitted at the same time, confronting the administration with its three most difficult and embarrassing problems the moment Congress assembles.
>
> Besides compulsory consolidation, other railroad questions are the completion of valuation of the roads and a determination as to what will be done with the huge fund now building up and available to the government under the recapture clause to bolster up weaker roads with loans.
>
> A tentative system of consolidations was worked out by the Interstate Commerce Commission, but railroads which object to being hitched up with weaker lines have made the tentative plan abortive. Whether the administration will approve any plan designed to compel the railroads to amalgamate has not been made known.

And in its leading editorial of the same day, the New York World criticizes the Nickel-plate consolidation; its opening sentence is:

Congress has approved the policy of railroad consolidation by voluntary agreement and before long a plan for the first of the great consolidations will be submitted to the Interstate Commerce Commission for its approval. It is being promoted by the Van Sweringen brothers of Cleveland. They propose to put together the old Nickel Plate, the Erie, the Pere Marquette, the Hocking Valley and the Chesapeake and Ohio.

On the general theory that consolidation of strong and weak roads is desirable there is now general agreement; there is, in fact, strong opinion in favour of making consolidation compulsory. It is all the more important, then, that the first practical test of the policy should be above serious criticism.

And the last sentence reads as follows:

The Van Sweringen merger needs looking into, not only as a matter of justice to the Chesapeake and Ohio stock holders, but also because it is important to establish sound methods at the beginning of this era of railroad consolidations. Anything like a scandal in this, the first great merger, would disgust the public with the policy of mergers and would deeply injure the railroads as a whole.

From now on mergers either voluntary or forced will be the big question in railroad America and railroad Canada.

Now, I want to come to my proposals. I have re-written this very carefully, and it is what I desire to present to the House and the country in dealing with this merging of railways so as to reach a solution of the question of regulation of ocean freight rates. This is my proposal in a word:

Proposed consolidation of the Canadian Pacific and subsidiaries with the Canadian National, involving:

1. Such re-routing of main lines and branches as might be dictated by the better grades, mountain passes, bridge-crossings, tunnels, approaches to stations, etc., held by one or other of the companies;

2. The consolidation of the cartage, telegraph and express services of the systems,—perhaps taking over the parcel post, postal and money orders of the post office,—thereby cutting out all unnecessary services and buildings, rents, etc., and perhaps using local post offices at places as aids to these national services;

3. The cutting out of all unnecessary trackage, bridges, tunnels, stations, buildings, tanks, plants, etc., and thereby releasing material for any double trackage required, or other additions that the traffic thus re-routed and consolidated might call for;

4. Also cutting out all unnecessary executives and staffs, officials and offices, headquarters, and attendant expenses;

5. Also cutting out and selling any unnecessary engines and unnecessary official sleeping, dining, passenger, postal, freight and other cars and equipment that the consolidation permitted;

6. Also cutting out all unnecessary printing and advertising charges and other propaganda; and all unnecessary solicitation and canvass for business caused by the present needless rivalry of branch and main line services.

All of which would involve:

1. Some system of half pay or pensions for men let out by this consolidation; and,

2. A better system of pensions for long service men generally;

(3) And further involving a revaluation of these consolidated services and a reorganization of their securities now in existence, as fast as present commitments will permit and improved financing might suggest.

Mr. SPEAKER: With all due deference to the hon. member, I fear he is not discussing the point. I have too much respect for the hon. gentleman to lecture him, but I do think he might come to the point; I am waiting in expectation that he will reach it.

Mr. MACLEAN (York): I am sure Mr. Speaker's hopes will be realized. Further, there would be involved the general bringing about of greater efficiency, better service, lower freights and fares, increased economy, ending forever all extravagant and unprofitable rivalry.

The Canadian Pacific has been generously treated by the Canadian people and parliament in the way of legislation, charters, plans, surveys, money subsidies, land grants, rights of way, exemptions of many kinds and protection by a fair and just railway commission maintained at the public expense; yet this great beneficiary and ward of the nation, notwithstanding its enterprise and devotion to the work and service called for in its franchises and contracts, has at times shown a spirit of ingratitude and at other times developed an attitude that the Canadian Pacific was more than the nation and parliament which had created it; and that it even now enjoys or thinks it enjoys a free hand to crush out or interfere with any right of the nation to engage in public ownership in the way of transportation and other services; in a word, that the created company is greater than its creator and benefactor, the nation. This public servant must not set up to be the master rather than the servant of parliament and the people; each must be fair to the other.

The Canadian Pacific can claim to have made a success of its railways and other services and is entitled to full recognition therefor; but, on its part, this great company must

recognize that besides all the successive aids and grants to it from the country, it has from the very first secured for its chief promoters and owners of its shares, peerages, baronetcies, knighthoods and other honours, fortunes for themselves and friends; and that the country was equally generous to the promoters and bankers of rival railway lines that ultimately became bankrupt; and that these later promoters and bankers also shared in the baronetcies and other honours and profits and appointments of various kinds and had all their company debts taken over and paid by an overtasked and overtaxed public.

Notwithstanding all which the public and the people found and are finding most of the money—outside of the Canadian Pacific's shares and bond issues—and all the traffic for these railways, at high rates; and therefore, in a word, that company must listen to a public demand for consolidation and unified operating costs when it comes up as it does come up to-day in this House and in the country; and the public likewise must be fair in the matter of compensation to the hitherto successful Canadian Pacific.

The Chicago, Milwaukee and St. Paul and many other railways now under fire on the New York Stock Exchange are a warning even to the successful Canadian Pacific. Great moneymaking propositions and successful services are ever threatened by scrapping. All transportation is being scrapped to-day. The automobile, the autobus, the motor truck are taking the local passenger, freight, cartage and express business from the big railways; and the aeroplane will soon reach for the long distance travel, mail and express business; the sleeping and dining car business is in danger, even a lot of the hotel patronage is threatened when business men and others come to know that interviews over wire or wireless are as efficient as personal visits involving long jumps by rail or road and the accompanying inconveniences. The new world may take a lot of the present rush out of business, and sanity take its place—overstraining may be at its peak.

There may be a wise time to sell a successful private-owned railway property, especially if in the near future the traffic were limited to long hauls of freight by land and sea; and if the Canadian Pacific should determine to sell, a commission of three men made up of the presidents of the Canadian Pacific and the Canadian National and one other arbitrator ought to be able to fix a fair amount for the consideration of parliament as compensation to the Canadian Pacific shareholders for the transfer of all their services and assets to the

National Railways. And such a consolidation of these roads and services might suggest to parliament the creation of a new corporation to be called National Canadian Carriers, an organization that would include these railway, ocean, express and telegraph services and other services on highways and waterways, said carriers being further empowered to take up, as need may call for, any coming developments in such service and communications of all kinds by radio, beam, wireless or cable, as inventors or promoters may be prepared to submit or the policy of the new consolidated directorate might determine or parliament order. All such common carriers in the widest sense to be national or under national control and in no way dictators to parliament or the nation. This is where the tragedy that is now at our doors will end and national prosperity begin afresh.

This programme of mine is, I hope, plain to all, and I ask hon. members to read it and I ask the country to read it. The outstanding deduction from it all is that Canada under her present financial strain cannot afford to maintain these two competing railways and other services, when one joint management and ownership would give a much better and more economical service. Is it not absurd, for instance, that there should be two enormous headquarter buildings and headquarter staffs in the city of Montreal, one for the Canadian Pacific and another for the Canadian National, when one building would house both, when one set of officials could administer both systems and do it much better and for less money. Of all the pieces of extravagance before the world to-day, this is one that ought first to be put an end to and reason and economy govern in its place. It is not only an extravagance, it is a crime and there is not a member in this House that does not admit I am right, that does not think it should end now and forever.

Now as to how this consolidation could be effected, I have already hinted at it in my previous speech that it could be achieved in a very short time and that the economies effected would permit not only reduced freights by land and water but would bring about other economies in the telegraph, express and postal branches and that the whole of the financial commitments of the two systems could be met by these consequent savings and by re-arrangement of the securities involved. Members may laugh at the extent of the proposal and the commitments of it; but because it is large and because it is sweeping, it may justify itself. The real enormity is in the existence of two unneces-

sary systems at great cost when one would do much better and give immediate relief to all interested in transportation and communications.

I do not propose a single thing that is not what might be called an investment proposition; and I challenge the best financial authorities in this country or out of it to deny the conclusion which I have reached in favour of the consolidation. All our railway proposals were for the expenditure of further money of the taxpayers of Canada. For the first time I am proposing something that would at once lessen the burden of the Canadian taxpayers; and I want to say, that the First Minister has himself declared in this House that he has already approached the Canadian Pacific—to what extent I cannot at present say—but what he said is most significant, and what the Globe says for itself and its party is also significant, and what the others that I have quoted have said is also significant. Canada is at a crisis to-day. What it wants is courage in the government and in this parliament to deal with that crisis and by a new departure start our country and our people again on the up grade. Desperate conditions call for radical use of the knife and the stern orders of the dictator of retrenchment in times of the wildest extravagance. If the cure doesn't come a new Cromwell will; and even now you can almost hear his horses champing in their stalls, and later on in the lower corridors of this House.

And, finally, let me say to the House and to this parliament in the matter of duplex services: Coming in at our centre door, under the tower, what do I see? Duplex post offices double-manned with two postmasters and two deputy postmasters—one set for the Commons and one set for the Senate—and double sorters in the two offices; also a duplex system of accountancy and a battery of clerks as timekeepers on members and senators, and a double staff of writers of indemnity checks for the two houses; also duplicate barber shops; duplicate Hansard staffs; duplicate messenger staffs—

Mr. SPEAKER: Order. The hon. member's remarks with respect to two railway systems and ocean rates were in order, but when he begins to discuss the internal organization of the House of Commons and the Senate he is absolutely out of order.

Mr. MACLEAN (York): I bow to your ruling, Mr. Speaker. I was simply trying to show that this extravagance which is common to transportation also prevails in other quarters, and if we start to cure it in our own House we will the sooner cure the duplication in connection with our railways and our ocean services. That completes my argument anyway, Mr. Speaker. My point is that you cannot deal effectively with ocean rates by establishing such a one-horse system as the government now propose. But if we have the enterprise to take over the Canadian Pacific Railway and its steamship service—and it is one of the best in the world—and merge them with the National Railways and our merchant marine, we shall at once secure absolute control of land and ocean rates. This consolidation would effect very great economy of operation—upwards of $70,000,000 a year—and would give us an ocean service under our absolute control. If the government want to arrive at a real settlement of the problem they must do something along these lines. Then Canada will publicly own all her transportation facilities, and so give the people service at cost. We do not want to have anything to do with the north Atlantic conference or combine. I admit that it is one of the worst combines in the world, that it is trying to fleece the people of Canada—everyone admits that now—and that it should be disciplined. My argument, Mr. Speaker, is that the only way to discipline this combine is by consolidating our two railway systems and their steamship services into one transportation system under one national management, absolutely owned by the people of the Dominion. Once you have done that you will be able to say for the first time to those whom you invite to settle our vacant lands: "We invite you to a country of hope, to a country where you will have the cheapest transportation by land or sea for the products of your farms and of your factories." I hope the government will accept my suggestion. I also hope that they will widen the scope of the committee and allow anybody to appear before it. I am going to appear before that committee and express my views in a much more pronounced form than I have to-day. I hope my friend down the line, the leader of the Progressives (Mr. Forke) will also go there with his representations.

I believe that the people of Canada to-day are determined to finish for all time extravagant expenditure wherever it appears, especially in connection with transportation. While I was quite properly called to order by you, Mr. Speaker, when I pointed out the duplication of workers right in these houses of parliament, I only pointed out that what has taken place in connection with transportation in this country, has also occurred

within our own walls; and I say that whenever the election comes on the people will end this duplication and extravagance, and will perhaps also end those who are responsible for it. I am not prepared to say who are responsible, but it is a condition of affairs that cannot be allowed to continue, it must be remedied, and now is the time to remedy it. The government for the first time have an opportunity of handling the rates problem in a big way, and if they can show me that they are going to consolidate our transportation systems in the way I have proposed, I will be only too glad to vote for any motion putting it into effect whenever they present it to the House in proper form.

Mr. ROBERT GARDINER (Medicine Hat): Mr. Speaker, before we proceed further with this motion I would call the attention of the House to the composition of the proposed committee. It is to be composed of eight Liberals, four Progressives and three Conservatives. Why is it that the Progressive party with practically the same membership as the Conservative party is allowed one more member on the committee? I would remind the House that there are thirteen members in this part of the chamber who do not pay allegiance to the Progressive party, and they have no representation on the committee. Under the circumstances I presume that the Progressive party is to be represented by four members because of the fact that the thirteen members to whom I have referred are included in the party.

Now, Mr. Speaker, I would suggest to the Prime Minister that in order to give all the elements in this House proper representation on the committee he should increase its membership by two or three at least, because it is not fair that our thirteen members should have no representation on a committee of such importance. Some few days ago there appeared in the press an announcement that there had been born in this House a new political party. I contradict that statement emphatically. We thirteen members who do not belong to any of the three major parties in this House met together for the purpose of seeing to it that we got proper representation on any special committees that might be appointed from time to time. That is all we met for; consequently I wish to deny the suggestion that a new party has been born in this House. I would request the Prime Minister to take into consideration the representations that I have made in this regard and try to provide representation on this committee for these thirteen members.

Right Hon. W. L. MACKENZIE KING (Prime Minister): With respect to the constitution of the committee the government has followed the usual procedure. As to increasing the number on the committee, the unanimous consent of the House is required; but if that is the wish of the House the government does not mind if the committee is made larger. But as to the personnel, I simply wish to point out that the government is following the practice that was adopted when this parliament came into being and that was followed at the beginning of this session in striking the general committees of the House. Unless some substantial reason to the contrary can be offered, I question very much whether at this stage in the life of the present parliament it would be wise to depart from that practice.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, I cannot see how the contention advanced by the hon. member for Medicine Hat (Mr. Gardiner) can be logically disputed. Nor does it seem necessary that the committee be enlarged in order to meet it. The committee has fifteen members now. Eight are from the government side, four from the fifty hon. members to my left and three from the fifty-one hon. members here. Obviously the committee is out of balance: the elements are not fairly chosen. That can be remedied by dropping one of the four selected from the fifty to my left and choosing one from the thirteen. I do not favour large, cumbersome committees. I have always felt that because of the new composition of this House an injustice has been done the Conservative party in the small representation it has on committees, and still more so, indeed, in the very small opportunity it has to participate in debate. Members of the Conservative party have only one opportunity in four to take part in debate, although the party represents, as hon. gentlemen will admit, even from the figures of the last contest, a close approximation to half the people of the country. However, I know the difficulties that in this respect come to the surface and I have never made any complaint as to representation on committees. I do think, though, that the representation in debate is distinctly unjust and should be remedied. But as respects this case the obvious remedy is to have one dropped from the fifty who are over-represented and have one come from the thirteen who are not represented at all.

Mr. J. S. WOODSWORTH (Centre Winnipeg): Mr. Speaker, I should like to endorse the position taken by the hon. member for Medicine Hat (Mr. Gardiner). We who represent Labour here have no complaint whatever to offer as to the treatment we have received from the House; I believe we have been represented fairly on the committees. But sometimes we are placed in a rather awkward position by the practices which have prevailed. For example, when it comes to debate we have no whip through whom we can speak when arrangements are being made as to the programme which I believe it is the custom to place in the hands of the Speaker. On account of their being only two in the Labour group we have had difficulty in finding a place on some very important committees. We are intensely interested, for example, in railway matters, since a very large number of railway men rather look to us in that connection; but I felt that our numbers—two—hardly entitled us to any representation on that committee. In respect to the committee that was formed the other day to consider the revision of the rules we felt that we had hardly fair treatment, although nothing was said at the time. My colleague (Mr. Irvine) suggested that revision and asked that a committee should be appointed to carry it out. The member for West Calgary (Mr. Shaw) also had a resolution with regard to private members' day. The member for Macleod (Mr. Coote) had a resolution with regard to the consideration of the estimates. The member for Brant (Mr. Good) had still another resolution with regard to the size of standing committees. All these four resolutions were referred to the committee on the revision of the rules, but strangely enough not one single member of the four who proposed these matters was placed on the committee. It seemed to us at the time that this did not show any very great courtesy to those members; indeed, it was not altogether in accordance with the general practice of this House, namely, that of placing on committees those who are particularly interested in the subject concerned.

4 p.m.

Now, with regard to this committee on the control of ocean freight rates, the Prime Minister says that he has been following the recognized practice of the House. But the House should know that within the last few weeks, or few months at most, the conditions in the House have entirely changed. We two members of the Labour group now feel that we can unite with these other groups in seeking representation. There is one Independent member and some ten members who formerly were united with the recognized Progressive party, so that including the representatives of Labour we number thirteen. I think I hear someone say, "unlucky number." Well, we are willing at any time to enlarge our group by including others who care to come in. But numbering, as we do, thirteen, and having regard to the proportion that number bears to the number of the remaining members of the House, we ought to be entitled to representation on a committee of this character.

May I say this, before I take my seat, just to put ourselves straight with the House and with the country at large: We who are elected as Labour representatives remain Labour representatives, entirely responsible to our Labour groups. I believe the member for Medicine Hat (Mr. Gardiner) is quite right when he says the farmer representatives remain entirely responsible to farmers and the independent member remains responsible to the people who nominated and elected him. But for the purposes of the conduct of the business of the House we have found ourselves forced into co-operative effort of this kind, and we think it is only fair that the government should recognize the changed conditions and grant us representation on the special committee.

Mr. R. H. HALBERT (North Ontario): As one of the committee who at the commencement of the session struck the standing committees of the House, I wish to say just a word lest a wrong impression may have gone forth from what has already been said. It will be noted that those who include themselves in the group numbering thirteen have always been on the standing committees since the commencement of this parliament. No objection was taken when ten out of the thirteen were placed on the Banking and Commerce committee, representing the Progressives. If they have formed a separate group I would like to know who the leader is, and I would like to know what their name or designation is. Moreover, they are occupying Progressive seats in the House. I simply rose to explain, as one who was on the striking committee, that the group of thirteen is over-represented because of its members being counted as still within the Progressive group for the purposes of the standing committees of the House.

Mr. GOOD: Does over-representation on one committee justify no representation at all on another?

Mr. HALBERT: This is a special committee, I am not speaking of the standing committees. The group in question is over-represented on the standing committees of the House. As the right hon. leader of the opposition has said, if these thirteen members have left this party they are not entitled to a representation of more than three. However I, as one of the four Progressive members named would be perfectly satisfied to be left off this committee, but we want the actual facts to be thoroughly understood.

Mr. JOS. T. SHAW (West Calgary): I have listened with some interest to the politically-minded member for North Ontario (Mr. Halbert). He thinks that if people get together for the purpose of endeavouring to secure what they deem to be their proper representation for committee purposes that consequently there must be a political group, that the group must have a leader, and that they must have all the attributes of a new party such as the one that he belongs to.

Mr. HALBERT: I rise to a point of order. I did not mention any political group at all.

Mr. SHAW: I beg the hon. gentleman's pardon.

Mr. HALBERT: I did not speak of any political group.

Mr. SHAW: I was calling the Progressive party a political group. They may not call themselves a political group, but they are. I have no desire to take part in the organization of any political group, and I do not propose to do so. I think we have already got too many political groups in this House. More than that, Mr. Speaker, I am perfectly satisfied that when the electors get a chance at this political group they will see to it that there will be one group in this House of which there will be but a sad remnant left after election day. That group is the group to my immediate right. I have no complaint whatsoever to make personally. The situation does appear to me as perfectly clear. The regular Progressives, or the reactionary Progressives, or the Regressives whatever you call them, are over-represented on this committee. If they did not know that fact before they certainly must be fully aware of it now, and the proper thing, the just thing, the reasonable thing, to do is to withdraw their excessive membership on that committee and see to it that the committee represents fairly the opinion of this House.

Mr. ROBERT FORKE (Brandon): I have listened with some interest to the discussion that has taken place. The hon. member who has just taken his seat (Mr. Shaw) has referred to the members who sit to his right as likely to be taken to task by their electors at some time. I do not know exactly to whom he is alluding, because looking at the composition of the members to his right I do not know whether they are all included in the Progressive party or otherwise.

Mr. SHAW: I referred to the members to my immediate right.

Mr. FORKE: When the hon. gentleman first spoke I did not know to whom he was alluding exactly but now he has made it plain. I hope the hon. member is not as good a prophet as he imagines himself to be. Sometimes, perhaps, we are mistaken when we enter into the field of prophecy. I should like to say—and I think I can speak for the Progressive group, or political party, or whatever you like to call them; I am not one of those who quibble over names—that we are a group associated together for certain purposes, and I understand that one of them is the good government of this Dominion of Canada; that is the main principle for which we stand. I for one never imagined for a moment that everyone was not getting a fair deal in the matter of representation on committees. Parliament has been in session for nearly two months now, and this is the first intimation I have had that anything was wrong, that there was any trouble. I for one imagined that everything was going along smoothly as far as committees were concerned. The hon. member for North Ontario has just pointed out that this group of members or whatever you might call them, are over-represented on all the standing committees. It has usually been the custom for representations to be made to the Progressive group to suggest the members who should appear on these standing committees. There has been no complaint as to that, and we followed the same custom in regard to this select committee. I did not know there was going to be any complaint or that hon. members would assume the position they now take. If they want separate representations it is quite reasonable on their part and they are entitled to get it; and I am quite willing to bow to any arrangement the House may come to in that respect. There is no intention in the world, I am sure, for anyone to take any undue advantage in this matter. These hon. members should certainly get the privileges to which they are entitled in this House, and they will be given the rights they are entitled to on all the committees. I do not want to

quibble over trifles and I will not say that these hon. gentlemen in question are over-represented on the regular standing committees. I do not want to stir up trouble at this stage of the session and I am quite willing to leave them where they are as far as I am concerned. I think, however, it is rather ungrateful to use language such as has been resorted to this afternoon. I think these members must realize that they have been accorded every courtesy by hon. gentlemen in this part of the chamber. With special reference to the Labour members here I am astonished that the hon. member for Centre Winnipeg (Mr. Woodsworth) should say that he has not got all the privileges that other hon. members in this House have received. If ever—

Mr. WOODSWORTH: I made no such statement. I said I had no complaint to make with regard to the privileges enjoyed, that we have been treated with the utmost courtesy by this House. I did say, however, with regard to a certain committee that on account of the smallness of our number we had found ourselves somewhat at a disadvantage and that when the opportunity offered to co-operate with other members we would gladly avail ourselves of it in order to have on the committee representatives who would be perfectly satisfactory to us. I want that to be quite understood; I am not complaining at all of the treatment that the House has accorded to the two Labour members.

Mr. FORKE: There is just another matter I should like to call attention to. I want those hon. members who have been complaining that they have not been accorded all the privileges to which they are entitled to take up the order paper and find out who have had the privilege of indulging in discussions that have taken up the time of this House. If they will do that they will find that the time of the House has been largely occupied by members who are now complaining that they have not enjoyed enough privileges.

Mr. SPENCER: May I ask the hon. gentleman a question?

Some hon. MEMBERS: Order.

Mr. FORKE: Oh, let him ask it.

Mr. SPENCER: I should like to ask if the resolutions to which the hon. member refers were not put on the order paper in perfect order, and whether they have been taken up in their turn?

Mr. FORKE: I have no doubt they were put on in perfect order, but I hope that some rule will be adopted by the House to prevent the same thing from occurring again.

I have this to say in conclusion: I do not want any hard feelings in connection with this matter, but I think when people are treated decently and fairly there is no justification for getting up here and complaining of bad treatment. I want those hon. members who have been complaining to get all the privileges and rights that belong to them; I am sure no complaint has ever come from any member of the party I have the honour to lead that they were getting too many favours. The situation which has arisen occurred quite incidentally without any scheming or manoeuvring on our part, and I hope it will be remedied so that there will be no more trouble.

Mr. W. C. GOOD (Brant): I want to throw a little light but not any more heat upon this discussion. I am in a position to throw some light upon it, and I crave the attention of the House while I do so very briefly. The Prime Minister says that the customary practice has been followed in this respect. I beg to differ with him very definitely with regard to the appointment of members on the committee under consideration. I will admit that up until this time the practice has prevailed; but in this case the thirteen members, including myself, were definitely informed that we could not possibly secure any representation through the Progressive group on this committee. I therefore went to the government whip; I went to the Conservative whip; I went to a number of members of the Progressive party including the leader; I went to some of the government members; and I endeavoured to secure only simple justice. I did so privately hoping to have no trouble, hoping that it would not be necessary to raise the matter on the floor of the House.

Mr. BEAUBIEN: In doing all this, was the hon. member acting as the whip of the group?

Some hon. MEMBERS: Order.

Mr. GOOD: The question is perfectly proper, and I will answer it very definitely and frankly: I was acting at the request of those who had no other means of securing representation.

Mr. MARTELL: Is my hon. friend from Brant (Mr. Good) the leader of the "Ginger group"?

Mr. SPEAKER: The question is not relevant.

Mr. GOOD: I do not think it is necessary to deal with a lot of irrelevant matter. We are not dealing with the matter of a new political party. It does not exist. But there are thirteen members of this House who could not get fair treatment in any other way, and were forced to take such action by the declaration of Progressive members.

Mr. CARROLL: When my hon. friend came into this House he allied himself, as I understand, with the Progressive party.

Mr. GOOD: Yes.

Mr. CARROLL: Did the hon. gentleman not take part in electing the chief whip of the Progressive party, the hon. member for Last Mountain (Mr. Johnston).

Mr. GOOD: I did not.

Mr. CARROLL: Has the hon. member or his group from that time to the present intimated to either the government whip or the opposition whip that they have chosen another whip?

Mr. GOOD: Most certainly, Mr. Speaker.

Mr. FORKE: The hon. gentleman has referred to a conversation he had with me. I entirely repudiate any such statement, or that I made any such remark to him as he imputes to me. I think what I told the hon. member was that he had better go and see the government in regard to getting representation. I could not authorize him to get representation; I told him that it was a matter about which he should see the government. I hope he will not deny that.

Mr. GOOD: I may possibly have been misunderstood by the hon. gentleman.

Mr. FORKE: No misunderstanding.

Mr. GOOD: I will say again most emphatically that I was given to understand by the hon. gentleman that none of the thirteen gentlemen mentioned could possibly secure appointment on any committee through the Progressive party. I am sorry if I misunderstood the hon. member, but that was my understanding of what was said, and that there was no other way out of it—if we wished to secure representation we had to take such action as we have taken. I wish to state to the House most definitely that, acting at the request of other hon. members, I did everything possible to secure a friendly arrangement in this respect in order to avoid any trouble or friction in the matter. I even went to a member on the government side the latter end of last week and made representations, and I understood from what he told me that he made an effort to secure a friendly adjustment so that there would be no dissatisfaction.

Mr. MACDONALD (Pictou): Does the hon. member desire to intimate to the House that he has ceased to be a follower of the hon. member for Brandon (Mr. Forke)?

Mr. GOOD: I should like to answer the question though it hardly relates to the matter under consideration; however I may say—

Mr. MACDONALD (Pictou): Oh, yes it does.

Mr. GOOD: I may say very frankly, so far as "leading" is concerned, yes. Up to the present time the member for Last Mountain (Mr. Johnston) has acted as chief whip for the Progressive party; and since last year we thirteen members are not represented by him in the negotiations of the House. That is the situation and I thought it was fairly well understood in this House.

Mr. CARROLL: Has the hon. gentleman representing the thirteen—which is rather a peculiar number—told the government whip or the opposition whip, or the whip of the Progressive party, that they were disallied—if that is a good word—from the three groups and desired to form another group in the House?

Mr. GOOD: Yes, I so stated a few minutes ago.

Some hon. MEMBERS: Order, order.

Mr. SPEAKER: I would ask hon. gentlemen on both sides to discuss the motion before the House. We are losing much time this afternoon.

Mr. GOOD: I have been asked questions, and as I do not wish to appear discourteous to any hon. member, I desire to answer these questions. I think some of them however have not been entirely relevant.

Mr. CARROLL: I should like to ask—

Some hon. MEMBERS: Order, order.

Mr. SPEAKER: I stated yesterday, and have stated on different occasions, that whilst questions may be allowed with the consent of the hon. gentleman who has the floor, yet when the debate degenerates into a discussion of this kind the Chair must intervene and stop it, otherwise the debate will be interminable.

Mr. MARTELL: I rose some time ago to a point of order. We all know well that when we appeal to the electors in this country

there are two recognized parties, we have the old-fashioned Liberal party, the old-fashioned Conservative party, and of late we have had the Progressive party. Since they came to this House they have divided themselves into various factors. The hon. member for Brandon (Mr. Forke) is the leader of the Progressive party; my right hon. friend (Mr. Mackenzie King) is the leader of our party; and the right hon. member for Grenville (Mr. Meighen) is the leader of the Conservative party. That constitutes what we understand in this country as the two-party system. Now a third party has come in.

Some hon. MEMBERS: Order, order.

Mr. MARTELL: When the Speaker calls me to order I will sit down. Then the hon. member for Centre Winnipeg (Mr. Woodsworth) says he is the leader of a group, the Labour party so-called. He has been recognized by Your Honour on divers occasions as the leader of the fourth party. Now in the name of Heaven—

Mr. SPEAKER: Order.

Mr. MARTELL: —are we going to have a fifth and sixth group in this House? I may ask you, Mr. Speaker, to recognize me as the leader of the Liberal Constitutional party, because I do not always agree with my party on constitutional questions. I might be called an old-fashioned Tory, because I believe in keeping up the British connection.

Mr. SPEAKER: The hon. gentleman rose to a point of order. I understand his point of order is that the Speaker can only recognize two or perhaps three groups in this House. The Speaker ignores the parties as parties; but there are, as all constitutional authorities state, amenities which cannot be ignored. For instance, when a debate is proceeding in the House the Speaker must alternate; he must see one on the ministerial side, then one on the opposition side, and then the third group, the Progressive party. He must see them as he must also see others who do not belong to that third group. Hon. members will remember that once in the House of Commons in England besides the historic Liberal and Conservative parties they had the Irish party, and there was also a group of four very eminent gentlemen, Mr. Balfour and Lord Randolph Churchill being of the number, I have forgotten the names of the others; yet recognition was given by the Speaker to any of those eminent gentlemen. Of course, this is not strictly part of the law, but it forms part of the amenities of the debate, and it seems to me I should be remiss in my duty as Speaker if I did not recognize those members who do not officially belong to either of the three larger groups. Last year I applied that principle in the case of the Labour group, because that group is quite a factor in the country. I had to take notice of the hon. member for Centre Winnipeg (Mr. Woodsworth), who represents Labour and I think I was right in doing so. Therefore the point of order of the hon. member for Hants (Mr. Martell) is not well taken, although I think it is well to draw the attention of the House to the apparent anomalies which exist. Might I remind the House that a motion has been passed to give precedence to the debate on the budget over all other questions? We have been discussing this motion all afternoon. The suggestion was made a moment ago that things could be arranged by one member of the Progressive group dropping out of that committee and being replaced by a member of the other group. If that suggestion were adopted, the House might proceed with the other business of the day. The time is going fast.

Mr. GOOD: I would have been through long ago if I had had an opportunity. All I wish to say in conclusion is that a suggestion was made by me to the government whip several days ago in order to avoid the embarrassment of anybody dropping out. The situation might be remedied by the addition of four members to the committee, one from the Conservatives, one from our section, and two from the Liberals. This would make an exact and fair representation. That is one way out of the difficulty. The other way out is that which has been suggested by the leader of the opposition (Mr. Meighen). I am sorry if I have said anything to hurt the feelings of any hon. member present, but I will not willingly submit to injustice, and in this particular case, I believe a grave injustice was being done. I, for my part, strove patiently for a number of days to get the matter adjusted privately without any unpleasantness, and I would like to appeal to the hon. member for Brome (Mr. McMaster) as witness of what I did in this connection to get an adjustment. If a way out is secured, either by increasing the membership to nineteen, or by the other method suggested, I shall be quite satisfied.

Mr. F. S. CAHILL (Pontiac): Who should be consulted in the hon. member's group of thirteen in future on questions of this kind arising as to who should be appointed from

that group to represent them? What position does the hon. member hold? What is his status in the group of thirteen—leader or whip?

Mr. GOOD: I do not know how many times I must answer this question. I have answered it two or three times already. I have stated distinctly that twelve other members asked me in writing to secure committee representation for them as they could not get it in any other way. I gave that document—or a copy of it—to the government whip. Surely that is plain enough.

Mr. HARRY LEADER (Portage la Prairie): Mr. Speaker, in order to settle this discussion and clear the air, if I am in order, I am going to make a suggestion. The hon. member for Brant (Mr. Good) has said that there are two ways of settling this, either by increasing the representation on the committee, or by some one who is already on dropping out. My official resignation is now in the hands of the Prime Minister, and while I wish to thank the members of the Progressive party, of which I am proud to be called a member, for selecting me to represent them on that committee, if I am in order, I would suggest that my name be dropped and some other name substituted. I could make a suggestion, but I will not do so. I will leave that to them.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the hon. member did send me a note a moment ago saying that if it was in order, he would suggest that his name be dropped from the committee and some other suggested, if that would help to clear the way for other business. The House heard the hon. member for North Ontario (Mr. Halbert) a moment ago make a similar offer. There seems to be a disposition to see that all groups are represented. I would suggest that the motion as put be carried, and that hon. gentlemen opposite to-morrow notify the government what substitution of names they wish, one of the gentlemen who has just been mentioned retiring and thus permitting a member of the thirteen to take his place on the committee. I think it would be better to keep the committee of the size it is. It would require the unanimous consent of the House to enlarge it. I would submit that would be the quickest way to dispose of the matter.

Mr. GOOD: With that understanding—

Some hon. MEMBERS: Surely.

Motion agreed to.

[M. Cahill.]

BUSINESS OF THE HOUSE

EASTER ADJOURNMENT

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, so that members may know officially with respect to the adjournment at Easter, though I mentioned it the other evening, with the consent of the House, I had better make the motion formally. I move:

That when the House adjourns at six o'clock on Wednesday April 8, it do stand adjourned until Tuesday, April 14.

Motion agreed to.

JOINT COMMITTEE ON PRINTING

Hon. CHARLES MARCIL (Bonaventure): moved:

That the first report of the joint committee on Printing except the section thereof referring to sessional papers numbers 49, 98, 99 and 100, be concurred in.

He said: In explanation of this motion, I wish to state that the Senate has already passed a motion similar to the one now being proposed. It has been discovered after the meeting of the committee that sessional paper No. 49, being the rules adopted by the province of Quebec relating to appeals against convictions or sentences under the Criminal Code, are for the special use of the provincial tribunals and there is no necessity for the House of Commons to pay the cost of having the same printed and distributed. They are needed more particularly by the members of the legal profession in the province for which they were adopted.

As to Papers Nos. 98, 99 and 100, the House has decided prior to the meeting of the committee that they be printed without being referred to the committee.

It was by inadvertence and for lack of proper information that committee decided to print the same.

Motion agreed to.

HOUR FOR PRIVATE BILLS

Mr. D. F. KELLNER (East Edmonton): Mr. Speaker, I desire to move a motion of which notice was given last Wednesday:

That on and after next Tuesday, the thirty-first day of March instant, until the end of the present session, if the hour from eight o'clock, p.m., to nine o'clock, p.m., on Tuesdays and Fridays, which under the rules of the House is devoted to the consideration of Private Bills, is not wholly taken up or used for that purpose, such part of the hour as remains after Private Bills are disposed of, shall be devoted to Public Bills and Orders, which shall be called by the Speaker in regular sequence as they appear on the order paper.

Mr. W. F. CARROLL (South Cape Breton and Richmond): Mr. Speaker, I would think

that was a question that should go before the committee which, under your direction, is dealing with proposed changes in the rules of the House. I do not think it is within the scope of a private member to move such a resolution at this stage without notice.

An hon. MEMBER: Notice was given.

Mr. CARROLL: Even if notice was given, I do not think such change as is proposed should take place. The fact that an hour is set aside after eight o'clock on certain evenings to take up private bills does not necessarily mean that the whole hour must be taken up with or allotted to private bills. The moment private bills are disposed of, necessarily other government work comes up.

Mr. MEIGHEN: The House may have had notice of this motion, no doubt it had; but I did not observe it, and consequently it is a surprise to me. I do not concur with the hon. member for Cape Breton South and Richmond (Mr. Carroll), who feels that it should be a subject for reference to the special committee in that it contemplates a change in the rules of parliament. It is no more a change in the rules of parliament than are a large number of motions that are constantly made by the government either for the appropriation of certain days or for the appointing of special committees for certain purposes, or motions of a similar nature. This is merely a motion that could have effect for this particular session, applying to the rules as they exist to-day. It so happens this session that there are a number of very important subjects that have been precipitated into "Public Bills and Orders" and which will find there a permanent resting place unless some means is found to enable discussion of them. It would not take a very great deal of time, if after private bills have been disposed of, between eight and nine, the rest of the time were devoted to the discussion of these questions and especially to the consideration of certain bills which have drifted into the category of public bills and orders. I have always felt as respects bills introduced by private members that after having got so far, landing in the bog, it was scarcely fair treatment for the member who had special legislation which he wanted to advance to shelve it in this way. Something can be said, as well, for this residue of resolutions, but the argument cannot be advanced quite so forcefully as in respect of bills which are held up in this way. I would suggest that the House give serious consideration to the motion of the hon. member (Mr. Kellner). For myself, I see no objection to its application this session.

Mr. LAPOINTE: I do not understand what my right hon. friend means when he says that there is no rule of the House governing the matter.

Mr. MEIGHEN: That is not what I said; the minister misunderstood me. I know he will agree with me when I explain the point. The motion is not in the nature of a change in the permanent rules of the House. There is of course a permanent rule of the House which applies to the present case, but this motion is no more a change of any standing rule than is the motion which is frequently made that Wednesday or Thursday be taken as government day after a certain period, or that a special order shall have precedence, such for instance as the special order which is now first on the order paper. The present motion, I say, is no more a matter for relegation to the committee which is considering changes in the permanent rules of the House than would be just such a motion as I have mentioned.

Mr. LAPOINTE: What my right hon. friend alludes to is the suspension of the rules in regard to one particular subject. That happens, not very frequently but occasionally; while the motion of my hon. friend (Mr. Kellner) would mean the immediate permanent suspension of rule 25.

Mr. MEIGHEN: Its suspension for this session; and so does the motion to take Wednesday mean a permanent suspension of a particular rule for the period of the session.

Mr. LAPOINTE: But that is a matter of practice, whereas this motion if adopted would establish a new practice which has never been known in this House, and that at a time especially when there is a committee sitting for the purpose of considering the advisability of changing some of the rules of the House. I trust that the committee will not accept any such innovation as suggested by my hon. friend inasmuch as it would lead to confusion. I do not see how the House could very well devote, of one hour, forty-five minutes to the consideration of private bills and fifteen minutes to the discussion, let us say, of race track gambling or something of that kind. I do not think it would be of any advantage to the House to adopt the motion. While personally I am not averse to the changing of some rules in the House, and elsewhere for that matter, I do feel that so long as the rules stand we should respect

them; and moreover while there is a committee actually considering the question of changes in the rules, I should feel disinclined to accept the motion.

Mr. SPEAKER: If no other hon. member desires to speak, the mover of the resolution will close the debate.

Mr. D. F. KELLNER (East Edmonton): If we are to accept the policy that no rules are to be changed in this House, then it seems to me that the committee just now studying the rules of parliament might as well cease its activities. And the minister will I think appreciate the fact that, whatever the committee may do, it does not expect any changes which it may propose to become effective this session. The motion now before the House is one that applies entirely to the present session. As regards subjects that are now on the order paper, there are quite a number of very important matters under the heading of "Public Bills and Orders" which it would be desirable to take up, and it would seem to be a question whether or not the government and the House desire to smother discussion of these questions or to give hon. members a chance to have them fairly brought before parliament. There is no question whatever to my mind that the procedure now proposed is almost identical with that followed by the government when they ask the House to give to government business the time that otherwise would be due private members. We are merely asking now for reasonable length of time in which to deal with important matters on the order paper. As for any resolution on race track gambling coming up for a fifteen minute discussion, I would ask the Minister of Justice (Mr. Lapointe) whether he seriously thinks that the mover of such a resolution would take fifteen minutes if it were offered him to discuss that subject. Why, it would be altogether impossible for him to get anywhere in that length of time.

Mr. LAPOINTE: I have seen some surprising things happen.

Mr. KELLNER: Possibly the Minister of Justice looks for surprises. But there are many days when private bills and orders are disposed of in about ten or fifteen minutes, and if we had the rest of that hour to take up public bills and orders, many important matters would be disposed of. It is undesirable that these matters should be deferred to a subsequent session, because it seems to me that this will only make for an effort on the part of members to beat the rules of the House; if they cannot get a fair chance to deal with the subjects they are promoting they may try to get ahead of the rules.

Mr. CARROLL: Why not make it a permanent rule of the House?

Mr. KELLNER: I am not suggesting anything as a rule of the House either permanent or temporary; we are simply asking that a certain space of time which is now devoted to private bills be given to public bills and orders when that time is not consumed in considering such private matters.

The House divided on the motion (Mr Kellner):

YEAS

Messrs:

Anderson,	Knox,

McCrea,	

Mr. SPEAKER: Under the rules of the House—

Mr. BELAND: Mr. Speaker, I beg to call to your attention that the hon. member for South Quebec (Mr. Power) was in his seat and did not vote.

Mr. POWER: I was paired with the hon. member for East Hamilton (Mr. Mewburn). Had I voted I would have voted against the resolution.

Mr. CHAPLIN: I was paired with the hon. member for Welland (Mr. German). Had I voted I would have voted for the motion.

Sir HENRY DRAYTON: Mr. Speaker, I was paired, but I certainly understood that no pairs counted. I may say that when I saw that some hon. members did not rise I at once sent over a note to my hon. friend the chief government whip (Mr. Kyte) asking him to vote because he is paired with our chief whip (Mr. Boys) who is absent.

Mr. DUNCAN: I did not know this motion was opposed by the government. I was paired with the hon. member for North Bruce (Mr. Malcolm).

An hon. MEMBER: You voted.

Mr. DUNCAN: I did not know that pairs counted.

Mr. ROBB: Mr. Speaker, I was paired with the hon. member for Vancouver Centre (Mr. Stevens). Had I voted I would have voted against the resolution.

Mr. MARTELL: Mr. Speaker, I should like to call your attention to the fact that the hon. member for South Toronto (Mr. Sheard) voted.

Mr. SPEAKER: Order. These explanations will be entered in the proceedings, but the vote cannot be changed.

There being an equality of voices, rule 6 puts the Speaker under the obligation of casting his vote and he can state his reasons to the House. I vote nay. My reason is this: There is a special committee, only appointed a few weeks ago by the House; it is presided over by the Speaker and sitting twice a week to discuss the advisability of amending some of the rules that are obsolete. That committee has not yet reached rule 25, which is affected by the principle involved in the present motion. Therefore I think it would be wise not to anticipate but to let the committee fully consider this question and report on it. The House can then adopt or reject the motion. I declare the motion lost.

Motion (Mr. Kellner) negatived.

PUBLICATION OF THE STATUTES

Hon. JAMES MURDOCK (Minister of Labour) moved for leave to introduce Bill No. 41, respecting the publication of the statutes.

He said: The object of this bill is to determine the manner in which the statutes enacted from year to year by the Dominion parliament shall be printed and bound, and distributed. The principal reason for the bill is that a revision of the statutes is now in progress, and the sections of the present statute determining the manner in which acts of parliament shall be printed and bound are couched in terms not now in common usage and not precisely in accordance with the practice which has been pursued for many years. A consultation with the Department of Justice resulted in the present measure being drafted as a new and complete statute rather than as an amendment of the existing statute, and it has the approval of the Department of Justice.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I do not know that I am

clear on the explanation of the hon. minister. He says that the present statute contains language that is not now in common use. What does he mean? If he would give us the statute to which he refers hon. members could refer to it.

Mr. MURDOCK: An act respecting the publication of the statutes. It is on the orders of the day, and my right hon. friend—

Mr. MEIGHEN: No, the hon. minister misunderstands me. What is the statute now in force?

Mr. MURDOCK: An Act Respecting the Publication of the Statutes.

Mr. MEIGHEN: That is not on the orders of the day, if it is the old statute.

Mr. MURDOCK: That is it exactly.

Mr. MEIGHEN: How would the old statute be on the orders of the day?

Mr. MURDOCK: It was found necessary to revise in several particulars the present act respecting the publication of the statutes.

Mr. LAPOINTE: It is really an amendment of the present statute.

Mr. MURDOCK: It really contemplates the amendment of a number of sections, and the Department of Justice thought it would be better to repeal the old act and pass a new statute, which is being done.

Motion agreed to and bill read the first time.

TORONTO VIADUCT—IMMIGRATION

On the Orders of the Day:

Mr. T. L. CHURCH (North Toronto): I would like to direct the attention of the Minister of Immigration (Mr. Robb) to complaints that are appearing in the Toronto papers the past few days, by letter, by editorials and otherwise, in reference to advertisements said to be appearing in British newspapers that 5,000 workers are needed in Toronto to work on the Toronto viaduct, when none are, as a fact, needed. I would like the minister to be kind enough to look into these complaints; to ascertain whether they are well founded or not, and, if so, who is responsible for the effort to induce immigrants to come to Canada on the basis of such wilful misrepresentations as these.

Hon. J. A. ROBB (Minister of Immigration): I will.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I understand that the hon. member quotes from an advertisement in some English paper, the purpose of which is to induce immigrants to come to Canada on the assumption that there is work for them on the Toronto viaduct. I just wish to point out to my hon. friend that under the law of England it is a criminal offence to use English newspapers for the purpose of inducing immigrants to come to Canada under false pretences. I think that should be brought to the attention of the public generally.

EXPORT TAX ON POWER

On the Orders of the Day:

Sir HENRY DRAYTON (West York): Mr. Speaker, during the budget debate I did not fully realize that the change in the law so as to provide for the export tax on power referred to by the hon. Acting Minister of Finance (Mr. Robb), had been carried out by order in council and that we will have no resolution under which an opportunity would be afforded to discuss the matter in the ordinary way in committee. Under these circumstances it seems reasonable to request that all applications for the right to export power and all correspondence having regard to the matter, the order in council itself, and the recommendation of the department on which the order in council is based, be tabled during the pendency of the debate.

Hon. J. A. ROBB (Acting Minister of Finance): I think the order in council has been published in the Canada Gazette. The act is administered by the Trade and Commerce department.

Sir HENRY DRAYTON: I am sure my hon. friend will realize that the order by itself does not mean very much. I think the House is entitled to know what steps were taken by the government with regard to the imposition of this new tax—that is, unless the matter is to be kept from any intelligent review by the House. We should have the correspondence, the recommendations and the like. I should not think there would be any difficulty about it.

Mr. ROBB: If there is any correspondence relating to it I will bring it down.

Sir HENRY DRAYTON: The applications and the recommendations.

NATURALIZATION ACT

On the Orders of the Day:

Mr. ARTHUR L. BEAUBIEN (Provencher): May I ask the Secretary of State (Mr. Copp) if he intends to bring down any amendment to the Naturalization Act this year?

Hon. A. B. COPP (Secretary of State): The present intention is not to bring down any amendment to the Naturalization Act.

RURAL CREDITS

On the Orders of the Day:

Mr. H. E. SPENCER (Battle River): I would like to ask whether the attention of the government has been directed to the following resolution which has been unanimously agreed to by the legislative assembly of the province of Alberta:

Resolved, that this House continue to urge on the Dominion government the necessity for a federal farm loan scheme, and request that action be taken at the present session of parliament to make the necessary provision to make such a scheme effective.

Right Hon. W. L. MACKENZIE KING (Prime Minister): It would be very difficult to answer my hon. friend. A number of these resolutions that are passed by provincial legislatures are sent in to the government, but it would be necessary to inquire of the Clerk of the Privy Council or of the Secretary of State whether this one has been received. I will make the inquiry and try to give my hon. friend an answer.

CANADA GRAIN ACT AMENDMENT

On the Orders of the Day:

Mr. O. R. GOULD (Assiniboia): I would like to ask the Minister of Trade and Commerce (Mr. Low) if he will intimate to the House why the government decided not to bring down any amendments to the Grain Act this year.

Hon. T. A. LOW (Minister of Trade and Commerce): There are no other reasons than those stated yesterday. It is desired to give hon. members ample opportunity to study the report of the Royal Grain Commission. If the House so desires we have no objection to introducing the bill and upon second reading referring it to the Agriculture committee. I am sure Mr. Justice Turgeon would be glad to appear before that committee and explain fully his report and the bill that he has drafted.

Mr. GOULD: I would suggest to the minister that the farmers of western Canada do not wish to market their grain under existing conditions any longer than they can help, and would like to see the bill passed in its amended form this year.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, we have some interest in this matter too. I thought it was a new proceeding in parliament that the government should leave a bill on the table for a year in order that it might properly soak in. The session of parliament is for that purpose; the various stages of the bill itself are for that purpose. I do not know anything more difficult to understand about a grain bill than about any other. If there was any bill that this premonitory procedure should apply to it was the Petersen bill. I do not see that the government has any reason at all for this extraordinary procedure, especially in view of the fact that already three or four sessions have elapsed since the matter was first undertaken. The reports have been delayed month after month—indeed, year after year. Surely we should not have to rest on our oars for another year before we have the legislation.

Mr. LOW: My right hon. friend does not suggest that for several years no action was taken on the report of the Royal Grain Commission?

Mr. MEIGHEN: No. I said the report had been delayed for months and even years.

Mr. LOW: Not the report of the Royal Grain Commission that was appointed a year or two ago?

Mr. MEIGHEN: Yes. The government in its Speech from the Throne of 1924 offered the expectation to the House that the report would be down in time for legislation a year ago.

Mr. LOW: The report was received only shortly before the session opened.

Mr. MEIGHEN: I know that.

Mr. LOW: It was tabled immediately following the opening of parliament. We realize that this is a very important matter. It has been intimated to me on more than one occasion that some members would like an opportunity to study the report of the Royal Grain Commission more fully. But if it is the wish of the House that the government should proceed with the bill we are ready to introduce it, give the bill its first and second readings and then refer it to the Agriculture committee. As a matter of fact, if the Agriculture committee is prepared to recommend its adoption we are ready to proceed with the bill this session.

Mr. MEIGHEN: I think I see now the reason why all this precaution is to be taken. The government is apparently going to rest its destiny on the Agriculture committee with respect to this bill. I was in no disagreement with the minister as to the delay to date,

but surely he does not suggest that that is a reason for leaving the bill on the table for a year. Suppose there is a general election; next year there will be new members. Will the House then have to have another year until the new members study the bill, too?

Mr. GRAHAM: Speak for your own side of the House.

Mr. MEIGHEN: That is what I am doing.

AUSTRALIAN TRADE TREATY

On the Orders of the Day:

Mr. W. G. McQUARRIE (New Westminster): May I inquire when the government propose to bring down the Australian treaty for ratification?

Hon. J. A. ROBB (Acting Minister of Finance): I think that question was answered a few days ago.

Mr. MEIGHEN: Could the government lay that on the table too, so that we may think it over?

FISHING LICENSES TO FOREIGNERS

On the Orders of the Day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): I want to give some information to the hon. member for New Westminster (Mr. McQuarrie) in connection with an inquiry he made yesterday, in which he drew the attention of the House to an answer that had been made to a question put by him on the 25th of March. There were six enumerations; three had been answered by the Minister of Marine and Fisheries. I find that this is what happened: Part of the question relates to the Department of Marine and Fisheries and part of it to the Department of External Affairs. The External Affairs department sent its answer in to the Department of the Secretary of State, where the questions were assembled, but it had not reached the House, so that the answer as given to the House contained only the reply of the Marine and Fisheries department. That is why all the questions were not answered at the same time. That is why the whole question was not answered at the moment. Now the part referring to the Department of External Affairs, which remains, is the fourth question:

Is it true that the Japanese government has refused to make any modification in the agreement subsisting between Canada and Japan, as to the number of Japanese subjects to be allowed entry to Canada yearly?

The answer is No.

Has the Japanese government made any proposal to the Canadian government in reference to the matters referred to in the preceding question?

[Mr. Meighen.]

The answer is No.

If so, what are the particulars thereof?

The reply to this is: Answered by the preceding answer.

VANCOUVER HARBOUR COMMISSION

On the Orders of the Day.

Mr. GEORGE BLACK (Yukon): I should like to call the attention of the government to several questions put on the order paper on 25th February. After being allowed to stand some days the questions were converted into an order for return. The questions were concerning certain transactions with the Vancouver Board of Harbour Commissioners. They do not involve any research, it is a matter as to which the government should have information at hand here in Ottawa, and I would ask the Minister of Marine and Fisheries if the return could not be expedited.

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): I shall be pleased to make the necessary inquiry and see that the return is prepared as soon as possible.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Monday, March 30, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Mr. J. FRED JOHNSTON (Last Mountain): Mr. Speaker, I am sure you will agree that we have had a somewhat interesting afternoon. We have had a review of the past and present railway situation in this country from the hon. member for South York (Mr. Maclean). We have also learned that no new political party has been born in this country, which fact I am sure will come as a measure of relief to many of us as there will be no swaddling clothes and feeding bottles necessary.

May I at this time congratulate the Minister of Railways (Mr. Graham) on attaining another mile stone. I am sure that I voice the feelings of all, at any rate in this part of the House, when I say to him that we hope he may have many happy returns of the day.

In addressing myself to the resolutions now before the House I wish first of all to draw attention to the proposal of the government to create what is termed a tariff board. In this connection I want to read from the resolu-

tion relating to the board in question the following words:

> The remaining members will be persons specially qualified to advise upon such questions, and will give continuous time and attention to these and kindred matters.

Now, Mr. Speaker, I am not opposed to the appointment of this board but I want to point out that the farming interests of this country will expect to be represented on that body. I think I may say to the government that this board will not be received with favour by the farming interests of the country if one of their number, one in whom they have absolute confidence, is not included in its personnel.

Another matter I intended to draw attention to was the amendments to the Dumping Act, but I observe the Acting Minister of Finance gave notice yesterday that when we reach the proper stage of the proceedings he will withdraw this proposal. I am pleased that he is going to do that, but it is still a matter of wonder why those amendments were ever proposed. I am sorry they were brought down but I am glad, as I have said, that the acting minister now proposes to withdraw them.

I wish to say a few words regarding the budget of 1924, and the reductions in the customs duties that were given effect to at that time. It is a well-known fact that our friends to the right have claimed that those reductions, along with other policies of the government, have resulted in the closing of many factories in this country. I have in my hand a publication issued by the Liberal Conservative organization committee at Ottawa, dated February 19, 1925, and I want to say to my hon. friends to the right that this publication came into my hands in a legitimate way.

Mr. MEIGHEN: Glad you got it.

Mr. JOHNSTON: My right hon. friend probably will not be so glad before I have finished.

Mr. MEIGHEN: It will not hurt.

Mr. JOHNSTON: In this article it is stated that "a seven-foot binder with no attachments in 1921 cost $235; the price to the farmer to-day is $237. But the sales tax of 3 per cent existed in 1921 and does not exist to-day." The House will note immediately that the figures quoted here are for the years 1921 and 1925; there is no consideration given to the intervening years. But anyone having to do with the agricultural implement industry, or the buying of these implements, will know that in that interval between the years 1922 and 1923, there was a very material increase in the price to the user by the manufacturers. No consideration is given to that at all. The idea conveyed in this article is that as against the price of 1921 there was an advance in 1925 which may be true as respects the figures submitted. But the list given in the article goes on to enumerate different machines—five-foot heavy mower, ten-foot rake, single-disc drill, six-foot 12-tooth cultivator, and so on. I made it my business after this publication came into my hands to write to one of the large implement firms doing business in western Canada and ask them for their prices for each of the years 1921 to 1925 inclusive, showing what reduction, if any, had been made by the lowering in the customs duties and sales tax as of last year, and I wish to submit these figures: An eight-foot binder in 1921 cost $331; in 1922, it cost, $267, in 1923, it cost $274, and previous to April 11, 1924, it cost $308. Immediately after the reduction in the customs duties and sales tax the price was reduced to $293, or a saving to the farmer of $15. Further, the price for this year is $283, or a total difference, between the price in 1921 and the present price of $48. I mention the last price in order to explode the old theory of our protectionist friends that any reduction in the customs duties does not reach the consumer but is added by the American manufacturer to the price.

Mr. MEIGHEN: What about the 5 per cent sales tax taken off, is that not worth mentioning?

Mr. JOHNSTON: I have given the prices for the years 1921 to 1925 inclusive.

Mr. MEIGHEN: You missed the point altogether.

Mr. JOHNSTON: Now on a 20-shoe drill the price in 1921 was $260, in 1922, it was $200, in 1923, it was $207. Previous to April 11, 1924, the price was $230. After the reduction in the sales tax and customs duty the price was $210, or an immediate reduction of $20. The 1925 price is $185, showing a net reduction this year over 1921 of $75 on these implements.

Mr. LEWIS: In order to make the situation quite plain was there an increase in the price in 1924, before the budget came down, anticipating that the duties were going to be lowered?

Mr. JOHNSTON: My hon. friend will have to ask the manufacturer that, I do not know.

I do know, however, that there was an increase by implement firms in this country in the fall of 1923, applicable to the prices sent out in the spring of 1924, but it was a general increase. Now I have the prices of two other implements in very general use in western Canada. On a 16-16 disc harrow the price in 1921 was $90, in 1922 $72, in 1923, $76. Previous to April 11, 1924, the price was $85. After reduction in the customs duty and sales tax the price was $80, or a reduction of $5. To-day that implement costs $79, or a total reduction of $11. On a 10-foot hay rake the price in 1921 was $66, and in 1922 $55, in 1923, $56.50. Previous to April 11, 1924, the price was $65, and after the reduction of customs duties the price was $62, or $3 attributable to reduction in customs duties and sales tax. To-day the price of that machine is $60, or a reduction of $6. These figures are authentic and are from one of the largest implement companies doing business in western Canada. I have a letter from the sales manager of that implement company to show the correctness of my statements.

It is not my intention to dwell very long on this matter of protection. I have said in this House before, and I re-state at this time, that in my opinion protection breeds trusts and tends to distrust in government. We heard from the hon. member for Dufferin (Mr. Woods) a short time ago in regard to the manufacture of wire fencing in this country, and I think it is worth while repeating some of his statements. We have different firms manufacturing wire fencing in Canada. Some of them also manufacture the wire or raw steel rods. In this particular instance the manufacturers who weave wire fencing also manufacture a fencing of No. 10 wire, on which there is an import duty of 20 per cent. These other people who only weave wire are forced to pay that 20 per cent duty to their competitors, with the result that they will either be put out of business or we will have another trust in this country. My hon. friend at that time spoke about manufacturing in the small towns of Ontario years ago. I remember very well as a boy in this country, that in the town where I was brought up we had many small manufacturing establishments. We had a foundry employing fifteen or twenty men, a tannery employing about an equal number, and a woollen mill, three different firms that manufactured wagons, sleighs, buggies and so on, but all these had disappeared, before 1896. And why? Probably because something similar to what I have stated in connection with the wire fencing obtained—that the big fellow was able to freeze them out. I think it can be safely said that protection has failed to make Canada prosperous. I do not wish to burden the House with a long array of figures to sustain this statement I have made as to the failure of protection to make Canada prosperous, but there are a few to which I should like to call attention. Take for example the comparison between the growth of Canada and the United States during comparable periods in their early development. In 1790, the United States had a population of 3,929,000, which compares with 3,689,000 for Canada at the time of confederation. In the first fifty years after 1790 the population of the United States rose to 17,063,000; while in the first fifty years of its history the population of this Dominion only reached 8,361,000. I have taken the United States figures from the Encyclopedia Britannica and the Canadian from the Year Book. In the first fifty years of its existence, or thereabout, the United States increased in population more than four-fold, while the population of Canada during a similar period was only a little more than doubled. This does not look as if Canada had in the last forty odd years enjoyed, under protection, the growth that it was entitled to in the normal course of events.

Or, if more evidence is desired of the ineffectiveness of protection as a national policy —that is a policy that will build up Canada— we have only to look at the figures of emigration to the United States, which our Conservative friends have been so fond of citing of late. I do not need to quote them here, for they have been brought before us quite lately by the right hon. member who leads the official opposition (Mr. Meighen). Any one who is curious can find the figures up to recent years in The Monthly Labour Review, published by the United States Department of Labour, which showed an annual exodus of 117,000 in the United States fiscal year 1922-23.

Instead of quoting these figures of the United States government, however, I prefer to cite a table from the last issue of the Canada Year Book 1922-23, page 149. In that table the Bureau of Statistics reviews the movement of Canada's population in the last two decades—1901 to 1911 and 1911 to 1921. In the first of these decades the numbers added to the population of this country by natural increase and by immigration were 2,701,217; while the actual increase in the population was only 1,835,328. In the second decade the numbers added by immigration

and by birth were 2,879,580; while the actual increase in the population was only 1,581,840. In other words in the first of these decades, one of the most prosperous in the history of Canada, and under a fully developed protective policy, there was an exodus from the country of 865,000 and in the second ten year period the loss of population was 1,297,000. Surely the existence of such figures as these after thirty or forty years of protection is evidence that there is something wrong in that "heaven-born" system as a national policy. And I am sure, Mr. Speaker, that the figures pertaining to the last decade I have mentioned cannot bring much comfort to my hon. friends to my right, because it was they who were in office from 1911 to 1921, under a highly protective system, under which Canada has lost so many people to the United States.

Now what about these factories that we hear have been closed? What is the truth in connection with that matter? Everyone knows that during the recess the hon. leader of the opposition went about Canada telling the people that two thousand factories had closed, and many of his lieutenants echoed those words. I have in my hand a clipping that reports a statement given at a conference held in the city of Ottawa in the fall of last year with respect to employment. At that conference a representative of the Canadian Manufacturers' Association stated that during the past two years thirteen hundred and fifty-one factories in Canada had closed, not two thousand, but he did not stop there, as the right hon. gentleman does. I might say that Mr. Shaw, the gentleman who made this report, stated that the new companies that had been formed during the past two years do not make the picture quite so dark. The following is the list of factories closed and new factories opened in the past two years:

Classification	Closed	Opened
Food products	240	153
Tobacco, cigars, etc.	24	12
Fertilizers and fertilizer materials	19	5
Oils, chemical, drugs and industrial minerals	85	59
Pulp, paper and printing	43	68
Lumber and wood products, exclusive of pulp and paper	271	169
Furniture and musical instruments	49	19
Building materials	81	49
Agricultural implements and tools and equipments, tractors, etc.	31	6
Carriages and wagons	18	10
Iron and steel and metal products and machinery	172	134
Leather	13	8
Leather products	10	13
Footwear and findings	24	21
Rubber goods	6	4
Autos and equipments	23	27
Toys	7	1
Glass products	6	4
Textiles and apparel	156	108
Miscellaneous including brooms and brushes, tents and awnings, jewellery, corks, etc.	73	64
	1,351	934

This shows a total number closed of 1,351, a total number opened of 934, or a net loss of 417. That is somewhat different from the statement that has gone broadcast over this country.

I think a question that many people in this country would like an answer to is whether or not industries can live in Canada without protection. I now draw attention, Sir, to two industries that are living in this country without any protection. One is the cream separator industry that has been spoken of frequently in this House, which does business in an international way and which shows no signs of closing its doors. I hold in my hand an announcement by the Brantford Cordage Company, of Brantford, Canada, that they are offering to the purchasing public of Canada 80,000 shares. I want to give to the House some of the particulars with respect to this industry. The issue is termed "first preferred sinking fund cumulative participating stock —$25 par value." Of the first preferred shares —$25 par value—100,000 shares are authorized and 80,000 shares are now being issued. Of the second preferred cumulative shares—$25 par value—34,000 shares are authorized and 34,000 shares are now being issued. Of the common shares—no par value—100,000 shares are authorized and 80,000 are now being issued. Underneath the summary of the capitalization there is a note that this company has no bonded debt. Still it has been doing business on a free trade basis in Canada for many years. Mr. C. L. Messecar, president of the company, summarizes his information to the public as follows:

> Business and property—The company is the largest manufacturer of binder twine in the British Empire and owns and operates a plant occupying seven and a half acres at Brantford, Ontario. There has been completed and put into operation last January a third mill with the most modern equipment, which increases the productive capacity of the company approximately 50 per cent.

Not only can business carry on in this country on a free-trade basis, but it can increase its business.

> The business is largely domestic, but the company's product is also exported to practically all the grain-growing countries of the world. Owing to its low manufacturing costs, the business has been able to meet all competition.

This is what he says as to its assets:

Assets (after present financing)—The fixed assets of the company, as appraised by Lockwood, Greene and Company of Canada, Ltd. Engineers, Montreal, amount, on a depreciated replacement value basis, as at August 31, 1924, to.. ..	$ 924,413 14
Net current assets, exclusive of goodwill, patents, trade marks, brands, etcetera, amount to..	1,593,419 08
Total net tangible assets (August 31, 1924)	$2,517,832 22

Earnings—The net earnings of the business, according to the certificate of Messrs. Clarkson, Gordon and Dilworth, after depreciation and federal taxes for the five years ending August 31, 1924, have averaged $269,584.33 per annum, which is 1.68 times the dividend requirements on the first preferred stock.

That is not a bad showing.

Having regard to the increased capacity and according to the orders on hand, the net earnings for the year ending August 31, 1925, should not be less than $500,000.

I think our protectionist friends had better give a little consideration to these companies that are able to do business in Canada on a free trade basis.

I wish now for a very few moments to say something about transportation in this country. First of all, we have our railway transportation about which we heard so much this afternoon. In this connection, the House knows this matter must come before parliament at this session in a specific way and for that reason I shall have very little to say at this time. In shipping grain from western Canada we first have to load it in cars. When it gets to the head of the lakes it has to go into lake-going vessels. Before it is landed on the Old Country market, it has to be taken aboard ocean-going vessels, so that it has the three steps. It can readily be understood why western members are so much interested in transportation matters and transportation costs. With respect to the first, while this matter is coming before the government and before parliament for attention at this session, I wish as best I can to refute some statements that have been made in the press with regard to earnings in western Canada on the handling of grain. I have here the net earnings month by month for the year 1924 of the Canadian Pacific railway. I have also an advertisement which that railway published in many of the newspapers of Canada giving a comparative statement of rates for similar mileage in the United States as against Canada. I am free to admit that in every case the Canadian rate was lower, but that does not mean that the handling of grain on the prairie section of western Canada is not done at a profit. I read from that advertisement these words:

[Mr. Johnston.]

Is the loss on grain traffic to be made up by higher rates on other commodities? Is it to be charged on traffic in some other part of the country or is the government to collect it in taxes from all the people?

Only one inference can be taken from that, and it is that the rates now being charged on grain in western Canada are not paying. As against that I wish to place on Hansard, not the gross earnings, but the net earnings, month by month, of the Canadian Pacific in the year 1924:

Year	Net Earnings
January..	$ 709,011
February..	938,618
March..	2,332,071
April..	1,497,607
May..	1,629,361
June..	2,462,880
July..	2,339,116
August..	3,280,706
September..	4,581,103
October..	7,090,615
November..	6,122,251
December..	4,554,047
	$37,537,386

In the month of August, when grain begins to move in the prairies, there was an increase of nearly a million over July. The figures for September are $4,581,103; and when the big rush of grain is on from the prairie section in October we find the net earnings of the Canadian Pacific Railway running up to $7,090,615. The total for the twelve months, as will be seen from the foregoing table, is over $37,000,000. An analysis of these figures will reveal some interesting results. It will be noted for instance that the net earnings for the month of October alone, when the rush of grain was on, was but $16,053 less than for the first five months of the year. Again, the net earnings for the months of September, October and November are but $1,949,448 less than one-half of the total. And if we include December we find that the four grain months exceed in earnings the other eight months by $7,158,646. These figures I think should receive the serious consideration of every hon. member who will have to pass judgment on the rates question when it is before the House. In further support of my contention that the handling of grain in the prairie sections is the most lucrative end of the railway operations, either for the Canadian National or for the Canadian Pacific, I shall quote from the report of a speech delivered by President Beatty in the city of New York a short while ago.

Mr. CALDWELL: Before the hon. member proceeds, I should like him to answer a question. Are the figures which he has given those of net earnings of the railway in ques-

tion during the time the Crowsnest pass agreement was in force?

Mr. JOHNSTON: Yes; these are for the year 1924 when the Crowsnest rates on wheat and wheat products were in full force. I would read now the following press despatch;

Would be Canada's Richest Men To-day

E. W. Beatty Says Canadian Northern Builders Should Have Served Prairies Alone

New York, February 22.—Over sixteen hundred members of the New York Traffic Club, and the largest gathering in the history of the organization, were present at the annual banquet in the Commodore Hotel here last night, where E. W. Beatty, K.C., president and chairman of the Canadian Pacific Railway, was the chief speaker. The guests included the executives of many of the larger United States railroads. W. A. Schumacher, president of the Club, was in the chair.

Mr. Beatty was accompanied by W. R. McInnes, of the C.P.R. Mr. Beatty largely devoted his remarks to a review of Canada's railway history, which was, he said, the story of the great achievement, mistakes, failures and political and economic complications ending with the most unique situation existing in the world to-day. He traced the building of the Canadian Pacific Railway, and said that the success of the company had provoked similar but over-ambitious enterprises. He referred to the Canadian Northern which, he said, while a great conception, carried to physical completion, had failed because it was built before its time and could not be operated successfully through the dislocation of war time.

"If," said the speaker,—

And I would draw the attention of the House to this.

"If", said the speaker, "instead of turning its prairie lines into a portion of a transcontinental system the owners had been content to make as their termini the mountains on the west, and the Great Lakes on the east, they would have been the wealthiest men in Canada".

There is only one inference to be drawn from the foregoing and it is, that the handling of grain in the prairies to-day is the most lucrative traffic in which the railway companies are engaged.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. JOHNSTON: Mr. Speaker, when the House rose at six o'clock I was discussing transportation rates in Canada, particularly railway rates. I also mentioned lake and ocean rates. As the latter subject is coming before a special committee of the House of which I am a member, I shall refrain from discussing it now. With respect to lake rates, in my opinion, judging from the information I have, the producers of wheat in western Canada have been harder hit by the exorbitant tolls levied by the lake carriers than they have been by ocean rates. In this connection I think it is not too much to say that when the rush of grain is on, and the rate to Buffalo is one-half cent lower than the rate to lake ports, our coastal laws should be suspended.

Now I come to a matter which probably is somewhat irrelevant to the motion before the House; nevertheless, I think it is of sufficient interest to occupy the attention of hon. members for a short time. I refer to the appointment by this House last session of three commissioners to visit the Wembley exhibition. I happened to be one of those commissioners, and as there has been some criticism of the vote, I wish to state my position in regard to it and to justify the expenditure. The hon. member for Fort William and Rainy River (Mr. Manion) told us the other day that he had discussed this vote on the stump, and when he discussed it in the House he said that the cost of the commission was covered by a vote of $20,000. He would have been more fair had he said the cost was smothered by a vote of $20,000, for the total cost of the commission was $4,200, or $1,400 for each of the three commissioners. It is not my intention to try to justify the vote upon its smallness; if it will not stand on principle, it will not stand at all; but when we take into consideration that this House voted over a million dollars to place Canada's products on exhibition at Wembley, I think there was some justification for sending a small delegation from parliament in order that they might bring back a report.

Mr. JACOBS: Particularly as all the members were also Canadian products.

Mr. JOHNSTON: Our report is now in the hands of the Minister of Immigration (Mr. Robb), and a perusal of it will show that it contains a recommendation that Canada should participate in the exhibition for 1925. Whether our recommendation had anything to do with the government's decision I do not know, but I am glad that they have decided that Canada shall again take part in the exhibition this year. I do not intend to deal with the matter in detail on this occasion; my remarks in that connection will be more appropriate when the minister's estimates are before the House; but it may be of interest to hon. members to know that all men of affairs in this country did not support the official opposition in their stand against the vote in question. I have in my hand a letter from a well known figure in Canada, and I will read that part of it which applies to the matter I am discussing:

J. FRED JOHNSTON, M.P.,
Bladworth, Sask.

Dear Mr. JOHNSTON,

May I congratulate you on the substance of the interview you gave the Saskatoon Star and which appeared September 24th, on your visit to Wembley? I have just drawn the attention of my different editors to some phases of the interview and have sent the article as a whole to the editor of The Financial Post, suggesting that he reproduce it in next week's issue.

We supported the governent in the expenditure on the exhibition, believing in it just as you do; and we also supported the action of the government in giving a grant for M.P's to go abroad. We believed that both appropriations were very good investments.

Faithfully yours,

J. B. MACLEAN.

Mr. Maclean is publisher of Maclean's Magazine.

Those of us who did go to Wembley were very sorry indeed that the chief whip of the Conservative party (Mr. Boys) was unable to go. The House knows that he supported the vote and was anxious to go, but for personal reasons he could not get away. I hope the government will see its way clear to let the hon. member go this year; and I think he should be accompanied by one or two other members of this House. I believe they could do good work for Canada by visiting the Wembley exhibition. It was our privilege the second day, I think, after we arrived at Wembley to welcome to the Canadian building certain members of the Imperial government, and the occasion was a source of great satisfaction to us.

From the opening of the exhibition in April until the time we left, an average of twenty thousand school children a day passed through the turnstiles to visit the exhibition. These children were all at the age when their minds were most receptive, and they could not but be impressed by the splendid exhibit of our products in the Canada building. I feel confident, Mr. Speaker, that if the government or the House would accept some of the proposals and recommendations contained in the report of the commissioners the cost of sending them to Wembley would be returned to this country many times.

A particular phase of the matter that I wish to emphasize is the effectiveness of the manner in which Canada was placed before the Britisher who travels abroad. It was my pleasure to meet many who intended to visit Canada. One trip through the Canada building could not but create a desire to see the real thing, and I am informed by the officials who were in charge of this end of the work at Wembley that long before the exhibition closed last fall many travellers from England were touring our country. I do think we give too little attention to this matter of tourist travel. It is estimated that last year the revenue coming to Canada from tourist travel was over $136,000,000, and the only money we spend in a direct way to induce tourist travel is a vote of $35,000. Of this amount $12,000 is used for salaries, leaving $23,000 for what may be termed propaganda. I have made the assertion, and I stand by it, that the total cost of Canada's exhibit at Wembley will be returned to this country, not by ordinary tourist travel but by increased tourist travel in a very short time. Other countries are paying a great deal of attention to the matter. In 1919, I think it was, France created a department of government under a minister whose business it was to look after tourist travel in that country. We know what Italy and Switzerland do in this connection; they almost live on the revenues derived in their respective countries from this source. I will try to give to the House some idea of the benefit that is bound to come to Canada and what we may expect if we extend our energies a little. I think they are more alive to this question out on the west coast than here in the eastern parts of our Dominion. Vancouver has a publicity commissioner who gives a great deal of time to this matter, and here is something he says:

According to estimates carefully worked out by Mr. Davison, Publicity Commissioner for Vancouver, approximately one-third of every dollar left in the country by tourists finds its way back into the pockets of the rural districts. In the year 1924 it is estimated that one million tourists visited British Columbia. According to Commissioner Davison these visitors consumed—

I am not going to give the total in pounds, but it is remarkable. What I want to get at is how this money is distributed and who gets the benefits. Canadian food products consumed amount to $30,000,000; foreign, $14,000,000. The other $92,000,000 is made up in this way: transportation, railways, steamships, $28,000,000—that is where our National railways come in; hotel accommodation, personal services, $56,000,000; equipment, clothing and so forth, $3,500,000; amusements, souvenirs and so forth, $3,500,000; miscellaneous, $1,000,000, making $92,000,000. This, added to the food consumed, $44,000,000, makes a total of $136,000,000 as the estimated revenue coming to Canada last year. As I have pointed out, all we are spending in this connection is, at the most, $35,000. It goes without saying that in no other activity do we get a like revenue for such a comparatively small expenditure. There are some things which are necessary if we are to increase tourist traffic in this

country. We are pretty well equipped so far as railways are concerned, but we must have motor highways. I was pleased that the Minister of Railways moved to amend the Highways Act of 1919 by giving further time for the provinces to earn their grants under that statute and I hope that another year he will see his way to further supplement the vote for this purpose. Tourist travel comes to our country largely in motor cars from the south and if we have trunk roads, particularly in western Canada, to connect with the state roads we will take many thousands of people into the mountain sections that we would not get otherwise. I have here a comparative statement which should be of some interest to the House. If we were to compare the value of our four highest exports during the fiscal year 1921-22 with what I might call our "export of scenery" they would be seen to rank as follows: Agriculture and vegetables, $317,000,000; wood and paper, $179,000,000; animal products, $135,000,000; foreign tourist travel, $100,000,000; iron and its products, $27,000,000. That means that the "export of scenery" comes fourth in the list, and in selling our scenery to tourists all they take away with them is an eye-full and the food they consume, we have the scenery left to sell over again. I feel that there is a wonderful field for increasing this traffic in the Old Country, and I would suggest to the government that they send to Wembley this year the same man who was there last year. He is an expert photographer, and an expert also in handling moving pictures. Last year he went out into the country week ends and displayed his pictures, and the number of visitors he had in his office at the Wembley exhibition was remarkable. The cost of doing this is very slight if we compare it with many of our other activities, and it involves no new scheme of taxation: It is simply a matter of spending a little money in a direct way to induce more people to visit our country.

I am not going to detain the House much longer except to deal with this further point: We hear to-day rumours of an election, and one wonders what the issues are going to be. We heard the hon. member for Dufferin (Mr. Woods) say the other evening that back in 1911 he was in the councils of the Conservative party when it was decided they could not defeat the government of the day by attacking their policy but their only chance was by raising the loyalty cry or starting a flag waving exhibition, and they did not hesitate to do so. Now, I was rather amused on taking up the morning Citizen of March 27 to read this from a speech by the right hon. leader of the opposition to west-end Conservatives:

> If this country wishes to maintain British citizenship on the North American continent, it must turn right about from the way in which it is being led by the Mackenzie King administration.

I was just wondering whether that was the beginning of the Conservative campaign for next election. But hon. gentlemen to my right will find a vast difference in public opinion in this country from what obtained formerly. We had the remarks of the hon. member for Dufferin who at that time was attached to the party of whom I have just spoken, and a few weeks ago we had the words of the member for Portage la Prairie (Mr. Leader) with respect to the reciprocity pact. The House will remember that he said at that time that he was sorry he had voted against reciprocity in 1911, and hoped that he would get the opportunity to vote for a similar pact at an early date. There you have an expression of opinion from Ontario and another from Manitoba. I do not believe the Progressive party is going out of existence at the next election. It received support in 1921 from many of those who opposed the reciprocity pact in 1911, and who have seen the light. My Conservative friends will have a much harder task in winning public support for their policies than they had in 1911. I have here another reason why western Canada would not give much support to the Conservative party. Here is a Canadian press despatch from Halifax dated September 3:

> Meighen Not in Sympathy With Prairie Provinces
>
> Halifax, N.S., Sept. 3.—Right Hon. Arthur Meighen, speaking here Tuesday on the rapidly growing movement of the various provinces of Canada to secure better treatment under the confederation agreement, declared that while Canada was a "hard country to govern" the various problems would largely be solved if a more human touch was established with the extremities of the country.
>
> The ex-premier said the prairie provinces think they are the only ones who have been denied the rights of the confederation pact.
>
> "I am going to tell them," he said, "that I am not in sympathy with their grievances."

Now what are their problems and their grievances? We remember very well the attitude of the right hon. gentleman in 1922 when we were striving to get the Crowsnest pass rates re-established on wheat and wheat products in that western country. Both he and his party opposed us as vigorously as they could. If that is one of the grievances he is going to tell western Canada he does not sympathize with we already have that information. With respect to tariff matters

neither the right hon. gentleman nor any person else need expect to make any headway in western Canada on a protectionist platform.

In conclusion let me say this: I believe there is a tendency in this country on the part of many people to look for governments to do for them that which they might better do for themselves. Personally I am opposed to what might be termed paternal legislation. Canada's problems to-day are not those of production. We can produce, and as a matter of fact are producing, more per capita than any other people in the world. That is established by facts. Our problems are rather those of distribution and markets. In connection with these the government certainly has a responsibility, a big responsibility, and I hope it will address itself to their solution not only with vigour but with determination.

Miss AGNES C. MACPHAIL (Southeast Grey): Mr. Speaker, I wish at the very beginning of my remarks to offer my congratulations to the hon. the Minister of Railways and Canals (Mr. Graham) on this his sixty-sixth birthday. I think I am not going outside the bounds of truth when I say that I believe he is the most loved member in this whole chamber, loved not only by me but by all hon. members. It is something to be able to control or lure to oneself affection and regard as the Minister of Railways and Canals is able to do. It is possibly after all a greater success than any other kind of success that could come to one.

I am going to deal with a particular question, namely the condition that we now find in the area of the colliery towns of Cape Breton. I remember when I came to this House four years ago one of the first debates—at least the one which stays in my mind most vividly—was the one precipitated by, I think, the hon. member for East Calgary (Mr. Irvine) on a motion to adjourn the House to debate an urgent matter, which was then the proposal of the company to cut the men's wages thirty-seven and a half per cent, as I recollect, and a delegation came from Cape Breton asking that a royal commission be appointed to look into the matter. The British Empire Steel Corporation—shortly called "Besco"—is, as everyone in this House knows, a huge merger that absorbed twenty-four companies with a capital of eighty-three million dollars. They went into the merger that way, and as one company came out with a hundred and two million dollars of capital. This company is a very excellent example of pampering. They have received almost everything—subsidy, bonuses, protection by tariff and militia. They have had almost everything any government could give them. I think when I am through hon. members will conclude with me—at least if they believe anything I say—that it is an excellent example of the pampering of industry and the neglect of humanity.

I wondered before I went to Glace Bay and the towns in the vicinity of Glace Bay where the strike occurred, at mines Nos. 2, 4 and 6, how it was that people, after just three weeks of unemployment, found themselves at once on the hunger line, and almost in fact unclothed; that is unclothed when one thinks of the cold wind. I wondered how that could occur in three weeks' time. I had of course an idea that surely it could not be just the result of three weeks of not working, and I find—and my visit confirmed me in this—that the condition now existing is an accumulation, and that the cessation of work three weeks ago has merely brought the matter to a head. For four years the men have not had regular work. For a year and a half they have had almost no work. In the Dominion mines Nos. 2, 4 and 6, affecting 2,200 men, 85 per cent of whom are Canadians, and many of the younger men of whom are veterans and returned soldiers, the men worked seven days in December, six days in January and four days in February. One man said to me, "Oh we make big pay when we work". But work is the difficult thing! They get fairly good pay all right, but they were not getting much work and by the time everything was checked off that had to be checked off their pay envelopes there was almost nothing left. One woman expressed it in this way to me, "For a year and a half we have just had enough to eat. We have let the stores of furniture, of bedding and household necessities go down. We have just been getting enough to eat." So that, when the credit given by the company's stores was cut off a little over three weeks ago and they ceased work, they not only had nothing, but most of them had much less than nothing: that is, they were deeply in debt to the company's stores. Whether the miners themselves are right or are not right, their idea is this: that this little work and cutting off of credit was all a means to an end, a means of forcing the men to accept the ten per cent reduction in wages proposed by the company for the 1925 rate. I can quite realize how the very beautiful province of Nova Scotia, with all the fine hospitality and fellowship of the people in that province, resents the amount of

unfavourable publicity that is being given to it. Everyone who has talked to people from Nova Scotia knows how tremendously proud they are of Nova Scotia, and so I understand and sympathize with their feeling of resentment that so much is being said about the trouble there. Still, Nova Scotians as such are not to blame for this condition, because this company is not a Nova Scotian concern, but it has the ambitious title of the British Empire Steel Corporation. It is far outside the bounds of the province. Many of the directors live abroad, some in England and they are entirely absentee. Three of them sit in the Senate.

Mr. GRAHAM: Hard on the company.

Miss MACPHAIL: Tremendously hard on the company. I went by train to Sydney and of course one cannot go any further than Sydney by train. Then I took a street car and went to Glace Bay. It took an hour and ten minutes to get there. I was accompanied by the mayor of Glace Bay and the representative of the Great War Veterans' Association. When I got there I tried to be fair. I am sure some hon. members will find it hard to believe that. I visited some of the representative places. I visited the Young Men's Christian Association, which is the central relief station. I visited some of the sub-stations of New Aberdeen, and other places. They have funny names down there. They call one place the Hub, and another the Table land, these are different suburbs. I visited the headquarters of the United Mine Workers. I went through the hospitals accompanied by one of the leading surgeons there. I visited all the rooms of the school, and went through the school with the truant officer, a gentleman who had held the position of truant officer for a long time and had been a teacher before that. I met at least two thousand miners at a mass meeting in the Savoy theatre in Glace Bay. I read in a paper to-day the statement that I had said, that if I lived in Glace Bay I would always eat at the Savoy theatre. That was a funny thing. I did not see anything to eat there, but that is where the mass meeting was held. I talked to preachers, teachers, nurses, and miners, every one I met there. I met the wives of doctors, and all the friends of people that one meets in such a centre. I met the moderates and the reds, and by the time I had spent two days in Glace Bay nobody looked red to me. I think if I lived there long I would be a lot redder than anything I saw. The schools did not show the amount of hardship that the hospitals and the homes and the relief stations showed. I took this to mean that the people were exceedingly anxious to keep their children in school and to put their best foot forward. They put on whatever clothes they could wear and whatever boots would fit, and the children were sent to school in that way. The British Canadian Co-operative Company has been doing a really excellent work in supplying a nice dish of warm soup for the children at noon, knowing that the children are not getting sufficient food at home, and they want to keep them in good health and mental condition, so that they can continue their studies undisturbed by the strike that is now on.

I do not want to exaggerate nor to overpaint the picture. I would much rather understate than overstate the conditions, because hon. members will get tired of it. Hon. members will think it cannot possibly be true. If any of my hon. friends take that view, I have only one thing to say—go and see. It is quite noticeable that people who say there is no hardship are not on the ground, they are at a comfortable distance from it. I believe if anybody, whether director of that company or a shareholder, or a member of this government, even the member for Cape Breton South and Richmond (Mr. Carroll), will go to that district and stay there for a week or two, he will come to the conclusion that very real distress and human misery is found in those colliery towns. If anyone wants to spend an Easter recess in the interest of humanity, let him go and spend it—and I shall not be afraid of what he will find in contradiction of my remarks—in Glace Bay, Sydney Mines, Mine No. 6 or any of the colliery towns in that district. I saw some cars there and we went in one of them, a Ford sedan that succeeded in getting through the mud. It spluttered and stuttered but it got through. Four of us went in it—the little woman I spoke of before, the truant officer, a Great War Veteran official and the man who drove the car, who, they told me was a red, and myself. He was an exceedingly modest, pleasant fellow and I do not know whether he was red or not. The first place we went to was a house of the two-family type—two families living in a non-painted wooden house. The first door we went to, we were kindly invited in. There were five children in that home with the mother and father making seven. There were two bedrooms, a little sitting room with nothing in it, and a kitchen. The kitchen was small and had the usual kitchen furniture, two chairs, a

table and a stove. It had never been a home for at least twenty years. If it ever had been a house that could have been made into a home, that was a long time ago. It was a most dilapidated place. There had been decorations on the wall once, but they were not intact. I went into the bed rooms. I saw the bed clothing, and you would hardly believe it, but there was just one blanket and one quilt on one bed, which clothing, as the woman told us and as the truant officer had told us the day before, came from the relief station, and on the other bed, there was just a quilt. That was all. They were at their meal when we went in. They had been late in getting to the relief station, and as the demand is greater than the supply, they were only able to get a meal of bread, potatoes and milk, and that was a good deal better than nothing.

In the next home we visited there was a family of four including two children, one of whom was at school. This was a tidy looking place. The house was not in good shape, but it was as clean as it could be under prevailing circumstances. One child was in bed quite sick, and it had not eaten anything for a week. It did not like eating the food that was placed before it. I do not know whether it was dangerously sick or not. I fancy it was not dangerously sick, but it was miserably sick. I can give the names and addresses of any of these people if anyone wants me to do so.

The next house was that of a returned soldier with six children, five boys and one girl. This was all in the newspapers. His house was not a company house, but it was a very poor house for which they paid twenty dollars a month. It was such a poor house that they were using only the downstairs, because the roof leaked and the plaster was falling off, so that the father and mother thought it was not safe for the children to be upstairs. The upstairs was not finished; it was just one room. Downstairs, there was the kitchen and one bedroom, in which the eight people, the mother, the father and the six children slept. The baby was four months old and the next one two and a half years who had never walked. The mother told me—and I am saying just what she told me—that the child was normal when born, but was now suffering from rickets and was not in good health. It never walked and it had spindly legs, like a thumb, not like the legs that a child of two and a half years should have. By the way, the place I have just finished telling about was on the edge of the sea, only a few yards from the wholesome sea that is at our eastern gate, as we read when we come into the entrance to this building.

The next place we visited was in New Aberdeen, the home of the widow and family of a veteran. The father had been killed overseas. There were six children, one under sixteen years of age and the mother did not get a pension for him. There was another one about twenty years old who was married to a girl, both of them children to look at. They had two children and she was an expectant mother. The mother of the young man told me that she did not think it was too much to say that they had had only one solid year's work in five. That may be overstating the fact, but that is exactly what she said. She looked around at us, so helplessly. Any woman with a heart at all would feel like striving to do something. She turned around and said: "What is wrong? What is the matter? We used to be able to work and have very good times." She was a miner's wife, who had been born and raised in a mining town; she knew absolutely nothing else; but compared with her past experiences, what they were going through now she considered terrible. To me it would be unbearable, but to her it did not seem as bad as that. These places were not chosen for me, because many times when they would want to go into one house, I would want to go into another and I went into the one I wanted to go into.

Some hon. MEMBERS: Hear, hear.

Miss MACPHAIL: I see the joke. I did go into the houses I wanted to go into. We passed some fairly good-looking houses up towards the business section of Glace Bay that were not on the hunger line. That is certainly quite true. The next place we visited there was a man, his wife and two children. The place was very clean and small, possibly the neatest place we were in. The clothing was clean; the whole house was clean. When we came out, the truant officer said to the representative of the Great War Veterans' Association and myself: "I gave that man the clothes he is wearing" and the representative of the Great War Veterans' Association said: "Do you call them clothes?" That is about what one would say. He had on a red sweater that did not have any sleeves below the elbows. Still it was a sweater. I have worn one that was as bad, but I have had another. The hard part of it is that that was the only one he had. The wife was wearing a clean calico dress, which was all she had. There was nothing back of that. A little child that she told me was seven, but that did not look over four, was wearing a coat, a very decent

old coat, but no dress, and a pair of stockings that the mother had made out of cloth. She was warm inside, but she could not go outside. That is an actual condition.

I have some of these men's pay sheets. People wonder why they did not get out. They ask: What do they stay for? I wondered that too. This man worked four days, earning $14.80, but the check-off comes in: Rent, $2.14; coal, $1; attorney for his back store bill, that is for how much he is indebted at the store, $2; U.M.W., $1; relief association, 30 cents, church 40 cents, hospital 25 cents; and he had left $6.51 for a week's work.

This is what they call a bobtail. I was at relief store No. 2 and I asked a group of very fine Scotchmen who were there if they could give me some bobtailed pay sheets. They said that was one of the things they were plentifully supplied with. This is one that I was given. This man worked two days, earning $7.40. Rent was $2.88; coal, $2.30, attorney for his back store bill, $1.02; hospital $1.20. There was nothing left. This is another one, and I will not go over the items. In this case the man worked three days and had $5.02 left. In another case the man worked two days and had $1.61 left. In another case the man worked three days and had $2.79 left. These are all from the same man. The man told me he would be glad to go away and he would be delighted to get work. He would walk out if he could not get out any other way. He had no money to pay train fare. But he said: "If the company knows that I have left them and am dissatisfied with conditions and possibly a publicity agent against them, my wife and children will be turned out of the company's house," because it is a company's house he is in. He said: "I am hopelessly in debt. I once just got out of it." He told me how he once owed $143 to the company's store and had just got out of that debt when cessation of work occurred again.

It will be seen therefore that these people are actually fettered as securely as though the links of the chain that bound them were visible. Let me take another family. These people came originally from Newfoundland, the family comprising the man and his wife and two children. The woman had been in hospital for a long time suffering from tuberculosis, as I learned from Dr. Macdonald—and when I say Macdonald you will understand that it might just as likely be McLean or McLaughlin or McNeill, for these are the prevalent names. He told me that this man was unable to support his wife in the private ward of any of the hospitals and they could not take the risk of keeping her in any of the public wards. After awhile she was able to walk around and her case was really arrested. But she was instructed to procure eggs and milk and to take lots of fresh air, and in the endeavour to get the eggs they found it necessary to keep hens in the back kitchen. These people told us further that they were doing their very best to get milk and we were astonished to find that they were paying 10 cents a pint. So surprised were we at this that we took the trouble to have the statement verified and we discovered on inquiry that she was really paying 10 cents a pint for milk which was an absolute necessity in her case. And here is one feature of this case from which we simply cannot turn away our eyes: these four people, man and wife and two children, were actually obliged to sleep in one three-quarter bed, although as I have said the woman was suffering from tuberculosis.

9 p.m. I was in another home where the inmates had not so far accepted relief—and all those whom I have cited were living off the relief stations. But these particular people, whose name is dear to me, a family of five, were suffering severely. The man is an electrician by trade and of course was out of work, but they had not yet accepted any relief. I had a conversation with the woman, who told me that although they had so far refused to take any help it would not be long before they would be obliged to do so. Let us remember that these people are haughtily proud, as I learned from one man when he drew himself up to his full height, blowing out his chest as politicians do. He said, "My name is Macdonald and I will never ask for relief". And that represents the spirit of the people. These people are not craving relief and they resent others sticking their noses into their houses; but they resent more haughtily the condition that makes that necessary. To convince the House that I am not making this up out of my head, I may say that I copied from the list of sub-station No. 2 in New Aberdeen, one of the worst districts where some 228 families are being fed, the names of one family numbering seven, as well as others. Some of these names I copied are, McNeill, McMillan, McDonald, McKinnon, McIntyre and Munroe. This is the order in which I found them. I had a pleasant chat with two women at the relief station, one of whom although not an old woman in years was quite old in appearance. And that is the tragedy of womanhood there. She told me that her husband had had no steady work for a year and a half and although they were

trying to do as well as they possibly could they could not help running into debt. There were seven children in the family, of ages ranging from ten months, to sixteen years, a few of them being at school. That woman came to the station in an old sweater and skirt, without any shoes, and with a very bad blister on her heel as a result of having to wear old rubbers. How anyone could keep rubbers on in Glace Bay without strapping them on is more than I can tell. There were no number fives to fit her at the station and she was asked to come back the next day. Her name too was McDonald—I will not give her Christian name to distinguish her from the other McDonalds. And mark you, Mr. Speaker, our own neighbours in the province of Ontario are called by these very names; to hear them one would imagine one was in Priceville or Glengarry. Another woman named McGillivray had three children who could not attend school, having no shoes; it was so wet in Glace Bay, as it is everywhere at this time of year but particularly there, that they were bound to stay at home. I took her name and address for I intend to have some relief sent to this family and the one I mentioned a moment ago. This woman whispered in my ear an admonition not to forget herself and her husband because they were simply out of clothes. They had provided for the children rather than for themselves and they had positively reached the limit beyond which it was impossible for them to go. One could not help being struck by the fact that children of four years and under showed the miserable condition they were in. The children over that age are healthy but under that many of them, in the hospitals, in the junior rooms of the schools and on the streets as well, show plainly the malnutrition from which they have been suffering.

Mr. DUFF: Did the hon. member say that children under four years of age were in the schools?

Miss MACPHAIL: I did not say that, I referred to children over that age.

Mr. DUFF: That is what the hon. member said.

Miss MACPHAIL: I am glad the hon. member has expressed himself.

Mr. DUFF: I want you to tell the truth.

Miss MACPHAIL: I have great regard for the truth, but these children I saw in the primary rooms would be only two and three years of age when the hard times struck them three or four years ago, and they had been under-

nourished for the last two or three years. I do not say of course that this is true of all the children there but the fact is that the hospitals are filled with such cases as I have described. And I want to say in passing that the hospitals are excellent institutions. I went through St. Joseph's and the General hospital and they were exceedingly sanitary and well kept. The matron who showed me through the General hospital and the sister with whom I went through St. Joseph's are fine types of women. I did see little babes particularly that were quite unhealthy looking as the doctors and nurses informed me. I took their word for it, for I suppose a casual visitor would not be able to tell that there was anything organically wrong with them, from a passing visit. And they were all suffering from more or less similar conditions—ulcers, ricketts and all sorts of anaemic disorders; and there was one little baby with a paralyzed face, an infant about three days old. This of course was something that might be found anywhere else, and I was glad when the sister told me that the little thing would soon be going on. In the hospitals I noticed that all the doctors and their wives as well as the nurses and everyone connected with these institutions were very much concerned over the situation, because the hospitals depend upon the miners who contribute about 60 or 70 per cent of their upkeep. As a matter of fact, the miners are the population and they keep the hospitals and everything else going. One doctor who accompanied me on my visit of inspection expressed himself in no uncertain terms, and not as mildly as I am repeating them to-night, with regard to people who through the press and in their public utterances would lead Canadians generally to believe that no distress existed down there. He told me that a week ago yesterday he was called to see a patient in a home where he found a family of eight, six children with their parents, in absolute destitution and entirely without shoes. He went to the relief station and obtained three pairs and out of his own money he bought five pairs at stores in Glace Bay.

The relief organization now existing there really grew out of a temporary and voluntary relief group of seven people, among them a very noble Jewish woman and a reverend gentleman, Mr. McAvoy, the wife of the mayor, and the little deaf woman who showed me about—the others I do not know; those were four of the original seven. They started this relief organization before the cessation of work three weeks ago because they knew there were children who could not go to school as they were not getting enough

to eat, and there were adults in the same unfortunate position, so these seven persons busied themselves in gathering up from those who had to give it to those who had not. You see, the public opinion of Glace Bay, in fact the public opinion of the whole of Nova Scotia for the first time is supporting the miners. I am sure those who are familiar with Nova Scotia will admit that public opinion to-day is very much stronger on the side of the miners than it has ever been. It is becoming apparent to all who live in the colliery districts that their living is being sucked away by this process of strangulation of the miners. And so you find the whole middle class—I suppose you would call them professional people; I do not know whether in Canada we have lower, middle and higher classes, or not. I am not quite clear as to that—but at least doctors, merchants, ministers and their wives, have thrown themselves without reserve into this relief work. I saw in to-day's papers, and have no doubt other members also noticed the paragraph, that Mrs. Macpherson, the Salvation Army woman who has worked there from the first, says that the schools are likely to be closed because the salaries of the teachers cannot be paid. I now recall that when we visited one of the schools there the principal told me that they had not got their salary for last month. Although she said it in a joking way, it shows how dependent everybody is on the miners.

I want to make it clear for the sake of the real workers, I mean the miners themselves, that it was on the advice of these noble professional people who have interested themselves in their condition, that they turned down the gift of $5,000 sent to them by Russia. I said outside the House of Commons, and I want to say it here, that I think it is a very dubious compliment to Canadian intelligence that the miners of Nova Scotia and those who are working with them thought it necessary to turn down such a substantial gift in order that those people and their wants might remain respectable in our eyes. We are indeed a smug, self-righteous people.

You can imagine how chained these people feel. Surely we can get something of their sense of not being able to get out of a hideous situation when we find that they cannot even get representation in parliament because their constituency is pocketed in a larger one which they cannot influence—or at least by reason of the methods employed in elections they cannot influence it. I am sure this House, I am sure members of the government, and I am sure the members who sit for those constituencies have no idea how deep the resentment is, how intense it is, and how quiet it is. These people are not broken; do not ever think that. They feel that they have not got justice anywhere. Whether they are right or wrong I am not saying, but that is their feeling, and after all it is this kind of feeling that makes such a situation as exists there now a very dangerous one.

I want to describe the town so you will know how I felt when night came on. Up town are electric lights and a sewage system, there are some paved streets and sidewalks, there is the Savoy theatre and there are some stores and rum shops—these are closed now. That is, there is a town there. But when you go back where the great majority of the people live there are no electric lights, there are no sewers, only open gutters flowing on each side of the road; there are a few houses where there is a way of getting water in, but for the most part there are absolutely no sanitary conveniences at all. Just now in the springtime it is a bog hole, and when night comes, whether in the springtime or not, unless there is good moonlight the place is plunged in absolute darkness. After we had seem all this, after I had seen these women whom I have described, and after I had visited the hospital and met the relief workers and eaten my lunch in the relief headquarters, I said, "Is there anybody really red in this locality, red, red, red, the redder the better?" And they said there was one man. You know his name, it has been bandied about from time to time—J. B. Maclachlan. Then I said, "Take me to J. B. Maclachlan; I should like to see him." We went to the Labour Herald office. You know it prints wild things—and we too would print just as wild things if we suffered what they have suffered. I said—and I repeat it now, for you cannot arrest me—I said, "What is the worst thing Maclachlan ever said?" One man replied, "The worst thing I ever heard him say was 'To hell with them.'" I said I will add to it, "and make it snappy." You know that old joke about "sedition". Really it would be just as well if we never again charged a man with sedition in Canada. Do you know who Maclachlan reminded me of? Well, you would be surprised—J. J. Morrison; and I doubt if I can pay either of them a higher compliment than to compare them one with the other. Why, he has a beautiful home life. He is endeavouring to break the bonds, he is endeavouring to save a little money to buy a plot of ground and a home, he is endeavouring to get some culture. He has a beautiful family, a rosy-cheeked wife with a rolling

Scotch tongue. And he is a man who has always stood for good citizenship. When I think of some of the things said by those who call themselves "good" citizens, I wonder really where we are going. Of course, these men say wild things. Naturally they do. They say awful things. But no one could blame them. Anyone who went to the same place and lived through the same conditions would, I am sure, say the very same awful things. And I want to make this clear, because I think members of parliament are human—that means I have great faith in them—I believe they are. Mr. Maclachlan told me this story, which he did not intend I should repeat in parliament, and I am sure he will be horrified to read it. He told me that years ago, the very first time he ever came to Ottawa to negotiate between the miners and the company—just about the beginning, I suppose, of this Besco concern, I cannot say whether it was before this or not—but at least it was some years ago, when the company's representatives and the miners' representatives entered the Chateau Laurier—he had forgotten its name and I had to tell him—when they sat down in the rotunda and looked at the luxury around them, he said, "I wanted to say something nasty, the nastiest thing I could think of, and I turned to the company's men and remarked, 'If you could bring the miners of the colliery district of Cape Breton into this place, you would not settle this wage dispute as you intend to settle it, and as you will.'" I appreciated that statement of his. Do you know, I am often struck by the fact that people who live at places like the Chateau Laurier pass the bill down, and the people who pay for it are never there? You see, my sympathy is very deep for these people, because they are primary producers, and their problems are just our problems only possibly in a more aggravated form.

Mr. CAMPBELL: And because they are mostly Scotch.

Miss MACPHAIL: Yes, I sympathize with them also because they are mostly Scotch. Other people corroborated this very story. One man, not Maclachlan, but a very moderate man, one whom the government would do well to encourage, said, "When some of our men went down to Truro last year to the annual convention, for days after they came back they could not talk about anything but the beauty of Truro." They said, "We did not know that such towns, with such homes for ordinary working people, existed." These are the facts. It seems almost ridiculous to think it could be true that anybody had not travelled that far away from home in this advanced day of civilization. One woman told me she had not been out of Glace Bay for twelve years because she never felt she could afford the money that would take her over to Sydney and back—seventy-five cents. On the other hand, I do not want to suggest for a moment that miners, when they have money, are not good spenders; I rather think they are. I think that when they were making money they possibly spent it freely. Indeed, I am sure they must do so in order to forget the barrenness and dreariness of their lives as much as they can. It would be but natural to think that, when you consider how utterly lacking in beauty this place is. I never saw anything so devoid of beauty as Glace Bay in the spring. I wish you could see it—those bogs for roadways, with open gutters at the sides of them; those squatty, painted houses, row on row; the bleak winds of the sea; no vegetation, no trees. I can quite believe that when these people get money they buy a car; they go to the Savoy theatre twice a week or as often as their funds will allow. They cannot make their homes comfortable; they are in the grasp of circumstances too great for them. And just a quarter of a mile away, up town, there are at least paved streets, bright lights, rum shops and the Savoy—do you wonder, then, that they flock there, where they can get at least what they think is some little pleasure?

It would seem to me that the best safeguard of citizenship would be to strive to make the miners help themselves; not to try to break their union, but rather to encourage them sanely to get themselves on such a basis that their standard of living will be equal to the standard of living of other Canadians. I thought Mr. McLeod, president of the United Mine Workers for District No. 26, an exceedingly sane man. He is a moderate; in fact, they accuse him of being too moderate. At least he is anxious for the best things for the men. He knows that if there is any outbreak on the part of the men, it will be the men, not the company, who will suffer; he knows that there will be men thrown into prison, as was done before, and that they will come out with broken, embittered lives, the very worst influences in the community. So he is striving to teach the people and to get them to see that if they could once get out of the clutches of the company's stores and into a co-operative store of their own; if they could only get houses which they partly owned and could continue to pay for and try to beautify; if they would strive to work together through their unions for the good of all—that that is the way out, not in raid-

ing stores, breaking windows, and that sort of thing. His influence is all for the good. This government, the company, or anybody else concerned in the affair, ought to be glad to encourage the continuance of a union under the leadership of Mr. McLeod.

I would not like the company to think that if they break the union which exists now they will have broken everything. What I think will happen—and many people have voiced this opinion to me—if the union is broken, as has been done among the steel workers in Sydney, is this: a much more radical organization will take the place of the union, an organization that possibly even we would not want to see.

I could not help but be struck by the tragedy of womanhood in that place; because to be a woman in a colliery district is a tragedy. Their youth is brief; there are many children; there is poverty, age coming quickly; dependency, and death. I do not know how they have kept the little spark of life that their faces still show: there were some young men and some young women who were hotly resentful of the conditions and not afraid to voice their feelings in the matter. But for the most part, especially if they had many children, their attitude was subdued, pathetic —I can think of no other words that so well describe it.

I would like to ask this government, have they an immigration policy? Or is it true that it is people like Besco and the railways and organizations of that kind that have an immigration policy? We find that Besco has been bringing in immigrants, even during the worst times; they have agents stationed all over the world who are bringing in immigrants, dumping them down where there is no work for them and doing absolutely nothing for them after they get them here. Do you wonder that labour resents that sort of thing? Do you wonder that all the resentment that these years have built up is directed against that company? No, you cannot wonder that they are resentful. Much money is spent to bring immigrants to Canada. These Scotch-Canadians—with the exception of some Scotch-Canadians—are the very best citizens we have; yet the women who give us these good citizens are not cared for; they are left to shift for themselves. What about them? This is the attitude that seems to have been taken by all governments, provincial and federal up to date.

It did not seem to be difficult for the company to get protection on coal, but the government gives no assurance that that protection is to go down to the worker.

Some hon. MEMBERS: Hear, hear.

Miss MACPHAIL: Was that the thirteen? It looks to me as though the very great distress of the miners of Cape Breton to-day has been used by the company for their own protection. While the papers of the east heralded the announcement in the budget as a great thing, I did not find the miners thinking that—and I was in the town the day the budget came out; they felt entirely hopeless regarding anything that protection could do for them. They knew where that protection would go, from past experience.

When you think of it all—and I have almost finished with this tale of woe—when you think of it all, do you wonder that these miners have come to the conclusion that industry is heartless, that the courts are unjust, that all politicians are rascals? Do you wonder?

Some hon. MEMBERS: Oh, oh.

Miss MACPHAIL: That is what they think.

An hon. MEMBER: I hope they did not think that of you.

Miss MACPHAIL: I am not a politician. One cannot but be surprised at the attitude of the Nova Scotia government, one of continued indifference, apparently, to a very grave situation, a situation which at any moment may break out into something really terrible; because we are only depending for relief on the generosity of Canadian citizens. It is hard to explain the attitude of the Nova Scotia government unless it be that they are afraid of this industrial monster; that they are more anxious to court its smile than they are to save to happiness and good citizenship many thousands of our fellow Canadians. One can almost imagine them asking themselves: What to them is environment for miners that will produce strong men, happy women, and healthy children; what to them the final destiny of our country, so long as power remains intact? Of course the government here can say there is a technical difficulty and that that prevents them from doing anything. They cannot send relief; they cannot inquire into this thing, because the Nova Scotia government, which lies closer to the miners, has done nothing. But I have seen this government find its way round technicalities before to-day. If the heart of the government was really anxious to do something to relieve the great distress among the people in the island of Cape Breton, they would find a way round the technical snag.

Really to my mind the whole cause of it all is this: We have put the commercial value

of making dollars and cents above the making of human life and creating comfortable conditions of living. I cannot think it is due to anything else. Our citizens will go on I am sure doing what they can to supply the needs of Cape Breton. Down there they are looking with great gratitude, almost with amazed gratitude at the wonderful things the city of Ottawa has been doing for them. Other places are following suit, and I am sure that the desired relief will come pouring in. But it is a peculiar situation that the governments concerned—the local government and the federal government—cannot come to the assistance of these people; that they can do nothing for the miners but leave it to private people to tax themselves to provide the necessary assistance.

I have nothing more to say. I leave the problem to the government. For it is a problem, and its solution, possibly, will demand something more than direct relief. It may be that there will have to be a genuine shaking up before long. I do not know whether that time is now or not, but I do know that when Canadian public opinion is aroused, and it is being aroused in this case, it is not going to stand any more fooling on the subject. I really feel sure of that.

Mr. C. H. DICKIE (Nanaimo): Mr. Speaker, I am afraid that any words of mine may seem commonplace after the eloquent address by the hon. member for Southeast Grey (Miss Macphail) to which we have just listened. However, I am going to put a few common sense arguments before the House in an endeavour to do something to alleviate the condition that prevails in Canada to-day. My remarks are going to be brief. The hon. member for West York (Sir Henry Drayton) and the hon. member for Vancouver Centre (Mr. Stevens) in eloquent speeches have pretty well diagnosed the existing situation. It only remains for me to touch simply the high spots. These hon. members, with their actuarial minds and brains, have handled the problems before us in a much better manner than I can do. Suffice it to say that extricating the situation from the maze of clerical and arithmetical intricacies in which it is involved we find that in Canada to-day we are $100,000,000 poorer than we were a year ago. I think we will all admit that the liabilities of Canada are greater by $100,000,000 than they were at this time in 1924, a very serious state of affairs.

Now, what is the remedy? It seems to me that in discussing the tariff there is one vital phase that is lost sight of, and that is the necessity of keeping our money in Canada. I remember in speaking before in the House on this subject but the point did not seem to be appreciated to the extent to which it should be. We are sending out of Canada every year $300,000,000 to our friends across the line. Three hundred millions from a population of nine millions of people means about $33 for every man, woman and child in Canada, how can we pay that huge amount and succeed? We must stem the outflow to some extent; we cannot do it entirely. After paying our interest debts to England we have a fair balance of trade of about $92,000,000. We take that and we hand it over to our American friends, and our total contribution to them to-day amounts to hundreds of millions of dollars. We cannot succeed if we continue doing this, and the remedy for this state of affairs, is, I consider, to keep our people from buying so much from the United States. We have to trade with these people; we know that they are good friends; they buy from us and we buy from them; but still it seems the acme of nonsense that for iron and other metalliferous and non-metallic products we sent $265,000,000 to the United States last year. We also sent $78,000,000 for agricultural products, a total of $343,000,000. This sum that we sent to our neighbours across the line we could very well cut in two and thus save Canada a million odd dollars. The remedy is to import fewer goods. Last year we did not import quite as many as have been imported in years gone by. The reason was that we were not able to do so. Another reason was that many of our people are now living and working in the adjoining republic and are making their purchases there.

We talk of the hard times. It is pitiful to hear a tale such as has been told by the hon. member for Southeast Grey. On the other hand we were assured by the Minister of Labour (Mr. Murdock) that times were better in Canada than they were in the United States; that in the latter country there were 20,000,000 of people out of work. We were also told by the Prime Minister that the factory whistles were blowing at midnight throughout Canada. The factory whistles are not blowing at midnight in the town of Woodstock as instanced by the Prime Minister. The Bain Wagon Company had a little rush order on sleighs and they worked for a while at night but the factory whistles are not blowing there at night now. It has also been proved that they are not blowing at night in the case of the factory in Orangeville. What is the good of trying to tell people that times are good in Canada. We would like if that was

the case, but times are not good in Canada, and they have not been good for some time. It is almost impossible to enlist capital in any industrial enterprise in Canada to-day because manufacturers are distracted by taxation, not knowing which way to turn. One reason is that the people have not the confidence in the government that they should have, although I am not going to emphasize very strongly that feature of the situation. We have our frightful railway problem, that "old man of the sea," bestriding us, and I do not know what the outcome of the situation is going to be. We must stop this drift to the country to the south if we are going to succeed. We are told that our people are coming back from the United States. In 1924 there were 41,000 returned but there were 161,000 that went, so that we cannot attach undue importance to any reported repatriation movement. Our people are still going to the United States where times are better and the opportunities are greater. It is just possible that in the adjoining republic, where they have had a period of uprecedented prosperity, things are now a little quiet, that they have passed the peak of the anticline. We in Canada have been wallowing in the trough of syncline; we have never got to the same stage as our neighbours as far as prosperity is concerned. In years gone by when they had prosperity on the American side it was sometimes reflected in Canada; we had a certain degree of it here. When it was a case of our people leaving Canada and going to United States it lessened our population; and I ask you, Mr. Speaker, what would have been the experience in the case of our bread lines if a portion of our population had not gone? Instead of having thin bread lines we would have had bread battalions, and the burden would have been too great for Canada to bear. Strong virile men have been leaving this country and going to the United States instead of staying here and swelling the bread line. It is a great pity. I remember going back a few years ago into the county of Oxford through the country that I was familiar with as a boy. In those early days at every prominent four corners you could see strong, husky Canadians tossing the caber or indulging in other athletic exercises. Where are those men now? The government says that we must reduce the cost of living. In those days one could live for $2.50 a week. Living was as cheap in Canada as in any other country in the world. Those strong men to whom I refer have left the country but did they go to other countries where living is cheaper? Are they living in equatorial countries where bread fruit grows on the trees and when the tide is out the table is spread? Not at all. Some of them went to the great west to Deadwood, Dakota, to Leadville, Colorado, and others again to the Yukon where ham and eggs cost a dollar or two a plate. They were not looking for cheap living. Cheap living is a fallacy in any country. You can always go some place and live cheaply. The thing is to have such a living that the agriculturist, the market gardener, the poultry man, the fruit man, the produce man, and everybody else can succeed. It is impossible for a small farmer to succeed in the neighbourhood of, say a great city, if living is unduly cheap. It is the ability to purchase, not cheap living that we want. Daniel Webster once said:

> A well-employed and prosperous community can buy and consume; an ill-employed community cannot do so. This is a solution of the matter. The whole science of political economy is not one half as important as this.

What we want is earning power. We want a chance for our people to earn money, and when they have earned money they are willing to pay decent prices. I have every sympathy for our friends the Progressives. Personally they are gentlemen, but I think, Sir, if they persist in the fallacy of free trade that prosperity for Canada is absolutely impossible. I do not think there is any chance for Canada being prosperous under such a policy.

An hon. MEMBER: Cheer up.

Mr. DICKIE: I do not need cheering up. I am cheerful. The only remedy for Canadians is to buy more in Canada, and the only way we can induce them to do that is to keep the people from buying across the line. I believe in an adequate protectionist policy that will make the people buy at home. If necessary in order to make them buy at home, I would not hesitate one moment to put our tariff wall one brick higher than the tariff wall of the country to the south of us. Why should we be guided by these people, they having a population of a hundred and ten million, and we a very small population? Why should we govern our action by their policy? Our small country requires much greater protection than the great country to the south of us.

I have very little sympathy with the talk of secession. We are Canadians, and I think if we buckle on our harness and put our backs to the south we can make this country one worth living in. We have wonderful potentialities. In the great Laurentian and pre-Cambrian plateau, we have the greatest potential region in the world to-day and the greatest possibility for gold mining. We have in the west our

wonderful forest resources not yet exhausted. We have wonderful potentialities, but we must have a spirit of compromise. No country can succeed if its industries do not succeed, and our industrial institutions cannot succeed in Canada without an adequate tariff. Our friends to the left of us here desire a good price for their wheat, and when wheat goes to two dollars a bushel every man, woman and child in the country is glad. Of course the cost of living goes a little bit higher because of the rise in the value of wheat, but we are glad that one part of the country is successful. However, when we ask them to stand a little tariff, and perhaps pay a little more for agricultural implements in order that thousands of people may be enabled to live in our industrial centres, they fall back upon the old cry of "Free trade, free trade." I say that free trade is the curse of England to-day. If it were not for a lot of economically silly old college professors with peculiar ideas they might have had protection in the Old Country. Why, Mr. Speaker, should we say that all the rest of the world is wrong and we are right—all except England—poor old England with a million and a half unemployed, using goods made in France, Belgium and Germany made by men who are working for cheaper wages than those paid in the Old Country? England wants protection and wants it badly, although no country in the world is better situated to succeed under a free trade policy than England.

I am going to worry the House a little with another question of which I am sorry to say no mention is made in the budget. I refer to the export of our raw material from Canada. Editorials have appeared in many of the papers in Canada with respect to this question. A pulpwood commission was appointed in 1923 and travelled through the country at an expense of $75,000 and collected a lot of useful information, which was well compiled. There were two practical men on the commission, and against whom or the other members I am not saying anything derogatory. Mr. Anstie, from British Columbia, vice-chairman of the commission whom I know well is quite heavily interested in timber, and it would be to his advantage to prevent saw logs leaving British Columbia. I know it to be a fact that the other gentleman, Mr. McLellan, from New Brunswick, is or was very largely interested in the export of pulpwood, and it would be to his interest that pulpwood be exported. This commission travelled through the country listening to testimony in all parts of Canada, but the evidence was absolutely one-sided. The commission compiled a fairly good report and made very sensible recommendations to the House of Commons. Wherever they went the people who were interested in exporting our forest products saw to it that their case was well presented by able lawyers. The general public was apathetic. I know that was the position in British Columbia. I stated last year on the floor of the House and repeat to-day that although the evidence of British Columbia was against the export of our raw forest products, if a plebiscite were taken I think seventy-five per cent of the people of British Columbia would vote to prevent our sawlogs being exported to the sawmills on the other side. The commission did a good work, and their findings were fairly reasonable, all things considered.

The investment in the pulp and paper industry of Canada in 1917 was $187,000,000. In 1923 we had $417,000,000 invested, which shows the wonderful strides the industry has made. There were at that time 29,234 men on the payroll, the amount paid out being $37,243,000 annually. In 1924 we exported 1,444,693 cords of pulpwood, for which we received $14,322,714, and the manufactured value of a cord of pulpwood was $63.44. Had this 1,444,000 cords that we exported been manufactured in Canada it would have had a value of $91,651,313, less the amount received, $14,322,714, making a loss to Canada of $77,328,599. If pulpwood exports were manufactured in Canada, this 1,444,000 cords would justify an expenditure in a pulp and paper plant of $125,000,000, and would mean the employment of approximately 10,000 men, with a payroll of $12,000,000 a year. That is what we are losing by shipping the pulpwood out of Canada. In the year ending March 31, 1924, Canada exported in pulp and paper to the American side, $144,030,679.

When the question came up in the House a year ago the Prime Minister said he would not favour any duty or embargo on pulpwood that would interfere with the farmers or settlers who were taking wood off their wood lots. The farmers export sixty-five per cent of the total export according to the report of the commission. That would amount to 938 thousand cords. For this they receive $9,380,000 less freight charges. If this pulpwood had been manufactured in Canada the value would have been $59,469,000, less amount received, $9,380,000. Canada's loss would be $50,089,000. The farmer's average receipts per cord of pulpwood amounts to $6. For these 938,000 cords in 1924, the amount that the farmers and settlers received was $5,628,000

It must be borne in mind in connection with the commissioner's report that many bogus settlers take up land in the clay belt just for the sake of the timber. After the timber has been taken off or is depleted, they abandon the property. The report mentions these bogus settlers, but in the premises I am stating at the present time I am assuming they are all good, legitimate settlers. If they were compelled to sell in Canada, they might get 25 per cent less than they get on the American side. This is quite a substantial reduction, and supposing the market existed, the farmers loss would be $1,400,000. Therefore, Canada loses $50,000,000 in order that the settler or farmer should make $1,400,000. I defy anyone to contradict these figures.

The total exports of wood, wood products and paper to the United States in 1924 were $230,000,000. From this, one can realize what our adverse balance of trade with our neighbours to the south would be were it not for our exports of wood, wood products and paper. Still, we are recklessly depleting our forests and shipping our raw wood to our friends across the line instead of having them come into Canada and do the manufacturing here. It is not only wood that enters into the manufacture of pulp and paper. Many men are employed outside. Let us take the materials used in the pulp and paper mills in the Abitibi district. In 1923, a record was kept of the number of freight cars that passed in and out of the yards of the Abitibi Power and Paper Company at Iroquois Falls in northern Ontario. The total was 30,801 cars, of which, 5,923 cars contained paper, 2,052 cars, coal; 6,169 cars, pulpwood; 148 cars, sulphur; 178 cars, limestone; 88 cars, alum; 24 cars, oil; the balance being empties. That shows the immense traffic that is furnished to our Canadian railways by these pulp and paper companies.

In British Columbia the logging exports in 1924 amounted to 240,000,000 feet B.M., and from government lands, licensed lands, 46,000,000 feet B.M. Sawlogs from licensed lands are not supposed to be exported from British Columbia, but the law is more honoured in the breach than in the observance. The reason is that, if there is a greater supply of logs than is required in the mills, because of conditions which exist there, the principal one being that our logs, if they lie in salt water too long, become infested with the toredo and are a loss, the privilege is accorded of shipping the surplus supply of logs across the line. That is just the same as if we had no barrier at all. We have enormous camps there under American capital with their railways extending into our forests, and as long as the British Columbia mills can secure all the logs they need, the balance is exported.

Last year we cut in British Columbia 2,550,000,000 B.M., twenty-five per cent greater than the cut of any previous year. In British Columbia, Washington, Oregon and California, it has been recognized that the last great stand of timber exists on the North American continent, and we are going through it as a reaper would go into a field at the present time. We still have a great deal of timber in British Columbia and should conserve it. We do not want to ship it to the American side and see our men following it. I am sorry to say that if you go, as I have had many times to go through these camps, you will find very many workmen who can scarcely speak our language. They are Russian Finns, Scandinavians, a splendid type of men who do our logging, but unfortunately, most of them are single and they are what we call a floating population. When wages and opportunities of employment are better in the United States, they go to the other side of the line. When they can get better wages in Canada, they come to our side. They are not the class of people we like to have, not because of any question of merit, but because they are a nomadic people. In British Columbia, I do not know whether our Anglo-Saxon people have been contaminated by jazz music and rotten Hollywood shows, but they do not take kindly to logging camps.

Mr. BROWN: Do I understand the hon. member to be advocating a tightening up of the embargo on logs?

Mr. DICKIE: If the hon. member will give me a little time, I will suggest a remedy.

Mr. BROWN: The hon. member dealt with that already and I was not very clear just what he had said.

Mr. DICKIE: I am dealing with the sawlog question now. A little later, I will suggest a remedy, and probably my hon. friend will agree with my suggestion. At the present time I am dealing with the appalling depletion of timber in the west. I remember distinctly the condition of affairs in Michigan in the early days. In those days I was privileged to go through a good deal of that country, being a log scaler. I remember standing in those virgin forests as a boy and thinking: Well, here is timber for the world for a thousand years to come. Wherever you looked there was a splendid stand of virgin timber. Ten years from that date they were importing sawlogs from the

Georgian bay to keep their mills going on the Saginaw river. They went through that forest as a reaper would go through a field of grain; The woods were filled with industrious, capable, cheerful men from the province of Quebec, men for whom I have a great admiration, whom I have envied, men always happy and industrious, with whom one had no trouble at all and who were quite satisfied if they were accorded fair treatment. I do not know where that race has gone now. We have but few of them in the west. Even in my time that section of Michigan has been entirely depleted of timber and they are importing lumber from British Columbia into Michigan every day. In Wisconsin, the same condition exists. In northern California, in the counties of Mendocino, Humboldt and Del Norte, where the red woods used to come down to the Pacific shores, the forests are shoved up the rivers into the mountains. The forests there are being depleted very rapidly. People will say that the forests will grow again. In Oregon it has been demonstrated that it takes fifty years to grow a tree one foot through, and that applies pretty well in all parts of the Pacific coast where growth is really prolific. If any hon. member cares to go out and count the rings on the cross section of a tree in the grounds adjacent he will easily be able to prove that what I am saying is correct. I will guarantee he will find fifty annular rings in the first foot and no more, but if you count them for two feet, you will find that there are 150 rings. That means that a tree two feet in diameter is 150 years of age. The larger the tree, the slower it grows, and consequently you have to figure on 150 years to get what we call a good British Columbia sawlog. People will say that the annual increment keeps up with the depletion and they use every argument they can in order to defeat any restriction being placed upon the export of sawlogs. In northern Ontario, and, I know, in British Columbia there are great areas of what we call mature forests. Trees, as with leaves, have their time to fall. They live only a certain length of time. I have walked through those silent aisles of the forests with great columns rearing themselves on all sides, and have seen dead tops in all directions, trees ripe and dying. There is no annual increment in mature forests but there is an annual decay. After the trees have become ripe, and once they have reared their crests heaven high, the trees begin to die and when they die there can be no increase in forest growth until after a fire or destruction.

[Mr. Dickie.]

I come now to the question of hardwood logs. I am not very familiar with this question but with the permission of the House I shall read again from the Financial Post an extract which I quoted a year ago. I do not like reiteration but I have not seen the point disputed and the article I am about to read shows the necessity for some action.

The Ontario legislature will be asked to approve of legislation placing an embargo on the exportation of hardwood from the province. The measure is designed to force United States plants in Minnesota and Wisconsin to cross into Ontario to manufacture their products if they desire to use Ontario hardwood. The measure is similar to the pine embargo of some years ago. That measure resulted in many saw mills locating in the north. There are about 1,300 hardwood plants located in Wisconsin and Minnesota. Henry Ford entered the area and purchased practically all the available reserves. The estimate made to-day is that the end of seven years will see but 100 to 110 of these plants remaining because of the exhaustion of their supply of raw material. Realizing this there has been a rush into Algoma, United States concerns have eagerly sought control of the available limits on the Canadian side. It is understood that one American concern made a contract to ship 100 million feet of hardwood across lake Superior. This was to have gone to the Iron Mountain plant of Henry Ford. Ontario's reserves of hardwood are limited. The estimate is that the small area in which hardwood thrives contains 6,500 million feet. This includes the big forest reserve and runs north to the border of the clay-belt. In discussing the embargo, Hon. James Lyons, Ontario's Minister of Lands and Forests, pointed out that some years ago the numerous saw mills around Saginaw and Bay City, Michigan, were importing Canadian logs heavily. An embargo was placed on their exportation with the result that there is $75,000,000, invested in saw mills around the Soo to-day. The Canadian Pacific Railway line, Soo to Sudbury, is studded with them. He also points out that in 1900 there was an embargo in regard to pulp with the result that $190,000,000 are invested in the pulp plants of the province to-day.

The forestry department's statistics claim that there is in Canada of pulpwood 871,720,000 cords, 65 per cent being first class. Of this, merchantable spruce and balsam amount to 580,000,000 cords. In Ontario, Quebec, Nova Scotia and New Brunswick there are 280,000,000 cords of which approximately 5,000,000 cords are cut annually. The forestry department estimates that cutting, fire, insects, winds and decay deplete the forests to the extent of 40,000,000 cords annually. In the last ten years it is reported that the spruce bud worm has destroyed 100,000,000 cords, and Mr. Sebrecht, a forest authority, puts it at 150,000,000.

Mr. Barnjum, rightly or wrongly, has been traduced all through the west, it being alleged that his motives in this matter are not unselfish. I have heard propaganda which has been inspired by people who were anxious to export our pulpwood and who declare that his actions are actuated by selfish considerations. They impute unworthy motives to him; but I

know that he has spent a fortune in trying to impress upon the Canadian people the advisability of preventing the exportation of our forest products. Now, with regard to the growth of trees, in order to emphasize the facts I desire to quote from an article that comes from Nova Scotia:

"Most extravagant ideas exist as to the rate of growth of trees, observations of single trees growing in the open being taken as a basis to be translated into performance by whole acres of trees. The idea prevails that Nova Scotia spruce in the Nova Scotia climate is growing at an extraordinary rate. As a matter of fact, while it can be stated that the climate is most favourable to reproduction, i.e., to the establishment of young growth, the rate of growth of trees in the forest is not very different from the ordinary rate to be found in the New England States under similar conditions.

"Some 550 trees were analysed as to their rate of diameter growth, and a number of sample plots were measured to arrive at a conception of growth conditions. From these measurements it appears that to produce a spruce tree, 12 inches in diameter on the stump, may require from fifty years for the most favoured trees, to one hundred and seventy years for trees which had for a long time to compete for light with their neighbours. The unusually rapid-growth trees are, to be sure, found only occasionally; the much more usual rapid growers require eighty to ninety years to make the 12-inch diameter.

That shows how long we might expect to look for a new forest. I know mountain sides that were logged or burned forty 10 p.m. years ago in British Columbia where now there is little sign of any new forest of the Douglas fir type. Usually when a Douglas fir forest is destroyed it is re-seeded by hemlock or broad leaf trees. There are of course new growths of fir forests in different places where the conditions are ideal but as a general rule this does not occur. After severe fires, for some reason or other we get a growth in many instances of hemlock instead of fir. Anyone who has been through the southern Kootenay country, as the Minister of Public Works (Mr. King, Kootenay) has been, knows that around Eholt, Grand Forks, Greenwood and those places where there was formerly a good growth of pine there is now little but poplar. The remedy is to prevent the exportation of our raw material and otherwise to conserve it as much as possible. But what I have read may not appear alarming unless I read something else—the recommendation in the concluding part of the report of the pulpwood commission:

So far as this commission is concerned, we have clearly pointed to the fact that some steps must most assuredly be taken whereby the annual drain on the spruce and balsam supplies of eastern Canada must be very greatly reduced. In some parts, this object may possibly be attained by the complete elimination of fire and insect losses; in other cases, it can only be attained by the elimination of such losses plus the reduction of the amount of spruce and balsam used either in local industries or in export. It has been thoroughly pointed out that in the Maritime provinces the timber supply situation is extremely serious. On the theory of "ultimate exhaustion"—

And just a word on that phrase "ultimate exhaustion." Long before that time comes manufactories close down and all you find is the wreckage of saw milling towns and camps.

On the theory of "ultimate exhaustion" there is only thirty-one years' supply of the pulp species. On the same basis, in Ontario and Quebec combined, in which provinces the pulpwood industry has its highest development, there is fifty-one years' supply.

This, however, does not take into consideration the losses by fire, insects and decay which are 40,000,000 cords every year. It is only a matter of a few years before the Maritime provinces and Quebec will be short of pulpwood, and I cannot see why we should persist in sending this raw material across the line. The argument is that the Americans will not come here but will go elsewhere for their pulp and paper if we put on an embargo. There may be something in that; but they are coming here rapidly now as we know. We all know that United States investors have immense fortunes tied up in the pulp and paper industry of Canada. I have too great faith in the American people to think that they will adopt any policy of reprisal or retaliation. In fact there is no way in which they can retaliate in kind. And besides, what have we to thank them for in their treatment of us on tariff matters? They have said to us, "We don't want any of your canned goods, we don't want any of your western cattle, we don't want anything you manufacture; but we do want your raw products, your men and your money." That is exactly what is said to us, and we have been falling for it for years. The Fordney-McCumber tariff says that plainly—a tariff characterized by one of the gentlemen to my left as having been brought about by the manufacturers of the United States. But as a matter of fact that tariff was put into effect just to suit a group of gentlemen similar to my admirable friends to the left, only living across the line. Our western farmers were sending their cattle and farm products into the States, and the American farmers said, "We don't want any of your competition." It shows that business more than sentiment actuates the agricultural portion of our community, admirable as they may be.

As to the Americans retaliating or not coming over here to establish mills, I may say that up in the Soo region, on Manitoulin island, a big pulp mill is being constructed by the Fox River Company of Wisconsin. A few miles from where I live in British Columbia

we have what will be the last word in efficient saw mills, a mill that will cut a million feet every two days, and the company will employ four or five hundred men in the mill and about two hundred and fifty in the woods. They are going to cut logs into lumber there instead of sending them across the line. They are making a model town and will employ white labour, and some of the arguments used against saw mill owners do not apply to this company. Recently we saw in the newspapers the following article regarding the Canadian newsprint industry:

New York, March 6.—The newsprint industry is going to Canada, according to A. R. Graustein, president of the International Paper Company. Dispatches from Montreal yesterday announcing purchases of lands, mills and water power by the company, means nothing less than the transfer of a large part of the United States news print industry to the Dominion, Mr. Graustein said to-day.

When the new Canadian development is completed, he said, the International Paper Company would be able to produce 1,000 tons of newsprint per day in its mills in the Dominion. Outlining the plans of the company, Mr. Graustein said that if a contract with the newly organized Canadian International Paper Company, Limited, was ratified by stockholders, the Riordon and Gatineau properties in Quebec would be acquired.

"In order to preserve the position of the company and to insure its growth as a newsprint producer," he said, "it is necessary for us to develop in Canada. In the last twenty years the Canadian newsprint industry has come up from nothing to a point where it equals American production, showing unmistakably that the future of the industry is in Canada.

"We intend to build on the Gatineau river, near Ottawa, a big newsprint mill with at least the same capacity as our Three Rivers mill," he said.

Altogether the company intended to spend $27,000,000 for the Gatineau development, about $20,000,000 of which was for the mills, water powers and timber limits.

Another expression of the better class opinion which I claim prevails in the States is to be found in the Manufacturers' Record of New York. It says:

No country on earth can get rich shipping raw materials. Raw materials are simply the basis for the employment of labour, and labour creates the wealth which comes out of the use of raw materials. Wherever raw materials can be utilized at home, whether that be the United States or Canada, whether, so far as this country is concerned, it be the utilization in Alabama, for instance, of coal and ore, carrying the raw materials through to the finished product; whether it be in Louisiana in the utilization of gas or oils and sulphur, the Manufacturers' Record is heartily in sympathy with the policy of using these raw materials at home to as great an extent as possible. It does not believe that we can by legislation prevent the shipment of raw materials from one state to another. That would be unwise under our form of government. Canada has a perfect right to utilize its raw materials at home if it decides to do so. We have a perfect right to utilize our raw materials of all kinds at home for the production of manufactured goods, preferring to ship the finished product into Canada or other countries rather than send the raw materials abroad. It would be better, for instance, for this country if we could turn all of our wheat into flour and ship the flour rather than the wheat, but that point has not yet been reached.

I am afraid I am tiring hon. members—

Some hon. MEMBERS: No, go ahead.

Mr. DICKIE: —but I have this subject very much at heart and I am trying to show where Canada can make millions of dollars. We know we have not illimitable timber resources. Every other country is beginning to conserve its forest wealth. Finland only allows such a limited amount of cutting as is compensated for by natural growth each year; Sweden the same way. They are reforesting, as is every other country in the world, they are all paying attention to their timber resources, while we are simply depleting our lands of all forest growth. The people who are opposed to any restrictions on the export of pulpwood have issued statements that the annual growth to-day is keeping up with the depletion of our forest resources. Let any man go up the Ottawa river, the Gatineau or anywhere else where timber is grown and see if he will assert that our forests are not being depleted. It is utter rot to say so. It is said only by men whose personal and selfish interests inspire them to make such unfounded statements. There is not an iota of argument against preventing our raw resources from going across the line. I have shown where we would save $70,000,000 or $80,000,000. And we need have no fear of lack of markets. The American newspaper men have already gone to Washington to try to head off what they know to be a sensible movement on our part, but they are getting little encouragement. They must come to Canada for their paper, and no doubt they will. As for any attempt at retaliation, they would be simply retaliating against themselves. In British Columbia it has been asserted, that 70 per cent of the timber lands alienated from the crown belong to American investors to-day. Those men are not going to see their investment hazarded by retaliatory measures, even though the minority of the people of the United States insist on reprisals; and, as I say, I have too much respect for them to think that they will ever attempt such a policy. I have seen editorials in other American papers corresponding with that which I have read from the Manufacturers' Record. Hon. members will remember that not very long ago President Coolidge made a notable speech with respect to preserving the forest wealth of his country. I remember when in Virginia, Louisiana and parts of Texas there were immense virgin forests; to-day they

are practically all gone. Many of these lumbermen have come to British Columbia to do what they did in their own country. The people of Virginia, Wisconsin, Michigan and Minnesota are all bewailing the reckless depletion of their forests.

It is perhaps useless for me to suggest a remedy; I do not favour an embargo, I do not think it is the right step to take, but I favour something pretty nearly the same. In British Columbia, if because of business stagnation, we had large quantities of logs in salt water, I should not like to see them destroyed. I would suggest that by order in council or some other way they should be allowed to be shipped out of the country. My idea would be that on Nos. 1 and 2 grades of fir, spruce, pine and cedar logs and on all hardwood logs an export duty should be imposed of $5 per thousand feet board measure; on all other logs, $2 per thousand feet; on all pulpwood exported by actual settlers and farmers from their land a duty of $2.50 per cord, and on all other pulpwood $5 per cord, to take effect January 1, 1927. I may be asked, why defer the imposition of these export duties to that date. I reply that Canada must act in a gentlemanly way. We have immense amounts of American capital invested in this country in our forest reserves, and I would give them a chance if they want to come over here and establish mills. They have millions of dollars invested on Vancouver island alone, and I do not wish to work any hardship on those gentlemen, so I would give them time. What I suggest is that in the interim the above duty shall apply on all raw forest products as above specified in excess of the 1924 exportation. That would prevent any attempt on the part of our friends to make a Roman holiday with our pulpwood; to come in and devastate our forests, piling the wood over on their side of the international line before 1927. In that way we would be protected.

With regard to the settler or the farmer taking wood from his wood lots, I submit that this country could pay those men to sit right at home and could still make $50,000,000 more than is being made to-day. We could make it up to them in some way. Possibly we should not say to the pulp and paper manufacturers, "You will have to pay so much a cord;" but there are ways of putting pressure on them and at the same time treating them fairly. Even though there should be no market at present for their pulpwood, I am sure the farmer-settler would make money by conserving it, by allowing it to grow for the time being. The value of timber will increase by leaps and bounds in the next ten years; there is not the slightest doubt about it. This is the age of paper and pulp, and the farmers and settlers will make more by letting their timber stand than they will by cutting it. Up in the clay belt thousands of acres have been cut over by bogus settlers who have abandoned the property after cutting the pulpwood off and shipping it across the line.

I know that my hon. friends to my left are free traders just as strongly as I am in favour of adequate protection. But they must recognize that during the last two or three years many Canadian industries have gone out of business. It may be that times are improving just a little, but when you consider Canada's immense resources, its potentialities and the virility of its people, you will realize that we should go ahead by leaps and bounds rather than stand still or perhaps gain a little here and lose a little there. In this connection a matter was to-day brought to my attention which is worth mentioning. We have at Burrard inlet, Vancouver, a creosoting plant which represents a cash investment of $450,000. There is no duty on creosoted piling coming in from the American side. This company has a payroll of $30,000 a month, but the conditions now are such that they are seriously thinking of dismantling their plant. With a little protection they would be able to carry on; that payroll would continue and they would have a much better feeling toward British Columbia than they have at present. It is another case, very largely, of dumping from the American side. Over there they have enormous establishments; they sell to their own market, but they have a surplus lying in their booms and they use this when the opportunity offers itself, as in the case of a recent contract which came to my attention, in connection with the foundation of the dry dock at Prince Rupert. The Seattle creosoting plant underbid our own people; they offered a price much lower than it was possible for the British Columbia firm to quote for the supplying of creosoted piles. But the Northern Construction Company decided to pay more for creosoted piles from Vancouver than the price at which they could have got them from Seattle, and they were actuated by pure patriotism. Now, this is a condition which should not exist. The Americans simply slough off their surplus piles to our city, at prices our people cannot meet, but when they have put the Canadian creosoting plant out of business then the price will go up, as has been the case in many other instances. So that if this industry is assisted something is done for Van-

couver, and the people will pay no more for creosoted piles than they are paying to-day.

The hon. member for Comox-Alberni (Mr. Neill) asked me if I would support him in connection with the subject matter of the resolution he has on the order paper dealing with naval protection on the Pacific coast. I do not know exactly what his viewpoint is; he had not concluded his argument when the discussion was adjourned. But it sounds well to me, as far as he has gone, and I would be very much in favour of the taking of some action along this line. The great naval headquarters at Esquimalt are in the district which I am humbly trying to represent, and I would like very much indeed to see a warship there, belonging to Canada or to Great Britain, upon which our young men could be trained. My idea is that we should make a substantial contribution to the British admiralty and let them look after our ports. When those magnificent ships of the British navy were in our waters on both coasts last year, I in common with many Canadians felt a keen sense of humiliation. Here were those wonderful ships of war ready to protect us at any time, yet we were contributing hardly anything to the upkeep of the British navy. I know that we are in economic straits, but, Sir, as I said with respect to other matters, Canada should play the part of a gentleman, we should and we can afford to be a little more liberal than we are. Some people are saying to-day: Why should we want warships to protect our coasts with no war in sight. Sir, war is bound to come, we who live there know it must come—why should we require ships, when we are protected by the Monroe doctrine? Well, I have very little use for the Canadian who will wish to avail himself of the elastic provisions of the Monroe doctrine. The Monroe doctrine, as you know, is applied by the United States to suit their convenience. It is an admirable doctrine. Let me relate just a couple of incidents, Mr. Speaker, and I am through. Early in the war, as will be known to many, two German cruisers, the Nuremburg and the Scharnhorst, were in the waters of the northern Pacific. The people of Vancouver and Victoria were very much perturbed; some of them became panic stricken and left these cities, thinking that an attack might be made upon them. We were almost defenceless. We did have an old, obsolete boat and a couple of submarines—as to the submarines, when they submerged they never knew whether or not they would emerge again—but those who manned them were willing to live up to the best traditions of British seamen. We knew, though, that they could have little effect on these large, up-to-date German cruisers. I remember talking to an American friend at that time, and he said: "Would it not be very nice if two or three of our vessels happened to pay Victoria a friendly visit at this time?" I said, "It certainly would." However, no American vessels paid us even a friendly visit. What we did see was a Japanese cruiser, stripped down to the decks, swarming with brown men, lying off our coast, ready to offer its protection.

The other instance I want to mention is this: When Dewey captured Manilla he was lying with his fleet in Manilla harbour. Admiral Diedrich came sailing in with a German fleet greater in strength than that of Admiral Dewey. Dewey pointed to a place for him to anchor, but Diedrich said he took his orders from His Majesty the Emperor of Germany and he chose his own anchorage. Diedrich then paid a visit to Admiral Chichester of the British fleet which was in the vicinity, and in the course of conversation with him he said: "What would be your attitude if I decided to attack the American ships?" Chichester said, "That is a secret between Admiral Dewey and myself." This is a matter of history; it is not hearsay. Diedrich knew what it meant. He left the British ship in a huff, and returned to his own vessel. The next morning when he came on deck he saw that during the night a British cruiser had steamed in and anchored between his warships and those of Admiral Dewey. As my American friends would say, "That was nice."

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, before I address myself to the budget, I should like, with the permission of the House, to conclude the remarks I was making on the resolution I introduced some weeks ago to the effect that "Canada should consider the question of the defence of our sea coasts and of our ocean borne lines of commerce". I am sorry that this resolution will not come to a vote under the rules of the House, but perhaps when the naval estimates are being discussed hon. members, especially those from British Columbia, will take an opportunity of expressing their views, and perhaps the Minister of National Defence will take the opportunity of expressing the policy of the government in that regard.

The House will recall that when I was speaking on this subject last I had shown or tried to show, that our coast, our property, and especially our shipping in British Columbia were entirely defenceless and that there

was great need of defence, and I was examining what we had in the way of defence ourselves or what we would be likely to procure from outside sources. But before I go on with that I should like for one moment to go back to the question of the Disarmament conference and make a point that I omitted to make when I was talking on this question before. I suggest, Sir, that all the Disarmament conference did was to bring about an agreement among the nations of the world to do what they fully intended to do anyhow. In other words they made a bargain to do what the experience of the Great war had shown them was the most advisable thing to do; they made a solemn treaty to carry out what they had every intention of carrying out of themselves. For instance, the war had shown clearly that big dreadnoughts were not the most useful type of ship to use. Consequently the Disarmament conference made a solemn bargain to limit the size and number of dreadnoughts, or what they call capital ships, in future. It is true that they went further and made a limitation in regard to the size and armament of what they called auxiliary ships, otherwise cruisers, but I notice they were particularly careful not to limit the number of these boats; and while they did put a limit, in regard to the maximum size and tonnage, the limit was so high and the tonnage was so large that in reality it encouraged all the nations of the world to increase the size of their cruisers. For instance the average light cruiser, before this conference ran to seven or at the most eight thousand tons. Japan had building at that time four boats of seven thousand tons. The Disarmament conference decided that the maximum tonnage of cruisers was to be ten thousand tons and the limit of armament, I think, eight inch guns. So naturally the Japanese immediately redesigned the ships they had been building. They raised the limit of these cruisers to ten thousand tons and they increased the armament of those vessels so as to bring it just within the maximum laid down by the conference. Other nations followed the same course naturally for it would be foolish for them to have smaller ships than their competitors. The result is that the Disarmament conference has actually increased the size and cost of light cruisers without in any way limiting the number of them that can be built. What will be known in the future as the "treaty" cruiser has arrived, and at the present moment the five signatories of that conference have laid down no less than thirty of these new cruisers. And that conference was only held a couple of years ago! The treaty cruiser of the future will be a thirty-five knot ship with a battery of eight or more eight inch guns capable of developing a volume of fire of about thirty rounds a minute, and discharging a projectile weighing somewhere in the neighbourhood of two hundred and fifty pounds. In a word I think it might be justly said that the Disarmament conference, by virtue of its actual results, appears to have brought about a revival of armaments.

Now I shall describe the ships, or the means of defence, that we have on the Pacific coast. I said that we had a cruiser that was of very little value except for training purposes. We also have two mine sweepers. It is true that we have no mines, and no means of laying mines—no mine layers—and it is extremely unlikely that an enemy that might come and blow up or ransom any of our forts and towns would be likely to bring mines and lay them for us to sweep out, because that would be quite unnecessary. So that these mine sweepers are not of any particular value as regards that purpose. I admit, however, that they would be good for the pursuit of submarines.

Now I should like to give two instances of what actually occurred in the war, and in making this statement I shall not be disclosing any secret, so as to give an idea of how acute the conditions were out there in the way of lack of defence. During the war a passenger boat was running up north to Alaska. It happened to have three funnels, rather an unusual thing, and the general cut of it in some ways rather suggested a light cruiser. That boat was taken off its regular merchant service—it had no armament—and was bolstered and painted up to make it look as much like a cruiser as possible and started out on the Pacific ocean in order to head off, if possible, German raiders and cruisers; and from a diary discovered on the body of one of the German officers killed in the battle off the Falkland islands it was actually discovered that on one occasion, at least, a German armed raider had fled from this boat believing it to be a British cruiser. That is one of the pretences we had to take refuge in.

Here is another instance: The terminus of the Pacific cable, which is a very important point during a war and still more important if the war happened to be on the Pacific, is at Bamfield on the west coast of Vancouver island. During the war this station was defended ostensibly by a handful of men with rifles. You can imagine what use such a force would have been against an armed raider. But it had the further pro-

tection, or was supposed to have, that the channel of five or six miles leading into Bamfield was suitably protected by mines; and every time a boat required to come in a pilot had to go out and guide the vessel through the mine field into safety and out again, the plain fact being, Mr. Speaker, that there never were any mines there at all; it was all a figment of the imagination calculated, or supposed—or we hoped it would—to mislead any German vessel from coming in to blow up the cable station. To put our whole dependence, in future wars, in artifices of that kind is surely not the part of reasonable and responsible men.

I have led up to the suggestion that we have no defence and that we need defence. Having no defence of our own there are only two outside sources by which we could attain it. The first that we would naturally turn to in an emergency is the British navy. In 1914 the British navy had 126 heavy and light cruisers. They could only spare a few of these for the Pacific, and we all know the enormous damage that was done by the Emden which, if I remember rightly, was not a cruiser at all but merely an armed merchantman, an armed raider. The fact that the Emden did an enormous amount of damage was not due to her armament, or anything of that kind but simply because there was no vessel bigger than herself able to get into contact with her. The record of that single boat, and the damage she did in the Pacific, ought to be enough to convert anybody to the idea that we out there ought to have some protection. I notice that since I brought this matter up there was a debate in the British House when the first Lord of the Admiralty pointed out what trouble the German sea raiders caused in the Great war and asked if it took seventy cruisers to round up these few German raiders, with almost the whole German fleet bottled up, what would be the prospect in a future war if British commerce were attacked by some other power.

There are two further matters I desire to mention. During the war a condition existed that will never exist in any war on the Pacific, and that is that the two great powers against us, Austria and Germany, practically had both their fleets bottled up in a port or in some channel, and the British fleet kept them there. Occasionally one would break away in the darkness and do a great deal of damage, but for the main part they were kept bottled up, and it was comparatively easy for the British fleet to concentrate their vessels and keep them there. But on the Pacific it would be impossible because the ports are all open, and the British fleet would have to be much scattered, and their efficiency naturally very much reduced in that way.

I would point out also that owing to the Disarmament conference having induced Britain, to bring down her naval power, from a three to one to a one to one basis, it means that in 1928 the British fleet of heavy and light cruisers, instead of being 136 will only be 57, and they will certainly be all needed to police the main trade routes of the Pacific if a war occurred on the Pacific. I think therefore, it is proved that we cannot hope that Britain can do any more than guard the main ocean routes, and it will be quite impossible for us to expect her to detach ships to guard what might be called the local coasts, of British Columbia, Australia, New Zealand and so on. These other dominions have realized the truth of that contention as we see in the fact that New Zealand has embarked on a policy of naval defence of her own shores so have Australia and South Africa. It is somewhat significant that the policy of the naval defence of South Africa is advocated by and going to be carried through under the leadership of Charles Hertzog, a man who, in the Great war only a few years ago, was in active rebellion against Britain, and it cannot be supposed that he is animated in this matter now by any great feeling of imperial enthusiasm. He is actuated by the conviction that if South Africa is not in a position to defend herself, she will be in a helpless condition.

So much for the idea that we can expect the British navy to protect the British Columbia coast or the Atlantic coast.

The other source from which we might hope to get some relief is the Monroe doctrine. That is a very much over-rated doctrine at the present time. I will quote the best definition of it that I have been able to obtain in one sentence, as given by President Adams. I will give you his interpretation of the Monroe doctrine, at the time of its inception. He says:

> Considering the South Americans as independent nations, they themselves have the right to dispose of their condition. We have no right to dispose of them either alone or in conjunction with other nations. Neither have any other nations the right to dispose of them without their consent.

That was the doctrine as it was formulated over a hundred years ago, but between that time and the present, conditions have changed entirely. The very evil which it was intended to prevent—that is the abuse or the coercion of the small American states by European ccuntries—has been changed into a very much greater dread, not any more of the European

powers but of the United States themselves. I should like to quote a sentence or two out of a very well written article on the Monroe doctrine by an American writer in an American journal, which cannot be supposed to be anti-American or pro-British. Here is what this writer says, talking about the diplomats of the United States:

> To them the doctrine has become a diplomatic top bureau drawer, into which anything may be put and from which, after due pawing, anything may be produced.

I think that is a very good expression "after due pawing". The Monroe doctrine, from time to time, has been used, added to and pared away, according as the emergency suggested and, in the interests of the United States only. Thus on one occasion it had an annex hitched on to it, called the Doctrine of Paramount Interest, a lovely amendment, which allowed the United States to go into a foreign country and do what they thought would be in the best interests, not of that country, but of the United States. Later on, when they encouraged a rebellion in a Central American republic, they invented another extension of the Monroe doctrine, and it took the form of the Doctrine of Preventive Intervention, by virtue of which the United States claimed the right to intervene in the affairs of any of the Latin American states whenever in its opinion a state of affairs threatens to arise which may produce European intervention, which may in turn produce occupation of territory, which may ultimately produce annexation. If this is a doctrine of non-intervention, of protecting other states' national independence, then of course black is white. In spite of that language "we have no right", we find that, under the Monroe doctrine, Texas was annexed against its will, to the United States, California, New Mexico, Porto Rico and Cuba, and there has been interference in Panama and Columbia. In other words, the modern interpretation of the Monroe doctrine is that no nation is to be coerced except by the United States. That is so openly feared that at a pan-American conference some years ago they endeavoured to get the United States to go back to the original meaning of the Monroe doctrine, but the United States would not do so, and the word "suzerainty" was quite openly used in reference to its relation to some of the smaller states; so that it is to this doctrine, with its cold-blooded indifference to the interests of any nation except the United States that we are asked to appeal for protection and for defence in case of war. Moreover the doctrine does not apply to British possessions.

Mr. POULIOT: How much does my hon. friend say Canada should expend yearly to protect her shores?

Mr. NEILL: I will deal with that in a few moments. Moreover the Monroe doctrine does not apply to British possessions, and it only applies to where the independence of states is threatened. It does not forbid attacks on shipping or the collection of an enormous indemnity, or the collection of a war indemnity in the shape of large supplies of raw material for years to come, as was suggested would be one of the terms if the Germans had conquered in the late war. Then if we were driven by our defencelessness to ask for the application of the Monroe doctrine by the United States, what price would we pay for it? Scripture tells us that the lion and the lamb shall lie down together, but in that case the word "shall" is used. "Shall" suggests futurity. We do not know when that period will arrive, but history records no instance where the lion and the lamb have lain down together with any real satisfaction to the lamb. Take the record of Britain herself. There is no country in the world which has been so magnaminous in its treatment of vanquished nations, or so generous in its rule over conquered natives. No nation can compare with Britain in that regard, and yet taking the record of Britain herself, where she has gone in very often with the most emphatic declaration that it was only temporary occupation for the good of the particular state, and with the fervently expressed intention of pulling out in a very short time, there are very few records of where she has ever pulled out again. It has drifted, perhaps, into a suzerainty; it has always become more or less permanent, I admit, very often, for the good of that nation or race, but still Britain has remained there, a permanent, unwelcome and uninvited guest. If we are driven by the misfortunes of our defenceless condition to seek the assistance of the United States under the Monroe doctrine, we are practically inviting that we become an appendage in some form or another of the United States. Some mention is made of the cost. The costliest way of all of defending ourselves in case of an attack would be by inviting the aid of the Monroe doctrine. It would be goodbye to our dreams of national existence. We would get requests which, by-and-by, would become demands, and by-and-by we would have absorption, or control, or at least, that peculiar thing, known and already practised on other nations, as "preventive intervention."

Moreover, it is quite possible in case of war that the United States would not be able to afford us any protection. A very able writer the other day made the prediction that, in case of war, if the Hawaiian islands were captured by an enemy, the whole coast of the north American continent would be at the mercy of the enemy. I submit the question is not: Can we afford to defend our coast? but, can we afford not to defend it? Take the case of a man owning a big business block and going to a mortgage company to ask for a big loan. The first question he would be asked would be: "Where is your title?" He could produce that. The second question would be: "Where is your insurance policy, and how much is it?" Supposing his reply was: "Well now, I want to tell you about that. I do not believe in fire. We are not going to have any more fires. I have joined an association to disown fires, and consequently I have not insured my building and do not propose to do so." Would that man get his loan? I do not think so. Are we in any better position as regards our national existence? Is naval defence not the premium on our national life insurance policy? I should like to ask this House, and through this House, the people of Canada: Can we afford to neglect to pay the premium on the policy of our national life insurance? I should like the House to think over that.

There are just two other points in this connection and I have done. One is that my advocacy of this suggestion will lead to militarism on a large scale. That is a very unfair unjust criticism, so unfair, unjust, untenable and indeed, inapplicable, that I think it can be put forward only by those who wish to confuse the issue, who want, not to face the issue, but to shut their eyes to the plain facts, and who think, by calling it militarism, they can dismiss the obvious situation I have presented. If I were arguing for or suggesting, even in a remote degree, a big fleet and army, they would be quite correct. But there is all the difference in the world between militarism and defence, between defence and defiance, between protection and aggression. Have we ever tried to stop crime by dismissing our police force? I do not think so. Will an absolutely helpless nation not invite the aggression of a truculent neighbour? I therefore repeat—and I wish to be so careful about this that it cannot be misrepresented that I have written it down—that what I am asking for is only—that the Parliament of Canada should consider and devise a policy for the defence of our shores and of our shipping, a policy within our means and to be carried out as our financial condition allows us. Is that jingoism? Is that militarism? Is it not rather the sober, sane action of a business man who protects his business against loss by fire or his family against his own loss by sudden death?

There is just one other point in this connection. It has been suggested to me, not, I am glad to state, by any hon. member from the prairies, that the prairie members will take no interest in the consideration of a case of this kind. I do not believe that, and even putting the matter on the most material grounds, they are bound to take an interest in it because they are as much concerned ultimately as we are. The freedom of Calgary and Winnipeg will be fought for, not at the gates of those cities, but on the Atlantic coast or on the Pacific coast. What will be their condition if they are cut off from the sea for three or four years? I know we in British Columbia would suffer first. Our coal mines which, heaven knows, are in a bad enough state now, would be the first to suffer. Our fishing industry would disappear. Our lumber industry would be at a standstill. But as the shipping disappeared the trouble would spread on to the prairies, and once they had no outlet for their grain, there would be a complete tie-up of the business conditions of Canada. It would paralyze every feature of the trade of Canada. Let us not forget, for we forget so easily, how nearly Great Britain was brought to her knees during the Great war, not by any lack of men or food or munitions, but by the threatened inability of being able to convey that food and those munitions to the men at the front.

I want to answer my hon. friend's question about the cost. I said at the beginning of my remarks the other day that I was particularly careful to define no detailed scheme for defence, because there are so many different ways, and to suggest one would only promote divergence of opinion upon the main issue. The particular line adopted would have to be decided by technical experts and largely governed by our financial ability at the moment. I quite admit that, and I am suggesting that we go into no expensive scheme whatever. I will make this suggestion as to the cost. We have the skeleton of a very considerable standing army in Canada to-day. I should like to know, in case of a sudden need for this army: What nation could we use that army against suddenly and quickly? There is only one nation that we could use it against in a hurry and that is the United States. The prospect or the possibility of war with the United States is so remote—and

I hope it always will be remote—that it is quite unnecessary for us to consider it to-day and for many years to come. Therefore, if we have no need for a standing army, why have we one? The danger to Canada will come on our coasts long before there will be any need of an army. We spend roughly on the permanent force and on the active militia, if not on the active militia alone, somewhere in the neighbourhood of four million dollars a year. For instance, in the city of Ottawa, there are the skeletons, at least, of four different regiments, and I suppose the same is true in a greater or lesser degree throughout the whole of eastern Canada. You can make a soldier of sorts in six weeks; you can make a first class soldier, a fighting man, in six months; but it will take at least that many years to make a first class naval man. First of all, he has to be a seaman, and that is not done in a day or a month. Then he has to be a naval man, and this means a finely trained mechanic of a kind which you do not get in civilian life. The ordinary time for training a first class naval seaman would be six or eight years. Would it not be better to spend less on the militia, and what is saved on that might be spent on a nucleus, at least, of a scheme of naval defence? I am only throwing out a suggestion that would minimize the cost of any naval scheme that might be adopted.

I have spoken only about the Pacific coast because that is the one with which I am familiar. I am not ignoring the needs of the Atlantic coast, but I leave it to men more capable and better informed than I am to deal with that. I would suggest that the government consider, if not at this session, at the next one, the advisability of appointing a committee of a non-partisan character to study this question. Its importance can hardly be overestimated. I would conclude by summarizing in half a dozen sentences the arguments I have endeavoured to present to-night and the other evening:

1. That our sea coasts are defenceless.

2. That the need of defence is evident and urgent.

3. That we cannot logically demand, nor can we reasonably expect the British navy to furnish that protection in case of war.

4. That it is highly undesirable that we should be driven to seek the protection of the Monroe doctrine.

5. Let our motto be, aggression against none and defence against all.

Therefore, in the words of the resolution, I would submit that Canada should consider the question of the defence of our sea coasts as well as of our ocean borne lines of commerce.. That, Mr Speaker, concludes this phase of my remarks.

On motion of Mr. Neill the debate was adjourned.

PRIVATE BILL

On the motion:

Second reading of Bill No. 24, an act to amend the Toronto Harbour Commissioners Act, 1911.—Mr. Church.

Mr. SPEAKER: The hon. member for North Toronto (Mr. Church) wishes to withdraw this bill. Is it the pleasure of the House that he shall have leave to withdraw it?

Bill withdrawn.

On motion of Mr. Mackenzie King the House adjourned at 10.55 p.m.

Wednesday, April 1, 1925

The House met at three o'clock.

REPORT OF COMMITTEE

Second report of select standing committee on Railways, Canals and Telegraphs.—Mr. Cahill.

REPORTS AND PAPERS

Copy of correspondence, applications and other documents respecting licenses to export electrical energy.—Hon. Mr. Low.

Report of the Department of Customs and Excise containing accounts of revenues, with statements relative to the imports, exports and excise of the Dominion of Canada for the fiscal year ended March 31, 1924.—Hon. Mr. Cardin (for the Minister of Customs and Excise).

PRIVATE BILL

FIRST READING

Bill No. 42, to amend the Toronto Harbour Commissioners Act, 1911.—Mr. Church.

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—SPECIAL COMMITTEE

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the name of Mr. Shaw be substituted for that of Mr. Leader as a member of the special committee appointed to consider the resolution to give the government of Canada control over certain ocean rates by confirming the agreement between His Majesty and Sir William Petersen, K.C.B.E., as set out in said resolution or by any other method that offers effective control.

Mr. SPEAKER: By unanimous consent.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

OCEAN FREIGHT RATES

Mr. SUTHERLAND:

1. Did the special committee appointed by parliament February 28, 1923, to inquire into agricultural conditions, make a report in regard to ocean freight rates during the session of 1923?

2. Did said special committee in their seventh and final report state that, owing to the impossibility of digesting and properly weighing the evidence submitted to them in the time at their disposal before prorogation of parliament, recommend that a similar committee should be appointed at an early period of the next session of parliament?

3. Was the recommendation referred to carried out by the government?

4. What was the date of the appointment by the government of W. T. R. Preston to make an investigation into the alleged discrimination in ocean freight rates covering Canadian shipments from Atlantic seaports referred to by the special committee referred to in question 1?

5. Was parliament in session at the time the appointment was made? If so, was parliament consulted in the matter?

6. What was the date and contents of the order in council authorizing said appointment?

7. From what time did Mr. Preston begin to draw pay and allowances under the order in council referred to?

8. What amount has been paid to him, or is due him in connection with the investigation referred to?

9. Is he still on the pay roll?

Hon. Mr. COPP:

1. Yes, the fourth and fifth reports referred to ocean freight rates.

2. Yes.

3. Recommendation referred to was made to parliament and no action has as yet been taken.

4. February 28, 1924.

5. (a) Yes. (b) No.

6. February 28, 1924.

7. February 28, 1924.

8. Expended to January 31, 1925—

Travel	$ 864 85
Remuneration (Feb. 28 to June 1, 1924)—(94 days less=87 days at $15)	1,305 00
Living allowance (Feb. 28 to Oct. 24, 1924)—(239 days at $10)	2,390 00
Sundries	310 23
	$4,870 08

Accounts on hand, pending supplementary vote—

Travel	208 68
Remuneration (June 2, 1924, to Jan. 23, 1925)—(236 days less 32=204 days at $15)	3,060 00
Living allowance (Oct. 25, 1924 to Jan. 23, 1925)—(91 days less 18=73 days at $10)	730 00
Stenographic services	216 00
Sundries	17 77
	$4,232 45

9. For such additional time as he may be actually engaged in the work of the ocean freight rate inquiry.

MAIL SUBSIDIES AND STEAMSHIP SUBVENTIONS

Mr. McTAGGART:

1. In what year was the payment of subsidies to steamships instituted in Canada?

2. What amount has the government paid in subsidies in each year since that date?

3. What was the total amount so paid up to the present time?

Hon. Mr. COPP:

1. The Public Accounts of Canada show that payments were made on account of mail subsidies and steamship subventions from 1867-68 onwards.

2.

	Local Services	Foreign Services	
1867-68			$ 177,349 33
1868-69			253,746 67
1869-70			288,999 02
1870-71			236,098 97
1871-72			242,107 98
1872-73			363,447 98
1873-74			285,882 29
1874-75			287,772 40
1875-76			261,588 89

IMPORTATION OF KRAFT WRAPPING PAPER

Hon. Mr. STEVENS:

1. What amount of kraft wrapping paper was imported during the last calendar year?

2. What amount was imported from (a) Norway and Sweden, (b) United Kingdom, (c) United States?

3. What is the duty on kraft wrapping paper?

4. Is the government negotiating a commercial treaty with Finland or other European countries which will naturally affect this rate of duty? If so, to what extent?

5. Has the government investigated the condition of paper mills in Canada manufacturing kraft wrapping paper?

6. How many mills in Canada manufacture kraft wrapping paper and what was the total output last year?

Hon. Mr. COPP:

1. and 2. (a), (b), (c): Imports of kraft wrapping paper into Canada during the calendar year 1924:

Countries whence received	Quantity Lb.	Value $
1. Total imports.. ..	889,710	52,749
2. (a) From Norway.. ..	52,003	2,990
From Sweden..	428,132	19,053
(Norway and Sweden)	480,135	22,043
2. (b) From United Kingdom..	45,724	2,807
2. (c) From United States..	262,225	23,323
Other countries..	101,626	4,576

3. Rates of duty on kraft wrapping paper: General tariff, 25 per cent ad valorem; Preferential tariff, 15 per cent ad valorem; Intermediate tariff, 22 1-2 per cent ad valorem.

4. A treaty of commerce and navigation between the United Kingdom and Finland was signed on December 14, 1923. Ratifications were exchanged on July 4, 1924. Article 23 of the treaty provides that the stipulations of the treaty shall not be applicable to any self-governing British dominion unless the said dominion so desires; but it is provided that the goods of such dominion shall enjoy in Finland the same treatment as would be enjoyed by similar goods if produced in the United Kingdom so long as the goods produced in Finland are accorded favoured nation treatment in such dominion. The customs tariff of Finland provides for a reduction under the conventional tariff on certain products of interest to the Canadian trade. At the last session of parliament, a bill respecting trade between Canada and Finland was passed in the Canadian House of Commons but in the Senate the committee rose without reporting the bill. As the trade between Canada and Finland is considered of advantage to Canada, it is proposed to introduce a similar bill in the House of Commons at this session.

A bill will also be introduced in the House of Commons respecting a certain trade agreement with the Netherlands. This agreement will provide for favoured nation treatment.

The French convention provides for a discount of ten per cent, on the amount of duty under tariff item 197, "Paper of all kinds, n.o.p." Goods from all countries entitled to the benefit of the favoured nation clause will receive the benefit of this reduction.

5. No, special investigation has been made concerning the condition of the paper mills in Canada, but it is ascertained that three-fourths of the production of kraft paper is exported from Canada to twenty-six different countries. The value of kraft paper imported into Canada from Finland during the ten months ended January 31, 1925, was only $2,777, while the total exports to all countries of Canadian kraft paper for the same period amounted to $2,677,268.

6. Information for the calendar year 1924 is not yet compiled. During the calendar year 1923, nine mills manufactured kraft wrapping paper. The total production was 42,851 tons, valued at $4,464,198.

PURCHASE OF LIGHTSHIP GROS CAP NO. 1

Mr. SIMPSON:

1. In what year was the lightship Gros Cap No. 1 (formerly the St. Julian) purchased by the government?

2. What was the purchase price and from whom purchased?

3. Where was this boat built, for whom and for what purpose?

4. What amount has been spent by the government in remodelling and refitting this boat since the date of purchase?

5. Was the Gros Cap No. 1 stationed during the season of 1924 at a place called Gros Cap in lake Superior?

6. Was this place formerly served by a gas buoy?

7. What was the average cost of maintaining the gas buoy at this point during the season of navigation?

8. What was the total cost of maintaining the lightship Gros Cap No. 1 during the calendar year 1924: (a) wages of crew; (b) supplies, including fuel, food and clothing; (c) repairs; (d) all other expenses?

9. How many members of the crew of this boat are paid for the season of navigation only; how many are paid during the full year; how are the latter employed during the winter season?

Hon. Mr. CARDIN:

1. 2 and 3. Vessel was built in 1917 at Toronto, by Polson Iron Works, Limited, for war purposes and was transferred by Department of Naval Service to Department of Marine and Fisheries in 1920 without cost.

4. $26,458.65.

5. Yes. The establishment of this lightship was authorized by order in council P.C. 2762, 5th August, 1921. The order in council recites that the Lighthouse Board of Canada had received a request from the Dominion Marine Association for improved aids to navigation on the Gros Cap shoal, the information received by the board showing that Gros Cap shoal is a dangerous spot very close to the main track of heavy traffic between lake Superior and Sault Ste. Marie, numerous accidents having occurred. The Lighthouse board recommended the establishment of a lightship.

6. Yes.

7. About $300.

8.

(a)	Wages	$10,322 09
(b)	Supplies	2,352 80
(c)	Repairs	448 36
(d)	Sundry expenses	232 77
	Total	$13,356 02

9. (a) Seven.
(b) Two: captain and chief engineer.
(c) Keep vessel clear of snow and prevent damage by ice, make such repairs as it is possible for them to make by themselves and to take care of the vessel generally.

MR. E. LAFLEUR, K.C.

Mr. ROSS (Kingston):

1. On what date was Mr. E. Lafleur, K.C. retained by the government to prepare the contract between His Majesty King George V represented by the Minister of Trade and Commerce?

2. Is Mr. Lafleur still under engagement on this contract or any part of it?

3. If not, on what date did Mr. Lafleur complete his services in connection with the contract referred to in question 1?

4. What amount was charged by Mr. Lafleur for his services during the period referred to in questions (1) and (3), and what amount was paid, or is to be paid, to Mr. Lafleur?

[Mr. Simpson.]

Hon. Mr. LOW:

1. December 3, 1924.

2. No.

3. December 11, 1924.

4. No account has yet been received from Mr. Lafleur in this connection.

PARK ST. CHARLES COMPANY, LIMITED

Hon. Mr. STEVENS:

1. Has any payment been made to the Park St. Charles Company, Limited, for land occupied by the Quebec Harbour Commission, as per verdict of the arbitrator in the case?

2. If so, what sum has been paid and on what date?

3. If more than one payment was made, to whom were they made and on what dates?

4. If no payment has been made to the Park St. Charles Company, Limited, or their agent, has any settlement or payment been made with any other person or firm and having any reference to the said claim and if so, to whom?

Hon. Mr. CARDIN:

1. Yes.

2. and 3.

1920.—To Park St. Charles Company, January 17.—Interest on award, $3,092.37; 1921.—To Park St. Charles Company, January 18.—Interest on award, $3,092.37; 1922.—To Park St. Charles Company, January 18.—Interest on award, $3,092.37; 1923.—To Park St. Charles Company, January 19.—Interest on award, $3,092.37; August 24.—Interest on award, $1,872.35; August 24.—Award, $51,539.58; Total, $65,781.41.

The two last mentioned amounts have been paid by cheque to the order of La Banque Nationale and La Cie. Park St. Charles.

4. Apart from the above amounts, the Quebec Harbour Commission has paid for legal fees of their attorneys and those of the Park St. Charles Company, arbitrator's fees, notarial, surveyor's, stenographer's, witnesses', court fees, travelling expenses, premiums on security bonds, an additional sum of $10,732.33.

PELAGIC SEALING TREATY

Mr. NEILL:

What amount of revenue was derived by Canada from the United States under the provisions of the Pelagic Sealing treaty in each year to date since the coming into operation of the said treaty?

Hon. Mr. CARDIN:

*1913	$ 34,672 13
*1919	193,610 41
*1920	215,622 89
1921	61,529 21
1922	47,345 43
1923	69,148 81
1925	28,274 89
Total receipts	$ 650,203 77

*The above amounts were credited against the advance payment of $200,000 plus $10,000 per year during the close season provided for in the treaty until they were recouped.

EXPENSES OF MEMBERS TO WEMBLEY EXHIBITION

Mr. SUTHERLAND:

1. What members of the House of Commons attended the exhibition at Wembley, England, during the past year at the expense of the Dominion of Canada?
2. What was the expense to the Dominion government in the case of each member?

Hon. Mr. ROBB:

1. Geo. W. Kyte, L. J. Papineau, J. Fred Johnston.
2. $1,400 for each.

EXPORT OF POWER BY CEDAR RAPIDS POWER COMPANY

Hon. Mr. MANION:

According to the contract which is subject to examination by the Department of Trade and Commerce, what is the price per horse-power paid by the Aluminium Company of America at its Massena, New York state plant, for power exported from Canada by the Cedar Rapids Power Company?

Hon. Mr. LOW: Although the act provides that such export contracts are subject to examination by officers of the department, this authority has never been exercised. A copy of the contract has never been submitted to the department, therefore the department has no information on the matter.

The department has the right to ask for a copy of the contract but is of the opinion that it would be unfair to the company exporting to make public the confidential contents of the contract.

BUCTOUCHE, N.B.—PUBLIC BUILDING SITE

Mr. DOUCET:

1. Has the government purchased a site for public building at Buctouche, Kent county, New Brunswick?
2. Does it propose to erect that building in the near future or is it the intention of the government to dispose of that site?

Hon. Mr. KING (Kootenay):

1. Yes, in 1913 from C. J. Collette, for $500.
2. Nothing in contemplation at the present time in either respect.

ADMINISTRATION OF COPPER BOUNTIES ACT, 1923

Mr. EVANS:

1. What has been the cost each year of administration of the Copper Bounties Act of 1923?
2. What amount has been paid in bounties?
3. To what companies have such amounts been paid?

Hon. Mr. LOW:

1. 1923-24, $591.73; 1924-25, $180.90.
2. 1923-24, Nil. 1924-25, $14,551.75.
3. Consolidated Mining and Smelting Co. Ltd., Trail, B.C.

UNOPPOSED MOTIONS FOR PAPERS

HALIBUT TREATY WITH THE UNITED STATES

Mr. BLACK (Yukon):

For a copy of all correspondence, letters, telegrams and communications passed between the hon. member for Skeena, and any minister or official of the government, in relation to the halibut treaty with the United States; also, all letters, telegrams and communications of whatsoever kind, passed between the said hon. member for Skeena and any minister or official of the government relating to the close season for halibut on the Pacific; also, all petitions, letters, and communications from other persons forwarded by the said hon. member for Skeena, to any minister or official of the government, relating to the said halibut treaty or the close season for halibut.

POSTMASTER AT GLACE BAY

Mr. BLACK (Halifax):

For a copy of all correspondence exchanged between the Postmaster General, the Civil Service Commission and all other persons, relative to the appointment of a postmaster at Glace Bay, Nova Scotia.

ST. JOHN AND QUEBEC RAILWAY

Mr. A. J. DOUCET (Kent, N.B.).

For a copy of all correspondence between the New Brunswick government or any member thereof and any minister or department of the Dominion government, with reference to the taking over by the Dominion government of the St. John and Quebec railway.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): There is no objection to the motion if we understand clearly what is required. There was undoubtedly a good deal of correspondence before the construction of this railway in reference to the work being undertaken by the federal government, but I presume my hon. friend wants the correspondence, since the construction of the line, as to the taking over of the construction by the federal government.

Mr. DOUCET: Within the last five or six years. After the taking over of the present line.

Mr. GRAHAM: With that understanding.

Motion as amended agreed to.

PEACE RIVER RAILWAY OUTLET

On the Orders of the Day:

Mr. D. M. KENNEDY (West Edmonton): Does the Minister of Railways and Canals think there is a probability of the heads of the Canadian National and the Canadian

Pacific coming together in a joint agreement regarding the Peace river transportation problem?

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): I would not like to say that until I got a reply to that question or something to the same effect from the gentlemen themselves. They were, if possible, to agree on a joint report or suggestion. I may say this, that if some suggestion does not come shortly, I will, I think, ask them to join in another conference to discuss the matter again.

INQUIRIES FOR RETURNS

RURAL MAIL ROUTES

On the Orders of the Day:

Mr. M. E. MAYBEE (Northumberland): On March 16, a question standing in my name with reference to the establishment of rural mail routes was passed as an order for return. I should like to know when it will be brought down.

Right Hon. W. L. MACKENZIE KING (Prime Minister): It will be necessary to direct the attention of the Postmaster General (Mr. Murphy) to the question, and I will ask him to give my hon. friend an answer at the next sitting of the House.

MR. PETER HICKEY

Mr. R. B. HANSON (York-Sunbury): On April 14, of last year an order for a return was passed for the correspondence, etcetera, re the dismissal of Peter Hickey as lighthouse keeper at Fish island light, Prince county, Prince Edward Island, and if an investigation had been held, for a copy of the evidence and report. That return has not yet been brought down. As there is no reason in the world why it should not have been brought down before this, I would ask the government when it is to be brought down.

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): I shall be pleased to make the necessary inquiry and see that the return is brought down as soon as possible.

THE BUDGET

CONTINUATION OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Tuesday, March 31, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

[Mr. D. M. Kennedy.]

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, the few changes in the tariff which are indicated in this budget are of a character which will give satisfaction to the interests concerned in the district which I represent. The principal ones are those dealing with coal. It so happens that both the increase and the decrease indicated by the budget will be of benefit to the mines in my district. These mines, as the House generally knows, are in a very desperate condition owing to the competition of fuel oil, and our principal market is in the United States. There is a reciprocal item in the United States tariff by which the duty on Canadian coal going into the United States rises or falls in the same way as our duty on American coal coming into Canada. Consequently, the reduction of duty on bituminous coal from 53 to 50 cents a ton will be of advantage to us in the American market. Three cents is not a very big reduction and it might well have been more. It amounts to only six per cent, but six per cent of a reduction in the tariff is always better than nothing. On the other hand, the increase in the duty on slack coal also benefits us because we have practically no market for slack coal, in the United States. We produce very little of it in any case, and a considerable trade has been growing up of late years in slack coal coming from the United States into Vancouver. I judge from the change in the tariff that this will be entirely done away with.

There is a matter in connection with lignite that I should like to draw to the attention of the government. I have done so already, but I want to impress it upon them once more. Some years ago the government made a change in the duty on lignite, putting it on the free list in order to facilitate the sale of coal from southern Alberta into the United States. At that time there was no influx of lignite from the United States into Canada on the Pacific coast. Lignite and bituminous are more or less comparative terms. You cannot say precisely by looking at coal that this particular coal is lignite and that bituminous. The question is one of analysis, and the Customs department, in order to arrive at some basis on which to gauge the entry of this coal, agreed between the two nations that if coal went over six per cent of moisture, it would be considered as lignite. The result of that ruling was that there started up a trade in lignite coal going into Vancouver from the Bellingham mines in the state of Washington to the south, a trade that had never been thought of or contemplated before. The coal for that purpose was analysed and it went 6.1 per cent of moisture, or just one-

tenth of one per cent over the amount at which it would be allowed in free. At my suggestion last year the government had it analyzed again and it came to 6.7 per cent of moisture, bringing it apparently well into the lignite class. I submit, however, it is not lignite and should not be so classified. I have in my hand a bulletin of the Washington Department of Conservation and Development in which they deal with these Bellingham coals and they distinctly say:

> It is often referred to as lignite, but more properly it should be classed as a low grade bituminous coal.

Mr. MACDONALD (Pictou): What is the percentage of carbon in the coal?

Mr. NEILL: I have here an analysis, but it is defined merely as moisture, ash, F.C.—whatever that stands for,—and B.T.U.

Mr. MACDONALD (Pictou): What is the "F.C."?

Mr. NEILL: It does not give the carbon apparently, but the moisture content; the bulletin gives its moisture as well below six per cent, so that, in the opinion of the Washington Department of Conservation and Development, the coal should be classified, not as lignite, but as low-grade bituminous. Yet we are allowing it to come in as a lignite coal. I have also in my hand a statement showing the quantities that have come in. In 1923, the quantity of lignite coal that came into British Columbia from the United States was 2,331 tons and, in 1924, the trade had grown, owing to this favourable tariff regulation, to 25,763 tons. On the other hand, the benefit that we looked for has not taken place. The quantity of lignite coal going out of Alberta into the United States in 1923 was over 21,000 tons and, in 1924, it was only 12,302 tons. Therefore, for the sake of getting a sale of 12,000 tons of lignite from Alberta, we are sacrificing the British Columbia coal industry to the extent of 25,763 tons of lignite coming in from Washington. And when I point out, as I have, that this is not really lignite but low-grade bituminous, I think it will be very proper for the government to raise the point of analysis from 6 per cent to 7 per cent moisture. That would cut out the imported coal coming into Vancouver and possibly prevent some of the lignite coal going from Alberta. But even if it did prevent it all it would be better to do so than to build up a trade which would be more antagonistic to British Columbia than beneficial to Alberta.

Turning now to another item of the budget, I would deal for a moment with the reduction of the duty on engines used in the propulsion of fishing boats. This is something that will be very acceptable to the fishing population of the Pacific, and no doubt to those on the Atlantic. The previous tax was 15 per cent on engines of British origin and 27½ per cent on those coming from the United States, and that has been cut down to 10 per cent and 15 per cent respectively. Coupled with the reduction in the sales tax last year, this represents a substantial saving to those who buy these engines. Taking the average price of one of these fishing boat engines, which probably would be $160, the total reduction in the duty now would represent a saving of something like $35.50 on each engine which is a substantial amount to a poor man buying an engine for his own use. I am also pleased to see the way in which these engines are now exempted from the sales tax. Last year the exemption provision read, "Gasoline engines to be used in boats, etc.", and that has been struck out now and the provision stated in a different form referring to item 453e. Hon. gentlemen will appreciate the significance of this when I say that many fishing boat engines do not use gasoline but distillate and coal oil. Diesel and semi-Diesel engines are coming into use now and they are using a low grade of crude oil, and under the change I have indicated it will enable the sales tax to be taken off all these engines which are used for practically the same purpose. Heretofore they were not eligible under this class inasmuch as they did not use gasoline. These are practically all the tariff changes that affect my district.

I have been asked by a body of my constituents to urge upon the government the raising of the duty on eggs from 3 cents to 8 cents in order to make the Canadian duty equal to that imposed by our American friends.

Some hon. MEMBERS: Hear, hear.

Mr. NEILL: I thought that would raise applause from my right. Well, that brings up the whole question of tariff on the one hand and low tariff on the other.

Mr. LADNER: Does not the hon. member's judgment warrant his urging upon the government personally such an increase?

Mr. NEILL: If the hon. member will wait a little I will reveal what my judgment is in the matter. As I was saying, this opens up the whole question of tariff and low tariff. I have sat in this House for four years and I will undertake to say that sixty per cent of that time has been spent by members on both sides in an utterly fruitless, useless,

unnecessary attempt to convince the other part of the House as to the merits of the tariff question. I do not propose to be led down that enticing but bewildering vista; I decline to be drawn into it. Our friends to the right, as they have just indicated, will applaud this request that I have just brought to the attention of the House, in the conviction that it will increase the price of eggs to the producer in British Columbia. On the other hand, no doubt, the low tariff men would say that an increase of that kind would raise the cost of living and also probably result in a reduced demand, and that in the case of an article of such common and universal use it would only require the individual householder to make a small restriction in their use to materially affect the demand, so that the reduced demand would so bring down the price that possibly the result would be no better than if the tariff had been left alone. I will leave the subject in that way without expressing any opinion. But I will say this, that the situation as regards the importation of eggs has been materially improved in the last few years. When this government came into power they found some measure of egg inspection but it was of such a weird character as to prove futile against the importer of foreign eggs, while it was a real nuisance to what we may call the domestic importer, that is to say, the person importing from one province to another. The government changed that system to make it apply to the importer of foreign eggs, whether from China or from the United States. I recall the investigations that took place at that time, when there was an enormous influx of Chinese eggs. I remember one shipment alone of 50,000 cases which were traced to Montreal and some to Ottawa. Since then, owing to the rigid enforcement of the system of inspection, the situation has greatly improved, and although it is a source of annoyance to some country storekeepers, the results in the main have been beneficial. In the first two years since the inspection system has been applied the importation of Chinese eggs in 1923-24 was absolutely nil. In this last year there has been an importation of some 75,000 dozen, of which 30,000 have been rejected. This will help to discourage their entrance and will also, I hope, tend to keep up the quality. As regards the importation of eggs from the American side, the figures are also somewhat encouraging. In the year 1923 the importation of eggs in dozens from the United States was 8,256,000 and in the following year 6,454,000 while in the year ending March 23 last, only a week short of the year, the importation was only 2,429,000. It is apparent, therefore, that instead of becoming more acute the situation is rather improved. Now, for the consolation of my friends who can see only through one glass, namely protection, I would suggest another method of assisting our egg producers in British Columbia—and I know that the hon. member for Vancouver South (Mr. Ladner) will be peculiarly interested in the fortunes of egg producers seeing that he represents a city constituency. Here is what I suggest as something that would materially help the situation. When the government bring down their policy in connection with the regulation of freight rates, if they will see to it that the exceedingly unjust discrimination that exists to-day in the freight on wheat from the prairies is done away with, it will be of great benefit to egg producers. When a farmer in the prairies ships No. 1 wheat, worth probably $2, to Vancouver and it is going to China or to Great Britain, he pays a rate on it of 22½ cents a hundred, but if the same farmer ships No. 6 wheat which is worth perhaps only $1 he pays, or the consumer in British Columbia pays, a rate of 41½ cents. Now, if there is any possible way of justifying such a discrimination I should like to hear it, for I have not found anyone who is prepared to defend it.

Mr. FORKE: It exists elsewhere; the same discrimination exists in shipments from Winnipeg to Fort William.

Mr. NEILL: If the hon. member is prepared to sit down and see that injustice continue in Manitoba that is no reason why we should have it in British Columbia. I was pointing out that there is a discrimination of $3.80 a ton or $133 a carload, and it is claimed by the British Columbia Poultry Exchange—whose membership I do not know, although I know that it does not embrace all British Columbia—that there is a loss of $75,000 a year in connection with this one item alone. If the railways can carry 20,000 carloads of wheat at 21 cents per hundred—and I do not think it is denied that they carry it at a profit—surely they can carry 2,000 more at the same rate for local consumption in British Columbia, and so for once place the British Columbia farmer on a par at least with his Japanese and Chinese competitors or with the consumer in Britain. For it is when the wheat is exported, no matter where it goes, that the low rate applies; when it is used in British Columbia the high rate must be paid. If the government can adjust this matter it will be doing a lot for the egg producers of British Columbia, and it would not involve

any tariff alterations. Certainly the present injustice, which cannot for a moment be defended, should be done away with.

There is another matter affecting British Columbia. I refer to the protection of the west coast,—I am not now talking about naval defence, but about protection against shipwreck and the like. I wish to congratulate very heartily the Minister of Marine and Fisheries (Mr. Cardin) for the success of the development on the west coast of the direction-finding apparatus that he installed there some years ago. It is located at a point called Pachena. It was very carefully located, the men in charge are thoroughly efficient, and the apparatus appears to be of the very finest. The files of the government offices are full of letters of warm thanks from captains and shipping companies for the benefits they have secured from being able to receive the location of their ships by means of this apparatus, because the west coast where the station is located is a place where it is peculiarly easy for ships to go wrong; the currents are rather variable, at a certain point navigators have to make a sharp turn to get into the straits, and at night time or in foggy or dull weather they are very liable to overrun their reckoning and be on the shores of Vancouver island before they know it. During the past winter there has not been a single wreck on that coast, which in itself is a tribute to the efficiency of the installation and to the efficiency of those in charge of it. I think it was last year that the Americans, who maintain two or three similar stations along their coast line, initiated a competition to see which station would be most accurate in giving locations of vessels, and they warned their own stations that they were going to have this contest, but they did not warn the Pachena station, although they took it into the competition. In the result the Pachena station beat all the American stations in accuracy. I think its fraction of error was only something like three per cent over a long series of contests. That alone, I think, is a striking tribute to the efficiency of our Canadian staff.

In this connection there is another matter which I should mention, in the hope of obtaining further action. A couple of years ago the Minister of Marine and Fisheries installed at Bamfield for the four winter months a boat equipped with wireless that would be always available with steam up to go to the succour of any vessels in distress. It was an excellent idea and saved both shipping and human life. But the best boat available was one of the fishery patrol boats, and while, as I say, it did good work on several occasions, yet emergencies might easily have arisen to cope with which that boat would have been absolutely useless, its insufficient breadth of beam and lack of power rendering it unsuitable for such operations. But still we were glad to get that boat. Now the government have for some years been subsidizing to a considerable amount a salvage company which keeps a salvage boat always under steam at Esquimalt in the vicinity of Victoria. But Esquimalt is too far away from the west coast; it is like having a fire apparatus for Ottawa stationed twenty miles out in the country. This company has had built at enormous expense a very fine type of boat, indeed it is the very last word in improvements for succouring boats in distress. That boat has been brought out to Victoria. Now, I would suggest that the government should pay the company a slightly larger subsidy for the purpose of having that improved boat kept at Bamfield during the four winter months, for there it would be of the very greatest service to west coast shipping. This boat is even superior to the American boat Snohomish which has been maintained for the same purpose by the United States authorities, and has long been our envy and admiration. It would be an inestimable boon to the west coast if the minister could see his way to give a little extra subsidy and have the boat stationed at Bamfield. Then it could be said indeed that we had a first class wreck protection service on the west coast.

Another item I would call to the attention of the government is in connection with our soldier settlers. The committee that reported on this last session recommended that there should be a flat reduction of sixty per cent and forty per cent on the stock purchased by these settlers in certain years. That portion of the report was concurred in by the House and by the minister, who specifically stated that he approved the proposal. I trust that that recommendation will be carried out. It is a good one, because we are all aware that the stock was purchased at too dear a price at that time and it would be no use trying to have a revaluation of it to-day. Therefore a flat rate would be perfectly equitable to all and sundry, and I hope the government will carry out the recommendation this year. In fact they are almost pledged to do so. The other feature has to do with revaluation of the land. The committee's recommendation on this subject was left in abeyance, not being concurred in by the House, but the minister assured us it was going to receive his consideration during the recess. Now, a flat rate of reduction on the value of all these lands would be absolutely useless, indeed I think it would be positively wrong, for this reason: There are a large number of farms on which no

rebate is required at all; if they were revalued they would probably show a value higher than when bought. To give a flat rebate, it would have to be necessarily very small, perhaps ten per cent, which would be absurd, for it would be giving to a large number of soldier settlers something they do not require, and on the other hand it would be denying justice to a number of other settlers who need assistance very badly. An average rebate of ten per cent would be of no use at all to this latter class, whereas if the rebate was confined only to those soldiers applying for it, of course they would not seek it if they thought the valuation of their property would be raised, and so the government could afford to give a reasonable rebate to those whose land was undoubtedly purchased at too high a price. When the Prime Minister and his party were in British Columbia last summer they did the Comox-Alberni district the honour of visiting it. We were very proud to see him and his party, and he was kind enough to give an interview to a deputation of these soldier settlers, and he was further good enough to go out and see for himself some of the uncleared bush land from which had been taken all the merchantable timber, leaving stumps running perhaps twenty or thirty to the acre and from three to four feet through, and which could not be cleared at less than $10 to $15 apiece; and in some cases the second growth has covered the land. The Prime Minister was told that that land was bought for the soldiers in the early days of their return at $45 an acre, but the current value of similar land alongside, both then and now, was between $5 and $7.50 per acre. It matters not now whether there was graft or mere mismanagement; there was a rush in those early days, and something had to be done in a hurry. Here is a case where an investigation should take place, and these men should get a substantial reduction on the original cost of their land. It may be asked: What is the use of always asking the government to spend money and then passing resolutions denouncing them for it. But this is not a case of spending money at all; it is a case of throwing out these people and then taking in others to fill their place to whom you will have to sell the land, not at the original price but at its present value. The original purchase money is gone; it was gone when whoever was in charge bought this land at six times what it was worth. It is now a question whether you are to throw out these soldier settlers and sell their land to other people—perhaps orientals—at its present value, and take the loss; or let these men stay on the land at its present value and take the loss; the loss will have to be taken in any case. I would suggest therefore that it would be a very proper thing indeed for the government to go very thoroughly into this subject and have a revaluation of all the soldiers' land where required.

There is another matter I would like to touch on, and that is the question of old age pensions. I was very much pleased to see the Minister of Labour (Mr. Murdock) give notice that a committee would be re-appointed this year to deal with this matter. I trust that the personnel will be the same as that of last year, because we understand the subject and are in a position to deal with it easier than it can be dealt with by others starting afresh. The resolution that that committee brought down last year was a recommendation to the government to devise a scheme on a very modest scale of old age pensions, with the understanding that each province that wished to take it up would pay half the cost. The idea was that the provinces are now compelled to meet the whole cost of aid to destitute people, and although under the new plan they would pay half of the larger sum involved, they would probably pay no more in the long run than they are paying now, and the pension system would be a suitable one to all concerned. The question of destitute relief is getting acute in some of the provinces and this would be a method of dealing with it. I understand that the government consulted the provinces in the recess to find out what their attitude was, and I suppose the answer of the provinces will be submitted to this committee and I hope we will be able to arrive at some conclusion and make some recommendation to the government by which this question may be dealt with. It is an all-important matter; it is a phase of social reform in Canada that should be brought more to the front in the political programme of both parties in the near future.

Having talked to-day and last night for an hour and a half without mentioning the oriental question perhaps I may be permitted to refer to it now. I do not intend to discuss the principle involved; I consider that that was well defined in the resolution passed by this House in May, 1922. Public sentiment since then has crystallized into the belief that that resolution expresses the situation, not only as it was but also as it should be, in regard to governmental action. It is very brief; I will quote it for the sake of getting it on Hansard:

> That, in the opinion of this House, the immigration of oriental aliens and their rapid multiplication is becoming a serious menace to living conditions, particularly on the Pacific coast, and to the future of the

country in general, and the government should take immediate action with a view to securing the exclusion of future immigration of this type.

It was moved by a member of the government that the word "exclusion" be struck out and the words "effective restriction" be substituted therefor, which was done. But it was done with the assurance of several members of the cabinet that the words "effective restriction" would be held to mean, although for diplomatic reasons the idea was otherwise expressed, the same as exclusion. That was the resolution that was passed at that time, and it was strengthened by the remarks of the Prime Minister (Mr. Mackenzie King) in the debate on July 11, last year, in which he used this language—I will quote only one sentence:

If we find that we cannot get effective restriction in the manner I have described, the government will be prepared to consider any further restrictive measure which my hon. friend or his friends from British Columbia may bring to its attention.

Now, I wish to deal with the situation since, starting, as it were, from that resolution; with what has been done by the government to implement that resolution and that pledge, and what yet remains to be done. The government have done three things, which I will deal with individually. In the first place they passed the Chinese Immigration Act, which to my mind has been an unqualified success. I asked for returns the other day and I find that in the calendar year past practically no Chinese immigrants have come to Canada: only two members of the diplomatic service, two of their servants, no merchants, no students. Seventy-four came in under permit, which means that they may stay not longer than six months. Out of the seventy-four, thirty-five were Chinese actors under permit, and these were compelled to put up bonds to ensure their going out within the specified time. The rest of those who came under permit were of the classes that none could take exception to—clergymen and their wives, consular service and immigration agents; Chinese passenger agents, and so on. So it may well be held that this act has dealt effectively with the exclusion demand so far as the Chinese are concerned. I may say, too, that much of the success of it was due to the efficient manner in which the immigration officers administered the act. I have been to some trouble to check them up; I cross-examined them, almost, in the matter, and I am well satisfied that they are enforcing the act very rigidly, but still in a fair and reasonable spirit. I think it may also be said that the results in a political sense are highly satisfactory. There was a little friction at the time with the Chinese, but that has died out and I firmly believe there is a better feeling between Chinese and the white men in British Columbia than there ever was before. The Chinese know just exactly where they are, and what their limitations are. The white man, when he is brought in contact with the Chinaman by competition, is able to say: "Well, you are there, but no more of you will come in," and he is satisfied, so to speak, to leave the Chinaman where he is. So much for that phase of it.

Then, the second thing that the government have done in fulfilment of this pledge is to place restrictions upon orientals in the fishing industry. This is a subject that requires a little consideration. The hon. member for Bellechasse (Mr. Fournier), I think, was speaking somewhere in Ontario the other day, and I saw in the paper that he made the comment that it was noticeable how the habit of "propagandering", if that is the right word, has increased since the war. We learned it during the war days, and, as he pointed out, every big industry, almost every large organization, now maintains a press agent for the purpose of disseminating propaganda. I had noticed that myself, and I look upon it as a regrettable thing. I think it was much better in the old days when news was collected by reporters, employees of the press. They were reliable, intelligent and unprejudiced men, and what they collected and prepared for publication was generally pretty nearly accurate. If it was left to them to-day it would be the same thing. But now the press agent sits in his office and writes out a dozen, yes, two or three dozen, little news items, varying them a little from time to time, and he sends a few of them out to this paper or that magazine at the last minute. The editor has usually no reason to suspect there is anything wrong with them. Perhaps the main idea of the article or news item is true, but it is skilfully perverted to educate the public along one particular line and to convince them that something is true which is not true—because that is the main idea of propaganda. Now, that has been done in this matter. There has been a very skilful and, I should imagine,—I hope so at any rate—well-paid propaganda in connection with these restrictions upon orientals in the fishing industry in British Columbia. It has been widespread; letters and telegrams have poured in to the minister, some from this angle, some from that angle, in order to concentrate upon him and to give the impression that there is a general feeling

in British Columbia in connection with this matter. The idea is to show that the whole thing was a mistake; that it had misfired and should be corrected. But this is all propaganda; it is "bunk" of the plainest description. Any man with a printed letterhead that did not too plainly betray his connection with the Japanese, and who was unpatriotic enough to do it, was invited to write to the minister expressing his views. I traced some of these to their source and in almost every case I found that if they were not in the direct pay of the Japanese they were obliged to them in matters of business relations, and so on. There was another feature I noticed, too, in this white propaganda, so to speak: it was how wild their remarks were; how inaccurate their statements. The Japanese put in petitions of their own, but at least they knew what they were talking about and kept within the bounds of moderation in their arguments. But these men who did not know the first thing they were talking about simply let themselves go to please their oriental allies and made some of the most ridiculous statements you could imagine. The press was not lost sight of, either. Little news items were sent to this newspaper and to that; or articles occasionally appeared. They were usually, however, in the form of letters to the editor, signed by "Tom Smith" or "Bill Jones". I was particularly impressed by one contributor —I forget his name—who, in order to make good his case and to earn his money, in the course of a violent attack upon myself made the statement that he was able to produce individual Japanese who had done more for the progress and prosperity of British Columbia than the whole tribe of Neills from creation down. Mr. Speaker, I would like if I had time to get in touch with that gentleman. I admire the research he must have made to trace my pedigree back as far as that. So far as my family records go, I can only go back a couple of hundred years, when one of my ancestors met a violent death. The democratic wing of our family says that he was hanged for sheep stealing, but the more aristocratic members claim that he was beheaded for intrusion into the politics of the day. We all know that at that time it was quite an honourable thing for a worn out politician to be beheaded; they had not discovered the Senate in those days!

I would like to point out, in justice to myself and also to other members, that this restriction on Japanese fishing in British Columbia is not the work of one member, or of two or three members, at all, and it did not originate entirely in British Columbia. It was the recommendation of a commission —I have its report here, but I shall not read it—a commission composed of six members of parliament, of all political parties. Two of them came from the east, and so were quite untrammelled by our local prejudices; they saw things for themselves. And the resolution recommending this restriction was passed unanimously by the commission. Further than that—the members who came from the east are in the House and can bear me out—the conditions so surprised them, hit them so much harder than us who were used to them, that when we came to consider the restriction clause they were prepared to go much further than we were. They were prepared to make it a whole sweep of one hundred per cent, but we, knowing the local conditions, said: "No, let us go slow, and then we are likely to go further." But certainly that recommendation was not the idea simply of one or two members from British Columbia.

Now the only support of any importance, the only reputable support that this propaganda has received from what I might call any semi-public body, has come from the Canners' Association of British Columbia, and curiously enough, theirs is the only industry in British Columbia that has not suffered from direct competition with the Japanese. They have suffered from competition in London, because there the Japanese from Siberia compete with them with Siberia-put-up salmon; but the Japanese have no canneries in British Columbia, and so the British Columbia canners do not suffer from their competition there. There is no other class or industry in British Columbia that does not so suffer. The farms, the logging camps, the mines, even the stores and hotels, every class of industry in British Columbia, suffers from the direct competition of the Japanese, except the canning industry, and the canning industry is the only one demanding that this restriction be taken off the employment of Japanese. And they do not only ask it, they demand it, and they are emphatic in their demands. They go so far as to say: If this is not done, we shall have to shut down;—and when an industry with a capital of $11,000,000 invested in it uses language of that kind we can only conclude either one of two things, either that a really desperate situation exists which deserves investigation, or that some one is putting up a bluff on the people of Canada. Let us consider which of the two it is, for that point is worthy of consideration.

This commission to which I have made reference did not deal harshly with the cannery

men of British Columbia by any means. They recognized that they might be put to some loss, or to some inconvenience at least, by this restriction on Japanese, and they considered this in making their recommendations. For that and other reasons they made recommendations that there should be a material reduction in the taxes paid by the canners. The tax on purse-seines used to be $300; the tax on drag-seines at that time was $150; and the government's license on canneries was $500. The commission recommended that all these taxes be brought down to $20 each, and they were all so reduced. The government carried out our recommendation in that respect. Further than that, the commission recommended that the tax of one-half of one cent on each salmon caught in drag-seines, purse-seines and traps be abolished. You can imagine that with the enormous amount of salmon caught, a tax of even half a cent on each individual salmon would amount to a very big sum. The commission recommended that that tax be done away with, and that was done. So the commission did not deal harshly with the canning interests on that occasion.

Now let us deal with the results—not nebulous statements by people who do not know anything about the situation, vague statements that it is going to kill the industry, but cold, hard facts collected from the government returns, not prepared at my suggestion, but issued in the regular way.

I have here a statement of the total pack for the last four years:

Total Pack in Cases	
1921	603,548
1922	1,290,316
1923	1,341,677
1924	1,745,313

This reveals the fact that the 1924 pack of canned salmon in cases was the largest of any year in the history of the industry, even larger than in the bumper year of 1919, just after the war, and which bumper pack was the result of a tremendous effort to stimulate production, and when everything that had a tail that could wiggle or a fin that could shake was jammed into a can and sold. Last year the output was greater than in any previous year. It was 30 per cent greater than in the previous year, it was 36 per cent greater than in 1922, and it was 87 per cent greater than in 1921. There is the record of this industry for the last four years—30 per cent, 36 per cent, and 87 per cent greater than in 1921. You might say: Well, you might catch a lot of fish, and the more you catch the more you lose. I have heard that statement made by the cannery men.

4 p.m.

Mr. DUFF: Was 1921 supposed to be the big year?

Mr. NEILL: No, 1919. Here is an extract from a trade paper, the Pacific Coast Fisherman, dealing with the British Columbia salmon market. It is taken from its March issue this year.

> The British Columbia market continues in very satisfactory shape. Bookings of new-pack sockeyes for Great Britain are already reported at between 75,000 and 80,000 cases, at $14 per case for Skeena and $15 for Fraser river goods; and the tendency of values is strongly upward.

These sales of new-pack sockeyes mean that they are contracting to-day, in March, for delivery of salmon that are still in the water, and that will not be taken out of the water for four or five months yet, and that will not be on the market for eight or nine months to come. Yet they have already sold 80,000 cases, at a good price, and the prices are tending strongly upward. I go on with the statement:

> The only danger seems to be that prices will be advanced too far above the level of Siberian goods, which would invite more competition from the latter. New-pack Pinks also are receiving considerable attention.

Now listen to this:

> The only 1924 pack stocks remaining in first hands in the province are Chums, of which there are about 50,000 cases in strong hands. These are firmly held at about $4.25 per case.

I want the House to note that. Out of a total pack of 1,745,000 odd cases, only 50,000 remain in their hands at this season of the year, or less than three per cent. I have often known the canners to be obliged to go on packing their new pack with more than half of the old pack still on their hands; but here we find a situation entirely different. With a pack 87 per cent greater than it was three years ago; with a better price, a cleaned-up market, and selling already a considerable portion of next year's crop; with less overhead,—because, mind you, their contention is that with the lack of Japanese they could not get enough fishermen—and with the cannery license reduced, with the seine license reduced, and with the tax on salmon caught in purse seines abolished; with the industry in that condition they say: "Give us Japs or give us ruin."

Now the argument they use is that white men have not come into the industry in the same proportion as the Japanese went out—that is their whole argument—and that they have consequently suffered from the lack of efficient fishermen.

Mr. McQUARRIE: Has the hon. member ever seen an advertisement in any of the newspapers asking for white fishermen?

Mr. NEILL: Never, and to tell the truth, I never expect to, and I see all the coast papers. Let me quote one of the subtle little news items:

Statistics show—

They are given to making statements they cannot bear out.

Statistics show that notwithstanding the heavy reduction—

These people have not signed this. It is just a news item and is all part of the propaganda—

—in the number of Japanese licenses in the past three years the number of licenses to white men and Indians has increased only eighteen per cent.

The Japanese reduction was forty per cent.

Canners claim that any further reductions in Japanese fishermen would compel them to apply for the privilege of using traps or to go out of business.

Let us examine that. I will quote some more government statistics. I have before me a statement prepared by the department in the usual course, of licenses issued in 1922 and 1924, before the forty per cent cut came in, and after. It shows the number of licenses issued to Japs in 1922 was 2,933; the number issued in 1924 was 2,241. Deducting the one from the other shows a reduction of 692 licenses in the two years. The number of licenses issued to whites and Indians in 1922 was 4,660. I am quite satisfied in including the two together, for the Indians have as much right to employment as we have, they are good citizens and spend their money where they earn it. I have in my hand a notice issued from Tokyo, Japan, which reads as follows:

Remittances home by Japanese working abroad are an appreciable offset to the country's adverse trade balance for the year 1924. For eleven months these have amounted to 33,800,000 yen.

Adding on the proportion for the odd month it comes to nearly twenty million dollars that goes home to Japan every year. I am justified in including the white men and the Indians in the same category.

An hon. MEMBER: Is that all from Canada?

Mr. NEILL: No, it does not say what amount is from Canada. It is from all different places. The number of white men and Indians who got licenses in 1922 was 4,660, and the number in 1924 was 6,402, showing an increase of 1,742. The total number of licenses issued to everybody, whites, Indians and Japs, in 1922 was 7,593. The number issued in 1924 was 8,643, or an increase in the total of 1,050.

I want to explain a point there. While I have been adhering to the numbers given here I have been more than fair. People say a man can twist figures to suit himself, but I do not need to do that, because I have a strong case without doing so, and I could use the actual figures and make a much stronger case than I am making, because no one who has not the local knowledge would be able to analyse the figures. But I have taken 468 off the 1924 licenses, because they referred to cod hook and line and grey fish fishing; they were not licensed in 1922 and they were licensed in 1924; therefore if I included them I would be giving an unfair advantage to my own case, so that I do not include them. The net result which I wish to show is that the total number of licenses in these two years increased—not decreased—1,050. The whites and Indians increased 1,742, while the Japs only decreased 692. Surely that does away with the argument that they are being handicapped by the reduction in the Japanese licenses, because they cannot get others to take their place, when not only have the total number increased, but the white men and Indians have increased to the number of 1,742, as against the Jap reduction of 692. But I have other figures here going into more detail.

The way the canners do their figuring is this: they take some isolated inlet, and show a reduction there and build up their argument. I am going to show the fallacy of that. Here is one district up north. The total number of licenses issued in that district has decreased 14.8, practically fifteen per cent. I admit that That is what they build their argument on They say the white men have not come in, to replace the Japanese. Not only did the white men not increase in that place but they went down thirty-eight per cent. The cut in the Japs in that place was forty per cent. But this return shows that the reduction of Japanese licenses was practically fifty per cent The reason is due to some local condition. Perhaps the salmon did not run that year, or a cannery was shut down. But the whole thing was reduced. If they had been short of men they would have employed their whole quota of Japs, but here they have not employed their whole quota, because the reduction is fifty per cent instead of forty. Here is the district in which they say the white man is going down. Certainly he is going down, because the law of supply and demand enters into it. Here is another case which was featured to the Minister of Marine and

Fisheries. Take the district of Skeena. In that district they show the licenses had gone down 150, practically fifteen per cent. The number of licenses issued to white men last year in the Skeena was 248, which is an increase of fifty-six per cent. The Indian licenses increased six per cent and the Jap licenses went down forty per cent. The white man goes up fifty-six per cent, the Indian six per cent, the Jap goes down forty per cent and the question is asked, how could there be a reduction in the total? The reason is that the Japs outnumbered the white men in that district four to one, and that forty per cent reduction of the Japs came to more than fifty-six per cent increase of the white men. But in an industry where the white men increased fifty-six per cent in two years, surely it cannot be said the white man is not coming in to take the place of the Jap.

There is another reason I want to give why that reduction occurs, on the top of the reason I have given. That 1922 commission went all over the province and amongst other places we visited Skeena, and there the cannery men and managers came before us and said "We have too many boats on the Skeena". I must say that the cannery men almost entirely provide the gear, the boats, and some expensive nets and give them to fishermen, on shares, and the outlay is considerable. They said, "There are something like 1,100 boats and licenses on the river. That number is too many. We would like to go back to the old system of the exclusive privilege where the waters were allocated to the different canneries and each cannery got so many boat licenses." But the late government changed that policy, and this commission could not see their way to do anything different. However, by cutting down the number of Japs we did decrease the number of licenses on that river. The number went down from 1,100 to about 800, and what was the result? The result was that they caught more salmon with a fewer number of boats and with a largely decreased overhead expense. They found they had had too many boats and too much expense. The ruling of the commission in regard to the restriction in the Jap licenses was a perfect God-send to the canners because it enabled them to do what business jealousies had prevented them doing before. Formerly they would not cut down their overhead expenses; they all knew they had too many boats, but one man would not cut down the number of his boats for fear another man might perhaps catch a few fish more than he had. They would not stand for that. The result was that they kept on this competition until they were on the verge of ruin. They found this was the case and this reduction was satisfactory as they caught more salmon at a smaller overhead cost.

But what happened in the next year? The reduction of 40 per cent was in 1923. There was no reduction in the number of Japs in 1924. So, in 1924 the cannery men got together and they said: "We have had an object lesson. This thing can be extended. We will agree to cut down the white licenses now because we have still too many." They made what is called a gentleman's agreement amongst themselves, and they cut down the number of boats which they would take at each cannery with the result that they still caught as many fish but naturally they did not employ as many white people. I want to quote just a sentence from two or three letters I have here on this subject. This is one from an Old Country fisherman, just out from the Old Country, who went around trying to find employment. I do not know him and will not vouch for him. He wrote to the Vancouver papers complaining of his troubles. I will quote only his last sentence which is this:

> However, it is no business of mine to argue the matter, but I would like to question Mr. Rhodes' statement that there are no white men to take up the vacated licenses of the Japs.
>
> Can he tell me why, to all my applications for a net at the different cannery offices in Vancouver, I have received the same reply as I did last year. Full up?

This is another letter from a man I can vouch for, a returned soldier. I know him well and his word is reliable. I quote this from his letter:

> I wanted also to state that I was turned down cold at Rivers inlet for a fishing gear. My reason for telling you is because I have heard that there is some fool talk about Japs coming in as of old, on account of a shortage of white men. I happen to be only one of the white men who were refused this past year. British Columbia Packers, Bell Irving and Gosse Millard canneries are the ones I tried. That includes five canneries on Rivers inlet. That was as many as I thought likely and had been told by different parties the others were full up. If I had been a green hand I wouldn't have minded so very much, but I have fished on River's inlet since 1919 and also before I was in the army. Being a British subject is the biggest farce ever pulled as far as fishing goes.

This is the complaint of two practical, white fishermen as to their trouble, that they could not get gear because the canneries had very naturally decided not to employ as many as before. I am sorry the Minister of Marine and Fisheries is not in his seat, but I think I see the minister without portfolio, the hon. member for Ottawa (Mr. McGiverin), and he will recall in Vancouver, before a delegation of the cannery men who interviewed him, that I gave this explanation of the situation on the Skeena river; that I invited contradiction if my statements were contrary

to the facts in any way and that I received no contradiction. I will give the real reason why the cannery men prefer the Japs. The reason is two-fold and very natural too. One is that the Japs are much more convenient to deal with. The white men are unfortunately not amalgamated; the cannery men cannot deal with them in a body. They ought to be amalgamated. But the Japs are; the cannery man sends for the boss Jap, and in a few hours he can complete the whole arrangements for his season's work. He says to the boss Jap: "I want so many Japs for fishing licenses. I want so many to work in the canneries. I want so many to make a contract to fill the cans and pack them," and so on, and that is the end of his troubles for that year. The boss Jap attends to all the rest. If a Jap dies or disappears, the white employer never hears about the event. Another one is put at once in his place. This saves the cannery man a great deal of trouble, I quite admit. The other reason is that the Japs are probably cheaper, in this way. The white man demands better accommodation. He will not live in a shack let alone permit his wife to live in one, as the Japs will. A Jap and his wife and eight or nine children will live in one small shack and be quite happy under sanitary conditions that a white man would not tolerate. I well recall the surprise on the faces of the hon. member for Lunenburg (Mr. Duff) and the hon. member for Hants (Mr. Martell) when they went into a cannery one day and saw Japanese women, with babies from three weeks to nine months old strapped on their backs, putting up the salmon in cans. We were used to this, but it was a revelation to them.

Mr. DUFF: I sent the babies home.

Mr. NEILL: People in the east say: It is a funny thing that virile white men cannot compete with the Japanese in British Columbia. That and similar reasons are why we cannot. We do not want to subject our women and children to living under such conditions of life and work. For that reason, it is naturally cheaper for the cannery men to employ Japs because their quarters are much cheaper in that regard.

The cannery men are primarily interested in getting Japs back to use gill nets. They are not at all interested in the herring branch of the industry. There are 1,179 Japs who got gill net licenses last year. They are all allocated to different canneries pro rata. There are something like sixty-five canneries, so that they would average from nineteen to twenty Japs to each cannery. They do not always get that number, but that is an average and the department is proposing this year to impose a further restriction on these Japanese of only 15 per cent. Fifteen per cent out of nineteen or twenty comes to less than three, but we will call it three. That is the extent of the trouble and embarrassment that is proposed to be imposed upon these canneries—to replace this year three more Japs with three white people. The canning industry supports, it is said, 17,000 people in British Columbia. We ask to cut down these gill net workers by 180 this year, or only three to each cannery, and that is what all the trouble and fuss is about, all this propaganda and talk of ruin of the canning industry, because of employing three fewer Japs in a cannery on an average and three more white men. I have more data that I could give that would be illuminating, but I will not give it now because I think I can contend that the cannery men have not made out a good case for the increased use of the Japanese.

These cannery men, as I quite admit, have their own troubles. I believe they are oppressed by a case tax which, I think, is too heavy, and I would also like to see the sales tax taken off, not only for their benefit, but for the benefit of all the working people, because canned salmon is the poor man's food. I have, time and again, urged and I will again in the future urge that change on the government, particularly a reduction of the case tax which is very unjust to the cannery men. I would be delinquent in my duty as a representative even from the district, let alone from the province, if I did not do everything I could to advocate the interests of the canning industry and of these same cannery men about whom I have been talking. I realize they have an enormous investment. As regards their business and the employment they give, their industry is of the greatest importance. I do not minimize in the least the consideration they ought to get; I am prepared to support them in every legitimate manner, and I have done so as the Acting Minister of Finance (Mr. Robb) knows. But there is such a thing as being fair to both sides, and the cannery men should recognize that they owe something to the people of British Columbia by trying to help to make this industry a white man's one in years to come.

Mr. LADNER: The hon. gentleman has made out his case against the cannery men, but in the representations which some of us have received, the question is not so much

of keeping the Japanese out of the province or out of one industry, as, having excluded them from one industry, what is to become of them? The representations which I have received are that the government, by interfering with the business in the hardships of which they naturally engage, are forcing these men to go into some other industries more congenial to white men, such as the growing of small fruits, and I have communications from various sources complaining that the government are driving them out of the fishing business; driving them off the high seas and forcing them into the more congenial atmosphere of the small-fruit business. The hon. member made a considerable study of the question and other hon. gentlemen would be interested to know his views on this point: the Japanese being in the province, where will legislation cease in directing their activities?

Mr. NEILL: I should hardly like the hon. member to leave the impression that I had made out any case against the cannery men; I am here simply to say that they have not made out their case so far as the restriction is concerned. As regards the other points to which the hon. member has alluded, I shall deal with them shortly. But I will say that I, too, have received suggestions that these men are being driven into the berry-growing business, but I have traced the allegation to its source in one instance and I find that it does not come from the berry men themselves but from a paid lawyer of the Japanese. And that naturally vitiates to a great extent any weight it might have. It is all very well to contend that they should not be allowed to compete with the berry growers, but that objection should come from the berry growers themselves and not from the Japanese; otherwise it loses all its force. It is like the man who went to the council of a certain town and put up a strong plea to have the place made a horseless town. The town council were much impressed but the representation lost a good deal of its weight when it was discovered that this man was the garage owner in the town. The same principle applies in this case. Let us wait until the berry men complain and then I will pay more attention to the representations that are then made. I want to be sure, not that the man who is making those reresentations is speaking on behalf of the berry men but that the berry men are actually complaining themselves; I want the berry men's O.K. to the complaint.

Mr. LADNER: Although the hon. member has not ascertained the facts himself, he must know that if you take five hundred or a thousand Japanese from the fishing industry they must find work somewhere else. My question is, how does he propose to handle that phase of their activities?

Mr. NEILL: I shall deal with that question later. As regards the herring business, that is in the hands of a totally different class of people. I may observe here that they do not can herrings to any great extent out there; they dry-salt the fish in a very primitive way. The herring packers were told last year that they would have to employ twenty-five per cent of whites or Indians in their crews on the seine boats on the east coast of Vancouver island. On the west coast for nearly ten years all the employees on herring seines have been white men and no disaster has occurred. I can recall the time the Japanese were taken off the salmon seines some years ago; they were removed one hundred per cent in a single season, and although disaster was prophesied nothing untoward happened. In the present case the trouble arises from the fact that the Japanese have been told that twenty-five per cent of their employees on the herring seines on the east coast of Vancouver island must be white men or Indians. There has been some propaganda in that connection but I shall not delay the House to discuss it. However, the Japanese sent in two petitions in that regard both of which I have studied with considerable care. The stuff that I got from some of the white men I threw into the wastepaper basket as being unworthy of consideration; they were talking nonsense. But the Japanese put up a reasonably worded plea and I gave it all the attention it deserved. They stressed two main contentions, the first of which was that only Japanese could fish profitably in this particular spot on the east coast of the island. They stated that there was a place where the tide ran so strong that it called for the greatest skill in handling the boats. There was a frequent change in the tide, one current below another, and that it was impossible for anyone to man a boat there unless he had thorough experience as a fisherman. It was stated further that the bottom was rocky and required very skilful and experienced men. And so on. At this particular place which it is said is so exceedingly difficult to navigate, a spot called the Gap in the constituency of my hon. friend from Nanaimo (Mr. Dickie), there is never any very great catch; some years they have taken no more than fifty tons per net in the whole season. So that it would not much matter if that place were eliminated. Now, I admit that in these particular waters, as in every

industry, experienced men are required. But the point with which I take issue is the implication that white men or Indians cannot be taught to fish in this spot or anywhere else. The Indian has been all his life more or less on the water and there is no reason under the sun why he should not gain experience enough to handle boats here or anywhere else. Is there some peculiar fetish about that one particular spot in all the wide world that white men cannot learn to fish there? That is the Japanese argument and it falls to the ground the moment it is stated. The fact is, of course, that the Japanese employers do not want to get rid of their countrymen, and last year they complied with the law nominally; twenty-five per cent of their employees were white men. But they took these men on and never gave them any opportunity to get into the hang of handling the nets under these particular conditions. White men in a similar situation would have looked to the future and seen to it that the inexperienced fishermen should learn to handle the nets so that the following year they might be able to do the work properly. But the Japanese did not do that; they kept these white men on the pay roll in order nominally at least to comply with the law while their Japanese countrymen continued fishing. They were able therefore to say to the fishery officer, "We have tried the white men and they have proved a failure". And naturally the white men failed under those conditions; they were not given a chance to acquire the local experience. I want to quote a few sentences from a letter I received from a man who gave evidence before the Fisheries Commission over which my hon. friend from Lunenburg (Mr. Duff) so ably presided,—and I remember that the hon. gentleman as chairman of the commission commented on the intelligent way in which this man had given his evidence. He says:

> Enclosed please find clipping from a Vancouver paper.

The clipping reads:

> The weight of evidence shows—

And there is no weight of evidence at all.

—that neither whites nor Indians can handle herring nets successfully on the rocky east coast of Vancouver island, it is stated.

This correspondent goes on to say:

> I enclose clipping which is an outrage and entirely untrue, and no doubt you will agree when you read it. It practically says that a white man or Indian don't know or cannot catch herring by the purse seine method on the east coast of Vancouver island. Well, sir, for your information I would say that the white man taught the Jap how to catch herring there many years ago, and myself was one of those that they learned from by watching us. And also in regard to the new law passed last June making it compulsory for the salteries and seine owners to use 25 per cent whites or Indians: it is a good law and will ultimately give back to the white fishermen and Indian that which they have been gradually edged out of for years. I have been identified with the fisheries over 35 years on this coast and am absolutely fed up with the way the white man has been edged out of his inheritance, namely, the fishing industry of British Columbia and compelled to go to the States to get a living on account of the Japanese. We want that law pertaining to herring fishing and salting left just as it is. Give the white fisherman a chance and he will soon show them whether he can catch the fish or not.

I have also a telegram which I should like to read. I wrote to a man, sending him a copy of the Japanese petition asking for his opinion. This is his answer:

> B.C., 30-31 March, 1925.
>
> A. W. Neill, M.P.
>
> Sir, your letter just been read to me over the wire am on my way fishing will be gone two weeks can contradict all statements made by Japanese and supply proof we have fished salmon successfully in those very waters under the same conditions I will write full statement upon return.

This I think answers the contention that they cannot use whites or Indians; they can. The other contention has somewhat more weight: it is urged on behalf of the boss men or packers, not the individual fishers; it is said that they were the pioneers and it is unfair to freeze them out. That is an argument that appeals to any white man. I considered that carefully too, but it is untenable, in this regard: we are not seeking to drive out Japanese capital; we are not seeking to drive them out of the business at all. In fact, we are quite willing they should remain. It is true they cannot get individual herring net licenses in their own names, but they can do what a good many of them have already done —form a company with a few white men at the head and by mortgage or some other control continue in the business. All we ask is that they employ white men. That is not an unreasonable request. On the west coast they have employed for years all white men on these herring boats owned by Japanese, these boats taking their fish into Japanese plants. So there is no trouble in that respect.

Another contention they made was that they are best qualified to deal with this trade, that it is in a way peculiar to them because they understand the oriental market and handle the trade over there. I want to explain that. The market for these herrings is not in Japan at all,—if it is it is for a very small amount; the ultimate market is in China, principally in southern China, and these Japs ship the herrings over to Japan, I suppose, and tranship them to China. In reply to the implication that if we interfere with them too much we may lose this very important business, let

me quote a telegram which I received the other day from a government official:

Student class in southern China prevent any dried salt herring of Japanese origin being marketed there, and correspondence and newspaper despatchs from Orient mention destruction of shipment suspected of Japanese origin.

When they find there any of this dry-salted herring coming in which they suspect of being handled by the Japanese they take it out and burn it. I have an extract from a letter written by a Chinese merchant to his agent in Vancouver, expressing the same idea. He practically says: For heaven's sake don't let it be known they are handled by Japanese. Let me quote one or two sentences:

In case you cannot secure space of direct steamer you should transhipp the goods to us either through Hongkong or Shanghai. This commodity should not be shipped in a Japanese steamer as we do not like its name appeared in the bill of lading and other documents.

In order to remove suspicion, we wish you to mark the boxes according to the sample which we sent you on July 5, 1924. It should be also marked "origin of Canada" on the box. The seal of the government should be used if possible.

We believe that you will be pleased to help us from difficulty. We wish you to write a letter to the British Consul and ask him to remove the difficulty or suspicion of your product as Japanese goods. The Chinese officials and the chamber of commerce should be made to understand that the fish is a Canadian product not Japanese product.

It is evident that the ultimate market for this commodity is in China. The Chinese merchants are willing to buy it from white men, and they are very much afraid that any shipment should be suspected of being of Japanese origin. So I do not think we need put much weight on the Japanese contention that the market may be lost if they do not get the privileges they are asking for.

Now I come to the argument of the hon. member for Vancouver South (Mr. Ladner), the argument advanced by the Japanese, that these men who will be taken out of the fishing industry will go into the berry industry.

Mr. LADNER: I do not wish it to appear on record that the Japanese have advanced this argument to me. The argument has been advanced by people interested in the fruit and other industries. They say that already the Japanese who are being driven out of the fishing industry are crowding into these other industries. What solution does the hon. member suggest for this trouble?

Mr. NEILL: I entirely disclaim any suggestion of making a personal reference to the hon. member. My mind was so full of the correspondence I have received that I was applying it to these correspondents and not in any way reflecting on the hon. gentleman himself. I have no doubt that he has letters of the character he indicates. Now I want to deal with that argument. I have heard it stated that some of the Japanese have gone north to Siberia to engage in fishing there. I do not know what weight may be attached to the statement, but I think practically little. I am willing to admit that most of these Japanese must find other occupations. But there are 60,000 orientals in British Columbia, and taking 200 out of the salmon industry each year is not going to create any particular hardship when they are spread over the 60,000 engaged in other industries. What is of far more importance is the constant importation of orientals. The restrictions do not run quite so high in number as he thinks, but what is the use of restricting a couple of hundred from the salmon industry if the Japanese are coming in by their thousands every year? There is where the leakage is, and that is where we want to stop it. But I want to deal with that point still further, and to draw particular attention to the first two paragraphs of a resolution passed by the British Columbia legislature. The resolution itself is a long one and I will ask permission of the House to place it on Hansard. I think it may be fairly stated that when the legislature of any province passes a resolution it pretty well represents the provincial point of view on the subject matter dealt with. This is the most drastic anti-oriental resolution that I ever saw the British Columbia legislature pass, and I have seen them pass a good many in years gone by.

Therefore be it Resolved, That this House go on record as being utterly opposed to the further influx of Orientals into this province, and further, that this House places itself on record as being in favour of the enactment of such amendment to the "Immigration Act of Canada," as is necessary to completely prohibit Asiatic immigration into Canada.

Be it further Resolved, That this House is also of the opinion that the field of industrial and commercial activities of all Orientals now in Canada, particularly British Columbia, should be restricted by legislation.

And be it further Resolved, That an humble Address be presented to His Honour the Lieutenant-Governor, praying that he cause a copy of this Resolution to be transmitted to the Hon. the Secretary of State or other proper official at Ottawa, for presentation to His Excellency the Governor General in Council.

Be it further Resolved, That the government of the Dominion of Canada be respectfully requested to grant adherence on the part of Canada to no treaty or binding international obligation in any form whatsoever having the effect of limiting the authority or power of Provincial Legislatures in respect of the regulation of social and industrial activities within the provinces; and, further that the government of the Dominion of Canada be respectfully requested to forthwith take the action necessary to bring about the denunciation of any and all treaties in so far as the terms and provisions of the same have the effect of

depriving the Dominion of Canada of the power of regulation, control and prohibition of Asiatic immigration?

You see, they recognize the continuance of this restrictive policy in all lines of business. This resolution was passed by the British Columbia legislature on December 17 last, and I want to point out the peculiar conditions of the vote. If you look at the records of the British Columbia House, you will find that something happened which I never heard of before in any legislature in the world. There was a vote forced—we know how that is done—and the vote as it appeared was 43 yeas; against, nil. A number of people all of the same mind, 43 of them, forced a vote in order to have it recorded that they were there and voted in that way. The journals of the House go on record that there were three members absent, and they named those men, bringing the membership up to 46; there was one member deceased, and there was the Speaker in the chair, these accounting for the complete membership of 48. It shows the determination of those men to get themselves on record when they compelled a vote on a matter in regard to which there was no opposition. I think you will find the politician in British Columbia always has his ear to the ground and knows what his constituents at home think about the matter. I also draw attention to the fact that those members were in favour of further restrictions at that time. Still it may be held that I have not completely answered the objection of the hon. member for Vancouver South in regard to the berry growers. Perhaps he will accept the evidence of the berry farmers themselves. On February 17 and 18, 1925, the United Farmers of British Columbia met at Revelstoke and passed a long resolution, which I want to place on Hansard:

Whereas the Oriental population in B. C. is estimated at 60,000 owning or leasing 26,000 acres of land, and if allowed to continue uncontrolled will surely soon force the remaining white vegetable growers off the land, and in so doing strike at the very base of the structure of the white population, and

Whereas the refusal of the Orientals, excepting the majority of the Japanese, who are good co-operators, although supplanting white people on the land, to join the co-operative marketing organizations on the success of which the best hopes of the vast majority of the white fruit and vegetable growers are centred, nullifies the efforts of these organizations, and

Whereas in fishing, lumbering and retailing and many other lines of business they are, by industry and price-cutting, ousting white competitors living at Canadian standards, and

Whereas it is estimated that Orientals export to their home countries through banks and post offices $16,000,000 annually, thus robbing Canadian trade, and

Whereas a homogeneous and not a dual population is in the best interests of Canada, both for strength of the nation in war and its institutions in peace.

Therefore, be it resolved by the delegates of the United Farmers of B. C. in convention at Revelstoke, February 17 and 18, 1925, that they support the resolution on exclusion of Orientals sent to Ottawa by the B. C. government, and earnestly urge the prohibiting of the owning or leasing of land in Canada by Orientals, and the passing of such further legislation as will tend to eliminate Orientals from competitive business in Canada.

I would direct the attention of hon. members to the concluding paragraph. Far from wanting this restriction on Japs cut out, they want it extended, and they say, "Eliminate orientals from competitive business." Further, they want the same principle extended to the holding of agricultural land in Canada. I think that goes far enough. What they want is the same restriction as was passed in California, a law prohibiting orientals from owning or leasing land for agricultural purposes. That of course is a provincial matter, and I only quote it to show that the United Farmers of British Columbia are not unwilling to restrict oriental participation in the fish industry; only they want the restriction applied to them further.

Mr. McQUARRIE: Has the hon. member made any inquiry as to the right of a province to pass such legislation, in view of the existence of the Japanese treaty?

Mr. NEILL: That, Mr. Speaker, is somewhat beside the subject, and I am taking up a good deal of time, but I suppose I am in order to answer. Yes, I have made investigations in that regard, and I believe it would be entirely intra vires of the province to pass such legislation. Here is the Japanese treaty referred to; section 4 says:

They—

That is, nationals of either race.

—shall be permitted to own or hire and occupy houses, manufactories. . . . and to lease land for residential, commercial, industrial and other lawful purposes, in the same manner as native subjects.

It has been held by legal luminaries that that extends to the buying or leasing of land for any purpose of business, factories and so on. The next section is the one which I think applies to agricultural land. It says:

They shall, on condition of reciprocity, be at full liberty to acquire and possess every description of property.

And so on. I would call attention to the words "on condition of reciprocity." That is to say, "You can do what we do." Now, the Japanese law does not allow a white man to lease or own land for agricultural purposes in Japan, though he may do so for industrial purposes. So that it is thoroughly competent for us, since they do not allow us to do it,

to prevent their doing it in British Columbia. I took this point up with one of the best legal advisers of the crown here, and he expressed the opinion that the point was well taken. He said it could not be finally decided, however, until appeal was taken to the Privy Council and he suggested I should try to get some local interest in British Columbia stirred up in the matter. I am glad to say that I have interested one of the local members of the riding I represent and he has promised to bring the matter up in the British Columbia legislature at the next sitting. I have taken too long, Mr. Speaker, in dealing with this matter, but I wanted to show that these restrictions, which were applied on the recommendation of an impartial commission, were conceived in wisdom and have been carried out with fairness and moderation and without doing injury to any industry.

I said earlier in my remarks that I wanted to deal with the record of the government in this regard, and I was pointing out what the government had done in fulfilment of the resolution and the pledges they gave. I said they had passed the Chinese Immigration Act, which is all to the good and most successful. I said they had passed the restrictions to which I have referred, and which are good so far as they have gone. The third thing they have done is to reduce the quota. Now, there is a clause in the gentleman's agreement—I have it here, but I shall not bother reading it—that says that not more than 400—at that time—agricultural labourers or domestic or personal servants shall be allowed by the Japanese government to come into Canada per annum. The quota, it will be noted, applied to these two classes only. Last year the government of the day cut that number down to 150, but unfortunately the door is still wide open for some classes other than these two, such as women and children, and families, to come in practically without any limitation. I shall not waste the time of the House in debating this subject. It is almost an established fact that in that regard the gentleman's agreement is now at any rate a failure. And I may say that while I was praising the officials a moment ago for the manner in which they handled the Chinese Immigration Act, I cannot say the same as regards the Japanese. They seem to look upon Japanese immigration, coming, as it does, under the gentleman's agreement, as something that does not interest them. I do not know that they even have a copy of the gentleman's agreement, and they do not seem to understand its vague provisions very clearly. At any rate they do not seem to pay the regard to its enforcement that they have given to the restrictions under the Chinese Immigration Act. Last year the quota was put at 150. The returns I got in the House the other day show that 146 came in, but that is not the whole story. If I took the time I could show that on the face of it at least 37 of the 146 came in illegally. But what is the use of arguing about that when 262 women came in, and one or two more hundreds in the way of families? Boys of seventeen, as many as you like, can come in—and you cannot tell whether a Jap boy is seventeen or twenty-one—under the guise of being members of families. A Japanese boy can say: "I am a member of the family of so and so that was here twenty years ago," and he has to be admitted. So I shall not take the time to deal with that phase of the subject; there is no doubt the condition is far from satisfactory.

Now, these are the three things that the government have done. They have all been good, and they have constituted a wide departure from the record of previous governments in this regard. But I hope the government will not think me ungracious when I say that while these provisions are good, they are not enough. The people of British Columbia have become aroused. This propaganda has attracted attention and has created a sort of reaction. The people are beginning to sit up and take notice; they are saying they want these things looked into; they demand action. I have numerous telegrams and letters, but I shall refer to but two of them. Here is one from The Native Sons:

> We look for definite action on Japanese immigration at the present session.

That is the key-note of their demand—action; action this session. Here is another one from 607 Canadian women meeting in Vancouver—I am glad to see the women of Canada interested in this subject. They say, "Enthusiastically endorse stand," and they demand that during the present session action be taken. That is the key-note of them all. They refer back to the resolution of 1922 and to the assurance given us on July 11 of last year by the Prime Minister, and they ask that action be taken.

Now, as regards a method, I will suggest one simple method for the consideration of the government. It would be quite easy. Any Japanese coming to Canada has to have a passport signed by a Japanese official in Japan; that, I believe, is the law to-day. All that is needed, therefore, is a small addition, one more regulation by agreement with the Japanese government, to the effect that when

a Japanese arrives in British Columbia he must produce a passport not only signed by the Japanese official in Japan but also viséd by the Canadian consul there as well, with the understanding—the latent understanding, if you like—that the Canadian official is never to put his visé on it. There is the thing in a nutshell. It would have the advantage of not requiring legislation. It would save the face of the Japanese; there is precedent for it; it could not be called offensive; they could agree to it, you might say, in an informal manner, and there would be no need for the strong terms employed by the United States which gave so much offence to the Japanese. If something of that kind were passed I believe it would absolutely meet the case. One addition, perhaps, that I would suggest to it would be this: If possible some system of registration should be adopted such as we had when the Chinese Immigration Act came into effect. When the Chinese registration was being carried out it was discovered that 25 per cent more Chinamen were in Canada than there should have been according to the records. I do not say we should do that with regard to the Japanese with any idea of making trouble for those who are now in Canada; I would leave them at liberty, but I would use it to prevent smuggling, to which there would be great temptation following the making of any such provision as I have suggested.

Now is the time, as never before, for action, and I believe I am speaking in the interest of Japan as well as of Canada when I say so. It is not wise to wait until there is a flaring up of public opinion, like there was in the United States, and then to pass, in a moment perhaps, some drastic measure of exclusion which the Japanese would consider of an insulting character. It should be explained to them quietly and determinedly that if they will not agree to some measure of effective restriction of this character, then they must expect that sooner or later we will follow in the footsteps of the United States. Other nations are tightening up in the matter of oriental immigration. I have been in communication with other dominions and other countries and I find that increasingly the case. In Africa, where the conditions are much worse than here, long years ago the situation got so bad that they absolutely excluded any oriental immigration. But they have come to the stage now where they have a system of what they call voluntary repatriation. The Asiatic problem there is not Japanese, but has to do with the natives of India. They have a system by which in some provinces particularly those in which the orientals are so numerous that they outnumber the white people, they say to any Indians who want to go home to India: "We will pay your fare from the centre of Africa, if need be, to the point of embarkation. We will pay your steamship fare to India. We will pay your railway fare to even the most remote part of India when you get there, and when you have arrived at your native village we will give you $50 in cash, and our blessing." That has been in force some years. The official who wrote me that remarked dryly that they had almost arrived at the limit of the success of that plan. They had repatriated as many as would go voluntarily, and there was talk of making it compulsory in the future. There is the situation we are coming to if we do not take time by the forelock.

Now, Mr. Speaker, there is an election in the air; I can smell signs of it. This is the period in the life of this parliament, as in all parliaments, when it becomes good politics for an independent party or an independent member to attack the government. The time is arriving when not much more can be expected from the government in the way of needed legislation or government grants—and it is always popular to attack a government anyway. If a member is independent and supports the government, of course he is called a truckler, if he opposes it he is called a patriot, and they say that is a sign of his sincerity. Sometimes it is; sometimes it is only a sign of his moral weakness. I recall the case of a magistrate who told me that he had a case before him in which his brother was concerned, and he said that he had given the decision against his brother, although he thought he was in the right, because he did not want to be accused of favouring a blood relation. He thought by that he showed his independence and his courage. I thought he showed his cowardice and moral weakness. It was just as bad to be afraid of popular opinion as to be influenced by his domestic relation. I could follow in the footsteps, perhaps, of the Progressive party when they moved an amendment the other day expressing their opinion of the government. I have it here, and it is a very drastic expression indeed. Of course it was out of order, but if I believed that the government of this day were as bad as this represents them to be, I think I would long ere this have been actively engaged in some line of action calculated to overthrow them. I could very easily draw up an amendment with the knowledge that you will rule it out of order, Mr. Speaker, and that it would not unduly embarrass the

government. I could outline in that amendment a number of policies that would be very popular in my district, and could add a fiery denunciation of the government for not carrying them out. In that way I might obtain some cheap publicity for the moment among a few unthinking people. But the bulk of my constituents are not unthinking people, they are hard-headed, clear-thinking people, and I do not think they would fall for that sort of thing. They are not interested in long-drawn-out, fine-spun debates of theories and academic questions. They are not easily caught by claptrap oratory.

Mr. FORKE: You have spoken for three hours now.

Mr. NEILL: The hon. gentleman says I have spoken for three hours. Would he inform my ignorance as to how the remark is applicable?

Mr. FORKE: You mentioned long-drawn-out debates.

Mr. NEILL: I said long-drawn-out debates of fine-spun academic theories, such as I have heard so often from his side of the House. That is a very different proposition. I do not think any hon. member who has heard me—and I have not spoken three hours; the hon. gentleman might at least be accurate when there is a clock right in front of him—I do not think any hon. member who has heard me will say that I have gone into any academic lines of thought. I have not been debating whether the French should get out of the Ruhr or whether the government should have expressed their opinion on the Seven-power treaty. I have been dealing with matters of practical concern to the men and women of British Columbia and of the district I represent. To go back to my constituents—if my hon. friend will allow me to deal with them a little longer, and after all they are mine, not his—I find that my friends in Comox-Alberni suffer from what I might call a measure of political astigmatism in that they can see only one thing, and that thing is—Results, and it has to be spelled with a great big R. But when they do see results, I will say this for them; they have the good sense to recognize those results and the wisdom to appreciate them.

Now, instead of condemning the government for not acting as quickly as I and other members from British Columbia would like them to have acted in the matter of oriental exclusion, I am going to take a chance on the government and say that I believe they and more particularly the Prime Minister, are sincere in this matter. I believe that he will at this session carry out the mandate given by the resolution of 1922, emphasized by the assurances he gave us in the debate of last July. If they take action in some form along the lines I have indicated, but not on the lines of an extension of what I might call the elusive possibilities of the "gentleman's agreement", for that would not be satisfactory—if they will take action along the practical lines I have suggested, then in that event, and in that event only—and I must emphasize that—for the time has gone past for promises and action is required now—the people of British Columbia I am firmly convinced would recognize that the government had done a great thing for our province, a thing that would be of more and more benefit as time goes on; and then in that event, and in that event only, I believe the people of British Columbia would show their appreciation of the government's action by the way they would cast their votes at the polls in the next election.

Mr. WILLIAM DUFF (Lunenburg): Mr. Speaker, I would first like to congratulate the hon. member for Comox-Alberni (Mr. Neill) on the excellent address which he made not only this afternoon but last evening. Whilst I agree with what he said about the fishery situation in British Columbia, I find myself not in entire agreement with his remarks last night in regard to what should be done in the defence of our shores, both on the Atlantic and the Pacific coasts. However, I am sure that the hon. gentleman was sincere in his opinions with regard to the defence of the sea coasts of this country, and consequently I am not going to raise any objection at this late hour to what he said in that connection.

With regard to the fishery situation in British Columbia—and the hon. member for Comox-Alberni deserves the congratulations of this House for the able manner in which he presented his opinions—I, as chairman of the commission which went out to British Columbia some two or three years ago and made some recommendations to the government, should like to say a few words with regard to the other gentlemen who were on that commission. Being chairman, my whole duty was to sit in the chair and see that the other commissioners kept order; it was these other gentlemen who did the work, Mr. Speaker, and I have very much pleasure even at this late date in saying that the commission, comprised of five other members besides the chairman, did good work for the fisheries of British Columbia, and I might add that it cost only about half as much as any other

commission which investigated fishery conditions in that province.

Now may I deal for a few minutes with the budget and with matters which have been taken up during the debate. The only matter with which I intend to deal is in regard to what the government has endeavoured to do for the province of Nova Scotia, and the announcement which the Acting Minister of Finance (Mr. Robb) made in that regard in presenting his budget. In this budget, Sir, the government in a very practical way has endeavoured to show the people of Nova Scotia that it is in sympathy with them, and the legislation which was introduced by the government with regard to the coal industry of this country,—and of course this applies to the coal industry in other provinces of this Dominion as well as Nova Scotia—certainly deserves from this parliament and the people of this country the highest commendations they can give. It will be remembered, Sir, that not only this year, but last year, the government tried to do something for the province of Nova Scotia. Last year this House voted the sum of $200,000 towards reducing the freight rates on coal, so that Nova Scotia coal could be taken to the markets of upper Quebec and Ontario. The people of Nova Scotia were able to take advantage of that grant made by the government to the extent that Nova Scotia coal was able to be carried one hundred miles farther west than it had been carried in previous years. The government this year have gone one step further, and have introduced a resolution with regard to using slack coal for coking purposes. I do not know whether I am in order in dealing with this question, but I wish to say in passing that the people of Nova Scotia, and in fact the people of all provinces where coal is mined, should certainly express thanks to the government and this parliament for introducing and passing that legislation. In addition to that, when the tariff was brought down, the government increased the duty on slack coal from fourteen to fifty cents a ton. Whilst I am a great believer in low tariff—and if it were possible I would like to see no tariff in this country—yet as long as we have a tariff I see no objection to raising the duty on slack coal and putting it on a level with the duty on the other coal. I think the government has in a practical way shown the people of Nova Scotia and the people of Cape Breton, where most of the coal is mined, that they believe in dealing with these questions in a practical manner, and they are not carried away by what they read in the newspapers or what they hear, but they sit down, I might say, in conference with the members from the Maritime provinces, who in the newspapers for the last several months have been criticized for not going out every day and giving interviews and telling what they have done. It is only fair to say that the Maritime province members and especially the members from Nova Scotia have for the last two or three years endeavoured to get the government to do something in regard to this coal question in Nova Scotia, and I think the government, with the legislation which they have introduced and are now introducing, have shown in a practical manner that their sympathies are with the coal miners of Nova Scotia as well as the coal miners of other provinces of the Dominion.

5 p.m.

We listened last evening to a speech made by the hon. member for Southeast Grey (Miss Macphail). I fail to see, Mr. Speaker, what the remarks of that hon. member had to do with the budget; but in view of the fact that there were perhaps sentimental reasons why you did not want to call this hon. member to order and let her proceed, I trust you will, treat me with the same courtesy and consideration this afternoon, as I think it is only fair that the other side of this question should be given, not only to this House but to the country. There is no question, that during the last few weeks there has been a great deal said pro and con regarding the coal situation in Nova Scotia, and the situation in mining areas of that district. I was very much struck with a remark made by the hon. member for Southeast Grey last evening. You will perhaps remember, sir, that in the course of her address, when speaking of conditions in Cape Breton and the situation of the miners there, she mentioned the fact that the miners were a proud people and did not wish to accept charity or help from anybody. That is quite true. It is a matter of history that the Scotch are a proud race. But it must not be forgotten that not only are the miners of Cape Breton a proud race but the people of Nova Scotia are a proud race. Whilst we are a hospitable people and welcome anybody within our gates, yet as I said a moment ago we are a proud people, and we resent undue interference from outsiders. I have no desire whatever to criticize the hon. member, in view of the fact that she is alone in one regard in this House—

Mr. IRVINE: Does the hon. member mean to say that the people of Nova Scotia would resent the charitable contributions of the

people of Canada in this particular case of the Nova Scotia strike?

Mr. DUFF: I am going to deal with that in a minute. I will explain that and show conclusively that in my opinion, while the people of Nova Scotia appreciate any sentiment that may be expressed or anything which may be done for them if it is necessary, I say that the time has not yet arrived when the people in other parts of Canada need worry themselves about the people of Nova Scotia without consulting, first, the province of Nova Scotia, and secondly, the duly elected representatives of that province in this House.

Mr. BROWN: Does the hon. gentleman mean that the subscriptions collected in Ottawa to relieve the suffering are inacceptable or that we have been unduly interfering in this matter? Is that the meaning?

Mr. DUFF: I think that is the meaning. I think the people of Ottawa had better look after the poor within their own gates, with the money which they have subscribed for this so-called destitution in Cape Breton. There is no question about the good faith of these people, and they subscribed with the very best intentions. However, I say, that the people who subscribed the money would have been better advised if they had consulted the people who knew conditions in Nova Scotia and knew what could be done in order to give relief in that province. They would have been better advised if they had spent that money in their own city. There is no question that there is some destitution and suffering in the Cape Breton area where this strike is in force, and the member for Southeast Grey last evening portrayed certain conditions—

Mr. BROWN: Might it not be urged that the Prime Minister of Canada (Mr. Mackenzie King) gave us a splendid lead in that matter when he gave a private contribution?

Mr. DUFF: My hon. friend must certainly know that the Prime Minister has the biggest heart of any man in this country. That is one reason why he is Prime Minister, and I presume that is the reason why he gave this subscription. I repeat that the people of Nova Scotia are a proud people, and it ill behooves anybody or any association, to send subscriptions to the people of Nova Scotia when every day the newspapers are saying that the representatives of the people of Nova Scotia and the legislature of that province are not doing their duty in this regard. I have no objection to the hon. member for Lisgar (Mr. Brown) or anybody else who so desires, sending $50 or $1,000 to the people of Cape Breton. That is their business. But I repeat that the people of that province are a proud people, and as far as this matter has gone they are able to look after their own troubles and distress.

The hon. member for Southeast Grey gave some individual cases and told us what she had seen in the Cape Breton area. It is quite true a strike has been in progress there for some time, but even if a strike were not in progress there would necessarily be some destitution and some poverty in an area of that size. But the hon. member comes back from her trip and endeavours to impress upon the people of Canada that conditions in Cape Breton are very much worse than they are in other parts of Canada. Now after hearing her remarks and reading what she said, I say you can go to any large city in any part of this country and find far worse conditions than the hon. member found in Cape Breton, although a strike is in progress.

What did she say? I do not want to be too critical, but she told us herself that the person who met her at the station when she arrived at Sydney on her way to Glace Bay —and I presume she went there on the invitation of this gentleman—was the mayor of Glace Bay. Now who is he, pray? She said also, in denouncing the provincial government and in denouncing the parliamentarians, that the Labour party had no representative in parliament. Evidently, this hon. member did not get in the right company or was not told the correct story in the right company, because the mayor of Glace Bay is a member of parliament in the province of Nova Scotia and is known as a Labour member of parliament. There are also two other Labour members from the county of Cape Breton in the parliament of Nova Scotia and, if I am not mistaken, one from the county of Cumberland. This lady was met by the mayor of Glace Bay, and evidently from what she tells us, the mayor of Glace Bay, who is the Labour member from that city, put her on the track to find out where all this destitution and poverty existed. What does she find out? She finds out that people are hungry after a three weeks' strike. It is quite natural that some people would be hungry after a three weeks' strike, but she did not go into the particulars and find out how many people in that district were not hungry after a three weeks' strike. She did not find out that the heads of twenty families, who are getting relief from the relief committee in the town of Glace Bay to-day, had $5,000 each in the bank. She did not find out this, for instance.

and this is something that hon. members will rather enjoy. The hon. member for Southeast Gray spoke about the school children, and it will be remembered that she said she saw children of four years of age in school with hungry looks on their faces. Although she has been a school teacher for a number of years, she has not studied the Nova Scotia law, because under that statute no child can go to school until it is five years of age. She said that she went into this school; that she saw many hungry children there, and that it was necessary for a soup kitchen to be established to give those children lunch in the middle of the day as they could not get any at home. A very amusing incident happened in one of those soup kitchens last Thursday. Mr. Alexander S. McNeil—I do not think he will mind my mentioning his name—is Superintendent of Mines for the whole Cape Breton area. He has sprung from the common people. He went in as a breaker boy, as I think they call it, and he worked himself up to the position which he now occupies. He is one of the finest characters I have ever met, as I think will be conceded by everybody who knows him. Last Thursday at about 12.30 p.m. Mrs. McNeil became worried because her three children had not turned up from school. She called up her husband and asked him if he had heard anything about them. He said: No. At half past one she telephoned the school to find out if they had left. Word came back saying that the three children had gone to the soup kitchen to get soup with the other school children. Therefore, all the stories we hear about the soup kitchen must be taken with at least a grain of salt in the soup.

Mr. WOODSWORTH: Does the hon. member for Lunenburg actually want us to believe that the social workers and others on the spot who are giving relief find out nothing of actual conditions or that the incident he mentions is at all typical?

Mr. DUFF: I said a moment ago, I think, before the hon. member came in, that there is no question that there is destitution and poverty in Cape Breton. But there was destitution there thirty-five years ago when I went there for the first time on a sailing vessel. There is still destitution and poverty there and there would be even if this strike were not on. It is quite true that there is more destitution and poverty there now owing to the fact that, although these poor miners in 1924 paid $240,000 into the United Mine Workers' fund, that organization has not come across with one dollar, so far, to relieve the suffering in Cape Breton.

Mr. WOODSWORTH: Is the hon. gentleman aware that, according to the rules of that organization, it is several weeks before strike pay becomes due?

Mr. DUFF: That is a nice organization for a poor miner to belong to. That is my answer. If they have a regulation or rule on their books to that effect, are they going to stand there in Minneapolis or somewhere else in a foreign country and let the miners of Cape Breton starve, and the Prime Minister, the hon. member for Lisgar and the rest of us support these miners with private contributions?

Mr. WOODSWORTH: Is the hon. member aware that in 1919 in district No. 18 the government co-operated with the United Mine Workers of America to smash the local organization which tried to organize in opposition?

Mr. DUFF: That has nothing to do with what I am saying at all, and I am not going to hark back to that. These men whose families are suffering have in the last few years paid $2,000,000 into this fund; last year they paid in $240,000, and the hon. gentleman is complaining about this government, the local government and the municipality not doing anything, when money belonging to the miners themselves is not sent forward for their relief and to relieve distress in that district.

Mr. WOODSWORTH: May I ask whether the hon. member is not aware that the courts of Nova Scotia backed up the United Mine Workers of America when the local miners two years ago tried to retain their own funds and to select their own officers; that the United Mine Workers of America appointed provisional officers, and that the company dealt with the provisional officers and not with the officers the men themselves had elected?

Mr. DUFF: I am not arguing about the law with regard to this matter. In this, I am perhaps a friend of the United Mine Workers. This is the situation: As regards these miners whom the hon. member for Centre Winnipeg (Mr. Woodsworth) and the hon. member for Southeast Grey pretend to think so much of, although he knows they are starving, he does not raise his voice to say to the United Mine Workers of America: For heaven's sake send them a part of this $240,000 which they paid into the fund last year. I do not care about the law. The situation is beyond the law. The question is whether these men, women and children are suffering and whether they should be looked after

An hon. MEMBER: With their own money.

Mr. DUFF: With their own money, yes. The hon. member for Southeast Grey told us some awful stories last night about one or two particular cases. She told of homes where there were only two bedrooms, a kitchen and a sitting room. How many members in this House—and I hope I am not going to say anything now that will offend anyone—and how many of their grandfathers or forefathers were raised in any bigger houses than houses with two bedrooms, a kitchen and a sitting room? How many fishermen in British Columbia or Nova Scotia or Prince Edward Island or New Brunswick have homes with more than two bedrooms on the second floor and, perhaps, an attic for five or six children? How many people have only two bedrooms, a sitting room and a kitchen? It is silly for anyone to come into this House and talk about conditions like these. These conditions prevail everywhere. These people do not live in palaces; but if they had been a little more economical, maybe they would have been able to add an L to their kitchen or another bedroom over the L. The hon. member for Southeast Grey told us about an awful house on the bluff at Glace Bay where she said a man and his family were living under terrible conditions. She said that there was practically no roof on this house; that it was leaking, but that this man had to pay $20 a month for it. I do not wish to say anything with regard to the statement by the hon. member for Southeast Grey, especially for a certain reason; but she is certainly gullible and she must think we are gullible when she says in this House that any miner or fisherman or lumberman or workingman in Nova Scotia can afford to pay $20 a month for the best house that can be obtained. Instead of paying $20 a month, the most these miners pay is about $2 a week. Twenty dollars a month is $240 a year. Yet the mayor of Glace Bay, who is a Labour member for Cape Breton, assisted by his truant officer—and I do not know the particular reason why the mayor of Glace Bay put the hon. member in charge of a truant officer—told her that this poor fellow had to pay $20 a month for his house.

What other awful things did she tell us? She told us about visiting one family where there was tuberculosis; the mother was suffering from this dread disease, and the hon. member deplored the fact that a woman with tuberculosis should be allowed to sleep in the same room with the rest of her family. Now, I would suggest that before the hon. member undertakes to give us the pleasure of her presence in Nova Scotia she should at least take the trouble to study to some extent the legislation of that province so far as it relates to the matters she investigates. There is no reason whatever why anyone with tuberculosis in an advanced stage should remain at home either in Glace Bay or anywhere else in the province. We have a splendid institution at Kentville and if this doctor to whom the hon. member referred, or the great friend of hers, the mayor of Glace Bay, or the truant officer, had done their duty by themselves and by this poor woman they would have had her sent to the sanitarium instead of having her remain at home with her children.

The hon. member also talked about the terrible condition of the streets, about the sewerage and about other things of that nature. She said there was no electric light in the town; whilst there were lights and a few sidewalks in the centre of the town there was no light on the outskirts. She also told us that there was a lot of mud in the place. Well, we are told that there are good roads in Ontario; but going through the province the other day I spent some ten hours gazing out of the car window, and as my eyes turned from one side of the landscape to the other, this being the first time I had passed through that part of the country, I beheld very muddy roads indeed. And are there not muddy roads in Quebec and in every other province in the Dominion just as there are in Nova Scotia? Surely it is nothing out of the way to see muddy roads in the outskirts of any town especially at this time of year. Indeed, we have a clause in the Road Act in Nova Scotia prohibiting the running of automobiles at this time of year, the reason being I suppose that owing to weather conditions the roads are too muddy. Yet the hon. member tried to impress upon the House the other evening the awful condition in which she found the roads in that Nova Scotian town.

Mr. WOODSWORTH: Has the hon. member read the reports which during the last four years have been presented by boards of conciliation and by royal commissions with regard to the insanitary conditions in the mining towns?

Mr. DUFF: I have read some of the reports. But who is to blame for those conditions?

Mr. IRVINE: You.

Mr. DUFF: I? No, not I, but the Labour mayor of the town of Glace Bay, just as the Labour mayor is to blame in the town of

New Waterford and the Labour mayor in other towns of that section. But I do not say that the conditions are worse in those sections than they are elsewhere as regards sewerage and other things of that kind. I think the hon. member had better learn something about the conditions that prevail in Nova Scotia. Is he aware of the fact that the British Empire Steel Corporation is assessed 70 per cent of the whole total assessment of Glace Bay, 60 per cent of the assessment of New Waterford, and 65 per cent on the average of all municipalities in which they have property?

Mr. WOODSWORTH: Is the hon. member aware that these figures have been definitely denied by officials?

Mr. DUFF: They have not been denied by any reputable officials, and it is a very simple matter to prove conclusively, as anyone with common sense can, that in a mining town, where the mining operators have large property, the fact must be as I have stated in this case. There can be no other conclusion, as everyone who knows the situation will agree. I say without fear of successful contradiction that if the Labour mayor of the town of Glace Bay, who is the local member representing labour in the province of Nova Scotia, had any spunk or courage, instead of using this situation for propaganda purposes—and that is all it is done for—he would have called a special session of the city council to remedy the present situation.

Miss MACPHAIL: Does the hon. member know that the mayor of Glace Bay did do that very thing and that the sum of $5,000 was voted for relief? Does he know further that they had to pledge everything they had even at that?

Mr. DUFF: There is more in regard to the province of Nova Scotia that the hon. member should have learned before coming back and trying to slander that province. Let her get some more information first. She suggests now that the mayor and council of Glace Bay raised all the money they could when they voted only $5,000. If my hon. friend would look at chapter 70 of the revised statutes of Nova Scotia she would see that the town of Glace Bay, or any other town in the province for that matter, can without any special legislation borrow one half of one per cent of the total assessed value of the town.

Mr. IRVINE: How much have they already borrowed?

[Mr. Duff.]

Mr. DUFF: I mean for purposes of this kind. In any such case any city, town or municipality in the province of Nova Scotia can go to the bank and borrow one half of one per cent of its total assessment; and the total assessment of Glace Bay would be in the vicinity of $3,500,000. Yet my hon. friend who interrupts me suggests that the mayor of that town did his full duty when he called a session of the council and voted $5,000 for the relief of four or five thousand suffering people—a dollar apiece.

Mr. HANSON: In view of the hon. gentleman's strictures on the member for Southeast Grey (Miss Macphail) in this regard, I would ask him whether he does not think that the company, as the landlord of these miner tenants, also has some responsibility for the sanitary conditions in the town?

Mr. DUFF: They are responsible for the sanitary conditions in the tenements which they own, but they have no right to install any system of sewerage in the town, to provide electric lights, or to do anything of that kind. Those things are under the control of the town and there is no reason why the company should look after them.

Mr. WOODSWORTH: Does the hon. member know that throughout the years the company has largely dominated the municipal councils?

Mr. DUFF: I regret that my hon. friend has been so gullible; certainly he does not know anything about the conditions that obtain down there. The hon. gentleman gets up on the floor of the House whenever he has an opportunity to say something about Nova Scotia, and it seems to me that before he does that he might give the conditions of the province some study. Why should any hon. member go to a truant officer in the town, as the hon. member for Southeast Grey did on this occasion, instead of consulting responsible citizens with a view to ascertaining the facts as they are? Let me say that the company has never dominated civic conditions in any districts in which it operates. But there is a Labour mayor and there is a Labour council in Glace Bay as there are in New Waterford and in all the other places where the labourers predominate, and the company certainly does not control affairs there. Now, I admit that the company has its faults and I shall refer to that aspect of the question later on; I am not here to take sides.

Mr. IRVINE: May I ask a question?

Mr. DUFF: I want to get through at six o'clock.

Mr. IRVINE: The hon. gentleman has taken exception to the report made by the hon. member for Southeast Grey (Miss Macphail). I wonder if he would be prepared to make at Glace Bay the speech which he is now making in this House?

Mr. DUFF: Mr. Speaker, anybody who knows me knows that I would make a speech anywhere. To use the picturesque language of the hon. member for Southeast Grey last night, I would not care a damn where it was.

Miss MACPHAIL: I never said that last night.

Mr. DUFF: Mr. Speaker, she used similar language.

Mr. SPEAKER: Order.

Mr. DUFF: I will withdraw the remark, Mr. Speaker; it is not parliamentary.

Mr. SPEAKER: Thank you.

Mr. DUFF: It was not parliamentary, but it was "snappy," to use the word of the hon. member for Southeast Grey. Now, Sir, I do not ask the Labour group in this House to take my word for conditions in Cape Breton. Let me read something which has been said by a very prominent lady in Toronto. She has close associations with the mining district and goes down there every year to spend the summer. Here is what she says:

> Aroused by the letter appearing in Saturday's Globe from Miss Agnes Macphail, M.P., relative to conditions in the mining areas of Nova Scotia, Mrs. Florence Fraser, Tyndall Avenue, a resident of Sydney for a number of years, who spends each summer with relatives in Nova Scotia, declared yesterday that she could "show Miss Macphail conditions much different from those described in her story." Mrs. Fraser insisted that the reading public was obtaining highly colored stories, favorable to the miners.
>
> "From what I read, Miss Macphail is not thoroughly conversant with the conditions under which miners are living in Nova Scotia," said Mrs. Fraser. "There are houses built by the company, containing seven rooms, with hot and cold water, electric lights, and a garage with every second one. These are not described to the people of Toronto, nor is it told to them that the rental is from $5 to $7 a month. Neither are they told that numbers of miners own their own automobiles.
>
> "There is another matter," continued Mrs. Fraser. "The miners are not forced to deal in the company's stores. There is a fine co-operative store there, as well as other retail stores. There is no difference in prices as between the company's and the retail stores. If anything, they are lower in the company stores."
>
> Mrs. Fraser said the shacks referred to by Miss Macphail were never intended for families. They were built, she said, for transient labor from Newfoundland.

So I think Mrs. Fraser, who, I presume, is a responsible citizen of Toronto—she does not hesitate to give her name—should be listened to by the people of this country just as much as should the hon. member for Southeast Grey, who in my opinion came back with a prejudiced story because she was guided around Glace Bay by the Labour mayor and the truant officer.

Now, Sir, in her peroration the hon. member was not satisfied with discussing conditions in Glace Bay, she must have a crack at the provincial government. She said that that government was not doing its duty in this matter and was, to use her own choice language, afraid of Besco. I cannot see why anybody who wants the votes of the people of Nova Scotia should be afraid of Besco. I cannot see why the government of Nova Scotia, whether Liberal or Tory, should not stand in with the miners in this district in preference to standing in with the company, and for this reason: The situation in Cape Breton not only affects the immediate district, it affects the whole province, and if the hon. premier, Mr. Armstrong, does not do what is right and proper in trying to settle the strike, and use his best efforts in the premises to improve conditions in Cape Breton, not only the people there but the people in every other constituency will certainly have something to say to him when he appeals to the province in June. So I would say that Hon. Mr. Armstrong and his government and the legislature certainly have more interest in this matter than has either the hon. member for Centre Winnipeg (Mr. Woodsworth) or the hon. member for Southeast Grey. Premier Armstrong lives in Nova Scotia, he has everything at stake; and when the hon. member for Southeast Grey states that he and his government are not doing their duty, it seems to me that it requires a good deal of assurance on her part.

But, Sir, it has been contended that this government and the provincial government should come to the relief of the distressed people in the mining districts of Nova Scotia. Let us see whether they should take action. I understand that legislation with regard to looking after the poor is different in some of the other provinces to what it is in Nova Scotia. In our province, where we have as good legislation, and perhaps in some cases more advanced legislation than, in some of the other provinces, there is a statute dealing specifically with poor relief. Chapter 50 of the revised statutes of Nova Scotia distinctly sets out that poor relief must be paid through the organization created either by the city council, the town council or the municipal council for the locality; the province has

absolutely nothing to do with it. Each city, town or municipality must provide its own relief, and the act sets forth how this should be done. At the sitting of the town or city council every year a poor committee is appointed from the members. They have full power to deal with any and all cases of distress which come to their knowledge, and have power to assess the municipality to cover the cost. As I said a moment ago, the British Empire Steel Corporation are assessed about seventy per cent of the total assessment in the mining districts in which they have their mines. Now, if this gentleman, the mayor of Glace Bay, was so anxious to alleviate this horrible suffering, as detailed and retailed by the member for Southeast Grey, all he had to do was to call a special meeting of the city council, pass a vote for the money required from time to time, put that money in the hands of the poor committee of the municipality, and see that it was expended. Because, as you will observe, Mr. Speaker, after all, this horrible Besco would pay about seventy per cent of the cost, and about two-thirds of the remaining thirty per cent would be paid by the citizens of Glace Bay, the professional and commercial men and others who are not miners and do not want relief, and the miners themselves would pay only ten per cent of the total amount required. And yet the friend of the hon. member for Southeast Grey sits down and does nothing except vote $5,000. A wonderful man he is to relieve the situation in the city of Glace Bay! All he has to do if he thinks this combination, this B-e-s-c-o, is such a horrible thing, is to go out and make it pay seventy cents of every dollar he wants for the poor and hungry in Glace Bay and the surrounding district. If that is the fact, then until that is done why should the provincial government interfere, or why should my good friend the junior member for Halifax (Mr. Black) get up every once in a while in the House and ask the government as to the situation in regard to the coal strike in Nova Scotia? I am sure my hon. friend, who is possessed of a great deal of this world's goods, has done his full duty by the poor and suffering of his province. While I have not seen his name in either the Halifax or the Ottawa papers indicating that a large subscription had been made either by himself or the bank which has done business with these miners in Nova Scotia and of which he is a director, I am sure the hon. junior member for Halifax has done his full duty. And if he has done his full duty, there may be an excuse for his asking the government why they do not do something. The hon. member is evidently very much interested in the strikers and their dependents in Cape Breton. He is perhaps the best known shipping man in the Maritime provinces, and he has always had a fine business. I remember —and I am not very old—a longshoremen's strike in the city of Halifax. As hon. gentlemen know, longshoremen are hired to load and unload steamers and vessels and handle freight on the wharves. On the occasion of this strike, of course the loading and the unloading of the cargoes of vessels which came to the wharf of the hon. junior member for Halifax were affected. While my memory, perhaps, has become a little defective, I can remember that the hon. junior member for Halifax showed no great desire at that time either to settle the strike or to look after the wives and children of the men out on strike. Yet he gets up in his place now and day after day asks the Prime Minister (Mr. Mackenzie King) and the Minister of National Defence (Mr. Macdonald)—I presume because he is the cabinet minister from Nova Scotia—what is being done with regard to these poor women and children in Cape Breton.

Mr. HANSON: May I ask the hon. member if the positions in connection with these two strikes are at all comparable?

Mr. DUFF: It is only a matter of degree.

Mr. HANSON: Not at all.

Mr. DUFF: It is only a matter of degree. If fifty women and children were affected by the longshoremen's strike in Halifax and 20,000 are affected by the strike in Cape Breton, what is the difference so far as the position I have stated is concerned?

Now, what I say is this: The hon. member for Southeast Grey was good enough to say that the mayor of Glace Bay and the council there had voted the sum of $5,000; and I also noticed in the press this morning that this gentleman, who was a member of the local legislature, had hied himself to Halifax and asked for a special act to vote $5,000 for teachers' salaries,—you will remember that the hon. member for Southeast Grey told us last night that there was danger of the schools being closed because there was no money to pay salaries. Again I say she is not acquainted with Nova Scotia legislation. Anybody who knows anything about Nova Scotia legislation —and a school teacher, above all, should study legislation with regard to schools in

other provinces as well as her own—should know that the school legislation in Nova Scotia provides that certain moneys shall be voted each year for the upkeep of the schools. For instance, in the town of Glace Bay some time in February the council meets; they go over their requirements, and when they come to the question of schools they call in the school board, which is a separate organization from the city council, and they ask the school board how much money they require for the year. The school board tell them what money they require and the council put that amount in the estimates. I simply wish to make this point to show that somebody—now, I almost made a break that time—that somebody unquestionably fooled the member for Southeast Grey, because this money which was voted in February for the upkeep of schools provides for the upkeep of the schools, the payment of teachers' salaries, fuel, janitor and everything else, from the beginning of the school year in September until the next June. And she says this because the truant officer, in whose charge she was, or the mayor of Glace Bay, told her that there was no money to pay the school teachers.

Mr. IRVINE: Did my hon. friend notice a report in the press this morning that the council of Glace Bay had just voted another $5,000 with which to pay school teachers this month?

Mr. DUFF: No I did not, but I am glad to hear it. Instead of voting another $5,000 they should vote $50,000 if necessary, because this poor Besco, this terrible organization, have to pay seventy per cent of it, and I shall be glad to see them pay it rather than that the women and children of Glace Bay should suffer. They ought to pay it because they are as much to blame for this strike, perhaps, as the miners are. I have no sympathy with Besco. All I want to do is to protect the good name of Nova Scotia and to see that no outsiders come in to interfere with us. Until such times as the town of Glace Bay does its duty by these women and children; until such time as the municipality does its duty by them; until such time as the province comes to their relief, it is not for anyone to get up on the floor of this House and ask for money or subscriptions from anybody.

Mr. IRVINE: How can my hon. friend protect the good name of Nova Scotia by casting aspersions on one of its chief citizens?

Mr. DUFF: Who is that?

Mr. IRVINE: The mayor of Glace Bay.

Mr. DUFF: I did not know that he was one of its chief citizens. Anyone who will deliberately, for his own political purposes, allow women and children to starve, is no good citizen of this country.

Mr. WOODSWORTH: May I ask what about the vice-president of Besco, who said that the people could not stand the gaff; that they had to come to the company?

Mr. DUFF: I want to say that if I was on the directorate of Besco I would have kicked Mr. McLurg out of Cape Breton the minute he said that. He had no right to say it, and we will never have proper conditions until men like McLurg are kicked out of the company. But I say that is no reason why the hon. member for Southeast Grey should have made the reference she did last night to the three directors of the company who are members of the Senate and good citizens of this country. Let them clean up the mess; let them send McLurg about his business. He is not fit to have charge of anybody; I would not have him in charge of a henyard, let alone 12,000 miners in the county of Cape Breton. I have no sympathy with McLurg, not half as much, perhaps, as the hon. member for Centre Winnipeg has. Let him get out; let them put him out; the quicker the shareholders of the British Empire Steel Corporation get together and reorganize, the quicker we shall have industrial peace in Nova Scotia. All I am trying to do is to show that there is no necessity for all this political propaganda. It is not necessary for the hon. junior member for Halifax to come here and blow off every day about conditions in Cape Breton when there are fifteen other members from Nova Scotia in this House who are just as good men as he is and who have the interests of Nova Scotia and Cape Breton at heart. We are looking after this situation, and I for one will not stand for it.

Mr. WOODSWORTH: May I suggest that in this House we are all Canadians. Might I ask—

Some hon. MEMBERS: Order.

Mr. SPEAKER: Order.

Mr. WOODSWORTH: May I ask if as a Canadian I have not the right to protect the interests of other Canadians?

Mr. SPEAKER: Is the hon. member rising to a point of order?

Mr. DUFF: No, it is just a stray remark.

Mr. WOODSWORTH: I am asking a question, if I may, of the hon. member who has the floor.

Some hon. MEMBERS: Order.

Mr. SPEAKER: The hon. member may ask it with the permission of the hon. member who has the floor.

Mr. DUFF: There is no question about it, Mr. Speaker, that this is a free country and the hon. member for Centre Winnipeg has the right to get up, if he wants to, and talk about conditions in Ottawa or Prescott or L'Orignal or any place back in the woods. He can talk about anything he wants to. But the member for Prescott, (Mr. Binette), who represents in this House the people of that district, has the right to object to my hon. friend's interfering with anything concerning that constituency. That is what we resent in Nova Scotia. We feel just as keenly about this matter or more so than does the hon. member for Centre Winnipeg. What I say is that we are looking after this matter. Of course the hon. member for Centre Winnipeg comes here and says he represents labour. Who told him that he represented labour, except the labourers in the constituency which he represents? I represent as many labourers as he does, and if they earned the wages that some of the miners in Cape Breton earned they would have ten or twenty thousand dollars in the bank and homes of their own. I have fishermen and lumbermen in my county who work only six months in the year, yet who own their own homes, have money in the bank and are comfortable. So I say it is all nonsense to talk about Besco being wholly to blame for the present condition of affairs, because the miners are to some extent to blame for it themselves. The hon. member for Southeast Grey said last night that these people could not get out of Glace Bay and Sydney. Does she know that 50 per cent of the miners in Cape Breton are unmarried, bachelors? I am surprised that she did not stay down there. She tried to say that these people could not get away from Cape Breton. If anybody else in this country gets out of work, be he a lumberman, a fisherman or anything else, whether he lives in Alberta or any other part of the country, he soon hunts for work somewhere else. Let me also tell the hon. member for Centre Winnipeg that these young bachelors earned anywhere from $90 to $100 in one single week in the month of February. This condition spoken of by the member for Southeast Grey does not exist all over the coal mining area, but in some of the coal mines they worked 234 days last year. Now working 234 days in a year, at wages of from $3.50 to $6 a day, it seems to me they should not be in the condition in which they were represented to be by the hon. member for Southeast Grey and the hon. member for Centre Winnipeg.

Miss MACPHAIL: Does the hon. member not know very well that these are not the people who are asking for relief? Some of the miners draw big pay, it is true. They are not on the relief lists at the different stations.

Mr. DUFF: My hon. friend perhaps was not here when I said there were twenty families the heads of which had $5,000 in the Royal Bank in Glace Bay, who were lined up every day at the soup kitchens and the relief stations.

Miss MACPHAIL: I doubt it very much.

Mr. DUFF: Of course you do. You were in the charge of the truant officer when you were there. You were in bad company when you were with the mayor of Glace Bay, who for political purposes—

Mr. SPEAKER: Order. The hon. member must address the Chair.

Mr. DUFF: Mr. Speaker, we have another lady who is very much worked up about the distress in Cape Breton, a lady by the name of Mrs. Charles Archibald. I think she is vice-president of the Tory organization in the city of Halifax, and this Mrs. Archibald has been worked up into a great state over the things Premier Armstrong and his government are not doing for these poor distressed people in Cape Breton. This lady is the wife of a gentleman who was manager of a mine in Cape Breton some few years ago known as Port Morien, and now Cow Bay. This Mr. Archibald closed down this mine in the winter of 1894, although the poor miners pleaded with him to keep it open until spring. He closed it down and from seven to eight hundred miners were thrown on the street, and now, of course, Mrs. Archibald, when she has no responsibility, can come along and say: Mr. Armstrong, you and your government must come to the relief of these poor people.

Miss MACPHAIL: I want to ask the hon. gentleman if he is aware that ten thousand people are being fed from Glace Bay proper every day, that ten thousand people are getting their rations three times a week from the relief station there.

Mr. DUFF: More shame for the mayor of Glace Bay when the British Empire Steel Corporation are assessed 70 per cent, and he could raise the money to feed these people in their homes. Then they would not have to go to relief kitchens or anywhere else.

Mr. Speaker, there is perhaps nothing else I can add. There is no question that it is a serious situation that exists in Cape Breton. My only purpose in rising was to protect the good name of Nova Scotia. As far as the coal situation in Cape Breton is concerned, I am not prejudiced in any way. I have no coal mines in my district, but we are vitally interested in the progress of Cape Breton and in the other counties west, to which we sell a great deal of goods. In addition to that, we benefit from the royalties which the provincial government collects from the mines in Cape Breton, and Cumberland and other places. There is no distress around the mining districts of Pictou and Cumberland. There are poor people there, due to the strike, of course, but the difference between the mayor of Glace Bay and the mayor of New Waterford, and the mayors of Trenton, Stellarton, Westville, New Glasgow and other places, is that they have a proper love of humanity in their hearts, and they are not trying to get elected at the next election.

Mr. WOODSWORTH: Might I ask if the hon. gentleman has not read the appeal that has come from Springhill in the last day or two?

Mr. DUFF: It is quite possible that somebody in Springhill may be sending in an appeal, like they do in Glace Bay, somebody who is not responsible and has no business to do it. But I say the people of Springhill and these districts can look after their own poor. As I say, Mr. Speaker, I am not at all prejudiced. My only interest in discussing this matter is to see that the good name of Nova Scotia is upheld, and until such time as every resource has been exhausted in these cities and towns, which can be assessed for the purpose of looking after these poor people, I say there is no need to appeal to this government or to the provincial government. If the mayor and council of Glace Bay should come to this parliament or to the provincial legislature and say: We have exhausted our resources, we have raised every cent we could to look after our poor;—then I say it is time, after the United Mine Workers have sent back the two and a half million dollars, for anybody in this House or in the provincial legislature to say that this government or the provincial government should vote any sum for the relief of this state of affairs in the county of Cape Breton.

On motion of Mr. Manion the debate was adjourned.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, April 2, 1925

The House met at three o'clock.

REPORT

Hon. E. M. MACDONALD (Minister of National Defence): Under the provisions of section 47, chapter 43, 9-10 Edward VII, I beg to lay on the table order in council relating to the pay of officers when employed in swinging ships.

PUBLIC ACCOUNTS COMMITTEE

Mr. HANCE J. LOGAN (Cumberland) presented the first report of the committee on Public Accounts as follows:

Your committee recommend that the quorum of this committee be reduced from twenty-one to eleven.

He said: I beg to move:

That the first report of the select standing committee on Public Accounts be concurred in.

Mr. STEVENS: What is the effect of this report?

Mr. LOGAN: The report has already been read. The effect is to reduce the quorum from twenty-one to eleven. The difficulty of securing a quorum in committees of this House has become almost a scandal. Last year we called this committee four times in succession, but were not able to secure the quorum of twenty-one. This year we have had the same experience, and this morning we had to wait nearly an hour to secure a quorum. We were able to secure it only after sending to all parts of the building and trying to get members out of other committees. In order to carry on the work of this committee, it has been found necessary to have the quorum reduced, and I think eleven will be quite sufficient.

Motion agreed to.

RURAL CREDITS

Right Hon. W. L. MACKENZIE KING (Prime Minister): The hon. member for Battle River (Mr. Spencer) the other day asked a question as to whether the government had received a copy of a resolution passed by the Alberta legislature relative to a federal farm loan scheme. I have not the memorandum

here, but I have looked into the matter, and as far as I can find out no such resolution has been received by any department.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

OCEAN SHIPPING RATES

Mr. DOUCET:

1. What was the amount paid by the government in connection with the investigation and report made by Sir Henry Drayton in regard to the North Atlantic Steamship Conference and ocean rates?
2. What is the amount already paid and payable to Mr. W. T. R. Preston in connection with his investigation and report with the said matters?

Hon. Mr. COPP:

1. Sir Henry Drayton was carried on the pay-list of the Board of Railway Commissioners for the period from July 31, 1913, to September 21, 1913, when he was employed on the ocean rates inquiry, and he was paid during the inquiry his regular salary rate as Chief Commissioner, namely $12,500 per annum, and $1,074, expenses.

2. Expended to January 21, 1925, Mr. W. T. R. Preston, Travel, $864.85; Remuneration (February 28 to June 1, 1924, 94 days less 7=87 days at $15), $1,305; Living allowance (February 28 to October 24, 1924, 239 days at $10, $2,390; Sundries, $310.23; Total, $4,870.08.

Accounts on hand, pending supplementary vote: Travel, $208.68; Remuneration (June 2, 1924 to January 23, 1925, 236 days less 32= 204 days at $15), $3,060; Living allowance (October 25, 1924 to January 23, 1925, 91 days less 18=73 days at $10), $730; Stenographic services, $216; Sundries, $17.77; Total, $4,232.45, and for such additional time as he may be actually engaged in the work of the ocean freight rate inquiry.

PELAGIC SEALING TREATY

Mr. NEILL:

1. When does the Pelagic Sealing Treaty expire?
2. Is it the intention of the government to renew it?

Hon. Mr. CARDIN:

1. The treaty is to continue in force for fifteen years from December 15, 1911, and thereafter until terminated by twelve months' notice in writing given by one of the parties to all of the others, which notice may be given at the expiration of fourteen years or at any time afterwards.

2. The matter will receive consideration.

[Mr. Mackenzie King.]

QUEBEC HARBOUR COMMISSION

Hon. Mr. STEVENS:

1. Having reference to reply to questions on Hansard, page 1317, March 24, stating that Quebec Board of Harbour Commissioners had not overdrawn its appropriations, how does the government account for an item of $11,881,350.58 appearing on page 11 of the Public Accounts, 1924, schedule L, and shown among miscellaneous investment (non-active) in the balance sheet for March 31, 1924, page 2 of the said Public Accounts?
2. Is the said sum of $11,881,350.58 in excess of, and to be added to a further sum of $8,426,800 shown in the said answer on page 1317 of Hansard, as having been advanced to Harbour Commissioners for harbour improvements, and on which no interest has been paid?
3. Do the above items, added together, represent the amount advanced for Quebec harbour improvements?
4. Has any interest been paid on the said amount, if so, how much?
5. Has any report been made by the Board of Audit, or by J. W. Tribble?

Hon. Mr. COPP:

1. The item of $11,881,350.58 referred to as taken from the Public Accounts 1924, Schedule L, is the total amount charged to the Quebec Harbour Commissioners for expenditure on improvements to the harbour of Quebec at March 31, 1924. $4,154,195.68 of this amount is old expenditure paid through other departments and charged against the harbour commissioners. This expenditure was authorized by various statutes passed previous to the reorganization of the harbour commission on its present basis in 1912, while the balance of $7,727,154.90 was expended under the authority of acts passed since 1912, which authorize a total for advance to the commissioners to date, of $8,500,000; of which amount at March 31, 1924, there remained available the sum of $772,845.10, and the Harbour Commission of Quebec could not have been considered to have overdrawn its appropriation, as provided for by parliament, until this amount had been exceeded.

2. No. The sum of $8,426,800 represents the amount advanced to the commissioners out of the total authorized by the acts passed since 1912, above referred to.

3. No. The amount stated on page 11 of Public Accounts represented the total advanced to the Quebec Harbour Commissioners for harbour improvements at that date. The total amount advanced to date amounts to $12,439,195.68, of which $8,426,800 has been advanced out of the total of $8,500,000 authorized for advance since 1912.

4. Advances were made to the Quebec Harbour Commissioners between the fiscal years 1873-4 to 1909-10 amounting to $4,156,-550.58. Interest on these advances was paid between the years 1873 to 1891 to the amount of $1,068,458.49. From 1892 to 1898 pay-

ments were not made on account of interest but interest was charged in the books to the amount of $1,305,315.01. This amount was written off by the authority of parliament in the revision of the balance sheet in 1908. Interest accrued and outstanding on the 31st March, 1925, on the $4,156,550.58 amounted to $5,640,463.68.

New advances were authorized and commenced in 1913 and on the 31st March, 1925, amounted to $8,426,800 which added to the amount advanced prior to 1909-10 namely $4,156,550.58 would account for a balance of $12,583,350.58 which will appear in the balance sheet, March 31st, 1925. No interest has been received on the new advances which on January 1st, 1925, amounted to $2,437,498.87.

5. A report has been made by the Board of Audit.

CUSTOMS—ANTI-DUMPING CLAUSES

Mr. McTAGGART:

1. How many times were the provisions of the anti-dumping clauses of the Customs Tariff Act applied in the years 1922, 1923 and 1924?

2. What was the total amount of customs duty collected in the years 1922, 1923 and 1924 as a result of the application of the anti-dumping clauses of the Customs Tariff Act?

Hon. Mr. CARDIN:

1. Number of entries on which dumping duty was collected: Fiscal year 1922. Information not available; fiscal year 1923, 2,523; fiscal year 1924, 2,365.

2. Amount of dumping duty collected: Fiscal year 1922, $126,285.95; fiscal year 1923, $98,557.98; fiscal year 1924, $131,960.11.

SUPERVISOR OF GOVERNMENT PUBLICATIONS

Mr. DOUCET:

1. Is the position of supervisor of government publications, occupied by Mr. Fred Cook, under the jurisdiction of the Civil Service Commission?

2. When was the position created and how was the incumbent appointed?

3. What is the salary range of said position provided by the classification, and by whom was it set?

4. What compensation does Mr. Cook now receive annually?

5. Have the duties of the position been materially changed since it was created?

6. Is the further sum of $500 for payment to Mr. Cook included in the estimates for the fiscal year 1925-26?

7. If so, will it in future be the policy of the government to recommend to parliament the payment of any additional salary demanded by an employee dissatisfied with the compensation of his position as fixed by the Civil Service Commission?

Hon. Mr. MURDOCK:

As respects the Department of Public Printing and Stationery:

1. Yes.

2. a. February 15, 1924, by order in council No. P.C. 67/271. b. August 17, 1923, by order in council No. P.C. 1631.

3. a. $3,900, $4,200, $4,500 per annum. b. Civil Service Commission.

4. $4,500.

5. No.

6. Yes.

7. The further sum of $500 in the estimates for 1925-26, is compensation to cover duties as secretary to the Government Printing and Stationery committee, which were not included in the classification made by the Civil Service Commission; the future policy of the government is in no way involved.

SOLDIER SETTLEMENT LANDS

On the Orders of the Day:

Mr. ROBERT GARDINER (Medicine Hat): May I inquire from the Acting Minister of Finance when the House may expect legislation dealing with revaluation of soldier settlers' lands?

Hon. J. A. ROBB (Acting Minister of Finance): I do not think I have any further information to give than that given a few days ago. The matter is now under consideration.

BLUE SKY LEGISLATION

On the Orders of the Day:

Mr. JOS. T. SHAW (West Calgary): In view of the decision about a year ago by the Supreme Court of Canada to the effect that a federally incorporated company is under no obligation to comply with provincial legislation, and particularly with that legislation known as "blue sky" legislation passed by the various provinces, and in view of the fact that many companies are taking advantage of the situation to unload upon the public worthless stock, I should like to know from the Secretary of State if he intends to bring down any legislation this session for the purpose of remedying that situation.

Hon. A. B. COPP (Secretary of State): Information has not come to the department that any great number of companies have been unloading worthless stock upon the people generally throughout Canada. The matter is now being investigated, and if it is found necessary to bring down legislation along the line suggested by my hon. friend, it will be brought down this session.

Mr. SHAW: Does the minister require any instances where the public have been defrauded?

Mr. COPP: I will be very glad if the hon. member can give us any instances.

THE BUDGET

CONTINUANCE OF DEBATE ON THE ANNUAL FINANCIAL STATEMENT OF THE ACTING MINISTER OF FINANCE

The House resumed from Wednesday, April 1, consideration of the motion of Hon. J. A. Robb (Acting Minister of Finance) that Mr. Speaker do now leave the chair for the House to go into committee of Ways and Means, and the proposed amendment thereto of Sir Henry Drayton.

Hon. R. J. MANION (Fort William and Rainy River): I have listened with a great deal of interest to the discussion which has thus far taken place on the budget, and while I do not intend to review the debate, I should like to take a few moments to deal very briefly with some of the remarks made by speakers who have preceded me.

The hon. member for Lunenburg (Mr. Duff) made, I thought, a rather severe attack upon the hon. member for Southeast Grey (Miss Macphail), due to the fact that she had gone down to Cape Breton and investigated the conditions there in what I thought was a spirit of humanity. I do not think that the hon. member for Lunenburg did himself quite justice, and I do not think he did quite justice to the hon. member for Southeast Grey, in the rather severe attack which he made upon her last night. It is true of course that in this country, as in every other country there are people who are poor. Two thousand years ago the greatest teacher, the world has ever had said: "The poor ye have always with you," and unfortunately it is a blot upon our so-called civilization that this condition exists to-day very much to the same extent as it existed two thousand years ago. At the same time, looking at the question down there from the standpoint of the ordinary observer, or the standpoint of the ordinary reader of the newspapers—or, indeed, the ordinary reader of the debates of this House—and without in any way desiring to take part in the controversy, I do believe that conditions are anything but desirable, and I feel that the sympathy of this House goes out to that section of the country which seems to be labouring under very depressing conditions to say the least. I will go further and say that it would appear to me that it might be wise on the part of this government to make a more thorough investigation than has yet been made of these conditions, with a view to seeing if we should not perhaps give such help to the people in that section of the country in their afflictions as we might give, under difficult circumstances, to the people of such a country as Japan or perhaps the Fiji Islands, if an earthquake or other disaster had come upon them.

My hon. friend from Lunenburg made a remark in regard to the tariff with which I have no quarrel, in which he praised the government for putting a tariff on slack coal. He said—and he will correct me if I am wrong—that he was a low-tariff man, but he complimented them on the fact that they had raised the tariff on slack coal. My hon. friend from Comox-Alberni (Mr. Neill) in his speech, telling that fish story from British Columbia, which takes at least three hours, has on other occasions taken, I think, very much the same attitude as my hon. friend from Lunenburg. He states that he is also a low-tariff man, but when it comes down to tariff protection on certain products which come from his constituency, he believes in a tariff.

Mr. DUFF: There is no coal in my constituency.

Mr. MANION: There is coal in my hon. friend's province.

Mr. DUFF: Yes, in the province.

Mr. MANION: The point that I am trying to make is that very often our cries for low tariff are more or less sectional. In other words, those who feel that they require a tariff for their own section of the country believe in a tariff, and I submit what I have already stated on other occasions, that if wheat remained at the price it has been selling for the last two months, $1.50 or $1.75, as I hope it will, in order to give the people of the prairie provinces a just return for the labour and investment, we would hear very much less tariff discussion in this House and out of it than we have heard in the past, just as in the past few weeks we have heard very little tariff discussion from my hon. friends to my left.

The hon. Minister of the Interior (Mr. Stewart, Argenteuil) a gentleman for whom we all have the utmost friendship, rose in this House as a defender, perhaps I should also say a pretender, regarding the budget we have been discussing. The hon. minister, with that kindly, honest, frank face, fairly oozes respectability, and I have noticed the more disreputable a case the government has to put forward the more sure they are to call upon my honest-appearing friend to come forth and defend it. As I listened to him defending so eloquently—which he certainly did in a very able manner—the budget which has been presented, it made me think of an incident which

occurred in the life of Sir John A. Macdonald. He had in his cabinet the Hon. John Carling, who had a face almost as honest as that of the Minister of the Interior, and one day, after some particular action of Hon. John Carling, Sir John A. Macdonald studied his face for some little time and said to one of his friends, or I think it was to Hon. John Carling himself, "I have come to the conclusion that the good Lord never made a man as honest as you look." As I listened to my good friend the Minister of the Interior defending this farcical budget the other day, I felt the House might well come to the same conclusion regarding him.

He also spoke of what he believes on the tariff question. He did not listen to the chimes he rang last year, but he did say that he believed in a lower tariff; in fact he believed in a tariff for revenue only. I think I am not misquoting him when I say that. The expression "tariff for revenue only" is used to my mind in a false sense, because a tariff for revenue only is a free trade tariff. There is no such thing as a "tariff for revenue only" being a protective tariff. England has a tariff for revenue only by which she brings into the coffers of her finance department something like $600,000,000 per annum on commodities which she does not produce in her own domain; in other words, five-sixths of the money brought into the coffers of England by tariff duties are raised upon sugar, tea and tobacco, three substances which England does not produce within her own shores. So that is a tariff for revenue only, and if Canada had a tariff for revenue only she would have free trade, because so long as you put on a tariff which protects at all you are putting on a protective tariff to the extent that it protects.

I wish to touch one other remark of the hon. Minister of the Interior, and then I shall proceed with my discussion of the budget. The hon. minister pointed out—and drew my attention to it at the moment—that Sir Henry Thornton had made a statement that in Northern Ontario a number of new industries had started up recently employing a lot of men. I venture to say that, without knowing the facts, that most of those industries are pulp and paper industries, not affected by the tariff at all. But at any rate I wish to point out particularly to my hon. friend that the day after he made his speech I noticed in the morning papers of this city an article stating that there was a disturbance in Sudbury, due to the many unemployed starting a parade of their own.

Dealing with the budget from the standpoint of the ordinary observer, I submit that this budget, in which there is a complete absence of any remedies for our present discontents, is like a train of fifteen cars carrying one passenger. It is a sort of peculiar political salad, made up of a strange compound of unconscious humour, misstatements of fact, homeopathic doses of both free trade and protection, and an oily dressing of hopes of better times to come. As to misstatements of fact, I need only draw the attention of the House to the statement in regard to the prosperous conditions prevailing in the Dominion, and more particularly and more emphatically to that fable of a surplus—that fable which my hon. friend the Acting Minister of Finance (Mr. Robb) is talking about ad nauseam, but which should be classed among Aesop's fables.

I intend to deal very briefly with my conception of the so-called surplus which the Acting Minister of Finance has described. My hon. friend from West York (Sir Henry Drayton) has dealt with it from the standpoint of an ex-Minister of Finance, my hon. friend from Vancouver Centre (Mr. Stevens) has dealt with it from the standpoint of a chartered accountant, but I intend to deal with it just from the standpoint of the man in the street reading the budget speech a number of times and trying to figure out where the Acting Minister of Finance gets his surplus. My hon. friend the ex-Minister of Finance (Sir Henry Drayton) has pointed out that in his view instead of hava surplus of $2,000,000 there is actually a deficit of about $100,000,000, and I venture to assert that he is pretty accurate in his analysis. But I intend to deal with this surplus, not on the basis of any figures placed before the House by the Minister of Railways (Mr. Graham) or any of his colleagues, but simply from the standpoint of the figures given by the Acting Minister of Finance himself. I find that on page 1469 of Hansard he estimated the revenue for the fiscal year, accurately enough for his purpose, at $344,000,000, as against an estimated expenditure of $342,000,000, leaving a surplus of $2,000,000. I am giving round figures. Well, Sir, if you look back at the preceding page you will find that the Acting Minister of Finance gives the accounts for the railways and shows loans by way of cash charged to the net debt of the Dominion at something over $18,000,000, and loans by way of government bond issues of $46,000,000, which added together amount to $64,000,000. This converts his surplus of $2,000,000 into a deficit, according to his own figures, of $62,000,000.

That we should charge this railway expenditure not only to our debt but to the ordinary accounts is evident to anyone who would treat these accounts fairly. The hon. member for St. Lawrence-St. George (Mr. Marler) in his speech before the Canadian Club of Montreal recently, reported in one of the Montreal papers, said:

> Our ordinary debt may have decreased in the past few years, but the ordinary debt is not the only one, we have in addition to that the railway debt. Consequently the gross debt of this country is not only the ordinary consolidated debt, but the railway debt, and if one rises then the whole debt is increased, and if one is lessened then the debt can be decreased.

I quote the hon. member because he is a follower of the government and a friend of the Acting Minister of Finance, and yet he agrees that these railway charges should be included in the ordinary debt of the country, and I believe that when we talk of a surplus we have to take into account this railway expenditure.

Mr. EULER: Would the hon. member include in what affects a surplus or deficit the amounts advanced to the National Railways or borrowed by them on capital account?

Mr. MANION: Mr. Speaker, we do that in regard to harbours, canals and other public expenditure on capital, and unless there is some hope of getting back any of the money in the near future, certainly it should be charged to the national debt, and against surplus because the country is responsible for it.

Mr. EULER: If it is for capital account?

Mr. MANION: No matter what it is for. In 1922-3 the Minister of Finance (Mr. Fielding) charged up $80,000,000 advanced to our railways to the national debt according to the Acting Minister of Finance.

Mr. EULER: The hon. gentleman surely distinguishes between adding to the national debt or adding to the surplus or the deficit?

Mr. MANION: Certainly. But the Acting Minister of Finance does not even add the railway bond advances to the debt, and he claims a surplus when in reality there is no surplus at all; in fact there is a deficit of $62,000,000 according to his own figures, though the cash deficit is not so much as that. We are just as responsible to the people for those expenditures upon the National Railways as we are for any other expeditures by the government, particularly in view of the fact that at present no one can expect within any reasonable time in the future that that expenditure will be paid back by the National Railways. It would be very much the same, Mr. Speaker, as if a civil servant of the higher grade in this city, receiving, we will suppose, $10,000 a year, spends $9,000 himself, and his wife and children, for whom he is entirely responsible, have run current accounts for another $5,000, making a total expenditure for his household of $14,000. Would my hon. friend from North Waterloo (Mr. Euler) claim that that gentleman had a surplus at the end of the year?

Mr. EULER: No. But the hon. gentleman says that the whole $14,000 was spent on living. He does not say that anything was spent on purchasing a house or anything of the kind that would be an actual asset.

Mr. MANION: I said that this gentleman himself had spent $9,000, and his wife and children had spent another $5,000, or had run accounts for that sum, for which he is absolutely responsible. Could they claim a surplus?

Mr. EULER: If the hon. gentleman will say what the $9,000 and the $5,000 were expended for I will give him an answer.

Mr. MANION: No matter what it was spent for, it was spent or he became responsible for its payment, and he would not have any surplus that year. I know what my hon. friend has in his mind, that some of that expenditure might have been capital expenditure which would be an asset. All right, he is responsible for it anyway, and being responsible for it he would not have a surplus, especially if he could not dispose of the asset as in our railway case.

Mr. EULER: It might be a liability, but it would not affect his surplus.

Mr. MANION: I submit, Mr. Speaker, that if a gentleman, such as I speak of, has spent or become liable for $14,000 as explained, and then claims that he had a surplus on his $10,000 income, he would be suspected of having delusions of grandeur. I remember reading of an old Greek general who had won a very costly victory saying: "Another such victory will ruin us." I think that if we have many more surpluses such as the surplus that the Acting Minister of Finance has described in his budget speech this country will be ruined. It was Talleyrand who said that language is given us to hide our thoughts. But in Canada budgets are given us to hide our deficits.

But, Sir, that is not the worst, because on page 1469, the Acting Minister of Finance deals with unpaid arrears of interest from Greece and Roumania, $4,000,000, which those countries have asked the Dominion to apply

to the principal owing—and upon which perhaps in the future they intend to pay interest—and he actually adds that $4,000,000 of unpaid arrears to his so-called surplus of $2,000,000, and says he has a surplus of $6,000,000! I think if that statement were read to one of the mummies in the British Museum it would take off its dried wrappings and laugh. What kind of gold brick financing, what kind of political shell game is the Acting Minister of Finance trying to put over on the unsuspecting people of this country? Sir, if you take the old South Sea Bubble, the Home Bank fiasco, and Get-rich-quick Wallingford, and roll them all into one, you would have nothing akin to what my hon. friend has been attempting to tell the people of Canada. I do not think that Get-rich-quick Wallingford, that prince of crooks, even in his palmiest days, attempted to put over such a deal on the people with whom he came into contact. I well remember in my earliest days in the west purchasing stocks in some pretty slick mining projects, but those slick mining deals, Sir, were the highest and soundest kind of financing compared with that which is exemplified in the budget speech of this year.

But that is not all. The Acting Minister of Finance (Mr. Robb) on page 1470 of Hansard, says, referring to the $4,000,000 of unpaid interest due from Greece and Roumania:

> This amount is available to be applied on account of our loans to the Canadian National Railways of $18,027,000, to Canadian Government Merchant Marine—

And so on. Well, sir, I think the Acting Minister of Finance has given us a splendid example of unconscious humour in that statement. There is still another delightful touch on page 1472, where, after telling us that he has quadrupled the duty on slack coal, he says that this change will remove the difficulties in the administration of the act. If he had said, remove the difficulties in multiplication instead of in administration, perhaps he would be nearer the truth, because he has increased the duties, I understand, from fourteen cents to fifty cents. I do not see how a difference in multiplication can make any difference in the administration of the act. Now that the famous Dennistoun case is off the boards, Mr. Speaker, I am going to keep this budget speech for light reading on dull days.

But, Sir, to speak seriously, should we not have the truth in regard to matters of this kind? Should the people of this country be treated like so many children? Should they not be told the facts with regard to their own financing? Should they not know the conditions which really obtain in Canada? Or are we to have a conspiracy of silence, or perhaps what is worse, a tissue of half truths, in dealing with the financial condition of our country? I am reminded of a remark made by Napoleon when he was referring to a German diplomat: He said, "That man lies too much. It is necessary to lie sometimes, but not all the time."

Sir, if you look back over the history of the ages that have gone you will find that many empires have risen, then have declined and fallen, particularly during the fifteenth, sixteenth and seventeenth centuries. That is exemplified by what happened in the case of Spain and Portugal; I mention merely these two for the purposes of the illustration. What was the cause of the decline and fall of these empires which had become very outstanding not only in commercial development and in industry but also in colonial expansion? They declined and fell because they were oppressed with unfair taxation and because they were oppressed with bad government. This Dominion of Canada to-day is to my mind suffering from exactly the same conditions. No one needs to elaborate the argument with regard to high taxation, because I believe that the taxation in Canada to-day is as high at least as the taxation was in any of those countries of which I speak; and so far as the bad government is concerned, that is manifested on every side.

Yet the Prime Minister (Mr. Mackenzie King) in the Speech from the Throne made the statement that the only problem or the outstanding problem before the people to-day, was the cost of living. He apparently sees no problem to be solved in connection with the affairs of this country except the high cost of living. In view of that fact I made it my business to inquire of the Bureau of Statistics as to the cost of living in the past year, and I am going to show how the Prime Minister and his government are solving this problem. The Bureau of Statistics state that the index figures for each month with respect to foods, fuel, lighting and rent from last May to the present time were as follows: May, 144; June, 144.2; July, 144.8; August, 146.7; September, 147.2; October, 147.4; November, 148.4; December, 149; January, 150.3; February, 151.1. Well, Sir, as far as I can see, the problem of the cost of living is being solved by this government in exactly the same way as they are solving every other problem they have had to deal with, and that is by making it worse. All

the conditions of this country have been getting worse and worse year by year since this government came into power.

What are the real problems of the country to-day, and what is the real solution of those problems? To my mind they are four, chiefly: First, we must bring about a condition of less taxation by a proper and economical handling of our affairs. Secondly, we must have a stable tariff policy, providing for a tariff high enough to permit all our industries to continue. Thirdly, we must have an efficient immigration policy, and fourthly, we must have a wise railway policy. I am going to deal with the last two first, that is, the immigration policy and the railway policy.

So far as an efficient immigration policy is concerned, there is no doubt that we need agriculturists in this country to populate and cultivate those millions of acres of fertile land which we have from the Atlantic to the Pacific. But I should like to draw the attention of the government to the fact that we have in various sections of this country besides the prairie provinces millions of acres of land to be developed. There are millions of acres in the Maritime provinces, in Quebec, in northern Ontario and in British Columbia. Take the section of country whence I come, northern Ontario; we have a country there as extensive in area as the British Isles and the German Empire put together, but while they have in the two European countries I have mentioned about a hundred million people, we have in northern Ontario from North Bay to the Manitoba boundary only about a hundred and fifty thousand. We have resources of all kinds; millions of acres of fertile land; we have hundreds of millions of tons of iron ore which some day will make that a great iron producing country. But that section to-day forms a gap between the east and the west, and the government might well spend some of its time populating that country to make traffic for the railways and to bridge that gap between the east and the west instead of sending out to the prairie provinces all the immigrants that come to our shores. At the same time, it is to be remembered that prosperity in our country will in itself bring immigrants here. In 1914, the year before the war, 400,000 immigrants came to Canada—a goodly number indeed; so that the conditions which it is often stated are not brought about by protection were actually being brought about in those years. Before the war we were getting immigrants as rapidly as we could absorb them. At the same time, we all know that we have no room in the cities for more industrial workers, so that we should at least get our industries back into good condition before we permit immigrants to come to the cities and towns.

Mr. WARD: May I ask my hon. friend whether the tariff has been very much reduced since that day?

Mr. MANION: I will deal with that before I finish.

Mr. SPENCER: May I ask the hon. member a question? Does he think for a moment that if immigrants are brought only to the farms, the people can be kept there if they do not want to stay?

Mr. MANION: Oh, I do not suppose there is any slavery system in this country which will keep anybody anywhere that he does not want to stay. But the fact is that we are not keeping our people in the country at all just now; they are going to the United States.

With regard to the matter of railway policy, we have in this country to-day three transcontinental railways where two would have been ample. We have railways sufficient at least for three or four million more people than we have. In other words, we are overbuilt in the matter of railways. What we need is increased population in a fairly prosperous condition. In other words, we need stability in business; we need work and wages for our people; we need prosperity for the different sections of the country. One point that I would like to emphasize is this: we should have less spending by our National Railways. The hon. ex-Minister of Finance (Sir Henry Drayton) put a question on the order paper a few days ago and he received the reply that there was spent upon our National Railways during the past year, added to the new capital account, $118,000,000. That is a vast amount of money, Mr. Speaker, to add to our national accounts, to our national debts, in a sense—national obligations is the better word—in one year. I was thinking over the matter and I made it my business just this morning to look up the Public Accounts. What did I find? In 1900 our whole income, the entire revenue of this country, was only $51,000,000. I take this from the Public Accounts for 1924, page 47. In other words, in 1900 we were taking in less than fifty per cent of the amount which has been added to the account of the National Railways this year. The hon. member for North Waterloo (Mr. Euler) looks surprised, and so was

I surprised when I looked that figure up. But I am going to give some other figures. In 1905 that amount had gone up to $71,000,000 odd; in 1910, it had gone up to $101,000,000. In other words, our total receipts in 1910 were $17,000,000 less than was added to the national debt by the railways in the past year. It was not till 1912, just thirteen years ago, that this country took in receipts from all sources equal to the expenditure for the National railways during the past year. That appears to me a very serious state of affairs, and I think the government might well consider whether there is not some way of lessening such vast expenditures of the people's money as have been going on for the National railways during the past year.

Mr. GOULD: Has the hon. member got the percentage of direct and indirect taxation that was gathered at that time?

Mr. MANION: I have not that information at hand, and I do not see what bearing it has on the argument I am making.

Now I intend to deal with the question of economy, and the question of the tariff. I give these as the other two remedies by which our country could be put back on its feet.

Mr. MARCIL (Bonaventure): What would the hon. member suggest as the remedy for this railway situation?

Mr. MANION: I would suggest, first of all, that we should put our foot down on some of this extravagant expenditure. Beyond that—I know my hon. friend wishes me to give simply my own opinion—I am not ready to go at the present moment.

Mr. RINFRET: What extravagant expenditure does my hon. friend mean?

Mr. MANION: I think the fact is self evident when $118,000,000 is added on capital account for the National railways during the past year. That is an amount that no private corporation would consider spending on additions such as the Canadian National Railways have been making in the present state of its finances.

Mr. RINFRET: That is an argument for private ownership.

Mr. MANION: My hon. friend may possibly use it as an argument for private ownership. I will admit this: I came here eight years ago a public ownership man, but if conditions go on as they are to-day, it will not be very long until I am with him on private ownership.

Mr. LAPOINTE: That will be another conversion.

Mr. MEIGHEN: It will be at least better than public ownership under the present government.

Mr. MANION: I wish the Minister of Justice (Mr. Lapointe) would at least be converted to giving the people of this country good government, which we are not getting at the present time. I do not wish to go into the details of that $118,000,000 of expenditure, nor do I wish to take the attitude of criticizing Sir Henry Thornton, but I do submit that $118,000,000 is too much money to be put into the National railways in any one year when the finances of the National railways are in the condition they are in to-day.

Mr. BEAUBIEN: Does that figure include uncontrollable fixed charges?

Mr. MANION: This $118,000,000 is new expenditure, according to the reply given by the Minister of Railways (Mr. Graham) to the ex-Minister of Finance (Sir Henry Drayton) the other day.

Now I intend to deal with the question of economy, because, Sir, so far as I can see, my good friend the Minister of Justice has no more conception than any other minister in this government of the need of economy in this country—certainly not if we are to judge by the expenditures which are going on under this government. I am going to prove that also by the budget speech of my hon. friend the Acting Minister of Finance. I think I can do it from memory. The Minister of Finance said in his budget speech that the decreased revenue in Canada in the past year was $52,000,000. He said that the decreased expenditure was $5,000,000, or a little less than 10 per cent of the decreased revenue. Now Sir, I wish to point out that private corporations would try to approximate those figures a little more closely than this government has approximated them. In the past year the Canadian Pacific Railway, which no matter what we may think of it as a company, and no matter what we may think of its rates, certainly deserves the respect of the people of this country for the manner in which it does its business, according to their annual report, which I have in my hand, had for the fiscal year ending December 31st last, gross earnings which were $13,334,000 less than the previous year; but their working expenses were $13,083,000 less than the previous year. In other words, while the government in charge of the affairs of this country have decreased their expenditure by

10 per cent of their decreased revenue, the Canadian Pacific Railway have decreased their expenditure by about 96 or 97 per cent of their decreased revenue.

Mr. EULER: May I ask a question; merely for information? My hon. friend made the statement that there had been spent on fresh capital commitments on the National railways for the last year $118,000,000. Can he give me the exact statement?

Mr. MANION: No, because I have not got the railway statement.

Mr. EULER: Can he direct me to the statement made by the Minister of Railways in that connection?

Mr. MANION: The figures I am giving are the figures given by the Minister of Railways to the ex-Minister of Finance, and will be found in Hansard of 16th March, page 1151. The fact is, Mr. Speaker, that that $52,000,000 of decreased revenue, which has been claimed by the Liberals as decreased taxation, is simply and plainly a proof of the business depression in this country; it is simply a proof of the fact that the people of Canada are not in a position to buy the things they used to buy in the past; they are not in a position, for example, to import the luxuries they used to import, and on which they had to pay duty. In my own city of Fort William, there are a number of closed-down plants, and the closing down of at least one or two of them is due to the lack of tariff protection. These plants have certainly not the expenses they had a year ago, but they have no income whatever. If this ministry goes on and brings Canada to the stage where she has no income whatever, where she is in bankruptcy, you will have no income, and then I suppose we shall have reached the stage of perfection because there will be nothing collected in taxes. This government goes gaily on spending on everything that comes to its mind, and cutting down expenses on practically nothing. It would be a hilarious farce if it were not for the fact that it is a tragedy to the people of Canada. Here we have unnecessary expenditure going on on public works, unnecessary general expenditure of all kinds, unnecessary expenditures on the railways such as I have mentioned, unnecessary expenditures on royal commissions. I asked this government over a month ago for a list of the royal commissions that they had appointed since they came into power, and the expenditure on those commissions. Apparently they have been unable to figure up the expenditure yet, because I have not yet received my reply. I did, however, receive a reply as to two of these royal commissions this government have appointed, the pulpwood commission and the grain commission. The pulpwood commission cost $75,000 to the people of Canada, and the grain commission cost the people of this country $170,000. In other words, these two commissions, which gave their reports, have cost the people of Canada a quarter of a million dollars. So what must have been the cost for all the other royal commissions that have been appointed by this government? I venture to assert that there has been a cost of probably well over a million dollars, if not a million and a half, spent on royal commissions appointed by this government since they came into power, and appointed, as an hon. gentleman remarks, to save the government from the responsibility of deciding questions for themselves. As a consequence, we have high taxes and high expenditure in every line of government. We have an income tax four or five times the income tax in the United States in almost every income range, and as a consequence we have this country being pushed fairly rapidly into the arms of the United States. And yet the Prime Minister insists that conditions in Canada are good and getting better, whereas in reality the conditions in Canada are bad and getting worse. It reminds me of a remark made by Lord Rosebery in that very charming story of Napoleon which he told in which he said that "at times it was difficult to know when Napoleon was deluding himself, when he was trying to delude others, and when he was simply talking at random for talking's sake." I think, Sir, the same remark might well be applied to the Prime Minister in his reference to the conditions in this country at the present time.

Mr. EULER: If the hon. gentleman will permit me—I am quite sure he does not wish to convey an incorrect idea to the House: He stated a few moments ago that there were capital expenditures amounting to $118,000,000 last year. I have the figures before me and the total of $118,000,000 is described as "additions to the funded and unfunded debt." That does not mean capital expenditure. It includes—no doubt—the deficit, and in addition it is very plainly stated that something over $28,000,000 is in the form of interest, certainly not capital expenditure.

Mr. MANION: I did not give the figures as capital expenditure; if I did so I made a mistake. What I meant to say was that it was added to capital account. This $118,000,-

000 was added to the debt of the railways according to the answer given to this question.

Mr. EULER: The hon. member sought to give the impression that it was capital expenditure.

Mr. MANION: I did not intend to give any such meaning. I did not pretend to analyze the $118,000,000; I simply said it was an addition to the railway debt of $118,000,000 according to the reply given to the ex-Minister of Finance.

Mr. EULER: It is all right so long as we understand that.

Mr. MANION: That is exactly what I meant; if I did not make myself clear it was my fault. To get back to the question of economy: To my mind this government has no conception of the financial state of this country; it has no conception of the depressed condition in business; it has no conception of any remedy for this depressed condition; it has not even any conception of its own impotence. It is said that Nero fiddled while Rome burnt—

Mr. McMASTER: We have heard that before.

Mr. MANION: I believe my hon. friend would have heard it before. This government does not even fiddle; it simply stands pouring oil upon the flames, in the shape of harmful legislation and high taxation. Let me show the hon. member for Brome (Mr. McMaster) the different manner in which the financial affairs of the United States—that magnificently rich country from the standpoint of riches—are handled. The other day President Coolidge delivered his inaugural address as president, and he made the whole spear head of that address "economy in national expenditure." I am going to read a couple of paragraphs from that address, because, Sir, they apply so well to conditions in Canada that I think they should be laid before this House and this Dominion.

Mr. LANCTOT: For the last fifteen years.

Mr. MANION: They may have been applicable for the last fifteen years but they at least apply more particularly now than they ever did before because conditions have never been so bad in Canada as they are to-day. President Coolidge said—

Mr. RINFRET: Does my hon. friend claim that taxation is higher to-day than it was three years ago?

Mr. MANION: Yes, I think taxation is higher to-day than it was three years ago, and taxation is very much too high under any circumstances, because if this government showed a proper conception of the need of economy it would be cutting down such expenditures as carrying Mr. W. T. R. Preston at the present time—cutting down expenditures of that kind and therefore cutting down the taxation of this country. President Coolidge, in his inaugural address which he delivered on March 4, and which I find recorded in the New York Times of March 5, said—and the words will apply to the Dominion of Canada:

> When we turn from what was rejected to inquire what was accepted, the policy that stands out with the greatest clearness is that of economy in public expenditure with reduction and reform of taxation. The principle involved in this effort is that of conservation. The resources of this country are almost beyond computation. No mind can comprehend them. But the cost of our combined governments is likewise almost beyond definition.
>
> Not only those who are now making their tax returns, but those who meet the enhanced cost of existence in their monthly bills, know by hard experience what this great burden is and what it does. No matter what others may want, these people want a drastic economy. They are opposed to waste. They know that extravagance lengthens the hours and diminishes the rewards of their labour.
>
> I favour the policy of economy, not because I wish to save money, but because I wish to save people. The men and women of this country who toil are the ones who bear the cost of the government. Every dollar that we carelessly waste means that their life will be so much the more meagre. Every dollar that we prudently save means that their life will be so much the more abundant. Economy is idealism in its most practical form.

Later he said:

> The collection of any taxes which are not absolutely required, which do not beyond reasonable doubt contribute to the public welfare, is only a species of legalized larceny.

That is the opinion of the President of the United States in regard to economy and I think that opinion may well apply to conditions in this country at the present time. But instead of paying attention to such advice as that we go gaily on our way spending where we do not earn, spending where we do not even possess. Mr. Micawber gave philosophy to Copperfield on one occasion, which philosophy applies to nations as well as individuals. Micawber had a philosophy of life founded upon his own mistakes.

4 p.m. He said: Copperfield, if you have an income of £20 and your expenditure is £19 19s 6d, the result is happiness; but if you have an income of £20 and the expenditure is £20-0-6 the result is misery; the blossom is blighted, the tree is withered, the God of day goes down upon the

dreary scene and you are forever floored, as I am! That applies as much to this Dominion as to each individual in the country; because unless attention is paid to that philosophy this country cannot make the progress which it should make. I do not wish to go further into the question of economy because it requires no elaboration. The only people in Canada who do not seem to know that economy is needed, the only people in Canada who are paying no attention to the extravagance of the government, are the members of the government themselves.

Now, Sir, I must deal for a few moments with the question of a stable tariff policy for this country,—this will appeal to my hon. friend the member for Brome (Mr. McMaster)—a stable tariff policy for this country high enough to permit all our industries to continue, a policy which will give us not only confidence in our business but work for our unemployed, and give an opportunity for our Canadian boys and girls to remain in Canada and not be forced to expatriate themselves to the most highly protected country in the world to earn a living, and which will give, as well, an opportunity for tens, yes hundreds, of thousands of people from the crowded European countries to come over here and help us to develop this magnificent country which we possess. A proper policy of this kind will give our artisans the choice of employment instead of, as now, the choice of crossing to the United States or going hungry. What we want is to have our Canadian factories going, not to have, as is the case at the present time, foreign factories going whilst ours are idle, Canadian artisans idle while foreign artisans are busy. I wish to show here just in reply to one of the speakers who preceded me—I think it was the hon. member for Prince (Mr. MacLean)—who claimed that conditions in the city of Brantford were in excellent shape, that the reverse is the case. I have here a list of names of those who in the past year have sent to this government protests against this cutting down of the tariff, and at the head of them is the council of the city of Brantford. I have on this list also Hamilton, Kitchener, London, Galt, Glen Williams, Peterborough, Woodstock, Paris, Carleton Place, St. Catharines, Montreal, Toronto and Tillsonburg. These are simply names that I happened to have under my hand; I know there must be many more. In addition to that I have seen protests from coal producers, the boot and shoe producers, the starch and syrup manufacturers, the iron pipe producers, the textile industry, the fruit growers, east and west, the steel producers, and the poultry producers. From all over this country we have had demands for tariff stability, for a tariff high enough to permit our industries to continue. And after all, Mr. Speaker, who has profited in the past year or two by the cuts in the tariff which this government has made?

Mr. JOHNSTON: The agriculturists of the country, all these people have profited.

Mr. MANION: I know one agricultural person that has profited and that is the whip of the Progressive party. He has profited by a free trip to the Wembley exhibition, but he is the only agriculturist that has profited by it.

Mr. JOHNSTON: If my hon. friend was opposed to that trip, why was he not in his seat to vote against it?

Mr. MANION: I certainly would have voted against it if I had been in my seat, because I talked against it. I happened to be in the city of Toronto at the time. I did not dodge the vote; I do not dodge votes.

Mr. JOHNSTON: My hon. friend stated a few evenings ago that he voted against it, when he did not.

Mr. MANION: My hon. friend is correct. I thought I had voted against it. I admit my mistake. It was pointed out to me the other day that only a few members were in the House at the time. Had I been in my seat I would have voted against it, because never was a more disgraceful expenditure of public money undertaken by the government of Canada. Why should the hard-pressed taxpayers of this country pay for the trip of the whip of the Progressive party to the Wembley Exhibition?

Mr. JOHNSTON: My hon. friend had better discuss that with his own whip who supported the vote.

Mr. MANION: My whip did not accept the vote; he did not take the trip either. The hon. member for Last Mountain (Mr Johnston) did, and I should not be surprised if he promoted the whole scheme. I was asking: Who has profited? The hon. member for Last Mountain apparently thinks the farmers have profited. From the statements of his friends sitting around him, I would think that the farmers are at the present time not very well fixed. I know of no farmers in Canada who are in very good circumstances at this time. Have the artisans profited who have been forced to go to the United States to earn their living? Have

the business men in this country profited? I have made it my business, in every section into which I have gone, to ask every class of business men how business is, and never before in my life have I heard so many stories of business depression as at the present time. The whole country is depressed to-day.

It is not cheap goods that we get by a low tariff that we want in Canada; it is work and wages for our people.

I admit with Sir Arthur Currie, the general who made such a good reputation overseas, that perhaps we should talk a good deal of optimism, of patriotism in Canada. I have no criticism to offer to that. I talk it sometimes myself, but at the same time it is very difficult to be optimistic, patriotic, when you have no work and no food in the house. When unemployment and hunger come in at the door, patriotism and optimism fly out of the window, and that is why our people are flying across the border into the United States at this time. If we have prosperity in Canada, we shall have happiness in Canada; and if we have happiness in Canada, we shall hold our people in this Dominion. The reason we have not prosperity, have not happiness in Canada—

Mr. MARCIL (Bonaventure): Ten years of Tory rule—that is the explanation.

Mr. MANION: During the last year of Tory rule we had prosperity in Canada and more than 400,000 immigrants came into this country during that year.

Mr. RINFRET: How is it then that the whole country voted against the then government?

Mr. MANION: They voted against the government because they were war-tired—the same reason that caused people throughout the world to vote against every government that went to the people. But the people of Canada have found out their mistake and very richly paid for it.

Mr. RINFRET: How can my hon. friend explain West Hastings and St. Antoine?

Mr. MANION: How, I ask in turn, can my hon. friend explain Yale, Halifax and Kent?

Mr. RINFRET: Those are old Tory seats. That is easily explained.

Mr. MANION: I can just as easily explain West Hastings as my hon. friend can explain the others. The reason that we have depression and instability in Canada is because of the unstable attitude of this government on the tariff question. We do not need to go back beyond the last three years. We do not need to go back to the Liberal platform of 1919. All we need to do is to go back to 1922 when the present Minister of Finance (Mr. Fielding) brought in his budget at that time and said: The tariff is low enough; we are not going to have any more cuts; we have to have stability in the tariff if we are going to have stability in business in this country. In the following year the present Acting Minister of Finance (Mr. Robb) brought in a budget whereby he made slashing cuts in the tariff in reply to the stand of the Minister of Finance for stability, and the Minister of the Interior (Mr. Stewart) made that now famous but obsolete statement that the death knell of protection had been rung. That was the second stage. This year we have both free trade and protection in the same budget. Could anybody under those circumstances understand what this government really thinks on tariff questions? Is it possible that we can have stability in the country at the present time? A consistent application of a weak policy would be far better than alternate applications of two opposing policies, the application of either one of which may be excellent in itself, but the application of both of which together can lead to nothing but instability as we have it in Canada to-day.

Mr. RINFRET: Can the hon. member point to any tariff reference in the amendment of the hon. member for West York (Sir Henry Drayton)?

Mr. MANION: We do not need to do that. Everybody knows where we stand on the tariff. We were not even given an opportunity. My right hon. leader was not even given an opportunity of moving his resolution; the Prime Minister refused to give him an opportunity to move it.

Mr. RINFRET: I was in the House on several occasions when the resolution was called and the leader of the opposition in his seat, and he did not move it. He had several opportunities.

Mr. MANION: I deny that at any time, at any reasonable hour, since this session opened, was my right hon. leader given an opportunity to move that resolution.

Mr. RINFRET: Will my hon. friend say "any time" or "any reasonable hour?" Of course, if he says "any reasonable hour", he retains the right to decide for himself what constitutes a "reasonable hour".

Mr. MANION: The only time he was given an opportunity was at eleven o'clock at night. Does my hon. friend contend that is a reasonable hour?

Mr. RINFRET: That would be good enough for me.

Mr. MANION: I do not blame my hon. friend for being easily pleased in that regard. I know he finds himself a little uneasy because he happens to represent one of those protectionist cities, not the same kind of constituency as that represented by the Minister of Agriculture (Mr. Motherwell), or the hon. member for Brome (Mr. McMaster). My hon. friend is a member of a party whose tariff policy nobody knows and nobody can possibly know.

Mr. RINFRET: I may tell my hon. friend that I feel as easy in St. James as we do in St. Antoine.

Mr. MANION: We shall find out whether the hon. member is so easy in St. James after the next general election. I am not so sure about that.

Mr. RINFRET: We will welcome it.

Mr. MANION: We will welcome it too. You can go to the country as fast as you like so far as we are concerned. I was going to point out, when the hon. member for St. James (Mr. Rinfret) interrupted me so heatedly, that, though it is true there are sections of this country which do not believe in protection—

Some hon. MEMBERS: Hear, hear.

Mr. MANION: My hon. friends do not applaud so heartily as they did a year ago. I notice, by the way, that no applause came from the other side of the House. I was going to say there are in this country sections such as the prairies which do not believe in protection, and, perhaps, some of the Maritime provinces which do not believe in protection at the present time either.

Mr. CALDWELL: Hear, hear.

Mr. MANION: Except for coal. It is only fair that it should be remembered that, in the Dominion of Canada to-day, Ontario, Quebec and British Columbia, those three provinces at least, are reasonably solid in favour of a tariff policy of protection.

Mr. McMASTER: I doubt that.

Mr. MANION: I submit they are. My hon. friend will have an opportunity to state his case later.

[Mr. Manion.]

Mr. EVANS: What about some hon. members from Ontario in this section of the House?

Mr. MANION: Some of the free traders from Ontario will not be here after the next election. I was going to say that those provinces contain about 7,000,000 of the people of this country, which is a fairly good majority. I do not mean to say by that that I believe the prairie provinces or the Maritime provinces should have anything imposed upon them which would mean a loss to them, and I submit that the resolution of my right hon. leader, which was referred to in the discussion a few moments ago, shows that he realizes what we all realize to-day, that if the 7,000,000 people in Ontario, Quebec and British Columbia are to have the tariff policy which they wish, and if the tariff policy is going to be a weight around the necks of the Maritime provinces or the prairie provinces, they must get some compensation from the 7,000,000 people.

Mr. GOULD: Does the hon. member anticipate that his right hon. leader would reimpose the duty on stumping machines?

Mr. MANION: My hon. friend will have to ask my right hon. leader as to that. He will get his answer from him.

Mr. MEIGHEN: I would on stumping machines in this House.

Mr. MANION: If I may be permitted to have the floor again, I say that the conditions which we suffer from in this country could be counteracted by a wise tariff policy, a tariff which every country in the world except England and Canada has in force at the present time. Both England and Canada, which are not practising increased protection, are suffering from depression, unemployment and an exodus of their own people. In England at the present time they have something like 1,500,000 unemployed, and I hold in my hand a statement from a New York paper showing that the textile industry, the lace and silk and wool industries in England are so hard hit that they are demanding protection. I also have a clipping from the Montreal Star of March 9 which shows that the great shipping industry of England, the greatest industry which she ever possessed, in which industry she commanded the world until recently, is being ousted by protectionist Germany. This article is dated London, March 9, 1925, and reads:

> British industrial interests on the side of both capital and labour have been made to sit up and take notice by the success of German shipbuilders in capturing a £1,000,000 contract which was placed by the British firm of Furness Withy.

The German tender was £300,000 lower than the British one for the five ships that were ordered.

Britain is accustomed to being beaten by continental competition in many industries, but not in shipbuilding.

However, Newfoundland recently ordered a steamer and placed the contract in Holland with an English company. It would have cost an extra £10,000 to have had the work done in England.

Surely in view of that condition, and in view of the fact that even in shipping, the most developed industry in the whole of the British Isles, since England finds it difficult to continue the industry and to compete with the rest of the world in that industry, it would not appear to present a very good argument in favour of free trade.

Mr. McMASTER: Is my hon. friend not aware that in Germany material for shipbuilding is allowed in free?

Mr. MANION: What has that to do with the matter? Does my hon. friend not admit that the British shipbuilders should protect themselves from being driven out of business by the Germans? And if labour is cheaper in Europe and the standard of living lower, does he claim that we should adopt the same conditions in Canada, or should we protect ourselves against such a condition? The material is cheap also to the English shipbuilder. Why should the shipbuilder who has been carrying on so nobly for fifty or a hundred years permit himself to be driven out of business by German competition?

With regard to the politics of my hon. friend from St. James (Mr. Rinfret), I point out that Edmund Burke said that a political party consisted of a group of men banded together for the advancement of national progress by the promotion of some particular principle on which they were all agreed. What is the particular principle on which the Liberal party are all agreed? Is it the tariff? They have as many attitudes on the tariff as Heinz has of brands of pickles and sauces. We have the hon. member for Hants (Mr. Martell) who is a free trader; we have the hon. member from Brome (Mr. McMaster) who is a free trader; and the hon. Minister of Agriculture (Mr. Motherwell) who is a free trader—in the west; I do not know what he is in the east—and we have the hon. Minister of the Interior (Mr. Stewart, Argenteuil) who is a free trader, who has rung "the death knell of protection"—

Mr. MOTHERWELL: What is the hon. gentleman's authority for saying I am a free trader anywhere?

Mr. MANION: Is the hon. minister a protectionist?

Mr. MOTHERWELL: No, not in the sense in which my hon. friend uses the word.

Mr. MANION: I thought my hon. friend would straddle the fence, if I put him to the test. These are a few of the Liberal free traders in the House. My hon. friend the Minister of Agriculture disowns the free trade policy, so I will accept it that he is a protectionist.

Mr. EVANS: I wish to ask a question simply for information and I would like to hear my hon. friend's answer. He says that England is saving £300,000 by giving a contract for shipbuilding to Germany. Will that not assist the shipping industry in England on account of their having that lesser overhead?

Mr. MANION: Yes. But what will happen to the shipbuilders in England who are out of work and going hungry?

Mr. EVANS: Is not industry in Canada suffering to-day because of an unduly heavy overhead?

Mr. MANION: No, it is because of the instability brought about by the many attitudes assumed by the government in regard to protection.

I was speaking of the free traders on the other side of the house. I will mention the protectionists. I will put the hon. member for St. James (Mr. Rinfret) among them if he wishes to go in. Then I will take the hon. member for St. Lawrence-St. George (Mr. Marler) and the hon. member for Sherbrooke (Mr. McCrea) and my hon. friend from George Etienne Cartier (Mr. Jacobs). These are a few of the protectionists in the House. I should not overlook my good friend from North Waterloo (Mr. Euler), he is something of a protectionist, and I have often wondered why he did not become contaminated by the hon. member from Brome (Mr. McMaster) who is so extreme in his views. I could name a number of others, but I will not do so.

In regard to those on the other side of the House who have no policy at all, I will mention the Prime Minister himself, (Mr. Mackenzie King), because I venture to assert that not even the Prime Minister himself knows what policy he supports on the tariff question.

Is it on the Senate that they are agreed? I do not think so, because we have seen a speech by the Minister of Railways (Mr. Graham) which does not agree with the attitude of the Prime Minister as expressed in his speeches in the western provinces. With regard to the railway question they are not

all agreed, because sitting over here to my left is the hon. member for North Waterloo (Mr. Euler) an out-and-out protectionist and just two seats away from him we find my hon. friend from Laprairie and Napierville (Mr. Lanctot), who wishes to give the National railways away for one dollar.

Mr. LANCTOT: I have always held the same opinion on that subject.

Mr. MANION: I laid the trap for my hon. friend and I knew he would say that.

Mr. EULER: My hon. friend said that I was a protectionist.

Mr. MANION: I meant that my hon. friend was in favour of national ownership. And my hon. friend beside him believes in giving away the National railways altogether.

Mr. LANCTOT: We would be better off in five years from now if we gave it away.

Mr. MANION: I do not intend to go into that question.

Mr. LANCTOT: I will tell the House what I think of my hon. friend and his party later. They are to blame for the railway situation.

Mr. MANION: I do not know what abuse my hon. friend is uttering now, because there is too much noise.

Mr. LANCTOT: I will tell the House what I do believe about my hon. friend and his friends.

Mr. MANION: I hope it will be printable. My hon. friend says that this railway condition is due to us. Well, I am just going to see whether it is due to us or not. Perhaps I should be classed among those to whom it is due, but I do not think this party is responsible. In 1896 there was only one transcontinental railway in Canada. In 1904 Sir Wilfrid Laurier and his government started the National Transcontinental and the Grand Trunk Pacific, and before he went out of power in 1911 his government guaranteed $35,000,000 for the extension of the Canadian Northern railway from Port Arthur to Montreal, which made the third transcontinental railway.

Mr. LANCTOT: Did the Conservative party oppose that scheme in the House in 1911?

Mr. MANION: I do not know whether they did or not.

Mr. LANCTOT: No, they did not.

[Mr. Manion.]

Mr. MANION: But I do know that Sir Wilfrid Laurier started the scheme of guaranteeing $35,000,000 to extend the Canadian Northern railway from Port Arthur to Montreal, and so made it the third transcontinental railway. The fact that we have three transcontinental railways should be laid at the door of the Liberal party, not at the door of the Conservative party.

Mr. GRAHAM: If my hon. friend will permit me: A railway running from the prairies to Montreal is not a transcontinental railway. That was the Canadian Northern railway position when Sir Wilfrid Laurier went out of power. The Conservative government of British Columbia—

Sir HENRY DRAYTON: Built the only paying part.

Mr. GRAHAM: Under charter—

Some hon. MEMBERS: Oh, oh.

Mr. GRAHAM: My hon. friend is afraid of what I propose saying. I deny the suggestion just the same.

Sir HENRY DRAYTON: Question.

Mr. GRAHAM: I rose and asked the privilege of making a correction, which my hon. friend (Mr. Manion) gave me. The Conservative government following the government of Sir Wilfrid Laurier through, I think, consultation with Sir Richard McBride, had the latter government issue a provincial charter to the Canadian Northern to build a line through the mountains to the coast. That started the downfall of the McBride government, and left—

Mr. MANION: I do not wish to interrupt my hon. friend but—

Mr. GRAHAM: Just another minute and I will be through. I was trying to point out that my hon. friend was wrong in saying the Liberal party ever established a third transcontinental line. The Liberal government refused absolutely to aid the Canadian Northern extension into British Columbia, but—

Mr. STEVENS: Sir Wilfrid Laurier granted the charter and declared there would be a third transcontinental. He himself is on record in Hansard as saying that he thought a third transcontinental railway was necessary. I will produce Hansard containing his speech in a few minutes.

Mr. GRAHAM: As a matter of fact, I happened to be the minister to whom the Canadian Northern came for aid for the line

through to Vancouver from the prairies, and Sir Wilfrid Laurier and myself absolutely refused that aid, saying they must make a success of their prairie line east, and after that the western extension might be considered. The Conservative party helped the Canadian Northern to build that extension, and thus are responsible for the third transcontinental line.

Mr. MANION: Mr. Speaker, I should like to point out that while I am not going to argue about the part of the line in British Columbia, yet I do submit that the part of the Canadian Northern extending from the head of the lakes to Montreal, which was not needed at all, was started by the guarantee of $35,000,000 made by Sir Wilfrid Laurier before he went out of power in 1911.

Mr. GRAHAM: Did not my hon. friend favour that?

Mr. MANION: I do not know whether I favoured it at that time or not. I was not then handling the affairs of the country; my hon. friend and Sir Wilfrid Laurier were. In 1911 I was quite a young man—a good deal younger than my hon. friend, for which I presume he is a little sorry.

Mr. GRAHAM: Not a bit.

Mr. MANION: At the same time I submit that that line across northern Ontario where in 350,000 square miles there are only 150,000 people is part of the line which should never have been built under any circumstances. However, the hon. member for Laprairie and Napierville was getting rather bitter at my discussing railway matters—

Mr. LANCTOT: By whom was that line from Port Arthur to Montreal built, was it by the Liberals or by the Tories?

Mr. MANION: I do not know who built it, but the contracts were let before the Liberal party went out of power.

But we have got some distance from the argument which I was making, Mr. Speaker. Burke once pointed out the need for some co-operation in regard to one principle for a party to be a political party, and I was showing that in railway matters, tariff matters and Senate matters the Liberal party have no unity of any kind; in fact, in all lines of thought they seem to be dwelling in a thick fog of confused ideas; but no, there is one principle as to which I should have made an exception: they are in agreement on the principle of power at any price—even the price of Canada. It was Daniel O'Connell who said that he could drive a coach and four through any act of parliament. Well, Sir, you could march a whole battalion of soldiers through the principles of the Liberal party to-day without disturbing their ranks in any way.

Now, Sir, what does the Conservative party offer the country in place of the policies which I have been criticizing? They offer a stable tariff policy which will bring about prosperity and success; and they offer it to all classes, to manufacturers and to farmers—to the 2,000,000 farmers of Ontario and Quebec who require protection. These farmers require the home markets which surround their farms, the home markets of Montreal, Sherbrooke, Three Rivers, the home markets of Hamilton, Toronto, Brockville, Peterborough and other cities; and they require more protection than they are getting at the present time to keep out the millions of dollars' worth of farm products which are now being imported and which can be produced in Canada. I have under my hand a report from the Department of Trade and Commerce showing, at page 1420, the imports of farm produce, and fortunately it divides these imports into those that can be produced in Canada and those which cannot. The report shows that of fruits, vegetables and animal products which can be produced in Canada, there were imported in the year ending March 31, 1924, $149,201,000—practically $150,000,000 worth of farm products, all of which could be produced here if we cared to produce them. We collected upon the products imported less than $29,000,000 in tariff duties, or something like 18 per cent; whereas our farm products going into the United States are charged at the rate of from 25 to 30 per cent. Let me give a few of the items. I regret that I am taking so much time,—

Some hon. MEMBERS: Go on.

Mr. MANION: —but I submit, at least half of my speech has been made by my hon. friends opposite. These are a few of the items we imported in that year:

Butter, over 1,000,000 pounds.
Cheese, 900,000 pounds.
Eggs, 5,000,000 dozen.
Fruits, $25,500,000.
Corn, 9,000,000 bushels.
Hides and skins, 49,000,000 pounds.
Lard and its compounds, 8,000,000 pounds.
Bacon and hams, 3,000,000 pounds.
Fresh pork, 10,000,000 pounds.
Pork in brine, 5,500,000 pounds.
Seeds, $3,000,000.
Vegetables, $6,000,000.
Raw wool, 15,500,000 pounds.

Those are a few of the items, all of which can be produced on our farms, and should be produced there. Let me give the duties on a

few of these items to illustrate what I mean by saying our duties are too low in comparison with those imposed by the United States:

Product	United States Duty	Canadian Duty
Wheat..	42 cents a bushel	12 cents
Oats..	15 cents a bushel	10 cents
Hay..	$4 a ton	$2
Potatoes	50 cents per 100 pounds	35 cents.
Butter..	8 cents a pound	4 cents
Cheese..	5 cents a pound	3 cents.
Eggs..	8 cents a dozen	3 cents

This list illustrates some of the goods which should be produced in this country, and it also illustrates the fact that we should have tariff for tariff with the United States. We can do no better in this country than copy the United States, which in area, in resources, in all the essentials of a country's development, is more like the Dominion of Canada than any other country in the world.

Mr. GRAHAM: Could my hon. friend—I am not going to make a speech this time—give the origin, say, of the butter and cheese that was imported? Perhaps he has not the figures—

Mr. MANION: No, I regret I have not the figures. I did not go into that; I did not want to take the time.

Mr. FORKE: I do not wish to take up time either, but I would like to understand why we were importing hides. Some hon. members in that part of the House stated in speeches that very few hides had been manufactured in Canada; that there was no market for hides because there was no manufacturing.

Mr. MANION: These are the figures of two years ago.

Mr. FORKE: I know, but the hon. member was saying that now we had to import hides.

Mr. MANION: These are the figures for two years ago; and by the way, I could have made the figures look very much worse if I had quoted those of three years ago. I cannot explain to my hon. friend why we are importing hides; I did not go into the details. I am giving information which I think my hon. friend should be glad to get, namely, information in regard to products we should be producing on the farms of Canada but which unfortunately we are importing.

Mr. FORKE: That is what I am puzzled about, because I know we can produce hides but we cannot find a market for them.

Mr. MANION: I have the facts here, from the Bureau of Statistics. If there is any mistake it is a mistake of the Bureau of Statistics. I was going to say—

[Mr. Manion.]

Mr. SPEAKMAN: May I ask a question before the hon. member proceeds? Do I understand him seriously to assert that the $150,000,000 worth of farm products that he refers to are all products which could be produced in Canada

Mr. MANION: I made the statement on the basis of information supplied by the Department of Trade and Commerce of this government; sometimes I do believe this government; in this case I do. I expected that question and I am quite ready for it. I confess that when I read the figures I had the same doubt that my hon. friend apparently has. But the figures show that in addition to that $149,000,000 worth of products imported which could have been produced on the farms of this country, we imported $236,000,000 worth of other farm products—that includes cotton, by the way. In other words, we imported into Canada in that year, according to these figures, $385,000,000 worth of farm products of all kinds, of which practically $150,000,000 worth were goods which could be produced on the farms of this country.

Mr. WARNER: May I ask my hon. friend how much of that import consisted of goods which were in season in Canada at the time the import was made?

Mr. MANION: The very fact that the Department of Trade and Commerce in their statistics show that these are goods which could be produced on the farms of Canada indicates that they came in at seasons when they could be produced here, otherwise they would not have been included in such statistics.

Some hon. MEMBERS: No, no.

Mr. MANION: Well, suppose strawberries came in, as they do, a couple of weeks earlier from the southern states than they are produced in Canada, should we take away the taste for strawberries on the part of the people of Canada so that they will not buy Canadian strawberries when they come in? Take the Okanagan valley; in that section of the country the fruit growers are up against the competition of the producers of Washington, Oregon and California, whose products come into our country at least a couple of weeks earlier than the products of our Canadian fruit farmers appear on the Canadian market. Well, should we take away from the people of the prairie provinces, or the people of Canada generally, if you will, the taste for fruits, and permit our fruit farmers in the Okanagan to go out of business? I submit we should not.

I was pointing out that the United States has had the most remarkable development of any country, bar none, in the history of the world. I was going to say that Mr. Blaine, who had a debate with Mr. Gladstone in 1896 on free trade and protection, which we are still debating, pointed out that between 1812 and 1861 the United States had tried free trade three times, and that after each one of these trials there were depression, unemployment, and panics. He said also—and this is according to the facts—that from 1861 on, after they had adopted a consistent high-tariff policy in the United States, progress and prosperity had been practically unbroken in that country.

Mr. McMASTER: Surely the hon. member, who is interesting us so much in his discourse, does not pretend that since 1861 they have not had panics, and severe panics, in the United States?

Mr. MANION: Oh, no. I have said in this House before, and I repeat it now, that no policy that anyone has yet discovered is a panacea for all hard times. There will be hard times occasionally in every country. But I submit that the hard times which occurred in the United States after that later period to which I have referred were very small in comparison with the periods of depression that had prevailed before. And, what is further, the progress of the United States from 1861 to the present day has been the most remarkable in the history of the world. So I submit that we should be more ready to copy the policy of a country which we so much resemble, the United States, than the policy of two little islands in the North sea whose area is only one-thirtieth of ours and whose conditions are altogether different from ours. I submit that that is the method by which we may succeed.

I am going to take the liberty of again quoting President Coolidge. He points out, in the same inaugural address to which I have referred—and I am very near the end of my remarks:

> These policies of better international understandings, greater economy and lower taxes have contributed largely to peaceful and prosperous industrial relations.

And he says:

> Under the helpful influences of restrictive immigration and a protective tariff, employment is plentiful, the rate of pay is high and wage earners are in a state of contentment seldom before seen.

That, I think, is a just reply to the Minister of Justice (Mr. Lapointe) and the Minister of Labour (Mr. Murdock) when they said the other day that there were twenty million unemployed artisans in the United States.

Mr. MURDOCK: Mr. Speaker, the statement was not made by either of the gentlemen referred to. If my hon. friend will stick to the facts—

Mr. MANION: Will my hon. friend tell me who made it?

Mr. MURDOCK: The record will show who made it, and who was quoted as making it.

Mr. MANION: This is a piece of fancy quibbling, Mr. Speaker. The Minister of Justice threw it at me across the floor of this House when I was speaking the other day, and then the Minister of Labour came in and quoted the words. I know who made the statement; he quoted Mr. Green as saying it.

Mr. LAPOINTE: Hear, hear.

Mr. MANION: Well, were they trying to put over a hoax on the people of this country? Were they just talking to hear themselves talk? Or were they really trying to confuse the people?

Mr. MURDOCK: No, there was no hoax being attempted at all. It was merely a statement of what a prominent representative of labour in the United States had said—no more; no less.

Mr. MANION: Well, it is a rather extraordinary attitude for the Minister of Labour to take. The Minister of Justice might be forgiven, because he is not dealing with labour conditions, but the Minister of Labour is dealing with Labour conditions. He puts before a sensible audience, as this House is usually, the statement that there were twenty million unemployed in the United States, quoting it from somebody—a statement which was false on its face. I know there was no such condition in the United States in its whole history. Why, twenty million people—that is one-fifth of the people of the United States; it would comprise the fathers of all the families in the United States! The thing was obviously false; and now the Minister of Labour tries to get out from under by saying it was not his statement—that he only quoted it.

Mr. MURDOCK: He is not trying to get from under any of it. We will deal with it later, and find out whether those who refer to it know better than my hon. friend.

Mr. MANION: Well, I will give my hon. friend a chance. He is quite at liberty to quote it again, but I am sure he will only make himself more ridiculous.

Canada, Mr. Speaker, is to-day in a low-tariff period, the rest of the world is in a high-tariff period, because in Europe you have a low price of money, low wages and low standards of living. Our tariff, therefore, is too low at the present time. The only thing to be done in this country from the tariff standpoint, the only thing that will put industry on its feet, is to raise the tariff applicable to the basic industries. Now, my hon. friends to my left are getting ready to ask me what I have been asked before, namely, why we did not do this when we had the opportunity to do it, back in 1920. The hon. member for Springfield (Mr. Hoey) nods his head, so that he takes the fatherhood of that question. Well, I will answer him. The reason we did not do it was because it was not necessary to do it at that time. In 1920-1921, the last year we were in power, conditions were good in Canada; business was good; unemployment was excellent; there was no exodus to any great extent of our people to the United States. My hon. friend from Vancouver Centre (Mr. Stevens) points out that I said "unemployment", instead of employment, was excellent.

Mr. MURDOCK: You were right the first time.

Mr. MANION: Rather strangely, my hon. friend the Minister of Labour (Mr. Murdock) pointed out on the floor of this House just the other day how good conditions were in this country in 1920. Not only that, Mr. Speaker, but the exodus from Canada at that time was very little: industry was stable; and, more important, the nations of Europe had not then got back to normal production and normal competition. But since that time these conditions have all changed. We have now the exact reverse of what was taking place then. European competition has come back, so much so that they are dumping their goods of all classes into this country, and putting out of business all classes of industry here. What is perhaps more important, this government has come into power, with as many tariff policies as a centipede has feet. The United States has also raised its tariff. The tariffs of every nation of the world have been raised except the tariffs of England and Canada, the two countries that are suffering more from depression to-day than any other country in the world. As a consequence of these changed conditions, the bottom began to drop out of business, and has been dropping out ever since, and everybody knows it except the government.

Let us look at the basic conditions in the United States and Canada. The United States national debt is not much less per capita than is ours. Our trade per capita is greater than theirs. Our bank reserves are good, our railway development is good, our national wealth is great. And yet we are not prospering as they are over there. According to the words of President Coolidge—I choose to take his word in preference to that of the Minister of Labour—conditions are good over there, and everybody knows conditions are bad in this country. What are the reasons for the difference? The chief reasons are that taxation is high in this country, higher than it is in the United States—our income tax, for example, is much higher. Secondly, the tariff of the United States is about twice as high on practically all lines of goods as our tariff.

Finally, Sir, we need a cool head and a strong hand to handle the affairs of this country. Instead of that, we have a weak head, and a hand that cares for nothing except holding the sceptre of power.

I have read a good deal of history in my time, and I have found that there have been a number of weak governments, but I have never found any government, except one, that could equal this government in incompetence, and that was the government of the Sultan Abdul Hamid, in Turkey, in 1885. He ordered the killing of the Armenians. This government is not killing the Armenians; it is killing industry, and driving out of our land into exile in a foreign country our Canadian boys and girls. Not only is this government not killing the Armenians, it is actually helping the Armenians, and the Czecho-Slovakians, the Germans, the French, the British, the Americans—everybody but Canadians. May I also point out that that famous Liberal, Mr. Gladstone, whom my good friend from Laprairie and Napierville (Mr. Lanctot) would not criticize, I presume, having in mind this government of Abdul Hamid made a famous speech in which he said the Turks should be "driven out of Europe bag and baggage." I say, Mr. Speaker, that the only salvation for this country is to drive this government bag and baggage from the Dominion of Canada, and to put in power a government that will bring into force a proper policy of economy, and a proper tariff policy which will give stability to industry, provide work for the unemployed, develop our resources, and build up a nation where our boys and girls can remain and find work instead of being forced to go to the United States to get it; a country where we will be able to look after hundreds of thousands of immigrants coming in from

the crowded countries of Europe. We must not only develop a spirit of love for our own country, but we must provide opportunities for our own boys and girls to indulge that spirit of love for their country. We must build up a proper protective policy which will bring about industrial development in this country, so that our boys on the farms and in our industrial centres will be able to remain in Canada and make a living at home.

About sixty years ago Macdonald, Cartier, Brown and the other Fathers of Confederation had the vision to dream of a great nation in Canada, extending from the Atlantic to the Pacific and from the Great Lakes to the Arctic ocean. If we are going to bring about a realization of that dream, we must profit by the lessons of history of the nations which have gone before.

Mr. McMASTER: Hear, hear.

Mr. MANION: My hon. friend from Brome (Mr. McMaster) will not say "hear, hear" to this, though it is just as true. The lessons of history teach me that there has been no country in the world that has ever progressed and reached prosperity except under a protective tariff. I make no exception when I say that. I do not wish to be diverted again, because I have taken up too much time now. But Great Britain, up till 1846, had the highest kind of protection, so high that she at times prohibited imports into Britain of lines of goods that interfered with home producers. She did not bring in free trade until 1865. For ten or fifteen years after 1846 Great Britain had duties on about four hundred lines of goods. It was not until Gladstone brought in his final free trade budget in 1860 that they had free trade in England. Up to the time they had protection in England, and that is only sixty or seventy years ago, England was the most highly protected country in the world. She was protecting her industries of every kind, and she only brought in free trade when she had become the master of the world from the standpoint of industrial production, when she had become the workshop of the world, and hoped to remain so, because they thought then Cobden was correct when he said that if England adopted free trade, all the countries of the world would adopt it in the next ten years. I could argue this further with the hon. member for Brome, but I do not wish to take the time. I say, Mr. Speaker, that no country has ever become great industrially or commercially except under a tariff policy of protection. That tariff policy of protection is being fully employed by all the countries of the world to-day except Canada and England. Not only is that a precept which we should live up to, but we should have a policy of economy. The United States and England are living up to that precept of economy, and consequently are cutting down their national debt, whereas in this country, taking the figures of the Acting Finance Minister himself, we have added $13,000,000 to our national debt in the past year.

Let us get into line with these different policies. Let us adopt the policy of lower taxation, by cutting down the expenditures of this government. Let us adopt the policy of protection, which will keep our home markets for our Canadian people, and permit them to compete with the other countries of the world. Let us adopt a policy of economy on the railways. Let us adopt a policy with an efficient immigration as its aim. Adopt these four as the corner stones in the building up of our nation, and cement them with a united Canadian spirit, and it appears to me you will then bring about that progress, prosperity and content which the people of Canada desire at the present time.

Hon. J. H. KING (Kootenay) (Minister of Public Works): Mr. Speaker, before proceeding with the remarks I shall make, I desire to be in accord with the other members of this House in expressing my personal regret at the continued absence of the Minister of Finance (Mr. Fielding). His record as a public servant and as a minister of the crown is one that I think commands the admiration of most people in Canada. His integrity, earnestness of purpose, and his courtesy are admired by all.

My hon. friend who has just sat down (Mr. Manion) has followed to-day pretty much along the lines of the former Minister of Finance (Sir Henry Drayton) in his attack on the financial statement of this government. I think it can be easily contended that he has not succeeded in his effort to upset the facts as stated in this House by the Acting Minister of Finance (Mr. Robb) some days ago. It is true he drifted far and discussed many matters. We have had to-day a real campaign speech delivered by my hon. friend from Fort William and Rainy River (Mr. Manion), the hon. member apparently thinking it would be wise to try out a speech of that kind in parliament before going to the electors. He referred to the matter of immigration—

Mr. MANION: If my hon. friend will permit me: I hope he will not attempt a campaign speech; I know he is above all that.

Mr. KING (Kootenay): We will see when we get through. My hon. friend referred to the matter of immigration and said that in 1914 some 400,000 people came to Canada. Later on he said that in the last year of Conservative rule 400,000 people came to Canada.

Mr. MANION: I noticed the mistake; I meant the same year, before the war.

Mr. KING (Kootenay): I mention this because otherwise wrong inferences might get into Hansard and be accepted throughout the country, and if they are not corrected it leaves a false impression. Now, as is well understood, immigration does not come about over night, it is the result of a policy carried on for a period of years. People do not emigrate to another country unless there is a reasonable chance of succeeding in the new land. During the years between 1900 and 1911 the policy pursued established a record in Canada, people were attracted from other countries and they came to this country in thousands and hundreds of thousands. It is true that after the defeat of the Laurier government in 1911 the flow of immigration did not cease but continued up to 1914.

Mr. MANION: It increased.

Mr. KING (Kootenay): There may have been an increase but not under the policies that prevailed and the conditions that existed in Canada between 1911 and 1914. Because it is well known—hon. gentlemen in this House know, the people of Canada know—that in the spring of 1914 there was more unemployment and more distress throughout this country than there has ever been at any time since that year. Even after the war period the conditions we had in western Canada did not compare with the conditions which existed there in 1914 in the matter of unemployment.

My hon. friend complained of railway expenditure. It is well understood—

Mr. MEIGHEN: Will the minister give an example of any appeal in that year for even provincial or Dominion relief by reason of unemployment?

Mr. KING (Kootenay): In those years the people of Canada appealed to the authorities responsible, but of late years a system has grown up in this country of appealing to the federal government. "They have the money, get it from the Dominion government." That is the view that exists in some quarters in Canada to-day. But the people are supporting the government to-day in withstanding appeals of that kind and in placing the responsibility where it properly belongs.

My hon. friend (Mr. Manion) complained of the expenditure in regard to the government railways. What is the history of that question? During the regime of my hon. friends opposite they brought about a consolidation of those railways; they provided that there should be a national system that should operate as any private system might operate. Such is the condition we have to-day and it was brought about by hon. gentlemen opposite. My hon. friend (Mr. Manion) spoke of a capital expenditure last year of $118,000,000. I do not think he was fair to parliament in making such a statement. Later on when his attention was drawn to it he explained that he did not intend to convey any such idea. However, the statement will stand further scrutiny and if the facts are carefully examined it will be seen that the $118,000,000 referred to was a fair and proper expenditure under existing conditions.

My hon. friend has also seen fit to charge that great extravagance exists in connection with the public works of this country. I should like the hon. gentleman to be fair. What are the facts? The Department of Public Works is administering and carrying on its services for one-half the appropriations that were voted in 1914. Furthermore if we compare the relative value of the dollar to-day with its value in 1914 it will be evident that there is an earnest effort to economize and that economies are being effected by the government. It is a surprising thing that my hon. friends opposite have lately become addicted to the making of comparisons with the United States. How wonderful conditions are in the United States, they say, and how terrible they are in Canada. Why cannot we be fair with ourselves? There is prosperity in the United States but it is a prosperity growing out of the war. The United States did not enter the war until two or three years after Canada did, and during that period it accumulated great wealth which wealth it holds to-day. Comparisons of that kind by Canadian public men are absolutely unfair to this country and to its people.

My hon. friend also referred to the appointment of royal commissions and for some reason selected the Royal Grain Commission for criticism. Well, now, what is probably the largest trade we have in Canada to-day? It is our grain trade. There have been complaints, not within the last three or four
5 p.m. years but over a period of many years, with respect to the marketing of grain, and there have been previous

grain commissions. When the present government assumed office considerable uncertainty existed with respect to this trade, and there were many demands that a royal commission should be appointed to investigate the existing conditions.

Mr. MANION: The reason I spoke of the grain commission and the pulpwood commission was because they were the only two for which I could get figures from the government. They are the only ones for which I have received figures so far.

Mr. KING (Kootenay): I am just following my hon. friend's remarks. He indicated to the House that there had been a waste of public money in appointing the Royal Grain Commission.

Mr. MANION: Not especially on that commission, on a lot of them.

Mr. KING (Kootenay): You mentioned those two and they are the ones I will deal with. As I have already stated, this was not the first commission appointed to inquire into the grain trade; there have been others and there will probably be others again because it is a very important trade. The present commission presented a very comprehensive report, and it is the hope of the government that by reason of that report parliament will agree on such comprehensive legislation as will remedy some of the evils complained of. The cost of the commission was $169,707 which works out at about one-fifteenth of a cent per bushel taking a crop of 250,000,000 bushels. So it is evident that the country will get good value for the money expended. As far as the Royal Commission on Pulpwood is concerned there will be an opportunity probably of discussing the matter later. I can only say that during the last week representations have been made by hon. members of this House suggesting that there should be an embargo on our forest and other raw products. If such a policy is to be adopted surely the people of Canada should be fully informed in regard to the facts. In the past other commissions were appointed but they did not bring about such results as the government of the day might have wished for.

I was rather surprised that my hon. friend accused this government of extravagance with respect to such a trifling matter as the trip to Wembley exhibition made last year. The whips of the several parties in this House were selected to go there in the interests of the Canadian parliament and the Canadian people.

It was a most useful trip, full of information and enlightenment, and the hon. gentlemen who participated in it will be in a position to serve their constituents and their country by reason of the journey. And yet hon. gentlemen opposite speak of it as a terrible thing. Why, Mr. Speaker, we have had such trips as this on other occasions. There have been at other times trips to the Old Country in the interest of Canada and the Canadian people. I do not think my hon. friend (Mr. Manion) will succeed, if he has no greater examples than the one given, in impressing the people with the idea that the government is guilty of extravagance.

Mr. HOEY: Will the minister be good enough to state what the cost of the Wembley trip was?

Mr. KING (Kootenay): I understand it was $1,400 for each member, or $4,200 in all. We have also heard from my hon. friend (Mr. Manion)—and I am going to clear this up before I proceed further—a complaint regarding the railways and he tried to go back and show that the Liberal party were responsible. My hon. friend finds himself to-day in a very peculiar position. From 1900 to 1911 he was a good Liberal, and if the Liberal party made mistakes during that period, he was supporting them. If the Conservative party made mistakes after 1911—and they admit they did in regard to the railways—he supported that also. So he has a double liability and a double responsibility.

Mr. MANION: I was very young then.

Mr. ARCHAMBAULT: He accepted the position of candidate of the Conservative party after that in 1917.

Mr. KING (Kootenay): I do not think it can be fairly contended by the people of Canada, let them be of one party or the other, that the construction of a second line of railway in this country was not a necessity. It was a necessity; it opened up a very wide stretch of country, and it effected a great deal for the settlement of Canada and was to the advantage of the people of Canada. As regards the Canadian Northern which grew out of the prairies and extended east to the eastern seaboard, that was a natural development, because its traffic developed in the prairie country and it had to come to the eastern seaboard in order to carry the traffic that arose along its line. In regard to whether that was justified or not, we have the statement recently made in New York by Mr. Beatty, president of the Canadian Pacific:—

If Mackenzie and Mann had confined their operations to the prairie provinces and their connections in eastern Canada they would have been the wealthiest men in Canada to-day.

Through political manipulations that took them beyond the bounds of the prairies, they destroyed their project. My hon. friend inferred that the people of this country should not take advantage of opportunities that are afforded to the people of the world to import vegetables or fruits in season that they may like to have in their households. I for one would not take that position. I hope the people of Canada will always be in a position and have the means to import these delicacies and any other things they may require in their households. Is it to be the policy of the Conservative party to say: You shall not import oranges, lemons, bananas, strawberries, into your household? The thing is absurd and will not, I am satisfied, appeal to the people of Canada.

Mr. PRITCHARD: Was there any material difference between the duty on that farm produce coming into Canada in 1923 and 1921?

Mr. KING (Kootenay): No difference at all. There has been no change.

Mr. LAPOINTE: A double liability again.

Mr. MANION: May I inform my hon. friend that there is a difference on the other side, that the United States have raised their tariff about twice as high?

Mr. KING (Kootenay): They are not importing any bananas or oranges or lemons. They are not doing us any harm in that regard.

There has been a desire apparently on the part of the opposition to create the impression that the budget is a thing of mystery. That might be all right in some country districts where people are not familiar with the term "budget"; but surely in parliament each and every member knows that the budget is merely the setting out of revenues and expenditures—by whom? Not the minister, but by competent officials in the Department of Finance, setting them down as one would do in one's own business or in the business of a corporation, and at the end of a year striking a balance between the revenue and the expenditure. I think it will be generally admitted that the Acting Minister of Finance (Mr. Robb) is always concise in his statements, and it can also be admitted that he is not of the type that would undertake to deceive this House in the matter of balancing the accounts and affairs of a country like this. My hon. friends contended last year in parliament, and then during the interval between sessions, with more or less success, that this government had been responsible for a change in the method of bookkeeping. That was refuted last year in the House; but apparently my hon. friends thought they could continue a former programme that would be effective in the country and contend that, instead of the government having a surplus of $35,000,000, as was shown last year, there was really a deficit. Their contentions were discounted and have been effectually answered and discounted this year. The Acting Minister of Finance, true to his Scotch instincts for truth and fair play, called in, not one, but two chartered accountants. A day or two ago the hon. member for Vancouver Centre (Mr. Stevens), in referring to the action of these chartered accountants, tried to confuse the issue and did in Hansard leave the inference that these chartered accountants were called in to certify as to the correctness of the audit. To illustrate his point, he read the certificate of the auditors to the balance sheet of the Canadian Pacific. Does my hon. friend think for a moment that that can be put over in this House or in the country? One was a certification as to the method employed in bookkeeping. The other was a certification as to the correctness of the annual statement. The government of Canada do not call in outside auditing firms to confirm the annual statement. We have an Auditor General appointed by the Parliament of Canada, whose statement is brought down each and every year, and that is the audited statement of the affairs of the people of Canada. My hon. friend who, the other day, undertook to intimate that this certification was of no value, was absolutely wide of the mark and side-stepped the question entirely. The certification is of value in this respect, and I am going to read it again because the people of Canada should have this matter finally cleared up in their minds. The certificate reads:

> We have examined the balance sheet of the Dominion of Canada as at March 31, 1924, and we certify that the balance sheet conforms to the balance sheets of previous years in not including in the net debt of the Dominion, issues of the Canadian National Railway Company and companies included in its system, which carry the guarantee of the Dominion of Canada. Such guaranteed issues are shown year by year as indirect liabilities.

> GEO. EDWARDS,
> Of the firm of Ewards, Morgan & Co.
>
> W. GARTH THOMSON,
> Of the firm of Peat, Marwick, Mitchell & Co.
>
> Ottawa, Canada, 27th January, 1925.

Mr. STEVENS: The hon. gentleman will find all he has stated in my own remarks. The point I make, if he will just try to understand it, is this, that prior to last year, that

is the year ended December 31, 1923, there had been no consolidated railway statement, but for that year there was one. That would apply also to 1924. My complaint was that this consolidated railway statement was not included in the presentation to the House, and I pointed out that the criticism regarding former accounts did not apply now as it did in previous years.

Mr. KING (Kootenay): I thought I had made myself entirely clear. The certification was for a purpose; it speaks for itself and clears the situation. When the former Minister of Finance (Sir Henry Drayton) was confronted with a certification the other day, what did he say? He said, "All you can say is that we did it." If our hon. friends had wanted to be fair in this matter they would have said, "Yes, that was our system, but we have changed our minds. We think the railway obligations should be a direct and not an indirect liability and should not be confused with the national budget." Personally I am not of that opinion. It does not make very much difference possibly whether they are considered a direct or an indirect liability. But we are only following the procedure generally followed by governments. The government of Ontario does not carry the Hydro Electric Commission or its expenditures as a provincial expenditure. It is an indirect liability, and you will find in the case of the provincial governments generally that expenses of this kind, which are out of the ordinary run of government activities, are not carried as a direct liability; but I think it is important that there should be a separation, and that the expenditures pertaining to the Canadian National Railways should be kept distinct and separate from the general expenditures of the government. We have entered upon a large and important experiment in the matter of government ownership, and I think it is wise and in the interests of the Canadian people that they have full knowledge as to what this expenditure may cost them.

Mr. WOODSWORTH: Would the hon. minister give us full information, for example even to the salaries paid to the higher officials of the organization?

Mr. KING (Kootenay): As I stated a few moments ago, the Canadian National is being carried on and operated as a distinct company, under directors and a board of management. Are you going to place it in a different position from competing lines? The manager says we should not give this information. If we did we would open the doors to our competitors and it would be unfair to us. That statement has been made by the Minister of Railways (Mr. Graham) and I think it is probably an answer to my hon. friend's suggestion. I think the government would have to be guided by the advice of the president or management of that railway in regard to information of that character.

Before passing on to another criticism, I desire to say that I have had some little experience in these matters. I have listened to many budget speakers, not in this parliament but in provincial legislatures, where political warfare is waged very much as it is in this parliament, and on each and every occasion when the government has a surplus I have found that it has been a bitter pill to the opposition; they do not like it. But being a bitter pill to the opposition does not prevent it being soothing and gratifying to the taxpayers of the country. The surplus of last year, the reduction in taxation, i.e., the reduction in the customs duties and in the sales tax of some twenty-four or twenty-five million dollars were well received by the taxpayers of the country, and although the surplus is not as large this year, it is still gratifying to the people of Canada to know that, after the final closing of accounts for the year of revenues received and the expenditures made by the government there was a balance in favour of the country and that there was a substantial surplus.

My hon. friends have taken exception to the manner in which the government have handled the Roumanian and Grecian loans. It was rather surprising when one considers the history of these loans. The loans were made by our hon. friends opposite when the Canadian credit was almost at the breaking point, when the Canadian dollar was worth from eighty to ninety cents, and during my hon. friends' term of office it was a frozen loan, there was no interest paid and it accumulated, but in 1922 arrangements were made, through the high commissioner in negotiation with the Roumanian and Grecian governments, whereby the interest that was due was consolidated in the form of a bond and became part of the joint debt of those countries to Canada. The Acting Minister of Finance (Mr. Robb) very properly stated the other day just what took place. We had a loan made by the late government on which there was no interest being paid. The interest had accumulated to some $4,000,000. A bond was taken from these countries for the payment of this interest and the whole loan consolidated. In the arrangement new

securities were given to the Dominion for the total indebtedness, and they were further secured by specific charges on certain revenues of these countries. In the case of Roumania the security of the new bond is a fixed charge upon the export duties charged on wheat and other export products. In the case of Greece their obligations are a charge upon the revenue of the International Financial Commission appointed to administer specific revenues of the Greek government, for the purpose of meeting the charges in connection with their external indebtedness. These governments since 1922, have been paying their interest charges regularly and promptly, and in the case of Greece part of the principal. You have this position to-day: what was a frozen loan formerly is now a loan on which not only the interest is being paid but the principal is being liquidated.

Mr. HALBERT: How was the loan made? Was it in cash or in goods?

Mr. KING (Kootenay): I believe it was given in cash or credit.

An hon. MEMBER: Goods.

Mr. KING (Kootenay): I am told it was in goods.

Mr. HALBERT: Then by what firms were the goods supplied?

Mr. KING (Kootenay): I am not familiar with the early stages of the loan. There has been a discussion in regard to it, and probably the older members of the House will know.

An hon. MEMBER: Paint.

An hon. MEMBER: Varnish.

Mr. STEVENS: It is an old story.

Mr. KING (Kootenay): It is revived this session.

Mr. ARCHAMBAULT: It is still good and still has some varnish.

Mr. KING (Kootenay): It is surprising, Mr. Speaker, where party exigencies will force our hon. friends opposite. They have been touring this country and in and out of parliament complaining that the people of Canada are exporting their excess production of raw material. The nation is very much like an individual who, to pay his debts and carry on, must sell in the markets open to him the products of his energy. I cannot think my hon. friends are really serious when they talk as they are talking these days of a tariff wall that would prevent the importation of any manufactured goods into Canada and of an embargo that would prevent the raw materials of the country going out of Canada. If that is so, and if it should come to pass, then the Lord help the people of Canada. Conditions are bad enough to-day, and they were bad enough in 1914. Conditions were bad enough between 1878 and 1896. But if this policy that is being promoted and being announced by our hon. friends opposite—that is a high protective policy that will not permit importation of manufactured goods into Canada and an embargo on our raw materials—is to be adopted, then I am satisfied there will be no balanced budget, and Canada will not be in a very happy or prosperous condition. There is a lot of hectic talk these days about the export of our raw materials. To-day in every line of our basic industries we are producing more than we can consume. Is that production to cease or to be restricted to our own requirements? Surely not. As regards three of our basic industries, forestry, agriculture and fisheries, under proper scientific handling they can be conserved and be made increasingly valuable. In the case of forestry this is proven in Norway and Sweden, much older countries than ours, which to-day under a proper system of conservation of their forests are exporting their raw products and selling them in the markets of New York and Boston in competition with those of Canada and the United States.

Mr. DICKIE: What raw forest products are coming from Sweden and Norway to the markets of New York and Boston? I mean absolutely raw products, such as saw logs?

Mr. KING (Kootenay): There are degrees of raw products. Sawn lumber dressed on one side is comparatively raw in its manufacture, and that is entering the markets of New York and Boston to-day from Norway and Sweden in competition with the Canadian and United States product.

Mr. DICKIE: We have no objection to sawn lumber.

Mr. KING (Kootenay): Then it is a matter of degree. My hon. friend says he has no objection to sawn lumber coming in. But he does object to pulpwood that has been rossed.

Mr. DICKIE: That is a small item.

Mr. KING (Kootenay): It is not a small item. The rossing of a cord of pulpwood represents as much in cost and energy as the work on one or two thousand feet of cut timber.

Mr. DICKIE: If I might interrupt again? Why not carry on the manufacture a little further to the pulp, and so enrich our workmen and everybody else to the extent of 50 per cent? That is where our assets are diminishing.

Mr. KING (Kootenay): My hon. friend has asked me about raw products from Norway and Sweden entering the American markets, and I have given him what I understand to be one of those raw products. But who are our greatest competitors to-day in those markets in regard to newsprint and kraft paper? It is these little countries whose forests have been cut and recut for centuries, but through a proper system of conservation those forests to-day are producing in competition with the forest wealth of this great continent. There is no question that there has been frightful waste and extravagance in the handling of these great natural resources, but the waste and destruction has not been in the marketing of the raw products, it has been incident to the carelessness of our people. Fire has been the chief destructive cause. The homesteader in clearing his land has not taken the care he should have taken. The prospector exploring ore veins has at times found it convenient to remove the timber in order that he might better see the character of the country and its geological formation, and he has resorted to fire. But the homesteader and the prospector have not been the worst offenders. We know that railway companies in times past have not properly protected the forest growth adjoining their right of way. The lumberman himself has not always taken proper care to ensure his limit against fire. Many of those who are complaining most bitterly to-day against our raw products being exported are probably more responsible than any others for the terrible destruction of our forest wealth in the past. Fortunately to-day there is a more wholesome regard on the part of the people for our forest wealth; they are beginning to realize what an important part our forests play in the regulation of our rivers and streams, our climate, and so forth.

All our governments to-day, provincial as well as federal, have forestry departments whose staffs are composed of men who have graduated from forestry schools. They are devoting a great deal of time to the conservation and improvement of our timber resources, but they have had considerable difficulty in educating the people to the necessity of voting large expenditures for this work. Anyone who is familiar with lumbering operations on the Pacific coast, particularly on Vancouver island, knows that the lumber men in moving tremendous trees through any section of the country take off all the young, small growth with their drag line. This destroyed growth dries out and in a very little time becomes a fire hazard. As my hon. friend from Nanaimo (Mr. Dickie) said last night in his very interesting and instructive address, when this brushwood takes fire it throws out such a tremendous heat that the chances are that the seed bed will be destroyed and there will be no fresh growth of timber for many years to come. I have travelled through the inland portions of northern British Columbia, and have seen evidences of fires which probably occurred 100 to 150 years ago, and only in the last few years has nature begun to reforest. Fire is the greatest evil we have to contend with although it is true that in certain sections of the country trees suffer from other causes. For instance, recently in New Brunswick, there has been widespread destruction through the attacks of the spruce bud worm, whole sections of spruce having died and a few years later they will look as if they had been fireswept. But eventually science will entirely control these insect pests. The only agency, however, to prevent fire is proper regulation of timber operations, adequate protection and careful patrol work during the fire season,—all of which is going to cost money. In addition to taking these measures against fire, some of our provincial governments—most of the timber being under their control—are making surveys of such sections as are suitable for reforestation, and we find to-day that large areas are being set aside and protected to allow nature to reforest.

With respect to agriculture, we have only to look at the older countries of Europe to realize that our great competitors in Great Britain are Denmark, Belgium and Holland. We know that under scientific methods the products of our soil can be shipped to their ultimate market in the finished state to compete with those of any other country. This is also true with regard to our fisheries. The fishing industry by scientific treatment can be made ever-producing. I noticed within the last few days that a conference is being held in British Columbia between the United States and Canadian interests in order that a rehabilitation of the salmon fisheries on the Fraser river may take place. In line with that policy this parliament adopted two years ago a treaty with the United States government pertaining to the conservation of the halibut banks on the Pacific coast off Prince Rupert. I personally am desirous that there

shall be such a development in Canada as will result in the manufacture in our own country, as far as humanly possible, of our raw material into finished products. But to say that that must be done and that there should also be embargoes to prevent any material from going out in its raw state is absurd; it is a policy that would not be tolerated for a moment by the people of Canada.

We have a different condition in the mining industry. It is true that the ore that is taken out of the ground cannot be replaced by human intelligence or by scientific effort, but surely, having regard to the tremendous wealth we have in these mineral products, the extent of which is practically unknown to the Canadian people to-day and will not be fully known for many years, it is not the time to say to the people of Canada that they shall not ship out of the country the raw material from the mines. It is interesting to view the history of the parties in this regard. I may be mistaken but I have yet to learn of any act on the part of the Conservative party while they were in power, from 1911 to 1921 or in the period preceding, which tended toward the development of refining processes in connection with our ores in Canada. I would ask you, Mr. Speaker, to contrast that policy, or lack of policy, on the part of our hon. friends with the policies enunciated and put into practice by Sir Wilfrid Laurier and his government in the years they were in office. By a system of bounties the iron and steel industries in Canada have been built up. These industries have had their ups and downs, and we know that iron and steel are being made from our ores and that the products of this refinement are being used in the commerce of our country. The bounties as applied to the lead and zinc industry were a greater success. The history of that policy is rather interesting. At a time when the lead and zinc industry in British Columbia was apparently going out of business, the government undertook to set aside a certain sum of money to be used in the form of a bonus to be paid in accordance with the value of the ore refined. Before the period limiting the bonus had expired the stimulation to the industry had been such and the market conditions had been so improved that the price attained by the mineral was in excess of the price on the basis of which the government had agreed to pay the bonus, so that nothing more was required to be done so far as the bonus was concerned. To-day we have the lead and zinc industry well established in western Canada. Canada is making more lead and more zinc than she requires for her own needs, and is becoming an important factor on the world's market in connection with these products.

The hon. member for Nanaimo (Mr. Dickie) an evening or two ago, as I have stated, gave us a very interesting address on the subject of timber waste. But he hardly arrived at a conclusion. He came pretty nearly up to an embargo, but he went back to the question of waste; the hon. gentleman is too shrewd, too clever a business man to go that far. He said in conclusion that he was not satisfied that an embargo would be the proper thing; he thought perhaps an export duty might be wise. If I followed him correctly, I think that was what he said. Well, I do not take exception to my hon. friend's attitude. I am not sure that we have arrived at the position where we should impose export duties on raw material. The question is a debatable one, especially at this time when Canada's position is such that she must have revenues to meet the interest on her national debt, as well as to reduce the debt itself. There is a field there that might be surveyed by experts, bearing upon the question whether Canada would be entitled to take some revenue from the raw products by way of an export duty. I would be prepared to debate and consider that, but as to an embargo, I would say no.

Mr. McQUARRIE: May I ask the minister a question? Is he opposed to embargoes of all kinds against the sending of the products of Canada to other countries?

Mr. KING (Kootenay): I am opposed to the policy enunciated by my hon. friends, a policy of high protection that will not permit the importation of manufactured goods into Canada and will prevent the exportation of raw products.

Mr. McQUARRIE: No; the question was as to embargo. I understood the minister to say he was opposed to embargoes. Did I understand him correctly?

Mr. KING (Kootenay): I have repeated it, yes.

Mr. McQUARRIE: Embargoes of all kinds?

Mr. KING (Kootenay): As proposed by my hon. friends. There may be occasions, in war time or times of stress, when embargoes should be imposed, but I have not seen the time as yet in Canada. As to its being a policy for a great party, I would not like to be one of the party to endorse it.

Mr. McQUARRIE: Just to be more specific, Mr. Speaker, is the minister in favour of an embargo against the export of sock-eye salmon?

Mr. KING (Kootenay): My hon. friend comes from the Fraser river. He is fully conversant with the sock-eye salmon industry, and if he wishes to dilate on the merits of an embargo, he will have the opportunity to do so.

Mr. McQUARRIE: But I am asking a question.

Mr. KING (Kootenay): Just a moment—

Mr. DEPUTY SPEAKER: The hon. member is not entitled to put a further question unless he has the minister's permission.

Mr. KING (Kootenay): I have stated my position quite fairly regarding the matter of an embargo.

Mr. McQUARRIE: Do I understand that the minister refuses to answer the question?

Mr. KING (Kootenay): I have not refused, Mr. Speaker. I have declared my position, and have tried to make it clear to this House. I have stated that in times of stress conditions may arise which would make an embargo on certain products necessary. But as a policy for a great party in conjunction with a high tariff policy—well, the embargo is the limit.

Just before the opening of parliament this year, Mr. Speaker, we had a rather unusual display of activity on the part of our friends opposite in an attempt to precede His Excellency the Governor General in his annual speech to this House. In the Ottawa Journal a day or two before the meeting of parliament, the Conservative party, through their leader, stated the policy which they were prepared to follow; and that policy appeared in the news columns of the press of the country generally. This statement of policy reads very nicely; it would seem to be a panacea for all Canada's ills. In fact, it reads very much like a patent medicine advertisement. The right hon. leader of the opposition proposes a policy of increased protection, stating that it would give new life to Canadian industry, would enlarge the Canadian market for farm products, would create employment for our workers, increase traffic for our railways—by which alone, they state, an all-round reduction in freight rates can be secured. It would also add to the revenue, they say, thus permitting a reduction in internal taxation. Hon. gentlemen opposite would lead the people to believe that if Canada was touched by this magic wand of protection all these things would come about. The proposals are so incredulous that one wonders if he is not living in fairyland.

There is nothing new in the policy of high protection. As far as the Canadian people are concerned we have had it in operation for a period of many years, and it is in operation to-day in some instances. I need take only one example, the automobile industry, which enjoys a protective tariff of 35 per cent. That duty may not be in accord with what our hon. friends opposite are going to propose when they get into power; that may be too low for them. I listened to the former Minister of Finance (Sir Henry Drayton) the other day when he was trying to convince this House that in view of the conditions in Canada we should adopt a protective policy similar to that adopted by the government of France. He read from the French tariff, showing that the schedules had been increased by 1,000, 2,000 and 3,000 per cent in some cases. I think we might fairly assume that for every $100 the manufacturer puts into an automobile, he has a protection of $35, and I think we may also fairly consider that at least adequate protection. Hon. gentlemen opposite say that if we gave protection of that character, we would then turn into the pockets of our workmen the expenditure necessary to manufacture this necessary utility; but has it worked out that way? I find that in the year 1920 we imported 13,079 cars, valued at $14,035,000; in 1923 we imported 7,987 cars, valued at $11,038,000; in 1924, we imported 10,889 cars, valued at $11,442,000; making the value of the total importations for the three years, $36,515,000. So this much vaunted protection has not worked in this case. The imports in those three years amounted to $36,515,000, and if I were to follow the course of my hon. friend the former Minister of Finance, who took the importations of manufactured goods the other day, divided them by 1,200, and then said that that many thousands of people would have had employment in this country if we had had protection, I would take these figures: Dividing 36,515,000 by 1,200 gives 30,428. Divide that by three again, the imports covering three years, and you have 10,142 workmen that should have but did not have this expenditure in Canada on account of this high protection. The thing is a fallacy, Mr. Speaker. It does not work.

The automobile industry is, of course, an important one to Canada. I was rather amazed when I found the extent of the importations, but more greatly so when I looked at the ex-

portations from Canada. I find that in 1922 we exported $14,883,000 worth, in 1922, $8,082,000, in 1924, $37,742,000, or in those three years Canada exported automobiles to the value of $60,607,000. In addition to that, we exported in the same period $8,100,000 worth of automobile parts; so it is a rather important industry.

My hon. friends opposite might say—I would expect them to say, and I say it in order that they will not—look at the growth of this industry under high protection. They would say high protection had made it possible for Canadian manufacturers to export these automobiles. We know that is not so. Capital has come into the automobile business in Canada on account of certain preferences which the Canadian people enjoy in certain markets which the Americans do not enjoy, and that is why this development of the industry has taken place, and why there is this large export business.

Mr. McQUARRIE: Would the minister discuss for a few minutes a tariff on eggs?

Mr. KING (Kootenay): I do not propose to be interrupted by my hon. friend unless he has something of interest to say or a question to ask that bears strictly on my argument.

Mr. McQUARRIE: That is a question of very great interest in British Columbia.

Mr. DEPUTY SPEAKER: The hon. member has no right to persist if the member who has the floor does not wish to answer, or desires to continue along other lines.

Mr. KING (Kootenay): I am not worried about questions, but this question is not applicable to my argument just now. Probably we can let it rest. My hon. friend apparently is interested to-day in eggs and sockeye salmon. He can make an address on them later.

Mr. GRAHAM: Let the eggs set.

Mr. KING (Kootenay): I am satisfied that hon. gentlemen opposite will have a very difficult task in trying to convince the people of Canada that a policy of high protection such as they advocate will be to the advantage and interest of the Canadian people. If this policy is of such great value, I am wondering, and I think the people of Canada are wondering, why in heaven's name did not the Conservative party bring this policy into effect in 1911? They cannot claim they did not do so then on account of the war, because from 1911 to 1914 they had a period of tranquility, and again from 1918 to 1921 they had a further period. In 1911 the Conservative party, which to-day is proposing a high protective tariff, came into power on the defeat of the greatest trade agreement that was ever made by a Canadian government, an agreement which if it was in force to-day would mean prosperity to the Maritime provinces, prosperity to the provinces of central Canada, prosperity to the prairie provinces, and prosperity to the province of British Columbia. But not having this agreement, Canada has been forced to go further afield for her markets, and it can be said to the credit of her people that she has succeeded, and has not been daunted by the mistake she made in 1911. The Canadian people have gone forward and steadily increased the growth of their export, so that to-day Canada stands per capita as the greatest exporting nation in the world.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. KING (Kootenay): Mr. Speaker, before six o'clock I had not only dealt with the criticism of the official opposition on the budget but I had also gone to the point where I think a government are entitled to go. That is, that when the party opposing have laid down their policy as a remedy for the conditions that exist, they should try and show the fallacies of that policy. My hon. friend the member for Fort William and Rainy River (Mr. Manion), who has a very excellent vocabulary which he does not always use with discretion, made use of the term "gold brick." I propose to employ that same term now because it is absolutely applicable with respect to hon. gentlemen opposite. That party gold bricked the people of Canada in 1911. They are the very same men who to-day—through the press, and by their speeches on public platforms and in parliament—are libelling the government of this country and depreciating the efforts of our people. However, I do not think there is much danger of the people falling for those proposals coming from the source from which they do. "Once bitten twice shy," and the people of Canada have not forgotten 1911 and the years that followed.

Sir, I do not believe that any good will ever come to a party that decries its country. In the early days of this parliament it was said that the group of members to the left of the official opposition were pessimistic as to Canada's future. If that was so at

the beginning of this parliament as respects our Progressive friends, all I can say is they never reached the state of gloom and bitterness that prevails in the Conservative party to-day, a condition which is more characteristic of the leaders of the party than of the rank and file. The most notable examples, probably, are the right hon. leader of the opposition and his lieutenant from the city of Vancouver, one of the finest cities in Canada, a city that has enjoyed since 1922 a development unknown in any other seaport city in the world let alone in Canada. This development synchronizes with the new life that has struck western Canada.

My hon. friend from Vancouver Centre (Mr. Stevens) was abroad last summer and since returning to Canada has been busily engaged in making public addresses. He has assumed an attitude that is rather surprising to members of this House, apparently being desirous of copying his friend and leader. Both gentlemen have developed into what might be termed common scolds. My hon. friend from Vancouver Centre is not satisfied to scold the people of Canada and the members of this House, but gushingly states that he told the people of the Old Country last year what he thought of them and their policies, and he adds "I was received with great response." My hon. friend mistook courtesy for response. Let me say that I do not believe it is the duty of any member of the Canadian parliament to go to Great Britain and tell the people there what they should do. I have sufficient confidence in the statesmen of Great Britain to leave Great Britain's problems to her own people to solve.

The hon. member for Vancouver Centre in an address delivered since he returned from England has intimated to the people of Canada that the policy adopted by this government last session, whereby the government reduced the import duties on the instruments of production in the basic industries, had led to blue ruin in the province of British Columbia. He stated that some 350 or 400 men were thrown out of employment on account of the adjustment of the duties on logging equipment. I was rather surprised to hear that statement because I had been in western Canada last fall and met the men who are engaged in the manufacturing of this kind of machinery, and they did not tell me they were going out of business. Accordingly I thought I should ascertain the facts because my hon. friend has the faculty of speaking with some conviction. I made inquiries and I am now going to read to the House what the facts are in regard to that statement. I will read a telegram sent to me from Vancouver dated March 10, 1925:

Hon. J. H. KING,
Minister of Public Works,
Ottawa, Ont.

I have been continuously in commercial engineering in Vancouver since 1902. I know every firm manufacturing or handling machinery in British Columbia. No concerns manufacturing logging equipment have gone out of business since the lowering of tariff. Present depression due to slackness in lumber industry. Only two concerns are engaged exclusively manufacturing logging equipment in this province, namely Empire Manufacturing Company and Tyee Machinery Company. Last named company also imports logging engines manufactured Portland, Oregon, and geared locomotives from Lima, Ohio. These two concerns have never employed more than fifty men in their combined operations. Undoubtedly lowering of tariff has been of great benefit to British Columbia especially coast, depending as it does on the lumber and logging industry and has done no injury to small manufacturing concerns located here. Am certain one large logging and lumbering concern would employ more men and distribute more in purchases and payroll than all concerns engaged exclusively in the manufacture of logging equipment in the province. Statements made that any firms manufacturing logging machinery employing 250 to 300 men have gone out of business since tariff reduction last year absolutely without foundation.

GEORGE A. WALKEM.

I know Mr. Walkem, but not intimately. I have met him. He is not a supporter of the Liberal party. He is a mechanical engineer, who has practised his profession in British Columbia since 1902, and who has been closely associated with engineering and particularly that form of engineering in the province. Last summer the people in his constituency saw fit to elect him to the local legislature of British Columbia.

My hon. friend also referred to and produced a petition from purported employees in the shoe manufacturing business in British Columbia. I want to assure my hon. friend and the petitioners that the government's tariff policy as regards British Columbia, that is, the lowering of duties on the instruments of production, will do more for the shoe business in Vancouver than his highly protective policy. But my hon. friend has seen fit to place his own interpretation on business conditions in British Columbia, and I think it is only fair that parliament should know the real state of affairs. I have in my hand a statement of the Financial Times of March 6, which reads:

Industrial progress in British Columbia shown by workmen's compensation figures from Canadian Bureau of Financial Times, Vancouver. Statistics compiled by the Workmen's Compensation Board of British Columbia are indicative of the industrial development of that province during the year 1924. According to the figures published, it is estimated that more than $160,000,000 was expended last year on payrolls in industries under the Workman's Compensation Act. For 1923, the payroll amounted to $153,548,944 as com-

pared with $128,592,502 in 1922. There was a corresponding increase in the number of industries established and operated, 1,550 new firms commencing business during 1924.

I first saw this statement in the Victoria Times and later in the Financial Times, and I have quoted the Financial Times because it cannot be said to be a party organ. I thought it well to confirm this newspaper statement, and I wrote to the chairman of the compensation board asking if the statement in the Times would be confirmed by his board. He writes me as follows:

The Hon. J. H. KING,
Minister of Public Works,
Ottawa,

February 26, 1925.

Dear Doctor:

I am in receipt of your telegram reading as follows:

"Would be glad if you would confirm statement made in Victoria Times, February, 14, regarding increased number of new firms doing business in the province in 1924 and increased payroll between 1922 and 1924."

I was unable to get a copy of the Victoria Times but take it that the Times copies a report from the Vancouver papers. I accordingly wired you as follows:

"There were 1,550 new firms commenced business in this province during last year. Payrolls of 1924 were at least $22,000,000 greater than 1922"

which I now beg to confirm. The reason I cannot give you the definite payroll figures for 1924 is that we have not yet audited all the employers' payrolls for 1924. There audits will not likely be completed before June or July of this year. However, we have assessed on the basis I have given you and in every single year our assessment has been found to be under the actual payroll; hence you can rest assured that the figures I have given are within the amount.

Conditions in British Columbia are better than they have been for the past four or five years. I have never known such a unanimous feeling of optimism as is now being displayed by the larger employers. Nothing in my opinion can hold British Columbia back from rapidly forging ahead.

I think the information compiled in our records gives more accurate indication of business conditions than any figures that can be compiled by others.

E. S. H. WINN.
Chairman.

The statements that my hon. friend has been making in his many addresses are statements that would lead the people of eastern Canada to believe that conditions in British Columbia are not as they should be. I do not claim that they are the best, but we are improving, we are going ahead. The Vancouver Sun of February 26 had this to say in regard to the propaganda my hon. friend is carrying on and its effect on British Columbia. The article is headed "Poor Publicity" and it goes on to say:

Hon. Harry Stevens, genial and able member for Vancouver Centre, tells his Ottawa confreres that high taxation, instituted by the Canadian government, is driving business men out of Vancouver into Seattle. Published broadcast in the east, this interesting statement has moved many eastern interests to inquire anxiously whether it is really true that the head offices of Vancouver firms are moving across the line. It is not true. In straining after ammunition wherewith to blast his political opponents, Mr. Stevens has this time somewhat overreached himself. Instead of devastating the Liberal forces, Mr. Stevens has simply managed to give his own constituency a black eye. Canadian taxation may be high. No one will deny that. But Mr. Stevens' support of the present freight rates discrimination against Vancouver and the remarkably poor publicity he gives this city in statements like this one will do more to drive Vancouver firms out of business than will our present taxation.

I think I may be permitted to follow that up and to show the progress that British Columbia is making in the industries in which she is directly interested. The lumber industry is one of our largest. Probably no other province in Canada has the stand of timber that British Columbia has, and in no province has the industry developed so rapidly as in British Columbia. I took occasion to write the Department of Lands in Victoria, B.C. asking them in regard to the increase in the lumber business over a period of years, and I propose to place these figures on Hansard. Before doing so, I purpose reading a letter from the minister of that department, because we hear in this House statements in regard to the administration of the lumber industry, not only in British Columbia, but in other provinces, and I think the minister's letter might well be placed on Hansard. He writes as follows:

February 25, 1925.

Hon. Dr. J. H. KING, M.P.,
Minister of Public Works,
Ottawa, Ont.

Dear Dr. KING,

In reply to your telegram of February 23, I enclose herewith memo showing export, as requested by you.

I may say the policy of the government is that manufacturing shall take place within the province. As hon. members are aware, we have no control over export of logs from crown granted areas. In the case of licenses, each case is dealt with on its merits and export is only allowed where there is no local market. On the other hand, no export would be allowed if operations were deliberately carried on for the purpose of glutting the market.

This is signed by the Minister of Lands in British Columbia.

I think I might fairly explain to the House the matter of export of logs from the province of British Columbia. We have large stands of timber there and in our logging operations we find that only certain grades of timber will be absorbed in our own or local markets: that is the lumberman or operator cannot saw a No. 3 or No. 4 grade log and expect to ship that class of timber with the freight rates that it carries into the prairie districts or into the foreign markets. So that in the logging operations we have what is known as a third and fourth grade of logs, which if made into lum-

ber, in thickly populated areas would be absorbed locally, but would not permit of sale if one had to export over a long rail or ocean trip. So that we have in British Columbia the exportation of certain grades of logs, more particularly Nos. 3 and 4. These are only allowed to be exported on a certificate of officials of the department and by order in council of the government. Now as to the growth of the industry, I will just briefly state it. The following figures will show the water borne lumber trade, logs exported and the total scale of logs:

Year	Water-borne Lumber Trade M.B.M.	Logs Exported M.B.M.	Total Scale of Logs M.B.M.
1915..	58,074	106,874	1,017,683
1916..	43,676	52,184	1,280,263
1917..	43,922	51,176	1,647,275
1918..	88,069	11,608	1,761,184
1919..	108,872	44,270	1,758,329
1920..	146,624	28,673	2,046,468
1921..	188,733	90,216	1,790,017
1922..	273,146	151,518	1,899,158
1923..	521,707	233,658	2,521,735
1924..	531,262	240,530	2,549,700

That I think will show the House and the country that the manufacture and sale of the products of this basic industry have advanced very materially during the last few years.

The mining industry is of great interest and great value to the people of British Columbia, and I think never in its history has it been in a more flourishing condition than it is at the present time. The value of our mineral products for 1924, according to a conservative estimate, will total $45,000,000. This is 9 per cent better than $41,000,000 in 1923. This does not tell the whole story for the year 1924 because during that year the coal mining operations within the province suffered very materially, more particularly in the Crowsnest pass district where a strike continuing over seven months lessened production by 750,000 tons. If we eliminate the coal mining, the metal mining will show an increase of 25 per cent in 1924 over 1923. A few miles north of Vancouver we have one of the largest copper mines in the empire. This class of mining has not been over-prosperous on account of the weak markets due to the unsettled conditions that existed in Europe following the war; yet a comparison of the years 1922, 1923 and 1924 shows continuous progress in that industry. In 1922 we produced 32,359,000 pounds of copper; in 1923, 57,720,000 pounds, and in 1924, 63,185,000 pounds. It is true a great deal of this metal is shipped out of the country in the raw state, but as I said this afternoon, the policy of the Liberal party in bonusing this mining industry has brought results. In the budget brought down some few years ago the government gave a bonus for the production of refined copper in Canada, and within the last few months this bonus has had its effect. Copper is being refined at the Trail smelter in British Columbia to-day, and some 600 tons of that refined copper is now in eastern Canada and being manufactured into copper wares in this country. In addition to that we have the annual statement of the Consolidated Mining Company in which they say:

> As expected the year's average prices of lead and zinc were favourable. In the latter part of the year the copper position improved. On the expectation that the market price of this metal will remain above 14 cents a pound for some time, preparations are being made to resume operations by the Allenby Copper Company at Copper Mountain, near Princeton, B.C.

Copper Mountain has one of the largest deposits of copper in the world, but it has been closed down for a number of years, and to-day under the stimulus of the bonus and the increased price of copper, we have further assurance that this mine will be in operation this year. But, Mr. Speaker, probably the brightest phase in the mining industry in any country is the development of the lead and zinc industry in Britsh Columbia. A comparison of the production of zinc for the years 1922, 1923 and 1924 shows the following:

	Pounds
1922..	19,000,000
1923..	58,000,000
1924..	64,000,000

The record of the increase of lead production is even more remarkable as shown by the following:

	Pounds
1922..	41,000,000
1923..	96,000,000
1924..	131,000,000

British Columbia's position in regard to lead products in relation to the rest of Canada is emphasized when it is understood that the year 1923 was the first time that the production of lead from Canadian ores exceeded 100,000,000 pounds. And last year the province of British Columbia from her own ores produced 131,000,000 pounds.

The development of the Portland canal district, where is located the famous Premier mine, the mine carrying very high grade silver and producing great wealth, gives promise of great production, from other properties. A fair indication of the increased mining in British Columbia might be shown by the number of companies which have been incorporated during the last year. Their total capitalization for the years 1923 to November 1924 being around $90,000,000 as compared with $68,000,000 for the full years 1914, 1915 and 1916.

I have referred, Mr. Speaker, at some length to the industrial activity in British Columbia, in order that I might dispel the picture of gloom and despair that has been painted by some of the hon. members opposite. Last night my hon. friend from Comox-Alberni, (Mr. Neill) dealt with the fishing industry in British Columbia and informed the House that the year 1924 was the best year ever enjoyed in the salmon fishery business since 1919. Agriculturists in the province have suffered, as agriculturists have suffered the world over, but I find that last year there was an improved feeling among them.

Now, as to taxation. A few days ago the hon. member for Vancouver Centre suggested that taxation to-day is stifling industry, and that this government is at fault in regard to it. No one will deny for a moment that taxes are high, and no sane or reasonable man will wonder why they are high. During the war period we expended large sums of money both at the front and at home, and to-day we are carrying the burden. We were told the other day by my hon. friend from West York (Sir Henry Drayton) that probably we would be well advised to adopt the French policy and raise our tariffs to a very high point, but he did not suggest that we should not pay our war debt; and I believe it was the intention of our people when they borrowed money to prosecute the war to repay it. So to-day we have high taxation. But as shown by the Acting Minister of Finance (Mr. Robb) $900,000,000 of our war loans are tax free, but as those loans mature and are refunded they will become taxable.

I have made some inquiries regarding taxation in this country and in the United States, and I have before me a comparison of the income tax on corporations as levied in the two countries. I am advised that in the United States this tax is 12½ per cent, while ours is 10½ per cent. These figures are given me by the Commissioner of Taxation and I have no doubt they are absolutely reliable. It is therefore apparent that Canadian corporations have an advantage over those in the States to the extent of 2 per cent in this respect. My hon. friends opposite these days seem to be very anxious to make comparisons between Canada and the United States in an attempt to show that we are very much worse off than our neighbours. But it is very difficult to make reliable comparisons, our federal and provincial jurisdictions being different to the federal and state jurisdictions across the line. Some of our provinces impose income tax, and over this the federal government has no control, and because of this it may be that corporations in this country are paying more in income tax than corporations in the United States. I am not sure whether income tax is imposed by some of the states, but I know that the states adjoining British Columbia do not impose any.

My hon. friend from Vancouver Centre also invited the attention of the Acting Minister of Finance to the fact that non-residents in Great Britain or the United States who purchase goods for export are subject to tax. Well, a non-resident in Great Britain, the United States or Canada, who purchases goods for export only is not subject to income tax. My hon. friend also intimated that an outsider who might come in and do business in England would be presented by the tax commissioner or his agent with an assessment as representing a foreign firm. This statement implies that the Old Country imposes a tax on those who effect purchases therefrom, but I am advised that this is not the case. Foreign companies transacting business in Great Britain through agents or representatives are taxable on profits realized within the United Kingdom, but not in respect to purchases for export only. Great Britain also assesses resident corporations, although they be foreign, where the actual control and management is within the United Kingdom. Preliminary operations in manufacture by foreign companies within Canada are deemed by statutory declaration to be the partial exercise of business or the carrying on of business in Canada, and consequently within the purview of the income tax law. The minister may determine, and his determination is final, what portion of the ultimate total profit made by the sale abroad of the semi-manufactured goods referred to should be taxed in Canada. So we find that a foreign firm with an agency in Vancouver is assessed at the discretion of the minister, and his word is final as to the profits made and the assessment thereon.

I have before me extracts from the Income War Tax Act which I should like to place on Hansard to save time, as I am anxious not to detain the House.

Mr. SPEAKER: By unanimous consent.

Sir HENRY DRAYTON: I presume it is merely the references to which my hon. friend has referred?

Mr. KING (Kootenay): Yes, from the statute.

This is my statement:

Extracts from Income War Tax Act

Inter-company purchases and sales at more or less than fair prices

(2) (a) Where any corporation carrying on business in Canada purchases any commodity from a parent, subsidiary or associated corporation at a price in excess of the fair market price, or where it sells any commodity to such a corporation at a price less than the fair market price, the minister may, for the purpose of determining the income of such corporation, determine the fair price at which such purchase or sale shall be taken into the accounts of such corporation.

Income partly arising from creative operations within Canada taxable

(b) Where a non-resident person in whole or in part produces, grows, mines, creates, manufactures, fabricates, improves, packs, preserves or constructs anything within Canada and exports the same without sale prior to the export thereof, he shall be deemed to be carrying on business in Canada and to earn within Canada a proportionate part of any profit ultimately derived from the sale thereof outside of Canada. The minister shall have full discretion as to the manner of determining such proportionate part.

Non-residents

(3) (a) In the case of the income of persons residing or having their head-office or principal place of business outside of Canada, but carrying on business in Canada, either directly or through or in the name of any other person, the income shall be the net profit or gain arising from the business of such person in Canada.

Non-residents deemed to be carrying on business

(b) Any non-resident person soliciting orders or offering anything for sale in Canada through an agent or employee, and whether any contract or transaction which may result therefrom is completed within Canada or without Canada, or partly within and partly without Canada, or any non-resident person who lets or leases anything used in Canada, or who receives a royalty or other similar payment for anything used or sold in Canada, shall be deemed to be carrying on business in Canada and to earn a proportionate part of the income derived therefrom in Canada. The minister shall have full discretion as to the manner of determining such proportionate part.

With respect to the government's position in regard to the duties on the implements of production used in the basic industries, I am satisfied that British Columbia, which probably is more liberally endowed in this respect than any of the other provinces, will be willing to accept the budget. Last year our Progressive friends unanimously supported the budget, and if they are consistent I believe they will support this budget. It is true the government have not made any further reductions, but the fact that the surplus this year is only $1,800,000 is in itself a sufficient argument against any further reductions in taxation at present. I am satisfied that hon. gentlemen opposite—and I am speaking now of the Progressive group, the second largest in this House—I am satisfied that on mature reflection and consideration they will endorse the budget.

There have been suggestions that the Prime Minister has not been delivering in western Canada speeches of the same tenor as those he delivers in eastern Canada. I absolutely contradict those suggestions. I was with him during his western tour, and probably no Prime Minister of Canada was ever better received. I also had the pleasure of accompanying him to Toronto. A prominent newspaper man had been detailed to accompany the Prime Minister throughout his British Columbia tour. He was sent from Winnipeg to Toronto to report the meeting, and when I met him next morning he said, "Doctor, I have wired the Vancouver papers that the Prime Minister made the same speech last night as he made in Vancouver." There is no doubt on this point as anyone will admit who takes the trouble to read the speeches that the Prime Minister has been delivering throughout the country, for it will be found that the tenor of those speeches is of the same character and the same high type whether delivered in western Canada or in eastern Canada.

Now, I do not think I should continue longer. I believe the people are desirous that the government should proceed in an even and proper manner with the business of the country. I am satisfied that there exists throughout Canada to-day a general opinion among the people that the affairs of the country are being properly administered, particularly having regard to the difficulties which the government have to confront and to the conditions which have been prevailing.

Mr. T. G. McBRIDE (Cariboo): Mr. Speaker, in rising to take part in this debate, I first wish to congratulate the Acting Minister of Finance (Mr. Robb) on being able to bring down a budget that was much more acceptable to this House and to Canada than any of us had reason to expect. Of course we all realize that it would be absolutely impossible to bring down a budget that would be acceptable to everybody. We have in the eastern sections of Canada the manufacturers, who want high protection and we have the prairie provinces in the west, that want free trade. The farmers on the prairies have to compete in the markets of the world with what they produce, and naturally they think they should have the right to buy what they want where they can get it the cheapest. Then we have our large railway system, which the private companies failed to make a success of; a system which was in a very dilapidated condition when the government took it over—in fact it was not

safe to run trains on several of the lines, at least at any speed. On the one hand we have the people talking day after day about cheap freight rates; on the other we have Sir Henry Thornton and his officers making every effort to get our railways on a paying basis. Then we have the Acting Finance Minister and the government trying to keep expenditure within revenue; on the other hand we have members of parliament, or at least a percentage of them, who want more expenditure and less taxation. Under these conditions I do not think it is possible for any man to bring down a budget that would be acceptable in all quarters of the House.

Since the House opened on February 5 a good deal has been said about hard times; about people going to the United States; about unemployment; about getting more immigrants into the country; about less taxation and greater expenditure; about ocean freight rates; about the merchant marine; about cheap money for the farmers and how to run the banks. Others have talked about Senate reform; some about a reduction of the indemnity; some about annexation to the United States. Indeed some people go around the country suggesting that this government is in favour of annexation, or words to that effect. My experience has been that a man with a pair of good sound lungs does not have to go round the country telling the people what he has got; no, they will perform the functions they were intended to perform, without any special effort on his part. As I see it, no true Canadian will go round the country making such a statement; only the skimmed milk type of politician would do such work.

We have heard, as I have already said, a good deal about people going over to the United States. I might make the statement that 250,000 people came from the United States to Vancouver last year, and it would be just as correct, as some of the statements that have been made in this House. The statement is correct, but it is misleading and should not be made. They came over, but the greater number of them went back. Why run down Canada? Why have people so much to say about the United States? Why do they hold the United States up as a country of prosperity, a country to be desired by all, and why do they paint a gloomy and foreboding picture of their own country? There are two or three statements I would like to make in connection with our people going over to the United States. Here is a letter from a young man who went to California in 1923. He says:

> I do not care much for California; I find it very hard to get acquainted. The people seem to think of nothing here but the almighty dollar, and I think every crook from hell to bedlam must be in California.

I have given it word for word as it was written. He says further:

> The favourite sport seems to be trying how often you can get married and divorced in the same year. Stealing other men's wives is another way of passing the time, and robbing at the point of the gun is as common as swatting mosquitoes in the Smith meadows during the month of June.

We have heard a great deal about the condition of prosperity in the United States and the inducements that are offered to Canadians to go there, while at the same time a gloomy picture is painted of Canada. Here is what Sam Gompers, president of the American Federation of Labour for a great number of years in the United States, said on the 5th of November last—and I may say that on the 5th of November there were not a great number of people out of employment in Canada, in British Columbia at least:

> All this talk of prosperity in the United States looks good on paper. We hear much about it, but right now we have at least two million people out of work.

That was on the 5th of November last year. Is that a very desirable country for our people to go to? Still another: Mrs. J. H. Bullman, president of the Illinois Federation of Women's Clubs, in an address before the leaders of that body in Chicago on December 12, makes this statement—these are not Canadians; they are Americans:

> There should be more hanging and less sobbing over the plight of the youthful gunmen and ex-murderers and toughs.

Then she goes on to say:

> We are the most lawless nation on the earth. Our criminal record is unequalled in any city on the globe. With such a condition why should we talk about abandoning capital punishment? Every five and a half years more lives were lost through crime than were lost in the war. I am tired of this silly sentimentality that favours the treatment of crime.

And she closed by urging that there be no cutting down of the number of hangings until crime is lessened. Yet the hon. member for Fort William and Rainy River (Mr. Manion) makes reference this afternoon to the "magnificent" country to the south of us. Glowing terms, splendid words about the country to the south; but what about Canada? He holds up poor old England and Canada as the picture of distress—as if they were not fit to take care of themselves. There was more unemployment—yes, five times more—in Vancouver in the spring of 1913 or 1914 than there has been since this government came into power.

It has been stated by an hon. member of the opposition that the housing problem in this country is solving itself; that the people did not need any more houses, because they were leaving the country. Well, I do not know very much about Canada, but I know a little about a town out on the Pacific coast which they used to call Gastown; then they called it Vancouver, and now some people call it Greater Vancouver. I am going to say a little about what has been going on there. During the year 1924 there were 2,032 homes built in that city, and there is scarcely an empty house in it; indeed when I went back after the last session I had to call up a number of hotels before I was able to get a room. Here is what the building inspector says:

> On December 31st when the building inspectors of the various districts which make up Greater Vancouver compiled their figures for the year 1924, they stated it was one of the greatest years of construction in the history of the lower mainland. The total value of buildings erected was $12,882,474, an increase of 90 per cent over the previous year.

Does that look as if people were leaving this country or had lost confidence in it? But that is not all:

> On December 31st, there was under construction, proceeding or contracted, an additional nine millions, or a grand total of twenty-two millions for the year 1924.

I think that is a record this country should be proud of. It is a record the people should know about, and it is one that will do much to counteract the attempt being made to becloud the issue all over this country. I do not know that I will say much more about Vancouver. I do not wish to make one of those long-winded speeches lasting two or three hours. I will pass on.

The hon. member for Comox-Alberni (Mr. Neill) last night dealt fully with the oriental question. Indeed, many of the items that he had in his address I intended to bring before this House. However, I do not intend to repeat what he has already said, and said so well, and I will be as brief as possible. I will give you a quotation from a Japanese paper translated into the English language. This publication says:

> There is danger ahead. Discrimination has been shown in the school question, which is extremely important, and in the fishing question. We Japanese to whom it is a question of life and death struggle must determine it at any sacrifice.

That is what the Japanese say themselves in their own paper. Indeed, if the Japanese did not stand by their country in case of trouble, they would be executed for treason by their own countrymen. That is the opinion of a judge of the Supreme court of British Columbia, and I quite agree with him. Why should we be bringing in orientals to Canada and educating them in our schools at the expense of the taxpayers of this country, when we cannot furnish money to educate our own children? Why should these people be coming to this country to take the place of our own men in business? We have got to educate them for the purpose, and then allow them to enter business to compete with the white race. Why should we in British Columbia be compelled by this government to allow those people to come to this country, and have them sit in the same schools with our white boys and girls? I have nothing to say against the oriental idea of morals; that is their own business, not ours. But I do say that this government should stop, and stop once for all, those people coming in and placing themselves alongside our children in the schools, where our children will have a chance to talk with them. It is all very good for people down here who do not know, but it is a serious question out in British Columbia, and I think this government should realize it, and the sooner they do, the better it will be for all concerned.

We hear a great deal about the Japanese high temperament, and the position they will take if we say that this country does not want to have them here. If the Japanese had any self-respect, shall I say, they would not come to Canada, for well they know they are not wanted. They are forcing themselves in on us. Would any self-respecting people do that? I do not think they would. And when you bring together the oriental race and the white race together, what do you have? In the first case, they will not assimilate, but they are getting married, and they are bringing into existence a mongrel race that is not a credit to any country. It is certainly not a credit to Canada, and should not be allowed. In fact if this parliament is going to allow these people to come in here it ought to do as the States have done, make a law forbidding orientals and the white race to unite in marriage, and the sooner that is done, the better it will be for all concerned.

We have out there in British Columbia over forty thousand of these orientals, and last year there were about twelve hundred births. Surely that is enough of

9 p.m.

increase without allowing any more orientals to come to our shores. Not only that, the Japanese themselves take objection to cheap labour. I read this in a Japanese paper:

The Tokio government fears cheap labour from China. Drastic action which may result in the deportation of 6,000 Chinese labouring now in Japan is expected from the Japanese government. Chinese labour is affecting employment in Japan, as the Chinese work for smaller wages.

Now if Japan claims the right to deport labour that they bring in when they have finished their work, surely Canada has that right too. Why should she not have this right? Even India has taken the stand to keep outsiders from coming into her country. I read this from Delhi, India:

A bill was passed for the purpose of regulating the entry into British India of persons who were domiciled in other British possessions.

The British representative on the executive council did not oppose that bill. Now if India can regulate her immigration, why cannot Canada? I have another item here from Capetown, South Africa, The Transvaal and Free State:

Asiatic segregation contemplated by South Africa, also Belgrade. The Jugo-Slav Minister of Commerce has published a decree requesting all foreigners to leave. Friendly nations are granted a short delay not to exceed four weeks.

Is this not evidence enough that Canada should have the right to regulate her immigration? Not only that, but there is no class of people in British Columbia to-day that has as much tuberculosis as the orientals have. That has been proven by statistics. And these orientals are in the market gardening business. They are supplying vegetables to the hotels and restaurants and to many private houses. Now is it right that that class of people should be handling vegetables and spreading that disease that is costing British Columbia to-day and other countries thousands, yes, millions of dollars to try and stamp it out? Yet that is what is going on. Indeed, there was a case of leprosy a short time ago in British Columbia, and this man was also engaged in market gardening, with every opportunity to spread the disease. We have quite enough people of our own to run this country, and when the good Lord made the orientals and the white race he put the Pacific ocean between them to keep them apart.

Mr. WOODSWORTH: May I ask if red men were not put in this country rather than the white?

Mr. McBRIDE: The white men were here before the orientals, and the orientals are not pioneers. They do not go out to help develop the country, never have and never will. They always stay around the cities. The hon. member for Comox-Alberni (Mr. Neill) spoke last evening on the subject of naval defence. I should like to say a word or two on the same question. It seems to me this government should do something to give us protection on the Pacific coast. I am not advocating a standing army for Canada. The only necessity for such an army as I see it, would be in the event of trouble between us and our friends to the south—something that nobody ever expects to see, it is quite unthinkable. I do not think Canada should spend money on a standing army but I do believe that adequate provision should be made so as to protect our shores and our ports in case of trouble. Also to enable us to remain neutral, if we wanted to do so, in the event of a clash between other countries. Supposing, for instance trouble arose between United States and Japan and a naval battle occurred between the ships of those countries off the Pacific coast? Supposing the Japanese fleet got the worst of it where would they head for? They would make either for Prince Rupert or Esquimalt, possibly for Vancouver. We may as well realize it the Japanese fleet could enter Prince Rupert, or the harbours of Esquimalt, Victoria or Vancouver and command these cities to surrender. We could not defend ourselves; we have nothing to defend ourselves with. And supposing the Japanese fleet entered Vancouver harbour? Under international law Canada might permit them to remain for twenty-four hours but no longer. At the expiration of that time this country would have to force the evacuation of that harbour or run the risk of bombardment by the United States navy. How could we force the Japanese to withdraw, if they did not wish to go, seeing that we have no means of compelling them. We should simply, in the absence of an adequate force of our own, have to let the Americans come in, and that would be a very humiliating position to be placed in. Then if the Japanese showed fight the Americans would have to bombard their fleet in the harbour and possibly blow up our towns and our docks. It is a serious proposition for us on the Pacific coast. Other countries are preparing for eventualities of this kind and why should not Canada. Sometimes we hear people talking about Canada being in no danger, that the United States and Britain would afford the necessary protection in such case of an emergency. It reminds me of the man who had three sons. He set them up in business but when they got into financial difficulties they always came to talk it over with the old man and to get him to foot the bill. That is not a very dignified procedure,

but it is just what Canada would have to do in the event of such hostilities as I have alluded to breaking out because she could not protect herself. We must look at the facts as they are and not as we would wish them to be. The experience of other countries ought to be valuable to us in a matter of this kind; it is a far safer guide than theory. The experience of England is particularly useful. It has shown that it takes three years to build a warship, and nine years to train a crew. If we trust to civilization there is no guarantee of security. Only the nation that can protect itself is in a position to rest in safety.

Now, what is the United States doing? I am not going to enter upon a consideration of the entire programme of the United States for defence purposes. I shall cite only one instance. In 1924 the number of guns mounted for the defence of Panama was as follows:

Pacific Coast—
One 16" gun range 50,000 yards.
Six 14" guns.
Fourteen 6" guns.
Twelve 12" howitzers.
Twelve 4.7" howitzers.

On the Atlantic coast the artillery mounted for the same purpose is as follows:

Atlantic coast—
Four 14" guns.
Four 12" guns.
Six 6" guns.
Sixteen 12" howitzers.
Eight 4.7" howitzers.
Sixty-six 3" guns.

In addition there is a mobile armament consisting of fifty-two, 155mm. guns, tractor drawn. This year the United States is budgeting for the following additions to the defence of Panama:

Four 16" guns for the Pacific at a cost of $1,200,000.
Four 16" guns for the Atlantic at a cost of $1,060,000.

Surely if the country to the south is impressed with the necessity of making such preparations we ought to do something to protect our part of the Pacific coast. It is possible that Canada could impose on the generosity of the British government in order to protect herself on the Atlantic should trouble break out there but we could not do that on the Pacific; we are too far away. The Dominion of New Zealand last year voted $5,000,000 for this purpose; a little country like New Zealand. We claim that the Canadian people are going to be a great nation in a short time and therefore why should we not make some preparations to defend ourselves? I think it should be the duty of this government to at least make a start this session in providing some protection for the Pacific coast. They are in honour bound to do it.

Now I come to a consideration of railway matters. We have not heard very much on this subject this session but I hope to hear the question discussed before the session is over. I should like to refer for a few minutes to the matter of an outlet to the Peace river country. I am not going to labour the question, I am not going to ask hon. members to take any statements of mine; I will give you statements taken from a report published in 1920 and signed by Hon. Arthur Meighen and W. W. Cory, Deputy Minister of the Interior. I went up into that country and spent part of a fall there before I ever mentioned the subject here—I wanted to be sure that I could verify any statements I intended to make and I will now say that I have no fault to find with that report as a whole. I will just give you a few extracts from the report in order to show you what the country is like:

First, the area of the Peace River district is over 115,000 square miles. Three and a half million acres of the best of this land is owned by the Dominion government.

The climate of the Peace River district is excellent. Blizzards are unknown. Seeding usually begins early in April, sometimes in March. Most of the rainfalls occur in June and July. Mild weather until Christmas is not uncommon.

In 1919 there were shipped out over the Edmonton and Dunvegan railway, 4,909 carloads of freight. In the same year there were shipped in 4,143 carloads of freight. Marquis wheat has yielded as high as 69 bushels to the acre.

Now as to Pouce Coupé:

The extent of this choice area is about 25 miles wide by 40 miles long. The altitude is low. Summer frost and hail are very rare, and total crop failure from any cause is unknown.

The mountain streams contain trout. Cariboo lake teems with large trout and white fish.

Seams of coal are exposed in the canyon above Hudson Hope. Beds of gypsum ten to fifteen feet are exposed on both banks of the Peace river for a distance of fifteen miles.

As regards coal there is practically no limit to the coal areas there and to the available water-power. People went into that district believing the federal government were going to provide railway transportation for them. A circular to that effect was distributed all over the United States and the Old Country, and settlers went in there confident that the government were going to provide them with transportation. As to the kind of people in the Peace river country I am prepared to say I never encountered a better class anywhere. They are the pioneer type. They are men and women who are willing to make good and who will make good if they get half a chance. Why will this government not do something

to give them an outlet? I know the finances of this country will not permit very large expenditures on railways, and I am not asking for that. I should like to see an outlet by way of Prince George, but I understand that would cost in the neighbourhood of $17,000,000, and I am not asking even for that at the present time. What I would like this government to do—and the outlay would be only a small one—is to see to it that the piece of line between Spirit river and Pouce Coupé, fifty-four miles long, which is already graded and which is practically ready to lay the steel on, is completed and to extend it ten miles further into the Peace river block. This would make, all told, sixty-four miles. Surely that would not be a big thing. When the line is built, I would like to see the government turn it over to whatever railway is operating the Edmonton-Dunvegan line on condition that they would reduce the freight rates that now exist from the Peace river block to Edmonton. They could then leave the country alone for a few years to see whether it would develop as fast as a large number of us who know the district think it would. I think that would satisfy the people there, and for the present it would give them an outlet. I believe it would serve the purpose; the expenditure would be very small, and it would redeem the pledges given by the federal government to the people who went in there. I think the government would be fully justified in carrying out this project.

Mr. KELLNER: Did the hon. member see the press report recently to the effect that the Canadian Pacific are negotiating with the government at the moment whereby they are to be given a subsidy of some $180,000 to bring the Peace river grain out over the British Columbia and Edmonton-Dunvegan line?

Mr. McBRIDE: I have seen that report in the newspapers. Further than that, I know nothing of it; but even if that were done, it would not give the people in the Peace river block any accommodation in the way of railway facilities. That would be only to operate the lines that are already there, that is, in Alberta. I think the government is in honour bound to carry out this extension, and I think the people would back them in doing so. As I have already said, this would be only fair to the people who are in there.

Mr. HOEY: Approximately, how many people are in there ?

[Mr. McBride.]

Mr. McBRIDE: I would not say how many are in there at the present time. I do not think in the Peace river block there would be possibly more than two thousand. I was told that at one time there were between seven and eight thousand but I will say this, that when I was through that country, I met only one man who wanted to sell his place. They have their patents on their homesteads and they are keeping them until they get railway facilities while they are living in other places. You can readily understand why people are leaving that district. I have seen men who had built three granaries. They build first one granary, then an addition and then another addition, each year for three years, to hold the grain waiting for railway facilities. In other places, they have two and three years' grain stacked in the fields. They grow the grain because they like to grow it, and they are trying to live there as best they can. It is a general thing for the men to go to Vancouver or the United States, wherever they can get a job, in the winter time, leaving their wives and families to look after the cattle, while they earn a little money with which to buy the necessaries of life. Yet they have the grain there if they could get it to market. Why not give them an outlet?

A good deal has been said about immigration into Canada, and I expect a good deal more will be said. I do not think Canada will ever be right until we have thirty or forty million people. At the same time, I cannot say that I am in favour of this government taxing the people of Canada to bring a certain class of people to this country. I come from the Old Country, and I have never seen the time there that a man, if he wanted to earn his passage to Canada, could not do so in less than two years. If a man has not backbone enough to earn his passage out here, what is he going to do when he gets here? Such men are going to flock into the cities or come and whine to the government to lend them money or something along that line. Let me give an instance. Last spring, two young men who received assisted passages to Canada came out to British Columbia and went to work on a farm that I am very well acquainted with. They said they were raised on a farm in the Old Country; that they had worked on a farm all their lives. One of them worked for about four and a half months and the other, for about five and a half months. I know the man for whom they were working gave them every opportunity. At the end of that time neither one of them could hitch up a team, take it out and do a day's ploughing.

That was not the worst of the matter. The farmer had finally to pay them off, and neither of the men had ten dollars saved when he paid them; they were always borrowing money ahead. When they were asked what they would do for the winter, they said they thought they would go to Vancouver, that the people there would not let them starve. Such people are no good and they are a curse to the workingmen of the country. They go to the cities, take whatever jobs they can get, at any wage, and put the working men out of their steady jobs. We do not want that class in Canada. Any man who wants to make good can earn enough to bring him to this country, and if he cannot do that we do not want him here.

A good deal has been said from all parts of this House about the tariff, and as far as I can see, it makes very little difference whether the tariff is high or low as long as the government will see to it that the manufacturers in Canada will produce goods just as cheap as we can buy them on the American side. That is all we ask. That is all the farmer asks. Why should the farmers of this country, who have to compete in the markets of the world, be put up against a tariff of 25 or 35 per cent when they go to buy anything? That is not right. Some people say that Canada cannot compete with the United States. Canada can compete with the United States. She can give the United States cards and spades and beat them to it. The young men of Canada proved the stuff they were made of when they went to France and Flanders and they can do so again. The trouble with our manufacturers is that they are too mean to purchase up-to-date machinery and give our young men a chance to make good. If they were given to understand that they would get protection provided they put their goods on the market as cheap as they could be purchased on the other side, but that if they commenced to hold the people up in this country, the tariff would be cut down, that would have the desired effect, and I think it is what ought to be done.

I had a letter from British Columbia the other day, in connection with eggs and butter. I think the government during the present session should raise the duty on eggs coming into Canada to make it equal to the duty on the same article going into the States. There is nothing wrong about that and I think it is only fair. Some members laugh at that; the trouble is that protection is not for the farmer. He gets no protection, and the manufacturer is protected all the time. Now a certain class of people start in a small way. They take up a homestead; they have a cow and a few chickens and try to make a living in that way. Why should they not be given the same protection as the manufacturers? Why should the government not put a duty of 8 cents a dozen on eggs, as the United States does? Why should they not also put a duty on butter?

I should like to say a word in connection with the farmers being given this rural credit that has been spoken of. Anything I may say has no reference to returned men whatever. In my view neither this government nor the provincial government can do too much for the returned men—the men who did so much for Canada—but I am absolutely opposed to this government starting to give credit to farmers or anyone else. Let the provincial government look after that. I have heard the provincial government out in British Columbia boasting that they could borrow money cheaper than the Dominion government. Why then should the Dominion government get mixed up in this proposition? Why should they place a blanket mortgage on British Columbia or on Quebec or any other province, in order to be able to give the farmers cheap money? That is exactly what they have been doing. If Mr. Brown has his farm clear of mortgage, why should this government place a mortgage on that farm in order to be able to lend me cheap money? It is not a good policy, and if this government wants to get into trouble, it seems to me that would be a good way to go about it.

In conclusion I have a few words to say about railway rates. We have heard a great deal about railway rates and about putting our railways on a paying basis. Some farmers say, "Reduce the rates and carry more grain." What would the farmers say if the railways said, "Produce more grain, and lower your price for grain, and you will make more money"? The one is just as good an argument as the other. In my opinion it is up to this government to increase the rates from the Atlantic to the Pacific. Some people say that if you increased rates on the Canadian National you would drive all the traffic to the Canadian Pacific. Well, increase the rates on the Canadian Pacific also. As I view the matter, I think it would be a simple thing for this government to increase the rates on both lines, say 10 per cent; then tax both lines 90 per cent of that 10 per cent and you

will get a revenue that will carry our railways and finance the country. I think that is a reasonable proposition. They would not then be making any more profit on the Canadian Pacific railway than they are making at present, or very little more. Canada will never be as prosperous as she should be until our railways are on a paying basis. I say further that districts which have no railway connection should not be taxed to give cheaper freight rates to those districts which have connections with the main lines. Take for instance a firm that I am very well acquainted with in British Columbia which got in nine carloads of freight last month. There is not one member of this House who did not help to pay the freight rates on those nine cars. Why should they? The people who are making the profit are the people who should pay. At present every member in this House is helping to pay for the freight on those cars, because the National railway is carrying them for less than cost. I do not see that it is reasonable that we should put Sir Henry Thornton and his men up against an impossible proposition. I have no hesitation in saying that Sir Henry Thornton and his staff are doing everything that it is possible for them to do to give a good service to Canada and to place the railways on a paying basis. But they cannot do it. It is an absolute impossibility at the present rates. If the freight rates were increased, they would not be any higher than they are in the United States. I have a schedule here showing the rates on one side of the line and the rates on the other side of the line, and I find that where they are carrying wheat, for instance, at 22 cents a bushel on the Canadian side they are charging 37 cents on the American side, and I find in another instance where they are carrying wheat for 20 cents on the Canadian side they are charging 35 cents on the American side. According to this schedule the rates are fifteen to twenty per cent higher on the American side than on the Canadian side.

Mr. MILLAR: Is that per bushel or per hundred pounds?

Mr. McBRIDE: Per bushel, through freights to the head of the lakes. I say we should increase the rates.

Mr. HUMPHREY: I do not think there is any road in the United States that can be compared with the roads on this side per ton mile haulage. I think the roads on this side compare favourably with every road in the United States for haulage per ton mile.

[Mr. McBride.]

Mr. FORKE: I should like to point out that the amount of grain hauled from those stations by these United States roads as compared with the grain hauled from Canadian Pacific stations is almost insignificant. The rates do not count. It is a small part of the traffic.

Mr. McBRIDE: The distances are the same. It is shown on the map that their haulage to the head of the lakes on the same basis costs from ten to thirty per cent more than on our Canadian roads. Why should we force the management of our railway to do something which it is impossible to do I say, increase our rates and put our railroads on a paying basis.

Mr. ROCH LANCTOT (Laprairie and Napierville) (Translation): Mr. Speaker, everybody discusses the economic depression existing throughout the country. My hon. friend, the leader of the opposition (Mr. Meighen), and his friends proclaim that we have not enough protection. We have too much, state the Progressives. All this highly amuses me. How can you explain that the American industries, although highly protected, feel the depression as much as we do. The Canadian farmers, being deprived of the United States markets, have to bear up with some hardships, and the American farmers complain as much as we do, if not more. We have taken the habit of singing the old tunes over and over again without realizing what they mean. It is more than time that we should come down to brass-tacks. I think, it is more likely our follies of railways of war, of "Ballantyne" merchant marine, of soldier land settlement, and so forth, which are the first cause of our economic depression; our excessive and senseless participation in the war, far surpassing our means; for instance, conscription in 1917, when we were already almost ruined.

My hon. friend from Fort William and Rainy River (Mr. Manion) will pardon me I hope, if I do not immediately comment on his speech, because I wish first of all to make a few remarks with reference to our railways since 1911. My hon. friends in the opposition are wonders, they have always done the right thing; if ever errors were committed, we have to blame the Liberals, it is out of the question that they did wrong! Their equals, in the realm of public affairs, are not to be found in any country! Moreover, according to their statements in and out of this House, they boast of being administrators who have governed the country economically, without ever blundering; in a

word, they are the saviours of our country!

These gentlemen, Sir, will tell you that if we have to bear up with the burden of our railways, the responsibility rests entirely with the Laurier government. In 1911, in the course of the session which preceded the general elections of September, the House unanimously voted $35,000,000, as a guarantee to Mackenzie and Mann for 1,000 miles of railway extending from Port Arthur to Montreal, this is $35,000 per mile. The general election took place on September 21, a few months after parliament, without much opposition, had acquiesced in this guarantee. What happened? Laurier was defeated. You might think, Mr. Speaker, that these distinguished statesmen, these far seeing and able men, would set aside this project? Nothing of the sort. Take note that nothing was begun previous to September 21, 1911; the contract was not even signed. Therefore, if this agreement passed by the Laurier government was not in the public interest, the incoming government immediately after the election had taken place, should have refused to sign the contract. That was not done. On the contrary, it is the Borden government, through the then Minister of Railways, Mr. Cochrane, who signed the contract with Mackenzie and Mann. My hon. friend from West York (Sir Henry Drayton) seems to doubt my word. I shall make him a proposal to-morrow, and I am in a position to prove to him that what I state is the truth—

Sir HENRY DRAYTON (Translation): I do not think so.

Mr. LANCTOT (Translation): For there are still eye witnesses and I shall make him meet these gentlemen who are his friends, and who will corroborate my statements. I, therefore, say that you are more to blame than the old Laurier government, for, according to the statements you have since made, you knew that this was a disastrous policy for the country. I further add, without any wish to deceive the House, that on the occasion referred to you failed in your task as members of the opposition and you failed in your duty towards the people of this country in signing this contract, and, you further lie deliberately to the same people, because it is really yourselves who signed the contract. This is not all. The Borden government foreseeing that the building of the two sections, at the same time, would not be a very popular move, came to an understanding with its friend McBride, the Premier of British Columbia and the latter undertook to build the sections between the prairies and Vancouver, a distance of 900 miles, with the Dominion government subsidies and a guarantee of $25,000,000 by McBride. Our railway difficulties date from that day on The only possible thing to do, in 1911, was to get rid of Mackenzie and Mann, by expropriating all their lines in the three prairie provinces, so as to use them as feeders for the Transcontinental railway of Laurier. Had this been done to-day, we would have but two railways instead of three, and the work of Laurier would have proved a greater success than that of the Canadian Pacific railway, because the former opened up on the whole a better territory than the latter, and, as you know, Sir, the prairie railways were, and are still the best paying lines of the Canadian National Railways, passing through and accommodating the most fertile parts of the west. If this had been done, we would not have to face, to-day, this railway problem.

Our troubles began in 1913. The Borden government—the one chosen in 1911—brought in Messrs. Robert Rogers, Cochrane, and so forth, into the cabinet. Laurier was defeated; however, these good Tories still were not satisfied, they were after his scalp. The Transcontinental railway was not quite completed when Laurier was defeated. The task of completing this railway so well begun was entrusted to Mr. Cochrane, the Minister of Railways. The railway grades were changed, wooden bridges were built to replace the iron bridges; all this was done so that the Grand Trunk Railway might have an excuse not to carry out the contract agreed upon between the government and the company. However, the government was yet not satisfied. "This is not enough; Laurier might yet embarrass us; we must do more; we shall establish an inquiry in regard to the construction of said railway;" and commissioners were appointed. You know who they were, Sir Henry Drayton and Mr. Lynch-Staunton; and the trick was done. These gentlemen got down to work and the following year the report was laid on the table of the House; according to these gentlemen's report, the commission appointed by the Laurier government had spent $40,000,000 too much to build the Transcontinental railway, an easy thing to prove when such an inquiry is carried on by faithful partisans. I think I would make no exception for any party in regard to a report on an inquiry held under such conditions, when it is a question of the construction of a railway of more than 2,000 miles. Mr. Speaker, the same thing happens every day in law courts, not for railway construction, but in regard to an unfortunate person who may have committed murder. Medical ex-

perts are called, examine the patient and disagree. They are under oath, no one can accuse them of perjury as they are indifferent to what happens to their patient, whether he escapes hanging or goes to the penitentiary; the case is different for the politician, he wants to see his party in power and, if the party comes to power, he concludes: I shall have my reward, moreover, I am not under oath, I am a Tory and I work for the party, I have very little in common with the Liberals. It is no doubt for such a reason that my hon. friend from West York was knighted.

The government for a time, came to the rescue of our bankrupt railways. In 1917 the war was not over; the Borden-Meighen government felt the elections were approaching; a plan had to be worked out to keep in power and win the war. Their party was the only patriotic one in Canada! So as to make the result more certain, they said to themselves: We shall form a Union government. Some amongst them thought that this was not an easy matter, those old staunch Liberals, the fighters as they are known in the east and even in the west, will refuse to mingle with Bob Rogers; because these Liberals thought at that time that Rogers was no angel. The Tory faction which was trying to bring about this alliance thought: If the thing is necessary, we shall turn down Bob. I am sure that my hon. friend the leader of the opposition was one of those who strove to form the Union government; at all events, if he was one of them, I congratulate him for he made a success of it. To form this alliance the war question was not the only one, there was also the question of railways in which all the premiers of the west, Ontario and even the east were very much interested in. It was then that the government decided to purchase the Canadian Northern so as to have these premiers in their favour; however, if not entirely on their side, at least certainly not openly against them. This proved a success. In 1917, the Borden government purchased the Canadian Northern. This bill was piloted by my hon. friend, the leader of the opposition (Mr. Meighen). Messrs. Mackenzie and Mann were well taken care of. After having undertaken to pay all the guarantees and grants of the Dominion and provinces involved, in money and lands, all these said amounts, for the twenty-eight lines built by Mackenzie and Mann, costing more than $500,000,000, the Borden government, at the time of the purchase of said railways, found the means of having $10,000,000 paid in cash to compensate these gentlemen of their bankruptcy. This was equivalent to saying that they deserved the congratulations of parliament and the people of this country for having succeeded in placing a bankrupt railway upon the shoulders of the taxpayers of this country.

I think, Sir, that it would be difficult to find in this country other railway contractors who knew how to enrich themselves so well with an enterprise which became bankrupt. The people of Canada had no such luck.

Owing to the fact that this purchase was made by the Borden government, the provinces were relieved from their guarantees to Mackenzie and Mann to the amount of over $100,000,000, and, through this 1917 transaction, we hailing from Quebec, have assumed a debt of not less than one-fourth of the above amount, $25,000,000 to $30,000,000 to pay for the blunders of the western provinces which had a very small population at that time.

In 1920, we purchased the Grand Trunk railway. We already had the Intercolonial, the Transcontinental, the Grand Trunk Pacific and other small lines in bankruptcy, and there are still some throughout the country that politicians offer to the president of our National railways so as to add to our railway system comprising 22,000 miles which we own at present, and upon which we lose fifty-six, sixty to eighty million dollars each year. And, all this without mentioning the new lines that we build here and there throughout the country. We have, Sir, since the purchase of the Canadian Northern, in 1917, up to date, increased our railway debt by $582,000,000; the interest, up to this day, on this amount comes to $131,000,000; moreover we owe the public on these purchases nearly $1,000,000,000. We owned paid up railways, previous to our first purchases, to the amount of nearly another $1,000,000,000, and I have no fear of misleading the House and the country when I state that our railways cost us at least $2,500,000,000. I wonder if this state of things can last much longer?

Mr. Speaker, I have always been opposed to this folly of state ownership and I am still more than ever against this unsound policy endorsed by too many of our colleagues in this House. I feel gratified that many of my fellow-members are not so enthusiastic as they were in 1917 at the time of the Canadian Northern purchase. I recall that my hon. friend from South York (Mr. Maclean) was very enthusiastic then; we were to pile up money. A few days ago, he spoke of adding the Canadian Pacific Railway to the Canadian National as the only way of getting out of the hole; not that he is against state ownership, but he hopes to do better with the Canadian Pacific Railway system. He reminds me of a man who went

broke in a poker game, he wants to make up his losses, but often he comes out more in debt. I do not hold the same views as my hon. friend from South York, I would rather see the stronger swallow up the weaker; that is done when there is a bank merger. Not very long ago, in Montreal, the Molson's Bank was merged with the Bank of Montreal, and I think that such a step is to the advantage of the public and the same thing would happen if a merger took place among our railways. I should like to see the Canadian Pacific Railway absorb our National Railways under certain stipulated conditions. And what are these conditions? They are that the Canadian Pacific Railway after having taken possession and paid us a fair price, perhaps a little higher than the one I would put—

Mr. MERCIER (Translation): How much?

Mr. LANCTOT (Translation): I am not particular about the price. At all events, this would rest with the members of this House to decide. I wish to see the large majority of shares remain in this country and not pass over to the Americans or other foreigners, so that we may later deal with our own affairs through the medium of the government and the railway commission.

At the outset of my remarks, I enumerated the causes of our ruin. I now wish to broach the subject of our participation in the war, a senseless and excessive participation with the scanty means we had at our disposal, when we were already on the road to ruin with all our railways.

Should Canada have taken part in the war? I answer, yes; but according to our means. What did this consist in? To recruit 100,000 to 150,000 men and even 200,000 men to please the jingoes of this country, and stop at those figures, furthermore produce food of all kinds to help the allies. Unfortunately our government and all the politicians did not see it in that light. It was not so much with the aim of helping the allies as to pass for loyal subjects of His Majesty and so that the records of history might show that the Tory party had saved the empire. If only our politicians had gauged the true situation of this country, its means, and had understood that Canada is a young country, still undeveloped!

I do not think that there are many amongst the members of this House, at present, that do not acknowledge now that the Borden-Meighen government made a great mistake in having conscription passed in 1917, at a time when the United States had just entered the war, after having accumulated all the gold in this world, and when they did not have one-fourth of the necessary ships to transport their troops. Why impose conscription in this country, when Australia carried on without it. The reason given in 1917, by one of Mr. Borden's ministers was that there existed no province of Quebec in Australia. I am well aware that the movement had Quebec as its aim; however, Mr. Speaker, the people of the province of Quebec will not forget for a long time to come these politicians of 1917. I must draw your attention to the fact that they already gave a decision on this measure in 1917, another in 1921, and they hope to give another in the near future. At present, in the province of Quebec, Mr. Monty, accompanied by Mr. Armand Lavergne, forsooth, and others somewhat in the same class, is organizing meetings on behalf of my hon. friend the leader of the opposition. With a certain dash of reserve, Mr. Monty claims to be the worthy successor of Cartier, and Mr. Meighen the worthy successor of Sir John A. Macdonald. I do not think, Sir, that had Sir John A. Macdonald been Premier of this country during the Great war, he would have made all the blunders that his successors did here in Ottawa. I have somewhat studied the life of Sir John A. Macdonald. I must admit that he is the only Prime Minister of Canada, who remained a Canadian above all things. And I intend in the future if I still mix in politics to support the Prime Minister who will give proof of being a Canadian first and last

The member for West York (Sir Henry Drayton) discussing the budget, on March 30, last, quoted France as an example of a protectionist country, and pointed out what it had accomplished since the armistice. He further stated that France had spent, in reconstruction, for miles and miles of railway and bridges that had been destroyed, for the highways that had to be rebuilt, as well as for canals and dams, up to January 1, 1924, twenty billion francs, so as to repair the physical damage to public properties, over and above those damages to churches, government, public and municipal buildings, and that France had carried out these repairs herself. Moreover, within the same period, France had disbursed an amount equal to about fifty six billion francs for the reconstruction of the devastated territory. To carry out all this work, it received an immigration of 1,500,000 people and it made a lot of money. That may be, I do not deny what France did. However, all this is due to

the extraordinary situation in which it found itself after the war: more than one-fourth of her territory was devastated, more than 500,000 homes destroyed; they had necessarily to rebuild.

However, Mr. Speaker, so as to have work and a visible prosperity, I state that it is not inviting for other countries to find themselves in the same situation as France was after the armistice, in 1918.

In our own country those conditions do not exist, we have no war devastated territory, it is fortunate for us, but we have been ruined by the war and over-burdened with taxation.

Does the high protective tariff infallibly bring prosperity to the people in this country? I do not think so, Sir, and I believe I have an instance in my county which proves, above all doubt, that my contentions are right, that is, that the high protective tariff does not always give to workmen a fair salary for the daily hard labour, in proportion to the salaries paid in the United States for the same kind of work. I am referring to the brickyards of Laprairie and Delson. When this building which we are now occupying was constructed—I refer to the Parliament building—the National Brick Co. of Laprairie, sold to Messrs Peter Lyall & Sons 15,000,000 bricks at $7.25 per 1,000. To-day the same brick sells at $17 per 1,000. I think that my statement cannot lead the House astray, in giving the sale price of that year; it was during the war and men were scarcer than to-day. I would like my good friend, Mr. Ballantyne, our ex-Minister of Marine and Fisheries in the Borden-Meighen government to be asked to do a little work, in his capacity of general manager of the National Brick Co. of Laprairie and Delson —as the company has its works in two different places, 4 miles from one another— Mr. Ballantyne is a protectionist, I think.

Mr. McMASTER (Translation): Yes, an extremist.
