DEBATES

OFFICIAL REPORT

DOMINION OF CANADA

CANADA

House of Commons Debates

OFFICIAL REPORT

Wednesday, March 11, 1925

The House met at three o'clock.

REPORTS AND PAPERS

Copy of report for the year 1924 of positions excluded under the provisions of section 38B (2) from the operation of the Civil Service Act, 1918, as amended by chapter 22, 11-12 George V.—Hon. Mr. Copp.

PRIVATE BILL

FIRST READING

Bill No. 24, to amend The Toronto Harbour Commissioners Act, 1911.—Mr. Church.

OCEAN SHIPPING RATES

Mr. S. W. JACOBS (George Etienne Cartier): Mr. Speaker, I desire to lay before the House a petition of the Montreal Board of Trade referring to the Petersen ship subsidy bill; also a petition of the Montreal Corn Exchange referring to the same matter.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CIVIL SERVICE APPOINTMENTS, 1924

Mr. HOCKEN:

How many appointments were made to the civil service of Canada by the Civil Service Commission during the calendar year 1924?

Hon. Mr. COPP: During the calendar year 1924, 1,571 appointments were made by the Civil Service Commission, to fill vacancies caused by death, resignations or otherwise, and 250 additional appointments. Of the total appointments made 299 were postmasters and 177 seasonal appointments required owing to a large number of positions abolished in the process of re-organization.

COLD STORAGE PLANT, MONTREAL

Hon. Mr. STEVENS:

1. Who prepared plans for the Harbour Commission's cold storage plant, Montreal, and what was the engineer's estimate of cost?
2. Were tenders called for the erection of said cold storage plant, and, if so, in what manner?
3. How many firms tendered, and what are the names of such firms or individuals?
4. What was the amount of the lowest tender?
5. At what figure was the contract awarded, and to whom?
6. What is the total cost to date, based on engineer's approved certificates?
7. How much has actually been paid to said contractor?
8. Has contract been completed? If not, what still remains unfinished?

Hon. Mr. CARDIN:

1. Mr. F. W. Cowie, Chief Engineer, Harbour Commissioners of Montreal, and Harold Rolph, representing the John S. Metcalf Company, Ltd., Montreal. Preliminary bulk estimate approved P.C. January 30, 1919, $900,000. Detailed estimate approved P.C. May 7, 1919, $1,400,000, as follows:

Refrigeration and Equipment.... ..	$485,620
Excavation and Piling Foundation..	100,000
Superstructure..	736,411
Power House ⅔ cost..	77,969

2. On March 22, 1920, tenders were called for the superstructure only, by public advertisement in the local English and French newspapers.

3. Five, as follows:

1. E. G. M. Cape & Co. Ltd., Montreal, P.Q.
2. G. D. Loomis & Sons, Montreal, P.Q.
3. The Atlas Construction Co., Montreal, P.Q.
4. Geo. A. Fuller Co. Ltd., Cleveland, Ohio.
5. P. Lyall & Sons Construction Co., Montreal.

The Commissioners' Chief Engineer, Mr. F. W. Cowie, made a proposal for the building of the superstructure above tendered for, to be carried out by the harbour commissioners organization, with the co-operation of the John S. Metcalf, Ltd., Montreal, at an estimated cost of $957,174, including co-operation fees, &c.

4. Lowest tender for superstructure, $1,357,000, the John S. Metcalfe fee of 5 per cent for plans, specification and estimates, not inincluded.

5. No award was made. The commissioners gave orders to carry out the whole work departmentally under the direction of Mr. F. W. Cowie, Chief Engineer. The work on the superstructure to be under the superintendence of the John S. Metcalf Company.

6. Cost to date, $2,930,723.38, as follows:

Refrigeration and equipment	$1,290,494 62
Excavation and piling foundation	125,526 73
Superstructure	1,350,308 42
Power House ⅔ cost	164,393 61

7. For plans, specifications, superintendence and co-operation, $60,705.42, was paid to John S. Metcalf Co. Ltd.

8. Building was completed by harbour commissioners' organization, and plant was put in operation in May, 1922.

NO. 3 ELEVATOR—MONTREAL

Hon. Mr. STEVENS:

1. Who prepared plans for No. 3 elevator, Montreal, and what was the engineer's estimate of cost?
2. Were tenders called for the erection of said elevator, and, if so, in what manner?
3. How many firms tendered, and what are the names of such firms or individuals?
4. What was the amount of the lowest tender?
5. Was the lowest tender, or any of the tenders, accepted? If not, for what reason?
6. Was a contract later given to Metcalf & Company?
7. What did such contract include?
8. Were tenders called for this changed or amended contract?
9. What were the terms and amount of said contract?
10. What was the engineer's estimate of amended plan, and who prepared the plans?
11. How much has been paid to Metcalf & Company (a) to prepare original plans; (b) to prepare amended plans; (c) as commission as supervisors?

Hon. Mr. CARDIN:

1. The original plans were prepared by The John S. Metcalf Coy., Ltd., grain elevator engineers, Montreal, their estimate being the sum of $2,347,000, not including percentage for plans, estimates, engineering, superintendence, etc.

2. By public advertisement, on 10th March, 1923, in all the English and French local newspapers.

3. Seven firms,—

(1) E. G. M. Cape & Coy., Montreal.

(2) Atlas Construction Co., Ltd., Montreal.

(3) John Quinlan & Co., Ltd., Montreal.

(4) Downing, Cook & Coy., Montreal.

(5) Quinlan, Robertson & Janin, Ltd., Montreal.

(6) Barnett, McQueen Co., Ltd., Fort William.

(7) Fegles Construction Co., Ltd., Fort William.

4. $3,217,500. Jno. S. Metcalf Company's fee of 5 per cent for plans, specifications and estimates not included.

5. No tender accepted. Bids were too high.

6. Yes, on 17th April, 1923.

7. Plans, estimates, superintendence of work, preparation of bids for materials, tabulation and reports on same, provide at own expense all large items of working plant, and to assume full responsibility for satisfactory work.

8. Tenders were called on amended plans only.

9. Plans and specifications, 2½ per cent, and engineering superintendence, 7½ per cent, or 10 per cent in all on an amount not exceeding $3,000,000.

10. $3,194,500, including the 10 per cent for plans, superintendence, etc., as above mentioned in item 9.

11. (a) (b): Amended plans and original plans, included in original contract—(2½ per cent).

Amount paid to 31st Jan., 1925	$ 72,888.30
(c) Amount paid to 31st Jan., 1925	160,617.49
(5½ per cent) or total of	$233,505.79

2 per cent being held back until final acceptance.

POTATO EMBARGO

Mr. HANSON:

1. Has the government any knowledge of the report as published in newspapers of the 7th and 21st instants, that an embargo against Canadian potatoes has been placed by the British government?
2. If so, what action, if any, does the government propose to take to have this embargo removed?
3. What action, if any, did the government take to prevent this embargo taking effect?
4. Does the embargo apply to potatoes grown in the United States?
5. If not, what is the attitude of the British government with reference to the importation of potatoes from the United States?

Hon. Mr. MOTHERWELL:

1. Yes, the report is correct.

2. 3. When the possibility of the embargo was first reported, the following cable was sent to the High Commissioner: "Unofficially reported here that British ministry contemplate putting embargo on Canadian potatoes because of presence here of Colorado beetle. This beetle has been in Canada for half century and to take objection to it now would be extremely unfortunate and untimely in view of recent action of United Kingdom looking to promotion of inter-Empire trade by establishing marketing committee upon which dominions have been invited to appoint representatives. Urge you have any such suggested action stayed until whole situation is carefully surveyed from all angles as another ill advised cattle embargo incident would be unfortunate."

The following is a quotation from a letter addressed by the High Commissioner to the Right Honourable Lord Bledisloe, Ministry of Agriculture and Fisheries: "I am enclosing a little article which appeared in the Manchester edition of the Daily Mail yesterday headed "U.S.A. Bacon".

You will notice in the last paragraph of this an allusion to potatoes, in case American potatoes should find their way via Canada to this country. As a matter of fact this would be commercially impossible because the duty on potatoes from the United States to Canada is thirty-five cents per 100 lbs. and the United States market is always higher than the Canadian, even in times of plenty like the present year, and if they went through Canada in bond they would be bound to be marked "U.S.A. potatoes."

You are probably well aware of the care taken in grading and marketing Canadian potatoes. They are run over wire screens for sizes, then bagged, and each bag must have a tag attached by a government inspector marked "Canadian A", and "Canadian B" or "Canadian C". I may add that the potatoes are examined by two government inspectors —by the original grader and the potato health inspector at the point of shipment.

The information I get is that it is practically an impossibility for the Colorado beetle to appear in any Canadian tuber because, as you know, the slugs feed on the leaf and they bury themselves in the earth, not in the tuber, and the tuber being run over wire screens for sizes and then run again over hand racks at the point of shipment precludes any possibility of them containing anything that might develop into a Colorado beetle.

These representations were, however, unsuccessful and the embargo was placed on Canadian potatoes. The government was, however, successful in inducing the British government to except from the conditions of the embargo any Canadian potatoes afloat at the time the embargo was put into effect.

A further attempt was made to have the restrictions removed, the following cable having been sent to the British ministry: "The Entomological branch of the Department of Agriculture has just completed a close biological study of the Colorado beetle and from their study of the habits of the insect, there would appear to be no danger whatever of the beetle being transported in shipments of potatoes exported from Canada.

The Colorado potato beetle in eastern Canada disappears from the plants by the end of September and enters the ground for hibernation. In fact, the large majority of the beetles are in the ground a month earlier. Potatoes exported from Canada to England are dug in October, at which time, as stated, the beetles are inactive, being in hibernation in the ground. After digging, the potatoes are machine graded before shipment and the danger that any beetles could remain in association with the potatoes through all this process is infinitesimal.

Our officers who have made special observations of this insect have never reported the finding of the beetles in bags, barrels, or other containers in which potatoes are shipped.

During the summer months when the beetles are active, there is a possibility of their being transported with any cargo, but it seems almost inconceivable that the beetles could be introduced with shipments of potatoes which are invariably dug after the beetles have entered the ground for hibernation.

We have no records, nor know of no cases in other countries the insect having been distributed through shipments of potatoes.

As the department has an established potato inspection service, Canada would suggest that the Imperial government accept shipments of potatoes from this country subject to their being accompanied by certificates as to freedom from Colorado potato beetle due to having undergone such grading and inspection as would permit of such guarantee.

No reply to this has yet been received.

4. A similar embargo, and for similar reasons, is placed against the importation into Great Britain of potatoes from the United States.

5. Answered by No. 4.

DEPARTMENT OF AGRICULTURE—OFFICIALS

Mr. LUCAS:

1. How many veterinarians were employed by the Health of Animals branch in Dominion of Canada during 1923?

2. How many were employed during 1924?

3. How many veterinarians were employed by the Health of Animals branch in each province during 1923?

4. How many were employed in each province in Canada during 1924?

5. What was the total amount of salaries paid veterinary employees of the Health of Animals branch in Canada during 1924?

6. What was the total travelling expenses of all employees of Health of Animals branch for 1924?

7. What mileage expenses were paid for motor cars for each veterinary employee of the Health of Animals branch in the province of Alberta, and what was the name and location of each employee?

8. What is the total number of permanent officials engaged by the various branches of the federal Department of Agriculture who are located in the province of Alberta, and what are the names and locations of each?

9. What is the description of the work which these officials are required to perform?

10. What are the names and locations of permanent employees of the federal Department of Agriculture

located outside the province of Alberta who were temporarily employed within that province during 1923 and 1924?

Hon. Mr. MOTHERWELL:

1. 305.

2. 299.

3. Prince Edward Island, 5; Nova Scotia, 5; New Brunswick, 4; Quebec, 56; Ontario, 105; Manitoba, 50; Saskatchewan, 21; Alberta, 41; British Columbia, 18.

4. Prince Edward Island, 5; Nova Scotia, 4; New Brunswick, 4; Quebec, 57; Ontario, 104; Manitoba, 49; Saskatchewan, 21; Alberta, 36; British Columbia, 19.

5. $653,515.01.

6. $258,087.89.

7.

Blackwood, A. C., Calgary	$ 1,132 81

Way, A. J., Edmonton	92 40
Total	$17,353 46

8 and 9. Total permanent employees of the Department of Agriculture in the province of Alberta in 1924, 116. Names, locations and duties,—Health of Animals Branch—Dr. J. C. Hargrave, Medicine Hat, district veterinary inspector in charge of enforcement of regulations under the Animal Contagious Diseases Act, etc.; J. C. Porter, Medicine Hat, senior clerk; Miss M. Sinclair, Medicine Hat, clerk stenographer.

Dr. A. E. Cameron, Lethbridge, pathologist in connection with animal contagious diseases research and diagnosis.

W. E. Lewis, Lethbridge, and Jack Wai, Lethbridge, animal caretakers and assisting at laboratory.

Field Veterinarians.—Testing cattle under accredited herd plan and municipal tuberculosis order; supervising the suppression of animal contagious diseases in their respective districts; inspection of cattle in stockyards, etc.: Blackwood, A. C., Calgary; Caldwell, J. H., Calgary; McCaskill, A. W., Calgary; McDougall, W. F., Calgary; Monroe, A. R., Calgary; Storey, H. C., Calgary; Whyte, J. D., Calgary; Buie, John, Edmonton; Duthie, R. C., Edmonton; George, H. H. S., Edmonton; Nichol, G. A., Edmonton; Olson, N. P., Edmonton; Phillips, J. C., Edmonton; McMillan, D., High River.

Busselle, A. W., Calgary, stockyards, retired October 31, 1924; Christie, N. D., Calgary, transferred to Winnipeg, July 1, 1924; Pinhorn, G. C., Medicine Hat, retired October 31, 1924.

Boundary Veterinarians.—Posted at animal quarantine stations to inspect animals imported; suppression of animal contagious diseases in district and tuberculosis testing: Christie, V. V., Twin Lakes; Elliott, H. J., Aden; Guertin, J. O., Coutts.

Car and Yard Inspectors.—Inspecting and supervising the disinfection of stock cars—available for inspection of garbage feeding when required: Marshall, J. J. (Senior) Calgary; Allen, W. P., Calgary; Bossard, P. S., Calgary; Fountain, W. H., Calgary; Lewis, F., Calgary; Smith, C. E., Calgary; Carroll, W. J., Edmonton; Johnston, W. N., Strathcona.

Harris, G. M., Lethbridge, retired October 31, 1924.

Permanent officials in meat packing establishments in Alberta—employed in connection with the inspection of meats and meat food products under the Meat and Canned Foods Act:

Swift Canadian Co., Ltd., Edmonton, Alta.—
W. B. R. Knowles, V. S.; J. H. Burnett, V.S.; A. J. Way, V.S.; A. Desrosiers, M. V.; J. W. Nagle, V.S.; H. Christman; F. E. Moore; S. C. Cotterell; F. A. Cox.

P. Burns & Co. Ltd., Edmonton, Alta.—
I. Christian, V.S.; R. B. Dellert, V.S.; S. R. Walkinshaw, H. W. Cox.

Gainers Limited, South Edmonton, Alta.—
A. R. Walsh, V.S.; H. W. Cowan, V.S.

P. Burns & Co. Ltd., Calgary, Alta.—
L. Senecal, V.S.; A. A. Lockart, V.S.; F. F. Saint, V.S.; A. W. Hopkins, V.S.; R. H. Cook, V.S.; J. Macdonald; S. E. Curtis; J. E. Wilson; A. R. MacGregor.

Union Packing Co. Ltd., Calgary, Alta.—
G. G. Pook, V.S.

Experimental Farms Branch—
William D. Albright, Beaverlodge, superintendent in charge of experimental sub-station; Robt. Watson, Beaverlodge, stenographer-bookkeeper; Robt. Jones, Fort Vermilion, superintendent in charge of experimental sub-station; Alfred P. Hobbs, Fort Vermilion,

stenographer-bookkeeper; A. G. Smith, Wainwright, assistant in connection with cattalo experiments at Buffalo park; James Wilson, Wainwright, herdsman, in connection with cattalo experiments at Buffalo park; F. H. Reed, Lacombe, superintendent in charge of experimental station; L. T. Chapman, G. E. DeLong, Lacombe, assistants to superintendent; G. M. Long, Mrs. A. Aldwinckle, Lacombe, clerk-stenographers; E. Edmunds, Lacombe, farm foreman, supervision of field work, etc.; F. W. Jones, Lacombe, Herdsman, taking care of live stock; N. E. Brooks, Lacombe, head herdsman, in charge of live stock; W. J. Groom, Lacombe, poultryman; W. H. Fairfield, Lethbridge, superintendent, in charge of experimental station; J. Milroy, Lethbridge, farm foreman; R. J. C. Paris, Lethbridge, head gardener, supervision of horticultural work; J. M. Dykes, Lethbridge, poultryman; A. E. Palmer, W. D. Hay, Lethbridge, assistants to superintendent; R. E. Everest, Lethbridge, supervisor of illustration stations; A. Jones, Lethbridge, clerk-stenographer.

Live Stock Branch—

Miss J. B. Gordon, Edmonton, clerk-stenographer; Miss T. A. Savage, Edmonton, clerk-stenographer; Miss F. A. Martin, Calgary, clerk-stenographer; A. S. Morrison, Edmonton, acting district live stock promoter representative of live stock branch re distribution of pure bred sires, promotion and improvement of live stock, etc., cattle; R. E. Wilson, Calgary, district live stock promoter, supervision of horse breeders' clubs, and supervision and promotion of breeding, marketing, etc., of horses, representative of horse division.

S. G. Freeborn, Calgary, district sheep promoter. In charge field work among farmers and breeders for the encouragement of sheep, and goat husbandry, etc.; N. Curtis, Edmonton, and D. A. MacKenzie, Calgary, stock yard agents. In charge of enforcement of the Live Stock and Live Stock Products Act and regulations thereunder. Supervision of sales of stock, etc.; W. H. Tallis, Calgary, junior stock yard agent. Assists with the work at the stockyards; T. Williamson, Edmonton, W. F. Wilson, Edmonton, O. A. Aynsley, Calgary, swine graders. In charge of the grading of swine at stockyards, public marketing for packing establishments, etc.; G. M. Cormie, Edmonton, district poultry promoter. Responsible for the promotion of the production and co-operative marketing of poultry and poultry products; R. Alloway, Edmonton, J. A. McMillian, Edmonton, J. D. McMillan, Edmonton, distributors of live stock. Assist in carrying out the distribution policy in regard to pure bred sires. Report upon applications from Associations for the loan of sires; R. H. Ennismore, Edmonton, egg inspector. Inspection of interprovincial or export shipments of eggs. Give instructions and demonstrations in grading and candling of eggs, etc.; T. T. Clyde, Edmonton, poultry promoter. To do field work among farmers and producers for the purpose of increasing the quality and production of poultry and poultry products, etc.; J. R. Higgins, Calgary, Geo. Syrotuck, Edmonton, promoters of egg production. To stimulate egg production, promote co-operative marketing, organize egg circles, etc.; A. G. Moore, Edmonton, dairy promoter. To encourage the development of the dairy industry, to organize and supervise cow-testing activities, etc.

Fruit Branch—

M. P. McNeil, Calgary, fruit and vegetable inspector. Enforcing provisions of the Fruit Act and Root Vegetables Act. Prepare market reports, etc.

Entomological Branch—

H. L. Seamans, Lethbridge, Dominion entomological laboratory. Investigations re the biology and control of insects affecting field crops.

Seed Branch—

G. M. Stewart, Calgary, district seed and feed inspectors. Responsible for administration of Seeds Act, Feeding Stuffs Act, and the Fertilizers Act, inspection of seed, feed, and fertilizers offered for sale; C. T. Tapp, Calgary, seed and feed inspector. Assists in the above mentioned duties; E. M. Hanna, Calgary, senior clerk. Clerical work; M. L. Henderson, Calgary, clerk stenographer; H. M. F. Hutton, Calgary, clerk stenographer; C. W. Leggatt, Calgary, supervising analyst. In charge of laboratory for the analysis of seed, feed, and fertilizer; A. Hope, Calgary, M. N. Patterson, Calgary, G. N. Ramage, Calgary, F. K. Robertson, Calgary, D. E. Reader, Calgary, seed analysts. Test and analyze seeds, feeds and fertilizers.

Health of Animals Branch—

R. Julien, V. S., Montreal, Que., sent from Winnipeg to Edmonton, relieving at meat packing establishments during January and February, 1923; G. S. Hanmore, V.S., Toronto, sent from Winnipeg to Edmonton, relieving January and February, 1923; R. Waddy, V.S., Winnipeg, Man., at Wainwright re the inspection of slaughter of buffalo, 1924; L. M. Heath, V.S., veterinary research station, Hull, Que., relieving pathologist at research station, Lethbridge, during 1924.

Live Stock Branch—

W. O. Watkins, district sheep promoter, Winnipeg (since resigned), was employed during the fall of 1923 grading rams in the province of Alberta; J. M. McCallum, chief, stock yards service, Ottawa, was employed for a period during October 1924, grading rams; E. J. Johns, junior stock yard agent, St. Boniface stock yards, St. Boniface, Manitoba, substituted for N. Curtis, stock yard agent grade 2, at Edmonton during the latter's statutory leave September 27-October 17, 1924.

The undermentioned dairy recorders and testers, E. C. Crohn, Victoria, B. C. (resigned); J. H. Marshall, Hamilton, Ont.; S. Ross, Ottawa; A. M. Clark, Montreal, Que. (resigned); E. Young, New Westminster, B.C.; R. Snazelle, Seagrave, Ont.

These men were employed at various intervals in Alberta during the years 1923-24.

These men were employed as travelling inspectors visiting farms to test cows entered in the Canadian record of performance test for pure bred dairy cattle. They move from farm to farm making the round of the Prairie provinces and British Columbia. Some of them did not return home for two years.

H. T. Wilson, poultry inspector in Ontario, worked at various periods in the province of Alberta during the years 1923-24.

EGG GRADING AND INSPECTION

Mr. SUTHERLAND:

1. How many egg inspectors or graders are now employed by the Department of Agriculture?
2. What is the total of the annual salaries to be paid for the present year in this connection?
3. What are the percentages of the eggs graded in 1924 under the various grades provided in the act, viz. Class I—fresh; grade (a)—specials. grade (b)—extras; sub-grade I—pullets—extras; Grade (c)—firsts; grade (d)—seconds?

Hon. Mr. MOTHERWELL:

1. (March 4th, 1925) Twenty-six egg inspectors including one chief egg inspector.
2. (Fiscal year 1924-25) $42,112.57.
3.

	Percentage
Class (1) Fresh	
Grade (a) specials..	..
Grade (b) extras..	14.6
Sub-grade (1) pullet extras.. ..	.08
Grade (c) firsts	27.9
Grade (d) seconds..	25.3
Class (2) storage	
Class (2a) preserved	
Grade (a) extras..	3.4
Grade (b) firsts..	19.7
Grade (c) seconds..	9.0
Class (c) cracked and dirty.. ..	.02

[Mr. Motherwell.]

RUSSIAN FLOUR ORDER

*Mr. GARLAND (Bow River):

1. Has the government any information regarding the large order placed by the Russian government with Canadian mills for more than $12,000,000 worth of flour?
2. If so, what arrangements, if any, have been made with the government regarding financing this purchase?

Hon. Mr. COPP:

1. No.
2. Answered by No. 1.

FEDERAL AND PROVINCIAL TAXATION

Mr. CHURCH:

1. Has anything been done by the government to meet the Ontario government and co-ordinate federal and provincial taxation to prevent duplication and overlapping, on income, amusement and other forms of taxation, since last session?
2. If so, what action has been taken?

Hon. Mr. ROBB:

1 and 2. A taxation conference was held at Ottawa in November, 1924, at which representatives of the Ontario government were present. On the 11th of November representatives of the various provinces met the Acting Minister of Finance. On the following day the representatives of the provinces met by themselves and passed a resolution, which was later presented to the Acting Minister of Finance: "That a conference be called at the joint request of the premiers of Ontario and Quebec to deal with the problems which arise from time to time in the administration of provincial affairs and for the purpose of such conference, but not in any way limiting the scope thereof, that the following be the agenda:—(1) Overlapping in departments where joint federal and provincial jurisdiction is being exercised. (2) Consideration of income tax as to collection and allocation. (3) Exemption of all purchases by and on behalf of provincial governments from operation of sales tax. (4) Adjustment of federal subsidies to provinces with a view to having provincial subsidies bear a reasonable ratio to provincial expenditures. (5) Provincial taxation of all nationally operated railroads. (6) Inter-provincial relations in respect to succession duties. (7) Consideration of measures for reduction of taxation and further economies in administration."

MALAGASH DREDGING

Mr. BLACK (Halifax):

1. What are the names of those who tendered for dredging at Malagash in 1924?
2. What were the prices of the different firms or individuals tendering?
3. To whom was the contract awarded?
4. By whom was the work done?
5. Was the work done according to tender?
6. What was the price paid per yard for rock?

7. What was the price paid per yard for earth?
8. What was the total quantity of rock removed?
9. What was the total quantity of earth removed?
10. How much money was earned by contractor?
11. How much money was paid contractor?
12. How much more rock is required to be removed under contract?
13. How much more earth is required to be removed under contract?
14. Who was the inspector of dredging operations?
15. How many days was inspector employed in connection with work?
16. How much was paid inspector per day?
17. What was the total amount earned by inspector in 1924?

Hon. Mr. KING (Kootenay):

1. None.
2. Answered by No. 1.
3. No contract awarded. The Fraser Paving and Construction Company, Limited, of New Glasgow, N.S. offered to do this dredging if they were given a chance to test out the working possibilities of their outfit before entering into a contract to carry out the work. This offer was accepted and during 1924 this firm made certain tests with a view of doing the work as a hydraulic proposition but they have not yet expressed their willingness to enter into contract to undertake the work.
4. Work to the value of about $500 is claimed by The Fraser Paving & Construction Co. Matter being investigated.
5. Answered by No. 4.
6. No payments made.
7. No payments made.
8. Nil.
9. About 500 cubic yards place measurement.
10. About $500.
11. Nil.
12. It is not anticipated that any rock will be encountered.
13. Approximately 23,290 cubic yards, place measurement.
14. James H. Treen, (during the period the Fraser Paving and Construction Co., Ltd., were making their tests.)
15. Fifty-four days.
16. $4.
17. $216.

PIERREVILLE WHARF

Mr. DOUCET:

1. What did the repairs to the government wharf, at Pierreville, county of Yamaska, cost?
2. How many thousand feet of lumber were used in said repairs?
3. What was the price of said lumber?
4. Who supplied the same?
5. Is the government aware that Mr. Rodolphe Tourville, M.L.A., and Mr. Edouard Ouellet, legislative councillor, are members of the Tourville Lumber Company of Louiseville, county of Maskinongé?
6. Who was the contractor of above wharf and what was his remuneration?
7. If the work was performed by day labour, who was the superintendent, and what was his salary?
8. Who bought the old lumber?
9. What disposition was made of the new unused lumber?
10. Was said unused lumber carted away by day or by night?
11. Was the old lumber sold and at what price?
12. What was the total cost of the construction of the government's shed?
13. How many feet of lumber were used in the construction of said shed?
14. What were the names of the contractor and inspector?

Hon. Mr. KING (Kootenay):

For calendar years 1923 and 1924:—

1. 1923—$105.09.
   1924—$3,254.19.
2. 1923—937 feet.
   1924—26,714 feet.
3. 1923—$39.98.
   1924—$1,189.81.
4. 1923—Messrs. D. & A. Laperriere, of Pierreville, P.Q.
   1924—Messrs. D. & A. Laperriere, of Pierville, P.Q. and The Tourville Lumber Mills Company, Louiseville, P.Q.
5. No information.
6. 1923—Work performed by day labour.
   1924—Work performed by day labour.
7. 1923—George Allard, $4.00 per day.
   1924—George Allard, $4.00 per day.
8. 1923 and
   1924—No old lumber sold.
9. 1923 and
   1924—No new lumber remained unused.
10. See answer for question 9.
11. None sold.
12. $882.57.
13. 9,061 feet.
14. 1923-1924—No contractor or inspector as work done under a foreman.

FISH EXPORT

Mr. MacLEAN (Prince):

1. Has the Marine and Fisheries department entered into any arrangement with Mr. Hugh Green relative to the shipment of fish from the Maritime provinces to Great Britain?
2. Is any assistance being given by the government?
3. If so, what is the nature of same and at what points in the Maritime provinces will the operations be carried on?

Hon. Mr. CARDIN:

1. No.
2 and 3. Answered by No. 1.

MRS. JEAN MULDREW

Mr. DOUCET:

1. Is Mrs. Jean Muldrew an employee of the Soldier Settlement Board?
2. If so, what is her annual salary?
3. What amounts of travelling and other expenses has she incurred each year since her appointment, which have been paid out of public funds?

4. Is she entitled to the preference given by section 39 of the Civil Service Act to those who have military service overseas in the late war, or to the widows of such?

Hon. Mr. ROBB:

1. Yes.
2. $3,000.
3.

1919-20	$1,123 65
1920-21	1,636 51
1921-22	1,404 26
1922-23	862 08
1923-24 to Sept. 30, 1923	856 27
*Oct. 1, 1923 to March 31, 1924.	1,139 23
*1924-25	280 28

4. No, (she was appointed prior to the passing of this section), but she is a widow whose only son was killed in action in 1915.

*Attached for special duty to Department of Immigration and Colonization.

MILITARY DISTRICT NO. 10—COAL INQUIRY

Mr. WOODSWORTH:

1. How many officers have been dismissed for participation in the frauds disclosed by the Campbell commission in connection with the sale of coal?
2. How many non-commissioned officers?
3. How many privates?
4. How many workmen?

Hon. Mr. MACDONALD (Pictou): None. The government has taken steps to court martial Lt.-Col. G. F. C. Pousette, District Supply and Transport Officer, who was primarily responsible for the receipt of coal at the military establishment at Winnipeg. The question of dismissing and disciplining officers, privates and workmen is under consideration.

CONSUMERS GLASS COMPANY

Mr. DESLAURIERS:

1. Is the government aware that the Consumers Glass Company of Verdun, through its superintendent, Mr. Goddard, brought workmen between the 20th and 25th February, 1925, from Zanesville, Ohio, where the trade union is not recognized, and that these strike breakers have replaced citizens of Canada in said Consumers Glass factory?
2. Is the government in a position to inform the House if the men named Crest and Millar at present registered at Dombrieo hotel, as well as their companions, have not violated the Immigration Act by entering Canada?
3. If they have unlawfully entered Canada, is it the intention of the government to deport them?
4. Is it true that said Consumers Glass Company unlawfully employ young girls between 9 p.m. and 7 a.m. and even on Sunday?

Hon. Mr. MURDOCK:

1. No information.
2. The Department of Immigration and Colonization has no record of Crest and Millar and unless furnished with the names of their companions can make no reply with respect to the latter.
3. If it is shown that these men effected illegal entry to Canada, the Department of Immigration and Colonization will institute deportation proceedings.
4. No information.

HUDSON'S BAY COMPANY—LAND

Mr. GOOD:

1. During the last ten years has the Hudson's Bay Company been granted any land?
2. If so, (a) How much; (b) Where situated; (c) For what consideration; (d) For what reasons?

Hon. Mr. STEWART (Argenteuil):

1. Yes.
2. (a) 98,059.94 acres.

(b) Prairie provinces and Northwest Territories.

(c) Deed of surrender, Dominion Lands Act, exchange account and by purchase under clause 32 of Dominion Lands Act.

(d) 693.74 acres—Trading post under deed of surrender.

42,836.27 acres—Notifications and allotments of 1/20th.

54,156.50 acres—Exchange account.

373.43 acres—Sales for trading post under section 32 of the Dominion Lands Act.—$1,746.26.

QUESTIONS PASSED AS ORDERS FOR RETURNS

VANCOUVER WATERFRONT PROPERTY

Mr. BLACK (Yukon):

1. How much did the Vancouver Board of Harbour Commissioners pay for the waterfront property lying immediately east of and adjoining No. 1 harbour board elevator, portion of which is now occupied by elevator known as Spillers elevator?
2. What was the total area of the said property: (a) Above high water mark; (b) Below high water mark?
3. Was the said property offered to the harbour board for $275,000?
4. Did the said price of $275,000 include a sawmill and buildings then on the property?
5. Did the harbour board secure an option at this price and if so, for how long?
6. Subsequent to the purchase of the said property, did the harbour commissioners permit the former owners to remove the mill and other buildings, or to whom was the said mill sold, or given, or released?
7. Was a portion of the said property leased to R. H. Gale of Vancouver, acting for himself or a company, and if the latter, what was the name of the company to whom the lease was issued?
8. Did the said R. H. Gale negotiate the said lease?
9. Has there been any transfer of the said lease since the original issue? If so, to whom?
10. What is the amount of rental being paid to the harbour commissioners for the said lease?
11. Did the harbour commissioners undertake to build a jetty for grain conveyors as a condition or term in the said lease? If so, what has the said jetty and conveyors and equipment cost?

12. Has the said original lease, or a later transferred lease been assigned to the "Spillers" Grain Company of England?

MILITIA HEADQUARTERS—STAFF

Mr. DOUCET:

1. What is the name, the rank, the position, and the pension of each officer on the staff at headquarters, Ottawa, and the military districts, who has been retired from the service, from the 1st of January, 1924, to the 1st of March, 1925?

2. What is the name, the rank, the position, and the salary, including pay and all allowances, of each officer of the staff at headquarters, Ottawa, and the military districts, who has received; (a) an extension of term; (b) a reappointment, from the 1st of January, 1924, to the 1st of March, 1925?

3. Who recommends to the Minister and the Deputy Minister of the Department of National Defence: (a) the retirement of an officer; (b) the extension of term to an officer; (c) a reappointment of an officer; (d) the promotion of an officer?

4. What is the name of each officer of the staff at the general headquarters and local headquarters, Ottawa, and in the military districts, who has held the same rank more than four years, and what is the tenure of appointment of all positions on the staff?

5. What is the intention of the Minister of the Department of National Defence regarding those officers who have not been promoted in the army for many years?

OFFICERS COMMANDING MILITARY DISTRICTS

Mr. DOUCET:

1. What is the tenure of appointment of an officer commanding a military district?

2. What are the names of the officers commanding the military districts of Halifax, Nova Scotia; St. John, New Brunswick; Toronto, Ontario; Montreal, Quebec; Quebec, Quebec; from the 1st August, 1912, to the 1st of March, 1925?

3. During the above years, what was (a) the date of 1st appointment as officer commanding a military district of each of the above officers; (b) the date of each reappointment; (c) the date of each extension of term; (d) the total number of years of service as officer commanding a military district?

4. Is it the intention of the Minister and the Department of National Defence to maintain in his position an officer commanding a military district for a term of more than four or five years, by this fact stopping promotion to a lot of officers of the permanent force well qualified and available for such a position?

UNOPPOSED MOTIONS FOR PAPERS

TRENTON WHARF

Mr. STEVENS:

For a copy of all correspondence passing between January 1, 1922, and June 27, 1924, between the Minister or officer of the Department of Public Works and the member for the time being of the riding of West Hastings, referring in any way to the Trenton wharf.

KENO CITY TOWNSITE

Mr. BLACK (Yukon):

For a copy of all correspondence between the Gold Commissioner of Yukon, the Surveyor General, the Director General of Surveys, any official of the government and any person concerning the survey and plan of the townsite of Keno City, iin Yukon territory.

RAILWAY MAIL SERVICE

ALLEGED DISCRIMINATION AGAINST CANADIAN NATIONAL RAILWAYS

Mr. W. J. WARD (Dauphin) moved:

That, in the opinion of this House, there should be no discrimination against the Canadian National Railways in the carrying of mails.

He said: Mr. Speaker, it will be recalled that during the progress of last session I placed the following question on the order paper:

What percentage of the mail of Canada is being carried by the Canadian Pacific railway between eastern Canada and the Pacific coast?

The answer to the question was:

Expenditure on account of the railway mail service for the whole of Canada for fiscal year, 1922-23:

Canadian Pacific railways..	$3,683,232 80
Canadian National railways.. ..	3,178,411 02
Other railways...	615,839 07

It will also be recalled that following the reply to this question, a regular avalanche of telegrams and petitions and resolutions poured into Ottawa from all parts of Canada demanding the removal of what was at least believed to be discrimination against the National Railways in the carrying of mail. Almost immediately following the appearance of the said question on the order paper, I was invited to visit the office of the deputy minister. On visiting his office, I was informed that everything was being done at that time to remove what appeared to be discrimination, and to make as nearly as possible an equal division of the mail carrying business of the country between the two great railway systems. However, not being satisfied in my own mind that all was being done that might be done, this year I placed on the order paper the resolution that is now before the House. In order that I might be enabled to give a fair statement of the situation as it actually exists, I have secured from the Post Office Department some figures that, while they may not all be strictly relevant to the subject matter, I think will be of interest to the House, and probably more so to the country. I will ask to have this statement placed on Hansard in order that the figures can be grasped intelligently.

Hon. gentlemen will kindly note the track miles of the two great railway systems in the Dominion of Canada are as follows: track miles of the Canadian Pacific Railway Company, 13,579; and of the Canadian National, 19,975 miles. Now I would direct the attention of the House to the track miles used. In the case of the Canadian Pacific, 13,172 miles are used; in other words, just 400 miles less than the mileage actually constructed; but when we come to the

Canadian National Railways, we find that the mileage in use is only 18,280, while the mileage built is 19,975. These are the figures that I remarked at the outset were perhaps not strictly relevant to the subject matter of the resolution, but nevertheless I think they are worthy of notice.

Now in respect to the carrying of mail the figures are as follows: Canadian Pacific railway, train miles, 5,638,040; Canadian National railways, train miles, 6,602,644. I would also direct the attention of the House to one feature of those figures, and that is that while the Canadian Pacific Railway operate only 13,172 miles of railway, their train miles amount to 5,638,040; while the National Railways, operating 18,280 miles, have a train mileage of 6,602,644; in other words, the train miles of the Canadian Pacific are 20 per cent, or thereabouts, in excess of the National Railways. Now anyone who has travelled between eastern and western Canada cannot but have been impressed with the large number of excess trains that are operating in this country. When you get on a train in the city of Winnipeg, for instance, you will find, as I did when I was coming to Ottawa this session, that there were only 37 passengers on the entire train. The Canadian Pacific Railway train had left about an hour previously, and I understand that it carried only 31 passengers. I think this might very well be taken into consideration by the Minister of Railways (Mr. Graham), with a view to seeing if we cannot reduce the number of unnecessary trains that are running, and which are responsible for some at least of the Canadian National Railway deficits.

Now I come to the subject matter of the resolution. The postal service miles of the Canadian Pacific Railway amount to 3,629,508. and of the Canadian National Railways to 4,270,320. Dividing that into two classes, so to speak, we find that the Canadian Pacific operated 1,187,536 miles of the 60-foot full postal cars; that is, a full mail car; while the Canadian National Railways, though they operate 18,280 miles of railways as against 13,172 miles of the Canadian Pacific, is approximiately 75,000 miles more than the Canadian Pacific railway of the 60-foot full postal cars.

Then coming to the thirty foot postal car the Canadian Pacific operated a mail service on 1,575,682 miles, and the Canadian National for the same half car operated a service of 1,411,200 miles. In the case of baggage car mail service the Canadian Pacific mileage was 866,290 and the Canadian National mileage 1,758,366. It will be noted that in that instance the National Railways gave a service to a much greater degree than did the Canadian Pacific. But that means very little because payment is made for what is called overflow service. In other words a train leaves Montreal, Toronto, or some other point, the overflow after the mail car is filled is carried in the baggage car. That space is purchased from station to station as it is required.

Now, in the matter of payment for that service the sum of $772,906.09 was paid to the Canadian Pacific, according to the figures which I have, and $769,916.49 was paid to the Canadian National. You will note, therefore that the payment is almost equal for the service rendered in that particular class. However coming to the overflow mail we see a different situation. The overflow mail is the mail which I have just mentioned, the mail offered in excess of the accommodation on the baggage or postal car. In the statements I have, the figures are given by provinces. I shall not weary the House by enumerating all the details. but will ask permission to place them on Hansard.

The statements are as follows:

CANADA

Statement showing a comparison of track miles, train miles and postal service miles etc., in connection with mail traffic on Canadian National and Canadian Pacific Railways:

Track mile—C.P.R., 13,579; C.N.R., 19,975.

Track miles used—C.P.R., 13,172; C.N.R., 18,280.

Train miles—C.P.R., 5,638,040; C.N.R., 6,602,644.

Postal service miles—C.P.R., 3,629,508; C.N.R., 4,270,320.

Sixty foot postal car, miles—C.P.R., 1,187,536; C.N.R., 1,208,476.

Thirty foot postal car, miles—C.P.R., 1,575,682; C.N.R., 1,411,200.

Baggage car miles—C.P.R., 866,290; C.N.R., 1,758,366.

Payment for service—C.P.R., $772,906.09; C.N.R., $769,916.49.

Statement showing track miles, Train miles, Postal service miles, etc., in the provinces of Manitoba, Saskatchewan, Alberta, and British Columbia.

Track miles—C.P.R., 8,525 miles; C.N.R., 9,396 miles.

Track miles used—C.P.R., 8,334 miles; C.N.R., 8,798 miles.

Train miles—C.P.R., 2,542,290 miles; C.N.R., 1,620,629 miles.

Postal service—C.P.R., 1,893,094 miles; C.N.R., 1,122,018 miles.

Sixty foot postal car—C.P.R., 687,429 miles; C.N.R., 412,986 miles.

Thirty foot postal car—C.P.R., 778,102 miles; C.N.R., 278,447 miles.

Baggage car—C.P.R., 427,568 miles; C.N.R., 430,585 miles.

Payment—C.P.R., $411,645.17; C.N.R., $221,518.16.

OVERFLOW MILEAGE—CANADA

Prince Edward Island, mileage—C.P.R., nil; C.N.R., nil.

Nova Scotia, mileage—C.P.R., nil; C.N.R., 15,906.

New Brunswick, mileage—C.P.R., 7,286; C.N.R., 36,200.

Quebec, mileage—C.P.R., 30,372; C.N.R., 90,186.

Ontario, mileage—C.P.R., 167,700; C.N.R., 68,973

Manitoba, mileage—C.P.R., 58,144; C.N.R., 6,712.
Saskatchewan, mileage—C.P.R., 99,094; C.N.R., 3,591.
Alberta, mileage—C.P.R., 48,392; C.N.R., 11,209.
British Columbia, mileage—C.P.R., 17,352; C.N.R., 10,256.

SUMMARY

Canadian Pacific Railway—428,340 miles.
Canadian National Railway—243,033 miles.

It will be noted that the Canadian Pacific Railway have for this class of service throughout Canada, 428,340 miles; the Canadian National Railway, 243,033 miles. It might appear, Mr. Speaker, from the wording of my resolution that I intended to jump in and tear the Post Office Department to pieces for not having given a fair share of the mail carrying business to the National system. That is not my intention at all. I simply wished to bring to the attention of the House and the department the fact that there was a feeling in the country that the National Railways were not receiving a fair share of the mails offered. However, I think our efforts of last year have not been without effect.

This morning I telephoned to the office of the Superintendent of Railway Mail Contracts, and asked for a comparison of the earnings from this service of the different railways since 1922-23, and I think it will probably be of interest to the House to give the figures. Payments for the fiscal year 1922-23 to the Canadian Pacific Railway, $3,683,414.13; payments to the Canadian National for the same year, $3,158,063.46, a discrimination, if the term is permissible, of $525,350.67 in favour of the Canadian Pacific Railway Company. The fact that there was this discrimination precipitated the feeling throughout the country which came to a head a year ago. For the year 1923-24 the payments were: Canadian Pacific Railway, $3,659,012.99; Canadian National Railways, $3,176,034.60, a discrimination of only $482,978.39, so the situation was getting a little better. For the calendar year 1924 the payments to the Canadian Pacific Railway amounted to $3,534,251.69, and to the Canadian National, $3,172,107.07, or a difference in favour of the former of $362,-144.62. I presume that when we have the figures for the financial year we shall find a further lessening in the discrimination. So that if the Post Office Department continues the good work for another five years this discrimination or differential will be entirely removed. As a member of this House I must say that I appreciate very much the work which the department is doing. Having discussed the matter at some length with the minister as well as with the officers of the department, I believe they are doing just about all that can be done to gradually remove this apparent discrimination without disrupting the service. Still I am not so generous as to allow the department to take the entire credit for this good work. I think our efforts of a year ago as well as the agitation on the part of the public, which interested itself actively in the matter, throughout the length and breadth of Canada, were very largely responsible for the change which has been brought about—I was going to say change of heart, but I suppose I should say change of policy on the part of the department.

Now, I understand there are other members who wish to speak on this question and I think I have said all I wish to say except one other matter: It may be of interest to the House and to the country to know just what price is paid for the various services rendered. For the sixty foot mail car the department pays thirty-five cents per service mile, and for the thirty foot car twenty cents per service mile. I may say here that the question is often asked why so few mail cars are found on the Canadian National railway line, and I have often wondered myself why their absence. But the mystery was solved for me the other day by the minister, whom I am glad to see in his seat. He told me that the National railway had been carrying a large percentage of the mails offered to it in baggage cars, and that the mails can be carried much more cheaply in these cars than in mail cars. I have here the price paid for a full storage or baggage car, and it is thirty-six cents per service mile. The minister also informed me that a storage car will carry almost twice as many mail bags as a mail car. So that I think the National Railways are to be commended for their endeavours to adopt the system of carrying the mails in those cheaper cars, where they can carry very much more mail in the same space, and at a greatly reduced cost.

With reference to this overflow space that was mentioned, I might remark that that is sold in three, seven, fifteen and thirty foot units. The price paid for the three foot unit is four cents per service mile, for the seven foot unit 6.5 cents, for the fifteen foot unit thirteen cents and for the thirty foot unit twenty cents. In closing I desire again to impress upon the minister the absolute necessity for economy in every possible way. If mail can be carried more cheaply in storage cars than in mail cars, I think that is the service that should be put into effect. I also think we should try to reduce the number of unnecessary trains operating over our railways.

Mr. C. WALLACE STEWART (Humboldt): The matter which the hon. member for Dauphin (Mr. Ward) has drawn to the attention of the House through this resolution this afternoon was first brought to the attention of most of the members of this House, I think, through a statement, made before the committee that dealt with national railways and shipping last year, by an official of the Canadian National Railways who appeared before that committee, and although he did not use the term "discrimination" which the hon. member uses in his resolution, he left on our minds the impression that there was a discrimination by the Post Office Department in the allotment of mails to the Canadian National Railways, in comparison with the allotment of mail which the Canadian Pacific Railway carried over their lines. That committee to which I have referred, of which I had the honour of being a member, made a certain investigation of this matter last year. I must admit that the investigation was very casual. We did not go into the subject at any great length, but taking the statement that had been submitted to us by the official of the National Railways as being generally correct, we did make a recommendation to this House, and I should like to read to the House the recommendation made in the report of the committee on National Railways and Shipping last year, which is as follows:

> In regard to the transport of His Majesty's mails, the evidence submitted indicates that there is at present an unequal distribution of mail services between the railways—in some instances resulting in inferior service to the public. Your committee feels that adequate mail service is of paramount importance in the public interest, and suggests that the government take steps to review the whole question of the transport of mails throughout Canada in order that distribution may be effected to give a maximum of service to the public and justice to the Canadian National Railways.

Hon. members will note that in that paragraph of the report there is no statement that we had found there was a discrimination, but without affecting the service to the public which our Post Office Department renders, and which it has been formed and built up to render, it appeared to us that it would be possible to change the routing of some of the mails in such a way that it would perhaps render greater justice to the Canadian National Railways. The official who appeared before our committee summarized the claims, if I may use that term, that the Canadian National Railways had upon the Post Office Department for a further allotment of mails to be carried. He put it under four heads. The first claim was that they should have carriage of mail on their trains, Nos. 1 and 2, from Montreal to Vancouver, which was carried by the Canadian Pacific Railway. The second claim was that they should similarly carry on their trains Nos. 3 and 4 between Toronto and Winnipeg the through mails which are now allotted to the Canadian Pacific Railway. The third claim was that all overseas mail, ex steamers at Quebec should be handed to the Canadian National Railways for transport to Montreal, and his final claim was that all overflow mail originating in Montreal and destined for Toronto should be carried by the Canadian National Railways. He gave us to understand that the existing condition was that they carried that overflow three days a week, and the Canadian Pacific Railway carried it three days a week.

As I have already stated this matter was not very thoroughly investigated last year by the committee. The House will remember that that committee met in the closing days of the session, and there was no time, even if the committee had seen fit to go into the question at length, and perhaps to the depth, that the question merited. I have, however, in the interval been making further inquiries. It seemed to me that this was one of the matters in which perhaps we could take a definite stand in regard to placing our Canadian National Railways on a little better footing. I want to make it very clear to the House that in making the investigation, and in making the statement that I make this afternoon, I put it on this ground, that we, as representing the taxpayers of this country, who have to meet the deficits of our Canadian National Railways, are not doing our duty if we should overlook any point where we can turn business to the Canadian National railways. I know that someone might raise the objection at this point that by asking the Post Office Department to divert its mails to the Canadian National Railways it may not only put the public of Canada at a disadvantage in regard to service, but it would only be taking money out of one pocket and putting it into another. I am not sure that that last argument could be sustained. We certainly do not want to put the public of Canada to any disadvantage in so far as service is concerned. I would lay down as a basic principle that in the matter of the routing of mail the Post Office Department must always have a perfectly free hand to send the mails over the route that will take them to their destination in the shortest time and in the most economical manner that is possible. But on the other hand, where it is possible for

the department to route mail over the Canadian National Railways, so that the public will not be at any disadvantage in regard to service—that is in the delivery of the mail to them—and where it will not cost the Post Office Department any more to route the mail over the Canadian National than over the Canadian Pacific Railway, I think we might well advise the Post Office Department that such steps should be taken, and that they should so route the mail over the Canadian National that they would obtain perhaps an advantage in that respect. Finding themselves, as they do at the present time, at a disadvantage—

Mr. CHURCH: Is it not the function of the railway commission, of its own volition, to regulate any undue and unjust discrimination with regard to transportation companies that use the mails? I understand the railway commission of its own volition can make rules and regulations to prevent any undue or unjust discrimination.

Mr. STEWART (Humboldt): In reply to my hon. friend, I have never heard of the railway commission taking any action in this regard and I also point out to him that I think the word used in the resolution of the hon. member for Dauphin, (Mr. Ward) was unwisely chosen. I think that the word "discrimination" does not perhaps best suit the situation which we are now facing. I would not for one moment have it supposed that I think the Post Office Department are showing discrimination in the allotment of these mails. I was stating that where the Post Office Department could change the routing of their mails they should do so, and I think they should be so advised by this House. Hon. members might wonder why this House should need to offer to the Post Office Department any advice in that regard. Perhaps the Postmaster General (Mr. Murphy), who is in his seat just now, will think it is presumption on the part of any member on this side of the House to offer his department any advice in that regard; but I want to make it perfectly plain why I think the House might offer them advice without being presumptuous. There is no member in this House who has a greater respect for the efficiency of the Post Office Department than I have. I have had the experience of living out in the frontier of our Dominion for a considerable portion of my life, where perhaps we see the efficiency of the Post Office Department, and realize the efficiency with which it serves us better than those who live in the larger urban centres of the Dominion, where they have delivery many times a day, just as a natural routine of business. The Post Office Department is efficient without doubt. It has, I believe, built up its record for efficiency by very definite business principles and business lines of conduct. It is because in my contact with the officers of that department I have been impressed with their adherence to very strict business principles, and business conduct, in the administration of their affairs, that I offer this suggestion. The matter which has been referred to in the resolution as discrimination is, I think, the simple growth of the affairs in our national history, rather than discrimination.

The Canadian Pacific Railway was the first railway to cover our country from one end to the other. Without a doubt it gave the best service to the majority of the people of Canada for many years, and naturally, if the officials of the Post Office Department were going to use the most efficient and economical means of reaching the great majority of our people, they would be forced to use the Canadian Pacific. Therefore, naturally, they used those lines and their branches for the carriage of mails, and the Canadian Pacific became a part of the postal system. A matter that must not be overlooked in this regard is the training of sorting clerks in the post office. They have to make the sorting of mails a specialized business. After the routing of mails on one system has been carefully built up, to change it to another cannot be done at a moment's notice and it is not done without thought being taken as to the result. It completely throws out the usefulness of clerks who are trained to know the post offices along certain lines, and who have to learn all over again the post offices on another line. To do this on a big scale means serious disruption of the postal service of the Dominion.

In the past few years, at least the majority of hon. members will admit that our Canadian National railway system in its unified form is reaching and giving service to many centres of this Dominion, as well as to the farming sections, that the units of which it is built up did not do prior to their union into a national system. The Canadian National Railways are now in a position to compete successfully in many respects with the Canadian Pacific and they can compete with the Canadian Pacific in giving service in the carriage of mails. The matter still remains, though, of changing in some sections from one to the other, and we should not too severely criticize our Post Office Department for hestitating to take the action that would be necessary to change the carriage of mails

from a route that their clerks in many cities of the Dominion now well know to a route which those clerks do not know at all.

To give definite consideration to the four claims that were made by the official of the Canadian National Railways who placed this matter before the committee last year, I will refer first of all to the carriage of mails between Montreal and Vancouver, a through service. This seemed to many of us to lend itself admirably to a shift from one railway to the other, and it was felt that the Canadian National Railways could very well take that mail and make the earnings which the Canadian Pacific has up to the present time been making, without greatly disrupting the service and the work of the clerks necessary to render that service. On careful investigation, however, I find that there are details that are rather complicated, particularly on that portion of the route between Winnipeg and Vancouver. The mails are not carried in bulk through to Vancouver, but they are loaded into one sixty-foot mail car and as much storage space behind it as is required. As the mail passes on through those important centres, Portage la Prairie, Brandon, Indian Head, Regina, Calgary and so forth on its way to Vancouver, the mail is distributed from this postal service car, and as the space is available in the postal service car, the space in the storage car or cars behind it is relieved, the mail being piled into the postal service car. By agreement with the Canadian Pacific Railway, as the space in the storage car is relieved, it is also cut off for payment, the Canadian Pacific being paid only for the space that is required. If this service is to be divided between the two railways, as is suggested, each carrying one-half, it will immediately appear to hon. members here without any technical training, for I myself admit that I have none in that respect, that it will be claimed that the same advantage cannot be taken of storage space in half a car as could be taken in a full car.

As to claim No. 3, that all overseas mail ex steamers at Quebec should be carried between Quebec and Montreal on the Canadian National, that claim was made simply as being a possible point of balancing up the sheet between the two railways. On investigation, I have come to the conclusion that we will have to find out the country of origin and what the government of that country would say as to the routing of its mail once it landed in this country. Some, perhaps a goodly portion of that mail is through traffic that has to travel right across the continent, and it has to go, according to agreement, by the shortest route possible. If the Canadian National Railways were not ready to give the shortest time and the quickest service in delivery, without any reference to our Post Office Department, the contract might be cut off by the British postal service which has command of that. That is a very small service at any rate. I understand it is a matter of only $15,000 or $30,000 for the whole thing. It is not a serious matter, and considering that the Canadian Pacific have in years past, when necessary, put on a special train to deliver that mail from their steamers at Quebec to Montreal in the shortest possible time, I doubt whether the Canadian National, to their financial advantage, could compete with the Canadian Pacific in that respect.

We have two claims left that seem to lend themselves to some adjustment, the first one being the through carriage of mail between Toronto and Winnipeg, so routed. At the present time, that is carried over the Canadian Pacific. The same objection that could be raised as to the carriage between Montreal and Vancouver, that is that there is a large distribution of that mail en route, does not apply to the carriage of mail between Toronto and Winnipeg. With the possible exception of the head of the lakes, the twin cities of Port Arthur and Fort William, there is no large distribution of mail routed from Toronto to Winnipeg. That which goes into the car at Toronto goes out at Winnipeg. It could just as well be carried by the Canadian National as by the Canadian Pacific, so far as time is concerned, because their times are equal in that respect. The only difference that could be made would be the hours of arrival in Winnipeg in regard to meeting outgoing trains on the many branch lines that run out of the gateway city into various parts of western Canada. I think an adjustment could be made in that regard. I would suggest to the Postmaster General and to the members of the House generally that, as regards the carriage of mail between Toronto and Winnipeg, the question of transferring to the Canadian National Railways a part which the Canadian Pacific now has, could very well be considered. This would, to the extent of at least $150,000, reduce the difference that the hon. member for Dauphin (Mr. Ward) gave us. I have forgotten the figure, but I think it amounted for the last year to something like $350,000. If I remember rightly, that is what the hon. member quoted. And that sum could be cut down almost by half through the alteration in this one service. It seems to me too that the service lends itself to this economy.

I might mention another matter of minor importance, in the same category as the carriage of mails from Quebec; I refer to the carriage of overflow mails from Montreal to Toronto. This is not a serious item viewed from the standpoint of financial returns to the railway. At present I understand the Canadian Pacific Railway, on three days of the week, carries part of the overflow mail, in storage or baggage cars, and possibly this particular service is attractive to the railways. No doubt the Post Office Department would find it profitable to consider the question of allowing the Canadian National Railways to carry these mails in particular, and all of them, every day of the week.

There are a few other suggestions which I might throw out with respect to possible changes that might be made to the advantage of the Canadian National Railways as well as in the interests of the people of Canada as a whole. A saving might in some instances accrue to the Post Office Department also. The hon. member for Dauphin spoke of the need of some consideration being given to such railway train duplication as exists at present and which might be eliminated. The point I am raising now is rather similar. I suppose that every member in this House at some time or other in his life has suffered the inconvenience, on coming to a junction point between one railway and another, of having to wait a more or less lengthy space of time before making connections. If hon. gentlemen will only think of the inconvenience they have suffered under such circumstances as individuals, only once or twice or at most a few times in the course of a lifetime, they will readily sympathize with the country at large in the inconvenience to which the people are put every day of the year and every year in our history through the delay that is caused in the transportation of mails for the same reason. It seems to me that from the postal point of view alone this matter is well worth taking into consideration. Probably my hon. friend from North Toronto (Mr. Church) will check me up on this with the suggestion that it is a matter for the railway commission. No doubt the railway commission might very well employ themselves in providing better connections at points of junctions between two railways in the interests of the travelling public. But I emphasize here the importance of such an improvement for the proper distribution of the mails. If trains could be made to connect at junction points it would then be possible for the Post Office Department to route mails over two lines rather than over one as at present is the case.

Then there is the question of the carriage of overflow mail throughout the Dominion as a whole. The Canadian National Railways, I think, might be given the carriage of these mails in any particular place where a great deal of it originated. There is an overflow service between large centres of the Dominion, in eastern Canada particularly and to some extent in the west, and this overflow mail could perhaps be subdivided for the purpose I have in mind. I do not know how the Post Office Department views this matter at all.

4 p.m.

Strictly speaking, overflow mail is mail that cannot be carried in the postal service car, the storage space available in that car being very limited. The mail clerks must have their distribution boxes placed all around the car and they must be able to move freely from one point to another, so that there is not a great deal of space left for the storage of bulky mail. Anything that cannot go into that car is classed as overflow mail and is carried on a car behind. The hon. member for Dauphin gave the cost per foot per mile of the space so allotted. But there is a certain class of overflow mail which differs from this ordinary material. This other kind appears seasonally, some of it very regularly. We have for example certain magazines and weekly newspapers—one at least in Canada—that constitute a very large amount of overflow mail every week in the year. Then there are other magazines that appear every two weeks or perhaps monthly; and at certain seasons of the year large quantities of catalogues appear in the mails, sometimes filling a whole car by themselves. That kind of overflow mail, when it is sufficient to fill a car, is I believe very profitable to the railways; at any rate, it is decidedly advantageous to them to get the carriage of this mail, inasmuch as it is easily disposed of, being simply destined from one point to another. This mail entails no particular responsibility except the care on the part of the railway people to see that it is kept intact. I would suggest to the Post Office Department that mail of this kind, where the question of distribution en route does not enter into the matter at all, and where there is no particular necessity of relieving storage space by taking it into the mail service car, be turned over to the Canadian National Railways wherever possible. For example, there is every week a car of weekly newspapers originating, let us say, in Montreal for distribution in western Canada. That car could very well be carried to Winnipeg at least by the Canadian National Railways.

There is one other matter I want to mention in this connection, and that is the seriousness to our Post Office Department of sudden changes in time tables by the two main railways in this country. Before I left home it came to my attention that the Canadian Pacific Railway had made certain alterations in their time table on the main line. I did not realize at the time that this would mean a serious handicap to the Post Office Department who were delivering mails to the Canadian Pacific, but on looking into the matter I discovered that this very change meant a delay of nearly a day to me in my journey to Ottawa to attend this session. It has also been brought to my attention that this change means a delay in the carriage of mails every day. Perhaps, again, the railway commission might look into this matter. I therefore throw the thought broadcast, that the Post Office Department should always be considered by our two great railways when any changes in the time tables are contemplated; for we cannot possibly have the best service unless ample notice is given of such intended changes. The Post Office Department comprises so many units, and there are so many intricate rules and regulations governing the service, that the department cannot possibly adapt itself to changed conditions at a moment's notice. And for that matter, I understand that sometimes they do not get even a moment's notice, the time tables being changed without their knowledge and the department not finding this out until afterwards. This is something in regard to which the railways might very well work in co-operation with the Post Office Department. I have been advocating the giving of more business to the National Railways, and it strikes me that the National Railways themselves might in this respect meet the Post Office Department halfway by giving it ample notice of changes in the time tables.

Before I close I want to point out again why I have presumed to offer these various suggestions. Our Post Office Department is I believe independent of all large corporations in the country, and I am sure we do not want it to be so warped as at any time to make the postal service of Canada conform to the wishes of any private concern. On the other hand, it is our duty as shareholders in a great railway to advise our postal officials to bend themselves just a little in the direction of giving to the Canadian National Railways, whenever this is possible, whatever business is available. I think I am only doing my duty in offering that advice.

[Mr. C. W. Stewart.]

Mr. JOHN EVANS (Saskatoon): This question affects us very keenly in western Canada. Last year I brought to the attention of the House certain figures which the Postmaster General (Mr. Murphy) described as incorrect. I shall not reiterate any statements I made on that occasion, but I do believe that a discrimination exists so far as any equitable distribution of mail service as between the two railways is concerned. No through mail is carried by the Canadian National either from Montreal or from Toronto. To me this does not seem right. In western Canada the local situation is even worse; towns of considerable size between Winnipeg and the mountains are subjected to very much delay in the delivery of their mail. We can take such places as Rivers, Melville, Watrous and Saskatoon, where we find that the mails are delayed at least one day in their delivery. The mail arrives in Saskatoon four hours later than it would if carried by the Canadian National, and the result is that business letters cannot be answered the same day and replies from Winnipeg to business men in Saskatoon are delayed another twenty-four hours. The situation as regards the mail to the east is just as bad. I am informed by the Post Office Department that the business mail of Saskatoon leaves that city on a Canadian National train at 23.50 and that at Regina it is transferred to Canadian Pacific train No. 4. Lately the mail has not been arriving in time to enable its transfer to Canadian Pacific No. 4 to be carried out. I cannot see why these mails should be transferred at Regina. All Canadian National Railway lines converge at Winnipeg, and the trains on all three lines of the Canadian National arrive at least one hour before either the Canadian Pacific train or the Canadian National through train leaves Winnipeg for the east. I think that is correct. Anyway, if it is not true as regards the Canadian Pacific it is true as regards the Canadian National, and there is no reason why the mails should be transferred at Regina. In a communication which I have from the Post Office department it is stated:

> This delay can be eliminated by transferring the mail service now performed by the Canadian National between Saskatoon and Regina to a Canadian Pacific train which does make the connection in time.

I do not think that should be done; these mails should all go right through at least to Winnipeg. This matter was taken up, I believe, by a committee representing both sides, but what has happened since I do not know. As regards the local mail particularly, and also the through mail, before discussing the matter any further I would like to hear what

the Postmaster General (Mr. Murphy) has to say.

Mr. THOMAS SALES (Saltcoats): Mr. Speaker, the hon. member for Saskatoon (Mr. Evans) has referred to Melville and Saskatoon; I would like to draw attention to the condition at Melville. The resolution says there should be no discrimination against the Canadian National, but I would like to say there should be no discrimination against the Canadian public. When a man can leave on a train from an important centre like Melville and arrive in Ottawa twenty-three hours earlier than mail which left Melville on the same train, he is not getting service; to my mind it is a discrimination against the public. Mail leaving Saskatoon, Melville and all other stations between that point and Winnipeg, eastbound, reaches Winnipeg at ten o'clock in the morning, after the Canadian Pacific train has left. The mail is therefore, held over, as I understand it, in Winnipeg until the departure of the Canadian Pacific train the following morning, making its arrival here twenty-three hours later than it should be. The westbound situation is a little different. The mail for Melville and stations between Winnipeg and Saskatoon leaves here on the Canadian Pacific and upon arrival at Winnipeg is transferred to the Yorkton and Minnedosa line. The mail for Melville is carried as far as Yorkton and reaches Melville at five o'clock in the afternoon—that is my information from the people there. If it was carried straight through on the Canadian National it would be in Melville before eight o'clock in the morning, which would give time for the answering of business letters, but when it reaches there at five o'clock in the afternoon it is too late for attention that day. The situation with regard to Toronto is being dealt with, but I did feel that it would be of interest to the House to know the facts as regards all the stations between Winnipeg and Saskatoon on the Canadian National. As has been pointed out, perhaps the present service is a development of the old service before what is the present Canadian National line was built. If that is so it is no reason why this condition should continue from year to year, especially since the matter has been drawn to the attention of the department—and it was drawn to their attention very forcibly last year.

Hon. CHARLES MURPHY (Postmaster General): Mr. Speaker, if no other hon. gentleman desires to discuss the resolution which has been moved by the hon. member for Dauphin (Mr. Ward), I would like the indulgence of the House for a short time while I offer some observations regarding it and what has been said in connection with it by the hon. members who have already spoken.

In the first place, Sir, allow me to thank the hon. members who have taken part in the discussion for the appreciation which they have expressed of the desire of the Post Office Department to meet the public needs and to afford the people of this country prompt, efficient and satisfactory postal service. In this connection I should also add a word of appreciation of the admission made both by the mover of the resolution and by the hon. member for Humboldt (Mr. Stewart) who stated frankly that there was no discrimination. The hon. member for Humboldt said he thought there might perhaps be a happier choice of a word for the purpose than the word "discrimination" used in the motion. As to that I take no exception; I regard it as a reflex of certain statements that were made last session before a committee of the House by a railroad official who was insufficiently informed on the subject and who consequently misled—unintentionally, I am sure—the members of the committee as well as members of the House. Had the committee seen fit to ask for an explanation from the Post Office Department they would have obtained the facts then in pretty much the same way as the hon. member for Humboldt has given them to the House this afternoon, and as they could be given, by the officials who are technically informed on these subjects, to any hon. gentleman who desired special information about some special railway mail service. For information of this kind and for the data that he may present to the House or to a committee of the House, the minister is, of course, wholly dependent upon the officials of the department.

Now, briefly, there is no discrimination. That has been admitted by the gentleman who was responsible for that impression gaining ground, when he took part in a conference held about a month ago in the Post Office Department with certain officials representing the Canadian National Railway and certain officials representing the Post Office Department. At that conference we took the precaution of having the statements there made taken down in shorthand, and I will read for the information of the House what the railway official in question said on that occasion with regard to the charge of discrimination. He said:

> I do not say we are discriminated against—I did not say that. I have not used that term at any time. I said the present service was the result of the growth of service—the present service is the result

of the growth of train service. There has been no intentional discrimination; that is a fact.

That, Mr. Speaker, I submit, clears up the situation both with regard to the railroad officials and with regard to the House and the public generally. The fact is, as stated by the gentleman from whose observations I have just quoted, that the conditions which have been referred to and which have been the subject of criticism, and quite properly so, are the outcome of the growth of service. At the same time, while that is the fact, and as one hon. member who has spoken observed, that is no reason why if present conditions are not found to be satisfactory there should not be changes made. There have been changes made; others are in contemplation, and further changes will be made from time to time until eventually we hope to attain practically an equal division of the railway mail service between the two great railroads in this country. In that connection I might point out that while at the time of the holding of the inquiry before the special committee of this House last summer, it was alleged that there was a difference in the annual payments of about $750,000 in favour of the Canadian Pacific Railway, as between that road and the Canadian National Railway, that condition no longer prevails; and by reason of improvements and changes that have since been made, the reduction in that difference which was observable at the end of the year indicates that the amount will be more than cut in half for the present year, and as time goes on a progressive improvement in the same direction will be made. In that connection let me place on Hansard a statement which I am sure hon. members who have taken part in the discussion, as well as other hon. gentlemen in the House, will be glad to have in order that they may be able to supply to their constituents or to others who may be interested in the matter, proof of the statement that has been made in the direction that I have just mentioned.

The following statement shows, by provinces, the mail services, all classes, including storage cars—overflow mail—and transcontinental routes, with expenditures for mail carriage, and number of post offices served for quarter ending September, 1924:

Province	Canadian Pacific Railway			Canadian National Railways		
	No. of services of all classes	Total expenditure	No. of P.O's served	No. of services of all clasess	Total Expenditure	No. of P.O's served
		$ cts.			$ cts.	
Prince Edward Island	.....	.....	.....	25	12,398 80	124
Nova Scotia	.....	.....	.....	58	67,774 90	1,400
New Brunswick	42	19,091 66	280	72	59,558 64	498
Quebec	63	88,287 04	1,232	131	157,443 78	1,789
Ontario	104	315,992 58	1,118	199	277,343 26	1,800
Manitoba	40	100,892 86	438	48	59,572 93	572
Saskatchewan	58	153,141 26	826	65	106,844 08	922
Alberta	38	110,727 17	600	25	45,751 60	685
British Columbia	42	100,068 82	625	4	12,777 72	275
Total	387	888,201 39	5,119	627	799,465 71	8,065

This statement, Mr. Speaker, is for the quarter ending September 30, 1924. Now the difference in money payments, between the total amount paid to each of the two roads, amounted for that quarter to $88,735.68 in favour of the Canadian Pacific, or a total for the year if the same ratio was preserved of about, in round figures, $350,000; or less than one-half the difference that prevailed for the year which was under discussion at the time the committee sat last summer. That statement for that quarter will indicate the improvement that has been made and the equalization that has been going on in favour of the Canadian National Railway.

[Mr. Murphy.]

Mr. McQUARRIE: If I may be permitted a question, could any of these services which are assigned to the Canadian Pacific be just as well performed by the government railways?

Mr. MURPHY: In answer to my hon. friend I may say that his question touches the point that is at issue in connection with all these services; and in relation to that the department has to consider, for instance, a local service at any point in relation probably to a whole service, and it has to consider whether one road is the better adapted by reason of location, and density of population

along the line, and so on, to give service than the other road. The changes that have been made have been all in the direction my hon. friend's question indicates, that is, that where it has been found that the Canadian Pacific is serving any territory which could be as well served by the Canadian National Railway, then a change has been made in favour of the latter line and that will continue to be the policy of the department. But it all takes time, and the situation is complicated by a happening which was referred to by the hon. member for Humboldt (Mr. Stewart) who told the House that frequently the railroads make sudden changes in their time tables without notifying the Post Office Department, thus dislocating the mail service. That has happened time and time again. The Post Office Department has made representations to both railroads, and I have induced my colleague the Minister of Railways and Canals to make representations also, that none of these changes should be definitely decided upon, much less put into effect, without consulting the Post Office Department in advance, so that there will not be a dislocation of services and all these delays to which some hon. members have made allusion.

Now, there are certain features that have been brought up in the discussion that possibly might be referred to, but I do not know that it would profit any of us if I were to go into details regarding them. However, I might mention one or two. My hon. friend from Humboldt made a number of excellent suggestions. These suggestions have in part been carried out already. To the extent to which they have not been carried out immediate attention will be given to them by the department if, indeed, the department is not considering them at the present moment. In the same way the suggestions made by other hon. members—the hon. member for Saltcoats (Mr. Sales), the hon. member for Saskatoon (Mr. Evans),—these suggestions, as well as a request or two preferred by one or both of these hon. gentlemen, also will receive the immediate attention of the department if, as I have said, in point of fact it is not engaged already in dealing with them.

My hon. friend (Mr. Stewart, Humboldt) has suggested that a portion at least of the overflow mail—the seasonal overflow mail as he happily characterized it; that is mail which appears from time to time and is not continuously in flow throughout the year—might be given to the Canadian National Railway, and my hon. friend instanced magazines, catalogues and so on. That class of mail has been given to the Canadian National Railway, and as a matter of fact the system has been paid through one quarter approximately $30,000 for the carriage of that particular class of mail.

I do not know that at the moment it is advisable to take up any further time of the House on this subject. It is one that my hon. friend from Dauphin (Mr. Ward) was quite justified in bringing before the House, and one which has elicited suggestions and requests from hon. gentlemen who have spoken that will bear fruit in a very short time by reason of the action which will be taken by the Post Office Department. Such being the case, and as we are all in agreement that there is no discrimination—I have quoted to the House a statement on that point by the gentleman who was responsible for that idea last year gaining currency—I would suggest the purpose of the mover of the resolution has been effected in introducing the resolution and having it discussed and that it might be withdrawn.

Mr. W. F. MACLEAN (South York): I did not think when I made my suggestion last night in favour of the consolidation of the two great railways in this country that I would meet with so much evidence in favour of the proposition as I have heard here this afternoon. Then let me cite another instance of approval. I was sitting down to my modest dinner last night when a gentleman came in and introduced himself to me and said "Mr. Maclean, there was more sense in what you were urging this afternoon than I have heard for a long time in parliament." The idea is going to grow; and I want to tell my hon. friends from the west that if they want to consolidate that part of Canada, make it more efficient, bring about better settlement, and have its business affairs improved, they must take up this proposal for the consolidation of these railway lines; and the sooner it is done the better it will be for them and the better it will be for the country at large. I want also to compliment the Postmaster General upon having recognized the need for consolidation and for the existence of a spirit of fairness between the two systems. But it is not so much fairness in competition between the two railways that we want as the consolidation of the two services and an improvement in the treatment of the public. If that is done you will see great improvements not only in the west but also in the east—in fact throughout Canada—because of putting an end to the existing awful extravagance of railway services, of postal services, of telegraph services, of express services and,

worst of all, the competition between the two systems to get the business.

Mr. WARD: I am very glad to accept the suggestion of the Postmaster General. I think the resolution has served its purpose, and I am sure we all appreciate the information which the minister has given with respect to the services already given and his promise to continue the good work. I am very glad, therefore, with the permission of the seconder to withdraw this motion.

Motion withdrawn.

SELECT STANDING COMMITTEES

MOTION BY MR. GOOD TO REDUCE THE MEMBERSHIP

Mr. W. C. GOOD (Brant) moved:

That in the opinion of this House, the membership on select standing committees should be reduced, so as to secure more regular attendance, and promote efficiency.

He said: Mr. Speaker, I think that at the outset we may assume that the committee work of parliament is very important; I do not suppose anybody will dispute that statement. I think I may also safely say that the committee work of the Canadian parliament is growing in importance. I think this is necessarily the result of the situation which faces us at the present time where we have abandoned the two parties in the country and in the House, and have here several distinct groups. We may have at any time a condition such as prevailed in England not long ago where the administration of affairs was carried on by a minority government. Unless some new methods can be evolved and applied, to operate the government on non-partisan lines, this situation may face us more or less continuously in the near future; and under such conditions I would submit to the House that the committee work of parliament is likely to be increasingly important. I therefore argue that committee work ought to be made as effective as possible. What conditions, then, would best conduce to efficiency on the part of our committees? I presume that regular and full attendance is at least one of the conditions that are necessary before committee work can be carried on effectively. In that regard I should like to submit to the House some statistics which I obtained from the Chief Clerk of Committees in regard to the work of committees in this House during the last three years. I desire to go into this in some detail, because I consider it very illuminating indeed. I have before me a tabulated statement, under the headings of the three years 1922, 1923 and 1924, and sub-headings as follows namely; The meetings held; the number of members; the average attendance and percentage attendance of all the committees of this House, both standing committees and special committees.

I want to deal with this table in some detail in order if possible to interpret the situation and get some light as to what ought to be done to make our committee work more effective. Let us take first the standing committee on Agriculture and Colonization. In 1922 nineteen meetings were held. The total membership of the committee was 105, the average attendance 64, and the percentage attendance 61, showing a very good attendance of a very large committee during that year. Those who were on the committee probably recall that a number of fairly important matters came before the committee, and a fairly large number of meetings were held. In the next year, 1923, the same committee had ten meetings, the same membership, 105, average attendance 45, and percentage attendance 43, a much poorer attendance in 1923 than in 1922. In 1924 there were only seven meetings held. The membership was the same, 105, average attendance 40 and percentage attendance 38. I presume, Mr. Speaker, that there is at least one conclusion or inference that we may draw at this point. If a committee has really no serious work before it, nothing of a very important character, the meetings are few and the attendance is likely to be bad. That I think is probably the inference we can draw from the figures I have given the House.

Let us pass now to the Banking and Commerce committee. In the year 1922 that committee had ten meetings, total membership 82, average attendance 19 and the percentage attendance 23. Less than one-quarter of the membership attended the meetings of the committee that year.

The next year the Bank Act was under revision, and another very important matter was also submitted to that committee by this House. There were 75 meetings held; with a total membership of 89, the average attendance was 45, and the percentage attendance 51. Considering the importance of the work the committee had to do in the year 1923, the attendance was surely bad. Later on I shall try to show the House why it was as bad as it was, only slightly over fifty per cent. The next year, 1924, the committee held 40 meetings; with a total membership of 90 the average attendance was 47, and the percentage attendance 52, the percentage attendance being practically the same as during the year preceding.

The next committee listed is the Debates committee, which did not meet at all in 1922 or 1923, and met only three times in 1924. With a total membership of 13, the average attendance was 8 and the percentage attendance was 62, a small committee, meeting I presume for some special business and having a fairly good attendance.

The Industrial and International Relations committee was created only last year. It held six meetings and out of a membership of 33 the average attendance was 12 and the percentage attendance 36, a poor attendance during the first year of its existence.

The committee on Marine and Fisheries in 1922 held six meetings, and with a membership of 36 the average attendance was 14 and percentage attendance 40. In the next year five meetings were held, and with a membership of 36 the average attendance was 14 and the percentage attendance 38, practically the same as the year before. In 1924 five meetings were held and with a membership of 37 the attendance was 11 and percentage attendance 30.

If the House will consent I should like to place this table on Hansard to save time, instead of reading it all now. It is not very lengthy and I could place it in a condensed form on Hansard.

Committee	1922				1923				1924			
	Meetings Held	Members	Average Attendance	% Attendance	Meetings Held	Members	Average Attendance	% Attendance	Meetings Held	Members	Average Attendance	% Attendance

Soldiers' Pensions and Re-Establishment	11	28	19	68	.....	.....	.....	.....	29	29	13	46

I desire to refer, however, to some of the special committees which have held meetings during the last three years, because here I think we can learn some lessons. We had the special committee on Agricultural Conditions in 1923. That committee held 80 meetings, and with a membership of 19 the average attendance was 15 and the percentage attendance 79—almost 80 per cent attendance.

The special committee on the Civil Service Inquiry in 1923 held 35 meetings, and out of a membership of 18 it had an average attendance of 12 and a percentage attendance of 67.

The Redistribution committee met during both years 1923 and 1924. Without going into the figures other than the percentage attendance, I may state that the percentage attendance in 1923 was 88 and in 1924 it was 73.

I have not the figures as to the meetings or average attendance of the committee on Railway Transportation Costs, as the minutes seem to have been mislaid. The committee on Soldiers' Civil Re-establishment met in 1922, percentage attendance 68, but in 1924 the same committee only had a percentage attendance of 46.

It strikes me that in determining the size of committees one should keep in view the nature and extent of the business that is likely to come before any committee.

Mr. HOEY: Could the hon. gentleman give us any figures showing the attendance preceding the session of 1922?

Mr. GOOD: I regret to say that I have not any figures dealing with the committee attendance in previous parliaments.

Mr. HUGHES: I presume the hon. gentleman recognizes the fact that many members of the House are on two, three and four committees, that these committees meet frequently on the same day and at the same hour, and that therefore it is impossible for a member to attend more than one committee meeting on the same day and at the same hour. That fact should be recognized, and it should not be made to appear that members of this House were neglecting their duties.

Mr. GOOD: The hon. member for Kings, P.E.I. (Mr. Hughes) has anticipated what I was going to say in this connection. I do not wish to infer at all that this lack of good attendance is due to negligence or carelessness on the part of hon. members. It may, in some isolated cases be so, but for the most part it is due to the overlapping of committees meeting at the same time and the inability of members to be in two places at once. That is, however, a condition which we have to face. My proposal is that this matter should be faced frankly and courageously, and that we should make some effort to remedy the difficulties that we have met in the past. The Chief Clerk of Committees, Mr. Todd, was good enough to write me a letter in connection with the tabular statement, and I should like to quote, with his permission which he has given me, three paragraphs from his letter. Mr. Todd, I understand, has had very extensive experience and he speaks with some authority in regard to this question. I quote as follows:

> From my own experience, I may state that during the last three or four sessions, when committee work has been quite heavy, a number of members have complained that they have been put upon too many committees, and could not attend to them all. As a consequence, we have frequently experienced considerable difficulty in procuring a quorum.

> It seems to me that if the membership of the standing committees were cut in half, and members of the House were placed on, say only two committees each, there would be less trouble in obtaining the necessary quorums.

And the final paragraph:

> The Railway committee, for instance, consists of 128 members, with a quorum of 25, or five more of a quorum than that required for the House itself. In former years, when railway legislation was very important and numerous bills were referred to that committee, most of the members wanted to be on it. Now, however, that the number and character of railway bills is not as it used to be, members have not the same interest, with resultant difficulty in our obtaining a quorum. I think the size of this committee especially, and of its quorum, should be very considerably reduced to meet present conditions.

I also have some information regarding the reduction of the size of committees in Great Britain almost a century ago owing to their experience. I shall not weary the House with reading this; I desire merely to refer to it.

In order to get some further information on the subject matter of the resolution, I drafted the following questionnaire which I mailed to the clerks of the legislative assemblies of all the provinces of Canada, also to the Clerk of the House of Representatives at Washington. I have received some information from most of these parties. Following is a list of questions submitted in this connection:

1. Total membership of your legislature.
2. Names of your various standing and special committees, and number of members composing each of them.
3. The provisions for a quorum in each case.
4. Have you had poor or irregular attendance at committee meetings, and if so, for what reasons?
5. What principles, if any, determine the size of your committee?
6. Is there discernible any disposition to increase or decrease the size of your committees, and if so, upon what experience is this disposition based?
7. Do you find a higher percentage of attendance and better results from smaller committees?

I will give as briefly as I can the substance of the information that I have been able to secure from the various provinces in this connection.

In Ontario, the committees are large and the quorum small. I do not wish to give all the figures. My information is that the attendance is fairly good and that there is not much disposition to make any change. I believe, however, that I am safe in saying that most of the standing committees about which I have information meet more or less infrequently for special purposes and not for investigational work such as is frequently carried on in this House. The difficulty, therefore, which has been referred to, namely the inability of members to attend two committees at the same time, does not seem to have applied, at least to the same extent.

In Quebec, I also have a membership list of all the standing committees and their quorums. The standing committees are generally relatively smaller in numbers than in Ontario and the quorums are also smaller in numbers. As regards special committees, I submit the following information from the Quebec assembly rules of 1915:

A majority of the members of a special committee shall compose a quorum unless otherwise ordered by the House.

Rule No. 332 states:

No special committee may consist of more than fifteen members without special leave of the House.

I shall refer later to the situation in Great Britain in this respect.

In Nova Scotia, with a total membership in the legislative assembly of forty-three, the committees are also fairly large, relatively, I think, as large as they are in Ontario or Quebec. The report which I have does not seem to indicate any disposition either to increase or decrease, and there is no complaint as to irregularity or poor attendance.

I have also the list of the various committees, with membership, quorum and so on, in New Brunswick. I wish now only to draw to the attention of the House the opinion of the clerk of the legislative assembly of New Brunswick that the percentage of attendance in the smaller committees is better than in the larger committees.

I have not as yet received any direct reply in regard to Prince Edward Island although I have the information.

There is nothing of special interest to refer to as regards Manitoba.

In Saskatchewan, a majority constitutes a quorum unless otherwise ordered. I may say, however, that the quorums as ordered by the assembly are relatively small, running from eight down to three.

The situation in Alberta is somewhat the same. In both Saskatchewan and Alberta the membership of the committees is large. I think the situation is very much the same as it is in Ontario where the committee meetings do not clash and are held infrequently.

The information from British Columbia is also to the same effect, that there seems to be no particular disposition to move one way or the other. Generally speaking, the provinces of Canada have standing committees, the meetings of which do not, I think, clash, and no special difficulty seems to have been experienced.

I attempted to get some information concerning the situation in Australia and South Africa, but the information which I was able to secure is not sufficiently complete to make it worth while giving it to the House. I desire, however, to refer to the situation in the United States which, I think, is to a very large extent similar to Canada. In the United States the select standing committees of the House of Representatives are very numerous and small in number. There are fifty-five such committees, and it might be interesting to hon. members if I would refer to some of these committees and give the number of members composing them: On elections, three committees to consist of nine members each; on ways and means, 26 members; on appropriations, 35; on judiciary, 21; on banking and commerce, 21; on coinage weights and measures, 19; on interstate and foreign commerce, 21; on rivers and harbours, 21. And so on. The membership is almost entirely in the neighbourhood of 20—22, 22, 21, 21, 20, 21, 22, 22, 19, and so on, down through the list. There are a few smaller committees: for example, education, 15; labour, 14; patents, 14; invalid pensions, 16, and so forth. There are some with 13. Then there are a number of committees having to do with expenditures in the different departments; these are quite small committees. I might mention a few: expenditures in the State department, 7; Treasury department, 7; War department, 7, and so on. They range between 6 and 7. The committee on rules numbers 12, of whom the speaker must be one. A rather interesting committee, the 55th of the number, is the committee on the disposition of useless executive papers, 2 members. I have a letter from the clerk of the House of Representatives and I should like to quote a few sentences from it:

A majority of the entire membership, excluding vacancies, constitutes a quorum. In the House, in committee of the whole, 100 constitutes a quorum.

On the whole, committee attendance is regular. It is only when meeting days of committees clash that difficulty is had in securing a quorum.

The size of house committees is determined by the relative numerical strength of the two great political parties. The membership on committees is in ratio to that of the membership of the House itself.

I would quote now the last paragraph in this letter in regard to the percentage of attendance of smaller or larger committees. The answer is as follows:

This question cannot be answered with any degree of accuracy. I will say, however, that practically all of the large committees operate through subcommittees of 3 or 5 members each, indicating that better results can be obtained by small committees

I would refer very briefly to the provisions in Great Britain relating to special committees, or what are called there select committees. At pages 80-81 of the Manual of Procedure in the Public Business of the House of Commons of Great Britain for 1912, under the heading Select Committees, I quote the following:

> A select committee is a committee appointed by the House to consider or take evidence upon any bill or matter and to report their opinion for the information and assistance of the House.

And further on:

> A select committee must not, without the leave of the House, consist of more than 15 members.

That is all which I think it is necessary for me to quote in this connection. It seems to me that we are faced with this situation, that from time to time in this House committees meet infrequently to consider matters not of prime importance and not requiring any special investigation, but in which the opinion of a considerable number of the members is perhaps desirable. In such cases I believe that a large committee is entirely proper, and I do not desire to argue that there should be any reduction in the size of committees of that character. But some of the standing committees in this House, and practically all of the special committees, that have been appointed, are required to concentrate very intensively upon certain important matters and to give those matters prolonged and careful consideration extending over weeks and months. In those cases it is in my judgment very desirable that the committee should be smaller in number so that it would be possible for members to attend regularly; a very large percentage of attendance being in such circumstances essential. If such is not done there will prevail a condition of affairs which in my judgment is disastrous to progress; that is to say, we shall have members who, either because they cannot or do not want to attend certain committees, are available merely for voting purposes in case of need. Members can be swung from one committee to another in case of a vote, and it does seem to me highly undesirable that there should be a vote upon any matter of great importance by a member who either does not care to attend a committee regularly or is unable to do so. I could cite some cases that have come under my observation in this House, and I would seriously recommend that the whole matter be gone into carefully, and that we take into consideration the probable nature of the work of the various committees, and adjust the membership accordingly. Of course, one difficulty occurs in that connection: from time to time certain committees will have relatively few meetings and relatively inconsequential business during a particular session, and the next year very important business. But surely in view of the situation some attempt might be made to adjust the membership to meet the conditions existing at any time. I do not see why it is necessary that the membership of any committee should remain the same from year to year. If, for instance, the Banking and Commerce committee had before it such an important investigation as it had in 1923 —or rather two important matters requiring about eighty meetings—it would have been advisable to reduce the membership so that those who attend may do so regularly and inform themselves in regard to the matters under consideration.

5. p.m.

I do not wish to take up the time of the House further, but would suggest that in view of the appointment of the special committee to consider the rules, the question I have just submitted to the House might very properly be turned over to that committee for further investigation and report. And I sincerely trust that, after the question has received further consideration at the hands of this committee, something may be done to remedy what I think has been a very serious, and indeed a disastrous, state of affairs in regard to some of our important committees. The resolution standing in my name was drafted a considerable time ago and is therefore not just what I should like at the present time. I have therefore arranged with one of my friends to move an amendment which I shall gladly accept in order to dispose of the matter.

Mr. T. L. CHURCH (North Toronto): The hon. member for Brant (Mr. Good) has moved a resolution asking that the membership of select standing committees be reduced with a view to securing a more regular attendance as well as to promoting efficiency. When we look around the empty chamber today and see the House practically deserted, while academic questions are being discussed by some hon. gentlemen, it seems to me that the same reasoning with which the hon. member has supported his resolution might apply to the membership of the House itself, and that we might argue for the same reason that if the size of this House were reduced it would increase efficiency and secure better attendance. Not so. The size of the House or committees has nothing to do with efficiency or the number who attend. Members will not attend to hear trivial questions at the expense of dealing with up to date and

practical problems of an economic nature and their solution, or to deal with problems affecting the members' local or national interest.

It is pretty nearly time that private members' day was abolished altogether and that such questions as those which now appear on the order paper were dealt with when the estimates for the different departments come up. When you reflect upon the extent to which the order paper is filled with motions referring to a lot of academic questions, I think the people of Canada can congratulate themselves that we have a Senate to save us from the deluge of legislation which hon. gentlemen and some others would place on the statute books. We should have shorter sessions of parliament. We cannot expect members to sit here, day in and day out, for months, listening to discussions on academic questions. The legislature of Ontario, with a very large legislative programme to deal with, can get through in six or eight weeks, and I submit that this parliament should complete its work in from two and a half to three months. if it had up to date rules to provide for modern methods of dealing with the problems which come before it. We should have shorter speeches; we should limit the time for speeches; there should be a committee before whom all resolutions should be submitted before presentation to the House. The special committee which is to deal with the rules of the House this session would do a good work for the people of Canada if it recommended the bringing down of legislation such as they have in the British parliament, whereby discussion is curtailed and a proper closure rule enforced. The hon. member for Brant is very fortunate to-day. If he has this small attendance out of an audience of two hundred and thirty-five, how many would he have if his resolution were adopted? I am afraid he would talk to empty benches; that he would have no listeners at all.

One of the reasons why members do not sit continuously in the House on private members' day is because of the purely academic questions which are brought up. Consider the many practical problems that are at present before the people—unemployment; the social condition of the country; the transportation problem; the condition of trade, commerce and industry; agriculture, and so on. Not one of the resolutions at present on the order paper relates to the accomplishing of anything in a practical way to solve the practical or economic problems which confront us, whether they pertain to the Maritime provinces, to the west or to central Canada. And I may say just here that the west spends months telling us of its ills and woes and is happy, when sending deputations to Ottawa to place before the government the conditions in that part of the country. The same may be said of the Maritime provinces. It is about time central Canada woke up and sent some deputations to Ottawa to deal with matters affecting its interests long overlooked. Central Canada is too modest, it has paid most of the taxes since confederation and it is time it woke up and sent along a deputation to tell Ottawa of its ills and then west and east would see they were well off.

I repeat that the government ought to take steps to bring down modern rules with a view to shortening the session. No one but a rich man can afford to be a member of this parliament, owing to the way our antiquated rules permit the lengthening out of the sessions to five months of the year. We sat until July 19th last year; then with the holiday season coming on in July and August the best of the year is practically gone. Members of the cabinet are busy men; they have important departments to preside over, and their time is unnecessarily taken up in listening to the discussion of academic questions on private members' day in the House. I have looked over the resolutions on the order paper from first to last, and the only academic subject that seems to have been omitted from the bill of fare is that important question: How old is Anne? If that was included then the bill of fare would be complete. Why, there are more practical problems dealt with in an ordinary meeting of the mock parliament of a Canadian university in this country than there have been during the past month or two in this House on private members' days. Private members' day should now be abolished for this session and then, any of these remaining questions can be discussed on the estimates. For my part, I am willing to facilitate the business of the House by dealing with my resolutions in that way; and I have three on the order paper, with reference to such questions as coal, unemployment, the exodus and soldiers' re-establishment. I do not think that the adoption of my hon. friend's resolution would have the effect of increasing efficiency. The size of a legislature has nothing to do with efficiency nor with the number who attend. For the reason I have stated Mr. Speaker, I am opposed to my hon. friend's motion.

Mr. W. G. McQUARRIE (New Westminster): It seems to me that the great trouble with this House so far as the committees are concerned is that we do not get down to business soon enough. I think I am correct in stating that last year there were no

meetings of any of the standing committees, except for organization purposes, until after the Easter adjournment. That meant that when we got down to business toward the end of the session there were a great many committees meeting at the same time. Most of us were on two, three or four of them, so that it was impossible for us to attend them all. That is the position I was placed in, and of course the same applied to other hon. members.

Now, we have wasted a good deal of time during the present session without doing very much committee work. I am on three committees this year, and none of them has so far met. I presume that this session will travel along in the same old way; that there will be no meetings of these committees until after the Easter adjournment. If it could be possible for the government to get down to a business basis and have the committees start their work right at the beginning of the session, then we might be able to avoid the duplication of sittings that we have always experienced.

So far as the number on the committees is concerned, I do not think it will make very much difference if the number is reduced. I question whether this resolution, if passed, could accomplish anything. I do suggest, however, that the government might do something to expedite the work of the committees. I asked the Prime Minister (Mr. Mackenzie King) the other day if we were going to have any committee meetings before the Easter adjournment, and he told me he thought that that was a matter for the members of the committees. He suggested that if I happened to be on a committee and thought that that committee should be at work, it was for me to take the matter up with the whip—government whip, I presume—and see that the committee got down to work. I do not know that I am supposed to be a supervisor of the government whip, or to dictate in any way to the government or to the chairmen of committees as to when they shall start their business. I think if I went to any chairman of a committee and tried to dictate to him, he would immediately tell me to mind my own business. But in my capacity as a member of this House, I think it is only my duty to state my views as to the meetings of committees, and I do recommend that something be done to get our committees working earlier in the session.

Mr. J. L. BROWN (Lisgar): I am sure we are all anxious to facilitate the progress of business through the House, and since coming here I have very frequently felt as the hon. member for New Westminster (Mr. McQuarrie) has done, that we do not get down to the business of committees early enough. I know that certainly some of the business that comes before some of the committees might just as well be brought before them earlier in the session; on the other hand, there is some business that cannot be brought before the committees until the House has been in session for a certain length of time. However, I shall not enter into a discussion of this matter at any length. It has already been indicated that there is perhaps a better method of our dealing with this subject than taking a vote in the House upon it at the present time. A committee was promised, and I think very properly, earlier in the session, and I think has already been appointed, to consider the advisability of revising the rules of the House. That, of course, refers to procedure of both the House and the committees, and in view of that fact, I would move the following amendment to the resolution, seconded by the hon. member for Battle River (Mr. Spencer):

That all the words after the word "House" in the second line be struck out and the following substituted therefor:

The question of revising the membership of select standing committees so as to secure more regular attendance and promote greater efficiency should be referred to the special committee already appointed to consider the advisability of revising the rules of the House, and that the said committee be requested to report upon the said matter during the present session.

Mr. GRAHAM: Might I suggest to the hon. member that in order to have his motion in conformity with the one naming the committee, it should read "the special committee appointed to consider jointly with Mr. Speaker."

Mr. BROWN: Yes, I move accordingly, Mr. Speaker.

Mr. GOOD: Before the question is put, Mr. Speaker, I should like to say that I am entirely in accord with the amendment. I think it is the proper procedure under the circumstances. I only desire to say that the hon. member for North Toronto (Mr. Church) has already four resolutions on the order paper for private members' day, and he has I think disposed of another one; so that if he is very anxious to get rid of private members' day, he perhaps can help in that direction as much as anybody else.

In regard to the remarks of the hon. member for New Westminster (Mr. McQuarrie), I am afraid that the earlier meeting of committees will not wholly solve the difficulty that I mentioned. When two or three important

committees are meeting at the same time, and practically have to meet at the same time, it is very necessary that the committees should not be composed of the same membership. That has happened in the past, and I submit to the House that that is a problem which we ought to tackle. While I am entirely in accord with what the hon. member has said as to the advisability of committees meeting as early as possible in the session, I would submit to him that that will not be an entirely adequate and sufficient solution of the difficulty that we have to face.

Mr. SPEAKER: Is it the pleasure of the House to adopt the amendment?

Amendment agreed to.

Mr. SPEAKER: Is it the pleasure of the House to adopt the main motion as amended?

Main motion as amended agreed to.

DEFENCE OF SEA COASTS AND OCEAN-BORNE COMMERCE

Mr. A. W. NEILL (Comox-Alberni) moved:

That, in the opinion of this House, Canada should consider the question of the defence of our sea coasts and of our ocean-borne lines of commerce.

He said: Mr. Speaker, I have framed this motion in the very simplest and broadest language. I wish to avoid the error into which I think the hon. member for South York (Mr. Maclean) fell the other day in introducing his resolution in connection with the British North America Act. He lost a good deal of support for the main principle of his motion by tacking on to it a detailed method of carrying it out.

I would ask the liberty of the House to diverge for a moment to perhaps a more personal matter. Some months ago I saw an editorial in a paper called the Mail and Empire—I should not say I saw it, because my attention was called to it. Personally I only subscribe for the better class of newspapers.

Mr. GARLAND (Bow River): Where is that paper published?

Mr. NEILL: I have only an obscure knowledge of this particular paper, but I think it is published in the city of Toronto. I wonder is that the same city that publishes the Orange Sentinel. It is, eh? Well, Mr. Speaker, that accounts for a whole lot, does it not? It is a surprising thing to me to find that a city that sends men here as able as the Toronto representatives, particularly the hon. member for Centre Toronto (Mr. Bristol) and the hon. member for West Toronto (Mr. Hocken), should be found lending its support to newspapers of this character. When the occasion offers I think I shall make it my business to visit the city of Toronto, and observe at first hand the habits and customs of this quaint and interesting people, with their strange weird newspapers. This particular editorial is a peculiar one. It is incorrect as to its facts, very muddy as to its logic, and faulty as to its grammar which one would not have expected. But it suggests that a dark conspiracy exists between myself and the members of the government in connection with my bringing in this resolution. Having a simple, innocent mind myself I cannot see where the conspiracy comes in, nor can I see any purpose or benefit to either party in a conspiracy of that kind. However, I can assure the House that before I put this notice on the order paper I had no communication whatever with any member of the government or even with any member of the House. If the Toronto Mail and Empire would believe me—but I suppose its mental efficiency has been so impaired by long years of narrow, partisan viewpoint that it is very difficult for it to do so—it might accept the very simple solution that I put this notice on the order paper because, as I represent the constituency farthest west in Canada and the one that would be almost certain to have to bear the brunt of any attack in case of a war on the Pacific, I deemed it my duty to lay the facts there before this House and before this parliament because when our hour of travail comes upon us I do not want my constituents to say, "Our representative knew of these conditions and failed to warn the public and parliament." I propose, therefore to transfer the responsibility in that regard to this House and to this government.

I wish to be particularly careful, in handling this matter, to do so from a non-partisan viewpoint, and for that reason I have been careful, not even to seek information as to the history of this or similar transactions in the past I care not what Conservative or Liberal in days gone by should or should not have done in this matter. We are living in the present and the future is our responsibility. "Let the dead past bury its dead". There is ample scope in this matter to enlist the very best abilities of both sides of the House, of all three parties in the House, in order that the government may be advised as to the adoption of a policy in the best interests of the country at large. I would suggest, if I might make the suggestion in a modest way, that a committee of this House—a small committee re-

presenting a few of the ablest men on each side or of both the three main parties—might be formed to consider this matter. I believe that the leaders of the Conservative and Progressive parties are big enough men to subordinate any possible party advantage and to act with the government members of the committee, and with the aid of experts—because the committee's deliberations would be of little use in such a highly technical matter without the aid of experts—they might be able to arrive at and enunciate a policy that would be of the very greatest benefit to Canada. That policy might be known, I was going to say, as a national policy, but I suppose that would be infringing upon a long established political trademark. It might be called, however, a "Canadian" policy, and the credit of it would enure not to the government or the opposition but to all parties in the House alike, and incidentally probably would have an additional chance of success from the very fact that it was non-partisan in its origin.

There are two phases of this question that I want to discuss as briefly as I can. The first, and the most important one by far, is: Is there necessity for such defence? Secondly, the method of furnishing such defence. The first question is by far the most important. Grant me that and I care not at all if we do not agree as to the details of furnishing such defence because it would be almost impossible for us to do so. It is a singular fact that there is no representative in this House—I think I am justified in saying so—who has any real, practical knowledge on the subject of naval defence. If it were a question of law, of medicine, or of military matters, we have plenty of experts—men qualified to speak with authority—but not in this particular instance.

Mr. HANSON: What about the minister?

Mr. NEILL: He has, I think, no personal naval knowledge.

Mr. GARLAND (Bow River): What about the hon. member for Lunenburg (Mr. Duff)?

Mr. NEILL: Fishing and naval defence are two wholly different things. Dealing with the second phase of the subject I should like to touch on this point: There is a great diversity of opinion, there must be naturally, as to how we would carry out any adequate system of defence. Some members would advocate the buying, or perhaps borrowing, of ships from Britain. Others would have us build our own ships. Others suggest we do not need capital ships but might depend on an aeroplane service, or submarines, and possibly gas—but I do not propose to invite any possible conflict of opinion by discussing any of these diversified ideas; that is a matter, as I have already said, entirely for experts. But there are two facts which I would like to mention that would have to be considered in arranging defence. The one is that we have in Esquimalt, which is close to Victoria, a dry dock which is soon to be completed at a cost, I think, of $7,000,000. That dry dock is of very vital importance to the British navy operating in the Pacific. If that navy should meet with any mishap rendering repairs necessary, as a result of war operation, it would be of the most inestimable benefit for the vessels of that fleet to be able to go into dry dock there and the fact of there being a dry dock would avoid those ships having to return to Britain. In the case of war ships coming from Britain they might have to go round cape Horn, owing to the possibility of the Panama canal being blown up at the very inception of hostilities, and after reaching the Pacific coast of Canada it would be necessary for them to go into dry dock, because a man-of-war is a very intricate piece of mechanism and needs constant care and overhauling. It is very important therefore that this dry dock should be protected. Yet to-day that dry dock is almost open to the attacks of any man who comes along with a motor boat and a few rifles, and might readily be blown up. There are a few obsolete guns mounted on the fortifications but it would take them all their time to protect themselves let alone the dry dock in case of attack. Another point is that Barkley sound, which is on the west coast of Vancouver island, would likely be the very spear head of an attack on the Canadian positions, because it is the most westerly point of land, is the most exposed, and is particularly unprotected. It has the third biggest harbour in the world, a natural harbour, and it runs into the island, so that its head is within thirty miles of the east coast, and it happens to be the end of one of the Transcontinental lines of railway. It certainly should be protected in some way, and the dry dock ought to be protected from attack both by water and by air; land fortification is not so important.

I am dealing only with the Pacific partly because that is the part of Canada with which I am acquainted, and partly because there is where the danger of war is most to be apprehended. This is no idea or conception of my own. We have had lately the announcement of Major General MacBrien, chief of the Canadian military staff, who has stated publicly that in his measured and considered

opinion the next war will take place in the Pacific. Another reason why I am dealing with the Pacific more particularly is because it is remote from Great Britain. A fleet can cross the Atlantic from Britain to Halifax, in, I suppose, four days; but it would take that fleet two or three weeks, possibly six weeks, to reach the Pacific.

To give you some idea of the great importance of the Pacific I may mention that the tonnage sailing in and out of Pacific ports has increased from 500,000 tons to 11,000,000 tons. Even the tonnage going in and out of the port of Vancouver last year amounted to 2,000,000 tons.

Now, I come to my main argument and it is this. We assert that we need defence on the Pacific coast, and if it should be asked "defence of what?" I would point to the dry dock in Victoria, and the large expenditures on public wharves and public buildings. In Vancouver we have a floating dry dock of very considerable value, we have the elevators and all the government plant connected with Vancouver harbour. Millions are invested there and further investments will likely be made. We have the terminals also of three railway lines. The same conditions prevail more or less in Prince Rupert. They have an elevator building there, and they have also the terminal of a transcontinental line. Roughly speaking, and keeping within a conservative estimate, it is estimated that the value of these public works and including private property would be something like $200,000,000. Now on a war insurance basis the premiums on this tremendous amount would come to a very large sum indeed. There is in addition a coast line entirely open and utterly defenceless of something like ten thousand miles, with numerous inlets, also the great Fraser river opening into the centre of the country, which it is desirable to have protected.

But the most important thing of all, and on which I would base my sole argument as to the need of the defence, if there were no other ground for it, is the shipping interests out there. The exports and imports into Canada by sea, leaving out the exports by land to or from the States, amount to $2,000,000 every day of the year, that is, there are two million dollars worth of merchandise going out from or into Canadian ports every day. The average voyage would take perhaps fourteen days. That would represent something like fifty million dollars worth of goods constantly on the ocean going to or from Canadian ports. That gives hon. members an idea of the magnitude of the shipping interests. Those interests of course would be the main object of attack. An enemy gunboat might come and put the city of Victoria or Vancouver to ransom, or they might come and blow up the dry dock, but the greatest damage they could do to Canada would be the attacking and destroying of the shipping. It was different with the Germans who had to be content with sinking ships, because they could not get them into their own harbours. In our case the enemy out there would have the double advantage, because not only would we lose the goods and ships but she would have the benefit of both ships and the goods themselves, which would be seized by her. This would not be done by men-of-war, slow-going vessels, but it would be accomplished by light cruisers, or even by armed raiders. They might blow up a town or two and hold them to ransom but the main object would be to blockade the country and destroy the shipping. The greatest damage would be to the province of British Columbia, because that is where the different trade routes converge coming into port. Once a ship got out in the open Pacific it would have a chance for its life, because the ocean is very big and the British fleet would be likely to safeguard the main routes, but when it comes to the smaller ports the greatest danger would arise. That is what we have to defend on the Pacific

It may be asked, against whom do you suggest it would be necessary to defend? We have all observed the complications that are arising in Europe. You have only to read the daily paper to see how constantly near a conflagration they are. Dealing with the situation on the Pacific ocean, there are seven nations involved, or counting Australia, New Zealand and Canada as one, there are five nations with large territorial interests and coast lines, and any one of them may precipitate a war at any time, or one of the nations may, as in the case of Belgium, be dragged into a war quite unwillingly.

Now consider the possibilities of war. I know it is very unpopular to talk about war. There is a sort of psychological reaction against it. The sufferings the public have endured, during and since the war, have given them a distaste for the subject, and they want to try and put it out of their minds by refusing to talk about it, and they say, "There is no war and there will be no war". But we would be lacking in our duty as legislators, if we shut our eyes to the plain facts, however willing we may be to do so. We are told that there is no need to talk about war, we have the League of Nations. Yes, we have the League of Nations. I could talk for an hour on the disabilities connected with the League of Nations, but I think it

will be admitted by any student of the subject that the League of Nations is to-day a source of weakness to Great Britain, and she never would have gone into it if she had not believed that the United States would also be a party to the League of Nations. Britain is confronted with great obstacles and dangers owing to her adherence to the League of Nations. She has either to break faith with France or to coerce a number of small Balkan states which might at any moment cause trouble, and there is little doubt that her comparatively isolated situation in the League of Nations is a source of danger. But the United States is not a party to the League of Nations. A league of nations that does not include the United States or Germany or Russia or Turkey, with a united population of almost three hundred million, or nearly fifty per cent of all the white races on the globe, cannot help being weak and ineffective in the exercise of any power to stop war.

We are told that we should remain defenceless, because a number of people cry, "Peace, peace", when there is no peace. But do we require to be taught the lesson a second time? Who was so blatant in his declaration of peace previous to the Great War as the Emperor of Germany? Did we not pay in the blood of the human race for our foolish belief in his interested assurances? It is an absolute fact that many of the men lying in Flanders are there to-day because we had to rush in men who were unprepared for war. We paid in blood the price of unpreparedness. When we recall the occasions of men going up to the front, infantry men who had never fired a rifle in their lives until they reached the front, and men who took charge of aeroplanes the third time they had ever seen one, because there was no time or material or instructors, artillery men supplied with twenty rounds of ammunition to last them a week in competition with an enemy who could fire that number of rounds a minute, we begin to realize that we paid in the slaughter of our men because we listened credulously to the assurances of the German emperor and people of his ilk.

There is another argument, in addition to the one based on the League of Nations, which has been advanced. We are told we are going to have disarmament. We have had disarmament conferences and are going to have more of them. I have no doubt we will have more, but as to their efficiency, I think the matter will have to be considered very carefully. The actual results of disarmament conference recommendations up-to-date have been exceedingly small, very much smaller than is popularly supposed. The sole limitation imposed by the disarmament conference at Washington was not to limit the size of fleets at all. It was supposed to be, but all that was limited was the size and numbers of the capital ships; that is men of war like a dreadnought. There was also a provision as to aeroplane carriers. And they did put a restriction on auxiliary ships—that is, smaller than capital ships—and the restriction they put on was that they were to be of not more than a certain size and a certain gunnage capacity, and the result is that instead of reducing the navies it has increased them, because you will understand you can build more ships when they are a reasonable size and reasonable in price than when you require to build an enormous dreadnought. Suppose the Utopian dreams come true—and they have never yet come true in this world—but suppose disarmament is an accomplished fact; suppose they succeed in suppressing the instincts, the ambitions and passions of every nation in the world, whether they belong to the League of Nations or not, and we have universal disarmament—and you would not expect a ten year old child to believe it—what does it mean? It means a great advantage in one respect and one respect alone; it would be a tremendous advantage to the human race, as it would stop the enormous economic waste caused by maintaining armaments, and that is all it would do.

I want to lay down another principle and emphasize it, because it is almost the crux of my argument. Disarmament does not stop war. I think it is the popular idea, but it is not correct. No greater fallacy was ever enunciated than the proposition that armament is the cause of war or that disarmament would stop war.

Mr. SHAW: Does the hon. gentleman say that armament would stop war?

Mr. NEILL: No. Armament, to a certain extent encourages war. It encourages a nation to be truculent towards its weaker neighbours. Disarmament, to a certain extent, also encourages war, because a weak nation, defenceless and unprotected, offers an opportunity of attack by a bullying or aggressive neighbour who wants to take advantage of the weaker nation's necessity. To that limited extent, disarmament encourages war and armament also encourages war.

Mr. SPENCER: What, in the hon. gentleman's opinion, is the general cause of war?

Mr. NEILL: I am coming to that. I was so careful to get it precise that I have written it down. War is caused by the conflict of different national, economic and racial policies, by the never-ending economic competition, by the strife for trade, by the demand for an outlet for surplus population, by the demand for a place in the sun. These are the causes of war, and not the fact that one nation is armed more than another. We had war in the world long before there was armament. Men fought with scythes and pitchforks for lack of more effective weapons, and they would do so again if they could not get the ordinary armament of to-day. But that is not what would happen. If we had disarmament, this is what would happen. It would mean nations ostensibly adhering to the pact and at the same time secretly preparing for war. It would mean nations secretly equipping factories, ostensibly for industrial purposes, but so prepared that by the tearing down of a partition and the coupling up of a pulley, they could be used for the manufacture of munitions of war. The nation that was most unscrupulous, the most careful to carry on these secret preparations, would be the one ahead in the game. This would put a handicap on the nation that sought honourably to adhere to the disarmament treaty and would be a great stimulus to dishonesty in the matter.

Mr. WOODSWORTH: If the causes of war are so largely economic, might it not be wise to devote our attention to removing the economic systems that perpetuate war?

Mr. NEILL: Yes. I quite agree with that, and when the millennium comes, we shall all be in heaven. Both are equally remote at the present time. I am talking about the present day, present conditions and the present generation. I do not expect to live in the next century, I am interested only in this one. There will also be the situation of a nation keeping outside of a disarmament conference, and, not by her government but by private manufacturers, building cannon and guns ostensibly belonging to themselves, which armament they would be ready to deliver when war broke out to any country which, perhaps, had already paid for them. The disarmament conference applied only to capital ships and heavy cruisers. It had nothing to do with light cruisers, destroyers, aeroplanes or gas.

We have only to remember, to go back for a moment to the "secret preparations" idea, what is going on in Germany to-day. Under the treaty of Versailles they have a rigid inspection by an Allied Military Commission as to whether they are carrying out this compact, and the commission has discovered and reported that they cannot enforce this. They have discovered large quantities of gas masks, gas manufacturing machinery and the smaller class of munitions, rifles and so on. Although they have this military inspection which would not occur under ordinary conditions, to control these things, they have not been able to control them. It has also been discovered that they have the skeleton of the headquarters staff of an army as big as they had before the war. These things cannot be controlled.

Mr. SHAW: Does the hon. gentleman place much faith and credit in the report of that military commission that has made the report to which he refers?

Mr. NEILL: I think I am entitled to accept to a large extent, the report of a commission presided over by General Foch and accepted by Britain.

Mr. SHAW: I should think not.

Mr. NEILL: I was going to touch for a moment more on the Washington conference, which did something of very vital importance to Britain. Britain there agreed to depart from the three to one naval power arrangement and to come down to a one to one. Where before she had maintained a navy equal to any two of the next two naval powers, she agreed at that conference, unfortunately, I think, for our interests, to come down to a basis of the next highest, so that any two nations would have a bigger fleet than Great Britain. That is one of the outstanding features of the disarmament conference.

As regards the prospects of war, nations do not advertise their intention of getting ready for war or of going to war. You can judge only by small matters. If you read the report of what is going on in the United States to-day, are they not strengthening, day by day, their defences? They are strengthening their air fleet, their navy, and they are even recruiting corps of nurses to be ready for any eventuality. If you look at the last Japanese budget, you will find that over fifty per cent of it is devoted to preparations for war. They have strengthened, increased and developed their compulsory military system. All these things have their significance, and surely it is a much more significant factor, which I do not think can be gainsaid, that there has lately occurred a thing which has been dreaded by every military student for the last one hundred years—an

Oriental-Slav combination. A treaty has been made by which China, Japan and Russia, make a defensive or possibly an offensive alliance. The resources of China are almost untold as regards population, and when they are properly trained, equipped and led, they make very good soldiers; they are second to none. China is to have a peace army of 800,000, capable of expansion to double that number, to be trained, educated and equipped by the genius, thoroughness and energy of the Japanese. The Japs have their own excellent fleet and a peace army of 250,000, convertible in three weeks to 500,000. Above all, they have the co-operation of Russia with her great ability to supply not only men, but food, and greatest of all, her ability to create a diversion in Europe by starting a war in Europe in such a way as to require the concentration of armies and fleets there. It is a combination that is, to a large extent, I will not say irresistible, but very strong and powerful. This combination is aimed, so it is stated, against any possible combination of the United States, Great Britain and France, but I notice that the door has been thrown open for Germany to enter into this Slav-Oriental combination, and it is too much to expect that she would not take advantage of such a favourable opportunity. These three powers the two oriental nations and Russia, have a combined population of 522,000,000 and, with Germany, 582,000,000 ranged against what? Against 185,000,000 of France, Britain and the United States. That is rather more than one-third if you leave out Germany, and considerably less than one-third if you take Germany in.

Under these conditions it is not a dream to say that war may any day, and will some day, occur, and it is more than likely it will occur on the Pacific. I have not quoted my opinion; I have quoted the opinion of Major General MacBrien. Are we to repeat history again? Britain had a very able and experienced soldier in the person of Lord Roberts who spent the last years of his life in warning Britain what was to come. His opinion was based on no fanatic idea of militarism but on his reading of the signs of the times, just as a farmer reads the prospects of the weather or the crops. They paid that man a big sum for his work, and when they received his recommendations they laughed at them. We have since paid for that. In this instance, we have the recommendations of Major General MacBrien who points to a war on the Pacific.

[Mr. Neill.[

Mr. BIRD: Does the hon. gentleman not think that the soundness and elasticity of our national credit is a better security for our nation than an armament which will possibly be obsolete before it is built?

Mr. NEILL: I must confess I do not think so. When I go out to fight, I want something to fight with, not an economic situation of a problematical kind.

Mr. BIRD: Is it not a fact that in the recent war the nations whose credit was most elastic, healthy, eventually won the war against nations that were armed in a far superior way than ourselves?

Mr. NEILL: Yes, in the long run that is true. But who stood in the forefront and paid the price at the beginning?

I laid down the proposition that we need defence, and if we accept that, we must now address ourselves to the question as to what we have either in the way of our own resources, or what we may expect from others. On the Pacific we have practically nothing but one or two boats with a few obsolete land guns. We have a destroyer which mounts three 4-inch guns instead of four 4.7 guns as a modern boat should have. It is hopeless so far as its radius is concerned; it could not hit anything five miles off. It is hoplessly outclassed by modern boats of the same type, and it was built in the early years of the war when material and time were considerations of importance.

Mr. CARROLL: The hon. member, I suppose, is aware of the fact that these boats are simply used for training purposes.

Mr. NEILL: Largely, but they are all we have.

Mr. GARLAND (Bow River): Is there any danger that this will lead to another Petersen subsidy, for arms?

Mr. NEILL: The subject is altogether too important to be treated lightly. We shall deal with the Petersen subsidy at the right time, and I am sorry to hear the hon. member for Bow River treating lightly a subject the importance of which he may come to recognize later on. I would ask hon. gentlemen not to interrupt me further because I want to finish with this destroyer before six o'clock. It is made of plates of steel three-sixteenths of an inch thick, that is, about double the thickness of an ordinary strand of telephone wire. And it is not galvanized. Now, anyone who has lived near the coast,

where telegraph wires are subject to the spray of salt water, knows that the galvanization rusts off in a very few months; and this boat has no galvanization on it at all. You can imagine therefore what the effect of the salt water has been on it during these years. Some day it will run against a floating log or one of our British Columbia salmon and crumple up like last year's snow.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, March 12, 1925

The House met at three o'clock.

CANADA—UNITED STATES SMUGGLING TREATY

Mr. SPEAKER: I have the honour to inform the House that a message has been received from the Senate acquainting this House that the Senate doth unite with the House of Commons, in the approval of the treaty for the suppression of smuggling operations along the international boundary between the Dominion of Canada and the United States, and assisting in the arrest and prosecution of persons violating the narcotic laws of either government and for kindred purposes, which was signed at Washington on the sixth day of June, one thousand nine hundred and twenty-four, and which was signed on behalf of His Majesty in respect of Canada by the plenipotentiary therein named, by filling in the blank space therein with the words "Senate and".

REPORT

Annual Report of the Superintendent of Penitentiaries for the year ending December 31, 1924.—Hon. Mr. Lapointe.

CORRESPONDENCE ON OCEAN SHIPPING RATES

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg to lay on the table such correspondence as has come to my office relating to representations on ocean rates requested by the right hon. leader of the opposition. I might say that there is a great deal of correspondence, I find, in the different departments, and it will take some days to get a copy of all the correspondence from the Department of Trade and Commerce. Some of the other departments have correspondence relating to this subject ready to table to-day. When the right hon. gentleman made his request I immediately asked each department to expedite the return.

Hon. P. J. A. CARDIN (Minister of Marine and Fisheries): I beg to lay on the table correspondence of the Department of Marine and Fisheries in regard to ocean freight rates.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): I wish to lay on the table of the House, following the suggestion to the right hon. leader of the opposition, certain correspondence received by the Department of Railways concerning ocean rates. Considerable of this is inter-departmental correspondence, and I suppose some of these letters and memoranda will probably appear in the returns brought down from other departments. However, there may be some things here that are not included in the others.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I did not quite catch what that was.

Mr. GRAHAM: This is following along the line of tabling all the correspondence in reference to ocean rates. These are letters received complaining of ocean rates, and a good many of them, I think, complaining of the rates on the merchant marine; that is the way they got to the Railway department. The unimportant part of the file is merely interdepartmental correspondence transferring correspondence from other departments to the Railway department.

Mr. MEIGHEN: In this relation the government must be under a misapprehension as to what I asked for. I am sure Hansard will confirm what I say, when I give this confirmation of my request. What I asked was not the correspondence of individuals with the department, nor of companies nor anything else, nor with any department. I asked only for correspondence of the government, first of all between the previous government in 1920 and 1921 with the British government, or with the Imperial Shipping committee, in relation to ocean rates. Then yesterday I asked for similar correspondence between this government and the British government, or the Imperial Shipping committee, in relation to ocean rates. The return filed yesterday, or the day before, of a lot of correspondence with the Trade and Commerce department on the subject from individuals in Canada, as far as I could see, was in no way a compliance with my request. Similarly this that is filed to-day has nothing to do with my request. I have no objection to it being filed; it may be

necessary; but it has nothing to do with the correspondence I asked for.

Mr. MACKENZIE KING: I must confess I thought that my right hon. friend wanted all the correspondence that dealt with the subject of ocean rates, and I have been trying to get all the correspondence together.

Mr. MEIGHEN: I made myself clear again the day before yesterday. From the first that is all I have asked for.

COPYRIGHT ACT, 1921, AMENDMENTS

Mr. W. G. RAYMOND (Brantford) moved:

That the report of the special committee appointed to consider and report upon Bill No. 2, an act to amend and make operative certain provisions of the Copyright Act, 1921, presented this day, be concurred in.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I was not quite certain, Mr. Speaker, whether you said the report was presented this day or not.

Mr. SPEAKER: It was presented to the House two days ago. The hon. gentleman (Mr. Raymond) moved concurrence in the report on that occasion, but objection was taken, and notice was given.

Mr. MEIGHEN: I do not rise to debate the merits of the report, because I want to frankly say I do not know what the report is; but I rise to take the same exception which I took last session to policies being adopted on motions, even after one day's notice, to concur in reports of committees. The committee's report should be used as a basis on which legislation may or may not be proposed, according as the government see fit. I do not think any one is prepared to debate the merits of copyright amendments now; the subject is very complicated. It is a subject which should be introduced and placed before this House in the form of a measure, thereby giving the House all the opportunities for criticism and for review of its decision that a bill presents. If we now deal with the subject and the matter is closed just after one debate, we abandon all those safeguards which I think the House is entitled to.

Mr. RAYMOND: I beg to say that the report, which was read some two days ago when notice of this motion was given, was simply to the effect that the committee might have the authority of the House for the printing of the evidence before it and of its proceedings. That is all that is involved in the report. I agree with the right hon. member for Grenville (Mr. Meighen) that it is necessary that important matters should receive the consideration of the House, but if he had noticed the report of the committee at the time it was presented he would have seen that what I have explained is all that is involved in it.

Mr. IRVINE: At this end of the chamber we cannot hear what the report is about. As I am very much interested in the copyright question I should like to know what the report is that is being adopted.

Mr. RAYMOND: The report was read, as I stated, some two days ago, and it simply asked the permission and authority of the House to have its proceedings and evidence printed for the benefit of the members of the House and for the benefit of the members of the committee.

Mr. SPEAKER: As a safeguard may I be allowed to read the report itself which is very brief. It reads as follows:

Your committee, in accordance with the resolution which it has adopted, recommends that it be granted leave to print its proceedings and evidence, when deemed advisable, for the use of the committee and for the use of the members of this House; and that rule 74 in relation thereto be suspended.

Motion agreed to.

LEAGUE OF NATIONS

GENEVA PROTOCOL—PAPERS TABLED AND STATEMENT BY THE PRIME MINISTER

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg leave to lay on the table a copy of the protocol for the pacific settlement of international disputes drawn up in Geneva during the fifth assembly of the League of Nations, 1924, of the report to the League of the committees which dealt with this matter and the covenant of the League as amended. I may say that the government received an intimation this morning that the right hon. the Secretary of State for Foreign Affairs of Great Britain made a statement to-day to the League of Nations Council with respect to the position taken by the British government, and I understand also the position taken by the governments of the self-governing dominions with respect to the protocol. My reason for laying these documents on the table is that I intend to move that copies be printed so that they will be available for members of the House when the discussion comes up on this matter.

It would be, I think, of interest to hon. members of the House to have a statement made at once by the government as to Canada's position as communicated to the Secretary General of the League of Nations, and also to the British government, some days ago. These communications have I believe been made public in Geneva to-day in accordance with our understanding with the British government. It was agreed that communications were not to be made public until after the Hon. Mr. Chamberlain the Secretary of State for Foreign Affairs had made his statement to the council. The statement is as follows:

Ottawa, March 9, 1925.

Sir ERIC DRUMMOND,
Secretary-General,
League of Nations,
Geneva.

In response to your communication of October twenty-seventh, nineteen twenty-four enclosing certified true copy of protocol for the pacific settlement of international disputes, and noting that it is open for signature by representatives of all members of the league, the government of Canada desires to state that after careful examination of the subject it has come to conclusions which may be summarized as follows:

First—that Canada should continue to give wholehearted support to the League of Nations, and particularly to its work of conciliation, co-operation and publicity.

Second—that we do not consider it in the interests of Canada, of the British Empire or of the league itself to recommend to parliament adherence to the protocol and particularly to its rigid provisions for application of economic and military sanctions in practically every future war. Among the grounds for this conclusion is the consideration of the effect of the non-participation of the United States upon attempts to enforce the sanctions and particularly so in the case of a contiguous country like Canada.

Third—that as Canada believes firmly in the submission of international disputes to joint inquiry or arbitration, and has shared in certain notable undertakings in this field, we would be prepared to consider acceptance of the compulsory jurisdiction of the permanent court in justiciable disputes with certain reservations, and to consider methods of supplementing the provisions of the covenant for settlement of non-justiciable issues, including method of joint investigation, reserving ultimate decision in domestic issues and without undertaking further obligations to enforce decisions in case of other states.

Fourth—that Canada would be prepared to take part in any general conference on reduction of armaments which did not involve prior acceptance of protocol.

W. L. MACKENZIE KING,
Prime Minister and Secretary of State
for External Affairs.

I beg to move:

That six hundred copies in the English language, and three hundred copies in the French language, of the protocol for the pacific settlement of International disputes drawn up in Geneva during the fifth assembly of the League of Nations, 1924, with report of committees, and the covenant of the League of Nations as amended be printed forthwith and that rule 74 in relation thereto be suspended.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Would the Prime Minister say whether the documents embodying the protocol laid on the table comprise any account of the position taken by Canada's representative in relation to the production of the protocol and concurrence therein at the Geneva Conference?

Mr. MACKENZIE KING: The documents are the official documents that were before the league in the form in which they have been sent to us from the league. They do not contain the information concerning which my right hon. friend has just inquired.

Mr. MEIGHEN: I should like to ask that a report be given of the proceedings so that the House will be informed of the position Canada's representative took from the beginning.

Mr. SPEAKER: Is it the pleasure of the House to adopt the motion?

Mr. MACKENZIE KING: Just before the motion is put, Mr. Speaker. I notice that I have not included in the motion the letter from the Secretary-General communicating the protocol and of the reply of Canada to the Secretary-General tabled to-day. That should, I think, be inserted in the motion.

Mr. SPEAKER: By unanimous consent. Is it the pleasure of the House to adopt the motion?

Mr. MEIGHEN: I suggest that the information I have asked for might well be provided and printed with the other documents rather than that there should be two sets of documents.

Hon. ERNEST LAPOINTE (Minister of Justice): The representatives of Canada, as well as the representatives of the other countries, merely adopted a resolution agreeing to the submission of the protocol to the various governments. They did not accept the protocol for Canada, they were not authorized to do it, nor did any other country approve of the protocol. They merely approved of its submission for the consideration of the various members of the League of Nations.

Mr. MEIGHEN: What I am asking is that the record of the conduct be submitted to parliament. This country had a representative at Geneva. There certainly is, or should be, a document that embodies the record leading up to the evolution of the protocol. It is the production of that document which I should like.

Mr. MACKENZIE KING: There were two representatives of Canada, one an hon. member of this House and the other an hon. member of the Senate. I presume that the proceedings of the assembly have been printed in a form that will be available, but the government has no separate report of its own representatives other than what is contained in the proceedings.

Hon. E. M. MACDONALD (Minister of National Defence): May I say that I hardly apprehend what my right hon. friend desires to have furnished to the House. The protocol in this particular sitting of the league was drafted in committee, and so far as the league itself is concerned was simply dealt with in a general way like the report of any other committee to any other body. My colleague, Hon. Senator Dandurand, speaking on behalf of Canadian delegates made certain remarks which were included in the report of certain proceedings. The position we took representing Canada was not that we assented to the protocol in any way but merely assented to the proposition that it should be submitted to the different countries for their approval after consideration.

Mr. MEIGHEN: The minister referred to a general report of the proceedings. It is that report I would like to have laid upon the table.

Mr. MACDONALD (Pictou): I am afraid it would be a very voluminous document, if it had to be printed. It would hardly interest the House in detail. It would contain a full report of the proceedings, but I have no doubt that the final day's proceedings which contain all the meat of the matter might be obtained in committee.

Mr. MEIGHEN: Is there any printed report of the proceedings?

Mr. MACDONALD (Pictou): Yes.

Mr. LAPOINTE: My hon friend will find those reports in the Library of Parliament.

Mr. WOODSWORTH: Can the minister tell me when the House will be afforded an opportunity to discuss the action of the government in regard to the protocol?

Mr. MACKENZIE KING: I hope at an early date; I cannot give my hon. friend the exact time at the moment.

Mr. SPEAKER: By unanimous consent the motion is agreed to.

[Mr. Meighen.]

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907—AMENDMENT

Hon. JAMES MURDOCK (Minister of Labour) moved for leave to introduce Bill No. 25 to amend the Industrial Disputes Investigation Act, 1907.

Some hon. MEMBERS: Explain.

Mr. MURDOCK: The purpose of this amendment is to limit the application of the act in terms to matters not within the legislative jurisdiction of any province. It is recognized, of course, that the enumerative provisions of the amendment are not technically necessary for this purpose, but it is thought advisable, nevertheless, to insert them for purposes of convenience and to make the act more intelligible to the body of employees and employers whose interests the legislation is designed to serve. These remarks apply as well to any overlapping which may be found to exist in the amendment as drawn. It is hoped the enactment of the section in this form will tend to prevent misunderstandings and differences regarding the application of the act to particular disputes and create greater certainty in the administration of the act than would be possible if the provisions were couched in more general terms. The purpose of the proposed paragraph IV is to enable any province to take advantage of the Dominion act should it so desire.

Within the next day or two I shall lay on the table of the House a copy of the decisions that have been recently rendered on the Industrial Disputes Investigation Act, including the decision of the Privy council in England, and the argument that was presented before that body.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

HOTEL SCRIBE

Sir HENRY DRAYTON:

1. What amount has been received from the sale of the wainscotting, doors, floors, fixtures and other material of the Scribe hotel property, Paris?
2. What was the cost of the work of salvage?
3. What amounts were received in rents for the portion of the building still under lease for the past year?
4. What were the total carrying charges for the past year, including interest on the total cost, as given by the railway management—taxes and insurance, if any?

Hon. Mr. GRAHAM:

1. The Canadian National management state that the only wainscotting removed consisted of some mahogany from former Jockey Club premises, which is being held for the Canadian National offices. All bath, lavatory, lighting and other fixtures were removed by the original proprietors. Canadian National Railways have sold some old radiation pipes, flooring and boards, for which 32,500 francs were received. All other salvage material was turned over to Ruhl Company people under their lease.

2. There were no salvaging expenses. The work was done by purchaser and 32,500 francs was net to Canadian National Railways.

3. Rent earned last year, 228,000 francs.

4.

	francs
Property taxes..	200,000
Insurance..	5,600
*Operating expenses disbursed through Messrs. Viard & Dastugue, architects..	265,000
Paid Dion Bouton for cancellation of lease..	175,000
Watchman, electricity, water, gas and miscellaneous expense..	6,200
Interest at 5 per cent on capital investment of 40,767,676 francs.	2,038,383
	2,690,183

=at exchange rate of 5.20.. ..$139,889 51

* Note by management:—Excluding 180,000 francs for taxes which is mostly recoverable on account of building being largely unoccupied. The annual rent under the lease to the Ruhl Company will be 2,400,000 francs. As normal carrying charges will consist only of interest on investment, or 2,038,383 francs per annum, the annual rent income will leave a substantial surplus, and in addition, the Railway is to receive free rental of office space which has an estimated rental value of $15,000 per annum.

No. 1 ELEVATOR VANCOUVER

Hon. Mr. STEVENS:

1. Who prepared plans for the extension to No. 1 Elevator, Vancouver, and what was the engineer's estimate of cost?

2. Were tenders called for the erection of said extension, and if so, in what manner?

3. How many firms tendered, and what are the names of such firms or individuals?

4. What was the amount of the lowest tender?

5. At what figure was the contract awarded, and to whom?

6. What is the total cost to date, based on engineer's approved certificates?

7. How much has actually been paid to said contractor?

8. Has contract been completed? If not, what still remains unfinished?

Hon. Mr. CARDIN:

1. (a) John S. Metcalf & Co. Ltd. (b) Foundations $55,000, including engineering fees; superstructure, $359,000, not including engineering fees; electrical substation, $55,020, including engineering fees.

2. Tenders were called for the foundations by advertisements in the daily papers of Vancouver inserted as follows: Vancouver Sun, Vancouver World, Vancouver Province, 3 days each. No tenders called for superstructure.

3. Five firms tendered on the foundations as follows: Cotton Company, Limited; Pacific Construction Co. Ltd.; McQueen Construction Co. Ltd.; Paulsen Company; Nickson Construction Co. No tenders called on superstructure.

4. Cotton Company at $36,715, low tender on foundations.

5. $42,807 on foundations to the Pacific Construction Co. Ltd.; superstructure awarded to Pacific Construction Co. Ltd. on a basis of 10 per cent on cost, fee not to exceed $35,000. Fee was based on estimate cost of $359,000. If cost was less than $359,000, contractors were to receive 5 per cent of difference between cost and $359,000. Contractor's equipment was on the ground for the foundations, and inasmuch as speed was essential award was made accordingly.

6. 699,238.26.

7. $583,258.52.

8. Yes.

MR. COLIN McKENZIE

Mr. DOUCET:

1. Was Mr. Colin McKenzie, barrister of Sydney, Nova Scotia, a representative of the Dominion, in England, during 1924?

2. If so, what department was he representing and on what mission?

3. How long was he so employed and at what salary?

4. What was the total cost of disbursements (a) salary, and (b) expenses?

Hon. Mr. MACDONALD (Pictou):

1. No.

2, 3 and 4. Answered by No. 1.

SECRETARY OF TREASURY BOARD

*Mr. GARLAND (Bow River):

1. Is the Deputy Minister of Finance also Secretary of the Treasury board?

2. If so, does the item of $5,000 in the main estimates for the Secretary of the Treasury board mean that the salary of the Deputy Minister of Finance is to be $15,000 for the next fiscal year?

Hon. Mr. ROBB: The answer to the first question is, Yes; and the answer to the second question is, Not necessarily so.

DAIRY CONFERENCE, 1923

Mr. CARROLL:

What are the names of the delegates from the Maritime provinces who attended the Dairy conference held in Ottawa by the Department of Agriculture during November, 1923, and what amount was paid to each by the department, as expenses?

Hon. Mr. MOTHERWELL:

Hon. John H. Myers, Minister of Agriculture, Prince Edward Island, $96.05.

Harvey Mitchell, Deputy Minister of Agriculture, Fredericton, N.B.

W. J. Reid, Director of Agricultural Instruction, Charlottetown, P.E.I., $92.70.

W. A. MacKay, Dairy Superintendent, Truro, N.S., $87.95.

J. R. Sutherland, Dairy Superintendent, Sussex, N.B., $75.30.

J. H. Simpson, Dairymen's Association, Bay View, P.E.I., $81.45.

J. S. Cousins, Dairymen's Association, Park Corner, P.E.I., $83.

W. J. Bird, Dairymen's Association, Truro, N.S., $84.70.

C. R. DeLong, Dairymen's Association, Barss' Corners, $99.05.

A. J. Gaudet, Dairymen's Association, St. Joseph, N.B., $92.60.

Heber Huggard, Dairymen's Association, Norton, N.B., $68.45.

The above delegates were chosen by the various departments or organizations which they represented. There were others appointed who did not attend. The Dominion Dairy Conference was held in Ottawa, November 29 and 30, and December 1, 1923.

INDUSTRIAL DISPUTES INVESTIGATION ACT

Mr. CHURCH:

1. Is it the intention of the government to introduce this session, any legislation to amend or consolidate the Industrial Disputes Investigation Act? If so, when?

2. What sums were paid during 1924 and 1925 for litigation and to whom, regarding this act?

3. What was the total cost of this litigation, and what accounts are outstanding?

Hon. Mr. MURDOCK:

1. Yes, see order paper of March 12, under head of "Introduction of Bills".

2. Paid during 1924: H. H. Dewart, counsel, $752.40; Lewis Duncan, counsel, $9,825.84; Bernard Rose, witness, $220.00; Jas. T. Gunn, witness, $30.00, total, $10,828.24. Paid during 1925: Lewis Duncan, counsel, $2,368.50; C. C. Robinson, counsel, $952.08; total, $3,320.58.

3. (a) $16,624.82. (b) Possibly some accounts from counsel in England.

INSTITUTE COMMISSIONER—DEPARTMENT OF AGRICULTURE

Mr. SPENCER:

1. Is it a fact, that the Minister of Agriculture intends to absorb into the department's administrative offices the function and staff of the Institute Commissioner, dispensing with the latter's services and, on the other hand appointing a new assistant deputy minister who, in addition to his regular duties of office, would undertake to perform the Institute Commissioner's present work?

2. What would be the money lost to the government in pursuing this policy in comparison with promoting the present Chief of the Institute Branch, in accordance with the merit system which the government so piously advocates?

Hon. Mr. MOTHERWELL:

1. Yes.

2. None, but to the contrary, some saving will be effected.

IMPORTS OF GLASS PRODUCTS

Hon. Mr. MANION:

What was the total value of glass products imported into Canada during the fiscal years ending March 31, 1923, and March 31, 1922, with countries whence received?

Hon. Mr. LOW:

Imports of glass and glass products into Canada during the fiscal years ended March 31, 1922 and 1923.

Countries whence received	1922	1923
United Kingdom	$ 685,806	$1,310,929
British India	5	—
British West Indies—		
Jamaica	34	—
Trinidad and Tobago	5	—
Other British West Indies	9	—
Hong Kong	1,051	998
Austria	1,305	2,583
Belgium	1,326,242	2,135,670
China	753	136
Czecho-Slovakia	65,960	131,002
Denmark	163	—
France	74,440	65,148
St. Pierre and Miquelon	35	—
Germany	19,270	87,449
Italy	20,674	4,605
Japan	52,268	46,229
Netherlands	174,873	148,977
Norway	7	—
Poland and Danzig	10	—
Sweden	—	891
Switzerland	5,221	3,614
Syria	66	—
Turkey	1	—
United States	2,964,336	3,133,528
Total	$5,392,534	$7,071,759

PUBLIC DEBT OF CANADA, 1923

Hon. Mr. MANION:

What was the amount of the public debt of Canada on March 31, 1923?

Hon. Mr. ROBB: The amount was $2,453,776,868.74.

BUSINESS OF THE HOUSE

WEDNESDAY SITTINGS—PRECEDENCE TO BE GIVEN GOVERNMENT BUSINESS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That on Wednesday, the 18th of March, instant, and subsequent Wednesdays to the end of the session, government notices of motions and government orders shall have precedence over all business except questions by members and notices of motions for the production of papers.

Mr. ANDREW KNOX (Prince Albert): I do not know what procedure I should follow in regard to this matter but I feel certain that a great number of the members object to having private members' day cut off so early in the session. We use up these private members' days for the purpose of bringing before the House items of importance in many cases, and we have a long list of motions on the order paper which will not be reached this session if the private members' days are cut off. I had a resolution on the order paper last year, which, for the reason that private members' days were cut off, I was unable to present to the House, and we finally had to bring it to the attention of the House in another way, a way that was forced upon us at that time. I sent in the same resolution this year in what I considered to be ample time, namely the end of October last. I found at that time that I was twenty-fifth on the list. It looks as if I might not be able to reach the resolution for some time, and I would certainly ask that Wednesday be left as private members' day for some time to come.

Mr. GOOD: Before allowing this motion to pass, I should like to ask the government its intention with respect to Mondays.

Mr. MACKENZIE KING: My hon. friend will observe that no notice has been given, so far, with respect to Mondays. It remains private members' day for the present.

Mr. GOOD: Will the government give the House any assurance that if this motion is allowed to pass, Mondays will be left for a very considerable time yet?

Mr. MACKENZIE KING: Mondays will not be taken without due notice in advance.

Mr. J. S. WOODSWORTH (Centre Winnipeg): Mr. Speaker, I would urge that in some way we should be assured, either at this time or later, that private members will have an opportunity of bringing forward these resolutions. A good many of us come from constituencies where, perhaps, questions coming before the House and naturally brought forward by the government, do not fully meet the needs of our electors. Some of us come here representing groups that have hitherto not been very largely represented in this House. Some opportunity ought to be afforded for introducing resolutions that have not so far had a place on the agenda of the government business, and I trust that in some way the government will see that that opportunity is given.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, a brief glance at the order paper will make clear that the House should not consent to this motion passing unless we are given a very definite assurance at least as to Mondays. We have had no shadow of assurance from the Prime Minister in that regard; so far as assurance goes, he might as well not have spoken. The order paper still has ten pages of private members' motions. I do not suggest, because I know if I were in the government myself I could not suggest, that there would be time for the discussion of all of those motions in the one session, and I do not think it would be reasonable to expect it. But there are many important resolutions on the order paper, very few from members of the opposition, but many from other members, especially from hon. members to my left. Under conditions that everyone admits obtain during this session, during all the sessions of this parliament, where reasonable expedition is accorded all government measures, where there has been no show of obstruction, it should not be necessary to curtail Wednesdays at the present time with not the slightest assurance as to Mondays not being curtailed next week or the week following, and no time at all given to the discussion of these questions.

I take this occasion to refer for a moment to a resolution which stands in my name, resolution No. 29, relating to an immediate revision of the tariff. I do not assume any air of importance beyond the ordinary member when I say that no one would suggest that an opportunity should not be given, should not be assured, for the discussion of this resolution. As yet it has been called, I think, twice, certainly not more than three times,—twice, or once, about eleven o'clock at night and the other time a few minutes before six o'clock on a Wednesday. Nobody would suggest that it could have been gone on with at that time. If the House is to discuss this question, that discussion should certainly be in advance of the budget if there is any hope of substantial results. I do not suppose that the budget will be delivered until the fiscal year is over, but in any event, this resolution should be reached in advance of the

budget. I intended to ask for a special day for it, but I am not going to do so if hon. members feel that that is asking a favour which should not be given to any hon. member. But I do want to insist that it be reached in advance of the budget, and that other resolutions of corresponding importance be given an opportunity for discussion during this session. I do not know what the need for shutting off private members' day so soon is, and I do not think we shall get on very much faster by doing so. Yesterday we covered several resolutions in a short session of three hours. It seems to me that it would meet the wishes of everybody better to leave Mondays and Wednesdays for some time yet. Wednesdays can be used very conveniently for private members' days, and I fancy that the government will need all the time at its disposal to prepare its programme and that the session will be expedited rather than otherwise by giving them a little leisure on Wednesdays. I know some of us wish, and I know the government wish that, before putting some measures before the House, there had been more leisure for meditation.

Mr. MACKENZIE KING: Mr. Speaker, I think my right hon. friend is the last person who ought to complain that a longer time has not been given for discussion of these motions on Wednesdays. I have in my hand a statement of the dates at which Wednesdays were taken under his administration. I find that in 1920, twenty-three days were allowed to elapse from the opening of parliament before Wednesdays were taken, and in 1921, nineteen days were allowed to elapse before Wednesdays were taken.

Mr. RYCKMAN: Is this not a different administration?

Mr. MACKENZIE KING: Fortunately, yes. This administration has already allowed thirty-four days. I might also point out that, in the session of 1917, nineteen days were allowed to elapse and, in the session of 1918, twenty-two days were allowed to elapse before Wednesdays were taken.

Mr. JACOBS: We did not have Progressive members in the House at that time.

Mr. MACKENZIE KING: I think the government of the day proceeded on the assumption that it was part of the government's duty to see that government business was expedited and that parliament was not kept unduly long in session. With respect to the opportunities that hon. members have had, as the leader of the opposition (Mr. Meighen) has just said, he, as well as others, have had at least two or three opportunities to speak. If they did not take advantage of the opportunity presented on the order paper, that was no fault of the government, it was entirely their own fault. A member can begin discussing a resolution and adjourn it. If they have not gone on, it is because they did not wish to go on with their resolutions. The right hon. gentleman says that he hopes the government will expedite its programme. Every hon. member and, I believe, the country generally realize that the government has expedited its programme and has been in readiness.

As regards the budget, the government would have brought down the budget this afternoon, but for the debate that has been going on with respect to ocean rates. If that debate is concluded to-day, the budget will be brought down on Tuesday; if the debate is not concluded to-day and is concluded on Tuesday, the budget will be brought down on Thursday. But we are certainly not going to hold over the budget to suit the convenience of my right hon. friend or any other hon. member with respect to any motion he may have on the order paper. I think the country looks to have the business of the country conducted as expeditiously and efficiently as possible, and it is part of the government's programme to see to it that measures are brought down in an orderly and speedy way. We hope that in bringing the budget down at an early date, we shall greatly expedite the work of this session of parliament. There is no reason why, if the debate on the budget begins on Tuesday or Thursday, it should not be concluded before the Easter recess. Hon. members have been asking the government at different times to open the session earlier so that they might get back to their homes before the summer comes on. Hon. members of both groups have made that representation. I might draw the attention of the House to this circumstance;—this year the debate on the Address was much shorter than in any other session we have had of this parliament, and that has afforded a longer time for private members' motions than was afforded on previous occasions. I think, under those circumstances, the motion should be carried.

With respect to Mondays, as I have already said, the government does not propose to take Mondays at the present time, and it will give due notice before attempting to do so. The question of taking Mondays can be discussed at that time.

Mr. MEIGHEN: The Prime Minister, unintentionally or otherwise, has misapprehended what I stated. But first let me compare the

present situation to that of previous sessions. I have not looked up the dates and therefore do not dispute the correctness of the figures given. The point I make however, is that this session the legitimate business of private members, comprising motions of the greatest consequence, has not been reached. There has been no opportunity for discussion, for there are pages and pages of such motions, some of them of considerable importance, still on the order paper. It is the condition of the order paper which I plead as a reason for not hastening the taking of Wednesday for government business. This was not the case—certainly it was not so to the same extent or anything like it—in previous years; and I do not think that in any of those years the government forced the abolition of Wednesday as private members' day against the wishes of the House or of any substantial proportion of it. The Prime Minister says that I have been urging expedition, and I think he said, the expedition of the budget. I said nothing about expedition at all, but I did think that the government would have opportunity enough for expediting its business without reserving to itself so soon a day which should be devoted to the discussion of private motions. What I urged was not the hasty bringing in of legislation but the maturity of it before it is brought in. I object, and object most strenuously, to the Prime Minister's intimating to this House that I have missed opportunities of going on with this resolution. Imagine the Prime Minister suggesting that I should have responded to the call of Mr. Speaker at eleven o'clock or so at night, to move resolution No. 29 standing in my name.

Mr. MACKENZIE KING: My right hon. friend could have gone on and asked for an adjournment of the debate.

Mr. MEIGHEN: Yes; and the Prime Minister knows that an adjournment buries the resolution.

Mr. MACKENZIE KING: If the right hon. gentleman will look up the record he will find that there have been adjournments of debates which have been continued. This has happened this very session.

Mr. MEIGHEN: This session? No. There was one debate which concluded at six o'clock but which finally came on again the next day or a day or so afterwards; it was not adjourned at all. That is the only case of the kind I have known for years. And can that be urged as a reason for my going on with a resolution of this importance at a few minutes to six? I think it is most significant that the Prime Minister should suggest that the only opportunity to debate this resolution should be given a few minutes before eleven o'clock, or a few minutes before six on Wednesday. It does not indicate any disposition on the part of the government to have this subject thoroughly discussed prior to the budget.

Mr. MACKENZIE KING: The right hon gentleman could have his opportunity on Monday.

Mr. MEIGHEN: Possibly, but will the Prime Minister assure me that I shall be in a position to proceed with the resolution on Monday?"

Mr. MACKENZIE KING: On some Monday, yes; I cannot say which one.

Mr. MEIGHEN: Some Monday, after the budget. May I make a comment on the haste of the government in bringing in the budget before the end of March?

Mr. MACKENZIE KING: Mr. Speaker, I do not think my right hon. friend is in order.

Mr. MEIGHEN: I thought I was on the subject which the Prime Minister discussed.

Mr. SPEAKER: The mover of the motion closes the debate, of course. I thought, however, that as the subject was one concerning the business of the House it might be desirable that I should afford the hon. member some latitude of discussion. Generally speaking the mover of a motion closes the debate; but by leave of the House the right hon. gentleman (Mr. Meighen) may conclude what he has to say.

Mr. MEIGHEN: I do not think I have gone beyond the subject matter of the Prime Minister's speech; I did not think that he was out of order and consequently I am not. It seems to me very precipitate, this evident anxiety on the part of the government to hasten the budget before the end of the fiscal year, when the results of the fiscal year cannot possibly be known, and before the fullest opportunity has been given for deliberate debate on that subject, which is the essence of the budget itself. I did not anticipate—indeed, nothing was further from my mind—coming into conflict with the government on this subject. I never for a moment entertained the idea that the government would seek to precipitate the budget debate or would fail to give me an opportunity, if I asked it, and some definite assurance of such an opportunity, of discussing a motion of the very transcendent importance of that which stands in my name.

Mr. SPEAKER: Is it the pleasure of the House to adopt the motion?

Some hon. MEMBERS: No.

Mr. GOOD: I asked the Prime Minister a question.

Mr. SPEAKER: The debate is closed.

Mr. GOOD: I do not propose to speak at any great length just now.

Some hon. MEMBERS: Order.

Mr. SPEAKER: I understand that the hon. gentleman desires to ask a question. I would remind him that he has already spoken.

Mr. GOOD: Is the debate closed, Mr. Speaker?

Some hon. MEMBERS: Yes.

Mr. GOOD: Very good, then.

Mr. SPEAKER: Is it the pleasure of the House to adopt the motion?

Some hon. MEMBERS: No.

Some hon. MEMBERS: Carried.

Mr. MACKENZIE KING: I have no desire to press the matter unduly; my purpose is entirely that of expediting the work of the House.

Sir HENRY DRAYTON: Order.

Mr. MACKENZIE KING: If my hon. friend will wait a moment he will see that I am only trying to oblige him. I am prepared to have the motion amended so as to give one further Wednesday to private members, that is, Wednesday of next week, if that will help to satisfy hon. members. I would also intimate that the government has no intention of taking the next three Mondays—no, I will not say the next three Mondays, because when the budget comes down we shall proceed with it. As to what my right hon. friend says about bringing down the budget before the end of the fiscal year, I would point out that this has been done repeatedly.

Mr. SPEAKER: Mr. Mackenzie King moves, seconded by Mr. Graham,

That on Wednesday, the 25th of March, instant, and subsequent Wednesdays to the end of the session, government notices of motions and government orders shall have precedence over all business except questions by members and notices of motions for the production of papers.

The House divided on the motion as amended (Mr. Mackenzie King), which was agreed to on the following division:

[Mr. Meighen.]

YEAS

GOVERNMENT ANNUITIES ACT 1908—AMENDMENT

Hon. JAMES MURDOCK (Minister of Labour) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to amend The Government Annuities Act, 1908, to provide that an annuity shall not be granted or issued for an amount less than ten dollars a year.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

ST. LAWRENCE WATERWAY

On the Orders of the Day:

Mr. JOHN MILLAR (Qu'Appelle): Mr. Speaker, I should like to ask the government if it has received any report from the inter-departmental committee appointed to look into the St. Lawrence deep waterway project? If so, when will such report be laid on the table? If not, has the government any information whatsoever to give to the House in regard to the progress made? Also, what are the names of the gentlemen composing the inter-departmental committee?

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): Mr. Speaker, this is a pretty big order to handle without a moment's notice. As a matter of fact, there is an inter-departmental committee which reports from time to time purely for the information of the government and the advisory committee. I am not sure whether there is anything in their reports which should not be made public, but the government deems it wise not to publish these reports, and the wisdom of its action has been well proven. The chairman of this inter-departmental committee is Mr. Biggar, and they have made reports from time to time. To be candid, I never dreamed that these reports would be asked for by parliament. There may be nothing in them that should not be placed before the House, but I would want to look through the reports very carefully before making them public, as some of the matters dealt with between the countries affected are of a very delicate nature, and it is just possible that the information given to the government should not be made public through the records of the House. I can get the personnel of the committee for my hon. friend. I may tell him that the progress made with the deep waterways question will, I imagine, be fully discussed in the House before the session closes.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): The Minister of Railways (Mr. Graham) indicated that an opportunity will be given to discuss the course the government was taking and the progress made in relation to the St. Lawrence canal development. I would like to ask him to be good enough to advise the House two or three days in advance before that opportunity is given.

Mr. GRAHAM: I thought probably that opportunity would come in discussion of the estimates for the work.

Mr. MEIGHEN: Well, we should have notice.

Mr. GRAHAM: Surely; there will be no trouble about that.

WINTER EMPLOYMENT CONFERENCE

On the orders of the Day:

Mr. D. F. KELLNER (East Edmonton): Mr. Speaker, I wish to ask what undertaking the government has entered into with the provincial governments and municipal authorities as a result of the unemployment conference last fall.

Hon. JAMES MURDOCK (Minister of Labour): Mr. Speaker, the government has entered into no agreement with the provinces and the various municipalities with regard to unemployment. In September last there was held in Ottawa a national conference regarding winter employment in Canada. The purpose of that conference at its outset was stated to be to decide that:

—the time has arrived when all public authorities, as well as those persons most intimately involved, whether as employers or workmen, in the problem of unemployment, should come together in conference for the purpose of endeavouring to devise a certain regularization of industrial employment, having regard particularly to building and other out of door work during the winter season.

The hon. member will find on pages 49 and 50 of this printed record of the report of the conference, which I am sending across to him, a statement of this government's policy on unemployment relief. There has been no change in that policy as there outlined. Also on page 125 will be found a statement in connection with certain proposals of the conference for joint participation as between the provinces, the municipalities and the federal government in relief measures. The conference was duly advised that the federal government could not subscribe to those proposals, although I did, as representing the government, agree to bring them to the further attention of my colleagues.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, the minister referred to a "conference on winter employment in Canada." Is that a new christening of the conference on unemployment that took place last fall?

Mr. MURDOCK: That is the actual and proper term that was, and should be, applied to the conference held in Ottawa. It was so stated in the calling of the conference, it was so stated all through the conference. The subject matter for consideration was whether those mayors, representatives of provinces and others authorized to expend public money could not devise uniform measures for so expending that money as to carry along certain work during the winter season that had formerly been held over for the summer season. It was a conference to consider winter employment in Canada.

Mr. MEIGHEN: I have the opportunity to advise the minister of a very, very bad slip. In the report of the conference on winter employment, it is described as a conference on unemployment. Perhaps he can get that slip repaired at the Printing Bureau.

[Mr. Kellner.

MINERS AND STEEL WORKERS

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): Mr. Speaker, might I ask the government if it has any definite information as to whether or not the government of Nova Scotia is actually taking any steps towards relieving the distress prevailing among the women and children in Cape Breton?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the government of Nova Scotia has not communicated anything to us with respect to their action at the present time. We have no information.

Hon. J. B. M. BAXTER (St. John City and Counties of St. John and Albert): Mr. Speaker, on much the same subject I desire to offer a suggestion. I do not want to talk, and I cannot talk at any length; but it seems to me that if we had an inundation in some place there would be no difficulty in all parties of this government getting together to afford some immediate relief. The conditions that exist in Nova Scotia I do not pretend to judge, and I doubt if individual members of parliament have sufficient knowledge to apportion blame on one side or the other.

Mr. SPEAKER: Order. Does the hon. gentleman desire to put a question ?

Mr. BAXTER: Just a question, yes; just a suggestion, Mr. Speaker, that as hungry people are apt to overstep certain lines that we do not want them to overstep, I am going to ask the Prime Minister if he will either by an assembling of people outside of the political field altogether, or by taking a representative say from each group in this House so as to make it as representative as possible, send a commission or a committee, or whatever you like to call it, into Nova Scotia to see whether the government is grappling, or is able to grapple, effectively with the problem, and to see what can be done to preserve to Canada a great industry.

Mr. MACKENZIE KING: I may say to my hon. friend that I think it would be a highly improper procedure for the federal government to interfere with the affairs of a provincial government. I would think it quite improper for this government to interfere were the Ontario government, for instance, dealing with a similar situation; I would think it highly improper for the federal government to interfere were the government of Alberta or of British Columbia, or of any other province, dealing with a like situation

in their respective provinces. That is the view of the present administration.

As to endeavouring to have assistance given to those who are suffering, I think that makes a very special appeal to every individual member of parliament, and I shall be very glad to join with other members of this House in making a personal contribution to those who are suffering in the strike at this time; indeed, I had so intended to do. However, I do not think I would be justified as a member of the federal government, holding federal funds in trust, to use those funds in any way which may have a bearing upon an industrial dispute with which this government has had nothing to do.

Miss MACPHAIL: Has not the government of Canada at other times sent money and supplies to relieve suffering in other countries?

Mr. MACKENZIE KING: No request has come from the province of Nova Scotia for assistance. If a request comes from the province, from the recognized authorities there, the government will be prepared to take it under consideration.

Mr. E. J. GARLAND (Bow River): Had the Prime Minister requests from Japan when relief was sent to that country?

Mr. MACKENZIE KING: My impression is that a request did come; I cannot say it came from Japan, but certainly it came I think from some other governments that were associated together in seeking to give relief. It was an international matter.

PEACE RIVER RAILWAY OUTLET

On the Orders of the Day:

Mr. D. M. KENNEDY (West Edmonton): I would ask the Minister of Railways (Mr. Graham) if the report from the two railways on the matter which was referred to them on the 8th day of January, and which Sir Henry Thornton thought could be prepared within thirty days, is yet in his hands. Have the two railways yet reported regarding the Peace river country?

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): They have not.

Mr. KENNEDY (Edmonton): It is a long thirty days.

Mr. GRAHAM: Of course, if the railway presidents and their staffs had nothing else to do, they could perhaps get the report out in three or four days; but they are both very busy organizations. I hope to have the report, however, next week.

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—MOTION FOR RATIFICATION DISCUSSED

The House resumed, from March 10, the adjourned debate on the motion of Hon. T. A. Low (Minister of Trade and Commerce) to ratify and confirm a contract between His Majesty and Sir William Petersen providing for the establishment of a subsidized steamship line on the Atlantic, and government control of certain ocean rates, and the amendment thereto of Mr. Clark (Burrard).

Mr. WILLIAM DUFF (Lunenburg): Mr. Speaker, the resolution which has been moved by the hon. Minister of Trade and Commerce (Mr. Low) is, in my humble opinion, one of the most important that has ever been introduced into this House for discussion. It seems to me, Sir, that I need not say that the matter of freight rates, both on land and sea, has been a burning question for a great many years, and business men in all spheres of activity have for a great many years been endeavouring to get this question solved. Of course, there are two sides to every question, and there are two sides to this question of freight rates, whether on land or sea, and for that reason this parliament should be willing to study the question from all angles so that they may arrive at a satisfactory conclusion.

It will be remembered, Mr. Speaker, that some years ago the Prime Minister of this country, the late Sir Wilfrid Laurier, after listening to representations from a great many people all over Canada, decided that it was necessary to do something with regard to freight rates on land, and the consequence was that in the session of 1903, I think it was, a bill was introduced into this parliament creating what is known as the railway commission. That commission, I think we will all agree, has done good work with regard to railway freight rates. Since that time, there has been a great deal of discussion from time to time with regard to whether the government or some other body could not in some way control ocean freight rates. In my opinion, and I think I shall be backed up by eminent authorities, it is not quite so easy to control ocean freight rates as it is to control freight rates on land; but nevertheless that is no reason, in my opinion, why this or any other government should not do everything possible to see to it that the products of the people of this country reach foreign countries at freight rates as low as possible commensurate with the service performed by the steamship companies.

As I said a moment ago, this question is not a new one. In 1911, before Sir Wilfrid Laurier, who was then Prime Minister, went to the Imperial conference, representations were made to him about this important matter, and he decided to take up this question at the conference. After discussing the matter with the representatives of the British government and of the overseas Dominions there present, Sir Wilfrid Laurier moved a resolution asking that an imperial commission be appointed to go into and endeavour to settle amicably this great and vital question. This resolution of Sir Wilfrid's was passed by the conference, and shortly after returning to this country he appointed as the commissioner for Canada to inquire into this matter no less a person than Hon. P. C. Larkin, now Canadian High Commissioner in London. However, we had an election that fall, and a great disaster befell this country—the government of Sir Wilfrid Laurier was defeated.

Mr. CHAPLIN: Another one is coming.

Mr. DUFF: Yes, and there will be more than one. There will be some after you and I are dead I am afraid. Although, as I said, the government was defeated, and although the nominee of the Liberal party, Mr. Larkin, did not enter on his duties on that commission, the matter was of such great importance that the government which followed that of Sir Wilfrid Laurier, the government of Sir Robert Borden, decided to enter upon a consideration of it, and Sir Robert Borden, very wisely I think, appointed Sir George Foster, now Senator Foster, as his representative on that commission. The commission met but there was not very much done. The imperial authorities moved very slowly, like some great bodies in Canada, with the result that very little was done. Subsequently the matter came up again. In the spring of 1913, I think it was, the flour millers of this country came to the government with a complaint that the ocean steamship lines were charging too high a freight on their products, and the government of the day then appointed Sir Henry Drayton, the present member for West York, to investigate the question. I think we must all agree that the hon. gentleman, whose name I have just mentioned was very well qualified to go into an important matter of this kind, and that anything he said on this subject should receive the attention of this House. The hon. gentleman proceeded to London and, after investigating the conditions there and at other important centres where steamship lines were doing business, he set forth certain findings and made certain recommendations. While he realized that this was a very important question and it was necessary that it should be dealt with carefully, not only in the interests of Canadian shippers but in the interest of steamship lines as well, still I think I am safe in saying that Sir Henry Drayton's report of that time found that there were certain grave grievances which should be remedied. The hon. gentleman is not the only one who has felt that way. Some three years ago, it will be remembered, at the demand—the insistent demand shall I say?—principally of hon. gentlemen representing the three prairie provinces, and perhaps with representations made by other hon. members, this government appointed a special committee of the House to go into this question, and the report of that committee is certainly very illuminating. Whilst I cannot agree with everything that committee said and reported, there is no doubt it was proved conclusively that there were certain agreements made with certain steamship companies which were not in the best interests of the shippers of Canada.

Perhaps I may be allowed here to make a personal reference, and that is to the effect that previous to the appointment of this committee and to the investigation which it made, I offered certain observations on this important matter. Hon. members who were in the House during the session of 1921 will remember that in the few remarks which I made in regard to the Canadian Government Merchant Marine I showed conclusively that the merchant marine was taking part in the meetings of what is known as the steamship conference, and while I did not know whether the rates set by this conference were excessive or not, nevertheless I stated at that time that in my opinion a steamship line owned and operated by any government should not sit in at a conference to fix rates on different articles. Even the hon. member for Burrard (Mr. Clark) in his speech the other day admitted that there was—shall I say?—a conference to fix rates, a combine. I do not want to be too hard on the steamship companies; indeed, I wish to say that these companies deserve a great deal of credit for what they have done for transportation, not only for transportation between Canada and Great Britain but for transportation on the seven seas of the world; and it seems to me that we should discuss this matter fairly and squarely and without doing anything which would unduly hurt these great companies. Personally I have a great deal of sympathy —shall I say natural sympathy?—for anybody who does business upon the great waters; and I think that any person who has either

travelled on these great steamship lines, or who has had business to do with these companies, or has watched them for the last fifty years and noted their progress and development, must certainly realize that they have been a great asset in the transportation service of the world. I am sure, therefore that this parliament will not take any action that will in any way affect or prejudice these companies as long as they do what is right for the plain people of this country.

The matter of discrimination in rates, as I said a moment ago, has been discussed a great many times, and shortly after the hon. member for West York and Right Hon. Sir George E. Foster were identified with this question it was shown that a certain company offered to take up the matter of fixing rates. Let me say before I read a letter in that connection, that it was decided by the Dominions Royal Commission:

> That it is not desirable that the operations of the steamship companies should remain longer without some measure of government supervision.

They go on to say:

> For ourselves we regard it as intolerable that British ship owners should be in a position to initiate or countenance practices of a kind so directly inimical to British trade.

Now, Sir, it is contended, of course, that the reason these rates are so high at the present time is, that there is not sufficient shipping to permit the charges to be lowered. It is a well known fact, however, that there is at least 15,000,000 tons more shipping to-day than there was before the war—in fact there is a total tonnage of something like 28,000,000 tons, representing an aggregate of some ten thousand and some odd hundred vessels.

Mr. MEIGHEN: I do not wish to interrupt the hon. member, but is not that the tonnage in only one area? I observe from the authoritative figures I have that the total tonnage is about 61,000,000 tons.

Mr. DUFF: I get the figures I have quoted from Lloyd's classification.

Mr. MEIGHEN: I think that is only for one area.

Mr. DUFF: I think the right hon. gentleman is correct, as I notice in a report of the United States merchant marine that in the United States in 1914 there were 7,920,000 tons, and in 1921 there were 18,282,000 tons; and that the gross tonnage of American and foreign vessels in 1921 was—American vessels, 67,946,000 tons, and foreign vessels, 70,000,000 tons. But the figures show conclusively that the reason given—that tonnage is not available—cannot be accepted in view of the fact that there is such a large amount of tonnage offered all over the world.

The proposition made by the government in order to arrive at some conclusion in this matter is a very important one. They say in the resolution that repeated and continuous representations have been made by the agricultural community of the Dominion and the manufacturing, producing, commercial and financial interests as well as the general merchants throughout the country, that these trading communities and interests have been and are still seriously handicapped and hampered in their trade relations with overseas countries. Perhaps this agreement, which I will refer to later, may not be the ultimate solution of this great question, but one thing for which we must give this government credit is that they have had the courage to tackle this problem, and this is certainly in their favour. They have been told by merchants and shippers all over the country that there is a grievance. Whether there is as great a grievance as these people try to make out is a matter to be decided later, but the fact remains that this government decided there was a grievance, and in order to remedy this grievance they have brought down before parliament the agreement which I have in my hand, which you have all heard read.

We have heard several speeches both for and against this proposition, and it seems to me this question is entirely too big to introduce personalities. Of course, it has been claimed that all the information which the government has is contained in a report made by a certain gentleman whose name I need not mention. Whether that is so or not—and I do not think it is so, and I think I can show that the government has had a great deal more information than is contained in that report—it is not a sufficient answer to the government's proposition to say that because this gentleman made the report this parliament should not favourably consider it; and it is useless to draw a red herring over the trail referring to the fact that this gentleman, like the rest of us in parliament, and others outside, at one time and another took part in certain by-elections. That in my opinion will not satisfy the people of this country, and hon. members who speak on this subject must certainly give better reasons for refusing to adopt this resolution than statements made with regard to the gentleman who has made the report. As I said, the question is too big entirely for that. What we have to decide is whether there is a combine, or not. If there is a combine, then I think it is up to this government and parliament to try to find a remedy. Perhaps the

word "combine" is a little harsh; for my part I think it is. But if, after hearing all these reports about the supposed combine, it seems to me it is in the interests not only of the people of this country but also of the shipping companies themselves to lay their cards on the table, to have a full and free discussion as to whether there has been a fixing of rates —a combine—or not, or whether excessive rates were fixed; so that the people of the country may know whether the steamship companies have or have not overcharged them.

Mr. BRISTOL: Will the hon. member permit a question.

Mr. DUFF: Yes.

Mr. BRISTOL: Is it correct to say that the Canadian Government Merchant Marine have been members of this combine for the last three or four years; and if so has the government obtained from the people who are running the Canadian Government Merchant Marine a full and accurate statement of what has happened in the last three years, when as I understand it they were members of the alleged combine?

Mr. DUFF: A few moments ago I said they were members of this combine, and in 1921 I called the attention of the then government to the fact; and no action was taken. I might further say that I called the attention of this government to the fact, and action I believe has only been taken lately.

Mr. BRISTOL: The question is, what information have they got from former governments concerning our own merchant marine?

Mr. DUFF: I am sorry I cannot answer that question. As a private member I would not know. All that I do know is that the Canadian Government Merchant Marine were in this conference and sat in during the years 1920 and 1921. In 1920 the matter was brought to the attention of the late government, and the merchant marine have been sitting in on this conference ever since. That is absolutely wrong, in my opinion.

Mr. BRISTOL: Therefore they should be able to give accurate information as to whether there is a combine or not, and if there is a combine they could tell us the character of it. We pay the merchant marine money for their services, and we should be able to get information from them.

Mr. DUFF: When the committee meets, some member of the Canadian Government Merchant Marine should be among the first witnesses called.

[Mr. Duff.]

Mr. CARROLL: Do I understand the hon. member to say that they have not withdrawn and that they are still members of the conference?

Mr. DUFF: I understood the Minister of Railways (Mr. Graham) to say that they had withdrawn, but I should like to call the attention of the Minister of Railways to the fact that they have not withdrawn, because they are still members of a conference on their lines running from the Maritime provinces to the British West Indies, and they are exacting rates on freight the same as the Royal Mail Packet are exacting. There is a conference or an understanding between the Royal Mail Packet Company and Canadian Government Merchant Marine with regard to freight rates on goods between the Maritime provinces ports and the West Indies.

Mr. BOYS: Can the hon. member inform the House as to the date when the Canadian Government Merchant Marine withdrew from the conference?

Mr. DUFF: I am sorry I cannot give any information as to that. It is impossible for me as a private member to give the information.

Mr. BOYS: I suppose there can be no doubt they were members of the conference on 31st December last, on which date the report was signed.

Mr. DUFF: I am sorry but I cannot answer that question. The Minister of Railways stated that they had withdrawn, but I personally think that whether they withdrew in December or earlier, it was too late. They should have withdrawn long ago, they should never have been in the conference. My information, however, is that they are still in the conference with regard to fixing rates between the Maritime provinces and the British West Indies, I say it is wrong and the quicker they get out the better.

Mr. CARROLL: That is not this conference

Mr. DUFF: No, but it is a matter of making rates and that is what we are discussing when we are considering this resolution, and I still think the ships of the Canadian Government Merchant Marine should be out of it. I said before that in discussing this question we should look at it broadly. I remember, and no doubt other members here who are as old as I am will remember, that the steamship companies operating on the north Atlantic are a different class of vessel entirely from the vessels operating some years ago, and for that reason those who have invested

millions of dollars in their different ships should have every consideration from this government and from parliament. These lines are operated, of course, principally in the interests of their shareholders, but after all is said and done we must give them credit for helping in the great transportation problems of this country.

Mr. SHAW: My hon. friend says there has been a change in the character of the ships. I would like to know generally the nature of the change in the character of the shipping.

Mr. DUFF: The steamers are very much larger and much more luxurious. There has been a great deal of comment with regard to the carrying of immigrants and the prices which these steamship companies charge immigrants coming to this country, and while perhaps it is true that the charges are a great deal higher than they were some years ago, and while it is quite true that the charges are altogether too high, yet the fact remains that accommodation on the ships which are plying between Liverpool and Montreal and Liverpool and Halifax is different altogether from that afforded in the ships in which immigrants came over some years ago. I do not remember it myself, but my father and mother came over in a sailing ship, an entirely different kind of vessel from the present day ships such as the Aquitania, or the Olympic; or some of the great liners of the Canadian Pacific Railway.

I have heard a good deal about the rates which are charged in these days, and there can be no question that there is discrimination. Whether the steamship companies can explain that away or not, I do not know. But the Minister of Trade and Commerce (Mr. Low) when he spoke on behalf of the government, did the right and proper thing in telling this House, that he was quite willing to appoint a committee and wanted to appoint one. In my opinion, that is the only way to get at the bottom of this question. I have no doubt it is impossible for the government to lay all their cards on the table before this House, but when the committee is appointed they must certainly, and no doubt they will, give this House a great deal more information than they can at the present time. It is up to them to show, and no doubt they can show, that something must be done in order to protect the people of this country who ship goods, whether those goods are shipped from the far west or from any other part of Canada. The government is to be congratulated, I think, on the fact that in the very first speech which was made on this subject, that made by the Minister of Trade and Commerce, he told the House that he intended to have a committee appointed which would investigate this matter thoroughly. I presume he means in the interest, not only of the government and the people of this country, and of the proposition which he has brought down, but, as a matter of fair play, of the steamship companies.

There is no doubt that the people of Canada are very uneasy and feel that there is something wrong with regard to the matter of ocean freight rates, and it is right and proper, as I said a moment ago, that a full investigation must be had. For instance, we are told that shippers have complained to the department very bitterly about the discrimination. Take, for instance, the difference in rates between shipments from Hamburg, and the United Kingdom, to Bombay and Calcutta, and shipments from Antwerp and Hamburg to Canada. There must be something radically wrong when you can ship goods from Hamburg to Bombay and Calcutta at 25 shillings per ton, and a shipper sending goods from Antwerp to Canada has to pay the same price. It is also true that if you are shipping goods from the United Kingdom to Calcutta, they must pay a rate of 40 shillings per ton, and that if you are shipping goods from the United Kingdom to Canada, they must pay a rate of 45 shillings per ton.

Mr. BRISTOL: Does the rate not largely depend on whether they are getting a return cargo from the place to which they are going?

Mr. DUFF: I was coming to that. I want to be quite fair to the steamship companies. I intended to say, and I may as well say now, that there is no question that the reason the rate is higher from England or Europe to Canada than from England or Europe to the United States is the fact that these ships, on both voyages, whether going east or coming west, in plying between England or Europe and the United States, have full cargoes, and in plying between England or Europe and Canada, they have part cargoes or go in ballast.

Mr. BRISTOL: About twenty-five per cent sometimes.

Mr. HOEY: That is a good argument for encouraging the incoming cargo.

Mr. DUFF: I agree with that. For that reason I presume the hon. member for Springfield (Mr. Hoey) agrees with me that we ought to have lower tariffs on goods coming into this country.

Mr. IRVINE: Why do you not lower the tariff?

Mr. DUFF: The only reason that the tariff is not lower is that the hon. member for Springfield and I are only two members of this House. If we had the full power, I think we would lower the tariff.

The Imperial conference which met to discuss this important matter made a summary of their findings, and in order to approach this matter properly and get all the light on it we possibly can, it might be as well for me to place their findings on Hansard. This is what the Royal Commission on Shipping say in the conclusion of their report:

(1) The conference system with the deferred rebate—the natural evolution of a highly organized trade dealing with customers for the most part scattered or disorganized—has created on almost all the chief ocean routes a monopoly, the limitations upon which are in many cases illusory, and which generally tend to decline;

(2) The sytsem was introduced in the first instance with the object of raising rates or preventing their fall and diminishing competition;

(3) It has been successful in raising or keeping up rates;

(4) The public have, as a rule, to pay higher rates of freight than they would pay in an open market;

(5) The system has been injurious to "tramps," the strongest element in the British mercantile marine and it leads as to them to waste and to higher rates of freight;

(6) The system tends to waste in various other directions owing to the manner in which the rings are constituted;

(7) There is no satisfactory evidence that the saving in cost, if there be any, under the system of shipping rings exceeds the waste which is due to that system;

(8) The system tends to inflate the amount of tonnage and consequently the amount of capital invested upon which interest has to be paid;

(9) It has diminished or tends to diminish the ports of sailing;

(10) It gives a country such as the United States, in which the system is illegal, an advantage as compared with the United Kingdom;

(11) It has caused in the case of South Africa diversion of British trade;

(12) There is no evidence that it has appreciably increased regularity of sailing or greatly improved the quality of steamers; but it has tended to bring about equality and stability of rates.

A good deal of what is said in that report is correct, and I have often wondered why the steamship men themselves, after that report was made by such a prominent commission, did not take steps to show the public that there was not very much, if anything, in what the report set forth.

Mr. CALDWELL: What commission made that report?

Mr. DUFF: The British government—the Report of the Royal Commission on Shipping in 1909. I notice—and I say this not at all in a spirit of criticism—that the greatest criticism of this resolution so far has come from my friends of the official opposition. I notice also that the complaints which have come from people in this country have come from the friends of the official opposition, because if you will read the correspondence which has been tabled in the last few days, or if you go to the Department of Trade and Commerce, you will find that there are—shall I say—hundreds of letters there from prominent manufacturers from all parts of Canada complaining about excessive freight rates. It might be interesting, perhaps, to make a few comments—and I will be as short as I can—in order to show that the government has certainly done the right and proper thing in taking cognizance of all those complaints which have been made by prominent manufacturers and shipping men in this country, and that nobody should blame the government for endeavouring to find a way out to regulate and to make freight rates on the north Atlantic lines as reasonable as it is proper to make them. This is a letter from a prominent manufacturer:

At the present time, as you will see by the ocean bill of lading, we are paying 30 cents per cubic foot or $12 per ton of 40 cubic feet, on organs or pianos going to Liverpool. In 1910 we paid on similar instruments, six shillings and ninepence per ton of 40 cubic feet, which is practically $1.50 per ton of 40 cubic feet, as you will also see by the enclosed ocean bill of lading. . . .

In 1910 and 1911 and for many preceding years, we were shipping a carload of instruments to Liverpool every week. The car would contain eighteen instruments. To-day we nor anyone else ship a carload in a year, simply because the freight rates, added to the price that we must get for our instruments, brings them up to the price of what they can purchase a cheap piano for in England, of German or English make.

Now listen to this:

If I can be of any further service to you, do not hesitate to ask me, as I feel that the steamship companies, including the Canadian merchant marine, are only preventing trade coming to them by demanding such exorbitant freight rates, and I sometimes think that the Canadian merchant marine are the worst sinners of the lot.

For instance, we had a number of instruments going to the West Indies some weeks ago, and have also a shipment of five going this week, and we found that the Canadian merchant marine rates were much higher than what we were quoted from Pickford & Black of Halifax, so instead of sending the instruments to Montreal, we had to send them to Halifax and the amount saved on the ocean freight more than paid the difference on the inland freight between Montreal and Halifax.

When prominent business men complain so bitterly about the rates that are being charged, I think it is only proper that this government should endeavour to do something to regulate those rates and to provide cheaper carriage for shippers. I could cite a number of other instances but I do not think it is necessary.

I realize, of course, that the steamship companies cannot carry freight to-day at as low a rate as they could before the war, but that is no reason why in March, 1924, there should

have been an increase of some twenty-five per cent. It is said that the shipping rates are governed by the law of supply and demand. Be that as it may, everyone knows that at that time there was far more shipping available in the country than there were cargoes to be carried; so that I cannot possibly see why the conference should have raised the rates twenty-five per cent.

Mr. CHAPLIN: A moment ago the hon. member was quoting from a letter written by a shipper in which the statement was made that the rates quoted by the Canadian Government Merchant Marine were higher than those charged by Messrs. Pickford & Black. But the hon. gentleman also told us, of his own knowledge, that Pickford & Black and the Canadian merchant marine were "in cahoots" as regards rates and were quoting the same figures.

Mr. DUFF: I did not say that; I said the Canadian Government Merchant Marine and the Royal Mail Steam Packet Company. These goods to which reference is made in the letter I have quoted were shipped evidently from Montreal. The rates quoted by the Canadian Merchant Marine were charged on cargoes from Montreal direct to the West Indies, and the shipper could afford to pay the railway freight from Montreal to Halifax and ship from that port by one of the boats of Messrs. Pickford & Black and still save on the shipment; the rate all-told was so much lower than the rate quoted by the agent of the Canadian Government Merchant Marine in Montreal. The hon. member will see the point without my going any further.

Mr. LEWIS: As an experienced vessel owner, will the hon. member give us his opinion as to what effect the operation of the ten vessels now proposed will be as against the alleged combine?

Mr. DUFF: That is a large order.

Mr. LEWIS: I ask the hon. member that question because I know he is experienced in this regard.

Mr. DUFF: Well, the operation of ten ships may not have the desired effect, but at least it will show the people of the country that this government is anxious and determined to do what it can to break up this so-called combine, if it exists. They may not succeed, of course, for one reason and another which will appeal to my hon. friend. If I owned or controlled one of these great shipping lines I would try to get the rest of my friends to co-operate with me in an endeavour to drive the Petersen concern out of business altogether. There are a number of ways that might be adopted to frustrate the scheme. I say, however, that the government is justified in endeavouring to do something to bring down rates, if they are too high, and to show the people of the country that it is standing by them and will make every effort possible to reduce the cost of carriage on the Atlantic.

Mr. LEWIS: In case the committee comes to the conclusion that the rates are not too high under present circumstances, will the hon. gentleman still support this legislation?

Mr. DUFF: I want to hear the evidence first. But after reading through the evidence given before the agricultural committee two years ago I expect to see my hon. friend from Swift Current (Mr. Lewis) support the action of the government in this matter.

Mr. SUTHERLAND: The hon. member has referred to the desire of the government to do something practical in this matter. If he will look up the seventh report of the committee that sat two years ago he will find that they pointed out that owing to the wide range of subjects submitted to them they were not able to give this whole matter the consideration which it merited. They therefore recommended to the government that a similar committee should be appointed subsequently, which would have been last session. Why did not the government carry out the recommendations of that committee if they attached so much value to the evidence then taken?

Mr. DUFF: I cannot, of course, answer for the government, but it seems to me that even apart from the findings of that committee there is enough evidence on the files of the different departments, particularly of the Department of Trade and Commerce, to warrant the government in taking the step now proposed. I have not wearied the House by reading all the letters that could be submitted on this subject, but I could quote letter after letter from prominent manufacturers throughout the country in different lines of business, complaining bitterly that the rates are altogether too high. As I said before, however, I am not going to say whether the rates are too high or not; I believe in giving a square deal to the steamship companies. The steamship companies deserve a great deal of credit for the service they have put on not only on the north Atlantic but on every sea, and I am willing to wait until the proposed committee has met and taken evidence before I pass any judgment on the question of rates. Until that evidence has

been adduced, and until the committee reports to parliament, I am content to suspend final judgment in the matter.

Mr. SUTHERLAND: The hon. member no doubt realizes that he has not answered my question. Why did the government not take action last session to carry out the recommendation of the committee a year before, that a similar committee should be appointed the following session, that is, last year? Why did they not do something last year if conditions were so bad as to call for a remedy?

Mr. DUFF: I agree that to a certain extent it might have been possible for the government to take some quicker action. But there is this much to its credit, that this government is taking action now, which is something that the late government failed to do. The late government knew all about the situation. Sir Wilfrid Laurier had moved a resolution at the Imperial conference, prior to the defeat of his government in 1911, to have the whole matter investigated and he appointed a commissioner in the person of the Hon. Mr. Larkin. After the Laurier government was defeated Sir Robert Borden appointed another commissioner, and from that time on until 1921 the matter was under consideration but no action was taken either by the Conservative government, or by the Union government, or by the Liberal-Conservative government led by my good friend the leader of the opposition (Mr. Meighen). But this government is doing something; it is making an attempt to solve the problem. Whether the present proposal is all that could be done, or even whether it is the right thing to do, I am not quite sure. But the government should be given credit for its sincerity and its honesty of purpose in endeavouring to grapple with the situation which is complained of and which has been brought to its attention by the shippers of the country.

Mr. SUTHERLAND: I do not wish to interrupt my hon. friend, but why stress the importance of the evidence taken before this special committee when you ignore the recommendation in their final report that, owing to the impossibility of doing justice to the evidence, a similar committee should be appointed at the next session, which recommendation was absolutely ignored by the government. Yet the contradictory evidence submitted to that committee is being constantly referred to in the course of this debate.

Mr. DUFF: Mr. Speaker, I do not think I can say anything more to my hon. friend; I have endeavoured to cover his question.

[Mr. Duff.]

Mr. MEIGHEN: Before the hon. gentleman proceeds: Assuming I am right as to what he really thinks of the Petersen contract, judging from his speech, does he consider that this House is taking a right course in voting for anything at all providing it goes to a committee afterwards?

Mr. DUFF: I would refer my right hon. friend to something which happened in this House last year when a bill was introduced. I objected to the principle of it, I objected to the second reading; the bill went to a committee; the committee made some changes, but not so many as I think they would have made had they known what has since happened; that committee reported the bill to the House; and the House voted against the report of the committee which they themselves had appointed. Now, that may happen in this case, although I do not say it will or should.

Mr. MEIGHEN: The hon. gentleman did not believe in the bill he is referring to, and he opposed it. He does not think now that he was wrong, does he? And if he was right then, why does he not follow the same course now?

Mr. DUFF: Time has proven conclusively that I was right, and I am sure my right hon. friend feels in his heart that he was wrong in the way he registered his vote last session.

Mr. MEIGHEN: That is another question.

Mr. DUFF: With regard to this matter, I certainly do not want anybody to think or say that I am opposed to the contract. I think it is a step in the right direction.

Mr. MEIGHEN: I think you are.

Mr. DUFF: Again, time will tell.

Mr. IRVINE: I understood the hon. member to say in reply to a question that he did not anticipate that the ten ships proposed to be built would have any effect upon the combine. Does he not think that the million and a quarter of the people's money to be spent by the government to prove its good intentions is a little too much money to spend on such propaganda?

Mr. DUFF: I did not say what the hon. gentleman says I did say.

Mr. IRVINE: That is correct.

Mr. DUFF: Not at all. I said that although we may differ with regard to the remedy proposed, we certainly should give the government credit for attempting to cope with this grave situation. I think that in the opinion of people who are vitally interested

on the other side of the question this contract is going to do some good. We hear that opinion expressed every day as we walk around this city. They evidently think that the Petersen contract is going to be of some effect. While this particular agreement calls for the construction of only ten ships so far as Petersen and his company are concerned, there is no reason why the government should not enter into a contract with other companies, if they deem it necessary, in order to regulate these rates more effectively—for instance, with the Canadian Pacific company. It seems to me that this company should be in the arrangement, because after all is said and done, whether they have been guilty of charging excessive rates to the people of this country or not, they are a business organization, and so long as the people and the government of Canada stood for it, I do not blame the Canadian Pacific Steamship Company for getting as high ocean rates as they could get. But, as I have just said, I feel that this great organization should come in and help straighten out the matter, and that therefore if necessary the government should make a contract with the company to use their ships for the purpose of breaking the alleged combine.

Mr. IRVINE: Does that imply that the government should issue another million and a quarter dollars annually for ten years to the Canadian Pacific Steamship Company or to any other company that might engage in this bold effort to break the combine? Does the hon. gentleman not think that in that event it is not likely we would receive in reduced ocean rates sufficient to pay the taxes required to provide the subsidies?

Mr. DUFF: I am surprised to hear my hon. friend speak in that way, because I thought that he came especially to this House to lead us out of the wilderness not only with respect to high freight rates but also in regard to the high cost of living. I am surprised, I say, that he throws cold water on this simple proposition of the government to bring down the cost of living and so enable the people of this country to benefit. Whether the arrangement will work out satisfactorily or not, I am not prepared to say; it is a big question; but I do say that the government should be given an opportunity to put all the information it has before the committee and before the House so we may deal with it intelligently. I am convinced from what other speakers have said that the government has a good deal of information in its possession to prove conclusively that high ocean rates have been charged, and that the government believes that in this contract, it has an effective way of reducing those rates on the north Atlantic.

Mr. IRVINE: Where is this information? That is what we want.

Mr. DUFF: As I said a moment ago, I presume the information will be given by the government when this special committee meets, and I think it will be the duty of the government to have someone present to give the committee all the information which it has on the subject.

Mr. IRVINE: Why not give it now?

Mr. DUFF: I have been giving some this afternoon; I do not know whether my hon. friend heard me. I can give him some further information, but I do not want to weary the House with too many quotations. Let me give him some information from his own province. I presume my hon. friend is interested in the cattle industry of southern Alberta, the province from which he comes. This is what the Lethbridge Board of Trade said a short time ago about the ocean freight rates on cattle:

> Whereas the ocean freight rates on cattle from the Atlantic seaboard to the United Kingdom are at present excessive in the extreme, being practically prohibitive of the success of building up an export trade in cattle from the province of Alberta to the United Kingdom.
>
> And whereas it is the considered opinion of those qualified to judge that cattle can be profitably carried across the Atlantic at rates much below those now in force.
>
> And whereas the production of cattle is an important industry in southern Alberta, and the growers desire to export cattle to the United Kingdom.
>
> Therefore be it resolved that the government of Canada be urged to take such steps as may be necessary to have Atlantic rates on cattle reduced to a point where cattle from Alberta can be profitably exported to the United Kingdom.

Mr. BRISTOL: Will the hon. member permit another question? I understand that grain rates are not controlled by the combine—if you want to call it a combine; that is, you have the greatest competition in the world between the tramp steamers on the one side and the liners on the other fighting to get all the grain they can. In view of this competition, how is the western farmer going to be helped on grain?

Mr. DUFF: I think I said earlier in my remarks that I did not agree with everything we have heard with regard to there being a combine, that I did not agree the rates were too high in some cases. All I said was that there was such an agitation all over the country by manufacturers, farmers, lumbermen and

others with regard to excessive ocean freight rates that it seemed to me the proper thing for the government to do under the circumstances was to endeavour to settle this question in the way they propose to settle it, that is, by appointing a committee to bring out all the evidence bearing on the question and giving the steamship companies, the manufacturers, and all other parties concerned the fullest scope to lay their arguments and evidence before the committee, which could then decide whether there is justification of the allegation that to-day excessive ocean freight rates are being charged by the north Atlantic shipping conference lines.

Mr. BRISTOL: Where you have tramp steamers on the one hand and liners on the other competing for grain, how do you hope to lower the price by any other method?

Mr. DUFF: Here is a letter from the Dominion Millers' Association written on January 15, 1921, addressed to the present right hon. leader of the opposition.

Mr. BRISTOL: That is with respect to flour. I am dealing simply with grain, which is the biggest thing grown in the west to-day, and in the rates on grain you have the greatest competition in the world.

Mr. DUFF: It is quite true there may be open prices on grain, but my hon. friend must realize that there is a conference—I will not call it a combine; but there are meetings of the different steamship interests, not every day perhaps, but every week or whenever any important matter comes up—and while cattle and grain rates may not come under this conference, you cannot tell me that these people, meeting and discussing the rates they shall charge on other commodities, do not agree among themselves what they shall charge on grain and cattle.

Mr. BRISTOL: They have to meet the tramp situation from day to day. Sometimes in Montreal there are a large number of tramps, and the price goes down. Sometimes the liner wants to fill up space, and she will take grain for that purpose; but that is a distress cargo; it is totally different. Wheat is the great basic commodity, and there you have the greatest competition in the world, and you cannot get away from it.

Mr. DUFF: But if it were not for the tramps, the rates would probably be very much higher than they are.

Mr. BRISTOL: They might be, but you must remember the tramp is the greatest thing in the world to bring rates down.

[Mr. Duff.]

Mr. MORRISON: Does my hon. friend know that the tramps charged more for carrying wheat from this side to Liverpool during the last year than the liners?

Mr. DEPUTY SPEAKER: Order. The hon. member for Lunenburg (Mr. Duff) has the floor.

Mr. DUFF: I do not object, Mr. Speaker, to questions.

Mr. IRVINE: I understood the hon. member was giving information for my special benefit just now, and I would like to say that is not what I need. I am quite willing to admit that freight rates are high, although I do not know that they are. The information that I want is this: Does this proposal which the government has advanced guarantee to us any hope that the rates will be reduced? That is the kind of evidence I want, and my hon. friend has not given me any reason why I should vote for the government's proposal in the hope that it will reduce rates.

Mr. DUFF: Then I presume my hon. friend wishes to leave the rates as they are, and not try to do anything.

Mr. IRVINE: Do not presume that. I will tell you what I wish later. What I am asking for is some evidence that this proposal will bring down the rates.

Mr. DUFF: In my opinion the government deserves credit—

Mr. IRVINE: I am not worrying about credit, but about the reduction of freight rates.

Mr. DUFF: You are not worrying about them as much as the manufacturers and others whom I have quoted are worrying. You evidently do not want to do anything. You say you do not know whether this proposal is going to do anything or not. Now in everything in the world, whatever the enterprise may be, people go into it without knowing definitely what the result is going to be, but they go into it with the hope and expectation that better conditions will result, and I feel as other people feel, and as the government must have felt, that even an attempt in this small way is going to bring good results. I believe that it will bring good results, and the steamship companies to-day are worrying more about this thing than my hon. friend from East Calgary (Mr. Irvine).

Mr. IRVINE: Does the hon. member not admit that a little common sense would perhaps be of as much value in a proposal of this kind as mere hope?

Mr. DUFF: I do not know just what my hon. friend means by that. If he is comparing his common sense and mine, I am willing to admit he has more than I have.

Mr. IRVINE: I was not making any such comparison. I asked my hon. friend for a reason for the hope he has expressed that this proposal will bring rates down. That is what I referred to as common sense. If you can give me a commonsense reason for this hope, I might be inclined to hope with you.

Mr. DUFF: Perhaps my hon. friend was not listening to the question asked me by an hon. member sitting at the other end of the House with regard to the rates on grain. The argument was that there was no conference rate on grain, that grain rates depended on the number of tramp steamers coming into port at different times and looking for a cargo. If it is true,—and it is—that the more tonnage there is available, the lower the rates are going to be, when the government brings down this proposal, whether it is for ten or twenty or more ships, if they set the rate at which these ships shall carry freight, that certainly is going to have an influence in reducing the rates, because it brings in just that much additional competition for the traffic. I think that is a sufficient reason why my hon. friend and every other member of this House should support this proposal, provided the government can give us sufficient information to warrant us proceeding with it.

Mr. MEIGHEN: The hon. member made reference a moment ago to a complaint filed with the late government in 1921 from the Dominion Millers' Association, and made the statement that the government did nothing.

Mr. DUFF: I did not get as far as that.

Mr. MEIGHEN: He made it some time before. I know he will be glad to get the information that, on the contrary, the government called a conference in relation to that complaint, which had to do with the differentiation against flour as compared with wheat, and as a result of the conference, when all got together, the large shippers of wheat admitted there was not any unjust discrimination, and consequently no step was necessary.

Mr. DUFF: I do not know exactly where I left off, Mr. Speaker, but I will try and proceed. I think I was saying to my hon. friend from East Calgary (Mr. Irvine) that the people of Alberta certainly think they have a grievance with regard to freight rates on cattle. I can only repeat that if that is so, it seems to me that everybody in this House should endeavour to support the government in the proposals which they are making, and should be willing at least to allow those proposals to go to a committee, which the hon. Minister of Trade and Commerce (Mr. Low) has told us he is willing to appoint so that the House can be apprised of both sides of this important question. There is no doubt that the question of ocean freight rates is a very important question to the people of this country, and especially in view of the fact that the country to the south of us has in the Fordney tariff put up a very high tariff wall. And I should just like to say here that the greatest mistake this country made with regard to the cattle business, and business generally, was in 1911 when it turned down reciprocity with the United States. If that agreement had been carried through, we would not perhaps be compelled now to ship all our cattle and wheat and other commodities to Great Britain and the continent of Europe. But we are faced with that condition, and it seems to me that as long as that condition continues, we should do what we can to remedy the situation. I think that the government is justified in doing everything possible to preserve our present markets and to increase future business, and this is one way by which the government can perhaps get rates reduced, so that our traffic will flow east and west, instead of north and south. It seems to me, therefore, that every encouragement should be given the government in this matter.

It has been held by some people that instead of making this contract with Sir William Petersen, we should use the ships of the Canadian Government Merchant Marine. Now if I have one complaint to make in regard to this contract, it is that perhaps the ships will not be fast enough. In my humble opinion, instead of being 11-knot, they should be 13- or 15-knot boats. Because in the winter time from November to March coming west over the Atlantic ocean, there is no question about it, a small low-speed boat cannot make regular trips. For that reason I say when anybody argues that the ships of the Canadian Government Merchant Marine could take the place of even those ships which are proposed under this contract there is absolutely no ground for making such an argument. Those ships are slow, they are not fitted for this purpose.

Mr. MEIGHEN: They are faster than these ships.

Mr. DUFF: No, they average about nine knots.

Mr. MEIGHEN: In actual operation nine to ten knots but the test speed, as compared with this, is higher.

Mr. DUFF: I shall not argue with my right hon. friend, I think we both threshed that question out before as regards the Canadian Government Merchant Marine ships.

Mr. MEIGHEN: Yes, but not the comparison.

Mr. DUFF: The fact remains that these ships of eleven knots, even would be faster.

Mr. MEIGHEN: That is the test speed.

Mr. DUFF: You will find that with the Diesel engines with which these ships will be equipped, they will be able to make their eleven knots at any time except, of course, in a very heavy gale of wind. The Canadian Government Merchant Marine ships are of very different construction and, with the engines they have, in very rough weather cannot make more than five knots actual speed. In mild weather, when the sea is smooth and calm, they could make, perhaps, nine knots. Nevertheless these ships of the Canadian Government Merchant Marine every year are getting slower and slower, with the result that if the government retains them much longer they will some day go on a voyage and never come back.

Mr. MEIGHEN: You are prejudiced on that subject.

Mr. DUFF: Let me say this also. There is no question but there is discrimination between American and Canadian ports; and sometimes in the Maritime provinces you hear a great hullabaloo, about the government operating a line of railway between Montreal and Portland, and our goods being shipped from the latter port to the Old Country instead of going through Canadian ports. Let me say that if this agreement does nothing else it will have the effect of bringing more goods to Canadian ports and having more ships come to those ports.

Mr. LADNER: Would the hon. gentleman point out in the agreement where there is any restriction against these boats calling at American ports as provided in the old agreement of 1897?

Mr. DUFF: Well, I do not remember if the agreement says these ships must sail from Canadian ports, but I certainly do say that no government would be fit for their position, and no Minister of Trade and Commerce would be fit for his if they or he entered into such a contract as this and allowed, as the old government did and as this government does vessels of the Canadian Government Merchant Marine to load in Portland and other American ports.

[Mr. Meighen.]

Mr. LADNER: Quite right, but the hon. gentleman will find that there is no control of that feature under this agreement.

Mr. LAPOINTE: Yes, paragraph (a) of clause 1.

Mr. DUFF: Perhaps if I quote the paragraph it will satisfy my hon. friend:

> Build, equip, provide, establish and during this contract, continue and in the manner hereinafter mentioned, operate a regular shipping service between such ports in Great Britain or Ireland or the continent of Europe, and Canadian ports as may be designated by the Minister of Trade and Commerce for Canada or his representatives from time to time.

Mr. LADNER: Does the hon. gentleman suggest that having provided such a service the boats cannot call at foreign ports?

Mr. DUFF: I would certainly say in the first place that if there is not sufficient business for them in Canadian ports then it is a bad look-out for Canada. In the second place, as I said a moment ago, the government should not enter into a contract permitting these vessels to call at foreign ports as the vessels of the Canadian Government Merchant Marine now do. As I have already stated, one reason why I think we should support this contract is—that all the freight on these boats, either going east or coming west will be shipped from or arrive at Canadian ports instead of that freight going from or to Portland, New London, and other American ports. This arrangement will have a very direct effect upon the routing of that traffic. The British preference, which this government introduced, has had a certain effect; but under the present arrangement with the vessels coming and going through Canadian ports the cry should be stopped that the government are not doing anything to divert traffic from Portland to St. John, Halifax, and other Canadian ports.

Mr. MEIGHEN: Will the hon. gentleman follow that through just a moment? The ships of the Canadian Government Merchant Marine at present are not confined to Canadian ports but call at other ports. Now, what my hon. friend (Mr. Ladner) was pointing out is that this contract in no way prevents the Petersen boats from doing the same thing or empowers the government to prevent it.

Mr. DUFF: The difference between these boats and the Canadian Government Merchant Marine boats, as I understand it, is this—that these boats are going to make direct trips to Montreal or other Canadian ports.

Mr. MEIGHEN: The contract does not say so.

Mr. DUFF: It provides that the service shall be between ports in Great Britain or Ireland or the continent of Europe and Canadian ports.

Mr. MEIGHEN: Yes.

Mr. DUFF: But the contract does not say that they are to leave Montreal and go to Portland or New York, and then cross to Queenstown, Ireland, and then go into Liverpool and Antwerp.

Mr. MEIGHEN: But there is nothing to enable the government to prevent them from doing that very thing.

Mr. DUFF: We can provide for that, of course, in committee, if it is thought necessary.

Mr. MEIGHEN: I see.

Mr. DUFF: That is one of the things we might do. I do not believe the government would object to making that change.

Mr. GARLAND (Bow River): Did not the Prime Minister intimate the other day that changes could not be made until after there had been a conference with Sir William Petersen? Therefore the committee can hardly make any such change.

Mr. DUFF: Even if such a conference as that is necessary the matter can be arranged and Sir William Petersen, I am convinced, will agree to it. As it is the contract is very explicit in its terms, that is that these ships must sail from Canadian ports direct to ports either in Great Britain or Europe.

Mr. LAPOINTE: With all despatch.

Mr. DUFF: Yes, with all despatch—which means direct. However, that need not worry us at all. The point I was trying to make is this: The reason why we should support this contract, if for no other reason, is that under this arrangement these ships will have to go from Canadian ports to Great Britain and Europe. That is why the contract should be supported especially by members from the Maritime provinces who are talking all the time about Portland being used by shippers of grain from the west and shippers of other goods from Ontario and Quebec. That is the reason why we in the Maritime provinces, at least, and I think western men too, should vote for the agreement—because it is going to divert the trade which now goes to Portland to Canadian ports.

A question came up a few minutes ago with regard to the matter of wheat, and perhaps on this subject I may be allowed to make a quotation from the report of the Royal Grain Inquiry Commission. I might preface the quotation by the observation that the rates on wheat vary very much. At any rate here is what the commission said—page 206:

> It is evident that Canadian seaports must have a margin of three cents per bushel, or perhaps more, in their favour in the inland rate to the seabord, if they are to get this shipping business, or any considerable share of it, under the present conditions.
>
> Notwithstanding the fact that New York is 500 miles further from Liverpool than Quebec is, ocean rates of freight from New York to Europe are considerably cheaper than from the St. Lawrence.
>
> For instance, in October 1923—October is the busy month for Canadian grain shipments—the ocean rate from New York to Liverpool was two-thirds or 6⅔ cents per bushel, whilst the rate from Montreal was three shillings per quarter or 9 cents per bushel, a difference in favour of New York of 2⅓ cents per bushel. Authorities most familiar with the trade state that the spread in ocean rates, as between Montreal and New York, averages one shilling per quarter of 480 pounds to United Kingdom ports, which is equal to three cents per bushel in favour of New York.

Now, Sir, although the grain rates do not figure in this conference or combine there is no question but that this reveals discrimination, and it is the duty of this government and this parliament to see if the condition complained of cannot be remedied.

I notice in the statement which has been issued by the shipping companies that they object to the subsidy used in this agreement with Sir William Petersen. Perhaps if any other way could be found out of this difficulty—as the hon. member (Mr. Irvine) said a minute ago—it would be wise for this country to endeavour to take advantage of it and not pay this subsidy. But the question is so serious that it seems to me that if a subsidy is necessary nobody should object to this subsidy being paid. The steamship companies who, in their pamphlet, are objecting to the payment of this subsidy, should be the last people in the world to say that no subsidies should be paid. I do not know exactly what subsidies have been paid to steamship companies in the last few years, to the Canadian Pacific Railway steamships and other lines. No doubt the Minister of Trade and Commerce (Mr. Low) can obtain the information from his officials and tell us how much money in subsidies has been paid to the White Star-Dominion line, to the Cunard line, to the Royal Mail Steam Packet Company, to the Donaldson line, to the Manchester line, to the Allan Steamship Companies and to the Furness Withy Company. I am not objecting to the steamship companies receiving the subsidies, but I say it does not lie in the mouths of these companies to object to this government arranging to pay Sir William Petersen a subsidy for ten ships,

when these same companies have been receiving, and are receiving to-day, large amounts in subsidies, something like thirteen million dollars if I remember correctly. They should be the last ones to come in and make a complaint when this government is paying a subsidy to Sir William Petersen or to certain contractors.

Mr. LADNER: Would it not be fair if the hon. gentleman would point out to the House that these subsidies which have been paid are in relation to mail contracts and not in regard to freight? That has been the policy of the British government for years.

Mr. DUFF: My hon. friend knows that whilst that might be quite true, the fact remains that they have always complained that if they did not get the subsidies they could not do the business or keep the boats on the routes. We have heard from the present Minister of Trade and Commerce, and from the late Minister of Trade and Commerce when the Conservatives were in power, that these steamship companies complained if they did not get the subsidies. We who have read the history of the country know very well that subsidies have been paid for a number of years. For instance, take the great question of the Crowsnest pass railway, in which our friends from the west are so much interested. They desire to get the benefits of the Crowsnest pass agreement with the Canadian Pacific Railway Company, and rightly so. They say that a previous government gave to the Canadian Pacific Railway certain concessions for fixing a rate on the Crowsnest pass railway; and in view of the fact that the previous government gave these concessions to the western men, these men felt quite justified, and rightly so, in asking that the contract should be carried out by the Canadian Pacific Railway. My hon. friend says that some of the subsidies have been given to the railway for carrying mail, yet we know how much money has been paid to the railways in the country, the Canadian Northern and the Canadian Pacific, to build lines; and if we can vote subsidies to build railways, and grant millions of acres of land for the same purpose —which is another form of subsidy—why can we not under this agreement, if the government feel it is necessary, give Sir William Petersen a bonus for putting in operation a line of steamships, when, in consideration of this subsidy, it is understood that this line of steamers must carry the products of this country at a cheaper rate than they would if they were receiving no bonus? If that line of steamers were to receive a subsidy of $1,300,000 per year, and charge the same rates as the conference is now charging, my hon. friend would be quite right in objecting, but the subsidy is being paid to the company with the distinct understanding that the government has power to fix rates on all commodities, and these rates must certainly be lower than the present rates or the rates fixed by the different steamship companies.

Mr. LEWIS: The hon. member stated that our own steamers have already received subsidies for the mail service. In this case did the government approach our own Canadian companies, rather than go outside to Sir William Petersen, to make a contract with them?

Mr. DUFF: I am sorry the hon. gentleman is putting me in the position of a minister of the crown. I cannot answer. I do not know. I presume they did. But whether they did or not does not change the fact. I think it was the Minister of Trade and Commerce, or the Prime Minister, who said there was no reason why they could not make a similar agreement with the Canadian Pacific steamship line or some other line. If hon. members will look at clause 1, subsection (f) of the agreement they will see that under this contract this line of steamers must carry immigrants from Great Britain or the continent of Europe at rates to be fixed by the government, and carry all Canadian mails free. So that this line of steamers will carry mails as the other lines which receive subsidies are doing.

Mr. LADNER: Will the hon. member read further? The clause says:

> If and when the parties hereto agree upon the establishment of a passenger service—

That may be when the boats are worn out.

Mr. DUFF: It may be when the boats are worn out, it may be to-day or tomorrow, or it may be forever. However, that does not change the fact that the government can compel them to carry mails.

Mr. LADNER: Does the hon. member really think they are going to put on a passenger service? Or is it not merely a question of dealing with the freight combine?

Mr. DUFF: It is primarily done to get lower freight rates, there is no question about that. But there is no reason why a passenger service could not be carried on in conjunction with the freight service, and yet the rates be lower than they are at the present time. I do not know what kind of boats the other ten or twenty or fifty may be. They may be all passenger boats, but this government

under the contract can make any arrangement with the contractor to put on other freight boats or passenger boats or boats to carry mail.

Mr. MEIGHEN: But the contractor has to agree to the new terms. The terms may call for a large amount of money, and he does not need to agree if he does not want to.

Mr. DUFF: I cannot answer all these questions. I am not in the confidence of Sir William Petersen or the Minister of Trade and Commerce. I am taking the contract as I read it, and in view of all the questions that have been asked, and all that has been said in regard to the contract, it seems to me that the only right and proper thing to do in order to get sufficient and proper information is to allow this resolution to go to a special committee, let this special committee summon witnesses, examine Sir William Petersen, summon the government officials and summon men from the steamship lines. In that way the committee will be able to decide whether the government is justified in asking parliament to ratify this contract or not.

Mr. LADNER: Does the hon. member not think that should have been done before the contract was made and the government committed to this matter?

Mr. MEIGHEN: Hear, hear.

Mr. DUFF: I am afraid I cannot follow the hon. gentleman. The government must have a policy. They do not come into parliament and wait for a committee to investigate the matter before they bring down a policy.

Mr. LADNER: They have done it before in regard to freight rates.

Mr. DUFF: When?

Mr. LADNER: In 1922, in connection with the Crowsnest pass agreement. When the committee reported then they adopted the policy.

Mr. DUFF: Then they have received sufficient information from this agricultural committee and this is the policy which they think is right and proper.

Mr. LADNER: I am not trying to argue with the hon. member. I am impressed with the soundness of his argument and his information; and in view of his suggestion that the matter should go to a committee, where the information could be obtained, and submitted to parliament, I am merely asking his opinion, which would be of value to me and other members, as to whether he does not think it would be wiser that the committee should inquire and obtain the information before the government commits itself to the agreement.

Mr. DUFF: I do not think so. I have read letters from prominent manufacturers, and I showed that it was not a new thing. The government of Sir Wilfrid Laurier dealt with it in 1911. The government of Sir Robert Borden started to deal with it, but for some reason, perhaps because of the war, they did not get around to it. This question has been before the people of this country for many years. No less a personage than the hon. member for West York (Sir Henry Drayton) was sent to London to make an investigation. He made a splendid investigation, and he came to the conclusion that something was wrong that needed to be rectified. But because of the war and for other reasons, nothing was done by the government of either Sir Wilfrid Laurier or Sir Robert Borden. This government, however, which is a courageous government, has investigated the matter, and after hearing the evidence placed before the agricultural committee, it has laid this proposition before the House. It seems to me that we should certainly be willing to pass this resolution and let it go to the committee. After the committee investigates the matter and reports to parliament, and after we have an opportunity of reading all the evidence, if we are not satisfied, then it is time enough for us to object to any of the clauses in the agreement or in the bill based upon it. The steamship companies have nothing to fear from this government, and I do not think it is wise for them, in their pamphlet, to refer to the fact that, as I said a moment ago, this subsidy was granted. They are taking a rather peculiar attitude, which reminds me of the ditty which says:

> The devil was sick, the devil a monk would be;
> The devil was well, the devil a monk was he.

That seems to be the way the steamship companies are looking at this proposition. When they and the railway companies could get subsidies, that was all right; but when this government in order to reduce freight rates wishes to give another company a subsidy, they object to the subsidy being paid. I think, under all the circumstances, this government is perfectly justified, in order to get the rates reduced if they are excessive, to give a subsidy to this steamship company, especially in view of the fact that the government has full power to reduce rates.

The hon. member for Burrard (Mr. Clark) has moved the following amendment:

That Mr. Speaker do not now leave the chair but that it be resolved: That effective control of ocean rates can be exercised only with the co-operation of all portions of the empire, and by a body on which all are represented, and the contract made by the government with Sir William Petersen, based on the report of W. T. R. Preston is ill-advised, costly and futile and unworthy of the serious consideration of this House.

The hon. member, on a very grave and serious question of this House, was certainly ill-advised in introducing such an amendment, when the principal thing he said in his amendment was that this contract was based on a report by W. T. R. Preston, and was ill-advised, costly and futile and unworthy of the serious consideration of this House. That, to my mind, should make every member of this House vote against that amendment. The fact remains that this resolution is not based on Mr. Preston's report at all. This agreement was entered into on the 11th day of December, 1924, whereas Mr. Preston's report was mailed in London, England, only on December 31, 1924. How could the government make an agreement with Sir William Petersen based on the Preston report, as the hon. member states in his amendment, if Mr. Preston's report left London twenty days after the agreement was entered into?

Mr. LEWIS: Does that not nullify the report altogether, if the agreement was made before the report was received?

Mr. DUFF: The agreement is not based on the report. The report is a sort of annex to what the government already knew. It only confirms the fact that there are excessive freight rates, because as I said first in my speech, and as I repeat now for the seventeenth time, the agreement is not based on the Preston report. Prominent manufacturers have written reams of letters to the department complaining about these freight rates, and I presume the action of the government was based on this accumulation of evidence which came in from all parts of the country, and not on Mr. Preston's report.

Mr. MEIGHEN: I read in the preamble:

And whereas the government of Canada after an investigation of the representations brought to its knowledge and after giving the same serious consideration has thought it wise—

And so on. What does that investigation refer to?

Mr. DUFF: I am sorry I cannot use sufficient language to make either the right hon. gentleman or some other hon. members understand what I mean. Let me see if I can put it in other language. What I said was that this legislation was not based on the Preston report: that year after year complaints had been coming into the Liberal government of 1911, the Conservative government of 1911 to 1917, and my right hon. friend, when he was Prime Minister, that these freight rates were too high and that there was discrimination in certain respects. Therefore, the government had sufficient evidence to warrant them in making this agreement with Sir William Petersen or anybody else without waiting for the Preston report, whereas the hon. member for Burrard claims that the agreement is based on that report. I do not think this parliament should accept the amendment of the hon. member for Burrard, first, because there is no necessity to drag Mr. Preston into the matter at all. If the hon. member cannot give a better reason why this House should vote for his amendment and vote against the resolution, then he would have been far better advised if he had not moved it. He also states in his amendment:

That effective control of ocean rates can be exercised only with the co-operation of all portions of the empire and by a body on which all are represented.

That means that the hon. member for Burrard wishes us not to deal with the situation now, not to try to find a remedy in 1925, or 1926, or even 1927, because the experience of previous governments who appointed Sir George Foster and Sir Henry Drayton to look into this matter and who appointed Sir George Foster as a member of the Imperial commission, has been that it took five years for them to make a report. How could my hon. friend expect, if his amendment is adopted and an Imperial conference is called, that anything is going to be done for the Canadian people in the next two or three or, perhaps, five years? This is a matter for Canada; it is a matter for the Canadian parliament to deal with, and there is no reason why we should not make the first step in this direction, why we should not ourselves go ahead and fix these rates without consulting any other part of the empire. There is no reasonable probability of such a conference being arranged to meet in London or elsewhere within one or two years. There is no reasonable probability, should such a conference ever be held, of members of the conference arriving at any satisfactory conclusion respecting Canadian interests. We must not forget that a great deal of the capital invested in these steamship companies is British capital and that an Imperial conference is certainly not going to give to Canada anything other than it is compelled to.

Mr. MEIGHEN: Why was the matter not taken up at the Economic conference?

Mr. DUFF: I really do not know. Further, South Africa, Australia and New Zealand could not possibly be expected to understand Canadian conditions so as to arrive at any conclusion that would be satisfactory to this country. The history of the Imperial conference and Imperial Colonial conference is that years elapsed before any reasonable conclusions were arrived at. The Colonial conference of 1911 suggesting the appointment of an Imperial Dominions Royal Commission reported in 1917, or six years after they first met. The conclusions of this conference of 1911 which reported in 1917 have not been acted upon prior to this date. Does that answer my right hon. friend's question why the Imperial Economic conference cannot deal with this matter? The English people are great people, but they are pretty slow in some matters, and we Canadians, who are swift, do not want to wait until the British government reports on this matter. With these facts staring one in the face, the futility of suggesting that the present question should be referred to another commission of this character is obvious, and the suggestion too ridiculous to be entertained for a moment. I therefore think that parliament should unhesitatingly reject the amendment that has been submitted by the hon. member for Burrard (Mr. Clark). Rather, let those hon. gentlemen who may be appointed to act on the proposed committee get together and consider all the facts from every possible angle; let them take all the evidence which they deem necessary, either from government officials or from representatives of the steamship companies, so that they may be able to come to a sound and a fair conclusion. We want to give everyone a square deal, and if the committee should find that rates cannot equitably be reduced on any commodity, whether it be wheat or cattle or anything else, then let them report to parliament accordingly. I do say, however, that it is time the air was cleared. In the interests not only of the companies concerned but of the common people of the country as well it is highly essential that there should be a show down, and I trust that the committee after proper investigation will report to parliament something which will be satisfactory to the people of Canada at large, whether they be shippers, producers, or the plain folk in the ordinary walks of life.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. L. J. LADNER (Vancouver South): Mr. Speaker, at six o'clock the hon. member for Lunenburg (Mr. Duff) who is a practical man in the shipping business, had concluded his well-reasoned address, in which he told us that the objections to the Petersen contract came from the friends of the official opposition. But it is significant that these objections come from the rank and file of the people, demonstrating their endorsation of the attitude of the official opposition towards the proposal of the government. For instance, I have before me a communication from the Vancouver Board of Trade, one of the largest organizations of commercial and business men on the Pacific coast, containing some 2,000 members and representative of all the business interests of Vancouver—yes, and of inland districts of the province. This is in the form of a letter to the Prime Minister, the Right Hon. W. L. Mackenzie King, and after pointing out that the council of the board had met, it proceeds:

> Having had an opportunity of perusing the report of Mr. W. T. R. Preston regarding the North Atlantic Steamship Combine, and having studied the proposed agreement contained in the Routine Proceedings and Orders of the Day for Monday, February 23, the council unanimously resolve, that this board again express to you the strongest opposition to the granting of this subsidy on the ground that it is not in the public interest and will not be effective in reducing freight rates.

There is the opinion of a body of business men who know what will conduce to the best interests of the country generally. In today's papers I notice that the Montreal Board of Trade and the Montreal Corn Exchange have taken a similar stand. I also have a telegram from a body of men who probably are better acquainted with the shipping business than even the members of the Vancouver Board of Trade; I refer to the Vancouver Merchants' Exchange. They have addressed a telegram to Hon. T. A. Low, Minister of Trade and Commerce, which reads as follows:

> The Vancouver Merchants' Exchange, representative of the shipping and exporting interests of this port, is of opinion that there exists no need for the reported subsidy to shipping or any interference with the operation of the regular economic laws in this regard, but that if it be deemed advisable by reason of conditions of which we are unaware to take such action, opportunity should be first given a full examination and discussion of the matter as affecting the entire export trade of Canada. It is further requested that no action be taken by the government until such opportunity has been afforded.

The hon. member for Lunenburg (Mr. Duff) urged as the chief point in his address that the government should be commended for taking some steps with respect to the alleged combine; but he adds the qualification, that they should first, through a special committee, find out if such a combine exists; and, if so, the way in which it adversely affects the interests of Canada; and thereupon the special committee should recommend to this House ways and means of meeting the situation in the interests of the people generally. It seems to me that the government has got the cart before the horse. Having received this report from Mr. Preston, they at once proceeded to conclude a contract with Sir William Petersen.

As to the report, I think hon. members looking at it dispassionately will declare it to be full of political prejudice and intended for party propaganda. It contains statements of fact, but interwoven with these statements are subtle implications reflecting upon what he deems to be the failure of preceding governments to take obvious steps to remedy the condition of affairs which he assumes to be long standing. Here is a paragraph which I find on page 7 of the Preston report:

> Following the defeat of the Laurier government, however, Mr. Larkin was replaced by Sir George E. Foster, the latter being nominated by the new Prime Minister, Sir Robert Borden. It was expected that the report would be produced by this Imperial commission within two or three years, but five years elapsed before it was available.

Now the implication, of course, which is here is that the Conservatives, having assumed office and being in league with the big interests, allowed this matter to stand in order that it should be rendered fruitless; and reading the report from one end to the other I say it is a fair statement to make that there are political insinuations and propaganda for elections sticking out of it in every line; it is not a report founded on the real merits of this question. If the government had been sincere in trying to arrive at the real unadulterated truth and facts of this question so far as the north Atlantic conference is concerned, they would have done as the hon. member for Lunenburg (Mr. Duff) suggested they should have done—they would have had either a commission or some semi-judicial body sitting in an unprejudiced manner to hear the merits and demerits of all sides of the case; they would have had witnesses from the north Atlantic conference come there, representatives of the steamship companies and of public bodies such as boards of trade and railway corporations—in fact everybody interested in this matter—they would have submitted the facts and the evidence to this body or commission and then this parliamentary committee, as is now suggested, would make a report to the House of the facts with their recommendations.

Mr. ARTHURS: Is the hon. gentleman aware whether the government made a contract with Sir William Petersen before or after the Preston report?

Mr. LADNER: I think the facts disclosed show very clearly that the contract with Sir William Petersen was made about the time of the Preston report or before it. At any rate the report was based largely upon the information which, perhaps, the government had received in an unofficial manner from Mr. Preston, and from other sources in a general way. But my point is this: That the parties who are really interested, and who have been carrying on the transportation business on the Atlantic ocean for many years, and who would be adversely affected by the proposed legislation, have not, according to their own declaration, been allowed to submit the facts as they see them, or to suggest what they would propose to do as a solution of the problem; and in my humble opinion the government in levelling this popgun of a combine breaker is doing so largely for political purposes prior to an election; it is not pursuing a wise course and it is not sincere.

Mr. LOW: The "popgun" appears to be creating quite a stir.

Mr. LADNER: No, what is causing the stir is the amount of money that will be required to shoot the popgun off. Mr. Preston in his report states that his investigation extended months beyond his expectations, and yet he did not, according to their own statements, go and see the very people, who constitute the combine or north Atlantic conference.

Now, Mr. Speaker, this question seriously and vitally affects western Canada, and particularly the port of Vancouver. That is one of the reasons why I am addressing the House in respect to it. The exports from British Columbia for the year ending March 31, 1922, amounted to $71,000,000, and for the fiscal year 1923, to $97,000,000; and in 1924 they jumped to $140,000,000, an increase of $43,000,000. There are over forty-five different steamship lines operating out of Vancouver, and most of these are running between that port and the United Kingdom and the continent. Under this proposed agreement the country is not only risking $13,000,000—not risking it but giving it away—but the commercial and transportation interests of Canada, and the people

as a whole, are facing a dislocation of national trade conditions. It would be impossible to know at what moment Sir William Petersen may fail in his undertaking and thus bring about the consequences likely to result from a failure. Later I will deal with the agreement which he entered into in 1897 with the Dominion government in connection with the steamship proposition at that time.

I have taken the trouble of looking over a history of shipping so far as the British Empire is concerned, and I have found that during the four hundred years' experience in Great Britain, shipping subsidies having commenced about the reign of Elizabeth, there is no record of any such experiment as this government proposes to carry out on the north Atlantic against this huge shipping combine. The report to the British government of the select standing committee on steamship subsidies as far back as 1902, when a very thorough report was given, makes the statement, which is very significant in view of the present proposal of this government, that:

> Trade interests are not considered except so far as mail services follow the line of great commercial traffic.

That is, in giving mail subsidies the principle the British government has evolved, after generations and centuries of experience in the actual world of shipping, is that they do not give subsidies to influence rates or to seriously influence trade, but they have given subsidies for mail services so far as mail services follow the line of great commercial traffic. The reason for giving these subsidies, according to the statement, was to follow the great commercial routes. The object of subsidies, according to the policy of the British government during the last one hundred years, has been to provide speed and regularity of postal service, and they also provide for the use of the vessels during war. There is only one instance where that rule has been departed from, and it is in the establishment of a subsidy for the West Indian service to Jamaica, to encourage the fruit trade of those islands.

It is significant to note the hopes of Sir William Petersen in connection with this contract. These words have been mentioned before but they can bear repeating. Sir William Petersen is addressing his shareholders and as the head of this company is telling them what fine things are in store for them. I quote this from a publication of the Vancouver Board of Trade. It says, quoting the words of Sir William Petersen to his shareholders:

> You have to go in search of business now-a-days.

Apparently he headed right for our government here.

> I have been on a business trip which may bring a considerable measure of success to this country. It will matcrialize within the next few months, and in the early spring we will see our ships sailing under very much more prosperous conditions than at present prevail, with steamship companies dependent on existing low freights. We will be independent of the existing freight market. It is not a prophecy but also an almost accomplished fact. I am the biggest shareholder in this company, and I shall try to get as many shares as I can. Do not sacrifice your shares.

Are those the words of a man who expects to be an altruist to the people of Canada? Those are the words of a keen business man who has got a contract made against the people of Canada, and he is advising his shareholders to pick up all the shares they can because they are going to make some money on them. Sir William Petersen at the present time owns three steamers that we in Vancouver know about. They had one in 1924 under time charter to a Vancouver firm; another is under time charter to a Vancouver firm at the present time. In working out this contract, Sir William Petersen, as has been pointed out by various speakers, has it within his power under the terms of the contract to substitute in his place a company which the government are bound to accept without qualification. No matter what kind of a company he may get hold of, no matter whether it is loaded up with mortgages, heavily bonded or otherwise under obligation, Sir William Petersen may bring the ships under that company and always be within the terms of the contract. In so doing, as has been pointed out by at least two speakers, he receives $1,350,000. The boats will cost, I understand, about $500,000 each or $5,000,000 for the ten. The ten boats can be purchased on time payments of one-tenth each year, or $500,000. The interest on the money amounts to $250,000 for the first year. So that the payments which Sir William Petersen or his company must make in any given year, or rather in the first year, amount to $750,000. He receives $1,350,000; so he has a net profit, or money available, of $600,000 if he operates his boats at cost, without making anything on the freight. If the North Atlantic Steamship Conference are operating boats at a rate at which they must make a profit, naturally it will be very easy for Sir William Petersen to carry on his operations at a lower rate than theirs, complying in that respect with the agreement that he has with the government and thereby put in his pocket $600,000 a year. I would like to ask the Minister of Trade and Commerce (Mr. Low) if he has got any answer to that proposition. He has made no reply to any hon. member who has urged it so far, nor is there anything in

the text of this agreement that can be argued as giving the minister power to stop Sir William Petersen making a profit of $600,000 a year, which amount increases every year of the contract. The minister is silent.

Mr. LOW: He will have an opportunity later.

Mr. LADNER: I have heard three speakers make that point, and it is a very important one, and I have not yet heard the minister reply to it. I do not see how he can get around it. It seems to me that with the many one-sided features of this contract, Sir William Petersen has a very fine agreement, and can carry on his financial operations to an even greater extent than is indicated by these figures.

The Foreign Trade Bureau of the Vancouver Board of Trade, whose chairman is one of the largest exporters of lumber in Canada, or in British Columbia at all events, makes a very good comment with respect to this question. They say: One steamer will carry 1,800,000 bushels of wheat. It earns a subsidy of $135,000. That subsidy equals 7½ cents per bushel, which is the total freight rate from Montreal to Liverpool. But unfortunately these ten steamers could only move about ten per cent of Canada's usual transatlantic wheat movement; so ninety per cent must pay the higher freight rate. Now, who is going to be favoured in the ten per cent of that movement? And who will have the power to give the favours? That is something which I think would be hard for the Petersen people to carry out. If you apply the carrying capacity to lumber, the subsidy amounts to $16,000 per voyage, and in sixty voyages, which is all that the ten steamers can make in any one year, the lumber rate will amount to $4.50 per thousand feet board measure; and they can carry only a very small proportion of the export lumber business of British Columbia.

Now, I shall say a few words on the agreement. Sir William Petersen made an agreement with the Dominion government many years ago, in 1897.

Mr. ARTHURS: Are the ships of the Canadian Government Merchant Marine carrying much British Columbia goods at the present time?

Mr. LADNER: The merchant marine does carry considerable goods in the way of export from British Columbia, but the unfortunate thing is that although the government some time ago, after a great deal of persuasion and hundreds of telegrams and after eight or ten visits of delegations from boards of trade, made the promise that they would establish a customs officer in New York—and headlines a yard wide appeared in the government papers telling us the good news—yet they surrounded that officer with regulations of such a kind that he was absolutely useless, and he does not help the freight at all—that is, the trade between eastern Canada and Vancouver and vice versa.

Mr. ARTHURS: What about the export trade?

Mr. LADNER: The merchant marine does carry a considerable quantity of lumber, and I believe is getting along very well in that respect.

Mr. MacLEAN (Prince): Would the hon. member be in favour of continuing the merchant marine in that trade and on that route?

Mr. LADNER: My idea would be to continue the merchant marine on those routes where the steamers are paying or giving a service of value to the country; but where they are not paying or giving a service of value to the country, the government could use them instead of buying these ten new ships, or paying some other man to buy ten new ships.

Mr. MacLEAN (Prince): Are the ships not doing better on the Pacific coast than on the other coast?

Mr. LADNER: I believe in most cases on the Pacific coast they are making a profit, and where they are making a profit it is only common sense to leave them there to continue making a profit, because government institutions are so much the other way that when we find a ray of light in that respect, we ought to encourage it.

Mr. SUTHERLAND: The Prime Minister says they are no good.

Mr. LADNER: They seem to satisfy the trade of British Columbia in a number of lines.

Mr. GRAHAM: Does the hon. member advocate us withdrawing the east-and-west service through the Panama canal that has been established by the merchant marine?

Mr. LADNER: I certainly do not; I would be insane if I did.

Mr. GRAHAM: I do not want my hon. friend to go that far; but he takes strong ground that we should not run any of these boats where they are not at present paying, and I thought it rather queer.

Mr. LADNER: The hon. gentleman perhaps was not paying attention to my remarks. I took good care to say, where they were not paying or giving good service to the country. In 1897 the government of Sir Wilfrid Laurier made an agreement with Sir William Petersen and his associates, and I am told that Sir William Petersen failed to live up to the contract and forfeited his deposit, which was afterwards returned to him. The point I wish chiefly to make in that connection is this. Why not insert the same precautions and equally sound provisions in this agreement? This agreement, from a lawyer's point of view, is the most one-sided and open agreement you could possibly conceive of. There are no penalties. The worst the minister can do is to serve notice that the agreement is at an end. That may be very favourable to Sir William Petersen, and would not be helpful to the government.

I would like to draw the attention of the government to one or two of the clauses of this agreement, because they are very important, and we do not know whether the government is going to hold us hard-and-fast to the letter of this agreement, or whether the committee is going to change it, and whether a compromise is going to be reached after a further conference with Sir William Petersen I therefore think it is necessary to comment on these clauses, because we may be faced with that condition when the bill finally comes down. The first clause, as I have already pointed out, provides that the government shall accept the company which Sir William Petersen forms. In my judgment there should have been a provision by which that company should be such as met with the approval of the minister, because in company promotions and organizations it is possible to so organize a company as to completely defeat the end that the government seek in a contract of this kind. It is possible to work all kinds of ingenious schemes by means of control of directors, encumbrances, bond issues and many other matters, by which a company would be an empty quantity, so far as being a party to a contract of this kind is concerned.

My next point, and one which chiefly affects British Columbia, is found in subsection (d) of clause one which says:

> That the control and regulation of the rates to be charged by the contractor shall rest with the government of Canada and that the government shall fix such transportation rates on all commodities from time to time.

British Columbia received a very severe blow at the hands of this government when they allowed the Crowsnest pass agreement to come into force. We have been attacked by land on the railways and we are now being attacked by sea on the Pacific coast, because just as soon as the government brings in preferential rates under the Petersen contract, if it accomplishes the purpose for which the government made this contract, it is going to lower the ocean rates on the Atlantic coast, and in that way create a discrimination against shipping rates from the British Columbia coast or from western Canada, because the government will not be exercising that paternal and wise influence and directing their forces against any combines on the Pacific side of the North American continent. I should like to ask the minister how he is going to protect the western provinces against an adverse result under this contract and according to that provision, or how he can protect it. If the minister is reading his notes I will wait for a reply. If he does not propose to answer the question I will go ahead.

Mr. MEIGHEN: He will never answer it.

Mr. LADNER: I take it our addresses on this contract are in the nature of a debate, when an exchange of ideas would be of some advantage, and coming from Vancouver it is my duty and purpose to place before the government my views of our responsibility in the matter as we see them, and when the time comes to face the public we will tell them what we have done and the answer that the government has given us. I suggest this clause should be added to subsection (d)—

Mr. MacLEAN (Prince): Then the hon. gentleman is admitting there is a combine?

Mr. LADNER: I am not admitting there is a combine. I do not know.

Mr. MacLEAN (Prince): I thought the hon. member admitted that by inference.

Mr. LADNER: If the government is serious in the attempt to lower freight rates on the Atlantic, and their proposition is well conceived and they do lower these rates, is it not plain to the hon. member that it will have an adverse effect upon shipments from the Pacific coast through the Panama canal?

Mr. SINCLAIR (Queens, P.E.I.): That is quite true, but the agreement embodies all the ports, and Vancouver would be included, I think.

Mr. LADNER: No. The intention of the agreement is to control freight rates on the Atlantic between Europe and Canada.

Mr. GRAHAM: Would this be a fair inference: that if the government is right and my hon. friend is partially wrong, and it does transpire that the ocean rates on the Atlantic are controllable by the government, immediately following that the same principle would apply to the Pacific?

Mr. LADNER: Apply to what?

Mr. GRAHAM: To the Pacific ocean.

Mr. LADNER: Apply the agreement?

Mr. GRAHAM: The hon. member does not get me, perhaps. I ask him if this would not be a fair inference: that if it transpired that the government was right and succeeded in this attempt to control ocean rates on the Atlantic, taking his version of it would it not follow, as night follows day, that that success on the Atlantic would immediately be followed by the application of a like principle on the Pacific?

Mr. LADNER: Not necessarily at all.

Mr. GRAHAM: Well, I might say that it would.

Mr. LADNER: The goods are shipped from Vancouver to Europe; the competition is between the ports on the St. Lawrence in eastern Canada and Europe—

Mr. GRAHAM: The hon. gentleman does not get me.

Mr LADNER: Yes I do. The point is that if you reduce the freight rates on the Atlantic from an economic point of view, it has an effect on the Pacific.

Mr. GRAHAM: No, I said that if the government were successful, as they hoped to be, in getting control of ocean rates on the Atlantic, it would follow as a matter of course that that success on the Atlantic would immediately be followed by the government applying the same principle on the Pacific.

Mr. LADNER: Is the government prepared to say they will do so?

Mr. GRAHAM: Most assuredly.

Mr. MEIGHEN: A safe promise.

Mr. GRAHAM: This government always makes safe promises.

Mr. LADNER: Does the minister really think that a proposition like this which would control about two per cent of the freight between Canada and the continent is going to affect the freight rates on the Pacific?

[Mr. Ladner.]

Mr. GRAHAM: If it does not control more than two per cent, I should imagine the other ninety-eight per cent would not be making such a fuss.

Mr. MEIGHEN: What fuss are they making?

Mr. LADNER: I do not think there is any suggestion beyond the inference in the minister's words, that they are making any fuss. They are placing their case before the body that is going to make the law and they have not had an opportunity to do so previously. Mr. Preston in his report says:

> My only regret is that the investigation extended months beyond my expectations.

And yet the statement of the steamship companies is that he never came near them. What kind of information is that to justify the government entering into a contract of this kind? I presume the minister also includes the boards of trade of Montreal and Vancouver and all the business men of the country among those who are complaining against the proposed subsidy.

Mr. GRAHAM: The hon. member is wrong again. He asserted that only two per cent of the traffic would be affected.

Mr. LADNER: Of the total trade.

Mr. GRAHAM: The other ninety-eight per cent need not be very much afraid of our making a very great disturbance. He need not worry about the effect that two per cent of the trade would have on the other ninety-eight per cent. The other question the hon. member asked was, would there be an opportunity for the people who were reasonably opposed to this scheme to be heard? That is just what the government proposes in submitting the whole thing to a committee, where all objections can be heard.

Mr. MEIGHEN: Does the hon. minister think that if business men are lampooned in a reckless report they are not likely to protest?

Mr. GRAHAM: I do not object to that at all. If I were one of the ship owners I would feel that my business was interfered with and I would protest.

Mr. LADNER: Will the minister not agree with me that what the steamship companies are complaining of is not so much that they fear the competition of these wonderful boats of Petersen's, but that they object to a wrong accusation, and, as they say, the false statements made against them and affecting their honour without consulting them.

They feel it is a dishonourable thing for a government to appoint, in an official way, a representative who pretends to go into the matter and gather evidence, from the very companies affected, when on the facts submitted it appears he did not do any such thing. They have a reason to object, whether their interests are materially affected or not. I would suggest that a provision which I shall give should be added to subsection (d) of clause 1. The present clause reads:

That the control and regulation of the rates to be charged by the contractor shall rest with the government of Canada and that the government shall fix such transportation rates on all commodities from time to time.

I suggest that there be added these words:

But such rates shall be made with due regard to rates on similar classes of goods, products or commodities between the province of British Columbia or other western provinces of Canada and Great Britain or Ireland or the continent of Europe, so that there shall not be any unfair discrimination of rates as against goods, products or commodities between British Columbia via the Panama canal or other ocean route and the said western provinces of Canada on the one part and Great Britain or Ireland or the continent of Europe on the other part.

I would refer the government also to a provision in the agreement which makes it possible, at the option of Sir William Petersen to put on any number of ships that he likes and then to call on the government to pay the money. This point was referred to before, but I want to refer to it again. That is contained in clause 3 which states:

And the subsidy aforementioned shall be increased or reduced as the case may be in proportion to the number of ships operated and maintained by the contractor in the service aforesaid from time to time and such increase or reduction of subsidy shall be added to or deducted from the monthly payments hereinbefore provided for in paragraph two.

Therefore, if Sir William Petersen gets the idea that he wants to put on twenty ships instead of ten, he is able to ask the government to give him $2,700,000 instead of $1,350,000 a year, and instead of making $600,000 for himself, as he can,—and as to this the Minister of Trade and Commerce (Mr. Low) refused to answer or to give any explanation—make $1,200,000. It was said the other day that clause 6 provided a remedy in the hands of the minister. Clause 6, I submit, merely gives the minister power to act if Sir William Petersen does not act. It is an option in favour of the minister, by which the minister may say: In my judgment that trade requires more boats; therefore I give you three months' notice, and—

The contractor shall arrange to place additional ships up to the number of ten in this service on an increase in subsidy in proportion to the number of ships actually placed in service.

No one can deny that there is at least a possibility of a double interpretation, to put the case mildly and in the most favourable aspect to the government. Clause 9 states:

And the contractor covenants and agrees that the vessels in the said service shall prosecute all voyages made by them with all possible speed and despatch.

I submit that the minister should have some power to fix the dates and ports of sailings in order to meet the needs of the trade. The whole thing is in the hands of Sir William Petersen. He can fix the dates of sailings to suit himself. Clause 10 states:

The minister shall have the privilege at his option of entering into contracts for like purposes with any other contractor or contractors.

For my part, I would object to any government, whether Liberal or Conservative or any other kind, giving to a minister unlimited and full power to make contracts with sundry people unknown to parliament for any number of ships and on the basis upon which they might agree. It was said the other day that parliament would have to vote the money. That may be so before the money is paid, but the contract is binding upon the Parliament of Canada just as a contract would be upon an individual once it is signed. This contract gives to the minister full power to make whatever contract he likes and on whatever basis he may determine.

In conclusion, I would like to suggest to the minister that when he revises this contract, as he is going to do, because the Prime Minister said so, he should read the contract made between Sir William Petersen and the government of Sir Wilfrid Laurier in 1897. This contract will be found at page 3977 of Hansard of June 14, 1897. There are in that contract provisions which are so palpably and clearly in the interest of the people of Canada that it is beyond me to understand why the government has left them out of this contract, unless it has done so for some purpose beneficial to Sir William Petersen as regards which the people of Canada might be suspicious. I will refer the House to some of those provisions. This afternoon, we had a little discussion back and forth with the hon. member for Lunenburg (Mr. Duff) in regard to these vessels having to travel between Canada and Great Britain. In the contract of 1897, almost the same words are used. The contract reads that the contractor is:

To build, equip, provide, establish, and during this contract to continue and in the manner hereinafter mentioned, a regular steamship service between the port of Liverpool and the Canadian ports hereinafter named.

The ports were specified. Yet they took precaution to insert another clause in these words:

And the contractors do further covenant and agree with Her Majesty that the steamers belonging to the said service are not, nor are any or either of them while this contract exists, to call at any foreign port.

There is a specific prohibition to call at a foreign port without the consent of the minister. My contention is that under the present contract Sir William Petersen, after he leaves Montreal, can go down to United States ports and pick up freight there, perhaps pick up Canadian freight, and carry it over to the continent. There is nothing in the agreement to stop him from doing that. The agreement of 1897 contains this wise provision:

The days and times of sailing from the port of departure of the steamers are to be fixed subject to the approval of the minister.

Why did the government not put that in this contract? If hon. members will look through this contract, they will not see one right or authority on the part of the minister to control or influence Sir William Petersen in fixing days and times of sailing. In the 1897 agreement, there was a further good provision:

The right is hereby given to the minister from time to time, on three months' notice to the contractors, to change the time of sailings from the port of departure.

In other words, the contract makes it possible for the government, in the interest of the trade of the country and for the purpose for which the contract is made, to control the ports of departure and the time of sailings, and to change them when the government may so determine. Another provision which I commend to the minister is this:

And it is further mutually agreed and understood that the contractors are not to be allowed to receive or accept any subsidy or aid, pecuniary or otherwise, from any colony or foreign country, or any provincial, civic or municipal authority.

What is there in this contract to stop Sir William Petersen from going to France or some other country and making come kind of arrangement with respect to these same boats to give a certain service and to do it in keeping with the provisions of the contract? If hon. members will read the contract, they will find nothing in it to stop him from doing so. But what is most amazing is the absence of any penalty, of any forfeiture clause, in the present contract, excepting the right of the minister to terminate the contract on giving certain notice. In the contract of 1897 there was this very wise provision which I commend to the Minister of Trade and Commerce seriously in the hope that he will add it in his next contract:

The contractor must deposit with the Minister of Finance of Canada the sum of £10,000.

[Mr. Ladner.]

Why should not Sir William Petersen have made a deposit with the government in this instance as an evidence of his good faith? Why is he left absolutely free to do whatever he may see fit, without responsibility to anyone? There was another provision in the contract of 1897 along the same line:

That at the same time—

That is to say, simultaneously with putting up the £10,000 just referred to.

—they, the said contractors, will give to the minister a guarantee to his satisfaction for a further sum of ten thousand pounds sterling, which said deposit of ten thousand pounds and the guarantee for the further sum of ten thousand pounds are to be deposited and given as security that they, the contractors, will supply the steamers in accordance with the terms of this agreement.

And so forth. And if they did not carry out the contract the deposit was to be forfeited. I am told that, as a matter of fact, the contract with Sir William Petersen was not carried out and the deposit was forfeited; but through some machinations and influences friend Petersen, upon petitioning the government, got the money paid back to him. I do not know why this was done. There are various other provisions in the 1897 contract which are omitted from this one and which in my opinion ought to have been embodied in it. For example, liquidated damages are to be paid to the government by the contractors in the following manner:

The sum of five hundred pounds on each occasion when the contractors fail to provide at the appointed Canadian or British port a mail ship in accordance with the contract ready to put to sea at the appointed time or when such mail ship shall not actually put to sea and proceed on her voyage at the appointed time.

Now, suppose Sir William Petersen should fail to provide the number of ships which he has agreed to put into operation, or suppose there should be delays at any time of one week, or ten days or two weeks: where is there in the contract one single provision giving the minister the right either to oblige the contractor to implement his agreement immediately, or to impose a penalty in the way of a forfeit? There is nothing of the kind in the present agreement, and that is distinctly unfortunate. The 1897 contract also gives the minister the right to terminate the agreement at any time; and there are a number of other useful provisions. There is one particularly which I think should certainly be included in this agreement; the extravagance of the allowances in the present case would probably indicate the necessity for something of the kind.

It is a further condition of these presents that no member of the House of Commons of Canada shall

be admitted to any share or part of this contract nor to any benefit to be derived therefrom.

That provision appearing in the 1897 contract is altogether omitted from the agreement now under consideration. I have spoken at greater length than I had intended, but the subject is important and calls for careful study. This undertaking on the part of the government is apparently only the first step in the direction of Atlantic transportation, and it would seem that there is no limit to the enterprise. If the contract is approved it gives to the minister the power to enter into further agreements which may involve the country in untold sums, expenditures concerning which the elected representatives of the people will have nothing to say. This contract will operate adversely to the interests of western Canada and particularly of British Columbia. It is opposed by most of the organized bodies in that province, such as boards of trade, the Vancouver Merchants Exchange, and other important institutions. My suggestion to the government is that they allow the committee to deal with the contract in a truly impartial and dispassionate manner, enabling all interested parties to appear freely and submit their claims, so that no aspersions may be cast on anyone as is the case in the Preston report. If this is done and the government is willing to stand by the word of the Prime Minister (Mr. Mackenzie King), I am sure that after the subject is fully investigated they will go back to Sir William Petersen with a new contract of greater merit, a contract which will do justice to the various interests throughout Canada. And if a conference does exist and the members of it are unwilling to deal fairly with the people of Canada, then I for one would stand behind the government in an effort to bring relief to those who might be suffering from unfair rates either on the Atlantic or on the Pacific.

Mr. W. D. EULER (North Waterloo): After hearing the exhaustive address this afternoon of the hon. member for Lunenburg (Mr. Duff), himself a practical shipping man, I approach the subject of the debate with a rather greater degree of diffidence than usual. I realize that I am uttering what is a truism when I repeat the statement that has been so often made in the debate that the question of transportation, both by land and by sea, is one of very great importance to the people of the country and, I would add, a constant challenge to the best efforts of the government and of parliament. It is also a truism that a nation that has not the facilities for quick and easy communication, for rapid, efficient and cheap transportation, is a nation that cannot hope to hold its own in competition with the other nations of the world. This country is in urgent need of the very best facilities in the way of transportation, because of its great distances internally, from coast to coast, and the considerable distances that must be covered in the carriage overseas of its surplus products of factory and farm. I refer to this particularly because it closely affects the question of ocean freight rates. The farmers of western Canada produce large quantities of wheat in excess of the requirements of the country itself, so that of necessity this surplus must find a market overseas. One reason why it is indispensable that there should be a market overseas is the fact that the country to the south of us, which otherwise might be available to our producers, has erected high tariff walls against practically all the products of Canada. The products of our factories must also to some extent find a foreign market. It would I think be possible to prove that we have over-built in the matter of manufacturing establishments. And that is not a reflection on anyone. During the optimistic years of the war, or immediately following the war, our manufacturers with laudable enterprise branched out, perhaps just a little further than was justifiable. The result is that if these establishments are to be kept going and our workmen are to be employed, markets must be found in other countries. We speak of the necessity for greater production. But production to an extent greater than is needed to supply the needs of our own country is useless unless we can find markets for our surplus; and markets cannot be found, or if found cannot be taken advantage of, unless we have transportation at such a cost as will enable us to compete with other nations. I say therefore that the question of transportation rates, both by land and by sea, indirectly concerns all the people of Canada; so that all should work together with a view to providing whatever remedy may be necessary to improve such conditions as may be at fault at the present time.

Now, Sir, I make no claim to special knowledge of the shipping business and for that reason, as I said before, I approach the subject with a good deal of hesitancy. I have not the knowledge of my hon. friend from Cariboo (Mr. McBride) or of my hon. friend from Lunenburg (Mr. Duff), both ship owners, who both speak with authority. But I have followed the debate thus far with close attention and an open mind and certainly without any partisan feeling, and I am now trying to form my conclusions on the basis strictly of common sense and fair play. In this regard I

deplore the attitude of some of our friends diagonally opposite, who rather than debate the case strictly on its merits seem to find considerable enjoyment in abusing what one might call the plaintiff's attorney; they are paying more attention to the personality of the author of what is known as the Preston report than to the statements of fact and the findings thereon as presented in the report.

I should say that the subject might with advantage be approached in a threefold way: First, is there a combine? Second, is there a malignant combine? If such a combine exists, has it been using its power as a monopoly, to extort unfair rates and profits from the people of this country? And, finally, is the remedy proposed in this resolution best calculated to serve the purpose which we desire to achieve? I contend, Mr. Speaker, there is very little necessity for attempting to prove that a combine exists. One might almost say that the conference itself admits the existence of a combine, for the word "conference" in my mind connotes the word "combine", in this particular instance, and to me it seems to be a distinction without a difference. Certainly it is admitted even by those associated in the conference that they have an understanding for the fixing of rates, and that they abide by those rates. As to whether the combine is unfair and rapacious in its operations, one must judge by the evidence that has been adduced. I admit that after reading the Preston report I felt that a very good case had been made out. I have also read some of the reports and heard some of the speeches referring to the findings of my hon. friend from West York (Sir Henry Drayton); I have read some of the statements and some of the letters by the former Prime Minister, the present leader of the opposition, which rather bear out the contention that there was a combine, and that it was acting in such a way as to prejudice unfairly the interests of Canadian exporters and importers. So it seems to me there is very little reason to doubt that this combine did use its power to charge "all that the traffic would bear." And is not that the very nature of a combine? Every combine is formed primarily for the one purpose—to benefit itself. There is no doubt about that, and it follows logically and naturally that the benefits sought by the combine will be provided at the expense of those with whom it does business. Consequently, while I am ready to admit that possibly a combine might be conducted without disadvantage to those doing business with it, yet I think that is pretty much a matter of theory and not of practice. I believe it is possible, and sometimes quite desirable, to unite several lines of business into one organization, for by so doing they may be able to operate more cheaply through improving their methods, and they usually eliminate considerable overhead in the marketing of their product. But I also believe it is almost axiomatic that where a combine exists, especially if it reaches the point of being a monopoly, in ninety-nine cases out of a hundred it is conducted so as to be prejudicial to the interests of those with whom it does business. I have not very much doubt that if the north Atlantic conference is a combine it is no exception to what I say. If that be true, if we have a combine of that nature, then, Mr. Speaker, I contend that it becomes the duty of the government to apply such remedies as it may see fit.

I should like to discuss then for a few moments the remedy, and this is where a disagreement seems to take place. I regret that in the criticisms offered from the other side of the House no very practical alternative has been suggested in place of that proposed by the government, with one exception, that proposed by the hon. member for South York (Mr. Maclean), with which I shall deal a little later. It has been suggested that we ought to use the Canadian Government Merchant Marine in connection with this work. I had the pleasure of being a member of the committee last year that dealt with the estimates of the Canadian Government Merchant Marine, and during the course of the investigation I think it was pretty well established by unimpeachable authority—because we had before us people who know more about those ships than any hon. members—that those vessels are not adapted for the work which the ships named in this contract are supposed to undertake. Our ships are not properly built, and there seems to be very little doubt that they never will be able to make good in competition with the ships that now ply between the great ports of the world. I would suggest in connection with the contract made with Sir William Petersen, if it were at all possible, that the hon. Minister of Trade and Commerce (Mr. Low) would be doing a service to the country if he could induce Sir William Petersen to take over these merchant marine boats.

Then we have the criticism that the scheme is too small, that it is a mere drop in the bucket, or, as my hon. friend who preceded me (Mr. Ladner) termed it, a popgun. If that be true, I would reply that it would seem rather strange, if this proposition is so negligible and will have so little effect upon

the operations of the north Atlantic conference, that the conference should make so much fuss about it. Besides, I think the suggestion was made by the Prime Minister the other day in reply to the leader of the opposition, that if it is found that the present scheme is too small there is always the possibility of enlarging it if it gives promise of success. Personally I do not care to embark on a large expenditure of money in subsidies, but if the scheme does work out satisfactorily I for one am ready to consider broadening it out.

In the course of the debate on the Address I was a little disappointed at the tenor of the remarks of my right hon. friend, the leader of the opposition, who, I am sorry, is not in his seat. I have a great regard for him personally, for his clear analytical mind, his trenchant eloquence, and the logical way in which he reasons out his conclusions; and yet in his criticism of this scheme—which at that time I admit was not completely before the House—he seemed to be reduced to the necessity of reciting a couple of lines of poetry breathing discouragement and depression, the doleful couplet from Childe Harold:—

> Man marks the earth with ruin—his control
> Stops with the shore.

Surely my friend knows that poetry is the product of the imagination and that very often it is the absolute negation of fact.

Mr. FORKE: Poetry and politics do not mix.

Mr. EULER: I should say not, and I am surprised that the practical mind of the leader of the opposition would permit him to resort to poetry of this kind. The poet by the exercise of his fancy and the skilful use of words and rhythm and rhyme, symbol and metaphor, and all the arts of the practised writer, is usually able so to charm the ears of his listeners and engage them in the contemplation of the beauties he depicts that they entirely lose sight of the fact that what he is saying is contrary to truth and cold fact. This fits the case in connection with the quotation the right hon. gentleman gave. Besides that, it might be fair to consider that the poet Byron died about a hundred years ago. I hope, however, that the right hon. gentleman does not consider himself back in a generation so far away as that.

I was going to say that instead of taking a hopeless view of the difficulty as the leader of the opposition apparently does, and I am sure he does realize that we have a difficulty to contend with and an injustice to correct, I think that as a man of courage, as I know he is, he should make some real effort to suggest some remedy, if the present proposal does not please him, and then go on with the determination to correct the difficulty. In this connection I like the undaunted spirit of my hon. friend from South York (Mr. Maclean), and I desire to pay him my very sincere respects. He is the oldest member of this House, and yet the most forward-looking in his progressivism, and I am thinking of that with a small "p". At the risk of being reproached with what I said a few moments ago, I should like to say of him, if he does not resent it: "Age cannot wither nor custom stale his infinite variety." The hon. gentleman is a progressive in spirit; I am not applying that word to him in the party sense. He is a progressive, perhaps strangely enough, in the Conservative party. It might also be possible to find a few liberals and conservatives —again with a small "l" and a small "c"—in the ranks of my Progressive friends across the way. It might even be possible to discover, if a careful search were made, a few conservatives on this side of the House. I am now speaking with reference to the question of public ownership, to which the subject under discussion is akin.

Now I would like to speak for a few moments on the methods which have been suggested for applying a remedy in connection with the steamship combine. Frankly, I like best of all the suggestion of my hon. friend from South York—

Mr. MACLEAN (York): Hear, hear.

Mr. EULER: —when he says that the remedy for our troubles in regard to transportation both on the ocean and on the land is the uniting of the Canadian Pacific and the Canadian National into one great system. I know that that suggestion comes with somewhat of a shock, the first time it is made, to a great many members on this side of the House, and to some on the other side, although probably not so many. I hardly believe that I can fairly be charged with being a dreamer or a visionary. I hope I view in a practical way the problems that come before this House. I remember very clearly about eighteen or twenty years ago in the city from which I come, the city of Kitchener, there lived a man by the name of Daniel B. Detweiler, and in the village of St. Jacobs, eight miles farther to the north, a man by the name of Elias W. B. Snyder once a representative in the local House at Toronto. Both these men, by the way, were of Mennonite extraction, and they both dreamed the same dream at the same time. That dream was that the great cataract of

Niagara Falls might be harnessed and the power from the falls be distributed over western Ontario to turn the wheels of our factories, and to light and heat our homes. I well remember at a meeting of the board of trade in my home town Mr. Detweiler urging that a committee be appointed to look into the question of the development of Niagara power and its distribution throughout western Ontario. There was so much skepticism in the meeting that of all the gathering there Mr. Detweiler himself was appointed a committee of one to try to promote his idea. Yet that dream has come true. These two gentlemen from the riding which I have the honour to represent were the ones who first conceived of the development of Niagara power, which later was carried out through the genius and executive ability of Sir Adam Beck. Now if that dream came true, why should not the other come true? You have to-day the National railways. Who would have thought, ten or twelve years ago, that 22,000 miles of railway, the greatest railway system in the world, would be in the public ownership of the people of Canada? And I want to say that, despite the efforts of those who do not believe in the public ownership of railways, the National railways are here to stay, and that in my opinion, if ever there is to be a monopoly of railways in this country, it will be a monopoly owned and controlled by the people of Canada.

Now sir, we have these two great railway systems, practically parallel in many respects, duplicated at many points and both well conducted under the leadership of the executive of the Canadian Pacific Railway and the leadership of Sir Henry Thornton. Yet, despite the fact that they are well conducted, we have duplication; we have wasteful competition; instances have been given during this debate where we have unnecessary overhead and all that; and all at the expense of the people of Canada. Out of that condition results almost directly the deficit about which one hon. gentleman spoke a few moments ago. The time may not have arrived, the time may not be opportune, for the amalgamation of these two roads. I do not know that I am quite so optimistic as my hon. friend from South York who says it could be done in six weeks, but I do say in all seriousness that the logic of events and of common sense and of good business will result in the realizing by the people of Canada that this waste has got to stop, and that there is practically only one remedy for it. The union of the great public railway utilities of this country is reasonable, and, as I said before, a solution not only of our railway problem but, incidentally, of the one that we have under discussion to-day. The Canadian Pacific has a magnificent line of steamships, and if they were included in a merged system of railways in this country our problem would be solved and we would command our own fate so far as steamship rates are concerned.

Mr LADNER: Would the hon. gentleman be in favour of the purchase of the Canadian Pacific by the government of Canada?

Mr. EULER: Yes. Call it purchase if you like, I call it amalgamation. I am coming to that in a moment. I should like to repeat the striking statement that I made on the floor of this House last session, and it seems to me an almost unanswerable argument for the suggestion made originally by the hon. member for South York: I have it on the very highest authority that if the Canadian Pacific and the Canadian National railways of Canada could be combined, we could effect a saving of from fifty to seventy-five million dollars each year. It seems to me that argument is almost unanswerable. That sum of money would wipe out our annual deficits—would solve the problem that is pressing upon the country from year to year, the problem of deficits, of consequent high taxes, and would solve the problem which we are discussing now. I know many hon. members are definitely against the principle of public ownership and I have no quarrel with them. I know also that some hon. members who are in favour of the National railways rather shrink at the magnitude of the merger I suggest, the acquiring of the Canadian Pacific. The hon. member for Vancouver South (Mr. Ladner) has asked me whether I would be in favour of purchasing the Canadian Pacific. Well, my answer to that was, yes; but while I do not propose to go into this at any length I see no very insuperable obstacle to doing that. It would be just as easy for the two railways combined into a national system to pay returns, interest—dividends if you like to the shareholders and the stockholders—in fact on all the obligations of the Canadian Pacific, as it is for that company to do so now. The hon. member for South York made the statement that he thought the Canadian Pacific would not be adverse to entering into such a contract. I do not know; I have no knowledge on that score, but I do believe that it might very conceivably be good business for them to do it. I say this: As the people of Canada realize more and more that the National railways are their own property and that their own

taxes depend upon their patronage of their own railway, the Canadian Pacific may come to realize that the suggestion that has been made in this House to amalgamate the two systems might be in its own interest. I realize that what has been suggested by my hon. friend, and supported by myself, may be a matter of the distant future more or less, but failing that I have another alternative suggestion which I would prefer to the one that has been suggested by the government. And in passing, let me say, I have no fault to find with the suggestion by the government. It is, after all, the only effort that has ever been made by a government to deal with an evil that has existed for a great many years, and for that I compliment the government. I imagine that it took a good deal of courage to enter upon a conflict with such great interests as are concerned in the north Atlantic steamship combine. But I was going to refer to another alternative suggestion and that is this: If we are to pay out a sum of money aggregating some $1,300,000 each year for a period of ten years, I would prefer if those vessels could be constructed or purchased and operated by the Dominion government itself. I am well aware of the objections that are made to that. Some of us are constitutionally opposed to public ownership. I have heard the objection raised that it would be almost impossible for the government to operate these ships to advantage, that there would be all sorts of difficulties in connection with the obtaining of terminal facilities and connections overseas. That may be true and my mind is quite open in that regard; but I had another thing in mind in making the suggestion and that was, I believe it would be in the interests of our National railways if we could have a well equipped, properly built, completely efficient line of steamships to act as a complement to that system. In what I said with regard to the great rival of the National railways I have had no antipathy or prejudice against that company, but at the same time I should like to see the National railways placed on something more of an equality with the Canadian Pacific so that they might compete successfully with it. Moreover, I should judge that a great deal of business would go to the National railways if they had a line of steamships connecting both east and west, although the suggestion now is merely for operations in the north Atlantic. Finally, Mr. Speaker, if neither of these alternatives can be adopted, and I suppose there is no likelihood of their being adopted, at this session of the House, I believe in making some effort to fight the evil that we know of. I have already said it is my intention to support the government on the suggestion that has been made as the best that seems to be available. I think it is the duty of parliament to cope with the evil that it knows exists. The plan that is proposed is an experiment; let us call it that. It may fail; I do not know. It may be that we shall be able to strengthen it in committee, or to alter it, or to devise, something better, but the people of Canada—

Mr. MARTELL: Will the hon. member speak up so that we can hear him better? We always like to hear his views whether we agree with him or not, but in this quarter of the chamber we cannot hear him.

Mr. EULER: I am very sorry and I will try and speak so that I can be heard in any part of the chamber. I know that the charge of not being able to hear cannot be brought against my hon. friend for Hants (Mr. Martell). I should like to say this in all seriousness: I believe that the people of Canada—the ordinary people of Canada, and we are all ordinary—are convinced there is something in this charge of a combine, and they believe also it is working to the injury of Canadian business. That being the case I am very sure they will judge severely any member of this House who will not do at least his conscientious bit to remedy the wrong he knows to exist. I know very well the difficulty of some of my hon. friends, the Progressives across the way. They are opposed to the principle of a subsidy. As a matter of fact so am I, but in public life, as in ordinary life, we cannot always have our own way and sometimes we are obliged to compromise if thereby we can obtain good. So far as I am concerned I am ready to do that. Desperate ills require desperate remedies; and I was almost going to say that if it were necessary I am ready to fight the devil with fire. What I like about the whole scheme is that it is at least a definite departure from the old condition of sitting still and bearing the imposition; it is now a case of definitely getting up and fighting the thing that has been strangling the business of Canada. The scheme is probably not perfect, but I have sufficient confidence in the breadth of view of the Prime Minister, the Minister of Trade and Commerce, and the rest of the government to feel assured that if, in this committee to which the whole matter is to be referred, suggestions are made that quite evidently it will be in the interests of parliament to accept, they will be accepted. For

that reason, Mr. Speaker, I am prepared to support any reasonable plan that may be suggested that will tend to destroy the power of an organization that is hampering the progress and prosperity of this country.

Mr. M. N. CAMPBELL: (Mackenzie): In paying a tribute to the hon. member for North Waterloo (Mr. Euler) for the very able and instructive address he has given us, may I say that I am glad to welcome him into the circle of those who advocate public ownership. It has always seemed to me one of the anomalies of our political life that we have a Conservative party that has been fairly consistently behind the principle of government ownership and a Liberal party just as consistently opposed to it. May I express the hope that in the future these differences will not exist, and that the Liberal party of Canada will be real liberal in principle as well as in name. The history of the operations of the north Atlantic steamship combine reveals perhaps more than anything else the impotence of governments to control, in the interests of the people, those powerful trusts that have gradually developed and have been strengthening themselves during the last fifty years or more. It is not flattering to our Canadian governmental institutions to know that it was a Canadian company, a company that enjoyed special privileges from the Canadian government, and was directly responsible for organizing, some fifteen years ago, this trust that we know has done so much to strangle Canadian trade and industry. I have here the report of Mr. Preston, and also a report issued by the steamship companies refuting a great many of his statements and arguments. I find such a difference between them, such a divergence of views, and statements so diametrically opposed to each other, that one hesitates to discuss the report at all; and if anything were necessary to prove to us the necessity of referring this to a committee where all sides of the questions could be heard and statements procured, it is the difference in these two reports. The alleged discrimination against Canadian ports in favour of American ports in the placing of insurance, and the difficulty this has placed in the way of tramp steamers coming into the ports of Montreal and Quebec, can in my opinion be overcome in one way and in one way only; and that is the way our Canadian National Railway management have overcome it. Instead of paying out large sums of money as they formerly did to private insurance companies, the Canadian National Railway management are now paying these insurance moneys into a particular fund. The losses are taken out of that fund, and the result has been a saving of hundreds of thousands of dollars to the Canadian National Railways. On page 11 of Mr. Preston's report we find a copy of a memorandum which Mr. Preston claims he handed to the steamship companies. In dealing with the discrimination in the placing of insurance he says:

> The government has this question under serious consideration and is hopeful of permanently establishing a parity of insurance rates on the St. Lawrence with those to and from American ports.

It seems to me it is a most humiliating thing for the government of Canada to go on bended knee to private marine insurance companies and beg them to remove this discrimination. Surely the manly thing, the self-reliant thing and the statesmanlike thing for this government to do is exactly what our own Canadian National Railway management did, namely to ignore these companies, build up an insurance corporation of our own, pick some able and competent business men, put them in charge of it, and let it be run on strict business principles. I would suggest to the government that these companies charge the regular old-line company rates; but that at the end of the year, when the losses are paid, any moneys left over would be rebated pro rata to the shippers. I believe that by adopting a policy of this kind we can not only remove the discrimination but can create another discrimination; that is we can create a discrimination in favour of Canadian ports as against American ports.

Now I have not been able to secure any figures regarding profits or earnings of marine insurance companies. I do not know that any are available, but we have figures showing the earnings of fire insurance and life insurance companies in Canada, and some of these figures are very illuminating. I must admit, of course, that in life insurance the liabilities are spread over a long period of years, and one cannot properly determine the profits by the figures for a few years. Nevertheless these figures are so astonishing that they will at least give us some idea of what profits are actually earned. I quote from the Canada Year Book, and I find that after paying out claims, the surplus in the hands of Canadian life insurance companies was as follows:

1918	$35,000,000
1919	46,000,000
1920	65,000,000
1921	75,000,000
1922	80,000,000

I believe it is not an extreme statement when I say that if we had the surpluses earned by the fire and life insurance companies of Canada since confederation with the accumulated interest they would pay off the national debt. When we come to fire insurance it is more easy to determine the actual profits, because at the end of the year, when the policies run out and the losses are paid, anything that is left over is direct profit, outside of expenses of course. I find that in the year 1919 the amount of fire insurance placed in Canada was $4,923,000,000; the amount of premiums received $40,000,000; and the losses $16,679,000; leaving a net surplus in the hands of the companies of $23,352,000. This appears to be just an average year, because in the next year, 1920, I find the amount of fire insurance placed in Canada was $5,969,000,000; the premiums received amounted to over $50,000,000; and the losses paid $21,000,000; leaving a surplus in the hands of the company of nearly $29,000,000. Therefore it seems to me the government should take this matter into very serious consideration, and I certainly see no justification for the government placing itself in the humiliating position of coaxing these private companies to remove this discrimination against our Canadian ports.

When we come to consider the question of rates, the greatest discrimination, or the greatest difference between pre-war rates and after-war rates seems to be in the cattle rates. We find that whereas before the war cattle were handled from Montreal to Liverpool at from $6 to $7.30 per head, at present we are paying at from $20 to $25 per head. I must say I am not very hopeful we will ever be able to build up any very large live cattle trade with Great Britain under the present circumstances. I believe that if we are ever to develop a large live cattle trade with England it will be done through the Hudson Bay route. I know that many hon. members do not agree with that statement, but those of us who have been devoting months of time and study to the consideration of the reports and information in connection with Hudson bay are firmly convinced of the truth of that statement. I find that the government propose to pay out about $14,000,000 under this agreement which is before the House to-night. For this money which is to be paid out in subsidies we will receive no direct benefit after it has been paid. If this agreement was entered into primarily to protect the interests of the cattle growers in western Canada as it has been claimed—and I think perhaps there is some ground for that proposition—before the government go ahead and carry out that primary object, the proper thing to do would be to spend this $14,000,000 in completing the Hudson Bay railway and developing the port of Nelson. I am quite certain that within a few short years hundreds of thousands of head of live cattle would be shipped from the northern portion of the prairie provinces to Great Britain via that route.

Another thing that would affect the live cattle trade to a considerable extent is the further development of the port of Quebec. I have brought this matter up in this House on previous occasions and I intend to bring it up again. We find that in western Canada we can deliver our cattle on steamer at Quebec at a saving of from $4 to $5 a head. The facilities for handling cattle there are superior to those at Montreal, and the route is a little shorter over the Transcontinental railway; and I would entreat the government, if they want to assist us in developing our cattle trade, to do something further to develop the port of Quebec. The great difficulty in the way of shipping our cattle through Quebec is this, that owing to, not a discriminatory, but a prohibitive rate on grain over the Transcontinental to the city of Quebec, we are not able to make up mixed cargoes from that port. That is one of the factors in the cattle situation to-day. And while this matter is under discussion, I hope the government will see its way clear at some future time to remove that prohibitive rate and to allow some of our grain to go forward to Quebec so that mixed cargoes may be made up there. The question of government control of rates enters into this resolution. The history of government control of rates in the past has not been such as to encourage us in the hope that we are going to receive any material relief from the fact that the government will control rates on these steamships, because the government has absolute control of our railway rates and the government must be responsible for the retention of this prohibitive rate to which I refer.

A consideration of the report before us to-day, issued by Mr. Preston, reveals that it is noteworthy, not so much for what it says, as for what it fails to say. I have just been comparing it with a former report dealing with steamship rates. I refer to the report of the royal commission appointed two years ago to inquire into grain rates on the Great Lakes. In the report of that royal commission, I find that they went very fully into the earnings of the vessels, the dividends that were paid by the companies and the

values of their vessels. They gave us a great deal of evidence as to what earnings these vessels were making and they gave us further evidence to prove that the values of the vessels were inflated to show reduced earnings, whereas in reality the companies were making much more than their reports would indicate. In the report we are now considering we have not one single iota of evidence to show whether these Atlantic steamships are making enormous profits or whether, as some of the companies claim, they are really going behind. That proves the necessity of referring all this to a special committee of this House with power to bring witnesses here in order that we may obtain all possible information before we go any further.

When we come to consider rates on grain from Montreal to Liverpool, we find that there is no very great rise in those rates in comparison with pre-war figures. I have taken four different years before the war and four years after the war. I find that the cost per bushel of transhipping our grain from Montreal to Liverpool was as follows:

	cents
1911	4.15
1912	7.52
1913	7.82
1914	7.04

Now we come to the after-war period:

	cents
1921	17.25
1922	7.82
1923	7.93
1924	9.06

It is rather remarkable that our grain was transported in 1922 at the exact cost at which it was transported in 1913, notwithstanding the fact that coal, wages and overhead costs of ships had increased tremendously during that period. This may be due to the fact that one-half or more than one-half of our grain is handled by tramp steamships over which the combine has had no control.

Mr. Preston, in his report, states that in dealing with this we are faced with adopting one of two alternatives, that is, government ownership or subsidizing private lines. I have no hesitation in saying that, if we must choose between these two, in heaven's name give us government ownership rather than the continuance of a policy of granting subsidies to private concerns. We have government control of rates. We have government control of railway rates, but that has not prevented some of the most iniquitous discrimination from creeping into our rate schedules. We have indirect government control of rates on the Great Lakes, of the steamship companies, but that has not prevented those companies from fleecing us out of eight or ten million dollars a year in excess rates. I find that the government propose to pay out a subsidy of $1,375,000 a year or, in the ten years under this agreement, we would have paid out $13,750,000. I find that an annual subsidy of $1,375,000 would pay interest on a capital investment of $27,500,000. I would suggest to the government that rather than continue to pay out this subsidy with nothing to show for it at the end, we should increase the capitalization of the Canadian Government Merchant Marine, if more ships are necessary, to the extent of $27,500,000. In that way I believe we would accomplish more than we shall by the plan laid before the House by the Minister of Trade and Commerce.

Last session we discussed at considerable length the question of trade with the West Indies. The hon. member for Cumberland (Mr. Logan) very ably and eloquently placed some illuminating facts before the House in connection with trade with the West Indies, and made some concrete suggestions for the further development of that trade. On that occasion the Minister of Railways and Canals (Mr. Graham) suggested that probably the best course to follow would be for the government to construct two ships, specially built and equipped for carrying perishable products through tropical regions. That statement of the minister was applauded from every section of this House, I do not believe there was a dissentient voice; and that should be a clear indication to the government that parliament would prefer that policy to a continuation of a subsidy. But when I suggest a further increase of government ownership, I make that suggestion on the understanding that the government will see to it that its merchant marine in future remains out of this combine. About two years ago we had evidence produced before the special committee on Agriculture showing that the Canadian Government Merchant Marine had its feet under the conference table; that it was participating in these regular meetings for rate fixing and that, in fact, in some instances it was the principal sinner. The government must bear some responsibility for that. After nearly two years we recently had an announcement that the government merchant marine had withdrawn from this conference. Yet this same government comes forward to-day and in righteous indignation proceeds to deal with the North Atlantic Steamship Combine. In view of the fact that these prohibitory rates are maintained to prevent us from using the

Transcontinental railway for the transportation of our grain, forcing us at the head of the lakes to deliver that grain to the lake steamships whether we like it or not, and in view of the history of the Canadian merchant marine's connection with the combine, we may be pardoned for doubting to some extent the sincerity of the government. I would earnestly entreat the government to go further into the matter and give us some definite assurance that the Canadian merchant marine will in future keep strictly clear of the combine. I have here an editorial from the Manitoba Free Press in which there is discussed at considerable length the case of a shipment of cattle from Montreal to Dundee by a Colonel Mullins, a cattle shipper.

Mr. VIEN: What is the date?

Mr. CAMPBELL: The paper is torn and the only date that appears is April 28; I am not sure whether it is 1923 or 1924, but probably it is 1924. After summing up the evidence adduced, the Free Press observes:

> These documents make some things pretty clear. First, that the Canadian cattle shippers have nothing to hope for from the Canadian government merchant marine. No privately-owned line could have made a better job of trimming a cattle shipper and teaching him not to be so foolish as to try to ship Canadian cattle to British markets than the Canadian government merchant marine's performance with Col. Mullins.
>
> Mr. Motherwell's telegram to Col. Mullins, with its formal official defence of a $27.33 rate from Montreal to Dundee gives an accurate idea of how much the Dominion Department of Agriculture can be relied upon to fight for the interests of the Canadian cattle raiser in this matter of freight rates.
>
> With the Canadian marine in league with the shipping ring and the Dominion Department of Agriculture asleep at the switch, can anything be done?

The Minister of Agriculture (Mr. Motherwell), discussing this subject a few evenings ago, said that the time had come for us to line up either for or against the combine. The implication of that statement was that any of us who questioned the present proposal and demanded further light on it were lining up with the combine. I must repudiate that suggestion; we in this section of the House are as anxious as are hon. gentlemen opposite to have the combine dealt with. We want a little more information, however, and in general I believe that most hon. gentlemen in this section of the House would prefer to see some more money spent on the Canadian merchant marine. We should like to see the merchant marine develop so that any money spent upon it would yield us something in return. I would urge the government to turn the whole question over to a special committee, before whom those especially interested can appear and give testimony, so that we may have the fullest and freest discussion. We should be able to secure every possible information that would assist us in coming to an intelligent understanding on the subject. To refuse to do this, to force the agreement through the House without affording us an ample opportunity to acquire this information, is to surround the whole thing with mystery and suspicion. I hope therefore that before this matter comes to a vote the government will clear up the situation by making some pronouncement of policy along this line.

Mr. W. B. SNOWBALL (Northumberland, N.B.): Mr. Speaker, I make no apology for prolonging the debate on this subject, as I look upon the action of the government in grappling with ocean freight rates as being as important and far-reaching as any legislation that will come before this parliament. Every citizen in Canada, manufacturer, farmer or labourer, will be beneficially affected by the decrease in transportation charges, whether on land or sea. In dealing with the report I wish to eliminate Mr. Preston entirely, as he is only the instrument used, or the spade that dug up the facts.

The report deals with the problem as to whether there is a combine, conference or sitting-in of certain large shipping interests to consider and make or maintain freight and passenger rates; and I am satisfied that in this particular the case has been established. But if not, I have my own personal experience to draw from. I have before me both the report and the reply of the steamship lines, copies of which have been placed in the hands of some of us. While the reply is not signed, there appears in it some of the names of large shipping companies that operate on the north Atlantic. I do not see anywhere in the document the name of the Canadian Government Merchant Marine. I find that the steamship companies in this reply take exception to what Mr. Preston states on page 3. I would quote the following from their reply:

> As mentioned previously in this report there is no "combine" (which in the present day acceptation of the term implies a monopoly), but merely an association of the regular lines, constituting a very small portion of the carriers on the Atlantic, who have agreed among themselves to quote on various commodities equivalent rates subject to change on notice.

I wonder if that does not mean a combine. I think it establishes very fully, at least it does to my mind, the fact that Mr. Preston was right when he said that there was a conference almost equivalent to a combine.

In April, 1922, the British Admiralty sent a gentleman from England to dispose of the accumulation of war lumber stocks held in

this country. In the interests of the trade I felt that this lumber must be moved across the Atlantic to re-establish the business and relieve the American and Canadian markets. I met the representative in Montreal, and after some discussion cabled my English friends to name a price delivered to the British Isles. On hearing from them I called upon the Canadian Government Merchant Marine, as I felt that Canadian interests would appeal to them. I was cordially met, but Mr. Cunningham and Mr. Teakle assured me that they could not cut the existing rate of 90 shillings, although I told them that I was quoted 85 shillings to 90 shillings by tramp vessels. This rate however was too high to secure the business. Mr. Cunningham replied that he was sitting in with the conference and would bring the matter up. I told him that to move this stock we could not pay over 75 shillings, and that if that rate was not available I should have to allow the matter to drop. After spending two days without success, I went to Toronto and interviewed Mr. Hanna, the then president. I found him most interested in the proposition. He called in his marine assistant, and together we figured the probable cost including interest; and from these figures I claimed that 75 shillings would cover the cost barring accidents. Mr. Hanna, however, could not agree on his own initiative and suggested that together we go to Ottawa and discuss the matter with the minister. On reaching Ottawa we met the present Minister of Immigration (Mr. Robb), who introduced me to the late Hon. Mr. Kennedy, then Minister of Railways and Canals; and after some discussion it did not take him long to decide what was the proper thing to do. He advised Mr. Hanna to accept the 75 shillings and as a result I was able to charter the Canadian Trapper for two voyages, and the Canadian Planter for one under date of April 28, 1922. I then concluded the purchase and shipped the stock off the Canadian market. This was accomplished through the action of the late lamented Mr. Kennedy.

Tramp boats that had been formerly asking 85 shillings to 90 shillings came forward at once, and I succeeded in chartering the S.S. Dront at 75 shillings and the Convallaria at 72 shillings and sixpence. Tramp vessels invariably govern their freight rates by conference rates, keeping slightly under them. This to my mind fully establishes the fact of a conference or combine, and the result that will follow a lowering of conference freight rates.

This, as I say, brought the tramps down and we were able, owing to what was done by the Canadian Government Merchant Marine, to charter tramp boats for the removal of our lumber stocks all over New Brunswick at very much lower rates than were ruling when I went before the Canadian Government Merchant Marine management.

Now, Mr. Speaker, I am also satisfied that there is justification for an increase of ocean rates over those of pre-war days. Dock dues in Liverpool before the war were,—I speak subject to correction—one shilling and sixpence; to-day they are two shillings and eightpence; Dock labour was four shillings and sixpence to five shillings per day; to-day it is twelve shillings and sixpence. Wages on vessels were £3.15.0 for sailors, £4 for firemen; now they are £9 and £9.10.0 respectively. Coal that cost, bunkered, $2.75 to $3, now costs from $8 to $9. But, even considering these increased costs, there is nothing to my mind to justify a three hundred per cent to four hundred per cent increase in rates, as the report shows, and as is confirmed by a letter from a large leather manufacturer. This condition is intolerable and must be grappled with. We do not need to rely for data on the report in our hands; all we have to do is to refer to the correspondence tabled the other day where we find this matter was brought to the attention of the government as far back as 1921 in a letter, and was dealt with by the right hon. leader of the opposition in the reply he made to Sir George Perley. I do not need to read this reply as it will take time and hon. members already have the correspondence in their hands. I would also refer the House to a letter written to the right hon. leader of the opposition on October 5, 1920, by Mr. C. B. Watts of the Millers' Association:

> This apparently illustrates the point brought out at the hearing, and as confessed by the agents of the mercantile marine, that they could at their will say whether Canada would export flour or export wheat, and they are apparently at this moment exercising that power to prevent Canada shipping flour to the United Kingdom, but allowing it through their concession of 20 cents per 100 pounds to ship from Boston and Rotterdam.

We have other quotations here. One of my hon. friends from the west (Mr. Ladner) in referring to this matter quoted the resolution passed by the Vancouver Board of Trade a few days ago, in which they declared themselves against this agreement. I have no doubt but that is correct, and the case may have been dealt with on its merits, and the Vancouver Board of Trade may have thought that the only thing which would be accepted by this House was the contract or agreement now before us and were not aware of what the right hon. Prime Minister said yesterday, that he was prepared to have the agreement go before a special committee to be fully

discussed. Against that resolution I want to quote to the House from the correspondence placed on the table a resolution passed by the Ontario Associated Boards of Trade at their annual meeting in Toronto on February 25, 1913. I do not think the rate conditions on the Atlantic have changed any since that date. This is their resolution:

> Therefore be it resolved that the Ontario Associated Boards of Trade in annual meeting assembled, strongly urge the government to immediately establish a line of ocean freight steamers, or to take such other steps that will prove immediately effective to relieve the producer and consumer in Canada from the exactions of the ocean freight rate combine. "Carried unanimously."

Ontario is one of our largest shipping provinces and is vitally interested in ocean freight rates on the Atlantic, and I put that resolution alongside the resolution passed by the board of trade in Vancouver. Maybe the Vancouver people are afraid that by the development of the Atlantic ocean traffic they may lose some of the kudos they derive from being able to ship through the Panama canal. I object most strongly to their action, for to-day they glory in the fact that through the Canadian Government Merchant Marine they can send their lumber down the coast through the Panama canal and into the eastern states, by reason of their low freight rates, driving the Maritime provinces away from the natural market they have had for years for their lumber. Any member here who fails to stand up against the Vancouver Board of Trade resolution will be derelict in his duty to Maritime interests.

My impression is that the steamship companies are not acting in their own best interests and that of Great Britain and Canada by maintaining such rates and moving their vessels with cargo and passenger space not fully taken. I believe if they were to cut their rates so as to induce trade and travel that their earnings would materially increase and more than make up for the cut in rate. A general feeling of prosperity would follow that would be mutually beneficial to the steamship lines and the country.

Personally I am an admirer of the Canadian Pacific Railway and feel that the company have done much to put Canada where it is to-day. They ventured much, and success followed. Why do they not now blaze the trail as they did in building their railway across Canada, and thus get back to cheaper passenger and freight rates? I should like to see such a patriotic corporation approached by the government. They can do much for Canada, and in this instance they can do more at once than any other institution. We must have cheaper rates, for the prosperity of Canada depends on them, and my endeavour will be to find a satisfactory method, and I will endorse this one in the Canadian interests if a better solution cannot be found.

I cannot see why some money cannot be spent on the Canadian Government Merchant Marine to bring it up to date and fit it for actual service—fit the boats with a refrigerator plant and space for limited passenger accommodation, and have them call at such ports as Miramichi, New Brunswick, from which port fresh fish, lumber and pulp is shipped to the British market. They could make fortnightly trips bringing out freight and passengers, and land them at Miramichi, getting return cargoes between Miramichi and Bathurst. The distance from Miramichi to Great Britain is the shortest route from any part of Canada to the British Isles. There are railway facilities at Miramichi, and freight from the west can be brought in by carloads and shipped from there, thus giving employment for some of our men of the Maritime provinces who are looking for improved conditions which may naturally be expected under the Liberal regime, particularly if this project is consummated. I join heartily with the development of Halifax, St. John, Quebec, Montreal and Vancouver, Mr. Speaker, but there are other ports that must get consideration to make a full rounded-out Canada.

I should like to touch on immigration, as it was mentioned by one hon. gentleman that Canada did not offer sufficient inducements. It never will offer sufficient inducements with the present high tariff. But reduce the tariff and the cost of living will come down. People will come to our land in hundreds of thousands as they did under previous Liberal rule and tariff reductions, but were soon scared away by the high tariff period that followed after 1911. Who pays the duty? The farmer and the labourer who compose over eighty-five per cent of our population. They not only pay the bulk of the $160,000,000, but also the increased cost produced by the tariff. Make it possible for the backbone of this country to live more cheaply, the farmer to buy more cheaply, and we will be able to compete in the world's markets, and steamers will be filled with immigrants seeking our shores. No one likes to have a gun pointed at him—and there has been some suggestion of a popgun—no matter what its calibre may be, and while the steamship companies may feel that this gun is not of a very large calibre, evidently they would like to have it pointed the other way, because they are very energetic, as this reply of theirs

to the Preston report shows, as well as their action in having people around here trying to find out what the attitude of parliament will be. But if we are loyal to Canada and to the people we represent, some action must be taken by this parliament because it is imperative that the lines now operating on the Atlantic reduce their rates, both passenger and freight, so that prosperity may come again to this country, and prosperity can only return in full measure when transportation rates on both water and land are reduced materially from what they are at the present time.

I think some good to Canada will come from submitting this contract to parliament, and I believe that it should go to a special committee for mature consideration. I am free to admit that I hope some of its defects will disappear, and that a policy will emerge more potent than this contract for the relief of the intolerable burden of ocean freight rates as they exist at the present time.

In conclusion, I think the previous speaker must have been unaware of the intention to send this question to a special committee for further consideration. If he had known of that I think he would have joined most heartily with the members on this side of the House who are in favour of an advanced policy for Canada that will reduce freight rates, and by so doing reduce the cost of living, and bring again to Canada the prosperity that we had during the regime of Sir Wilfrid Laurier, and which has already commenced to come during the regime of the present Liberal government.

Mr. A. J. LEWIS (Swift Current): Mr. Speaker, I do not wish to speak very long upon this subject to-night, especially as it is going to be considered by a committee which will investigate the whole question and report back to the House. I understand, however, that it is not the wish to adjourn so soon, so I shall continue the debate for a few minutes.

I listened with a great deal of interest to the hon. member for Lunenburg (Mr. Duff) this afternoon, and I agree with him that the government should be congratulated upon its attempt, at all events, to grapple with the problem with which we are concerned at the present time. We know very well that rates at the present time are almost prohibitive, and that as a result a great deal of depression exists among the farming classes in this country, and especially among those who are interested in the shipment of cattle to Great Britain. But I do not altogether agree with the hon. member when he says that if this country had voted for reciprocity in 1911, we would not now perhaps have this problem to face. We must remember that we are living in a democracy, and if the people of this country in 1911 decided against reciprocity, it is no good harping upon the subject or regretting past action. We must live in the present. Between 1911 and the present we have had a world war, and there is no telling what the United States would have done, even if reciprocity had come into effect. I also want to congratulate the hon. member for Lunenburg who, although he was interrupted frequently this afternoon, remained courteous throughout and showed himself a gentleman to all his interrupters.

I do not altogether agree with him, however, when he says that the Imperial authorities are very slow, but that we in this country do things in a hurry; but the hon. member is partially correct because this government produced its remedy before it had received the report. I would also like to suggest to him that sometimes "fools rush in where angels fear to tread".

I also wish to say a few words in regard to the remarks of the hon. member for North Waterloo (Mr. Euler). He said that he had listened to this debate continuing for a number of days, and had heard very few practical suggestions. He gave one or two himself to the House. He spoke, for instance, in regard to the ownership of a steamship service. I would remind him that when I was speaking on this very same subject in the debate on the Speech from the Throne I also suggested that as one of the remedies which this country would ultimately have to adopt before we would be able to smash this alleged combine.

He also went on to say he was glad it was a departure from folding our hands and doing nothing. Now it is a good thing to fight if you know what you are fighting about; but it is not always a good thing to fight until you are quite sure of your ground and know what chance you have of winning. I believe that we would have a much better chance of success if we were not fighting a lone hand. I listened to the hon. Minister of Trade and Commerce a few days ago, who in speaking of the combine, mentioned some of the great steamship lines and suggested that probably this was a combine that encircled the whole world. Well, if we are up against a powerful organization of that magnitude, we should think very seriously whether we in our lone capacity, with ten small ships, have any chance of winning out; or are we simply throwing away $1,375,000 on a losing game? That is the question that is before us, and I think

myself it would have been a good stroke of business if we had used the machinery that we have ready to our hands and have attempted, at all events, to get in touch with the Imperial authorities, whom we claim are also vitally affected by this combine, and with other parts of this great empire, because by so doing we might have been able to unite as we did in the war, and with the whole empire behind us have a better chance of success.

I wonder whether the Minister of Trade and Commerce went to the steamship lines who are vitally interested in the well-being of Canada and placed this matter before them and offered them this same opportunity that has been given to Sir William Petersen. We must remember that the Canadian Pacific Railway Company is vitally interested in the prosperity of Canada, which is more than can be said, I think, of Sir William Petersen and his company. The Canadian Pacific has millions of dollars invested in this country, and it is to their interests as well as ours that we should place these matters on a sound financial basis in order that we may ultimately get prosperity.

I should like to say a few words in regard to an interruption I received when I was speaking on this subject in the debate on the Speech from the Throne. I happened to mention the press reports, and also the subject that was quoted by the leader of the opposition at the present time (Sir Henry Drayton), and I was interrupted by the hon member for Cape Breton who asked, "Does the hon. member presume to lay down the government's policy in regard to the whole question?" To which I answered, "I am merely commenting on the speech of the leader of the opposition and the press reports, and the president of the Petersen line," and the hon. Minister of Trade and Commerce then said, "A bad basis." Now really, was it a bad basis? That is the question, because now that the resolution is down I find that the press reports were pretty nearly correct. I also find that the speech delivered to the shareholders of the Petersen line by the president was also pretty correct in detail. Therefore I do not know why the Minister of Trade and Commerce should speak of a "bad basis." I think it was a splendid basis.

The question is asked in this House why the attempt is being made to discredit Mr. Preston who has prepared this valuable report. Well, I understand that in a court of justice if a witness comes forward and you can prove to the judge that evidence given by him in the past has not been correct his testimony falls to the ground. I am not saying this in regard to Mr. Preston, but the line being pursued by some hon. members with respect to that gentleman seems to be that if they throw discredit upon him they will discredit his evidence. As far as my knowledge of western Canada goes I believe the farmers there will be glad that this government is making a serious attempt to smash the North Atlantic Steamship Combine, and that a resolution has been introduced into parliament for the purpose. I think they will welcome the news for this reason: At the present time they find it is almost impossible, under existing conditions to raise cattle and ship them to Great Britain. But I want to inform the government that the western farmer is also an intelligent being, and that he does not want any legislation passed that will be based on an unsafe foundation. He does not wish this government to grant subsidies for the establishment of rates that will stimulate an artificial trade between Canada and Great Britain, the removal of which will bring about a worse condition than that which obtained at first. It does seem to me that it would have been a better stroke of business for the government, in the first place, to have placed an auditor or a skilled accountant upon these steamships in order to find out the actual cost of taking cattle across to the Old Land. If it was ascertained that the cost of conveying cattle across the ocean was much lower than the charge which the steamship companies make at present then I believe that something drastic should have been done. If, on the other hand, it was ascertained that there was no profit in the transportation of cattle under existing conditions I do not believe this government or any government would be justified in attempting to create a market in Great Britain by artificial means. I believe that even the men of my own district would be against a subsidy of that particular kind.

It does not seem to me that Sir William Petersen is very much interested in smashing the ocean combine, because he tells his shareholders that it is impossible to make a profit under the existing low rates. Therefore he is a very poor man to engage in this kind of game when he himself does not believe that the present rates are too high. To his shareholders he said "I think that in the spring our ships will sail under very much more favourable conditions." But at whose expense? At the expense of the people of Canada.

Generally speaking I am against the granting of subsidies. We have already mail subsidies to steamship lines but I do not believe it is a wise plan to extend the operation of these subsidies. The hon. member for Lunen-

burg (Mr. Duff) said that if he was the owner of one of these great ocean liners he would do everything in his power to smash this combine. But suppose the alleged combine should decide that no vessels should proceed to the port of Montreal for a period of one or two weeks during the busy season? What would be the result of such a course as that? It would disrupt the whole trade of Canada and would divert a great deal of our commerce to United States ports. To many of us that would seem to be a very unwise thing to do, but is it not within the bounds of possibility that the steamship companies in question might resolve upon such a plan.

Mr. LOW: Does my hon. friend think the Canadian Pacific would do that?

Mr. LEWIS: I do not know whether the Canadian Pacific would do such a thing or not. In any event we are not fighting the Canadian Pacific; we are fighting, as you yourself stated the other day, the whole north Atlantic combine, consisting of eight, ten or twelve steamship lines. Now, if such a combine exists—and the government claims there is such an organization,—it would be open to them to take such a course, and even if it were only tried for two weeks it would tie up business in this country, and cause the greatest possible inconvenience to the people of western Canada, especially should such a boycott be established during the busy season.

Mr. JACOBS: Where would the tramp steamers be all this time? Would they not be coming into port?

Mr. LEWIS: They might be coming into port, but the statement has been made in this House that not fifty per cent of the wheat shipments, for instance, were taken by tramp steamers last year.

Mr. FORKE: No, it was stated that they carried sixty-two per cent of the shipment of wheat from the port of Montreal.

Mr. JACOBS: If the liners did not come would not the tramp steamers be available?

Sir HENRY DRAYTON: Does my hon. friend want the tramps to take the place of the liners?

Mr. JACOBS: In the event of the other vessels being tied up.

Mr. LEWIS: I want to say a few words in regard to the Preston report. I am afraid I have not been able to find anything new in it.

Mr. MARTELL: Is it not a fact that tramp steamers go from place to place looking for cargo, that there is no regularity in the service which they give, whilst there is regularity in the ocean transport service by the regular lines? The ordinary tramp steamer calls at one port for orders, and then goes to another port for a cargo; she has no regular port at all but is always looking for a cargo. The shippers could not depend upon tramp steamers and the quicker we recognize that fact the better. There must be some regular system of transportation from one port to the other. The question in this matter is whether there is or is not a combine. The hon. gentleman must not rely upon tramp steamers.

Mr. LEWIS: I was not suggesting we should rely on tramp steamers. My contention was that if this alleged combine should withdraw the ocean liners from the port of Montreal, we will say for a period of ten days or two weeks, it would inconvenience a good many industries and individuals in Canada—in fact it would tie up business generally and disorganize our commerce. I am not saying that it would be done, but it is a method which might be resorted to.

Mr. MARTELL: Is it not a fact that ninety-nine per cent of the members of parliament do not know the difference between a tramp steamer and an ordinary liner?

Mr. LEWIS: I will allow the hon. member to speak for himself.

Mr. MARTELL: I will answer my hon. friend by saying that I come from a race of seafaring people and I know all the steamship lines in the world. I am not criticizing the speech of my hon. friend but I ask him not to ignore this fact: You will not produce the millennium by any sort of legislation, remember that. The tramp steamers are looking for traffic everywhere, but if you once dislocate the system which has long been established, what are you going to put in its place?

Mr. LEWIS: I do not suppose for one moment that this legislation is going to produce the millennium. If I thought so I would not vote for it, because I am not ready for the next world for a little while yet. With regard to the Preston report I may say that I do not see any new material in it. The first ten or twelve pages deal with the report we have already received in the House with regard to the agricultural commission and other reports. So far as the freight rates are concerned, which he brings forward in proof of many of his statements, they deal to a large extent with other coun-

tries rather than our own, and I do not think that his comparisons are altogether fair, as was shown the other day in regard to the difference in immigrants coming to this country in 1903 and 1924. There is no comparison of the ships that bring people over. I remember coming myself in 1903. I must admit that at that time the service was good, much different from the time my hon. friend from Cariboo (Mr. McBride) came over. When I came over I think it cost me something like $60 to get to Winnipeg; I am not sure what the ocean fare was. I went over again in 1912, and I think the fare was $67. I believe that in the same class to-day the fare is double that amount of money. But there is this to be taken into consideration; coming to Montreal, at least to-day, the harbour charge is double what it was two or three years ago. Hon. members can readily understand that the prices have increased all around. They could not make charges similar to those in effect in that time. At the same time I agree with a great many that they are far too high. But my difficulty is whether this scheme is going to be effective, or whether it is simply another drag upon the ratepayers at the present time. I should like to point out that this is rather an unusual procedure to bring in a resolution and also a bill before the committee has reported.

Mr. MARTELL: Will the hon. gentleman suggest any alternative?

Mr. LEWIS: I will suggest two. The first is that I think the government would be wise if they would call together the people who are interested in any part of the British Empire who wish to get lower freight rates in the first place. For instance take Australia. That country had ships of her own some time ago. I understand she sold them very recently. With a lone hand she could not make it go, but with Australia, New Zealand and Canada in conjunction with Great Britain, surely if the people of Great Britain, in that free trade country, feel that there is a combine, you would have the whole British Empire behind you and you would not be fighting a lone hand; and for that reason I would commend what Sir Wilfrid Laurier did at that conference in the attempt to get the people of the British Isles and the British Empire together to fight this alleged combine. That would seem to me the best way it could be done. Failing to get the support of Great Britain or any other part of the empire, I would suggest what I suggested some time ago, namely to create a steamship line under the management, if you will, of Sir Henry Thornton, who seems to be a splendid official. Let us take the same amount of money we are spending and create our own lines, similar to the Canadian Pacific Steamship lines. Then we would be independent of all the other steamship lines.

Mr. MARTELL: Does the hon. member advocate that we should go into government ownership of steamships? I think we have enough government ownership at the present time with the Canadian National Railways.

Mr. LEWIS: I will admit that the Canadian National Railways, and the whole system of government ownership has bled the Canadian people white; but at the same time I have great confidence in it, and if we would put party bias aside and get down to business management, the Canadian Government Merchant Marine might be in a better position than it is at the present time.

Mr. MARTELL: The hon. member would like to put the steamship line under Sir Henry Thornton, the same gentleman who is in charge of the Canadian National Railways. If under his management the Canadian National system is bleeding the people white, would the hon. member want him also to bleed the people white under the system of a steamship line?

Mr. LEWIS: No. I am not saying anything against the management of the Canadian National because we are gradually getting out of the hole; but I want to say the deficit on the Canadian National cannot continue. If we take into consideration the stock we are buying every year and the equipment, with the deficit, it would amount to nearly a hundred million dollars. I say that this system of going behind cannot continue very long in Canada.

Mr. MARTELL: Bankruptcy would result.

Mr. LEWIS: It means bankruptcy if we are going to keep on in this way. With a population of nine million people we cannot pay ten or eleven dollars a head to liquidate the deficit on the Canadian National, and the time will come when we shall be forced into the scheme suggested by the hon. member for South York (Mr. Maclean), where we shall have to combine in order to save ourselves.

In closing I say that I intend to vote that this resolution shall go to a committee. I do not know altogether, nor am I satisfied in my own mind, that this is the best scheme. I think there are other schemes which might be suggested, but this is the only scheme that is before us, and we must deal with it upon its merits. When a man speaks in this House

about a certain matter the people claim, "Oh you are against it" or they say, "You are siding with the steamship lines; you are on the side of the combine". Nothing can be further from my mind. I do not believe in combines. I think they should be fought where we can fight them with any measure of success; but I do not think it is wise to attempt to handle them until we are sure of our ground and have some conception of success in the future. For that reason, I hope, after this matter has been before the committee and all the evidence available is gathered and comes to our hands, that we shall see to it that we cast an intelligent vote either for or against it as the case may be. At the present time I intend to vote that this matter shall go before the committee, and I will await my final decision till the bill comes back from committee.

On motion of Mr. Forke the debate was adjourned.

On motion of Mr. Mackenzie King the House adjourned at 10.40 p.m.

Friday, March 13, 1925

The House met at three o'clock.

PRINTING OF PARLIAMENT

Hon. CHARLES MARCIL (Bonaventure) presented the first report of the joint committee of both Houses on the printing of parliament.

CORRESPONDENCE ON OCEAN SHIPPING RATES

Correspondence exchanged between the government of Great Britain and the government of Canada respecting the proposed investigation by the Imperial Shipping committee of the North Atlantic shipping rates, also the effect on empire trade, with special reference to the conference system.—Right Hon. Mr. Mackenzie King.

IMMIGRATION—ISSUE OF PERMITS

Hon. J. A. ROBB (Minister of Immigration and Colonization) laid on the table the annual return of permits issued under the authority of section 4, subsection 2, of the Immigration Act.

He said: For the information of hon. members I beg to submit the following general notes of interest:

(1) The return covers all permits issued between the 19th July and the 31st December, 1924. The 19th July was the date upon which the amendment to section 4 of the Immigration Act became law.

(2) In several cases it will be observed that a permit was issued in cases where deportation had been ordered. In this connection it is well to recognize that where complaint is made to the department with a view to deportation and the board of inquiry finds that the person is deportable, the deportation order is issued as a matter of course. Provision is made in the law for an appeal to the minister. In a number of cases consideration has been shown on appeal. If the person whose deportation was ordered were allowed to continue residence in Canada without being placed under permit, that person, on the completion of five years' stay in Canada, would acquire Canadian domicile and could not then be deported. The issue of the permit automatically lifts such person out of the immigrant class and places him in the non-immigrant class and prevents time running in his favour for the acquisition of domicile. This explains why permits are sometimes issued in deportation cases.

CANADA HIGHWAYS ACT EXTENSION

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee at the next sitting to consider the following proposed resolution:

That it is expedient to provide that the time within which the various provinces of Canada may earn and be paid the sums allotted to the said provinces under the provisions of the Canada Highways Act, chapter 54 of the statutes of 1919, as extended by chapter 4 of the statutes of 1923, be extended for a further period of two years.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

CANADIAN NATIONAL RAILWAYS
BRANCH LINES CONSTRUCTION BILL

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved that the House go into committee at the next sitting to consider a proposed resolution in favour of the Turtleford branch.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the favourable consideration of the House.

Motion agreed to.

IMPORTATION OF TOBACCO

On the Orders of the Day:

Mr. P. A. SEGUIN (l'Assomption and Montcalm) (Translation): Mr. Speaker, I should like to draw the attention of the hon. Acting Minister of Customs (Mr. Cardin) to an article which appeared in La Presse on March the 12th last and which reads as follows:

Notice to Tobacco Merchants and Smokers

St. Jacques de l'Achigan, March 10, 1925.

To the Editor of La Presse.

Sir,—A few months ago, quite a considerable quantity of foreign tobacco was imported. This produce of an entirely inferior quality for the pipe, has been mixed with our tobacco of the province of Quebec and sold as such. It has been established, to-day, that these foreign tobaccos sold as products of the province of

Quebec have considerably depreciated the value of our tobaccos. It would be advisable that dealers who handle these mixtures should explain to merchants where these tobaccos are grown and their quality. It is but proper that these transactions should be carried on in such a way as not to further disparage our tobaccos. It is being loyal to one's own people to try not to belittle their products.

The Tobacco Growers' Association.

I should like to know if the minister is aware of this practice of a nature to strongly prejudice the interests of the tobacco growers of the province of Quebec? If so, will strong and effective measures be taken to further protect our good friends the tobacco growers?

Hon. P. J. A. CARDIN (Acting Minister of Customs) (Translation): Mr. Speaker, no precise information has reached the Department of Customs and Excise on the subject to which the hon. member refers. I can assure him that we shall keep him informed. The department is prepared to take all the necessary measures to protect the legitimate interests of the tobacco growers.

RURAL CREDITS—REPORT OF DR. TORY

On the Orders of the Day:

Mr. GARDINER: Will the Acting Minister of Finance (Mr. Robb) kindly inform me as to whether he has yet received the final report from Dr. Tory with regard to rural credits?

Hon. Mr. ROBB: I think Dr. Tory is expected in Ottawa next week.

HOME BANK DEPOSITORS

On the Orders of the Day:

Mr. IRVINE: I should like to ask the government if they have considered the advisability of providing in the supplementary estimates for the reimbursement of the Home Bank depositors.

Hon. Mr. MACKENZIE KING: The government's policy with respect to the matter to which my hon. friend has just referred will be made known in due course. No announcement will be made until the government is in a position to make a definite statement.

RAILWAY FREIGHT RATES

On the Orders of the Day:

Mr. MEIGHEN: In the Speech from the Throne intimation was given that the government's policy in respect to land transportation would have to await the judgment of the Supreme court. Inasmuch as this judgment has been given, is the government prepared to say that they purpose bringing down legislation on the subject?

Hon. Mr. GRAHAM: The government does purpose bringing down legislation, as announced by myself some days ago, dealing with the freight rate situation as it now exists.

Mr. MEIGHEN: Could the minister give an intimation as to when the government will probably be ready to introduce the legislation.

Mr. GRAHAM: I am not in a position to say at what date, but we will do it as expeditiously as possible. The freight rate situation is not at all satisfactory to any person anywhere in Canada at the present time.

Mr. MEIGHEN: Hear, hear.

Mr. GRAHAM: And it behooves this parliament to deal with it. Under the finding of the Supreme court, it is the only body that has authority to deal with the question.

TORONTO TERMINALS

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved the second reading of Bill No. 23, respecting the Toronto Terminals Railway Company.

Motion agreed to, bill read the second time, and the House went into committee thereon, Mr. Gordon in the chair.

Section 1 agreed to.

Bill reported.

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—MOTION FOR RATIFICATION DISCUSSED

The House resumed from March 12, the adjourned debate on the motion of Hon. T. A. Low (Minister of Trade and Commerce), to ratify and confirm a contract between His Majesty and Sir William Petersen providing for the establishment of a subsidized steamship line on the Atlantic and government control of ocean rates and the proposed amendment thereto of Mr. Clark.

Mr. ROBERT FORKE (Brandon): I desire to offer a few remarks upon the resolution and amendment which are now before the House. There are two important factors in the life of Canada, and in fact in almost every other country, but more especially in this country of wide distances and long hauls in the matter of transportation. The first question to which I refer is that of production, and the second, that of transportation and distribution. I do not intend at this time to take up any of the time of the House in dealing with the question of production. As regards distribution, however, I may say just in

passing that we have a great deal to learn in this respect. I see it stated that in Denmark eighty cents out of every dollar goes to the producer; in the United States, about 33⅓ per cent of every dollar goes to the producer. Consequently, a great deal has to be learned in the United States, and I think the same applies to conditions as they exist in our Dominion, we have yet many lessons to learn about co-operation in distribution and the disposal of our produce. But we are more particularly concerned this afternoon with the question of transportation. To Canada transportation as has already been remarked in this debate, is of the utmost importance. Long hauls are necessary to bring our produce to the seaboard, and, a great deal of our produce has to be transported across the ocean into the markets of Europe before it can be sold.

As regards the contract that is before the House, I should like to read two resolutions that have been made public. The first is a resolution passed by the Canadian Council of Agriculture. It reads:

> Pending an investigation establishing the extent to which ruling ocean rates are unreasonable and that they will be effectively reduced by granting Dominion government subsidies, and considering Canada's serious financial position owing to existing obligations and the existing burden of taxation, the Canadian Council of Agriculture, while recognizing the concern manifested by the Dominion government in the matter of ocean rates, goes on record as deprecating so serious an expenditure of public moneys by means of subsidies which in principle are undesirable and justifiable only in cases of proven national necessity.

The second resolution I have referred to is one passed at the annual convention of the United Farmers of Manitoba, and it reads:

> That whereas, the present rate charged by steamship companies for the carriage of Canadian cattle overseas is excessive,
>
> And whereas, the development of the cattle industry is one of the basic factors connected with the development of permanent agriculture;
>
> Therefore, be it resolved that we endorse the efforts of the federal government in trying to reduce the present rates.
>
> And we further urge that the government exploit every legitimate means and continue every effort to have these rates reduced to a reasonable basis.

I have read these resolutions to show that this matter is of wide interest in all parts of the Dominion. And indeed the question of ocean freight rates is one of world-wide importance. We know that the open sea is the highway for all nations, but the matter immediately before the House, the question of transportation on the north Atlantic ocean is more intimately connected with Great Britain, Canada and the United States. Approaching the consideration of conditions as they exist, there are some people who take

the ground that everything that is is right, and there is another class who immediately assume that everything that is is wrong. Reasonable people have to consider just what is the mean between these two extremes and to find out what actual conditions are. I have noticed that the criticism has been made in connection with the subject now before the House that it is a mere waste of time, a mere trifling with the time of this parliament, to discuss this question. Perhaps that is a very extreme view to take. Those people will be inclined to say that all is well on the Atlantic and that in time everything will come out all right.

I do not think anyone denies to-day that there is a shipping conference, one part of that body sitting in New York and dealing with transportation going over the ocean eastward, another branch sitting in London and dealing with transportation going over the ocean westward. It was very well remarked by the hon. member for North Waterloo (Mr. Euler) last night that a conference or a combine—it does not make any difference what you call it—can have at least two functions. They can get together for co-operation and conference in order to better conditions, to find out how best their business—in this case the business of transportation—may be carried on. They may confer for the purpose of benefiting themselves or for the purpose of benefit accruing to the public. I have never heard, however, of any combine or conference that came together to consider matters of this kind that acknowledged any other intention than that of promoting the public good. Consequently we sometimes view with a good deal of suspicion any conference or combine that is able to get within its power and really control any great interest, whether the public has any say in the matter or not. We are, therefore, quite entitled to view with a certain degree of suspicion any large interest which gains control of any particular business or trade or industry, and to desire to have some opportunity of knowing whether it is in the public interest or not. So we can ask the question at this time: For what purpose is this conference being held? The question of the control of freight rates is not a new question. It has been before the Dominion government, the United States and other countries for a very long time. But, coming more particularly to deal with our own Dominion, I have a few extracts that, with your permission, Mr. Speaker, I will read to the House just to show that this is nothing new, that it has occupied the attention of different

governments before the present government assumed office. The first extract which I am going to read is taken from Hansard of May 5, 1913. I have the volume here and am willing to read the context if any objection is taken to what I have before me. This was taken from a speech delivered by the then hon. member for Portage la Prairie (Mr. Meighen). He said:

> We have every evidence of a monopoly in the arrogant exercise of power that we have had to submit to up to the present time. I am aware that the government have been dealing with this matter; that they have addressed themselves to it with vigour. I am also well aware that it is not possible to follow the old methods of attack and hope to meet with success in an attack on this corporation. It is not possible to adopt the old weapons and hope to win. Along what lines is it possible that we may succeed?

After some reply to that remark by the Hon. Mr. Pugsley, the right hon. gentleman (Mr. Meighen) said:

> The hon. gentleman says that these increases have taken place in the last eighteen months. They commenced before that time. I want to call the hon. member's attention to this, that the perfection of the North Atlantic Shipping Conference is not a matter of eighteen months' duration. That perfection was attained while the hon. gentleman was Minister of Public Works of this country.

He was referring to the Hon. Mr. Pugsley:

> It was while the late government was in power that they collected their arsenal and sharpened their weapons. It was during all those years that they boldly set about to equip themselves for reaping the reward that they are now attempting to garner. They did it in the full light of day. They acted in such a way that they swept from the seas the tramp steamers, everything that might enter into competition with them

Mr. EULER: What year was that?

Mr. FORKE: That was 1913. I am reading these extracts to show that there have existed in the past conditions very similar to those which we are considering at the present time, and that numerous demands have been made at various times that the problem should be dealt with. Apparently everybody so far has recognized the existence of the evil. In 1914 the hon. member for West York (Sir Henry Drayton) was sent to England to look into the matter, and after considerable investigation he appeared to be very much disappointed with the outlook. He came back, and nothing was done at that time. In 1918 the Dominions Royal Commission reported there there existed a combine of ship owners operating against the public interest and that a discrimination in rates was being practised against Great Britain in favour of foreign countries. Sir George Perley also wrote that rates "during past years" had been higher than were reasonable; and Sir Thomas White cabled to the High Commissioner for Canada that he was much concerned about freight rates and was anxious to have inquiries made in Great Britain to ascertain whether anything could be done in the way of co-operation.

We can see therefore that attempts have been made from time to time to deal with what apparently has been regarded as an evil by different governments and different members of those governments during a number of years past. Whatever may be the facts, everyone knows beyond question that rates have increased most enormously since this conference, or combine, or whatever you choose to call it, has come into existence.

In this connection let me say just a few words touching the Preston report. I do not think it is at all necessary that we should pay very much attention to that report; I do not see that we need take up the time of the House discussing it so far as the question of transportation and ocean rates is concerned. It seems to me that the fact has been fully acknowledged by different governments and by former members of this government that freight rates have been uniformly higher than they ought to be; that would appear to be established even apart from the evidence that has been submitted in the Preston report. Now, I have nothing to do with the personality of Mr. Preston, about whom I really do not know very much; and so far as I can see, that does not enter into the matter at all. If Mr. Preston is presenting the facts as they are, the facts will stand investigation independently of what we may think of Mr. Preston; and if they are not facts but only unfounded allegations they will fall to the ground. It is a very common practice in law, although I am not so sure of this, not having any knowledge of courts and lawyers, that when a lawyer has no case the best thing for him to do is to abuse opposing counsel in order to fill up the time and show at any rate that he has something to say. And while this abuse of Mr. Preston may be necessary under certain circumstances, to my mind at least it has very little to do with the question under consideration; the facts which Mr. Preston has submitted are what we have to consider at the present time. Are the statements made by Mr. Preston borne out by the facts as they are? That is what we have to consider now, that is the extent to which we must take his report into consideration. No doubt it may turn out that Mr. Preston has attempted to prove too much; and it seems to me on the face of the report that sometimes it might have been better if he had stated the case a little more mildly. Had he done so he would perhaps have re-

ceived a little more attention and been more readily believed. At the same time, I am not disposed, as some members of this House are, to discount the report. It is possible that the statements contained in it may be proved to be not so very far astray after all.

We are met however by a straight denial on the part of the steamship companies of some of the facts stated in the report. We have Sir William Noble of the Cunard line making the statement that any action by this House to take into consideration some of the allegations made might well alienate the sympathy of the steamship companies. This is a serious state of affairs indeed, and I would call the attention of hon. members to the threat; the very fact that this House should attempt to investigate the proceedings of the combine will "alienate the sympathy" of the steamship companies from the people of the country! Well, I do not think for one moment that these steamship companies are in the business for their health or for the benefit of the people: they are in the business for what they can make out of it. I am not afraid therefore that we shall lose their sympathy or that any damage will accrue from any investigation we may make into the manner in which these companies carry on their business.

I want to say now a few words about the Canadian Government Merchant Marine, and before proceeding I would read a short extract from the Ottawa Journal. I read this paragraph to refresh my own memory and those of other hon. gentlemen:

> If the King government thinks an Atlantic combine exists, let it use and subsidize its own ships to fight it. Canada to-day has a merchant marine of 57 fine ships. Two of them are of gross tonnage exceeding 7,000; twenty-three of tonnage over 5,000; one of tonnage over 4,000; fifteen of tonnage over 3,000; fifteen of tonnage over 2,000; and one of 1,766 tonnage.
>
> Their total tonnage is, roughly, 220,000 or 125,000 tons more than the ships to be provided by Petersen. What a farce, therefore, to have this Canadian government tonnage with insufficient cargoes or rusting at docks, while proposing to bonus an outsider with millions for fewer and no better ships?

That does seem a rather serious charge to bring against the government under the conditions that now exist; but we want to get all the information we can regarding the Canadian Government Merchant Marine before passing judgment. I listened with a good deal of pleasure to the speech delivered the other day by the hon. member for Cariboo (Mr. McBride) in the course of which he discussed the question of shipping. Perhaps that hon. gentleman is more fully informed on this subject than any other hon. member who sits on this side. Unfortunately, however, I was unable to be present during the delivery of another speech, that of the hon. member for Lunenburg (Mr. Duff) which the House heard yesterday afternoon, and as I have not been able to read his speech in Hansard I have not the benefit of his remarks on the subject. I consider the hon. member better informed on shipping matters than most of the hon. gentlemen that sit on his side, and for that reason I regret not being in possession of the facts he submitted. However, I have several statements in regard to the Canadian Government Merchant Marine which I should like to read.

Mr. DUFF: Will the hon. member allow me? He quoted from the Ottawa Journal a statement in regard to the tonnage of certain ships of the Canadian Government Merchant Marine. The Journal was not fair to the merchant marine, who have two ships of 10,000 tons, twenty-three of 8,500 tons, and, if I remember rightly, about twenty-five of 5,500 tons.

Mr. CALDWELL: But that is dead weight and not carrying capacity.

Mr. DUFF: I have quoted the carrying capacity; dead weight capacity is carrying capacity, is it not?

Mr. FORKE: I am not going to enter into any controversy on that point because I do not know much about it.

Mr. DUFF: I simply wanted to point out that the Journal was not fair to the merchant marine. I am accused of always knocking the Canadian Government Merchant Marine and I simply desired to show how fair I am in correcting the Journal's figures.

Mr. FORKE: I am sure we are all glad to have the correction. Now, I have taken some extracts from correspondence in connection with the Canadian Government Merchant Marine, and I want to refer to a letter from Mr. R. B. Teakle to the Deputy Minister of Agriculture in which the statement is made that the smaller ships are not at all suitable for carrying cattle; they could carry about 138 head in the big ships, but this was not worth while when expense was considered. There is also a letter from the Minister of Agriculture to Sir Henry Thornton, of March 15, 1923, with the reply that the steamers were not suitable as cattle carriers. Extensive repairs would be needed, the approximate cost being $32,000 per ship, and from October to May they were liable to be flooded during storms. I have also a memorandum prepared by the Minister of Agriculture.

Mr. MEIGHEN: From whom was the last letter sent?

Mr. FORKE: That was from Sir Henry Thornton in reply to the Minister of Agriculture, who had written on March 15, 1923. He said that the steamers were not suitable as cattle carriers.

Mr. MEIGHEN: What steamers?

Mr. FORKE: The Canadian Government Merchant Marine.

Mr. MEIGHEN: It could hardly refer to all of them, for several of them are carrying cattle now.

Mr. GRAHAM: But they are not suitable for the purpose. They cannot carry cattle at a fair rate and make a profit.

Mr. MEIGHEN: They all claim they cannot carry cattle at the present rate and make a profit.

Mr. GRAHAM: I am telling you what Sir Henry means—that none of them was suitable for carrying cattle; which is true.

Mr. MEIGHEN: He did not say that at all.

Mr. FORKE: Another memorandum prepared by the Deputy Minister of Agriculture states:

> It has been contended that smaller boats were not suitable for the cattle trade. This is demonstrated by the serious loss of cattle from the Commander in October, 1921, when she lost 57 head from a load of 280 cattle.

The following extract is hardly along the same line, but I think it will be interesting to hon. members. The Minister of Agriculture (Mr. Motherwell) stated):

> If the Canadian Government Merchant Marine were not in the conference they might get cargoes east, but for a cargo to come west they would have to compete with the entire North Atlantic Steamship Conference, and would come back empty.

This correspondence in connection with the Canadian Government Merchant Marine is not very encouraging. During the four sessions I have been in this House I have listened to a good many discussions regarding our fleet, Mr. Speaker, and I have not yet been able to determine just exactly what traffic the ships are suited for. I think it is about time we decided whether we have something that is of value to the country in transporting our products overseas, or whether our merchant marine is always going to be a liability. Of course, I realize that the boats were built at a time when shipbuilding costs were very high, and that consequently we may have no reason to expect any return upon the capital expenditure, but it seems to me it would be well for us to ascertain just exactly what traffic these boats are suitable for and utilize them accordingly, so that they may earn at least enough to pay operating expenses. It is very unfortunate that the present condition should be allowed to continue. I shall refer to this subject again when dealing with the Petersen contract.

Turning again to the cattle trade: I have not the exact year, but the year previous to the passing of the Fordney tariff by Congress, I find we exported to the United States 500,000 head of cattle; in 1923 our exportation dropped to 65,629 head; that same year we exported to Great Britain 39,856 head. So our total exportation for 1923 was something like 105,000 head, against 500,000 exported to the United States alone before the Fordney tariff went into effect, showing what a tremendous blow that was to our cattle industry. However, we have no reason to complain against the action of the United States government; if they saw fit to erect a tariff barrier against our cattle, while it was a serious blow to Canadian stockmen, yet it was the United States' own business, and we have to find another market to take our surplus cattle. That is why it is so important that transportation rates both on land and sea should be as low as possible in order that we may reach the markets of the Old Country. During the last few years, I find there has been a very serious increase in rates to Great Britain. From 1904 to 1912 the ocean freight rate was less than $8 per head. At that time the rail rate from Winnipeg to Montreal was $7.26, and the ocean rate thence to Liverpool $7.30—a difference of only 4 cents. Last year the rail rate from Winnipeg to Montreal was $10.20, while the ocean rate to Liverpool had increased to $20. This is something I have considerable difficulty in understanding, although there may be satisfactory explanation from the shipping companies. No one in this House will contend for a moment that railway operating costs have not increased enormously during the last few years—wages, materials and equipment have increased very greatly since pre-war days—and yet we find that although from 1904 to 1912 the freight rate from Winnipeg to Montreal and the ocean rate from Montreal to Liverpool were nearly the same, today the railways carry cattle from Winnipeg to Montreal for about one-half what the shipping companies charge to transport them to Liverpool. Now then, why has the ocean transportation charge increased so tremendously as against the comparatively moderate increase in railway transportation charge during the past few years? So far I have never

received any adequate explanation for this great disparity.

At this time the question naturally arises: If there is a combine, will the proposal contained in the resolution offer a satisfactory solution? I wish I was able to answer the question offhand. But I do not know. However, it is worth considering. We have seen that the high cost of ocean transportation from Canada to Europe has for a number of years caused a great deal of disquietude to those who have had control of the administration of this country, but unfortunately all the activities that have taken place from time to time have brought no benefit to our exporters and importers, and consequently it is about time we woke up and tried to do something to remedy this unsatisfactory state of affairs. I am not prepared to endorse offhand the proposal contained in this resolution. I am aware that a great many objections can be urged against some of the details, and of course we expect that whatever attempt is made to combat any conference or combine will meet with the most strenuous opposition from those interested in the continuation of high ocean rates. We can well understand that the government is undertaking something that entails upon it a tremendous responsibility. If this parliament undertakes to fight a combination so wide in its extent as the North Atlantic Steamship Conference it is undertaking a pretty heavy task and will have a bitter fight on its hands. At the same time I do not feel like giving up and saying we can do nothing. I do not think we should fold our hands and say, "We will let matters take their course and everything will come right in the end."

I do not wish in any way to reflect upon the British government, but I saw a statement in the British press not long ago to the effect that Sir William Petersen will be able to get no assistance in the way of financing from the Trade Facilities Act of Great Britain. Then, I noticed a reference in the Morning Post—a very respectable paper, Mr. Speaker, as everyone knows who knows anything about British newspapers; a paper which, I am sure, would not look with any degree of encouragement upon any such proposal as that which is now before this House—says:

> This arrangement is a sinister attack upon the unity of the Empire.

Just think of it; the idea that any parliament would dare to investigate such an arrangement as is supposed to exist in connection with the north Atlantic shipping combine! It makes me just a little suspicious when the Morning Post takes up the cudgels on behalf of that conference and claims that any criticism of their conduct is an attack upon the unity of the empire. It is also stated—I do not know what truth there is in it—that the large financial interests are not too friendly to the move that has been made by the present government.

4 p.m.

Be that as it may, we cannot anticipate that in connection with this matter the government will get much assistance from that source.

A good deal of criticism has been levelled against this proposal, and I could myself, I think, point out the inadequacy of the attempt being made by the government to fight such a large combination. I would almost be inclined to give up in despair; to believe that any attempt in this direction would be futile, that nothing could be accomplished against the large interests concerned. But it is interesting to note the effort that is being made to refute the charges levelled against the north Atlantic shipping conference. Gentlemen connected with these companies are waxing eloquent and going to a great deal of trouble to explain how vicious and how wrong this movement really is and to state that there is no ground whatever for any of the allegations made respecting high freight rates. Well, I cannot understand why they should bother themselves very much about this matter if the step which it is proposed to take could have no effect whatever upon future conditions with respect to ocean transport.

Mr. LAPOINTE: They are doing it for exercise.

Mr. FORKE: I cannot see the reason for all the fuss, if there is nothing in it. An hon. member to my right—I do not know who it was—made a reference the other day which seemed to indicate that there was a connection between a wheat pool and a combine; at least he suggested that a pool was in the nature of a combine. I am willing to admit that to some extent it is, but if you will allow a momentary digression, Mr. Speaker, I will try to explain the difference between a pool such as is operated in connection with the marketing of wheat, and a combine for the raising of prices or for any other purpose. A pool has never been undertaken for the purpose of raising prices. Last fall it was stated in the public press that the pool in wheat was responsible for raising the price of wheat during the last few months. I do not for a moment agree with that view; I do not think any pool can raise the price of wheat. The idea of a pool in the marketing of wheat is this: The wheat is threshed in large

quantities and then marketed during the period from the middle of September to perhaps the middle of December. It is thrown upon the market all at once, in enormous quantities. The millers can use only certain quantities of wheat at a time, and as a rule they buy the wheat just when they want to use it. Consequently someone has to step into the market and buy the large surplus of wheat that is thrown upon it at that time. Naturally the man who buys that wheat has to speculate upon what the price will be in the future. He has to take into consideration the tying up of his money for that period, and he is not likely to take any chances; he is not likely to pay the highest price. The idea of a pool is to put the wheat on the market, not all at one time but just when it is required by those who are using it for milling purposes —to feed the market according to the requirements of the millers, thus bringing into action the law of supply and demand. The result is that it is quite possible for the producer to get a better price, and the consumer does not have to pay any more for the wheat than he would have paid otherwise. That also eliminates the speculator who would come between the producer and the miller who buys the wheat for grinding purposes. That is the difference I would make between a pool and a combination that can be used to enhance prices.

I do not think the members in this part of the House have ever been enamoured of subsidies. The experience of Canada in the matter of subsidies has not been a pleasant one. There is even now before the House a matter affecting a large corporation which has received an enormous amount of money from this country in subsidies. I have no hesitation in saying that it is a blot upon the fair name of this Dominion; it is a festering spot, and I am sure every loyal Canadian is ashamed of the conditions which have been brought about under the guidance of that corporation. That condition has not the effect of making us fall in love with the idea of paying large subsidies to any corporation. However, if it can be shown that a subsidy will be of real benefit I do not think I would be wedded to any particular course simply because it was an academic consideration. We are living in a practical age; we have certain conditions to face and we must meet those conditions as best we can. As to the subsidy that is proposed in this case, whatever may be said for or against it, it is for no particular class, for no particular people. If in the interests of any, it would be spent in the interests of all the people. I think, perhaps, the class of shippers who would most benefit by a reduction in ocean freights through this special arrangement which the government is trying to make with the Petersen interests would be the package shippers.

I have suggested that the remedy that is being offered seems to me almost inadequate to meet the situation. I am told that nearly one thousand boats cleared from the harbour of Montreal during the last season; and in that connection I am quite willing to accept the figures of the hon. member for Vancouver Centre (Mr. Stevens) who pointed out how many trips the ten boats of the Petersen company could make during the season. It does seem to me that it is almost too small to make any particular dent in the arrangements that now exist with respect to ocean shipments. However, I am quite willing to investigate this matter; I am willing to give the government the credit for at least making an attempt to do something to better the existing conditions. I know very well what the feeling would be to-day in western Canada—speaking for myself and also, probably for most of the members who are with me on this side of the House—if it were to go out that we were against any attempt to meet the existing conditions and to deal with this conference, if we were simply to lie down and say that nothing could de done. We are anxious and willing that some investigation should be made; and I feel perfectly certain, if this matter goes before a committee, if we can get a proper investigation such as we ought to get—the privilege of summoning witnesses and of putting them on the witness stand under oath—that whatever comes of it we will at least be in a position to know something of the facts of the case. Then, knowing the facts of the case, having got all the information we possibly can—and I think the Prime Minister has made the promise that no obstacles will be put in the way of getting the fullest possible explanation in regard to the whole affair—being in possession of all the facts of the case, we shall then be in a position to vote intelligently upon the matter. I do not want to stand up here and assume a hostile attitude in regard to this arrangement although I may be somewhat critical, because it seems to me that we are up against a proposition that is tremendously big and that we may have some difficulty in combating it. However, I would say let us make an attempt to deal with the matter anyway; let us have an investigation and find out what we can. Having done that I think most hon. members will be enabled to give an intelligent vote when the proper time comes.

Mr. DONALD SUTHERLAND (South Oxford): Mr. Speaker, everyone must regard the situation with which we are confronted in this country as a very serious one indeed. The difficulties with which the government have to contend at this stage in our career are also very great. A number of years ago we became responsible for heavy liabilities which are increasing as the years go by. The war undoubtedly entailed many obligations. The conditions which prevail to-day, seven years after the close of the war, are not at all satisfactory, and the outlook is not at all encouraging. Therefore it behooves every loyal and patriotic citizen of Canada to do everything possible to bring about a better state of affairs. The country has great resources, many of them as yet untouched. We are in a very fortunate position in having a country so richly endowed by nature. Nevertheless the responsibilities which devolve upon us are such as to demand our most serious attention. I can assure the government that anything I may say this afternoon will not be said with any idea of embarrassing them in any way; I shall be influenced by the belief that frankness of speech is what the situation demands.

I do not feel like allowing a vote to be taken on this question without expressing my own views with respect to it. We have heard a great deal about the solution now proposed by the government for some of our difficulties embodied in the Petersen contract. Transportation, is of necessity bound to have an important influence in connection with the problems of a country so vast as is Canada. Ocean transportation is of special importance owing to our great agricultural production and the need of finding a market abroad for very much of our bulky surplus product. It has been said, and I think truly, that we have provided railway facilities in advance of the times; and one of our great problems to-day is to know what we are to do with such a great railway mileage throughout the country in view of our sparse population. I am not sure but that it would be wisdom on our part to close up many of the existing railways and eliminate the existing competition for traffic by some arrangement between the government railway system and the Canadian Pacific Railway There is nothing to be gained by an attempt at competition such as we witness every night in the trains which pass out of this, the capital city and elsewhere. We see one train lined up on the tracks of the Canadian Pacific Railway and another on the tracks of the Canadian National, both westward bound, competing with each other for traffic, both leaving at approximately the same time. It would be much more in the public interest if one would leave several hours in advance of the other, or, better still, if this competition could be lessened. This kind of rivalry for traffic and not in service in the same territory does not appear to me to be good business. I know the Minister of Railways is conscious of the difficulties which underlie a solution of this problem; but the need is so great that even he must be convinced that something will have to be done soon to bring about a better condition of affairs.

The contract with Sir William Petersen now before the House must have been a great surprise to the people when it was announced. Announcement has been made in the past of other projects which might be compared to the present one. Hon. gentlemen will recall the announcement in 1903 or 1904 of the determination to build the Transcontinental railway. The people were repeatedly informed that the actual cost in cash to them of that project would not exceed thirteen or fourteen million dollars at the outside. This was the estimate of the total cost of the enterprise to the country which was given to the public, and a great many people in Canada accepted the statement. Now when we look back—not so very far back because twenty years is not a very long period in the life of a country—what do we find? Was the cost to the country of that railway confined to thirteen or fourteen million dollars? No, but a debt of half a billion dollars has been placed upon the shoulders of our people as a result of the carrying out of this much vaunted project which dazzled the imagination of many people twenty years ago. We should not forget facts such as this when we are asked to commit ourselves to an undertaking such as the government has now placed before us. An analysis of the arrangement as close and as keen as is possible will therefore be in the public interest because under the circumstances in which we now find ourselves we cannot afford to experiment with any proposition which is in any way open to doubt. Before committing ourselves to such an enterprise we must be reasonably assured that the expenditure sought will accomplish the results which its promoters claim.

That being the case I wish to point out the steps which have been taken by the government in order to arrive at a solution of this matter. Two years ago a special committee of this House was appointed to inquire into agricultural conditions. Nineteen members

were appointed on that committee. They held something over eighty meetings, and they did not devote, or could not possibly devote, much attention to anything else. The hon. member for Brome (Mr. McMaster) was appointed chairman of that committee. He is not in his place this afternoon, but as a member of that committee I want to say that he devoted his whole attention to obtaining information regarding the work which that committee had been appointed to perform. He devoted himself very assiduously to his duties, and I believe he did not very often attend the other committees of the House; it was impossible for him to do so; as chairman of that committee he was not as free for other activities of the House as were other members on that committee. The hon. member for Brome, when speaking the other day on the question now before the House, referred to some evidence given before that committee and also to a statement made by a previous speaker that he did not take their report in perfect faith, that the finding of the committee was not so definite that it should be accepted without some further information. He argued that that was a reflection on the members of the committee, that the patriotism of those members was impugned by the reference which had been made to the work of the committee, because, he pointed out, the report of the committee was a unanimous one. I do not wish to take exception to anything that was done by the committee, but I can say that, so far as I am concerned, I never saw the report referred to nor heard of it until after it was printed, long after parliament prorogued. It appears a meeting of the committee was held when this fifth report on ocean rates was brought before the committee on a Monday morning, the 18th June. Parliament prorogued about a week afterwards. A fourth report was submitted and adopted on the morning of Monday April 23, when this matter was referred to in a general way. So far as the fifth report on ocean rates was concerned, I never saw it and never heard of it until it was printed after the prorogation of parliament. I was not present at the meeting at which it was passed. It was called on a Monday morning, near the end of the session, and that may account for my absence. I did attempt to attend the meetings of the committee as well as I could. During that session I was a member of another committee in connection with redistribution, and it was impossible for me to always attend both committees. In the seventh and last report of this committee, to which I referred last night, when the hon. member for Lunenburg (Mr. Duff) was speaking, hon. members will find that the committee admitted the impossibility of digesting the evidence which was taken before the committee in the time at their disposal. In this their last report they say:

> Your committee have held eighty sittings on forty-five separate days, have heard the evidence of one hundred and three witnesses and have had two hundred and twenty-three exhibits filed with them; but have not been able to make a complete inquiry into the matters submitted to them under the order of reference.
>
> In view of the important and widespread information collected during the sittings of your committee and the impossibility of digesting and properly weighing the evidence in the time at their disposal before prorogation, your committee respectfully recommend that a similar committee be appointed at an early period of the next session of parliament.

This resolution was carried and is the last report of this committee, from which you will see that the committee did not deal with the evidence obtained except in a general way that could not be considered as final. The view of the committee was that a similar committee should be appointed at the following session. What happened at the following session? Did the government act on the report of this committee? Did they appoint a similar committee? During the following session were they anxious that this evidence which had been obtained should be analyzed, supplemented and made available in concrete form for the members of the House? No; they allowed the session to pass without anything being done in that regard. I have one volume here containing the evidence, and there is another volume as large as this one, containing somewhere in the neighbourhood of twenty-two hundred pages of evidence and other matter. The committee was appointed to investigate agricultural conditions. But what about the question of transportation? Transportation might be connected, and undoubtedly is vitally connected, with agricultural conditions. But this committee was appointed for the purpose of investigating agricultural conditions; and while it is true they did devote considerable attention to railway and ocean transportation, there was nothing final or conclusive in what they did in their respect.

I am pointing this out because the government a few days ago were contending that this agreement which they have made with Sir William Petersen has been based upon the findings of this committee appointed in 1923. It is true that a year ago they appointed an investigator or a commissioner—I do not know whether he was a commissioner or not, at any rate he was appointed by order in council to investigate, or assist the

minister in arriving at an understanding as to whether there was an ocean combine, and if so the best method to pursue regarding it. But I notice that while the members on the government side of the House, started out proclaiming what they declare to be a fact, that the Preston report was based upon the finding of the Agricultural Conditions committee, yet the Prime Minister at the opening of this session did not make that statement but said it was based upon the report of the commissioner who had been appointed and that the report of that commissioner would be placed before parliament. To-day we find that the members of the government and the supporters of the government do not make any reference to that report. When the Minister of Trade and Commerce introduced this measure he merely incidentally referred to the report which is known as the Preston report, but based the measure upon the report of the special committee on Agricultural Conditions. A few weeks before, in speaking of the matter in the debate on the Address the Prime Minister stressed the importance of the report which would be placed before the members of this House. Why has the change taken place? Why did the government shift their ground? Are they not prepared to stand by the report which has been submitted by their investigator? And what is the reason they have changed their tactics in regard to that matter? The hon. member for Lunenburg (Mr. Duff) last night started out by saying that it was based on the report of the committee appointed to inquire into Agricultural Conditions, but he did not pursue that phase of it, after I pointed out the recommendations of that committee, and he ended up by saying it was based on other evidence which the government had obtained. Why is the government not frank with the members of the House? Why not tell us in a straightforward manner on what evidence they have based this contract with Sir William Petersen, and what it is, rather than misleading us, as they have evidently endeavoured to do, by several speakers on the government side of the House pointing out the importance of the finding of the committee appointed to inquire into Agricultural Conditions rather than on that of the commissioner who was appointed to investigate this matter.

A year ago when the estimates of the Department of Trade and Commerce were under consideration, an item of $10,000 came up. The minister did not inform the House what it was for; but incidentally, on this item of $10,000, it came out that provision was being made for somebody to go over to the Old Country to investigate the question of ocean transportation. When I found out who was being sent over, I took the stand that W. T. R. Preston was not a suitable man for that purpose; that the very fact of his past record in connection with shady political matters unfitted him for so responsible a position. I pointed out that any report which he might make would not have the influence or command the attention or confidence that a report made by the minister or some official of his department would command. Hon. members to my left—the Progressives—would not heed my protests; they apparently did not attach much importance to them. The minister himself stated that he did not listen to my protests and that he was not going to be drawn into a mud-slinging contest over a matter of this kind; that it was only a small item anyway, $10,000, and that this man was expected to finish the work inside of six weeks or two months at the outside. What happened?—I am referring to this for the benefit of my Progressive friends to my left. I quoted then from a letter sent by this man Preston when he was Superintendent of Immigration Overseas to Mr. Thomas Southworth, who was Director of Colonization in Ontario. When I mention those two names in the same sentence, I want to point out that I do not believe Mr. Thomas Southworth was in any way connected with any of the nefarious schemes that Mr. Preston was suggesting. He was not the kind of man to be connected with anything of that kind. I say that in justice to the memory of Mr. Thomas Southworth who has passed away. What did I state on that occasion? I read a letter from W. T. R. Preston, to Mr. Southworth, dated October 18, 1901, that has been cited in this House repeatedly, and elsewhere, and that has never been disputed as being correct. I am going to quote only a part of it in which W. T. R. Preston pointed out to Mr. Southworth:

> I know all you people are terribly afraid of the foreign element. Upon that point I don't agree with you and have no hesitation in saying that a good class of foreigners scattered about the old parts of Ontario will do very much more towards preserving a proper agricultural population than those from England for instance. Politically speaking I believe the introduction of a hundred families or so into some of those close ridings with the connection which could be had and maintained here would easily preserve for us many doubtful seats in that province.

The man who wrote this letter was being paid out of the public treasury of this country and was supposed to be working in the public interest. As superintendent of immigration yet he was engaged in a nefarious scheme of this kind. Why was he so anxious that men from England should not receive the prefer-

ence rather than the Doukhobor from Russia? Why did the hon. member for Saltcoats (Mr. Sales) and the hon. member for Red Deer (Mr. Speakman) who has just taken his seat, say that they did not attach any importance to that matter? They said if the government appoint a man like that, they must accept the responsibility. It was pointed out that if they consented to the appointment of a man of that kind who would suggest that a Doukhobor was preferable to a man from England in this country, they must accept the responsibility. I moved to strike the item out of the estimates, and hon. gentlemen to my left voted against me in that action. Consequently, they are responsible to-day for the man who was appointed to make this investigation, the man who was identified with the company who were obtaining a bonus of £1 for every Doukhobor who was being brought over and not receiving anything for the men who were being brought here from England. Other companies, it is true, were receiving a bonus of seven shillings and sixpence for an Englishman or an Irishman or a Scotchman, but the North Atlantic Trading Company were receiving £1, or $5, for a Doukhobor, a Galician, or a man from continental Europe. That was the kind of man this government appointed to bring in a report that is hoped to command the respect and consideration of the people of Canada.

I might read the contract made with the North Atlantic Trading Company under which this bonus, should he place a hundred families in close constituencies of Ontario, would be paid to that company. There is nothing contained in it that ensures that the company would have been instrumental in bringing those people to this country, but the government were obliged to make a return to this company showing how many people were coming from continental Europe to this country, and the company were to be paid monthly a bonus on every one of those who said they were going on to farms or into domestic service. North Atlantic Trading Company! We have heard so much about the North Atlantic companies in the last twenty-five years that I wonder how hon. members opposite would dare to propose another scheme on the Atlantic with Preston the chief actor. Sir William Petersen in 1897 made a contract with the government of that day to establish a fast steamship line on the Atlantic, a line of boats with a speed of about fourteen knots per hour. He was to receive a subsidy of $500,000 per year in connection with that contract. The government of that day boasted about the contract they had made and claimed that there was a proposition made by the government which had preceded them to give the Allan line $750,000 per annum, for a similar service, although a much better one. Sir William Petersen's company, it is true, put up bank securities for £10,000 and they also made a cash deposit of £10,000 with the government. But what happened? Did they go on? Did they build the fast Atlantic steamship line? They did nothing of the kind. A contract was made with Petersen, Tate and Company in 1897. In 1899, they were released from their contract. Do not forget the year in which they were released. They were released also from the security which they had given to the bank, and in 1903 they were also handed back, with interest, the £10,000 which they had deposited with the government of that day. I wish to draw the attention of the House to a debate which took place in connection with the motion of the Minister of Finance (Mr. Fielding) on that occasion to repay Petersen, Tate and Company the amount of their deposit with interest at three per cent, $56,540. In the debate which took place, I notice that after an explanation by the Minister of Finance, the hon. member for Gaspé (Mr. Lemieux) asked the question:

> Mr. Lemieux: Am I to understand that the deposit of $50,000 was remitted?
>
> The Minister of Finance: That is what we are proposing; that is the purpose of the vote now under consideration.

Mr. Osler then spoke. He pointed out that the class of ships they proposed to build were not satisfactory; they had to spend a lot of money on one boat which was known as the bottle-necked design, and the Petersen people, after finding out that the design they proposed to build was not likely to be a success, and in fact was a failure, were anxious to get out of it. The Minister of Finance then spoke:

> The Minister of Finance: I do not think this ship has been proved a failure. Very eminent naval architects have certified that the ships would serve the purpose for which they were designed. The difficulty was not in the class of ships, the difficulty was the financial one. The financial men were not making so much money out of it as they thought they ought to make, and could not go ahead.
>
> Mr. Lemieux: Is the hon. gentleman (Hon. Mr. Fielding) aware that there are some claims against Mr. Petersen about that deposit? Are there not some claims filed in the department?
>
> The Minister of Finance: I have no recollection of them. I must not contradict my hon. friend (Mr. Lemieux) but I do not remember any.
>
> Mr. Lemieux: Mr. Petersen employed attorneys and refused to pay them and they filed claims. I was asked to warn the hon. minister not to pay Mr. Petersen until these payments were settled.
>
> The Minister of Finance: I will inquire into it.
>
> Mr. Lemieux: I would file a claim for one gentleman—

The Minister of Finance: If the claim has not already been filed, I am afraid the hon. gentleman (Mr. Lemieux) will find it too late.

This naturally caused some comment in the House. I have here a question that was put on the order paper by the then member for West York, Mr. Wallace, inquiring whether there had been a communication with Mr. William Petersen with regard to the signing of the contract in 1897, and also whether Mr. Petersen was a German. The Minister of Trade and Commerce of that day, Sir Richard Cartwright, replied that he had not heard of any such rumour, but he understood that Petersen was a Scandinavian. It may be of interest to know what Sir William Petersen's origin is, because I understand that no reference is made to this in Who's Who. In the years that followed, there was a lengthy debate on the Petersen-Tate contract with the government. We find the subject dealt with in 1897 and 1898—several times in the latter year—and in 1899; in different volumes of Hansard, all the way down to 1903, when the refund was made to Petersen, Tate Company In the present instance Sir William Petersen possibly felt that it would be better, in making a contract with the government, not to put up any deposit; it would save the inconvenience of having it returned to him later on if he did not fulfil his part of the contract. It is rather remarkable that he was released from his contract with the government for the Atlantic fast steamship service the very year that Mr. W. T. R. Preston was sent to England by the government to take charge of the immigration service. Before the end of that year, that is to say, in November of 1899, the North Atlantic Trading Company was organized, and after it had drawn $360,000 out of the treasury in bonuses for the people to whom I have referred, who were coming out to this country, the items contained in the Auditor General's report for this purpose caused an inquiry to be made by the parliament of that day, with the result that those who were identified with the organization of the North Atlantic Trading Company were brought over here from England to give evidence before a committee of parliament. Mr. Smart, who was Deputy Minister of the Interior, when the contract was made, but who afterwards resigned and went into the employ of the North Atlantic Trading Company, was also brought over but he refused to divulge who comprised that company. Mr. Preston was also brought over and he too refused to say who constituted the company to whom this $360,000 had been paid. Motions were moved in the House to have these gentlemen brought before the bar of the House and compelled to give this information, but these motions were voted down by the government supporters of that time.

In 1906 Sir George Foster, then member for North Toronto, moved in the House to have the contract cancelled, and during the debate that ensued on his motion he was informed by Mr. Oliver, the Minister of the Interior, that the contract had been cancelled. The minister was asked when this had occurred and the information disclosed that it had taken place about two weeks before the time of its debate. No satisfactory explanation was given for the cancellation. They had a contract with the government extending over a period of ten years, eight years of which had still to run, when the contract was cancelled. When the first arrangement was made in 1899 it was not even by order in council; the arrangement was made on the strength of a letter from the Deputy Minister of the Interior addressed to the North Atlantic Trading Company, and Mr. W. T. R. Preston accepted the proposition on behalf of the government. The North Atlantic Trading Company ceased to function in 1906 and a motion was made the following year to have a further investigation made. But this was burked also by the government. I am referring to this matter because there has been a strong suspicion in the minds of some people that some of the steamship companies in some way obtained a rake-off in connection with the immigration which came to this country at that time. I believe that Sir William Petersen has been cabled to to come here in connection with the inquiry that is to be held, and it may be that he can throw some light on the operation of the North Atlantic Trading Company at that time.

I do not wish to labour the matter further, and I would not have referred to it again out for the stand I took on this matter a year ago when I made on the floor of the House statements which have so far gone unchallenged. No attempt has been made to refute a single statement I made in connection with this matter either a year ago or during the present session. There are members of the government who must have some knowledge of what occurred in those years, and I hope that before the end of this debate some of them will undertake to give an explanation as to why, of all the men in the Dominion of Canada, this particular individual, W. T. R. Preston, should be selected to submit a report on a question of such importance as the one under consideration. I pointed out a

year ago that I was conscious of the fact that transportation was one of the biggest problems we had to deal with in this country. Excessive costs of transportation are absorbing the profits of business, and this fact and the high wages paid, together with other conditions of an adverse nature, are responsible for the exodus of many of our agriculturists from the farms and for the general unsatisfactory condition of affairs that prevails. But, nothwithstanding all protests and the motion I moved in this House, this man was selected and his report, bearing date December 31, 1924, has been submitted to parliament. The contract with Sir William Petersen which is now under consideration was made twenty days before the Preston report was submitted. I noticed in the Manitoba Free Press, a few days ago an intimation that the contract was entered into during the summer—quite a long time ago. This journal says:

> As to Sir William Petersen, his difficulties seem to be the result of the change in government which took place in England last autumn. The contract with the Canadian government was entered into in the summer when the government of Ramsay MacDonald was in power. The Labour party in England received Sir William's overtures for assistance in very friendly fashion, and it is said he had arranged for an advance under the Trade Facilities Act before the contract was signed.

Surely the Minister of Trade and Commerce (Mr. Low), instead of assuming a defiant attitude when addressing the House on this question might have been frank in his statement, and I am confident, if he had, a good deal of this discussion would have been avoided. But he pursued the very unusual course of stating that the government were not accepting responsibility for the contract, although he said it was a cast-iron one. Cast-iron is not a very flexible commodity, you cannot make any impression on it by squeezing, you cannot pare it; you can only alter it by breaking it. The minister stated he was going to ask that this cast-iron contract should be submitted to a special committee of this House. It is most unusual for a government to submit their policy to a special committee and be unable to alter it if deemed advisable. I do not think any hon. member has ever heard of such a proceeding before. My hon. friends to the left may say, "Oh, but this is the democratic way of doing things." Well, it may be democratic according to their views, but I venture to say that it is not in accordance with British parliamentary practice and procedure. All that this contract lacks is the ratification of parliament. Having entered into the contract, why do the government not assume full responsibility, submit it to the committee of the Whole House and have it dealt with in the usual way? The majority of hon. members will not be in a position to know what is going on in the special committee, and the whole scheme will all have to be gone over again, for each member of the House is entitled to know everything about this contract as well as the members of the select committee to be named. Does the minister not know, do the government not know, what arguments they have to advance to justify the ratification of this contract by the House? Is it necessary to inform the House through a special committee, to call witnesses before that special committee, and then put all the other members of this House to the trouble of seeking information from the members of the special committee? It has always been customary in the British parliament to place the fullest information on any subject before the people's representatives. But it is significant that the government have apparently abandoned the W. T. R. Preston report, and they are not today even relying on the report of the special committee of two sessions ago, on agricultural conditions, for the hon. member for Lunenburg (Mr. Duff) last night took great care in the latter part of his address to point out that the contract was entered into as the result of some other information which the government had obtained, not because of any information they derived from those sources first referred to. That being the case, why do the government not submit the contract to the House? Then if conditions such as those referred to in the Manitoba Free Press and elsewhere are responsible for a change in the contract, let the government make a new contract with Sir William Petersen, if necessary, and submit it to the House in the usual way. Why all this humbug about a special committee taking evidence and hearing argument, if the government are not going to make a change in the contract? I venture to state that, in view of the nature of the contract, if it is referred to a special committee it will not come back to this House in time to be dealt with this session. And I think the government would now welcome such a fate for the measure. Last night the Minister of Agriculture (Mr. Motherwell) attempted to deal with this question. And how did he deal with it?

Mr. GRAHAM: Splendidly.

Mr. SUTHERLAND: Well, if any members visited a vaudeville show in the city last night they missed a treat in this House, because had they been in attendance they would have seen a real vaudeville entertain-

ment. I doubt if ever before a minister of the crown adopted a similar attitude on an important question of government policy to that of the Minister of Agriculture last night. I believe the Minister of Railways (Mr. Graham) is to speak on this question to-day. I hope that he will deal with it seriously; he understands the difficulties with which this country is confronted, difficulties which the advocates of this contract have already admitted. But the annual subsidy of £275,000 may not be the ultimate expenditure on this project, because it only requires the sanction of the Minister of Trade and Commerce (Mr. Low) to increase it without limit. For instance, he may think it advisable to have twenty ships, or to increase the number to forty, maybe to sixty, or even to a hundred ships; it is impossible to foresee what obligations we may be assuming if we ratify this contract. Our obligations under the Transcontinental railway legislation of 1904 may eventually prove a mere bagatelle compared with the possible expenditure on this project. Unfortunately the government do not appear to be conscious of the responsibilities which they are placing on the country and of the difficulties which confront the people to-day. We need to exercise the greatest possible degree of economy, and everyone knows that we cannot regulate ocean rates with any ten small ships that the government may subsidize.

But what about our own Canadian merchant marine? "Oh," the Prime Minister says, "they are no good." That is the frame of mind of a lot of people in this country with regard to anything the people possess. Our government-owned railways, according to some people, are of no use. I do not believe that it is possible for a government to do anything as well or as efficiently as a private individual or company can, but the railways now forming our national system were becoming bankrupt one after another, they were tumbling into our hands, and the government of the day had to make the best of a difficult situation and take them over and operate them. We have the Canadian merchant marine fleet of sixty boats. What did the Liberal party do when they had their national convention in this city in 1919? Were they not condemning the then government for not having done more than they did in providing for ocean transportation? I would point out, Mr. Speaker, that according to the report I have before me the Canadian Government Merchant Marine does not look so very bad when compared with the ships to be provided under the contract with Sir William Petersen. I think the hon. member for Brandon (Mr. Forke) was not correct in his summary of the tonnage of the Canadian Government Merchant Marine. There are forty-two boats in the service of over 4,500 tons each; there are thirty-two of these over 5,000 tons; there are twenty-six of over 8,000 tons, and there are two of over 10,000 tons, or a fleet of 60 in all. And yet the government proposes to give a subsidy of £275,000 for ten boats of 5,000 tons each. "But oh," they say, "they have a different type of engine to compete with them." Yes, and the old bottle-necked boats of the trans-atlantic service contract of 1897 were supposed to have advantages over all the other boats that were then in existence, but they did not turn out that way. It is just possible that Sir William Petersen's claim for the superiority of these boats will fall just as far short of fulfilment. In the first place, he has not the boats. True, the contract shows that one or two of them are now under construction—on the strength of a contract which is now to be referred to a special committee of this House. That indicates how much confidence the government have in their ability to put this measure through the House.

In connection with the government merchant marine, some evidence was taken by the committee on Agriculture in 1923, and I think there is a misapprehension in the minds of some people as to the evidence that was given before that committee. Mr. Cunningham, traffic manager of the Canadian Government Merchant Marine, was examined on March 21, 1923. His testimony was in part as follows:

By the Chairman:

Q Mr. Cunningham, in looking over this file I felt that we should have further information on this point: Are the different lines in Montreal members of the north Atlantic conference?—A. Yes, sir.

Q. I think you have said on several occasions that in attending this conference the Canadian Government Merchant Marine did not obligate itself to maintain the rates. Is that right?—A. In sitting in at the conference the Canadian Government Merchant Marine reserves the right in the interests of Canadian exporters to independent action if necessary.

Q. That is well understood between yourselves and the other lines?—A. Yes, sir.

That does not look as though it was almost a criminal offence for the traffic manager of the merchant marine to know what the other steamships were doing. How in the world could a steamship line be managed otherwise? It is alleged that the government merchant marine did not cut rates; that they stood in with the others; that they took the part of dumb spectators and allowed the conference to fix the rates and charge whatever exorbitant rate they pleased. Now

let us see what was said on that point at the hearing to which I refer. I quote from Mr. Cunningham's evidence:

Q. I think you said when you were here the other day or yesterday that you had departed on certain occasions from the rates fixed by the Canadian Liner Committee, and my impression is that you said that it would average about once a month, the departure from the rates. Am I right?—A. The way the question was put perhaps would indicate that we averaged once a month, but what I meant to convey was that the total number of times or the total of shipments accepted might in the aggregate amount to, in three years, thirty-six times.

On thirty-six occasions they disregarded the rates established by this conference, in an attempt to meet the views of the people. The witness was also asked regarding some of the commodities upon which a reduction had been made. One of them was meats, on which the rate was reduced from $1.50 to $1.25. Another was leather. I quote:

You just told us about three of those discussions in the four years you have been operating. Tell us in what respect you have battled for lower rates, and in regard to what commodity?—A. I remember sole leather in rolls was one where we arranged to meet the shipper's wishes in making a very drastic reduction.

Q. Did you get your assocation to comply with that?—A. Yes.

No interference—the conference did not interfere with them, although they made a reduction.

Q. What was the drastic reduction?—A. I think it was from $2 to $1 per 100 pounds.

Anyone will admit, I think, that that was quite a reduction—the rate was cut in two.

Mr. MEIGHEN: Was there any complaint as to the quality of the ships?

Mr. SUTHERLAND: No.

How many shipments did that cover?—A. Well, unfortunately after the rate was reduced we did not get any shipments.

What could the traffic manager of the Canadian Government Merchant Marine do under those circumstances? He cuts the rate by fifty per cent, yet the traffic goes to the other people. He was asked:

Q. Why did it go by other lines?—A. The shipper's privilege.

Will the government undertake to coerce people to send their shipments by these subsidized boats if the rates are reduced? Well, here was a reduction of fifty per cent, yet they did not get the traffic.

Something was said before this committee also with regard to cattle, and the explanation was that the government boats would require some alterations to make them as efficient for the carrying of cattle as some other boats were. There is no reason why that should not be done. It is true that the merchant marine did not devote much attention to carrying cattle, because, as Mr. Cunningham pointed out, there was not any money in it; they had to be carried at a loss. Mr. Cunningham also showed that this conference had exercised no control whatever over grain of all kinds, flour and cattle; these were outside the scope of the conference. And we are asked to believe to-day, on the basis of the reports and everything that is being said, that the Canadian Government Merchant Marine are a party in a combine to increase rates. The Prime Minister was asked why they had not taken the merchant marine out of the combine and made it compete with them.

5 p.m.

Mr. MEIGHEN: Was there any evidence given at the hearing to the effect that cattle, grain or flour were under the control of the conference?

Mr. SUTHERLAND: I could not answer that, but according to Mr. Cunningham these shipments were not under the control of the conference.

Mr. MEIGHEN: Who is Mr. Cunningham?

Mr. SUTHERLAND: Traffic manager of the Canadian Government Merchant Marine. A tremendous amount of evidence was taken, much of it of a contradictory nature. That is why the hon. member for Brome (Mr. McMaster) and the committee were anxious that the committee be formed at the following session, and if the government had done the proper thing, the thing that would have commanded the confidence of the people, they would have acted on that recommendation. Had the same committee or a similar committee been appointed last session there would not be the suspicion there is in the minds of the people to-day with regard to this agreement entered into without competition—an agreement which, while supposed to have been made on the report of the commissioner, was, according to its face, entered into twenty days before his report had even been mailed to the government.

The government are in a very favourable position to deal with ocean rates owing to the fact that we have a great system of government railways. These railways are under the control of the railway commission and they can utilize the boats of the merchant marine in a way that would not be possible if the country were not operating this extensive system of railways. Why subsidize another line of boats and have it enter into competition with and

help to destroy the usefulness of the government merchant marine? It seems to me that that would be the effect of the government's proposal; I cannot gather any other deduction from it. Here we have sixty boats, many of them double the capacity of the boats that it is proposed to subsidize. In view of the increasing liabilities in connection with our railway system I think the government should be very careful about entering upon the enormous expense involved in this proposed scheme.

I started out by referring to what the Prime Minister said in the debate on the Address in connection with this matter. It was also referred to in the Speech from the Throne where it was said:

> With regard to ocean freight rates, action is being taken to overcome the restraints on export trade due to the exactions of the powerful steamship combine known as the North Atlantic Steamship Conference.

Note the words "due to the exactions of the powerful steamship combine known as the North Atlantic Steamship Conference". I do not think the Minister of Railways will argue that a conference is not almost a necessary thing in connection with the operation of steamship lines. If a combine does exist then I think steps should be taken to deal with it; but I venture to predict that the arrangement proposed by the government will not accomplish anything. Some few years ago the government passed legislation for the regulation of rates on the Great Lakes; but afterwards had to abandon it and almost beg American shipping companies to come in and ignore it. They had to draft a provision to indemnify these companies in any action that might be brought against them for violating a Canadian statute. The statement made by the Prime Minister during the debate on the Address was as follows:

> This House will be favoured shortly with a report which I think it will find illuminating on the subject of this combine and its control of rates across the Atlantic.

What report was he referring to? Was it what is known as the Preston report, or was it not? I think some one should make that point clear. He goes on to say:

> Hence we contemplated the step referred to in the Speech from the Throne which will be announced in detail to parliament in due course, and which we hope will be a further factor in helping to solve our great national problems. We hope so far as our effort in this regard is concerned, that the Canadian government will not have to battle alone, but that it may look to the governments of all the other self-governing dominions, and to the government of the Mother Country itself, to co-operate with us in fighting this great combination that exists on the Atlantic, to the detriment not only of Canadian trade but the trade of Australia, South Africa, New Zealand—

[Mr. Sutherland.]

And so on. I wish to point out that as the debate progressed it was quite apparent that the Prime Minister has changed his mind considerably with respect to this being a cast-iron contract. It is liable to be changed if it goes to a committee. I think the government should explain why it is necessary for them to change their views with regard to this matter and, that if Sir William Petersen is not prepared to carry the contract or an amended contract, they will take the House into their confidence to that extent. I have repeatedly stated, in connection with the estimates submitted to the House, that it seems to be absolutely necessary to practically pry any information out of the government on any question where sums of money are to be voted. The present arrangement is one that involves a large sum of money, much greater than most people realize, too large an expenditure for the people of this country to make under present conditions unless the absolute success of the enterprise is assured.

I do not intend to speak at further length on this subject. I have endeavoured to touch on a few of the difficulties which the people have to settle in their own minds as to the sincerity of the government in this matter. I think the people are justified in being suspicious of the government's attitude from the beginning. The very fact that they refused to appoint a committee at the last session of the House would indicate that they did not attach much importance to the work that had been done by the special committee in 1923. The fact also that the government appointed a commissioner to investigate or who was supposed to investigate, this matter, a man whose reputation was not such as would justify the government in entrusting such an inquiry to him, is also suspicious. For Mr. Preston is well known for his connection with election scandals and other suspicious transactions which transpired in the past, things that might well have been forgotten were it not for the determination of the government to keep him in the forefront by identifying him with arrangements of this kind. I should like to know what special qualifications this party ever had to justify his appointment to such a position in connection with this contract? Surely the government cannot afford to sit dumb and have these challenges hurled at them time and time again?

Mr. MOTHERWELL: I will answer that question if the hon. gentleman wants to know. Mr. Preston was appointed for this purpose because he was a good mouser.

Mr. SPENCE: Kindly explain that.

Mr. SUTHERLAND: I do not understand.

Mr. MOTHERWELL: Does not the hon. gentleman know what a mouser is?

Some hon. MEMBERS: Louder.

Mr. MOTHERWELL: I say Mr. Preston was appointed because he was a good mouser —m-o-u-s-e-r.

Mr. SUTHERLAND: We are getting a little information, anyway, after a long delay. We now understand this man was appointed because he was a good "mouser." According to my observations of the feline tribe, a mouser generally eats the mouse when he catches it. I would hardly expect the Minister of Agriculture to be serious. Because he is a good mouser! Some hon. members of this House may be curious to know a little more about this expert mouser. He has been nosing around here so long that his scent must be very keen. I have an index here to a few of the references which have been made in the House of Commons to this expert mouser. It does not go back beyond 1899 but in volume three of Hansard of that year at page 6938 a reference is made to him. At page 8570 there is another reference. I am not going to mention the matters that were referred to, but they are all connected with the suspicious activities of this expert mouser. Again in volume three of Hansard, page 8570, occurs another reference. A question was asked as to what salary the government were paying this mouser, and the answer was $3,000 per year and expenses. That was the time, it will be observed, or shortly before it, when he was engaged in the work of bringing "those 100 families of foreigners out to those close constituencies in Ontario." And when he was connected with the North Atlantic Trading Company and that company were receiving five dollars per head for the Doukhobors and other immigrants from central Europe. In the same volume three, at page 8574 hon. members will find a reference to the money that was being spent on this same individual. In the same volume at page 8574 and 8575, the same year, we find another reference. Then at page 8578 to 8618 we find a lengthy debate in connection with the matter at that time, and the motion was that Mr. Preston's services be dispensed with. A debate followed and the motion was defeated. A further reference will be found at page 8618 and a further reference at page 10,214, The motion was that he should be dismissed on account of his conduct in the West Elgin and other elections. That motion was defeated, as will be seen at page 10,217. In 1901 we find an inquiry by Mr. Wilson as to Mr. Preston's return to Canada, why he came and so on, and a further reference at page 4820. In the same year, 1901, at page 4819, a reference to his operations will be found. There is a further reference also to be found at page 4819 to page 4842 in the Debates of 1901. In 1903 the matter again cropped up. At page 10,712 and 10,713 a further reference to him will be found. In volume five, 1903, at page 11,184 and at page 12,220, references are made to Mr. Preston being in court and being sued by the Canadian Employment Bureau. Then in 1904, volume four, page 6014 and 6015, Mr. Clarke, the member for Toronto, called attention to a letter in the Times, London, June 18, 1904, with regard to the difficulty between Lord Dundonald and the Canadian government signed by Preston, and a debate followed, pages 6551 and 6552. In 1904 volume four, at pages 7817 and 7818 we find a further reference. In 1905, volume one, page 452 there is an inquiry with regard to salary, expenses and other matters. In 1906, volume three, page 4451, we find a motion by Mr. Monk that Mr. Preston be summoned before the House for having refused to answer questions regarding the North Atlantic Trading Company. Hon. members will find the debate between that page and page 4535. There is a reference to the matter also on page 4534. In 1909, volume four, page 5656, Mr. Borden inquired:

When was Mr. Preston removed from Japan to Holland?

To which Sir Wilfrid replied that he was assigned to Holland within the last month.

Now it was necessary, in view of the scandal connected with the refusal of these government officials to divulge who had received the $360,000 to cancel the contract, and Mr. Preston was sent out to Japan, just as far away as they could send him, and he again got into difficulties in Japan.

In 1909, volume four, page 6657, we find a reference by Mr. Reid and Mr. Ames to complaints of Mr. Preston's conduct while in Japan, and in the same year, volume four, page 5999, Mr. R. L. Borden referred to complaints as to the conduct of Mr. Preston in Japan.

Then in 1907-08, volume one, page 360, Mr. Foster inquired:

(1) When did Mr. Preston leave the immigration work in England?
(2) (a) What has he since been engaged at? (b) Where? (c) What salary? (d) What expenses?

Mr. Frank Oliver replied as follows:

(1) October 26, 1906 (2) (a) and (b): Was appointed Canadian trade commissioner to China, Japan and Korea, August 31, 1906.
Assumed office October 27, 1906—(c) $3,948.39, $2,702.48, including $1,034.70 living expenses at Cape Town.

Then in 1909, volume one, page 186 of Hansard, January, 27, 1909, we find a question by Mr. J. D. Reid, as follows:

Has the Kobe foreign board of trade of Japan forwarded a memorial to the government protesting against the actions of Mr. Preston?

Then we have the reply by Sir Wilfrid Laurier in the affirmative. They had protested against them. We have a further question by Mr. Reid as follows:

Is the government aware that the Japan Weekly Chronicle in its articles declares Mr. Preston is really outrageous in his statements and insinuations against foreign merchants and asks for his recall?

And Sir Wilfrid Laurier answered no.

Mr. Reid asked if the government had taken any action, and Sir Wilfrid replied no.

Then in 1909, volume one, page 480, February 3, 1909.

Again in 1909, volume two, page 3991, April 5, 1909, Mr. Ames inquired:

(1) Does Mr. Preston still occupy the position of Canadian trade commissioner in Japan?
(2) Has he been requested to return or has leave been granted to him?
(3) Has the government in contemplation the transfer of Mr. Preston, if so, where?
(4) Will the government lay on the table protests from the Kobe foreign board of trade and the Yokohama board of trade re actions of Mr. Preston?

In the debate which followed it showed he had been transferred to northern Europe.

Then in 1909-10, volume one, page 1547-49, December 15, 1909, Mr. Monk made a statement regarding Mr. Preston's connection with the North Atlantic Trading Company and debate followed.

In Hansard of 1909-10, volume one at page 656, we find Mr. McKenzie's motion for copy of judgments in connection with Mr. Preston's suits instituted while in Japan.

In Hansard of 1919, there is a reference to statements published in the press over the name of Mr. Preston re soldiers lying in Flanders Field for no other reason than that they voted for the Liberal party. My hon. friends opposite will remember the insinuations—they were not charges—that were made in the old temporary parliament buildings and how they claimed that they were going to investigate those things when they came into office. Why did they not do so? Why were these slanders made by their representative overseas at that time not investigated when they were placed in office and had the opportunity? Preston was the man who was responsible. The hon. member for North Renfrew, a year ago when I took this matter up, asked why Mr. Preston had been arrested. I will tell my hon. friend to-day that I did not know then why he was arrested. He was arrested for going into military encampments and interviewing the soldiers where he had no business to be without permission. He was arrested as a suspect and locked up, but was released when he explained who he was—an agent of the Liberal party. He was mousing around again.

In 1922, Mr. Guthrie asked for facts in connection with an item of $1,509.95 for rent of house leased by Mr. Preston in England prior to 1911.

There are further references to Mr. Preston in the following Hansards:

1921. Volume 4, page 3383.
1923. Volume 1, page 206.
1923. Volume 1, page 247.
1923. Volume 2, page 1362.
1924. Volume 1, page 734.

Surely some mouser! I have not referred to these matters because it is any pleasure for me to do so. I could not say that I ever saw the gentleman referred to until he was pointed out to me in the gallery in this House a few days ago, but I did hope that the cleaning-up process which we had in Ontario in 1905 would forever put an end to such scandals as we had then in this country prior to that time. If the government hope to have the confidence of the people of Canada in any scheme that they may have or any measure they may wish to lay before parliament, they will have to appoint someone of a different calibre and with a better reputation than Mr. W. T. R. Preston has. They cannot evade the responsibility in this matter.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): Mr. Speaker, I am sure the House will not expect me to deal at any great length with the ancient feud between the hon. member for South Oxford (Mr. Sutherland) and Mr. Preston. The hon. member has referred to the cost that Mr. Preston has been to this country. I think Mr. Preston's salary would shrink into insignificance when compared with the cost of Donald Sutherland on Preston in parliament.

Mr. SUTHERLAND: Might I explain to my hon. friend that I have here a volume of the Senate Hansard to which I did not refer at all? I touched upon only what took place in the House of Commons.

Mr. GRAHAM: My hon. friend is keeping that until he gets to the Senate, when I suppose he will read everything on Preston that is in the Commons Hansard and everything

that is now in the Senate Hansard and that will be when he gets there. The time, however, is not propitious yet. I will say just this: I leave Mr. Preston to take care of himself. I think hon. members when they meet him in the committee will find that he is quite capable of doing so.

Mr. MEIGHEN ,The Minister of Agriculture (Mr. Motherwell) will help him.

Mr. GRAHAM: He will not require even the help of the able Minister of Agriculture. The hon. member for South Oxford read a letter purporting to be written by Mr. Preston in reference to the distribution of votes of immigrants. It sounds almost like a page out of the War-time Elections Act when, by legislation, the votes of our boys were partitioned out through the Dominion of Canada where they would do the most good to the Tory party. What Mr. Preston, even if the letter be correct, said in that letter, is not a circumstance to what was done in the War-time Elections Act. The letter was the opinion of one man, while the degradation of the electorate of Canada was the combined effort and concerted legislation of a party. I am through with my hon. friend.

This question of transportation, of course, as all hon. members know, is a difficult one and not a new one. I often think, sitting quietly, that the reasons for some of the difficulties of industry, particularly agriculture, are deeper even than transportation, with this explanation only, that exorbitant cost of transportation is one of the nibblers at the success of the agricultural industry. Hon. members have all noticed, when a man brings to town a load of hay, not pressed, just in the ordinary old hayrack, loose, with a binder on top, that every hungry horse along the road takes a nibble at the load of hay. There are people who are sufficiently charitable to their horses and uncharitable to the man who is selling the hay to drive up a team and let them eat at it all along the road. It just strikes me that a comparison can be made there with the different processes that are nibbling at the products of the farm, the mine, the forest and the fisheries from the time those products leave the hands of the producer until they get into the hands of the consumer. In years gone by our great grandfathers took a bag of grain in on horseback to the old-fashioned mill and got back a certain quantity of flour and a certain quantity of the by-product. It was said even then that our friends the millers took quite a bit of toll. A little later the wheat was drawn in and ground and flour taken home with a team—a little advancement. Up to that time there was only one toll. Following that, the wheat was drawn into town and was traded for flour—two tolls. Later on the wheat was brought in and sold and the money was used to buy the flour—another toll added—middlemen in different capacities. This has now reached the point they tell me that when many of our good friends take their wheat into town, they take home not flour, but bread. So that everyone gets a crack at this load of wheat before it reaches its destination. I am taking wheat as an example. Let us follow it from the time it leaves the home of the producer; elevator, percentage; out of the elevator on to the train, percentage; Winnipeg sale, percentage, broker; down to the ship on the Great Lakes, broker; insurance, broker. So that by the time you have got it over the ocean and have paid the freight rates you have paid out a lot in percentages; and when you want to sell the grain finally there is another broker to be considered. I have come to the conclusion therefore that the great trouble with our trade in Canada—and probably it is the same in other countries—is that we have not yet solved the problem of getting the product of the producer to the home of the consumer without incurring a great deal of expense in the transition.

Mr. FORKE: We are getting there out in the west.

Mr. GRAHAM: I was going to refer to that. You have a wheat pool in the west which has been accomplishing a good deal. But after a visit to Europe, after you have seen what Australia and other countries are doing, you must admit that the wheat pool solves the difficulty only at one end of the route; and in my humble judgment there should be some way by which the Liverpool, the Antwerp, the Hamburg market, and the prices which the farmer gets in the west might be more comparable than they are at the present time. We send our product over there; we have several associations all doing good work. But that product has to be handled through another process of brokerage, or whatever you may call it, before it is really sold to the consumer. The same thing applies in a measure to flour, perhaps in as great a measure. This is only a hint I throw out before coming to the discussion of ocean freight rates, because ocean freight rates form one incident, and a not inconsiderable one, of the taxes that are placed on the products of Canada, as of other countries, from the time they come from the soil until they reach the home of the consumer.

In 1903 the question of freight rates by land was taken up in a very practical way,

and what is known as the Board of Railway Commissioners was appointed. Before that time everything depended on the state of mind of the railway companies as well as on the extent of competition. I am a full believer in the work done by the Board of Railway Commissioners, and I believe that we should have been in a much more chaotic state in this country had we not had some authority to which to refer our railway problems. The United States has had an interstate board with, I believe, less authority perhaps than is the case in Canada. They have problems which perhaps are more difficult to solve than ours owing to the fact that their state incorporation and control of railways in the various states is more marked than is our provincial control; for although it is not here a matter of statute, it has become largely a matter of practice that steam roads should be under the Board of Railway Commissioners. But after the Board of Railway Commissioners had settled down to work and had established a basis of rates, the people discovered that no matter how fair a rate might be by land, say from the west to the east or vice versa, it was within the power of the ship owners by increasing rates on the ocean, to nullify all benefits the people might receive by a reduction in the cost of land carriage. For example, if one company owned a railway and a steamship line as well, it made no difference very materially to that company where the rates were placed on land, so long as they could place the rates on the ocean at a point that would make up for all that they lost in railway carriage. And what was applicable to companies owning both a railway and a steamship line was applicable generally, inasmuch as other railways would have traffic arrangements with ocean vessels, by which the two carrying systems could so adjust their rates that, no matter how you might control the land rate, the ocean rate could be so fixed as to wipe out any benefit that the shippers might otherwise receive.

That was found to be the case; at least that was the situation in 1910. In that year I had the privilege of taking up this question of ocean freight rates with the then chairman of the Board of Railway Commissioners, the late Mr. Justice Mabee. Anyone who knew Mr. Justice Mabee and knew of his work as head of the railway board will agree with me that he was a strong friend of the public, and endeavoured to render decisions which, while not being unfair to the companies, would at the same time afford all the relief possible to shippers. I am going to quote at some length from a memorandum prepared by Mr. Justice Mabee on this question, because I want to make it clear that the statement that this subject of ocean freight rates is new is not by any means correct. The problem has been wrestled with by governments for the last fifteen years, but this is the only government that has had courage enough to tackle it. This memorandum was prepared by Mr. Justice Mabee at my request and forwarded to the British government, and I shall read it because I believe it contains information which, coming from a man like him, will be of deep interest to the shipping public and to every hon. member of this House. On February 18, 1910, I wrote the following letter to the present Postmaster General (Mr. Murphy) then Secretary of State:

[Mr. Graham.]

Dear Mr. MURPHY:

I enclose a memo made by the chairman of the Board of Railway Commissioners, at my request, in reference to joint action between the government of Great Britain and the government of Canada respecting the regulation of ocean rates.

Will you kindly bring this to the attention of the home government, so that consultation might be had on the subject, as I deem it very desirable that steps should be taken to control these rates, for reasons which are set out in the memo.

Yours truly,

GEO. P. GRAHAM.

Hon. Charles Murphy, M.P.,
Secretary of State.

The memorandum in question is as follows:

Memorandum showing the necessity for legislative control over ocean rates and facilities between Great Britain and Canada.

For many years in England, in the United States and in Canada, the principle of governmental control over railway rates and facilities has been in active operation. These countries found it necessary, in the interest of the public, to establish tribunals with statutory authority to control the rates or tolls that railway companies charge the public for the carriage of traffic. The legislation in the three countries differs in detail, but the English act forms the basis of the others; the tribunals have different names, their jurisdictions vary in many details, some having wider powers over a greater majority of subjects than others, but over the control of freight and passenger rates upon railways there is a common field of jurisdiction.

In Canada the Board of Railway Commissioners has under the various acts affecting it, namely, 3 Ed. VII, Cap. 37, 6 & 7 Ed. VII, Cap. 38, 7 & 8 Ed. VII, Cap. 61 & 62, 8 & 9 Ed. VII, Cap. 31 & 32, jurisdiction over almost all matters relating to railways (except incorporations), as well as telegraph, telephone and express companies.

The jurisdiction of all these controlling bodies is limited to the land, or land and inland water movement; in other words, the moment that export traffic reaches the seaboard of any of these three countries, government control over its movement is entirely lost.

First, as to the existing conditions regarding the transportation of traffic from Canada to Great Britain; take the shipment of grain from Winnipeg to Liverpool via Montreal and the St. Lawrence route. The all rail haul from Winnipeg to Montreal is 1,414 miles; the distance from there to Liverpool via Belle Isle is 2,760 miles, and via Cape Race, 3,007 miles.

Under the present law, when these shipments reach Montreal, control over the rates and conditions of transportation is lost, the result being that for two-thirds of the total distance the traffic moves at the rates the ocean carriers choose to make. If this grain moves from Winnipeg via Fort William or Port Arthur to Georgian bay ports, and thence rail to Montreal, the inland movement is some 200 miles shorter and control over the through shipment that much less.

If it is wise to control the transportation upon land, why is it not in principle equally wise and in the public interest to control the ocean movement? If the public derives any benefit from the control of the rates affecting the land movement of the above traffic, that being one-third of the distance, it is fair to assume that it would derive much greater benefit if the rates from Winnipeg all the way to Liverpool were under control.

In this connection it may be noted that the government has expended nearly $11,000,000 on the St. Lawrence ship channel; over $1,000,000 on the Montreal harbour; has loaned nearly $11,000,000 to the commissioners of the Montreal Harbour Board; and has large annual outlays for lighting and buoying the St. Lawrence route, and all these expenditures have been and are being made that the cost of carriage along the St. Lawrence route may be cheapened by the elimination of the dangers of navigation. In the last annual report of the Montreal harbour commissioners, it is stated that the St. Lawrence river from the ocean to Montreal is acknowledged to be the best lighted and buoyed ship channel in the world.

It is said that some $750,000 has already been expended upon surveys for the Georgian bay ship canal. It is contemplated spending $100,000,000 or more upon this work. To what end? Cheapening the cost of getting the output of the west to the seaboard. The government is being pressed to take over the control of the elevators at the head of lake Superior; to cheapen the Welland canal; to press along the construction of a line to Hudson bay; all these to what end? Cheapening the freight rate to the seaboard. To what use, if all control over or regulation of the carriers' charges is to be lost the moment the traffic reaches that point? A road to Hudson bay must and will be built. Take Regina as a central point for the shipment of grain and cattle to a Hudson bay port; control over the rates and facilities would exist for about 800 miles, and no control for 3,000 miles upon shipments to Liverpool.

Contracts have been let for the construction of elevators at Vancouver, and within a few years vast quantities of wheat from points as far east as Regina will find their way to the English consumer via Vancouver to Salina Cruz, thence over the Tehuantepec railway (189 miles) to Puerto, Mexico, and thence to Liverpool. The distances over this route are, Regina to Vancouver, 1,127 miles; Vancouver to Salina Cruz, 3,054 miles; Salina Cruz to Puerto, Mexico, 189 miles; Puerto, Mexico to Liverpool, 4,800 miles. Here is a rail haul of 1,316 miles, 1,127 in Canada, the rates over which are under control, and 189 in Mexico, and a water route of 7,854 miles. It is likely no effective control over the portion of this route through Mexico could be worked out; but the portion between Vancouver and Salina Cruz could be—probably the portion of the route between Puerto, Mexico and Liverpool could—as to all grain shipped from Canadian ports—also be brought under a controlling tribunal.

After the completion of the Panama canal Canadian grain from British Columbia ports will go all water to Liverpool the distance to which from Vancouver is, via the Panama canal, 8,800 miles, and the rates over the whole of this route could be controlled, apart from canal tolls, if any.

All that has been said about the movement of grain applies to all traffic moving from Canada to Great Britain, and with still greater force upon all traffic coming from there to Canada, because if from an interior point the rail route there is so much shorter than in Canada.

Applications are continually made to the Board of Railway Commissioners for reduction in freight charges upon export traffic, such as cheese, butter, bacon, cattle, grain and so forth, and every reduction made on the land haul gives the ocean carrier an opportunity to add that to his charges. In a few years' time from 600,000,000 to 800,000,000 bushels of wheat alone will be exported from Canada to Great Britain, and with all the return traffic that such an export business means it will be a sorry day for the people of Great Britain and Canada if it is to be left to the ocean carriers to say what they are to be charged for the ocean portion of the route. The time to obtain control over the rates upon this traffic is while it is comparatively in its infancy, and not after enormous development has taken place and shipping trusts of all kinds have grown up. Had the United States established a railway commission thirty years before they did, they would never have had the abuses they have, since its establishment, been endeavouring to cure.

Express traffic is increasing rapidly. There are demands from all over Canada for reduction in express tolls. Take this illustration—a package is sent from England to Winnipeg by the Dominion Express Company, which is owned by the Canadian Pacific Railway Company. This package comes over the Atlantic in a Canadian Pacific Railway steamer to Montreal; thence over the Canadian Pacific railway to Winnipeg. What is the use of reducing the toll from Montreal to Winnipeg when all the express company requires to do is to increase the ocean toll to take up the difference? The same may be said of practically all traffic between the two countries to-day.

An international tribunal, consisting of the English Railway and Canal Traffic Commission and the Board of Railway Commissioners for Canada, or certain defined members of these commissions, could, by joint legislation, easily be empowered to control all these matters. Many details would have to be provided for, but there is no doubt acts could be framed applying the general principles of railway rate controlling legislation to ocean carrier. They are in effect common carriers. Most of them are incorporated in Great Britain or Canada. Very large sums are annually expended for their benefit in harbour improvements, lighthouses, buoys and so forth. They may easily form monopolies; it is charged that they have many times done so. Great Britain is dependent upon her food supply from abroad. This supply will increase yearly from Canada. The imports to Canada from there will increase yearly; so surely it is in the interests of the people of both countries that the ocean rates upon all this traffic should be under some controlling tribunal. Nor should it be to the disadvantage of the ocean carrier. Recently rates on westbound traffic were increased 25 per cent; the carriers said they were losing money; the shippers raised much complaint. No means exist for ascertaining if this increase is proper. If ocean carriers were compelled to file tariffs and could be brought before a tribunal to show the necessity for increase, if the increase were proper it would be allowed; in which event there should be no dissatisfaction. As it is, the carriers may be compelled to increase rates, and thus incur much adverse criticism, notwithstanding they are in the right. If, on the other hand, they are in the wrong, some power should exist to control them.

This is a memorandum sent me by the late chairman of the Board of Railway Commissioners, Mr. Justice Mabee, and if I re-

member correctly, an order in council was passed and this was forwarded to the British authorities.

Will you call it six o'clock, Mr. Speaker?

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

MARCONI WIRELESS TELEGRAPH COMPANY —EXTENSION OF PATENT

Mr. CAHILL (for Mr. Marler) moved the second reading of Bill No. 19, respecting a patent of The Marconi Wireless Telegraph Company of Canada, Limited.

Mr. MEIGHEN: Would the hon. member define to us the merits of this bill?

Mr. CAHILL: I was asked to have the second reading of the bill moved so that it could go to a committee. I am not prepared to say anything further about the bill.

Mr. MEIGHEN: The hon. member certainly has not said very much about it. Sometimes these bills are very objectionable. It seems a small enough matter to extend a patent, but the law provides a definite period for the life of a patent and the House should not be asked to give a second reading to a bill for extension unless it knows the special circumstances that entitle these men to special treatment.

Mr. CAHILL: In view of the objection, Mr. Speaker, I would ask that the bill be allowed to stand until the mover (Mr. Marler) is in his seat.

Motion stands.

CONCRETE SURFACING MACHINERY COMPANY

Mr. BOUCHARD (for Mr. Chevrier) moved the second reading of Bill No. 20, respecting a patent owned by the Concrete Surfacing Machinery Company.

Some hon. MEMBERS: Explain.

Mr. SPEAKER: As there is nobody to explain the bill, it will stand.

Motion stands.

MARCONI WIRELESS TELEGRAPH COMPANY

Mr. MICHAUD (for Mr. Casgrain) moved the second reading of Bill No. 21, respecting The Marconi Wireless Telegraph Company of Canada.

Mr. MACLEAN (York): I would raise the same objection to this bill that was offered in respect to the other. Here are two Marconi bills; and the greatest merger on this continent is now being consummated in New York, embracing all the American telegraph and telephone companies, all the wireless companies, all the cables, all the Marconi systems. In fact, I do not know where it does not go. The capitalization is to be a billion dollars?

Mr. SPEAKER: If the hon. member will allow me: if the mover has an explanation to give he might give it now, and then the hon. member for South York (Mr. Maclean) may follow.

Mr. MICHAUD: The object of the motion for the second reading, I understand, is to have the bill referred to a committee as soon as possible.

Mr. GORDON: I understand from the mover of the bill (Mr. Casgrain) that there is no variation of powers; the object of the bill is solely to change the name of the company.

Mr. MEIGHEN: It does more than that. It reduces the par value of the shares; and further powers are given to the company—it may engage in the business of telephone communication as well. It confirms a certain by-law; I presume that is the by-law reducing the par value of the shares. It also gives the company certain powers with respect to increase or reduction of its capital in the event of a two-thirds vote.

Mr. SPEAKER: Stands. I may say I have noticed that when private bills are called, hon. gentlemen in whose names the bills stand, with a few exceptions, are usually absent. I have to see that the rule is enforced, and I would remind hon. members who sponsor bills that they should be in their seats to explain them.

Motion stands.

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—MOTION FOR RATIFICATION DISCUSSED

The House resumed consideration of the motion of Hon. T. A. Low (Minister of Trade and Commerce) to ratify and confirm a contract between His Majesty and Sir William Petersen providing for the establishment of a subsidized steamship line on the Atlantic, and government control of certain ocean rates, and the proposed amendment thereto of Mr. Clark.

Mr. GRAHAM: At six o'clock I had just concluded reading a lengthy but interesting memorandum by the late Mr. Justice Mabee, then chairman of the Board of Railway Com-

missioners, pointing out the wisdom of forming, if possible, a joint tribunal for the control of ocean rates so that traffic could be controlled from the point of production to the point of consumption, including both land and water transportation. I might follow that up by reading a copy of the order in council dealing with the matter:

The committee have had under consideration a report, dated February 21, 1910, from the Secretary of State for External Affairs, submitting a memorandum prepared by the chairman of the Board of Railway Commissioners, at the request of the Minister of Railways and Canals, pointing out the necessity which exists for governmental control over charges made to the public for the carriage of water borne traffic, similar to that which is now exercised over railway rates.

The committee recommended that Your Excellency may be pleased to forward this memorandum to the Right Honourable the Secretary of State for the Colonies, with the expression of a desire on the part of Your Excellency's ministers that this important subject be brought to the attention of His Majesty's government, with a view to the establishment of a joint tribunal for the regulation and control of ocean rates.

Mr. MACLEAN (York): Was there an answer to that communication?

Mr. GRAHAM: I will come to that in a minute. That communication was dated February 26. Let me now place on Hansard a communication of February 21:

The undersigned has the honour to submit to Your Excellency a memorandum prepared by the chairman of the Board of Railway Commissioners at the request of the Minister of Railways and Canals pointing out the necessity which exists for governmental control over charges made to the public for the carriage of water borne traffic, similar to that which is now exercised over railway rates.

The undersigned recommends that this memorandum be forwarded to the Secretary of State for the Colonies with the expression of a desire on the part of Your Excellency's ministers that this important subject be brought to the attention of His Majesty's government with a view to the establishment of a joint tribunal for the regulation and control of ocean rates.

All of which is respectfully submitted.

I want to point out to the House after editing this document that a direct and specific recommendation was made with a view to the establishment of a joint tribunal for the regulation and control of ocean rates. That will be important, perhaps, in view of what followed. About the same date, yes it was February 28, 1910, there was a memorandum that had been presented by Mr. Grigg, who was then trade commissioner for Great Britain in Canada, touching on this very same question, which was submitted by the Governor General of the day to the British government. The House will bear with me, I hope, while I read it because these facts are important as touching the entire question of ocean freight rates and the situation as it existed at that time:—

Government House, Ottawa,

February 28, 1910.

My Lord,—I have the honour to transmit herewith for Your Lordship's consideration an important minute of council approved on the 26th, instant, pointing out the necessity which exists in the opinion of His Majesty's Canadian government, for governmental control over charges made to the public for the carriage of overseas and water borne traffic, similar to that now exercised over railway rates, and expressing the hope of my responsible advisers that it may be possible, with the co-operation of His Majesty's government, to establish a joint tribunal for the regulation of ocean rates.

I also have the honour to enclose for Your Lordship's information as bearing upon the subject referred to in the above minute, a copy of a memorandum handed me by Mr. R. Grigg, His Majesty's Trade Commissioner on the Board of Trade (residing in Montreal). The figures and statements in the enclosed memorandum would appear to indicate that the recent rises in the ocean freight from British to Canadian ports, which have resulted from the operations of the Canadian North Atlantic Westbound Freight Conference, and the further rises in contemplation, must mean a transfer of Canadian trade from Great Britain to the United States, and a certain loss to the peoples of Canada and Great Britain of the benefits of the customs preference of 33⅓ per cent now given by Canada to British goods.

I have the honour to be, My Lord,

Your Lordship's most obedient humble servant,

GREY.

Now, I wish to read the memorandum that had been handed to Lord Grey, the Governor General, by Mr. Grigg, representing the British government in Canada:

Press paragraphs indicate an increase of freight rates between Europe and Canada is contemplated by the Canadian North Atlantic Westbound Freight Conference.

The operation of the conference is believed to have resulted in a continued increase in freight rates, and in the application of more stringent regulations tending in that direction. The natural result of such conditions has been to lessen the value of the British preference and to reduce the volume of British freight to Canada, while United States products carried by rail and therefore not subject to the same increased charges, have profited by the resulting handicap to British trade.

Up to a comparatively recent date the rate for dry goods to Ontario by the Elder Dempster line stood for years at 8 to 10 shillings per 40 cubic feet, but on the sale of that company's steamers to a member of the North Atlantic Conference the rates were raised to from 15 shillings to 17 shillings 6 pence for Canada, and even now the rate for dry goods, via certain United States ports is 10 shillings while for Canadian traffic from 15 shillings to 17 shillings 6 pence is charged.

It would appear that a further increase in rates based, not on competitive conditions, but on a monopoly control, may be expected to further reduce the tonnage carried and prove a source of injury to British trade. The effect upon British trade opinion just at a time when a marked increase of interest in all Canadian matters is being evidenced in Great Britain, can hardly admit of doubt.

The following table shows the triennial increase of imports from the year 1892 to 1909, and the same average for British and American imports with their respective percentages.

With the permission of the House I should like the table to appear on Hansard:

Average	Total Imports	Imports from G.B.	Percentage	Imports from U.S.A.	Percentage.
1892-4. ..	$113,134,051	$40,209,671	35.54	$ 51,609,339	45.62
1895-7. ..	104,218,293	31,095,008	29.83	53,577,245	51.41
1898-1900	149,386,838	37,751,589	25.27	88,457,424	59.21
1901-3. ..	199,664,868	50,211,920	25.15	116,895,752	58.54
1904-6. ..	259,496,447	63,750,411	24.57	154,746 960	59.63
1907-9. ..	296,611,781	76,501,606	25.71	121,101,041	58.88

It will be noticed that the comparisons of percentual averages 1892-4 and 1907-9 are as follows:

	British	American
1892-4..	35.54	45.62
1907-9..	25.71	58.88

the money value being as follows:

	British	American
1892-4	40,209,671	51,609,339
1907-9	76,501,606	121,101,041

It follows therefore, that during a period of immense expansion in Canadian trade, British imports have suffered a percentual loss of about 10 per cent, while United States trade shows a percentual increase of over 13 per cent. Stated in values the United States had on the average years 1892-4 the advantage over Great Britain in imports to Canada, of $11,399,668 and in the average years 1907-9 that advantage had risen to $44,599,435, and that notwithstanding the preference which came in operation in 1897 and was increased in 1900.

The obvious conclusion based upon the above figures is that any increase in steamship rates must mean a transfer of trade from Great Britain to the United States, and it appears to be certain that anything which increases commercial intercourse between Canada and the United States must encourage the building of lines running north and south, necessary to satisfy the needs of an increased volume of trade.

I have given Mr. Grigg's memorandum and the table attached to it.

Mr. MEIGHEN: Will the minister tell me, how did a memorandum come to be sent over by Lord Grey and comment made upon it? Apparently it was never referred to in the advice given Lord Grey by the cabinet.

Mr. GRAHAM: I do not know. In Lord Grey's communication it states that it was handed to him by Mr. Grigg.

Mr. MEIGHEN: It is a strange thing.

Mr. GRAHAM: He was representing Great Britain in Canada, as trade commissioner. I am simply giving the records. Here is a resolution from Toronto, and of course this must be orthodox:

Whereas information has been given to the Toronto Board of Trade that it is proposed by the North Atlantic Westbound Freight Conference to materially increase the transportation charges for ocean freights from British to Canadian ports; and

Whereas the Canadian government, with a view to bringing about closer relations with Great Britain, has given a customs preference of 33⅓ per cent for British goods—

Be it resolved that an urgent appeal be addressed to all Canadian shipping companies to resist any proposed increase, as the effect of such increase must tend to divert to the factories of the United States, trade which the preference was designed to encourage with Great Britain and further be it resolved that a copy of this resolution be sent to the Prime Minister, and the Minister of Trade and Commerce, and the Minister of Marine, with the urgent request of the Toronto Board of Trade for the co-operation of the government at Ottawa to preserve to the people of Canada and Great Britain the benefits of the preference as it now exists.

Mr. SHEARD: What is the date of that communication?

Mr. GRAHAM: It is about 1909.

Mr. SHEARD: I was not in the House then.

Mr. GRAHAM: Hon. members will note that the board of trade at Toronto wanted to convert the heathen elsewhere, and so fearful it was lest the British preference might be interfered with by high ocean rates that it sent a copy of this resolution to other boards of trade. This resolution continues:

It is resolved also to send copies of the resolution to the boards of trade of the cities of Hamilton, Montreal, Quebec, St. John and Halifax.

That was the attitude taken on ocean rates by the representative of the British government. Let me go back a little. The hon. member for South York (Mr. Maclean) asked me a question and I am not sorry that he did. Now I will reply to that question, and in this connection I want to link up with this the amendment of the opposition, to which my hon. friend from South York is supposed to pay allegiance. I hope he will not. Here is the reply that came in response to a communication by the government and prepared by the late Mr. Justice Mabee. Remember, the distinct recommendation was not for investigation, not for sidestepping, but for a board of joint control of the various parties interested. Here is the reply:

I am directed by the board of trade to advert to your letter of April 1, transmitting copy of a despatch from the Governor General of Canada, on the subject of the proposed regulation of ocean freight rates, and asking for an expression of the views of the board on the proposal made by the Canadian government for the establishment of a joint tribunal for the control of these rates.

With reference thereto, I am to observe that, as Lord Crewe is aware, the question of the control of ocean freight rates and of the operations of shipping combinations is full of difficulties. The whole matter of shipping rings was quite recently investigated by a strong royal commission, on which the self-governing dominions were represented. A copy of the report of the commission is enclosed herewith.

The royal commission considered, inter alia, the suggestion made in South Africa that a board of control should be established comprising representatives from all the interests concerned, including the colonial government, but they came to the conclusion that it

was neither practicable nor desirable to invest any external body with power to fix rates of freight by compulsion (Cf. pars. 318 and 319 of the report, Cd. 4668, 1909). At the same time the commission made certain recommendations with a view to the establishment of means of conciliation.

Mr. MACLEAN (York): Who says that?

Mr. GRAHAM: I will give the signature in a little while.

Mr. MACLEAN (York): Who made that statement?

Mr. GRAHAM: The royal commission. At the same time the commission made certain recommendations with a view to the establishment of means of conciliation. The resolution continues:

The Board of Trade do not think that the considerations which have resulted in the control of the railway rates and facilities apply with equal force to the control of shipping rates and facilities. In the case of the former the government has granted certain monopoly privileges which, owing to the fact that the ocean is a public highway, could not be granted to shipping conferences. It also appears undesirable in the interests of imperial trade, to hamper British shipping companies in international competition by restrictions which it would be impossible to impose upon their foreign competitors.

While for the above reasons the board would see great difficulty in the establishment of a joint tribunal for the control of ocean freight rates, they direct me to call Lord Crewe's attention to the recommendation made by the Royal Commission on Shipping Rings in paragraph 332 of their report, that, to meet the possibility of cases arising where public interests may be greviously affected either by the checking of a trade or by its more or less permanent diversion, the Board of Trade should have the power to appoint competent persons to investigate the matter. There seems no reason why His Majesty's government should not discuss with the Canadian government the question of holding a joint inquiry into the rates charged and facilities afforded by the shipping companies engaged in the trade between United Kingdom and Canadian ports, either on the lines of the recommendation of the royal commission or on the lines of the inquiries provided for in the Combines investigation bill which it is understood has passed through the Canadian legislature.

I have, etc.,

R. C. HERON-MAXWELL.

The Under-Secretary of State,
Colonial office.

Mr. MACLEAN (York): They did not care much for the preference.

Mr. GRAHAM: And I must read another letter by Lord Crewe to Lord Grey, in reply, I presume, to Lord Grey's communication which I read a few minutes ago. It reads:

With reference to my despatch No. 224 of the 31st of March, and to Your Excellency's despatch No. 90 of the 28th February, I have the honour to transmit to you, for the information of your ministers, the accompanying copy of a letter from the Assistant Secretary of the Marine department of the Board of Trade expressing the views of the board on the proposal to establish a joint tribunal for the regulation and control of ocean rates, together with a copy of the report of the Royal Commission on Shipping Rings to which reference is made by the Board of Trade.

2. Your ministers will see that the board discover difficulties in the establishment of a joint tribunal for the regulation of ocean freights but suggest that there might be a discussion of the question of holding a joint enquiry into the rates charged and facilities afforded by the shipping companies engaged in the United Kingdom-Canada trade. You will no doubt furnish me in due course with the further observations of your ministers upon the question.

I have, etc.,

CREWE.

Hon. members having heard this, I wish to read to the House the amendment of the opposition. Mark you, we asked in 1910 for a joint tribunal. It was refused, the reason being given that it was impracticable. If it was impracticable in 1910, it is more so now, because the ramifications are greater. It was admitted by Mr. Grigg that there was a combine on the Atlantic, and as proof of that combine, he cited the fact that when the Elder-Dempster line had been sold to a member of the North Atlantic Steamship Conference, rates went up by leaps and bounds. He named the commodity and he asked, as representing the British government, that something be done. The government of Sir Wilfrid Laurier, through a letter addressed by myself to the then head of the Board of Railway Commissioners, outlined a proposition. I have read the reply which, to put the case mildly, was an absolute refusal to have a joint board. What does the amendment of my hon. friend say? This is the amendment of the hon. member for Burrard (Mr. Clark), speaking for the opposition:

I therefore move that Mr. Speaker do not now leave the chair, but that it be resolved: That effective control of ocean rates can be exercised only with the co-operation of all portions of the empire, and by a body on which all are represented, and the contract made by the government with Sir William Petersen, based on the report of W. T. R. Preston, is ill-advised—

And so forth. This amendment asks us in this parliament in the Dominion of Canada as representatives of the people to pass a resolution requesting the British government to do something which they refused to do in 1910. Is that going about the matter in a practical way? I can tell hon. members now my private opinion of what it is worth, namely, that this country will never get any control over ocean rates by a combination made up of the different parts of the empire. We are here to look after the interests of the Canadian people, and if this plan that is now proposed fails, this government is going to endeavour to get some other plan that will not fail. I say it advisedly again that there can be no efficacy in this amendment which asks the British government to form a body,

which the British government was asked to form years ago when the situation was not nearly as acute as it is at the present time, and which that government refused. Great Britain is greatly interested in shipping. It controls to a large extent the shipping of the world, and I say this not with any prejudice, that the great mass of the people in Great Britain are interested in the success of the greatest industry they have, that is shipping, and they are not interested in the decrease of the rates which that shipping gets.

Mr. MACLEAN (York): Will the minister say, as regards the document that he read embodying the policy of the British government, whether this is the first time it has been published?

Mr. GRAHAM: I am not sure, but this is the first time I have published it. I have been asked: The British government asked for a reply to your last document, what reply did you make? I made no reply whatever. I know when I am turned down.

Mr. CALDWELL: Has this document been on the departmental files ever since?

Mr. GRAHAM: This document has been with the Board of Railway Commissioners and I have been digging assiduously for a few days to find out things. My memory served me fairly well as to where these things were, but I wanted the documents themselves. I have been asked, as I said before, what reply I made when the British government asked for a reply to their document suggesting an investigation. I made no reply so far as I can find, and I think my memory serves me well at the same time, because we were after something to control ocean rates, not something to investigate. We had the proof from different parts of Canada, from our shippers, that they thought ocean rates were too high, and we wanted to devise some scheme to control ocean rates, as I outlined this afternoon. We did not need any further investigation. I say frankly that I considered the suggestion to make further investigation just another method of side-stepping the whole question and getting away from the one thing we were after.

Mr. MACLEAN (York): Why did you not reach for the big stick?

Mr. GRAHAM: We think we have one now.

An hon. MEMBER: Preston?

Mr. GRAHAM: My hon. friends opposite are investigating Preston all the time instead of investigating ocean rates. I am trying to stick to the subject.

Mr. CHAPLIN: Why did the minister send him over if the minister knew all about it before?

Mr. GRAHAM: My hon. friend knows that his friend the hon. member for South Oxford (Mr. Sutherland) would have been out of a job if we had removed Preston from the scene. I am going to stick right to this text of mine because it is very illuminating, and my hon. friends will discover that they were in it up to their ears and were endeavouring to do the same thing in their minds. The British government refused to appoint a joint board. We say now that it is futile, foolish, to fish out an amendment asking them to do something which they have refused to do and which this House knows they have refused to do.

But all the virtue was not in the Liberal government. Occasionally there are spasms of lucid intervals with our friends. When the people of Canada, through a misconceived notion, changed governments, the successor to Mr. Justice Mabee had the same idea that Mr. Justice Mabee had, that there should be some way of controlling ocean rates in line with the authority and machinery provided for the control of rates by land. So, the hon. member for West York (Sir Henry Drayton) very wisely, and I will not say following up what his predecessor did, but following along the same line, came to the conclusion that some method should be devised to control ocean rates. The hon. member for West York and I discussed the matter in a friendly way several times. The government of that day, through an order in council, sent the hon. member for West York, then head of the Board of Railway Commissioners, to London, to see if he could accomplish something. I will read the order in council authorizing him to proceed. This is dated July 23, 1913. That was before the war:

> The committee of the Privy Council have had before them a report, dated 15th July, 1913, from the Acting Secretary of State for External Affairs, with reference to the question of the regulation of ocean freight rates.
>
> The minister observes that this subject engaged the attention of the Canadian government in 1910. On the 26th February of that year a minute of council was passed advising that this matter should be brought to the attention of His Majesty's government with a view to the establishment of a joint tribunal for the regulation and control of ocean rates. In the month of August following, a despatch was received from the Secretary of State for the Colonies enclosing a memorandum from the Marine Department of the Board of Trade in which it is set forth that:—
>
> "There seems no reason why His Majesty's government should not discuss with the Canadian government the question of holding a joint enquiry into the

rates charged and the facilities afforded by the shipping companies engaged in the trade between United Kingdom and Canadian ports, either on the lines of the recommendation of the Royal Commission or on the lines of the enquiries provided for in the Combines Investigation Bill which it is understood has passed through the Canadian legislature."

It does not appear that any action was taken upon this suggestion.

The minister, conceiving the time to be opportune for renewing the consideration of this important question, recommends that H. L. Drayton, Esquire, Chief Commissioner of the Board of Railway Commissioners, be authorized to proceed to England for the purpose of discussing with the Imperial authorities the question of governmental control of the charges made by the shipping companies to the public for the carriage of ocean-borne freight.

The committee, concurring, advise that Your Excellency may be pleased to forward a copy of this minute, if approved, to the Right Honourable the Secretary of State for the Colonies for the information of His Majesty's government.

All of which is respectfully submitted for approval.

RODOLPHE BOUDREAU,
Clerk of the Privy Council.

Up to that time we were all of the same mind; it did not need any Preston report nor the report of any committee to convince the government of 1911 as well as the one succeeding it that something ought to be done with ocean freight rates. And they sent the hon. member for West York (Sir Henry Drayton) overseas to look into the matter. I saw the hon. gentleman the day he was going and he was full of enthusiasm, but I suggested that he would come back with the same information that I already had. He went over and did his best, and I am not going to discuss anything that occurred or did not occur. But no board was formed for the control of ocean rates, nor has there been any up to this day. I want to be fair, and I will observe that there are difficulties. As has been pointed out, the ocean is not like the right of way of a railway; if you make it too hard for ships to come to one port they can go to another. The difficulties therefore are great. But it does strike me that if Canada had had the sympathy of the British Board of Trade, part of the British government, in endeavouring to arrange fair ocean rates, a tribunal could have been established that might have had some effect at least. And the very fact that a combination had been formed from various parts of the empire, having in view the control of ocean rates, would have had the effect perhaps of obviating any necessity for action at all looking to the control of rates.

The question has been asked, and I think the leader of the opposition (Mr. Meighen) is somewhat enthusiastic about it—Why do you not use the merchant marine? Well, I will answer that question in due course. But before I take it up I want to refer to another matter, because I do not want to attribute anything to my right hon. friend's government which should properly be attributed to that of his predecessor. I find some correspondence tabled the other day, and in it there is a letter from Sir George Perley to the right hon. the Prime Minister of that day, now leader of the opposition, pointing out that excessive ocean rates exist, or at any rate that the people believe they exist. Let me read the first paragraph:

London, S.W., 4th January, 1921.

Dear Mr. Meighen,—You will remember that during the past ten years the question of ocean freight rates has been discussed many times, as they often seemed higher than was reasonable, and some of us thought that a way might be found for controllng them by a body similar to our railway commission. I am sure that you have been approached many times on the subject and I had occasion to look into it a good deal when carrying on the Trade and Commerce department in Ottawa in Sir George Foster's absence. Not long after we came into power, while Acting Prime Minister, I arranged with Sir Henry Drayton to come over here and try and find out the feeling here on the subject.

Now listen.

He came back not feeling very hopeful about the possibility of getting anything done in the direction of freight rate control but he will be able to tell you about this himself.

The reading of that confirms what I have stated. The second attempt, yes, the third attempt did not get us anywhere, no matter what party was in power on this side of the line.

Mr. MEIGHEN: What was the third attempt?

Mr. GRAHAM: This is the third attempt about which I am reading now. To proceed:

Nothing was done about this question during the war but on April 29, 1919, I received the following cable from Sir Thomas White who was then Acting Prime Minister.

Sir Thomas White evidently thought there was need of action. I am just reading portions of the letter.

Mr. MEIGHEN: It is not long and hon. members would like to have it all.

Mr. GRAHAM: Very well, I will read it.

Canada much concerned about ocean freight rates—Enquire and cable whether British government would co-operate with Canada in giving effect to report of Royal Commission on Natural Resources, Trade and Legislation of certain portions empire as presented to Imperial parliament in March, 1917—this report finds that it is not desirable that operations of steamship companies carrying passengers and freight between Canada and England should remain longer without government supervision—most important to obtain official position of British authorities respecting matter."

This I at once communicated to the Colonial Secretary here and I spoke to Sir Robert Borden about it when I was in Paris a few days after receiving it. In the reply from the Colonial Office they drew attention to a despatch which had been sent to the Gov-

ernor General on December 9, 1918, and which contained suggestions for the constitution of an Imperial Investigation Board for the purpose of reviewing questions relating to maritime transport and to the development of the sea communications of the empire.

Sir Robert Borden had evidently been giving the matter his careful consideration and in May, 1919, he prepared a memorandum "respecting necessary control of ocean freight rates and the disposition of available shipping", of which you will find a copy attached. This memorandum, which suggested in effect that the control of ocean rates and disposition of shipping should be placed in the hands of a commission, composed of representatives from the various parts of the Empire, was transmitted to Mr. Lloyd George and to the Prime Ministers of the other dominions.

Canada had acquiesced in the suggestion for the appointment of the Imperial Investigation Boad but in view of Sir Robert Borden's memorandum further consideration was given to the matter and eventually the Imperial Shipping Committee was created on the lines of the Colonial Secretary's despatch to the Governor General of Canada of October 11, 1919, by an instrument under the hand of Mr. Lloyd George dated June 15, 1920, copies of both of which you will find attached.

As the question of the control of freight rates had been one of much interest to Canada I rather felt that, if it were to be taken up seriously before this committee, someone with technical knowledge and understanding of commercial shipping questions should be here to assist me in my capacity as the representative of Canada on this committee. I put my views forward fully to Sir Robert Borden in a letter dated December 9, 1919, and, after this had been considered at Ottawa, Sir George Foster wrote me suggesting that Mr. William Phillips, who is the European manager over here for the Canadian National Railways, might act in the capacity of an adviser, on account of his knowledge of Canadian conditions and of shipping matters in general. I arranged with Mr. Phillips accordingly and he has been both courteous and helpful. I took him with me to the first meeting of the committee and I arranged that he could attend in my absence, although he is of course a busy man. Yesterday we had a long talk on the subject and reviewed the position as it has developed so far. The committee has held some 14 or 15 meetings, of which six have been devoted to "Ship-owners' liability by clauses in bills of lading", and the majority of the others to evidence given by representatives of various port authorities on questions relating to port facilities, control and development.

On July 29 last the chairman of the committee wrote me (copy of letter enclosed) saying that the committee desired to be furnished with up to date information regarding dock and harbour accommodation and other maritime transport facilities and would be glad to have before them as full a statement as possible of the views of the Canadian government on the questions falling within the scope of the terms of reference.

This letter was referred to the Department of Marine in Ottawa and I have a reply from them saying that the information asked for is being prepared and will be forwarded shortly, but that, so far as they know, the Dominion government has no statement to make.

The reason that I am writing you at the present time is in order that you may consider and decide whether you wish to bring before the committee the question of the control of freight rates. I understand that this was the chief ground on which the Canadian government favoured the appointment of the committee, but this question has so far received but slight attention, as the committee has occupied itself mainly in the discussion of subjects which, while no doubt important, have but little bearing on this point.

[Mr. Graham.]

Let me interpolate, that that will be the result of every meeting you have of a committee of that kind: it will discuss everything but the question of ocean freight rates.

The terms of reference do not definitely give the committee authority to consider the possibility of controlling freight rates, but I explained fully to the committee at their first meeting the interest which Canada took in that question, and that it was largely in view of Sir Robert Borden's memorandum on that point that the committee had been created. The instrument of appointment gives the committee authority to inquire into and report "on all matters connected with ocean freights and facilities," which appears to be sufficiently broad to cover the question of control of freights.

Then you will see that one of the clauses in Sir Halford Mackinder's letter of July 29 is as follows: "If your government should think it desirable now to nominate witnesses the committee would be glad to have information as to when they would be available to give evidence." The present therefore would appear to be an opportune time to take up with the committee the question of the control of ocean freight rates if you think it advisable to do so. I realize quite well that the position is not quite the same now that it was before the war. In the first place, there is at the present time a plentiful supply of ships and therefore freight rates naturally tend to adjust themselves on a reasonable basis. Then there is of course the fact that the Canadian government now owns quite a large number of ships and is therefore in that way able to exercise a certain amount of control regarding rates. These facts may influence the views of the government on the subject, but in any case I would suggest that the question be considered and a decision arrived at as to whether you care to press the matter before the Imperial Shipping committee on the basis of the memorandum prepared by Sir Robert Borden in May, 1919. If you should decide to do this, I think you will agree with me that someone with full technical knowledge and who understands commercial shipping questions should prepare the Canadian case carefully and then come over here to appear before the committee and to give evidence regarding it. As such a large amount of tonnage is owned in these Islands they are perhaps naturally not very anxious about the control of freight rates and therefore, if you decide to bring the question before the committee, I do not think it possible to give too much time or attention to the preparation of our case.

Will you kindly consider this matter and advise me as to your wishes.

Yours sincerely,

GEORGE H. PERLEY.

Now, if I had read that letter in the first place it would have saved a large portion of my speech, because Sir George Perley, in mild language, absolutely states the case as it is, that there is not much sympathy in Great Britain for the practical control of ocean rates. It is so simply on the face of it.

Mr. MORRISON: Does the minister mean to tell us that the manufacturers of Great Britain have no particular interest in low ocean rates? Have they not just as much interest in securing low rates as the shipping companies have in maintaining high rates?

Mr. GRAHAM: I would not go that far. But there are so many of them and so few of us. As a matter of fact, the greatest industry in Great Britain is shipping; the success of Great Britain depends largely on the profits of its shipping, and from the government down most of the people are shareholders in the shipping companies of Great Britain. In a word, the vast majority of the people have, directly or indirectly, investments in the shipping of Great Britain, and on the success of that shipping depends to a large extent the industrial prosperity of Great Britain. They are not like we are in Canada at all.

Mr. BIRD: I was wondering whether the minister had considered the possibility of the British government retaliating against the proposal of the Canadian government, and what would be the result of such retaliation?

Mr. GRAHAM: How would they retaliate?

Mr. BIRD: After reading the British debate on the Petersen contract it seemed to me that Mr. Guinness had already fired the first shot, and that that might be the ominous beginning of war between the British government and our own.

Mr. GRAHAM: I would not have such a poor opinion of the British government as that. Of course we have in this country people who would retaliate to the limit against the United States on the tariff, but a good many of us think that that action would not do us any good. I am not inclined to think there would be any retaliation. On the contrary, I fancy Great Britain rather likes to see her sons overseas show a disposition to look after themselves.

Mr. BIRD: I am not suggesting any such strife, but it is a point that has troubled me considerably, and I was wondering if the minister could forsee its probable consequences. As he says, the shipping profits are very vital to the public of Great Britain, and it is therefore only natural that the government should rally to the defence of the shipping interests. When the British government withdrew the subsidy to the Petersen firm, it seemed to me indicative of a possible development of strife between the two governments.

Mr. GRAHAM: We cannot foresee what will happen, but I do not imagine that the British government in all its might would endeavour to crush out the Dominion of Canada's trade, because the trade of Canada is as vital to Great Britain as the trade of Great Britain is to Canada, and Great
9 p.m. Britain is not likely to overlook the British preference in our tariff. But we have to look out for ourselves so far as we can. Let me refer for a moment to the supposed action of the British government with regard to Petersen. It has been said that the withdrawal of the British subsidy would prevent Sir William Petersen from going on with his contract with us. He says not. But if Sir William is prevented from doing so, he will not get a cent, and it will not cost us a cent. But we are going on in an earnest endeavour to bring about a state of affairs that will let the shipping companies of the world on the Atlantic and the Pacific know that Canada wants to get a square deal for her people.

Now, here is a letter, dated February 16, 1921, from the right hon. leader of the opposition, who was then Prime Minister:

> Dear Sir GEORGE PERLEY,—After consideration of your letter of January 4, we have decided that the question of the control of ocean freight rates should be placed before the Imperial Shipping committee at an early date. We also agreed with your suggestion that the case from the Canadian viewpoint should be carefully prepared, and Dr. Magill, of the Grain Exchange, Winnipeg, has been asked to undertake the task. As soon as his report and recommendations are received they will be considered and transmitted to you for your guidance.

I understand Dr. Magill did not undertake the work.

Mr. MEIGHEN: There was a letter asking him to undertake it.

Mr. GRAHAM: Yes.

Mr. MEIGHEN: There was also a reply from Dr. Magill, but apparently the government cannot find it.

Mr. GRAHAM: Dr. Magill sent a telegram the other day stating that he had made no report. I would imagine he sent an acknowledgment of the invitation.

Mr. MEIGHEN: It was in the correspondence.

Mr. GRAHAM: There we are right up to 1921 and not a blow struck for reduced freight rates. I think the correspondence I have read from Sir George Perley himself is absolutely convincing that no relief is to be expected in control of ocean rates through co-operation of the various parts of the empire, without anything I have said being taken into consideration at all.

Now I come to the Canadian Government Merchant Marine. It has been asked: Why do you not use the merchant marine? My right hon. friend the leader of the opposition in

his interruptions this afternoon intimated that that ought to be the course to be pursued. Let me refer you again to Sir George Perley's letter. Sir George Perley in pointing out the difficulties of this ocean control, called the attention of the then Prime Minister, the present leader of the opposition to the fact that they now had a merchant marine in Canada that could in a measure control the rates. Why did they not do it? I notice that no one is speaking too loudly. The opposition ask—and those who have given the least study to it ask the oftener—why we do not use the merchant marine for this purpose now? Well, my right hon. friend, as was pointed out to him by Sir George Perley, had a brand new merchant marine, with the paint not yet dry on it—the ships being turned out; not a trade route established the removal of which would embarrass anyone—ships out there at anchor. And Sir George Perley was saying: "Why do you not put them to work to bring down freight rates?" But it was not done.

Mr. MEIGHEN: They were all running.

Mr. GRAHAM: Some of them were not finished until quite a while after the war. But here were these boats, free to be turned loose on the north Atlantic to reduce rates; and when the high commissioner asked the Prime Minister of the day to do it it was not done. They belonged to the north Atlantic conference and they were put on other routes; they were not used to break the freight rates on the north Atlantic. Now we are asked why we do not do it. There are two or three reasons, and I may help my right hon. friend out of the hole a little before I get through.

Mr. MEIGHEN: I am not in it.

Mr. GRAHAM: Badly. It is a great thing to feel happy—

Mr. MEIGHEN: I am glad I am not in the government's hole.

Mr. GRAHAM: And my right hon. friend will not be for a great many years. At present the merchant marine ships are on established routes, that is, the ships that are capable of carrying large cargoes at reasonable rates. This government came in and found these ships. We were not responsible for the Canadian Government Merchant Marine which cost three or four times as much as it would now; but there the ships were, with a heavy capital expenditure, and they had been handed over to the Canadian National Railways just a short time before. They were not in charge of the minister who built them; they were shifted over to another department. Unfortunately I was put at the head of that department. The management of the Canadian National Railways have been sending these ships over different routes throughout the world, getting away as far as possible from keen competition, because they could not in some circumstances compete with the faster ships or ships better adapted to certain cargoes. New trade routes have been worked out that are of benefit to the Dominion of Canada. I asked one of the members from British Columbia the other day, when he was talking about taking the ships off routes that were not paying—he did not say anything like that in 1921 when there were practically no routes established—I asked him if he would allow us to take the ships off the route that had been established between eastern Canada and Vancouver, and he immediately said no. These ships at the present moment are not paying but we are developing an interprovincial trade by water to the benefit of both extremes of the Dominion of Canada, and in a short time I believe they will bring a profit to the merchant marine as well as great good to the country.

Mr. LADNER: If the minister will allow me, I suggest that he may develop the ends and choke the centre through the custom house regulations at New York.

Mr. GRAHAM: Now my hon. friend is running away to the Customs department. These ships do not need the Customs department. My hon. friend would want us to ship goods via American bottoms to New York. Well, we are trying to develop an all-Canadian route with the merchant marine that does not have to go to New York.

Mr. CLARK: I do not wish to interrupt the minister, but I would remind him that I myself advocated last year just such a service as he is now speaking of, and it was advocated by others also. It was promised by the Minister of Customs (Mr. Bureau) who is unfortunately not in his seat. But will the minister tell the House when this service between Vancouver and eastern Canada by water was established? I understood him to say it had been established; am I correct?

Mr. GRAHAM: Surely.

Mr. CLARK: When was it established and what does it consist of?

Mr. GRAHAM: I am not prepared to give those details. But it is carrying all the traffic that is offered and is prepared to increase the number of sailings as the traffic increases.

Mr. CLARK: When was that service established?

Mr. GRAHAM: Some months ago.

Mr. CLARK: Are there regular sailings?

Mr. GRAHAM: Whenever there is freight there are sailings.

Mr. CLARK: That is, there are no regular sailings?

Mr. GRAHAM: I would not say that My hon. friend can say it if he likes. We are trying to establish—

Mr. CLARK: I do not want the minister to misunderstand me; I am only asking for information with regard to the service that my hon. friend is referring to. Of course, if he does not want to give the information, all right.

Mr. GRAHAM: That is not a good way to put it. I might put it in such a way as to suggest a little surprise at my hon. friend living in Burrard and not knowing the steamship sailings, but I do not want to say that; we are trying to discuss this without manhandling each other. I say the Canadian merchant marine has put on a service between eastern and western Canada via the Panama canal and is prepared to increase that service as the traffic is offered. Then we have other sailings from Vancouver; we have sailings to the Orient, sailings to Australia. Who is to say we ought to take these ships off and put them on the north Atlantic, even if they could be used to reduce freight rates on the north Atlantic.

Mr. LADNER: Are they not paying?

Mr. GRAHAM: At the present time some of them are; still, would my hon. friend take them off? I am pointing out that we are not in the same position to put the merchant marine on the north Atlantic to reduce rates as was the previous government, which had them before any trade routes were established. Unless we take the ships off routes some of which are paying, others developing Canadian trade, others bringing trade to the Canadian National, we cannot do it. Unless the members of the House from various parts of Canada will say, "Yes, take these ships off the routes in our locality," then we have not any ships left of any consequence, even if they were suited for use on the north Atlantic in this connection.

Now, let me go a little further. As to this Petersen contract, let me make it clear that Sir William Petersen is offered so much money if he gives a certain service under government control. This is not a subsidy to a steamship line to run on certain routes, as subsidies are commonly granted; it is a certain amount per year to Sir William Petersen, the chief object of which is to establish the principle of government control over ocean freight rates. Is it worth while paying something for, or is it not? You say it is an experiment; I say it is an experiment. You come back to me and say there is no combine; I say I do not care whether there is a combine or not: Are the freight rates too high? Let the government get control by means of this contract and we will soon find out how much too high they are. And as to that experiment, it is worth to the farmers of western Canada and the farmers of Ontario more than we are paying to Sir William Petersen under this contract.

Mr. SPENCER: Would my hon. friend not include the manufacturers of eastern Canada as well?

Mr. GRAHAM: I am going to include them; you see, I was taking them in sections. I say it is worth more than we are paying for it, to the farmers of the east and of the west; but added to that, it is worth just as much to the manufacturers of eastern Canada to have some control over rates. I have correspondence on my desk pointing out where manufacturers have been unable to fill their orders in the Motherland on account of the increase in ocean rates.

This plan is a departure from existing conditions. We tried to get control through a joint board, but the attempt to get that plan has proved futile; and the suggestion of the amendment is only laughing in the face of the Canadian people. Now there is some other way, if there is a way, and it is one that the government of Canada required a great deal of courage in undertaking, because there are people who do not believe in bounties, although they would like this to go through. There are people who do not believe in doing anything to interfere with the existing conditions on the ocean. Then there are people who are prejudiced against government control of any kind, so that the government needed great courage in undertaking this arrangement. I want to say again that this is only an experiment; but unless some government has the courage to try and experiment we will never get any further than we have during the last fifteen years in the matter of control of ocean rates. One of the members for Vancouver the other night asked me the question if this contract would apply to the Pacific trade. I say now, thinking the other members of the govern-

ment will agree with me, that this is an experiment, and that if it proves successful, as we hope it will, it will apply to every port in the Dominion of Canada and to every cargo that comes to this country.

Mr. LADNER: Will the minister put boats on the Pacific in the same way and under the same conditions?

Mr. GRAHAM: What I tried to say was that if this proves successful—

Mr. MEIGHEN: Hear, hear.

Mr. GRAHAM: My right hon. friend surely does not hope it will not prove successful?

Mr. MEIGHEN: It is not a state of hope in my mind at all, it is a state of certainty.

Mr. GRAHAM: My right hon. friend is a pessimist. We will let it go at that.

Mr. MEIGHEN: I am, in this matter.

Mr. GRAHAM: My right hon. friend is a pessimist in respect to anything the Grit government attempts to do.

Mr. MEIGHEN: Hear, hear.

Mr. GRAHAM: I do not complain; some of us are born that way. My hon. friend (Mr. Ladner) asked if the government will put boats on the Pacific in the same way and under the same conditions. I could not say absolutely. It might transpire during this experiment that we could do better in the case of a future contract in some other way; but the best that can be done to control rates on the Pacific, if this proves a success, will be done by the government of Canada.

Mr. LADNER: Has the government any information with respect to rates on the Pacific now?

Mr. GRAHAM: As far as I am concerned I have never had any complaints as to rates on the Pacific. The great fear I have found, from correspondence we have got, is that the government are going to take the ships of the merchant marine away from there.

I want to say before I sit down that I do not care whether there is a combine or not; that is not the question before this House. You would think to hear some hon. gentlemen speak that the question before the House was "Who is Preston?" "Who is Petersen?" "Has anybody got a combine?" The question before this House is first "Do we think the rates are too high on the ocean?" Everybody expresses the fear that they are. What is the cure? Somebody proposes the merchant marine though they never used the merchant marine when they had it. Others say something else. The government, after a study of the case, believes this is one good plan to establish the principle of government control of ocean rates, and if it proves to be a success then the government will be prepared to proceed a step further. I make the prophecy before I sit down, that before this is all through, the leading shipping companies that sail the ocean will be prepared to make terms with the Dominion of Canada.

Mr. WILLIAM IRVINE (East Calgary): The minister who has just taken his seat has been as interesting as he usually is, if not as convincing as usual. This debate has been conducted at very great length, and it would appear that it will go on for some time yet. The duration of this discussion would apparently indicate the importance of the subject. It is not only important because of the particular instance with which we are dealing. It is important for another and greater reason. Just as the last century witnessed a very keen competition, which in our present time has culminated in large combines and trusts, so the age in which we are living will witness efforts being put forward on the part of all governments in all countries to secure control over these combines and trusts, in order that the advantages which may be derived from combines may be secured to the people without allowing these combines to reap an undue reward at the public expense. It is because of the importance of the subject in this regard, as well as from the point of view that it actually implies the subsidizing of a private company without any very apparent reason, without any return from that operation, that I rise to speak on this question; also to explain the position that I and my colleague are forced to take on the issue; and further to present what I believe is a viewpoint that is, at least, a little different from any that has so far been put forward, whether that be a virtue or the contrary.

The first question to be considered is whether we have a combine or not. The hon. Minister of Railways and Canals says it does not matter. Although the whole proposal has been based upon the assumption that there is a combine the minister now tells us that it does not matter whether there is one or not. But the government appointed a gentleman to investigate this matter and he has presented a report for the edification of members of parliament; a report which is calculated to demonstrate that there is a combine, and that the contract into which the government desires to enter is the way to break that combine. But I must say, Mr. Speaker, that I

have not come to the conclusion that there is a combine by the reading of the Preston report. If I were to take this report seriously, apart from the flat statement of the author, I would come to the conclusion that there is no combine at all. He says in one part of the report, quoting a letter from a manufacturer whose name he does not give:

> I have representatives of the steamship companies calling on me every week, who are complaining about the small amount of freight that is offered.

He would have us believe that there are shipping companies in a combine and in a conspiracy against Canada; and that the agents of these companies in Montreal had been grumbling to the shippers because there was no freight for their empty ships. Surely this combine would not grumble over the lack of business, nor bring ships in hopes of obtaining a business that had been killed by its own design. Then if hon. members will turn to page 18 of the report they will find a table of figures which is supposed to show that very high rates have been charged against the Canadian and British trade, and particularly during 1924. This table is given to prove that there is a combine and that that combine is engaged in a conspiracy against British and Canadian trade. He shows us by this column of figures that in 1924 the freight was very much higher to British ports from Canada than to ports in Europe. But if hon. members will turn to the column of figures in 1923 they will find that the situation is reversed, so that if Mr. Preston had issued his report in that year he would have had to have said "Yes, there is a combine but that combine is in a conspiracy against the European trade in favour of Britain and Canada." So that I think it was fortunate for the government that this report happened to be made in 1924. I do not conclude as to a combine on the strength of this gentleman's word.

There is another reason why I would doubt the existence of a combine, if I were to depend upon the information which this report gives or which the government has given, and that is the proposal that has been put forward to defeat it. That in itself would appear to argue that if there is a combine it is not very well combined, and that it is not very large, for the proposed ten ships would not break a very large combine. However, I believe there is a combine, first because of my understanding of the nature of the processes that have been going on for the last century in our industrial and commercial life. The competition which has taken place in the industrial and commercial fields has led inevitably to combinations of fairly equal forces for mutual benefits. In other words, co-operation which has been adopted as the policy of the farmers of this country, which is adopted largely by the labour organizations of this country, has been adopted long since by large corporations in competition with each other. Yes, combines are the natural outcome of the processes which have been going on for the last century. But if we required any special evidence of this we would have to go to the report of the Agricultural Conditions committee of last year or to the report of the hon. member for West York (Sir Henry Drayton). However, the minister has just assured us that they had sufficient evidence of the proof of a combine in 1910. If the government had that proof it is not clear to the House, and I do not think it will be clear to the people of Canada, why they, in 1924 appointed another gentleman to make another investigation of something of which they already had all the proof which they required. That is of course a minor point, but so far the government has carefully fought shy of dealing with that point and it would appear that there is some reason for thus evading an explanation beyond that which has been vouchsafed to the House. I conclude then that there is a combine.

The next question is, should the combine be broken and its development arrested in this way? I hasten to answer that question emphatically in the negative, notwithstanding the apparent enthusiasm of the Minister of Railways. It is very true that the next step from a combine is a monopoly, but then monopoly is the fruit of the system that the government supports. It is the natural ripe fruit of the system which the Canadian government advocates, which is endorsed by modern civilization, and if we are not prepared to eat the fruits we should not be prepared to scatter the seeds. Monopoly is the next step after a combine, and a combine is the result of a competitive system. We cannot escape the fruits. We have to pick them. No little ten-ship organization of the Minister of Railways is going to set back the great tide of a century. It might sound well to say it, but sociologically, historically and scientifically it is absurd, and even if it were not an absurdity, it would certainly not be the policy to follow. Combinations represent progress. Let me just mention some of the things which may be effected through combinations. No one will deny that a combine will render to any country an improvement in service. In the particular case before us, that of shipping, it will result in a more regular service, in a

higher standard of service, and it will also result in the elimination of duplication, and to that extent should lend itself to a reduction in freights. It will stabilize the whole enterprise. It will lead to a stabilization of rates and also to a stabilization of business, for if a business man has to buy large quantities of goods in Europe, and feels that the freight rates are so much to-day, may be twice as much next month, he is hampered in his business. But when he knows that freight rates have been thoroughly regulated, and that he can count upon them being in a stabilized condition it gives him more confidence in the conduct of his business. Then, a combine is conducive to a uniform rate to all merchants, thus giving the smaller merchants an equal opportunity with the larger merchants, and tends to develop trade in places where otherwise it would be impossible to have it developed. So I say that without some such arrangement as combinations, even in the case of shipping, the whole trade would be demoralized and shippers would not obtain good service, nor would workmen engaged in shipping have a living condition. The Minister of Railways recognizes this principle, or did recognize this principle when speaking this evening. He pointed out that it had been begun in western Canada, that the wheat pool to which he referred was the first step, a combination of farmers in the selling of their produce.

The next thing according to the minister as a step towards the reduction of the cost of living was the appointment of the railway commission, and the appointment of that commission was made in order that it might stabilize rates. Here are the two principles. He recognizes the combine principle and he recognizes the controlling principle, but not the Atlantic combine principle. If the government were to go out to meet the needs of the farmers in the west in so far as they would be met by the wheat pool, and practise the same principles they are trying to practise in regard to shipping, what would they do? They would go out and bonus some individual in Winnipeg to start a little elevator all by himself in order to break the wheat combine; but they did not do that. And the farmers had more sense than to do it; they formed a large combine to put the thing over, as they say in popular parlance. But when it comes to the Atlantic it appears the Minister of Railways forgets about the principle exemplified in the wheat pool, he forgets about the principle of controlling rates by commission such as was appointed by the government of Canada in respect to railways, and he says, "We are going to bonus some private company to break the rates for us. We are going to buy one of these individuals out of the combine to see if we cannot break the combine." I repeat that if he could break the combine it would be a very serious matter indeed. It would be turning back the wheels of progress, but as I have no fear of that occurrence, I do not require to express any fears in regard to the continuation of the evolutionary process; rather I would express fears for the government in undertaking such a proposition. I will deal later in my remarks with the method of control, all that I am contending for at the present time is that combines are necessary, combines are not necessarily evil; but combines cannot be broken, and even, if they could be broken it would be very bad business.

The next point is that the government has decided to break the combine. The government has decided to turn back the wheels of progress and has decided to accomplish the impossible. In this regard some hon. members on the government side have laid claim to an amount of courage which should be credited to the government for this great feat. If there is any courage in this regard, that courage is certainly shown in the government risking its life on a policy so ill-advised. Il think however that the lack of enthusiasm which has been so evident on the part of government supporters of this resolution speaks a great deal better for the government than the alleged courage does.

Mr. MEIGHEN: Will the hon. gentleman explain how the government has risked its life? I thought that was just what it was taking care of.

Mr. IRVINE: That is a very fine question, and I, perhaps, ought to take a moment or two to answer. The government, in my opinion, is risking its life in this way, that if the expenditure is permitted— and this seems probable—there cannot possibly come from it any return that will be visible to the Canadian people. If then this government has had the courage to dip into the treasury of an already overtaxed people for $1,350,000 annually to bonus a private company on the other side of the ocean, for which subsidy there is no return, that takes a little bit of courage. Of course I know this is not what it appears to be to the government. The government, I imagine, thinks that before the next election will be too soon to speak of the fruits of this investment; that it will be able to say to the westerners: Behold, we are the great little government

that went forth with the Preston report in one hand and with one million dollars odd in the other and challenged the great leviathan that controls the seven seas. That sounds fine in an election campaign. I do not know of anything that could sound better.

The next thing, I imagine the government think in this regard is this. They know perfectly well that freight rates are due to come down just as everything else is due to come down, and it is probable that by next fall there may be a drop in freight rates from perfectly natural causes. Then they will be able to say: Do you not see what we did? Do you not see what a little bit of courage has brought about? Did we not bring that large combine to its knees? Why, look at the freight rates! That may be the idea of the government. But after all, my faith in the common sense of the Canadian people is greater than to think they will give many votes on the strength of that. Again, we might be mistaken there. It is just possible that the government might be able to get this over once, but the reaping day is sure to come.

The government has decided to attempt this reactionary move and it claims courage in its attempt. But I should like to see the government try out its courage on something that is a little nearer to its hand. Has the government enough courage to break the combine on the Great Lakes? There is a combine right next door to it. Canadian ships are carrying Canadian goods to American ports more cheaply than they are carrying them to Canadian ports, and this government, with its superabundance of courage and with the right to tax the people to get millions for an overseas company,—would it not show a little bit of courage in breaking that combine? I have been suggesting not the breaking of a combine, but the control of a financial monopoly in Canada. I have never seen any evidence of courage on the part of the government with regard to that question. We have a combine in Nova Scotia that this government or the government of Canada has helped to build by subsidizing to the extent of ninety millions of the Canadian people's money. That combine at the present time is a very serious menace to the life and happiness of a great portion of the people of Nova Scotia, and calls have come time and again from those people for assistance, but the government seems to have no courage at all. Even the Minister of Labour (Mr. Murdock) who, I am sorry, is not in his seat, lacks that courage which is claimed for his government, when that problem is put before him. He says he can do nothing in that regard, no matter how much courage he may have secretly hidden in his bosom, because there is a British North America Act. And yet I notice that he is bringing into this House a bill which practically sets forth all that my colleague and I have ever claimed so far as the authority of this government is concerned in dealing with that condition in Nova Scotia. I will not quote that bill; the time will come for that; but I want to point out clearly that there is no evidence of this courage which the hon. member for Lunenburg (Mr. Duff) wanted to claim for his government for having taken this step to subsidize the Petersen company.

But since the government has selected this particular feat as the exemplification of its courage, I want to examine it from two points of view. I want to ask something about the method that the government is employing, and second, what results might with reason be anticipated? If hon. members on the other side of the House argue that they are not trying to break up a combine but to control, then I would say that if the effort that they are about to put forth is going to be at all efficient, it can have no other effect than to break up the combine, because what they are going to do seemingly, if they are going to do anything, is to buy these ships and to reduce freight rates on these ships in order that they may reduce rates generally or, at least, reduce rates on that particular line. It will be agreed surely that unless they reduce rates all around, this scheme will be a colossal failure. But they can reduce rates all around only by forcing each shipping company back to competition in rates, and to go back to cut-throat competition in rates would mean the breaking of the combines, so that is really what they are trying to do. This is not desirable and it is not practicable. Let us look at the method further. I am opposed to the method because it implies granting a subsidy to private companies. There may be occasions when it might be permissible to grant a subsidy. Personally, I am opposed to the principle, and I am very much opposed to it in the case before us. Not only am I opposed to it as a principle, but I am opposed to it because of the past history of the application of the principle in Canadian life. Look for a moment at the subsidizing of the Canadian Northern. We subsidized and subsidized it until it fell into our laps, a culmination which, perhaps, was the best part of its whole history. But nevertheless, that for which we subsidized it never materialized. Then the subsidies which have been granted

to the Canadian Pacific, as was pointed out by some other hon. member, are now a futility in the Supreme court. Other instances of failures as regards subsidizing private companies, failures in the sense that they have never produced that for which the companies were subsidized, are too numerous to mention. The principle involved in this method of subsidizing a private company and also the experiences which we have had by the application of such a principle are sufficient in themselves to condemn this resolution.

But what are the practical results which we may hope to get? I notice that the government supporters of the resolution have not had very much to say about that. They would rather leave that to fate. They appeal to the faith of the House with respect to what we may hope to reap from this outlay. But let me examine briefly the phase of the subject. I have so far pointed out that if the government were successful in securing the reduction of freight rates in the whole north Atlantic trade, it could be so only by breaking the combine, and to break the combine is a reactionary movement. All that any government should attempt in the case of a combine is to safeguard the efficiency in services which that combine makes possible, and to see to it that no monopoly shall operate at the expense of the people. But no government should ever undertake to break up that which natural laws have established. Let us follow this question further. It is not likely that the combine will be smashed, so that we need not worry very much on that score. But what are the likely results if this scheme is put into force? Certainly the world combine is not likely to be beaten so easily. There are some 500 ships in the north Atlantic combine alone, and that is only a little brother. The whole world combine is involved, however, and is it reasonable to suppose that this combine, finding its existence threatened on the north Atlantic, will be absolutely docile and sit quietly by, making no attempt to protect itself? Why, ten ships could make no appreciable difference to the world combine, but the shipping companies see in the present effort a reactionary movement and it is only natural to suppose that they would take steps to oppose it. It is not likely, however, that the combine will sit quietly by. If the combine is as strong as Mr Preston and the Prime Minister (Mr. Mackenzie King), make it out to be, it will not stand by silently while its privileges are being wrested from it by such a small force as ten ships on the Atlantic. Is it not rather a strange situation in which we find ourselves at the present time? The government is asking us to spend $1,300,000 odd to break a combine which we are helping to maintain by retaining in it sixty of our own Canadian Government Merchant Marine ships, operating at a loss. The Canadian merchant marine ships, according to the hon. member for Lunenburg (Mr. Duff) are still in the combine, and the Prime Minister tells us that the combine is so strong that if our ships withdraw from it they will be swept from the seas. Now, if sixty ships cannot afford to withdraw from the combine for fear of destruction how can the government explain the possibility of operating ten ships independently of the combine? These are some of the questions which the government has carefully avoided even so much as referring to. It is possible that the Prime Minister in his undue sensitiveness on the subject found himself at a disadvantage in being called upon to speak rather hastily; but his words will be found in Hansard. According to him the ships of the Canadian merchant marine are in this combine which he is going to tax the Canadian people in order to break, and the Canadian Government Merchant Marine cannot withdraw from the combine with safety. If that is not an absurdity then I do not know what is. But that is the position which the government brings forward for the approval of parliament.

And here is another probable result which was suggested by the hon. member for Nelson (Mr. Bird). If this combine is as strong as Mr. Preston's report alleges and as the Prime Minister states, if it is so strong that we dare not take our own ships from beneath its protecting care, then is it not reasonable to suppose that the combine will say to the government and to Sir William Petersen, "Keep your ten ships for the Canadian trade and we shall wait until you have grown tired of trying to do business with them." How long would it be before the government, under these circumstances, would be wiring to the combine to come to the assistance of Canadian trade? What could ten ships do if all other shipping companies were to withdraw from Canadian trade? It must be borne in mind that the combine, according to the government, is world-wide, and therefore would be in a position to boycott Canada.

Now if the government will persist in its futile attempt to break up the north Atlantic combine, surely the most effective and the easiest way to go about it would be first of all to withdraw from that combine the sixty ships belonging to our national system, and to employ them in Canadian trade. I thought

we were going to get some information from the Minister of Railways as to why it is that use is not being made of the Canadian merchant marine in the Atlantic trade as a means of reducing freight rates. But did any hon. gentleman gather from the minister's remarks the reason for the ships of the merchant marine not being made use of? The minister says that this government is not operating them in this trade because the other government did not. That was the logic of his remarks. Time and time again hon. members on the government side have insisted that the merchant marine is not properly equipped for the Atlantic trade. That is the statement; but we know from the facts that a large number of these ships have both the carrying capacity and the speed, which are the two most important things in any freight carrying trade. Possibly they might need a bulkhead here or there or some alteration of a minor character, but these are not prohibitive reasons for not using the merchant marine. I suggest therefore that if the government is sincere in its efforts to reduce freight rates it should put the whole fleet of the merchant marine into the north Atlantic trade, and if necessary add ten more ships. If this were done some results might be obtained. But the government may say that it would cost a great deal to do this; we might be told that the government would not in this event be able to balance the budget next year any more than they can this year if anything of the kind were done. Hon. gentlemen may argue that way if they will. The fact remains that the Canadian people will have to pay the bill in the long run whether a private company or the government itself undertakes the expenditure. In the case of the latter the people will at least have their capital at the finish, whereas if the present proposal is persisted in there will be nothing to show but the receipts of the Petersen company. But whether the government allows a private company to build these ships or whether it builds them itself, there will be no difference to the Canadian people, who in either case will have to pay for the ships, inasmuch as it will be out of the freight rates charged that the ships will be paid for. So that as a matter of fact the cost will be collected from the people no matter who builds the ships. Any excuse along that line is therefore not intelligent.

It is argued moreover that even if the freight rates cannot be reduced generally as a result of the Petersen fleet of ten vessels, there would be a reduction of rates on the goods carried by those ten ships. Let us grant this point for the sake of argument; let us assume that freight rates on the ten ships will be lower than those generally prevailing. Well, that is the greatest success than can be hoped for from the venture. But is it characteristic of the Petersen company that they will enter into an engagement with the government or with anybody else for that matter to carry on a shipping business at a loss. It is not very likely. It is reasonable to suppose, then, that we are going to pay that company for all the services we are to get in return. I am going to assume that we pay them this million and three-quarter dollars annually, I am going to assume also for the sake of argument—being very liberal with a rather illiberal government—that we are going to get back in reduced freight rates $1,300,000. Now, what have we in return? We have been at all the trouble and expense of collecting $1,300,000 from the pockets of the Canadian people, passing it to the private company, and then collecting it again from the Canadian people in freight rates. And that is supposed to be a reduction in freight rates!

Mr. LOW: Two or three times that amount.

Mr. IRVINE: The hon. minister interjects that we are going to get two or three times that amount. I think if he will go over his figures a little more carefully he will discover that I have given the very highest possible return. Merely because he makes the assertion that we are going to get two or three times that amount is not at all conclusive so far as I am concerned, and I am confident that he will have to furnish much better evidence than he has so far adduced before he will convince the House that we will not give to the Petersen company dollar for dollar,—that inasmuch as we are only giving them $1,300,000, we will not get any more from them in return by way of freight rates reduction. That, then, at the very best is all that we can hope for, and it simply amounts to our taking a dollar out of one pocket, slipping it into the other pocket, and then trying to hypnotize ourselves that we have actually made some money.

Mr. LOW: If I was of that opinion I would drop the resolution at once.

Mr. IRVINE: I am sure the hon. minister would, and I hope before I get through he will have arrived at that opinion, to drop the resolution is one of the things I am going to urge the government to do. But for the present I am trying to show that the utmost to be expected from this proposal is the reduction of freight rates to some extent in connection with the ten ships that the government proposes to subsidize; there is no possible hope of any other result.

My next point is that while combines are the necessary outcome of the system under which we are living, monopolies must be prevented. Since we cannot turn back the wheels of time and progress by reverting to cut-throat competition, as we would have to do if we followed the policy of the administration, we are forced to contemplate some method of controlling a combine so as to prevent it from becoming a monopoly. Now, let there be no misunderstanding so far as I am concerned. I am just as well aware as the government is that ocean freight rates are high; I am just as well satisfied as the government is that they might be a little bit lower; I am also just as well satisfied as the government is that the people of Canada, and particularly the people of the western provinces, are desirous of securing cheaper transportation rates—all these things are frankly admitted. Merely because I am opposing what seems to me from every angle to be almost an absurdity, and what certainly gives no promise of being anything but an utter futility, I do not want it to appear that I am content with the ocean freight rates as they are, I do not want people to imagine that I would welcome a great combine or a powerful corporation or a monopoly controlling freight rates, I am just as anxious to see rates reduced, perhaps a little more so than the government is; but the reduction desired can only come about by a control which will have to be much more authoritative and much more fundamental than anything that the government has so far suggested. The amendment which has been moved by an hon. member of the official opposition (Mr. Clark) at least points in the direction of an adequate control. It is not as positive as I should like to see it, it is not as specific in regard to the time within which action should be taken as I should like to see it, it does not go as far as I should like to see it go; but it at least has a stronger appeal to me—and I think to my colleague (Mr. Woodsworth)—than the proposal which I have been criticizing. It will be apparent also to the House that if I had a better proposal—which I have the conceit to think I have—the rules of the House, so celebrated and so acceptable, prohibit me from embodying my proposal in an amendment to the present amendment. Consequently my colleague and I are in the position of having either to vote for what we believe to be an absurdity or at best a futility or for an amendment which does not go as far as we would desire. We are forced to vote for the amendment because it points towards a control which we believe to be the only practical solution. It may be that it will take a longer time to gain our ends if we take the course indicated by the amendment, but when such control is secured it will be efficient.

The Minister of Railways is very emphatic in his opinion that because an attempt to secure control of ocean freight rates by the co-operation of the dominions with the Mother Country in 1910 was a failure, that therefore it is going to be a failure now and forever more, and he predicts with a sweeping prophetic enthusiasm that nothing may ever be expected to come out of any such proposal. I want to be as enthusiastic and as sweeping in my prophecy that nothing will ever come out of this pigmy of a proposal brought forward by the government. There are hon. gentlemen in this House who have protested in times gone by that they did not want to vote for a subsidy, and I hope that if they be led into voting for this subsidy they will remember the criticisms which they have directed against other hon. gentlemen in preceding parliaments who blundered in this regard. I venture to say, Mr. Speaker, that ten years from now—yes, a shorter time than ten years—there will be hon. gentlemen in this House who will condemn us for having voted a subsidy for such a proposal as this.

10 p.m.

Control of a world combine is only possible by a world force: that world force can only be secured by the co-operation of the nations affected to secure the alleviation desired. If that attempt fail, then we should have to think of some other way to effect our purpose. But we are told that although this method proposed by the government may not get very far, at least it is trying, yes, it is trying to do something, and at least it is immediate in its application. So far as I can see all that is immediate about it is the expenditure of $1,300,000. That is very immediate—more immediate than is comfortable for the people of Canada; but the reduction of freight rates is remote, and so far the government has advanced no vestige of reason calculated to interest anybody who has been thinking about the matter and to arouse in him the slightest hope that any very beneficial result will crown the enterprise.

Now it would appear to me that when we have admitted the existence of a combine and when we have admitted high freight rates, we will have to admit something more than that. This parliament, it seems to me, will have to admit that Canada, by virtue of her geographical position, by virtue of her climatic conditions, by virtue of the whole nature of her industrial life, must institute a different

kind of policy than the one that is being followed at the present time. The policy at the present time would appear to be a policy of shipping out of the country as much as we possibly can; if we have not ships to carry our goods out, pay somebody to provide ships for that purpose—rather than a policy by which we will be able to approach a little nearer to a condition of self support. I will not develop this point at the moment, because I anticipate there will be an opportunity later for dealing more specifically with a general policy for Canada. But I will say this: that if the government had half as much courage as some of its members claim it would come forward with a policy that would depend less upon the caprice of shipping companies on the north Atlantic and much more upon the intelligence and the industry and the economic ability of our own people.

Now, it is argued that we should let this Petersen contract go to a committee; that if the proposal only arrives at a committee, although it has no sense in it now it might perhaps become sensible then. That is the argument that has been adopted by some hon. members. I do not hold that opinion. I see no intellectual virtue in a committee. That, however, is not really the question. I want to make it very clear that we are not voting, as some hon. members seem to think, to investigate the whole question of freight rates and combines and the proposals which might be put forward as a result of the knowledge we might thereby gather; that is not the question before this House. The question is whether we are going to endorse a specific agreement no letter or word of which we are permitted to alter in any particular. I want to cite in this connection the position taken by the hon. member for Red Deer (Mr. Speakman), a position which I took to be a very strong one and which that hon. gentleman will have to hold, it seems to me, since there has been no change in the situation since he made his speech. He says in regard to this very point:

> A bill after it has had its second reading is accepted in principle, the principle of the bill is accepted when the House agrees to its second reading. So that parliament, having accepted the principle of the bill in this instance, the bill itself could not be subject to any severe modifications on the part of a special committee.

The Prime Minister (Mr. Mackenzie King) made some remarks in regard to that which I will quote if anyone objects to my interpretation of them. The interpretation which I put upon his remarks is simply this: That we can have a committee after the House has endorsed the principle which the committee is supposed to decide upon, we can send for Sir William Petersen and some other people and some changes may possibly be made, provided that Sir William Petersen and the government agree to them. The idea was to hold out the hope to those who have taken a very strong position that if the matter went to a committee something better might come out of it. But I want to point out here that if the Prime Minister was really sincere in that position, the easiest way out of the difficulty is to drop the proposal entirely and bring in a new one which would embody what he proposes to be willing to grant. Then there would be no difficulty about anybody voting. We will all vote for an investigation, because we desire it; we will all vote for a method of reducing freight rates, because we need it. That is not the question however, the question is whether we are to give the endorsation of this House to the principle embodied in a document which no committee, which not even the House, has the right to amend. That, as I understand it, is the situation, and so far as I am concerned, —and I think I speak also for the leader of the Labour party (Mr. Woodsworth) in this regard—I shall not be able to vote for the government's proposal. I shall support the amendment.

There is one more point I want to note: Parliament seems to have a strange psychological reaction on some people. I am not now reflecting on any hon. member; I have no doubt that if we could "see ourselves as others see us" perhaps I would be noting my own psychological reaction instead of that of other people. But the fact remains that hon. gentlemen have stood up and made what seemed to be very excellent proposals with regard to the reduction of freight rates. I refer in particular to the outline of a scheme that was put forward in the House last evening by the hon. member for Waterloo (Mr. Euler), which was to acquire the Canadian Pacific Railway and join it up with the Canadian National; to utilize the present merchant marine and to belt the world with our own lines of transportation. That was, to him, a better way; that was the real way; that was the way that he said we would ultimately have to accept. He also protested that he was not in favour of the principle of subsidizing. Yet, like many other hon. gentlemen, he said, in effect, "While I am not in favour of subsidizing; while I know there is a better way, I am going to vote for the subsidy—I am going to vote for a secondary way in which I have very little faith." That is

the strange psychological reaction which I have noticed. My own, may, as I say, come out in some other regards, but it is not going to come out in this. I am opposed to subsidies in general; I am opposed to this subsidy in particular; and I am going to vote against the resolution. If all hon. members who do not believe in subsidies and who do not believe in the ultimate rewards from this particular agreement, will do the same, then the Minister of Trade and Commerce will have to withdraw his resolution and obey the real will of parliament. That will, judging by the expressions of hon. members, would appear to be that a special committee should be appointed to make a complete investigation of the whole question of combines and ocean freight rates, and also recommend to parliament some practical scheme to control the shipping combine. But we cannot hope for this if we vote for the resolution.

Hon. J. E. SINCLAIR (Queens): Mr. Speaker, I wish to say a few words on the very important question that is now being considered by the House, and in doing so may I make one reference to the remarks of the hon. member for East Calgary (Mr. Irvine). He began his address by asking if there was a combine in north Atlantic rates, and immediately gave his conclusion that there was a combine; and he left the impression that there was no proof, or nothing that we could base a conclusion upon, to show it, that there was a monopoly. I will refer to that a little later in my remarks when I touch upon an investigation that was made by the Royal Commission on Shipping Rings. But let me follow his logic a little further. He told us that it was a mistake, that it was turning back the wheels of progress to break combinations, to destroy combines; and in the next breath he chided the government for not trying to break the combine on the Great Lakes, for not trying to tear down the financial institutions of this country, and for not interfering with the trouble in Nova Scotia. I do not think, Sir, it is necessary for me to follow further the remarks of the hon. member for East Calgary.

Now, Sir, in approaching the discussion of this question I wish to review the history of efforts to deal with ocean transportation and to control freight rates during the years that have passed in order, if possible, to throw some light upon this very important subject. My colleague the Minister of Railways and Canals in his speech this afternoon and evening went fairly extensively into the attitude of the government of Canada on the matter and the correspondence which this

government has had with the Imperial authorities. Perhaps I may be permitted to add to the information which he gave the House by reviewing, to some extent, the investigations that have taken place under different governments that were interested in endeavouring to get some measure of control in this matter. Because, Sir, the principle involved in the present arrangement is whether the Canadian government is justified in endeavouring to secure control to some extent over these rates. That is the undoubted principle involved although some hon. gentlemen have endeavoured to thrust that fact into the back ground and to lead the discussion into other channels.

Now let us go back a few years and consider what investigations have been made. I think the first was undertaken at the instance of the British government in 1906 when they appointed a Royal Commission on Shipping Rings. That commission spent nearly three years in investigating the matter and as a result of its inquiries two reports were presented, a majority report and a minority report. In brief the conclusions submitted in the majority report were that a conference existed and that it controlled freight rates in British shipping particularly in the north Atlantic trade; that although the conference was a benefit in many ways, nevertheless through its agency steamship owners were able to effect collective bargaining, a thing which they could not otherwise hope to arrange; and as a remedial measure it was suggested that the shippers and exporters from other countries should unite and form themselves into a counter combination so that they might be able to combat the influence of the shipping rings. The further recommendation was made that the board of trade should be empowered to endeavour to promote a settlement by conciliation where a conflict of interests existed between ship owners and the conference. In my opinion the suggestion for a union to bring about a counter combination was an utterly futile proposition, because it was impossible to unite in any such arrangement shippers and exporters from the other countries of the world from whom the shipping rings secured their traffic. I think those gentlemen knew the idea was impossible to realize when they suggested it; and the further idea to employ a conciliatory method was, so to speak, a case of damning with faint praise the proposition to exercise control.

The report of the minority not only confirmed the finding of the majority that there was a combine or conference but went

further and stated that an actual monopoly existed. I should like here to read a few clauses from the findings of the minority report to show just what conclusions were arrived at:

> The conference system with the deferred rebate—the natural evolution of a highly organized trade dealing with customers for the most part scattered or disorganized—has created on almost all the chief ocean routes a monopoly, the limitations upon which are in many cases illusory, and which generally tend to decline.

The minority also arrived at this conclusion:

> It has been successful in raising or keeping up rates.
>
> The public have, as a rule, to pay higher rates of freight than they would pay in an open market.
>
> The system tends to inflate the amount of tonnage and consequently the amount of capital invested upon which interest has to be paid.

I want the House to notice particularly the latter conclusion because the condition to which it refers is partly responsible for the state of affairs from which we are suffering to-day,—the result of the control that has been exercised by unduly inflated rates has encouraged more than the required amount of capital to be invested in shipping lines and we to-day have more ships than there are cargoes available for them which the report states tends to decline. The minority report, as did the majority report, also recommended power to be given to the board of trade to try and bring about a settlement by conciliation. However, the recommendations reflect very much the viewpoint which is held in Great Britain, and which was so well referred to by the Minister of Railways in his speech, that we in Canada need not expect our interests to be looked after by the Imperial Shipping Committee, or any other body appointed by the British government in the matter of the control of rates. There was a reservation in the minority report made by Sir David Barbour which I think is worthy of notice:

> For example, it has happened in the past, and will happen in the future, that the members of a shipping ring have miscalculated the prospects of trade, and have provided more ships than the trade really requires or can employ.
>
> In such cases there will be a very strong temptation to pass the loss on to the public and the existence of a monopoly affords an easy and convenient means of so doing.

I think, Mr. Speaker, the situation revealed by the extracts I have quoted resembles the very situation that we in Canada are in to-day: The ocean rates are high, and they are controlled and kept up by the influences behind the North Atlantic Steamship Conference, and they are kept up to a point which is necessary to enable those who are interested in the shipping companies to get a return on an investment greater than the trade conditions call for. I will demonstrate that a little later on in my remarks. I think I have shown that the British investigations disclose that there is a combine or a monopoly, that it inflates rates to an undue figure, and that they are kept at that high point by the power which the combine is able to exercise through collective action.

I think it is only necessary for me to make a passing reference to other investigations in Great Britain. The inquiry made by the Dominions Royal Commission was referred to by the Minister of Trade and Commerce in introducing the present resolution, and was again dealt with in considerable detail by the Minister of Railways and Canals in his speech to-night. I shall not repeat the statements of my colleague, but will content myself by mentioning one outstanding point which I think bears directly on the amendment moved by the hon. member for Burrard (Mr. Clark). That is that in 1910 the British government refused to consent to any measure of control when asked to do so by the Canadian government, the British authorities suggesting further investigation. My hon. friend from West York (Sir Henry Drayton), who went to Great Britain two years later in the hope of finding the British government in such a frame of mind that they would consent at least to some measure of control, made a report. I have that report in my hand and I will read one or two sentences from it to show that really my hon. friend must have mellowed down when he was in the Old Country, because among other things he made a recommendation for further investigation. He said:

> With this end in view I endeavoured to obtain the appointment of a joint commission to make a thorough and complete investigation of and to report on the methods and practices, and rates and charges of ocean carriers doing business or from time to time doing business, between ports in the United Kingdom and ports in the Dominion of Canada.
>
> I further impressed upon the Imperial authorities that it was the desire of the Canadian government that the investigation should be entered on in the near future, and if possible a report made so as to enable any necessary action to be taken by that government at the ensuing session of parliament.

Hon members will see that after the British government had refused to take action and wanted further investigation, the hon. member for West York fell in with their viewpoint, and so recommended when he came back to Canada. It is simply carrying on an interminable investigation, which is the object of the amendment moved to this resolution by our hon. friends opposite. I think, Mr. Speaker, that with the information in

the hands of the government, the time has come when people of this country desire that the government shall act with the precision and carefulness that are necessary in all matters of this kind. I wish to more fully emphasize the conditions that exist; because after all, in facing this question, we must face it in the light of the answer to the question; does a condition exist such as we believe, and if so, have we any better method or proposal to suggest than that which is put forward by the government at the present time? I submit that up to the present, Mr. Speaker, no suggestion of a constructive kind has been put forward to take the place of the one proposed by the government. I do not think, after considering all the circumstances of the case, that any better proposal can be put forward by one of the overseas dominions acting alone than the resolution at present before the House. Before dealing with that matter I want to cite to the House the result of an investigation that was held by the government of the United States in 1913. They were troubled, as Canada has been, with high freight rates; they desired to keep the Atlantic clear for American commerce, and they felt the pressure of control exercised by the shipping companies, with the result that they referred the question to the standing committee on Merchant Marine and Fisheries of the House of Representatives at Washington. I will just read the reference made to the committee on the 18th June, 1912:

> That the committee be empowered and directed to make a complete investigation of the methods and practices of the various ship lines both domestic and foreign engaged in carrying overseas or foreign commerce, to investigate whether any such shipping lines have formed any agreement, understanding, working arrangement, conferences, pools, or other combinations among one another for the purpose of fixing rates and tariffs, or of giving and receiving rebates, special rates or other special privileges or advantages, or for the purpose of pooling or dividing their earnings, losses or traffic, or for the purpose of preventing or destroying competition.

That is the very thing in which we are interested in the proposal we are now considering in this chamber. This committee began their sittings in January, 1913, and took evidence from the steamship owners, from the commission merchants, from the exporters and business men along the Atlantic coast who were directly and personally interested in American exports and imports. I say further by way of explanation that I have not been able to find that the committee made a report to the House of Representatives, but they did submit the evidence for the consideration of the House, and I will cite a few of the main paragraphs from the evidence thus submitted. Let me first refer to some evidence that was submitted by a gentleman in New York, with regard to the control exercised by European lines over the American Brazilian lines. The gentleman who was giving evidence was Mr. Sydney Story, vice president of the Pan-American Mail Steamship Company of New Orleans. He said:

> There is no doubt in the world that there is a great war being waged against the commerce of our country by our aggressive commercial rivals. When I was in Brazil last, negotiating with the government for aid to this American effort of ours from New Orleans, it was openly stated on the streets by the friends of the European lines who control the monopoly of transportation between North and South America that our line would not be permitted to exist; that we would be run out of the trade in from four to five months.

That is the evidence of a gentleman who was negotiating with the steamship lines trying to make an arrangement between Brazil and the United States. Further evidence was given by a New York agent of another Brazilian steamship company, Mr. Joseph J. Slechta. He said:

> So, as regards most of the trans-Atlantic business, you must bear in mind the fact that Brazil has for one hundred years been very largely dependent upon the development of her commerce, entirely upon her foreign commerce, and if she were to discriminate, or to take any really very severe measures against these lines, their boycotting would hurt the country very seriously. And that is the situation with which they are confronted, although, I must advise the committee at this point that upon receiving your summons the other day I cabled the situation to my head office, and received the reply that their own government was taking steps to effectively put the combine out of business. I asked for further details, which I have not received, although I am momentarily expecting an answer about it.

That evidence shows two things which probably might be taken into consideration by us, and that is that Brazil had been struggling for many years, a hundred years perhaps, to overcome the effects of the unfair control thus exercised, and that the government in the end, after a hundred years of attempt, had to try to break the monopoly by granting a subsidy to other lines to come in and operate. Perhaps it would be interesting for the House to hear a little from the evidence of William Harris Douglas of the firm of Arkell & Douglas, exporters in New York city, who gave evidence stating very clearly his opinion in regard to a monopoly. Mr. Douglas said:

> The Chairman: Tell the committee what, if anything, you know about conditions of the trade—the relations between the ship lines with whom you transact business.
>
> Mr. Douglas: The American carrying trade, as we all know, is monopolized by the foreign steamship owners. It is a combination of the English and Ger-

man and other nations. They have their established lines from our ports running in all directions, you might say, and they cover the world. These lines are largely in combination between themselves, and their ramifications extend to Hamburg and London, and they exchange their conferences in Europe, because there is the head and front of the combination in America, and the idea that the ocean is free is one of the fallacies of the American nation. The control of the ocean to-day, of all oceans, is a stronger and more pronounced and determined monopoly, you might say, than any intercolonial trade in our states; that is, by railroad or water transportations. They absolutely dominate the entire situation.

I might cite other evidence of that nature, but I have cited these extracts to show the tenor of the evidence given by those who are interested in American trade. Some of the commission merchants went on further to show how completely they were under the control of the combine, how trade was suffering, and also why, in their opinion, the government agency was the only power that could break this combine or take any steps towards doing so.

Another feature which we might note is in regard to the methods that were put forth by the steamship companies in the earlier days, ten or twelve years ago, to get control of the lines that were outside of the conference. Evidence is submitted here which clearly shows that there was an organized effort, and that wherever a line was put on to compete with the conference lines, fighting ships were sent in to carry freight at a lower rate. In the end these lines were put out of business or absorbed by the line which went in the first place to provide the fighting ships. By that method used in those years of driving any independent line into the conference or out of business, they were able to get control which extended its effects to the commerce of both Canada and the United States and, indeed, to the commerce of all overseas dominions and foreign nations.

There is further evidence given by leading shipping men to show that all countries had to assist their steamship lines by means of subsidies or money assistance in order to keep their channels of commerce free. I think I may briefly say that the result of the investigation by the committee of the House of Representatives at Washington was that the American government endeavoured to provide ships of their own, but it will be noted from the remarks that were made by the Minister of Railways and Canals (Mr. Graham) this afternoon, and by following what was done by the American people with their merchant marine, that it has proved of no avail to control Atlantic rates with ships owned exclusively on this side of the water.

Perhaps I might say, just in passing, that another obstacle met by our merchant marine in trying to get control of Atlantic trade is the fact that the port facilities and harbours are controlled by those who control the Atlantic lines, and unless you get some measure of control in the Old Country you have very little effect in trying to fight the lines from this end. You cannot send ships over there and have them come back empty. Unless you get in with the shipping interests in the Old Country who control the ports, port facilities and brokerage houses, you have not much chance of getting freight coming back. We feel that in the proposal that is here offered that weakness will be overcome, by reason of the fact that the person with whom the contract is made is in a position to over come the weakness on the British side.

Let me say a word further in regard to criticisms that have been offered as regards the merchant marine. We have been criticized from different parts of this House for not using the merchant marine to break the combine. I do not wish to give my opinion, but something has been said as to the suitability of the merchant marine for ocean traffic. I will show in a few minutes who benefit most from the proposal that is being put forward in getting control of rates. But first let me read the evidence which was given before the special committee of this House on agricultural conditions that sat in 1923 by a leading cattle broker in the city of Montreal, and I think his evidence will bear me out. This is the evidence given by Mr. Duncan A. Campbell of Montreal, who is a cattle broker and whose business it is, as stated in the evidence, to secure space and make shipments of cattle for his clients in this country:

Q. You have placed in my hands, Mr. Campbell, a statement of animals carried on board the Canadian Commander, the Canadian Hunter, the Canadian Trader, the Canadian Ranger, the Canadian Raider, the Canadian Victor, and the Canadian Rancher.—A. For the season of 1921?

Q. In the season of 1921?—A. Yes.

Q. There was in all carried 2,830?—A. Yes, sir.

Q. With a loss of 95, making a loss ratio of 3.35 per cent?—A. Yes.

Q. Will you tell the committee whether that is a large or small ratio?—A. I told the gentlemen here, that we can insure cattle—well, to go back a little further, that you may have all the information in connection with insurance. When, after the close of the war, I went to New York to get insurance, the best rate I could get was one and a half per cent. I was first quoted two per cent, but I succeeded in getting one and a half per cent. Afterwards, I got it down to one per cent, and then three-quarters. During the month of May and the early part of June last year, it was three-quarters. We then got a rate of five-eighths of one per cent. That is an all-risk policy, covering the animal from the moment he walks aboard the steamer until he walks ashore down the gangway on the other side. An animal which is unable to walk

ashore on the other side is taken over by the insurance company and the shipper is paid the full amount of his policy. For instance, if the animal is insured for $150, the owner of the policy gets $150.

Q. The full amount of the policy?—A. The full amount of the policy.

Q. This is a heavy list then?—A. Yes, this is 3.35, and the other is .62½.

Q. What is the matter, Mr. Campbell?—A. These are not good cattle carriers.

And I want the House to note particularly this statement:

The chief reason is that the decks on these steamers are three feet high, as high as this table. With a deck of that height, cattle are carried on both sides, cattle are placed on top of them, and there is no place that you can brace the deck to, because the deck fittings come over the side fittings, and when a wave strikes it, they smash, the cattle fall into the hold of the ship, or are knocked into the winches. In one boat we had a big loss; there was a big storm, and the whole upper deck load of cattle was washed overboard.

Q. They cannot be altered any way to make them suitable?—A. During the months of May, June or July, or the first of August, these would not be very suitable, but in a pinch they would do.

Q. Is there any practical way in which these ships of the government marine can be altered to make them suitable for carrying cattle?—A. No.

The most important thing for many of our farmers, especially those of central and western Canada, is the cattle business; and what has been said in regard to cattle is equally true of other kinds of freight so far as the construction of these ships is concerned. Mr. Campbell went on further in his evidence to show that the type of ship built during the war was not such as could be used to good advantage in the Atlantic trade owing to the large hatches and low sides. It is not necessary for me to go further into that question, but I think that the experience of the past few years, both on the part of the late government as well as on the part of this government, in connection with the management of the merchant marine, shows no hope of our being able to control Atlantic freights through the operation of the vessels of the Canadian Government Merchant Marine.

Something has been said on the subject of open rates on cattle, grain and flour. I do not want to spend too much time quoting, but evidence was given before the committee on Agricultural Conditions by Mr. Cunningham which will be found on pages 220 and 221, showing that the rates on wheat, flour and cattle are agreed upon at New York as well as by the liner committee at Montreal. You may call them open rates if you like, but the evidence is that none of those who sit in at the conferences change the rate without notifying the others, and the rates are not made public any length of time in advance. As a matter of fact, it is difficult to know in advance just what the rates are going to be.

Let me refer now to another phase of the subject, the necessity for Canada as an exporting country to have some measure of control over the rates. Our export trade during the fiscal year 1924 amounted to $1,045,351,056, of which total the sum of $360,057,782 went to the United Kingdom. Of that $360,000,000 odd the products of the farms of Canada accounted for $287,008,560; in other words, 80 per cent of the total exports to the United Kingdom went from Canadian farms. With that ratio of export trade going from the farms of Canada I submit that it is very essential, from the farmer's standpoint, that some measure of control be exercised if possible by the government over the rates at which farm produce is carried. I have here a table of rates showing the increase which has occurred in every case, and with the permission of the House I shall place it on Hansard:

OCEAN FREIGHT RATES ON UNDERMENTIONED COMMODITIES FROM EASTERN CANADIAN PORTS TO UNITED KINGDOM PORTS FOR YEARS 1914 and 1924

Commodities	Jan. to Aug. 1914	March to Dec. 1924	Increase %
Can. Vegetables	.17.09 per 100 pounds	50c. per 100 pounds	192
Can. Fish including Lobster and Salmon	.17.09 per 100 pounds	50c. per 100 pounds	192
Cured and Pickled Meats	.23.63 per 100 pounds	50c per 100 pounds	112
Prepared (canned) meats	.17.09 per 100 pounds	50c. per 100 pounds	192
Cheese	.31.32 per 100 pounds	60c. to 70c. per 100 pounds	108
Butter	.37.09 per 100 pounds	$1.00 per 100 pounds	170
Condensed Milk	.17.09 per 100 pounds	50c. per 100 pounds	192
Cattle	10.00 per head	$20.00 per head	100
Wheat (Liner)	1/3—3/6 per (qtr.) 30c. to 84c. per (qtr.)	2/3—3/9 per qtr. 55c. to 90c. per qtr.	27
Wheat (Tramp)	2/—3/9 per (qtr.) 50c. to 90c. per (qtr.)	3/ —4/3 per qtr. 72c. to 1.05 per qtr.	25
Flour	.12c. per 100 pounds	19c. to 22c. per 100 pounds	67
Meal (Oat)	.12c. per 100 pounds	19c. to 22c. per 100 pounds	67
Leather	.34.17 per 100 pounds	85c. per 100 pounds	148
Vehicles	.15.66 per cu. ft.	25c. per cu. ft.	60
Autos	.10.40 per cu. ft.	25c. per cu. ft.	140
Potatoes	No movement	50c. per 100 pounds	
Sugar (Refined)	No movement (rate 13c. per 100)	25c. per 100 pounds	95
Rubber Tires	.11.025 per cu. ft.	25c. per cu. ft.	127
Hay	.17c. to 20c. per 100	30c. per 100 pounds	62
Apples	75c. per barrel	90c. per bbl.	20
Lumber (heavy)	50s. to 85s. per std. (1,980 ft.) $12.16 to $20.67	80s. per std. (1,980 ft.) $19.46	19
Lumber (light)	40s. to 75s. per std. (1,980 ft.) $9.73 to $18.24 per std. (1,980 ft.)	70s. per std. (1,980 ft.) $17.03 per std. (1,980 ft.)	22

ARTICLES OF COMMON EXPORT TO UNITED KINGDOM

For year ending March 31st, 1924.

Article	Quantity	Value	Freight
Canned Vegetables	10,629,278 lbs.	$ 867,916	$ 53,146 50
Canned Fish:			
Lobsters	30,773 cwt.	2,002,168	15,386 50
Salmon	152,631 cwt.	3,430,153	76,315 50
Total Canned fish	183,404 cwt.	5,432,321	
Fruit—Apples	1,537,996 bbls.	6,739,347	1,383,196 40
Cured, Pickled or prepared meats	985,601 cwt.	17,876,255	492,800 50
Milk and its Products:			
Cheese	1,103,816 cwt.	22,153,209	217,480 40
Butter	4,371,197 lbs.	1,522,145	43,711 97
Condensed milk	127,849 cwt.	1,241,221	63,924 50
Total milk and products	.....	$ 24,916,575	
Cattle	59,486	6,287,815	1,189,720 00
Wheat	173,221,251 bus.	177,742,273	17,846,228 76
Flour	4,234,084 bbls.	22,188,665	867,987 22
Meal—(Breadstuffs)	515,924 cwt.	1,656,470	105,764 42
Lumber and Timber:			
Planks and boards—Pine	49,409 m.ft.	3,587,123	
Planks and boards—Fir	8,500 m.ft.	328,898	2,323,393 36
Planks and boards—Spruce	200,984 m.ft.	5,819,069	
Timber	11,505 m.ft.	352,288	113,082 06
Total lumber and timber	270,398 m.ft.	10,087,378	
Leather	2,382,888 lbs.	1,038,511	20,254 54
Automobiles	10,532	6,632,681	631,920 00
Potatoes	.....	.....	.....
Sugar	883,792 cwt.	8,744,604	220,948 00
Rubber tires	135,742	1,364,595	60,600 00
Hay	23,757 tons.	335,214	162,540 00

I might explain here that very few cattle were moving at that time owing to the market. A year or two ago the rate on cattle was higher than it is to-day. The rate on apples was very much higher some time ago, and if hon. gentlemen will refer to the evidence of Mr. Chase, given before the special committee on Agricultural Conditions, they will find an interesting statement in regard to the method used in getting the freight on apples reduced by competition between the Norwegian steamers and the regular vessels. This is a flat rate. The rate on cold air storage is usually very much higher. In looking over these figures it will be noted that the increase has ranged from 150 to 192 per cent on the main articles of export from our farms. With that condition obtaining, coupled with the low prices that the farmer has to take for his produce to-day, it is impossible to keep our export routes open in a way profitable to the Canadian farmer. Therefore from that standpoint alone I submit the government are fairly justified in taking action; indeed, they would be subject to severe criticism if they took no steps to secure a measure of control over the ocean carriers.

There is another feature which I want to place before the House, and that is the general condition of world tonnage which I referred to a little while ago. The following statement compiled from the British Board of Trade report is illuminating:

Statement of Shiping Compiled from British Board of Trade Report

	No. of ships	Gross tonnage
Worlds Gross Tonnage to-day..	.....	64,023,567
Worlds Gross Tonnage, 1921.. ..	28,433	61,974,653
Worlds Gross Tonnage, 1913.. ..	30,591	46,970,113
Br. Empire owned, 1921..	10,324	22,070,798
Br. Empire owned, 1913..	11,287	20,431,543
United States owned, 1921.. ..	4,343	17,026,002
United States owned, 1913	3,400	5,427,636
Germany owned about 10 per cent of the tonnage afloat in 1913, or about.. ..		6,000,000
Germany owned to-day, less than..		3,000,000

Shipping carried on through the ports of the United Kingdom 1913 vs 1921

Ships arriving with cargoes at ports of United Kingdom for the 10 months ending October showing tonnage carried

	British Ships Tons	Foreign Ships Tons	Total
1913..	26,902,396	14,014,634	40,917,030
1921..	20,944,209	9,920,006	30,914,215
Decrease.. ..	5,908,187	4,094,628	10,002,815

Ships departing with cargoes from ports of United Kingdom for 10 months ending October showing tonnage carried

	British	Foreign	Total
1913..	33,502,553	23,114,486	56,617,039
1921..	19,219,648	9,224,565	28,444,213
Decrease	14,282,905	13,889,921	28,172,826

[Mr. Sinclair.]

It will be observed that the British gross tonnage afloat has increased by 2,000,000 tons, or over 10 per cent, since 1913 as compared with 1921, while the world's tonnage in the same period has increased by 33 per cent. It will also be observed that in 1921 cargoes arriving at ports of the United Kingdom in British ships as compared with 1913 show a decrease of 5,908,187 tons. In 1921 cargoes leaving ports of the United Kingdom in British ships showed, as compared with 1913, a decrease of 14,282,905 tons, or a total decrease in business of 20,191,092 tons, being a decrease of 33⅓ per cent of the tonnage carried in 1913 by British bottoms.

Now, this condition, Mr. Speaker, points to one thing, which I wish to draw to the attention of the House. During the years previous to the war marine competition tended to control rates more or less; but after the war so much new tonnage was built that there is to-day a great deal more gross tonnage afloat than there is cargo tonnage available for it. It figures out at about four ships to handle what three ships could look after. With that condition obtaining, and the power of control of cargo rates in the hands of those who own the shipping, it is not surprising that to-day ocean rates are excessive. There is no doubt that any of us put in the same position would naturally set our rates to yield us a return on our idle ships as well as on those in commission. Consequently the export trade of this and other countries is necessarily charged much higher ocean rates than would be exacted if the law of supply and demand were allowed free play, as it should be to bring about a fair rate structure.

I think it will be admitted by every fair-minded person in the House and in the country after giving careful study to the history of ocean freight rates for the last fifteen years that the North Atlantic Steamship Conference is exercising powers that should not be vested in such a body, and that it is necessary that some action be taken by the government to secure a measure of effective control over the excessive rates now obtaining. This is the question before the House: Is the proposal we are now putting forward the best for meeting the situation? I submit that up to the present time no other method, constructive or otherwise, has been offered in substitution.

The main principle involved in the Petersen contract is the endeavour to secure a measure of control over ocean freight rates. To that end we give assistance to the contractor, Sir William Petersen, in the form of a subsidy to the extent of $1,300,000 odd, annually, provided he gives a certain specified service, and

the subsidy is paid in monthly instalments after the service is rendered; so Sir William Petersen gets nothing in advance, he gets the subsidy only after he has rendered service according to the contract. In return for that subsidy the government reserve to themselves the right to control the ocean rates to be charged by the contractor. In exercising that right they have power to insist that every dollar paid by way of monetary assistance under the contract is reflected back to Canadian importers and exporters in lower ocean freight rates. I submit for the consideration of the House that in so doing we are giving even a greater benefit to the producers of Canada. I am sure, Mr. Speaker, that in regard to export trade at least a large body of the people of this country who are agriculturists will get the greater part of the benefit from the subsidy which is thus paid.

Just one word more, Sir, in regard to the criticism that has been offered in respect to the scope or extent of the effort that is being made by this proposal. It is pointed out that only ten ships are involved. Well, that may be a small number, but it is worth noting that the suggestion of the use of even that number of ships is causing a lot of disturbance and fuss among those who are interested in that business, so they must see something in it. I am convinced that notwithstanding the comparatively small number of ships involved in the proposal, the result will be a favourable effect upon Canadian export trade. If we are to put ourselves in a position to take care of our financial obligations we must look to our export trade and give it all the encouragement we can. It has been a pleasure during the past few years to note the increase of our exports compared with our imports and to see that the balance is on the right side. If we are to maintain that position we must see to it that at least a fair margin of profit is afforded to those who produce the goods which we send to other countries.

I think, Mr. Speaker, I have devoted enough time to presenting the views on this subject which I hold as representative of a province which is altogether agricultural. When the details are under consideration we may have an opportunity of further discussing the benefit which the proposal will bring about to our export trade. We are all anxious, I am sure, to see our Canadian trade directed through Canadian channels. By the operation of the British preference we are enabled to bring a considerable amount of our imports through our Canadian ports and over Canadian railroads, which I think all in this House will look upon as a proper policy. But while we do that in respect to our imports we have very few opportunities of directing our exports through Canadian ports, and it seems to me that by this proposal we shall be able to do more in the way of building up our Canadian ports by exercising a certain amount of control over the channels through which our exports go out of the country.

On motion of Mr. Ross (Kingston) the debate was adjourned.

CANADA-UNITED STATES EXTRADITION TREATY

Mr. SPEAKER: I have the honour to inform the House that a message has been received from the Senate informing this House that the Senate doth unite with the House of Commons in the approval of the convention between His Majesty and the President of the United States of America for the purpose of enlarging the list of crimes on account of which extradition may be granted with regard to certain offences committed in the United States or in the Dominion of Canada under the convention concluded between Great Britain and the United States on the 12th July, 1889, and the 13th December, 1900, and the 12th April, 1905, and the 15th May, 1922, which was signed at Washington on the eighth day of January one thousand nine hundred and twenty-five, and which was signed on behalf of His Majesty in respect of Canada by the plenipotentiary therein named, by filling in the blank space therein with the words "Senate and."

On motion of Mr. Mackenzie King the House adjourned at 11.10 p.m.

Monday, March 16, 1925

The House met at three o'clock.

REPORTS AND PAPERS

Additional correspondence in the Department of Trade and Commerce in respect of ocean rates between Canada and Great Britain; also interim report of Canadian marine insurance rates by the Imperial Shipping committee; also interim report on rates of freight on Canadian flour in the North Atlantic by the Imperial Shipping committee; also statement of Imperial Shipping committee on ocean rates on flour and wheat.—Hon. Mr. Low.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

Hon. JAMES MURDOCK (Minister of Labour): I beg to lay on the table of the House, for the information of hon. members, copy of a publication issued by the Department of Labour concerning judicial proceedings respecting constitutional validity of the Industrial Disputes Investigation Act, 1907, and amendments of 1910, 1918 and 1920. This book contains a brief history of the circumstances which resulted in the judicial proceedings, together with the texts of the judgments of the Ontario courts and the Judicial Committee of the Privy Council, the cases for the various parties, the argument before the judicial committee and other co-related data.

INQUIRIES FOR RETURNS

AUSTRALIAN TREATY

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Press notices of government announcements have given the House to understand that a treaty has been made with Australia, and also that this treaty has been ratified by the Australian parliament. May I ask if there is any reason why it has not been presented to this House for ratification, and if so what the reason is, and when we may expect it?

Hon. J. A. ROBB (Acting Minister of Finance): Further negotiations with Australia are in progress.

Mr. MEIGHEN: Do I understand that no treaty has been effected?

Mr. ROBB: After the government of Australia had passed their legislation they passed an order in council changing the percentage that should apply to goods that would come under their tariff. I think my hon. friend understands that under our tariff, if twenty-five per cent of the goods are manufactured within the British Empire they are admitted. That was changed by Australia to seventy-five per cent. So, we are negotiating with them to have this more clearly defined.

Mr. MEIGHEN: Is there any reason why the Acting Minister of Finance should not lay on the table, and perhaps distribute, the treaty as already accepted? It may be subject to these negotiations, but the treaty has now a definite form. I see no reason why we should not have it.

Mr. ROBB: I am not sure that there are any good objections. I will let my hon. friend know later.

[Mr. Mackenzie King.]

REMISSIONS OF TAXATION

On the Orders of the Day:

Sir HENRY DRAYTON: When may we hope for the return called for by section 92 of the Audit Act which directs that returns have to be made of all remissions of taxation and the like, within the first fifteen days after the House opens. I have been unable to find any such return.

Hon. A. B. COPP (Secretary of State): These returns were made a week or two ago.

Sir HENRY DRAYTON: I made inquiry some days ago and my instructions are to the contrary. I communicated with one of the departments which had the matter in charge and understood that returns would be made in a few days.

Mr. COPP: It was brought down a week or two ago.

ROYAL COMMISSIONS

Hon. R. J. MANION (Fort William and Rainy River): A return was ordered to be brought down a week or two ago in regard to the number of royal commissions which have been appointed by the government. I do not know which department it would come under. I have not seen the return yet.

Hon. A. B. COPP (Secretary of State): It was changed to an order for return. Afterwards another question was asked, I understand, by my hon. friend from Winnipeg, and that was changed to an order for return. The whole matter will be brought down shortly.

ORDERS OF SESSION 1924

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): There are not only a large number of orders passed early this session which have not been brought down, but there is an overhang from last session. The government have not managed yet to comply with these orders. I have a list of at least half a dozen moved by hon. gentlemen on this side of the House, and I doubt not that there were some moved by hon. members in other portions of the House. One would think that a year would be sufficient time to comply with these orders, especially as some of them are very simple.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The delay in that regard must have been unintentional. It was an oversight. I will seek to have these returns brought down.

BANK ACT AMENDMENTS

On the Orders of the Day:

Mr. ROBERT FORKE (Brandon): I wish to ask the Prime Minister (Mr. Mackenzie King) or the Minister of Justice (Mr. Lapointe), whether the government proposes to introduce legislation embodying the amendments of the act proposed by the standing committee on Banking and Commerce at the close of last session; and if so, when will the bill be brought down?

Hon. ERNEST LAPOINTE (Minister of Justice): The matter is under consideration, and I think it is the intention of the government to deal with the matter as suggested by the committee.

RURAL CREDITS

On the Orders of the Day:

Mr. H. E. SPENCER (Battle River): Will the government tell us when it is their intention to bring down legislation with regard to rural credits?

Hon. J. A. ROBB (Acting Minister of Finance): I have already informed the House that Dr. Tory was expected in Ottawa this week.

PRIVATE BILLS

CONCRETE SURFACING MACHINERY COMPANY

Mr. E. R. E. CHEVRIER (Ottawa) moved the second reading of Bill No. 20, respecting a patent owned by the Concrete Surfacing Machinery Company.

He said: This bill is for the purpose of reviving a patent. I understand that under the provisions of chapter 44, section 4 of the Patent Act of 1921, this patent was valid until the 10th day of January, 1922. I am also given to understand that the owners thereof failed to manufacture in Canada after January, 1922, and that they also failed to pay the second fee. I am further given to understand that under the provisions of the Patent Act as now constituted, application may be made to this parliament for the purpose of reviving this patent, and that application is now made.

Mr. MEIGHEN: The hon. member has given two very valid reasons why the second reading should not pass. I think he should give us some reason why it should.

Mr. CHEVRIER: As I understand it, in proposing the second reading of a bill this House does not usually go into all the reasons why the bill should be read the second time; but that on the motion for second reading, the bill is referred to the committee to which that bill should go, there to be threshed out, and the committee decide whether the bill should be reported or not.

Motion agreed to on division and bill read the second time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

ELEVATOR No. 2, VANCOUVER

Hon. Mr. STEVENS:

1. Who prepared plans for No. 2 elevator, Vancouver, and what was the engineer's estimate of cost?
2. Were tenders called for the erection of said elevator, and if so, in what manner?
3. How many firms tendered, and what are the names of such firms or individuals?
4. What was the amount of the lowest tender?
5. At what figure was the contract awarded, and to whom?
6. What is the total cost to date, based on engineer's approved certificates?
7. How much has actually been paid to said contractor?
8. Has contract been completed? If not, what still remains unfinished?

Hon. Mr. CARDIN:

1. (a) John S. Metcalf Co. Ltd.

(b) Estimate of cost:

Superstructure..	$1,336,292 00
Substructure..	201,813 00
Car unloading plant.. ..	277,616 00
	$1,815,721 00

2. The Northern Construction Co. Ltd. and J. W. Stewart were asked to tender as they were already in possession of the ground on the construction of the Ballantyne pier.
3. The Northern Construction Co. Ltd. and J. W. Stewart.
4. Contract for substructure $190,000, for superstructure, contract was cost plus 10 per cent. Awarded to Northern Construction Co. Ltd. and J. W. Stewart.
5. See answer to No. 4.
6. $1,652,967.72.
7. $1,623,561.45.
8. The contract is completed.

Mr. M. G. WALKER

Mr. ARTHURS:

1. Does the name of one, M. G. Walker or Milton G. Walker, of Winnipeg, appear on the records of any department of the government, as having been at any time employed as a full or part time employee?
2. If so, what were his duties, and what remuneration was paid him?
3. Is he still in the employ of the government either as a temporary or permanent official?
4. If so, what are his duties and what salary does he receive?

Hon. Mr. COPP:

1. No.
2. 3 and 4 answered by No. 1.

DEPUTY MINISTERS

Mr. DOUCET:

What are the names and salaries of deputy ministers, and of those, who though not deputy ministers, held the same rank on December 31, 1921?

Hon. Mr. COPP:

Department of Agriculture: Dr. J. H. Grisdale, Deputy Minister, $5,500.

Department of Public Archives: Dr. A. G. Doughty, Deputy Minister, $6,000.

Auditor General's Office: Mr. E. D. Sutherland, Auditor General, $6,000.

Civil Service Commission: Hon. W. J. Roche, $7,000; Col. M. G. LaRochelle, $6,000; Mr. Clarence Jameson, $6,000.

Department of Customs and Excise: Mr. R. R. Farrow, Commissioner of Customs, $6,000.

Department of External Affairs: Sir Joseph Pope, Deputy Minister, $6,000.

Department of Finance: Mr. J. C. Saunders, Deputy Minister, $6,000.

Governor General's Secretary: Capt. O. H. C. Balfour, $6,000.

Department of Indian Affairs: Mr. Duncan C. Scott, Deputy Superintendent General, $6,000.

Department of Insurance: Mr. G. D. Finlayson, Superintendent of Insurance, $6,000.

Department of the Interior: Mr. W. W. Cory, Deputy Minister, $6,000.

Department of Justice: Mr. E. L. Newcombe, C.M.G., K.C., Deputy Minister, $10,000; Mr. E. R. Cameron, K.C., Rank of Deputy Minister, $6,000.

Department of Labour: Mr. F. A. Acland, Deputy Minister, $6,000.

Department of Marine and Fisheries, Mr. A. Johnston, Deputy Minister, $6,000.

Department of National Defence, Naval Service: C. J. Desbarats, C.M.G., $6,000; Militia Service: Major General Sir E. Fiset, $6,000.

Department of Mines: Dr. Charles Camsell, $6,000.

Royal Canadian Mounted Police: Mr. A. A. McLean, K.C., Financial Comptroller, $6,000.

Post Office Department: Mr. R. M. Coulter, Deputy Postmaster General, $6,000.

Privy Council: Mr. Rodolphe Boudreau, Clerk of the Privy Council, $6,000.

Department of Public Works: Mr. J. B. Hunter, Deputy Minister, $6,000.

Department of Public Printing and Stationery: Mr. F. A. Acland, King's Printer and Controller of Stationery, without remuneration.

Department of Railways and Canals: Major G. A. Bell, Deputy Minister, $6,000.

Department of the Secretary of State: Mr. Thomas Mulvey, Deputy Minister, $6,000.

Department of Trade and Commerce, Mr. F. C. T. O'Hara, Deputy Minister, $6,000; Mr. Geo. F. O'Halloran, Commissioner of Patents, $6,000.

Department of Immigration and Colonization: Mr. W. J. Black, Deputy Minister, $6,000.

Soldiers' Civil Re-establishment: Mr. N. F. Parkinson, M.A., Sc., Deputy Minister, $6,000; Department of Health: Dr. J. A. Amyot, Deputy Minister, $6,000.

Parliamentary Librarians: Hon. Martin Burrell, $6,000; Mr. J. de L. Taché, $6,000.

Clerk of the Senate: Mr. A. E. Blount, C.M.G., $6,000.

Clerk of the House of Commons: Mr. W. B. Northrup, K.C., $6,000.

Chief Electoral Officer: Mr. Oliver M. Biggar, $12,000.

Parliamentary Counsel: Mr. F. H. Gisborne, I.S.O., K.C., $6,000.

PROPOSED VANCOUVER ISOLATION HOSPITAL

Hon. Mr. STEVENS:

1. Has the government received from the city council, Vancouver, a request for a grant towards the construction of an isolation hospital?

2. Is the government aware of the large sum collected, annually, for sick mariners' dues at the port of Vancouver, resulting in a very substantial surplus each year above the cost of caring for sick mariners?

3. Is the government aware that a substantial number of infectious cases are due to sea-borne traffic entering the port of Vancouver?

4. In view of this substantial surplus, is it the intention of the government to accede to the request of the city council for substantial grant to the cost of erection of isolation hospital?

Hon. Mr. BELAND:

1. Yes.

2. There is no substantial difference between the sum collected and the expenditure incurred in connection with the service.

3. No.

4. Answered by No. 2.

BOARD OF GRAIN COMMISSIONERS

Hon. Mr. STEVENS:

1. How many employees were on the staff of the Board of Grain Commissioners, and located at Vancouver, during each month for the crop year ending August 31, 1924: (a) weighmaster's department; (b) inspection department?

2. What was the total amount of grain during crop year ending August 31, 1924: (a) inspected inwards at Vancouver; (b) inspected outwards at Vancouver; (c) weighed inwards; (d) weighed outwards?

3. What is the total revenue derived from: (a) weighing department of the Board of Grain Commis-

sioners at Vancouver for the crop season ending August 31, 1924; (b) inspection department?

Hon. Mr. LOW:

1. (a) 1923: September, 6; October, 7; November, 9; December, 10.

1924: January, 11; February, 11; March, 11; April, 12; May, 12; June, 12; July, 12; August, 12.

(b) 1923: September, 5; October, 6; November, 6; December, 10.

1924: January, 11; February, 16; March, 17; April, 18; May, 17; June, 17; July, 15; August, 17.

2. (a) 53,538,521 bushels.
(b) 53,415,036 bushels.
(c) 53,538,521 bushels.
(d) 53,415,036 bushels.

3. (a) $95,291.
(b) $55,233.

HEALTH APPROPRIATIONS

Mr. CHURCH:

What has been the vote by the parliament of Canada to the provinces for health purposes during the past six years?

Hon. Mr. BELAND: This question refers to a vote by the Parliament of Canada to the provinces for health purposes. A number of votes are passed every year for different associations, which have as their object the furtherance of health conditions in Canada. These are, for instance, the Canadian Association for Prevention of Tuberculosis, Child Welfare Association, Mental Hygiene Council, and some others. I presume, however, the hon. gentleman does not refer to these particular branches. The direct vote by parliament for health purposes during the past six years has been $1,050,000, exclusive of grants to the associations to which I have referred.

OYSTER AREAS

Mr. MacLEAN (Prince):

1. Have any negotiations been carried on between the local government of Prince Edward Island and the Marine and Fisheries Department of the Dominion government for the transfer of the oyster areas of Prince Edward Island back to the control of the Dominion government?

2. If so, what is the nature of those negotiations and how far have they proceeded?

3. Is it the intention of the Dominion government to endeavour to develop and restock these areas if control is given to the Dominion government?

4. Have Nova Scotia and New Brunswick consented to hand over their areas to the Dominion government and has any provision been made for development in those provinces?

Hon. Mr. CARDIN:

1. Yes.

2. The Minister of Marine and Fisheries informed the provincial premier by correspondence that if the divided jurisdiction were removed by placing the administrative control in the hands of his department, such measures as were deemed necessary by it for cleaning up public beds and building up an industry in private oyster culture would be taken. The proposal has not yet been accepted by the provincial government.

3. Answered by No. 2.

4. The Premiers of Nova Scotia and New Brunswick have indicated their willingness to place the administration of the suitable areas in their respective provinces in the hands of the Department of Marine and Fisheries provided mutually satisfactory arrangements for the development of the industry are concluded.

ROYAL GRAIN INQUIRY COMMISSION

Hon. Mr. MANION:

1. What was the personnel of the Royal Grain Inquiry Commission?
2. Who were the counsel of the said commission?
3. What were the fees paid to each of the same?
4. What was the total cost of the commission?

Hon. Mr. LOW:

1. Hon. W. F. Turgeon, Chairman; Prof. W. J. Rutherford, B.S.A., Prof. D. A. McGibbon, Ph.D., Jas. G. Scott, Robert Deachman, Secretary.

2 and 3.

	Remuneration $	Living Allowance $	Total $
D'Arcy Scott, Chief Counsel to Oct. 3rd, 1923	6,950 00	1,350	8,300 00
S. B. Woods, Senior Counsel from Oct. 13, 1923.	15,337 50	2,840	18,177 50
J. F. Fisher, Senior Counsel	7,025 00	11,330	18,335 00
	$29,312 50	15,520	44,832 50
4. Expended to Feb. 28, 1925..			167,610 82
Accounts in hand, pending supplementary vote.... ..			3,000 00
			$170,610 82

PULPWOOD EXPORTS

Mr. MAYBEE:

How many cords of pulpwood have passed through the port of Cobourg, Ontario, during each of the years 1922-23-24-25?

Hon. Mr. BUREAU:

Exports "Pulpwood" through the port of Cobourg, Ontario, during the fiscal years

ended March 1922, 1923 and 1924, and for eleven months ended February 28, 1925.

Fiscal Year	Cords
1922	49,798
1923	64,604
1924	68,674
April 1, 1924 to February 28, 1925,	81,163

CANADIAN NATIONAL RAILWAYS—COAL

Mr. MAYBEE:

How much coal have the National railways purchased from: (a) United States companies; (b) Canadian companies during each of the years 1922-23-24?

Hon. Mr. GRAHAM:

	1922	1923	1924
	Net tons	Net tons	Net tons
(a)	2,955,464	5,432,170	3,204,728
(b)	2,546,735	3,231,897	2,136,311

The quantities of coal shown as having been purchased from United States companies include the following tonnage of coal taken from the Rail and River Coal Company's mines at Belaire, Ohio, which are owned by the Canadian National Railways: 1922, 793,311 tons; 1923, 1,397,991 tons; 1924, 1,266,253 tons. These figures also include approximately one million tons of United States coal purchased yearly from United States companies for use on our United States lines, such as, Grand Trunk Western, Duluth, Winnipeg and Pacific, Portland—Island Pond division, Rouses Point and Fort Covington.

TRANSPORT OF MAIL TO EUROPE

Mr. DENIS (St. Denis):

1. What is the total amount now paid by the Canadian government for the transport of mail to Europe?
2. What are the names of the companies employed for the transport of said mail?

Hon. Mr. MURPHY: 1 and 2. Fiscal year, 1923-24—

Canadian Pacific Steamships Ltd.	$181,536 67
Robert Reford Company	7,160 50
White Star Dominion Line	34,144 75
Total	$222,841 92

DALHOUSIE POST OFFICE

Mr. JONES:

1. What was the nature of the repairs made on the Dalhousie post office, Restigouche county, New Brunswick?
2. Was a specification submitted to contractors inviting tenders for said work?
3. Who made the repairs?
4. What was the cost?

[Mr. Bureau.]

Hon. Mr. KING (Kootenay):

1. Masonry repairs and waterproofing; painting—exterior and interior—and whitening; repairs to plumbing and roof.
2. Yes.
3. Messrs. J. & D. A. Harquail Co. Ltd.
4. $2,065.

CAMPBELLTON POST OFFICE

Mr. JONES:

1. Were tenders invited for repairs and improvements on Campbellton post office, Restigouche county, New Brunswick?
2. If so, how many tendered. what are their names and the amount of each tender?
3. Who made the repairs?
4. What was the nature of said repairs?
5. What was the total cost?

Hon. Mr. KING (Kootenay):

1. Yes.
2. One—Messrs. J. & D. A. Harquail Company, Limited, $1,012.50.
3. Messrs. J. & D. A. Harquail Company, Limited.
4. General repairs, including roof, plastering, joinery, tiling, plumbing, etc., also exterior and interior painting.
5. Cost $1,012.50.

DARTMOUTH PIER

Mr. BLACK (Halifax):

1. From whom was the site for the Dartmouth, Nova Scotia, pier acquired?
2. What was the total amount paid and to be paid for the site?
3. Who is the contractor for the pier, what is the amount of contract, are there any extras on the work, and what is the total cost of the pier exclusive of the site?
4. Is the work of making approaches to the pier included in the foregoing? If not, what is the cost of constructing approaches?
5. Who was the inspector of the work, what are his qualifications for the position, what pay was he allowed, and what is the total payable to him?
6. Was there more than one inspector? If so, who are they?
7. If any inspector was dispensed with, which one was discharged and why?

Hon. Mr. KING (Kootenay):

1. Beazley Brothers.
2. Paid in full, $6,802.
3. (a) Halifax Dredging Company, Limited, and Standard Construction Company, Limited. (b) Approximately $135,659.64 based on approximate quantities. (c) No. (d) Final estimate, $139,063.06 increase due to increased quantities on unit prices basis.
4. Yes.
5. (a) Douglas D. McCulloch, O.A.S. (b) Civil engineer. (c) $6 per working day. (d) $762.
6. Yes, Geo. Young and Geo. Richards employed as assistant inspectors.

7. Geo. Young and Geo. Richards were employed from July 2 to July 4 and July 9 to November 8, 1924, respectively, to check deliveries of material.

CANADIAN NATIONAL RAILWAYS—DEBT

Sir HENRY DRAYTON:

1. What additions were made to the funded and unfunded debt of the Canadian National Railways and affiliated companies during the calendar year 1924?
2. What is the total amount required for interest on funded and unfunded debt of the Canadian National Railways and affiliated companies during the said year 1924?

Hon. Mr. GRAHAM:

1. To the debt to the public.	$ 90,814,026 70
To the debt to the government (including interest).	28,085,159 35
Total..	$118,899,186 05
2. On debt to the public.. ..	$ 38,361,704 14
On debt to the government.	31,271,043 00
	$ 69,632,747 14

The interest on unfunded debt, consisting principally of interest on bank overdrafts, overcharge claims and other small interest payments for the year 1924 was $377,115.47.

Sir HENRY DRAYTON:

1. What additions were made to the funded and unfunded debt of the Canadian National Railways and affiliated companies, exclusive of the obligations of lines in the United States and of separately operated properties during the calendar year 1924?
2. What is the total amount required for interest on funded and unfunded debt of the Canadian National Railways and affiliated companies, exclusive of the obligations of lines in the United States and of separately operated properties during the said year?

Hon. Mr. GRAHAM:

1.	
To the debt to the public..	$90,080,526 70
To the debt to the government, (including interest)	28,085,159 35
Total..	$118,165,686 05
2.	
On debt to the public.. ..	$37,459,173 25
On debt to the government	31,271,043 00
Total..	$68,730,216 25

The interest on unfunded debt, consisting principally of interest on bank overdrafts, overcharge claims, and other small interest payments for the year 1924 was $347,265.10.

WEMBLEY EXPOSITION

Mr. DOUCET:

1. Who were the officers in charge of the Canadian exhibits at the Wembley Exposition in 1924?
2. How many of these were able to speak the two official languages?

Hon. Mr. ROBB:

1. Mr. A. W. Tolmie and Mr. J. O. Turcotte.
2. Both.

GOVERNMENT NEWSPAPER ADVERTISING

Mr. CHAPLIN:

1. In what newspapers in Canada has the advertisement "Canada is coming through" appeared?
2. How much was paid to each newspaper.
3. What is the amount of unpaid obligations in respect to this advertisement?
4. Is it the intention to further continue the advertisement, and if so, for how long?

Hon. Mr. LOW:

1, 2 and 3.

	Amount unpaid
Manitoba Free Press..	$ 369 60
Gazette Printing Company.. ..	258 72
Can. Congress Publishing Company..	100 00
Globe Printing Company..	488 00
Saturday Night..	412 50
MacLeans Magazine..	980 00
Financial Post..	285 00
	2,893 82

Nothing has been paid on account of this advertisement.

4. No.

RURAL ROADS

Mr. DESAULNIERS:

1. How many rural roads were opened to traffic in 1923 and 1924, respectively?
2. What was the total cost for the upkeep of said roads, by provinces?

Hon. Mr. GRAHAM:

1. The Department of Railways and Canals has no information except as to roads constructed or improved under the Canada Highways Act. In 1923, 2,768 miles of rural road were so constructed or improved, and in 1924, 1,936 miles.

2. Maintenance is a purely provincial matter as to which the federal department has no record.

GRAND-MERE CUSTOM HOUSE

Mr. DESAULNIERS:

What was the revenue of the custom house, at Grand-Mère, for the years 1921, 1922, 1923 and 1924, respectively?

Hon. Mr. BUREAU:

Fiscal Year	Amount
1921-1922	$ 98,498.51
1922-1923	99,791.65
1923-1924	144,792.37
1924-1925 (eleven months)	73,034.43

IMPORTS UNDER BRITISH PREFERENCE

Mr. DECHENE:

1. What was the total value of merchandise imported into Canada under the British preference regulations during the years 1922, 1923 and 1924, respectively?
2. What proportion of said merchandise was imported from the British Isles, and what proportion was imported from other parts of the British Empire during each of the above years?
3. What proportion of said merchandise was imported through Canadian ports during each of the above years?

Hon. Mr. LOW:

1. and 2. Imports into Canada under the British preferential tariff during the fiscal years ended March 31, 1922, 1923 and 1924.

Countries whence Imported	1922	1923	1924
United Kingdom	$69,901,949	$93,554,415,	$102,944,427
Africa, British—			
East	6,024	4,791	6,783
South	15,249	90,916	17,405
West—			
Gold coast	12,558	188,601	228,734

3. The information is not available.

QUESTIONS PASSED AS ORDERS FOR RETURNS

RURAL MAIL ROUTES

Mr. MAYBEE:

1. Has the government established any rural mail routes in the years 1924 or 1925?
2. Have any tenders been asked for in connection with any proposed routes? If so, in what counties, and, from what post offices?
3. Is it the policy of the government to establish any new mail routes?

[Mr. Desaulniers.]

CANADIAN GOVERNMENT MERCHANT MARINE —CATTLE EXPORTS

Mr. BLACK (Halifax):

1. Have any Canadian Government Merchant Marine steamers carried cattle from Montreal, or other Canadian ports, to ports in Great Britain or the continent, during the years 1922, 1923 and 1924? If so, to what ports?
2. What number of cattle were carried each voyage?
3. What rate of freight was paid?
4. What was the net result of this business, voyage by voyage?
5. What was the profit or loss, as the case may be?

CANADIAN NATIONAL RAILWAYS—SHIPMENTS

Mr. SENN:

1. How many carloads of hay and straw were shipped from the following points in Ontario, on the Canadian National Railways in 1923 and 1924:—Caledonia, Hagersville, Seneca, Middleport, Canfield?
2. How many carloads of other farm produce were shipped during the same period from these points?
3. How many carloads of other merchandise were shipped during the same period from these points?

UNOPPOSED MOTIONS FOR PAPERS

CANADIAN NATIONAL RAILWAYS—SALARIES

Mr. R. B. HANSON (York-Sunbury) moved:

For a return showing by districts or regions the number of employees in each of the following classes and the average annual compensation for each employee of such class of the Canadian National Railways:—receiving under $1,000 per year; receiving $1,000 per year or over but under $2,000; receiving $2,000 per year or over but under $3,000; receiving $3,000 per year or over but under $4,000; receiving $4,000 per year or over but under $5,000; and so on until all classes are complete.

Mr. MEIGHEN: Carried.

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): No. My hon. friend and I have had some conversation concerning this. The Canadian National board have objections to giving this information, and my hon. friend, I understand, is going to ask to have this motion transferred to the order "Notices of Motion". He wishes to discuss it.

Mr. HANSON: What the minister has said is quite correct, but the only difficulty about that is, at this stage of the session, if it is transferred to the notices of motion, I am afraid it will never be reached. It will enter the land of limbo, and it will never come out. If, however, it is not going to be allowed to pass, I do not know if there is anything I can do but ask that it be transferred to notices of motion.

Mr. GRAHAM: Transferred to notices of motion.

Right Hon. ARTHUR MEIGHEN: (Leader of the Opposition): I do not know that this

can be transferred by so simple a formula as that. I do not like interfering in view of the arrangement made, and I would be prepared to abide by it, although all of us know that if it is transferred to notices of motion it may never be reached. Provided the minister will see that it will be reached during this session, I do not think anyone on this side will object to its being transferred.

Mr. GRAHAM: We had better let it stand. Like my hon. friend, I do not think one individual has a right to make any pledges to anyone about the transference of an order and whether it will be reached. Every hon. member who has a motion on the order paper would have a right to say whether his should have the preference over this one. It is not discussable where it is. All I can say is that the Canadian National board has suggested to me that it would be very injurious to the management of the Canadian National Railways if this information were given out, because that would mean that all information could be given that is requested concerning salaries and everything else in regard to the Canadian National Railways.

Mr. MEIGHEN: If the minister will say that he supports the company in that view, I will not raise any further protest.

Mr. GRAHAM: From my experience, I would support the company in that view, as this is absolutely a matter of operation.

Mr. MEIGHEN: Hon. gentlemen are coming round to our doctrine.

Mr. LAPOINTE: Under rule 38 this motion must be transferred automatically. Let me read the rule:

> Notices of motion for the production of papers which the member asking for the same intends to move without discussion, shall be marked by him with an asterisk and shall be placed by the Clerk on the order paper above "Notices of Motions," under the heading "Notices of Motions for the Production of Papers." All such notices when called shall be forthwith disposed of; but if on any such motion a debate be desired, it will be transferred by the Clerk to the order of Notices of Motions.

Mr. DEPUTY SPEAKER: Transferred to "Notices of Motions".

Mr. MEIGHEN: So far as I am concerned, it may as well be taken as defeated. I have accepted the minister's statement, which I think is absolutely right; and I am pleased to see that the government has become slowly converted to the viewpoint I expressed three years ago.

Mr. WOODSWORTH: I should like to join with the leader of the opposition (Mr. Meighen) in protest against the minister's stand in this regard.

An hon. MEMBER: But the leader of the opposition agrees.

Mr. WOODSWORTH: I mean, not as a point of order but as to the stand taken as regards such information being in the interests of the public. The other day, in response to a question of my own with regard to the salary paid to an official of the Canadian National Railways, the statement was made that it was not in the interests of the general public to give the information. In this particular case to which I have referred, the official was employed by the Colonization department, and—

Mr. DEPUTY SPEAKER: I must point out to the hon. member that this is not a debatable matter.

Motion transferred to "Notices of Motions".

LEASE OF RESERVE TO V. GRENON

Mr. ROSS (Kingston) (For Mr. Arthurs):

For a copy of all correspondence, documents, and other communications regarding the leasing of certain property in the lower French Indian reserve to one V. Grenon, and also relating to any complaints or requests for cancellation of the said lease.

CANADIAN GOVERNMENT MERCHANT MARINE

Mr. BLACK (Halifax):

For a copy of all correspondence, cables, telegrams, and other negotiations which may have taken place during the years, 1923 and 1924 and 1925, between the Minister of Railways and Canals and/or his department, and/or any other member of the government and any individual, firms or companies wherever situated, relating to the purchase or sale of the Canadian Government Merchant Marine steamers, as a whole, or for any part thereof.

QUEBEC HARBOUR COMMISSIONERS

Hon. Mr. STEVENS:

For a copy of all correspondence passing between Quebec Harbour Commissioners and any minister, or department, or official of any department of the government during the year 1924, in reference to advances by the Dominion government from votes by parliament; also, a copy of the report of the Board of Audit in regard to the affairs of the Quebec Harbour Commissioners made during the year 1924; also, a copy of a report of any individual member of the Board of Audit made in addition to the report of the Board.

DARTMOUTH PIER, NOVA SCOTIA

Mr. BLACK (Halifax):

For a copy of all documents, contracts, estimates, pay sheets, vouchers, correspondence and other papers relating: (a) to the acquisition of a site for the Dartmouth pier, Nova Scotia, constructed since 1921, and (b) to construction of said pier and the approaches thereto.

TIBURCE MALLET

Mr. DOUCET:

For a copy of all correspondence exchanged between the Department of Marine and Fisheries and others, regarding services rendered in saving lives, by one Tiburce Mallet, of Ste. Marie, Shippigan Island, New Brunswick.

WATERED STOCK

MOTION BY MR. CAMPBELL FOR RESTRICTIVE LEGISLATION

Mr. M. N. CAMPBELL (Mackenzie) moved:

That, in the opinion of this House, legislation should be enacted which will make difficult, and if possible prevent, the practice of issuing what is known as "watered stock".

He said: A banking expert who has recently written a book on the economics of finance is authority for the statement that seven men control over seventy per cent of the savings of nine million people. Mr. Gustav Meyers, in his book, History of Canadian Wealth, points out that to say that a small group of individuals control so vast an amount of wealth does not mean that they own it. Between ownership and control, he states, there is a difference, although the opposite of that is generally supposed. One of the most fruitful sources of this concentration of wealth has been the policy in the past of capitalizing and collecting dividends on what were originally free gifts from the public domain; and closely allied with this is the common policy on the part of powerful corporations of increasing the actual value of their stock when they are in a position to force the great consuming public to pay dividends on the fictitious as well as the real values of their capitalization. The fact that these pernicious practices were assisted and often deliberately encouraged by legislative action is something that lends little credit to Canadian public life. Prior to the British conquest of Canada, over nine million acres of land in Lower Canada had been granted to privileged individuals by the French crown, usually without any equivalent service to the state. This policy was continued and extended under the British regime. The cumulative rents from these endowments formed the basis of many of the great Canadian and British fortunes of to-day.

According to Parkman, in his Old Regime in Canada, while ecclesiastics, seigneurs and officials lived in elegance and luxury, the lot of the working people was that of poverty, ignorance, squalor and misery. The Hudson's Bay Company, which had received an empire gratuitously from the British crown, began the process of stock-watering very early in its history. According to the report of a parliamentary committee in 1794, the total stock of the company on December 23, 1720, was £103,950, although not more than £10,150 had been paid in cash. In 1829 this was further inflated to £400,000. Even on this enormous over-capitalization large dividends were regularly paid. From the time of its charter in 1690, up to 1800, a period of 110 years, the profits of the company amounted to between sixty and seventy per cent annually on its actual paid-up capital. By 1857 it was estimated that the company had taken £20,000,000 in net profits out of Canada. When it is considered that immense quantities of the company's stores and other property had been destroyed in wars, and when it is further taken into consideration that money had a very much greater purchasing power in those days, one can appreciate the enormous wealth that the Hudson's Bay Company took out of what is now the Dominion of Canada in profits. Since that time, due to the sale of land and other valuable holdings, the profits of this company have been so great as to be beyond computation in dividends upon paid-up capital. In 1839 Lord Durham reported that the whole of the public lands in Upper Canada had been alienated by the crown, that less than one-fifth of those of Lower Canada remained, only one-eighth of those of Nova Scotia, less than one-third of those of New Brunswick, and that the whole of Prince Edward Island had been given away in one day, principally to absentees living in Great Britain. Thousands of immigrants were brought out to Canada to provide rent-rolls for these human vampires, and the plundering, extortion and exploitation of these poor unfortunates can hardly be surpassed by the history of negro slavery in any part of the world during that contemporary period. The terribly inhuman conditions under which settlers were brought to Canada may be partly understood by the fact that according to the report of the commissioners of immigration for 1847 no less than 17,445 British subjects died on the passage to Canada during that year. In addition to this, many thousands of these poor immigrants died on their arrival here. This frightful state of affairs moved men like Judge Thorpe, William Lyon Mackenzie and Louis Joseph Papineau to risk fortune, reputation and even life itself in the interests of their suffering countrymen.

The history of our Canadian railways is replete with instances of graft, inefficiency, stock-jobbing and stock-watering. Sir Donald Smith, a man who had grown rich in the service of the Hudson's Bay Company, chiefly through the plundering of the northern Indian tribes, was one of the principal promoters of

the Canadian Pacific Railway. At the very outset these promoters are said to have made a collective profit of over $9,000,000 from the manipulation of the stock, which they sold to themselves at 25 cents on the dollar. In 1917 Judge Phippen estimated the value of the gratuities received by the Canadian Pacific Railway up to that time in cash subsidies, land grants, exemption from taxation and other privileges as $450,000,000—considerably over half the total assets of the company. No doubt if the exact figures were available of the company's finances from the date of its charter to the present time it would be found that the accumulated earnings on these free gifts from the Canadian people would be more than the present total assets of the company. It is apparent that the people of Canada really constructed the Canadian Pacific railway, and are now compelled to pay heavy dividends to private interests on the value of their own gratuities to the promoters. Between 1910 and 1920 the Canadian Pacific Railway Company paid out in dividends over $219,000,000, and during the same period took over $100,000,000 from their earnings and invested it in subsidiary companies. According to Mr. Beatty, the president, the company had in 1922 a surplus of $238,000,000, representing earnings reinvested and not paid out in dividends. It may be truthfully said that the Canadian Pacific Railway with all its subsidiary companies was publicly built but is privately owned.

I should like to quote a few figures from the January, 1914, issue of the Monetary Times of Toronto, dealing with their recent mergers and amalgamations of various companies. The list is too long to quote in full. The first and perhaps most important is the Canada Cement Company. That company was formed in 1909, being a merger of eleven different companies in eastern and western Canada. The collective capitalization of these eleven companies was $17,750,000; but when the Canada Cement Company was formed this was watered to reach a total of $38,000,000, and over $30,000,000 was actually issued in stock. The stock was watered in reality to the extent of about $13,500,000. Now, to prove that this company was in a position to compel its customers—the people of Canada—to pay dividends on the watered stock as well as on the actual value of the stock, the merger immediately raised the price of cement about 47 cents per barrel. I have figures here showing some transactions which were entered into by the city of Winnipeg with the Canada Cement Company, but I do not want to weary the House by quoting them; they prove that immediately after the merger the price of cement was raised 47 cents per barrel. The gentlemen primarily responsible for organizing this trust was Mr. Max Aitken. To show how the government of that day appreciated the commendable work he was doing in organizing this merger, they recommended him for a baronetcy, and he was created Sir Max Aitken. As Lord Beaverbrook this man is now living in Great Britain in opulence and luxury on his ill-gotten gains—the money he plundered from the people of Canada.

Another merger is the Amalgamated Asbestos Corporation, Limited. This was a merger of five different companies with a collective capital originally of $3,550,000, which was raised to $18,000,000; in other words, watered to the extent of $14,450,000. The Ames-Holden-McCready Company Limited was a merger of two different companies with a collective capitalization of $3,500,000. This was watered to the extent of $8,000,000, the capitalization of the new concern being $11,500,000, of which $7,000,000 stock was actually issued. The next company is not unknown to hon. members of this House, particularly those from western Canada.

Canada Steamship Lines, Limited: This was a merger of twelve navigation companies with a collective capital of $16,200,000, which was raised to $33,000,000, the amount of $16,800,000 being watered. Some further reference to this company will be interesting. I find in the report of the royal commission on Lake Grain Rates which was issued in 1923, that the figures presented to this commission by the merger showed a profit of only 9.3 per cent on the appraised value of their boats; but the commission, after going carefully into the figures and having two qualified appraisers value those boats, arrived at an entirely different conclusion. I am not going to weary the House with lengthy quotations, but the commission proved conclusively that the value of the stock was very much lower than the figures given, so that naturally the dividend earned would be very much greater.

Now, these companies have another very convenient way of hiding dividends, and that is by the formation of subsidiary companies. We find that Canada Steamship Lines Limited had a subsidiary line known as the Standard Shipping Company. This company was composed of Roy Wolvin and James Norcross, both of the Canada Steamship Company. This subsidiary company had offices at Winnipeg and it had the monopoly of the space in the ships of the parent company, and largely controlled the insurance writing on the cargoes shipped in those vessels. We find the capitalization of this Standard Shipping

Company was only $5,000, but in two seasons Norcross and Wolvin drew about $275,000, which rightfully belonged to the Canada Steamship Lines. This was a convenient way of hiding the merger's dividends. This $275,000 was all taken out of the pockets of the farmers of the northwest. In the same report I find that the Great Lakes Transportation Company claimed their profits for the same year to be only 11 per cent on the appraised value of their holdings, but the investigation of the commission showed these holdings to be tremendously overvalued. Take one instance, the steamship Glenclova, which was valued in the exhibit handed to the commission at $525,000. From the record and the testimony of the appraisers who were employed by the commission it was proved that this vessel was worth only $125,860. If the valuation of the other vessels was inflated to that extent it would mean that the company in that year would make a dividend of about 46 per cent instead of 11 per cent. As a further indication of how misleading their figures were, I will refer to a letter which was issued by the president of the company, Mr. Playfair, on July 5, 1922. This letter was sent out in support of an issue of bonds. In part, it reads as follows:

> The net earnings after deducting depreciation for the year ending December 31, 1921, exceeded five times the amount required for interest on this issue.

With regard to that the commission made the following observation:

> Five times the amount required for interest on the issue would be $350,000; but in Exhibit 329, which was put in as part of the evidence of the company, it is stated that the net earnings of 1921 were only $133,794. No satisfactory explanation of this astonishing difference is tendered.

Now we will deal with the Mathews Steamship Company. This company claimed their profits to be only 10.24 per cent on the appraised value of the vessels. They showed the value of one vessel, the Mathewston, as $900,000; but in a letter which was given to the public in support of an issue of bonds they mentioned that this vessel had been completed during the previous year at a cost of $800,000, so that after the vessel was in use for a full year, when there should be a considerable amount of depreciation, we find it written up to the extent of $100,000. In this letter which the Mathews Steamship Company sent out, dated August 20, 1922, I find the following:

> The average annual net earnings derived from operation, after depreciation and taxes for the five years ending January 31st, 1922, amounted to almost five times the total interest charges on the bonds now outstanding including the present issue. Preliminary figures for the first half of the year 1922, indicate

> that the earnings for this year may be considerably in excess of the above proportion.

On this part of the letter the commission make the following observation:

> The bond issue was $700,000; the interest on that would be $49,000. Five times that would be $245,000; but in Exhibit 277 the company claims that its operations for the year 1922 up to the first of September resulted in a loss of $29,709.61.

Now, I have dealt briefly with causes; let me refer for a moment to the effects of the concentration of wealth. According to the Canada Year Book for 1922-23, .14 per cent of those who paid income tax had 25.77 per cent of the total income; .42 per cent of the taxpayers,—that is, less than one-half of one per cent—had 37.73 per cent of the income, while 7.7 per cent of the taxpayers had 74.80 per cent of the income. I want to point out that this is only the percentage of the amount of income of those whose incomes were taxable. After all, it is only a small proportion of the population who have incomes that are taxable under the Income Tax Act; so that when we figure it out on the proportion of the income, of the whole population we find that a very much greater percentage of wealth is in the hands of a few than these figures would indicate. In reference to the income tax figures of the United States, I find that in 1918, 14 per cent of the income taxpayers had 40 per cent of the total income. In this connection I would also like to quote a former chancellor of the exchequer of Great Britain, Mr. Snowden, who, speaking in the British House of Commons on March 20, 1923, said:

> Eighty-eight per cent of the wealth of this country is owned by two and a half per cent of the population and five out of every six persons who die leave not a penny behind them.

At the risk of being accused of failing to put forward some constructive remedy or suggesting some constructive measures in connection with this matter, I am going to leave it in this way: I have certain concrete ideas in my own mind of how this situation could be dealt with, but I realize that if these do not meet with the approval of the government or of some hon. gentlemen they will be used as a reason for opposing the spirit of the resolution itself. It is my opinion that when a private member puts certain facts and figures before the House to show the necessity for legislative or administrative action, his responsibility ceases. The responsibility for legislative and administrative action is on the government. The government has the advice of the very best legal counsel, which is something that the ordinary private member cannot secure; it has at its disposal a means of securing facts and figures which are not

available to a private member. Therefore I say that the responsibility for dealing with the matter is entirely with the government. We have undertaken to control in some measure, to exercise supervision over our transportation companies, our banks, our insurance companies, and a great many other corporations, and I see no reason why we should not carry that principle a little further. While I would be the last to suggest that we carry supervision to the point where it will interfere with the efficient management or with the proper carrying on of business, yet I think the public are entitled to know just what dividends certain companies are earning, particularly when some of them secure very special privileges by legislation from the people of this country.

Hon. A. B. COPP (Secretary of State): Mr. Speaker, the question that the hon. member for Mackenzie (Mr. Campbell) has brought before the House this afternoon is a technical one, a complicated and an interesting one. He has cited a number of cases where companies have made large earnings because of what he calls the watering of stock, and the paying of dividends on stock which was of no value. The resolution seems very innocent as it stands on the order paper, but it has one or two features which present difficulties. Before we could accept the resolution that my hon. friend has so ably put forward, we would first have to have some definition of "watered stock". Watered stock may be of different varieties. It might be stock such as my hon. friend has described, for which the holder gives no particular value. Stock may also be described as watered that is issued for the purchase of goodwill, or anything of that kind. A company taking over the assets of another company may pay in stock for such things as that. Such an asset may have no tangible value, but nevertheless it is of some value.

For many years, the several provinces of the Dominion have grappled with this question. I was unable to hear my hon. friend very distinctly, but I think he did refer to the different provinces that had grappled with this question to some extent. Some of the provinces have issued what are called blue sky laws to protect the public from the sale of stock by companies, and I think the Supreme Court of Canada has recently brought down a judgment declaring that the legislation passed in the province of Saskatchewan in that respect was ultra vires of the provincial legislature. I might also say to my hon. friend that the officials of the department under whose control and administration the Companies Act comes have given a very great deal of study to this question for many years, and I have several reports before me in regard to it; I have one very lengthy one before me now. The question my hon. friend has raised is not without its difficulties. A company is organized, and an application is made for its incorporation, either to the provincial legislature or to the Dominion. The company sets forth its object, and obtains its charter. All that is pretty well safeguarded, in so far as we are able to do so. The issuing of stock is practically a matter of civil contract between the company and the purchaser of the stock. My hon. friend has referred to cases where companies have made large and unreasonable profits because of stock watering, and that as a result of watering their products were sold at a higher price to the public in order that they could pay dividends on the watered stock. Nevertheless, people are not forced to buy these products.

Mr. CAMPBELL: Would the minister say that people in Canada are not compelled to buy cement from the Canada Cement Company? They absolutely control the market.

Mr. COPP: That may be so; I do not know particularly about the Canada Cement Company, but I say that generally speaking people do not have to buy the products of a firm that is charging a high price in order to enable them to pay dividends on watered stock.

This subject is not a new one; it has been considered every year, and almost every day by those in charge of the incorporation of companies. Under the Dominion charter, as I remember it, we have regulations by which the company that is issuing stock fraudulently or by misrepresentation may be called to account by the department. As regards the issuing of stock in the ordinary way, and charging a higher price for it, I am not in a position to say that some scheme might not be worked out and legislation enacted that would bring about an improvement. I can assure my hon. friend, and I think I can speak not only for the government but for every individual member of parliament, that if anything can be done to better conditions or to pass legislation to bring about an improvement along the line of meeting my hon. friend's complaint, it will be not only a pleasure for me but a duty, and the duty of this parliament, to do it. My hon. friend has brought the matter to the attention of the House and of those particularly interested in this matter, and when they read his remarks in Hansard, they will be able to gather what he has in his mind. The question will then be very thoroughly considered, and I can

assure my hon. friend that anything that can reasonably be done in the direction of protecting the people of Canada generally in the incorporation of companies, and in the matter of buying the products of these firms that are charging high prices, it will be the duty of this government and of parliament to do.

Mr. GARLAND (Bow River): Does the minister approve of the issuing of watered stock? Does he consider it a right thing to do?

Mr. COPP: It all depends on what the watered stock is, and on your definition of watered stock.

Mr. GARLAND (Bow River): Would the minister mind defining watered stock as he understands it?

Mr. COPP: I would not attempt to define it at the present moment, but as I have said, I will be very glad to bring this matter to the attention of the Companies branch and see if they can suggest anything that would be of advantage in the operation of the Companies Act, or in the issuing of charters, to better protect the people as a whole; and if anything can be done in that direction it will be a very great pleasure to me to do it.

Mr. LADNER: Could the minister not make greater restrictions in connection with the issuing of prospectuses? The law already provides that the allotment of shares for other than cash consideration shall be stated in the prospectus, but I would judge from the speech of the hon. member for Mackenzie (Mr. Campbell) that it is possible for the applicant, even with that safeguard, to be fooled. Perhaps the minister might find scope for legislation in that direction.

Mr. COPP: The department is always checking up and watching anything that comes to its attention through parliament, with a view to bettering the administration of any acts that come under its administration. As my hon. friend says, some regulation might be made in regard to the issuing of prospectuses; but I may say that we cannot always guard against the exploitation of stock. If a man wants to sell stock at a high price, and somebody wants to pay an extravagant price for it, the department cannot prevent that; but I can assure my hon. friend that I will have his remarks brought to the attention of the officials of the department, and if there is anything we can do that will be of advantage we shall be very glad to do it, and also to have my hon. friend come to the department and talk the matter over with the officials to see if something might not be worked out.

4 p.m.

Mr. BAXTER: Can the minister state conveniently at the present time just how that case came before the Supreme court, and what the decision was. I know there was something, but I have not got it accurately in my mind.

Mr. COPP: The recent decision of the Supreme Court of Canada was given in the case of Lukey vs the Ruthenian Farmers Elevator Company, Limited, 1924, C.L.R. 56. The Supreme Court of Canada decided that the Sale of Shares Act, Revised Statutes of Saskatchewan 1920, Chapter 199, was ultra vires of the provincial legislature in so far as it purported to apply to the sale of its own shares by a Dominion company. I do not know all the details.

Mr. BAXTER: The minister has answered me enough. It is apparently a decision that the provincial act was ultra vires, and I know that has been applied; but has there been any decision that the Dominion cannot enact legislation of the character that is asked?

Mr. COPP: I do not know of any.

Mr. MEIGHEN: The minister says there are several kinds of watered stock. I only know of one. Would the minister give us two or three examples?

Mr. COPP: A general definition of watered stock might be stock issued for which no value was given.

Mr. MEIGHEN: Hear, hear.

Mr. COPP: Another case, to my mind, would be stock issued for the sale of the goodwill of a business.

Mr. MEIGHEN: If the goodwill was worth the stock issued at its par value, it would not be watered stock.

Mr. COPP: It might be a question—

Mr. MEIGHEN: It would be a question of whether there was watered stock; but the minister said there were several kinds of watered stock.

Mr. COPP: I would say that the term "watered stock" might be referred to different kinds of stock.

Mr. MEIGHEN: I suppose there might be watered stock in different companies; but if there is any kind of watered stock except stock not represented by value, I would like to know what it is.

Mr. COPP: I might say in reply to my hon. friend from Mackenzie, that although the resolution on the order paper may possibly not mean very much, he has brought this matter to the attention of the government and of parliament, and in so far as the Companies branch is concerned, I will see that it is given consideration, and if any remedy can be provided we shall be very glad to do it.

Mr. IRVINE: The minister has stated that his department will be very glad to check up on this matter of watered stock; he has also stated that his department does not know what watered stock is. Will he therefore indicate how he is going to be able to check up on it in the coming year?

Mr. MACLEAN (York): Get a "mouser."

Mr. LADNER: I would like to ask the minister a question with respect to the registration of agreements. Under the British Columbia laws all shares which are issued must be issued for cash. If the consideration is other than cash an agreement embodying such an arrangement must be filed with the registrar of joint stock companies, and that is open for the public to inspect, and the company cannot get behind that; so that any shareholder can get the information as to the stock that is issued, and the expense at which it was issued, and they may look at it before they buy.

Mr. BAXTER: Do they?

Mr. LADNER: Very often. If they are sensible people they will do it. Would it not be possible to provide in the Dominion act that, in addition to stating in the prospectus the shares which are allotted for other than cash, there should also be filed—which I understand is not now provided for—the agreement or document under which the shares are issued for a consideration other than cash? Would the minister take a proposal of that kind under consideration? Because in that way the citizens of Canada can investigate what has been done by any Dominion company and can find out whether he is getting watered stock, and how much he is getting.

Mr. STEWART (Argenteuil): That would only protect the purchaser of the stock, and I do not think that is what my hon. friend (Mr. Campbell) is after. The point is the protection of the public.

Mr. LADNER: That is one important feature.

Mr. COPP: I will be very glad to refer the matter to the officials of the department for consideration. If what the hon. member suggests is considered an improvement it may be accepted.

Mr. MACLEAN (York): Has the minister compared the situation in Canada with the conditions that exist in other countries where this grievance obtains? Perhaps he will find that in some other countries they have dealt with the question and have afforded a protection to the public against what seems to be a bad principle.

Mr. SPENCER: I should like to refer to the statement the minister made a few minutes ago, that his department had been considering this subject of watered stock annually, and he might say, even daily. That being so, have they any policy to suggest by which they can handle this subject?

Mr. COPP: The hon. member misunderstood me. I did not intend to convey the impression that we had considered the question of watered stock every day; but the question of the improvement of the Companies Act or any other act has been considered by the officials from time to time. We passed a number of amendments last year, and if it is necessary to pass further amendments, we will be very glad to take suggestions from my hon. friend.

Mr. STEWART (Argenteuil): I think the proper course for the hon. member to pursue is to bring to the attention of the department the amendments he has in mind to propose to the act. I quite agree with the right hon. leader of the opposition (Mr. Meighen) that there is only one kind of stock that can be called watered stock. I do not know how it came to have that name. It is, however, a very difficult proposition.

Mr. FORKE: Perhaps it is putting water in the wine.

Mr. STEWART (Argenteuil): Yes. If the hon. member who has introduced this resolution has any amendment to propose which would prevent injury being done, I am sure the department will be very glad to give it consideration, and if they are unable to acquiesce in his suggestions, reasons should be given.

Mr. MEIGHEN: If the government feels disposed to prevent the issue of watered stock —and I do not think anybody doubts that it can be done—will the minister say whether the government, or even himself, feels that it can be accomplished?

Mr. STEWART (Argenteuil): I would be delighted if it could be done, but the right

hon. member will agree that the definition of watered stock is a very wide one, and care would have to be exercised in order that no injury would be done.

Mr. MEIGHEN: Would the minister commit himself—

Mr. STEWART (Argenteuil): Absolutely.

Mr. MEIGHEN: —to saying there should be no watered stock issued?

Mr. STEWART (Argenteuil): If my hon. friend's definition of watered stock and my definition are the same—and I believe they are, namely stock for which no value is given to the public,—then I will agree with him.

Mr. MEIGHEN: Or inadequate value?

Mr. STEWART (Argenteuil): I would be quite willing to enact such legislation, but I want to qualify my statement—because we have had some experience with this question out west, the blue sky law, for example—and say that it is sometimes difficult to pass legislation of that character without doing injury to legitimate enterprise, and due care must be exercised.

Mr. FORKE: It seems a rather strange situation that the minister admits there is such a thing as watered stock, and then tells a private member: Bring in your amendment and we will see what we can do about it. I do not think that meets the situation in a fair manner.

Mr. MEIGHEN: They could refer it to a committee.

Mr. FORKE: Something like that. I think it is pretty well known that there is lots of watered stock in companies in Canada to-day. We may have some difficulty in defining what watered stock is, but it has been suggested to me that the minister has been in rather deep water in regard to this question of watered stock. I think the government should take this matter into serious consideration. Something should be done to prevent the floating of companies on watered stock or watering the stock after companies have been formed, and giving the people a wrong idea about capital invested in different corporations and companies. I think the government should do something more than ask a private member to suggest to them what should be done.

Mr. STEWART (Argenteuil): That is exactly what I said and what I meant. The government is prepared and willing to bring down any amendment that will remedy the difficulty, and will be very glad of suggestions from the hon. member. I think when suggestions are analysed, if I caught his argument aright, he will find very many of the complaints he is making are impossible of being dealt with. But I would not say it is impossible to amend the act; I think it is quite possible.

[Mr. C. A. Stewart.]

Mr. J. S. WOODSWORTH (Centre Winnipeg): We have surely a rather anomalous situation. The members of the government readily admit that we have in Canada such a thing as watered stock, although we may differ a little in our definition of it. They also admit that the watering of stock, that is, the issuance of stock for which no value is given to the public, is an evil, and yet the government, notwithstanding the fact that this matter has been repeatedly brought to their attention, appear to be incapable of devising any means of doing away with this evil. Those of us who are neither legal gentlemen nor financiers sometimes wonder why it is, when it comes to the matter of the great vested interests that the government find themselves in the position of being impotent to take any action which will safeguard the interests of the public. If it is the case of some milkman diluting his milk with water, action can be taken very speedily to stop the practice, without any question as to whether or not the water is pure or impure, alkali water or spring water. We urge that the essence of our representations is that the public is being defrauded. The common people and this government are agreed that the public has been defrauded by the process known as the watering of stock. And yet apparently year after year when the subject has been introduced the matter has been put off, as the government would seek to put it off to-day. Many cases of special privilege come before this House. Whenever we introduce any other than one or two well recognized types, we are said to be dealing with an academic question. I submit that the public is very much concerned about a matter of this kind. I quote here a paragraph which I noticed in a recent editorial of the Quebec Daily Telegraph in which we have noted the close connection between watered stock and the tariff. The editorial reads:

> We trust that all those who are crying blue ruin for Canada, on account of tariff reductions or lack of action to raise them, will not fail to let the public know whether or not Canada is going to continue to protect hundreds of millions of dollars of watered stock which periodically floods a number of our industrial concerns, when their profits become so large that they are afraid of public criticism.
>
> On the other hand, if the Ottawa government is being asked to protect merged industries that contain millions of dollars worth of watered stock for the benefit of a few promoters this information should also accompany the blue ruin speeches on the tariff question.

We also think that the federal government should at once institute an investigation into the watered stock capitalization of many merged industries, which are crying for further protection.

I would commend that paragraph to the serious consideration of the Secretary of State (Mr. Copp).

We have before us at the present time the far-reaching results of the failure of the Home Bank. I take it that one of the resons for this failure was that the bank advanced money to concerns which were not sound, which were putting before the country propositions which involved watered stock. Now the country is being asked to reimburse the Home Bank depositors and yet we are doing nothing to preclude frauds of this kind being perpetuated in the future.

We are to-day facing the very serious consideration of some action in connection with the industrial dispute in the Nova Scotia coal fields. It has been repeatedly called to the attention of this government that the British Empire Steel Corporation has been trying to insist upon dividends on what we generally know as watered stock. I had an opportunity a year ago of calling the attention of the government to the way in which the capitalization of that corporation had been built upon. I will not repeat here what I said at that time, but it is known that the company, in seeking incorporation, had to admit that it would not require a very great deal to finance the company that it was proposed to create. A little later on, the promoters were able to inflate the capital to a very great extent. I have a memorandum with regard to the organization of that company:

The Dominion Iron and Steel Company Limited was incorporated in 1899, H. M. Whitney of Boston being the chief promoter. He had previously organized the Dominion Coal Company. Whitney wrote to Premier Murray asking for concessions in the royalty on coal used in the new steel plant. In that letter he said:

"The estimate of an iron plant in Cape Breton on a large scale would require the investment of a large sum of money, not less than $3,000,000 to $6,000,000."

This letter is published in the Industrial Advocate of Halifax for April, 1899.

The Engineering and Mining Journal of New York—issue of October 28—records the listing of the Dominion Iron and Steel Company on the Boston stock exchange. The company is stated to have $15,000,000 stock and $8,000,000 in bonds (of which latter $2,000,000 were still in the company's treasury).

I do not know whether the government can justify anything of that kind. I do not know whether the country is compelled forever to pay dividends on stock of that character, but I know we must face the result of this situation in the low wages and dissatisfaction which prevail at the present time in Nova Scotia.

Let me mention still another instance which recently came before the attention of the public. The L. R. Steel Company were able, through their manipulation, to victimize a large number of poor people throughout this country. This was done very largely through the practice to which reference has already been made, that of maintaining subsidiary holding companies. I think now of families in my constituency who could ill afford any loss of this character, who were approached by plausible agents of the L. R. Steel Company and were told that this was in the nature of a co-operative company. They believed in the principle of co-operation, and they were deceived as to the real standing of the company. An altogether different proposition was put up to them from that which would have been warranted by the facts of the case. We all know the results. I would like to refer to still another organization which has recently been before the public, especially in my city.

Mr. McMURRAY: At the time that stock to which my hon. friend refers was sold in Manitoba, was there not on the Manitoba statute books legislation whereby a thorough investigation would be made by an official of the government and a writ granted to sell that stock? If that was the case, could my hon. friend imagine anything more strongly designed to protect the public?

Mr. WOODSWORTH: My point is that the public was not protected.

Mr. McMURRAY: If that will not protect the public, how does my hon. friend suggest that this government protect it in any other way?

Mr. WOODSWORTH: I would suggest that it is rather a large order for a member of the government to ask that a private member protect the public.

Mr. McMURRAY: Still, my hon. friend has had this under his consideration for a long time, and the proposition I put to him is a simple one. Can he not see the difficulties in the way?

Mr. MEIGHEN: Does the minister say that at the time the L. R. Steel Company was incorporated, there was a Public Utilities commissioner operating under the act?

Mr. McMURRAY: I think so. I am not absolutely sure, but I know that official has been appointed and has been carrying on his work there for quite a number of years.

Mr. MEIGHEN: Who was he?

Mr. McMURRAY: Mr. P. A. Macdonald.

Mr. MEIGHEN: He was retired long ago.

Mr. McMURRAY: It was always debated whether he was retired or not, but I think it is one or two years since he retired. If my memory serves me right, he would have been holding office at the time the L. R. Steel Company's stock was sold in Manitoba.

Mr. COPP: My hon. friend (Mr. Woodsworth) is referring to the British Empire Steel Corporation. That is a provincial incorporation under an act of the province of Nova Scotia, not under a Dominion charter at all.

Mr. WOODSWORTH: I am not discussing whether any one organization is under a Dominion charter or not; I am discussing the general principle and saying that the public ought to be protected. If, through any flaw in the legislation of either Manitoba or Nova Scotia, the public has not been protected, that is all the more reason why this House should act in the matter.

Mr. COPP: Does my hon. friend suggest that this parliament should pass legislation to interfere with the incorporation of companies in the separate provinces?

Mr. WOODSWORTH: I have not made such a suggestion. I would be glad to make a suggestion later on. The Secretary of State (Mr. Copp) has tried to put off my argument on the ground that the British Empire Steel Corporation comes within provincial jurisdiction.

Mr. COPP: My hon. friend misunderstands me. I am not trying to put off any argument at all. I am asking only for information. I want to consider it.

Mr. WOODSWORTH: I am quite aware that the British Empire Steel Corporation was refused a charter by this government and subsequently obtained it.

Mr. MEIGHEN: My hon. friend is mistaken. It was refused by the late government.

Mr. WOODSWORTH: I am sure we can depend on the leader of the opposition (Mr. Meighen) to set us right in regard to matters of that kind. I would refer to another company and ask the Secretary of State to take particular notice of this. It is a company whose conduct has recently been forced upon our attention in the west, the Hearst Music Publishing Company. I am informed that this company had a Manitoba charter but it had been refused a license under the Sales of Shares Act. Then under pressure a license was granted. After a further examination, however, the license was withdrawn. The company then obtained a Dominion charter, thus being able to snap its fingers at the provincial government and at the public generally. Under these circumstances we have a perfect right to come to the Dominion government and ask that the interests of the public be protected.

I should like to read a paragraph or so from a statement which has been furnished me by a friend of mine who has been devoting some little attention to this matter. He suggests:

> Watered stock is always a potential charge upon the workers, but where competition really exists its influence or effect upon labour conditions is inconsequential. When, however, a company operates under the direction of a combine—

Such as that referred to a little while ago, the Canada Cement concern.

> —or enjoys some special privilege, permitting it to charge unwarranted prices for its commodities or services, then watered stock may readily become a serious evil. Canada happens to be a country where the financial system lends itself readily to the nation-wide control of enterprises, either by means of combines, fixing market spheres or fixing prices. That fact gives to watered stock in Canada an importance which it does not always hold in other countries where the financial systems are less favourable to the establishment of centralized control of whole industries.

The writer then gives one method by which the public has often been victimized.

> Another game which has been too often practised may be described. Two or three men owning similar enterprises may be bitten with the passion for easy money. They organize a company to amalgamate their enterprises. The new company makes a loud noise about the economies effected by the consolidation, and reports huge profits. Then the two or three men, having issued to themselves bonds representing something more than the value of the combined enterprises, send out salesmen to dispose of common stock in their company representing something more or less than its bond issue. Usually the stock is sold at par, if the declared profits said to have resulted from the amalgamation are high enough. The stock is bought by small investors who know nothing about the actual workings of the company, and seldom ask for information.
>
> In a year or so the men who formed the company, having utilized the money derived from the sale of common stock in ways which may indirectly benefit them while adding nothing to the resources or capacities of the company, discover that that company is beset with difficulties. The common stock holders are informed that it can only be saved by additional stock subscriptions, and being frightened usually do not respond. Presently the company declares itself bankrupt, and the original owners who hold the bonds take over the properties and the investors in common stock are left with finely engraved but perfectly valueless certificates. This game in various forms has been played by highly respectable financiers and lawyers, and fairly competent lawyers have been victims of it.

I want to present to the House a few more paragraphs taken from a memorandum furnished by another friend of mine—a business man. It may seem rather strange that business men sometimes are willing to assist or to speak through Labour members in this House. This I sometimes think may perhaps be attributed to the fact that, as one of the old Socialist leaders once suggested, the workers having nothing to lose but their chains, are able to speak freely in these financial matters. Certainly, they are free to say what I know a great many business men across the country would gladly say. The excerpt to which I refer is as follows:

Perhaps it is not too much to say that the greatest controllable evil in connection with the "high cost of living" is the tendency which Canadian financiers have shown in the last few years, and in increasing numbers, to follow the high finance methods of American promoters. These methods vary so greatly that it is impossible to give more than an outline of them without writing a series of books, but the following are fair examples:—

A family is operating a manufacturing plant in a small town; they give individual attention to the business; they know all their workmen personally and they work in harmony with them, paying fair wages and making moderate but steady profits; the business grows, the line of goods becomes known and the trade mark established. The business begins to outgrow the old methods; new workmen are brought in for special new machines; the owners die; their sons are not content to run the business in the old way. The promoter appears on the scene, he has nothing but a good suit of clothes, a fine line of talk and a knowledge of American promoting methods. The promoter sizes up the business; perhaps the value at a conservative estimate is half a million dollars including buildings, real estate, machinery and stock on hand; but the hard work of the founders, their knowledge of the business, their lack of extra overhead put on by so-called efficiency experts, and the small salaries that they are content to draw from their own business, and other factors, make the business pay on an average through a period of exceptionally good years, say one hundred thousand dollars a year. Does the promoter buy the business for five hundred thousand dollars (its actual value without the men that built it and the surroundings under which it was built)? He does not. He searches for and finds a business that will go well in a prospectus with this business. He options this second business which is, for some reason we need not specify, not paying, at say one hundred thousand dollars payable partly in cash and partly in the stock of a new company. He options the first business, producing as you remember one hundred thousand dollars a year when trade is good. He gives the owners five hundred thousand dollars of preferred stock and five hundred thousand dollars of common stock; he puts them and himself on the board of directors and arranges salaries for them at least double the rate they have been drawing. He sells bonds to the public for five hundred thousand dollars. He can show earnings which provide three times the interest on the bonds. The second business takes perhaps fifty thousand dollars of the cash, the promotion takes another hundred thousand dollars to swing and the promoter, if he is fairly modest takes only another hundred thousand dollars in cash and five hundred thousand dollars of common stock. Part of his common stock he gives away with the bonds and some of it he gives to the owners of the small business which has been taken in to show some reason for the water and make believe that it will increase the earning power of the first business or absorb some of its product.

Now let us see where we are. We had one business worth half a million dollars and earning on an average in good years, and when it had the benefit of the founder's experience and his undivided time and attention, one hundred thousand dollars a year. We had another business which was breaking even and which was worth, perhaps, fifty thousand dollars. That is, we had what, stripped of the special circumstances that made them pay, two businesses that were worth $550,000 of anybody's money and that only had to earn $33,000 to give their owners a reasonable return on their investment, or at any rate, would not normally be called on to part with more than $33,000 per annum to satisfy capital. What have we now? Bonds, $500,000; preferred stock, $500,000; common stock, $1,000,000; total $2,000,000. The public is now called upon to pay interest on two million dollars, fourteen hundred and fifty thousand of which is new capital created out of paper and the promoter's ideas. The public is now called upon to pay salaries sufficiently dignified to fit the officers of a two million dollar corporation and at least twice as much as the same individuals drew when the businesses were entirely their own. The public is now called upon to pay for efficiency experts, accountants instead of bookkeepers and all sorts of people who were not needed in the old business, which nine times out of ten, produced as much and as good material as cheaply without their aid.

One of two things happens, either the price of the product is increased and the wages of the lower employees decreased until the interest on the securities is paid, or the concern goes to the wall when the old management is withdrawn and the cost of production increased beyond what the product will bear. If the concern goes to the wall the men in the plant lose their jobs and the small investor who has absorbed the common and preferred stock is wiped out. The bond holders take over the property reorganize the company, rewater the stock and the same thing happens again. If the promoter has had luck the company goes on, pays its dividends and perhaps in time is ripe to be taken into a yet larger promotion and help to put more watered stock on the market. In either case the public is stuck. The promoter is all right; he has his cash and the proceeds of his common stock. The former owner may be all right. He may have sold his stock, and anyway he has the bonds and his property back. But the public is stuck whether the company is a success or a failure.

Every time one of these companies is a success the cost of living is raised to make it a success. Every time one of these companies is a failure the public is stuck. It is always the public who pay.

And this gentleman, who, as I say, is a business man, makes the following suggestion, which I give for what it is worth:

The only thing that can be done is to provide machinery for scrutinizing and licensing new issues of stock and bonds for public sale. The Secretary of State department are quite competent to deal with this matter if they have the necessary legislation back of them. Governments naturally shirk the responsibility for stock issues but they must assume it or we will go from bad to worse. A few years ago—

And I think this calls attention to a tendency which we cannot disregard.

A few years ago preferred stocks were generally regarded as safe investments but the collapse of the Riordon and other companies has weakened the public

confidence in preferred stock and the promoter now generally puts the bonds of his company before the public in the first stages of unloading. Bonds were sold during the war in such varied forms that a great many people are now interested in them who never heard of them before 1916 and to the ordinary small investor anything with coupons on it looks as good as a government bond, consequently the money which once went to mortgages now goes into all sorts of bonds sold by promoters and it is difficult to get the necessary money for building and farm loans. This has forced up rents and increased the cost of living and it is likely that some of these bond issues will fall down and leave the promoter with the need of inventing another form of security to tempt the ever-gullible public. All this cannot be stopped but it can at least be diminished by periodical warnings to the public and by regulation.

Now, the Secretary of State (Mr. Copp) has asked for specific suggestions. I would venture to say that if his own department is not prepared to carry out any such scrutiny as that suggested in this memorandum, probably the purpose in view would be accomplished equally well if the government would introduce an amendment providing that every company with a Dominion charter should come under the Sales of Shares Acts of the various provinces. That may not be going very far, but at least it is something concrete. In a number of our provinces to-day we have agencies, more or less successfully protecting the public with respect to companies that have provincial charters, but it seems that there is no way by which these provincial agencies can do anything to protect the public against a company with a Dominion charter. This suggested measure would require no additional machinery.

Before I take my seat I should like to call the attention of the Secretary of State to what seems to be a very admirable report on blue sky legislation made by Mr. A. H. O'Brien, and issued by order of the Legislative Assembly of Ontario. I note here that:

In 1895, Great Britain appointed a committee of the board of trade to look into the question. That committee made an exhaustive study of the entire problem through a period of years. In 1900 legislation was passed placing moderate restrictions on the issue of fictitious stock. This legislation not accomplishing its purpose, committees of both Houses of Parliament again considered the problem. In 1906 the present legislation was enacted, and it is now incorporated in the Companies Consolidation Act of 1908.

I notice that as far back as 1884 Germany passed laws limiting the sale of fraudulent securities, and France, in 1893, passed similar legislation. I notice also that the Ontario Companies Act is copied largely from the Companies Act of Great Britain, but does not include all of its provisions. Mr. O'Brien states:

When, under the British act, a prospectus is issued it must furnish very full information, not only of earnings and assets of all companies formed, but of all promoting, underwriting, selling and managing profits made from corporate promotions, including allotments of stock and ownership of stock. . . The prospectus, when filed, is open to the public, and requires full disclosure of all profits made directly or indirectly from the formation of corporations and officers must reveal fully all money made as a result of their connection with the corporation.

If that is possible in Great Britain, is it not possible in Canada? As to the effect of blue sky legislation in the state of Kansas, the commissioner states that:

The law has kept out of the state an immense amount of worthless securities. It has put some of the persistent violators in jail and has made refugees in other states of others. The law has not eliminated the sale of worthless stock, but has reduced it to a minimum.

The objection that it is dangerous for the state to intervene is, I think, met by the following statement:

Those persons that make such objections fail to realize that the corporation whose securities are being controlled has been created, and the issue of its securities authorized and sanctioned, by the state.

In 1921 a special commission appointed by the governor of Massachusetts to investigate the sale of corporate securities reported as follows:

Since the state authorizes the issuance of fictitious or watered stock, it must follow that it is the duty of the state to prevent the sale of such securities until the state itself determines that they are not fraudulent. The state creates the securities, and places them in the hands of the fraudulent promoter, who in turn distributes them to the public. Any additional legislation to check the sale of fraudulent securities is nothing more or less than an effort by the state to limit the use by fraudulent promoters of the false tokens which the state itself creates.

Now, it is not my purpose to read in detail any further extracts from this report, although it contains many passages of very great importance.

Mr. McMURRAY: Does the report that the hon. gentleman is reading from deal at all with the issue of watered stock, or merely with its sale after it is issued?

Mr. WOODSWORTH: It deals with the sale of watered stock. But I am suggesting that this House might, as a preliminary step, pass legislation by which any company owning a Dominion charter would be able to sell its stock only under the laws which prevail in the various provinces. That is my point. Personally I should like to go much further than that, and it seems to me that the government must in the long run go much further. As the House knows, we have the insurance companies brought under cast-iron regulations, and whereas a few years ago there was a good deal of fraud connected with the various

weaker companies, and especially with their promotion, to-day we have our superintendent of insurance whose duty it is to safeguard the public interest. Last year we made provision for an inspector of banks. The House will remember that two years ago such a measure was voted down on the ground that it was not possible for the state to interfere with the banks; but after the failure of the Home Bank the government came around to the position that it was essential that the public should be protected; and an inspector was appointed. Now, I suggest that, as we have a superintendent of insurance companies and an inspector of banks, it is not any very great innovation to advocate that it is the duty of the state to protect the public generally in this matter of stock manipulation, which, after all, is a much more complicated question than either of the other two to which I have referred.

Mr. E. J. GARLAND (Bow River): Mr. Speaker, first of all let me extend my deep sympathy to the government. The usual policy of evasion is to be continued on this as on most other matters. When I came down here I was practically given to understand that we should not have come as farmers or as representatives of any other political body than the Liberals, because they were going to give us everything we were advocating. Amongst the things we were advocating was the abolition of watered stock. Another thing was the abolition of protection —a protective tariff. The government's attitude certainly must make its supporters in the province of Quebec weep. I am sure they will mourn to-morrow when they read of the attitude of hon. members opposite with respect to the resolution of the hon. member for Mackenzie (Mr. Campbell). I have in my hand an article printed by a paper about which I do not know very much—probably my hon. friends opposite do—the Quebec Telegraph. Does it represent them or support them at any time? The Quebec Telegraph has this to say:

Liberals are not against a tariff—

I heard the contrary during the elections.

—but they are against a tariff which protects overwatered stocks of companies when they stop paying dividends because they have been cleaned out by the insiders. Such protection only benefits a handful of the controlling interests.

I wonder what the Quebec Telegraph will write about it to-morrow? I wonder what the labourers in the cities of Montreal and in Quebec and Nova Scotia and the west will say? The average annual wage paid in all industries in 1917 was the pitiful sum of $757. There is no doubt in the world that one of the chief causes for that low wage was the necessity of paying dividends on watered stock. In 1918 the average wage was $866, and in 1919 it was $940, war conditions compelling an increase. We find that of all salaries and wages to employees in all industries in 1919, the average per worker or salaried man was $1,010.

Mr. MARTELL: Will the hon. member permit me right there?

Mr. GARLAND (Bow River): With pleasure.

Mr. MARTELL: Will the hon. member point to one industry in Nova Scotia that is paying low wages on account of the paying of dividends on watered stock? Will he tell me the companies that he can prove to have watered stock in that province?

Mr. GARLAND (Bow River): Well, the hon. Minister of Labour (Mr. Murdock) is responsible for the statement that the British Empire Steel Corporation has about $250,000,000 of watered stock.

Mr. MARTELL: That may be so, if my hon. friend will again permit me. But I think that the Minister of Labour at that time was speaking without direct knowledge of the facts. I am not defending the British Empire Steel Corporation; I am simply saying that when hon. members make assertions of that kind against any company they should be in a position to prove them.

Mr. GARLAND (Bow River): I am delighted that the British Empire Steel Corporation has such a strong supporter in my hon. friend. I suggest—

Mr. MARTELL: Do not misunderstand me; I am not supporting the British Empire Steel Corporation. But I say that assertions are often made against that corporation that are made against other companies, without any knowledge in fact. That corporation may be over-capitalized or may have watered stock, but the mere assertion of any individual that that is so does not establish the fact.

Mr. GARLAND (Bow River): The hon. member is unduly sensitive. I did not even mention the British Empire Steel Corporation.

Mr. MARTELL: The hon. member did mention it.

Mr. GARLAND (Bow River): Not until after the hon. member had mentioned it himself.

Mr. MARTELL: If my hon. friend will permit me; I have to take his word, but I asked him to point to an industry in Nova Scotia that had watered stock and he referred to the British Empire Steel Corporation and to the hon. Minister of Labour as his authority. That is the way I understood it.

Mr. GARLAND (Bow River): Quite right. I have never made any claims against the British Empire Steel Corporation, but if I am in order, Mr. Speaker, I would ask my hon. friend to tell the House whether or not there is any watered stock in the British Empire Steel Corporation?

Mr. MARTELL: I do not know, neither does my hon. friend know.

Mr. GARLAND (Bow River): Will the hon. gentleman go a little further? I have answered his question; now I want to put another to him. Will he say there is no such thing in industry in Canada as watered stock?

Mr. MARTELL: I am not speaking on that general subject. But I submit that before a company is said to be paying low wages on account of having watered stock, those who make the assertion should be prepared to prove it by the submission of evidence that would be accepted in a court of law.

Mr. GARLAND (Bow River): My hon. friend will have to take issue with his own colleague and, I presume, political superior, the Minister of Labour. At any rate the fact of the matter is that industry in this country, despite the position taken by the hon. member for Hants (Mr. Martell), is exacting unfair profits as a result of watered stock.

The Secretary of State (Mr. Copp) was very anxious for definitions. I really had not gone to the bother of finding out the actual definition of watered stock; the thing appeared to be perfectly clear to me. The popular idea of watered stock is that suggested by the right hon. leader of the opposition (Mr. Meighen), and there should be very little trouble about that. But if we turn to another authority we find that Professor Irving Fisher, of Yale University, has discussed watered stock after this manner. In the discussion of certain methods under which the book value of capital, surplus and divided profits may exaggerate the true condition of the company, he goes on to point out another way in which that may be done, namely, through the issue of stock below par, or for services, patents, and so forth, at unduly high prices. He goes on to say:

[Mr. E. J. Garland.]

To illustrate this way of overvaluing capital, or "stock-watering," suppose a company to be capitalized at $200,000, and that this company issues at the beginning 1,000 certificates of the par value of $100,000, but sells them for only $60 per share actually paid into the treasury. Here is $60,000 paid-in capital, represented by $100,000 face value of stock certificates, leaving a margin of $40,000 "water." Suppose, further, that another block of $100,000 of the stock is given to an inventor for his patent, the real value of which is only $10,000. Finally, suppose that bonds are issued to the extent of $300,000, and are floated at par. Then the company has received in actual cash only $360,000. Of this sum only $60,000 has been received from the stockholders. The patent, which has also been contributed in return for $100,000 of stock, and which is worth only one-tenth of that sum, makes the total balance due the stockholders $70,000. But, the company is capitalized at $200,000. Consequently it will be necessary for the bookkeeper to exaggerate the assets to the extent of $130,000. He may do this as follows:

Assets		Liabilities	
Plant (cost $360,000)..	$400,000	Bonds.....	$300,000
Patent (worth $10,000).	100,00	Capital....	200,000
	$500,000		$500,000

Here $90,000 of the exaggeration is put under patent and the remainder in an overvaluation of the plant. Many other methods of stock-watering are possible. A common one is to allow the plant to run down.

That is sometimes called mismanagement.

It is sometimes said that stock-watering is not wrong, as long as all the terms and conditions are known. This is much like saying that lying is not wrong, provided everybody knows that it is lying; for a false balance sheet is only one form of a false statement, and, ordinarily, a false statement is made with the intent to deceive. The object may be, for instance, to mislead intending bondholders by making them believe that there is a larger security for their loans than actually exists. We see here one reason why honest men often undervalue their assets—

And so on. That, Mr. Speaker, is the learned opinion of Professor Irving Fisher in his book The Nature of Capital and Income, given at pages 79 and 80. I would suggest that that is one form of watered stock which has perhaps not come to the attention of the Secretary of State; but the undoubted fact is that in Canada, as in other countries, you have the vast body of the public called upon to pay dividends on watered stock for which no value has been given.

If you will turn to the table from which my hon. friend from Mackenzie (Mr. Campbell) has read, I would like now to sum it up. He mentioned several companies including the Amalgamated Asbestos Corporation, Ames-Holden-McCready, Limited, and the Canada Cement Company. I will take the whole list and summarize it. Ninety-four companies came into various amalgamations, and were thereby reduced to 17 combines or mergers. The 94 companies had a total capitalization prior to amalgamation of $63,788,500. Upon that capital, I presume, they were paying

dividends to the stockholders; but after amalgamation we find that these 17 corporations have a total capital of $206,650,000. The increase in the capital value of the above companies, authorized under the Companies Act is $142,861,500, or 324 per cent, and on that the company now expects to pay dividends. This situation unhappily is not confined to this country. Yet I will say that a certain condition in this country tends to make the watering of stock a more common practice than in others. This condition is undoubtedly the special privilege of tariff protection which is extended to companies or corporations of the kind cited in these mergers. For example, where a tariff duty is raised so high that it prevents any reasonable competition in the home market, and gives to a corporation in the country complete or almost complete monopoly, and so control of the home market, undoubtedly that company is in a position not only to pay lower wages to the people it employs, but also to exact higher profits from the people who buy its goods. I would, therefore suggest to the minister, who is anxious for suggestions, and in the hope that his officials will do more than his government, that one of the means by which he could get over the British North America Act in regard to the British Empire Steel Corporation—and he was anxious that my hon. friend from Centre Winnipeg (Mr. Woodsworth) would help him out in that regard—is to cut off all bounties on steel until the water is squeezed out of that stock. That would be one method.

Mr. MACLEAN (York): What about cement?

Mr. GARLAND (Bow River): Exactly. I would suggest that with regard to other corporations or combines that have watered stock on which they may be exacting profits from the people, the protective tariff be removed entirely.

Mr. CAMPBELL: And cut out the special railway rates that some of these companies enjoy.

Mr. GARLAND (Bow River): I have in my hand a further list of suggestions which possibly the Secretary of State has not seen. They were made by Professor Albion Small, a leading American sociologist, and appeared in the January issue of the American Journal of Sociology, published by the University of Chicago Press. Professor Small's views on the problems of profits are practically similar to those expressed by the English economist, Mr. Hobhouse. I will summarize them:

(1) Stockholders should receive not more than a maximum rate of dividend calculated to be enough above the average rate of return upon dividends to encourage investment in needed new industries.

(2) Stockholders should be restrained from evading the prescribed dividend limitation by voting salaries to themselves for services, mostly imaginary.

(3) Premiums in the form of pro rata dividends on salaries and wages should be offered as inducements to increased output.

(4) Net profits in excess of the prescribed dividends and premiums offered on salaries and wages should be divided in some proportion to be determined by experience between employees of all sorts and the state.

(5) The state's share of the profits should not be available for governmental expenses, but should go to some holding concern, perhaps an adaptation of the Federal Reserve Bank, to be loaned to most desirable industrial enterprises—desirable from the standpoint not of private but of public interest.

I cannot altogether give my assent to all the proposals of this learned gentleman, but I refer them to the minister among others that he is going to take into his consideration.

Mr. ROBB: May I ask my hon. friend if he does not think that already Canada takes a considerable share of the profits of these companies by way of income and other taxes?

Mr. GARLAND (Bow River): I find some difficulty in arriving at a complete answer to that extraordinary question. I do
5 p.m. not think the government is taking anything like the income tax it should, either from individuals of from companies. I am in favour of a much more steeply graduated income tax than we have at the present time, and the elimination of indirect taxation altogether.

In conclusion, let me say that I sincerely trust the hon. member who introduced this resolution will see to it that the House gets an opportunity to vote upon it. I am anxious that that should be done in order that hon. gentlemen opposite will have an opportunity of registering themselves fairly on this question. I dislike very much to have them one session declaiming loudly against the evils of watered stock, and in the next session, anxious to avoid a vote upon it. We have, for example, the eloquent member for L'Islet (Mr. Fafard) who in discussing this whole question, at page 1714 of Hansard of last year said:

When the manufacturer bewails the fate of the poorly paid workmen, to justify a request for higher protection, he lacks sincerity; for when certain companies were realizing, during the war, profits of 25, 50 and even 100 per cent, the manufacturers did not raise the salary of the workman; on the contrary they even increased their capital fourfold in "watered stock" so as not to show too large a dividend.

I am quite sure the hon. member for L'Islet will be glad to vote for this resolution. Then we have that very eloquent gentleman the

hon. member for Charlevoix-Montmorency (Mr. Casgrain). He took almost two whole pages of Hansard last year condemning the practice of amalgamation of companies for the purposes of issuing watered stock, and he quoted at some length—Hansard, page 1886—from the Montreal Financial Times dated April 11, 1924 showing how brazenly these corporations blazen forth their vast profits on the pages of the public journals. Then we have the hon. member for Colchester (Mr. Putnam), who was perhaps one of the most outspoken on this matter. He says:

If dividends are doubled by the application of protection, the owners of the industry will resort to the very common device of watered stock in order to conceal from the consumer the extent to which he is exploited.

I notice my hon. friend from Hants (Mr. Martell) has fled. I wonder is it because he is bored with the subject, or because he finds so many on his side are in favour of the abolition of watered stock? Why, I even find the Minister of Justice (Mr. Lapointe) speaking on the same subject. He does not attack the thing very pointedly, but he talks of watered stock mandarins, whatever a "mandarin" is, something very ferocious, a sort of bogey we are supposed to see in the woods, but which he never sees when he has a chance to invade them.

I therefore sincerely trust that the hon. member for Mackenzie will see to it that the hon. Minister of Justice and all his colleagues get an opportunity of voting on this question.

Mr. IRVINE: The hon. member states that he would like the question put to a vote, in order that the government might place itself on record with regard to the question. Does he not think the easiest way out of the difficulty would be for the government to accept the resolution and put it in the waste-paper basket to-morrow?

Mr. GARLAND (Bow River): I have no doubt if they accept the resolution that danger would still be ahead of it, but I am willing to take the Secretary of State's word that he will accept the resolution and bring down the legislation upon it, and I am willing to wait. I am always reasonable.

Mr. H. E. SPENCER (Battle River): Mr. Speaker, I was indeed interested in the outlining of this subject by the hon. Secretary of State (Mr. Copp). From the fact that his department has given this subject so very much consideration, I feel sure that the government as a whole will support the resolution as it is presented. Possibly when he was speaking he was thinking of the clause in the Speech from the Throne which referred to the tremendous high cost of living and the necessity of something being done to lower that cost. In my opinion, possibly no better steps could be taken than some drastic measure with regard to the control of the watering of stock. If this were done it would do more to cut down the high cost of living than many other things we could mention. We have to admit that the matter of centralization of industries is a most natural law in the development of civilization, but there is no reason why we should not regulate these industries, particularly with regard to this matter. There is no doubt, as other hon. gentlemen have said, that the matter of watering of stock brings many evils in its trail, and amongst others is the creating of a higher cost of living, the cutting down of purchasing power. It is one reason for the great labour unrest, and also for the vast unemployment we have at the present day. As the hon. member for Centre Winnipeg (Mr. Woodsworth) and the hon. member for Bow River (Mr. Garland) state, there is not the slightest doubt that the trouble we are having in Nova Scotia at the present time with the British Empire Steel Corporation is very largely brought about by this evil. The question of watered stock touches every industry, every trade and every life in this country, and it is not surprising therefore, to find the following resolution passed by a convention in Alberta:

Whereas, what is commonly known as watered stock is largely responsible for the high cost of living.

Therefore, be it resolved, that legislation be enacted prohibiting this practice.

This was adopted by the Annual Convention of the United Farmers of Alberta held in Calgary, January 20, 1925. I have before me a very interesting book entitled Wake Up, Canada, written by C. W. Peterson, where he speaks on this subject at page 244, as follows:

It is also well to remember, as has been pointed out previously, that in most cases, the bulk of the common stock, in some cases practically all of it, merely represents allotments to promoters and bonus allowances to purchasers of the company's preferred stock or bonds. It is therefore in many cases clear loot, upon which the consumer has to provide dividends.

In the chapter headed, "The Looting of Canada," I find a statement showing the earnings available for common stock,—after deducting interest on bonds and dividends on preferred issues—of twenty different in-

dustrial enterprises in Canada. I will quote these figures to the House:

Name of Company	Common Stock Outstanding
Canada Car and Foundry Company.. ..	$ 4,963,000
Canada Cement Company..	13,500,000
Canadian Cottons Limited..	2,715,000
Canadian General Electric..	8,000,000
Canada Locomotive Company..	2,000,000
Dominion Bridge Company..	6,500,000
Dominion Canners, Limited..	2,794,000
Dominion Steel Company..	37,097,000
Dominion Textile Company..	5,000,000
Laurentide Company..	9,600,000
Lake of the Woods Milling Company.. ..	2,100,000
Maple Leaf Milling Company..	2,500,000
Nova Scotia Steel and Coal..	15,000,000
Ogilvie Flour Mills Company..	2,500,000
Penmans Limited..	2,150,000
Price Brothers and Company..	5,000,000
Riordon Pulp and Paper..	4,500,000
Sherwin-Williams Company of Canada.. ..	4,000,000
Steel Company of Canada..	11,500,000
Woods Manufacturing Company Limited..	1,718,000

I did intend to put a great many more figures on record, but the subject has been so very fully covered by the hon. members who preceded me that I will not take up time in so doing, but I do await with interest a statement of the policy of the government with regard to this subject.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Apparently we have had all the illumination on this subject that we are going to get from the government. The hon. Minister of Agriculture (Mr. Motherwell), when he thinks of how great that illumination has been, smiles in derision.

Mr. MOTHERWELL: I have not had the advantage of hearing the discussion.

Mr. MEIGHEN: Then it is just as well, as far as any light on the subject from the government side of the House is concerned. I have some opinions on the question. I do not think they are in agreement with any opinions offered so far—at least not in total agreement—but I shall present them to the House, in case they might be considered of some value by someone. The hon. member for Bow River (Mr. Garland) opened with an expression of deep sympathy for the government benches, in that they found themselves perforce silent on a question on which their enthusiasm just a short time ago knew no bounds at all. My sympathy really is with hon. friends to my left, that the hopes with which they looked forward to great drastic reforms on this question of watered stock, as on many others, are dashed to the ground. I of course compliment them on the placidity, the good nature with which they meet the situation. That is, for the most part; some of them seem to chafe under it, but others are more anxious to see that no Liberal opposes them in the next contest than they are to advance very far in the reforms they so long had at heart.

Mr. FORKE: What has that to do with watered stock?

Mr. MEIGHEN: Watered stock had a lot to do with the same question a few years ago, but watered stock sinks into insignificance beside the stock that is not watered, in this House. We all remember not only the speech referred to by the hon. member for Bow River (Mr. Garland) but the speeches of members of the present government themselves—yes, I have a very vivid recollection of the valiant attacks of the present Minister of Justice (Mr. Lapointe). He was a swordsman of wonderful skill, out in search of the big interests and these manipulators of watered stock; he was excelled only by the Prime Minister himself. But the cohorts were numerous, and this chamber used to ring with condemnation of the scandalous stock issues that were going out from the Secretary of State's office, and the whole practice of crushing the masses under this burden of overcapitalization.

The matter is brought up now by an hon. member to my left who has not forgotten his early training and beliefs. The hon. member presents the evils under which the people suffer, and he brings in a most moderate resolution for some sort of relief, doubtless in the hope that it would be accepted by the government. He asks them to do whatever is possible to alleviate the situation. The Secretary of State (Mr. Copp) representing the government replies, and I think I can give a synopsis of his reply. He admits that this is a very important question. He is pleased that it has been brought forward by the hon. gentleman of the Progressive party. He explains that it has caused a great deal of worry to himself and his officials. They have thought over it by day and slept over it by night. There are many phases to the question. Indeed, there are many kinds of watered stock. Some watered stock, he says, is given in payment of good will; other watered stock is given in payment of something else, so that there are different kinds of watered stock to complicate the situation, and thereby add to the difficulties of the administration. He ends, however, with the very momentous pledge, that this resolution moved by the hon. member will be placed by him before the officials of his department. Thus is represented the interest the government now has in the question of watered stock. The only sug-

gestion the minister made was that he was ready to do this honour to the hon. gentleman's resolution—he was ready to find it a secluded sepulchre.

I said in opening that I am not in full accord with hon. gentlemen to my left on this question. I do not think that all they attribute to watered stock is directly or logically attributable to it. I am against the practice of issuing watered stock and in favour of its curtailment, for the reason that it is, on its face and in essence, a misrepresentation. There is only one kind of watered stock, as everybody knows. What is meant by watered stock is watered stock issued for nothing. That is all. It is not watered stock issued for goodwill, but it is watered stock issued above the value of the goodwill, if for goodwill. In a word, all watered stock is issued for nothing and the public are invited to assume that it is worth its face value.

Before stating further the objections that I have to watered stock, let me refer to one or two allegations made by hon. gentlemen to my left. They seem to assume that watered stock forms the basis of a vested right to tariff protection. I take a position of direct opposition to any such assumption. I do not think watered stock forms any right whatever or constitutes any portion of any right to tariff protection. Nor, for that matter, do I think any stock constitutes in itself any portion of a right to tariff protection. Tariff protection does not rest on the need of paying dividends on stock. Tariff protection rests on the need of making a country and on nothing more. When hon. gentlemen lightly use the words that "the public are called upon to pay," I ask: Who calls upon them to pay? No government has a right to call upon them to pay and I do not know who there is besides a government. The public are not called upon to pay a nickel upon watered stock, or, for that matter, upon any stock. The public are absolutely free to pay or not to pay as they may see fit. Hon. gentlemen may say: But a company gets into a position where it has a monopoly of the field, and an instance is given of the Canada Cement Company. I am not saying that the Canada Cement Company is in that position; but if a company gets into the position of a monopoly, it does not get there because it has issued watered stock. It would be there just the same if it issued stock only to the value of the assets it possessed.

Mr. CAMPBELL: The contention that I made was that the company by amalgamation of competing companies was in a position thereby to raise its prices.

[Mr. Meighen.]

Mr. MEIGHEN: Very good. If such is the case, that unjust power of the company is due to the amalgamation and not to the fact that upon the amalgamation it issued watered stock. If upon amalgamation the Canada Cement Company had issued stock only to the exact value of even one-half the value of the property that went in, it would be none the less an amalgamation and it would hold just as great an area of Canada as its market.

Mr. CAMPBELL: Watered stock is a result, not a cause of the merger.

Mr. MEIGHEN: Watered stock is only an incident and has no relation to the power of the company after the amalgamation.

Mr. WOODSWORTH: Is it not true that companies refuse to pay higher wages on the ground that they cannot pay their dividends, those dividends being on watered stock?

Mr. MEIGHEN: As I know companies, they will not pay any more wages than they can avoid paying whether their stock is watered or not, nor will anybody else. They will pay the wages that they find they have to, first of all in the labour market and second, that will appear fairly satisfactory to the men employed. The question of the water in the company cannot be used logically by any concern. To my mind, no wage earner is so ignorant as to be in the slightest imposed upon by any company which urges the fact that it has to pay a dividend on watered stock, as a reason why it cannot pay wages.

Mr. WOODSWORTH: Some boards are so ignorant that they allow that to weigh with them in granting their awards.

Mr. MEIGHEN: If any board of conciliation is, it ought to surrender its charter. I cannot conceive of any board of conciliation so ignorant as that. In a word, the fact of the water gives a company no right whatever, not even an ostensible, plausible right in respect of wages or tariff or anything else. It is argued as well that the issue of large blocks of watered stock has the effect of deceiving the public. In this, I am in full agreement. It is certainly true that to give a certificate on its face value which it does not possess is very likely to deceive, or contributes at least to deceiving the intending purchaser. Therein I find the main objection to the issue of stock that can be said at all to be watered.

I am aware that especially in this country as a confederation many difficulties present themselves in remedying the situation The

provinces, as well as the Dominion, have the right to incorporate companies. The Dominion, upon its incorporation, has rights in respect of the control of capitalization of all kinds and the sale of stock representing the capitalization. It has no corresponding rights at all in respect of companies incorporated by a province. This Dominion incorporated most of the companies referred to by hon. members to my left. It incorporated the Canada Cement Company. It incorporated Ames-Holden, I think. It did not incorporate the British Empire Steel Corporation; that privilege was left for the government of Nova Scotia. But most of the companies complained of by hon. gentlemen to my left were incorporated federally, and whatever may be the responsibility for the issue of over-capitalization, it must rest on the government responsible for the issue of the letters of incorporation. But to the best of my recollection, every single one of the companies mentioned by hon. gentlemen to my left was incorporated either under this administration or under the administration which preceded 1911. It is a fact that all these mergers about which we have heard so much, the evils of which were crushing the population, were created one and all just a few years ago under the auspices and the authority of hon. gentlemen opposite or of their predecessors in the government of the Liberal party.

Mr. GOULD: Will the hon. gentleman tell the House why the charter of the Besco Company was refused by the federal government?

Mr. MEIGHEN: That could be done better by the hon. member who sits to my left (Sir Henry Drayton). However, I will give a frank answer. The application was made; it was held in the office of the Department of Finance for many weeks; and the charter was withheld on the ground that in the judgment of the department the capitalization issue was too high. It was finally withdrawn by the company itself; and no absolute, written refusal having been given, application was made to the government of Nova Scotia and a charter was issued in pursuance thereof.

I was going to make some reference to the companies mentioned by hon. gentlemen to my left. Let me say again, as I said before, that the actual incorporation of these companies, irrespective of the capitalization, gave them no right whatever to any tariff protection. In a word, the right to tariff protection does not rest upon the necessities of any concern at all; tariff protection is not in any way whatever an individual right. Tariff protection is a matter of policy, and the only question before a government or parliament is—is it better for the nation? It is not a question whether protection is needed by any corporation or individual.

Reference has been made repeatedly to the great amount of water injected into the stock issue of the Canada Cement Company. I do not think it can be reasonably disputed that this allegation is correct. Certainly, however, I was in no way, nor was any one of my political friends, responsible for its issue. I think it is a fact that that company to-day controls a very large share of the market of this country; I suppose it has reached perhaps the proportions of as large a controllable market as any single concern in Canada. Hon. gentlemen to my left as well as hon. members opposite used to inveigh against that condition of affairs; and they threatened that as respects the commodity produced by this particular concern there was going to be free entry into this Dominion after they came into power. Now, I may tell hon. gentlemen to my left, confidentially that I do not think that anything I could say would persuade hon. gentlemen opposite to interfere with the tariff on cement. But I do not want anything I shall say to indicate that it is my view that Canada suffers to-day because of the tariff on cement. I do not think it does. I believe it is a fact that to-day cement sells lower in this country than in the United States or in any of our competing countries. That I believe is true. I know there is a great deal of watered stock, but I do not think that those who suffer are the public of Canada. There doubtless are sufferers, I presume; but they are not, I say, the Canadian public. I have made that statement because I have no wish to appear as the defender of this concern; I do not need to defend it. As I said before, no appeal however fervent, nor any language however eloquent, on my part would have any effect on hon. gentlemen opposite in this respect.

The question comes, then, as to what can be done in this country under the difficulties I have mentioned incident to our federal system. We cannot control the issue of provincial charters. If we placed restrictions on the issue of federal charters which would give less rights to the companies applying federally, then they could apply provincially, the probable result would be that the number of provincial charters would be increased while the federal charters would diminish. What could be done would be mainly by co-operation with the provinces. And even then care would have to be taken that the restrictions were not such as might give to the incorpor-

ators in other countries, who would operate here under license, any advantage over Canadian concerns. I have always felt, and subject to any further light I can get on the question, I still feel, that there is no reason why stocks should have any par value at all. I do not know why the state should put its imprimatur on any special value attributable to a certificate of stock. Some years ago, I think a couple of years before the late government went out, we introduced and put through parliament an amendment to the Companies Act to provide for the issue of stock of no par value. Many companies have since been incorporated on that basis; their stock has no par value at all and therefore no one can be deceived. But of course the company still has the right to get stock and fix a par value if it applies. I presume that most of the applicants still ask for the issue of stock of regular par value, and if we ourselves were to proceed to limit the grants of charters to those who issued only stock of no par value, unless the provinces did likewise, it might result in a larger number of provincial issues and a withdrawal to a degree from the federal field. But if the provinces would concur and would adopt the practice of issuing charters only in the case of stock of no par value, it seems to me that a better state of affairs would ensue. No purchaser of the stock could be deceived by anything the government did. He might still be deceived by the seductions of agents; he might still be deceived by misrepresentation on the part of the company. But at least this parliament could be certain that he would not be deceived by a nominal par value across the face of a certificate, placed there on the authority of the government acting by virtue of a statute. This it seems to me would be a real reform. I have never seen advanced any reason that appealed to me at all, why the state should be asked to fix any special par value on a certificate of stock. And this in my judgment applies to preferred stock just as much as to common stock. As respects all that represents the proprietary interest in any concern, why should the state decide what the face value of a certificate is?

There would still remain the problem of controlling the sale of the stock even though it issued without par value. This cannot be done by the federal parliament alone. The federal parliament can control in the first place the sale of stock of companies enjoying federal charters; that is to say, the sale by the company itself. But we could not control the sale by those who purchased from the companies, in whatever form they might purchase.

Similarly, the provinces alone can control the sale in the first place of stock that issues from provincial companies but not the subsequent sale of stock after it has passed from the hands of the company itself. The different provinces have sought to effect such control; the first was Manitoba under the regime of the Roblin government. The blue sky law which that government put through the legislature was in my judgment most efficacious. At the time of the gas and oil boom of about thirteen years ago it saved innocent purchasers in that province hundreds of thousands if not millions of dollars. I do not know whether it is in effect now or not; until the Solicitor General intervened I was under the impression that it had been allowed to die.

Mr. McMURRAY: The late administration in Manitoba was defeated on a vote to provide for the payment of the Public Utilities Commission, and the present government of the province has set the law aside.

Mr. MEIGHEN: Yes, I did not think it was in effect at all at the time of the sale of the L. R. Steel stock.

Mr. FORKE: Is the Solicitor General correct in saying that that statute has been entirely set aside?

Mr. McMURRAY: That is my understanding—it has been set aside by the present government.

Mr. MEIGHEN: I do not want my hon. friends to my left to feel hampered because when in office they do not do what they are very enthusiastic about when in opposition.

Mr. FORKE: I thought that law was being administered by the municipal commissioner, Hon. Mr. McLeod. Of course, if the Solicitor General says that my impression is wrong—

Mr. McMURRAY: The law was left in abeyance for a year and a half.

Mr. MEIGHEN: For a long time it was not in effect at all. Now, it may appear from what I have said that the area of usefulness which remains in this respect is not very extensive. I do think that every encouragement should be given—and it is probable that legislative restrictions to that end could be imposed—I do think that every encouragement should be given to the issue of stock of no par value, and that an effort should be made to secure the co-operation of the provinces to adopt a like policy. If all did so, then there could be no misrepresentation under federal or provincial sanction, and

at the same time there would be no impoverishment of the powers of a company which would handicap it as compared with its competitors in other lands which might operate under license here. Let me say that I think a reform can be effected. I do not oppose the resolution at all. What I rose mostly to do was to declare my conviction that the extent of the reform is not half as great as the mass of people imagine, and the extent of the evil is not at all that portrayed by many who have spoken in this debate. It seems to me that we have far more watered stock to-day, Mr. Speaker, than we had a few years ago. Watered stock is stock that represents no value. What may be represented by water alone one day, may be represented by value a few years after; what may be represented by value one day may be represented by water a few years after. So water is not injected only on the incorporation; the water is the result of the process of time, of management, and of public policy, and the stock issues of thousands of companies which had par value, and for which full value was given, are to-day represented by nothing: they are water pure and simple and the water itself has evaporated. It is of far more concern to this parliament to see to it that we follow a policy which gives value to the operations of concerns, and thereby gives some value to their stock. It is far more important that we direct our attention to these things than that we worry over evils which to a large extent are imaginary, and which in any event at the present time are beyond our power to cure except to a small extent.

Mr. W. F. MACLEAN (South York): Mr. Speaker, I agree altogether with what the right hon. gentleman (Mr. Meighen) has said in regard to this resolution. But I would go a bit further and make a suggestion to the government, especially to the Acting Minister of Finance (Mr. Robb), that the way to get at the evil is through the income tax; and the income tax is with us now to stay for a good many years. If a company is found to be taking unfair advantage of the people, and I do not care how much watered stock is in it, I would subject its assets and its business to strict examination. If it is found to be taking unfair profits by reason of watered stock, let it be punished by increasing the income tax. In other words, have a flexible, adjustable income tax. The Pullman Car Company of Chicago is very heavily capitalized now. They know they are taking too much out of the public in their sleeper charges, and half of their profits now go back to the railway companies. I take it that the Canadian National is drawing an immense income from the contract that the old Grand Trunk had with the Pullman Company. Another great company over-capitalized is the Standard Oil Company, and they are making restitution to the public through the Rockefeller family, who have made enormous charitable donations for various public purposes. But the greatest over-capitalization in history is in process of formation in the United States, where the consolidation is being formed of all the telegraph companies, the Bell Telephone Company, and the cable and wireless companies, and the flotation will be made almost any day. There should be a way of getting at these companies, and the only way I see is to measure up the service they give against the income they receive from the public, and tax their enormous profits. As the leader of the opposition says, there are lots of companies that are no good now, and there is no reason why the public should continue to be taxed, even if Max Aitken did get a peerage because he floated a great deal of watered stock on the Canadian people. There is the example that is set up for all the boys of Canada to-day: Pe a Max Aitken and then you will become a peer in England.

You cannot punish the men who float these mergers, but you can make them share their over-profits with the public. The Acting Minister of Finance is looking for further income, and perhaps he and the Secretary of State will accept my suggestion. Let them get some "mousers" to find out how these excessive profits can be taxed. I want to tell him what takes place in the province of Ontario. There when estates are valued for probate, and the mouser they have up there in the attorney general thinks the valuations are too low, he checks them up and sees that a fair amount of the estate comes to the province by payment of higher duties. The Acting Minister of Finance is very much in need of increased revenue and he should devise such a scheme as this. The responsibility is not on private members to apply a cure, it is on him and on the government, and I hope instead of following the mild suggestion of the Secretary of State—he says to the House, "If you give us some suggestion we will follow it up"—I hope instead of following this course the government will realize that the duty is on them to frame a policy to protect the investor. The only way I can see of effecting this is to adopt more and more the principle of no par value stock. Let every one of these companies be investigated each year so that their assets and their profits may be accurately determined, regard-

less of the amount of watered stock there may be. They have no right to say that watered stock is entitled to a dividend and that before any tax can be imposed upon it the dividend must be paid. That is not the issue at all. It is the income of the company that ought to be taxed. The only way to get at the difficulty, especially where a company's income is based either upon a monopoly or upon watered stock, is to investigate the company every year; you will put the fear of God into them if they have to make an annual statement. The Minister of Justice (Mr. Lapointe) is going to vote on this; I want to tell him to get a mouser in his department and we will find out about these things. That is the only way to get rid of this grievance—and it is a grievance—with respect to watered stock. There are more victims of watered stock in this country than of anything else. As the right hon. gentleman (Mr. Meighen) says, the provinces and the Dominion must agree on this matter; we must have a united policy. But even that will not work out as effectively as the method I have just suggested. If you find a company making exorbitant profits, then they must know that they are not entitled either to the protection of the tariff or to protection in respect to their watered stock, to the extent that dividends must be paid on that stock before the public are protected.

Mr. JOHN EVANS (Saskatoon): Mr. Speaker, I did not think there could be any two opinions as to what watered stock is. To me the whole thing has a moral aspect apart from its economic side. There is no doubt that in the years past companies and promoters have capitalized the benefits granted to them by politicians in both the Dominion and the provincial legislatures, such as tariffs, bonuses, bounties, subsidies, tax exemptions, land grants and so on. Watered stock in capitalization is really an American feature, and I think it reached its peak in Canada during the administration of the Laurier government some years ago. To me the whole thing is a fraudulent abstraction of money from the pockets of the people. The representatives of the people, therefore, are entirely responsible for the whole thing. It does really amount in the end to a sale of the rights of the people, to giving the right to certain promoters to take money out of the pockets of the consumers and wage earners of this country. In a speech made in this House on March 22, 1892, Sir Richard Cartwright said:

> Thousands of dollars were turned over at Red Parlour conferences to those who devised robbery for the development of the election fund.

[Mr. W. F. Maclean.]

There is not a doubt in my mind that corruption is a part of the National Policy itself; that the National Policy tends to corruption of politicians. Indeed, Sir, the Labour Herald of Glace Bay, Nova Scotia, December 6, 1924, has this to say regarding the British Empire Steel Corporation:

> Some time before parliament adjourned Mr. Joe Steel, M.P.P., asked several questions in regard to the purchase of coal by the government for public buildings. Below we give the reply which he received. Study the prices paid to the different companies. Look at Inverness: bankrupt Inverness, gets as low as $4.60 per ton for coal, and the British Empire Steel Corporation for coal not one whit better, and in some respects not so good, receives $11.75. Why the difference of $7.15? There is only one answer: The British Empire Steel Corporation buys up governments, and politicians are for sale. No politician would ever look to bankrupt Inverness to finance his election or other expenses. But Besco can do it, and did it in Newfoundland. And where does Besco get the money to spend on corrupt politicians? Out of the public with the consent of the politicians.

Canada stands well up in the list to-day as an exploiting capitalistic country. From an editorial in the Ottawa Citizen of June 29, 1924, I clipped the following:

> The manufacturing of millionaires has been frequently mentioned, and recently there has been publicity added regarding the increase of inflated wealth through various corporation mergers. The formation of this one steel corporation is an excellent example of the prevailing method of "making" money.
>
> The authorized statements of the corporation provide the facts. The projected financial statement published over the name of the president discloses the fact that the liability for bonds and debenture stock, representing the intrinsic value of the properties, amounts to $31,102,000, to which must be added deferred payments of $1,484,000. There has been issued in addition to the foregoing $101,750,000, and so far as evidence appears in this regard, this amount appears to be entirely in the nature of a bonus distribution to the bondholders and the parties promoting the merger. The issuing of this large amount of liability of over $100,000,000 is easily balanced by a book entry, as in the case of the British company.
>
> On the asset side of the statement the "land, buildings, plant, machinery, mining properties, and equipment" is written up to $130,000,000 by simply adding to the bonded indebtedness of $31,000,000 the $101,000,000 of common and preferred stock. That this appears to be an exact statement of the facts is confirmed by data taken from Poor and Moody's Manual Consolidated for 1922. The old issues of the merging companies amounted to $63,000,000 common and $19,000,000 preferred. The merger transformed this into $24,000,000 common and $77,000,000 preferred, thus adding to the previous inflated capital the sum of $19,000,000 by way of still further inflation.

So there can be no doubt that to-day the British Empire Steel Corporation—and I say this in answer to the hon. member for Hants—(Mr. Martell)—are squeezing their employees to pay a dividend on this watered stock.

Again, perhaps Dominion Canners Limited will furnish a good example of the watered stock method of robbing the consumers of Canada. That is one of the greatest evils

of the protectionist system of this country. Some 43 companies amalgamated under the name of Dominion Canners Limited. This I take from an issue of the Farmers Sun of November 26, 1921. The actual capitalization of the various companies merged was $115,442,000. They were authorized to issue exactly double the amount of stock, or $230,884,000. Surely the responsibility must rest heavily on those who granted them this privilege.

Watered stock is essentially and particularly a feature of a protected nation. No doubt it is practised in some other countries, but as the Secretary of State said, the stock does have some value there in purchasing goodwill and the like; but here on this continent no value whatsoever seems to be given, and that is how the name of water has come to be used in this connection, because water really represents no value.

I need go no further to show the evils of the system, because my colleagues have already proved the existence of watered stock in the capitalization of many concerns. Some hon. gentlemen in this House are forever crying for more protection; but here is one feature of class privilege that is destroying even the industrial concerns whom it was supposed to benefit. We have built up the industrial concerns of this country on a plan on which it is now really impossible for them to compete. The hon. leader of the opposition declares that 2,000 of these factories have had to close their doors; he says he can vouch for the truth of this. But this is only what may be expected of all that are left before our industries come to run on a rock-bottom basis. It is not possible for an exporting country like Canada, for a country that derives most of its income from the export of agricultural products to ever carry on on this artificial basis. There is really only one industry in Canada that is paying its way to-day, and that is agriculture; and this industry has been bled for the last forty years for the sake of over-capitalized concerns. It is doubtful indeed if under the tariff system and watered stock capitalization we have not paid more in that way than even the total amount that has been paid by these industries in wages during all this time.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. EVANS: When the House took recess I had dealt briefly with the injustice that the infusion of water into the capitalization of certain concerns placed on other industries, agriculture in particular and consumers generally, by reason of the dividends which they claim the right to earn on that which is only nominal capital. There is another charge placed on the real wealth of the producer which constitutes an injustice. By charging an unjust price for any commodity—which must be done if dividends are earned on what is only water or nominal capital,—the company enjoying that privilege is able to pass on more easily than otherwise would be the case the whole of the legitimate taxation which it should pay. This extra burden has mostly been borne as I say by the agriculturist, because he is in a position where he is not able to pass it on as other industries can. Let me give an example from the Farmers' Sun of November 26, 1921, which reads:

> For example, the Dominion Textile Company has a capital of $5,000,000 common stock, of which only $500,000 was actually paid in, the balance "bonus" stock. On the actual capitalization it was shown by the Board of Commerce that they made 310 per cent, but on the "book" capital, they only earned 31 per cent.

Mr. WHITE: What year was that?

Mr. EVANS: In 1921.

Mr. ARTHURS: What was their dividend last year?

Mr. EVANS: I do not know.

Mr. ARTHURS: Was it anything approximating that amount?

Mr. EVANS: I cannot tell. This is a fact and I am only dealing with facts.

Mr. ARTHURS: Is there the same amount of water still in that stock?

Mr. EVANS: I cannot tell, I think there is.

Mr. MEIGHEN: Maybe the president lost some when he was over in Europe.

Mr. EVANS: That might be, I cannot tell. It must be apparent to hon. gentlemen that if an industry can pay 310 per cent on subscribed capital, a real injustice is caused to other industries in this Dominion.

Mr. MEIGHEN: What does the hon. gentleman mean by subscribed capital? Surely he does not mean that the Dominion Textile had only $500,000 of actual value in its plant?

Mr. EVANS: That is what I gathered from the article in the Farmers' Sun.

Mr. WHITE: I thought the hon. gentleman was dealing with facts.

Mr. EVANS: The hon. member can take the floor after I have finished, and show this

statement not to be a fact, if it is possible. Let us consider this fact: that during the war when there was a prospect of wheat being high in price and the farmer had a chance of meeting the profiteering of the factory owners and distributors, the government arrested the price of wheat. It was stabilized then at about fifty per cent of what it ought to have been, and what the price would likely have been, while the manufacturers of munitions and supplies of war were permitted, by their faithful representatives in this House, to sky-rocket their charges and mulct this Dominion to the extent of the two billions of dollars that represents the public debt. Now the agriculturist and wage earner are supposed to pay this debt, a thing they did not incur, while the manufacturer goes free from paying even a fractional part, because he is still enabled by protection and watered stock to pass on his just debts to the wealth producer. I say, Mr. Speaker, that the debt of this country belongs to the watered stock companies and not to the agriculturist who had the price of his product fixed by law. When deflation started the price of wheat was not kept at the stabilized price set by the government until all the other commodities that entered into the cost of living and production came down to that level, but wheat along with all the other farm products, including live stock, was the first to fall in prices. During all the time since the war closed the government has stood by and has been content to let all the watered stock bear dividends by further fleecing the agriculturist. Even the Canadian Pacific Railway Company, which has in the past divided melons of sixty and ninety million dollars among shareholders, were allowed to sky-rocket their rates so that ten per cent might be paid on hundreds of millions that they never invested in that concern. I say, Sir, that Canadian industries and public utilities will have to be drained of their water. It is time some idea of justice and equity prevailed in business throughout this Dominion, so that the different classes in the Dominion might have some confidence in each other and that the sectional differences of the country created by favouritism, class privilege and corruption, may be equalized before it is too late. It is useless at this time to talk of unity and optimism while these sores on the body politic exist, while parliament, instead of meeting out even-handed justice, is yet a place where privilege is dispensed.

Mr. M. N. CAMPBELL (Mackenzie): Mr. Speaker, I should like to make a reference or two to the remarks delivered this afternoon. I was rather surprised to hear the Secretary of State (Mr. Copp) make the statement that people did not have to buy from these corporations. I should like to ask the Secretary of State if he would put that question to the citizens of Ottawa or to the citizens of Winnipeg or to the municipal council of any municipality, if they do not have to buy cement from the Canada Cement Company, or, if they buy from any other company, if they do not have to pay the price fixed by the Canada Cement Company, because that company absolutely controls the market to-day. Let me quote a little instance. On July 8, 1909, the city of Winnipeg purchased 25,000 barrels of cement which they secured at $1.77 per barrel. That was just before the merger took place. Three months later, after the merger was formed, they called for tenders for a smaller quantity. They received only three tenders each of them from an agent of the Canada Cement Company. They received tenders from no other company and the lowest price at which they could secure the cement was $2.24 a barrel. It is useless to ask the citizens of Winnipeg if they cannot buy the cement somewhere else and in that way avoid paying interest or dividends on watered stock.

Ask the people of Canada from the Atlantic to the Pacific if they can avoid buying their oil, gasoline or fuel oil from the Standard Oil Company, because, after all, every oil company that is doing business in Canada to-day, I care not what be its name, depends entirely upon the Standard Oil Company. There is really no competition in the oil business in Canada at the present time. It is controlled by that one company.

Ask the farmers of the northwest why they use the vessels of the Canada Steamship Company, why they provide business for that company. They have no alternative. The government of this country in putting a prohibitive rate on our railways to the sea prevents us from shipping our wheat to a logical point that would be a competing point for these vessels and forces us to hand it over to them whether we wish it or not. As usual, a great mass of legal difficulties is placed in the way of something being done. I have always found, since I have been in this House, that wherever something requires to be done for the common people, there is no end of legal difficulty in the way, the thing is impossible to overcome. But when one of the corporations needs something, these difficulties all seem to disappear immediately. When it was necessary to start the Canadian Pacific, to give it grants, cash subsidies, 25,-

000,000 acres of free land, there were no legal difficulties. The provincial governments, where these lands were situated, did not have to be consulted. The whole thing went through without any trouble. It all depends, to use the old and perhaps a little vulgar saying, whose ox is being gored.

The Canadian Northern came to this parliament in financial difficulties in 1917. If the government of that day had not wanted to deal with the matter, they could have placed any number of legal difficulties in the way of providing means for the Canadian Northern to carry on. They got over those difficulties. The difficulties automatically vanished, because this was a huge corporation looking for something. The government of that day started the printing presses running and they printed about $25,000,000 of money which they handed over to that company. I am not particularly criticizing the government of that day. In fact, I think they did right. It was necessary to do something quickly. But when the people of this country want something, when the farmers are in distress, when the working people of Nova Scotia are in trouble, there seems to be none of that statesmanship that was shown on that particular occasion.

Mr. MEIGHEN: The hon. member is referring only to the present. The late government never declined anything at the request of the people.

Mr. CAMPBELL: I am more particularly interested in the present than in the past, but most of these crimes were committed in the past. We are assured by the Secretary of State that the government is studying the question. How long is the government going to study it before it does anything? In the debate on the amendment to the Companies Act last session, the whole situation was placed before the government. The decision of the Supreme court in the case of the Ruthenian Elevator Company was laid before the government of that time. A year has gone by and the government is still studying the matter. How long does it intend to continue to study before some remedy is provided?

The Minister of the Interior (Mr. Stewart) invites me as mover of this resolution to come forward with an amendment to the act. I think that is a remarkable invitation to come from the government.

Mr. STEWART (Argenteuil): Will the hon. member please try to stick to what the Minister of the Interior said? He invited the hon. member to come to the department with suggestions. The government will take the responsibility for the amendments.

Mr. CAMPBELL: If I misunderstood the minister, I withdraw the statement, but I understood him to say that the mover should submit an amendment to the act.

Mr. STEWART (Argenteuil): I did not say that.

Mr. CAMPBELL: I think my responsibility ends when I place before the government the necessity for legislative and administrative action. The responsibility for that action is then entirely on the government. The members of the government are more interested in avoiding embarrassment for the administration than in meeting the situation and trying to secure a remedy for it. The hon. gentlemen on the treasury benches must accept that responsibility. They cannot continually invite suggestions from this side of the House. We give them suggestions, but the responsibility is on them to provide legislation. The Solicitor General (Mr. McMurray) invited some suggestions from the hon. member for Centre Winnipeg (Mr. Woodsworth), and I could not help thinking that if the hon. member for Centre Winnipeg were in the position of the Solicitor General, he would not be asking anybody on this side of the House for suggestions to deal with the situation, he would deal with it fearlessly, courageously and actually do something. That is what the people of this country want today. They want to see on the government benches men who are attempting something and not simply marking time. The confession of any government of inability to deal with a situation of this kind is simply a confession of inability to carry on the government itself.

We have been discussing for a long time a contract known as the Petersen agreement, the object of which is supposed to be the control of a combine. The government are making, or at least they think they are making, some attempt to deal with that situation, of which there is no doubt a good deal of political capital will be made in the country. They will appeal for popular support on the ground of what they are trying to do, whether the measure passes the House or not. Well, here is a combine that has existed for generations, and so far nothing effective has been done to control it. Here is an opportunity for the government to show itself to the country a real combine-smashing administration. If they take effective steps to cope with this evil they will have something tangible to show the country.

The Minister of Agriculture (Mr. Motherwell) a few nights ago declared that we must line up either for or against the combine. That is precisely what I want to see, and an excellent opportunity presents itself right now for hon. gentlemen in all parts of the chamber to line up either for or against a dangerous combine. All sorts of obstacles are placed before us, however; legal impediments are suggested; and the British North America Act is again brought forward. It seems to me that those hon. gentlemen who raise the British North America Act now as a legal difficulty which we cannot get over should have supported the resolution of my hon. friend from South York (Mr. Maclean) a few days ago when he proposed a means of meeting that difficulty. But I am not particularly concerned about that act. When there are on the treasury benches gentlemen who have the will to control watered stock, regardless of the British North America Act, such control will be brought about. It is only two years ago since the same legal difficulties were conjured up when it was proposed to institute a system of inspecting banks. Hon. gentlemen at that time said it could not be done and that statement was echoed all through the House; the whole atmosphere of government was filled with the same thing—it simply cannot be done. But we did it; it is a fact to-day.

Mr. ROBB: Who did it?

Mr. CAMPBELL: The government; but the government did it only when forced into action by public opinion. The government simply rode like a chip on the crest of a wave instead of directing the course of that wave. Now, I want to see on the government benches gentlemen who will direct these waves instead of being forced into a certain position by the trend of public opinion. We are controlling the insurance companies, for we have an officer with supervisory powers to keep in touch with them. We are also controlling our railways, and we are overseeing the banks. There is therefore no logical reason why the government should not exercise some control over the issue of watered stock. All that is needed is the will to action on the part of those in power.

Motion agreed to.

CUSTOMS TARIFF ON AUTOMOBILES AND MOTOR TRUCKS

Mr. G. G. COOTE (Macleod) moved:

That, in the opinion of this House, a substantial reduction should be made in the customs tariff on automobiles and motor trucks.

[Mr. Campbell.]

He said: The subject covered in this resolution is I am sure one of great importance both to the commercial and to the social life of the country. For the last forty years the question of a protective tariff has been, I think, the chief topic of debate between the two historic political parties of Canada, and no matter what party has been in power at any time we have always had a certain measure of protection. I hope that the present resolution, which I am sure is very moderate, will meet with a good measure of support from all parties in this House. The Liberal party has always advocated free trade or at least a low tariff policy. And the leader of the opposition (Mr. Meighen) will probably feel disposed to support the resolution; I believe it is very much in line with a motion moved by him in this House in 1911 in which he advocated a reduction in the duty on agricultural implements. On that occasion, if I understand his words correctly, he argued that when any industry had demonstrated its ability to export a large portion of its products the duty in respect of the particular commodity which that industry produced might safely be lowered. I will quote very briefly from the right hon. gentleman's remarks on that occasion. They will be found in Hansard of January 18, 1911, at page 1919:

The hon. member for South Lanark, at page 347, made the statement that by reason of the vastly growing exports abroad the manufacturers had demonstrated their ability to stand reductions. Further and more particularly is this the quotation that I wish to call attention to; the hon. gentleman said, as will be found at page 347 of Hansard:

I may observe here that the right hon. gentleman was referring to Hon. John Haggart, at one time Minister of Railways. He quoted Hon. Mr. Haggart as follows:

For the last fourteen years, protection in Canada has so developed our manufacturers that the government now think that a fair reduction in the tariff can be ventured on. They believe that our people can compete with less protection than formerly, and to prove that, it can be pointed out that we are now sending agricultural implements to many portions of the world.

I could read several further quotations from the speech of the right hon. gentleman, but I do not think it is necessary. I have called the attention of the House to the advisability of reducing the duty on automobiles, not because there are not many other lines on which the duty should be reduced, but because I believe that the large majority of the people of this country are firmly convinced of this necessity and are demanding that the duty on automobiles be lowered. When I say automobiles I include of course motor trucks; and I was prompted to bring this resolution be-

fore parliament more by reason of the price which is being demanded for trucks than because of the price charged for automobiles. As evidence that the people are demanding this reduction I would quote briefly from a speech made by the hon. member for Halton (Mr. Anderson) in this House in the session of 1923. At page 2841 of Hansard of May 17 of that year the hon. member said:

As I have previously stated, I am not a high protectionist, and I think there are some industries in this country which possibly are too highly protected. One of these, I think, is the automobile industry. This industry is making rapid strides in Canada and in the last year this country, a country of nine million people, exported half as many automobiles as did the United States, with a population of 110,000,000.

I will not read all the hon. member said about this reduction of duty, but I may point out that in his opinion the protection ought to be brought down to a rate of 25 per cent. I am sure, Mr. Speaker, you will agree with me that the hon. member for Centre Toronto, I think it is, is generally regarded as a very strong protectionist. I find that in his paper, the Orange Sentinel,—

Some hon. MEMBERS: Order. West Toronto.

Mr. COOTE: I stand corrected. I refer to the hon. member for West Toronto (Mr. Hocken). We have so many members from Toronto that we may be pardoned, Sir, if we sometimes do not designate them rightly. This editorial is headed, "Reduce the duty on motors," and proceeds:

Whatever else may be done with the customs tariff at the next session of parliament, there should be a substantial reduction in the duty on motor cars. It is clear from the prices quoted in the United States and Canada that the Canadian manufacturers are charging "all the traffic will stand." The duty of 35 per cent is more than protection. It is in part a government subsidy to the makers of automobiles. As long as the motor car was purely a luxury that only the rich could enjoy, there was not much reason for complaint. But the motor car has become a necessity in business and professional life, and those who are thus compelled to buy one should not be forced to pay excessive profits to the manufacturers. A certain type of car that sells in the United States at $1,875, costs $3,100 in Canada. That is altogether too wide a spread, and is not warranted by any factor in the trade. The American makers have larger production, it is true, but they pay higher wages, and there is no reason why their raw materials are any cheaper. The makers of motor cars in Canada are soaking the public unduly, and it is the duty of the government to lower the tariff, and in that way inject a little competition of American firms that will bring down the prices.

This editorial is from the Orange Sentinel of November 6, 1923. I have one other quotation which I should like to read in this connection. It is from the June number of the Textile Journal, a copy of which I think was sent to all the members of this House. It contains a plea from a great many manufacturers for more tariff protection, and this is the way that one manufacturer puts the case. He says:

We presume manufacturers in every line—

He is asking for more protection.

—with the possible exception of the automobiles, in which we think there is an exorbitant protection, are suffering along the same lines.

Wherever men are gathered together in this country to discuss matters of current interest the tariff is very likely to be one of the topics engaging their attention, and you will always find many supporters of a protective tariff policy, but when automobiles are mentioned almost unanimously it will be agreed that the duty is much too high. I believe that the figures respecting the export of automobiles will prove beyond a shadow of a doubt that our motor manufacturers should now be able to get along with a substantial reduction of the protection they are enjoying.

Mr. WHITE: What does the hon. gentleman understand by a substantial reduction?

Mr. COOTE: A great many different interpretations will be put on the word "substantial". Of course, if this resolution should be adopted as unanimously as the last one was, I have no doubt the government will interpret it to their own satisfaction. For my part, I would like to see the reduction very substantial. I would suggest about one-half of the present tariff. Of course, a little bit less than that might still be called substantial; I have before me a copy of the Ford Times, which I think is the official newspaper of the Ford Company of Canada. This issue is dated June 14, 1923, and contains an article headed, "Export trade bid of Canada hits the United States," which says:

During 1922 the Dominion came through to the point of crowding the United States, exporting 37,958 motor vehicles, or almost half as many as our competitor across the border.

It gives figures for the different years, but I do not think it is necessary to take the time of the House quoting these. The article proceeds:

For the calendar year 1923 statistics show that there were manufactured in Canada 147,582 motor cars and trucks. Of these 69,920 were exported and 77,662 were consumed in Canada. That is, our exports were 47 per cent of the total output of our Canadian factories.

The value of automobile imports for 1924 was $11,443,158, the value of our automobile exports was $33,828,692, or approximately three times the value of our imports.

I have here, Mr. Speaker, a list taken from a publication by the Trade and Commerce department giving the exportation of motor

cars and trucks from Canada. I find that we exported cars and trucks to ninety-seven countries, dependencies and colonies being included under that term. The list includes automoblie exports to the following countries:

The United Kingdom	$5,575,000
East Africa	135,000
South Africa	2,480,000
British India	2,043,000
Ceylon	231,000
Straits Settlements	478,000
Australia	6,115,000
New Zealand	4,680,000
Argentine Republic	1,413,000
Belgium	201,000
China	135,000
Cuba	89,000
Japan	227,000
Mexico	153,000
Netherlands	240,000
Dutch East Indies	676,000
Spain	153,000
Sweden	545,000
Uruguay	174,000
Venezuela	70,000

Total exports of automobiles were $27,246,000. Motor trucks were exported to a total value of $5,496,000. In addition we exported automobile parts valued at $4,162,000. Surely if ability to export is any determining factor, the tariff on automobiles—and trucks—might safely be reduced. I am quite free to admit that Canadian exporters enjoyed an advantage in certain British countries over their American competitors, but that advantage in the United Kingdom, to which we exported very largely, was only a margin of 10 per cent. If our automobile manufacturers can export so many cars to Great Britain in the face of this competition from the United States with only 10 per cent preference, why do they need 35 per cent protection in Canada?

Then there is another phase of the industry which might be considered in determining whether the tariff can safely be reduced. I want to call attention to some figures which were given before the special committee on Agricultural Conditions in this House two years ago. Take the case of the Ford Motor Company of Canada, the report in connection with which will be found on page 981 of the proceedings of that committee. According to the evidence submitted at that time the Ford Company of Canada was formed in 1903 with a nominal capital of $125,000, of which $62,000 was paid up in cash. The balance of the stock was issued, I think, to Mr. Ford and his associates for their patent rights on the Ford car. At page 997 the statement was made by an official of the company that no fresh money was subsequently taken in as capital, that the increased capital all came from earnings. The capital at that time was $7,000,000; cash dividends paid were $10,000,000; surplus and present worth, $12,500,000. That means that $29,500,000 had grown up from the original investment of $125,000. In a recent issue of the Financial Post of Toronto there is this item regarding the Ford Company of Canada:

During the past week Ford of Canada sold at 498 at New York, and there has been a bid of 500 with no stock offering on the Toronto exchange. This is a new high for these shares. Last January and again in March they reached 485, but have been down around 450 since then, the last sale being at 450 on Nov. 6. No reason is advanced for the activity in the shares unless it is expectation in the way of melon splitting. Shareholders have not been overburdened with dividends of late years, the company having paid but 10 per cent in 1924 and a similar amount in 1923. Earnings justified a greater payment. In 1923 they were $5,106,197 and 1924, $3,719,187, while the 10 per-cent dividend took $700,000 each year. Surplus to-day stands at $19,609,861. It is interesting to review the dividend position of the shares since the company was organized in 1906 with $125,000 capitalization, reorganized 1911, $1,000,000 capital and again 1916, $10,000,000 capital, $7,000.000 issued.

That was a pretty nice melon, Mr. Speaker—to raise it from $1,000,000 to $7,000,000 at one issue. Dividend payments have been as follows. I do not think I need read all the list; if there is no objection I would like it placed on Hansard.

The list is as follows:

	Dividend Payments	
	Per cent	Amount
1905	6	7,488
1908	10	12,500
1909	25	31,250
1910	100	125,000
1911	100	125,000
1912	500 (stock)	625,000
1913	20	150,000
1913	33 1-3 (stock)	250,000
1914	10	100,000
1915	110	1,100,000
1916	600 (stock)	6,000,000
1917	5	350,000
1918	5	350,000
1919	35	2,450,000
1920	15	1,050,000
1921	30	2,100,000
1922	30	2,100,000
1923	10	700,000
1924	10	700,000

The total cash dividends to date have $11,451,000 and the total stock dividends $6,875,000, a total of $18,326,238. I have pointed out that the capital stock is now $7,000,000. At $500 per share—that is what this article says the price has been on the market—the capital stock would be worth $35,000,000. On an investment of $125,000 the company has paid in cash dividends $11,451,238 and their capital stock is now worth on the market $35,000,000. In other words, if a man had invested $1,000 in stock of the Ford Company on the formation of the company he would have drawn in cash dividends $90,000; his stock at the present market price

would be worth $280,000, making a total of $370,000 from an investment of $1,000.

Mr. CALDWELL: That is in about twenty years?

Mr. COOTE: Yes.

Mr. GOOD: It is better than farming.

Mr. COOTE: Yes, I think it would make most of our gold mines in Canada look rather poor. Some of the other automobile manufacturing concerns might show a similar statement, but I have not been able to get any information along that line. If the financial condition of this firm is any indication of the condition generally—or even if it is not—there would appear to be good reason why the tariff should be reduced.

Another reason why there should be a reduction in the duty is that the prices of automobiles and trucks in Canada to-day are not based on the cost of production. The automobile manufacturers are basing their prices in Canada on the United States price plus the duty of 35 per cent. It should be noted that there is an excise tax of 5 per cent in the United States and when our customs officials collect the duty on imported cars they add the 5 per cent excise tax to the sale price in the United States and use that as the value for duty purposes. This in reality makes the duty approximately 37 per cent of the price in the United States. There is in Canada in addition a sales tax of 5 per cent based on the duty paid value of the car and an excise tax of 5 per cent on the duty paid value up to $1,200 and 10 per cent upon any value in excess of $1,200. Take the case of a car which costs $985 in the United States; when the duty, sales tax and excise taxes which I have described are added, the cost of the car in Canada becomes $1,487.66. That same car is priced at $1,506 in the city of Toronto; the difference, I presume, would be the freight Detroit to Toronto. That, I may say, has reference to a car that is to-day being assembled in Canada. If the individual purchases the car in the United States he has to pay that 5 per cent excise tax before he gets it from the dealer, and a $985 car with that 5 per cent excise tax in the United States added would cost $1,545.27 by the time he landed it in Canada.

To prove that these manufacturers of cars are adding not only the 35 per cent but two or three per cent extra, which they are able to do because of this excise tax in the United States, I would like to quote here a list of prices at the factory on cars in the United States and in Canada, with the percentage of increase of Canadian price over that of the United States. I would like to have this list also placed on Hansard, if there is no objection.

The list is as follows:

	United States Price	Canadian Price	Per-centage Increase
Ford touring car	$375	$520	38.6
Ford Tudor sedan..	580	755	....
Ford Fordor sedan	660	895	....
Extra for full balloon tires..	25	50	....
Chevrolet touring car ..	525	730	....
Chevrolet coach..	735	1,015	38
Essex coach..	895	1,225	37
Maxwell sedan..	1,095	1,535	40
Chrysler sedan..	2,170	3,025	40
McLaughlin-Buick coach..	1,295	1,820	41
Oldsmobile coach..	1,075	1,495	39
Oakland coach..	1,215	1,695	39
Hudson coach..	1,345	1,840	37
Overland touring car	495	710	40

Canadian prices are from 37 per cent to 41 per cent higher than United States prices.

To show hon. members what these cars cost in some districts in Canada, where we have to add a high freight rate, I would like to quote the following:

A Studebaker coach in the United States costs $1,295; the same car at Calgary cost $2,145.

A Star touring car in the United States costs $540; the same car in Ottawa costs $845.

A Star sedan in the United States costs $820; in Ottawa $1,285.

An Overland five-passenger sedan in the United States costs $715; in Ottawa $1,275.

A Dodge special touring car in the United States costs $985; in Ottawa $1,515.

A Dodge sedan in the United States costs $1,095; in Ottawa $1,940.

A Ford touring car, fully equipped with starter and demountable rim, in the United States costs $375; the same car in Calgary costs $675 or an increase of $300 on $375.

I am quoting these figures just to show what these cars are costing consumers in distant parts of Canada. I go on:

A Fordor sedan in the United States costs $660; the same car in Calgary costs $1,085.

Mr. MacLEAN (Prince): The hon. member has given the percentages of increased cost in Canada as compared with the United States. Can he tell us why there is a difference of from 35 to 40 per cent on different makes of cars, when the duty is all the same?

Mr. COOTE: I think it is from 37 to 41 per cent; I have no explanation of that, although one hon. member suggests that they add all that the traffic will bear. They have

certainly got very close to the price which we would have to pay in the United States plus the 5 per cent excise tax there, and then they have added the duty and our own sales tax as well.

I have a list here of several makes of cars giving the price in the United States and the price in Toronto, which is the closest point to the United States where I could obtain prices. I may say that I had no difficulty in securing the prices of all American cars, but it is a little more difficult to secure the same data in regard to Canada; at least, I had trouble in finding any publication that would give me all the prices in Canada. If I have the permission of hon. members I will insert this list on Hansard. It is not very long, and simply goes to prove that this practice is almost universal among Canadian companies of pricing their cars at the United States price plus all the duty which they can add.

	U.S.	Tax paid Toronto
Chevrolet 5-passenger touring car..	$ 525	$ 817
Chevrolet coach..	735	1,118
Chevrolet 5-passenger sedan.. .. .	825	1,279
Star 5-passenger touring car.. .. .	540	844
Star sedan..	820	1,276
Dodge 5-passenger touring car.. ..	885	1,404
Dodge special touring car..	985	1,506
Overland 5-passenger touring car ..	495	783
Overland 5-passenger sedan..	715	1,199
Jewett 5-passenger touring car.. .	1,205	1,895
Jewett coupe..	1,340	2,125
Nash special 5-passenger touring car.	1,095	1,750
Durant touring car..	830	1,395

I would now like to make a few remarks in regard to the duty on second hand cars which Canadians sometimes import from the United States. I took this matter up with the Department of Customs and in a memorandum which they prepared for me on the subject of used cars they state:

Used motor cars are subject to appraisal at the time and place of importation according to the condition of the imported cars. The practice of appraisers is to base the valuation on the list price of corresponding current models of imported cars and, under average conditions, to allow discounts for depreciation as follows:

Cars listed at less than $1,000	
1 year's use	25 per cent

Mr. Speaker, you can go to the United States and buy these cars at a depreciation of 50 per cent. Why should the customs authorities take it upon themselves to arbitrarily say: No matter what you paid for this car you are going to pay duty on the basis of the list price of the car less depreciation of 25 per cent? On a car that has been in use two years they allow depreciation of 35 per cent; on a car in use for three years, 45 per cent; on a car that has been in use four years, 50 per cent. Now you can go to the United States and secure a car that has had four years use at a depreciation of at least 80 per cent on the list price. On cars listed at $1,000 and over, after one year's use, 30 per cent depreciation is allowed. That should be at least 50 per cent. After two years use of the same car depreciation of 45 per cent is allowed; after three years use, 55 per cent; after four years use, 60 per cent.

Now you can get a used car costing originally $1,000 at a depreciation of from 80 to 90 per cent in the United States at any time, and anyone who will take the trouble to take an American newspaper and look at the advertisements for used cars will find that I have stated it conservatively.

I would like to give just two examples that have come under my notice of the valuation that has been placed on used cars by customs officers for duty purposes. In one case a Ford motor car was purchased in Spokane for $50 by two young men who were coming up to harvest in Alberta. When they got to the line the customs officer demanded $50 duty and tax on that car. They told him they had only paid $50 for the car and did not intend to pay $50 duty, and he could take the car.

The other case was of five young men coming up to harvest in Alberta who had a Chevrolet, 1920 model. I am sure that car could have been bought second-hand any place in the United States for $100 or less. They were required to pay $97 duty on that car. I am sure that statement is correct because I know these young men. As a matter of fact, when they got as far north as my place they were absolutely broke, and could not go any farther because they had no money to buy gas. They had to get work. It had taken all their money to pay the duty.

I feel this is a matter of very great importance to Canadians. A world car census recently made places Canada third in the number of cars used. The United States is first with 15,222,000 cars, or one car to about every seven people. Great Britain is second with 655,000, and Canada third with 642,571, or one car to about fourteen people. With our sparse population scattered over such a large territory we need more motor cars and trucks. After all, Mr. Speaker, this is, I think, a question of transportation. Can we afford to pay 50 per cent more for our cars and trucks than the people of the United States? As a matter of fact, I believe this is one of the factors which is responsible for so many of our people having moved to the United States. People to-day are bound to have motor cars, and if they can get a motor car across the line for 50 per cent less than they have to pay here,

other things being equal, they are very likely to go across the line. In many cases the price is prohibitive here, and they feel that if they go to the United States, where used cars particularly can be had very cheap, they will be able to enjoy the advantages of a car.

9 p.m.

Transportation is one of the greatest questions confronting this country to-day. That is stated in the Speech from the Throne, and I take it that it must be a fact. Here is what the Ford Times says about one phase of this question:

> The development of the automotive industry is only a logical sequence of the demand for transportation facilities, which have always played a major part in opening up a land to its fullest possibilities. With vast unopened areas in our land of huge distances, proper railroad service could not be a paying or a practical proposition. The need for transportation still remains and is of prime importance in changing these waste spaces into productive areas. No country can rise to its full height of importance without adequate transportation. Those who wonder at the continued increase in the sale of automobiles must realize that the big increases are in cars selling for less than $1,000. These constitute more than 80 per cent of the present market. Such cars are bought for their money-earning power. They earn their cost and keep. The automobile industry could never have attained its present tremendous totals over a period of 23 years had not its product more than justified itself economically. Its proper use lengthens life, increases efficiency, stimulates general business and promotes the wealth and stability of the nation.

Cars, Mr. Speaker, are a necessity for many people—doctors, merchants, travellers and I would also say many of our preachers, particularly in the western provinces, and more particularly our farmers. I have heard it estimated that our farmers in Alberta live on an average about twelve miles from the railway station, but that not more than one-third of them have motor cars. This government has always been preaching to these people that they should engage in mixed farming. The government want these farmers to milk cows, and if the farmers are to milk the cows, as we have very few cheese factories in that country, the cream must be taken to the creamery or to the station. It should be taken at least twice a week, particularly in warm weather. The man who lives ten or twelve miles from the station and has to make two trips to town during the week, is going to lose two days off the land, if he has to drive a team, because he cannot make the trip in half a day. If he has a car he will likely take the cream can to town in the evening, after he has done his day's work. We have many farmers in the west who are hauling their grain twenty or twenty-five miles or even further to the railways stations. When they used horses these men took two days to make the round trip to town and back. I want hon. members to consider what a task that is. They must go to the hotel at night, pay for a bed, and two meals, put their horses in a livery stable and pay a livery bill for them. But with a motor truck many of them can make two trips to town in one day. I was told that in one district in my constituency there were over twenty farmers this fall who were using motor trucks, most of them hauling their wheat twenty or twenty-two miles to the station. These men complained that their trucks cost them practically fifty per cent more than they cost across the line. Do hon. gentlemen think these farmers are prosperous enough to be able to pay the increased price? With regard to this question Henry Ford says:

> The great trouble with farming is that it involves too much unnecessary work. There is no reason why agriculture may not hope to come abreast of the other industries in the near future, if the farmer will turn his attention to modern industrial methods, instead of to the problem of borrowing money. There is no food scarcity. The problem is not one of how to increase production, and thereby pile up a surplus for speculators to play with, but how to simplify production and distribution so that less human energy shall be wasted in the process.

Thus is America's industrial genius quoted in a recent issue of Farm and Home.

This government has spent millions of dollars to get people on the land, and one trouble they have is that after they get people on the land many of them will not stay there. If there is one thing more than another necessary to keep people on the land it is improved transportation facilities which implies liberty to purchase automobiles at a reasonable price. Here is another article taken from the Ford Times. It reads:

> Autos Reduce The Farm Migration
>
> Easy to Get to Town Now; Just a Case of Starting the Family Car
>
> The farm telephone, the coming of labour-saving devices and the low-priced auto are three of the greatest factors in checking the admittedly large migration from the farm.

I want to say a word particularly in behalf of the farm women. Many of these women living on a farm anywhere from ten to twenty miles from town live a very lonely life indeed, and I do not wonder that they leave their farms. The only wonder to me is that so many of them stay as long as they do. This article says:

> Many a farm wife will testify that it has meant the disappearance of monotony, since in pre-auto days to get away meant harnessing up an already tired horse, with a limited radius. Now it is just a case of starting the family car, with a triple radius of possibility.

As I said before, Mr. Speaker, I think it would be a very liberal estimate to say that one farmer out of three in the province of Alberta is able to own a motor car. The importance of this subject is demonstrated by the fact that we spent in the year 1923 in Canada probably a hundred million dollars in the purchase of automobiles and trucks. The value of cars manufactured in Canada for home consumption was $63,541,000 and the value of imported cars and trucks, $11,443,000, making a total of $74,984,000. If you would add to this the amount of duty paid on imported cars, the sales tax, excise tax and retail commission, it would probably run over one hundred million dollars. A reduction of ten per cent in the selling price of cars in Canada would make available ten million dollars of new purchasing power, which would be used to purchase more automobiles and more of the common necessities of life, and the taxation incident to the spending of that ten million dollars would bring in considerable revenue to the Finance department.

Now, Mr. Speaker, I presume that the question will be asked—I am a little surprised it has not been asked already—what are you going to do to make up the loss of revenue? Because there would be some loss of revenue. For the fiscal year ending 31st March, 1924, the duty on automobile parts not otherwise provided imported into Canada was $5,123,000, on engines $1,389,000, on rubber tires for vehicles of all kinds $351,000, giving a total of $6,864,000 duty collected on automobile parts. Forty-seven per cent of the cars and trucks made in Canada were exported, so that you would deduct forty-seven per cent of this amount for drawbacks and that would give you an amount of $3,226,000. The total of drawbacks paid to automobile manufacturers was $5,223,000.

If you take off $3,226,000 drawback, that would leave a net balance of $3,637,000; then add to that the customs collected on motor cars, $3,316,000, and the customs collected on trucks, $661,000, and you have a total of $7,615,000.

Mr. EULER: I understood the hon. member to say there would be a reduction in the revenue if the duty were decreased. Does he assume that there would be no greater number of importations than we have now, or does he think that it would follow that because there is a reduction in duty and consequently a reduction in the price of American cars, that the Canadian manufacturer would merely reduce his price and sell just as many cars?

[Mr. Coote.]

Mr. CALDWELL: Sell more.

Mr. COOTE: I would not anticipate any greater importation of American cars. I think the Canadian manufacturer would reduce the price and we would buy Canadian cars just as we are doing now, and I may say I think it would be a good thing so far as general industry is concerned. I believe there would be more motor cars sold and more men employed in Canada than there are to-day in that particular industry. Supposing that a reduction of 17½ per cent even were made in the present tariff, there would apparently be a net loss of $3,807,000. The excise tax collected in 1904 was $2,689,399. Supposing we added 7½ per cent to the excise tax. This would give an increase in revenue of approximately $4,000,000, which would a little more than offset the loss of revenue by the reduction in the tariff if we made the same number of importations of foreign cars. You could thus reduce the price of automobiles 10 per cent without interfering in any way with our revenues through customs and excise.

Statistics for the year 1923 which I have here show that the value of cars manufactured in Canada in 1923 was $97,369,814. Deduct from that the value of passenger cars exported, $29,325,000 and the value of trucks exported $4,503,000, and you have a total manufactured value of cars consumed at home of $63,541,814. This value is about one-third more on account of the tariff of 35 per cent, or it actually works out at a little more than 35 per cent, as I tried to show earlier in my remarks. Let us assume that we paid $20,000,000 more for these cars on account of the duty. The number of men employed in the industry last year was 9,305 persons at an average wage of $1,600 and the total amount paid in wages was $14,998,000. Or in other words, we paid in increased prices on account of the tariff $5,000,000 more than the total salaries and wages paid by the industry. Is it good business for us to pay such a price for the establishment of this industry in Canada, or I should say, after the industry is established, should we continue to pay this price? After all, who is going to benefit from the tariff? The Ford Times of June 14, 1923 refers to the erection of its new plant at Ford, Ontario, in these words:

> Hard by, the new $10,000,000 Ford factory is rapidly nearing completion and when the wheels of production start turning there, Canada can boast the largest automobile plant in the British Empire.

Canada does not own that plant. The bulk of the stock and bonds in that industry is owned in the United States. It is hard to get definite figures in regard to the percentage

of capital in this industry controlled in Canada and in the United States, but the latest figures I have seen state that 80 per cent of the capital invested in this industry is owned in the United States. As I have shown in the case of at least one large company, it has all been built up out of earnings in Canada, yet it is largely owned now in the United States. In a clipping from the Financial Post of February 29, 1924, there is this statement:

> Practically all the manufacturing plants in Canada are either branches of American factories or are controlled by American capital their location in the Dominion enabling them to take advantage of the preferential tariff treatment in certain countries of the British Empire.

This is a little clipping also from the Post in regard to the Dodge Brothers plant being established in Canada:

> Establishment of this plant overcomes the handicap in Canadian operations resulting from tariff requirements and enables the company to market its cars at prices more in line with those in the United States.

When I think of how we have bled ourselves for the benefit of these American millionaires, I am tempted to exclaim as did the hon. member for Hants (Mr. Martell) a year ago: "How long, Oh, Lord, how long?"

I have here, I think it is an editorial originally printed in the Vancouver Sun, but it is reprinted in the Ford Times of Ford, Ontario. I presume when they reprint it in their editorial column they must approve it:

> To-day, the purchasing power of the American dollar is 100 cents. Compared with the goods which that American dollar will buy in United States, our Canadian dollar, spent in Canada, will buy goods worth not more than 70 cents, and it makes no difference whether the purchase is an automobile, a pound of sugar, or a cotton dress.

I believe as regards automobiles I have proved that is the case. If the Ford Times published this editorial, surely they must approve the sentiments contained therein, and I do not believe they would seriously object to a reduction in the tariff. Later on in the editorial, there is this statement:

> The question is, do we Canadians really want Canada to prosper and grow? If we do, we must cut out sentiment and get down to economics. We must abandon some of our hopeless, helpless, tariff-bred weaknesses and get down to business. We have lived so long on government subvention and government protection that we have forgotten how to do business without it.

In conclusion, I believe that all members must admit the importance of motor cars and trucks in the economic and social life of this country. I think I have produced evidence to show that the prices of these articles have been advanced to the very limit allowed by the protective tariff. The ability of our manufacturers to export their product has been amply proven, and I have also proved that the financial position of firms engaged in this industry is such that a substantial reduction in the tariff might safely be made and I believe it would be in the interest of this country if such a reduction were made.

Hon. J. A. ROBB (Acting Minister of Finance): Mr. Speaker, the resolution presented by my hon. friend to-night appears to be one that might well be left over until the budget is brought down.

Mr. COOTE: Too late.

Mr. ROBB: I am not finding any fault with my hon. friend for introducing this resolution to-night. He apparently has given it considerable study and has dug deeply into the accounts of the importations and the revenues. I wish to deal for a moment with one feature of the observations of my hon. friend regarding the capitalization of companies engaged in the manufacture of automobiles in Canada. If I followed the hon. gentleman closely, I think he said that 80 per cent of the capital invested in the automobile industry of Canada came from the United States.

Mr. COOTE: Eighty per cent.

Mr. ROBB: I was wondering whether the hon. gentleman had later statistics than those he quoted last year, because I find that when he discussed this question at that time, and with considerable interest, he made the statement, as will be found at page 2493 of Hansard, that 77.7 per cent of the invested capital in this industry in Canada was from the United States. If his statement to-night is correct it would seem that there has been some United States capital invested in the business since then. But without going into that feature, I would remind the hon. gentleman that no matter where the capital comes from, the industry gives employment to Canadian labour. There are 78 plants engaged in the manufacture of automobiles and their accessories in Canada, employing Canadian labour, and subject to Canadian taxation, a considerable amount in taxes finding its way into the Canadian treasury.

My hon. friend quoted some prices to show the difference in value between an automobile in the United States and one of similar pattern and style in Canada. I know of course that there is some discrimination, but we account for part of it ourselves. The hon. member will bear in mind that we place a sales tax on the automobile of 5 per cent, and we also impose a luxury tax of 5 per cent on

automobiles costing up to $1,200, and 10 per cent on those over $1,200. I mention this figure to remind my hon. friend that the difference in the duty, even admitting his figures does not account for the difference in the respective prices. I agree with the hon. gentleman that in many parts of Canada the automobile has become a necessity. But it is not always a necessity for there are many people owning and operating motor cars who in my opinion would be better off without them. And when I make this statement it is not because of the fact that I have never owned an automobile myself; I have never owned one for the reason that I never felt I could afford to keep and operate it. In the first place, I do not like to dig down for the price, and in the second place owning a car takes you away from your business, whether you are farmer or manufacturer, when you might well be at home. However, I will not pursue that thought further.

I would observe that there are two sides to the question the hon. member has advanced regarding the cost of automobiles to the Canadian people. I will admit that automobiles do cost the individual a lot of money. But I suppose that every hon. member in this House can recall the day when there were no automobiles in Canada; and when these machines were first introduced they stalled on the road about as often as they were made to go. In those early days a man who wanted an impressive turnout did not send to England for a Rolls Royce nor to the United States for a Marmon; and of course he would not have to pay any revenue to the country. What he did was to buy a pair of high steppers, so that neither the municipality nor the province got anything out of him in the way of taxes for driving his equipage along the highway. But the advent of the automobile has changed all that, and I submit that the provinces through their legislation have recognized that the automobile is a luxury, or at any rate if not a luxury a great expense to the country.

As my hon. friend has truly said, we have in Canada a considerable number of cars. I do not remember the figures he gave but the record I have is 513,821. From the owners of these cars the provinces collect in taxes the sum of $9,290,900.82; in the Yukon Territory—and one must wonder what they can do with cars away up there—there are 86 automobiles. I am not sure what the population of the Yukon is outside of government officials. In the various provinces the number of cars owned and the revenue collected on account of them will be seen in the following table:

	No. of Cars	Revenue
Prince Edward Island	2,167	$ 46,801 20
Nova Scotia	16,159	418,241 79
New Brunswick	13,746	301,272 16
Quebec	61,995	1,891,626 53
Ontario	240,933	3,823,704 60
Manitoba	42,200	588,369 95
Saskatchewan	61,367	701,492 50
Alberta	40,642	716,873 25
British Columbia	34,526	802,518 84

The foregoing table will show the revenue collected in each of the provinces. But there is also another source of income to some of the provinces from the operation of automobiles. British Columbia, Manitoba, Quebec and Prince Edward Island impose a tax on gasoline, so that these provinces regard the automobile as a fair object of taxation. In the early days, when people bought high steppers rather than Rolls Royces and Marmons, no one thought of levying a tax on oats as some of the provinces to-day impose a tax on gasoline. The whole situation therefore has changed. The fact of the matter is that the automobile has cost the different provinces of Canada millions of dollars to improve their roadways besides huge sums annually to maintain them. I submit to the hon. gentleman that the automobile is a fair source from which to collect revenue.

As I said in opening, it is on the eve of the budget, and the government must have revenue from some source. Demands come to the government from those who desire expenditure for new railways, the extension of existing railways, harbour improvements, bridges, grain elevators and other public works,—these alternating with requests that we part with various sources of our revenue. If we are to meet our national obligations—the interest on the national debt, the pensions that we owe to our soldiers and the widows and orphans of those who will never come back, and the cost of administration, we must have revenue from some source, and if you take away the revenue we are getting from automobiles we must secure it by imposing duties upon some other commodity. My hon. friend has suggested that we impose an additional excise tax. Well, that is a subject worth considering. We are now imposing a 5 per cent sales tax and a 5 per cent luxury tax upon automobiles up to a value of $1,200, and a further 5 per cent luxury tax upon automobiles above that value. I submit that my hon. friend having debated the resolution, might very well not press it to a conclusion but await the bringing down of the budget.

Mr. M. N. CAMPBELL (Mackenzie): Mr. Speaker, the Acting Minister of Finance (Mr Robb) seemed to place a great deal of emphasis upon what he considered would be the result of putting the principle of this resolution into practical effect, that it would necessarily entail a loss of revenue. I am not altogether certain that this would be the result, and in support of my view I propose to quote a few figures of the manufacture and sale of automobiles in Canada. In 1920 the value of automobiles and automobile parts manufactured in Canada was $137,420,000. The wages paid amounted to $19,368,000. Autos and auto parts to the value of $20,911,000 were exported, leaving the balance sold at home at $116,509,000. On the basis of the wages involved in the manufacture of the total, the wages chargeable to home production would be $16,376,000. If we reduce the purchase price of these to an import basis, that is, eliminating the amount of duty, which of course the manufacturer had the advantage of, the import value would be $101,792,000. Had these cars and parts been imported instead of manufactured here, they would have turned into the treasury of the Dominion in 1920 a sum of $35,627,000. So that we would have been considerably better off if we had not manufactured any automobiles. It will be said we would have thrown a great many men out of employment. Taking the wages involved, had we turned this $35,627,000 into the treasury, we could have permitted all these men to go idle, pay them their full wages, and still have a balance of $19,251,000

Mr. ROBB: Would my hon. friend apply that theory to every industry in Canada? Is that his policy?

Mr. CAMPBELL: We are discussing automobiles now, but in a general way it is true. It is more true of automobiles, though, than of any other industry. Some industries have been struggling all these years and are still not making very much money; I know a good many manufacturers are not. But that is not true of the automobile industry. In fact there is no story in the Arabian Nights, for instance, Aladdin's Lamp, that is more wonderful than the financial history of some of our automobile manufacturers.

After all, I am not so much concerned in having the price of automobiles reduced as I am in having the treasury enriched. I believe that if we cut the duty by 10 per cent, still leaving the home manufacturer with a tariff protection of 25 per cent, and impose an excise tax of 10 per cent, we would make a substantial increase in the revenue without adding anything to the cost of automobiles to the consumer. And I think it is revenue that the minister is after.

Mr. ROBB: Does my hon. friend mean to add an additional 10 per cent to the 10 per cent already imposed on high priced cars?

Mr. CAMPBELL: In a way I would.

Mr. ROBB: That would be 20 per cent?

Mr. CAMPBELL: My suggestion to the minister is that he reduce the tariff from 35 to 25 per cent, and impose an additional excise tax of 10 per cent.

Mr. ROBB: That would be a 20 per cent excise tax? I want to be correct.

Mr. CAMPBELL: Yes, only I would apply it on low priced cars as well. That would not mean any extra cost to the consumer, but it would mean a substantial increase in the revenue, and I think that is a very important point. I am quite sure this can be worked out without any very great hardship to the manufacturer. If you take the history of one particular concern in this country, certainly my suggestion could be applied without inflicting any hardship on them at all.

Mr. SPEAKER: Is the House ready for the question? Any hon. member wishing to speak now will please do so because the mover of the resolution will close the debate.

Mr. SPENCE: Would the minister inform us what is the duty on automobiles now and what is the tax?

Mr. ROBB: On item 438 the customs rates are, 22½ per cent British preference, 30 per cent intermediate, 35 per cent general. In addition, we charge sales tax of 5 per cent on the duty paid value, a luxury tax of 5 per cent on automobiles up to a value of $1200, and a luxury tax of 10 per cent on those in excess of that value. If I understand my hon. friend correctly, he would make the luxury tax 20 per cent instead of 10. I hope I have not done my hon. friend an injustice in putting that interpretation on his proposal.

Mr. CLARK: Do the luxury and sales taxes apply to both the American made and Canadian made automobile?

Mr. ROBB: Oh yes.

Mr. MORIN: When we import American cars do we pay the excise tax of 5 per cent to the United States government?

Mr. ROBB: No, to the Canadian government.

Mr. SPEAKER: Is the House ready for the question?

Mr. W. C. GOOD (Brant): I was waiting, Mr. Speaker, for the minister to answer those questions before I rose, but I will proceed. I would venture to call the attention of the House to some figures that I presented in detail two or three years ago in connection with the earnings of the Ford Company of Canada. It does seem to me that the net result of our tariff policy with respect to the automobile industry has been to put enormous sums of money into the pockets of American millionaires at the expense of the average Canadian user of automobiles. I think this is something that ought to come home to us very seriously, and I do hope, as I urged on the former occasion, that the government will increase the excise tax and decrease the customs duty. This will bring more revenue to the treasury and not increase the price of cars to the consumer at all. In fact, we will probably increase our revenue two or three times while lowering the price of cars to the Canadian consumer.

The Acting Minister of Finance (Mr. Robb) spoke as though the automobile was purely a luxury.

Mr. ROBB: No.

Mr. GOOD: I am glad to hear him correct that impression. At all events, so far as the farmers are concerned, particularly those in the west—and this applies also to many sections of Ontario and the east—the automobile is becoming just as necessary, just as useful as any farm implement; it is primarily a necessity on the farm, not a luxury; I think that ought to be borne in mind. I will admit that in many cases—and this applies more to city residents than to those in the rural districts—the automobile is a luxury and might well be dispensed with. Perhaps it would be interesting to inquire how it is that so many city people who do not need them are able to purchase expensive cars and ride around in them from one end of the country to the other.

Just one other point so far as the giving of employment is concerned. It has already been demonstrated, I think beyond all controversy, that we might well pension off all those who are engaged in the industry and still be money in pocket. Let them be pensioned for life.

Mr. EULER: Do you advise that?

Mr. GOOD: No, I do not advise it, but we are not under the necessity of doing anything of the sort. Just as soon as you relieve the burden upon the consumer of automobiles he has purchasing power, and if these men have to find another occupation he can employ them in farming, for instance. Farming in Canada needs a lot more men than it has now, but the farmers cannot hire men because they have no money. If you make the cost of automobiles less to the farmer he can hire more help and he can farm better than he does at the present time.

Mr. WOODSWORTH: Would that not solve the problem of providing for the widows and children who are worrying the minister so much?

Mr. GOOD: Yes, I am sure it would. There is no need to complain of a lack of useful emplyoment in Canada; it stares us in the face whichever way we turn. It strikes me that the argument with regard to throwing them out of employment is rather far fetched, in the present instance at all events. I trust that this matter will be pressed to a vote; I should like to see hon. members declare themselves either for or against the resolution.

Mr. PIERRE F. CASGRAIN (Charlevoix-Montmorency) (Translation): Mr. Speaker, before closing this debate, I think, perhaps, it would be proper to submit to the House certain reasons which, moreover, have already been given by the hon. acting Minister of Finance (Mr. Robb). The resolution moved by the hon. member for Macleod (Mr. Coote) is perhaps one of those that all classes of the community would like to see adopted for the very reasons submitted this evening to the House by the mover of the resolution himself. Indeed, business and trades people, the most humble classes among our farmers, the rural districts as well as towns and cities, in fact everybody would like to be in a position to purchase automobiles for the convenience of business as well as for pleasure, but on better terms than those existing to-day. On the other hand the hon. Acting Minister of Finance explains to us the government's policy on this subject; he points out that they are busy preparing the budget and that within a few days the budget for the next fiscal year will be laid on the table. Under these circumstances I do not see what harm there could be in postponing this resolution until the budget is brought down. On more than one occasion have we witnessed certain resolutions adopted in too great a haste cause great embarrassments to certain clauses that we wished to favour. I think that everybody agrees in admitting that the resolution has some good points, but should be more carefully studied, as the hon. minister stated, so that we might

carry out reductions, if necessary, without however being exposed to the disadvantage that such an adoption of a resolution might create. That is why I would ask the hon. member for Macleod (Mr. Coote) to kindly postpone the vote on this question until the budget is brought down, when, knowing what it contains, we may be able to act with a thorough knowledge of the matter.

Mr. DONALD SUTHERLAND (South Oxford): Mr. Speaker, I wish to make only a brief reference to the resolution. It must be apparent to everyone that a good deal of favouritism is shown in regard to our tariff and that there is need of having a tariff based on a sounder principle than that upon which the present tariff is based. I notice in the Montreal Gazette to-day that during the past week 29,452 boxes of New Zealand cheese were sold on the Montreal market and that 16,878 cases of American eggs were imported during the same week. Do hon. members realize the difference between the tariff on these commodities and the tariff on automobiles,—9 per cent in one case and 35 per cent in the other? It is quite evident that the tariff on farm products is not in keeping with the tariff on automobiles. I do not agree with the Acting Minister of Finance (Mr. Robb) that automobiles are a luxury. An automobile, particularly on the farm, is just as necessary as almost any other implement used on the farm—and I am speaking in regard to farming that is carried on in an up-to-date manner. In fact, many farmers to-day require not one automobile, but two, and some of them a motor truck in addition in order to overcome handicaps as a result of the scarcity of farm labour. The minister pointed out that the provinces were taxing the automobile owner very severely, and I quite agree with that. But let me remind him that the federal government have discontinued the contribution that was formerly given toward the building of highways, and that the provinces themselves have to build the highways to-day unassisted by a federal grant.

Mr. ROBB: But the advent of the automobile was one of the reasons why a former government enacted the good roads legislation and thereby added considerably to the interest account of this country.

Mr. SUTHERLAND: I quite agree that the automobile has been responsible for the building of expensive highways, which, I may say, are considered to be almost a necessity to-day on account of the high cost of transportation on our railways. A great deal of freight traffic, particularly on short hauls, that was formerly carried by rail is to-day carried by automobile, so that not all the expense in connection with highways is to be charged against the automobile which is used for conveying passengers. I rose simply to call attention to the difference between the tariff rates on imports of these commodities referred to in the statement in the Montreal Gazette to which I have referred. While this has no direct bearing on the resolution before the House, I would point out that there is much need of having our tariff so adjusted that we shall have reasonable protection for all the people of this country, rather than have a few singled out and given a preference, by an unreasonably high tariff while others suffer as a result of an altogether too low tariff.

Mr. COOTE: Mr. Speaker, in closing the debate—

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I do not wish to vote on this without making a statement to the House in relation to the motion. I have been rather disappointed at the display of ardour evidenced by hon. gentlemen to my left on this subject; I have ceased to be disappointed with hon. gentlemen opposite, for they seem to have entirely lost interest in all the questions that agitated them so much not so very long ago. If I remember rightly, in the province of Ontario the lanes and the highways rang with denunciations of this vicious automobile tax. Is it not on this subject that Hon. Mr. Raney gathered the flag of free trade about him and wandered through the province of Ontario, and on platform after platform directed his shafts against the government of the time as the friends of monopolies and trusts. Nothing aroused his ire so much—and in this he was supported by every hon. gentleman to my left whose speeches I read—nothing aroused his ire so much as the automobile tax. But now this question comes up on a motion of the hon. member for Macleod (Mr. Coote), a prayer meeting would be a tumult compared with the vigour that is displayed in this debate. The leader of the Progressive party was allowing the hon. member for Macleod (Mr. Coote) to reply without even expressing an opinion on this question, and hon. gentlemen opposite were silent as the grave, except for one who took care to speak in a language that most of us are unable to follow. Where is the Minister of the Interior? This was a topic that he was one of the most eloquent upon.

Mr. STEWART (Argenteuil): Will the right hon. gentleman quote any of my speeches at that time?

Mr. MEIGHEN: I quoted one a few months ago to the hon. minister, and invited him to make an explanation of it the next day on the orders of the day, but I have waited now several months and have not got it yet; so I do not see very much value in quoting to the Minister of the Interior.

The minister who answers for the government is content to plead the necessities of the revenue. This is the old story from protectionist Liberal governments—they cannot reduce because of the necessities of revenue. Now this government knows that there is many a schedule in the tariff to-day where reduction would add to the revenue, many a one, and I am not sure that this is not one. I do not say I am convinced it is one; but I am not sure it is not. The minister certainly did not show that it was not. The minister knows just as well as he knows he is sitting in his seat, that even though reduction may add to the revenue, it may be the worst thing in the world for the country; and that is what he should have argued before the House. That is the reason he maintains the tax where it is, and the only reason he can justify maintaining it where it is, because to do otherwise would do injury to the business of Canada. Hon. gentlemen take a single industry; they assume that the whole duty is added to the sale price, and that every manufacturer puts in his pocket that extra duty. Then they say: We paid into the manufacturer's pocket so much; we would have been better off to have paid that to the workmen and kept them in their homes idle. This simply shows an inappreciation of the whole situation. One industry depends on another; one industry makes work for another, and the loss of one industry is not the loss of one alone; it is the loss of several. The whole thing reduces the commercial life and industrial life of the country. The minister himself takes care that he reduces no duty beyond the point that will give the industry a chance for its life, and a chance to progress and develop in this Dominion, and I would have welcomed from the minister a defence along the line that he knows to be sound—and not this lame defence behind the shade of the revenue, which he always fears is going to diminish.

Now what has been the case made out by the hon. member for Macleod? He first of all started with a quotation from this speech I made in 1911, which, if it did no other good, has constituted the intellectual nourishment of hon. gentlemen to my left for several years, a speech in which among other arguments I sought to advance for a reduction of the duty on farm implements was this one: that the hold the Canadian manufacturer had obtained not only on his home market but on the foreign market was such as to demonstrate that the tariff at that time was beyond the necessities of that manufacturer. I did state, and stated very plainly that he was entitled, or rather the country was entitled, to such a tariff level on the goods produced by the manufacturer of agricultural implements as would maintain his hold on the Canadian market and enable him still to advance in the markets of other countries in the world; but he was not entitled to any more. But I did not rest with that argument. I went further and produced evidence to show that factory heads in this country had admitted that such had been their success under a comparatively fair tariff in developing the industry here that they were able to produce on a scale comparable with the scale in the United States, and at very little, if any, greater cost. I thought I made a pretty strong case, and I did advance facts in addition to those advanced by the hon. member for Macleod to-day. But as I said last session, and have said frequently in this House, there was, I think, one defect in the presentation I made at that time. I do not think I took into account as of sufficient strength the advantage that export trade gives the Canadian manufacturer in enabling him to increase the scale of his production, and thereby enabling him to diminish the price at home. That is the feature that everyone who is acquainted with and follows Canadian industry or that of any other country for any length of time must be impressed by, and in countries where the protection is the highest, in, for example, France to-day. In countries where the tariff wall around this country would be scarcely visible compared with theirs, you do not find the people arguing that they are paying the cost of keeping up great, rich millionaire manufacturers. As a matter of fact, just because of that tariff, they to-day are able to sell and are selling within the borders of France their products at prices lower than are enjoyed by the consumers of other countries of the world, even lower than the prices that are enjoyed by Great Britain at this very time.

10 p.m.

Now I am not certain—I certainly am not convinced by anything advanced by the Acting Minister of Finance—that it would not be possible to lower the tariff on automobiles and at the same time maintain the industry. He advanced no argument on the subject at all. At the same time, I am not convinced by the argument presented by the hon. member for Macleod. I am aware that there is much criticism of the difference in price to the Can-

adian consumer from that which obtains to the American consumer. It is largely due to the fact that we have this 10 per cent luxury tax. That luxury tax is always looked upon by the consumer as a tariff; it is looked upon as part of the protective structure, and the protective tariff gets the blame that is attributable in a considerable degree to the luxury tax.

Mr. SALES: Was there not the same difference between the American and Canadian prices on automobiles before the luxury tax came into effect?

Mr. MEIGHEN: If there was, then without the luxury tax the difference is a great deal less now, showing that as the industry develops, the margin between the American purchase price and our own is constantly reducing. I went into this matter with a large Canadian concern some few years ago and their books demonstrated, so far as I was able to examine them—I am not an accountant—the correctness of their assertions that because of the scale of production they were now able to maintain due largely to their export trade, they themselves had reduced the price to their factories until it was within ten per cent of the price to the American factory just across the river. This is not a very great margin, but when you add to that the ten per cent luxury tax, you have twenty per cent, and when you add to those two, some larger costs of distribution in this Dominion, where the population is more sparse and the cost of distribution greater, there should be quite a margin between the price to the consumer in the United States and the price in Canada. The sales tax adds to that margin because the American has no sales tax to pay, so that even though the cost to the manufacturer here was only ten per cent above the American cost, the cost to the consumer would be twenty-five per cent above, plus the extra cost of distribution; so that in respect to automobiles the protective tariff is charged with much that it is not responsible for. The protective tariff may be responsible to a degree for the difference that at present exists. I would not like to see any step taken which would shatter still more confidence in this country. We all know it has been shattered enough. It has been shattered so much that to-day, while this government remains in power, there is no hope of business expansion in this Dominion. There is none to-day and there is no hope for any for years to come, because the conduct of this administration has undermined and destroyed confidence in Canada, and if the government accede to this demand and invade still another field, then the condition will be even worse than before. No case has been made out by the hon. gentleman and no case has been made out by the minister in reply. Let us hear from the Minister of Justice.

Mr. LAPOINTE: There is nothing to answer in my hon. friend's remarks.

Mr. MEIGHEN: Nothing he can answer? Is that what the minister said?

Mr. LAPOINTE: The people will answer.

Mr. MEIGHEN: The hon. gentleman tried to answer in the last parliament. I am glad he desists now.

Mr. LAPOINTE: My hon. friend may receive some answer some day.

Mr. COOTE: I am sorry my arguments were not sufficient to convince the right hon. the leader of the opposition (Mr. Meighen) that this reduction might safely be made with advantage to this country. I understood him to say that he had been told that the factory price of cars in Canada was only ten per cent higher than the factory price of cars in the United States. I do not know whether I heard him correctly or not, but he said something to that effect. I am sorry that I have sent my list of prices of these cars to the Hansard room.

Mr. MEIGHEN: I stated, in a certain factory.

Mr. COOTE: I have before me a list which was furnished by a reliable clipping agency in Canada, and this shows the factory prices. He says in a foot note:

The above prices are f.o.b. factory, United States or Canada, exclusive of taxes.

These prices are as follows:

	United States	Canada
Chevrolet, coach	$ 735	$1,015 or 38% higher
Oakland, coach	1,215	1,695 or 39% higher
McLaughlin-Buick, coach..	1,295	1,820 or 41% higher
Oldsmobile, coach.. ..	1,075	1,495 or 39% higher
Hudson, coach..	1,345	1,840 or 37% higher

I could give many more. I have gone over a great many makes of cars, comparing the prices, and have found nothing under 37 per cent. The prices to the people in this country after the taxes are paid are in nearly every case over fifty per cent higher than in the United States. I may also say, Mr. Speaker, that the tariff on cars entering the United States is, I am told, twenty-five per cent, and it is rather strange, if a high tariff really creates low prices that we, with a tariff ten per cent higher than the United

States, should pay at the factory thirty-seven per cent more for our cars than they do in the United States. I cannot understand that. The right hon. leader of the opposition said that prices were lower in France than almost any other country. Possibly that is correct, but if they are it is owing to the fact that France is working on a depreciated currency, the thing that the manufacturers and big business men and bankers in this country are so desperately afraid of, but it enables France to manufacture cheaply.

I do not wish to take time to refer to all the arguments advanced by the right hon. leader of the opposition or by the Acting Minister of Finance, but there are a few I think I should refer to very briefly. I think the first argument was that there were discrepancies in the figures which I quoted in regard to the percentage of capital in this industry which was owned in the United States: that last year I quoted it at 77.8 per cent and this year at 80 per cent. I will admit there is a discrepancy there of 2.3 per cent. I did not have the actual figures in regard to this matter. I may say it is a matter that has not been very definitely settled, but I was told a short time ago by a gentleman who has given a little study to this question that he thought it was about 80 per cent, that the establishment of American branch factories in Canada was going on all the time, and that most of the companies that were establishing branch factories over here now owned practically all the stock in their Canadian branches, but at any rate I do not think the discrepancy is big enough to make very much difference to that argument.

Now, Mr. Speaker, I want to refer very briefly to the question of motor trucks, which I think possibly I did not deal with at any great length before. I think this is a very important matter not only to farmers but to our manufacturers. They are nearly all employing motor trucks, and you can see at the present time that this duty of thirty-five per cent on motor trucks, which really amounts to thirty-seven per cent, is placing those who must buy motor trucks under a handicap, is imposing a great hardship and is very unfair to the farmers who are a long distance from railroads, and who need those motor trucks badly. I have no particuliar wish to see the duty on the high priced cars reduced. I do not think that matters very much, but I think it must be reduced on the cheaper cars. The people are demanding it, and I believe they will adopt some method of achieving that result before very long. The Acting Minister of Finance (Mr. Robb) I think made the statement that he never owned an auto,—that he could not afford one. I would suggest that if he would reduce the duty on automobiles, he might be able to purchase one himself.

Mr. ROBB: I have no time to drive one.

Mr. COOTE: If the Acting Minister of Finance, with a salary of $14,000 per year, feels he cannot afford a car, I would like him to consider the position of the poor farmer living fifteen or twenty miles from town. How is he going to get a car? While I am on that subject I want to refer to a very good settler in my district, a splendid type of settler, who came from Sweden—who said to me a year ago, "When I cannot afford an auto, I am going to leave the farm. I do not think I and my family should be away out here on this farm without an automobile, and I am going to leave it if I cannot make enough to keep a car." It would be good business for those people who are trying to get settlers on the land to do what I suggest if they really want them to stay on the land. The Acting Minister of Finance referred to the large tax the provinces collected out of these cars. That is only an added argument in favour of the motion which I have presented. Is the automobile to be singled out as paying the greatest tax of any industry in this country? I do not see why it should. He stated that there was a time when there were no automobiles at all. I thought he was inferring that probably those who have not automobiles ought to do without them. There was a time in this country when we did not have any railroads. Does the minister suggest that we should do all our transportation with horses again? There was a time when the farmer had no binder, no mower. Does the minister suggest that we should go back to the cradle and scythe again? He referred to the large amount of taxes which manufacturers of automobiles pay. I find in Hansard of last year, March 17, at page 379, these remarks by the hon. member for Springfield (Mr. Hoey), who mentions the amount of taxes some of these men pay:

> During the years 1915 to 1918 inclusive a certain factory in this country produced 113,542 automobiles, and the excess price charged to Canadian purchasers over the prevailing price in the United States was $13,394,941. The wages paid by that concern during that period on the cars actually made and sold in Canada amounted to $9,083,360, and their total wage $11,960,807. That is their total wage bill on cars made for sale in Canada and for export. They paid in taxes during that period $2,285,145, leaving a surplus of $2,027,436. What do these figures mean? They mean that during this period the people of Canada would have paid all the wages this firm

paid, all the taxes this firm paid, and had a surplus in the national treasury of $2,027,436, or a sum sufficient in itself to pay more than half the duty paid by this firm on their raw material entering into the manufacture of this article.

I regret that the Acting Minister of Finance did not give a little more consideration to my proposal for increasing the excise tax so as to make up any loss of revenue that would occur through the reduction in the tariff. He simply said that it was worth considering, and I suppose he thinks we should be satisfied with that. I hope he will consider it.

I am disappointed at the attitude taken by the Acting Minister of Finance, and if this government will not reduce the duty on automobiles and trucks, particularly trucks and lower priced cars, it should give up all pretence of making any reduction in the tariff. As regards the actual reduction, the motion, as worded, leaves it to the interpretation of the government, if the resolution should be fortunate enough to be passed by this House. I do not think it would be my place to say what amount should be taken off the present duty, but something very substantial should be taken off in regard to lower priced cars and trucks. Personally, I do not care whether anything is taken off the higher priced cars or not. When I come to eastern Canada and visit the cities, Ottawa included, I am always struck by the large number of handsome, high priced cars that are driven around the streets. The government would save some money on their own high priced cars if they would reduce the duty. When I see the number of old, dilapidated, practically worn-out cars that are in use in some of the rural sections of Canada, I cannot help feeling that there is something very wrong in this country. People out in the country doing at least their fair share of the work are not getting a fair return. It may be hard to convince hon. members who spend most of the time in these cities that there is any necessity for reducing these duties, but if they will visit the rural sections and see the cars that some people are using and the number of people who are not able to purchase cars at all, they would be ready to give their approval to this resolution.

As a final word, I would say that I hope the majority of the members to-night will give their support to this resolution, because it is something that the people of Canada generally would appreciate and they would back up those members who would support such a resolution.

Mr. ROBB: Does my hon. friend advocate adding the same excise tax as he would take off the customs tariff? Is he of the same view as the hon. member for Mackenzie (Mr. Campbell) who advocated taking off 10 per cent and adding 10 per cent?

Mr. COOTE: I did not advocate such action, because the excise tax should be added to all cars, both imported and manufactured at home, and a much smaller addition to the excise tax than the amount taken off the tariff would bring in as much revenue to the country as is now being received.

The House divided on the motion (Mr. Coote) which was negatived on the following division:

Mr. MARTELL: During the polling of the vote, Mr. Speaker, through a misunderstanding due to no fault of my own, my vote was not taken. If the vote had been properly polled, as I contend it was not, I would have registered in favour of the motion of the hon. member for Macleod (Mr. Coote), because I am in favour of his resolution. But while the vote was being taken hon. members did not know what they were voting for.

Some hon. MEMBERS: Order.

Mr. MARTELL: I simply want to explain my own position as representative of the county of Hants and to state that I support the hon. gentleman's resolution.

Mr. CARROLL: My vote was not recorded. I understood that after the Clerk Assistant had taken the vote on the other side of the House it was expected that he would turn to this side of the chamber and call the names of those over here who supported the motion. I rose in my place to vote for the motion but my vote was not registered.

Mr. LOVETT: I was paired with the hon. member for Charlotte (Mr. Grimmer). Had I voted I would have voted for the motion.

NATIONAL COAL POLICY

Mr. T. L. CHURCH (North Toronto) moved:

That, in the opinion of this House, the time has arrived for Canada to have a national policy in relation to its coal supply and that no part of Canada should be left dependent upon the United States for such supply.

The government should immediately consider the initiation of an all British and Canadian coal supply and that such a policy is both a social and economic necessity and in the best interests of the future of Canada.

That a duty should be placed on coal from the United States to ensure an all British supply for Canada and thus afford adequate protection to coal mined and coked under the British flag.

That, whereas coal is in effect a food, it should be carried on a preferential toll basis by the railways on the same basis as food.

He said: I do not propose to make any lengthy speech to-night on this subject inasmuch as my views are already recorded in Hansard. For three sessions now I have brought this matter to the attention of parliament and I have already given at some length my reasons for the proposal I make in this resolution. Since last session some $200,000 has been voted as a bonus for the carrying of coal from Alberta and the Maritime provinces to central Canada, but we have not had any particulars as to how that money was spent. I understand that it was devoted altogether to the carrying of coal from the Maritimes to the province of Quebec. The resolution, as will be observed, also relates to an embargo on coal. It is my opinion that a duty should be imposed on coal coming from the United States in order to ensure an all British supply for Canada. We want to develop our own resources, and I think it is necessary that we should have some adequate protection so that all the coal Canada uses will be mined and coked under the British flag. Recently some supporters of the government in the Maritime provinces, notably Premier Armstrong, have been inviting the government to impose a duty on coal in order to stimulate the industry in that part of the country. Some five million tons of coal are used in the province of Quebec annually and of this only two millions come from the Maritime provinces, the other three millions from the United States. As I said a moment ago, I do not intend to discuss the subject of this resolution at any length seeing that the principle of it was adopted last session by a unanimous vote of the House, that is to say, as regards the desirability of having a national policy in relation to the mining of coal in Canada. The reasons I gave for a national coal policy for Canada are the same to-night as those that I have advanced during the past three years in parliament, and are so well understood by the House, that I will not labour the matter further. I will simply content myself to-night with moving the resolution for a na-

tional policy for Canada so that every ton of coal used in Canada shall be mined and coked under the British flag whether it is from Wales, Alberta or the Maritime provinces thus keeping labour and wages in Canada.

Hon. CHARLES STEWART (Argenteuil, Minister of the Interior): The resolution which the hon. gentleman has moved, except in regard to the question of the imposition of the duty, was adopted by the House last session, and with that single exception the government will offer no objection to the motion. The question of an increase of duty is however a departure from the principle that was voted upon last session, and I may say frankly that the government do not feel that they can agree to the levying of a greater duty. It is quite true that Premier Armstrong and a number of the coal operators and other interested parties came from Nova Scotia to interview the government during the recess. They asked for an increase in the duty on slack coal from fourteen to fifty-three cents, and that is the only request they made with respect to the imposition of a duty.

It strikes me as being too late in the evening to discuss this coal proposition thoroughly. It is a matter that I have given a great deal of attention to during the past two years. Last session the House voted a subvention of $200,000 to assist in the transportation of coal. Owing to the strike in Alberta last year no arrangement was made for the transportation of coal during the season when it could be economically hauled by the railways. Later in the year when in western Canada I had an interview with Premier Greenfield at which Sir Henry Thornton and Mr. Stutchbury, the fuel commissioner for Alberta, were present. It was then decided that although the mines were again under way and producing coal, it was getting too close to the season when the wheat movement would begin for the railways to embark on the experiment to establish the freight rate on coal from Alberta to Ontario. Alberta coal has been used in all parts of Ontario to the entire satisfaction of everyone. The question is one of freight rates and freight rates alone. Let me say for the information of my hon. friend from North Toronto (Mr. Church) and other hon. members that we have agreed to have the experiment carried on this spring. I suggested there should be an arrangement that the coal should be mined and placed on board car at $3.50 a ton, that the railways should be handed the coal in trainload lots to be carried to common distributing points in Ontario, and that every facility should be given to try to establish a lower rate than that prevailing. Sir Henry Thornton intimated at the interview that the lowest rate at which the railways could transport that coal was $9 a ton. I see by press despatches that came through no later than yesterday—I have not received the information in any other way—that negotiations between the Alberta government and the railway are proceeding and that they propose establishing a rate of $7 a ton for the trial shipment of 50,000 tons. That shipment, as I say will be made next spring. It is estimated that if a rate of $6 a ton could be granted, and if the mining and loading on car could be done at $3.50 per ton, it would make it possible to bring Alberta coal into Ontario and meet the competition of American anthracite.

In the investigations carried on by the Dominion Fuel Board we have been devoting our attention to see if it is not possible to supplant anthracite coal coming from the United States into the provinces of Ontario and Quebec. Naturally fuel coming from Alberta will be largely, if not altogether, lignite suitable for domestic purposes, and we hope it will supplant the American anthracite supplied to those provinces.

The coal fields of Nova Scotia have been having rather a difficult time. This year we offered them a subvention to assist them in getting their coal to points further west to the extent of 50 cents a ton as the maximum on any shipment. I am sorry I did not know this resolution was coming up to-night or I would have had full details for my hon. friend; I will be prepared to lay them on the table of the House before very many days showing exactly what has happened. Briefly, Mr. Speaker, it is estimated that we have extended the market for Nova Scotia coal 100 miles westward by the assistance given to the coal movement.

Sir HENRY DRAYTON: To what points?

Mr. STEWART (Argenteuil): As far west as Cornwall, and in a line directly north of Cornwall.

Sir HENRY DRAYTON: What does the minister say to the position taken by the Nova Scotia government and by the Nova Scotia Coal Company, that it is impossible to sell Nova Scotia coal in quantity to-day even in Montreal owing to their inability to meet the American price? It was for that reason a duty was so strongly urged.

Mr. STEWART (Argenteuil): I do think even with high production costs in Nova Scotia to-day they can meet the American

competition because they have the advantage of a very low water rate to Quebec and other St. Lawrence river points.

Mr. MACLEAN (York): Does the minister expect that the Americans will keep up their present price on anthracite? I say they will reduce it.

Mr. STEWART (Argenteuil): I am coming to that, Mr. Speaker.

Sir HENRY DRAYTON: Before my hon. friend leaves that point, perhaps he will be kind enough to give the House information as to the price at which Nova Scotia coal can be laid down in Montreal compared with the American price?

Mr. STEWART (Argenteuil): I have not the exact figures before me, but it is somewhere in the neighbourhood of $6 a ton. It would be absolutely impossible for the Nova Scotia mines to meet the American competition in Montreal but for the approximately 70 cent rate that prevails on ships coming up the St. Lawrence.

Sir HENRY DRAYTON: The information I have is that the National and Canadian Pacific Railways have bought American coal in Montreal at $5.10 and $5.25 against $6 quoted for Nova Scotia coal.

Mr. STEWART (Argenteuil): If they have bought it for $5.10 it is very recently. Of course, the price of American coal has dropped 25 cents a ton.

Sir HENRY DRAYTON: Say $5.25?

Mr. STEWART (Argenteuil): When investigation was made the price of coal in Montreal and Toronto was about $6 a ton; they were both about on a parity. But that only comes about owing to the facilities provided for water shipment. With reference to the question by my hon. friend from South York (Mr. Maclean), we do hope to supplant all the anthracite coal coming from the United States by providing a cheaper product. That is another experiment we have been carrying on. I may say that I hope to continue the subvention to assist in the transportation of coal this year, and I also hope to bring down legislation for the assistance of the manufacture of coke, to which we have been devoting a very great deal of attention recently. My hon. friend is probably aware that in the city of Hamilton there is a splendid by-product coal manufacturing plant that is giving excellent service and producing a fuel from bituminous and low grade coals which is superior to the anthracite and which can be produced at from $2.50 to $3 per ton less. So we hope to convert a product that is plentiful, in which there is not liable to be a famine. The anthracite field of the United States is becoming somewhat depleted and in all probability in the very near future we will be faced by an embargo on their anthracite coming into Canada. So we have been working along the line of the conversion of bituminous fuel into high grade coke for domestic purposes. There is always some difficulty; these small tests are not always successful from the commercial point of view. But the transference of bituminous coal into coke is no longer an experiment; its success has been amply demonstrated and the resulting fuel has proved its superiority over anthracite. We know now that this is the solution of the problem of supplanting the present anthracite fuel supply throughout Ontario and Quebec.

Mr. MACLEAN (York): The coking will have to be done here in the central provinces?

Mr. STEWART (Argenteuil): Yes. If we can transfer Nova Scotia fuel into high grade coke say in Quebec—at Montreal, perhaps, where there is a market for the by-products—we can use a million and a half tons of that coal to take the place of anthracite coal at present coming from the south to this part of the country. That is what we hope to do. I intend to bring down legislation at a later day, of which I will give due notice, and we can then discuss the matter more fully.

Mr. BROWN: The amount of coke that could be profitably produced would necessarily depend upon the extent of the market for the by-products?

Mr. STEWART (Argenteuil): Perhaps my hon. friend is aware that at present the Ontario Hydro-Electric people are seriously considering the establishment of a large steam plant to supplement their hydro operation in Toronto and vicinity. We are carrying on negotiations with the engineers for the purpose of determining whether it is possible for them to establish coke ovens in conjunction with their steam plants, using gas for fuel under the boilers and turning out this fuel to take the place of anthracite. The suggestion may not be realized, but having regard to the figures we have placed before them and the data we have been able to give them, the engineers are very much interested in the possibilities in that direction. The larger cities throughout the eastern provinces—Ottawa, Montreal, Quebec and so on—would consume all the by-products resulting from the coking of a million and a half

tons of Nova Scotia coal which now has difficulty in finding a market, and we would then be put beyond the necessity of looking to the American market for anthracite fuel. So much for the eastern area; and if we can make a success of the transporting of Alberta coal into the northern and western portions of Ontario, then we can cover the whole field so far as domestic fuel is concerned.

Mr. WARNER: In connection with the minister's remarks regarding Alberta coal, did I understand him to say that 50,000 tons of coal were to be shipped?

Mr. STEWART (Argenteuil): Yes; a sufficiently large amount to establish definitely at what rate the coal can be transported in trainload lots—full trains of coal from the point of shipment to central points in Ontario.

Mr. KELLNER: Has the minister had any requests from Alberta for assistance under that vote of last year?

Mr. STEWART (Argenteuil): No. As I have pointed out, the whole matter was held up in Alberta last summer when the shipment could have been undertaken, owing to the strike. When the strike was over it was thought to be too late in the season to attempt the shipment, on account of the probability of interfering with wheat shipments from the western provinces. The idea is to have the shipment made in May or June when there is plenty of rolling stock available and when the larger cars may be had for the purpose, thus making possible a real test of the actual cost of the transportation of this fuel.

11 p.m.

I am quite willing to accept my hon. friend's resolution, with the exception of the statement with regard to increased duty. If he will withdraw that portion of the resolution the government will be quite prepared to accept the remainder of it.

Mr. GARLAND (Bow River): May I ask the minister, before he concludes, in what form the necessary vote will be provided this year?

Mr. STEWART (Argenteuil): It will be in the supplementary estimates—that is, the subvention vote.

Mr. GARLAND (Bow River): As a revote?

Mr. STEWART (Argenteuil): Oh, yes.

Mr. W. F. CARROLL (Cape Breton South and Richmond): I was not aware, Mr. Speaker, that the resolution standing in the name of the hon. member for North Toronto (Mr. Church) would be taken up this evening, and I am not prepared to discuss the question in detail as I should like to do. There are, however, a few observations which I desire to make with respect to the resolution so far as it pertains to the question of duty on coal. The hon. member for Vancouver South (Mr. Ladner), I think it was, during the course of a discussion in the House on another subject, asked me where I stood on the question of coal duties. I am always prepared, Mr. Speaker, to say where I stand on any question when the proper time comes, and to-night I am going to express my views, for what they are worth, with regard to the question of duty as it affects slack coal in the province of Nova Scotia. I shall also have something to say as regards the duty on coal as it would affect the western provinces if the duty on slack coal was made as I think it should be.

Let me outline briefly the history of the duty on coal. In 1879 a duty of 50 cents a ton was imposed on all coal imported into this country, whether anthracite, bituminous or coal dust. A year or so later, about 1880, this duty was increased to 60 cents a ton on all kinds of coal imported. In 1894 further changes were made in the tariff: the duty on bituminous coal was left at 60 cents a ton; the duty on coal dust—which meant, I presume, what we now call slack coal—was placed at 20 per cent ad valorem, and anthracite was put on the free list. There was, of course, a reason why anthracite was put on the free list. We do not mine anthracite coal in Canada. So far as our geologists have been able to establish up to the present time we have not anywhere in Canada anthracite coal of the quality of that which we import from the United States. It therefore became a dire necessity in Ontario and the western parts of Quebec—in fact, everywhere in Canada, but particularly those sections—to get the best fuel at the lowest possible rate, and I presume that is why in 1894, the government of the day saw fit to remove the duty on anthracite coal. The duty has remained off anthracite coal from that time to this.

In 1906 there was another change in the duty on coal. Slack coal was given a duty of 14 cents a ton. This was coal that would go through a screen with a half inch mesh—the requirement had previously been three-quarters of an inch, I believe. Run of mine and screened bituminous coal was left at 53 cents a ton. In those days slack coal was scarcely marketable in this country, and I am going to point out an anomaly that grew up. Slack

coal in those days carried an ad valorem duty of 20 per cent and the slack coal that came in here was so cheap that the government of the day finally set a recognized value of 65 cents a ton on all slack coal imported. So it was a very cheap commodity in those days, because it was not used for any particular purpose. That ad valorem duty of 20 per cent on 65 cents made the duty 13 cents per ton, and in 1906-1907 the duty was made 14 cents a ton. I want to point out that the duty on run of mine coal or screened bituminous coal, and the duty on slack coal, presents to-day an anomalous situation which cannot be understood in this country. Slack coal to-day is practically as valuable as run of mine coal, for the reason that the manufacturers in central Canada have so developed their plants that they can use slack coal better than run of mine or screened bituminous coal. As a matter of fact, many of them break up their run of mine or screened coal into very fine dust, which they use in their furnaces.

Another point is this: It is said on the very best authority that large coal barges come from the United States across the Great Lakes to Montreal, and these boats are divided into two compartments. One compartment contains say 2,000 tons of slack coal, which comes into this country at a duty of 14 cents a ton, and the other compartment contains run of mine or screened bituminous coal, which carries a duty of 53 cents a ton. That coal is taken to the dock at Montreal—and I am speaking of Montreal because it is the largest consumer of this sort of coal—and the duty is paid, and then the slack coal and the screened coal is mixed and sold in Montreal as run of mine coal. It could not all come in as run of mine coal or it would have to pay a duty of 53 cents a ton; but by mixing it they pay only 14 cents on half the cargo and 53 cents on the other half, and then the whole cargo is mixed and sold as run of mine coal in Montreal. I say that is a fraud on the customs of this country; but it is being done. The only way to stop it is to level up the duty on slack coal from 14 cents to 53 cents. I am not going into a lengthy argument, but I stand for that because I think it is fair, and because I think it will bring the duty on coal up to a point where we will be able to get a bigger market in Montreal for our slack coal. Slack coal constitutes, I am told in some cases as high as 55 per cent of the output of certain of our mines in Nova Scotia; in many of the mines with which I am more familiar I know it constitutes at least 40 per cent of their output.

[Mr. Carroll.]

I agree with those who say that we should give to the people of this country fuel at the very lowest possible cost. I agree with those who say we should not raise the duty on coal to such a point that the people in central Canada might be, so to speak, crucified in the matter of heating their homes, or the manufacturers of this country, who are entitled to a fair deal, charged too much. But I say that if the government imposed this duty they would be doing nobody any harm. The bogey of British Columbia and of Alberta is set up, and I will tell you why. In British Columbia they have a market for considerable of their slack coal in the United States. Their coal goes into the United States at 14 cents a ton for slack coal, and run of mine at 53 cents a ton, exactly the same duty as coal carries entering this country. Now if we raise the duty on slack coal to 53 cents, which is where the duty on bituminous coal stands to-day, the American duty would go up to the same point, and our British Columbia friends argue that their export trade to the United States would be injured. But may I point out that British Columbia is in an entirely different position in this respect from Nova Scotia, and also Alberta. If you will look at the map, you will see that Washington and Idaho are the states adjoining British Columbia, and in neither Washington nor Idaho is there any quantity of slack coal, scarcely any in fact; and if the Americans over there are taking slack coal to-day from British Columbia, a duty of 53 cents a ton would not prevent British Columbia coal from entering those two states, because from its geographical position British Columbia would continue to enjoy the identical market it has to-day.

Mr. MacLEAN (Prince): Are there any large importations of coal there?

Mr. CARROLL: There is very little slack coal imported, but they use some in their factories.

Mr. GARLAND (Bow River): Is it not true that if Canada imposes a tariff duty on slack coal, then under the reciprocal agreement the United States will impose a corresponding duty on our coal entering that country, and would not that react against our coal entering the Washington market?

Mr. CARROLL: I said that was the argument, but perhaps not as well as my hon. friend has said it. I said that the moment we place a duty of 53 cents a ton on slack coal entering this country, a similar duty will be placed on our exportations of slack coal to the United States; but I also said that from

the geographical position of British Columbia in relation to the states of Washington and Idaho, British Columbia is not going to lose any market they have to-day for their coal by reason of that additional duty being levied. Alberta is in perhaps a little different position. I do not know what percentage of the coal of Alberta is slack coal, but I do know that some of the states adjoining Alberta are in the very same geographical position relative to Alberta as are Washington and Idaho with relation to British Columbia, and if we should level up the duty on slack coal entering this country to where it should be, and where it was at one time, and do away with this anomalous situation that exists to-day, I do not think it would hinder one ton of Alberta coal going to the states adjoining.

A year or two ago, in 1923 I think it was, representatives of the miners of Alberta came to this government and took up the question of lignite. I am not speaking by the book, but I think Alberta is the only province that has any amount of lignite coal, and they have a chance of getting a market for that in the United States. We do not import any lignite from the United States that I know of; if we import any, it is only a very small quantity. Those of us interested in coal made no kick when Alberta asked for the removal of the duty on lignite, in order that the reciprocal agreement which the hon. member for Bow River (Mr. Garland) has mentioned might apply and the lignite of Alberta enter the United States free, it is done to-day, and as far as lignite is concerned, I believe it did the industry of Alberta some considerable good.

Speaking about Alberta, I said a moment ago that I was sorry my hon. friend brought up this resolution so late at night. I sent up for my papers but have not got them yet. I have a copy of a resolution passed by the Edmonton Board of Trade in December to the effect that they stood for the levelling up of the duty on slack coal to where the duty on ordinary run of mine and screened bituminous coal stood. I observe one of two of my hon. friends from the west smilling. I do not know the complexion of the Edmonton Board of Trade, but it seems to me that the boards of trade in the west probably are composed of business men, as boards of trade in central and eastern Canada are, and I would think that before the Edmonton Board of Trade would seriously propose and pass a resolution of this kind, they would consider what the effect of it would be on the slack coal industry of Alberta. I am taking for granted that, having passed that resolution, agreeing that it was an anomalous position for this country to occupy in regard to its coal trade, that they must have given very serious consideration to the question of how the levelling up of the duty on slack coal would affect the slack coal industry in Alberta; and I am concluding that, after having given it that consideration, they must have come to the conclusion that it would not affect that industry to the disadvantage of the miners or operators of the province of Alberta.

I say that it is an anomalous position for the government of this country to occupy. It is going to help our coal industry in Nova Scotia and it is not going to affect disastrously the coal industry in either British Columbia or in Alberta, which are the other two great sources of supply. I point out this fact, that in the past year we did not come within 1,350,000 tons of the quantity of coal used on the Montreal market, as compared with the quantity used in 1923. We were about 1,400,000 tons short on the Montreal market, and I believe had we mined that 1,400,000 tons and placed it on the Montreal market, there would not be the distress which exists in certain areas of Nova Scotia and especially in Cape Breton. It is reckoned by those who are in the trade that they could market one million tons of slack coal in the district of Montreal. They could land it there for distribution if the duty on slack coal were levelled up to where it should be. I could give the House innumerable figures in this regard. I am simply placing myself where I think every Nova Scotian should be placed, I say that they should stand for the levelling up of the duty on slack coal from fourteen to fifty-three cents per ton.

Mr. MacLEAN (Prince): What about reducing the other?

Mr. CARROLL: If we are going to have any duties in this country I believe in having them uniform. We buy practically every suit of clothes, almost all our shoes, all our manufactured goods in Canada from manufacturers who are protected in the market to the extent of twenty-five to thirty-five per cent ad valorem duty, and we in Nova Scotia who have to buy those goods bearing that duty are in the position of getting between a five and ten per cent ad valorem duty on coal. If my hon. friend wishes to suggest that we in Nova Scotia should occupy that position relatively to the people of the central provinces, then I say to him that he is not a good Maritime man. The farmers of the country have thirty per cent on their goods. My western friends say they do not want it. I say nothing about that. They know more about it than I do.

I am talking of a matter which I know something about.

With reference to the subvention granted last year in the matter of rates on coal to points west of Riviere du Loup, I want to point out what a very small thing is capable of accomplishing. This subvention was voted about the 15th or 16th of July, and did not become effective till the latter part of July. This government voted $200,000 and gave a subvention of one fifth of one cent per ton per mile for every ton of coal which came west of Riviere du Loup. What was the result of that? It was a very small thing, but it enabled the coal operators of Nova Scotia to market in that short period, from the latter part of July to the close of navigation, one hundred thousand tons of coal in the market west of Montreal which market up to that time they were never able to reach. That was what the subvention meant to us. We are thankful to the government for what they did last year. It will mean a great deal more this year because the operators can take advantage of that one-fifth of one cent per mile from the very opening of navigation to the close, and if we go by comparisons, it would not surprise me if this enabled them to reach, perhaps, with two hundred thousand tons of coal this year, markets which they were unable to reach some years ago.

I am in perfect harmony also with the project to establish coking plants. I am proud of the fact that I raised this very question in the House in the session of 1922. I gave it as my opinion then that the only way to combat in this country the high price of anthracite coal was for this government, or any other government that might be in power, to have some great national policy on the question of coking; so that the people of Ontario and Quebec and the other provinces that are forced to use anthracite coal might be given something as good as anthracite at two or three dollars a ton cheaper. I was glad to hear the Minister of Mines (Mr. Stewart, Argenteuil) say to-night that that was the policy of the government, and I am proud to be in a position to say that it was I who brought this to the attention of the government in the session of 1922. I believe it will work marvels in connection with the coal trade, in giving the people of this country a cheaper fuel as good as anthracite. It will work marvels in doing the very thing which my hon. friend from North Toronto (Mr. Church) had in view every time he moved this resolution in the last two or three years for a national policy on the question of a supply of coal for Canada. The trouble with the proposition, Mr. Speaker, is that, as with all other innovations, it will probably take some considerable time to work out, and to get men sufficiently interested to place their money in it. But I am given to understand by some financial men who to-day have nothing to do with coal operations that, if a proper bill is brought down this session in connection with coking plants, it will work marvels in giving the miners of Nova Scotia and, I am in hopes, the miners of Alberta, when they have proper freight rates, a chance of getting clear of their surplus of slack coal which, at the present time, they are unable to market in the large centres of Canada. This may take two or three years, and in the meantime we are at the mercy of United States operators.

While I am a low tariff man, while I voted to-night for the reduction especially on trucks, as I did not swallow the whole of my hon. friend's resolution and while I believe motor trucks which come into this country for business purposes should come in at a reduced rate of duty in order that business men, farmers and others who require trucks in their actual business may get them a little cheaper, I do not think this is the time that we should have lower tariffs in view of what our neighbours to the south have been doing with their tariff for the last two or three years. In Nova Scotia we are practically shut out from the markets which we had there for our fresh fish. The result to-day is that men who were engaged in the fishing trade along the south coast of Nova Scotia and particularly the island of Cape Breton, are forced out of that business for want of a market and they must go to the coal mines of Nova Scotia to make a living, as that is the only other large industry we have. If I had time I might go into the way in which our customs officials are looking after the dumping clause of the act. We are not well organized in this regard, and I am of opinion to-day that this is one of the things that should be remedied owing to the fact that while United States' operators are not dumping their coal into this country, they are defrauding the tariff getting it in at a much lower duty than it should come in at. I hope I have satisfied the hon. member for Vancouver South (Mr. Ladner), who asked me the other night regarding my position in regard to the question of coal duty. I have placed it before the House in a much briefer way than I would like to have done, owing to the fact, as I said at the outset, that I was unaware that this question was coming before the House this evening.

Mr. D. F. KELLNER (East Edmonton): Mr. Speaker, I was wondering if the Minister

of the Interior could clear up a little confusion that seems to exist between this government and the provincial government. I understand when he was out west recently he made a speech in which he made nearly the same statement as he has made to-night. I have before me a copy of the Edmonton Journal in which there is a report of an interview with Premier Greenfield of Alberta, who states that they knew nothing about any $50,000 being specially ear-marked for moving Alberta coal. I do not wish to read these articles as they are a little long, but further down, on April 28, the trade commissioner, Mr. Stutchbury, says that he wrote the Hon. Mr. Stewart asking for this assistance, and that on June 23 he renewed the request, so I cannot see how the minister can state to-night that he did not have any application from Alberta.

Mr. STEWART (Argenteuil): Mr. Speaker, when the subvention was voted last year, both the Alberta government and the eastern coal interests knew it was for the purpose of assisting in transportation. When we passed the order in council after a definite arrangement had been made for the assistance of eastern coal, we set aside $50,000 to be applied to the movement from Alberta. It was always there. The one difficulty was that arrangements were made to call on the government to put up the amount. Furthermore, I told Mr. Stutchbury, the trade commissioner, last spring, while the strike was on, that I would expect lignite coal would be loaded at a rate of $3.50 per ton. He doubted very much whether that could be secured. I told him I thought, in fairness to the consumer and to the government that were giving assistance in this movement, that would be a reasonable rate, and I understood afterwards he secured the rate from the Drumheller mines.

Mr. KELLNER: He made application on April 28 and June 23.

Mr. STEWART (Argenteuil): He did not make any application for any specific amount. That has not been done yet, because they have no arrangement with the railways. The arrangement I mentioned to-night is one I saw through a press despatch.

Sir HENRY DRAYTON (West York): Mr. Speaker, the issue is extremely plain, and it affords us a pretty good opportunity of showing whether there is any real sympathy in this House with Nova Scotia and Nova Scotia miners, some of that sympathy that we have heard so much about from people that I had hopes were entirely sincere in their expressions of sympathy. The minister gives us very cheering news in connection with coking. It is a very excellent thing, something which we certainly ought to have. The minister said that there was another good thing about coking besides supplying this coke. He said it would also enable the Nova Scotia people, who now have considerable difficulty in finding a market, to sell another million and a half tons of coal. The hon. gentleman nods his head. When the hon. gentleman said that, he admitted the necessity for the duty. When he nods his head, he corroborates the necessity for the duty—

Mr. STEWART (Argenteuil): No.

Sir HENRY DRAYTON: —and yet he tells us that there should be no duty. He shook his head. Let us see why he did so. In the first instance, as we understand the matter, there is difficulty in Canadians selling bituminous coal in this country, while at the same time we are importing millions and millions of tons of bituminous coal. Under those circumstances, if anything like a fair consideration be given, if the question of Canadian markets for the Canadian worker is to apply at all, surely it is supposed to be the policy of this government that it should apply in matters that are indigenous, in matters of first production, the mines, agriculture, fisheries and forests. Certainly we have in the mines in Nova Scotia a condition which is such that the companies cannot market their coal, and my hon. friend knows that. He knows further that not only can the companies not market their coal, but that they have banked coal and this means loss in the coal itself, deterioration of the coal, losses in the trade. My hon. friend has also admitted that it costs $6 a ton to put Nova Scotia coal into Montreal. If he has looked into the matter at all he will know, what is the fact, that American bituminous can be sold easily at lower rates, and that company contracts are given freely on that reduced scale. I do not really know why the government wants the reference to the duty withdrawn; I cannot see the reason. Here we have something which is absolutely indigenous to the soil, something which is intensely vital to a whole province; we have something passed upon by the Liberal party of that province through its official chief in regard to which there is a demand for a duty. We are not asking for any specific duty in this matter. We are merely asking that there be a protective duty which will enable Canadians to work in Canada. It does seem to me that under these circumstances the gov-

ernment, if they desire to give any consideration at all to the Nova Scotia miners, will accept the resolution.

Mr. JOHN EVANS (Saskatoon): I want to have a little information regarding this resolution; I want to know exactly what a national policy in regard to fuel means. The resolution calls for a duty on United States coal; but that cannot possibly help the householder, whether in Ontario or in western Canada. In this country we are in the anomalous position of having created an industrial area that possesses neither coal nor steel, an industrial area that is devoid of these two great commodities necessary to a manufacturing centre. The situation regarding fuel is acute only in this area of Ontario. Now, if a national policy on fuel means that the treasury must again be drained in order to give a subsidy to the railways to haul coal from Alberta and from Nova Scotia, I think we should carefully consider it before entering on this kind of project. This industrial area, as I have said, is in a most anomalous position. The fuel situation no doubt is sometimes acute, but we cannot better it by this means; and after we have protected this area by a high tariff from competition without, and also by means of a discriminatory freight rate from competition on the part of the rest of the Dominion, I for one will want to know exactly what a national policy on fuel means. I see it calls for a duty, and it also calls for a preferential rate on the railways. Western Canada will not be in favour of this resolution, and I for one must oppose it.

Mr. HANCE J. LOGAN (Cumberland): It is now nearly midnight, and this is no time to discuss a national coal policy. I regret that we have not a whole day to consider the matter in view of its supreme importance. I shall not take more than a few minutes therefore to express my opinion on the subject. Last year when the resolution was moved, I endeavoured, speaking at some length, to show the necessity for a readjustment of the coal tariff.

We are asking in Nova Scotia that the duty on slack coal be made the same as that on run of mine. When run of mine coal was given a duty of fifty-three cents a ton, a duty was placed on slack coal of fourteen cents, the idea being that the tariff from an ad valorem standpoint was about equal; because at that time slack coal was a cheap commodity. As a matter of fact, if you travelled throughout the United States then you would find around every colliery mountains of slack coal which you could buy at fifty cents or less a ton. Owing to improved apparatus, however, stokers, feeders and so on, slack coal has become almost as valuable as run of mine, so that to-day there is only a few cents difference in the price. And yet the duty on slack coal remains at only fourteen cents a ton as against fifty-three cents on run of mine. We in Nova Scotia are asking that the relative ad valorem percentage be made the same as it was when the duty was established. I do not think we are asking anything unreasonable; I do not think that an increase in duty will affect the consumers of this country to any great extent. But we shall certainly prevent the fraud on customs referred to by my hon. friend (Mr. Carroll), whereby importers to-day make a mixture of about half slack and half run of mine. They screen it at the mine in Pennsylvania and enter it for customs about half slack and half run of mine. The actual duty they pay is about thirty-three cents a ton. Thirty-three cents a ton on coal at the price it is to-day is not a protective tariff.

Let me read, for the information of the House, some figures in regard to the value per ton compared to the percentage of duty as collected on run of mine coal and slack coal. In 1916 the percentage of duty to value was 46.5 per cent, on run of mine. In 1923 it had gone down to 13.5 per cent. In 1924 the percentage of duty collected on the value of run of mine was 17.7. In 1916 the percentage of duty to value on slack coal was 16.2 per cent; in 1923 it was 3.8 per cent, and in 1924 5.9 per cent. In that time the importation of slack coal had increased by leaps and bounds until last year there was imported into this country over 3,000,000 tons of slack bituminous coal, paying a duty of only 5.9 per cent of the value. Yet when we in Nova Scotia ask for an increase in that duty we are charged with being high protectionists. We are only asking for the lowest kind of revenue tariff on slack coal

We know to-night something of the conditions that exist in some of the collieries of eastern Canada. I will not go over the harrowing state of affairs that prevails there, and which existed even before the strike. Let me tell you, Mr. Speaker, that whereas Nova Scotia in 1913, the last normal year—that is, the last year before the war—produced over 8,000,000 short tons of coal, in 1924 we produced only 5,500,000 short tons. In other words, our production of coal in Nova Scotia instead of advancing, as it should have done, has gone down since 1913 two and a half million tons annually. And yet you want to know what is the reason for the conditions

that prevail in Nova Scotia to-day! One of the chief reasons why there has been that great decrease in production is the admission of slack coal at a very low rate of duty. We are now asking that that be rectified and the duty upon all coal put at the same rate.

I go further, although all my friends do not agree with me, and say that when we need a tariff so badly that we are taxing our people here, there and everywhere in all sorts of ways, we should insist on putting a duty upon what is a semi-luxury—anthracite coal. No man can advance any argument in favour of the policy that makes the poor man who lives in a hovel pay a duty upon his coal while the man who lives in a mansion is allowed to bring in his coal duty free. I also advocate of course that we should put a duty upon anthracite dust, because that is another commodity which came in here last year to the extent of 300,000 or 400,000 tons to supplant coal mined by the miners of Canada.

Now, what is the objection to this course? The only objection I have heard raised is that if we increased the duty on slack coal the Americans would also increase the duty upon slack coal from British Columbia. If I am wrong I want to be corrected, but I am informed that, whereas in Nova Scotia we produce over 40 per cent of slack coal owing to the friable condition of our coal, in British Columbia they do not produce more then 20 per cent of slack coal, nearly all of which they use for manufacturing purposes in that province. They are not sending slack coal from British Columbia into the United States. Therefore there is nothing to fear in the way of reprisals.

I congratulate the government upon the policy they propose to adopt with reference to coking. It is a policy which can be discussed at considerable length when the measure is brought down. I endorsed the policy last year of giving a subvention in aid of freight rates on coal. It has brought good results, for over 100,000 tons of coal have reached Quebec and Ontario from Nova Scotia that would never have been sent there but for that subvention. I wish, however, that the limit of 50 cents could be increased to at least $1, because under the present rate no coal has been shipped from the mainland of Nova Scotia into these western markets. This matter will take considerable time to debate, and I am not going to weary the House at this late hour. I only make this plea to the government, to remember that we have in Nova Scotia 14,000 honest, hardworking men—that is, they would like to work if conditions were right. We have down there men who have been mining coal under difficult circumstances, and we find that instead of our production going up it has gone down two and a half million tons per annum during the past twelve years. Taking the average price of coal at the mine at $4 per ton, we are receiving $10,000,000 less in Nova Scotia in 1925 than we were in 1913.

Mr. J. J. HUGHES (Kings, P.E.I.): Mr. Speaker, this is a large question, and it has been discussed from several angles this evening. Most of those who have spoken have viewed it from the standpoint of the mine operators and the miners. Now, a large body of people are vitally interested in this question—the people who consume coal. Nearly everybody does that. This is a country in which artificial heat must be provided during the winter months, and I know as a matter of fact that the ordinary householder in the Maritime provinces finds it difficult at the present price of coal to warm his house sufficiently to make it comfortable. He finds his coal the largest item in his bill of expense. Therefore I should like to say something from his viewpoint. But the evening is so late, Mr. Speaker, that we cannot do the subject justice, and therefore I move the adjournment of the debate.

The House divided on the motion (Mr. Hughes) which was agreed to on the following division:

YEAS

Messrs:

Archambault, Benoit, Binette, Brown, Cardin, Casgrain, Davies, Delisle, Desaulniers, Deslauriers, Evans, Finn, Fiset (Sir Eugene), Forrester, Hammell, Hanna, Hughes, Johnston, King (Huron), King (Kootenay), Lapointe, Logan, Lovie, Low, McBride, McConica, McIsaac, McKay, McMurray, McTaggart, Mercier, Motherwell, Murdock, Ouimet, Pelletier, Raymond, Rhéaume, Rinfret, Sinclair (Queens, P.E.I.), Snowball, Stewart (Argenteuil), Stork.—42.

NAYS

Messrs:

Bancroft, Bowen, Carroll, Chisholm, Church, Clark, Coote, Doucet, Drayton (Sir Henry), Drummond, Elliott (Waterloo), Fansher,

Gardiner,	Ross (Kingston),
Garland (Bow River),	Shaw,
Hodgins,	Speakman,
Hoey,	Spence,
Hubbs,	Spencer,
Kennedy (Edmonton),	Stewart (Leeds),
Ladner,	Stirling,
Maclean (York),	Sutherland,
McKillop,	Thompson,
Marler,	Thurston,
Martell,	Wallace,
Meighen,	Ward,
Preston,	Woodsworth.—38.

PAIRS

(The list of pairs is furnished by the chief whips.)

Messrs:

Robb,	Stevens.

On motion of Mr. Lapointe the House adjourned at 12.08 a.m. (Tuesday).

Tuesday, March 17, 1925

The House met at three o'clock.

PRIVATE BILLS

FIRST READING

Bill No. 26, respecting a patent of Walter W. Williams.—Mr. McMaster.

LEAGUE OF NATIONS—FIFTH ASSEMBLY

Right Hon. W. L. MACKENZIE KING (Prime Minister): I beg to lay on the table copy of the report of the Canadian delegates to the Fifth Assembly of the League of Nations, September 1 to October 2, 1924, also copy of the journals of the Fifth Assembly of the League of Nations, September 1 to October 3, 1924, containing summarized reports of all plenary meetings of the assembly. I think this latter document will give my right hon. friend (Mr. Meighen) the material he was requesting the other day. I move:

That 800 copies in the English language and 200 copies in the French language, of the report of the Canadian delegates to the Fifth Assembly of the League of Nations, September 1 to October 2, 1924, laid on the table of the House this day, be printed forthwith, and that rule 74, in relation thereto, be suspended.

Motion agreed to.

REPORT

Memorandum prepared by Mr. E. H. Scammell, Deputy Minister of Soldiers' Civil Re-establishment, and correspondence re Canteen Funds and Disablement Fund.—Hon. Mr. Beland.

[Mr. Hughes.]

CANADA EVIDENCE ACT AMENDMENT

Hon. ERNEST LAPOINTE (Minister of Justice) moved for leave to introduce Bill No. 27, to amend the Canada Evidence Act.

He said: Subsection 2 of section 5 of the Canada Evidence Act, which deals with objections which a witness may have to answer upon the ground that his answers may incriminate him, enacts that answers so given shall not be used or received in evidence against him in any criminal proceedings except a proceeding for perjury in the giving of such evidence. It is proposed to strike out the words "in the giving of such evidence" at the end of the section.

Motion agreed to and bill read the first time.

THE RECENT EARTHQUAKE

On the Orders of the Day:

Mr. P. F. CASGRAIN (Charlevoix-Montmorency): Have the government received a report from the official of the Interior department who was despatched last week to the north shore of the river St. Lawrence from the city of Quebec to investigate the recent earthquake? This district is a very popular summer resort, and as summer will be in sight very soon and many people will very likely be summering in that district as in years past, it is important that the government should make an official declaration on the report of its official in order to give assurance to the travelling public.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I will direct the attention of the Minister of the Interior (Mr. Stewart) to the question of my hon. friend. I am sure he will be happy to give him an early reply to it.

CANADIAN NATIONAL RAILWAYS—ROUYN

On the Orders of the Day:

Sir HENRY DRAYTON (West York): I observe that a charter is being given by the Quebec Legislature for the purpose of building a railway to the Rouyn mines. Is it correct that an arrangement has been entered into whereby that railway is to be operated by the Canadian National?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I shall be glad to refer the question of my hon. friend to the Minister of Railways and Canals (Mr. Graham) who, I expect, will be in his seat to-morrow and will give an answer at that time.

PENSIONS AND SOLDIERS' CIVIL RE-ESTABLISHMENT

On the Orders of the Day:

Mr. J. A. CLARK (Burrard): On February 26, I asked the Minister of Soldiers' Civil Re-establishment (Mr. Beland) when it was contemplated that legislation in regard to pensions, soldiers' civil re-establishment and other matters, would be introduced. He said that legislation would be introduced very shortly and that probably notice would be given the following week. That is three weeks ago. The other day the Prime Minister stated that the budget would be brought down shortly. Will the pension legislation be introduced before the budget in order to give the Senate an opportunity to consider that legislation before the Easter recess?

Hon. H. S. BELAND (Minister of Soldiers' Civil Re-establishment): I do not think it was so far back as three weeks ago that the question was asked.

Mr. CLARK: February 26.

Mr. BELAND: At that time I pointed out, I think, that it would be introduced at the end of the following week. In the meantime, advice was received that a delegation representing the ex-service men would like to meet members of the government in connection with the proposed legislation and the date was fixed by themselves as last Friday, the 13th instant. The delegation met some members of the government on that date and since then I have been hard at work preparing a bill founded upon the representations that were made only two or three days ago. I hope to be able to present a resolution in the course of this week, or have it on the order paper at all events, and to deal with it as expeditiously as posible.

Mr. JAMES ARTHURS (Parry Sound): Are any material changes being made from the recommendations of the special committee of last year?

Mr. BELAND: No material changes that I can think of at present. Two or three further amendments, I believe, are in contemplation in this connection and also some amendments which were not mentioned by the parliamentary committee, which bear upon the Federal Appeal Board.

ALTERNATIVE VOTE

On the Orders of the Day:

Hon. T. A. CRERAR (Marquette): Is it the intention of the government to introduce at this session legislation giving effect to the principle of the single transferable vote in single member constituencies?

Right Hon. W. L. MACKENZIE KING (Prime Minister): That subject is under consideration and I shall have to give my hon. friend an answer later on. The government has not yet definitely decided whether to reintroduce the legislation this session.

Mr. GOOD: Did not the Prime Minister promise last year most definitely and explicitly that the bill would be brought down this session at an early date?

Mr. MACKENZIE KING: If I made any such promise it will be carried out and the bill will be brought in.

INTERIM SUPPLY BILL

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee of Supply.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): What is the purpose of going on with supply to-day? Is this regular supply or will it take only a few minutes? I understood yesterday that we were to go on to-day with the Petersen contract.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I think the announcement was made that the Acting Minister of Finance desired to have an interim supply bill put through.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. ROBB moved:

Resolved that a sum not exceeding $31,409,846.82, being one-sixth of the amount of each of the several items to be voted as set forth in the main estimates for the fiscal year ending March 31, 1926, laid before the House of Commons at the present session of parliament, be granted to His Majesty on account for the fiscal year ending March 31, 1926.

Sir HENRY DRAYTON (West York): My hon. friend told me a couple of days ago that he would have to obtain supply earlier than usual this year, as there was a strong probability that the Senate would be rising. Under the circumstances I see no reason why the usual thing should not be done. I would point out that what we are doing now is to enable the government to carry on properly. There have been oppositions sitting in this House, with which my hon. friends across the way are familiar, that have taken an absolutely different stand, apparently under the impression that sharpshooting and sniping and anything of that sort were admissible in the game. We have the idea that our function ought to be to enable the government properly to carry

on, and we know that it is necessary that these bills should be passed a little in advance in order that the public service may be continued. I therefore give my full and free consent, so far as I am concerned, to the bill going through on the usual terms. By that I mean that the House in passing interim supply is not committing itself to any item whatever, either as regards its principle, as regards the amount involved, or indeed as regards its very necessity. In other words, the House is left absolutely free to deal with the estimates as it sees fit when they come up for consideration. I am agreeing to-day to the payment in advance of one-sixth of the estimates. I have not checked the figures myself, for it is rather difficult to do that; but I have no doubt that the minister has had them dealt with by the proper officials and is able to tell us that the amount he now asks for represents truly and correctly one-sixth of the main estimates now before the committee.

Mr. ROBB: That is my understanding. The accounts have been checked up by the department and I have no reason to think that they are incorrect in any way. My hon. friend has taken a fair attitude.

Sir HENRY DRAYTON: The minister understands that the supply goes through on the terms I have stated.

Resolution reported, read the first and second time and concurred in.

Mr. ROBB moved that one-sixth of each of the resolutions reported from committee of Supply be now concurred in.

Motion agreed to.

Hon. J. A. ROBB (Acting Minister of Finance) moved that the House go into committee of Ways and Means.

Motion agreed to and the House went into committee, Mr. Gordon in the chair.

Mr. ROBB moved:

Resolved that towards making good the supply granted to His Majesty on account of certain expenses of the public service for the fiscal year ending March 31, 1926, the sum of $31,409,846.82 be granted out of the consolidated revenue fund of Canada.

Motion agreed to.

Resolution reported and concurred in. Mr. Robb thereupon moved for leave to introduce Bill No. 28 for granting to His Majesty certain sums of money for the public service for the fiscal year ending March 31, 1926.

Motion agreed to, bill read the first and second time, considered in committee, reported, read the third time and passed.

[Sir Henry Drayton.]

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—MOTION FOR RATIFICATION DISCUSSED

The House resumed, from March 13, the adjourned debate on the motion of Hon. T. A. Low (Minister of Trade and Commerce) to ratify and confirm a contract between His Majesty and Sir William Petersen providing for the establishment of a subsidized steamship line on the Atlantic, and government control of certain ocean rates, and the proposed amendment thereto of Mr. Clark (Burrard).

Mr. A. E. ROSS (Kingston): Mr. Speaker, as a member of one of the races comprising this great British Empire, may I affirm our kindly feelings and good wishes to all those who are to-day commemorating their patron saint.

Now, Sir, I feel no apology is necessary for participating in the discussion of the subject now before the House. The proposition as placed before us by the government requires our careful consideration. It is one of universal importance because it affects each one of us directly or indirectly. Commerce and transportation are the most important subjects that can be laid before any parliament. Every great nation has achieved greatness through use of ocean routes, and therefore I say I have no apology to offer in discussing a subject of this importance. The report before us suggests a combine among the north Atlantic shipping interests. This is an American word implying a restriction of trade or commerce, a restriction that may extend even to the point of becoming a monopoly. But the report gives us no definite proof that there is any such combine or restriction of competition. If, however, we grant the existence of a combine, we must admit that three great principles lie at the basis of its discussion. The first is, that contracts in restraint of trade—which is rather a local word, implying business between parts of a country or adjoining states—and contracts in restraint of commerce—which is a wider term—are very undesirable. The second principle is, that the economic effects of such a restraint may be either good or evil. The third principle which should be discussed by any such report is, that anti-trust legislation very often oversteps its scope and produces harmful effects. These three principles find no part in the report or in the discussion of the subject so far by members of the government. Therefore, when the report goes to the committee, we as a House must insist that there shall come back to us some proof that there has been a restraint of trade

or lessened competition; in the second place, a description of the effects, whether good or evil, of such restraint; and third, what will be the ultimate result of the solution proposed by the government.

I come now to the attitude which would be assumed by the man in the street as he discusses with his fellow men the proposal put forward by the government to offset the alleged combine among the north Atlantic shipping interests. The first question he takes up, as far as we have been able to come in touch with him, is the attitude of the agent of the government in the preparation of his report and his solution of the difficulty. Heaven forbid that I should apply to the author of the report the description given by the Minister of Agriculture (Mr. Motherwell) —"a good mouser". This phrase brings before us two characters of the feline family common to any home. One is the family tabby with sleek fur, comfortably ensconced in the living room, decorated with pink and blue ribbons and a favorite with every member of the household and every visitor. This animal is not a mouser—is not expected to be one. She is welcomed to the best couch and is the family pet. The other character is the cat who comes only occasionally, satisfies his intestinal craving for the good things of life, then hears the call and jumps out into the backyard. He is the disturber of the backyard peace, his screams annoy the sleeping world, and his portion is a mixture of bricks, bottles, boots and bones, and as he flies from yard to yard he makes trouble not only for himself but all his race. He does not set out to find any particular trouble, but he creates it wherever he goes. Finally he comes back home, tired and disreputable, scolded by all the family except the old grandma sitting in the corner; she takes him up, defends him for all his bad actions and says, "He is a good mouser." And now this member of the feline family comes home again: he has moused in Japan, he has moused in China, he has moused in Korea, he has moused in England, he has moused in northern Europe; but at last he is back home once more, battered and torn, and the old grandmother again takes him upon her lap and she says, "Well, this is our family cat; we have raised him, we are responsible for all his wilful ways, and we must keep him, for he is a good mouser."

I could leave the subject there, because we are not concerned with the past, or anything else, of the agent in this matter; but we must look at his present conduct. And the man in the street, when he reads his morning's paper, finds that this agent of the government, just after reaching home, gives an interview. This is the character of the interview as set forth in the Ottawa papers: Speaking of his work and his visit overseas, he says:

> I see that Sir George MacLaren Brown, the Canadian Pacific Railway's steamship representative in London, is criticizing me for not having called upon him while I was there. Why should I be bothered with a mere subordinate when the head offices of the company are right here in Canada?

And he goes on:

> I want to laugh when I read the suggestion that the facts should have been referred to Sir Norman Mackinder, chairman of the North Atlantic Shipping conference. They might just as well be referred to a certain well-known newspaper, which is simply a mouthpiece of the corporations. If the government were so foolish as to place the issue in his hands, I would be amazed. In any case, why should we do so? It's none of their business.

Then he goes on:

> There is one important thing I notice to-day in the cable news. It intimates that Petersen will not get the £600,000 subsidy which he was entitled to simply because he proposes to enter into competition with the combine. If that's the case, it's the first body blow to Imperial preference, and I am right ready to join with those who will end the farce of this so-called preference for good and all time.

Now, that is hardly the attitude that should be taken by a representative of the Dominion government who goes abroad to discuss a matter of such vital importance. The men mentioned in his report are strong men, they have done good work, and there should be no attempt to initiate a warfare between this country and these interests. We need one another; they need us and we need them in this great work, if there is to be development in this country in the matter of commerce and transportation.

In the second place, the man in the street questions this report as likely to defeat the object which the government has in mind. If the government's attitude is to prevent the lessening of competition, they have taken a rather doubtful method of accomplishing that. Through all ages the factor that has always prevented a monopoly of ocean routes has been the tramp steamer, and instead of encouraging the tramp steamer this proposal is likely to have the opposite effect, is likely to take away business that the tramp steamer would otherwise get. The tramp steamer has always had an important place in the development of commerce. If you take the figures as given lately you will find that visitations of tramp steamers have been very frequent and have been increasing so far as the ports of this country are concerned. In Montreal in 1921 there were 301 tramps; in 1922, 409; in 1923, 246; and last year 447. In further evidence as to the importance of

the tramp you will find these words in volume I, The Merchant Navy, by Hurd:

> The importance of the tramp owner in the shipping economy of the Empire cannot be too much emphasized. "Not only was he responsible for the larger part of our steam tonnage, but we were dependent on him for the import and export especially of what may be termed the rougher class of bulk cargoes, which are not as a rule suitable for liner business. It would be impossible for a country like the United Kingdom, with its enormous flow of trade, to depend wholly on regular lines with scheduled sailings."

I think I voice the opinion of the man in the street when I say that the government's proposal will not assist in the development of the tramp business. In further evidence that the tramp business plays an important part in British trade I would like to refer to figures given in 1914 with respect to steamships engaged in overseas trade. There were 1,200 regular liners at the beginning of the war, in 1914, having an average tonnage of over 5,000, and there were at the same time 2,400 tramps having an average tonnage of 4,000. It would seem to me as if the encouragement of the tramp, looking at the matter from the Dominion as well as the imperial standpoint, would be the better solution of the problem of lessened competition or restraint in commerce, if there is such.

The third point that the man in the street would take up is the fact that this solution offered by the government barely gives us a service. If you will turn to pages 12 and 15 of the fifth annual report of the Canadian Government Merchant Marine you will find that of our sixty ships twelve were engaged in sailings between Canada and Europe. These twelve ships were able to provide only a fortnightly sailings to Bristol and fortnightly sailings to London and Antwerp. If twelve ships can give only a fortnightly service it is hardly to be expected that the service will be very much increased by ten ships. In connection with the services given by these twelve ships the question arises, what about our attitude toward the Canadian Government Merchant Marine? Will the merchant marine be simply set aside? And, in the second place, what will be the attitude of the larger interests which we would antagonize by this proposal? It is a serious question for us to consider, and the committee should be able to give us the attitude of the government along these lines.

The fourth point that the man in the street takes up in regard to this proposal is the question, who is to get the benefit of it? If it is a matter of control of ocean rates, then any advantage in that direction would assuredly affect the Old Country, whatever indirect benefit we would get therefrom, and the taxpayer of Canada would have to pay. We do not see that the Old Country is at present burning with an enthusiastic desire to get at the solution of this question or to assist in connection with the measure that the government now proposes.

Mr. GARLAND (Bow River): I understand the hon. member to refer to the possibility of the British consumer benefiting by this subsidy. Would he make that a little clearer for us?

Mr. ROSS (Kingston): My point is this: the man in the street, looking at this proposal, says: Here we are paying over a million dollars a year for ten years, for whose benefit? To control ocean rates, if possible to reduce them, largely for the consumer in the Old Country. True, we will get indirect benefit from it by increased commerce. But to the man in the street it looks as though we were paying for cheaper rates for the consumer in the Old Country. Why the Old Country may not become as enthusiastic as we expect in this matter I shall endeavour to point out a little later. Just now I am endeavouring to show how these proposals appear to the ordinary Canadian citizen, the man in the street, and these questions must be answered later on when this matter comes back to us.

The man in the street is also struck by this fact in regard to this proposal. From one end of this country to the other cries are going up to-day not only to this government but to every government in the Dominion of Canada for retrenchment and economy; and how are we answering those cries? We are answering them by the proposed building of a road to Hudson bay, by a road through the Peace river country, by two roads into the Rouyn country, where perhaps one would do. We see no effort, not even an attempt at economy. On the other hand, this government is met from day to day with cries as to the condition of the workingmen of this country. The condition is brought home to the government, that no matter who is to blame, whether it is the men on strike or the interests who are culpable, a large section of this country is to-day in want. It may be said that that is a provincial matter, but I would like to point out this: The health of the people of any part of this country is not a provincial matter; it is a national matter, and if there are conditions in this country where women are suffering, where children are cold and hungry, then it is a matter that will sooner or later affect us as a country. Children without proper food and

nourishment must suffer from the effects of malnutrition, rickets, and the onset of tuberculosis. Women worried about the condition of their family must sooner or later develop neurotic and neurasthenic conditions which will affect the women of this country as a whole. This government, instead of paying heed to the cries of economy and retrenchment, are building hotels in Paris, and sending out $3,000,000 of our money for that purpose; they are buying a club in London, and sending out $2,000,000 more for that; they are building up the ship yards of another country to the extent of $13,000,000 of our Canadian money, when the work could very well be done at home. The question of economy and retrenchment must come before the man in the street when he is considering the entrance of the government into a proposition involving an expenditure of $13,000,000.

The other night the hon. Minister of Railways and Canals (Mr. Graham) in discussing this subject brought forward the argument that the Old Land had refused to consider this proposition or enter into a conference on the matter. I would like to-day for a short time to take up with this House the position that Great Britain occupied during those years 1909 and 1910 and down to 1914. I want to give reasons why in my opinion Great Britain could not enter into a conference or consider the matter at that time. And I would like to say that these are my own opinions; they may be wrong, but at the same time I look upon this matter as an Imperial problem.

The first objection that Great Britain would have against going into a fight on this matter would be that for ages she herself had granted just such monopolies to different parts of the empire. These monopolies were for very special state reasons. There was the East India Company, for instance; the West India Company, the Hudson Bay Company, and so on. She could not very well criticize interests for doing what she as a state had been doing. Her further reasons for non-interference would take us into a discussion of the position of the British mercantile marine and its importance as a factor in the development of Great Britain's commerce. Great Britain's existence has always been bound up in her merchant marine. For her own defence this merchant marine, we might say, started with special privileges she had given to what were known as the Cinque ports, and to the merchants of those ports.

It is interesting to note three or four events which show how dependent Great Britain has been upon the development of her merchant marine. There was first, in the Norman days, the battle of Sandwich in which the fleet consisting only of British seamen on British merchantmen defeated a French armada from Calais which was about to make a descent on England under Eustace the Monk. In 1217, there was the battle of Sluys in which, near Bruges, the British fleet, made up altogether of merchantmen from all parts, destroyed a French and Genoese fleet about to make a second descent upon Britain. In 1415 the first fleet raised by the Henrys was raised altogether from vessels around the ports of Great Britain. The fourth event was the aggregation of vessels which composed the English fleet which defeated the great Armada. Throughout the middle ages, you find the merchant marine not only maintaining but even extending the trade of the empire, and, as well, providing all the means for defence and security of the country. That brings us down to the Napoleonic period, which ended in 1815, and it is important to note the part that was played in that great conflict by the British mercantile fleet. In the Napoleonic wars these merchants of Great Britain lost some eleven thousand vessels by capture, and yet in spite of that at the end of 1815 they had 24,860 vessels upon the ocean. In 1874 they had 36,900, and of these 24,828 belonged to the United Kingdom. These figures indicate the persistence of the merchant people of Great Britain in the face of great losses, and also the assistance they gave in carrying their country through great crises. They indicate the part that was taken by the merchants and by the merchant marine of Great Britain in the affairs of state, and in the development of commerce and in the defence and security of the empire. Following 1815, there came a period of re-organization, with practically no assistance from the state. Its inspiration was due to farsighted and resourceful business men in the great British seaports. In spite of war, in spite of enemies and the interference of press gangs, the merchant marine continued to grow. This covers a hundred years of development, from 1815 to 1913 in which one of the chief items of importance in regard to the development of our merchant marine was the enactment of "navigation laws" which embodied a principle of absolute protection. These laws confined the import trade to British ships or ships of the producing country, restricted the carriage and transportation to the colonies, and reserved the whole of the coasting trade to British vessels navigated by British masters and with crews seventy-five per cent British subjects. In 1823 these laws were repealed.

The year 1850 was a very marked year in the development of our merchant marine. In that year the Marine department of the Board of Trade was formed. This department concerned itself with the question of security at sea, and with the proper type of sailors and seamasters. This century witnessed the transformation from sailing to steam vessels which at first retarded the development of the merchant marine, but later the occurrence of the American Civil war removed competitors from the trade and it was found that British tonnage, from 1850 to 1874, had increased from 65 to 68 per cent, while the United States tonnage in foreign trade had fallen from 60 per cent to 38 per cent. But this is the point I am coming to. The Prussian tonnage only varied from 49 to 46 per cent becoming a very important factor in competition with our British mercantile marine.

The duty of the Marine department of the British Board of Trade was clearly defined and restricted; it was concerned mainly in providing for the security of life and property at sea. It had no share directly in the upbuilding of the mercantile marine; in fact state interference—I should like the House to note this, because this is the important point—state interference with trade either by land or by sea was regarded with suspicion and distrust: The strength of the merchant marine has always depended, in the main, upon the enterprise and business ability of the shipowning community in meeting the nation's needs without state subventions or state encouragement. The relations between the government and the mercantile marine have also been very close, so that in August, 1914, the Admiralty controlled a naval reserve of upwards of 18,000 trained officers and men of the mercantile marine and fishing industry, in addition to a total of 170,000 men of the marine of British birth and 100,000 British fishermen. During the sixty years preceding the outbreak of the war the Board of Trade, Lloyd's Register and ship owners shaped the valuable economic and warlike weapon which proved an essential element to victory when at last the great war opened.

In 1890 the United Kingdom had 3,000,000 tons of sailing vessels. In 1900 this had declined to 2,000,000 tons, and in 1913 it had dropped to 850,000 tons but between 1885 and 1913 there was built up some 25,000,000 tons of steam shipping. Two-thirds of this was constructed in the United Kingdom and over one-half for the British flag. At the same time shipping had increased during this period—1894 to 1913—from 700,000 tons to 2,000,000 tons. Great as this growth was in British tonnage—and in the attempt to meet the increased shipping Britain had nearly doubled her tonnage between 1903 to 1913; in the same period the increase in Germany was four fold. It was a fortunate occurrence that Great Britain possessed half the merchant shipping of the world at the beginning of the war, otherwise the Motherland would have been seriously hampered in its prosecution of it and the ultimate result might have been different. At this date—the opening of the war—the British merchant marine was the largest, most modern, and most efficient of all the merchant navies of the world. Its quantity was divided as follows: In the United Kingdom 11,538,000 tons, and in the colonies and dominions 902,000 tons, making a total of 12,440,000 tons, whereas the world's total was only 26,000,000 tons. The nearest competitor at that time was Germany with 3,096,000 tons.

Now, Mr. Speaker, these facts show the critical periods in the history of the British Empire, largely the history of our mercantile marine. It was just at these critical years—between 1890 and 1913—that Britain was asked to take part in a conference which would affect her standing in relation to this great shipping which had been built up largely by the sacrifices, by the persistence, and by the tenacity of the merchants of her ports and the seamen on her shores. If we had a "mouser" of some importance, some one with some knowledge of the history of British shipping and of the relation between Great Britain and her mercantile fleet, one who could go into these questions seriously and bring to this House the report as to whether we can now or at any time in the future take any action which will interfere with the relationship which has always existed between the merchant navy and the state, we should be in a better position to consider what steps we should take. This relation to which I have referred is a serious question and requires a great deal of consideration by this or any other government. The period of crisis when Great Britain was asked to take part in this conference is past. To-day there is a spirit of co-operation abroad, there is a spirit of Imperial development moving; and what was refused then might well be considered at this present time, and I have no doubt will be considered.

4 p.m.

Now, I come to two practical suggestions in dealing with this subject. The government has expressed the opinion that no suggestions have been offered by hon. gentlemen on this side. Well, I am going to offer one now. We can take no steps, with safety and security to

this country, that will interfere with the great work that Great Britain has carried out in the last hundred years. If we want to take part in the development of a marine that will go on in the future I suggest, as some other members of this House have suggested, that our attitude should be a most friendly one towards the Canadian Pacific mercantile marine. That marine has no intention of acting in any way that will prejudice Canada's prosperity. Their interests are bound up completely in Canada; their whole development, their future, will depend upon the future of Canada; and we could very well consider the building up by the Canadian Pacific of a marine that would be a credit to us in the future. Second, there is the support that we could get from our Canadian Government Merchant Marine. I am not one who will discredit the merchant marine; I believe that with good management a service could be obtained from it. There are no reasons why boats cannot be properly fitted out, and, I would like to bring to the attention of the government a case in 1899 and 1900 when the government of Canada made use of boats such as existed then to carry troops, cavalry and artillery to South Africa. We went out on one of the Elder-Dempster line, hastily brought into the port of Halifax and prepared in such a way that she carried some 600 horses to South Africa. That voyage lasted about twenty-six days, and no doubt these horses suffered somewhat on the voyage. But on a voyage to the Old Country of twelve days or two weeks, no such injury could be effected to animals, cattle or horses. There is no use in saying that our merchant marine could not be used. These Elder-Dempster boats of which I have spoken were only ordinary merchant marine boats, not nearly as good as the boats we have now, and they were fitted up at that time for the purpose of transport to South Africa.

I should like to conclude my remarks by a summary of my position in regard to this matter:

1. The attempt of a state to break a conference of commercial interests engaged in shipping is a most difficult one.

2. The attempt of a state such as Canada, deeply in debt, which attempt is complicated already by a heavy burden of transportation now on our shoulders, seems almost futile.

3. The Petersen contract is a reversion to the old monopolies of the middle ages when the state granted trading privileges to certain of its citizens as a monopoly, which monopoly is now given by way of cash bonuses.

4. Canada's future will be best served by co-operation with her own interests and the use of her own merchant marine rather than by going out of our borders to build up a marine service which will not be ours.

5. Canada's future will also be well served by a development of a connection which will serve to defend as well as to extend our commerce.

There is no future for Canada in the proposed contract with the government. At the end of ten years, which is a long period in the life of an individual, but a very short period in the life of a nation, we shall have developed a unit which is not our own, upon which we shall have spent some thirteen million dollars odd, and in doing this, we shall not have developed work in our own country where there is a great need of such work.

In the amendment there is the possibility, or the appearance, of imperial action, of imperial co-operation, and it is at least worthy of our best consideration.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The hon. member for Kingston (Mr. Ross) will, perhaps, excuse me if I do not attempt to follow him in detail in the remarks which he has just made. He has summarized his views in a few concluding statements, and to these I shall make a brief reply. My hon. friend feels that this attempt is one which, under the circumstances, is likely to be difficult, and therefore, I gather from his remarks, should not be proceeded with. That is a counsel of despair. To meet a situation, that is, we admit, very difficult and complicated, it offers nothing, whereas the very fact that the task is difficult and complicated, makes it, we feel, a task that should not be left untouched, but one for the government of this country to undertake. My hon. friend says that he fears the attempt which we are making will be futile. I am amazed that, speaking, as so many from my hon. friend's side have spoken, in support of the shipping interests, they should feel the great concern they do about this attempt, if it is to turn out as futile as my hon. friend claims. As a matter of fact, if proof were needed that it is necessary to make such an attempt as the government is making at the present time to meet a grave situation, it will be found in the extensive propaganda which has been spread from one end of this land to the other, through the press of the country by the shipping interests. What astonishes one at the moment is their finding such great need—as shown by the efforts they are making —to oppose the so called Preston report. If

this plan that the government proposes is to be futile and of no avail, what are these powerful interests so much concerned about? There come to one's mind the saying: "The lady doth protest too much, methinks." In this instance, the shipping interests are helping to direct attention to the necessity and vastness of the situation with which the government is attempting to cope.

My hon. friend made a somewhat quaint comment to the effect that he regarded the government's action as a reversion to some mediaeval form of bestowing a monopoly. When one has listened, as we have been forced to listen for some days past to remarks of hon. gentlemen opposite, to the effect that this is a sort of popgun scheme, as I think one hon. member expressed it, a hay-rake attempt, as some other hon. members expressed it, one cannot but marvel at the "mediaeval" monopoly that is being given to this Petersen fleet of ships in face of the great monopoly with which it purports to contend. My hon. friend says that he thinks the country would be better served by developing the Canadian Government Merchant Marine. If that is the case, why, when his leader was in office and that particular overture was made to him by members of his own administration and his high commissioner in London,—why did not he attempt to put the merchant marine in action and have it serve the useful purpose which his worthy followers now says he thinks it might be capable of serving? A little later on I shall have something to say about the merchant marine and its effectiveness in this regard. My hon. friend thinks the time would be better spent in developing a connection that would defend as well as extend our commerce. I hope that before I conclude my remarks, I shall show my hon. friend that that double aim will be achieved by the method which the government is adopting. Finally, he remarked that in the amendment there was a possibility, and then he very wisely modified the word and said, the appearance, at least, of imperial concern, or interest, or control, in the course which had been suggested by the amendment. My hon. friend showed his usual caution when he used the word "appearance," because that is, I think, the extent of the control the amendment promises.

I come now more directly to the resolution which is before the House and the amendment which has been moved with respect thereto. The resolution is the first necessary step to be taken by the government preliminary to the introduction of a bill to give the government control of ocean rates. The resolution relates to the control of ocean rates; that is the principle underlying it, and hon. members in voting upon the resolution are passing on the important question whether or not in their opinion the government should undertake to control ocean rates. Whether the method which the government is taking to control ocean rates may be effective or not is a subject which, I think, admits of debate and which should be discussed fully and carefully. But I would point out in that connection that the Minister of Trade and Commerce (Mr. Low), when he moved the resolution, took care to intimate to the House that the agreement which the government has made with Sir William Petersen with respect to placing on the Atlantic the ten ships mentioned, will be sent to a special committee of this House, together with the bill in which it is included, for full consideration, and that hon. members will have the opportunity afforded by such a select committee to weigh carefully all sides of that agreement, and to pass upon it, only after they have thoroughly considered it.

May I point out that it would not have been possible for the government to bring this important question to the attention of the House and refer it to a committee in any effective way other than the way that has been adopted, namely, by preparing an agreement.

Mr. GARLAND (Bow River): Do I understand the Prime Minister to say that he proposes that a bill shall be brought in and referred to the committee? Is that bill to be based on this resolution?

Mr. MACKENZIE KING: Yes, certainly, that is the purpose of the resolution; to permit the government to introduce a bill, which will be referred to a select committee of the House immediately upon its second reading. I have in my hand a copy of the bill which the minister intends to introduce; it is entitled, "An Act to give the Government of Canada Control over certain Ocean Rates". The bill is substantially, indeed I might almost say identically, in the words of the resolution which appears on the order paper. The bill has two clauses, to which is attached the agreement. So that what the government is doing, in presenting the resolution in the form in which it is, is to give to the House in the fullest and frankest manner possible all the details which will come before hon. gentlemen in the bill itself. As my hon. friend is aware, any bill which contemplates the expenditure of public moneys must, under the

rules of the House, be preceded by a resolution; and the resolution in the present instance has been drafted in terms which will make apparent to all hon. members exactly what the bill will contain.

The point I wish to make clear at the moment is that the government was careful in presenting this resolution to indicate at the outset that the intention was that, once the resolution was carried and the bill introduced and given second reading, it would be referred to a select committee of the House on which there would be representatives of the different parties in parliament, and that such committee would have all the powers which belong to a select committee of parliament, to investigate and consider the merits of the particular proposition submitted. The reason the government adopted that course was in order that hon. members might feel no concern in their own minds as to whether or not they were obligating themselves, by voting for the second reading of the bill, to adopt the measure on the third reading. The bill itself contains a provision to the effect that the contract does not become binding until it is passed by parliament; so that when the bill has passed the committee stage and comes back to this House, if it should be defeated on the third reading the contract certainly will not come into force and in fact will have had no being whatever. The contract does not come into force until after this House and the Senate, and His Excellency the Governor General by his assent have all joined to make the bill a part of the law of the land. I want to make that clear because I have noticed in the course of the debate that some hon. members have felt some hesitancy about supporting the resolution as introduced, fearing that they were committing themselves in some way to the specific terms of the contract. Let me emphasize the fact that hon. gentlemen, in agreeing to the resolution and the second reading of the bill, are committing themselves only to the principle of governmental control of ocean rates. The terms of the contract itself will be subject to the scrutiny of a special committee of the House. Before that committee the government will expect Mr. Preston, who has presented his report, to appear; the shipping companies who have had a report prepared in reply to Mr. Preston will also be expected to come forward and tell the country who wrote that report, as well as to support its contentions and representations.

A great deal critical of Mr. Preston has been said here but at least there is this to be said for him in contrast to the document of the shipping companies which we have before us, that Mr. Preston had the courage to put his own name to the report he submitted, whereas the reply which has been drawn up and presented to us bears no one's name. I venture to predict that it will be found to be a document written by the publicity agent of these companies. The committee should have the fullest opportunity to discover who wrote that document, and I have no doubt they will take care to ascertain its authorship.

I have, I trust, made clear that what we are asking the House to consider at the moment is the principle of the governmental control of ocean rates. The first clause of the resolution reads:

> That to give the government of Canada control over certain ocean rates it is expedient—

And so on. The purpose is to provide for the control of ocean rates; and the wisdom of that principle, I submit, has been confirmed in the amendment moved by the hon. member for Burrard (Mr. Clark), which admits the necessity of governmental control over ocean rates. Let me read the amendment as presented to the House:

> That Mr. Speaker do not now leave the chair but that it be resolved: That effective control of ocean rates can be exercised only with the co-operation of all portions of the empire, and by a body on which all are represented, and the contract made by the government with Sir William Petersen, based on the report of W. T. R. Preston is ill-advised, costly and futile and unworthy of the serious consideration of this House.

The amendment itself by implication declares that it is desirable to control ocean rates; but it goes further even than we have gone in our statement and adds that so serious is the problem, so gigantic is it, that no course which this country could take alone would be other than futile and worthless, and that we must get all parts of the empire together to secure proper control through some commission comprising representatives of those component parts. I shall have something to say later on about that method of attempting to deal with the situation. It is not a new one; it was suggested fifteen or twenty years ago. Indeed, it has been suggested over and over again at different Imperial conferences; it was suggested by my right hon. friend opposite (Mr. Meighen) and those associated with him, as well as by previous leaders of his party. I might as well mention at the moment that Sir Robert Borden, Sir George Perley, while Acting Prime Minister, and Sir Thomas White, also in the same capacity, all took the same view. My right hon. friend was also of the same opinion. But up to the present time nothing has come

of it; as the hon. member for Kingston (Mr. Ross) said a moment ago, it was all a matter of "appearance", nothing in reality was accomplished. For fifteen or twenty years there has been a suggestion that something should be attempted in the way of a joint control of ocean shipping on the part of the different empire units, but as I say nothing has been done. I might say immediately that over and over again the Associated Chambers of Commerce of Great Britain have suggested this very thing. If they, with all the power they represent, have been unable to get the Imperial Shipping Board to take action of the constructive kind which has been suggested, does my hon. friend, or do any other hon. members, think that action is going to be taken by that board at the request of this chamber? A little later on I will say something more in regard to this phase; but I might at the moment say, by way of parenthesis, that the adjectives which have been applied to what is referred to in the amendment as a scheme based on Mr. Preston's report might more appropriately have been applied to the course suggested in the first portion of the amendment itself, namely, that it is "ill-advised, costly and futile and unworthy of the serious consideration of the House." I do not think my hon. friend from Burrard (Mr. Clark), although he presented the amendment, ever drafted it. We are all familiar with the drafting of my right hon. friend (Mr. Meighen) opposite, and I will pay him the compliment of saying that it was he who drafted the amendment in the language in which it now appears.

But, Mr. Speaker, with respect to the second part of the amendment, the objection I take to it—and I am going to use plain, bald Anglo-Saxon—is that it is untrue, and I ask hon. members to vote against it for that reason. It says:

> —and the contract made by the government with Sir William Petersen, based on the report of W. T. R. Preston, is ill-advised, costly and futile, and unworthy of the serious consideration of this House.

Let me say to the House, the contract was not based on the report of Mr. Preston. This statement in the amendment is therefore wholly incorrect and is absolutely untrue. One does not need to go further than to look at the dates of the two documents and see that. Take the contract itself. If hon. members will look at that document they will find that it is dated December 11, 1924; if they will look at the Preston report they will find that it is dated December 31, 1924, several days—weeks in fact—after the contract itself had been signed. There is the first evidence that the statement is not true. But take Mr. Preston's own statement that appears on pages 11 and 12 thereof. There is a communication, called "frank statement Canadian case" presented in the form of a memorandum to the shipping interests of Great Britain. This statement is dated London, April, 1924. Let me read the statement to the House:

> The Canadian government has decided to take action in order that Canadian interests shall not be so seriously affected as heretofore by the operations of the North Atlantic steamship combine.
>
> Of two phases of the situation, the government has taken particular notice:
>
> (1) The occasional discrimination in freight rates against Canadian ports and in favour of United States ports.
>
> (2) Freight rates which are believed to be excessive in connection with the carrying of natural products and manufactured articles to overseas markets.
>
> One of the reasons alleged for the discrimination against Canadian ports is that the insurance rates are higher in the St. Lawrence river than to or from American ports. The government has this question under serious consideration and is hopeful of permanently establishing a parity of insurance rates on the St. Lawrence with those to and from American ports. So that phase of the question need not be commented upon. There are two solutions of the disadvantages under which the ocean transportation of Canadian products labours:
>
> (1) By an arrangement with an independent steamship company with government assistance, and government control over freight rates.
>
> (2) The establishment of a government service between British and Canadian ports with modern vessels.
>
> The former is regarded as the more desirable, if satisfactory arrangements can be effected.
>
> One or other of these alternative solutions is regarded by many interests in Canada as inevitable.
>
> During the session of parliament, 1923, a committee of the House of Commons heard evidence on the question of the North Atlantic steamship combine, and in reporting to the House of Commons, recommended the government to take action with a view of overcoming the disadvantages connected with the transportation of Canadian products overseas.
>
> This recommendation moved by Mr. A. R. McMaster, chairman of the committee, was unanimously approved by the House of Commons in the session of 1923.
>
> In accordance with the instructions of parliament, the government has been making inquiry into the various phases of the question.

There is a statement made by Mr. Preston to the effect that as a result of the resolution of the House of Commons, based upon the report of a select committee of the House, the government had decided to take action, and that that action would be taken in one or other of two forms. The first is discounted at the outset, namely, the undertaking of a government-owned merchant marine. The other is that the government would be prepared to make a contract with a company that was ready to give to the government in return control over ocean rates on its lines. There in Mr. Preston's own report is the announcement that the government had decided upon the course which it was about to take before Sir William Petersen had even been heard of.

Sir William Petersen was given the contract because he was one of several persons approached who was prepared to enter into a contract with the government giving them control over ocean rates on his ships.

And may I say here, Mr. Speaker, that the government has made it known from the outset that it was prepared to make a similar contract with any shipping company in this country that was prepared to give it like terms. The government to-day is prepared to give the Canadian Pacific Steamship Company and other steamship companies doing business out of Canadian ports, the opportunity of entering into a contract along identical lines with the Petersen contract, if they are prepared to do the same as Sir William Petersen is prepared to do, namely, give this government control over the rates on the commodities which they take overseas.

Mr. GARLAND (Bow River): May I ask the right hon. gentleman a question? Was such an offer extended to the Canadian Pacific Company prior to the Petersen contract being drawn up?

Mr. MACKENZIE KING: I will have a word to say about that in a moment when I come to speak more particularly of cattle shipments. May I say to my hon. friend in reply that I personally made such a proposal to the president of the Canadian Pacific Railway only a few evenings ago, and that offer is open at the present time. Now I invite the Canadian shipping companies to come along and give this government control over ocean rates on their lines, and I ask parliament to join with the government in helping us to give them consideration similar to what we are prepared to give Sir William Petersen for this privilege. If they do not come along and accept our offer, what is the obvious explanation? The one explanation is that these lines to-day find it more profitable to operate the way they are operating—I do not say whether they are operating within a combine or not—otherwise they would be willing to give the government of this country control of ocean rates under conditions similar to those of this contract. You have the whole case there. This is not a matter of a subsidy to a steamship company, as subsidies are generally understood and as hon. gentlemen opposite would have the public believe. They seek to confuse the issue; by striving to make it appear that this is an unconditional subsidy to the Petersen Company alone. The sum proposed is one which the government of Canada is offering to a company which is prepared to give to this country the control of ocean rates on its service. The two things are very different.

Mr. ARTHURS: Will the right hon. gentleman allow me a question? Is he prepared to say that he will do the same with any other company? In other words, will he give a subsidy of $16,000 odd per voyage to boats of this size?

Mr. MACKENZIE KING: I have made that very clear. I have limited my remarks to Canadian companies, but I have said that for the present any Canadian company that will give a similar service and similar rights to the government will be given similar treatment. Can I make it any clearer than that? More than that, it would not be fair to ask. This discussion about subsidies, as generally understood, is all beside the mark when one understands the significance of the contract that the government has entered into. A little later I will make a reference to some of the present subsidies being paid in this country—subsidies to steamships performing regular services and exacting the rates which the combine permits them to exact. That is not what we are doing under the contract with Sir William Petersen. Sir William Petersen has offered to put certain ships on the Atlantic, but not with money paid by the taxpayers of this country, as hon. gentlemen opposite are so fond of saying. So sure is he of the ability to make returns—knowing as he does the exactions of this ocean combine—that he says: "I am prepared to put on the Atlantic ten steamers of the most up to date type and to give the government of Canada the right to fix the rates at any figure they like, in consideration of a certain guarantee that they give me at the start,"—which guarantee has been mentioned. Now, I ask hon. members to think that matter over. You cannot get something for nothing; you have got to pay in one way or another for whatever you want. Is it not worth while paying something to discover whether or not these allegations about the operations of an ocean combine are true? We will soon discover that once this contract goes into force; we will soon discover whether or not Sir William Petersen is able to carry his agreement out. If he is able to carry it out; if he is able to save the producers of this country millions of dollars for the consideration he has received, having regard to the rates at which he is prepared to have commodities carried, and can still make a profit, it will not be long before the people of this country, the people of the Old Country, the people of Australia, South Africa and New

Zealand, will begin to inquire into the significance of this contract. My hon. friends opposite want other parts of the empire to join in the attempt to control ocean rates. If they are sincere in that, they will support the present government in instituting an experiment which will very soon bring all these parts of the empire together in one great effort to deal effectively with the situation. Until some government is strong enough and fearless enough to launch such a project and to demonstrate to all parts of the empire the actual conditions in respect of this combine—or conference, whatever it may be called—on the Atlantic whereby rates are controlled,—until that step is taken you will never get the different parts of the empire to work in concert in an effort to control rates. When that step is taken, however, you will find them united in seeking effective action. The steamship companies know it, and that is why we are getting so much of their propaganda all over the country in regard to this proposal. And that is why hon. gentlemen opposite talk about everything except this contract. They pound away at Mr. Preston—great heroes they are, when Mr. Preston is not in the House where he would be in a position to answer for himself. They do what they can to besmirch Mr. Preston's character, do what they can to belittle him. Why? Because he has been enough of a patriot, and had the courage to present to the country a report with his own name attached to it, and to say that he will go before a committee of parliament or any body hon. gentlemen like to designate and substantiate what he has said in that report.

Mr. SUTHERLAND: May I ask the Prime Minister whether any statement made on the floor of this House regarding Mr. Preston has been refuted by either the right hon. gentleman himself or any of his supporters?

Mr. MACKENZIE KING: Well, my hon. friend has been the greatest hero of the lot, because he of all talked most about Mr. Preston; he said nothing concerning the representations of the report Mr. Preston has made. He will have a chance to meet Mr. Preston before this committee—

Mr. SUTHERLAND: That is not an answer to the question I put to the Prime Minister.

Mr. MACKENZIE KING: Well, as to what my hon. friend has said, I would certainly think it was very wide of the mark. However, the point I wish to make clear is this: what hon. gentlemen opposite have been attacking, is not this contract, they have been attacking Mr. Preston; they have been attacking Sir William Petersen; they have in addition been attacking all kinds of imaginary things, but they have not touched the essential features of the contract itself, nor have they sought to make clear to hon. members of the House the purpose which that contract is really intended to serve.

Mr. LADNER: Mr. Speaker, if the Prime Minister will permit—

Some hon. MEMBERS: Order.

Mr. LADNER: This is a proper question I am putting, and a fair one. The Prime Minister has repeated time and again that members in this part of the House did not comment upon or discuss the agreement. So far as my humble little contribution to the debate was concerned I discussed nothing else—

Some hon. MEMBERS: Order.

Mr. LADNER: —and I wish to ask the Prime Minister if he is not mistaken. Will he not be fair and agree that he was mistaken in that comment?

Mr. MACKENZIE KING: I am very sorry if I missed the significance of my hon. friend's contribution. I admit that it was a humble one, and I am only too ready if he so desires, to say that his remarks were confined to comments on the contract. But I think I will be able to show as I proceed that in their bearing they were so far astray as really not to be vital to the debate one way or the other.

May I now, Mr. Speaker, answer the question: Why has the government taken the course it has?—What has been the genesis of the contract that the government has entered into? First of all I would point out that this subject has been one of the most important subjects before this country not during the last two or three years only but during the last ten or fifteen years, at least. The matter of high ocean rates has been the subject of investigation by royal commissions in this country and in the Old Country, by special commissions and special committees. I shall not go over their findings in detail, but I will refer hon. members to the following important documents which will show whether or not there is reason for believing that a combine does exist on the Atlantic for the purpose of controlling rates and keeping them at an unduly high figure. There was a royal commission on Shipping Rings appointed by the British government in 1906, which made its report in 1909. There was the Dominions

Royal Commission appointed pursuant to a resolution proposed by Sir Wilfrid Laurier at the Imperial conference in 1911 and unanimously adopted. That commission was appointed on April 15, 1912, and reported finally on February 21, 1917. In 1913 the hon. member for West York (Sir Henry Drayton), at that time chairman of the railway commission, was appointed by Sir Robert Borden's government to investigate ocean freight rates, and he made a report on October 18, 1913. If there was nothing to investigate, why did Sir Robert Borden appoint my hon. friend, choosing him because as chairman of the railway commission he had special knowledge of the conditions affecting transportation? In June, 1920, an Imperial Shipping committee was appointed by the British government by virtue of a resolution of the Imperial War conference of 1918. This committee is still in existence and has made reports on various phases of shipping within the empire. During the last year it held sittings in this country through the medium of a subsidiary committee. Then there was the special committee of this House of Commons to inquire into agricultural conditions, appointed on February 28, 1923. This committee submitted seven reports to the House, those concerned with ocean freight rates being the fourth report, submitted on April 23, 1923, and the fifth report, submitted on June 18, 1923.

I have in my hand the report prepared by my hon. friend from West York (Sir Henry Drayton). That report was made as far back as 1913, and I find in it this statement:

> The Canadian exporter, by reason of the fact that, speaking in a general sense, nearly all the country's exports have a low value in proportion to the space occupied, and a comparatively low value in relation to the cost of transportation, is peculiarly affected by any increases in the cost of transportation, so that it becomes a matter of prime importance to keep such costs to a reasonable rate.

Then at page 8 I find this:

> I have no doubt, however, that on articles sold on the Canadian market by the British exporter in close competition with exporters in other countries, the increases in rates of recent years has a detrimental and injurious effect on the traffic, and may account in part for the falling ratio of British exports.

So, away back in 1913 my hon. friend from West York opposite reported to the government of that day an increase of rates on the Atlantic ocean which he believed was having an "injurious effect" upon exports. I will show that the view which my hon. friend then took is the view which has been consistently taken by all who have made careful inquiry from that day down to the present time. The only difference is that hon. gentlemen opposite have done nothing, whereas this government has attempted to grapple with the problem.

May I make this reference to Mr. Preston's report? When my right hon. friend (Mr. Meighen) received a communication from Sir George Perley, High Commissioner for Canada in London, in January, 1921, drawing his attention to Sir Robert Borden's efforts to have ocean rates investigated, and telling my right hon. friend that he thought the matter should be investigated, there was in connection with that letter an intimation that if any success were to attend the investigation it was desirable to have someone prepare the Canadian case with a view to assisting in its presentation, in association with Sir George Perley, before the Imperial Shipping committee. What did my right hon. friend do? He appointed someone. He appointed Professor Magill, just exactly as we appointed Mr. Preston, to gather information in regard to Canada's case. But here is the difference. My right hon. friend said to me the other day that that report of Mr. Magill must be in the department.

Mr. MEIGHEN: No, I did not.

Mr. MACKENZIE KING: My right hon. friend says he did not?

Mr. MEIGHEN: I did not.

Mr. MACKENZIE KING: If he looks at Hansard, he will see he did.

Mr. MEIGHEN: We will just clash right there. I said Mr. Magill's reply should be in the department. I did not say he ever made a report.

Mr. MACKENZIE KING: My hon. friend is at his old tricks again—his "reply" he says, and everybody assumed the reply was the expected report. What was it Mr. Magill was asked to do? He was asked to prepare Canada's case. And when we began to look for the reply, there was no reply. When we telegraphed to Mr. Magill, he told us he never made any report; he did not go into the subject at all. My right hon. friend might have told the House, instead of saying that Mr. Magill's reply was in the department, that he never made any report. That would have been better than saying the reply was in the department, when the reply was to that effect. As a matter of fact, there was no reply. But with respect to Mr. Magill my right hon. friend did exactly what we did in appointing Mr. Preston. He appointed a gentleman for the express purpose of gathering information that would be of service to the government when they attempted to deal with the

situation. The difference between his administration and ours is that there he left the matter, he did not pursue it a step further, for reasons best known to himself; but this government took care to bring into the House of Commons, apart altogether from Mr. Preston's report, a concrete proposal, and we intend to see that both are submitted to the special committee which will be appointed to look into this matter.

But to go on with the report that was made in 1913 by my hon. friend from West York. He says:

> The demand for investigation made by the Canadian government and acceded to as above noted by the Imperial authorities, is therefore justified by the exigencies of the traffic moving in either direction.

And he concludes:

> This affirmation—

He is referring here to something that was stated earlier:

> This affirmation by a member of the Conference of a condition under which the business of any given importer could, at any time, perhaps by the carrier's whim, lack of information, or desire for an excessive return, be at least temporarily extinguished, would appear of itself to call for the fullest investigation.

In other words, the hon. member for West York found in 1913 a condition whereby producers and other exporters in this country might have their business extinguished at the whim or caprice of the organization controlling affairs on the Atlantic at that time, and he said very properly that such a condition demanded investigation. Is not that in itself sufficient ground for a step such as the government has taken at this time.

But the real basis for the government's action in this matter was the report made by a select committee of this House, the report of the committee on Agricultural Conditions of which the hon. member for Brome (Mr. McMaster) was chairman, and which report was brought to this House and adopted unanimously, adopted by hon. gentlemen opposite; and this report found as a fact that there was a north Atlantic combine.

Mr. STANSELL: Did that Agricultural Conditions committee in its report suggest that further work along this line should be undertaken by Mr. Preston?

Mr. MACKENZIE KING: There is my hon. friend trying again to get back to Mr. Preston. The country is not interested in Mr. Preston beyond knowing the extent to which the representations which he has made are true, and they will get that information when the special committee of the House meets and takes these matters under consideration.

Mr. STANSELL: Did not that report suggest the appointment of a special committee to pursue their investigations further?

Mr. MACKENZIE KING: Yes, I think it did, but at the same time I think it made a specific recommendation of its own. It evidently felt the matter was very important, and that too many committees could not be engaged on it. I have here the fourth report of the Agricultural Conditions committee, which was submitted on April 23, 1923:

> Your committee are of the opinion that upon the regular steamship lines trading from Canadian ports the price of transportation service is determined neither by the law of supply and demand, nor on the basis of cost plus a reasonable profit, but that a combine exists among the various shipping companies, which combine is known as the North Atlantic and United Kingdom Conference Eastward-bound.

Now, that is not Mr. Preston; that is a committee of this House composed of hon. members of this House who held an inquiry under oath and who found that a combine existed. It was on the strength of that report that the government proceeded; and it is by virtue of that report, amongst other documents to which I shall refer later that the government has taken the action which it has seen fit to take in this matter. Elsewhere in the same report I find this:

> To this North Atlantic conference belong nearly all, if not all, of the regular steamship lines running from Montreal, including the Canadian Government Merchant Marine. Subsidiary to this Conference there exists a smaller association of steamship men connected with steamship lines trading out of Montreal. This association is called sometimes The Canadian Liner Committee. The lines or transportation companies constituting the association are as follows:
>
> Cunard, Anchor Donaldson and Thomson Lines; Canadian Pacific Ocean Services, Ltd., White Star Dominion Line; Intercontinental Transports, Ltd. (with which certain vessels of the Canadian Steamship Lines, Ltd., are associated); Furness Withy Company, McLean, Kennedy and Company; and the Canadian Government Merchant Marine, Limited.

The report goes on to show how this Liner committee operates. Perhaps I had better read the paragraph:

> The general rates were set at the North Atlantic and United Kingdom Conference in New York:

At this point, Mr. Speaker, may I stop to say just a word. My hon. friends opposite when it comes to labour problems, are very strong in urging that these international unions which have their headquarters in the United States should not be permitted to operate in Canada. Over and over again they have made the statement that it was an outrageous thing that Canadian labour should be associated in any way with American labour and that we should be subject to the dictation of American

unions in connection with our industrial affairs. Well, here in regard to the whole shipping business of this country entering into competition with the United States a select committee of this House has found that the rates are fixed in New York.

Mr. BRISTOL: Is not the most central point the natural place for a committee controlling the shipping operating in all parts of the Atlantic?

Mr. MACKENZIE KING: My hon. friend has admitted the whole case. He says there is a committee operating over the whole of the Atlantic and that New York is the natural place for it to meet. Does the House wish anything more? My hon. friend (Mr. Bristol) —who knows pretty intimately, I think he will admit, the workings of the steamship companies, has told the House that there is a conference that operates on the Atlantic, and it is a world-wide conference.

Mr. BRISTOL: Is it not a natural place for it to be? Would you have it in Montreal?

Mr. MACKENZIE KING: No, all I am anxious to point out to the House is that we have been contending, and hon. gentlemen opposite have been disputing our contention, that there is a conference that controls ocean rates—that the whole of the cattle and other trade from this country is subject to the action of that conference—and it is in order to take away from that world-wide combine with headquarters at New York the determining of the rates that shall be paid for ocean transport that we propose to take a step which will at least ensure that so far as that part of the trade between this country and the Old Country is concerned it shall be subject not to the control of New York but to the control of the government of Canada. There is the whole purpose of the government's proposal. The alternative is perfectly plain. After what my hon. friend has just said, no hon. member of this House can plead any ignorance whatever of the situation. It has been admitted here this afternoon that there is a world-wide conference controlling rates on the ocean, and that those rates are controlled from the city of New York. The hon. gentleman (Mr. Bristol) has admitted that Canada is subject to rates fixed in New York in that way. Now, the House can rest content with that state of affairs, or it can seek to have the control of ocean rates vested in the government of Canada so that in regard to the export trade of this country the determination of rates—whether it refers to matters great or matters small—shall not be left to the United States but shall be left to the representatives of the Canadian people themselves or persons authorized by them to act in their name.

Mr. BRISTOL: Is it the right hon. gentleman's idea that the Canadian Pacific and the Canadian Government Merchant Marine, who are members of this conference are American bodies? In view of the fact that the government merchant marine has been a member of the conference right up to the present time why have you not obtained a report from its management during the last three or four years so that you might see what kind of a robber that marine has been, that is if you say the members of the conference are robbers?

Mr. MACKENZIE KING: I do not think that my hon. friend's latest remark in any way affects the force of the statements I have made.

Mr. BRISTOL: You are forced to trust to the use of our own merchant marine.

Mr. MACKENZIE KING: I will touch upon the merchant marine a little later. In reference to this point all I want to make clear now—so that hon. members will appreciate the fact as they consider the wisdom of the step the government has taken—is that a committee of this House has already found and reported to the House the facts. It has arrived at the following finding, and I am quoting from the report of the special committee itself:

5 p.m.

> The general rates were set at the North Atlantic and United Kingdom Conference in New York, but for the purpose of united action in regard to these and other matters, a weekly meeting was held, at which representatives of all the steamship lines attended. At this meeting, rates were agreed upon, and no member of the line had the right to depart from the rates so established without conferring with and warning its competitors of his intention so to do. An earnestly worded expostulation would be directed by one member to another if this line of conduct was not followed.
>
> This state of affairs brought about the following extraordinary result. The government of the United States forced the shipping board of that country which manages the United States governmentally-owned steamers, to make a very low rate for the transportation of flour to Europe—a rate stated by the shipping companies to be below a commercial rate.

Mr. SUTHERLAND: Hear, hear.

Mr. MACKENZIE KING:

> This rate applied only to flour ground in the United States. To meet this rate, the North Atlantic Conference lines established, at a given moment, a rate of fifteen cents per hundred pounds on flour ground in the United States, while they maintained a rate of nineteen cents per one hundred pounds on Canadian flour—a very substantial differential against our Canadian millers.

Mr. MACKENZIE KING: Why does my hon. friend not now say hear, hear?

Mr. SUTHERLAND: The United States government forced their own boats to give this special rate to United States shippers.

Mr. MACKENZIE KING:

To this agreement as a member of the North Atlantic Conference, the Canadian Merchant Marine was a party.

Now what is the statement made there? That the United States government itself found it necessary to take action against this combine in regard to its own vessels, and the action which was taken affected the price of flour so far as the United States shipper was concerned. What affect did it have so far as Canada is concerned? It left Canadian millers at a disadvantage in regard to shipments to the Old Country. How great that disadvantage was I shall have occasion to show before proceeding very much farther. Take a further statement:

Evidence was produced showing that since the commencement of the war, ocean rates on cattle had increased by 300 per cent, while the price of beef in the British market had only increased 66 per cent during the same period.

Is that not a fact of which this House should take cognizance?

Mr. MEIGHEN: Is that out of the committee's report?

Mr. MACKENZIE KING: That is part of the report of the committee of which my right hon. friend, along with other members of this House approved.

Now there was a fifth report, and it is on these reports that the government's action has been based—not on any report by Mr. Preston, but on reports made by a select committee of this House. On Monday June 18, 1923, the select committee appointed to inquire into agricultural conditions presented their fifth report. Here is the first paragraph of it:

The special committee appointed to inquire into agricultural conditions beg leave to present the following as their fifth report:

Ocean freight rates

In their fourth interim report, your committee dealt with the question of ocean freight rates, the control of the rates charged by liners trading out of eastern Canadian ports by the North Atlantic and U.K. Conference, eastward bound, and the operations of the Canadian liner committee, sometimes called the weekly liner committee.

In view of the paramount importance of this subject and of statements made in the press and elsewhere concerning the findings of your committee, we feel that the matter merits further attention.

This is the paragraph that follows:

That the transportation business, as far as concerns ocean liners is very largely in the hands of rings or conferences is a matter which admits of no possible successful contradiction.

There is the finding of this special committee that made a further investigation into the question of high ocean rates, and it states in language as emphatic as it is possible to put into a report that the transportation business as far as the ocean liners are concerned centres very largely in the hands of rings or conferences. That is a matter which admits of no possible successful contradiction. I might read other parts of the report but it would only be in corroboration of the quotations which I have just given.

Mr. SUTHERLAND: Will the Prime Minister read the recommendations contained in the seventh and final report of the committee?

Mr. MACKENZIE KING: Well, my hon. friend—

Mr. SUTHERLAND: The report which the Prime Minister is quoting, to my knowledge, was never submitted to the committee at all.

Mr. MACKENZIE KING: My hon. friend may read anything he wishes to the House, but he will perhaps permit me to conclude what I was reading. On page 17 of the report there are quotations from the report of the inquiry of the Dominions Royal Commission which, of course, took place many years ago. These statements all go to substantiate the fact that the condition with respect to the control of ocean rates by these shipping rings found here to-day is a condition which existed many years ago. Then the report says:

In spite of the lengthy investigations held into this subject—

And this is interesting in connection with the matter now before the House; this is at page 19,—

—no definite government action either on the part of the British authorities or on the part of the Canadian authorities has yet been taken.

A suggestion is made—I think it is a very wise one and this might be as appropriate a time as any to point it out—in connection with the amendment that has been moved that this control should be by all parts of the empire working together, that if a control of all these ocean rings is to be completely effective, something even larger than the bringing together of the different parts of the British Empire is necessary. As a matter of fact, it will take something in the nature of international control, joint action on the part of all countries in the world interested in shipping, to effect complete control. That day may be far distant; but if

there is to be effective control, that will probably be the only means whereby it will be ultimately attained. Mr. Lubin, President of the Agricultural Institute at Rome, I think, made the suggestion in connection with the grain and cattle trade, that there should be some method of effecting international control. I venture to suggest that this is a subject which the League of Nations might well take up, and see if it is not possible, through the instrumentality of the League to bring together the different countries of the world in an effort to effect some kind of international control of ocean rates. But these are things that will take many years to accomplish. In the meantime, one step that will help to bring the matter prominently to the fore, as it is being brought prominently to the fore in the world to-day as a result of the action which this government is taking, is to proceed in a concrete manner with some step which will demonstrate whether the allegations that have been made with respect to high ocean rates are or are not correct.

Then the committee found as follows:

> Your committee, in view of the foregoing and of the evidence adduced before them and referred to in a previous interim report, are of the opinion that action is desirable to control shipping rings or conferences.

That is precisely what the government is now attempting. It is attempting to carry out the finding of a committee of this House to the effect that action is necessary to control these ocean rates. The step which this government is now taking in this connection is not the first one. The government has grappled with this problem from the start, and it has attempted different means of bringing about the control which the committee placed upon it as an obligation to be met. One of the steps of which no mention thus far has been made was a step taken by my hon. colleague, the Minister of Trade and Commerce (Mr. Low), who himself went to Montreal, asked the shipping companies to meet him there, and asked these shipping companies if they would not co-operate with the government of Canada in an effort to bring down ocean rates with respect to shipments of cattle to the Old Country, that being one of the foremost of the commodities of our country for which since the removal of the embargo we had a new and important market. He asked if they would not co-operate with the government in seeking to gain for the farming community of this country the market which properly belongs to Canada in Great Britain. But my hon. friend got little in the way of encouragement from the shipping companies. I have in my hand, from amongst the papers that have been laid on the table of the House, copies of letters which passed between the Minister of Trade and Commerce and the shipping companies with respect to the interviews which he had at that time. This was in March, 1924. Let me read this letter:

> White Star Dominion Line
> Office of the Manager,
> Montreal, February 21, 1924.
>
> The Honourable Mr. T. A. Low,
> Minister of Trade and Commerce,
> Ottawa, Ont.
>
> Dear Sir:
>
> Referring to your conversation with the writer in regard to the ocean freight rate on cattle and the desire of your department to assist the farmers.
>
> The question was fully discussed yesterday afternoon at a meeting of all the Canadian lines who operate vessels built to carry cattle; but the unanimous decision was that with the present rate the cattle business is not sufficiently remunerative to attract additional tonnage, and any reduction would mean increased losses and curtailment of sailings.

The last paragraph reads:

> We are most anxious to do everything possible to assist the cattle trade in Canada, and consider that the government would be well advised to encourage farmers to raise cattle more extensively; but we very much regret that we cannot see our way to make any further reduction in the ocean rate, which in 1921 was $45, and is now $20 per head.
>
> Yours very truly,
>
> P. A. CURRY,
> Manager.

They did not state that at one time the rate was $7 per head. But the Minister of Trade and Commerce did not let matters drop there. On February 29, 1924, he sent the following communication to Mr. Curry:

> Dear Mr. CURRY:
>
> I acknowledge receipt of your letter of the 21st instant and regret that you have not been able to see your way clear to meet the government in this matter which we had under discussion during my recent trip to Montreal.
>
> I am anxious to have another meeting with you and other prominent shippers before we decide on any other line of action from the government point of view.

I want hon. members to see the significance of that statement. The Minister of Trade and Commerce proceeded on two occasions to Montreal to discuss with the shipping companies some means of getting better rates across the ocean for Canadian cattle into the British market, believing that the Canadian cattle industry is one of the most important of the industries in Canada and one which this government had a special reason for seeking to develop, in view of the fact, that we, at least, were successful in having the embargo against Canadian cattle removed. My hon. friend went on these two occasions, but on neither of them was he able to get any successful accom-

modation on the part of the shipping interests. Mr. Low said:

I am anxious to have another meeting with you and other prominent shippers before we decide on any other line of action from the government point of view. I would be glad to go to Montreal but as this is a very busy time for us with the session on, I would like to know if you could possibly come to Ottawa to see me some day next week. I would be very glad if you would advise me of the same and also whether some of the other shippers could join you. We are anxious to have another discussion of the situation before deciding on our definite line of action.

Yours very truly,
THOS. A. LOW.

The correspondence goes on to indicate that Mr. Curry said he thought it would be well to have a representative, to quote his words, "from every Canadian line interested in the cattle movement," meet with Mr. Low. Mr. Low approved that and intimated that he thought, seeing they were all coming together, it would be better for him to go to Montreal and meet them there. He went to Montreal, and I have a letter here dated March 15 from Mr. Curry to Mr. Low which reads:

I have to thank you for your letter of the 12th instant, and greatly appreciate your offer to come to Montreal to meet the representatives of the cattle lines, and we will be very pleased to see you at any time on Wednesday, March 19, that is convenient to you.

The following gentlemen will probably attend the meeting: Mr. W. A. Coates, The Robt. Reford Co., Ltd. (Cunard-Donaldson Lines), Mr. J. W. Nicoll, Furness, Withy & Co., Ltd. Mr. J. P. Doherty, Canadian Government Merchant Marine. Mr. P. A. Curry, White Star-Dominion Line. . . .

I am told that Mr. Gear also attended this meeting.

Mr. CRERAR: This was a year ago.

Mr. MACKENZIE KING: Yes, March of last year. It was because the government found it impossible to get the co-operation of our own Canadian ship owners in its effort to reduce rates on the Atlantic for cattle, that we took the further step we have taken of seeing if we could not find some company elsewhere that would be prepared to co-operate to that end. We were ready to do for these other companies what we are now proposing to do for the Petersen Company, but these gentlemen were unwilling to meet us in that connection.

Mr. MEIGHEN: Will the Prime Minister say that a similar offer was made to them?

Mr. MACKENZIE KING: I cannot say offhand at the moment what particular offer was made, but I know the minister went prepared to make a very generous offer. He could inform the House better than I could as to the nature of it. But the reply that was received gave us reason to believe that the shipping interests were not prepared to consider any offer.

Mr. MEIGHEN: The Prime Minister referred to the Preston report. I hope I do not offend him in referring to it. The suggestion was to pay a share of the cost of the shipments.

Mr. MACKENZIE KING: I think the nature of the offer made to the shipping interests was that the government would be prepared to consider a certain payment, in the way of consideration to the companies, if they would fix a price of which the government would approve. If they did that consideration was to be given. And that is the nature of the arrangement we have made with the Petersen company.

Mr. MEIGHEN: No.

Mr. MACKENZIE KING: I beg my hon. friend's pardon. We have agreed with the Petersen Company that if they will carry cattle, let us say, at a rate which we shall fix they will get the subsidy, and if they do not they shall not receive it. Let the House understand the proposition. What this government has offered to the Petersen Company, and what under this contract the company have agreed to accept, is that the Canadian government shall fix a rate at which cattle are to be carried from all parts of Canada to Great Britain. The company agree to carry cattle, we shall say, at a rate this government will establish.

An hon. MEMBER: No.

Mr. MACKENZIE KING: Did someone say no?

Mr. RYCKMAN: Yes; I say no.

Mr. MACKENZIE KING: Will the hon. gentleman give us his reason.

Mr. RYCKMAN: The contract does not oblige the Petersen Company to carry.

Mr. MACKENZIE KING: I do not know what my hon. friend can be talking about; the whole business depends upon the carrying. Sir William Petersen does not get a five cent piece unless he carries.

Mr. RYCKMAN: The contract does not say so. If the Prime Minister will read it he will find, I submit, that the contract gives Sir William Petersen the control of ocean rates. If I cannot prove that I am willing to accept whatever the right hon. gentleman says.

Mr. MACKENZIE KING: If my hon. friend is driven to that point to attack the contract he has got to the last resort.

Mr. RYCKMAN: In the last resort, I say, Sir William Petersen controls the rates.

Mr. MACKENZIE KING: Let me in the name of the government definitely state the position. I desire to make it perfectly clear so that there can be no misunderstanding. If this contract does not mean that the government of Canada shall fix the rates, then the government of Canada will have nothing to do with it. My hon. friend's interruption is all beside the mark. What the government purposes to do, once the ships are built, is to tell Sir William Petersen the rate at which he is expected to carry cattle from Canadian ports to the ports of Great Britain. If he carries at that rate he will be paid to the extent provided for in the agreement; but if he does not perform that service he will not be entitled to a five cent piece nor will he get so much as a five cent piece. Can anything be plainer than that?

Mr. RYCKMAN: But the agreement does not say so.

Mr. MACKENZIE KING: If it will help my hon. friend at all for me to say so, I may tell him that it does not matter one whit whether the agreement as drafted does or does not say so; what does matter is that the position of the government is precisely as I have stated it and will be so shown before the committee, otherwise to give it effect, the agreement will have to be amended. But I contend that the agreement does provide what I have said; that is the purpose of the contract. Let me read paragraph (d) of section 1:

> That the control and regulation of the rates to be charged by the contractor shall rest with the government of Canada and that the government shall fix such transportation rates on all commodities from time to time.

Where does Sir William Petersen get the control of the rates there?

Mr. McTAGGART: Will not the Petersen Company be expected to pay a satisfactory dividend on its invested capital? If so, would that factor have a tendency to interfere with the effective control as indicated in the contract?

Mr. MACKENZIE KING: That is absolutely beside the mark. So far as this government is concerned, we do not care whether the Petersen Company pays a dividend or not; what we are concerned about is to see that the company shall carry out its contract. The agreement is that, for the consideration we are to give Sir William Petersen, he is prepared to let us fix the rate at which commodities are to be carried. Let me point out that this contract has been drawn up by as able a counsel as can be found in the Dominion of Canada; I think that Mr. Lafleur's name commands a position in the legal profession in this country second to none.

Mr. CHAPLIN: Was he acting for Canada or for Petersen?

Mr. MACKENZIE KING: He was acting for the Dominion of Canada. He was retained by the government and instructed to prepare a contract which should place no liability on the government of this country, in the event of the service which it calls for not being adequately performed.

Mr. BOYS: Was he told to relieve Sir William Petersen too of liability?

Mr. MACKENZIE KING: Does my hon. friend think that the government would have suggested such a thing to him? Would the hon. gentleman himself have made such a suggestion?

Mr. BOYS: I cannot gather from the right hon. gentleman's remarks what he has in mind; but I say most emphatically, and I am satisfied that he will agree with me, that Sir William Petersen will not remain responsible under this contract. And the Minister of Trade and Commerce (Mr. Low) did say, in reply to a question I put to him, that he considered that feature vital. I venture to say that no one who has any knowledge of law, or who appreciates the effect of clause 1, will say that Sir William Petersen will remain responsible under any covenant he gives in the first instance.

Mr. MACKENZIE KING: That is my hon. friend's view, but he will find that he is mistaken.

Mr. BOYS: I would ask another question. Do I understand the right hon. gentleman to say that he contends otherwise? To make it plain, does he contend that, under clause 1, when the proposed company is formed Sir William Petersen may not be relieved of his covenant, or of all covenants, for that matter?

Mr. MACKENZIE KING: My hon. friend will have a chance to examine Sir William Petersen when he is before the committee.

Mr. BOYS: But I—

Some hon. MEMBERS: Order.

Mr. BOYS: Let us be reasonable. The Prime Minister and other hon. gentlemen have suggested that this is one of the most important matters that this parliament has dealt with. Surely, then, it is reasonable that a member of this House should ask the leader of the government whether or not he does contend that Sir William Petersen will be responsible under the contract. Does the Prime Minister say that when the company is formed and Sir William Petersen's contract is superseded by one with a new concern, Sir William Petersen will not be totally relieved of every covenant in the agreement?

Mr. MACKENZIE KING: My understanding is that he will be responsible.

Mr. MACDONALD (Pictou): And Mr. Lafleur so advised.

Mr. MACKENZIE KING: Yes; Mr. Lafleur so advised. But apart from that altogether, let us assume that what my hon. friend says is correct. If Sir William Petersen were to get out of the contract and some other company should take it over, not a single dollar of the money of the Canadian people will go to anyone until the service is performed in accordance with the contract. That is the vital point. If Sir William Petersen makes an arrangement with some company to take over the contract, as I presume he may do, if he is a wise man, seeing that he may not live out the period of ten years, the fact remains that the contract calls for a certain class of ships and for a regular service to be rendered from Canadian ports, continuous and at certain rates to be fixed by the government. No payment will therefore be made until that service is performed. What difference does it make whether some other company takes over the contract or whether Sir William Petersen personally carries it out?

Mr. BOYS. Does the Prime Minister want an answer?

Mr. MACKENZIE KING: My hon. friend has not spoken yet and he will get his opportunity.

Mr. BOYS: If the right hon. gentleman—

Some hon. MEMBERS: Order.

Mr. BOYS: If the Prime Minister says that he does not want to be asked questions I certainly will not ask him any.

Mr. MACKENZIE KING: I am glad to have questions asked.

Mr. BOYS: That is all I am doing.

[Mr. Boys.]

Mr. VIEN: Don't make speeches.

Mr. BOYS: I simply want to know whether the government places any reliance on the financial standing of Sir William Petersen. If it does, surely in the event of his being relieved of the contract it would be a matter of consequence whether the succeeding company were financially sound or not.

Mr. MACKENZIE KING: So far as the government is concerned, may I say that in this whole matter we have taken into consideration the circumstance that not a dollar of public money will be paid out of the treasury until service is performed in accordance with the terms of the contract which has been entered into with Sir William Petersen. The question whether Sir William himself or some company that may take over this contract from him will perform its terms is a secondary matter altogether. What I think this House and the Canadian public is interested in knowing is whether there will be liability so far as the government of Canada is concerned where the service has not been performed. Now, I wish to state emphatically in the name of the government that if this contract means in any particular that payments are to be made other than as service is performed, the government will not entertain the contract for an hour. The obligation is clear, it is there in black and white: What we are paying for is the right to control rates. Let us get down to a concrete case. We started, as I have been intimating, dealing with the question of rates on cattle. One of the last letters sent to Mr. Low, Minister of Trade and Commerce, was from Montreal on May 9, 1924. It says:

> Dear Mr. Low,—Referring to our conversation in this office on Wednesday last, the question of cattle rates has been given further careful consideration, but I regret to have to advise you that none of the lines owning vessels which carry cattle are prepared to make any reduction in the present ocean rate which, as you are aware, is $20 per head.
>
> Yours truly,
>
> P. A. CURRY,
> Manager,
> White Star Dominion Line.

Mr. Low replied on May 13, 1924, as follows:

> Dear Mr. CURRY: Acknowledging receipt of your letter of May 9, may I say that I greatly regret that your company and others have not been able to see their way clear to co-operate with the government in lowering the carrying rates on cattle.

That was all in May of last year. After that Mr. Low himself went to England and made inquiries to see if he could find a steamship company in the Old Land which was prepared to carry cattle at a lower rate for a consideration. My hon. friends want

to see how this contract was developed. There is the development of it. The government had made up its mind that it would, if possible, effect an arrangement whereby the cattle of this country could be transported to the British market at a lower carrying charge than was exacted by the steamship lines. We sought in every direction, and the outcome of that search—it was difficult—was the offer made by the Petersen company to undertake the work. May I say to hon. members that I discussed with Sir William Petersen very closely how he expected for the consideration which we were paying to be able to make this arrangement go. His reply to me at each stage was, "Mr. King, if I did not know the charges which are being made by this ocean combine at the present time I would hesitate to make an arrangement of the kind; but if you can tell me anything about ocean rates that I don't know, I will be glad to be told." In other words, Sir William Petersen believes that he can demonstrate not only to this country but to Great Britain and the world that he can let this government —I put it concretely—cut rates on cattle from $20 to $15 or even to $10 per head for the consideration that he is getting, and deliver those cattle in the markets of Great Britain. Now, is it worth while attempting that in the interests of the Canadian people?

What is the position? For thirty years or more our cattle have been shut out of the British market. Away back in the early nineties, through an alleged violation of some cattle diseases act, our cattle were excluded from that market. No one took very seriously the reason alleged viz., that Canadian cattle suffered from pleuro-pneumonia, or whatever the disease was. The measure was looked upon as disguised protection for the cattle interests of the Old Land. Government after government in this country from that date onward sought to have the embargo removed. The late government sought to have it removed. I do not wish to claim particular credit for this government, beyond drawing attention to the fact, that through the activity of Hon. Mr. Larkin, the High Commissioner, I believe more than anyone else, this government was able to bring about a change in the situation, and the British government did do away with the embargo on Canadian cattle. What did we find? Although we had secured the right to ship Canadian cattle to the British market, we found that rates being charged for ocean carriage were such that we did not begin to get the number of cattle across that we had every reason to expect would be exported. Having that market at our doors, this government has felt that it was worth to the cattle raisers of all provinces of this country payment of a very considerable sum to secure the British market for their cattle. In efforts in that direction my hon. friend (Mr. Low) was seeking to make an arrangement with the shipping companies of Montreal by which it would be worth their while to carry cattle at a lower rate. Finding it impossible to make that arrangement, he went to England and while there secured a conference with the Petersen concern and made the proposal which as developed is as now formulated in the contract before parliament for consideration.

I hope, Mr. Speaker, that I have at least made clear the genesis of this matter, I hope I have shown the House that the Preston report was in no way the basis of the agreement made with the Petersen line; but was rather the assembling of material intended to be of service when the matter came up for discussion; and that the actual contract itself was based on findings of a committee of this House and on the needs of the situation as they have been pressed on the government from every direction.

May I now say a word about the representations that have been made to this and preceding governments on the question of ocean rates? While I have spoken more particularly of cattle, ocean rates affect the chances of export of every single commodity produced or manufactured in Canada. There is not an interest of any size in this country, I venture to say, whether it be the cattle raising interest, the grain producing interest, the milling interest, the lumbering interest, the dairying interest, the fruit and vegetable growing interest, the manufacturing interests or producers or consumers generally, importers and exporters of packages and the like, that has not been making protests year after year to the government of Canada about the way in which business has been held up through the high rates charged on the Atlantic. If the House will give me the time, I purpose to put on the records to-night some of these representations, and the point to which I wish to direct the attention of the House before I place them on Hansard is that in virtually every one of the communications, language is used to the effect that unless these ocean rates can be reduced our export business is going to be thwarted and the industries themselves strangled as a consequence. My right hon. friend talks about unemployment, about industries closing down, about men walking the streets,—let him read these documents of which the departments are full, and

many of which have been laid on the table, and he will find that interest after interest of the classes I have mentioned have been representing to the government that their whole export business, through the differentials given on the Atlantic is threatened with extinction. In other words, every one of them has made representations to the effect that the rates from New York to British ports are so much lower than those from Canadian ports, that there is no hope of their being able to export through Canadian ports. They have directed the attention of the preceding government and of the present government over and over again to these excessive rates which are threatening the existence of the country's export business.

I would ask hon. members to look at the correspondence that was tabled the other day between the government of Canada and the British government in regard to the subject of ocean rates, especially in relation to the Imperial Shipping committee—correspondence that was brought down at the request of my right hon. friend (Mr. Meighen). The first letter is signed by Sir George H. Perley, who at the time was High Commissioner in London. It reads in part as follows:

London, S.W., 4th January, 1921.

Dear Mr. Meighen,—You will remember that during the past ten years the question of ocean freight rates has been discussed many times, as they often seemed higher than was reasonable, and some of us thought that a way might be found for controlling them by a body similar to our railway commission. I am sure that you have been approached many times on the subject and I had occasion to look into it a good deal when carrying on the Trade and Commerce department in Ottawa in Sir George Foster's absence. Not long after we came into power, while Acting Prime Minister, I arranged with Sir Henry Drayton to come over here and try and find out the feeling here on the subject. He came back not feeling very hopeful about the possibility of getting anything done in the direction of freight rate control but he will be able to tell you about this himself.

That was not the first trip of the hon. member for West York across to the other side in connection with this matter. He had gone over in 1913 and had tried to effect some measure of control; then apparently he was sent over in 1918, and, as Sir George Perley says, came back not feeling very hopeful.

Sir HENRY DRAYTON: I think my hon. friend is making a mistake there. I went over only once on that question.

Mr. MACKENZIE KING: I beg my hon. friend's pardon; I had assumed that Sir George Perley was Acting Prime Minister at the latter period.

Sir HENRY DRAYTON: I do not know as to that, but I was over only once.

[Mr. Mackenzie King.]

Mr. MACKENZIE KING: Then I retract what I said in that regard. At any rate, my hon. friend was over in 1913. Then Sir George Perley goes on:

Nothing was done about this question during the war but on April 29th, 1919, I received the following cable from Sir Thomas White who was then Acting Prime Minister:

"Canada much concerned about ocean freight rates—Inquire and cable whether British government would co-operate with Canada in giving effect to report of Royal Commission on Natural Resources, Trade and Legislation of certain portions empire as presented to Imperial parliament in March, 1917—this report finds that it is not desirable that operations of steamship companies carrying passengers and freight between Canada and England should remain longer without government supervision—most important to obtain official position of British authorities respecting matter."

This I at once communicated to the Colonial Secretary here and I spoke to Sir Robert Borden about it when I was in Paris a few days after receiving it. In the reply from the Colonial Office they drew attention to a despatch which had been sent to the Governor General on December 9th, 1918, and which contained suggestions for the constitution of an imperial investigation board for the purpose of reviewing questions relating to maritime transport and to the development of the sea communications of the empire.

Sir Robert Borden had evidently been giving the matter his careful consideration and in May, 1919, he prepared a memorandum "respecting necessary control of ocean freight rates and the disposition of available shipping," of which you will find a copy attached. This memorandum, which suggested in effect that the control of ocean rates and disposition of shipping should be placed in the hands of a commission, composed of representatives from the various parts of the Empire, was transmitted to Mr. Lloyd George and to the Prime Ministers of the other Dominions.

I need not read the whole of that communication. It is sufficient to say that first of all Sir Robert Borden, as Prime Minister, then Sir George Perley as Acting Prime Minister, then Sir Thomas White as Acting Prime Minister and afterwards the right hon. leader of the opposition, (Mr. Meighen) as Prime Minister—all four of them attempted to deal with this question, believing that the matter of high ocean rates was all important. The communication of Sir George Perley, concludes:

As such a large amount of tonnage is owned in these islands—

He was writing from London.

—they are perhaps naturally not very anxious about control of freight rates, and therefore, if you decide to bring the question before the committee, I do not think it possible to give too much time or attention to the preparaion of our case.

Yet what is the amendment that is moved by hon. gentlemen opposite? It is to do the very thing that Sir George Perley says he thinks will not meet with much response on the other side. In his communication to my right hon. friend himself Sir George Perley says:

As such a large amount of tonnage is owned in these islands they are perhaps naturally not very anxious about the control of freight rates.

Yet my hon. friend drafts an amendment suggesting that we should solve this question by referring it to a commission on the other side. If hon. members will look at the memorandum which was drafted by Sir Robert Borden they will find that the first paragraph is as follows:

As transportation between different portions of the British Empire must be carried on almost wholly by means of shipping the control of ocean freight rates and a just disposition of available shipping in the interests of the whole empire are vitally necessary.

These are emphatic words—"control of ocean freight rates . . . vitally necessary." That is what we believe; that is what we are seeking to bring about, and we are taking what we believe to be the only steps that can be taken to get results. Sir Robert says in paragraph 6:

In its broadest aspects the question thus presented must necessarily demand attentive, and perhaps prolonged, consideration for its permanent solution; but a temporary solution is urgently important, as beyond question the present situation has become critical and if uncontrolled it will probably lead to unfortunate and perhaps disastrous results.

There Sir Robert Borden gives his views to the British government, those views being communicated by Sir George Perley to the right hon. leader of the opposition. Sir Robert states that control is a vital necessity; that it may take a long time to bring about effective control but that some immediate step is necessary, otherwise the results may be disastrous. That is the exact position the government takes in this matter. We do not contemplate that the arrangement we have entered into with Sir William Petersen will effectively control the ocean rates for all time, but we do believe it is a necessary first step to bring about the kind of control which ultimately will be effective. We think it is at least a beginning, and a beginning in the right direction.

I shall not with respect to these communications take up the time of the House further than to read a letter which my right hon. friend himself wrote to Sir George Perley in acknowledgment of Sir George's communication. This letter is dated at Ottawa, February 16, 1921, and is as follows:

Dear Sir GEORGE PERLEY,—After consideration of your letter of January 4th we have decided that the question of the control of ocean freight rates should be placed before the Imperial Shipping Committee at an early date. We also agreed with your suggestion that the case from the Canadian view point should be carefully prepared, and Dr. Magill, of the Grain Exchange, Winnipeg, has been asked to undertake the task. As soon as his report and recommendations are received they will be considered and transmitted to you for your guidance.

Yours faithfully,

ARTHUR MEIGHEN.

The Hon Sir George H. Perley,
High Commissioner for Canada,
19 Victoria Street,
London, S.W.1,
England.

Then in writing Dr. Magill the right hon. gentleman says:

You will observe that the Canadian government have attached great importance to the desirability of securing, if feasible, some control of ocean freight rates.

Mr. MEIGHEN: Hear, hear.

Mr. MACKENZIE KING: And he asked Dr. Magill to make a report. My right hon. friend says "hear, hear." But what did he do? This letter was written in February, 1921, and month after month went by without any further attention being paid to the matter by my right hon. friend. He did not press Dr. Magill for his report; he never asked for any report. Moreover, my right hon. friend himself went to England that summer; he attended the meeting of the Imperial conference and he was right next door to where the Imperial Shipping committee was sitting. Does my right hon. friend tell this House that he made any effort to carry out what he was there suggesting might be done in the way of keeping down ocean rates? As a matter of fact my right hon. friend knows that after writing the letter to Dr. Magill he never gave the matter another thought; he let the shipping interests have free sway. So far as the needs of the public were concerned, the matter rested at the point indicated by the quotation which I have just read.

Now, may I point out that my right hon. friend received more representations than those I have mentioned—and I have quoted from his own colleagues, a pretty strong phalanx, if one stops to think of it: Sir Robert Borden, Sir Thomas White, Sir George Perley and Sir Henry Drayton, four of the best known names in our country, each of them Prime Minister or Acting Prime Minister in his day, each urging that some steps be taken to see that this matter was remedied. Then we have my right hon. friend's own name added to the list, and we find all of them declaring that this question of ocean rates was something that demanded the attention of the government, but all of them leaving the matter at that point. Now they suggest that we should settle this by referring the whole question to some conference that is to be held in Great Britain.

I mentioned a moment ago that apart from these reports there was hardly an important interest in this country that had not made representations to my hon. friends. I want to read one or two of such representations. They will be found in the correspondence tabled and printed, and I would ask hon. members to make a note of them. Take, for instance, this communication from the Dominion Millers' Association:

THE DOMINION MILLER'S ASSOCIATION,
1801 Royal Bank Building,
Toronto, Canada, October 5, 1920.

Right Hon. ARTHUR MEIGHEN,
Prime Minister,
Ottawa, Can.

Re High Ocean Freight Rates

Honourable Sir,—I hand you herewith a copy of the representations made by the millers who waited on you on the 26th of August last on the above subject. Also copies of the resolution and other representations forwarded you by other interested parties.

In this connection we beg to call your attention to the fact that on Saturday, the 2nd inst., we were quoted a rate of 45 cents per 100 pounds on flour from Boston to Rotterdam, while at the same time they asked us 65 cents per 100 pounds on flour from Montreal to United Kingdom ports.

From this it would appear that the same condition of affairs continues in force as existed in 1914.

The point I want to bring to the attention of the House is this. The Dominion Millers' Association of Canada drew attention in 1914 to the fact that the rates at which flour was being shipped from New York to Europe were so favourable to New York as compared with the rates from Canadian ports, that the Canadian millers were finding it almost impossible to ship flour to Europe at all. Now the seriousness of that situation, as I gather it from the correspondence, and as hon. members who are in the milling and farming industries will realize more fully, is that as the milling industry in Canada suffered, so other industries suffered with and because of it. On account of the lower rate of shipment from New York to Europe, our grain was going across to American mills and being ground by American mills, and then shipped as flour to England from the United States. Instead of our millers receiving the business of grinding our own grain, on account of this preference given to American ports by the combine, the grain of Canada was going to help build up the industries, the mills and the railways and shipping concerns, of the United States. Now the serious part of that, when one studies the question further, is this: As hon. members of rural communities know, the offal which comes from milling is needed to further other industries in our country, the dairying industry, for instance; and when those in the dairying industry were not receiving what they hoped to be able to receive, that industry in its turn began to suffer. I need not point out that as one big industry after another in Canada suffers, so the great body of the Canadian public suffers through lack of purchasing power that otherwise would have been available for the commodities which they produce or manufacture. These representations of the millers were made at different times, by different interests, by the Live Stock branch, by the United Farmers' Co-operative Company, Limited, by Le Comptor Co-operative de Montreal, and the National Dairy Council; all these made their representations setting forth the seriousness of allowing these shipments to go by way of New York, not merely to the Prime Minister, but to a committee of the cabinet, at which most of the members I think were present. Take the representations of the millers. Here is their first statement:

When Sir Henry Drayton about 1913, was appointed by the government to investigate the combine called the North Atlantic Conference, which controlled all freight rates from Atlantic ports to Europe, a significant clause in his report was that the combine has power to make such rates "as will extinguish the traffic".

They go on to say that the advance in ocean freight rates made by the combine was such that the Ontario Associated Boards of Trade at their Annual meeting in Toronto on February 25, 1913, passed a resolution as follows:

That the Ontario Associated Boards of Trade, in annual meeting assembled, strongly urge the government to immediately establish a line of ocean freight steamers, or to take such other steps that will prove immediately effective to relieve the producer and consumer in Canada from the exactions of the ocean freight rate combine.

That resolution was carried unanimously. Then they go on to make this significant statement:

The reason representatives of the farmers joined the delegation in 1914, was that mill offals are a very important factor in their feeding operations.

As the average quantity of bran and shorts made from flour shipped for export during the past five years, totalled over 323,500 tons yearly, you can see what a very serious loss this would mean to the dairymen and stock feeders if the export of flour were cut off, as must result if wheat is carried lower than flour.

They also speak of the effect of these rates on prices to consumers and on other industries in Canada. Then they make this important statement:

This could be best accomplished by carrying flour for export at the same rate of freight as wheat, thus giving to the Canadian taxpayer all the benefits accruing therefrom instead of the British taxpayer getting all these benefits and the ocean combine crushing out of existence, one of Canada's basic industries, in which over $100,000,000 is invested, not to mention the effect on the dairying and live stock feeders and other allied interests.

I have read that paragraph because of the words "crushing out of existence one of Canada's basic industries." These men who are intimately associated with that industry believed that such was the effect of these preferential rates given to commodities being shipped by way of American ports.

I could quote from the representations of the Department of Agriculture and from numerous other communications of the millers, but I will not take up the time of the House further by reference to the representations of the millers except to say that the files will show that through all these years down to 1924 the millers were making these representations as to the effect upon their industry of the cheaper rates from American ports to Great Britain, and they stated over and over again that mills in Canada were closing because of the combine giving these better rates to American shippers.

But that was not the only trade that was being crushed or injured. If hon. members will look at page 21 of the published correspondence they will see a letter from Grahams Limited of Belleville, Ontario, dated November 9, 1920, relating to dried vegetables and fruits. This communication is addressed to the Commercial Intelligence Service of the Department of Trade and Commerce, and reads as follows:

Referring to your letter of October 27th regarding the export of our products to the United Kingdom. One serious complaint we have to make at this time is in regard to the ocean freights which are absolutely unreasonable being cheaper out of New York than Canada. We have purchased space for dried vegetables both in barrels and boxes as well as dried fruits and apple waste and chop out of New York to German ports and Holland ports at 65 cents per 100 pounds, while the rate from Canadian ports to United Kingdom is $1 per 100 pounds. The value of these goods have greatly reduced, the fact is that it is half what it was a year ago and these still ocean freight cannot be paid nor American competition be met under these circumstances. We believe this a matter that you might take up successfully as the steamship people are losing the trade entirely and we cannot possibly compete which we have been accustomed to doing with New York to do this export business under these conditions.

Take another industry which, while it may be remote, is very real to those engaged in it no doubt—I refer to clothes pegs. On December 3, 1920, a communication was sent to Mr. Watson Griffin, Department of Trade and Commerce, which contained the following statements:

During recent months we have found that the English market for wooden clothespegs as well as other markets we have been catering to have been practically closed to us on account of the high ocean freight rates prevailing. It is during the winter months that we are in the best position to cater to export trade, since during these months we can obtain direct sailings from St. John N.B., to all the large foreign ports.

[Mr. Mackenzie King.]

We have now on hand an accumulation of about 20 carloads of clothespegs and could probably move them immediately if the ocean freight rates were reduced. At present the rate from St. John to London or Liverpool is $1.00 per hundred pounds. Since the Canadian Government Merchant Marine has started on a schedule of sailings from St. John during the current month, we thought that you might be able to use your influence at headquarters to see if some reduction in the present ocean freight rates could not be secured.

Another phase of the matter which is of interest is the fact that if these goods cannot be moved it will mean that our factory will bave to be closed down and a number of men thrown out of work and a further addition made to the present long list of unemployed.

Owing to our geographical location we are able to compete satisfactorily with any other concerns in the same line of business for export trade, provided satisfactory freight arrangements can be made for foreign shipments.

The volume of our exports is approximately fifty to seventy-five carloads per annum, and represents an f.o.b. St. John value of about $150,000.

Thanking you for any assistance you can give in securing a downward revision of ocean freight, we are.

Yours very truly,

J. H. CUNNINGHAM,
Gen. Manager.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

WEST VIRGINIA PULP AND PAPER COMPANY

The House resumed from March 10 consideration in committee of Bill No. 13, respecting a patent of West Virginia Pulp and Paper Company—Mr. Jacobs—Mr. Gordon in the chair.

On section 2—Rights saved.

Mr. MACLEAN (York): On three or four nights I have sat here when private bills have been called and none of the sponsors has been present to explain them. I move that the committee rise and report progress.

Progress reported.

EDGEWORTH GREENE PATENT

The House resumed from March 10 consideration in committee of Bill No. 14, respecting a patent of Edgeworth Greene—Mr. Jacobs—Mr. Gordon in the chair.

Mr. MACLEAN (York): I move that the committee rise and report progress.

Progress reported.

MARCONI WIRELESS TELEGRAPH COMPANY OF CANADA, LIMITED

Mr. HERBERT MARLER (St. Lawrence-St. George) moved the second reading of Bill No. 19, respecting a patent of the Marconi

Wireless Telegraph Company of Canada, Limited.

Some hon. MEMBERS: Explain.

Mr. MARLER: The purpose of this bill is to extend the duration of a patent No. 98083, issued under date of the 20th March, 1906. That patent was issued and was subject to the Patent Act as contained in the Revised Statutes of 1906. That act, as hon. members will remember, gives any person who has made an invention the right to apply to have his invention patented, giving to such person for a period of time the exclusive use of that invention. The term under which that exclusive use is to be granted is regulated under section 23 of the same act and is therein specified to be for a period of eighteen years. The patent in question was issued, as I have stated, on the 20th of March, 1906, and consequently the term of the exclusive use of the patent expired on the 20th March, 1924. This bill now before the House asks for an extension of time for seven years until the 20th March, 1931.

What are the reasons why this extension is asked? The invention in question was invented by an English scientist by the name of John Ambrose Fleming, and is commonly known as the Fleming valve. This is an invention made for the purpose of detecting what may be called wireless currents and of amplifying those currents when detected. Another qualification which this patent has is for turning what are commonly called alternating electric currents into continuous electric currents. The patent in question, as invented and as patented by Mr. Fleming, was subsequently purchased by the Marconi Wireless Telegraph Company for a considerable sum of money, namely, £7,000. At the time this invention was patented, it was looked upon possibly as a visionary article and as one which, perhaps, would serve some useful purpose many years afterwards. Consequently, in the initial years of the time it was patented no commercial use whatever could be made of the patent in question. After that, as hon. members will remember, the war intervened and all matters regarding wireless telegraphy and such like were taken under the strict control of government supervision. Consequently, as regards making commercial use of this patent, any sales which were made of the article patented had to be made to the government and no royalties could be received thereon. In the meantime, the company in question, the applicants under this bill, had expended considerable sums of money in perfecting this patent and in endeavouring to adapt it to commercial use. That commercial use arrived only after the war had terminated and, indeed, only a few years ago. As hon. members will also recollect, radio, wireless telegraphy and matters of that description, particularly radio, came into vogue to any great extent only in later years. This particular article is used in the interior of radio apparatus. It looks, so I am told—I have never seen the article in question—more or less like a small electric light bulb. It is also used in wireless apparatus in ships at sea. Consequently the owner of this patent, the Marconi Wireless Telegraph Company, have not been able to put it to any good commercial use, and for that reason they ask for an extension of the patent for a further period of seven years. Ordinarily speaking, extensions of patents, perhaps, are not granted, but there are precedents which have taken place in this parliament where patents given have been extended very largely for the same reasons and with the same objects as those for which this application is made. I have here the statutes of Canada for 1900, and hon. gentlemen, on referring to chapter 121 of those statutes, will see that a patent therein granted in previous years was extended, under the particular statute which I have before me, for a period of six years. If they will refer to chapter 91 of the statutes of 1905 they will find therein quoted five patents which were extended for a period of nine years for substantially the same reasons as are advanced for the renewal of this one.

That hon. gentleman may be fully seized of what has happened in regard to this bill, I may observe that a bill for the extension of this patent was last year before the Senate. The Senate objected to it in the manner in which it was then drawn; it was objected to on the ground that others might have invented a similar article or have perfected an article of a similar nature. In the bill now before the House there is a provision in section 1 to meet the objection raised by the Senate in that regard. The Senate also objected that the extension of this patent should not affect those who manufactured the article in Canada for export trade. That objection is also met, being provided for in section 3 of the bill now under consideration. That I think is an ample explanation of the object of the bill.

Mr. J. A. WALLACE (Norfolk): I am strongly opposed to the passing of this bill, the objectionable features of which should be apparent to every hon. member. As outlined in the preamble it looks harmless and simple enough on the face of it. It calls for

the extension of Canadian patent No. 98083 granted on March 20, 1906, for certain new and useful improvements in instruments for converting alternating electric currents into continuous currents. The period of extension asked for is seven years. This patent involves, as my hon. friend (Mr. Marler) has said, the basic patent known as the Fleming valve or rectifier, on which all modern radio rests. This valve or rectifier was invented by Dr. Fleming of the University of London and was patented in England in 1904. The patent term in England was 14 years and expired in the year 1918. It was not renewed. This device was patented in the United States in 1906, the term there being seventeen years, and it was not renewed although application was made for an extension of time. The patent was taken out in Canada in 1906 and the term expired in March last. As my hon. friend has said, application was made in the dying days of last session to have the time extended.

Mr. MARLER: Will the hon. gentleman bear in mind the remarks I have made? The objections raised by the Senate are eliminated from the present bill.

Mr. WALLACE: It is true the objections of the Senate have been eliminated from it, but those are not the objectionable features of the bill. At least, they are not really so objectionable in my opinion, whatever my hon. friend may think. My objection to the bill is, in brief, that it will lay on the general public of Canada, particularly on radio enthusiasts, a very heavy financial burden. And I shall briefly indicate why. This patent is the device which I hold in my hand and which will be familiar to every radio user. It is the vacuum tube or Fleming valve or rectifier, and it consists essentially of two electrodes, a hot and a cold, within a vacuum. It was discovered by Edison before Dr. Fleming's time that a high voltage, high frequency alternating current will go only in one direction between a hot and a cold electrode, but this principle was made use of by Dr. Fleming and applied to wireless telegraphy. This device, with the addition of a third electrode, the grid, introduced by Dr. De Forest of New York, revolutionized wireless telegraphy and made possible modern wireless telephony or radio as we know it. If this bill passes, every radio user in Canada will be affected because if the extension of time is granted it will be of no advantage to the manufacturing company unless they put up the price of the tubes. This tube which I hold in my hand sold for $9 while the patent stood. A year ago in February, just before the expiry of the patent, the price of the tube dropped to $6 and in February of this year it went down to $4. Someone suggests that it has gone below that.

Mr. CALDWELL: Since the patent ran out?

Mr. WALLACE: Yes, the year after it expired. Now, I venture the prediction that the price will be advanced at least $2 if not more if the patent is extended.

Mr. MARLER: Will the hon. gentleman look at section 2 of the bill? Does it not permit others to manufacture the same article in Canada provided manufacture is already started?

Mr. WALLACE: I have no information that that has been done to any extent although I cannot speak with any certainty. I do not think that this device has been manufactured by anyone who will not be affected by the extension of the patent. Section 3 provides that the act shall not affect or restrict in any way the manufacture in Canada of an invention, covered by the said patent, for export out of Canada. The principle apparently seems to be to lay all the burden on the Canadian radio user. In the special copyright committee this afternoon Mr. Cartier who has charge of the broadcasting station of La Presse in Montreal was examined. He stated that there are 400,000 radio receiving stations in Canada, and he expressed the opinion that 100,000 at least of these are users of the tube set receiving apparatus, the others being users of the crystal set, who would not be affected. My estimate is that if there are 100,000 users of tube sets to-day there will be a million users of them in 1931 by the time the patent expires.

Mr. CALDWELL: Is it not a fact that these sets have all the way from two to five tubes?

Mr. WALLACE: Yes, these tube sets may have as many as eight tubes, according to the results which the owner wishes to obtain. The life of these tubes is short, particularly in the hands of amateurs; they are being burned out and broken every day. I estimate conservatively that every radio user will require on an average at least two and a half tubes a year, probably more.

Mr. MACLEAN: (York): How much do they cost?

Mr. WALLACE: The type which I have here costs $4. The price varies according to the variety.

Mr. MACLEAN (York): How much does an electric bulb cost?

Mr. WALLACE: I do not know; the price of electric bulbs varies as well. But if the average owner of a radio set uses two and a half tubes a year, and my estimate of the number of owners of radio sets is anywhere near correct, the public of Canada during the next six years in which the patent would be extended under this bill, as one year has already expired, would use 7,500,000 tubes. If the price is advanced $2 per tube, this would involve an outlay on the part of the radio public of Canada of $15,000,000. I submit, Mr. Speaker, that that would lay a heavier burden on the radio public of this country than the proposed Petersen bill would lay on the public generally. There is another point to be considered. If this patent is extended, there are innumerable patents covering improvements of this device, some of them mechanical, some of them electrical, and there is no reason why the holders of those patents should not come to this parliament and ask for extension also. For these reasons I submit that there is no justification for the extension of this particular patent. We have the reputation of being long-suffering, but I venture to say, Sir, that the House will not inflict this burden upon the long-suffering people of Canada.

Mr. J. L. BROWN (Lisgar): Mr. Speaker, I think the House and the country as a whole are to be congratulated on our having among us one with the technical knowledge of this subject which has been displayed by the hon. member for Norfolk (Mr. Wallace). Being a skilled electrical engineer, he was able to detect this seemingly innocent little bill as it was on its progress through the House. All civilized countries have patent and copyright acts; it is fitting that that should be so. The object is to protect an inventor or an author in his right to enjoy the product of his brain; and, speaking generally, for my part I would say that these rights should be primarily considered irrespective of the manufacturers' or the publishers' rights. Our patent act gives a man the right to his invention for a period of eighteen years. In the judgment of many that time is too long; certainly it is long enough. If the term is to be changed at all, I think we would favour reducing rather than lengthening it. Many reasons might be advanced why this patent should not be continued. The hon. member who has introduced the bill (Mr. Marler) has indicated certain reasons why in his judgment it should be continued. I suppose the same reasons could be advanced by almost every patentee for similar indulgence. But this particular patent has run its course of eighteen years. It is now nearly eight years since the close of the war, and its holders have had an opportunity to enjoy the profits arising from the manufacture of the article covered by the patent. I can well imagine that no bill that might be proposed to the House this session would arouse such strong protests from the public of Canada generally as would this particular bill, and I venture to say that hon. members will hear very soon from a tremendous number of radio fans all through the country if the prayer of the bill is granted and the patent extended.

Motion (Mr. Marler) negatived.

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—MOTION FOR RATIFICATION DISCUSSED

The House resumed consideration of the proposed resolution to ratify and confirm a contract between His Majesty and Sir William Petersen providing for the establishment of a subsidized steamship line on the Atlantic and government control of ocean rates, and the proposed amendment thereto of Mr. Clark.

Mr. ANDREW McMASTER (Brome): Mr. Speaker, before the debate is resumed, I have a word to say of the nature of a question of privilege. While the Prime Minister this afternoon was quoting somewhat largely from the fifth interim report of the special committee on Agricultural Conditions, of which I was the chairman in the session of 1923, the member for South Oxford (Mr. Sutherland) said that that report had never been brought before the committee prior to its being submitted to the House.

Some hon. MEMBERS: Order.

Mr. McMASTER: That was a somewhat severe reflection—

Hon. H. H. STEVENS (Vancouver Centre): Mr. Speaker, I rise to a point of order. I submit that the hon. gentleman is not stating a question of privilege at all; he is debating what was discussed on the question which is now before the House.

Mr. SPEAKER: I should like the hon. gentleman to state if he understood that the remarks made by the hon. member for South Oxford impugned his character?

Mr. McMASTER: I would regret to think, Mr. Speaker, that any of my fellow members would impugn my character; but if the state-

ment was correct, it certainly impugned my knowledge of the procedure of the House.

Mr. SPEAKER: Order. From what I can gather this is not a question of privilege. It is rather in the nature of an explanation which might be made on the orders of the day. It is a question of fact as between the affirmation made by one member and that made by the other. A question of privilege is so serious that it might send an hon. member to the tower. But I do not think in the present instance that the statement made by the hon. member for South Oxford is such that he might likely be censured. The point of order is well taken—

Mr. MACKENZIE KING: Mr. Speaker, if the hon. member for Brome (Mr. McMaster) is not to be permitted to make the explanation which he was about to make, possibly I will be within my right if I give to the House—

Mr. SPEAKER: If the right hon. gentleman will allow me, I might add that if the hon. member for Brome had not already spoken once in the debate he could have been allowed to make the explanation as his speech.

Mr. MACKENZIE KING: I will state what I think is in my hon. friend's mind, and if I am in error he will perhaps correct me. The hon. member for South Oxford (Mr. Sutherland) raised the question this afternoon with respect to a report from which I was quoting. He said either that the report had not been approved by the committee, —that all parties had not been represented on the committee,—or that the report had not been concurred in. I do not recall exactly what his remark was, but, in effect, it was one or the other.

Mr. SUTHERLAND: May I point out to my right hon. friend that I asked him if he would kindly quote the recommendation contained in the seventh and last report of the committee.

Some hon. MEMBERS: Oh, oh.

Mr. MACKENZIE KING: My hon. friend spoke about the report not having been concurred in. I am informed, at any rate, that so far as the committee is concerned all parties were represented on the committee when the report was before it. I have before me at the moment the Journals of the House for Tuesday, June 26, 1923, the first item of which reads as follows:

On motion of Mr. McMaster, the fourth, fifth, sixth and seventh reports of the special committee appointed to inquire into agricultural conditions, were concurred in.

Mr. SUTHERLAND: May I ask if these reports were read before they were concurred in?

Mr. MACKENZIE KING: They are always read, I understand.

Mr. SUTHERLAND: They were not read.

Mr. MACKENZIE KING: Then my hon. friend should have made it a point to read them before concurring in them as apparently all on his side did.

Mr. MEIGHEN: The Prime Minister should add that I rose on behalf of the party I represented and protested against concurrence in the reports under the circumstances.

Mr. MACKENZIE KING: These particular reports?

Mr. MEIGHEN: Those reports.

Mr. MACKENZIE KING: My right hon. friend nevertheless concurred in them.

Mr. MEIGHEN: The House concurred against my protest.

Mr. SUTHERLAND: Without their being read.

Mr. MACKENZIE KING: The point of importance is the fact that the House concurred in the reports and the reports contained the statements which I made to the House this afternoon.

At six o'clock, Mr. Speaker, I was directing the attention of the House to a series of communications to be found on the government files and which have been laid on the table of the House, communications which make it perfectly clear, I submit, that one interest after another in Canada was suggesting to the government of the day, of which my right hon. friend was the leader, that the high rates which were being charged on ocean freights were having the effect of destroying the export trade of the particular industries with which they were concerned, were in fact helping to bring about the closing of many of those industries and to increase unemployment in Canada. It was pointed out that the general effect was adverse to Canadian industries while helping to build up the industries of the United States, the railroads of the United States and transport from United States ports. In other words, the procedure of this ocean combine has been to establish rates, undoubtedly through the associations which these big interests enjoy among each other, from American ports to

European and British ports considerably lower than the rates fixed from Canadian ports to British ports. The result has been that our Canadian industries, owing to the higher rate of transport across the Atlantic to European and British ports, find themselves unable to compete with similar industries in the United States and, what is even worse, find that the higher rates from Canadian ports to British ports are causing much of the raw material of Canada to go to the United States to be manufactured there, thus building up United States industries at the expense of Canadian industries and stimulating the shipments of goods to European countries through United States ports instead of through our own ports. One instance that I spoke of as attracting a good deal of attention was that of the milling industry. Representations were made over and over again to the government of my right hon. friend opposite by this industry in Canada that owing to the fixing by the combine of lower rates upon flour from the United States to British and continental ports than from Canadian ports to the same point overseas, a large volume of grain was going from Canada into the United States to be ground in American mills, while our own mills, unable to export any flour, were closing their doors. What was true in the case of the flour and milling industry, according to the representations I have been reading to the House, has been true also with respect to the cattle trade and, according to representations which I shall read, has been true also with respect to many other industries. I was speaking of the clothes peg industry before the House rose; I mentioned it because it is one of numerous industries affected. What I have said is true also of the dairying industry, of the fruit growing industry, of the canning industry, and of others of great variety and scope. Hon. gentlemen opposite speak about raising the tariff wall, about putting a ring around Canada to prevent the competition of American goods, yet they are prepared to permit these ocean rates to be so regulated by a combine that our raw material is being drained from Canada to build up industries in the United States which compete with ours in export trade, a regulation of rates moreover which makes it impossible for our industries to ship goods from Canadian ports to Great Britain and European ports in competition with shipments going from American ports.

Now may I continue reading some of these representations?

Mr. BRISTOL: Will the right hon. gentleman permit me a question? Do the tramps on the Atlantic take flour? I understood that flour was one of the commodities in competition.

Mr. MACKENZIE KING: With regard to tramps I shall have a word to say later. As I understand it, tramp steamers are ever on the lookout for business, picking it up whereever they can can. But when you study the rates they have been receiving, you find that they are just a little bit below the rates which the combine fixes. In other words, the rates the tramp steamers get are based upon the rate which the combine originally fixes. If the combine's rate is high, the tramp steamer will be getting a very high rate, even though it is a little lower than that of the combine. On the other hand if the rates are kept down by the conference the tramp steamer will fix a slightly lower rate. So that so far as I can make out, the rates which the tramp steamers get are in the first instance based upon the rates fixed by the combine for the liners.

Now, may I read further regarding these ocean freight rates on flour? I have before me a letter which will illustrate what I have just said. It is from the Dominion Millers' Association to the then Prime Minister, the present leader of the opposition, and is as follows:

1801 Royal Bank Building,
Toronto, January 15, 1921.

Re: Ocean Freight Rates on Flour

Hon. ARTHUR MEIGHEN,
Prime Minister,
Ottawa.

Dear Sir,—You will remember when Mr. Gear and his colleagues appeared before you and the other members of the cabinet on the above question that he stated in reply to Sir Henry Drayton's query as to the freight rates being fixed in New York for the Canadian lines that they always took care to protect the interests of the Canadian shippers.

In the latter part of December the rate on wheat dropped from 40c. to 25c. per 100 lbs. and under the order of the U.S. Shipping Board, the rates on vessels subject to that board dropped on flour to 30c. per 100 lbs. making the differential 5c. per 100 lbs. as before.

Application was made to the Canadian shipping companies to reduce their rates likewise to 30c. per 100 lbs. on flour but we are informed that at a meeting of the steamship agents it was decided not to make any reduction with the result that the Canadian millers are now to pay 45c. per 100 lbs. by the Canadian steamship agents while U.S. millers or for that matter Canadians, can ship flour at 30c. per 100 lbs. via New York, Baltimore, etc.

I wanted to be positive of this before taking the matter up with you and to-day saw a letter from New York quoting 30 cents rate on flour to U.K. ports for January shipment while 45 cents has been the lowest rate offered from Canada although we understand we can get it for 25 cents to continental ports.

It seems a remarkable situation that Canadian government steamers should refuse to carry flour from Canadian ports at the same rate as U.S. government steamers will carry flour for both U.S. and Canadian millers from U.S. ports thus discriminating against Canadian ports and Canadian railways and compelling

Canadian millers to ship via U.S. railroads through U.S. ports.

This is especially extraordinary at the present time when unemployment is so great in Canada and also in view of the fact that it was reported in the press, one of the government steamers has been chartered to load in New York for some foreign port.

We sincerely trust that you will take this matter up immediately and take whatever steps are necessary to secure the 30 cent rate on flour from Canadian ports as well as U.S. ports. It looks very peculiar and bears strong evidence of there being a combine in ocean freight rates the U.K. when freight can be secured at 25 cents to the continent from the same agents as ask 45 cents to the U.K. ports.

Whilst speaking of flour, I might quote two other letters, one from the Fischer Flour Mills, of Pembroke, Ontario, dated April 4, 1921, addressed to the Department of Trade and Commerce, Ottawa, and reading as follows:

Re: Flour Shipments to Danzig

Gentlemen,—We have recently been submitting offers for carload shipments of flour to the Danzig (Free State) authorities and would have secured handsome contract if it had not been for the transportation charges which appear to be considerably higher from Canada to Danzig than New York to Danzig, and it is only on account of the saving in freight the New York interests secured the order.

We have been promised an order on the basis of equal freight. Is it not possible for us to secure part of this business and can you not please find out for us what would be the cheapest way to ship flour from Pembroke to the port of Danzig. Of course, so far we had to figure on St. John, N.B., freight which will be considerably reduced as soon as we could ship from Montreal.

We will be very much indebted to you for assisting us in this proposition. Business is slack and it would seem a pity if orders for flour which are so badly needed here should be all going to the American competition.

Trusting to receive full information at an early date, we remain,

Faithfully yours,

FISCHER FLOUR MILLS.

Then on April 8, 1921, the same firm writing to the Commercial Intelligence branch of the Department of Trade and Commerce, and referring to this file, says:

Dear Sirs,—We are very much indebted to you for your kind letter of the 6th inst. in connection with ocean freight rates on flour to Danzig, Europe.

We have informed you that it costs $4.00 to $5.00 to ship one ton of flour from New York to Danzig, and we are to-day advised by the C.P.R. that their rate from Montreal to Danzig is 48 cents a hundred or $9.60 a ton.

In other words, under the arrangement which this combine worked out, flour was going from New York to Danzig at from $4 to $5 per ton, whereas the rate from Montreal was $9.60 per ton. This firm adds:

This is a remarkable difference and as you will readily see, will surely kill the trade for Canadian maufacturers desirous of exporting to the above port.

Your co-operation is indeed highly appreciated and we are looking forward to encouraging news.

Faithfully yours,

FISCHER FLOUR MILLS.

I wish again to direct the attention of the House to the phraseology used by these various shippers. One after the other refers to the circumstance, not that his industry is being prejudiced, not that his industry is being impaired, but that it is being killed or destroyed. "This is a remarkable difference," this firm says, "and as you will readily see, will surely kill the trade for Canadian manufacturers." So much for representations with respect to the shipments of flour.

Now let me give a quotation or two with regard to canned goods. There is another large industry in this country, which affects market gardeners as well. This is a communication dated Hamilton, January 24, 1921, from the Dominion Canners, Limited, addressed to the Department of Trade and Commerce, Ottawa:

Dear Sir,—We have reliable information that freight rates on canned goods from San Francisco to U.K. ports have been fixed at $1.10 per 100 lbs. or the same rate as from Atlantic ports, provided the goods are not strapped.

You will readily appreciate that it is impossible for us to compete with California packers on this freight basis. The rates of freight now being asked by the various steamship companies, owing to their pool arrangements, is altogether too high and while the outlook for business under the most favourable conditions is not encouraging, the high freight rates are completely killing it.

There again is the same expression as was used in a previous letter, "the high freight rates are completely killing it," namely, the export business in canned goods in this country. The letter continues:

It should be in the Canadian interests to see that the freight rates established from Canadian ports to Great Britain are in line with the California rates. You understand, of course, that in California they are able to pack very much cheaper than we are in eastern Canada, owing to the tremendous business which they do there and owing to the large quantities of fruits and vegetables grown especially for canning factories on a very large scale. If there is any possibility of reducing rates, we belive it is in the best interests of all concerned.

If our information is correct, many boats are tied up for lack of freight and the holding of freights at prohibitive prices is only resulting in the goods not moving at all.

Yours very truly,

DOMINION CANNERS LIMITED.

The next is a communication with respect to rolled oats, another industry of importance in this country. I shall read only one or two paragraphs. This letter is addressed to the Right Hon. Sir George E. Foster, Minister of Trade and Commerce, Ottawa, and is from the Dominion Millers' Association:

Hon. Sir.—I am asked to call your attention to the high ocean freight on rolled oats.

Then this paragraph appears:

The oatmeal mills have found it impossible to sell any oatmeal for export in the face of these pro-

hibitive ocean freight rates with the result that the Canadian oatmeal mills are shut down while the Old Country mills are busy and the steamship companies are not getting the oatmeal to carry and ships including those of the Canadian Marine, are lying idle for days at a time in port waiting for sufficient cargo to accumulate to justify their sailing.

The last paragraph reads:

You will of course realize that the fact that oatmeal mills are shut down has an adverse effect on the price of oats as it takes ten bushels of oats to make one barrel of oatmeal so if the steamship companies would reduce their freight to a workable basis, it would not only be a benefit to the steamship companies themselves, and the milling industry but also to the farming community.

I have the honour to be,
Your obedient servant,
C. B. WATTS,
Secretary.

Mr. BLACK (Huron): What is the date of that letter?

Mr. MACKENZIE KING: The letter is dated March 16, 1921. I am reading representations which my right hon. friend and his government had before them with respect to these high ocean rates, and the point I wish to draw to the attention of the House in that connection is that this problem is by no means a new one. It is not a matter with which the Preston report is concerned one way or the other. I am trying to show that the government departments are full of these representations from all the leading industries of our country, and it is on the representations which have been made to the government, independent altogether of any report made by Mr. Preston, that the government action in this present connection is based. I wish also to make this clear, that this condition is just as bad—I should not say as bad, it is worse to-day, because the rates that are complained of here have been increased since that time on all the commodities to which I have made reference, and there is no guarantee whatever that next month unless the government steps in and takes action such as we are taking to-day, the rates may not be raised again. There is no control whatever. This combine regulates the rates any way they please, and every industry of any importance in this country is pointing out to the government that its export trade is being thwarted, if not destroyed entirely, by the high ocean rates; and in addition to that businesses are being closed down and men are being thrown out of employment. If my right hon. friend wants to know why men are out of employment and why businesses are closing down, he will find it in these representations which have been made to the government as to the impossibility of shipping goods abroad at the high rates which are being charged by the working of this combine.

Now let me take another communication in regard to the rates on cattle. This is a communication addressed to Hon. Dr. S. F. Tolmie, Minister of Agriculture, dated August 1, 1921, from the Stock Growers' Protective Association of Western Canada, Calgary, Alta., and signed by W. F. Stevens, secretary. Hon. gentlemen opposite will know whether that association has a right to speak on behalf of those for whom it professes to speak in this communication:

Dear Sir,—I am taking the liberty of directing your attention to the severe drop in market prices for cattle. According to a report just received from the commission firms in Calgary, $5.25 per hundredweight is at the present time the top price for butcher steers. Something is necessary to be done or the live stock business of production in western Canada will be reduced to a lower level than has been the case for many years. I have been requested by the directors to communicate with you in this respect and direct your attention to the present situation.

I have been asked to acknowledge our appreciation of the reduction that has been made in the price of steamship space, and also to say that another similar reduction will have to be made if our stock growers are to receive for their cattle a price which even approximates the cost of production.

I feel free in bringing this matter to your attention because I know you fully understand western Canadian conditions and the importance of the live stock industry to the three prairie provinces.

I trust that you will be able to secure in the near future another reduction in the price of ocean space.

Thanking you in anticipation, I am,
Yours very truly,
W. F. STEVENS,
Secretary.

These are communications which have been laid on the table of the House. I wish to quote from two or three more, simply to dispel from the minds of hon. members and the public once and for all, that the representations in Mr. Preston's report are the only ones that the government has had before it in this matter. These further representations to which I wish to refer were made long before Mr. Preston was asked to have anything to do with the subject, and are wholly independent of anything to which his report relates.

Another of the industries with regard to which communications have been received relating to ocean rates is the corn broom industry. Meakins & Sons, Limited, Hamilton, sent a communication, dated December 9, 1919, in which they said that a dozen corn brooms shipped by the Head line to Dublin from Montreal cost them eleven shillings ocean freight, while a dozen of the same brooms shipped by the Head line from Baltimore to Dublin or Belfast costs them from five shillings and four pence for the

small grades to seven shillings and eight pence for the very largest corn broom. They would average about six shillings and six pence per dozen. The communication goes on to say:

The difference between six shillings and six pence per dozen and an average of eleven shillings is such a great difference that there is absolutely no chance for us to compete, although these goods are in great demand both in Ireland and Scotland, and we know that we can manufacture them as cheap here as they can be manufactured in the United States.

The writer goes on to remark:

It seems too bad to see this trade lost to us, more especially when the same line of steamers carries the goods from West St. John to Ireland as carries the goods from Baltimore to Ireland. Cannot something be done in the matter?

We remain,
Yours truly,
MEAKINS & SONS LIMITED,
W. J. MEAKINS.

Thus it is seen that the very same ships carrying commodities from Canadian and American ports charge a very much higher rate from Canadian ports to Ireland than from American ports.

Here is another communication from the Sutherland Innes Company Limited with respect to the cooperage industry, dated Chatham, Ontario, January 24, 1919. It is addressed to Mr. O'Hara, Department of Trade and Commerce, and deals with the shipment of cooperage stock to Great Britain. The general manager says in part, I will not quote the whole letter:

It looks to me like a deliberate attempt—perhaps made through ignorance but very likely through greed—to destroy the trade in cooperage from Canada to Great Britain.

I think this is a matter for your department to take up, as it certainly is not reasonable, at the present time, with all the ships that are going from St. John and Halifax, to extort a rate of $3 per hundred pounds on cooperage stock, when previous to the war, steamers were rigorously soliciting the same business, at from 17 cents to 35 cents per hundred pounds according to the season.

There is an increase in ocean rates if you like, an increase from 17 to 35 cents per hundred pounds to $3 per hundred pounds. These are the high ocean rates of which manufacturing concerns in this country, as well as agriculture and other industries are complaining. The manager of this concern encloses a statement from a representative setting out these facts more in detail.

Mr. MEIGHEN: What is the date of the letter?

Mr. MACKENZIE KING: The communication is dated "Chatham, Ont., January 24, 1919".

An hon. MEMBER: Have you some late ones?

Mr. MACKENZIE KING: Yes, I have some late ones and I will bring them along in a moment. Then there is a communication with respect to pig iron from Fraser, Brace & Company, Limited, 83 Craig Street West, Montreal, dated April 17, 1919 to the Department of Trade and Commerce, which states:

We manufacture pig iron in electric furnaces at Shawinigan Falls and at present have a representative in England who writes that he can secure orders for from 500 to 1,000 tons per month over the balance of the year. However, we find it impossible to get a freight rate. The White Star line and Robert Reford Company, practically refuse to quote. Can you give us any assistance in this matter? We are asked to quote on this business c.i.f. London, Antwerp, Northern French ports, Genoa and Italy.

Your assistance will be appreciated. The Canadian Pacific O.S. have just quoted rate $25 a gross ton London subject to tonnage and change without notice.

Here is another important Canadian industry, the lumber industry. A firm in the Old Country acting as agents for Canadian concerns, Spence, Lock & Company communicated as follows with the High Commissioner at London, and the letter was sent out for the department here to deal with.

I will only read a sufficient number of paragraphs from the letter to illustrate its tenor:

27 Clements Lane
Lombard Street,
London, E.C. 4,
7th, September, 1921.

His Excellency
The High Commissioner for Canada.

The object of this letter is to bring before your notice the urgent necessity of lower lumber freights from Canada to this country.

Our interest in the matter is that of selling agents for many large Canadian houses. From the resultant confusion—

He is speaking of the war—

—we are only just emerging; during the past few weeks something like a recognized free on board value is gradually shaping, and there has even been a slight firming up of prices. A good deal of business has been done and more confidence is felt.

If, however, we turn to the sources of what has been sold we find that Finland has provided most of it, that Sweden has sold a fair quantity, and that Canada has literally sold nothing.

From eastern Canada we look normally for large supplies of spruce, but this year buyers have taken European white in preference as they find it not only in the main better, but actually much cheaper.

Canadian freights are bout 100/— as against about 50/— from Sweden and Finland. That is the first reason. The second is that the Finnish exchange is so low they can afford to sell at prices which appear ruinous to the Swede, and quite impossible to the Canadian.

The only hope we see for an awakening of spruce business is in a determination by sellers to accept the facts of the situation by a bold cut simultaneously with a sensible reduction in the freight rate. If freights could be set at 60/— that would give sellers

about $34 and $22 per thousand feet f.o.b. We think that at such rates a sound and steady business could be gradually worked up again, and we do not doubt that sellers could be eventually induced to accept business on such terms.

We ask your pardon for addressing you at this length but the matter seems to us of considerable importance, and we would venture to beg your assistance in bringing your influence to bear to ameliorate the position as regards the freight.

Mr. STEVENS: Will the Prime Minister kindly give the date of that letter?

Mr. MACKENZIE KING: The letter is dated 7 September 1921. I have another communication from Huntsville, Ontario, dated August 22, 1921. This letter is from the Anglo Canadian Leather Company, Limited. It was evidently sent by this company to the then member for the constituency who apparently forwarded it to the Minister of Trade and Commerce because it appears on the files of the department:

9 p.m.

Dr. PETER MCGIBBON, M.C., M.P.,
Bracebridge, Ontario.

DEAR DR. MCGIBBON,—We write to you to enlist your good offices to assist us in an effort which we are making to obtain a reduction in the ocean freight rate on sole leather from Montreal to England.

The present rate of $2 per hundred pounds is eight times the pre-war rate. As late as 1919 we shipped large quantities of sole leather at $1.25 per hundred pounds—or five times the pre-war rate.

We understand on very reliable authority that the general average of cargoes are being shipped at less than three times pre-war rate. Dry hides are being shipped at $1 per hundred pounds, from South America, against a pre-war rate of 80 cents per hundred pounds.

From this you will see that the rate on sole leather is unjust and entirely out of line with general rates. We have been endeavouring to induce the Canadian Government Merchant Marine Limited, Montreal, to authorize a rate of 75 cents or three times the pre-war rate, but without success.

We understand that the shipping business is exceedingly quiet and we constantly see references in the press to the effect that government ships are idle and that they are endeavouring to open up a new channel of trade to keep them busy, etc., it seems to us that if they would endeavour to keep alive some of the old trade that existed before the war it would be the proper way to go about an increase of business. The rate of $2 per hundred pounds practically shuts us off from export business in sole leather—

Another export business shut off.

—as this business is done on a very close margin of profit.

Then he goes on to say:

In fact for many years before the war we suppose that we did not make more than a cent a pound on our export business. You will understand from this how impossible it is to compete with the English tanners when a $2 freight rate has to be figured in the price.

You have evidence both in Huntsville and Bracebridge of the condition of our industry at the present time. Our Bracebridge plant is almost entirely shut down and while we are doing a little more at Huntsville just now, we have been idle all summer. Normally 50 per cent of our output goes abroad and there is no chance whatever to operate our plants to capacity or anywhere near it, until we are able to export freely. You will see from this the necessity of having a freight rate upon which business can be done.

We have no doubt you will realize also from what we have said the vital importance of this whole matter. It means something to every working man and merchant in the towns of Huntsville and Bracebridge.

Thanking you for your help in the past and for anything you may be able to do for us in the present case, we are,

Yours respectfully,
ANGLO CANADIAN LEATHER COMPANY, LTD.,
CHAS. G. SHAW.

I think I have quoted from enough communications to bear out the truth of the statement that I have made, that in a great variety of the industries of this country, industries upon which communities largely depend for their livelihood and which are therefore really all-important in the country's economic life, the export trade has been, if not completely, at any rate very largely destroyed, with the result that industry after industry has had to close down and unemployment has increased in the different communities.

Mr. STEVENS: All of these that the Prime Minister has quoted recently are, I understand, of 1921 date.

Mr. MACKENZIE KING: No, some of them are prior to that and they come down to 1921. The quotations I have made have been in order to show that hon. gentlemen opposite had plenty of representations made to them on this score. They know very well the source of unemployment and the cause of the closing down of industries, if such be the case, but they are failing to recognize, or at least to admit the right cause. They are endeavouring to have it appear that the tariff is in some way responsible for the closing down of these different industries, while they are being told, according to the representations made by the heads of the industries themselves that it is the high ocean rates that make it impossible for export trade to be carried on.

Mr. LEWIS: Will the Prime Minister tell us how it happens that under this terrible handicap of high freight rates, our export trade is $1,045,351,056, and the favourable balance of trade since last year has increased $260,000,000?

Mr. MACKENZIE KING: That is in spite of the situation that I have been describing. It would be very much greater if this handicap were removed. If the hon. member will study the figures, he will find that that gain has been confined largely to very considerable exports in two or three particular lines, but that others have suffered.

May I come to some of the representations that were made to the present government? The present government like the previous government had direct representations made to it, for example, with respect to the differential on flour from American ports as against Canadian ports. A communication which I received from the secretary, Mr. Watts, on January 11, 1922, begins as follows:

> Re high ocean freight rates. As the United States' millers only pay nineteen cents per 100 pounds in United States' funds while the Canadian millers have to pay twenty-four cents per 100 pounds in Canadian funds on flour to Great Britain, I am taking the liberty of sending you a copy of the representations made to the late Prime Minister and his colleagues on this question last August as I expect the Minister of Trade and Commerce will be bringing this question to your attention shortly if he has not already done so.

In another communication, dated January 21, 1922, Mr. Watts states as follows:

> This is a matter of vital importance, not only to the milling industry, but also to the transportation and agricultural interests in Canada, as at the present time Canadian wheat can be ground in American mills and shipped to Great Britain at nineteen cents per one hundred pounds while Canadian flour, even shipped in Canadian government boats, has to pay twenty-four cents per one hundred pounds. This means also a serious loss to Canadian labour, not only those employed in the mills, but in the transportation of the products as well. For these reasons, we sincerely trust you will be able to be present at the meeting and give us your aid in having flour milled in Canada, carried at the same rates of freight to the United Kingdom as flour milled in the United States.

I could mention other communications from the same association, but I can say in a word that they repeat in large part what is there stated. The government undertook at once to make representations on this matter, without very considerable success at the beginning. On July 10, 1923, this communication was received, and it shows how serious the matter had become at that time:

> The rate on Canadian boats from Montreal is 19 cents per 100 pounds, so the fact that there is a combine among the boats trading from Canada and that the Canada Steamship Lines has protested to New York against Canadian flour being carried from the United States ports at the same rate as United States flour, and insisting that it be carried at the same rate as the boats sailing from the Canadian ports were charging, as brought out before the investigation by the special agricultural committee, had no effect.
>
> The Ontario mills still continue to go to the wall, and if this discrimination continues long enough there will be few mills left in Ontario excepting those located at lake ports where they can get the benefit of the all water rates, or competitive rates based on the all water.
>
> Yours truly,
>
> C. B. WATTS.

That was a serious statement—"The Ontario mills still continue to go to the wall." On August 16, 1923, the following communication was sent also by Mr. Watts to Mr. Robb, at that time Minister of Trade and Commerce, re high ocean freight rates:

> In further reference to our letter of yesterday re the above, we beg to advise you that we are to-day offered a rate of 12½ cents per 100 pounds on A-1 steamers on flour from New York to Hamburg, last half of August or first half of September.
>
> The rate from Montreal to Hamburg is 19 cents or 6½ cents per 100 pounds or 13 cents per barrel higher than the rate via New York.

Then omitting a paragraph and coming to the concluding paragraph:

> The mills in Ontario have gone out of business during the past year or two at an appalling rate and if this discrimination continues, it will only be a short time before the milling industry in Ontario is wiped out excepting a few mills that are financially strong enough to work at a loss for possibly a year or two longer when the few that survive will probably be able to charge such prices as will well repay them for the lean years they have passed through, but it will not bring into existence again the large number of mills which that unfair discriminatory freight rates have ruined and driven out of existence.

Those representations are very similar to the representations which were made to the government of my right hon. friend opposite. I am happy to say that the present government have been able to do something in this matter; that they have been able, through the representations they have made, to get the same rate on flour from Canadian ports as from United States' ports, and that the situation has been remedied, at least for the present. The government took up the matter repeatedly with the shipping companies through the Minister of Trade and Commerce, the present Acting Minister of Finance, (Mr. Robb), and the present minister, it was also taken up at the Imperial conference by the Minister of Railways (Mr. Graham) and the ex-Minister of Justice (Sir Lomer Gouin). It was brought before the Imperial Shipping committee and stressed very strongly; it was kept before them by the present High Commissioner in England. They were asked to continue their investigations here and they did so, with the result that they have secured an understanding from the combine that the rates on flour from Canadian ports will not exceed the rates from American ports. So that the situation has been remedied to that extent. But as matters stand there is no guarantee other than the word of these com-

panies that these rates will be maintained. I would point out that while that result has been achieved in regard to one commodity, flour, these preferentials favouring American ports to the exclusion of Canadian ports remain in large measure what they have been with respect to other commodities. Unless some step is taken such as that which the government proposes in the legislation about to be brought down, it is difficult to see how the situation can be remedied at all.

I have here a communication with regard to cattle. It is of recent date and shows that these representations still have force and that they relate to present conditions.

Mr. MEIGHEN: Can the Prime Minister tell us when it was that the American government instructed the American merchant marine to give a preferential rate on flour?

Mr. MACKENZIE KING: I am sorry I cannot give that information at once but I shall have a further word to say in a moment regarding flour rates and I may then come across what my right hon. friend wants.

Mr. MEIGHEN: Was it in 1922?

Mr. MACKENZIE KING: I am not sure. I want now to read this communication with regard to the cattle industry. It comes from Edmonton from the Department of Railways and Telephones of Alberta and is dated February 8, 1924. It is from the Alberta government to the present administration, addressed both to myself and to the Minister of Trade and Commerce (Mr. Low):

> Gentlemen: It has been stated by a reputable authority, the Hon. Clifford Sifton, and freely commented upon in the press, that although live stock could be profitably carried to the United Kingdom from the Atlantic sea board for $10 per head the present cost is $20 per head. In view of the fact that western Canada is to a great extent dependent on the cattle industry and that the United States market is practically prohibited by tariff, everything possible towards lowering transportation costs should be striven for. If the Canadian merchant marine is a party to the continuance of this alleged excessive charge I am of the opinion that steps should be taken to rectify the matter. The Alberta government strongly recommends that the necessary steps be taken in order that the live stock industry in western Canada may be stimulated by the increasing of any net returns which may be secured for the producer. I shall be glad to hear from you in the matter.
>
> Yours very truly,
>
> A. CHARO,
> Freight and Traffic Supervisor.

There is a communication from the government of Alberta, comprising members of the Progressive party, asking that the necessary steps be taken in order that the live stock industry in western Canada may be stimulated "by the increasing of any net returns which may be secured for the producer." I think I have made it plain that one of the objects of this legislation is to effect what the Alberta government declares is absolutely necessary in the interests of the cattle industry of that province.

I have also a communication from a gentleman whose name will be familiar to many hon. members—Donald Munro, of Montreal. This gentleman has a great deal to do with the shipping of cattle to the Old Country and the situation as he views it is described in a letter dated April 11, 1924, addressed to Dr. J. H. Grisdale, Deputy Minister of Agriculture. I shall not read the whole letter but merely one or two pertinent paragraphs.

> I am also enclosing copy of a letter that I sent some time ago to the Furness Withy Steamship Company regarding the high rates now charged by them as well as by the other steamship companies, and the effect that such rates are having on the trade; the letter in question explains itself.
>
> At these high rates, in conjunction with the strong competition from Ireland, have a strange hold on the Canadian business, it is very obvious that something must be done to combat it, unless we are prepared to see the business die out entirely—

I would ask hon. gentlemen to note the significance of those words. Other persons speaking of their export business have talked about its being killed or destroyed. Here is a gentleman who has had a wide acquaintance with the live stock business and who declares that it is obvious that something must be done—

> —unless we are prepared to see the business die out entirely, and as the live stock export trade is of such vital importance to this country we cannot afford to take such medicine lying down.
>
> At the present time owing to the fact that we are practically tied down to two or three ports on the west coasts of England and Scotland we are compelled to accept what rates of freight are decided on by the regular lines running to these ports, and as these lines have a sufficient number of steamers to take care of what cattle we can afford to ship at present rates (which are fixed at New York by the Atlantic Conference) there is little hope of getting any reduction; the result is that while we are compelled to pay maximum rates, our cattle are landed at ports where we have to bear the brunt of the Irish competition.
>
> In order to get the ships running to the east coast or the continent interested in this trade I consider that it would pay the country well to offer them some inducement in the way of a subsidy if necessary, or if any considerable number was shipped to the east coast there would be less offering for the west coast ports of Liverpool or Glasgow, and any shortage would soon result in keen competition for what would be available, and such competition would soon be felt on lower rates.
>
> To my mind, this is the only way that lower rates can be obtained. I would therefore ask you to go closely into the whole matter. You know as much about the districts that could be tapped from the

east coast as anyone, and if the suggestion appears feasible, I would be pleased to go into the matter with you in fuller detail.

Yours very truly,

DONALD MUNRO.

I have other communications. There is for instance one from the Canada Carbide Company emphasizing the necessity of reducing rates on chemicals if that trade is not to be lost. Then there is a more recent letter in regard to lumber. I have read one addressed to the late government; let me read the more recent communication addressed to the present administration:

Dear Sir,—The steamship companies have recently advanced their rates on white pine ten shillings per standard. The rate now is over five times what it was prior to the war. Railroad rates have been increased a little more than twice what they were; then as regards commodities of all kinds, their prices have been increased only about one and one-half times, speaking generally.

The lumber trade is not in a flourishing condition just now. The producers are facing a heavy loss. The export trade to the British Isles shows a decided falling-off which is largely due to the fact that the Scandinavian countries are in a position through lower freight rates to make lower prices to the British importer. Canada at the present time needs export business, but under discouragement through advance in ocean freights exports will decline.

We submit, therefore, that something should be done internationally to control steamship rates. This of course would take some time to work out. In the meantime your government have a large mercantile marine and we are satisfied that if some pressure is brought upon the management the combination among the steamship companies could be broken. Will be glad to have your remarks.

Yours truly,

R. LAIDLAW LUMBER COMPANY, LIMITED.

I have also a communication from the Union Lumber Company of Toronto under date April 25, 1924:

We presume you appreciate that the trans-Atlantic steamship companies have recently advanced their rates on white pine lumber ten shillings per standard.

We feel that this is going to work a very material hardship on exporters of Canadian white pine products during this season due to the fact that this will be a further inducement for British buyers to purchase lumber from the Scandinavian countries, who are in a position through lower freight rates to make lower prices for their lumber to British importers.

We appreciate that Canada at the present time needs export business, and we feel something radical should be done in the way of endeavouring to control, if possible, ocean rates.

I will not read further from that communication, and I promise to conclude with quotations from two other communications which I have before me. The first is a letter from the Sheet Metal Products Company of Canada, Limited, and it helps to illustrate wherein the manufacturing interests generally have felt the effect of these high rates. The letter, of which I shall read only a part, is addressed to Mr. O'Hara, Department of Trade and Commerce, and is dated Toronto, September 28, 1923:

Re: Ocean Freight Rates

Dear Sir,—When Mr. Egan was in Toronto, in discussing the question of shipping to South Africa, he mentioned that we could get very favourable rates from the Elder, Dempster Co. Steamship lines.

In general discussion with him regarding ocean freight rates, we pointed out that owing to the attitude of the steamship lines operating from Canada and the high ocean freight rates that they were charging, that it was seriously interfering with export trade, so far as our line was concerned.

We believe that every exporter has had about the same experience as we have had and that the attitude of the steamship lines in exacting the highest possible ocean freight charge had very seriously interfered with a great number of manufacturers, who were breaking into the export market, in being able to market their products and get a foothold at the right time.

The steamship companies have practically adopted the attitude of only making reductions where ocean freight competition from this side rendered such reduction necessary. They would not listen to any statements which we had to make regarding German or other competition and notwithstanding the fact that we had reduced our prices to practically cost, no compensating reduction was made in freight charges, and the consequence is that as regards the U.K. and other places, because of this attitude, the European continental manufacturers have now regained practically the greater portion of the trade which they enjoyed prior to the war, in such lines as we manufacture.

Ocean freight rates at the present time are far too high. British companies are operating from U.K. ports to Vancouver by the Panama canal and laying goods down there at about the same rates as the steamship companies are requesting for shipments from Canadian Atlantic ports to U.K. ports.

The communication concludes as follows:

The object of this letter is to point out to you these conditions and to see if the department cannot be of service in securing such radical reductions in freight rates to the other export markets of the world, that will enable Canadian manufacturers to get thoroughly established in these other places and our products introduced there and connection established before it is too late.

We remain,

Yours truly,

THE SHEET METAL PRODUCTS CO. OF CANADA, LTD.

James Mayor,
Traffic Manager.

The last communication is from the Ontario government. Within the past few weeks there has been laid on the table of the legislature in Toronto the report of the Agricultural Inquiry committee. This report states:

The committee held fifty-four meetings throughout the province; also conferences with representatives of the railways, manufacturers, wholesale, retail and labour organizations and authorities on economic and social conditions, and accomplished a survey of farming conditions in Ontario by questionnaires sent to wardens, township clerks and agriculturists.

A section is devoted to ocean cattle rates, and I think I had better read it to the House. I would ask hon. members to realize that this is a quotation from a report of a committee

appointed by the Ontario government. I have read one communication from the Alberta government. This is from the Ontario government—a Tory government that my hon. friends opposite, I think, will vouch for.

Mr. CALDWELL: What is the date?

Mr. MACKENZIE KING: The report was laid on the table of the Ontario House just a few days ago, and this summary, I understand, was released to the press on February 24, this year. I have tried to get a copy of the report itself, but I am advised that it will not be printed for another day or two. Now for the quotation:

Ocean rates hold down export trade to Britain. It is true that 1924 shows the largest shipping of any year since the embargo was removed, running 80,000 head. But it is obvious that Ontario alone is capable of producing beef cattle in volume far exceeding the present export trade. A special bulletin of the Dominion Department of Agriculture in 1923 welcomed removal of the embargo as a new order of things warranting official experiments in the shipment of steers to England. The experiments were intended to demonstrate to cattle raisers that live cattle realize considerably higher returns than chilled beef shipments. This committee has followed shipments from western Ontario to England conducted by men experienced in the cattle trade and the results showed that as many were unprofitable as profitable. One of the first witnesses before this committee said: "I am the only farmer in a ten-mile area who has cattle for export in his barn. I have 95 acres and from 50 to 55 cattle. There are a hundred others at least who could feed and accommodate as many in the section. They have the barns. But they do not enter the trade because there is no profit in it. Ontario should be able to ship as many live cattle to England as does Ireland. It would mean prosperity to the province. The market is in England for as many as we can send, no matter what they say about the dead meat trade. The business does not prosper because it is without the attraction of profit."

The potential power of Ontario to engage in the movement of live cattle to Britain cannot be fully developed because of existing influences. Mr. Shamberg of New York is the chief buyer for export. Mr. Shamberg's agents are in the Union Stock Yards, Toronto; in the office of the International Mercantile Marine at No. 1 Broadway, New York, and at the British ports. The committee satisfied itself that the usefulness of the Canadian Government Merchant Marine is limited by the North Atlantic freight conference. It came to the conclusion that with his widespread power and influence Mr. Shamberg controls the profits of Ontario cattle raisers. He has inside information at all times by reason of which he can cancel optioned spaces or send his own cattle according to the trend of the market. The less optimistic in Ontario have been driven out and the industry is not what it should be.

Correspondence with the Dominion government in August last is quoted and the report goes on to say, "Inasmuch as definite action by the Dominion government was thus implied, the committee thought it inadvisable to carry investigation further. The committee recommends that the Ontario government strongly urge upon the Dominion government full consideration of the interests and requirements of Ontario shippers in whatever federal policy may be decided upon to secure reduction of ocean rates."

[Mr. Mackenzie King.]

Mr. MEIGHEN: Is that a report of an agricultural committee laid on the table of the Ontario House?

Mr. MACKENZIE KING: I may tell my right hon. friend how I came across this.

Mr. MEIGHEN: I do not mind that; I want to know what it is.

Mr. MACKENZIE KING: I should like to give him this information because it is illuminating. My hon. friend the Minister of Justice (Mr. Lapointe) directed my attention to an article in the London Times from its Toronto correspondent to the effect that there had been laid on the table of the Ontario legislature the report of a special committee on Agriculture, complaining of the high ocean cattle rates. I immediately communicated with Toronto and endeavoured to get a copy of the report. I was told that the report would not be printed for another day or two, but I was sent the official release given by the government to the press containing a summary of the report of the agricultural inquiry committee appointed by the Ontario legislature in 1924. That is the summary I have quoted from.

Mr. MEIGHEN: A committee of the Ontario legislature?

Mr. MACKENZIE KING: Yes, recommending:

That the Ontario government strongly urge upon the Dominion government full consideration of the interests and requirements of Ontario shippers in whatever federal policy may be decided upon to secure reduction of ocean rates.

So the last word we have comes from another provincial government directing attention to the fact that a large and important industry of the province is suffering through the high ocean rates and asking that this federal government should have regard to the interests of the province of Ontario, just as the Alberta government asked us to have regard to the interests of the province of Alberta, in our policy for the reduction of Atlantic ocean rates on cattle, if such reduction were possible.

I want to say a further word in regard to these rates of freight on Canadian flour on the north Atlantic. I mentioned a moment ago that a subcommittee of the Imperial Shipping committee had held an inquiry in Canada, and they have submitted an official report. The report makes it quite apparent that a combine was operating on the Atlantic to the detriment of Canadian millers; that flour was being shipped from United States ports to Great Britain and European ports at

a lower rate than from Canadian ports. The concluding paragraph is as follows:

After careful discussion both with the ship owners and the millers, our subcommittee, while in Canada, received an assurance (printed in appendix II) from the Montreal steamship lines acting in conference, that they will not in future request the New York lines, members of the North Atlantic Freight Conference, to quote Montreal rates on Canadian flour shipped through any United States port. This promise was accepted as satisfactory by the millers in Canada. Further, in view of this undertaking by the Montreal lines, the principal British lines engaged in the north Atlantic trade have since assured us that they will in future quote the same rates from United States ports on Canadian flour as on American flour. These assurances are of considerable importance in that they definitely remove the risk of any recurrence of similar discrimination in this form, and we therefore feel that the fact that they have been given should become generally known at once.

It is interesting to note, in connection with this report, the way in which that change has been brought about in the rate on flour. After this pressure has been brought to bear upon them, the steamship companies undertake on behalf of the Canadian group that they will not ask the American group to do in future a certain thing which they have been doing in the past, thereby establishing the fact that flour, which was supposed not to be on the list of commodities affected by the conference, has as a matter of fact been affected like these other commodities by arrangements between the two groups. The letter that gives the assurance is as follows:

THE ROBERT REFORD COMPANY, LIMITED,
20 Hospital street,
Montreal,
19th April, 1924.

Sir HALFORD MACKINDER,
Chairman,
Imperial Shipping Committee,
Montreal.

Dear Sir Halford,—As requested, I beg to confirm the understanding reached yesterday that the Montreal steamship lines, acting in conference, undertake that they will not request the New York lines, members of the north Atlantic freight conference, to quote Montreal rates on Canadian flour shipped through any United States port.

Yours sincerely,

WILLIAM I. GEAR,
Representing Montreal
Shipping Interests.

This is the promise we have to rely upon as to future avoidance of discrimination against shipments from Canadian ports as compared with shipments from American ports.

Hon. members have seen the report of the Royal Grain Inquiry Commission. I would like to direct their attention to a paragraph that appears on page 204, in the special report made by Mr. Scott upon shipments of grain from Canadian ports and the rates charged thereupon as compared with the rates from American ports. I quote:

So that, western province grain exported via New York has to be carried 800 miles further than if it were shipped at Quebec, or about 650 miles further than if sent all rail to Montreal.

The all-water rate—lake and canal—from Fort William to Montreal was 12½ to 14 cents per bushel in October, and although four cents cheaper than the through rate to New York, the latter secured 74 per cent of the business.

To what, then, is to be attributed this diversion of our western export grain to United States seaports?

The report goes on to answer this question. It says, page 206:

It will be seen from the above, that, although the cost of shipping via Buffalo to New York, is about 1½ cent dearer than by the Georgian bay to Montreal, and nearly 2½ cents dearer than by the all-water route, from Fort William to Montreal, New York and other United States seaports continue to capture from 65 to 75 per cent of our export grain trade.

Notwithstanding the fact that New York is 500 miles further from Liverpool than Quebec is, ocean rates of freight from New York to Europe are considerably cheaper than from the St. Lawrence.

For instance, in October, 1923,—October is the busy month for Canadian grain shipments—the ocean rate from New York to Liverpool was ⅜ or 6¾ cents per bushel, whilst the rate from Montreal was 3s. per quarter or 9 cents per bushel, a difference in favour of New York of 2¼ cents per bushel. Authorities most familiar with the trade state that the spread in ocean rates, as between Montreal and New York, averages one shilling per quarter of 480 pounds to United Kingdom ports, which is equal to three cents per bushel, in favour of New York.

I think that is enough to show that so far as the grain trade is concerned—

Mr. MEIGHEN: That is Mr. Scott's single report?

Mr. MACKENZIE KING: Yes. He was asked by the commissioners to report specially on that trade, and he did so.

Mr. MEIGHEN: A minority report.

Mr. MACKENZIE KING: I understand it is accepted by the other commissioners. He was asked to make a special report on that phase of it.

Mr. MEIGHEN: Why did they not sign it?

Mr. MACKENZIE KING: Well, Mr. Scott makes that very plain. In the opening of his report, which is addressed to Mr. Turgeon, the chairman. He says:

At the last meeting of the members of the Royal Grain Inquiry Commission at Winnipeg on the 29th April, 1924, you and other gentlemen composing the commission—Dean Rutherford and Professor McGibbon —did me the honour to request that I should draw up a memorandum of my views as to transportation, in order that the same be attached to the original report of the commission.

And he goes on to explain that he has gone into the figures; he states simply what is a matter of record and of fact.

Mr. Speaker, the point I wish now to refer to more particularly is the matter of the actual rates that are being charged. I have in my hand a statement which has been compiled by the Bureau of Statistics—a comparative statement of the average ocean rates on grain from Montreal to Liverpool and from New York to Liverpool over a period of years. The statement is very detailed but I have had an abstract made from it and I think the abstract will give the facts with accuracy. These are the figures for the average ocean rates, in cents per bushel:

Year	Montreal to Liverpool	New York to Liverpool
1912	7.52	7.34
1914	7.04	5.51
1921	17.25	17.10
1922	7.82	7.70
1923	7.93	6.07
1924	9.06	7.09

I have skipped the war years, because during that period there were times when no rates were quoted. Hon members will notice the jump from 7.04 to in 1914, Montreal to Liverpool, to 17.25 in 1921, and from 5.51, New York to Liverpool, to 17.10 in the same period. A study of these figures will show that the rates from New York to Liverpool seem to become proportionately increasingly lower than the rates from Montreal to Liverpool, and that in consequence the differential is becoming greater in favour of steamships sailing between New York and Liverpool than those sailing from Canadian ports to Liverpool. That means, of course, that the grain of this country will tend to be diverted more and more to American railways and American ports at a time when we are trying to build up our National railways and to build up Canadian trade by Canadian ports, and to help develop Canadian shipping.

Mr. MEIGHEN What is the authority for the figures?

Mr. MACKENZIE KING: I have a detailed statement here from the Dominion Bureau of Statistics, Internal Trade branch, which gives the whole matter in detail month by month, and it is from this I have taken the figures.

Mr. MEIGHEN: Will the Prime Minister table the statement?

Mr. MACKENZIE KING: Yes, with pleasure. I table it now.

Now I come to what seems to me, Mr. Speaker, the crux of the whole situation. It will be argued that ocean rates have risen in consequence of the increased cost of ocean transportation, and of conditions as they have been since the war. No one will deny that it was to be expected that ocean rates would rise somewhat, but I would point out that everything that can be said with respect to the increase of rates on the ocean can be said with equal, or greater force with respect to the increase of rates by rail, and the essential feature which this House should consider is whether the increases in ocean rates are fair as compared with the increases in rates by rail. In the one case, in railway rates, you have a controlled situation. You have a railway commission that has control of railway rates; it controls the rates, having regard to the return on capital invested, having regard to the wages that are being paid to labour, and having regard to the interests of the travelling and shipping public. But so far as ocean rates are concerned, there is no control save that which is exercised by this conference itself; there is no control on the part of the public, and I submit, Mr. Speaker, that if it is discovered that ocean rates by comparison are out of all proportion with the increases that have taken place on the railways, this government has established to the full a case demanding the immediate attention of this House by way of legislation to effectively reduce ocean rates.

Mr. STEVENS: Would the Prime Minister permit me a question? Assuming that this measure passes and the government fixes ocean rates, will the government fix them upon the same basis as just mentioned by the Prime Minister?

Mr. MACKENZIE KING: Well, so far as the present contract is concerned, the government is free to fix whatever rates it pleases, and it intends to exercise its judgment as to the rates it will fix, and the rates will be fixed with a view to testing out the situation on the Atlantic.

Mr. STEVENS: The Prime Minister, I think, has not apprehended my question. The Prime Minister has stated that there is virtually control over railway rates in the railway board, which fixes the railway rates having regard to the return on the capital invested, wages paid, and the cost of operation. I ask the question now whether the Prime Minister, when he comes to fix the rates on ocean traffic, will have regard to the same factors, the return on capital invested, the wages paid, and the cost of operation.

Mr. MACKENZIE KING: I will answer that by saying that the government in fixing ocean rates will endeavour to have regard to the rates charged on the railways, where regard is being had to the factors to which my hon. friend has alluded.

May I point out at once that so far as this discussion is concerned, it is really immaterial whether a combine exists or does not exist. May I say to the House, as I mentioned to my hon. friend the other night, that I believe in these days of world competition large organization of industry is essential, and something in the nature of combined effort; but just because I believe it is necessary, just because I believe it is certain to come, I believe the more strongly in the necessity of some control over these all powerful organizations; and that is the situation which is presenting itself on the Atlantic ocean at the present time. These companies are left to themselves to make arrangements as to steamship rates. In making those arrangements, if one judges by the rates that are quoted, it would appear that the public interest is not considered to anything like the extent of the interest of the other parties involved in the transaction. In a word, to carry on industry, capital is necessary, labour is necessary, management is necessary, and the public, as a consuming and producing entity, is also a necessary factor. All four are entitled to due consideration. I think the facts will show that so far as ocean rates are concerned, the public, if it has been considered at all, has been considered in a very remote way.

I have in my hand two receipts that speak for themselves. They were sent to me by an agent of steamship and railway lines in an Ontario constituency. They are two receipts that were in his possession which disclose the rates charged on the ocean and by rail on immigrants coming from Great Britain to Canada. The receipt of April 1, 1914, shows the third class ocean fare for one person as $32.50, and the Canadian railway fare from the port of landing to a locality in the constituency mentioned as $8.70. The other receipt is dated April 19, 1924, ten years later. It shows the third class steamship rate as $75, or an increase of 130 per cent over the rate in 1914, and the railway rate for the same distance is $15.70, or an increase of 81 per cent. In other words, the ocean rate, judging by these two receipts, had increased by 130 per cent, while the railway rate for the same distance, had increased by only 81 per cent. Now will anyone say for a moment that the railways have not been subjected to just as important consideration in the matter of their rates as ocean transports? As a matter of fact, ocean rates for labour have not gone up as much as rates for labour on the railways. The railways have to look after the maintenance of roadbed, a costly business; there is no roadbed maintenance in the case of steamship companies. Great stress has been laid on the fact that immigrants are treated much more comfortably on the steamships to-day; but the same may be said of their treatment by the railways. Take, for instance, the expenditure on railway stations, and the accommodation provided for immigrants at the ports of landing on colonist sleepers and the like. The railway accommodation is very much better to-day than it was ten years ago. In all of these particulars I think it can be urged with fairness that the railways have been subjected to just as much in the way of increased cost as the steamship companies; and yet when you come to look at the charges you find that the increase in ocean rates is infinitely higher than the increase in railway rates.

I have in my hand the reply that has been prepared by the steamship lines to the report of Mr. Preston. I am not going to take Mr. Preston's figures, but I will take from this publication the figures of the steamship companies themselves as to the increased rates they are charging, and let us see how they compare with the increase in railway rates. In the first place, I would direct the attention of the House to the fact that on March 1, 1924, there appears to have been as respects ocean rates an increase all along the line, an increase on every article mentioned. It is quoted here, in the pamphlet prepared by the steamship companies. The increases in the rates on the different commodities mentioned, taking only the figures as given by the steamship lines themselves are as follows—and these figures show only the increase in February, 1924, as compared with 1914, they do not include further increases that were made on March 1st of last year:

Commodity	Increase per cent
Agricultural implements	73
Automobile tires	127
Flour	58
Leather	122
Measurement goods—Coarse	215
Measurement goods—Fine	100
Weight goods	179

Now, I have gone to some trouble to make comparisons with these commodities and a few others, taking the actual rates given by the railway commission on commodities shipped by railway through the localities where these commodities are actually moving and

comparing them with the rates as set out by the steamship companies themselves for the commodities which they carry. The statement I am now going to give shows the export rail freight on a number of commodities per hundred pounds and carload lots from the places named to Montreal in the years 1914 to 1924. I will not read all the figures but I should like the permission of the House to place the entire statement on Hansard:

Statement showing Export Rail Freight Rates on a Number of Commodities, Per 100 Pounds, in Carload Lots, From Places Named to Montreal: 1914-1924

Commodities	1914	1924	Increase	Increase per cent
Cured Meats from Winnipeg, Man.	.63	.91	.28	44.4
Cured Meats from Edmonton, Alta.	1.15	1.40	.25	21.7
Canned Vegetables from Simcoe, Ont.	.20	.39	.19	95.0
Canned Vegetables from Trenton, Ont.	.15	.34	.19	126.7
Cheese from Woodstock, Ont.	.34½	.65½	.31	89.9
Butter from London, Ont.	.34½	.67	.32½	94.2
Flour from Bay Ports.	.11	.17½	.6½	59.1
Flour from Fort William, Ont.	.20	.35½	.15½	77.5
Automobiles from Windsor, Ont.	.62	1.19	.57	91.9
Rubber Tires from Toronto, Ont.	.30	.60	.30	100.0
Rubber Tires from Kitchener, Ont.	.33	.64	.31	93.9
Rail Revenue all commodities per ton-mile	.742	.987	.245	33.0

Now comparing the ocean rates in various commodities what are the figures?—

Statement showing ocean freight rates on a number of commodities from Eastern Canada ports to United Kingdom ports

July 1914—July 1924

Commodities	July 1914	July 1924	Increase	% Increase
Provisions, per 100 lbs.	23.63c.	.50c.	26.37c.	111.6%
Canned Vegetables, per 100 lbs.	17.09c.	.50c.	32.91c.	192.6%
Cheese, per 100 lbs.	31.32c.	.60c. to .70c.	28.68c. & 38.68c.	91.6% to 123.5%
Butter per 100 lbs.	37.2c.	1.00	62.98c.	170.1%
Flour, per 100 lbs.	12c.	.19 & .22c.	.07 & .10c.	58.3 & 83.3%
Automobiles, per cu. ft.	10.40c.	.25c.	14.60c.	140.4%
Rubber Tires, per cu. ft.	11.025c.	.25c.	13.975c.	126.8%

It will be seen that in all cases the percentage increase in ocean rates is considerably, in some cases, vastly, in excess of the increase of railway rates. With respect to the wages increase paid by the railways as compared with that paid by the ocean carriers the following table has been prepared by the Canadian National Railways:

WAGE INCREASES PAID BY RAILWAYS COMPARED WITH OCEAN CARRIERS

Wages	Ocean 1914	Rail 1914	Ocean 1924	Rail 1923	Increase Ocean	Increase Rail	% Increase Ocean	% Increase Rail
Per man hour		26.2c.		57.3c.		31.1c.		118.7
Crew per month (8,100 ton deadweight Standard steamer under United Kingdom articles)	$1,188.60		$2,274 00		$1,085.40		91.3	

In other words the ocean rate of wages was represented by 91.3 per cent of an increase as against 118.7 per cent increase by the railways. The prices of carrying commodities, on the other hand, have increased very much more on the ocean than they have on the railways. Taking the figures for the list of commodities mentioned on page 24 of the steamship companies' report and comparing them with railway rates I find the figures to be as follows:

Comparative Statement of Ocean and Railway Freight Rates (Years 1914 and 1924)

Railway Freight Rates (per 100 pounds) (Carload lots)

	1914	1924	Increase
Agricultural implements: (Toronto-St. John)	17½c.	33½c.	91%
Automobiles: (Oshawa-St. John)	57½c.	74c.	29%
Automobile tires: (Oshawa-St. John)	36½c.	66c.	81%
Flour: (Winnipeg-St. John)	31½c.	50½c.	60%
Leather: (Toronto-St. John)	26c.	46c.	77%

Ocean Freight Rates

	1914	1924	Increase
Agricultural implements: (per 100 lbs.)	30.92c.	89.3c.	188%
Automobiles: (per cu. ft.)	13.38c.	25c.	87%
Automobile tires: (per cu. ft.)	11.02c.	25c.	123%
Flour: (per 100 lbs.)	12c.	20c.	67%
Leather: (per 100 lbs.)	45c.	85c.	89%
	33.75c.	85c.	151%

When we come to passenger rates the increases become even more apparent. Here again I take for ocean rates the figures quoted by the steamship companies themselves and which are to be found at page 38 of their report. The railway rates are from official records.

Comparative Statement
of
Ocean and Railway Passenger Rates
(Years 1913 and 1924)
Railway Passenger Rates
(Montreal to Winnipeg)

	First Class passenger for	Immigrant Fare
1913	$37 85	$18 00
1924	48 00	25 00
	(An increase over 1913 rates of 27 per cent.)	(An increase over 1913 rates of 39 per cent.)

Ocean Passenger Rates

	First Class Fare (Minimum)	Third Class Fare (Minimum)
1913	$ 85 00	$31 25
1924	195 00	82 50
	(An increase over 1913 rates of 129 per cent.)	(An increase over 1913 rates of 168 per cent.)

An hon. MEMBER: What about the accommodation?

Mr. MACKENZIE KING: The improvement in accommodation during that time, if not greater, has been quite as great on the railways as it has been on the steamships. I wish to direct the attention of the House particularly to these figures because they illustrate in a concrete and simple way the difference between the controlled rates on land and the uncontrolled rates on the ocean. In the case of first class passengers in ten years there has been an increase in the rates charged, of 27 per cent on land, and of 129 per cent on sea. In the case of immigrants the increase amounts to 39 per cent on land and 168 per cent on the ocean. In view of figures of such a character, which cannot be disputed, I submit that the ocean rates, uncontrolled as they are, show a vast disparity as compared with the railway rates, and the obvious necessity of controlling the ocean rates becomes apparent the minute these figures are considered. I had intended to say something further about the immigration rates but I will spare the House any further details on that score at the moment. Let me hasten to a conclusion in what I wish further to bring out. I contend, Mr. Speaker, that apart altogether from any representations that have been made in any report by Mr. Preston, a comparison of the railway rates to-day with ocean rates will show a vast increase in the percentage of increase on the ocean as compared with the increase that has taken place on the land, and hence the necessity for some speedy method of effective control of ocean rates is obvious.

10 p.m.

As regards the question of a method of ocean control, only two or three alternatives present themselves. One is that the government itself should seek to build its own merchant marine and enter into competition with this vast and powerful combine. Another is that the government should endeavour to bring about some form of control by a commission. The third is that the government should take some such step as that which we are taking at the present time of making an arrangement with a private company of giving them in return for receiving the right to control the rates a fair consideration. Apart from those three, nothing remains other than to let matters stand as they are.

Just a word with respect to each one of these three in turn. As to the government undertaking to build additional ships to compete with the combine itself, that matter was gone into very fully the other evening by the Minister of Railways and Canals (Mr. Graham), who pointed out that if a step of that kind was to be taken, the time to have taken it was when the government was building a merchant marine, when it had ships ready to launch and was in a position to make these ships suitable for this particular trade. Members have asked: Why cannot the present merchant marine be used for the purpose? The answer is that ships of the merchant marine capable of handling the north Atlantic trade are few in number and are already employed on other routes in accordance with treaties that have been arrived at between different countries and Canada or are employed in large part on the Pacific ocean, in response to public need between Pacific ports and Australia and New Zealand, and are the only profitable part of the merchant marine ships at the present time. I do not think this House would feel that the government would be justified in taking out of the merchant marine at this time, when the deficits of the merchant marine are what they are, the few

ships that are really proving an investment and putting them on the Atlantic route to fight the combine. I think it can be shown that in order effectively to combat a combine, such as exists on the Atlantic ocean, it is essential, whatever steamship line undertakes the work, that it should have facilities in Europe and the Old Country as well as in this country.

*An hon. MEMBER: Why is it that the Canadian Government Merchant Marine have been losing so much money when they were charging the exorbitant rates that are being charged by the combine? Is there any definite reason for that?

Mr. MACKENZIE KING: I cannot tell my hon. friend the reason for that excepting that there was a differential, discriminating against Canadian ports and possibly the rates may have been so high that they were not getting any business. That is one reason and I think it is a very sound reason.

Mr. HOEY: Will the Prime Minister explain why they were in the combine at all?

Mr. MACKENZIE KING: I would answer that by saying to my hon. friend that the merchant marine is first of all under the control of the Canadian National Railways, not under the control of the government and the Canadian National Railways evidently felt that it was to their interest to have these ships in the combine. I presume that all such companies have their associations in matters of business and that the Canadian National Railways probably felt that if they were to get business at all through this merchant marine associated with them, it was necessary that they should fall into line with the other ships on the Atlantic or be boycotted by the conference. That is my understanding of the situation. Had they been boycotted, probably the position of the merchant marine would have been worse than it is at the present time.

Mr. SPENCER: Why was the Canadian Government Merchant Marine taken out of the combine?

Mr. MACKENZIE KING: I think it was taken out finally, out of deference to views expressed in this House.

Mr. MEIGHEN: When was it taken out?

Mr. MACKENZIE KING: Very recently.

Mr. MEIGHEN: Only a matter of days ago.

Mr. MACKENZIE KING: I think it was only a few days ago. I cannot answer the question definitely.

Mr. IRVINE: How does the government propose to prevent the combine from boycotting these ten ships?

Mr. MACKENZIE KING: My hon. friend has put his finger on the right spot. As regards these ten ships, it is up to Sir William Petersen to demonstrate how he can do that. He contends that he is fortunately in a position, through his knowledge of shipping conditions and through his associations and the interests he has, to enter into this fight if he gets the backing which he is getting at the present time. He has—and this brings out the very point which I was trying to bring out a moment ago—docks of his own in the Old Country, docks which he controls. He has relations with business interests there and other shipping interests which he himself controls to enable him to carry on, as he believes, this fight successfully. He can do it in a manner in which the government merchant marine could not begin to do it. This government owns nothing in the way of docking facilities in Great Britain or Europe. It has not the associations which Sir William Petersen's company has. He is prepared to enter into this fight. It remains to be seen whether he will be successful or not.

Mr. MEIGHEN: What other interests has the Prime Minister in mind that Sir William Petersen is associated with, that are going to give him so much courage?

Mr. MACKENZIE KING: He has large business associations and he would not be going into this venture if he had not. He has been a very successful shipper, as my right hon. friend knows.

Mr. MEIGHEN: So has the government of Canada.

Mr. MACKENZIE KING: Not in the same way as Sir William Petersen has. At any rate, the point that is important for the House to consider is that, while Sir William Petersen may not be successful in demonstrating the lower rates at which commodities can be carried across the Atlantic profitably, he is prepared to take his risk on that. This government is taking no risk in the matter. Sir William receives no payment whatever unless he is successful. The position is very different when you suggest that the government should ask the merchant marine to go into this competition. The merchant marine is costing this country some eight million dollars in deficits. Would this House

*(Mr. Forke. See p. 1307.)

countenance this government putting the merchant marine into this fight, and would it be possible for the government to make an arrangement with the merchant marine such as has been made with this private company?

Mr. STEVENS: Will Sir William Petersen's ships be under British or Canadian registry?

Mr. MACKENZIE KING: I do not know. They may be under both, so far as I am concerned. I cannot answer the question, but I have no doubt they will be under the right registry, whatever it is.

Mr. STEVENS: Is the Prime Minister not aware that ships operating under British registry can operate much more cheaply than ships operating under Canadian registry? That is one of the handicaps of the Canadian Government Merchant Marine. They are operating under the more expensive Canadian registry which makes it difficult for them to compete with ships operating under British registry.

Mr. MACKENZIE KING: That shows where Sir William Petersen will have an advantage in his endeavour to fight the combine.

Mr. STEVENS: An hour or two ago the Prime Minister said that he had made the same offer to Canadian shipping companies. Did he limit that to Canadian shipping companies whose ships are under Canadian registry?

Mr. MACKENZIE KING: No, there were no limitations at all in the offer that was made. I do not wish to take up further time in discussing the merchant marine. As I say, that phase was gone into very fully by the Minister of Railways and Canals the other evening.

Mr. KENNEDY (Edmonton): Has the combine taken any step or steps in any way to cripple the merchant marine since it was taken out of the combine?

Mr MACKENZIE KING: I have not heard of that, and I would be surprised if they had. Let me add this fact that one of the clauses in the contract with Sir William Petersen is that these ships which he is putting on the Atlantic are to work in conjunction with the Canadian National Railways and with the Canadian Government Merchant Marine. The probabilities are that, through co-operation in that regard, it may be possible to utilize even the merchant marine ships to greater advantage than it has been possible to do thus far.

Another alternative to the use of the government merchant marine is the one suggested in the amendment, namely control by a commission.

I need not emphasize the fact that commission control, so far as this country alone is concerned, is not a factor that can be considered; any control to be at all effective would have to be by means of international co-operation. The hon. gentleman suggests in his amendment that the different parts of the empire should unite to form a commission to control rates. Let us hope that this step will be taken; but thus far nothing has appeared to lead us to believe that the self governing Dominions and Great Britain are likely to come together in an effective way without a good deal of public opinion being aroused in the first instance; without some demonstration to bring matters nearer home than heretofore has been the case. Moreover, it is certain that a very considerable period would elapse before such a step could be taken. As was pointed out by the Minister of Railways (Mr. Graham) the matter was brought to the attention of the British government in Sir Wilfrid Laurier's day; it was brought to the attention of the British authorities by a communication prepared by the then chairman of the Board of Railway Commissioners for Canada, the late Mr. Justice Mabee. But there was nothing effective accomplished in consequence, as the correspondence shows. I referred this afternoon to the visit to Great Britain of the hon. member for West York (Sir Henry Drayton) as chairman at that time of the railway commission, with the same end in view. And other correspondence has gone to show that over and over again efforts have been made to have the Imperial Shipping committee take some action; up to the present time those efforts have failed. Is it likely therefore that any step will be taken without in the first instance some action such as is now proposed to give a lead in the matter?

Mr. MEIGHEN: When and by whom were steps taken to have the Imperial Shipping committee take any action?

Mr. MACKENZIE KING: If my right hon. friend will read the correspondence addressed to himself by Sir George Perley he will see that Sir George Perley spoke of Sir Robert Borden having been more or less responsible for bringing the committee into being for this purpose; that was one step; and he will find that Sir George Perley suggested that someone had better be sent over with

Canada's case worked out so that the matter might be presented. That would have been another step, only my hon. friend did not follow it up.

Mr. MEIGHEN: This government has not made an effort in that direction.

Mr. MACKENZIE KING: Yes; this government had a sub-committee of the Imperial Shipping committee working on flour rates, and at the present time on our representation the committee is working on insurance. But the progress is so slow that I confess we have not much hope of getting results speedily; and as for any general control, as the Minister of Railways explained the other night, the communication which was sent back from His Majesty's government suggested that it was too remote a consideration to be regarded as practicable.

Mr. MEIGHEN: When was this?

Mr. MACKENZIE KING: The communication which was addressed to the British government in Sir Wilfrid Laurier's day. That should be sufficient to show that the matter has been before Great Britain for some time at least. Now, as I say, the alternatives are as between the government undertaking its own work of building ships, or relying upon this vague and remote control of an empire conference, which has been suggested in the amendment of my hon. friend; or, finally, taking some such step as the one now proposed, of giving a subsidy to a line which is prepared to put a certain number of ships in operation and give to the government the right of fixing rates.

Let me point out historically the steps taken in this country with respect to the control of transportation rates. I will show how this came about with respect to railway rates and hon. members will see whether or not there is any parallel between what is now proposed and what was already done in that regard. As hon. gentlemen know, the Board of Railway Commissioners was established in 1903. Before 1903 there was no body controlling railway rates; the rates were left to the control of private companies as well as to such control as parliament exercised. We have heard a good deal lately in this House and in the country of an agreement passed in 1897, known as the Crowsnest pass agreement, which contained a provision that if that subsidy was to be paid to the railway company the company, in return, was not to charge above certain rates with respect to certain commodities in western Canada. And we have seen hon. gentlemen of the Progressive party upholding that agreement in the strongest possible terms. Now wherein is the difference between that principle and the present step which this government proposes in regard to the Petersen agreement? What was done at that time was to give a subsidy to a railway, with a condition attached fixing the rates that should be charged on certain commodities over a certain territory. That was before there was any body established by parliament to control rates; and that was the step taken in 1897 some seven years before the railway commission itself came into being. It was a step, let me say, which served effectively in helping to bring about rate control; and this government at the present time in this proposal to parliament is simply following Liberal precedents. It was a Liberal government that established the Crowsnest pass agreement limited rate control and it was a Liberal government as well that established the railway commission to control rates. The present administration is following to-day precisely similar steps in regard to ocean rates, which to-day are under no control. We are taking as the first step the right to fix maximum rates on the ocean for certain commodities, giving a certain subsidy in return for that right. If the day comes, as my hon. friend in his amendment hopes, when there will be a commission controlling ocean rates, then it will be time to consider whether or not the step now taken has been adequate for the purpose it is intended to serve and has served its day and generation. But I submit to hon. gentlemen opposite that the course which the government is taking in this regard is on all fours, with respect to the controlling of ocean rates, with the step taken by the government of Sir Wilfrid Laurier with a view to controlling certain railway rates prior to the time the railway commission was created.

I would ask hon. gentlemen again to reflect that so far as this particular payment to be made to the Petersen company is concerned, it differs from the ordinary subsidy, so called, in being not merely a payment to a steamship line for certain services to be performed, but in being a payment for the right of the government to control the rates that shall apply to that service. At the present time we are paying a considerable subsidy to the Royal Mail Steam Packet Company, whose ships ply between Canada and the West Indies. That company receives annually the sum of $340,000, or $85,000 per ship; and that subsidy is paid simply for the service; it is not paid in return for the right of controlling rates, as is the case with the present contract.

Take the Union Steamship Company of New Zealand. That company now receives a subsidy of $100,000 from this government, formerly it received $130,000. But in addition to that it receives a subsidy from New Zealand and one from Fiji, amounting to $219,000, or a subsidy per ship of $109,500, almost as great, when you reduce it to a rate per ship, as the subsidy we propose to pay the Petersen line, which is $130,000 per ship as figured out. And yet in the case of the Union company, plying between New Zealand and Canada, the subsidy is given simply for the running of the ships. In the present case the amount is paid only on condition that the ships shall carry the commodities at rates to be fixed under government control.

Mr. MEIGHEN: Are not the mails carried under those other subsidies?

Mr. MACKENZIE KING: Yes, my hon. friend is right.

Mr. MEIGHEN: And do they not usually amount to more than the cargo rate?

Mr. MACKENZIE KING: Yes. But I would remind my hon. friend that he himself has not been far removed from suggesting precisely this method of dealing with transportation rates. He was complaining the other day that he had not an opportunity to bring before the House a resolution of his own which appears on the order paper. Let me read for him the last clause of that resolution:

That to enable the products of the western and Maritime provinces to reach more readily the markets so developed the special transportation burdens borne by those provinces should be shared by the whole Dominion either by contribution to long haul freight costs or by assistance in some other form.

In other words, my right hon. friend suggests that this government should subsidize the railways for the long haul. What he has not brought out is the fact that while you may be helping the railways in that way, you are not necessarily helping the producing or consuming interests of this country. It has been pretty clearly demonstrated in this debate, that if every reduction of railway rates is to be offset by an increase in ocean rates, particulary where the same company owns steamers as well as railways, the exporters of this country are not going to gain very much advantage. There is the crux of the whole situation. Reduce the rates on the ocean and you will find very soon that the export trade of this country will develop by leaps and bounds in a manner heretofore unknown. It is the high ocean rates which, to the disadvantage of exports, have been eating up little by little all the advantages gained by control of railway rates.

I would ask hon. members to look at the terms of this contract. As drawn the country can lose nothing from any failure by the contractor. The worst that can happen is that we will be just where we are at present—still at the mercy of conditions as they are. On the other hand, if this contract is carried out from year to year, we will soon discover what is possible in the way of reduction of ocean rates. And once there begins to ply across the ocean a line of steamers on which the rates from Canada to the British Isles are at a particular figure, we will very soon see whether or not other shipping companies will not fall into line. I would add this further thought. There is no guarantee whatever, as matters stand, that further increases will not come rapidly upon the Atlantic. Here at least is one check in that regard. What does the contract state? First of all, that these ships shall ply between Canadian ports. That does not confine the service to Atlantic ports, it is equally applicable to Pacific ports.

Mr. LADNER: Does the Prime Minister say that the Petersen ships cannot call at foreign ports too?

Mr. MACKENZIE KING: They go from Canadian to European or British ports.

Mr. LADNER: Can they call at American ports and take cargo?

Mr. MACKENZIE KING: They have to proceed with all despatch to destination, to British or other ports. As to the next feature, they are to operate independently of this combine. Then there is the clause to which I wish to draw special attention:

(d) That the control and regulation of the rates to be charged by the contractor shall rest with the government of Canada and that the government shall fix such transportation rates on all commodities from time to time.

As I intimated the other night, such rates as are fixed on commodities will be confined to Canadian commodities. The words, "Canadian in origin" will precede whatever rates the government may fix. But these rates cover all classes of commodities. In addition, these vessels are to be fitted up with proper provision for perishable and partly perishable produce by means of cold storage facilities.

Mr. McQUARRIE: Might I ask the Prime Minister how many voyages per year these vessels will be required to make?

Mr. MACKENZIE KING: They are required to make all they can I think.

Mr. RYCKMAN: No, absolutely not.

Mr. MACKENZIE KING: Perhaps my hon. friend will stand up and tell us why not.

Mr. RYCKMAN: They are not. They are called upon to prosecute any voyage they undertake with all possible despatch. But before the voyage is undertaken there is no covenant whatever. And in clause (d) which the Prime Minister refers to there is no obligation whatever upon Petersen or his company to carry out the contract, and I hope to show it before this debate is through.

Mr. MACKENZIE KING: May I say to my hon. friend so as to put his mind at rest—

Mr. RYCKMAN: My mind is at rest.

Mr. MACKENZIE KING: I undertake to say right now that if this agreement does not obligate Sir William Petersen to carry out all that I have said to-day that it does obligate him to carry out, I for one will not be prepared to support that agreement when it comes back from the committee—

Mr. RYCKMAN: I welcome your statement.

Mr. MACKENZIE KING: —and if there is any doubt about the matter it can be settled when the contract goes before the committee. The House is not being asked to endorse something which it does not understand to the full. It will have a full explanation from the lips of Sir William Petersen himself if need be, and if that is not satisfactory it will be for the committee to take whatever step they may think best.

Mr. RYCKMAN: Mr. Prime Minister—

Some hon. MEMBERS: Order.

Mr. RYCKMAN: I wish to ask the Prime Minister a question. He has acceded to that, I understand.

Some hon. MEMBERS: Order.

Mr. RYCKMAN: Let me take this contract—

Mr. VIEN: I rise to a point of order, Mr. Speaker.

Mr. SPEAKER: Order.

Mr. VIEN: The hon. gentleman is not putting a question.

Mr. RYCKMAN: I am putting a question to the Prime Minister.

[Mr. Mackenzie King.]

Mr. SPEAKER: Order. I must remind hon. gentlemen that it is not in order to interrupt an hon. member while he is addressing the House unless with his consent. Bourinot goes further; he says:

> Whilst a member is addressing the House no one has the right to interrupt him by putting a question to him or by making or demanding an explanation.

Of course, when an hon. member good-naturedly accedes to the interruption, it goes without saying that the interrupter can put his question. But no speeches are allowed under the guise of an interruption; the interruption must be in the form of a brief question. As a rule, however, hon. gentlemen should not interrupt a member who is addressing the House.

Mr. RYCKMAN: Mr. Speaker, I thought I had the acquiescence of the Prime Minister.

Mr. VIEN: To put a question.

Mr. MACKENZIE KING: Mr. Speaker, I am very glad to have my hon. friend ask any question he wishes, if he has one in his mind, but I do not wish to encourage him. May I direct the attention of the House to another feature of the contract? I refer to the mode of payment. This is to be monthly to the contractor—

> —in equal monthly instalments payable monthly at the end of each and every month in each and every year during the continuance of this agreement, the first monthly instalment to become due and payable one month after the commencement of the service hereinbefore referred to.

In other words, payment is to be made after the service has been performed. Then there is an undertaking that the shipping services—

> —to be established by the contractor herein will co-operate and work loyally with the Canadian National Railways system and the fleet of ships operated by that system and under its control, and known as the Canadian Government Merchant Marine.

There is further the fact that at any time the minister has the privilege at his option of entering into contracts for like purposes with any other contractor or contractors; and, as has been mentioned, the contractor agrees to prosecute all voyages with all possible speed and despatch.

Mr. BOYS: Would the Prime Minister enlighten the House as to how the amount of money, $1,350,000, was arrived at? Why was it that amount instead of $2,000,000 or $1,000,000 or $500,000? I presume naturally in the course of the negotiations there must have been some basis on which that was worked out, and no doubt it would be interesting to the House to know how the figure was arrived at.

Mr. MACKENZIE KING: My hon. friend, I am afraid, will have to wait for this information. He knows that these matters are very carefully looked into in the first instance and not decided lightly.

Mr BOYS: That is why I thought the Prime Minister would be able to tell us.

Mr. SPEAKER: Order.

Mr. MACKENZIE KING: I have spoken at very considerable length, and I think my hon. friend will forgive me if I do not go into that detail at the moment. Mr. Speaker, I should like to draw to a conclusion these lengthy remarks. They have been lengthy for the reason that I have been endeavouring to make it perfectly clear to the House and to the country that this matter which the government is undertaking is very much in the public interest and I am anxious that it should be adequately understood and appreciated in all its bearings.

I would like to point out that the government's policy with respect to the reduction of ocean rates is only part of the larger policy which the government has in view of building up the industries of this country along lines that indicate the greatest possibility of successful development. We are desirous of developing the production of our basic industries. We have sought to relieve the capital that is essential to the development of those industries from some of the taxation to which it has been subjected. We have been endeavouring to develop a vigorous immigration policy. But having regard to the figures I have quoted to-night with respect to immigrant rates, and to a comparison between what it costs to bring a family from the Old Country to settle in this country to-day and what it cost ten years ago, the difficulty with which the government has been confronted will be readily appreciated. The only way to overcome that difficulty is to grapple with the ocean rates on immigrants; if we are to be successful in getting immigrants into Canada we must take some step to control ocean rates. Then, we have affirmed the policy of endeavouring to develop Canadian trade through Canadian ports. We are spending large sums of money on the improvement and equipment of our ports. We are sincere in our desire to develop inter-imperial trade, to further the trade between Canada and the Mother Country, believing that to be in our mutual interests and believing it to be a link of empire which should be strengthened in every possible way. In addition to that we have sought to develop our entire export trade in a manner that will help to build up our basic industries, our manufacturing industries, and the trade of the country generally.

The successful carrying out of all these policies, depends, I submit, upon such a reduction of ocean rates as will make the increase in the rates on the ocean during recent years, at least comparable to the increase that has taken place on the railways. So long as a conference framed among these shipping companies so regulates the rates that it pays shippers to ship via American ports; so fixes the rates as to make it impossible for many of our producers to ship via Canadian ports to the Old Country—so long as that condition prevails we may look in vain to all the other remedies that may be suggested for an improvement of our industrial condition.

We have to-day an opening in the British market for our cattle such as we have not had for twenty or thirty years, but we are prevented from getting the full advantage of that market simply because of the high ocean rates that are being charged; and what in that regard is true of cattle is true also of other commodities. Owing to the tariff wall which exists between the United States and this country we are prevented from selling cattle profitably across the line. There is a duty of as much as a cent to a cent and a half a pound, I understand, on lean cattle going into the American market. It does not pay to ship these cattle across the Atlantic at the rates fixed, although they are the class of cattle which are largely demanded by the British importers and would have a large market in Great Britain. We are restricted to the St. Lawrence route, to our Atlantic ports and our Pacific ports for the development of the trade of the country, but those ports will never be developed as they should, those industries will never prosper, unless by means of an adjustment of rates prevailing on the Atlantic we have an opportunity to compete successfully with other countries. Did time permit I could point out the effect of the present condition upon the chilled meat industry, which was lost to this country through American competition at one stage and which is lost to us to-day through competition from the Argentine and Uruguay, whence frozen meats can be shipped to Britain at the lower rates prevailing from those countries—rates fixed by this north Atlantic combine. If we are in earnest in the desire to build up Canadian industry, in seeking to develop our agriculture, lumber, mining, fishing resources, as well as our manufacturing industries, which are dependent

upon the development of the basic industries but equally dependent upon the markets they have abroad, I submit that we must take such steps as are possible at this time to reduce ocean rates.

Hon. gentlemen opposite say this is a small step; that it is inadequate; that it is not large enough to be effective. I would remind hon. members of the biblical narrative of David and Goliath. It was not the size of David or the size of the pebble that brought about the result that was effected at that time. It was the accuracy of the throw. It so happened that the aim that was taken was the right one; the giant was hit in a vital spot. If I am not mistaken, the pebble that has been thrown into the Atlantic by this much abused report of Mr. Preston and by the discussion which we are having in this parliament at the present time; the pebble that has been thrown into the Atlantic by the step which this government has taken, has stirred the waters of all the seas to the shores of every country to which the operations of this combine extend. We see to-night, after the representations which have been made to governments for many years past, the first really constructive and effective step to afford relief to the exporters of Canada and to further that development of our industries and trade which at this stage and at this particular time we all regard as so necessary and desirable.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, I had hoped until half an hour ago that there would be some termination within reasonable time of the marathon effort of the Prime Minister (Mr. Mackenzie King) and that I might follow him to-night, as I was, indeed, most anxious to do. But we are now past 10.35 and it would be unreasonable that I should expect to go very far. I think the convenience of the House would best be met if I moved the adjournment of the debate.

Motion agreed to and debate adjourned.

SUPPLY

DEPARTMENT OF LABOUR

The House in committee of Supply, Mr. Gordon in the chair.

Civil Government—Labour—salaries, $159,930; contingencies, $25,000.

Mr. ARTHURS: What is the explanation of the reduction in this vote?

Hon. JAMES MURDOCK (Minister of Labour): The hon. gentleman will notice that the number of employees has been reduced by five.

Mr. ARTHURS: Is that the total reduction in the inside service so far as this department is concerned?

Mr. MURDOCK: A reduction of five employees, yes.

Mr. ARTHURS: How many have been superannuated?

Mr. MURDOCK: One.

Mr. ARTHURS: That would be six in all?

Mr. MURDOCK: No, only one employee was superannuated during the past year. The positions of the others were abolished.

Item agreed to.

Conciliation and Labour Act, including publication, printing, binding and distribution of Labour Gazette, and allowance to correspondents, $35,000.

Mr. ARTHURS: What is the cause of the decrease in this item?

Mr. MURDOCK: The amount requested is $35,000, which is $11,000 less than the amount voted for the fiscal year 1924-1925. This appropriation is intended to meet the cost of printing, binding and distributing the Labour Gazette. From this appropriation also are paid the salaries of some sixty or seventy persons employed as correspondents, with salaries ranging from $125 to $300 per annum. Small payments are occasionally made from this vote also for special work done by way of rental surveys, statistics, or of conciliation and labour disputes, and travelling expenses for the same purposes. The opportunity to reduce this vote by $11,000 is largely due to a reduction in the cost of printing the Labour Gazette during the past year. The cost of printing the Labour Gazette has been reduced between $11,000 and $12,000 by the use of smaller type and a fewer number of pages. The publication has been more condensed, and there has been a saving during the year of some 350 pages.

Mr. ARTHURS: Will the minister give the number of correspondents in each salary class?

Mr. MURDOCK: I can give the hon. gentleman the entire list of correspondents if he would like me to read the names, or I could place it on Hansard.

Mr. ARTHURS: I want them by classes. I also want to know if there have been any changes in personnel this year, and if so, how many.

Mr. MURDOCK: The changes during 1924-1925 up to January 31st of this year are as follows:

Brockville: H. B. Burnham died in April, 1924, and was replaced by Mr. J. E. Wotherspoon, appointed in May, 1924.

Truro, N.S: F. W. Henderson, position abolished May 31, 1924. No appointment has been made.

New appointments for the year are as follows:

North Bay: H. P. Charlton, appointed July, 1924.
Springhill, N.S.: A. C. Mills, appointed August, 1924.

I might point out that the position at Truro was abolished. It was thought that Springhill, being a coal mining town, and not very far distant from Truro, that would be the best place to maintain a correspondent, and so Mr. A. C. Mills was appointed at Springhill in August, 1924.

Sudbury: Mr. W. H. Gougeon, appointed in June, reported for duty June, July and August, 1924, and resigned. Replaced by W. F. Keegan, appointed January, 1925.

These are all the changes among the correspondents for the year. I will put on Hansard for the benefit of my hon. friend a list of all the correspondents throughout Canada. The list follows:

LABOUR GAZETTE CORRESPONDENTS, FEBRUARY 1925

Location	Name	Annual Salary
Amherst, N.S.,	McCleave, H.	$150
Bathurst, N.B.,	Levasseur, M. H.	125
Beamsville, Ont.,	Sinclair, J. A.	200
Belleville, Ont.,	Harrison, Phillip	150
Brandon, Man.,	Fulcher, Edmund	150
Brantford, Ont.,	Dunn, Edward	200
Brockville, Ont.,	Wotherspoon, A.	150
Calgary, Alta.,	Stauffer, J. B.	200

Walkerville, Ont.,	Cole, W. H.	175
Winnipeg, Man.,	Howard, L. F.	No pay
Woodstock, Ont.,	Markey, John	150

Mr. JACOBS: Will the minister tell me who ever reads the Labour Gazette? Are there any subscribers and is anything received by the department from the subscribers?

Mr. MURDOCK: I have not a list of the subscribers here, but I am sure the amount received in subscriptions is not very large, because the Labour Gazette sells for only 20 cents a year. That price has been in effect for years. Of course, it does not begin to pay the cost of printing even a single issue.

Mr. JACOBS: What purpose does the Labour Gazette serve?

Mr. MURDOCK: I think that very many hon. gentlemen in this House and elsewhere throughout the country refer to the Labour Gazette and regard the information therein contained referring to wages, conditions of employment, prices, and so forth as fairly accurate. I think the Labour Gazette has won a name for itself in that respect. We find that some of the banks like to have it as is indicated by the fact that they subscribe for copies of the Labour Gazette to be sent to all their branches throughout Canada. I am not sure just how many banks do that, but I know that certain of them do.

Mr. LUCAS: How many copies of the Labour Gazette are issued?

Mr. MURDOCK: In January, 1924, there were 10,906 copies in English and 1,831 copies in French, or a total of 12,737 copies. It runs

along about that way all through the year, as we find in December there were 11,080 English copies and 1,825 French copies, or a total of 12,905.

Mr. IRVINE: Are these all distributed?

Mr. MURDOCK: Practically all. There would be a number of copies on supply, I could not say exactly how many but probably the usual number of copies that would be kept of any other government publication for possible future call.

Mr. BOYS: What company is printing the Gazette now?

Mr. CHAPLIN: How can you possibly get rid of 10,000 copies?

Mr. MURDOCK: One question at a time please. Answering my hon. friend from South Simoce (Mr. Boys) I may say the Labour Gazette is printed in the Government Printing Bureau.

Mr. JACOBS: Since when?

Mr. MURDOCK: I think since the January issue, 1924.

Mr. JACOBS: Before that time where was it printed?

Mr. MURDOCK: At a printing office in this city.

Mr. JACOBS: Why was that done?

Mr. MURDOCK: Different individuals might give different reasons. The reason generally advanced for printing it outside the Printing Bureau was in order to secure the union label on the Labour Gazette. In any case the fact is that for very many years after the Labour Gazette was first issued it was printed outside the Printing Bureau until January a year ago.

Mr. LUCAS: For how many years has the Gazette been printed?

Mr. MURDOCK: I do not know that I can answer that question offhand, but I should say about twenty years or more.

Mr. JACOBS: Is it now printed with the union label?

Mr. MURDOCK: No.

Mr. JACOBS: Why?

Mr. MURDOCK: Because the Government Printing Bureau does not use the union label on its printing.

Mr. JACOBS: Does that interfere with its circulation?

[Mr. Murdock.]

Mr. MURDOCK: No. I think that during the year 1924 we only heard one suggestion of remonstrance against the non-use of the union label.

Mr. CHARTERS: Is any effort made to secure additional circulation?

Mr. MURDOCK: Not to any extent, the reason being that with a charge of twenty cents a year it would not pay us to get out and canvass for subscribers.

Mr. CHARTERS: Why not increase the subscription price?

Mr. MURDOCK: That has been discussed on several occasions. I am not sure but that it might be advisable to add a reasonable increase, although it is held that if we did so many of the labour lodges would not subscribe to it. It is thought desirable to get the information that is in the Labour Gazette into the hands of labour generally throughout Canada, and therefore the price is put at the nominal figure of twenty cents. Whether right or wrong that is the view entertained.

Mr. BOYS: How are the correspondents paid? Are they paid according to the copy they send in, or what is the basis of their remuneration?

Mr. MURDOCK: They are paid an annual salary, somewhat proportionate to the importance of the place where the correspondent is located. I might give my hon. friend an indication of how the salary varies.

Mr. BOYS: Give us the extremes.

Mr. MURDOCK: I might mention Thetford Mines $150. The sum of $125 is the very minimum. We find $125 paid at Sherbrooke. Then at a place like Timmins, up in the mining region, the amount is $200, and at Halifax, N.S., $225. The salary paid at Trail, B.C. is $300, the understanding being that at Trail there is a pretty wide range of territory to cover, and there are a number of different little centres where it is necessary for the correspondent to get reasonably accurate information and send it in. That is the basis upon which the salary is determined.

Mr. BOYS: That is through the monthly report?

Mr. MURDOCK: The monthly report.

Mr. BOYS: Is the report sent in for a particular month or is that left to the correspondent?

Mr. MURDOCK: No the department expects the correspondent to send in a report each month.

Mr. JACOBS: Will the minister tell us what saving has been effected by having this publication printed at the bureau instead of parties outside?

Mr. MURDOCK: Well there was a difference between the printing of the Labour Gazette in the Printing Bureau in 1924 and the outside printing in 1923. In saying that I am taking into consideration the smaller type now used, because we changed the type used in printing the Labour Gazette from 10 point to 9 point type when we started to print it in the bureau. Then we condensed the report, there were a smaller number of pages than in 1923, so that there was a saving for the year of $13,704.31.

Mr. CHARTERS: It was really a saving in the paper used, not in the composition?

Mr. MURDOCK: Yes there is less paper. In the annual bound report I think there are about 346 pages less. Smaller type is used and there are fewer pages. There is not as much matter in the Labour Gazette now.

Mr. BOYS: Has there been a saving in the cost of printing? I can understand there would be a saving in the matter of paper, but I cannot understand how there would be any saving in composition?

Mr. MURDOCK: There would not be a saving in composition for a page merely, but there would be a considerable saving in paper.

Mr. BOYS: I think the minister pointed out that there was a decrease of $11,000, so practically that would be accounted for by the very item we are now discussing?

Mr. MURDOCK: Yes.

Mr. BOYS: It seems to me, if my memory serves me correctly, that in 1922, it may have been 1923, there were some questions asked the minister regarding a contract he then made with, I think, a new corporation. If I remember rightly I think he gave a very good reason for the change; I think he was very frank and said it was on account of some very good Liberals. I am not finding any fault with that statement now, but what I should like to know is if it is a fact that this saving of $11,000 is the difference between the present cost of printing the Labour Gazette at the Printing Bureau and the amount he was paying the firm with whom he made that contract in 1922 or 1923—I forget the exact year?

Mr. MURDOCK: No, I think my hon. friend is just a little off as to the facts. A contract was given to an outside firm to print the Labour Gazette in 1922 on the same basis on which it had been printed for many years, all during the term of the government my hon. friend supported, only in a different form—the basis of payment was identically the same but the bureau rates, I think, were 10 per cent less.

Mr. BOYS: The minister misunderstood me. I did not charge him with paying any more to this company he dealt with in 1922 than had been paid previously; what I was trying to find out was whether the saving of $11,000 is due to the fact that the Gazette is printed at the Printing Bureau. Taking into consideration the smaller type that we have now does that account for it?

Mr. MURDOCK: I am told it does to some extent but not altogether. I am informed by responsible officers of the Printing Bureau that they are able to print the Labour Gazette more cheaply than any outside concern could. The reason is this: The Labour Gazette is a monthly publication; the copy for the publication is coming in from time to time, and it can be used in the Printing Bureau as a very nice filler to fill in on certain of the machines when they might otherwise for a time be idle. The officials at the Printing Bureau tell me it is valuable to have it in that way and they can turn it out possibly more acceptably and cheaply than an outside concern could. Then there is the cost of the paper, and I am told, the smaller type and several other factors that enter into the decreased cost of some $11,000.

Mr. BOYS: Did the former contract expire last year?

Mr. MURDOCK: No, it ran only from month to month at the pleasure of the department, or the minister, I forget which.

Mr. BOYS: Was it the department or the contractor that terminated the contract?

Mr. MURDOCK: The department.

Mr. CHARTERS: What was the reduction in size?

Mr. MURDOCK: In January, 1923, there were 120 English pages, while in January, 1924, there were 89 English pages. In January, 1923, there were 132 French pages, and in January, 1924, 92 French pages. In October, 1923, there were 127 English pages and in October, 1924, 93 English pages. In October, 1923, there were 136 French pages and in October, 1924, 103 French pages, and so on throughout the year.

Mr. CHARTERS: That would account for a good deal of the saving?

Mr. MURDOCK: Yes.

Mr. IRVINE: Is a reduction in wages involved in this $10,000 reduction?

Mr. MURDOCK: No.

Mr. IRVINE: On what is this vote expended? Does it include anything at all except the mechanical work, setting of type and so on? Does it include the gathering of statistics?

Mr. MURDOCK: It is thought that on account of the smaller number of copies of the Labour Gazette and the lower cost of printing, we can estimate a saving in this vote of about $11,000 a year, and so the vote has been reduced accordingly.

Mr. IRVINE: I am not quite clear what is involved in this expenditure. Is it purely for the publication, setting of type, printing of paper and so on, or does it involve the gathering of statistical information?

Mr. MURDOCK: My hon. friend possibly did not hear me when I read this before. I will read it again. The amount requested, $35,000, is $11,000 less than the amount voted for the fiscal year 1924-25. The appropriation is intended mainly to meet the cost of the printing, binding and distribution of the Labour Gazette. From this appropriation are paid the salaries of some sixty to seventy persons employed as correspondents, with salaries ranging from $125 to $300 per annum. Small payments are occasionally made from this vote also for special work done by way of rental surveys, statistics or of conciliation in labour disputes; travelling expenses for the same purpose are met from this vote. Owing to new methods and closer supervision of the printing and distribution of the Labour Gazette, it is thought that the appropriation could be safely reduced by the above figure.

A detailed statement of expenditure for the fiscal year 1923-24 to March 31, 1924, is as follows:

Correspondents' salaries..	$ 9,999 84
Travelling expenses..	256 40
Services, fees, etc..	890 90
Printing and stationery..	36,709 49
Sundries..	2,109 95
	$49,966 58

A detailed statement of expenditure for ten months 1924-25, to January 31, 1925, is as follows:

[Mr. Murdock.]

Correspondents' salaries..	$ 8,355 64
Services, fees, etc..	390 00
Printing and stationery..	14,169 52
Sundries..	2,050 52
	$24,965 68

Mr. CHAPLIN: The minister told us a few moments ago that some 11,000 copies of this publication were printed. Is there not some way of cutting down expense in this connection?

Mr. JACOBS: To abolish it altogether would be the best way.

Mr. CHAPLIN: I agree with the hon. member that cutting it down a great deal or almost abolishing it would suit me, but it seems ridiculous that 10,000 or 11,000 copies of this paper have to be sent out. I know many members who get them never read them. There is in them plenty of information that could be put in some other publication. The minister claims that he is saving a great deal of money. I have been looking over some old estimates, and I notice that in 1920 this department got along with $35,000 for this item. I will read it for the edification of the minister:

> Conciliation and Labour Act, including publishing, printing, binding and distribution of the Labour Gazette and allowance to correspondents, and to provide for the payment of the salary of the private secretary of the minister.

The private secretary salary is not in there this year, and I presume there is another vote for it.

Mr. MURDOCK: That seems to be the vote at that time. When I came into office, my recollection is that the vote was $50,000. It was reduced last year by $4,000, and this year we are reducing it by $11,000, or bringing it back to what my hon. friend shows it to have been in 1919-20 and in 1918-19.

Sir HENRY DRAYTON: I think the hon. member for George Etienne Cartier (Mr. Jacobs) asked what was paid to the representative at Sydney and I do not think that was answered. It would strike me that he would be a very busy agent and it would be interesting if we had his correspondence. Is he still working on it now?

Mr. MURDOCK: We have no representative at Sydney.

Sir HENRY DRAYTON: Would that not be a most important place to have one?

Mr. MURDOCK: I do not think so. We have, of course, had an officer at Sydney on two or three occasions. Possibly twice during the last year we had an officer at Sydney.

Sir HENRY DRAYTON: If the idea is to help in labour matters would it not be a good thing to have the work done where there is real necessity for it? If there is one place where such work is needed it is at Glace Bay.

Mr. MURDOCK: I agree that there is no place in Canada where there is greater necessity for work to be done than in the vicinity of Glace Bay, and that has been the condition for several years. But no one knows better than my hon. friend what the extent of authority of the Labour department is in a matter of this kind. I can assure him, however, that we took every possible step that could have been taken. My hon. friend will agree with that, I think. And even when the Industrial Disputes Investigation Act was declared ultra vires we endeavoured to form a board which we hoped would be able to assist in bringing about harmony and co-operation and if possible a settlement.

Mr. BOYS: You have as much authority there as anywhere else in Canada.

Mr. MURDOCK: Under certain conditions possibly, yes; under other conditions, as my hon. friend knows, we have not.

Mr. BOYS: I know that, and I should like to have an explanation.

Mr. MURDOCK: In the steel plant at Sydney or at New Glasgow or at the Sault, if a dispute occurred years ago before the act was placed in its present position we should never have claimed any authority to deal with the trouble. If by offering our friendly offices we could do anything to promote harmony we would do it. But as to authority, we had none and never claimed to have it. As to the dispute in the coal mines, it was held to come under the provisions of the Industrial Disputes Investigation Act; but as my hon. friend knows, that is altogether a matter of uncertainty. It has been merely a question of trying to do whatever appeared possible to bring about a settlement.

Mr. IRVINE: I have been considering the Labour Gazette from the standpoint of education. I do not know whether this is any part of its function, but if it is not I cannot see that the Gazette has any function. I should think that its chief function would be to gather information of a sociological character.

An hon. MEMBER: Sociological?

Mr. IRVINE: An hon. gentleman opposite evidently has not heard that word; it is really one of the most important words to-day, for sociology is a coming science. I should like to think that the Labour Gazette was trying to perform a service along that line, and I do not think that there is any place in Canada where the labour problem is more acute than it is in that part of the Maritime provinces. Certainly the labour problem has not been more acute in the past few years anywhere than in the point which has been mentioned, and I should think that it would be eminently advisable to have a representative of the Labour Gazette there, who, even though he might not be permanent, could obtain all the data and information bearing upon the particular social phenomenon that we see there now. That information would be indispensable to the Labour department. I hope the minister will consider putting one of his officers there to collect such facts as are relevant to the whole matter, if that is part of the function of the publication.

Mr. MURDOCK: The hon. gentleman may be under a misapprehension. There is a Labour Gazette correspondent at Sydney but his duty is not to write on sociological questions; it is confined to the securing of prices and to the giving of advice from time to time as to labour unrest or labour conditions generally. He deals only with such facts as are apparent and in evidence. There has been a Labour Gazette correspondent although he is not regarded as an employee of the department. He might be called a part time employee from the fact that every month he sends in a report to the department. Presumably he is collecting or verifying material for the report during the rest of the month.

Mr. IRVINE: What is his qualification? Is he appointed from the standpoint of a journalist?

Mr. MURDOCK: In a number of cases. I think I am safe in saying, our best correspondents have been or are journalists; in other cases they have been representatives of labour for a number of years in some local capacity, having shown a sympathetic ability to grasp the questions with which they have to deal. I am not sure how many, but possibly there are six or eight or more newspaper men.

Mr. IRVINE: Is there any connection between the Department of Labour and the Bureau of Statistics? Is there any duplication of work?

Mr. MURDOCK: In some respects there is a degree of co-operation between the two departments. The Conciliation and Labour Act, as my hon. friend knows, defines the duties of the Labour department in regard to certain statistics on labour matters. These figures and facts have always been collected

by the Department of Labour. There is an able staff in the department who can more sympathetically and with greater accuracy compile them. The figures in regard to prices are brought into the Labour department and then they are passed over to the Bureau of Statistics where they are analyzed and compiled and issued each month. They are later copied into the Labour Gazette and become part of the official record. There is co-operation in that way.

Sir HENRY DRAYTON: I would suggest, Mr. Chairman, that the item should now pass and that my hon. friend should report progress.

Item agreed to.

Progress reported.

On motion of Mr. Macdonald (Pictou) the House adjourned at 11.30 p.m.

Wednesday, March 18, 1925

The House met at three o'clock.

REPORT

First report of the select standing committee on Railways, Canals and Telegraph Lines.—Mr. Cahill.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

ROYAL WINTER FAIR

Mr. SIMPSON:

1. How much is the grant at present being given by the Department of Agriculture to the support of the Royal Winter Fair at Toronto?
2. Is it the intention to give a further grant to this exhibition in addition to the above?
3. Is any part of the amount appearing in the general estimates of the Department of Agriculture No. 52, Live Stock, intended for this purpose?

Hon. Mr. MOTHERWELL:

1. Main grant, $25,000 per annum; grant to fox show, $2,000 per annum; grant in lieu of supplying judges, $1,200 per annum.
2. The matter is at present under consideration.
3. No.

CHAMPLAIN DRY DOCK, LAUZON

Mr. BOURASSA:

1. Is it the intention of the government to put an elevator in the building next to the Champlain dry dock at Lauzon, for the use of workmen of that locality?
2. If so, is it the intention of the government to have said elevator in operation next summer?

[Mr. Murdock.]

Hon. Mr. KING (Kootenay):

1. No.
2. See answer to No. 1.

CANADIAN GOVERNMENT MERCHANT MARINE

Hon. Mr. STEVENS:

1. Since his appointment, in connection with the North Atlantic ocean freight rates question, has W. T. R. Preston carried on any negotiations, verbal or otherwise, for the sale or leasing, or chartering of the ships of the Canadian Government Merchant Marine to any Norwegian, British or other European interest?
2. If so, with whom and if in writing, will the government immediately table the correspondence?
3. Has the government received any proposals from any source for the sale or chartering of a part, or the whole, of the fleet of the Canadian Government Merchant Marine?
4. If so, from whom?
5. If any negotiations have been entered into, are they under consideration at the present moment, and is there any likelihood that the Canadian Government Merchant Marine fleet will be disposed of in the near future?
6. If any negotiations are being carried on, are they contingent in any way upon the resolution now standing in the name of the Minister of Trade and Commerce in approval of a certain agreement entered into with Sir William Petersen?

Hon. Mr. LOW:

1. No.
2. Answered by No. 1.
3. Yes.
4. It is not judicious or desirable at the present time that the details of the offer nor the names of the persons interested should be made public.
5. Answered by No. 4.
6. No.

CANADIAN GOVERNMENT MERCHANT MARINE

Mr. BLACK (Halifax):

1. Have any of the steamers of the Canadian Government Merchant Marine ever been sold?
2. If so, what are the names of said ships?
3. At what price were they sold?
4. Have they been paid for in full?
5. If not, what balance of the purchase money is still due?
6. How is this balance, if any, secured?

Hon. Mr. GRAHAM:

1. Yes.

2 and 3. T. J. Drummond, $110,000; J. A. McKee, $110,000; Sheba, £17,000; Canadian Settler, $140,000; Canadian Logger, $100,000; Canadian Miner, £20,000; Canadian Sealer, £20,000.

4. The Canadian Miner, Canadian Sealer and Sheba were sold on a cash basis and were paid for in full on delivery of the steamers to the purchasers. The T. J. Drummond, J. A. McKee and Canadian Logger were sold on the basis of $20,000 cash, balance to be paid in five years in equal annual payments at 6 per cent interest. Canadian Settler was sold on

the basis of $25,000 cash, balance to be paid in five year in equal annual payments at 6 per cent interest. The cash payment was made, but the purchaser finding it impossible to meet his other payments, the Canadian Government Merchant Marine has repossessed the vessel.

5. T. J. Drummond, $72,000; J. A. McKee, $72,000; Canadian Logger, $80,000.

6. The balance of the purchase money outstanding in each case is secured by statutory mortgage on the steamer which is accompanied by an indenture containing protective clauses in favour of the Canadian Government Merchant Marine, Limited.

VANCOUVER HARBOUR COMMISSION

Hon. Mr. STEVENS:

1. Has the Board of Harbour Commissioners Vancouver, been authorized to purchase a new harbour boat? If so, for what purpose, and what will be the total cost?

2. Will the cost of said boat be paid out of revenue of the harbour?

3. Is the said boat being built under contract? If so, by whom?

4. Were tenders called for, and if so, how many tenders were received and, from whom were they received, and what was the lowest tender?

5. Is the harbour commission in possession of a pleasure cruising launch which has in the past been used for patrol work?

Hon. Mr. CARDIN:

1. No.

2, 3 and 4. Answered by No. 1.

5. The harbour commissioners are in possession of a service boat formerly the patrol launch Fispa.

VANCOUVER HARBOUR COMMISSION—GOVERNMENT LIABILITY

Mr. CLARK:

1. What is the total liability of the Vancouver harbour commission to the Dominion government?

2. What amount of the above total has been expended on the development of the north shore of the harbour?

3. What was the total amount voted the Vancouver harbour commission by the Dominion government during 1924?

4. What amount of this total was specifically allotted for the development of the north shore of the harbour?

5. What are the items for which the above allotment was made?

6. What is the total expenditure of the 1924 allotment, if any, to date on the north shore.

7. What items do the total expenditures of the above allotment, if any, cover on the north shore, with cost of each item?

Hon. Mr. CARDIN:

1. At December 31, 1924, $10,136,900.

2. None.

3. $5,000,000.

4. $581,000.

5. Lumber assembly wharf, terminal railway development.

6. Nothing. The work has been delayed consequent on the delay in completion of the Second Narrows bridge.

7. Lumber assembly wharf, $317,000; Terminal railway development, $264,000.

VANCOUVER HARBOUR COMMISSIONERS—DELEGATION TO ORIENT

Hon. Mr. STEVENS:

1. Has the Vancouver Board of Harbour Commissioners appealed to the government for permission to send a commercial delegation to the Orient?

2. If so, will such delegation carry with it the endorsement of the Trade and Commerce Department, or any other department of the government?

3. Are the expenses of the said delegation or commission being paid out of the revenue of the Harbour Commission? If not, in what manner?

4. Has the personnel of the said commission been decided upon? If so, who are they and what secretarial staff will accompany it?

Hon. Mr. CARDIN:

1. No.

2, 3 and 4. Answered by No. 1.

CANADIAN NATIONAL RAILWAYS—ENGINES

Mr. SENN:

1. Were any fire engines purchased by the management of the Canadian National Railways since the first of January, 1924?

2. If so, how many?

3. What were the prices paid?

4. From whom were they purchased?

5. Were they purchased by tender?

6. If so, did the Bickle Fire Engines Company, Limited, of Woodstock or any other Canadian company tender?

Hon. Mr. GRAHAM:

1. Yes.

2. 12.

3, 4, 5 and 6. Firms invited to tender were:
American La France Fire Engine Company,
Bennet & Wright Company,
Bickle Fire Engine Company,
Booth, Coulter Copper & Brass Company,
Estey & Company,
Garth Company,
McDonald Manufacturing Company,
W. J. McGuire & Company,
Pyrene Manufacturing Company; and order was placed with the Canadian Branch of the American La France Fire Engine Company who quoted lowest price for satisfactory machine of standard type for prompt delivery.

MARINERS' SICK BENEFIT

Mr. CHURCH:

Is it the intention of the government to introduce legislation this session to include seafarers in the coastal and inland waters of Canada in the Mariners' Sick Benefits? If not, why?

Hon. Mr. BELAND: No. The men employed in the coastal and inland waters service of Canada are not seafarers and no sick mariners' dues are paid on their account.

MONEY VOTES—AGRICULTURE: UNEMPLOYMENT

Mr. CHURCH:

1. What votes were made during the past five years of record for (a) live stock; (b) health of animals; (c) other agricultural purposes?

2. What votes were made for the relief of unemployment for each of the said years?

Hon. Mr. MOTHERWELL:

1. (a)

1920-21	$1,325,000 00
1921-22	1,000,000 00
1922-23	1,060,000 00
1923-24	1,230,000 00
1924-25	1,280,000,00

(b)

1920-21	1,320,000 00
1921-22	1,710,000 00
1922-23	1,886,410 00
1923-24	2,250,000 00
1924-25	2,000,000 00

These figures include the cost of meat and canned food inspection.

(c)

1920-21	$3,121,000 00
1921-22	3,302,139 50
1922-23	3,423,600 00
1923-24	3,650,500 00
1924-25	2,694,000 00

Civil government items are not included in any of these figures.

2.

1920-21	$ 500,000 00
1921-22	500,000 00
1922-23	1,300,000 00
1923-24	5,700 00
1924-25	Nil

QUEBEC HARBOUR COMMISSION

Hon. Mr. STEVENS:

1. To what extent has the Board of Harbour Commissioners, Quebec, overdrawn its appropriation as provided for by parliament?

2. Is it true that the said Board of Harbour Commissioners of Quebec have overdrawn to the extent of $4,500,000? If so, how is it proposed to provide for this sum?

3. Have the said harbour commissioners of the port of Quebec paid interest on the amounts borrowed from the Dominion government under various appropriation bills? If not, what is the total amount of the said accrued interest to date?

Hon. Mr. CARDIN:

1. To no extent.

2. No.

3. Some payments have been made on account of interest and sinking fund on the old indebtedness incurred for expenditure made in the development of the harbour of Quebec, partly by the Department of Public Works and partly by the harbour commissioners, but all charged against the harbour commission. This old expenditure was prior to the organization of the commission on the present basis, in 1913. Since the commission was organized on its present basis a total of $8,426,800 has been advanced to the harbour commissioners for harbour improvements, and on which no interest has been paid. The accrued interest on the total advanced amounts at this date to approximately $1,980,000. Against this accrued interest the commissioners hold contra accounts against the Dominion government for services rendered which will largely offset the total accrued interest.

SOLDIER SETTLEMENT BOARD STAFF

Mr. KNOX:

1. In the reduction of staffs of the Soldier Settlement Board, is it the intention of the government to give preference in the retention of employees to married men with wives and families dependent upon them?

2. Is the government aware that in said staff reduction, men are being transferred from one office to another, to the detriment of men who have remained in that locality and who are compelled to give place to strangers?

Hon. Mr. ROBB:

1. Yes. In reduction of staffs the principle is one of efficiency first. Other things being equal, men with dependents are given preference.

2. The entire staff of the board is regarded as a unit. Efficiency, seniority and other qualifications are considered from a Dominion and not from a local point of view. Transfers from one office to another are therefore unavoidable and beneficial.

Mr. KNOX:

1. How many married men employed by the Soldier Settlement Board have been discharged between January 1, 1924, and January 1, 1925?

2. How many unmarried men?

3. How many married men remained on the staff?

4. How many single men?

Hon. Mr. ROBB:

1. 51.

2. 27.

3. 355.

4. 71.

AGRICULTURAL GAZETTE

Mr. SPENCER:

1. Why has the Department of Agriculture to stop publication of the Agricultural Gazette which, among other sections included one dealing with institute

matters, confining its publication only to occasional special bulletin and annual reports?

2. Have subsidies been paid to the press instead, and, if so, what have been the amounts of the contributions for each branch and to each named newspaper, during the last three years?

3. What does it cost to publish the crop reporting information disseminated by the Institute branch?

Hon. Mr. MOTHERWELL:

1. The Agricultural Gazette was originated at the time grants were first paid to the provinces under the Agricultural Instruction Act, and the publication of this periodical formed part of the whole scheme for assisting the provincial departments of agriculture in connection with agricultural education. One section of each issue of the Gazette was devoted to provincial activities assisted by the Federal grant.

When the Agricultural Instruction Act expired, and no further grants were paid to the provinces in this connection, one of the chief reasons for the publication of the Gazette no longer existed, and it was therefore decided to discontinue publication.

2. No.

3. Nil.

ADVANCES OUTSTANDING TO BANKS

Mr. SHAW:

1. What were the advances outstanding under the Finance Act to the banks on 1st March, 1925?

2. What was the rate of interest paid on such advances on the said date?

3. What was the total amount of outstanding advances by the banks to the Dominion government on the 1st March, 1925?

4. What rate of interest did the banks charge on such advances on the 1st March, 1925?

Hon. Mr. ROBB:

1. $21,300,000.

2. 4¼ per cent.

3. Nil.

4. Answered by No. 3.

DEPUTY MINISTER OF FINANCE

Mr. GARLAND (Bow River):

1. What is the total amount of salary paid to the Deputy Minister of Finance?

2. What is the total amount of salary paid to the Secretary of the Treasury Board?

3. Why was it considered necessary to appoint a Secretary of the Treasury Board?

4. Why was it considered necessary to provide an Assistant Secretary of the Treasury Board at a salary of $4,500 per annum?

5. Were the duties of Secretary of the Treasury Board not heretofore performed by the Deputy Minister of Finance on a salary of $10,000 per annum?

Hon. Mr. ROBB:

1, 2, 3, 4, & 5. Explanation of the items for Secretary of the Treasury board and Assistant Secretary of the Treasury board will be made when the estimates of the department are under discussion.

WHARF AT COCAGNE CAPE, N.B.

Mr. DOUCET:

1. What was the total cost of the construction of a wharf at Cocagne Cape, Kent county, New Brunswick?

2. What was the amount of contract?

3. What amount was paid for extras?

Hon. Mr. KING (Kootenay):

1. $13,832.43 final estimate including extras.

2. $12,910, based on approximate quantities.

3. $430.80.

CANADIAN NATIONAL RAILWAYS—OFFICIALS' TRANSPORTATION

Mr. JONES:

When transportation is issued by the Canadian National Railways to officials of other departments of government is any charge made by the railway for the same against such departments?

Hon. Mr. GRAHAM: No free transportation is provided government employees except as authorized by law; all other officials buy their transportation in the ordinary way.

HOMESTEAD INSPECTORS

Mr. McQUARRIE:

1. What homestead inspectors under the Dominion Lands Service at Edmonton have been discharged from the service during the past two years, and for what reasons were they discharged?

2. What homestead inspectors have been appointed in the same district during the past two years and what are the dates of the several appointments?

3. Were the last mentioned appointments made by the Civil Service Commission after competition from within the service, and

4. If such appointments were not made by the Civil Service Commission after competition, how were the said appointments made and what are the dates of said appointments?

5. Have the persons so appointed reported for duty and are the said persons now engaged in the discharge of the proper duties pertaining to the said appointments?

6. Has one Joseph Driscoll been appointed a homestead inspector?

7. If so, how was the said Joseph Driscoll appointed, and if so,

8. What is the date of his appointment?

9. Is the said Joseph Driscoll now in the discharge of his proper duties as a homestead inspector?

Hon. Mr. STEWART (Argenteuil):

1. None discharged, but under reorganization of Dominion Lands Administration substantial economy effected by reduction of staff. All those retired received full benefits to which their period of service entitled them under the provisions of the Public Service Retirement Act.

Inspection service, Edmonton district, reduced by five inspectors:—3 retired under provisions of Public Service Retirement Act; 1 resigned; 1 transferred.

2. No temporary or permanent appointments have been made, but to cope with emergent situations arising from unexpected rush of business, needed help, when not procurable by transfer from permanent staff, has been supplied by emergency engagements under Civil Service Act, Section 23 (4).

3. Not necessary.

4. Answered by No. 2.

5. One inspector, presently engaged for thirty-day period, as explained in answer to question No. 2 Understand he is performing proper duties.

6. No.

7, 8 and 9. Answered by No. 6.

POST OFFICES BUILT 1922-24

Mr. DESAULNIERS:

1. How many post offices were built during the years 1922, 1923 and 1924, respectively?

2. How many were built in each province and what was the total cost of said post offices by provinces?

Hon. Mr. KING (Kootenay):

1 and 3. 1922, none; 1923, 1; 1924, 2.

2. New Brunswick, 1, Sackville, $37,195.14; Quebec, 1, Terebonne, $36,598.59; Ontario, 1, Alexandria, $39,544.40.

ST. JOHN AND QUEBEC RAILWAY

*Mr. HANSON:

Has the government, as intimated in the Speech from the Throne of His Honour the Lieutenant-Governor of New Brunswick on the 12th instant, agreed to take over from the province of New Brunswick the St. John and Qubeec Railway?

Hon. Mr. GRAHAM: I may as well answer this question now. Strong representations have been made time and again by the government of New Brunswick, as well as by members from that province, in regard to the advisability of the Canadian National Railways taking over the St. John and Quebec Railway. So far no agreement has been reached in the matter.

UNOPPOSED MOTIONS FOR PAPERS

MR. SAM PRENTER

Hon. Mr. MANION (for Hon. Mr. Stevens):

For a copy of all correspondence between R. E. Beattie, or Fergus McDonald of Vancouver, and the Minister of Public Works, relative to the proposed retirement of Mr. Sam Prenter from the Board of Harbour Commissioners, Vancouver, British Columbia: also, all correspondence between any persons in Vancouver, British Columbia, and the Minister of Public Works, or any minister or official of the government, relative to retirement of said Mr. Prenter, or other members of the Vancouver Board of Harbour Commissioners.

[Mr. C. A. Stewart.]

BRITISH ORIENTAL GRAIN COMPANY

Hon. Mr. MANION (for Hon. Mr. Stevens):

For a copy of agreement between the Vancouver Harbour Commissioners and the British Oriental Grain Company, relative to the acquisition of No. 3 elevator, Vancouver, British Columbia, together with copy of lease or other documents pertaining thereto; also, copy of correspondence between the harbour commissioners and said British Oriental Grain Company.

PRISON REFORM

Mr. SPEAKER: Miss Macphail moves, seconded by Mr. McDonald (Timiskaming)—

Mr. McDONALD (Timiskaming): Mr. Speaker, I am not seconding this motion.

Mr. SPEAKER: Miss Macphail moves, seconded by Mr. Shaw:

That, in the opinion of this House, it is desirable in the administration of penitentiaries to provide:—

1. Sufficient productive work to keep the inmates employed.

2. That a share of the proceeds go to provide for dependents and in case of no dependents such share shall be held in trust until release.

Miss AGNES C. MACPHAIL (Southeast Grey): Mr. Speaker, it is rather a bad start possibly when the hon. member, who sits to my right (Mr. McDonald), so vigorously tells the House he is not seconding my motion.

It is my desire in this resolution to so amend the administration of penitentiaries as to provide: First, sufficient productive work to keep the inmates employed; and, second, that a share of the proceeds go to dependents, and in case of no dependents such share to be held in trust until release.

A very great change has come about in public opinion regarding penitentiaries, their use and administration, yet the Penitentiary Act to-day does not substantially differ from that passed in 1868. This was the conclusion reached by the committee of three appointed by the Right Hon. C. J. Doherty, Minister of Justice, to advise upon the revision of penitentiary regulations and amendmnt of the Penitentiary Act, which committee reported on February 28, 1921. It seems to me that penitentiaries should serve two purposes: First, to protect society by confining within their walls those who have proven anti-social in outlook and action; second, to remake men, changing anti-social into social beings, and thus protecting society and adding to the fullness and joy of life. Productive work with pay I believe to be the chief remedy needed.

Mr. SPEAKER: Order. There is too much conversation going on in the House. I can hardly hear the speaker.

Miss MACPHAIL: Productive work with pay I believe to be the chief thing needed

to make the penitentiaries what they really should be. We must recognize that the prisoner is the logical outcome of ignorance and wrong thinking. We should therefore treat him as a patient and not as a victim. I believe that the state should be above vengeance. That opinion is held by eminent men who have had years of experience in dealing with prisoners and in penitentiary work. Thomas Mott Osborne, former warden of the Sing Sing penitentiary, speaking recently in Montreal, is reported in the Montreal Gazette of Wednesday, February 18, 1925, to have said that:

> In his opinion the principle of deterrent by fair treatment of the prisoner was the only principle of use in a penal institution. He thought that the great punishment that comes to a prisoner is the loss of his liberty and the stamp of society's disapproval. Retaliation by the state he condemned.

In the report to which I have already referred, made under the administration of the Right Hon. C. J. Doherty by a commission composed of Mr. Biggar, Mr. Nickle, and Mr. Draper, it is stated:

> It is necessary to eliminate wholly the idea of vengeance, not on humanitarian grounds or because of its painful consequences to the individual, but solely because of its stupidity and on grounds of common sense.

And again:

> Almost all the inmates of the penitentiaries must, before they die, be returned to freedom, and each prisoner on his release shall be called upon to live the ordinary life of a free man. Society must inevitably suffer if during his term a convict's spirit has been broken, if his habit of industry, if it existed, has been suppressed, and to the extent that his morals have been corrupted by prison association. It is ridiculous that society should store up trouble for its honest members, weaken itself and involve itself in large and unnecessary expenditure.

That is the conclusion reached by the three gentlemen composing the commission. To that, may be added the testimony of very many eminent citizens of the United States. I shall give only a few. William H. Moyer, reporting on prison discipline to the Prisons Association of all the states of the Union held in New York in 1919, said:

> It is now pretty generally conceded that one of the primary objects of imprisonment is reformation of the individual. If it is to succeed he must receive training instead of discipline, a careful and effective preparation for right living after release and the imprinting of an earnest and an honest desire to become a useful and law-abiding citizen. If we could more fully understand that the trouble in most cases is due largely to the lack of proper early training along right lines, we could more readily appreciate that what the offender needs is training not punishment for the lack of it.

Brigadier-General Hughes, Superintendent of Penitentiaries in Canada, in a letter to Tom Moore, president of the Trades and Labour Council of Canada, said:

> From crude, crooked and waste materials the task of the penitentiaries is to turn out as their product good citizens.

The Prisoners' Welfare Association of Canada, through their secretary, John Kidman, believe similarly that we should try to reclaim the prisoner rather than punish him.

Again, General Hughes in his report of 1921, says:

> It has also been demonstrated that seldom is a conversion to virtue obtained through punishment. Physical force can check or temporarily restrain various forms of evil, but usually at the cost of rendering them still more intense and permanent.

And again in his 1923 report he emphasized this by saying:

> I have looked in vain for one example of true conversion to virtue through punishment.

I believe that in order to make good citizens in our penitentiaries we must have productive work, and that that work, when well done, should be rewarded. This is not a new thought; it too is held in common by the Superintendent of Penitentiaries for Canada, the wardens of the different penitentiaries and by the committee that reported in 1921. General Hughes in his report of 1921, page 15, says:

> In order to make good citizens of the hundreds of young men now pouring into our penitentiaries, institutions should be provided for their proper segregation and classification, together with suitable government work in sufficient quantities to keep them continually and usefuly employed. It would be an easy matter in a very few years to make the penitentiaries not only self-sustaining but to pay each inmate a small wage for labour satisfactorily performed. Tremendous advancement has been made in the last two years, but it is only a beginning of what should be done.

Again he says:

> Inmates must work if any progress is to be made toward making them better citizens. It is needless to attempt to reform them if they be kept in idleness or made break stone.

He stresses this over and over again, in sometimes quite strong language. He says:

> Nothing ever written regarding the "stone pile" was to my mind sufficiently severe and I never look at the men at this work that I do not wish I could place those responsible for the necessity of its existence in their places. It is a matter of choice between idleness and stone piles, the lesser of the two evils, the stone pile.

The exact recommendation in regard to work with pay, made by this committee of three, is as follows:

> The committee, therefore, most emphatically recommends statutory provision to provide productive labour for all convicts. . . . The mere provision of work is not, in the opinion of the committee, sufficient. That the heaviest penalty for a crime is paid not by the criminal

but by his dependents has been chiefly emphasized before the committee, not by philanthropists and charitable workers, but by judicial, police, and penitentiary officials of good standing.

Their conclusion is:

If anything but evil is to follow from punishment by imprisonment for long terms it is, in the opinion of the committee, essential that such provision should be made as will allow the convict to earn at least something toward the support of his dependents during his confinement or of himself after his release.

The Hon. Albert E. Smith, governor of the state of New York, addressing this same American Prisoners' Association in 1919, said, on October 20 of last year:

If the state is interested in returning the man or woman to society as useful citizens it will never be able to do it unless during the period of confinement their minds are occupied by what they are able to do in life. We all know what work means, what satisfaction it brings to a person at the close of a day to say, here is what I have accomplished to-day. That is true of people in prisons just as it is of individuals out in the world.

I think it is very much truer of people in prison than it is of us who have our freedom, who have many other things to interest us and make each day worth while. If the men in our penal institutions were interested in some form of labour that would employ both their hand and their brain it would undoubtedly make the task of discipline a very much easier one. Authority after authority has come to that conclusion. I will quote one, Mr. Moyer, whom I quoted before. Addressing the American Prison Association, he said:

We believe that training both the mind and hands of the prisoner along useful lines offers the best and surest method of redeeming such as are redeemable.

The president of the association, Mr. F. M. Spurr, said:

Being a convict should not rob a man of his right to work, nor rob him of a fair recompense for his labour, after the cost of his maintenance is met. . . . Some fair pay given for their labour should so stimulate them as to make discipline fairly easy.

How can we expect to turn out from our penal institutions honest, law abiding citizens if we treat them in such a way as to make them feel we have not been strictly honest with them while they were there? The warden of St. Vincent de Paul penitentiary in his report in 1923 emphasizes very strongly the need of work and the need of recognizing good work with pay. The superintendent had mentioned the setting aside of a fund to pay a small sum to the working and deserving inmate, and the warden of the penitentiary emphasized this by saying:

In the case of a married man it would in many cases help to keep the fireside going and possibly prevent the ruination of his wife and family through outside influences over which they may have little or no control. . . . The feelings or the state of mind of an inmate who has paid his debt to society and who on being discharged returns to his home and finds it ruined or in a state of chaos can easily be imagined. Can one reasonably expect that his incentive to become a better citizen would be strengthened?

Instead of requesting the appropriation by parliament of a fund, he suggests that work be given by the different government departments to the penitentiary service, and his experience has taught him that by so doing it will be possible to defray the whole cost of such an outlay or even to make a surplus. Conditions are very difficult for a family, the husband and father of which is in prison, because that whole family has to share with him in the disgrace, even though they have had nothing to do with the crime. It is exceedingly difficult for them to get work; they have to bear almost the full brunt of society's disapproval. That makes it even more necessary that they should be provided for, because they are not on a level footing with other people in the labour market, in the securing of any sort of work. The public, with or without reason, are suspicious of the family of a convict.

I want to quote further from the governor of New York state, Albert E. Smith, in regard to the earnings of prisoners. He says:

I feel strongly on that subject. It has been my experience not only since I have been governor, but all the years I was in the legislature, that the real sufferers as a result of prison sentence are the dependent members of the prisoner's family. The prisoner is taken over by the state, supported, fed and clothed, and his children, if he has any, and unfortunately a great many of them have, and his wife are thrown upon the mercy of friends and relatives, or else become public charges. The most pitiful cases one can listen to are continually brought to the attention of the governor—stories of actual want and actual starvation as a result of the breadwinner being locked up in the state prison. Yet it is unfair to society to let them out of prison. Though the prisoner is where he belongs, that does not take from the state the obligation to do something for the man's wife and children while he is in prison.

Many members of this House have received petitions from dependent families and wives entreating that the breadwinner be let out of prison, even though, as the governor of New York state says, that is where he belongs. I have in my hand a letter from Pathfinder, Alberta, which was sent to one of the hon. members in this section of the House, in which a woman entreats the hon. member for her constituency to do something to get the head of the family out of prison. The letter was written on January 16, 1925. This woman has ten children, most of them very small, and the two older ones, who under ordinary circumstances might have been able to help, are mutes and therefore of no use in the

labour market. This is an extreme case, but there are many others, that I am sure other hon. members could cite many examples which show that while men who have broken the law should be kept away from society for the sake of society, still, great numbers of people are suffering unduly on that account.

I should think that if the family of a prisoner were getting some support from that prisoner while he was confined they would have an added respect for society; because they themselves were not to blame for the deed and they would feel that society was treating them fairly and not heaping upon their unfortunate heads the payment for a crime committed by someone else. I think, too, it would give them an added respect for themselves, and the most terrible thing that can happen to any of us is to lose our self respect, because when we do that we become entirely reckless and care not at all what we do. So I think it would help to hold the children who are to become citizens of the country high in their place in the social scale, and to keep the wife in that position, if they were made to feel that they were at least respectable, law abiding members of the community.

It would also have a tremendous effect upon the prisoner himself if he felt that he was still of some account, that he still had responsibility; because often it is true of us —and it must be true of those who are confined in prisons—that responsibility will hold us to a task when nothing else will. It would make the prisoner feel he could get a new grip on life, and would help him strive once more to climb to a worthy place in society. All that the Superintendent of Penitentiaries has asked for in his many reports and requests for work with pay is government work; that is, work to be done for the different departments of the government. He sets that out in detail in his report of 1921.

> The inmates of the penitentiaries are the wards of the Dominion government, and there is no valid reason why goods required for state use, and state use only, should not be made in so far as possible in the penitentiaries. The government spends many thousands of dollars yearly for furniture, furnishings and equipment of various kinds, a small portion of which could be made in the penitentiaries—

A large portion of which I think could be made in the penitentiaries. Brigadier-General Hughes told me just some few weeks ago that with the equipment they now have in the penitentiaries they are doing only one-tenth of the work of which they are capable, and that if they had the equipment such as he would like to have, they would be doing one-twentieth of which they were capable.

I have here, but I do not wish to quote it at length, a document prepared by the secretary of the Prisoners' Welfare Association, of which I believe the Minister of Railways (Mr. Graham) is the honorary president. They give strong support to this resolution, saying that there is no time so difficult for a man and his family as immediately after he leaves the penitentiary. He is feeling the lack of respect, the lack of confidence in himself. He is possibly clothed in rough clothing that makes him almost a marked man, and, as well, possibly his changed complexion and other things show him for what he is. He comes out of the penitentiary with almost no money, and very often with no skill for any trade, and it is difficult for him to get back into society. This embitters him, and the result very many times is that the man in desperation in the first few weeks after his release turns back to crime.

It has been said by people who oppose work with pay in the penitentiaries that free labour does not want the prisoners to have work and be paid for it. But that argument can no longer be advanced. In 1920 Brigadier-General Hughes wrote a very lengthy letter to Mr. Tom Moore, president of the Trades and Labour Congress, in which he set forth the need of work and the need of pay for it, and his desire that Labour should support him in that respect. The Congress recommended concurrence in this scheme, and further recommended that the entire penitentiary system of Canada be investigated, and further that the question of prison labour and the disposal of its products be thoroughly inquired into and reported on by a commission, and that a representative of the Trades and Labour Congress should be included on that commission. That commission was appointed the next year, in 1921, and I have quoted at some length from its report. Labour dropped all its objections to that particular thing that Brigadier-General Hughes was asking for, work with pay, and they went further, because in 1924 at their last annual congress they accepted the whole report, which goes into very many other prison reforms that I am not touching upon to-day, and they hoped that this whole report, which consists of about seventy pages, would be put into practice. So, there can be no argument that free labour is unwilling to have work done in penitentiaries and the prisoners paid for their labour. But, even if that objection still existed, what influence would the labour of 2,500 prisoners in the penitentiaries have upon one and a half million of workers, even in times of stress?

The number in the penitentiaries is so small that the objection never was a weighty one.

If we carry this resolution to-day, and if the government helps the Superintendent of Penitentiaries and the wardens to put it into effect as soon as possible, there is no doubt in my mind that it will effect a tremendous material saving, apart altogether from the lives of people, which to me is of very much greater importance than the material gain. But, quite apart from the remaking of the men and the caring for their dependents, there will be a very great material gain. The net cost of all the prisoners in Canada in 1923 was $1,441,900.93, or a per capita cost of $558.44. When you add to that the cost of the average conviction for crime, which is about $1,200, you will immediately see that if work with pay for prisoners could be so extended as to make the penitentiaries self-sustaining, and at the same time reclaim the men, we would save what it costs to keep these inmates in the penitentiaries, and over and above that, what it costs to reinstate them in the penitentiaries when, under the present system, they find their way back there as the easiest way out.

This plan of work with pay has been tried in very many places with success;—perhaps I should not say in very many places, but certainly it has been tried, and with very great success. There are two states that have made it a paying proposition, one of them Minnesota. I am quoting again from this account of the Prison Association convention in 1919. Mr. C. E. Vasaly, speaking for the Minnesota Penitentiary Board, says:

> We make a great deal of money, but we make something in the prison much more important than money, and that is the making of men. We would have no excuse whatever if we did not lend our industries sucessful as they have been, and still more successful as we hope they will be, to the making of men rather than the making of money. In the first place, our prison earns its support; it saves the state something like $360,000 a year in that respect. In other words, the prisoners are earning their board, which they would have to do if employed outside in industry, so I consider that nothing particularly to criticize. In addition to earning their board in that form of saving, they received in wages last year over $100,000, and will receive over $125,000 this year. What is that per capita? The earnings would be about $366 per capita. Prisoners earn from 25 cents to $1.50 per day, and it is our purpose to increase that. The prison made a profit which goes into a revolving fund, which is in fact the capital account.

I find by later reports that that revolving fund has reached the sum of $6,000,000, and out of that they buy the raw materials with which to work. He also says that they write off depreciation on the buildings, and that the yearly profit, after all expenses,—wages to prisoners, hospital fees, and so forth,—are paid, is devoted to the welfare of the institution and its inmates. He goes on to say:

> In that connection let me say that I know of no greater aid to prison discipline than wages. . . . The prisoner is contented, first of all, because he is working. He is contented because he is earning something for his family. . . . Those things put together have great effect on discipline, and make the prisoners more content and make them feel much more hopeful than they could otherwise be.
>
> It seems to me any system of prison labour, no matter what it may be, that does not take into account that side of things, the creation of contentment and hopefulness in the prisoner, not only with regard to himself but his family, is a mistake.

The other state that has made a success of it is the state of Michigan. The most notable success in administration was achieved by Warden Jackson, of Jackson penitentiary. At that institution they pay in wages from 10 cents to $1.50 a day, to which must be added shelter, clothing, food, medical attendance, dentistry, and so on. For the year ended June 30, 1917, a net profit of $156,000 was shown at the Jackson penitentiary, and this result was accomplished after paying all the expenses of the institution, making proper allowance for the depreciation of buildings and machinery, paying wages to the inmates and providing them with food, clothing and other necessities. The next four months following the end of the year referred to, namely, July, August, September and October, showed an increase in the profits, amounting for that period to $300,000. This was an addition to the material gain represented by having no idle men, by a general improvement of health, and the employment of twenty-five per cent of the inmates on farms who were practically free men and not under guard at all.

The other state which has tried the system, but in a lesser degree and therefore with less success, is New Jersey. At that institution only a small wage is paid—not more than 30 cents a day; but interesting work is provided for the convicts, and it has been found very beneficial to the men in maintaining discipline, developing their character, and so on.

In presenting the foregoing facts I have not disclosed the adverse side of the situation. However, in all the works on this subject that I have read, and I have all that I could obtain, I do not find an adverse side. Nor could I find any argument against giving profitable work to prisoners. On the contrary, all the facts that I could discover favoured such a programme; and those institutions where it is not in operation were praying that they might soon have it. Therefore experience shows that it is the one great thing the

penitentiaries must adopt before they become the kind of institution which public opinion wants them to be—a re-maker of men.

It seems to me that we in this House, who really are the guardians of these wards of the Dominion government, must find in our treatment of this resolution a test of our own intelligence and our own humanitarian instincts. Surely, we in this generation should crystallize into legislation, and into the administration of these institutions, the best principles we can. If we do not do that we are not fair to succeeding generations and succeeding parliaments. We are not taking advantage of our privileges if we do not adopt the best features in penitentiary administration which past experience has developed and put them into operation. If it is possible for all the hon. members of this House to help in the re-making of men, to save suffering to those who have really caused no harm to the state, to sweeten the lives of very many people, and over and above that to effect a large economy in public expenditure, why should we not pursue a course that will bring about these happy results? I leave the matter in the hands of hon. gentlemen feeling that they are reasonable men. If I am right in that opinion, if hon. members are the reasonable and sane individuals I believe them to be, they will support this resolution.

Mr. PAUL MERCIER (Westmount-St. Henri): Mr. Speaker, the resolution of the honourable member for Southeast Grey (Miss Macphail) mentions a fact which deserves to be studied and is partially realizable. I have always believed that convicts were employed in sufficient productive work to keep them occupied; and, as a matter of fact, if one consults the official reports of our penitentiaries, he finds that the inmates are kept busy. They learn a trade which shall permit them some day, when they return to social life, to become again citizens who will generally work with others for the welfare of the community.

I understand the good motives of the hon. member for Southeast Grey in bringing before this House this resolution. She sees the abandoned families as the result of the condemnation to gaol of their heads; she pities the bewildered youth treading the rosy but risky path of life who has been sentenced to a reformatory after a second or a third offence and is now confined there; she pities other condemned men, left without a soul in this world, undergoing their sentence. She remembers also that sooner or later they will all alone leave their prison, and although free, must tread the public highway with justice shadowing them and the police officer at hand. We certainly sympathize with the hon. member for Southeast Grey. On the other hand, we shall not forget that this government, as others in the past, through the Minister of Justice, has acted on the principle that it is by sufficient work that the culprit is regenerated. By this means he has the chance to become again worthy of occupying his former place in society, following at last the path of honesty and integrity. When convicts are taught the elements of an industrious life, they discover finally, that they can be useful to themselves, to their relatives and to their fellow citizens. In this way the state endeavours to profitably preserve a convict for society. Indeed, Mr. Speaker, society is a community submitting to the very same natural laws as the family itself. The Chaplain of the Health department in Paris, Abbe Geispitz, in his noted book Sous les Verroux enunciates these sentiments:

(Translation): "At all times there has existed and there will always exist daring, venturesome, whimsical and strange people. They have in the past made up the host of warriors, sailors and explorers. These fearless energetic and dauntless men these "dare-devils" often shedded much glory upon their country.

Perhaps, by remaining at home this too great activity would have turned to evil deeds, and their career abruptly ending with a rope around the neck. While being thrown in a larger sphere, without stifling laws, they had the opportunity of being of service both to their country and themselves."

And this man of experience in prison life to proclaim:

(Translation): Should we not ask ourselves if, today, we could not find some outlet for all this population too energetic to live in this stifling atmosphere and especially to prosper therein.

We share the opinion of this outstanding writer. We do not perceive in what way these words proclaim an Utopia. If one reflects upon this very vital question, consults the wardens of penitentiaries, asks the advice of judges and crown attorneys, the voices of experience, he will get the following answer: "Remove from the great centres of population these convicts, either for a certain time or for a definite period; set them to work like any other free men and the best results will be reached." Thus, we shall be able to prevent recidivism and to reduce the number of prisoners which is continuously increasing at the expense of the country.

Canada owns immense territories, almost boundless. She is anxiously waiting for immigrants and settlers. These prisoners, desiring to work, should find there a new life, perhaps a happy home with their families, if the state decides to adopt a policy providing for their support until such time as they are able to maintain themselves. Then they

would be entitled to receive pay for their work. Their labour would not only give them the opportunity of getting rich but would enrich our land. Moreover this is the principle successfully followed in the United States, Australia and New Zealand. This, in my humble opinion, should meet the wishes expressed in the resolution of the honourable member. The Department of Justice, it seems to us, Mr. Speaker, could easily carry out a policy of improvement on land lately opened to colonization and in doing this utilize the labour of our penitentiaries. In so doing, we will be acting charitably towards these unfortunate inmates and they will be actuated by feelings of remorse and repentance.

I would have supported the resolution if it had tended to that end. I do not imagine, Mr. Speaker, that it is a good thing or sound public policy to remunerate convicts for the kind of work they are actually doing. This work is now useful to themselves only and no profit whatever comes to the state which pays heavily for their betterment. These prisoners should avail themselves of the opportunity to improve their minds and thus develop the talents which, because of their criminal tendencies have remained dormant in their hearts and brains; so that when released from the penitentiary, they will derive immediate benefit, and will look to the future with a hope and confidence they had never experienced before. This opportunity, be it remembered, will be provided at the expense of the nation.

We do not wish, Mr. Speaker, to oppose the idea suggested by this discussion. The resolution of the honourable member should be graciously received and studied: it can assuredly do much good, if it is properly applied not only to the convicts but to their afflicted relatives.

In closing, Mr. Speaker, allow me to quote a page, admirably written, in French, and to the point in this debate, from the work already mentioned in this speech and entitled Sous les Verroux of Abbe Geispitz:

(Translation) "The convict population is costly to the country; it can, it must be productive. France will rise in one's esteem by taking away from all citizens the right of doing wrong under the plea of dire necessity, it is within her power; her territory is vast enough to feed the whole population and to provide for these riotous energies an outlet. It can subsitute to the army of criminals who to-day burden her finances without any benefit whatsoever, an army of pioneers and colonists who will mend their ways with these brighter possibilities of life before them and gather wealth for themselves as well as bring wealth and glory to their country. It can, and will perform such a duty.

Let us meditate over these words, Mr. Speaker, and apply them to Canada in the near future, if that is feasible.

[Mr. Mercier.]

Mr. J. L. BROWN (Lisgar): The matter which has been brought to the attention of the House by the hon. member for Southeast Grey (Miss Macphail) is in my judgment one of such importance that I would not like to cast a silent vote in support of the proposition. There is no more serious blot on the history of the past than the treatment of those who, through misfortune or faults of their own, come under the ban of the law. One cannot read that great masterpiece of Victor Hugo's without being profoundly impressed with the fact that many who might otherwise have been eminent citizens in the community by no fault of their own have been brought into circumstances where they have been compelled to hide from the minions of the law. Indeed, many of our great masterpieces of literature concern themselves with the treatment of those who have been inmates of penal institutions. We are happy to believe that to-day there is a different outlook upon those problems, and happy to believe that those who are in charge of our penal institutions are not brutes in human form that we read about in some of those pieces of literature. It has been my good fortune to come in contact with some of those who are at the head of our penal institutions, and I have been greatly impressed with the thought that they were men who were Christian and humanitarian in all their outlook upon life, and I am happy to believe that these men are doing all that lies within their power operating under the laws as they exist, and that they are doing all they can to better the conditions of those unfortunates who are placed in their charge.

4 p.m.

There are three aspects to this question of crime. There is the aspect of prevention, and of punishment and of reform. We cannot over emphasize the necessity of doing all we can to prevent crime. It is recognized now in the medical world that the prevention of disease is perhaps more important than the cure. Certainly it is of equal importance. In regard to our attitude towards crime, society cannot hold herself guiltless altogether in regard to crime as it exists. Many of those who are to-day in our penal institutions are there because they are victims of conditions for which they were not altogether responsible. Society as a whole cannot hold itself innocent in regard to this matter. Then we come to the question of punishment. We cannot perhaps altogether refuse to recognize the fact that the criminal must be made to realize some of the consequences of his misdeeds. We cannot perhaps altogether allow him to forget that the way of the transgressor is hard and that the man

who sins against the laws of nature and the laws of God must in large measure bear the consequences of his misdeeds. At the same time, as has been well pointed out, we must banish from our thoughts the idea of revenge. Whatever we may think of the relative importance of punishment and prevention, there can be no question in our minds, that as regards the question of reformation that that is one of the most important things we can undertake and one of the most necessary. It may not be always possible for us to see our way clearly. Possibly we will still, in our attitude towards the criminal, have to explore many by-paths, perhaps make many mistakes, and perhaps sometimes we will be discouraged when we think that the courses we have pursued with great hope of success have not been as successful as we thought at first they might be. But there is one step it seems to me we can take with perfect certainty, and that is the step that has been indicated in the resolution that has been brought before the House. It seems to me it is sound from every viewpoint. It is sound morally, it is sound socially and sound economically. It is sound from the standpoint of the individual, from the standpoint of his dependents and from the standpoint of the state. I do not need to labour the point further. It has been already well emphasized that from the point of view of the individual good honest work is to his advantage. We are not so sure that labour is a curse as perhaps we have thought it to be in the past. Good honest hard labour is indeed the foundation on which all society rests and upon which human progress is built; and if there are men who are averse to labour, if it is true in a large measure that many of the inmates of our penal institutions are unwilling to exert themselves, they are there because they have never learned the dignity of labour, or because they were placed in such circumstances as made them disinclined for employment. If that be true, one of the best things we can do for such men is to teach them something of the joy as well as of the material value of substantial, honest toil. Perhaps one of the greatest evils we have to face to-day is just the disposition on the part of men to get an easy living without honest labour. So that from the standpoint of the individual nothing can be said against but everything in favour of the proposition that he should be given sufficient work of a useful kind to keep him actively employed.

The old idea, the stone pile and the treadmill which Charles Reade describes in one of his novels, must be abandoned; and if we are to give men work to do in our prisons it must not be simply physical employment for the sake of keeping their muscles in trim; it must be useful work in which the labourer will see that he is accomplishing something. Is there any reason why that work should not be paid for? None that I can see. There is no valid reason why the man who performs such work should not be paid for it, or why society should not receive the product of his labour. The fact that the state has seen fit to take him in charge does not imply that the man should not be allowed a proper recompense. Certainly the idea is commendable from the standpoint of the dependents. We know it is all too true that the sins of the fathers are visited upon the children to the third and fourth generation, there are certain inescapable consequences that follow wrongdoing as naturally as night follows day. But that is no reason why society should heap further penalties on the dependents of the wrongdoer. And yet that is what we have done. We have visited them with our disapprobation relegating them to an inferior place in the community and we give many manifestations of our displeasure. And besides all that we have withdrawn from these people the means upon which they depended for their subsistence. Why should we continue to heap on their dependents burdens other than those which naturally follow from their wrongdoing?

I say, further, that the proposition is sound from the standpoint of the state. The state in its own interests has felt it necessary to take the law-breaker under charge. As has been said, he has been anti-social in his outlook and he must be brought to a proper view of his relation to society. He would not work voluntarily of his own initiative; he would not work under his own guidance; he must therefore work under the guidance of the state. But if the state in its own interests and for its own safety, assumes that responsibility towards the law-breaker, it does not thereby follow that the state should be put to unnecessary expense in punishing him. It does not follow that society, because a certain individual has broken its laws, should be further burdened with the care of him. There is no sound reason, then, that can be advanced why the criminal in our penal institutions should not be allowed to earn wages that will pay for his maintenance and at the same time assist his family; and if there is anything left over I do not see why it should not be given to him as a fresh start in life. I know that arguments have

been used in the past against this; but I am only too happy to believe that the attitude of organized labour towards this question has changed, if that is the fact, as I hope it is.

We have regarded the product of prison labour, thrown upon the community, as a wrong against society. Why should we so look upon it? We shall have to change our point of view in considering those who are thus engaged in productive enterprises. Too long we have been under the error of thinking that those who contribute something to the wealth of the state are injuring the state or somebody else. We must get rid of that notion and take the view that those who produce wealth in any form, whether it be the product of free labour or of prison labour, are doing something for the general well-being. When we look at the matter in that light I think we shall be prepared to change our attitude towards the product of labour. It has been suggested that the goods produced by prisoners should be made use of by the state itself. To some extent that is being done now; I believe that at the penitentiary at Stonewall large sums of money are being saved to the government in the repairing of mail bags. What may be done in other penitentiaries I am not aware. And those who are incarcerated in these institutions make their own clothing and so help to some extent to relieve the state of the burden of their maintenance. But I would not limit their activities to producing goods for the benefit of government departments. There is no valid reason to my mind why the goods produced in penal institutions should not be put upon the market.

Mr. LAPOINTE: I am afraid my hon. friend would then come into conflict with organized labour.

Mr. BROWN: That may be, and I am quite prepared for the conflict. I had hoped from what my hon. friend (Miss Macphail) said that organized labour had changed its attitude.

Mr. LAPOINTE: Yes, but they are in favour of prison labour being used for governmental purposes.

Mr. BROWN: Well, I am in favour of its employment for other purposes. I say, I see no reason why the products of prison labour should not be put on the market—not at slaughter prices I say, but in fair open competition with the product of free labour. When we have a proper attitude towards the question of production, when we get away from the idea that men who are producing something are doing something to the injury of somebody else, and realize that men who produce wealth in any form are doing something for the benefit of humanity as a whole, then I think we will be prepared to change our attitude on this matter. In the meantime I do not suppose it will be possible for us to go as far as I have indicated. For the present I am quite satisfied to take the one step, and if we can get a larger amount of the energy of the penitentiary inmates turned into the production of goods for the use of the state, well and good. But, as I say, I cannot see the difference. I can quite well imagine, for instance, that if the contractors who supplied the furniture for this magnificent building had been met with the proposition: "Well, we can get this furniture manufactured in the penitentiaries," there would have been a loud protest from them. So that after all, Mr. Speaker, there is no difference whether goods are produced directly for the benefit of the state or for the benefit of the people. There is no logical distinction, it is simply a distinction without a difference and exists only in our imagination. However, I suppose we have to bring people along slowly in this path, and if we cannot take the longer step we would like to take, we must be content with the shorter one. In my judgment there can be no logical or any other reason advanced why this resolution should not be adopted, and I should like to see it adopted unanimously. If we have not accomplished anything in the past it has not been because we have been definitely opposed, but very largely because we have been indifferent. But this matter is being forced upon our attention now as it never has been before, and I think the country is beginning to demand that we take a definite step forward. Perhaps we have been deterred by some things that we thought would be difficulties, but our duty to-day is to meet this problem and, in the light of the new opinion which we are developing in social matters, to take the step forward that has been indicated.

Mr. J. S. WOODSWORTH (Centre Winnipeg): Mr. Speaker, after the very comprehensive and forceful address by the hon. member for Southeast Grey (Miss Macphail) I do not know that it is necessary for me to spend a great deal of time in endorsing the views which she has set forth. It seems to me that in a great many ways the public generally is in advance of the penitentiary officials in this matter as in a good many others. I suppose

possibly those who have charge are apt to get into a routine, and since the unfortunate victims of our judicial system have often no one to plead their case, the injustice and wrongs that they suffer do not come before the public as they might in the case where the interests of other sections of the community are concerned. My attention was called only this morning to a rather interesting news item on the front page of the Citizen, which shows that some of our local magistrates are taking this question into consideration. The item is headed and reads as follows:

Sentenced to jail, still at his job

Unusual parole is given married man with large family in Kingston.

Kingston, March 18.—To be allowed to work in the day time at his job in a local factory and to return to the county jail at night was the unusual parole granted to a Kingston married man, who was a few days ago sentenced to two months in the county jail for stealing tickets and selling them at the Jock Harty arena, where he was employed as a ticket collector. He has a wife and several children to support, and this is the first time he was ever in trouble. His former employer gave him his job back again.

It seems to me that if a private employer has sufficient humanity and common sense to be willing to trust a man in this way and to see that his family is looked after, the government of the country surely ought to follow his excellent example.

Sometimes some of us in this corner have been accused of seeking to travel rather too fast in attempting to bring in reforms, but I would urge that the question of prison reform has been before the public again and again throughout a great many years. I remember very distinctly the sense of shock that came to a great many people in Canada back in 1914 when there was issued the report of the Royal Commission on Penitentiaries. The member for Southeast Grey has referred to more recent documents. I go back to that earlier report in order to show that for that length of time a great many people have been urging reforms in our penitentiaries. I had occasion several years afterwards to visit the Kingston penitentiary when I noted that comparatively few of the reforms suggested by the commission had actually been put into practice, and I am advised that the major reforms have not yet been introduced at that penitentiary. May I read a few paragraphs from this report?

Solitary imprisonment, labour and religious instructions have been the only agencies employed for the reclamation of the unfortunates. The first of these three has always been a prominent feature of the discipline. Probably in no prison on the continent do the working population spend as many hours alone in their cells as they do in our Dominion penitentiaries. They leave their cells to work and they return to them to eat and meditate and sleep. On Sundays the single break in the monotony of life in the cell is the hour of divine service, and when a holiday falls on Monday that hour is the only relief enjoyed for two whole days and two nights.

Again:

Labour, the second corrective influence stipulated in the act, has always been rigidly insisted upon. Years ago when there was a system of productive industries in the penitentiaries, the intention of the act to provide "well-regulated labour" was, no doubt, fairly carried out. The abandonment of these industries has made it physically impossible to employ the population at "well-regulated labour."

And again:

The industrial conditions in the penitentiaries of Canada are a disgrace to the Dominion. An honest attempt is made by the officials to keep all the prisoners employed at something, but it is only an attempt. As far as your commissioners could learn there is not a single well-equipped well managed, continuously busy shop in the whole circle of prisons.

I may say that I have had confirmation of this from the wardens of the penitentiaries, who themselves are very keenly interested in seeing that something should be done in this regard. The report goes on:

The reason for this state of things is not far to seek. There are no goods to be made, and if goods were made, there is no place to market them. The blacksmith shop at Kingston was running nicely when the commission made its visits. Steel gates for a new prison in the west were being turned out. When that order is completed, the management will be hard put to find employment for the men in the blacksmith shop. The tailor shop, carpenter shop, painters' and tinsmiths' shops are operated merely to meet the requirements of the institution.

Reference has already been made to the stone pile. That institution is, I believe, still in existence at Kingston as it is at other penitentiaries. Let me read the words in which this occupation is characterized by the report of these commissioners:

The conditions in the workshops were found to be fairly satisfactory. Like the rest of the buildings they are old style structure and their lighting and ventilation could be improved. The ceilings are high and there was no evidence of congestion of workers in any particular shop. To this statement, exception must be made in the case of the stone-breaking shop. Every feature of that department was bad. The atmosphere was charged with stone dust and there was apparently no adequate provision for carrying it away. The closets, situated at one end of the buildings, were poorly constructed and foul-smelling. Over seventy prisoners, some of them mere boys, were at work in this department when the commissioners made their visits. They were arranged in rows, facing each other, and the stone to be broken was piled in a long heap between them. As the raw material was reduced to the required size, fresh supplies were wheeled in by tenders from the yard. There was perfect order among the men. Not a word was spoken. But the monotonous raps of the hammers, the sullen, whitened faces of the forms, half crouching over their unhealthy, unprofitable, degrading tasks, were a mute but powerful denuciation of the system that permitted, or rendered necessary, such an outrage. Nothing has

been said, nothing can be said, in defence of this twentieth century reproduction of the unceasing moil of the galley slave.

It has been suggested to me that if some members of this House could by any stretch of imagination be forced to spend even a few days in such an institution their attitude toward this problem would be altogether changed. Most of us are busy; most of us are not brought into direct contact with these questions, but if it were otherwise I am sure there is not a man in this House who would wish to see such conditions tolerated for another year.

Another point to which I should like to direct attention is the lack of any proper alienist in connection with most of our penal institutions. Any student of social problems must recognize that a very great amount of our crime is directly due to mental deficiency. One cannot visit a penal institution without noting that a very considerable number of the men are subnormal, and one's own opinion in this regard is corroborated by talking with the medical doctors and with the wardens. A very large number of the inmates of our institutions are distinctly subnormal, yet we treat them as if they were fully responsible for the crimes they have committed. It does seem as if we cannot go on indefinitely in this haphazard, unscientific manner. We all recognize that crime is very largely the result either of some hereditary weakness or of some maladjustment in our social life, and we ought to take steps to see to it that we do not allow those who are mentally deficient to propagate their kind, and on the other hand that we do not permit those social maladjustments to continue which are responsible for turning out an increasing stream of criminals.

I do not wish to dwell upon another question which is closely related and to which the commissioners called attention, that of the punishments inflicted for the infringement of the rules of the prisons. The most severe punishments have in the past been frequently administered. When it is considered that a great many of those punished are actually mentally deficient, the full horror of such punishments begins to dawn upon one. Surely before we hand over these matters to the discretion of guards who are not fully trained in questions of this kind we should inquire very carefully indeed as to the exact physical and mental condition of the prisoners.

I should like also to urge the absolute necessity of a much better classification of the prisoners. Young and old are very largely placed in the same gaols. It should be quite feasible to make some arrangement under which the young offenders would be placed in one particular set of institutions and the old hardened offenders in another. At the present time, as the authorities have frequently pointed out, we have an arbitrary method of placing the short term offenders in our provincial gaols, which are often very much inferior to the penitentiaries, and placing the long term offenders, two years and over, in the federal institutions. It would seem reasonable that we should judge of this matter not according to the character of the crime but rather according to the character of the criminal. In some instances the offenders, although they may have committed what is called a serious crime, may be youthful—in fact, in many cases it may be their first offence; while in other cases the hardened criminals may be committed to a penitentiary for committing a comparatively insignificant crime. It seems to me that there should be a careful classification.

Further, within these institutions a great deal of latitude should be granted to those in authority in the treatment which they accord to the prisoners. In the hospitals we have many kinds of wards; we have a great variety of treatment for the different kinds of disease. So I take it that in our penitentiaries, which one day will be regarded much more like mental hospitals than they are to-day, there ought to be permitted a varied treatment for the inmates, in every case remembering that the view of leading criminologists is that the punishment administered by the state—or the treatment, shall I say, given by the state—is not so much penal as reformative in character.

With regard to the payment which is advocated in the motion, I should like to go back to this report of 1914, simply because it is the view of another set of people and was given as long ago as eleven years. I quote:

> It has been strongly urged upon your commissioners that prisoners should be paid wages or that a portion of their earnings be devoted to the maintenance of their families. At the present time, the prison population of Canada, far from earning anything for the state, costs the government for maintenance over $300 per head per year.

According to the figures given us to-day, that amount has advanced until it is considerably over $500 per head per year.

> Even if a well-selected circle of state-use industries were established and successfully operated, it is not likely that they would ever make our prisons self-sustaining. They should, however, very materially reduce the annual burden on the country and at the same time provide a fund for the remuneration of prisoners or assistance to prisoners' families. Any wages' system must include all prisoners in its operations.

I should like to stress this point because I know there are some who, feeling the need of caring for families, are inclined to say, "Well,

give payment in cases where there are dependents, but otherwise give no payment." This is the recommendation of the commission on that point:

Any wages' system must include all prisoners in its operations. If married men, or men with relatives dependent upon them, alone were paid, other prisoners, equally skilled and equally industrious, would justly complain. Even the fact that the earnings were given, not to the prisoner, but to his family, would not lessen the discrimination. The only prisoners who can fairly be left off the wages or reward sheet are those under the ban for bad conduct.

The system of rewards or payments to prisoners, according to their efficiency and industry, has been adopted in many of the institutions of the United States and in a few houses in Europe. As an incentive to labour and good conduct, it is invaluable. Men work with much more heart when they know they will be sharers, even to a small degree, in the product of their labour. In fact, their increased output under such a stimulus, it has been shown, goes a long way towards covering the wages fund. An idea of the outlay which the wages or reward system involves, may be gleaned from a survey of the pay sheet at Stillwater, Minnesota. Stillwater, as we have already seen, returned to the state, $362,000 profit on its industries last year. The money paid the prisoners at Stillwater is termed "over-work allowance." In the month of October, 1913, 24 hands working full time, 27 days, received an "over-work allowance" of $282.57, or an evarage of $11.77. There was quite a disparity in the amounts received by the men. One bench hand got $22.89 for his month's work. The earnings of four others were between $15 and $20, and seven were under $10.

As things are at present.

The payment of prisoners, under the industrial conditions that at present obtain in our penitentiaries, would be a question of charity rather than administration. The question is: Should the distress that exists in the homes of many of these men and the sufferings entailed upon their innocent families, be left as at present to the care of local charities, or should their relief be made an additional charge upon the penitentiary appropriation?

Mr. EULER: Would the hon. member say whether or not he is in favour of the product of prison labour coming into competition with the product of free labour?

Mr. WOODSWORTH: I was about to pass to that point. Since reference has already been made to the stand of organized labour, I am inclined to think that taken as a general proposition, I should have to agree with the stand taken by the hon. member for Lisgar (Mr. Brown). If we had anything like a proper system of production, and I should add of distribution, there would be no cause whatever why we should hesitate to allow the product of prison labour to go out on the open markets; but unfortunately we have not a proper system of production and distribution. Under the existing circumstances Labour has been afraid lest the products of the penitentiaries or prisons, which are made without any competition, and which may be made below the normal cost of production should be put out in competition with the products of free labour.

Mr. GOOD: If there were no cutting of prices, would the objection hold?

Mr. WOODSWORTH: Not to the same extent, and I think that that perhaps has been having its weight with labour men in their consideration of this question. May I suggest that labour men have given a good deal of thought to this matter? They have taken by no means an arbitrary or narrowly selfish standpoint. With regard to the prices, if the prices were the normal prices, it would help considerably, of course, but it is still true that under the existing economic system there would be difficulties. To-day there is over-production. Now that over-production is not absolute. I would rather put it that there is a greater production than the people have the purchasing power to secure for themselves. This is the fundamental trouble that confronts us at the present time. We know that on every side we are finding difficulty in obtaining markets. The manufacturers of this country are coming to this House begging that they should be given protection, lest they should come into competition with the lower paid labour of Europe, and into competition with the mass production of the United States. Well, if our great manufacturers feel the need of protection, it is not much wonder that labour that is earning wages that are very little higher than the amount necessary to maintain men in the penitentiaries should fear to have the competition of the penitentiaries, and should ask for protection. Thus we can understand the reason why labour has been a little bit hesitant on this question and why it has been anxious to safeguard the interest of organized Labour. On the other hand, I would like to say that Labour is intensely interested in the welfare of the prisoners. Indeed to no small extent, unfortunately, the men who have actually been caught, and who have suffered most severely at the hands of the law have frequently come from the ranks of labour. There seems unfortunately to be some way in which the high-grade criminals escape the most severe penalties. Labour is interested intensely in the welfare of prisoners, and is willing to endorse any arrangement whereby the interests of these men can be protected during the time they are within the penitentiary walls.

In passing may I venture to call attention to the anomalous situation that faces us at the present time the world over, when we are

afraid of producing too many goods. I wonder if it might not be possible for us pending the alteration of our whole system of production and distribution that we could arrange that the unemployed across this country, the hundreds of thousands of unemployed in Canada to-day, could be furnished with the necessities of life from these institutions, this, until such times as the state could find work for them. I am not putting forward this suggestion as a solution of our economic problem; I am advancing it simply to suggest that an experiment of that kind might bring home to us the anomalous position in which we find ourselves, and might drive us to reorganize our social life in such a way that we would produce not simply for profit, but for the needs of the people. I have no desire, however, to enter this large field of discussion this afternoon.

After the decisions which have been arrived at by the Trades and Labour Congress of Canada, after rather mature deliberation of this question, the government need not hesitate, I think, in endorsing and adopting the resolution put forward by the hon. member for Southeast Grey (Miss Macphail). When we have this productive work, and the payment of prisoners, it will require only minor adjustments to safeguard the interests of Labour in this matter.

Let me urge that the time has undoubtedly come when in this matter of prison reform we should give a great deal more attention to the scientific aspects of the question. We have inherited old ideas with regard to the criminal which are not at all justified by modern social study. I could hope that our Department of Justice could possibly be induced, even though it might involve a little bit more expenditure, to add to their staff a few men who had devoted considerable attention to these questions. Then when the recommendations of these men came in I could hope that these recommendations would not be pigeon-holed, as has been done so often in the past, but even in the midst of all the strenuous political life in which the major officials must spend their time, that they would consider a little more the human side of this question, looking more towards the welfare of the men and the women, and less towards the institutions in which they are housed.

Mr. L. H. MARTELL (Hants): It is not my intention to enter at any great length into the consideration of this resolution. It seems to me that a certain portion of it is simply intended to be an incentive to crime. A person who probably is no good commits a crime. He is convicted and sent to prison. If this resolution carries, particularly the last portion of it, such a person may be sent to the penitentiary for three or four years. There he is compelled to work and that is quite proper because he is placed in the institution and kept there for three or four years as a punishment for his crime; and should be made to do actual physical work. He is compelled to work and the government of the country holds for him in trust the money he has earned until the time comes for his release. In these days of unemployment when there is a certain element in the country which is always agitating and preaching bolshevist ideas there is a lot of people who would probably go to the penitentiary. If they were outside they would not save for themselves, they would not have any money, and so they would go from pillar to post. But after such a man, being in the penitentiary and being compelled to work, on his release is given probably one thousand or fifteen hundred dollars, his earnings, it is said, the result is the man enters upon a new career of crime.

Mr. BROWN: Do you think the possibility of his starting out on a new career of crime will be greater or less by reason of his having $1,000?

Mr. JACOBS: He will have more capital.

Mr. MARTELL: He will have the necessary capital to start out upon such a career.

Mr. BROWN: With no capital he would not be a menace at all I suppose?

Mr. MARTELL: If he has been corrected and taught a trade to that extent he has been benefited. Moreover he has been put in the penitentiary in order to protect society. Now if you permit that man who perhaps, is a single man to get money for the work he has done, it is held in trust for him by the government. While he is in the penitentiary he has no opportunity of spending any money and he goes out with his thousand dollars saved. That is an incentive to a man to commit a crime in order to go to the penitentiary because you are going to make the government of the country the means of his saving the money.

Mr. BANCROFT: Is my hon. friend contending that when a man is put in the position of a capitalist it is an incentive to commit crime?

Mr. MARTELL: No not in the least, that is not my contention at all; my hon. friend has failed to grasp what I am contending. Capital of course is necessary in this country. My hon. friend himself knows that if conditions had been more prosperous in that part of the country from which he comes he need not have left his district.

Mr. WOODSWORTH: I was going to ask if, under this suggested case, a man came out of the penitentiary a capitalist whether that would not be a very good safeguard against bolshevism.

Mr. MARTELL: No; the man would probably go from one extreme to the other. I say that the reason the man was put in the penitentiary was to protect society and also to punish him for his crime. Now you are going to punish him by giving him as good pay, if not a little better, than he would get outside; you are going to reward him by paying him wages for the work he has done in the penitentiary. That amounts to an invidious distinction against the poor man outside, who is honest but unfortunate, who is endeavouring to do an honest man's work with brain and hand, and probably has not been able to save any money. The criminal has been sent to the penitentiary and has been kept there at the expense of the state. And the state when his sentence has expired gives him back a certain amount of money which it is claimed he has earned in the form of wages.

An hon. MEMBER: He is given a premium.

Mr. MARTELL: Yes it is putting a premium on crime. I would almost be opposed to the whole motion, but I think the innocent children should not be compelled to suffer. I believe a man before he commits a crime should reflect upon the results which are likely to flow from his action.

Miss MACPHAIL: Would my hon. friend apply his remark that innocent children should not suffer to the children in his own riding?

Mr. MARTELL: Certainly, all over the country.

Mr. JACOBS: There are some innocents in his riding.

Mr. MARTELL: The children in my riding are all innocent. The remark, I am afraid, is not applicable to all the children in my hon. friend's riding. I trust I made my meaning clear, and I am going to move an amendment:

That all the words after the word "dependents" where it first appears in the second clause of the resolution be struck out.

That will not prevent the state from aiding the children or dependents; but where a man has no dependents I do not think there should be any premium put on his crime by giving him a reward when he comes out of the penitentiary.

Mr. E. J. GARLAND (Bow River): I had not intended to delay the House by taking any part in this debate, and I would not have done so had not the hon. member for Hants spoken as he did and introduced the amendment that he did. I congratulate the hon. member for Southeast Grey upon having introduced this resolution and also upon the manner in which she supported it. She approached the question at first from the humanitarian angle, and I think that is the angle which has largely governed the reports of the Department of Justice on this matter.

Let me, in passing, suggest that the hon. member for Hants would hardly have brought in the amendment he did had he attached the weight to these reports which they are entitled to receive. Possibly he has not read those reports in which event I may find it necessary to quote one or two extracts from them. I think, Mr. Speaker, that the highest ideal embodied in the resolution is to reform and not to punish the criminal. That I think is the intention, at least of the mover of the resolution.

It is suggested in the reports of the department that you cannot reform criminals by punishment. The proposal in the second part of the motion, is if a single man or a man without dependents, is imprisoned he is to be placed at productive work. He earns something, and a part of those earnings will be devoted to the cost of his upkeep in the penitentiary and the maintenance of the institution. What is to be done with the balance of those earnings? To whom does it properly belong? In my opinion it belongs to the convict himself, and the proposal I would submit is that if the sum be large it be turned over to him in a bulk sum at the end of his prison term but that the warden of the penitentiary should be placed in the position of a trustee. The convict should be called before him prior to discharge, and a discussion entered upon for the purpose of ascertaining the prisoner's plans for the future, so that the warden may advise him—in much the same fashion that our wardens, the bankers, advise us—with a view to helping that man towards re-establishing himself for the future in life. The whole sum of the man's net earnings need not be paid out at once; it could be paid out from time to time as the development of the

man's particular trade or occupation necessitated. So far as the first portion of the resolution is concerned I do not think there is any question as to the advisability of carrying it out.

I have heard no objection taken, but possibly as some hon. members may not be aware of some of the details in connection with the misery created, I will call attention to a letter which I received on January 31 of this year from a miners' union. This by the way may answer the question of the hon. member for North Waterloo (Mr. Euler) as to the possible attitude of labour on this question. The letter is from a miners' union, telling of one of its secretaries, a man fairly well respected and placed in a responsible position. He decamped with the funds of the union, fled to Seattle, was caught there, brought back to Canada and put in gaol for three years. At the end of a year the very men whose money he had taken circulated a petition pleading for his release, not because they wished in any way to condone the crime, but because his unfortunate wife and family were in dire distress and serious suffering. That was the attitude of a labour organization on this question. They wanted the man released because his wife was suffering. It may be said, "Yes, they wanted him released rather than given remunerative employment in gaol," but what would he do after he came out? He would at once commence competing in the labour market; he would at once go into the mines in all probability and get a job there, competing with these very men in their own field." Yet after all, what difference is there whether he competes in their own field in the labour market or competes inside the prison wall? There is no difference, and I do not think labour will raise any serious objection to this resolution. In the report of the Superintendent of Penitentiaries for 1922 I find the following:

> Conditions of all penitentiaries have been greatly improved,

And properly so. Amongst the improvements introduced are the following—and this is what I would call to the attention of the hon. member for Hants (Mr. Martell)—

> —the abandonment of the idea of handling all men by rule of thumb and substitution therefor of the personal study of each inmate and treatment of him, as his temperament and disposition would warrant.

Further on I find the following:

> The endeavours now put forth by penitentiary officers to secure employment for inmates on discharge.

A quotation is found further down from a former inspector of Canadian penitentiaries, as follows:

> Society has found by terrible experience that her gaol or prison system has too often turned out to be the largest factor and the most successful machine in the fabrication of the evil it was seeking to destroy.

I find in another report a comparison between the effects of treatment as a whole in different countries. And I take the statement on page 14, as follows:

> In England the severity of former years has been abandoned, and much more sane and humane methods now prevail. There is no criminal laxity however, in either the enforcement of the law or management of those convicted of crime. It would appear, therefore, if good and sane results are to be obtained in Canada we should study the English systems with a view to adopting what they have to offer by way of amendment.

The following from the Philadelphia Public Ledger is most amazing and most convincing:

> Mention has been made of Raymond B. Fosdick's book, American Police Systems. Some of the figures in it almost stagger belief. For example the arrests in Boston in 1918 exceeded the total number of arrests in London by 32,520, a falling off you see of the number of arrests following up the lightening of the punishment of criminals.

That hardly bears out the argument of the hon. member for Hants (Mr. Martell). Philadelphia arrests in 1919 exceeded the arrests in London by 20,005, and Chicago's arrests exceeded London's by 61,874; New York arrests in 1918 exceeded London's by 111,877. In 1919 there were 5,527 automobiles stolen in New York, in London only 290, in Liverpool only 10. In 1918 Chicago had 22 robberies for every one robbery in London, and 14 for every one robbery in England and Wales. Los Angeles in 1916 had 64 more robberies than England, Scotland and Wales combined. Liverpool is one-third larger than Cleveland and yet Cleveland in 1914 reported thirty times as many robberies as Liverpool. It may be argued that there were other factors. I believe there were other factors that tended to the development of the situation, nevertheless the fact stands out that under a more generous treatment that tends to develop the best in a man, rather than to treat him with rigid discipline, we find more favourable results ensue.

I should like to make one other point. About sixty per cent of those sent to the penitentiaries leave them without having suffered punishment. The more punishment inflicted in a prison, the stronger the probability that the place is poorly managed. I quote now from the 1921 report of the Superintendent of Penitentiaries:

> It has also been demonstrated that seldom is a conversion to virtue obtained through punishment. Physical force can check or temporarily restrain various forms of evil, but usually at the cost of rendering them still more intense and permanent.

If that be true in the case of physical force, surely any evolution of a higher, saner and more humane method of treating the men at the time of their discharge and during the time of their re-absorption into civil life would tend also to improvement.

I hope, Mr. Speaker, that the amendment of the hon. member for Hants (Mr. Martell) will not carry in this House. Our idea certainly ought not to be the mere punishment of crime. It ought to be the prevention of crime, and if as I believe this resolution will go a long way towards this by giving a convict more respect for himself and giving him an opportunity to meet fairly those with whom he will have to compete after leaving the prison, then I think every member should regard with favour the resolution.

Mr. W. D. EULER (North Waterloo): I have very little to add to what has been said and probably will not adduce any new arguments at all, but I would like to declare my sympathy for the principle of the resolution as introduced by the hon. member for Southeast Grey (Miss Macphail). I think she is to be congratulated for bringing this matter to the consideration of the House for practical action. The resolution is a credit to her head and to her heart because it seems to me what she suggests is economically sound and a credit to her humanitarian feelings. But I am afraid I cannot follow her in one suggestion that she made, and that was that crime is almost entirely a disease. Possibly that may be true to some degree, but if we recognized that to the full as being true I am very much afraid that if we had not our penal and preventive laws, we would have a very great increase in crime. It has been said that people are not to be sent to prison and punished for purposes of revenge. I am quite in accord with that. It is not the purpose of humanity or of society to exercise revenge. The chief motive for sending a man to prison, apart from the preventive feature, is to punish him, and if possible to reform him. I am in favour of the first part of the resolution, providing for steady work for convicts while in penitentiary. Its wisdom seems to be evident on the face of it; these men should be fully employed while they are held in confinement. That was impressed on me not so long ago when I had not the pleasure, but the somewhat depressing experience, of going through the penitentiary at Kingston and seeing what is being done there. The prisoners were not all busy and they would have been a great deal better off had they been fully employed. So that the first part of the resolution is hardly debatable. The second phase of it perhaps gives some room for a difference of opinion, although I cannot possibly follow my hon. friend (Mr. Martell) in the statement that if men knew that they would be paid for working in the penitentiary this knowledge would be an incentive to them to commit crime.

Mr. MARTELL: The hon. member must have misunderstood me. I said that men would not regard the penitentiary sentence as a deterrent if they knew that they did not run any risk of leaving those dependent upon them absolutely unprovided for.

Mr. EULER: I cannot agree with the hon. member even now. To my mind the great deterrent is the fact that men know that if they commit crimes they will lose their liberty and be disgraced; they know that when they come out they will be the object of the sneers of the world. And the payment of convicts for what they may do while in prison has no bearing on the question as to what constitutes a deterrent to crime. The great punishment is that the criminal is deprived of his liberty, and people have only to see the convicts at Kingston or in any other place of confinement to realize the truth of this.

Mr. MARTELL: After a man has served his time in penitentiary and comes out he becomes a citizen of the country and no one can call him criminal with impunity. Those who call him so are subject to damages for defamation of character. The discharged convict, in other words, resumes his civil status, and although there may be some scorn attached to him, the probability is that he would not suffer to any very great extent if he came out of prison with money in his pockets.

Mr. EULER: Technically perhaps the hon. member is right.

Mr. GARLAND (Bow River): Would the hon. gentleman say that the social position of the criminal was as good after as before his incarceration?

Mr. EULER: I was coming to that. No doubt my hon. friend (Mr. Martell) is right in the narrow legal sense; after a man has served his time he is technically washed clean, so to speak. But surely no man in this House will say that he has precisely the same standing among his fellow citizens as he had before he went to gaol.

Mr. MARTELL: If he comes out with money he may have a better standing.

Mr. EULER: I would support the resolution not so much because its adoption would enable

even a single man to come out of gaol with some money, although I believe that it would be well for such a man to have something to start with. What appeals to me is that we should do everything in our power to prevent the suffering of innocent women and children as a result of some man's crime. We see that principle recognized in the Ontario law: men who have been sentenced for more or less lengthy periods are allowed out on parole, the declared object of that practice being that they may go to work and provide for their dependents.

That briefly is my chief reason for supporting the resolution. It seems to me to be fair and I think that parliament should do everything possible to minimize the unmerited degradation and suffering that comes to those who are not responsible for the crime. I will go further than that; I think I can support the whole resolution just as it is. I believe that even a single man, seeing that he has been deprived of his liberty, might very well be compensated for any work he did so that he might have something to enable him to begin life anew and not be forced to resort once more to unlawful means of making a livelihood. We should do what we can to prevent him from entering again on a career of crime. These are my reasons for supporting the resolution.

Mr. ROBERT FORKE (Brandon): I do not want this opportunity to pass without expressing my appreciation of the speech made by the hon. member for Southeast Grey (Miss Macphail) and endorsing the resolution she has brought forward. I have not had much experience in regard to penitentiaries but I do not think there is a gaol in Manitoba the inside of which I have not seen, although fortunately I have been always on the right side of the bars. Now, I have listened with a good deal of attention and satisfaction to the remarks made by different gentlemen who have dwelt on this matter, and I realize that we are moving in the right direction in our treatment of criminals. Let me say, however, in passing that we should not altogether lose sight of the aspect of punishment. The thug who knocks down an innocent traveller and robs him of his money may deserve careful treatment in the way of reform but we should not forget that there is some punishment coming to people of that sort. Crime has been rapidly increasing along many lines, and it has not been increasing altogether among the mentally deficient. Banditry and a great many similar crimes have largely increased during recent years and there must be some cause for this. I think therefore that we might well look into that phase of the question.

As regards the consequent suffering of the innocent, that perhaps is one of the saddest facts in human life; it is regrettable that no one can commit a wrong without endless misery following in its train and bearing along with it all those connected with the criminal. I do not think that society has been very just in this matter; it visits the misdemeanours of the individual on his whole family. But that is the fact and we cannot help it; we recognize its injustice, but it exists nevertheless. Perhaps more could be accomplished in the way of mitigating the full force of crime in the country. I do not think that after a man has passed the meridian of life as a criminal there is very much hope of making a first-class citizen of him. Do not think that I despair of reforming anyone; I believe in the story of the thief on the cross. But it seems to me that our great hope lies with the young people; we must inculcate right ideas in them, and a great many of our amusements to-day are I am afraid little calculated to raise the ideals of the younger folk. If more stress was laid upon the dignity of labour, if more education was given to our young people to help them understand what really constitutes right living and the joy of life, there would be less crime. The wrong idea is abroad, the idea of having what is called "a good time." We were told long ago by One who came to walk upon this earth that He came so we might have life more abundantly. Now, Mr. Speaker, I think probably that is what everyone is seeking to-day, to make the most of his life, to get all he can out of it. I think that is the idea of the criminal. I think we should teach our young people what constitutes the great, grand and noble things of human life, the things that will bring most happiness to them individually and to humanity. I am quite in line with the arguments advanced by the hon. member for Southeast Grey. I congratulate her upon bringing this resolution before the House, and I intend to support it.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, I desire to join with my hon. friend from Brandon (Mr. Forke) in expressing to the mover of the resolution—

Mr. MACLEAN (York): Our sister member.

Mr. LAPOINTE: Our sister member, as my hon. friend very properly describes her—I desire to join with my hon. friend from Brandon in expressing to her the gratitude of the House for having brought this resolution

to our attention. It deals with a worthy subject, and the time of the House has not been wasted in discussing it. I think we all agree that the prisoners in our penitentiaries should be kept working; nothing could be worse for them from every point of view than idleness.

There are two schools of thought on prison reform. The views of one school were expressed by my hon. friend from Hants (Mr. Martell). They believe that the prisoner is indebted to the state, that he should give his labour in return for his debt, and that the penitentiaries should be made profitable institutions. The other school takes the position that reformation is the primary function of state prisons, and that careful segregation should be made of prisoners in order that the larger number of them may be reformed. The work to which they are assigned is really accessory to this main object of reformation. I may say immediately that I share the views of this school; I think that reformation is the main aim to be kept in view. I may say also that, speaking personally, I am going to vote for the resolution as it is.

I agree, though, with my hon. friend from South Waterloo (Mr. Euler) that we should not overstep the mark and proclaim that crime is really a disease. There is a point which could not be overstepped without some danger, and I am led to say that by something I was reading a few days ago in a bulletin issued by the Chicago Crime Commission. Crime has increased in Chicago at such a tremendous rate that the Association of Commerce has been compelled to form a special commission called the Crime Commission, and the following words are from a speech by the chairman of that commission. Referring to the many crime factors, he said:

> A fourth and equally insidious factor has been the development of a perfectly meritorious movement for the study of crime and criminals from sociological and psychological standpoints, and the endeavour to build up reconstructive or reformative treatment that shall restore the criminal to the class of the law-abiding. But whatever of merit or progress any or all of these factors may contain, certain it is that active and diligent organized crime has availed of every possible weakness they develop in the enforcement of the law. When with the best possible intentions there has been created a disposition to deal with crime from a psychological and sociological standpoint—the result has been to minimize the effect of individual responsibility of the criminal himself, and to develop sources of weak sentiment towards a specific crime in a specific case.

No doubt there is considerable truth in these words. The other day, being in New York, I read an interesting paragraph in the New York Herald-Tribune. Judge Alfred J. Talley, addressing the talesmen at the general sessions in New York in January, closed his talk by describing high life in Sing Sing:

> There are movies every night, baseball on weekends, vaudeville once a week, and Broadway shows once a month, with radio a constant feature of prison life. The result is that the average criminal has a better time in Sing Sing than out of it.

Well, I am a prison reformer, if this title means something, but I would not go as far as adopting for Canadian prisons the system which is in force in Sing Sing according to Judge Talley. So there is as I said, a point which should not be overstepped; we should not go too far in this direction. But with that reservation I agree with the principle of the resolution and with what it proposes should be done.

By way of information may I submit to the House what work is being done at the present time in our various penitentiaries? In the New Westminster penitentiary very little work is being undertaken at the present time for other government departments. Entire reconstruction of dilapidated shops, cell blocks, kitchen and so forth, as well as the construction of a wall surrounding the place, is now being prosecuted; workshops are being made fireproof; farming operations on a small scale and clearing of bush land are also being carried on. The internal requirements of the penitentiary, such as tailoring, shoemaking, tinsmith work, machine shop work, blacksmithing, painting, carpentering, baking, operating of gravel pit, and so forth, are being prosecuted.

In the Saskatchewan penitentiary, which is a new institution practically, begun in 1913, already two cell wings shops, hospital, new boiler house, isolation prison and administration building, containing offices, churches, school, library, kitchen, officers' mess, and so forth, have been built by inmate labour, as well as a residence for the warden and deputy warden. About 488 acres of land have been cleared and placed under cultivation. As at all other penitentiaries, tailoring, shoemaking, blacksmithing, tinsmithing, painting, carpentry, machine shop work, baking, and so forth, are being done, always for the use of the penitentiary. At present only a small amount of work is done for outside departments, in the manufacture of harness, tin utensils and some small orders of woodenware. There is also in operation at this institution a brick making plant, where all the brick used in construction work at the institution is manufactured.

At the Manitoba penitentiary we have all the usual trades in operation, as in the other

penitentiaries, for the maintenance of the institution. There mail bags for the four western provinces are repaired. A large building programme is being carried on, together with a remodelling of old antiquated buildings, the construction of a new cell block, a stable, granary, implement shed, root house, and the installation of a waterworks system. A large farm is in operation there also, with about 500 acres under cultivation.

In Kingston the penitentiary has all the trade necessary for internal upkeep, together with a large canvas manufactory, where all new mail bags are made and old ones are repaired; also tents, tarpaulins, bags and other such articles required by other government departments.

Mr. ROSS (Kingston): Can the minister give the House any idea of the number of bags made and the number repaired in a month?

Mr. LAPOINTE: I have not the information at hand, but I will give it to my hon. friend later. Boots and clothing are made at Kingston for the Indian department, as well as some clothing for the Canadian National Railways. Barriers for all other penitentiaries are made there. A large farm is in operation at this institution, as well as a quarry and stone-cutting department. So far as stone-cutting is concerned, it is done for the purposes of construction and repair work. Broom making is also carried on at Kingston, as well as tin and iron work for other government departments. An extensive construction programme is in progress, including the building of a new female prison, sewage disposal plant and remodelling of old shop buildings. There is also a printing department.

At St. Vincent de Paul, in addition to all the usual trades, the penitentiary manufactures leather goods such as leather folders for magazines used by the Canadian National Railways and hotels, portfolios for government employees, saddles, and so forth. Large quantities of hickory handles of all descriptions are turned out, together with small quantities of clothing and boots for other departments. There is a cannery at this institution for canning the goods for the penitentiary. A large farm is worked by the prison inmates. A new cell block capable of accommodating 208 inmates is almost completed, also the construction of a new entrance to the prison, together with a remodelling of many of the old shops and buildings with a view to making them fireproof and suitable for present needs. Bookbinding is another industry of the St. Vincent de Paul penitentiary.

[Mr. Lapointe.]

At Dorchester we have all the shops similar to those in other institutions, required for general maintenance purposes. In addition, mail bags for the Maritime provinces are repaired. Clothing is made for the mounted police in the Maritime provinces and a very extensive building programme is carried on, including enlargement of wall; building of new hospital, school room, library; new cell block; remodelling of old cell wing; fencing and clearing of farm, of which about 400 acres are already under cultivation.

Prior to 1921 organized labour was opposed in principle to prison labour even for the requirements of the federal departments. Since 1921, however, organized labour have changed their view in that respect; in their conventions and otherwise they have expressed themselves as favourable to prison work, the products of which go to meet the requirements of the government service. But let me tell the hon. member for Lisgar (Mr. Brown) that not only in this country but in the United States, where, I am told, prison labour is carried out on such a large scale, organized labour is opposed to prison labour coming into competition with free labour. It would certainly be a matter of great difficulty to apply that system in our penitentiaries. But it is not necessary to do it. I am convinced—and I think it was also the conviction of those who prepared the report of 1921—that the work in connection with the making of articles needed by the government should be sufficient to employ all the labour in the penitentiaries and to keep the inmates busy all the time. Both organized labour and such institutions as chambers of commerce have made representations in this connection. For instance, the garment manufacturers have passed strong resolutions against what they call the unfair competition to which their products are subjected by prison labour. But manufacturers as well as workmen in the United States are in favour of prison labour to meet the requirements of the states. If the articles produced by the penitentiary are not bought and used by the state in which the institution is situated, then they suggest that an agreement should be arrived at with other states whereby these articles will be purchased and used by them. If this system is accepted and applied in Canada there is no reason why some agreement could not be entered into by the provinces under which they might also acquire goods produced in the penitentiaries.

Let me indicate the classes of goods which might very easily be made in our penitentiaries and for which the penitentiaries are

well equipped. All classes of canvas goods, such as tents, tarpaulins, flies, nose-bags, water pails, packs of all descriptions, and so on.; furniture of all descriptions, in wood; all classes of galvanized iron and tin goods; clothing and the manufacture of uniforms—military, mounted police and other such; leather goods, including harness; book-binding; boots and shoes; hickory handles of all descriptions; blacksmith shop work; machine shop work; stone cutting; and broom making. I can include boots and shoes without being afraid of any adverse consequences in Quebec East, because I have been told by the manufacturers of boots and shoes there that they have never had the opportunity of working for the government.

Mr. HALBERT: Will it be permissible for members of parliament to get their supplies there?

Mr. LAPOINTE: I do not know. Perhaps they might do so by paying for them.

Mr. JACOBS: When they go to the penitentiary.

Mr. BROWN: Are any of the articles made in the penitentiaries put on the market, or are they all for the use of government departments?

Mr. LAPOINTE: None go on the market now, though that was done years ago.

Mr. BROWN: They used to make binder twine at Kingston.

Mr. LAPOINTE: The contract system—that was the name given to it—was so objectionable to labour in Canada and was the source of so many difficulties that it was abandoned. No goods which are the product of penitentiaries are at present being sold on the market.

Mr. ROSS (Kingston): Is the suggestion of the minister that these articles he names would be manufactured?

Mr. LAPOINTE: I say they could be manufactured; I do not say they will. I know there would be objection to some lines; but my hon. friend will always keep in mind that what I advocate would be the making of products for the use of the departments only, not for sale on the open market.

Mr. McQUARRIE: Would the minister be in favour of public works being done by prison labour? In some countries, for instance in South Africa, when I was over there last summer, I found that they were building a dry dock with practically all prison labour, and in the diamond mines they were using prison labour for a shilling a day, and so forth. Prison labour is used to a very great extent over there. Would the minister be in favour of the same policy being adopted in this country, and if so, would he use prison labour on public works done by the Dominion and provincial governments as well?

Mr. LAPOINTE: That is another very difficult question. I believe that if the prisoners in our penitentiaries were doing the work necessary for the production of the articles which I have mentioned, for the use of the various departments, they would be kept busy not only most of the time but all the time. The suggestion of my hon. friend might be considered, but I do not think it is necessary to consider it at the present time.

Mr. McQUARRIE: I do not wish it to be inferred that I am in favour of such a policy at all; on the contrary, I am opposed to it.

Mr. LAPOINTE: I would not like that to be inferred of me either. As far as wages are concerned, this also is a difficult question; —not the principle of it, because I do not agree with some hon. members who believe the prisoners should not get anything. Others have suggested that only the dependents of the prisoners should receive some compensation for the work done by the inmates; nor I would not agree with that. I think that the principle embodied in the resolution rather conforms with my own views in that respect; but it ought to be done as it is done in the state of New York, for instance, to which my hon. friend from Southeast Grey has referred. A sum should be deducted, first of all, representing the amount which the state expends for the upkeep of the prisoner in the penitentiary, and the proportion that might come to the prisoner would be only of the amount which would be over and above what the state had expended with regard to that particular prisoner. The amount would not have to be very large either. I heard one hon. member mention the sum of $1,000 or $1,500 which the prisoner would have on coming out of gaol. I do not think that would ever happen. In the prisons which have a system of this kind the amount of wages paid varies from 1½ cents a day to 25 cents. If you also take into consideration the fact that when a prisoner is guilty of an infraction of the bylaws of the penitentiary, the usual punishment consists in a fine, which is taken off the

money which is being kept for him, and further, that when any latitude is allowed him, smoking, for instance, and things of that kind, he has to pay for the tobacco and other articles he uses out of the money which is coming to him in the form of wages, there is no fear of any big fortune being made by an inmate of a penitentiary. On the other hand, I think that to a deserving inmate, a man who wants to make good—and there are some of them in the penitentiary—to be paid something for his labour would be a great incentive to good behaviour. Besides, it seems perhaps rather unwise to send a man out of the penitentiary after he has served a term of say six or seven or ten years with only what we are giving him at the present time—a suit of clothes and five dollars—and turning him on the street without any work. I think it would be in the interests not only of the inmate but of the community as well if a man who is deserving in other respects could have some little amount of money that would permit him to look around for other work, and to try and build a new position for himself in organized society.

Mr. McQUARRIE: Would the same policy apply to prisoners who are to be deported at the end of their sentence? For instance, the dope peddlers and people of that kind.

Mr. LAPOINTE: That would have to be considered; but to introduce discrimination in the penitentiary would be a dangerous system to adopt. I think all those who conform to the bylaws and regulations of the institution and do work properly and according to the regulations assigned to them, should be treated and dealt with in the same way.

Mr. MACLEAN (York): Has there been any increase in this allowance since the high cost of living?

Mr. LAPOINTE: Unfortunately, no.

Mr. MACLEAN (York): Now is your chance.

Mr. LAPOINTE: Yes. I see that time is passing rapidly; I have only one word more to say, and in this I am afraid I shall not meet with as much approval as my other points have met with so far. I honestly and sincerely believe that the Penitentiaries branch and its work ought to be taken away from the Civil Service Commission, just as is done in the case of the mounted police and the militia. It is not work of the usual departmental nature. I am responsible for what happens in the penitentiaries of Canada at the present time. I am responsible if there are evasions; I am responsible if there is a rebellion in a penitentiary anywhere; and I think it is not fair that the wardens and the deputy wardens, the main officers, and even the guards in the penitentiaries, should be selected under a system of competitive examination. It is absurd. I think that penitentiary work should be compared with the work of the mounted police or even of the militia. In the penitentiary the work that is to be done by the guards, and very often their lives are in jeopardy, depends for its success more on the character and the temperament of the man than on what they may happen to know about geography or arithmetic or anything else. This conviction I have formed during the year and a half in which I have been at the head of the administration of the Department of Justice. I believe in control by the Civil Service Commission when it is a case of appointments in connection with ordinary departmental work, but I do not think they are qualified to select the men to conduct the penitentiaries. In that respect the report of the commission, which was alluded to by my hon. friend from Southeast Grey, has stated that the present system is certainly defective. That report suggested that the Civil Service Commission ought not to be bound by any regulation in the selection of the men to who the work of the penitentiaries is to be entrusted; that they ought to be allowed to go out anywhere and select a person who seemed to them best qualified.

Mr. GARLAND (Bow River): Has the minister any complaints with regard to the present wardens or officials of the penitentiaries? I mean, what good argument has he against taking the appointments of these officials from the Civil Service Commission? Are the present officers not quite efficient?

Mr. LAPOINTE: I prefer not to answer that question; it is rather a delicate matter when it "comes down to brass tacks" as we say. I would rather not give any specific instances, but I should think that even the principle for which I am contending should appeal to my hon. friend—that the work in the penitentiaries is of such a special character that the appointment of qualified officials should not be entrusted to the Civil Service Commission.

Mr. ROSS (Kingston): Who selects them now? What principle governs the selection?

Mr. LAPOINTE: The Civil Service Commission makes the selection.

Mr. ROSS (Kingston): Is not this the process followed?—the recommendation is made by the warden to the Superintendent of Penitentiaries and then the Civil Service Commission makes the appointment?

Mr. LAPOINTE: No, unfortunately not. That may be the procedure in most instances but not always. I might perhaps inform my hon. friend that there is a position vacant in my department which should be filled, but has not been filled, because I have refused to accept the man whom the Civil Service Commission tried to impose on me.

Mr. ROSS (Kingston): Who recommended this man to the Civil Service Commission?

Mr. LAPOINTE: Not the chief of the branch because that officer gave me his opinion that the man selected by the commission had not the proper qualifications to do the work. The non-acceptance of this man is not due to any whim on my part in any way; it is because the officials of this branch in my department gave me their opinion that the man whom the Civil Service Commission recommended and wanted to appoint had not the qualifications for the sort of work the position demanded.

Mr. MACLEAN (York): Would the minister give a preference in filling vacancies to the mounted police?

Mr. LAPOINTE: I think I would.

Mr. SHAW: I rise to a point of order. I do so because I am interested in seeing a conclusion reached in this matter, and I cannot see what the action of the Civil Service Commission has to do with the debate on this resolution?

Mr. LAPOINTE: My hon. friend is right, but as all or most of the hon. members who spoke this afternoon took such latitude in giving their view on the general improvement of the penitentiaries I thought I could do the same thing with reference to the Civil Service Commission. I know it is a delicate subject as far as my hon. friend is concerned, but I had forgotten that fact when I touched the question. I congratulate again my hon. friend from Southeast Grey. I am sure the discussion in the House this afternoon will have a very good effect, and in order to conciliate the hon. member for West Calgary (Mr. Shaw) for my allusions to the method of making appointments I may assure him that I will vote for the resolution.

Sir HENRY DRAYTON (West York): I rise to support the resolution and to join in the general chorus of approbation which our fair member has so admirably and fully won. I want, however, to endorse one thing said by the minister, and that is that our attitude here is not at all an attitude of sentimentality; it is not a question of the sanity or insanity of the prisoner, it has to do with what ought to be the real object of these institutions—and that is to try and do something which shall make society as a whole better; and to do something with the raw material, bad as it very often is, which is put in our hands. We are all agreed that an idle life captivity is the worst thing that any man could experience. Next, a man should be kept at something which is not unproductive and barren of results. Those are the two outstanding features in connection with prison reform. If there is anything which we must do it is to see that these institutions which we maintain at great cost shall perform some useful function. That is the first duty incumbent upon us. The next thing—and I must hurry if I would conclude my remarks before six o'clock—is that if we are going to have productive work, in expecting the criminal to give society a square deal we must adopt the idea of giving a square deal to the criminal. Then, the least we can do is to look after his family. I was a crown attorney myself for years. If there is a terrible time in the life of any man it is when the time arrives for him to enter a gaol for a greater or less period, without friends, with no one to whom he can turn, feeling that as a result of his incarceration his family will be turned out into the street. That is a most depressing feeling.

Mr. MARTELL: What is complained of in connection with the resolution is that it seeks the enactment of a law which would enable a criminal to receive wages exactly as if he were competing with an honest fellow citizen outside.

Sir HENRY DRAYTON: My hon. friend is wrong in his idea that the man in gaol is going to receive the same wages as a worker outside. That is an impossible provision, it cannot be carried out. The whole idea of the resolution is to give the convict some chance at least of starting again; and I am going to ask my hon. friend to withdraw his amendment and allow the motion to go through as it is. I can assure him that there is no possible chance of any large sum being earned by the inmate of a penitentiary. Even if that were possible the poor fellow has been a long time down and out and has pretty well earned what he would receive.

There are several other points I should like to refer to but I shall not do so because I have no wish to delay this resolution. I will,

however, repeat this observation: If there is one thing more necessary than anything else it is that the man when he is discharged from the penitentiary should at least have in his possession some means to enable him to make his way in the world again.

Mr. SPEAKER: The question is on the amendment.

Mr. W. G. McQUARRIE: (New Westminster): Mr. Speaker—

An hon. MEMBER: Let us have a vote, do not bury the resolution.

Mr. McQUARRIE: As has already been stated this is an important resolution—

Mr. BROWN: Therefore we want to vote on it.

Mr. McQUARRIE: Yes?

Mr. LOGAN: You are burying it.

Mr. McQUARRIE: I want to vote on it but I want to do so in a proper way. We should not be forced to vote on a resolution of this kind without being afforded an opportunity of discussing it if we so desire. That is my point. Very well. If the debate on this resolution is not concluded to-day, it does not mean that the matter is closed. If the Minister of Justice (Mr. Lapointe) is in favour of it and will support the resolution, it is open to him—and the proper course for him to pursue—to bring in legislation as a government measure, which no doubt he will do.

Mr. LAPOINTE: We will have to convince both the government and parliament.

Sir HENRY DRAYTON: Parliament is ready.

Mr. MARTELL: Parliament is not ready.

Mr. McQUARRIE: Surely this government is strong enough, with the support of my good friends to my left to put through any measure which they consider right and proper.

Mr. LAPOINTE: I thank my hon. friend for the information.

Miss MACPHAIL: I would ask my hon. friend if he is strong enough to bear on his shoulders the weight of the responsibility for the defeat of this resolution for the purpose of hearing himself talk?

Mr. McQUARRIE: I am quite sure all hon. members have tried to be nice to the lady member for Southeast Grey (Miss Macphail) and far be it from me to say anything of an unkind nature.

[Sir Henry Drayton.]

Mr. SPEAKER: I think the remark of the hon. member for Southeast Grey is uncalled for. Every hon. member is entitled to speak and should not be interrupted, as the hon. member has just been. The hon. member is speaking on the question and is exercising his undoubted right.

Mr. McQUARRIE: I have a penitentiary in my town. I have not been in as many penitentiaries as the hon. member for Brandon (Mr. Forke) but I know something about the matter.

Mr. FORKE: I never was in one.

Mr. McQUARRIE: I apologize, but I understood my hon. friend to say he had been in all the penitentiaries in Canada. I stand corrected. I have been in the penitentiary at New Westminster and I was able to get out the same day. I have had the privilege of going through that institution, and had the privilege quite recently, shortly before I came to attend this session. I was invited by the warden to come out there and see what improvements had been made. He took me through the institution and showed me the work that had been done. I think there is enough work to keep the convicts busy for some years making improvements to the institution itself. There is a great deal of necessary work to be done.

At six o'clock the House adjourned, without question being put, pursuant to rule.

Thursday, March 19, 1925

The House met at three o'clock.

ROYAL ASSENT

Mr. SPEAKER: I have the honour to inform the House that I have received the following letter:

Ottawa, March 19, 1925.

Sir,—I have the honour to inform you that the Deputy of His Excellency the Governor General will proceed to the Senate chamber this afternoon at 3.15 o'clock for the purpose of giving the royal assent to certain bills.

A. F. SLADEN,
Secretary.

REPORT

Annual report of Dominion Statistician.—Hon. Mr. Low.

CRIMINAL CODE AMENDMENT

Mr. ANDREW McMASTER (Brome) moved for leave to introduce Bill No. 29 to amend the Criminal Code.

He said: Mr. Speaker, the object of this bill is to restore a wholesome safeguard which was in the Criminal Code prior to 1919 with respect to sedition. We have no definition of sedition in our code. Although we have certain purported explanations or definitions of what seditious words are, what seditious libels are, or what seditious conspiracies are; they are definitions which do not define to any great extent. But prior to 1919 there was a saving clause in the code that to attempt to change or alter the constitution by peaceful means was not sedition, and the object of the bill is merely to restore the law as it was prior to that date.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CANADIAN NATIONAL RAILWAYS—REVENUE FREIGHT AND TONNAGE

Sir HENRY DRAYTON:

*What were the average receipts and expenses for revenue freight per freight train mile in each of the years 1923 and 1924, in the different regions of the Canadian National Railways and affiliated companies?

What are the monthly percentages of tonnage originating in the different regions of the Canadian National Railways and affiliated companies to the total traffic of the year for each of the years 1923 and 1924?

Hon. Mr. GRAHAM: Mr. Speaker, there seems to be a little difficulty in getting the information just as my hon. friend (Sir Henry Drayton) wants it in questions 4 and 10.

Sir HENRY DRAYTON: Are those the questions dealing with regions instead of provinces?

Hon. Mr. GRAHAM: Yes. If we could change them to provinces the information could be more easily furnished.

Sir HENRY DRAYTON: I desire to have the questions in the easiest possible form for my hon. friend. I will have them amended to read "provinces" instead of "regions."

Mr. SPEAKER: Questions stand as amended.

CIVIL SERVICE INVESTIGATIONS

*Mr. GARLAND (Bow River):

1. What departments, if any, have been investigated by the Board of Audit?
2. Is it the intention of the government to table the reports made on such cases?
3. If not, why not?

Hon. Mr. ROBB: Mr. Speaker, I desire to lay on the table the original answer to this question as prepared and signed by the Auditor General, who is the chairman of the audit board:

Matters reported upon to the Finance department

1. Application of the Commissioner of Taxation regarding certain salary increases.
2. Inquiry into system of cancelling redeemed securities in the Finance department.
3. Revision of salaries in the Post Office department.
4. Inquiry into the accounts of the Quebec Harbour Commission.

Inquiries which have been completed and upon which the Board of Audit will report shortly to the Department of Finance.

1. Inquiry into the acounts of the Vancouver Harbour Commission.
2. Inquiry into the accounts of the Canadian National Railways.

Work under way

1. Inquiry into the accounts of the Montreal Harbour Commission.
2. Study of general conditions in the Auditor General's office and survey of the Consolidated Revenue and Audit Act with a view to recommending amendments thereto, etc.
3. Report on the Civil Service Act as administered by the Civil Service Commission.

Data prepared by the Board of Audit.

GEO. GONTHIER,
Chairman.

MONTREAL HARBOUR COMMISSIONERS

Hon. Mr. STEVENS:

1. Was the Montreal Board of Harbour Commissioners overdrawn at any period during the past year to the extent of $1,500,000 in a charter bank of Canada? If so, under what authority was such overdraft incurred?
2. Has the said bank requested payment from the Dominion government of the said overdraft?
3. Is the government of Canada responsible for the payment of said overdraft?
4. Is it the practice of the Dominion government to permit the Harbour Commissioners of Montreal or other boards of harbour commissioners to make extensive overdrafts?

Hon. Mr. CARDIN.

1. Yes. Under an arrangement with their bankers, for which no authority exists than the general powers conferred on the commissioners as administrators of the harbour affairs, under the terms of their Act of Incorporation.

2. No.

3. The Corporation of the Harbour Commissioners of Montreal are responsible.

4. It has been the practice of all governments since the Montreal Harbour Commission was organized on present basis, in 1907, to permit overdrafts. The same policy has been followed in the cases of Quebec and Vancouver organized in 1913.

In the case of the Toronto Harbour Commission, there has been no advance to that corporation of public moneys. Such public money as has been expended there was expended directly by the Public Works department and no interest is being charged or collected.

RAILWAY REVENUE FREIGHT

Sir HENRY DRAYTON:

1. What was the total amount of revenue freight originated and loaded at stations in the different provinces on all the Canadian railways for each of the years 1923 and 1924?

2. What was the total amount of revenue freight originated and loaded at stations in the different provinces on the Canadian National Railways and affiliated companies for each of the said years 1923 and 1924?

Hon. Mr. LOW:

1.

Revenue Freight Loaded at Railway Stations in Canada
(Tons 2,000 lbs.)

	All Railways	
	1923	1924
Prince Edward Island.	95,263	112,375

CANADIAN NATIONAL RAILWAYS—TRAFFIC AND EMPLOYEES

Sir HENRY DRAYTON:

1. What was the decrease expressed in tons of the traffic in the following articles or commodities carried by the Canadian National Railways in the year 1924, as compared with the year 1923: Wheat; bar, sheet and structural iron; castings, machinery and boilers; brick and artificial stone; coal; merchandise; miscellaneous?

2. What were the average number of employees of the System for the year 1923, and for the year 1924?

[Mr. Cardin.]

Hon. Mr. LOW:

1.

Revenue Freight Carried By Canadian National Railways
(Tons 2,000 lbs.)

Commodities	1923	1924	Increase	Decrease
Wheat..	5,999,453	5,231,066		768,387
Bar sheet structural iron & iron pipe. . .	709,857	425,734		284,123
Castings, machinery and boilers..	260,697	155,527		105,170
Brick and artificial stone. .	384,914	333,608		51,306
Coal - Anthracite.	3,167,071	2,634,823		532,248
Bituminous.	7,552,165	5,731,824		1,820,341
Lignite.	101,643	102,405	762	
Merchandise . .	1,612,980	1,531,832		81,148
Miscellaneous freight..	2,746,983	2,517,466		229,517

2. 1924, 88,169; 1923, 94,107; including hotels and miscellaneous operations.

BANQUE NATIONALE

Mr. DOUCET:

1. Did the Banque Nationale, from the date of its reorganization in 1922 up to its merger in 1924, send regularly to the Minister of Finance, monthly and yearly statements in compliance with the act?

2. If so, what was the state of said bank as shown by these statements?

3. If conditions seemed serious, what attitude was taken by the Minister of Finance?

4. Were suitable remonstrances made to the board of directors of said bank? If so (a) when, (b) in what manner?

5. Did the Minister of Finance verify the truth of the various statements made by the Banque Nationale from the date of its reorganization up to its merger?

6. Can he state that said statements were absolutely exact?

7. If these statements did not appear to him truthful or complete. did the Minister of Finance take action, if so, what was done?

8. Were all the required inspections made in compliance with the act, so as to ascertain the truth with reference to the condition of the Banque Nationale?

Hon. Mr. ROBB:

1. Yes.

2. Solvent.

3, 4, 5, 6, 7 and 8. From the extent to which the bank had relied upon borrowings under the Finance Act in 1921 and early months of 1922, it was apparent that the institution was in a non-liquid position. Reorganization took place in 1922. A strong directorate assumed responsibility for the bank's affairs and adopted measures under which it was hoped the situation could be worked out satisfactorily. New capital was brought in, the reserve fund written down against losses, the dividend reduced and government advances repaid.

Under these circumstances, and following the course taken by his predecessor in office, the attitude of the Minister of Finance was

that it was in the public interest that every proper facility and opportunity should be given the bank to improve its position.

The bank was absorbed by another institution on the 30th April, 1924, previous to the enactment of the provisions of the present Bank Act relative to government inspection by an Inspector-General of Banks, which came into force 1st October, 1924.

Mr. DOUCET:

1. Did the Banque Nationale pay any dividends to its shareholders from the date of its reorganization in 1922 up to the time of its merger in 1924?
2. If so, what were the dividends paid?
3. Did the government ascertain if the Banque Nationale was in a position to pay such dividends?
4. Was the Banque Nationale in a position to pay said dividends?

Hon. Mr. ROBB:

1 and 2. The bank reported dividends paid at the rate of 6 per cent per annum.

3 and 4. These inquiries relate to a period previous to the enactment of the provisions of the present Bank Act relative to government inspection by an Inspector-General of Banks which came into force October 1st, 1924.

COLONEL J. L. RALSTON

Mr. BLACK (Halifax):

1. What is the amount paid to Col. J. L. Ralston as chairman of the Royal Commission on Soldiers' Civil Re-establishment and Pensions (a) for services, (b) for travelling and other expenses?
2. Is there any balance to be paid to him, if so, what amount?

Hon. Mr. BELAND:

1. (a) $16,250; (b) $4,097.32.
2. No.

ICE CREAM STANDARDS

Mr. KENNEDY (Glengarry & Stormont):

1. Are there any federal standards in force covering ice cream?
2. If not, is it the intention of the government to establish such standards?
3. What department of the government does, or should, deal with the question of standards for ice cream?
4. Have any of the provinces established standards for ice cream?
5. If so, which provinces have done so, and what standards have been adopted?

Hon. Mr. BELAND:

1. No.
2. Yes.
3. Health.
4. Yes.
5.
   (a) Saskatchewan.
   (b) Manitoba.

(a) Standard for Saskatchewan:

Ice cream is a frozen product made from cream and sugar with or without harmless flavouring, stiffening and colouring materials, the amount of which shall be less than 2 per cent. It shall contain not less than 10 per cent of milk fat. All milk, cream and other ingredients, excepting fruits, nuts and sweets, used in the manufacture of ice cream shall, immediately before manufacture, be heated to a temperature of not less than 180 degrees Fahrenheit and held at such temperature for fifteen minutes or to a temperature of not less than 145 degrees Fahrenheit and held at such temperature for thirty minutes. All fruits used in the manufacture of ice cream shall be sound, clean and mature, and nuts shall be fresh and non-rancid.

(b) Standards for Manitoba:

Ice cream shall be the frozen product made from cream and sugar, with or without harmless flavouring and colouring materials, and with or without gelatine gum tragacanth or other harmless stiffening materials, in amount not less than two per cent and containing not less than fourteen per cent of milk fat.

(2) Fruit ice cream shall be a frozen product made similarly as ice cream, and containing sound, clean and mature fruit. It must contain not less than twelve per cent of milk fat.

(3) Nut ice cream shall be a frozen product made similarly as ice cream, and containing sound, non-rancid nuts. It must contain not less than twelve per cent of milk fat.

OCEAN SHIPPING RATES

INSTRUCTIONS TO MR. PRESTON

On the Orders of the Day:

Mr. H. A. STEWART (Leeds): I would like to ask the government, particularly the Minister of Trade and Commerce (Mr. Low), if the government will lay on the table of the House a copy of the instructions given to Mr. Preston prior to his undertaking the investigation in connection with the ocean freight rates, and referred to in the opening sentence of his report.

Hon. T. A. LOW (Minister of Trade and Commerce): I shall be very glad to bring d wn anything that there is in writing. The order in council, I believe, has been tabled; if not, I shall see that a copy of it is brought down.

Mr. STEWART (Leeds): The order in council has been brought down, I understand; I am referring to the instructions given to Mr. Preston. Would it be possible to have them brought down to-day? They cannot be very long.

Mr. LOW: If there is anything in writing I shall be very glad to have it brought down.

ROYAL CANADIAN ARTILLERY—PAY

On the Orders of the Day:

Mr. A. E. ROSS (Kingston): Mr. Speaker, I have received a letter signed "Thomas Atkins," asking me to bring to the attention of the government, and particularly of the Minister of Militia (Mr. Macdonald), a report in the Kingston press to the effect that the men of the Royal Canadian Artillery did not receive their pay last Saturday.

Hon. E. M. MACDONALD (Minister of National Defence): I did not see the report referred to, but I will make immediate inquiry.

CANADA GRAIN ACT

On the Orders of the Day:

Mr. O. R. GOULD (Assiniboia): I would like to ask the Minister of Trade and Commerce (Mr. Low) if he can advise the House of the probable date when the Grain Act or amendments thereto will be submitted.

Hon. T. A. LOW (Minister of Trade and Commerce): The bill is being prepared by Mr. Justice Turgeon, and I think it will be ready shortly.

CANADIAN NATIONAL RAILWAYS—ROUYN

On the Orders of the Day:

Sir HENRY DRAYTON (West York): Mr. Speaker, a few days ago I called the attention of the House to a newspaper article in connection with the building of a railway line to Rouyn, for the purpose of ascertaining whether or not the Canadian National were interested in the project; whether they were to lease the line, operate it, or do anything else with it; in short, whether an understanding of any kind had been entered into by them. The right hon. Prime Minister (Mr. Mackenzie King) said he would draw the matter to the attention of his evergenial colleague, the Minister of Railways and Canals (Mr. Graham), who, I am pleased to see, is now in his seat, and who can no doubt give the House the information.

[Mr. Low.]

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): The Canadian National Railway Company think it advisable that they should have a line into that very promising territory, which I think is even more promising than the public fully understand. It is in the territory of the Canadian National. I understand from the president that they have—

ROYAL ASSENT

SUSPENSION OF SITTING

A message was delivered by Colonel Ernest J. Chambers, Gentleman Usher of the Black Rod, as follows:

Mr. Speaker, His Honour, the Deputy of His Excellency the Governor General, desires the immediate attendance of this honourable House in the chamber of the honourable the Senate.

Accordingly, the House went up to the Senate.

And having returned,

Mr. SPEAKER informed the House that the Deputy of His Excellency the Governor General had been pleased to give in His Majesty's name the royal assent to the following bill:

Bill No. 28, for granting to His Majesty certain sums of money for the public service for the fiscal year ending March 31, 1926.

CANADIAN NATIONAL RAILWAYS—ROUYN

On the Orders of the Day:

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): Mr. Speaker, in completing my reply to the question asked by the hon. member for West York, the Canadian National Railway Company, believing it to be desirable to have a line from their main line into the very rich territory spoken of in the question, have suggested to capitalists that if they would build a branch line between two points to be named by the Canadian National, one of them being Rouyn, the company would be prepared to lease that line for a number of years, provided it were constructed properly and at a reasonable price, on terms to be arrived at between the company constructing the line and the Canadian National Railway Company. In that lease I presume there would be a provision that the Canadian National Railway Company could within a term of years purchase the line if they so desired.

Sir HENRY DRAYTON: Would my hon. friend be good enough to tell us if the government has approved of that arrangement?

Mr. GRAHAM: Not by order in council, but the government has practically approved of the suggestion.

Mr. MEIGHEN: When will parliament have a chance to pass on this matter? I understand the government believes strongly in parliamentary government.

Mr. GRAHAM: That is true, and parliament will have every facility to discuss anything that comes within the purview of parliament with reference to this line; but the Canadian National Railway Company, under the statute, passed I think by my right hon. friend has the right to lease properties with the consent of the Governor in Council.

MINERS AND STEEL WORKERS

On the Orders of the Day:

Mr. J. S. WOODSWORTH (Centre Winnipeg): After the urgent appeals of Canon Scott and other disinterested citizens, is it possible the government has decided to do anything to relieve the situation in Cape Breton?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I noticed in this morning's paper the reply which Premier Armstrong had sent to Canon Scott, in which he said, if I recollect it aright, that the facts apparently had not been properly represented to Canon Scott, and that the government of Nova Scotia had matters in hand. I took Premier Armstrong's reply to Canon Scott to be a most emphatic statement to the effect that the government of Nova Scotia wished to deal with the situation without any interference by any other government.

TORONTO TERMINALS RAILWAY

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals) moved the third reading of Bill No. 23, respecting the Toronto Terminals Railway Company.

Motion agreed to and bill read the third time and passed.

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—MOTION FOR RATIFICATION DISCUSSED

The House resumed, from March 17, the adjourned debate on the motion of Hon. T. A. Low (Minister of Trade and Commerce) to ratify and confirm a contract between His Majesty and Sir William Petersen providing for the establishment of a subsidized steamship line on the Atlantic, and government control of certain ocean rates, and the proposed amendment thereto of Mr. Clark.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, the motion under debate reads as follows:

> That to give the government of Canada control over certain ocean rates it is expedient to ratify and confirm the agreement between His Majesty and Sir William Petersen, K.C.B.E., as set out in the schedule to this resolution, and dated the eleventh day of December, one thousand nine hundred and twenty-four, and that in view of the provisions of said agreement giving the government control over such rates and of the services to be performed thereunder, the Governor in Council may authorize payment out of the consolidated revenue fund, to the said Sir William Petersen, K.C.B.E., of an annual amount of two hundred and seventy-five thousand pounds in the manner and for the period provided for in the said agreement.

Then follows the specific agreement. I read this so that the House, after being carried far over the waters of controversy, may get some glimpse of the port towards which we are sailing. I think it is important that we know what is before the House in its exact terms.

One would think from much of the debate that has preceded, and he would certainly think from the speech of the Prime Minister, that the motion before the House was to appoint a committee to inquire into the north Atlantic combine, and if possible, devise some method whereby the freight rates of that combine could be controlled. The House has been told that a desire to control is all the principle we are voting for; and those who favour control are told that the only thing to do is to support the resolution. Of course, those who are opposed to control and who like high rates are informed that they will be quite logical in opposing the resolution. If a government is to instruct the House—and if its word is to be the last on the subject—as to what principle it wishes to attach to a motion, then parliament might just as well become an appendage, a mere servile register of the administration's will. I think it is better for us to assume that we ourselves can read, and that we can understand the English language; and when we are asked to ratify a contract, common sense dictates to me that the principle which we are asked to affirm is the principle of that contract. If a government, on the introduction of any resolution or bill can say, "The principle of this resolution, this bill, is merely the public welfare, and those who support the public welfare must support this measure"—if a government can take such an attitude, then of course parliament will never have any question before it at all. An object to be gained is not necessarily a principle, it certainly is not a policy; a policy is the method proposed to reach the object. Now, it is true that a

government measure, merely because it passes in the form of a resolution or in the form of a second reading, need not finally pass unamended in detail; nor has anyone ever so contended. But every self-respecting government does insist that a government measure shall pass only with such amendments as do not vitally affect the measure itself. And when a government informs the House that it is not at all particular about its proposal, that all it wants is some way of reaching the goal, and that if the House will suggest some other method it will be gladly followed, then the government simply abdicates its duties, surrenders all its functions, and becomes nothing more nor less than surplusage in parliament.

The motion before us, is such that this argument applies with double force. The resolution preceding the bill asks us to affirm that it is expedient to ratify an agreement already entered into, signed and sealed, by the administration. The records of parliament will be searched in vain to disclose any case in which any government in our history, or in the history of the British parliament or of any dominion, ever suggested that an agreement signed and sealed by themselves, an agreement into which they had entered as fair between themselves and the other party, was subject to anything at the hands of parliament save acceptance or rejection. Indeed, this was the stand first taken by the Prime Minister; and in answer to, or rather in interruption of several speakers, he declared that what parliament had before it was the duty of deciding whether to reject or to approve of the contract which the resolution embodies. In so speaking he followed every precedent. But, as the difficulties of the situation loomed up, as the clouds gathered round his government, as he looked across at the gloomy faces of hon. gentlemen to my left, he proceeded by a slow curve to alter his position. He altered it first to the extent of saying that the agreement must pass; or, if the House considered that it could be amended, the government would take the amendments to Sir William Petersen and see whether he would agree to them. In the first place, this is not a very dignified attitude for any government to assume. Every citizen having made a contract feels that he should live up to it to the extent of his power. Having agreed that the terms of the contract are fair and reasonable, he does not like to submit to the humiliation of going back to the contractee and asking for a change. Well, what is true of a citizen in that regard should be far truer of a government. But this government, having declared its belief that the terms of the contract before us are fair and reasonable, is prepared to go back to Sir William Petersen and to say, "A committee of the House does not like this contract, so we are ready to kneel at your feet and beg of you to change its terms". This does not define fully the position which the Prime Minister took. He said further that if Sir William Petersen refused to consent to any change in the contract then it would be for the government to stand or fall by the agreement as it is. But again, the altered attitude did not seem to appeal to hon. gentlemen whose votes he was seeking very eagerly. The hon. member for Red Deer (Mr. Speakman) following of course the statements of the Prime Minister, made it clear that he would not consider the government acting in good faith unless the committee was free to devise some plan of control without subsidies at all—a wholly different plan or principle from that embodied in the contract. And the Prime Minister then declared that all that anyone would be voting for who voted for the contract was the "principle" that he desired ocean rates to be controlled, adding that if the committee favoured some other method and suggested it, it would be for the government to come back to parliament and, as best it could, give expression by a new measure to what it believed to be the will of parliament. In a word, the Prime Minister has declared that the government is prepared to change its policy, to the left or to the right, provided it can save its precious existence.

At times when a resolution is proposed, the House, if the case is unimportant, frequently lets the resolution pass, reserving decision on the principle for the second reading of the bill. But when the resolution is challenged by amendment then the government's policy as embodied in that resolution is at stake; and from that fate no government can escape. And that is the position which the government is in at the present time. I read the motion in order to bring to hon. gentlemen an understanding of what is meant, and I close this phase of the subject by asking this question: If the principle of government control by subsidies, in accordance with the terms of this contract if indeed this contract itself is not now before us for decision, when is it going to be, or when can it ever be? I submit that question this moment to every member of the government, sitting in front. Will it be on the first reading of the bill? Will it be on the second reading? And let us remember that the second reading is the last prior to

the committee stage, prior to the establishment of the select committee. When the second reading of the bill is before the House the Prime Minister can say exactly the same thing: "Oh, all that you are voting for is to have a special committee, and you will be given a chance to devise policies to suit yourselves." He can say that with just the same force and effect as he says it now. In other words, if the position which the Prime Minister takes is to be accepted by the House, then the House can never decide at all on the merits of this contract, or of the definite policy it proposes.

Now, it is well to inquire just what the real situation is with which we are confronted. The Prime Minister spent a considerable portion of his address in reciting conditions and circumstances which, I think, all of us know to exist; and it will contribute to definiteness in this discussion, as well as to clearness of thinking, if we can proceed to agree on what appeared to be conclusions from a large portion of his speech.

We can agree in the first place that there is a North Atlantic Steamship Conference—or combine if you wish to call it such. Nobody has ever disputed it that I have heard. We can agree that such conference or combine fixes rates on the goods its members transport. I do not know of anyone who disputes that; its officers did not dispute it before the committee presided over by the hon. member for Brome (Mr. McMaster).

Mr. McMASTER: I think it only fair to state that the officers of the lines denied that there was a conference, and the fact was only brought out with considerable difficulty.

Mr. MEIGHEN: It will be left for the hon. gentleman to establish what he says. I have read the report and I did not read that statement. I do not think any hon. member of this House doubts for a minute that a conference exists to-day and has existed for many years, and that the rates on the commodities are fixed by conference, with one or two or three exceptions. The argument has convinced me that the grain rate is not fixed by the conference. There may be an extent to which flour and cattle rates were fixed by it or possibly are to-day,—that matter may be left in dispute, it is not material for the moment,—but that rates are fixed generally there is no dispute. It may be taken for granted also that rates have been very materially advanced since pre-war days, and that the advance in those rates has had the effect of making difficult the export of goods; that it would be much better for Canadian industries if the rates were lower; and that possibly we would have some other Canadian industries if there were no rates at all. It can be taken for granted, as well, that repeated complaints have been made against those rates, back for six or eight years past,—yes, for longer than that,—and that those complaints are still kept up. All these things we acknowledge; it need not have taken three hours of declamation to establish them. I think we can agree further still, that the element of competition, to some degree is eliminated in respect of water-borne traffic. I do not think it is eliminated at all to the extent that it is eliminated in land transport, nor does any hon. member of this House think so. It is impossible in the present evolution of the industry to eliminate competition, save to a limited degree.

Yet, while we agree on all these things, we do not get very far towards enlightenment on the merits of this resolution; but once we agree on these things we dispose of at least three hours of the speech of the hon. Prime Minister (Mr. Mackenzie King). Now I state that there is not the same competition as in earlier days on the water. I make this further affirmation for whatever hon. gentlemen accept it as worth—that when the ocean steamship business develops to the extent that regular liners are established, then it is essential that there be something in the nature of conference and fixing of rates for those lines. I wonder if there is any member of this House who really believes that in evolution of the ocean steamship business to the extent that regular sailings are established, just as regular despatch of trains is established on land, it is possible to continue, save by some system of conference and uniformity of rates. I do not think the Prime Minister would say so. In a portion of his speech, towards the end, he clearly indicated the contrary. It cannot be done. If you do not have some such system, you are going to have each reaching out after the big fellow's traffic, giving rebates and advantages to obtain it—this is in evidence;—and thereby discriminations are produced which are far more serious than any discriminations complained of in this debate. The little fellow as a shipper will be virtually eliminated. This uniformity of rates established for the liner ensures to all equal treatment, to all shipments from all quarters no

4 p.m.

matter whether those shipments be large or small. Further, when we have the line transport system established, as stated in the report of the American government commission, experience has proven that there is no middle road between peace and war, and the big liner company has such advantage over the smaller that the crushing out process is sure to be successful, with the consequent establishment of a monopoly, not only in rates but in service. The element of competition even in service is gone forever. These things follow if there is no conference system; and consequently the conference system is not necessarily an evil in itself.

I do not argue from all this that as the shipping business grows and as the system evolves and these conferences become essential with the incident fixing of rates which is the main purpose of the conference, I do not argue that such thing can go on indefinitely with no superimposed control. I believe that the principle is unsound, that you can leave control solely in a conference; for while to do so is less dangerous than to suffer the absence of higher control on land—for the reason that on land competition in rates is absolutely impossible—on sea there is some competition, some very substantial competition, because of the presence of a very vast number of tramps—still sea transport should be controlled. These tramps according to the finding of the hon. member for West York (Sir Henry Drayton) in 1913, are not a great factor in competition in respect of goods which must have the liner service, which for the sake of regularity are practically dependent on the liner; but in respect of a great vast array of commodities the tramp competition is effective. Consequently we have not so soon arrived at the stage in the world's affairs when there is some supervision of ocean transport rates, the stage we have reached in respect of land transport rates. I admitted a moment ago that we had had in late years very material increases in ocean rates. The Prime Minister read at great length letters from shippers showing in respect of certain commodities rather startling percentages of increase. I do not doubt that some large percentages do obtain, but I might point out to the Prime Minister that his mathematics in some cases are out. But this is aside from the point. The only way in which we can establish what the advance has been is by such a computation as takes all rates into account; the selecting of isolated rates on tooth picks or clothes pins, on some little commodity such as those and working it out to a percentage leads to no conclusion. You ask me what does a computation of the whole field of commodities show? I had produced to me just a few minutes ago a schedule prepared from the Index of Shipping Freights. This is the official index accepted I believe everywhere as authoritative on this question. The schedule takes the average of rates, 1898 to 1913, as the basis. That average is stated to be 100. Then it gives the percentage of increases, year by year, first of all, in European waters; second in the North American area; third, in South America; fourth, in India; fifth, in the Far East and the Pacific, and sixth, in Australia. Lastly, the general average is given. I am going to read the figures for the North American area, which start at 100, the average between 1898 and 1913, a period of fifteen years:

1898 to 1913..	100
1913..	113.09
February, 1920..	529.89

This, of course, is the war period.

December, 1920..	277.17
December, 1921..	164.07
December, 1922..	135.15
December, 1923..	132.72
July, 1924..	121.87
August, 1924..	128.10
September, 1914..	138.94
October, 1924..	143.09
November, 1924..	137.32
December, 1924..	129.18
January, 1925..	134.60
February, 1925..	146.54

Thus indicating that the percentage now existing in February, even in the month when much of the tonnage is off, I understand, in the winter for repairs, over the average for fifteen years which ended in 1913, is 46.54 per cent. The percentage is, therefore, less than the figures quoted by the Prime Minister (Mr. Mackenzie King) as obtaining in relation to land transportation. The complete table is as follows:

Ocean Shipping Rates

Basis Date	European Waters	North America	South America	India	Far East and Pacific	Australia	Total
(Average, 1898-1913)..	100	100	100	100	100	100	100
Average, 1913..	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920..	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December, 1920..	268.90	277.17	244.10	256.79	286.72	347.18	280.14
December, 1921..	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922..	137.09	135.15	129.19	122.61	136.08	159.34	136.57
December, 1923..	134.03	132.72	120.09	124.35	125.07	144.21	130.08
July, 1924..	123.66	121.87	121.91	120.13	144.69	121.98	120.70
August, 1924..	120.45	128.10	119.94	118.97	113.31	128.19	121.49
September 1924..	117.90	138.94	123.20	124.93	122.19	144.22	128.56
October, 1924..	118.80	143.09	125.96	126.59	135.47	156.67	134.43
November, 1924..	115.01	137.32	120.31	120.50	131.95	162.02	131.18
December, 1924..	117.44	129.18	119.45	119.76	129.29	161.13	129.38
January, 1925..	115.26	134.60	120.38	123.33	132.44	172.70	133.20
February, 1925	114.92	146.54	118.04	121.95	129.99	178.04	134.91

Mr. MACKENZIE KING: By whom was the table compiled?

Mr. MEIGHEN: It is the Index of Shipping Freights and it appears in an article in the Economist of a very recent date. The table is completed to March, 1925. No doubt the figures are compiled year by year, as the years have proceeded, by officers of what is called, I think, the Shipping Freights' Association. I do not know how anything more authoritative can be obtained. If hon. members can produce anything more authoritative than this, covering the whole of shipping commodities of all kinds, I would be glad to submit to that higher authority.

Mr. GOOD: Are the averages weighted averages or merely averages of rates?

Mr. MEIGHEN: They are averages of rates. I do not know what is meant by weighted averages. They are averages of the business actually carried.

Mr. GOOD: What is meant by weighted averages is the average that takes into account the relative importance and quantity of the commodity carried.

Mr. MEIGHEN: I would presume it would take that into account. I would not think it would be of much value if it did not. I want to read as well just one other article of evidence.

Mr. ROBB: In the rates quoted by the right hon. member, is any distinction made between Canadian ports and American ports?

Mr. MEIGHEN: The north Atlantic is treated as one. I do not contend that this shows any absence of discrimination as between Montreal and New York. But as the Acting Minister of Finance has raised the point, I quote from the same journal of February 28 of this year the following words:

The fact is that the rates eastward are the same for all north Atlantic ports from Baltimore to Montreal, although insurance rates for ships entering Montreal are higher than for ships using American ports.

This, of course, refers only to eastbound traffic.

Mr. ROBB: And this year.

Mr. MEIGHEN: I do not know as to that. I have not read the context and I am not speaking positively whether it does or not.

The other article of evidence which I want to put on Hansard is this. The Minister of Trade and Commerce (Mr. Low) gave a statement of cargo which this new Petersen ship was capable of carrying. He stated it to be an average cargo and he had worked out the earnings of the ship according to that statement of cargo. The earnings he showed to be $35,159.44. The earnings in respect of each commodity are given separately and the rate charged is given. Those were the earnings if cattle were not included. If cattle were carried also, the earnings would be £9,469-8-10. The firm of Price, Waterhouse and Company have taken that same cargo and applied to its several commodities the rates which prevailed in 1913. This I give on the authority of Price, Waterhouse and Company and I place their signature on Hansard because it is on the original. The earnings of this same cargo in 1913 would have been $26,158.19, cattle excepted, and if cattle were carried, £6,079-12-5. That is to say, the earnings in 1924 were 40.25 per cent over the earnings on the same commodities in 1913, if cattle were not carried, and if cattle were carried, the earnings were 55.75 per cent higher. I will place the whole table on Hansard including the certificate of Price, Waterhouse and Company.

[The following is the table supplied:

EARNINGS FROM A "PETERSEN" STEAMER VOYAGE IN THE SEASON 1924 (AS PUBLISHED IN "HANSARD" PAGE 723) COMPARED WITH EARNINGS BASED UPON THE AVERAGE FREIGHT RATES FOR 1913 FROM MONTREAL TO LONDON

—	Weight — Tons	Measurement	1924 Season		1913 Season	
			Rate	Earnings	Rate	Earnings
				$ cts.		$ cts.
25 loads grain	5,350	250,000	3/- qr	17,250 00	2/7½ qr.	15,750,00
bags flour	1,000	56,000	19½c. 100 lbs.	4,368 00	17c. 100 lbs.	3,808 00
boxes provisions	300	18,000	47c. "	3,158 40	24½c. "	1,646 40
boxes cheese	100	7,000	67c. "	1,500 80	32·15 "	720 16
200 stds. deals	500	44,000	70/- std.	3,220 00	47/6 std.	2,280 00
canned goods	30	1,950	47c. 100 lbs.	315 84	16·88c. 100 lbs.	113 43
pulp board	50	3,500	53c. "	593 60	17·09c. "	191 40
lard	100	6,500	47c. "	1,052 80	24½c. "	548 80
sundries	50	10,000	37c. M	3,700 00	11c. M	1,100 00
			at 4.60 per £1	35,159 44	at 4.80 per £1	26,158 19
				£7,643 7 1		£5,449 12 5
Add: 420 head of cattle (No cattle carried in 1913; the rate taken for 1913 is based on that of 1912 season).	.....	.....	$20 per head	1,826 1 9	$7.20 per head	630 0 0
				£9,469 8 10		£6,079 12 5

On the basis of the above figures the earnings for the Season 1924 show the following percentages of increase over the earnings of the 1913 season—

Without cattle.....40·25 per cent
With cattle.....55·75 per cent

We have examined the freight Contract Records and Manifests of the Cunard and Canadian Pacific Steamship Lines covering the 1913 Season, Montreal to London, and we certify that the averaged rates for that Season which are used above have been taken therefrom and that the calculations of the earnings for the 1913 Season have been correctly made.

PRICE, WATERHOUSE & CO.,
Chartered Accountants.

Montreal, March 9, 1925.

One would have thought that evidence of this kind, which agrees very closely and accurately with the tables produced in the Economist are surely of more value than a plethora of miscellaneous letters which have been written at various times, mostly long ago, by different persons in the country about matters, the actual facts as to which may never have been investigated and the circumstances respecting which are now unknown. I stated a moment ago that as the conference system develops—and it has developed to a very considerable degree—it seems reasonable and essential that there be developed with it a supervising authority, an authority competent to control the disposition of the power now vested in the conference. It does not seem reasonable to my mind that an authority which does not represent all the people should be competent to dispose of the world's water freight, and I say that without any allegation that there has been discrimination or wrongdoing or extortion of any kind in respect of such disposition; but the principle seems wrong that there should go on uncontrolled an authority over these very vital matters in the hands of those whose interests are not in every way the interests of the whole people.

But when we get to that point, is not the next thing we have to decide, what necessarily must be the composition, what necessarily must be the status of any body that is to have a chance in the world to exercise anything in the nature of control? Surely any single country has not such right—and because it has not the right it never can succeed in an attempt to exercise it. I ask hon. gentlemen to reflect, has Canada alone the right to control rates in and out between this country and Great Britain? If we have such a right, has not Great Britain the same right? And how can both of us have the right to separate control? Now I pause for a reply from any hon. gentleman in this House. Have we the right to control rates between here and Australia, or to dictate to Australia what shall be charged on goods shipped from that Dominion to Canada? Have

[Mr. Meighen.]

we the right to say to Great Britain, "On the goods sent by your citizens to this country only such and such shall be the freight rates and we are going to dictate those rates right here in the Capital of Canada?" Let us reverse the position; let us suppose that Great Britain had proposed that its government would control the rates on our wheat shipped from the shores of Canada to the British market, can any hon. gentleman imagine to himself the speech that the Prime Minister of this country would deliver in this House? Can anybody conceive the compaign which would be launched in this Dominion against "Downing street domination?" Well, if Great Britain has not that right, how then can we assert the right to control rates between here and that country? In a word, we are asserting something which inherently we do not and cannot possess, and even if we had some wise method established to exercise such right, the wisest you could get, our attempt would be bound to end in failure.

Now, what kind of a board, what is the smallest circumference or power a board must possess which could even attempt to handle this situation? I venture to suggest to the House, and it is embodied in our amendment as an affirmation, that you cannot do so with any body of narrower compass than a body on which are representatives of the whole empire. Even the Prime Minister in a portion of his address said it could not be effectively done until you had a body representative of all nations of the world. Well, possibly to a degree that is true. But the shipping of this whole empire is of so vast a magnitude that it cannot be boycotted, and the people of this whole empire have among themselves the inherent right, if they choose to exercise it, to control the shipping between the various ports of the empire. Therefore the first step of any consequence at all that is not bound to end in disaster and collapse is to establish some such body on which the whole empire is represented. Every effort should be persisted in to bring this about. I do not say that when this is done it will be the last step in the development of a system of control, there may be one beyond, but that step has a chance, a good chance, of succeeding in so far at least as traffic is concerned between the various ports of the British Empire.

Hon. gentlemen opposite who entered into this agreement very hastily,—and some of whom I do the compliment to say are exceedingly sorry—tell us, "Oh we cannot get any body in which the whole empire is represented to take this matter in hand so we have got to splurge ahead and do something, no matter what it is, in order to attract attention, in order to stir our cousins up and have them see this thing has got to be attended to." Well, what have been the attempts? According to the Minister of Railways (Mr. Graham), the first was started in 1910. He got a memorandum from Mr. Justice Mabee, then head of the railway commission. He forwarded that memorandum to the British government, and the British government made a reply. Now, I have the highest opinion of the late Mr. Justice Mabee, but I must express the fear that I cannot be lost in admiration of his memorandum. It proceeds on the hypothesis that ocean transport is as susceptible of control by one country as is land transportation within that country itself; it proceeds on the hypothesis that competition is just as surely gone from ocean transport as from land. Both of these hypotheses are manifestly and obviously false. I do not need to go further. The memorandum says also that in a few years—it was written in 1910—England would be importing 600,000,000 or 800,000,000 bushels of our wheat. Well, as to-day, fifteen years after, there are only about 43,000,000 people in Great Britain, and all they could possibly consume would be 280,000,000 bushels, I am at a loss to know what they would do with the other 400,000,000 bushels. In a word, the memorandum is not very thoroughly compiled. It was forwarded to Great Britain with an expression of hope that some central body representative of the empire would be created to take charge of this transport difficulty.

Evidently the Canadian government of the time forgot that the whole question had just been investigated by a commission on which the government itself had been represented, and that commission's finding was that control on the water, as compared with control on the land, was impracticable, that there were very, very great difficulties to be confronted which did not appear on land at all, and that especially a control which necessarily, if it operated, would put British shipping at a disadvantage with continental shipping was something which would not redound to the benefit of any part of the Empire. These things were pointed out by the British government. Well, they seem to me very sensible. I wonder how they appeal to other members of this House. Do not the representations made by the British government in its reply sound sane and just and right. There were undoubtedly further difficulties to be overcome, and the British government suggested that the matter be still further investigated with a view to seeing if

something could not be evolved to take care at least of the danger of discriminations. The Canadian government stopped right there. The Minister of Railways says the reason they stopped was that he knew when he was turned down, and anyway they knew the facts and needed no investigation. This was back in 1910 and such is the reason he gave the House for having gone no further. Well, if they knew the facts in 1910, why did they start to find them out again in 1923 and again in 1924? They started two investigations in the last two years.

The next step of importance taken—I am passing by the various inquiries at the hands of the British government—was an inquiry by the present hon. member for West York (Sir Henry Drayton). He made an inquiry from the standpoint of Canada and returned with a report which, put in brief, was this: that he did not believe the principle of private control under the conference system could be allowed to continue undisturbed; that there should be some higher control; that otherwise, the conference would have power at its own will, to do injustice and injury to individual concerns. While he did not allege it had done so, he did not believe it was in principle right that the power should be solely vested there, and he suggested a tribunal which was to seek to evolve a plan. He mentioned that the Dominions Royal Commission then sitting was the proper body. This royal commission evidently took the matter in hand, and reported against the principle of private control and in favour of some system of united control on the part of the various parts of the empire. The war was on. Through the period of the war shipping was under the British government. In 1918 the representatives of Canada brought this matter forcibly to the attention of that government. The British government acquiesced to the extent of appointing what is known as the Imperial Shipping committee on which all portions of the empire are represented and to which certain definite powers were given. These did not include powers specifically to fix rates; those were withheld; but the committee was invited to investigate and report on all matters concerning discriminations, harbour facilities, and generally the betterment of communications between the various portions of the empire. Canada was not satisfied. Sir Robert Borden in the spring of 1919 prepared a memorandum in which he strongly urged that the powers of the shipping board be amplified and that Canada continue in its effort—and he invited the support of the other dominions as well—to have vested in this Imperial Shipping Board a power of control. This was subsequently submitted to me, when I was Prime Minister, in a letter from Sir George Perley. Sir George Perley had been our representative on the Imperial Shipping Board. Considerable good work was done by that board. He found, however, that he was not possessed adequately of the information necessary in order to bring home to the commission the duty of reporting itself in favour of being given these powers, and he asked us to consider the wisdom of having someone specially delegated to present the case of Canada, in favour of the amplification of the duties of the Imperial Shipping Board. The government of the day decided that Dr. Magill of Winnipeg was capable to do that work. Dr. Magill, however, declined. The letter in which he declined is not before us, but there was such a letter. This was during the session of 1921. At the close of the session I went to England, and immediately on my return a general election was called. Six months, or almost that, intervened between the reply of Sir George Perley and the calling of the general election. The session of parliament and Imperial conference were on and progress was not made.

The next step was the appointment of the committee under the charge of the hon. member for Brome (Mr. McMaster). This committee, however, was not appointed to investigate ocean freight rates at all; the reference to the committee contained no suggestion of such investigation. The reference was general, to look into the question of agricultural conditions. I make no complaint that the committee saw fit to give some attention to this subject; I am very glad it did. The committee made several reports, and now we are told that the government bases the policy it submits to parliament upon the report of that committee. Well, one would never dream so, if he reads the report itself. The report found that there was a combine and that the combine controlled rates. Does the Prime Minister say that is the basis of his policy?

Mr. MACKENZIE KING: Genesis was the word I used.

Mr. MEIGHEN: The genesis of it? Well, the Prime Minister also said that the government's policy was wholly irrespective of whether there is a combine or not. He said his policy had no relation to the combine, that it did not matter whether there is a combine or no combine; that his is the right policy anyway. And he said it was based on the report of a committee whose only finding in this respect was that there is a combine.

Does he say now that the committee recommended any action of this kind? In so far as there is any indication in its report of the course to be pursued, that course is directly contrary to the one the government has taken. Here is what the committee recommended. It is found at page xxi of the Journals of the House for 1923:

Your committee, in view of the foregoing and of the evidence adduced before them and referred to in a previous interim report, are of the opinion that action is desirable to control shipping rings or conferences.

What action?

It is suggested that the Canadian representatives in attendance at the next meeting of the International Institute of Agriculture should be given authority to see that the matter is thoroughly discussed, in order to discover whether an international system of control is feasible through such agency.

I wonder if there is any family resemblance between that suggestion, which at least shows that the committee had some enlightened understanding of the problem, and that which is embodied in this resolution? Then the report goes on:

In view of the fact that a very great deal of the shipping coming to Canadian ports is British shipping, concurrent action by the British authorities is respectfully suggested.

One would think that what occurred to the mind of the hon. member for Brome and his committee would have occurred to the mind of this government, but not a move was even attempted, to get British co-operation or concurrence. I quote further:

The matter might well be made a subject for discussion and consideration at the next Imperial Economic conference.

There end the suggestions of the committee.

Mr. McMASTER: Oh, no.

Mr. MEIGHEN: Well, I mean as to the line of policy to be pursued. What was the other one?

Mr. McMASTER: A little further on—several paragraphs.

Mr. MEIGHEN: Where is it? I hope that any further suggestions they made are not contradictory to those I have read?

Mr. McMASTER: No, no.

Mr. MEIGHEN: If they are in line with those I have read I do not see what the purpose of the interruption was. That is what the committee recommended. Even the committee did not feel that to discuss the problem intelligently and to get to anything in the way of an expeditious and wise conclusion the facts were still well enough under command; and they recommended this:

In view of the important and widespread information collected during the sittings of your committee and the impossibility of digesting and properly weighing the evidence in the time at their disposal before prorogation, your committee respectfully recommend that a similar committee be appointed at an early period of the next session of parliament.

This recommendation, I would presume, has reference to other subjects under review by the committee, just as it has to this one. These three recommendations which the committee made the government has flouted, and they come to this House and say they base their policy upon the committee's report! This idea is a lately generated one of basing the government's policy upon the committee's report.

Mr. Preston has been referred to in this debate. The government seemed very sensitive as to the reputation of Mr. Preston, but no member of this side of the House has ever so reflected on that gentleman as has the Prime Minister himself. In March of 1924 Mr. Preston is sent over to investigate and report on this problem. That is the commission given him by the order in council. It is all the order in council says, except to specify his pay, which I venture to think was the most important part of the whole enterprise. After sending Mr. Preston over in March, 1924, to investigate and report, this government came to a policy without waiting for his report at all. The Prime Minister stands now and says that it does not matter at all what is in Mr. Preston's report; that he is not basing his policy on Preston's report in any way at all; he is basing his policy on the report of the McMaster committee, which recommended movement and action in directly the opposite way.

Now what is this government policy? It is embodied in a contract which we are asked to ratify. I am going to analyze this contract, not in any technical spirit; I am going to try and reveal to the House just what the effect of the contract is. I know the Prime Minister says: Well, it does not matter what is there; the government is going to do so and so, anyway. Mr. Speaker, there are a class of people in everyday life who, when they make a contract, do what they like irrespective of it, but I do not think parliament should accept with placidity the declaration of a Prime Minister that he is going to follow in those footsteps.

In the first place, though I do not consider this of major importance, the covenant of Sir William Petersen, that the terms, such as they are, on his part of this contract, will be carried out, is a covenant which Sir William Petersen can set fire to just as soon as the contract is implemented by this parliament.

By the way, one would think this government was entitled to some superior benediction, because, forsooth, it did not make a contract except "subject to the ratification of parliament." "We made it in this case," the Prime Minister says, "very clear to Sir William Petersen that the contract could not take effect till parliament ratified it. That is the course we pursued." Well, there was no other course on earth he could pursue. The government had absolutely no power to make a contract save subject to the will of parliament. No contract ever was made—not previously authorized by parliament—except subject to the ratification of parliament. When Sir Wilfrid Laurier in 1898 brought down the Yukon railway contract, he brought it down subject to the ratification of parliament. When in 1903 he brought down the Grand Trunk Pacific contract, it was signed and sealed, and he brought it down subject to the ratification of parliament. When in 1918 the government of the day brought down the bill for taking over the Grand Trunk railway, embodying a contract, it also was subject to the ratification of parliament. All must be; the Prime Minister had no option; there was nothing else he could do. But there is this difference: In every one of those cases the government of the day, under Sir Wilfrid Laurier, and under Sir Robert Borden, took the full responsibility for their contract. They declared to parliament: This contract embodies terms which in our judgment are fair; those terms were signed and sealed; parliament can reject the contract if it will, but if it rejects that contract it rejects the government. Sir Wilfrid Laurier and Sir Robert Borden, and the present Prime Minister each of them said: "The contract is here for approval or disapproval; it cannot be trimmed." But Sir Wilfrid Laurier and Sir Robert Borden each stood by his assertion, stood by it in the face of opposition, stood up manfully and accepted his responsibility, and staked his government on the issue. But the Prime Minister in this administration wriggled and wiggled around and tried to read what he calls a principle into the resolution. He says to hon. gentlemen: If you do not like the resolution, amend it. If you do not like the contract, amend it, and we will go to Sir William Petersen and fall at his feet and ask him to accept your will. But if you won't have anything to do with it at all, throw it out, and give us something else. In a word, go on, do anything you like, **but save our precious** lives.

Now I come to the contract. Sir William Petersen, immediately he forms his company, has the government bound to accept that company. Whether it is a mere watered stock company, whether it is a mere cipher without financial responsibility, it does not matter. The government has no security at all, and no lawyer of Mr. Lafleur's standing ever in his life signed his name to a statement that Sir William Petersen has not power to release himself from every covenant by the formation of a company and the substitution of that company for himself.

I do not need to read all the introductory paragraphs. I fancy they are the intellectual harvest of the government, rather than of Mr. Lafleur. I have seen documents that eminent counsel have drawn, but I never saw any other of them preceded by a lot of political fanfare such as constitutes the best portion of this contract.

The covenants on the part of Sir William Petersen are as follows. He covenants, first of all, that he shall, either by himself or by this company:

> Build, equip, provide, establish and during this contract, continue and in the manner hereinafter mentioned, operate a regular shipping service between such ports in Great Britain or Ireland or the continent of Europe, and Canadian ports as may be designated by the Minister of Trade and Commerce for Canada or his representatives from time to time.

Will hon. members see the limitations of that covenant? He must build, equip, provide, establish and during the contract continue in the manner hereinafter mentioned to operate a regular shipping service between ports in Canada and Great Britain or the continent to be designated by the Minister of Trade and Commerce. That covenant, of course, he must keep.

Then by (b) he must:

> Establish and continue and maintain and operate as hereinafter set out the shipping service hereinbefore referred to free from the control of and independent of the Atlantic shipping combine or conference or any other combine or conference now in existence or which may be operated or established upon the Atlantic ocean at any time in the future without the sanction of the government of Canada.

First, he must build, equip and operate a regular shipping service, and the government can fix the ports; second, he must keep out of the Atlantic Steamship conference. Those are the two covenants.

The next is—it is not in very good English, but that does not matter very much:

> (c) That such service shall be put in effect and maintained with ten ships as hereinbefore referred to and these shall be built and placed in operation with all possible despatch and shall be fully completed and put in service within eighteen months from the date of this agreement (at least two of the same to be placed in service by August 1, 1925) and pending completion of the same, other ships of modern construction properly equipped and of approximately the same tonnage—

Mark that.

—shall be substituted and operated in the said service until the fleet in question is completely constructed and in operation, the said service to commence with at least six ships not later than June 15, 1925.

That is to say, Sir William Petersen in the execution of his covenant shall have in operation by June 15, six ships of about the same tonnage as those described at the close of the agreement, and he shall have two of the new ones not later than August 1, 1925. It will be observed that the ships which he may substitute do not need to be of the speed or of any of the characteristics of those provided for in the contract; they need only to be of about the same tonnage. The next covenant is this:

(d) That the control and regulation of the rates to be charged by the contractor shall rest with the government of Canada and that the government shall fix such transportation rates on all commodities from time to time.

Let me consider this paragraph for a moment —and I do so with the open invitation to any member of the House who disagrees with me to say so. Let me discuss what is the alpha and omega, the beginning and the end, of that covenant. It gives the government of Canada the right to fix the rates on any and all commodities. Of that there is no question. But what is its meaning? The government, in respect of any commodity—and "commodity" has a distinct meaning—can say to Sir William Petersen that the rate shall be so much on his vessels. This the government can do, and no more. Under that covenant the government cannot compel Sir William Petersen to carry the commodity at the rate fixed. He may fill his ship with other commodities whose rates are fixed to his liking. The Minister of National Defence (Mr. Macdonald, Pictou) takes refuge in a smile. I invite him to dispute that position.

Mr. MACDONALD (Pictou): I will dispute it when you get through; it is ridiculous.

Mr. MEIGHEN: That will be safer than to dispute it now. It is quite true that if Sir William Petersen carries the commodity he cannot charge any higher rate than the government may fix. So much is certain. Now, the Prime Minister says, "We will fix the rates only on Canadian goods." Of course, if the rates are fixed on American goods then the American seller will get the benefit of our subsidies; we should then have been generous enough to bonus the American shipper by making it possible for him to get more for his product: and when the Prime Minister was faced with that horn of dilemma he escaped by declaring that the government would fix rates only on Canadian commodities. Evidently what he has in mind is that Canadian wheat is one commodity and American wheat another. But I ask hon. gentlemen to my left, is that true? Is not wheat a single commodity? Is not barley a single commodity? Is not oats a single commodity? Is Ontario wheat one commodity and Quebec or Manitoba wheat another? And can the government fix one rate for Ontario wheat and another for the Manitoba product? It cannot. It names the commodity and fixes the rate, and that done, the government's power is exhausted. I should like to know whether the Prime Minister or the Minister of National Defence disputes my contention. They cannot.

The Prime Minister did say that the government would fix the rates only as regards Canadian commodities. Well, let me for the sake of argument accept that position; suppose he is right. What then? The horn of the dilemma which he is on now is worse than the other. Let me illustrate. The Prime Minister says to Sir William Petersen that the rate on Canadian wheat shall be 6 cents, let us say. We will say that the general rate on American wheat is 9 cents. Will any one suggest that Sir William Petersen cannot take the American wheat? If the Prime Minister attempted to reduce the rate on American wheat to the Canadian level, Sir William Petersen of course would be as well paid if he took the Canadian wheat. But the Prime Minister says he will not do such a thing as fix a rate in American wheat. But if the rate is fixed only on the Canadian product, Sir William Petersen is absolutely free to fill his ship with American wheat.

Mr. MACKENZIE KING: I hope my right hon. friend will not feel that, because I am silent while he makes these overtures, I agree with what he says. I want him to have the fullest latitude to make his case as strong as he can, and that is my only reason for not replying to these absurd views.

Mr. MEIGHEN: I suppose I cannot assume that, in view of—

Mr. McMASTER: Silence does not necessarily imply consent.

Mr. MEIGHEN: But silence in the case of the Prime Minister, who is never slow in interrupting, does imply that he has great difficulty in answering.

Mr. MACKENZIE KING: Well, let me make it clear that such is not the case, for I

differ utterly from my right hon. friend in regard to the representations he is making, which are inaccurate and absurd.

Mr. MEIGHEN: That is always the answer of the controversialist who cannot give any reason for his position. I say that Sir William Petersen certainly must carry out every covenant of his contract. But what are those covenants? The covenants are these—that he will build, equip and operate a regular service; if he does not do that he cannot sue the government for a single dollar; that he shall not get into the north Atlantic combine; and, as well, that he must have in operation certain ships at certain dates. These are the covenants and these alone, and when he fulfils them he can demand his money from this government. Now, I am speaking in the presence of at least sixty or seventy lawyers, none of whom has been overgifted with shyness in the past. I want to know whether any lawyer in the House will contest that position.

Mr. McMASTER: I think the leader of the opposition must have overlooked sub-section (e):

Make proper provision for the carriage of perishable and partly perishable produce by means of cold storage facilities.

If Sir William Petersen is to fit his ship in such a way as to carry that sort of produce how can he fill the vessel with American goods?

Mr. MEIGHEN: I am fair in assuming that the best lawyer in the House has made the best reply he can. Certainly Sir William Petersen must fit his ship to carry perishable or semi-perishable produce. But I want to ask the hon. member for Brome (Mr. McMaster): Is not Sir William Petersen absolutely free, if he desires, to operate this portion empty, or, if he does not like that, to fill it with American goods?

Mr. McMASTER: Not if he expects the subsidy.

Mr. MEIGHEN: What binds him in the contract to distinguish between American and Canadian goods? What binds him to carry Canadian goods at all? There is not a syllable in the contract which compels him to do so. In other words, Sir William Petersen has the whole thing under his hands. I venture to suggest that the Minister of National Defence cannot bring me the written opinion of Mr. Lefleur, or of any other reputable lawyer, that Sir William Petersen is prevented or estopped under this contract from carrying American goods as freely as he likes and as freely as he may carry Canadian produce. The rate on wheat to American shippers is, say, 9 cents. He may say to the American, "I will carry your produce for 8 cents." And he carries the American wheat at a rate one cent below the average level. What does that mean? It means that the American wheat is carried lower on the strength of a subsidy paid by this government out of the treasury of Canada.

It has been already argued in this debate that Sir William Petersen does not bind himself to establish any fixed number of sailings. Those are left with himself entirely. They must be "regular." Such is his convenant and no more. Once they start out they must proceed with despatch. I presume they would do so anyway, because there is no money in loitering on the water. But that is his covenant and no more. He can establish, so far as his contract goes one sailing a year and then he has absolutely fulfilled the contract. Or he could establish two sailings a year or one a month. Let us assume that this government fixes rates which are low, say ten dollars a head on cattle, and Sir William Petersen provides a sailing or two or perhaps three or a dozen sailings a year, and the less the number of sailings he runs the less will be his loss, Petersen will get $1,300,000 a year from the government and be entitled to every dollar of it. The interest charge on six million dollars is only about three hundred thousand dollars a year, and therefore he would have a million to the good, and as long as the government cannot force him to operate a service enough to bring his losses over a million, he will be entitled to everything he can save.

Mr. JACOBS: Would that be the spirit of the contract?

Mr. MEIGHEN: That is distinctly the spirit of the contract. It should not have been put that way. I admit that. When the hon. member for George Etienne Cartier (Mr. Jacobs) draws a contract he does not leave it to the other fellow to fix the terms and therefore the spirit to suit himself.

Mr. JACOBS: I have forgotten how to draw a contract since I have been in parliament.

Mr. MEIGHEN: So has the government. This contract cannot be attributed to Mr. Lafleur. The business of the lawyer is to draft what his client desires. The government's duty was to dictate the terms to Mr. Lafleur; it was for him so to draft the contract as to safeguard what the government

said should be safeguarded. The government cannot hide behind the skirts of Mr. Lafleur. The hon. member says that my statement is not in accord with the spirit of the contract; but, I have found this in the history of Canadian politics, that when a party starts to talk about the spirit as distinguished from the letter he is pretty nearly the "chart" stage.

Mr. MACKENZIE KING: Will my hon. friend accept what Sir William Petersen says as to the spirit and letter of the contract?

Mr. MEIGHEN: Not at all. Of course I will not. That is the hole the government is in and it should not try to pull me in too. The government is in the hands of Sir William Petersen. I hope I am able to read English and understand it myself. The hon. member says that the spirit has to be looked to. That is quite true, but the spirit grows out of the letter. When we get to this fine distinction of the spirit and the letter, just look out for the next turn in the road, when the Prime Minister will say: "The contract is really only a chart by which I am to guide myself. Its exact terms do not matter. I have declared to the House what the government intends to do, and no matter what the contract says it is my word that is going to go." The course the Prime Minister pursues now parallels to a degree his conduct with respect to the platform of his party in 1919, and hon. gentlemen can expect just the same end of the road—just the same reversal, the same farce. If any hon. gentleman can suggest that any further covenant that Sir William Petersen enters into modifies in any degree the proposition I have advanced, I would feel indebted to him if he would make his suggestion now. These are his covenants and these only, and these he must keep and when he keeps these covenants he gives all the service he promised. Then when he gives this service the government must pay or be in the position of repudiating its own engagement.

5 p.m.

The Prime Minister devoted considerable of his time to showing that the rates for immigrants had been raised greatly, and so they have. The immigration policy of this government, whatever the last edition of it is, is having a terrible time according to the Prime Minister because of these fearful rates the ocean steamships are charging for immigrants. Now I make the statement that under this contract the government does not make provision for carrying one single immigrant. Sir William Petersen is not bound under the contract, and need never be bound, to carry an immigrant in the next ten years—not one. It is true the contract says that Sir William Petersen and the government may later on agree to establish passenger service, but if they may agree, they also may not agree, and Sir William Petersen before he agrees will fix the terms he considers he wants, and if the government does not come to these terms there is no contract. On this I challenge contradiction from anyone. Ships for passenger service may be agreed to be provided, but if so Canada of course will have to pay the price.

I proceed to another phase of the discussion, and with this I think I will be through. I set out by arguing that the government of Canada by controlling rates on any small fleet of ships cannot meet with any real success in establishing control of rates generally. They cannot in the first place because inherently they have not the right to such single control. The other country cannot be asked to submit. It is true the government may contribute to rates, it may pay some of the rates out of the treasury. This is just what the present government is undertaking—this and nothing more. But if the government thought it worth while to control the rates on a certain number of boats, I ask, why did they not use the ships they already own? We have had various reasons given. In the course of the debate, during the speech of the hon. member for Vancouver Centre (Mr. Stevens) the Prime Minister said the ships of the Canadian Government Merchant Marine were no good. The Minister of Agriculture (Mr. Motherwell), whose closely reasoned, profound, statesmanlike speech I am sure the House will long remember, has made some statements on this subject. The Prime Minister did not confine his assertion simply to the interruption in the speech of the hon. member for Vancouver Centre. Repeatedly he followed that course, and he was disturbed in his serenity only by the Minister of Railways (Mr. Graham) who took an entirely different line, and claimed that the reason they could not use the merchant marine was that those merchant marine ships were rendering too great a service now. He said that the services they were rendering Canada on various trade routes were such that the government could not afford to take them off. This was the line of argument adopted by the hon. Minister of Railways, and let me do him the honour of saying—but perhaps he would not consider it a compliment to get any word of commendation from me—that circumscribed as he was, he made at least the most skilful attempt to evade this issue of any hon. member on his side.

Mr. GRAHAM: If that be true, I have a great imitator.

Mr. MEIGHEN: The minister has an imitator but I do not know that I would call him great. He is sitting quite near him—

Mr. GRAHAM: He is sitting opposite.

Mr. MEIGHEN: —but he was not half as skilful as was the Minister of Railways and Canals. The hon. member (Mr. Jacobs) said—and this will warrant, maybe, a diversion for the moment—that the mercantile marine was losing $9,000,000. The question of the wisdom of building the merchant marine does not come into this debate. I am not going to discuss the merits of its construction; I am prepared to leave that question just where the Minister of Railways and Canals left it and just where the Prime Minister left it after his change of faith. But I must interpolate this: The merchant marine, in 1920, made an operating profit of $1,400,000. In 1921, it made a profit of $781,000. The profit in 1920 paid interest on cost, even the war costs under which the ships had to be built. The profit in 1921 paid two and one-third per cent only. In 1922, there was a loss of $2,300,000; in 1923, a loss of $1,800,000 on operation. We have not yet had the report for 1924. The sum of $9,000,000 includes, of course, interest on cost which has to be taken into account, and depreciation. I only want to make clear the significance of the interruption of the hon. member for George Etienne Cartier (Mr. Jacobs).

I was about to arrive at the pregnant utterances of the Minister of Agriculture (Mr. Motherwell) who stated, as reported in the Manitoba Free Press of August 11:

> The using of the Canadian mercantile marine boats at cheaper rates is not practicable, because the five boats fitted up for cattle carrying are not big enough for cattle export trade of any volume. In fact the five boats together only equal one good-sized cattle carrier.

Does he contend that he is building good-sized cattle carriers now? He is building boats just the size of the mercantile marine.

Mr. MOTHERWELL: Larger.

Mr. MEIGHEN: Smaller than two of them, slightly larger, but only by a negligible per cent, than twenty-four of them. The minister says that because of their size they cannot carry cattle successfully. But he says further that they had been built too big for the lakes and too small for the ocean, and he came along with this drivel in a speech in this House since. These vessels of the merchant marine, according to him, could not be used because they are too big for our lakes and too small for the ocean. If the House will refer to a return brought down by the Minister of Railways and Canals on the second of this month, there will be found a schedule of the entire merchant marine vessels. In that schedule it will be found that the twenty-six ships are of a tonnage of 8,300 and over. The corresponding tonnage of the Petersen vessels is 9,000. It will be found that two out of these twenty-six vessels are 10,687 tons and 10,682 tons, and two more are over 9,000 tons. I ask the House to remember that twenty-six are above 8,300 tons. Of the remainder, thirty are from 3,341 to 5,000 tons odd. Only one is below 3,300 tons and that is the Canadian Sapper whose dead weight is 2,781 tons. These are the vessels which the Minister of Agriculture, with what I must describe as flippant fiction, declared were too small for the ocean and too big for the lakes. I hold in my hand a list of vessels which this year have traded into the port of Montreal, traded to European ports, traded even to South African ports, and sixty-seven of them are under 3,100 tons. There are boats as low as 1,149 tons trading to Meandros, Greece; boats as low as 1,290 tons trading to Copenhagen; boats as low as 1,966 tons trading to Copenhagen; boats as low as 1,096 tons trading to Antwerp. Our boats, all but one, or to be exact, fifty-six in all, are over 3,300 tons. The Minister of Agriculture, who wants to decry the property of Canada, who wants to find an excuse, for not taking the obvious course of lowering and controlling rates on their own vessels, if the government wants to control by themselves at all, declares to the people of Canada, on his authority as a minister, that boats of 8,300 tons and up are too small for ocean traffic!

What is the nature of these boats which the Prime Minister says are no good? He says they are not fit for north Atlantic traffic. In 1923, twelve of them plied the north Atlantic all year, according to the report of the mercantile marine presented by this government, between Canada and British and European ports. In 1922, eleven of them did the same thing and at least eleven of them did so last year. These boats which hon. gentlemen tell us are no good, which the Minister of Agriculture says are too small for the ocean, which we are told are not fit for the north Atlantic traffic, are doing service on the north Atlantic right along, and indeed are doing such good service that the Minister of Railways and Canals declares that in the public interest he cannot take them off. There have been repeated attempts on the part of

hon. gentlemen opposite,—and from this I want to absolve the Minister of Railways and Canals, as I never heard him uttering nonsense of this kind—to decry the character, type, design and construction of our ships. I hold in my hand some certificates which I have taken the trouble to obtain. The first one that I will read is from Mr. Isles, one of the superintendent stevedores of Montreal, one of the most competent and respected, as I am sure those who know him will admit, in the whole service. Mr. Isles' statement is the most moderate of any that I have received and I will read it first:

After going over the specifications covering the ships which are to be built under the Petersen contract, I find these ships are about the same type of ship as the SS. Glentworth, which loaded here last fall. Her T/Deck capacity was 131,966 cubic feet, lower holds, 425,831 cubic feet.

This ship lifted a cargo of 8,456 tons grain equal 39,458 quarters. Only her lower holds were full with a very small margin—probably 200 tons—in the 'tweendecks, otherwise the 'tweendecks were empty.

Comparing the larger ships of the Canadian Government Merchant Marine such as the Canadian Constructor and the Canadian Crusier, 4,413 net registered tons each, they are about the same size as the Petersen ships.

The Canadian Seigneur, the Canadian Pioneer and the Canadian Ranger are smaller boats, but as they would probably be easier to stow and as they carry their cargo both in lower holds and 'tweendecks they are more adapted for the Montreal trade.

Their speed is slightly better than that of the Petersen ships.

I draw this to the attention of the hon. member for Lunenburg (Mr. Duff), who has found terrible fault with the speed of the Canadian Government Merchant Marine.

They will do their work better, as from personal experience in loading the Canadian Mariner, Canadian Seigneur, Canadian Ranger, and Canadian Challenger, it is found that these ships were easily worked and just as suitable as any ships that I have handled, their cargo gear being up-to-date, with hatches of suitable size for economical working.

The proposed corrugation or "blister" on the side of the Petersen boats will, I think, cause trouble in docking and undocking as it will be liable to hit the quay wall causing leaky rivets, which will be a menace and source of danger to the cargo.

This class of steamer is still in the experimental stage, and why should we subsidize experiments?

Yours truly,

DAVID ISLES.

Superintendent Stevedore.

In a subsequent note he says:

The specifications on page 28 of the proposed Petersen steamers are, in our opinion, those of the cheapest class of cargo steamer, which would not compare with either Cairnross, Cairnmona, Cairnvalona, Cairntorr, Cairnavon, Cairngowan, or Cairndhu.

All of these ships have powerful fan extractors in every hold, have an average sea speed of 12 knots, and are now being fitted with refrigerator chambers; have powerful wireless installation, direction finders, and every aid to navigation.

Then he says further:

We find nothing in the specifications to provide safe carriage for perishable and partly perishable cargoes.

In the specifications which come at the end of the contract there is nothing at all to provide safe carriage for these cargoes. He adds:

In fact shippers to-day, who demand, and have got by the steamship companies, fan ventilation and refrigerated chambers, would not ship on a steamer built to these specifications.

Emigrant traffic. Neither accommodation nor provision for it. If it is not provided for at building it would never be satisfactory, and would cost ten times as much to add it.

Speed about 11 knots is useless on the Atlantic for this traffic.

The next communication I read is from Mr. Capper, marine superintendent of the Cunard line. He says:

I am of the opinion that these vessels of the Canadian Government Merchant Marine are a very good type, and equal to any other good cargo vessel on the service at present. As regards the running and working of the vessels, the records of the past two years show they are well manned and handled.

Mr. MACDONALD (Pictou): What particular vessels does that refer to?

Mr. MEIGHEN: To the Canadian Government Merchant Marine vessels in general.

Mr. MACDONALD (Pictou): Oh, no.

Mr. MEIGHEN: It refers to all those going in and out of Montreal, because he is a marine superintendent there and knows what he is talking about. The Canadian Government Merchant Marine boats run in and out of Montreal not only across the Atlantic, but to Newfoundland and the West Indies. It would refer certainly to all vessels of the 8,000-ton type, and I presume to many others of the 5,000 and 3,500-ton type. Now I read this letter from Mr. Welch. He built a number of the Canadian Government Merchant Marine boats, and is a practical marine engineer. He says:

I have examined the abbreviated specification of the proposed vessels for William Petersen and knowing the Canadian Government Merchant Marine boats of similar tonnage, I have no hesitation in saying that the latter boats have everything in their favour, both as regards cargo capacity and speed.

Yours truly,

A. WELCH.
M.I.N.A. London,
M.I.E.S. Scotland,
M.I.E.C. Canada.

I add to that this letter which has come to me from Mr. P. L. Miller, naval architect, and a member of the Institute of Naval Architects, England, and of the Society of Naval Architects of the United States. Writing under date of March 4, he says:

I have been reading with interest the reports from day to day in the press regarding suggested subsidy to Sir William Petersen to provide and operate ten cargo steamers on the north Atlantic trade under subsidy from the Dominion government, and I have had an opportunity of reading the contract and specifications attached thereto.

My object in writing to you is to repudiate what is implied, namely, that the cargo vessels constructed during the past few years at the expense of the Dominion government are inadequate to meet the conditions indicated by Mr. Preston. It is true that as the science of naval architecture and engineering develops, cheaper methods of propulsion will be found and are being experimented on to-day. Is there any justification for ignoring a whole fleet of first-class vessels in order to replace them by ten new vessels of very similar specifications?

On a study of the specifications I see corrugated sides mentioned. These are not by any means accepted universally as fundamentally sound. Furthermore, I think it will be generally acknowledged that ship owners would expect to operate a new ship for not less than ten years.

All the vessels of the Canadian Government Merchant Marine, Limited, have been built since the year 1917. They have been built under the same rigid inspection of Lloyd's Register of British Corporation as have been vessels in the Old Country, which is the same specification called for in Sir William Petersen's contract, and on the average are equal to any of the vessels turned out in the same period in Great Britain.

One must also remember that many of the existing vessels of the Canadian Government Merchant Marine, Limited, are already fitted with refrigerated holds; also, practically all are well fitted for the conveyance of grain, so it is difficult to see what advantage will accrue in the substitution of the Petersen ships for the trade required.

He might have added, "except for Mr. Petersen."

How anyone can admit or justify ignoring such a fleet in order to have a new fleet constructed is beyond the comprehension of any ordinary citizen, let alone one who knows the details of the business.

I sincerely trust that you will in some way be able to stop the exploitation in Canada of additional expenditure on a fleet of cargo vessels which, in my opinion, is not required.

Now I finish with this communication, signed by the head of the Robert Reford Company, certainly no great friends of the Canadian Government Merchant Marine, with whom the government merchant marine competes,

The Canadian Government Merchant Marine is at present operating fifty-seven steamers in various trades. Twenty-six of these ships have a dead weight capacity of 8,000 tons and over. Vessels of these measurements are generally agreed to be the most suitable for the Atlantic trade, and the greater number of the cargo liners coming to the port of Montreal are of about this size. These twenty-six ships of the Canadian Government Merchant Marine can indisputably be reckoned as among the best engaged in the Canadian trade.

In addition the Canadian Government Merchant Marine owns eight boats of about 5,000 tons dead weight capacity. While these are perhaps not so useful on the regular berth, there is a constant demand for such tonnage to and from Canadian ports on chartering terms.

There remain twenty-three steamers owned by the Canadian Government Merchant Marine of under 5,000 tons dead weight capacity. It has been maintained that such ships are too small for Canadian service, but from the attached list it will be seen that, apart from the Canadian Government Merchant Marine vessels, sixty-seven of such ships entered Canadian ports last year.

So far only the Atlantic trade has been mentioned, but it is quite possible for the Canadian Government Merchant Marine to employ the last-mentioned type of ship in the Great Lakes, inter-coastal or West Indian trades, where ships of small tonnage are specially called for.

R. W. REFORD.

These communications I submit as a reply to the uncorroborated assertions of hon. members of this government that the Canadian Government Merchant Marine boats are not fit for the Atlantic trade. Every one of these letters indicates they are the equal, and most of them state positively that they are superior to the ships the government contemplates building. They are undoubtedly faster. "Now," says the Minister of Railways, "all we want to declare by this attempt is the principle of control. We are ready to pay $13,000,000, just to establish the principle of control." Well, why does he not establish the principle of control over the Canadian Government Merchant Marine? Is not, in fact, the principle of control established now? Does the Minister of Railways subscribe to the opinion that the merchant marine is under the management of somebody else, and that the government cannot possibly recover its control? If the merchant marine under the management of the board which is operating it to-day, a board appointed by this government, is tied hand and foot and compelled to charge these exorbitant rates, why does not the government take the merchant marine from under that control? They can do so by order in council. Those eleven or twelve ships which are running now over the north Atlantic the government by order in council can in an hour's time take under its own control and fix the rates on every one of them; and what is more, can bind the captain and all concerned to carry goods at the rates fixed. Control as a principle is already established and only waits to be exercised if the government wishes to do so. Why pay $13,000,000 for the establishment of a principle which already is firmly and definitely established—if this control be called a principle? It is really no principle at all. It is merely an objective, and that objective the minister can reach in five minutes by passing an order in council. Does he say that to run the ships out-and-out and fix the charges does not establish the principle of control, but that if we pay $13,000,000 to another man's company to do so, this is the perfection of the principle of control? Sure-

ly the minister would not argue nonsense of that kind. Why then does he ask this House to vote this money for the establishment of a principle which he knows he can establish and give effect to merely by the passing of an order in council without a dollar of cost? So I say that if this government wants to reduce rates, if it believes in all these allegations that rates are exorbitant; that they are determined by a heartless corporation, a combine which sweats and strangles the industries of this country, why does it not take immediate control of its own ships and reduce the rates on fifty-seven instead of ten, thereby getting at least five times the results that it can possibly get by this expenditure, and without the payment of a dollar by way of subsidy?

This government, which pretends to pay such deference to the report of the committee of the hon. member for Brome (Mr. McMaster) took two years to follow the main recommendation of that report to take our ships out of the combine. Now the Prime Minister says that just a few days ago they took them out and the reason they did not take them out sooner was they were afraid the combine would crush them; the combine would boycott the merchant marine vessels and they would therefore lose more money. Well, I do not say this by way of disputing what the Prime Minister said, but I do say it by way of expressing my own belief: They may be taken out in the sense that they are not obliged to follow the combine rates, but I do venture the assertion that they are following the rates just the same to this very hour. But why did the government take two years to decide upon this step?—if indeed it is any real step at all. Why? The Prime Minister says, because we were afraid the combine would crush us. But, he tells us, Sir William Petersen is made of sterner stuff. Sir William Petersen is not afraid of the combine. Why, has he not a dock, or two docks, or some more docks, over in England? Has he not business interests there? Well, I suppose he has. I know he has four ships of about 4,000 tons which he runs somewhere down around the African coast. But the government of Canada has some business interests too. This country has some influence in the world which I think ought to compare with the influence and power of Sir William Petersen. The government of Canada operates 24,000 miles of railway. Their ships are under the command of the same directorate as the railways. The government of Canada has a thousand times the influence in respect of traffic abroad than Sir William Petersen can possibly have. The flag of this country floats in every bay and every ocean of the world, carried by the steamships of this country. This Dominion has infinitely more business pressure at its command than Sir William Petersen or five hundred Sir William Petersens can ever hope to possess. But the government says, "We are afraid of the combine; they would come upon us with their big guns and would crush us down and out, and that is why we could not take the merchant marine from its clutches. We could not stand the battle; but Sir William Petersen —he is ready to fight it out,—and he has a good chance of victory because, forsooth, he has four ships running down the coast of Africa. This is not any worse than the answers given by the Prime Minister to questions put by others. I address hon. gentlemen to my left: was one question propounded by any of them answered by the Prime Minister? Not one. One hon. member rose and said: If these rates are so exorbitant why is it that the merchant marine which charges them is losing money instead of making money? That hon. member, I think, was the hon. member for Brandon (Mr. Forke) but I notice he appears in Hansard now merely as "an hon. member."

*Mr. FORKE: They do not know me in the House.

Mr. MEIGHEN: Apparently they did not know him. What was the Prime Minister's answer? The answer was this: that he supposed it was on account of the differential against Canada that the rates were so high; they were stifling business and the boats could not get traffic. So the reason the merchant marine does not make money at the high rates of the combine is because it is charging higher rates into our ports—because the rates to Canadian ports, he says, are higher than to the American. This is the reason he says the merchant marine does not pay—and the merchant marine is owned by the government which complains against the extortion. This government stands here and confesses that for three years it has kept a merchant marine under a directorate which is holding rates so high that the trade of Canada is being strangled, that our manufacturers are being stifled, that our western cattle trade is being smothered. The same merchant marine is also, he says, killing itself because its rates are so high it cannot get the business. Is that not a magnificent way to manage the merchant marine of this country? That is precisely what the Prime Minister has proclaimed.

*(An hon. Member. See p. 1248.)

Then, the Prime Minister made special reference to the cattle business. One would think from one portion of his address that the ships were to carry cattle all the time, but if they devoted all their time to carrying cattle they could not possibly carry more than half the cattle shipped. You cannot pile all the cattle over into the British market all at once. This subsidy, distributed over the cattle business, would mean a cost of about $60 a head—that is, over all this one line could carry. What an economical way to develop the Canadian cattle trade! Then, we are told that our own ships are not fit for the carrying of cattle. Our twenty-six ships can be fitted for cattle just the same as any other ships. As a matter of fact the directorate have already fitted out not less than five; at least four are running, fitted for the cattle trade, and they are carrying cattle at $20 a head. The government say, "Oh, this is doing harm to Canada, we cannot stand such a rate." The government goes to Sir William Petersen, and I just picture to myself the spectacle which was presented. Am I putting the matter one whit different from its true perspective? The Prime Minister, or say the Minister of Trade and Commerce, goes to Sir William Petersen and says: "There are our ships, we are charging $20 a head on cattle. We and our fellow pirates are strangling the western cattle trade. We are throttling the Ontario cattle trade. A member of parliament gets up and says we are blood-suckers. The Lethbridge Board of Trade is up in arms. We will give you, Sir William Petersen, $13,000,000 if you will come into business and force us to reduce the rate on cattle." Will even the member for Brome suggest that that is not precisely the bargain which the Minister of Trade and Commerce now submits to this parliament for ratification? I have a certificate in my hand to show that these boats can be fitted up to carry cattle, of equal capacity with the Petersen boats which are to be built.

Has anyone answered this question in the debate: Who is to be the arbiter to decide which of the cattle shippers, which of the grain shippers, which of the clothes-pin shippers, which of the dairy shippers—which of all these are going to get special favours at the expense of the people of Canada? This argument would apply to merchant marine management on a low rate basis just the same as to Petersen's ships—this is precisely why we did not run the merchant marine on a scale differing from the other scales in and out of Atlantic ports. We would then have had to select special shippers in Canada and give them special favours at the expense of the country.

We would only have been contributing out of the treasury of Canada for the benefit of special individuals. But that is just what this government proposes to do, and besides for every dollar it gives the favoured individual, it gives Sir William Petersen two; that is the only difference. Who is to stand on the dock in Montreal and say to the shipper from one elevator. "We will give you the special low rate on wheat to-day, and say to the shipper from another: You will have to hire one of these other boats that are in the combine." Has this country any right to distinguish as between shippers? This country cannot possibly operate the government's plan without doing so; there is no way in which it can be done. Either this government or Sir William Petersen himself will be the bestower of the favours. Is the government prepared to hand over to a man not even a citizen of Canada the right to select pets in this Dominion, and give to these pets special rates across the Atlantic? This whole thing is built on a fallacy; it is unsound from the first word to the last, and I cannot help but think that the government's only hope is to find for it a secluded cemetery at the hands of this committee. Parliament is continually being told: If you like this thing, applaud it, but if you do not like it, refer it to a committee. Such is the government's move every time when its proposals, ill-digested, come before parliament for adoption.

Hon. members, those of us who have been in the House some time, can remember that it is not many years since the chief article of faith of hon. gentlemen opposite was that the money of this country had to be spent in Canada, that no money voted by this parliament should go to help build up the shipbuilding or other industry in another land. When the government of the day in 1912-1913 proposed the construction of three ships of war of the highest scientific type ever known, by way of assistance to Great Britain under the shadow of the German menace, hon. gentlemen opposite fought it for days and weeks and months, and the chief article of opposition was that our $30,000,000 was going to be spent in shipyards overseas, and not to help build up the shipbuilding industry in this Dominion. The government of the day felt that as we had never built anything of this type before, and as in our belief the menace was near, the only effective way was to get them built as fast as we could. We could not have established the necessary docks and all the other facilities in time. But hon. gentlemen opposite were willing to risk everything just to get those ships built in Canada. When

later in 1918 we came to the programme of constructing merchant ships in this Dominion, we took care that every one of them was built in Canadian yards, because the ships were of far simpler construction.

These ships Sir William Petersen is going to build are ships the like of which have been built in this Dominion before. They are vessels which can be built nearly as expeditiously in this country as in any other, perhaps not quite so cheaply, but better pay something more to give work to the unemployed in this country than send our money somewhere else in order to give work to the unemployed over there. The Prime Minister says: Oh, this money is not going to build ships at all; Sir William Petersen is going to provide the money to build these ships. Yes, in a way that is true, but Sir William Petersen provides the money on the faith of these subsidies. These subsidies out of the treasury of Canada are the security on which he gets his money. The money of this country in effect is to be spent in the shipyards of the old land or of Germany or somewhere over there, and according to the Minister of Agriculture (Mr. Motherwell) the contracts are already let. The money of this country is to be spent at a time when we have tens and hundreds of thousands of unemployed, to build ships in other lands. For this purpose the government will bestow on Sir William Petersen and a company which undoubtedly will register the ships overseas, $13,000,000 out of the overstocked treasury of the Dominion of Canada.

On every count there has been failure to review, failure to consider the circumstances, failure to delve to the heart of the difficulty. There has been nothing but a hasty, ill-considered, reckless plunge; and the government hope, I suppose, because of its mere recklessness, because of the spectacular character of this legislation; that in some way they are going to attract attention to the question, and finally drift to a solution. The Prime Minister says you cannot get any arrangement for supervision as called for in the amendment. Then before he is through with his speech he says: Just let us take this plunge into the Petersen contract; just let us get beside Mr. Preston with his pebble and help him throw it into the Atlantic. In that way we will rouse the dry bones of New Zealand. We will waken Australia, and bring England to her senses, and they will all come and gather round us, and we will be able to find some sort of board or institute, which will control rates on the water. Does the Prime Minister really believe that? Do you get any further in the solution of a question by starting with a false step? If hon. members feel they do, then they ought to vote for this contract.

I go back to 1903. Did we advance the solution of the railway problem in Canada by hastily plunging into the madness of the Transcontinental? Did we? Did not we rather deter the solution? Did not we rather intensify the difficulty of the problem for a period of at least half a century?

Did we in 1922 hasten the solution of the wheat marketing problem in the west by the gold-brick legislation of that year? Did not we as a matter of fact—and I appeal to hon. gentlemen to my left—did not we really defer the solution of that problem, which now is under way, for one year, if not two? That was precisely the effect.

Did we in 1923 advance the solution of the question of high freight rates on the Great Lakes by the legislation of the Minister of Trade and Commerce of that day? Will hon. gentlemen suggest for one minute that we did? We brought in some legislation—and in that too Mr. Preston was the moving spirit from the beginning, the same man who has wound his maladorous trail through our politics for a quarter of a century—we plunged into a piece of legislation which resulted only in this, a cost of at least $3,800,000 to our western farmers in freight rates over what the American farmer was paying who enjoyed American boats. Such was the result, at the expense of the Canadian farmer. But it was not the only result. Another result was that we forced this country to the position of bending its knee to the American boat owner, and begging him to come back into our trade and violate our law. We got nothing in the wake of that hasty legislation, save a loss of millions to our farmers and a bitter humiliation to our country.

But the government says: Take this step; plunge right in, and if you cannot say anything else for us, please say that we are courageous. The Minister of Railways admits himself they are courageous. Well if courage consists in ill-considered and precipitated legislation, then the government undoubtedly is deserving of that meed of praise. Or if courage consists in prodigality with other people's money, then the members of this administration will leave a memory which will outlive the name of Joan of Arc. Courage, forsooth, to dip into the treasury of this country in a mad expenditure of $13,000,000 to do something we can do without a dollar of this expenditure at all! This contract is to be blessed by parliament, and we are expected to vote for its ratification because, if the government in proposing it have

no other virtue, they have the virtue of courage!

No; you do not advance the solution of the problem by first taking a step in the wrong direction. You thwart the solution, you delay it; and what is more you make your country a by-word before the world. What position is this country in as respects the Great Lakes problem to-day? Are we as far ahead as we were in 1923? We have a board which is forced to sham because it is supposed to be controlling rates, but everyone knows that it has not dictated a single rate. That board in actual practice, has no more to do with the control of rates on our lakes than have the wardens of a Confucian temple in Shanghai. The government may have expected that by taking that step in 1923 they would bring the American government to attention, and that the American government would join them in some system of control. But instead the American government stood by and laughed, and after the whole farce is over, the North American continent laughs as well.

Surely this House, merely because it is told by the Prime Minister that it is a case of being either in favour of low freight rates or against them, is not going to vote for this resolution. Surely this House is not going to pass its blessing on a resolution or on the ratification of a contract in which, I venture to say, in his heart of hearts no hon. member believes. I ask, subject to correction: Is there any hon. member who has heard this contract approved by any respectable citizen in this country outside the walls of this House? If any one can mention a man who has approved it to his face let him say who that man is. I stand and say definitely that not one human being has ever in my hearing or by letter expressed in the slightest degree any word of favor for this contract. The House is asked in the face of the direct challenge of the amendment to declare that this agreement ought to be ratified, and its feelings are soothed by the Prime Minister who says that all we really declare, is that we should like to see something done. I appeal to this House, on the contrary to make its real will known and to say that even though the government resolution be amended in detail, it is fundamentally wrong in principle, is ill-advised, costly and futile, and deserves no further consideration at the hands of parliament.

Hon. E. M. MACDONALD (Minister of National Defence): I am sure the House will all agree with me that my right hon. friend (Mr. Meighen), whose faculty for destructive and unfair criticism is among the greatest of his abilities, has to-day given us one of the best exhibitions of that quality, and that after a speech of two and a half hours he has left this important question without having given to the House or to the country one atom in the way of solution, or one suggestion as to how the present problem may be met. Hon. gentlemen who sit behind him have discussed for a number of days this question of the incubus of ocean freight rates under which this country is now staggering, and they have denied that a combine has existed. They have urged that there was no such thing.

Some hon. MEMBERS: Oh, oh.

Mr. MACDONALD (Pictou): I see my hon. friends are following the cue of their leader. I am however in the judgment of the House when I make the statement that such were the arguments of hon. gentlemen opposite.

Mr. MEIGHEN: Will the hon. gentleman mention one member who has said such a thing?

Mr. MACDONALD (Pictou): My hon. friend from Vancouver Centre (Mr. Stevens)—

Mr. MEIGHEN: He did not. Will the minister quote from his words?

Mr. MACDONALD (Pictou): The right hon. gentleman now comes forward and declares that a combine does exist that controls ocean rates, and he admits that the rates have materially advanced and have rendered exceedingly difficult the problem of exporting our products. He agrees that complaints have been made and are being made in the circumstances, and that the element of competition is eliminated. And then he proceeds in his casuistic way to argue that after all a combine is not a bad thing and that when you come to deal with ocean transportation it is perhaps necessary. After a complete distortion of almost every phase of the contract which he ventured to discuss, he concludes his remarks without giving to the House one suggestion as to how the evil is to be overcome.

Mr. GRAHAM: He ran away from his own amendment.

Mr. MACDONALD (Pictou): Absolutely. My right hon. friend, in his dogmatic way, shortly before concluding, asserted that there was not a single man in this country who would say a word in favour of the proposition. Let me say for the information of

the hon. gentleman that I have under my hand a statement touching this question by one of the most important organs of public opinion in Canada. The Manitoba Free Press, in its issue of Monday, March 16, 1925, says:

> The attempt of the interest behind the North Atlantic shipping combine to obliterate the Preston report and the Petersen contract by a converging fire of all available artillery has not succeeded. The assaulting combination has been formidable: the British press, the linked commercial financial and shipping interests in Great Britain and Canada which have the best reasons for not wanting the present level of ocean rates disturbed, the Canadian Conservative party and its press, with something more than a hint that the British government is also unsympathetic towards the course taken by the Canadian government. Nevertheless, all the dust that has been kicked up does not obscure the broad outlines of the situation which exists and which calls for action. There is a combine among the North Atlantic shipping lines, and the rates exacted by the combine are so high as to affect our national interest in a manner highly detrimental. No relief is available unless we provide it ourselves. This the Canadian government is making an attempt to do. If Mr. Meighen and his party and his newspaper supporters, like the Montreal Gazette, the Ottawa Journal and the Toronto Mail and Empire, think they are getting anywhere by assailing the government for what it is trying to do and advocating the policy of patient submission to the combine, as though to the divine will—

This "policy of patient submission to the combine" is what my right hon. friend argued for. And that is what his whole speech to-day amounts to.

> —they are making provision for one more disappointment. The instincts of the opposition to oppose the government in all things often commits it to stupid and shortsighted policies; there has never been a more striking exemplification of this than in this instance.

Now my right hon. friend says that there is a combine. But has he offered one single suggestion as to how the evils from which the country is suffering are to be remedied? In the speech of my hon. friend from Burrard (Mr. Clark) there is an amendment suggesting in some vague way that there ought to be a conference of the different empire units to talk over the matter. But my right hon. friend (Mr. Meighen) scorns the idea, for he never ventured to say a word in support of it as a solution of the difficulty. So that, forsooth, so far as the regular opposition in this House is concerned, they say to the House and the country, tacitly at any rate: "Let the combine go on and interfere with the export trade of this country; let it continue to hamper the transportation facilities of Canada; we will sit tight and do nothing." That is their position.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

Mr. STEVENS: Would my hon. friend permit me to correct a statement which he made before recess? I did not catch the remark at the time or I would have interrupted him. I know perfectly well he does not wish to misrepresent me, and I merely rise to correct the statement. He stated that I had said that there was no combine. What I said was this:

> I am not for the moment suggesting that there is not a combine.

Then I also said:

> As a matter of fact, Mr. Speaker, no one disputes the fact that there is a conference, or a combination of interests existing in connection with shipping. It is unnecessary to establish that; it is admitted.

I merely rise to correct what was obviously an error on the part of my hon. friend.

Mr. MACDONALD (Pictou): My hon. friend from Vancouver Centre (Mr. Stevens) has read isolated quotations from his remarks, but I am in the judgment of the House if the trend of his remarks all through was not along the line that there was no necessity for dealing with this matter in the way the government were proposing to do, because there was not a combine in the sense in which it was charged. I would not wilfully misrepresent my hon. friend in any way, but I am quite sure that the impression which was left upon my mind and the mind of every hon. gentleman by the tone of his remarks was such as I have indicated. I am sure my right hon. friend (Mr. Meighen), when he announced this afternoon that there was no question about there being a combine, and then began to coo and to indulge in that kind of remarks, which he can do so easily, intimating that after all there might be worse things than combines, particularly in regard to shippers, took a very peculiar position. There were other days when he did not coo so sweetly in regard to combines, but thundered at them in the most vehement way. Hon. gentlemen who were in the House in 1913 will remember that my right hon. friend at that time thought the situation in regard to the Atlantic freight rates had reached so serious a position that he moved the adjournment of the House in order to call attention of the House and the country to its importance and made a demand that the then government which he was supporting take some immediate action to deal with it. And well might he do so, because here in Canada, with our immense undeveloped resources, unless we find an outlet for our

export trade under conditions under which we can profitably send what we produce to the older nations of the world, we have but very little hope for or confidence in our future. In exporting the products of the farm, the mines and other industries, we are in competition with the United States of America, with the Argentine Republic and with the other overseas dominions all of whom are as yet in a somewhat similar position to that in which we find ourselves. Yet my hon. friend, in 1913, realizing the seriousness of the situation moved, as is customary in cases of urgency, that the House should adjourn in order to enable him to bring the situation before parliament and the country. What did he say at that time? He said:

I have placed before you, Mr. Speaker, a somewhat elaborate table showing the great increase that has taken place in ocean rates on grain and flour. That increase cannot be accounted for by normal conditions of any kind and in my judgment an explanation can be found only in a condition of affairs such as we have been compelled to address ourselves to in other lines of industry, namely the presence of monopoly. What is the monopoly that appears to be in control in this instance? There is no attempt to keep secret the fact that there exists an understanding between the various steamship lines operating between north America and European and particularly United Kingdom ports. It is known as the Canadian North Atlantic west bound freight conference. That conference, however, took its birth not at the time that the rates were increased in this way. That conference has been an institution of very considerable strength for the last eight years. It has been doing its work in a thorough method. For the first three or four or five years of its existence apparently it devoted its energy to sweeping from the high seas traversed by its lines all of what are known as tramp steamers, those steamships that have operated through many years as the element that introduced real competition in freight rates over the Atlantic.

Again he says:

As I showed at the commencement, this conference has so successfully done its work that roughly speaking they have raised incoming freight rates from twenty to fifty per cent, and in some cases by even a larger percentage, in that way largely nullifying any advantage we might hope to secure from the British preference.

And yet he produced tables this afternoon from the London Economist in which the rates from this side of the Atlantic, both from the United States and Canada, were shown with a view of answering these large specific increases in rates which my right hon. friend and leader (Mr. Mackenzie King) gave to the House on Tuesday night. My right hon. friend the leader of the opposition (Mr. Meighen) attempted to make it appear to the House and the country that the actual increase in freight rates in Canada was not as great as it really is, and yet he inveighed against them at that time and said:

[Mr. E. M. Macdonald.]

Furthermore it is well known, and, I think, uncontradicted that those lines which operate from our ports to ports across the Atlantic have a distinct understanding, if not more than that, with all lines operating from Portland and the port of New York to similar ports across the ocean. All have been brought under what is known as the North Atlantic Shipping conference. They are all reaping the rewards that come from that monopolistic corporation and they all at present feel themselves bound to obey the dictates of that conference, whatever they may be. The problem that faces us is this. Is it possible, and along what lines is it possible, to succeed so as to bring to a sense of duty, to a sense of equity, this corporation? I do not think I am stating the case too strongly when I say that there is a monopoly. We have every evidence of a monopoly in the arrogant exercise of power that we have had to submit to up to the present time. I am aware that the government have been dealing with this matter; that they have addressed themselves to it with vigour. I am also well aware that it is not possible to follow the old methods of attack and hope to meet with success in an attack on this corporation. It is not possible to adopt the old weapons and hope to win. Along what lines is it possible that we may succeed?

Mr. MEIGHEN: Did I mention the line in this contract?

Mr. MACDONALD (Pictou): No, my right hon. friend was floundering as he sometimes is, as he was this afternoon. My right hon. friend at that time brought forward for the consideration of the House and the country a gigantic evil, and just as he did this afternoon, while admitting that the evil still exists, he offered to the House and the country not the slightest suggestion as to a remedy or how to deal with the matter. Then he went on:

But we know that we have interests in ocean rates that would be adverse to the interests of the people of the United Kingdom. It would be doubtless in the interest of the consumers there to see that the wheat rate was kept as low as possible in relation to the flour rate, whereas the very opposite would be the better policy here—to reduce the flour rate and not continue the spread between the two. I should be glad indeed if the government of the day could find a solution for the problem in the direction I indicate. At all events, the purpose of bringing this discussion up is to draw the attention of the people of this country through this parliament to the great increase that has taken place, to call attention to the serious aspect of this matter in relation to our prosperity and to enlist behind the government the active co-operation and sympathy of the Canadian people in whatever steps they may see fit to take in order to bring about a betterment of conditions.

In 1913, there was not any step too strong that could be taken in order to satisfy my right hon. friend, and the need which, he saw, existed in the country in regard to this matter. My right hon. friend to-day is speaking the voice of this combine. He produces certificates in regard to the Canadian Government Merchant Marine which, he says, come from those who are not friendly to it, but they all come from men who were

employed by ship-owners that were in the north Atlantic combine.

Mr. MEIGHEN: There is nobody else. The merchant marine are in it too. Where would I get them?

Mr. MACDONALD (Pictou): They are not now. We will come to that later.

Mr. MEIGHEN: The hon. member for Lunenburg (Mr. Duff) says they are.

Mr. MACDONALD (Pictou): My right hon. friend's record on this matter is certainly a circuitous one. When responsibility came to him in 1921, and when Sir George Perley wrote to him from England calling his attention to the necessity and desirability of taking some action in regard to this matter, what did my right hon. friend do? He announced that he was going to appoint Dr. Magill, and until a few days ago when he heard Dr. Magill had never made a report, my right hon. friend did not know but that Dr. Magill had made a report. My right hon. friend discovered this only three days ago.

Mr. MEIGHEN: My hon. friend has not the slightest warrant for what he says. I asked the government to produce the correspondence. They stopped at my reply to Dr. Magill. I believe Dr. Magill had made a reply to that letter. I knew he did not make a report. He was not asked to make a report. He was asked to prepare Canada's case for presentation to the Imperial Shipping Board. All I asked for was his reply to my letter. If the minister does not see any difference between a reply to a letter and a report of an investigation, I am sorry for his sense of accuracy.

Mr. MACDONALD (Pictou): My right hon. friend says now that he thought Dr. Magill had not made a report or he knew he did not make a report. Which was it?

Mr. MEIGHEN: I did not speak of that at all. I knew he did not make a report. What I said was I believed he had made a reply to my letter to him, and that is all I ever asked for.

Mr. MACDONALD (Pictou): My right hon. friend is now in a dilemma.

Mr. MEIGHEN: Not in the least.

Mr. MACDONALD (Pictou): On this question which was one of the most serious that he ever had to deal with and which he asked parliament to adjourn to consider, when he had responsibility and when Sir George Perley called attention to the matter, he wrote to Dr. Magill asking him to make an investigation, and my right hon. friend never bothered his head about the matter further.

Mr. MEIGHEN: Six months passed before the election was called. As I explained, we made no progress; but complaint does not come very well from a government which waited a year and a half after the McMaster report before even making a suggestion.

Mr. MACDONALD (Pictou): When my right hon. friend, who is such a severe critic, had the responsibility as Prime Minister of this country, after initiating a discussion of this subject in 1913, I am in the judgment of this House whether, from what has taken place here at this moment, the right hon. gentleman ever took one step in order to deal with the matter. He writes to Dr. Magill, he never inquires to find out whether Dr. Magill has made an investigation or not, and he leaves the matter there. That is where my right hon. friend stands in regard to this question. In dealing with the subject under discussion this afternoon, my right hon. friend asserts that we cannot control our rates on Canadian exports. This is quite at variance with his attitude previously when he demanded that the government of the day should take some action in regard to it; but he was unable to advise, because my right hon. friend is usually destructive, and I am in the judgment of the House and the country if my right hon. friend ever signalized his responsibility by any constructive method or movement in regard to any matter. To-day he says that the rates cannot be controlled. In the case of a combine, I should like to know as a business proposition if there is any way in which you can prevent that combine from operating except by creating competition for it. That is a sound and sensible proposition. If you have a certain group of people that control a condition of affairs in any kind of business, must you not find competition in order to remedy the matter in some way? If you cannot find the existing competition, must you not create that competition, which, by its entry into the field, will enable the article to be manufactured at a cheaper price or to be carried at a lower rate than that which the combine imposes?

My right hon. friend indicated that we had done nothing after the report of the McMaster committee, as it is known. My right hon. friend entirely omitted, when the hon. member for Brome (Mr. McMaster) asked him to read further this afternoon, a certain recommendation that was made at that time. That recommendation reads:

Should it appear that there are no ships or not a sufficient number of ships belonging to the Canadian

Government Merchant Marine suitable for this service then it would appear that wisdom would dictate the disposal of some of the smaller ships to enable ships of the class required to be secured.

He failed this afternoon to mention that. He read a recommendation to take the matter up at the Economic conference. The Minister of Railways and Canals and the then Minister of Justice brought before the conference committee and the Imperial Shipping committee the rates on flour and other rates which were urged upon them at that time, and as a result of their efforts a sub-committee of the shipping committee came to Canada last year and dealt with that question by way of investigation. A matter of this kind cannot be dealt with in a moment. The government have been active in considering how this great problem, so vital to the business interests of this country, might be grappled with in some way and how these results might be obtained. We have now submitted to the judgment of parliament the proposal which we have before us. My right hon. friend was very much worried because this proposal was going to a special committee. Is there any reason why it should not? Time and again, in a somewhat lengthy parliamentary experience, I have known governments to submit measures to the House and to say that, instead of the ordinary procedure which applies to government bills of going into committee of the Whole, after second readings, they propose to submit them to the consideration of a special committee in order that the whole House may be thoroughly seized of the matter. How much more on a great question of this kind would the government be justified in taking this course of submitting this measure to a special committee, so that it might be closely and completely scrutinized and we might arrive at some solution of the problem in the best interests of the people of this country? Now my right hon. friend engaged in some casuistical criticisms of this contract. In the first place, he told us that Sir William Petersen need only have one sailing a year. Well, Mr. Speaker, there is not much use discussing before the House in great detail what the legal effect of a contract may be, but this is the plain English of the contract in regard to this matter, that the contractor shall—

Build, equip, provide, establish and during this contract, continue and in the manner hereinafter mentioned, operate a regular shipping service between such ports in Great Britain or Ireland or the continent of Europe, and Canadian ports as may be designated by the Minister of Trade and Commerce for Canada or his representatives from time to time.

I had the opportunity of conferring with the distinguished legal gentleman who passed upon this contract, I refer to Mr. Lafleur, and it is his judgment, with all due deference to my right hon. friend's experience, and it is my judgment, if it is worth anything, that that clause has only one meaning—that a regular shipping service is a continuous shipping service throughout the year. Not only that, but my right hon. friend went on to say that it was not Canadian goods that were to be carried; all kinds of goods could be carried without the government here having anything to say about it. Well, it is the a, b, c of legal construction that when you are dealing with the interpretation of a contract you look to the recitals in order to see the purpose and object expected to be secured by the operative clauses later on. And this is one of the recitals:

And whereas the government of Canada after an investigation of the representations brought to its knowledge and after giving the same serious consideration has thought it wise to adopt such means as may be deemed expedient and necessary to exercise such supervision and control of trans-Atlantic freight rates as it is possible for them to do and thereby as far as possible to prevent and defeat any unreasonable excess or overcharge in ocean freight rates as exercised by such ocean shipping combines or conferences to the loss and detriment of its citizens and has reached the conclusion that in order to more fully safeguard the interests of its citizens it would be well advised to enter into an arrangement whereby it may exercise such control or supervision and whereby it may improve the conditions under which the products of its citizens are exported or imported.

That recital contains the express purpose of the contract, it is a controlling clause, and not even a barrister of a year's experience would venture to assert before any court in this country that it had any other meaning, nor, I venture to say, would any judge for one moment listen to an argument that the government of Canada had no control over the commodities that were to be carried by these ships. The language in regard to the control of rates is also so clear and definite that it cannot be considered for one moment as capable of any other construction:

That the control and regulation of the rates to be charged by the contractor shall rest with the government of Canada and that the government shall fix such transportation rates on all commodities from time to time.

Mr. McQUARRIE: Might I be permitted a question? Under this contract does the minister suggest that the government will have any control over the allotment of space? For instance, the Prime Minister yesterday referred to the carriage of cattle. Now, under this contract will the government be in a position to control the space that will be allotted for the accommodation of cattle? If so, under what clause?

Mr. MACDONALD (Pictou): I was dealing with the question of rates and the question whether it was Canadian goods that were to be carried on these ships. I will come to my hon. friend's point in due course, but he is not going to be permitted to divert the attention of the House from the point which I am making at this time—that absolutely and beyond a shadow of a doubt under this contract the control of rates and the control of goods that are to be exported vests in the government of Canada.

Then my right hon. friend indulged in some pyrotechnics in regard to the law concerning lake freight rates. Let us be frank and understand where we are with respect to that question. A commission was appointed, composed of Mr. McLean, of the railway commission, Mr. Thompson of Saskatchewan and General Tremblay, who is connected with shipping in Quebec. That commission recommended to the attention of the House and the government the measure which we submitted in accordance with the terms of that recommendation. That is where the law came from. It was created after the fullest investigation by a commission whose members certainly were in a position to examine the subject thoroughly.

Now I propose to deal with the question generally, and to call the attention of the House to what the government has done in regard to this contract. We have chartered ten new vessels, fully equipped for our trade, and we have obtained control of the movements of these vessels, and of the rates to be charged. The contract is substantially a charter party, similar to what might be entered into by any business firm engaged in a large way in the transportation of its products. We make the charter party and place the ships at the disposal of the Canadian producer and manufacturer, with the certainty that they will be able to transport their products cheaper than they can now, and with the assurance that those products will be transported through Canadian ports. That is a summary of our policy. That is the result we obtain by the arrangement we have made, and no amount of argument can gainsay it. This talk of handing $13,000,000 out of the treasury for no return entirely overlooks the substantial results that are involved in this contract. If we had a large business firm in Canada producing some staple product of which it was able to make large sales in Great Britain or on the continent, what would it do? It would proceed to make an arrangement with a shipping firm owning and controlling a fleet of ships to carry its products. In a word, it would make a charter party under which it would pay the shipping firm so much for the service to be rendered. That is what we have done. We pay this money in order that we may control these rates in the interests of the Canadian people, in order that these ships will sail from Canadian ports, and in order that the present condition of affairs under which our ports are discriminated against in favour of United States ports will not be permitted to continue. That is what we have done. And why should not that measure be submitted to a committee of this House?

In a speech in 1913 my right hon. friend indicated that the British interests in this matter were adverse to ours. They certainly are. Let us be frank about this. Sir George Perley says so. Writing to my right hon friend in 1920 Sir George said:

> The terms of reference do not definitely give the committee—

That is, the Imperial Shipping committee

> —authority to consider the possibility of controlling freight rates, but I explained fully to the committee at their first meeting the interest which Canada took in that question.

Then again he wrote:

> As such a large amount of tonnage is owned in these Islands they are perhaps naturally not very anxious about the control of freight rates and therefore, if you decide to bring the question before the committee, I do not think it possible to give too much time or attention to the preparation of our case.

Then my right hon. friend asked Dr. Magill to prepare a case, but never once inquired whether he had done so or not. Now, what is the situation in regard to our relation to the Mother Country in reference to shipping? My hon. friend from South York (Mr. Maclean) in the resolution which he introduced some weeks ago in favour of Canada having the power to amend her constitution, asserted, and asserted vociferously, that all we needed to do was to ask the Mother Country and she would grant us our request. My hon. friend entirely forgot the relation in which we stand to the Mother Country with regard to shipping. Section 91 of the British North America Act purports to give Canada the right to deal with navigation and shipping. But let me tell the House, we cannot deal with navigation and shipping except in a bettered way. Under the Merchant Shipping Act of 1854, which was re-enacted in 1894, Canada cannot do a single thing in regard to shipping except as to shipping which is registered in this country. Let us see how that works out—and it explains some of the difficulties we have to contend with in dealing with this matter. It is quite time that this House and the country

realized the larger issue that is involved in this question. The Hon. Mr. Brodeur, late Judge of the Supreme Court of Canada, whose unfortunate demise occurred a short time ago, when he was Minister of Marine and Fisheries previous to 1911 took up with the British authorities the question of amendments to the existing law which would enable us to deal freely with these matters as we can deal with other matters committed to us. Australia and New Zealand, in state papers, presented to the British government a similar claim and are still pressing the matter. Under the Merchant Shipping Act, so called, British shipping, Australian shipping, New Zealand shipping, can engage in our coasting trade and we cannot do anything to prevent it, to interfere with it, even to regulate it. If, for instance, Canada desired to impose a duty upon ships built in Great Britain and brought over here, that duty would be entirely nugatory, because if the ships were registered in Great Britain they would have a right to engage in our coasting trade and we could not interfere with them in any way. Not only that: we passed in 1910 the Canadian Carriage of Goods Act under which we undertook to lay down the rules applicable to bills of lading upon export cargoes from Canada. The Furness-Withy people and others engaged in this absolutely ignore that act; they make their bills of lading as they please, because, they say, if the ships are registered in Great Britain they are not amenable to our laws; the Canadian Carriage of Goods Act does not apply. Under the Colonial Laws Validity Act we cannot legislate in regard to any question affecting for instance, the amount of money recoverable in the case of a collision at sea; nor can we make any amendments to the rules of practice of the Admiralty court unless we secure approval through an imperial order in council. My right hon. friend was quite right in 1913, and Sir George Perley was quite right in 1920, when they said that the British people were not in favour of the control of rates or of giving us anything to say in regard to that matter. The shipping interest in England is very powerful, controlling as it does, political situations, dictating legislation and generally occupying probably the strongest position of any business interest in the great Mother Country. And they do not want their rates controlled; they would not agree to any proposal looking to the control of rates in Great Britain. We might as well bay at the moon as expect them to do anything in that connection. Though my right hon. friend had two resolutions drawn on this question,—and his supporter from Burrard (Mr. Clark) moved one here—he knew very well that the effect of that resolution if adopted would be to negative any chance of our getting an improvement in the matter of freight rates.

Mr. MEIGHEN: Did I not understand the minister to claim a few minutes ago that the government by appealing to the Imperial Shipping Board had actually got the flour discrimination removed?

Mr. GRAHAM: That was done before the Shipping Board came here.

Mr. MEIGHEN: No it was not.

Mr. GRAHAM: Yes it was.

Mr. MEIGHEN: Oh no—years after.

Mr. MACDONALD (Pictou): I will show my right hon. friend how that was done.

Mr. GRAHAM: It was done before they ever came over here.

Mr. MEIGHEN: It was done since 1918.

Mr. GRAHAM: They did not do it until two years ago.

Mr. MEIGHEN: I know—that was after.

Mr. GRAHAM: Not at all.

Mr. MACDONALD (Pictou): Having brought the Imperial Shipping committee to that point they went to the combine, the monopoly that my right hon. friend denounced; the monopoly to whom he said: "Please Mr. Combine, please Mr. Monopoly, won't you let up a little bit on this flour business?"

Mr. MEIGHEN: We got it done anyway.

Mr. MACDONALD (Pictou): That is the way it was done.

Mr. MEIGHEN: I thought you said they would not do anything.

Mr. MACDONALD (Pictou): I will make this statement, and my right hon. friend will not dispute it: The British parliament will not agree to legislation that will provide for the control of rates on British shipping. This is the way this Shipping committee, according to their own story, had the matter of flour dealt with—I quote from their report:

> We are pleased to say that we were able to obtain a satisfactory undertaking from the Canadian Liner committee—

That is the graceful title which means North Atlantic combine.

> —in regard to discrimination in rates against Canadian flour. This no doubt should be supported by a further

undertaking on the part of the British lines engaged in the north Atlantic trade, if such an undertaking can be obtained.

It has also been suggested that this board got something done in regard to insurance on the matter being brought before them. What was done was this—a very anomalous thing: the insurance rates which have discriminated so completely against our Canadian ports and in favour of New York and Portland, as indicated by my right hon. friend and leader when he read from the report of Mr. Scott, the grain commissioner, the other day, has been changed so that the rate is somewhat lower on the hulls of vessels sailing from Halifax, but the insurance rate has not been decreased one cent upon the cargoes going in those same vessels. A very peculiar anomaly, is it not? Nor has the port of St. John, which is our larger Maritime seaport, been able to get its insurance rates reduced at all, either on hulls or on cargoes. So that the remedy suggested in the resolution moved by the hon. member for Burrard simply puts this proposal into a political cemetery whence it can never be resurrected in our time. It relegates to oblivion the idea that any relief whatever can be obtained for this country in the matter of ocean freight rates.

My right hon. friend spoke this afternoon on the question of the utilization of the Canadian Government Merchant Marine, and I want to discuss very frankly that phase of the subject. I have gone into that matter and I find that of the ships of the Canadian merchant marine, 23 are under 5,000 tons. Fourteen are on the Great Lakes or laid up and are therefore not available for ocean tonnage. Thirteen are used in the Pacific trade and have, I understand, been successful in developing trade on the Pacific coast, sailing from Vancouver to other ports. Fifteen are engaged in the Australian trade taking in New Zealand and other places. Six are in the West Indian trade and nine on the north Atlantic. Those in the West Indian trade are being sailed there in accordance with the treaty arrangements which were made with the West Indies.

Mr. MEIGHEN: Twelve on the north Atlantic.

Mr. MACDONALD (Pictou): Nine.

Mr. MEIGHEN: There were twelve in 1923, according to the report which I hold in my hand.

Mr. MACDONALD (Pictou): This is the information that came to me officially.

Mr. MEIGHEN: I have the official report here.

Mr. MACDONALD (Pictou): That is the existing situation, anyway. I do not know what it was in 1923.

Mr. GRAHAM: What difference does it make to the argument whether there were nine or twelve?

Mr. MACDONALD (Pictou): I want to remind my right hon. friend that he and his government built these ships and it was along in 1920 and 1921 that stress was being laid upon the necessity of dealing with this question of ocean freight rates. Why did he not put some of these ships on the ocean if he thought the matter should be dealt with in that way?

Mr. MEIGHEN: Put them on the ocean? What are they on now? Were they not put on the ocean?

Mr. GRAHAM: They were all dressed up and no place to go then.

Mr. MACDONALD (Pictou): I want to direct the attention of the House to a clause in the contract to which my right hon. friend did not refer:

> And it is mutually covenanted and agreed between the parties hereto that the shipping services to be established by the contractor herein will co-operate and work loyally with the Canadian National Railways system and the fleet of ships operated by that system and under its control and known as the Canadian Government Merchant Marine.

The purpose of the government in regard to this matter is to ask the Canadian Government Railways, which are operating these ships, to work in conjunction with the ships that are to be constructed under this contract, so that co-operating together, and with the facilities of the railway being available for both the Petersen ships as well as our own, we shall have in reality 19 ships with which to deal with this combine.

You may ask, why was it not done before? Here was the situation. Here was this immense deficit upon the railways, and a deficit on the merchant marine ships. Now the proposition that you are going to fight a combine with nine ships, without any reserves of strength of any kind, I am sure every hon. gentleman will agree with me, on reflection, was not a sound business one, if the matter was being handled directly by the government. We had before us the result of the experience of the United States and of Australia, both of whom have gone out of operating their ships directly. The solution of the problem rests now on the arrangement we have made

with Sir William Petersen for ten ships under charter, together with the nine ships, if not more, of the government merchant marine on the north Atlantic co-operating with the Canadian National railways, with their freight rates controlled, and their destinations controlled. In that way we shall have given to Canada, when this contract is approved by parliament, the first practical method of dealing with this vexed question in this country.

Mr. SPEAKMAN: Before the minister leaves that point, may I ask whether the controlled rates applying to the Petersen vessels will apply also to the vessels of the merchant marine, if they are to work in conjunction with them?

Mr. MACDONALD (Pictou): That would certainly be the idea and the policy of the government.

Mr. MEIGHEN: Do I understand it is the intention of the government to place the merchant marine vessels under the management of Sir William Petersen?

Mr. MACDONALD (Pictou): No, I did not say anything of the kind.

Mr. SPEAKMAN: May I ask one more question in that regard? If the lower rates are to be applied to the vessels of the merchant marine as well, will not that, without the aid of a subsidy, increase the present deficit in operating these vessels?

Mr. MACDONALD (Pictou): I should think the government would see its way clear to supplement in connection with the government merchant marine vessels, just the same as they would in regard to the Petersen boats, although we are obtaining control of the rates on the Petersen boats as the result of a special charter.

Let us never forget what the situation is in regard to the Petersen contract. We hear a lot of talk about subsidies, but I assert this, and I venture to say it cannot be gainsaid: that what we have done in regard to the Petersen contract is simply to charter these ten vessels when constructed, and we shall have absolute control over their rates and destinations, and all such matters, in just the same way as a business firm in this country would that chartered ten vessels from the other side of the ocean. That is the sum and substance of the situation from a legal standpoint. There is no more technical and difficult subject to deal with, as a matter of law and business, than shipping and shipping contracts, and hon. gentlemen who have high status at the bar, but who have not had an opportunity of living at the seaboard, where they would come into contact with shipping business, have—no matter what their status may be—very little knowledge of how these problems are worked out. So technical is this shipping business and shipping law that not only in the Mother Country but in the seaboard provinces of this Dominion, both on the Atlantic and on the Pacific, men have given up practically all their other legal business in order to devote themselves to shipping law and shipping business. I assert, with some experience in these matters, because coming from a seaboard province I have had to deal with them, that all this talk about subsidies, all this bugaboo that is raised on the question, is simply an attempt to mislead the public mind in regard to what is a simple business proposition. This country is simply chartering from Sir William Petersen ten ships for ten years, and instead of giving him so much per ton, we are paying him a flat rate. In regard to the utilization of the Canadian Government Merchant Marine ships, it is both implied and expressly stated in the contract that the Petersen ships in working out the contract shall work in conjunction and unison with the Canadian Government Railway system, and with the fleet of ships operated by that system.

Mr. GOOD: I should like to know what objection the minister has to adding ten ships to the Canadian Government Merchant Marine and subsidizing them?

Mr. MACDONALD (Pictou): Well, for the simple reason that we look at the experience of the United States and Australia. The experience all over the world is that a line directly owned and operated by a government cannot be worked out successfully. But having these ships on our hands, and having the advantage of the business connections formed by an independent company which is sailing ships throughout the world, and utilizing the docks and terminals on the other side where these ships have their connections, we shall be able to utilize these government merchant marine ships in a manner we have never been able to utilize them before.

Sir HENRY DRAYTON: If my hon. friend is serious, why not put all the boats under Mr. Petersen?

Mr. GRAHAM: That would have been reasonable in 1920, when you did not have them on any routes.

Mr. MACDONALD (Pictou): Will my hon. friend say that his distinguished friend from Vancouver who sits behind him would

like to have the Canadian Government Merchant Marine ships now sailing from Vancouver on the Pacific ocean taken off these routes?

Sir HENRY DRAYTON: I really did my hon. friend an injustice. I assumed he was serious in his argument.

Mr. MACDONALD (Pictou): My hon. friend is a very genial fellow, and he jokes occasionally. He is beginning to be a rival in that respect to my hon. friend the Minister of Railways, though he has a long way to go before he catches up with him.

Mr. SPENCER: How many of the government marine ships will be working in co-operation with the Petersen ships?

Mr. MACDONALD (Pictou): According to my present advice, there are nine vessels operating in the north Atlantic which could be utilized in that connection.

Mr. SPENCER: If that is so, why not put the nine vessels under Sir William Petersen, following up the minister's assertion.

Mr. MACDONALD (Pictou): My hon. friend is very prolific of suggestions. These vessels are being run by officials connected with the Canadian National Railway system. I do not know whether they are making any mistake in running them. Probably they are running them as cheaply as they could be run anyway. My hon. friend wants us to give these ships away or to hand them over to Sir William Petersen. I do not think the Canadian people would be in favour of giving them away. But there is no reason why as a business proposition the results contemplated under this contract cannot be obtained, and I think they will be obtained, much more efficaciously along the line the government is suggesting than in the way my hon. friend suggests.

Let me say further, we have had a great deal of criticism of this proposal. My right hon. friend the leader of the opposition talked for two and a half hours this afternoon on the subject, and offered not a single constructive suggestion as to how to deal with this problem. I would like to hear, and this government and the country would like to hear, from hon. gentlemen who are criticizing this proposal some tangible suggestion that will be an improvement upon it. If you are going to leave this question to the British shipping interests, you will never solve this problem of the combine. There is only one way to deal with a combine, and that is to give it competition. If there is any other way, when you have not legislative control, I would like to know what it is. While, therefore, the method suggested may not be absolutely the best solution that could be devised for meeting the problem, the government submits it to the House with the proposal that a special committee be appointed to go thoroughly into the whole matter, investigating it from every angle. And I am confident that after the committee shall have heard evidence and gone into the subject fully, the conclusion will be that the method suggested by the government is a sound one. Hon. gentlemen may indulge in criticism, but if the evil was great in 1913 I think it will be admitted that it is still greater to-day. The combine has a strangle hold on the business interests of Canada, and our progress in trade is hampered in consequence. We cannot make any advancement so long as these impositions are exacted against our products as a result of the operation of any combine. It is necessary therefore, in the interests of the people at large, that we make some attempt to grapple with the situation, and I submit in confidence that the committee of the House which will scrutinize the measure with every care will give it their support.

Mr. McQUARRIE: I want to remind the minister that he has not carried out his promise to answer my question. I asked him a question which he said he would answer later on.

Mr. MACDONALD (Pictou): I shall be glad to give the hon. gentleman an answer when the House goes into committee.

Mr. D. F. KELLNER (East Edmonton): In rising to make a few remarks on the resolution and the amendment thereto it would not be amiss, I think, to express the pious hope that the subject may be discussed on its merits wthout any recourse to political controversy. I had intended to offer a word of congratulation to the leader of the opposition (Mr. Meighen) on his able speech this afternoon, but I realize now that if I did so I might be treading on dangerous ground after having heard the Minister of National Defence (Mr. Macdonald, Pictou). I do not think that hon. gentleman would relish any remarks of that kind.

The resolution, I understand, was prompted by the report we have before us, submitted by Mr. Preston, the allegations in which are to the effect that there exists a shipping combine which has practically complete control over all trade routes. They operate by outbidding competing lines, thus eliminating competition, and they divide the territory

among themselves. I do not think there is any question as to the nature of the general allegation of the report—certainly the suggestion is there—that this combine is out to work against British companies and industries.

The Prime Minister in speaking the other night on this subject offered the suggestion that this report was not the only thing which the government had to inspire them to move in the direction now proposed. He told us that there was a vast amount of correspondence from certain sources pointing to the impossibility of carrying on trade under existing rates; these companies situated throughout Canada, it was stated, found it very difficult to do business, and possibly this was another source of inspiration leading to the present step on the part of the government. Be that as it may, I think we are justified in assuming that both arguments more or less influenced the government in the matter. Let me now consider the action which the government proposes to take to meet the situation. It is proposed to subsidize a certain company—I understand that the government objects to that word, but I know of no other which can exactly describe the proposal; the government, I say, intends subsidizing a company—which will enter into competition with the combine which is now in operation. Speaking the other night in this House in another connection, I recalled the condition of affairs in the late nineties in regard to the railways in western Canada. I should like to refer to that matter again. In those days it was generally alleged that the Canadian Pacific Railway was a heartless company that operated simply for the purpose of extorting money from the poor settlers in the west, and it was urged that the only way by which that situation could be met was by building another road to compete against it. We proceeded to do that, and it has been stated during this debate that the competition which is supposed to go on between the two railways is to keep them from reducing rates under governmental control. We have a railway commission which, it is said, actually precludes any possibility of the railways charging exorbitant rates. Now, so far as the export trade of western Canada is concerned, I think it is only fitting that we should consider the whole situation from the time the product is laid on the car in western points until it reaches its destination overseas. The portion of rail over which these goods are hauled is one step in the export business. The Minister of Railways (Mr. Graham), discussing this subject the other night, said that what the government had in mind was to establish governmental control, and I took it that he wanted that control fixed in a way similar to the control that obtains on the lakes and the railways. I think therefore that we are justified, in considering the question of ocean rates, to refer to what has been done in other departments of our export trade.

Let us take our railways. When the Crowsnest pass agreement was reinstated recently —that is to say, to the extent to which it was reinstated—the railway commission acting on behalf of the government rejected it. Of course, it was again reinstated by the Supreme court. But at the present time the Railway Act is not being enforced by any means in its entirety. There is a clause in the act providing against discrimination, and it is hard for the rank and file of western people to see why that clause is not being put into effect. Let us take now the condition on the Great Lakes; for transportation there is an important factor in our export trade. We held an investigation into that matter a couple of years ago and passed a resolution to do away with the combine that existed in that regard. It was definitely represented to the committee that investigated the subject then that there existed on the Great Lakes a combine of no uncertain potentialities. I do not know but that the evidence submitted to that committee went to show that there was as complete a combine on the Great Lakes as on the Atlantic. If I remember rightly, in the year 1922 there was an announcement that lake rates would be decreased, and the ship owners along with the Canadian railways called a meeting in Toronto to consider ways and means of maintaining the rates. Just about the time the Toronto meeting was called, rumour reached them that the American roads also intended reducing rates. A meeting was then called in New York at which there were representatives of the Canadian railways, the American railways and the steamship companies, and it was agreed that the American companies should not reduce their rates. So that governmental control, so far as it applies to railways and to the Great Lakes, evidently is a control which keeps them from reducing rates; and if we were to establish that sort of control on the Atlantic I doubt whether we should be able to relieve the situation which now exists.

9 p.m.

In all fairness, it seems to me, we should inquire the personnel of the companies who comprise the combine, inasmuch as they have definitely started out for the purpose of handicapping British industry. I do not think

the statement can be challenged that they are largely British companies, consisting of men who unquestionably are high up in social and financial circles. And it seems rather a startling suggestion that they would go out and deliberately fix rates which would handicap England and would work to the benefit of other countries. I think if we delve into this great question to any depth at all we will probably find that there is something else besides the combine which is affecting these rates.

When we get down to the Great Lakes rate portion of the route, we have about a half dozen different routes which grain coming east may take. It may go down to some of the American ports and over American railroads, or may take the all-water route to Montreal, or may take the lake and rail route. We find that each year over fifty per cent goes by the American route. I do not think there is any question that the road which will carry the cheapest gets the grain. Some evidence was submitted to the committee which investigated national railways and shipping which I think shows one reason for the great percentage of our grain going out over American routes. That evidence was to the effect that grain would follow whichever route offered the best rate. If the rates are cheaper going by the American ports than by the Canadian ports, and if we give effect to this agreement and subsidize Canadian products other than grain, would that not be an incentive for the greater percentage of our grain to go by the American routes? I think, if we are going to subsidize only Canadian products going by Canadian ports, that we are actually building up a proposition which would probably divert more grain to the American routes. With reference to the ocean transport, I have before me the evidence which was submitted to the committee to which I referred as to the results of the operation of some of the merchant marine boats. The eastbound part of the first cargo paid $30,555.37. The westbound cargo paid $3,314.94; and the entire cargo paid $33,869.30. I would suggest that, as far as that trip is concerned, the reason that we have a high rate going to Europe is that we have no cargo coming west. If we had a cargo both ways there is no question but that the rates going east would be very much lower. This is not the only case. A long list is given here and they are pretty much on the same line. Take for instance the one that is labelled No. 16, I believe it is the Commander. The gross earnings of that boat eastbound were $38,132.74 and westbound $1,061.38. The boat was actually coming back practically empty. It would be impossible to have a low rate coming westward with a cargo amounting to a little over a thousand dollars, and apparently the only thing we can do is to increase the eastbound rates to pay for the ballast which they must carry when they are coming west. So much for the Canadian National. I have the Canadian Pacific Railway reports here—and they are sometimes spoken of as being an authority on shipping. The reports of the merchant marine show that it is all ballast coming one way. This Canadian Pacific report reads:

> The Canadian Pacific steamships, in common with all other ocean lines, have in 1922 passed through a trying period. The large amount of ocean tonnage which the owners have endeavoured to keep in commission has naturally created a situation seriously affecting revenues from transportation both as to freight and passengers.

And again in 1923 they report:

> The Canadian Pacific Steamships Limited, have in 1923 continued to show improvement in service and in revenues although many factors which militate against satisfactory operating results yet prevail. The world's ocean tonnage still exceeds trade requirements and financial conditions in Europe and labour unrest in Great Britain have had an adverse effect on steamship traffic.

Taking the two together their arguments would show that this trade is unbalanced and that there is too much shipping in operation, and I do not believe that a ship subsidy is going to relieve or cure that situation. I believe we will have to get something different from that. I am disposed to think that we do not give quite consideration enough to what might be done in the matter of negotiations between the government and these companies, and I am encouraged to read in that connection an item from the Commercial Intelligence Journal March 7, which says:

> Mr. A. E. Bryan, Canadian trade commissioner in Kobe, has for some months past been co-operating with western cattle raisers, the federal Department of Agriculture, and the various provincial departments in an effort to open the Japanese market to shipments of Canadian cattle. In this connection the government of Alberta sent a special representatitve to Japan to report on the possibilities of increased shipments to that country. His investigations substantiated the opinion of the Canadian trade commissioner that any development of the trade would be impossible at the transportation rate existing, namely $75 per head from Canadian ports to Japan. After discussion, successive reductions have since been made, to $50 per head, and to $37.50, the rate now quoted by the Canadian Government Merchant Marine and the Pacific lines.

Now here is an instance where rates have been reduced, according to this article, from $75 to $37.50. I do not think the article is quite correct. I have watched those negotiations with considerable interest, and I hope

the Minister of Agriculture will tell us some time what part his department took in the negotiations. I was under the impression the provincial government carried it out. I think the rate was formerly $100, reduced to $44 and eventually to $37.50. I maintain that that is just about as good or great an accomplishment as you can hope to achieve by starting up another company in competition with those that already exist. It is certainly worth trying. Mention was made the other night about the feasibility of taking over the Canadian Pacific Railway to work in conjunction with our merchant marine, and this new company which we propose to inaugurate. I should like to ask the government if, in the event of such an undertaking being arranged, would it be their opinion that they could use the anti-combine legislation to force the Canadian Pacific ships to come under a contract similar to that now proposed in reference to this subsidy. It seems to me there is a Canadian company that would be operating under Canadian registry, and it might be so that Canadian Pacific ships—

Mr. BRISTOL: The Canadian Pacific ships are under British, not Canadian registry. Therefore, what the hon. member suggests could not be accomplished.

Mr. KELLNER: I made the statement on the supposition that if the Canadian government took them over, unquestionably we could change that and they would then be operating under Canadian registry. What I was particularly anxious to find out was: Would this anti-trust law, in the opinion of the government, be elastic enough to cover this? If so, it would give us a very formidable array of ships, consisting of the present merchant marine, the Canadian Pacific and this Petersen line, if this measure is carried in the House. I believe, to those who sit in this corner of the House, the suggestion of taking over the Canadian Pacific makes probably the strongest appeal of all. We have for a considerable number of years been believers in government ownership, and I am disposed to think that this would meet with a hearty response from those who occupy the benches immediately surrounding me. There is one danger, I presume, in considering it at the present time, and I think the hon. member for South York (Mr. Maclean) should have delivered his speech on the electrification of railroads at the same time. Then he would have impressed the House with the danger of getting some out-of-date equipment which we might get if we were taking the railways over at the moment. I do not, however, presume there is very great possibility of our taking them over in the near future, and we shall probably not be embarrassed by that contingency.

In reference to ocean rates, I have before me a statement of the rates charged in 1923, from May to November, and I find that unquestionably the quantity of tonnage that was offered at any port was a big factor in connection with the rates. They varied all the way from six cents to nine cents during that year. I do not think there is any question that, before we solve this problem, we shall have, by some method or another, to equalize our trade. I might throw out this suggestion to the government: There has been a good deal of agitation from this side of the House, at one time or another, to make a study of European countries which have inflated their currency. I believe, if you will look over the countries that to-day are enjoying low rates, you will find that invariably they have inflated their currency to a certain extent. My argument in that connection is that, by that inflation, they are able to start an active trade in their country. Where the trade is, the ships are going, and where the ships are going, the rates are lower. So, in all probability before we shall settle this question to the best advantage, at least, we shall have to give that some consideration. In my estimation, it would certainly be worth while having a commission appointed who would be empowered to deal with this export business and who would be given the privilege of contracting for rates. When we were considering the combine on the Great Lakes, the feature which received the most prominence about that combine was the fact that two men were able to allot the entire cargoes that went on all those boats. Supposing we give a small commission that privilege in regard to ocean freight and allow them to contract for it, it would seem to me they could get a better contract than it is possible to get when every man is doing his own business.

In conclusion, I do not think, I would feel justified in supporting the resolution from what arguments have been submitted to the House. I think the amendment is probably a little drastic. The suggestion might be worthy of consideration, I do not know; I have not much faith in its accomplishing anything, but I would hardly go so far as the mover of the amendment and say that the suggestion is absolutely unworthy of our consideration.

Mr. E. B. RYCKMAN (East Toronto): Mr. Speaker, I am induced to intervene in

this debate because I asked the Prime Minister (Mr. Mackenzie King) across the floor if he approved this agreement, and his reply was to the effect that that was why the government signed it. I think the agreement is very prejudicial to the interests of the country. There are men of legal standing in the government, and it is impossible for me to conclude that that agreement was read over and considered by the lawyers in the cabinet before it was signed. My other reason for attempting to address the House is that I stated it to be my opinion that, in the final result, under this agreement the control of rates passed to Sir William Petersen and was not in the hands of the government. I hope to show this even to lay minds before I take my seat. This agreement interests me very much. I was attracted to it by what is no part of the agreement at all. It is a peculiar thing that upon a commercial agreement there should be an affidavit of execution. This is not done in the province of Ontario where the agreement was signed.

Mr. MEIGHEN: Nor anywhere else.

Mr. RYCKMAN: I thought: How did this come about? And then I noticed that the witness to the agreement and the maker of the affidavit was a judge of the Supreme court. It is suggested that Mr. Eugene Lafleur safeguarded the interests of the government in connection with this contract. I know Mr. Lafleur; I know that he is a master of the English language, and I know that this agreement was drawn by a literary sloven. It is obvious on the face of it. I also know that Mr. Lafleur is a distinguished jurisconsult, a man who understands how to draw an agreement expressing accurately the rights of the parties, and I say that this agreement was drawn by a drafting bungler. The affidavit is evidence of that. Does that affidavit serve any purpose whatever? None at all. Can any purpose ever be made of it? None at all. Sir William Petersen will never dispute the execution of the agreement and I do not think Mr. Thomas A. Low will. But supposing one or both did, you cannot prove the agreement by this affidavit. You have to call this Supreme court judge of the Yukon into the witness box and there he subjects himself to cross-examination.

I pass from this peculiar affidavit, following as it does an affidavit of execution under the Ontario statutes, relating to short forms of conveyances and mortgages, which is given a peculiar statutory efficacy, to the recitals. Notwithstanding the new law enunciated tonight by the Minister of National Defence, that the recitals control the construction of a document, I desire to say that the draftsman who wrote these recitals had a good deal of impudence. What did he do? He made Sir William Petersen agree that he understood about the conditions of the agricultural, manufacturing and industrial people of this country; and he made Sir William Petersen say that there was a combine. Here is a man who, no doubt, has been dealing with the alleged combine at one time or another saying, "It is in the interests of Canada that this thing should be done; there are combines, I know it, and therefore I agree with these recitals." These recitals, which have nothing whatever to do with the agreement, occupy about one-fourth of it. Consequently I was naturally prejudiced against the document because I knew there was propaganda in it. It goes forth with the blazing sanction apparently of a Supreme court judge, and then there is this propaganda of the recitals. Last night the Prime Minister asked: "What is the reason of the propaganda that has been undertaken by the steamship companies in opposition to this agreement? How fearful they are," he said, "of the great damage to be done to them by this David's pebble that we are throwing into their ranks!" They had to answer the propaganda in this agreement, published daily throughout the country; they had to answer the Preston alleged case; and they would not have been self-respecting men unless they had done so. Anything that has appeared in the newspapers or otherwise from the shipping interests has been to give the lie to the Preston report and to contradict the propaganda which the government itself has placed in the agreement and broadcasted so widely. I want to say at the outset that if there is any possible way of getting cheaper transportation rates on the ocean, on the land or in the air, I am all for it. No member of this House can be of stronger mind in that respect than I am, and I believe that is the attitude of this section of the House. It is absolutely unfair to impute that we are standing for the maintenance of a combine which is not in the interests of the people.

In passing, I am interested to revert to about twenty years ago, when, a government being in power in Ontario adverse to the party to which I have always belonged, and there being in charge of the administration of justice at Ottawa a minister of the party of the Prime Minister, a prosecution was undertaken, called the Plumbers' Supply Case, in which I happened to play a part. Men who were engaged in the supply of plumbers' goods were charged under, I believe, section 496 of the criminal code with forming an improper combine. The case

was heard by the late Mr. Justice Clute, and in the course of the testimony it developed that the combination was distinctly in the interests of everyone who had anything to do with the supply and use of plumbers' goods. Two of the men charged were found guilty; they practically admitted the charge; they were fined. The case was taken up with the Liberal government, and they said, "Here, this is striking where the blow should not be struck, this combine is in the interests of the people of this province;" and no further prosecution followed.

Coming to the agreement itself, as I say, I was led to examine it narrowly; and notwithstanding what the Minister of National Defence has just said, implying that you might get an agreement which lawyers might determine one way, but if they lived down by the sea where he does, or if it dealt with shipping, they would find that they were mistaken and that what they would naturally expect to follow from the words used did not follow but that the words had some other cryptic and unexpected meaning;—I say, Mr. Speaker,—and I would not assert it unless I absolutely believed it, and I am sure it would not do me very much good professionally, otherwise—that this contract has not only one "joker" but half a dozen or more, and that these "jokers" are inserted for the purpose of withdrawing from the attention of the public and of this House the actual effect of the agreement itself. I do not wish to cover the ground that was traversed this afternoon, but section 1 of the contract permits of its assignment to any German, United States or other foreign company. The draftsman protecting the high contracting party, might very well have said that the assignment should be approved of by the minister. The minister ought to know, this government ought to know, the House ought to know, the country ought to know who are the people getting the money that the country is paying. Section (a) of clause 1 has been read before; it provides:

> That the contractor shall build, equip, provide, establish and during this contract continue and, in the manner hereinafter mentioned, operate a regular shipping service between the ports designated.

I submit that there is no question at all about the legal interpretation of the phrase, "operate a regular shipping service." The duty is placed upon the contractor of establishing the service; he therefore can say what it is to be; afterwards he operates it. What does "regular" mean? I submit it is simply grotesque to say that it bears the meaning given to it by the Minister of National Defence. His words were, "A regular shipping service is a continuous service throughout the year." I wonder if those who pay their rent regularly on the first of the month think the "regular" part of it is a continuous payment and not a payment at fixed monthly intervals. The judicial meaning—and there will be no trouble to satisfy even the Minister of National Defence upon this—the judicial meaning of "regular" is "recurring or repeated at fixed times.". And it is true in the case of any service contract, as the minister can be well assured. That being so, the duty falls upon Petersen of establishing a shipping service, operating at certain recurring intervals, and when he has done that he has fulfilled the requirements imposed upon him by section (a) of clause 1. If he decides to give a monthly service, can anyone deny him the right to do so? Can the government say, "Oh, we expected a weekly service?" Petersen's answer would be: "I am very sorry, but you entered into a contract with me under which I was to establish and operate a regular shipping service. The shipping service that I have decided to establish is a monthly service. If you wanted anything else you should have stipulated for it; as you did not stipulate for it, and the duty being given me under the contract of establishing it, I am entitled to establish a service with such recurring periods as I see fit. That is my full duty under the contract, and that is all you will get." And if the government try to get back at him by saying that he may not use his boats in any other service, Petersen's answer will be: "You did not provide that I should not engage in any other service I have established that regular service and when I am not on that service I can do anything I like except work for the combine. I can charge whatever I like. I am independent of the combine; I can ply my boats in other services, get the avails from them and put them in my pocket, and you cannot say one word about it." What answer could the government make in a court of justice to a claim made by Petersen in this connection? The Prime Minister says that not five cents will go to Petersen until he fulfils the terms of his contract; that payment is after performance. But when Petersen establishes that monthly service, at the expiration of the very first month he is entitled to demand from the government the full amount of the monthly subsidy, and if the government does not pay it to him he can take his case into court and recover the money. It would have been easy to add at the end of section (a) a clause something to this effect:

—and the ships engaged in such service shall be engaged in no other service without the consent of the minister.

But that was not done. In the next place we come to clause (d). I really must repeat this, for the sake of emphasis:

That the control and regulation of the rates to be charged by the contractor shall rest with the government of Canada and that the government shall fix transportation rates on all commodities from time to time.

I submit that whoever was looking after the interests of the crown might have added something to this effect:

—and the contractor shall carry all freight offered at the said fixed rates, provided always that he has cargo space available therefor.

There is a provision that the control of rates is with the government; they are to fix prices. But if in a bookstore the price of a book is fixed, I need not buy at that price; I can say: "I will pay so much less and you can take it or leave it." So in this case: I can employ myself on other services; it is not a hardship to me if I decline to carry at the rate you fix. If the rate is fixed at such an amount that Petersen does not want to carry, then he can decline to carry and the government will not get the service. The farmers may be clamouring for shipment of their wheat, and the government is compelled to go to Petersen and say: "We are paying you a big subsidy; we want you to carry this wheat." Petersen says, "I am not going to carry it at the price you fixed." The government may then ask at what price he will carry it, and Petersen will say: "If the government want their commodities carried they must pay me my price, otherwise the carrying will not be done." So in such cases the subsidy will be earned although the goods are not carried.

The effect of clause 3 of the agreement is to give Petersen the benefit of the maintenance of a service in excess of ten ships if he wants to establish it. The government has no control over the number of ships that he may put in the service. The contract says:

The subsidy aforementioned shall be increased or reduced as the case may be in proportion to the number of ships operated and maintained by the contractor in the service aforesaid from time to time and such increase or reduction of subsidy shall be added to or deducted from the monthly payments hereinbefore provided for in paragraph two.

You will note that Petersen is given the right, by clause 3, to increase, whereas in clause 6 the government is given the right to increase. It is important, in the interpretation of these two clauses, to remember that the provision as to the subsidy is twice stated. If it does not mean that Petersen is to have the right to increase, with an increased subsidy, and that the government is to have the right to increase, under clause 6, with an increased subsidy, then the repetition of the provision as to subsidy is the worst kind of bad draftsmanship. It is a mere vain repetition; it has no purpose at all in the document.

As to clause 4, I wish merely to refer to two expressions. It says, "shipping services to be established by the contractor." That is the only place in the contract where the plural "services" is used. These services are to be established by the contractor, and following, as it does, clause 3—and, I submit, in explanation of and consonant with it—Petersen has the right, even against the expressed wish of the government, to increase the number of ships he has under subsidy. The word "loyally" is not a word of art when used in an agreement of this kind. The draftsman might just as well have used the word "righteously," or "warmly" or any other expression of that kind.

The Prime Minister declared in his speech that the government had the right to say what commodities the contractor should carry. Then why insert clause 7, wherein the right of the contractor to carry nitro-glycerine is negatived? Clause 9 merely says that any voyages Petersen undertakes, in the supposed case of the establishing of a regular shipping service of one boat a month, shall be prosecuted with "all possible speed and despatch."

Now, Mr. Speaker, a sad comment upon this agreement is found in the agreement of 1897 between this same gentleman and the then government. That agreement is found in volume 2 of the Debates of the House of Commons, of the session of 1897. Whole clauses are picked out of the 1897 contract and inserted in this agreement, but whoever was acting for the government took very good care that the clauses which would place a burden on Petersen were not taken out of that old contract and inserted in this agreement.

Let us see what the agreement of 1897 provided. It provided that the service was to be a fast weekly service. First of all, there was to be a fortnightly service, then a weekly service, and when the fortnightly service was instituted, one-half of the subsidy that the weekly service would afterwards claim was given. The terms and conditions as to carriage were to be "as the Governor in Council deems expedient;" that is left out of this agreement. The days and times of sailing were subject to the approval of the minister; that is left out of this agreement. The minister reserved the right, on notice, to change the time of sailing; that is left out of this agreement. The 1897 agree-

ment provided that Petersen, or Petersen, Tate and Company were not to receive any other subsidy or aid, and that they could not engage in any other service; that significantly is left out of this agreement. There was to be no discrimination against Canadian railway rates. Now while I am no advocate of rights of railways, I can quite see the great damage that may be done to this country if any one company is allowed to be discriminated against by the government of the whole country. Then in the 1897 agreement there are guarantees that are specifically provided for. First of all, there is a deposit of £10,000; then £10,000 in securities is to be put up for the faithful performance of the agreement.

Mr. Petersen fell down in the performance of that agreement, but nevertheless he got back his money and his securities, with interest. After he had failed to perform that agreement, and when under all the rules he had lost out, and that money he put up was the government's, yet he begged that the money might be restored to him. Can we expect therefore, Mr. Speaker, that when Petersen is in control this country is going to get the spirit of this agreement carried out unless the letter gives this country exactly what it thinks it is entitled to? In this connection let me ask what would Mr. Petersen say if we asked him to be generous and to carry out the spirit of this agreement. He would say: On the night before last in this very House the Prime Minister said that he was looking after the shippers of Canada, that he was not looking after Petersen or what Petersen might pay in dividends, that he was looking after the interests of those who were going to ship. If the Prime Minister takes the position publicly before the country that his only concern is not with Petersen, but with those he says he represents in this contract, I submit we shall get nothing but very cold justice from Petersen indeed—just what the courts interpret this agreement to mean, and no more, when we have any issue with Petersen.

The agreement of 1897 also provided that the ships in this regular service—the word "regular" is used there—were not to call at any foreign port. Further penalties were also provided, and really, not to take up the time of the House unduly, I feel that I ought to read these clauses in view of the absence of any similar provisions in this agreement. Of course, Mr. Petersen had had experience of how hard it was to live up to the provisions put upon him in this agreement, and what do we find? I am quoting clause 16 (Hansard 1897, vol. 2, p. 3983):

[Mr. Ryckman.]

Provided always and this contract is made and entered into on the express conditions following, that is to say:—

Firstly,—That subject to the conditions hereinafter contained, there shall be paid to Her Majesty as liquidated damages agreed to by the contractors,—

This is what Petersen was glad to do apparently at that time in order to get the contract. It goes on:

(a) The sum of five hundred pounds on each occasion when the contractors fail to provide at the appointed Canadian or British port a mail ship in accordance with the contract ready to put to sea at the appointed time or when such mail ship shall not actually put to sea and proceed on her voyage at the appointed time.

(b) A further sum of one hundred pounds for every successive twenty-four hours which shall elapse before such mail ship shall actually put to sea and proceed on her voyage, but so that these sums shall not in the aggregate exceed by more than one thousand pounds the proportionate part of the subsidy applicable to a single voyage.

(c) On each occasion when the contractors fail to perform a voyage between the appointed Canadian and British ports within the stipulated time, there shall be forfeited and paid by the contractors to the minister the sum of eight pounds ten shillings for every hour or portion of an hour consumed on such voyage beyond the stipulated time, provided always that the total sum thus forfeited shall not exceed the proportionate part of the subsidy applicable to a single voyage.

Mr. Speaker, the contract of 1897 contained in paragraph (a) of section 1 the provision that the contractors should:

Build, equip, provide, establish, and during this contract to continue and in the manner hereinafter mentioned, a regular steamship service between the port of Liverpool and the Canadian ports hereinafter named, of four steamships—

and so on. Why Mr. Speaker, were these penalties, these regulations, these directions, these covenants of Mr. Petersen, left out of the contract we have before us? Was it in the interests of the crown paying this subsidy? And by the way, the subsidy has been increased. This large sum of money is paid monthly under contract, which I submit gives Sir William Petersen the right to do anything and everything almost that he decides to do so long as he establishes a regular shipping service and does not become a part of what they call the North Atlantic combine. If this is not so, it can be easily found out. I would ask that the law officers of the crown, as this debate will probably not be over until to-morrow or later, be asked to report whether the interests of His Most Gracious Majesty King George V, the party of the first part of this agreement, are adequately safeguarded in this contract the House is asked to ratify. If that is not desired, and I can quite well understand why it should not be desired by those who have control of such matters, I would call upon the Toronto Globe. I have

been a subscriber for many years to the Toronto Globe. I do not agree sometimes with the fiscal policies it advocates, but I have found that the Toronto Globe was at times public spirited, and I do not see why the Toronto Globe, which will have either to approve or condemn this agreement, should not ask its counsel to take this agreement, and if it will help at all, this other agreement of 1897, and place them side by side, and then give his opinion whether the interests of the crown are safeguarded in this agreement which parliament is asked to ratify. In the course of the speech of the hon. member for East Calgary (Mr. Irvine), I believe, the Minister of Trade and Commerce (Mr. Low) said that he would withdraw the resolution if what the hon. member said was correct. The hon. gentleman's statement was that this contract was tantamount to taking money out of one pocket of the country, placing it in another, and hypnotizing the Canadian people into the belief that we were making progress.

Mr. CHURCH: Robbing Peter to pay Paul.

Mr. RYCKMAN: It is worse than that. I would say that it is taking money out of the pockets of the people of the country and putting it into the pockets of Petersen without any benefit to the country. I would apply to this resolution the words used by the Prime Minister (Mr. Mackenzie King) in relation to the amendment. And while he characterized the interpretation put upon the contract by my right hon. friend (Mr. Meighen) as wholly inaccurate and absurd, I think we are entitled to have an expression of opinion from someone not connected with the government, not connected with any party in this House, who will give a disinterested view of the merits of the question and state exactly what the contract really means. I am satisfied as to what the result would be if such an opinion were asked. This resolution says that to give the government of Canada control over certain ocean rates "it is expedient", and so on. I think it is apparent to hon. members, and to all who want to act fairly on their own judgment, that what is proposed in the subsidizing of these ships will not result in any governmental control of Atlantic rates. That being so, I appeal to hon. members, after considering the contract carefully and comparing it with that of 1897, to vote against an agreement which would be so much more in favour of the contractor than was the agreement under which he made default before.

Mr. E. J. GARLAND (Bow River): Let me at the outset make my position clear so far as the combine is concerned. I have never had any doubt, from the first time I had an opportunity of learning anything about steamship rates, that a combine has existed, and possibly because I happen to belong to a class that is accustomed to exploitation by all and everybody, I came to the conclusion that it was a pernicious combine. And I still believe it to be pernicious. I do not think it is in the interests of trade, or agriculture, of business generally, that the control of rates should be in the hands of private individuals, any more than I believe that the control of public credit should be a private affair. Nor have I heard any hon. gentleman in this House so far urge that a combine does not exist. Some may have inferred that from utterances in the course of heated debate, but I have not heard anyone yet dispute the fact. Anyone who would do that has hardly given the subject the study which the resolution now before the House must have suggested to him.

I find that a combine has existed on the north Atlantic for something like fifty years, commencing about the time steam was replacing sail. At that time rates began to rise and they have risen fairly steadily ever since. Investigations have been numerous, joint inquiries have been held, but in all the inquiries that I have looked into I have failed to find any single one that was carried to a satisfactory conclusion. I do not think this country has ever entered with Great Britain or any other country into a joint conference on these matters and come to a conclusive decision as to what was the best method of controlling rates. I think that something along that line should be done; we should at any rate make the attempt. I will come to that phase of the discussion a little later.

The recent renewal of investigations has simply cast light on a subject that had become shadowed because of the lack of public interest in it. Economic conditions becoming oppressively burdensome on the people, we began to hunt around for the various causes of trouble; and so in the committee on Agricultural Conditions which sat in 1923, and of which my hon. friend from Brome (Mr. McMaster) was so distinguished and ornamental a chairman, a glaring light was thrown upon the existence of this North Atlantic combine. The subject had also been referred to either in 1920 or 1921 when, before a special committee of this House investigating the Canadian National Railways and the Canadian Government Merchant Marine, Mr. Teakle was examined. As hon. members know, Mr.

Teakle was the general manager of the merchant marine, and in answer to a question put to him by the hon. member for Marquette (Mr. Crerar) he admitted the existence of a rate conference in Montreal on which representatives of the Canadian Government Merchant Marine were sitting in. We heard no more about the matter until 1923. I find, looking further back, that the Board of Trade of Great Britain had investigated this subject in 1910 when they submitted a report, the material part of which has been referred to by hon. members to my right, as well as by the Minister of Railways, and been placed on Hansard. That report was to the effect that a combine existed, and that it was advisable that there should be a joint inquiry with Canada in regard to it. In 1913 the hon. member for West York (Sir Henry Drayton), then chairman of the railway commission, was sent to Great Britain and in view of the conclusions arrived at by the Board of Trade he suggested that a joint inquiry was advisable. He attempted to have such an inquiry set on foot. It was discovered however that there was in existence a body known as the Dominions Royal Commission which I believe was investigating somewhere around New Zealand and which was expected shortly to be in Canada. He interviewed the chairman of that commission who happened to be in England, and he recommended that if the commission intended taking up the subject of a trans-Atlantic conference the matter could not be left in better hands. It may be noted that even at that time it was admitted that large increases in rates had taken place and that, as well, there had been a falling off in the rate of imports from Great Britain to Canada. The investigation suggested was not to be confined to the freight situation but was also to take up the whole question of passenger rates. The hon. member for West York was not successful in securing this joint inquiry for the reason I have stated. He did on his own account investigate matters to some extent and he made a very comprehensive report to the Board of Railway Commissioners on his return. The following action taken by him I only know from information through other people. Now let me point out to the House that I have never been a friend of the Tory party, and I hope I never will be a political friend of the Tory party. I have no intention I assure you, of ever allying myself with a party with the reputation and characteristics which that party has. But let me in fairness say that in my opinion Sir Henry Drayton brought back an infinitely fairer and more comprehensive report, and did more in England at that time, to remove combine evils than the recent delegate of this government did when he was in that country. At that time there existed two great evils of the combine, the children of the system. One was the "fighting ship" and the other was the deferred rebates clause called the "loyalty clause." Whether it was the result wholly of Sir Henry Drayton's intervention or not I am not sure and have not been able to ascertain. I know the United States was conducting an inquiry at that time into the same matters; but it is enough for us to know that during the year in which Sir Henry Drayton reported to Canada those two great evils were removed so far as North Atlantic conferences were concerned. What was this "fighting ship"? It was sort of privateer, especially built for the service required of it, that of competing with any lines on trade routes on which non-conference ships were operating with the effect that the non-conference line of ships was either driven out of business or forced into the combine. That was a most unfair form of competition. That is gone. At least no trace of it was found by the chairman of the Agricultural Conditions committee in 1923. The "loyalty clause" was simply an arrangement with the shipper that if he would give all his business to a conference boat, it did not matter which line of boats, provided the boat was in the conference, he received a ten per cent rebate of the cost. That was regarded as a most unjust and unfair form of competition and in restraint of trade. Those two evils have been removed so far as the north Atlantic is concerned.

The report we have before us, and upon which undoubtedly public opinion is expected to develop in support of the subsidy, is of little value. Everything that is in it that is material to the case was discovered by the special committee on Agricultural Conditions, and indeed by previous investigations. I wonder why the government appointed Mr. Preston. I know nothing about him. I have nothing to say about his character. I know nothing of his political career, but the question occurred to me as a fair and impartial examiner of this matter, why appoint Mr. Preston? Were there not plenty of qualified men within the ranks of our own civil servants, men who had experience, men in the Trade and Commerce department, in the Customs and Excise department, in the Department of Marine and Fisheries, men in various other departments, who had technical knowledge, and whose time was being paid for in any case? I have never heard any hon. gentlemen

opposite explain why it was necessary to go outside the service, and by so doing hand the plum to an outsider, which plum undoubtedly would have helped to stimulate the brain and the initiative of members of the civil service itself. Not only that, but I submit in passing that it would have accorded much better with the avowed policy of economy on the part of this government had it made an appointment from the civil service.

As far as the report itself is concerned, I cannot afford to waste much time on it, for the reason that has already been stated quite frequently that the recommendation of the government is not based upon that report, but that it is based upon the report made by my hon. friend the chairman of the Agricultural Conditions committee. Let us therefore consider the contract itself, and although I cannot attempt to give it the deep legal examination that hon. members to my right have given it, I can view it in the light of the ordinary man of the street, the business man. Ten small boats are going to be used by this government to control rates. I want hon. members now to imagine the export trade of Canada, a huge trade, then to imagine the capacity of ten boats, and ask themselves this question, how much of the total trade of Canada can ten boats carry? Certainly a very small proportion of it. How much of any single commodity can ten boats carry? Probably a large quantity of any single commodity. But the government may set rates till it is black in the face, and it cannot fix the rate for traffic unless it can establish competition. There is no use whatever in the government stating that this contract is to enable the government to control rates. The government cannot control rates unless it controls enough space to handle sufficient of each of the commodities shipped from Canada to create competition in the rates charged on those commodities. I hope that is clear, because I want to be fair in this matter. I welcome an interruption at any time, if I am not fair.

Mr. PUTNAM: Would the hon. gentleman concede that these ten ships might potentially be a factor in reducing rates?

Mr. GARLAND (Bow River): Potentially? Well, my imagination could even soar that far, but it would be a little strain upon it.

Mr. PUTNAM: The hon. gentleman is fairer than I thought he was before I asked the question.

Mr. GARLAND (Bow River): I am glad I have convinced my hon. friend opposite that I am fair. I may strain his imagination before we get through.

Mr. PUTNAM: I merely admitted symptoms of fairness in my hon. friend.

Mr. GARLAND (Bow River): There is one other point that occurs to me as a result of the interruption. The subsidy is to be paid annually, we presume, for ten years—$1,350,000. But we will assume that one or two more boats are added and that we are paying two million dollars per year for ten years, making twenty million dollars; and at the end of ten years we decide to stop the subsidy—where are we? We have spent twenty million dollars, and Mr. Combine rears his head as strong or stronger than ever before—at the end of ten years of experimentation and an expenditure of twenty million dollars. It is ridiculous for hon. gentlemen in any part of the House to talk about smashing the combine. Combines cannot be smashed. They can be absorbed but cannot be smashed. Under the present competitive commercial system, a combine is a natural growth, and things that are natural cannot be destroyed even by subsidies. Now imagine the situation: Here is a combine. To what extent it would control rates even I have no power to demonstrate to this House. But I will use the words of Mr. Preston himself:

> The North Atlantic steamship combine is only one section of the steamship conference now endeavouring to control all the great shipping interests of the world. . . . The object in all cases is the same. It is not unreasonable to infer that it is the control of the ocean commerce of the world, fixing freight and passenger rates solely in the interest of those controlling the vast tonnage and shipping traversing these waterways.

And ten boats of moderate tonnage are setting out to smash a combine with all those interlocking interests powerfully supporting it on every hand. The thing does not appeal to me as being reasonable. I am anxious that control of rates be established. I do not think any hon. gentleman in this House is not. I would desire to see effective rate control established to-morrow, and if I thought for one instant that this subsidy would give effective control of rates in the interest of all Canada, I would even overcome my natural instinct against subsidies and support the government on it.

Mr. ARCHAMBAULT: What would the hon. member suggest to control rates?

Mr. GARLAND (Bow River): I will come to that a little later if the hon. gentleman is patient. It is ridiculous to talk of smashing a combine of this size by creating a competitive system with a subsidy and ten small

boats, very ordinary boats, indeed. A moment ago I asked a question: Who was going to benefit? We have to export annually from Canada overseas, principally by the Atlantic ocean, an enormous quantity of grain and a fairly large number of cattle, so far as the agricultural population is concerned. I am going to make this a sectional matter for just a moment, because hon. members opposite have turned their faces to this corner of the House and made appeals to us on the ground that this would help agriculture, help the cattle business, help the grain business, and hon. members to my right have attempted to show us that it would not help either of these. Wheat is out of the conference altogether. It is subject to competition, so subject to it that the fluctuations in cargo space for wheat are very striking. An examination of the rates during last year will reveal a spread of all the way from nothing to thirty-four or thirty-five cents a bushel. Thirty-five cents, I think, was the limit. The Prime Minister states that he is going to control all rates. I want to ask him if it is his intention to control the rate on wheat. If it is, I want to register my unalterable opposition to his so doing, unless it be a maximum rate subject to fluctuations below. What would be the situation we would be in? We would be in much the situation that we suspect we are in as regards the railway commission at the present time. We have a strong suspicion that rates on grain should be lower but are not lower because the rates on other commodities must be low. If this government control of steamship cargo rates is going to involve also the control of rates on wheat, in other words to take the wheat rates out of competition and place them at some lined level, I regard that as a most sinister proposal. Let me call the attention of the government to the remarks of Mr. Preston on this very matter, at page 22 of his report:

> The fluctuation in the cost of transporting wheat between Montreal and Liverpool may be seen in the following schedule, compiled from reports published by the Dominion Statistical Bureau.

Note the following:

> The range of freight charges on wheat from five cents to thirty-five cents per bushel offers a problem to which profitable consideration may be given, if possible, of securing more stable freight rates.

The whole report was written with a view to breaking the stable freight rates of the combine and creating competitive rates, and Mr. Preston suggests in this part of it that wheat and wheat alone should be subject to stable rates. I do not like the look of it, and if the government proposes to fix wheat rates and by raising, even a little, the average price for transporting wheat to Liverpool or anywhere else, in order to afford lower rates on other commodities, I am absolutely opposed to it.

Let us take the cattle situation just for a moment. I find that the Canadian Pacific Railway Company were invited to handle cattle, and they refused to do so on the ground that the traffic was not profitable. We are told, however, that the traffic must be profitable because the rates are so high. That may be true, but I have not yet, nor has the committee on Agricultural Conditions—and I hope my hon. friend (Mr. McMaster) will correct me if I am incorrect—received information that cattle rates are exorbitant. That they are too high for the business, I admit, but that the steamship lines are charging exorbitant rates on cattle has not yet been proved. If any hon. member wishes to dispute the statement, I await the disputation. If not, we will proceed. The Canadian Pacific will not handle the business at all and does not want to. We will presume there is no money in that business for the Canadian Pacific. I will take the report of the select standing committee on National Railways and Shipping of last year, and I will ask hon. members to look at pages 8 and 9 where Sir Henry Thornton is being examined:

> By Mr. Jelliff: Q. That does not cause you any additional expense?

That is referring to the tearing out of any structures for the transportation of cattle.

> A. No. Now, to go on with these various items of expense. Simmered down it amounts to this; it makes the cost of carriage per head $17.48, and the revenue per head at the present rate is $20, leaving a profit to the company of $2.52 per head.

That is Sir Henry Thornton's evidence last year.

> By Sir Henry Drayton: Q. Does that include all the items you have mentioned?—A. Yes.
>
> Q. And does that include a fair proportion of the fuel and other expenses of the voyage?—A. No, it is the bare cost of handling the cattle. We have not charged anything for operating the ships against these cattle. Perhaps we should.
>
> Q. It really puts itself in this position, that the difference between $17.48 and $20 will apply on the general cost of running the boat?—A. That is it.
>
> Q. And you find out afterwards whether you have made a profit or a loss?

Hon. gentlemen will note this answer by Sir Henry Thornton:

> A. It does not require a very wide flight of the imagination to see what happens, especially if you charged interest on the cost of the vessel. While I do not want anything that I say to be misinterpreted as an effort in the direction of propaganda for increasing cattle receipts, at the same time, generally speaking, $20 per head on cattle to the United Kingdom is not considered a high charge in the shipping world.

When we have evidence of that kind before us, we wonder at the temerity of hon. members who appeal to us, almost plead with us to support this subsidy because it will reduce, they say, the rate on cattle ten dollars per head. The suggestion, I submit, is absurd, although nothing would delight me more than to see such a reduction. Why do I not think it a possible solution of our cattle industry's troubles? In the first place, last year we exported about 63,000 head of cattle. Only ten boats would be handling this traffic and they can carry only a limited number of cattle, about 500 on an average per boat.

Mr. HOEY: Four hundred and twenty.

Mr. GARLAND (Bow River): We will put it at five hundred. The ten boats will have to handle the bulk of that business in three months because our cattle are ready to export during August, September and October. July, August and September are the better months. If we can get the cattle off then, what do we hit? We hit that period when the grass-fed beef of Ireland and Scotland are going on the British market; we reach the market at the worst time of the whole year; we hit a falling market. That is one reason, in my opinion, why the transportation of live cattle to Great Britain is not a practical solution of the troubles of the cattle industry of western Canada.

Another reason that I offer is that Mr. Petersen cannot handle our cattle. He is going to have to handle 63,000 cattle in three months. Why do I say that? Because, Mr. Speaker, if he has to handle our cattle at a loss—and he will have to if Sir Henry Thornton is to be believed—then he will have to handle all the traffic, because nobody else will handle any of it. That must be obvious. If he is going to handle all of it, then the government will have to undertake another responsibility—the responsibility of orderly organizing the coming forward of the cattle so that they will reach the boats at the proper time to be shipped and in proper condition. It is a difficult problem to handle.

Mr. HOEY: They can provide more boats.

Mr. GARLAND (Bow River): Yes, and up goes the subsidy; and it will go up and up illimitably. I say again, it is absurd for the government or anyone else to claim that they can reduce the cattle rates $10 per head unless at the cost of the taxpayers of Canada.

Mr. CARROLL: It is said that the cattle trade cannot stand a rate of $20 a head from here to the Old Country; that is, it does not pay. If this rate is not lowered in some way, our cattle trade with the Old Country is gone, as I understand my hon. friend.

Mr. GARLAND (Bow River): No, not quite gone. You see, we are in rather a peculiar position in regard to the cattle trade. we built up a tremendous breeding stock during the war period; Mr. Fordney comes along with his little tariff, implemented subsequently, and our chief market in the United States is cut off. That is where the government should turn its attention, that is where our real market lies, in the United States. If a fraction of this proposed subsidy were spent in propaganda in the United States—I do not know the ethics of the matter so far as the government is concerned—it might help to open up that market, which would be a real solution. Another possible solution I would offer is, that if the government wishes us to continue shipping beef to England, we can ship it, I think, profitably as chilled beef, but I do not think we can ship it on the hoof and make a profit. I simply submit this in fairness to the Prime Minister. He was very enthusiastic the other day about the possibility of reducing rates on cattle.

Mr. MARTELL: Would the hon. member be satisfied with the government simply carrying on propaganda for the purpose of getting into the United States market?

Mr. GARLAND (Bow River): No, I should like them to try and get in there as well.

Mr. MARTELL: But the United States having control of their own market, how can the Canadian government get in there?

Mr. GARLAND (Bow River): Does the hon. gentleman mean because the United States has control over its fiscal policy?

Mr. MARTELL: Yes.

Mr. GARLAND (Bow River): Oh yes, I quite admit that; but I do not admit that this government can from any reasons of stilted pride afford to lie down on this job of attempting to secure reciprocal trade. I think that is one of the principal duties before the government, and in that of course will lie to a great extent a solution of many of our troubles, but especially so far as cattle are concerned.

Now, I have submitted a proposal with regard to the cattle industry that may at least hold some promise. I should like to ask another question: Why did the government pick out the Petersen firm for this subsidy? That has puzzled me from the very outset.

I have heard no argument from the opposite side why it was done excepting that advanced by the Prime Minister, which certainly was not conclusive—to the effect that this gentleman with four small boats had certain trade connections and certain docking facilities. That is the only reason, well put I admit, that I have heard as to why Mr. Petersen was selected for this subsidy; and it is not convincing to me. We have the Canadian National Railway system, and we are very proud of it. We have also the Canadian Government Merchant Marine, which is the complement of the railway system. That merchant marine cost us $70,000,000, and has a fleet of 57 boats. We have in addition another transportation system regarding itself as semi-public in character—I wish it was completely public in character—also controlling a magnificent line of ocean and coastal vessels valued at $66,000,000, and 60 in number, with a tonnage of 417,000 tons. In short, we have an investment, largely of Canadian capital, of $136,000,000 in our own vessels, the Canadian Pacific and the Canadian Government Merchant Marine. Why are those vessels not used? Has the government approached the Canadian Pacific Company? I asked the Prime Minister that question the other day, and he said that he had spoken to the president of the company three short days ago. And let me give that as the answer to his first question, the first great point he made: If this subsidy is going to be no good, if we are not going to secure control of rates, then why are the steamship companies making such a tremendous lot of noise about it, why are they howling their heads off, why is all this propaganda being broadcast? The answer came out of the Prime Minister's own mouth: As the result of that outcry he had himself gone to the president of the Canadian Pacific a few days ago with a proposition of a similar kind. Well, surely if they think they can get their finger in the jam pot with the others they are going to howl until they get their share. It does not require a very brilliant intelligence to recognize anything so obvious. If you want another reason, I ask you to stick a mouse trap on an elephant's tail and see if he does not roar. That is about the situation—a mouse trap has been stuck on an elephant's tail. And I do not wish to be unfair in this; that is the way it appears to me; and I have anxiously awaited any arguments on the part of the government to convince me otherwise, but not a single one has been advanced. True, we have heard from one member opposite that the Canadian Government Merchant Marine is no good—the ships are too small—they are too large—they are inefficient, and so on. Another hon. member on the government side says that the merchant marine is rendering too valuable a service on the routes it is now looking after to be withdrawn—if we did not keep the ships there everybody would be kicking—we have established trade routes which are important—we must keep the ships on those routes. I was interested in reading the other day a statement by the British Columbia Lumber and Shingle Manufacturers, Limited. It is true this organization is on the Pacific, but I venture to say the same praise exactly might apply to the Canadian Government Merchant Marine boats on the Atlantic that these men apply to those on the Pacific. The members of this organization consist of some thirty-eight companies, enormously important companies in British Columbia. I will hand the list to Hansard, if I may be permitted, because I think it should be on record.

The list is as follows:

Members of the British Columbia Lumber & Shingle Manufacturers Limited

Abbotsford Lumber Co., Ltd.
Brunetts Sawmills, Ltd.
B. C. Mills Timber & Trading Co., Ltd.
Canadian Robert Dollar Co., Ltd.
Cedar Cove Sash and Door Co., Ltd.
Eburne Sawmills Ltd.
Hanbury J. & Co., Ltd.
Maple Ridge Lumber Co., Ltd.
Premier Lumber Co., Ltd.
Rat Portage Lumber Co., Ltd.
Thurston-Flavelle Lumber Co., Ltd.
Commercial Lumber Co., Ltd.
Bainbridge Lumber Co., Ltd.
Genoa Bay Lumber Co., Ltd.
Moore-Whittington Lumber Co.
Sidney Mills Ltd.
Ellis H. M. Limited.
Shawnigan Lake Lumber Co., Ltd.
Victoria Lumber Co., Ltd.
Alberta Lumber Co., Ltd.
B. C. Fir & Cedar Lumber Co.
Campbell River Lumber Co.
Canadian Western Lumber Co.
Dominion Creosoting Co., Ltd.
Hammond Cedar Co., Ltd.
King Farris Lumber Co., Ltd.
MacMillan H. R. Export Co., Ltd.
Robertson & Hackett Ltd.
Bucklin Lumber Co., Ltd.
Timberland Lumber Co., Ltd.
Vancouver Lumber Co., Ltd.
Cameron Lumber Co., Ltd.
Lake Lumber Co., Ltd.
Lemon-Gonnason Lumber Co.
Straits Lumber Co.
Victoria Lumber & Manftg. Co.
New Ladysmith Lumber Co., Ltd.
Colpman Lumber Co., Ltd.

The letter was written to Senator Taylor last year when there was some agitation about the management of the Canadian Government

Merchant Marine out there, and it proceeds as follows:

> In the first place, we wish to state unqualifiedly that the lumber industry, which is the premier and most important industry in this province, has been greatly benefited through the co-operation of the Canadian Government Merchant Marine, and numerous instances can be cited where orders have been secured through the instrumentality of this organization. Some of these orders were obtained at times when they were vitally necessary to the lumber industry of British Columbia, which means that they were vitally necessary to the working population of this province.
>
> Previous to the inauguration of the Canadian Government Merchant Marine the lumber export sales to China, India and Egypt were very small, but since the Canadian Government Merchant Marine put on services to these countries a market has been opened up which gives an outlet for a grade of lumber which in the past has been very hard to dispose of.

And so on; the whole letter is one glowing tribute to the merchant marine and its management at that time. It is signed by R. H. H. Alexander, secretary-treasurer of the British Columbia Lumber and Shingle Manufacturers, Limited, Metropolitan Building, Vancouver. I have no doubt that dozens of other letters containing similar testimony could be produced. Let me, however, ask this of the government: If they contend that ten boats of meagre tonnage and the mediocre qualities of the ten proposed are to be such effective combine busters, would not one hundred and seventeen boats be infinitely more so? And they are Canadian-owned—the Canadian Government Merchant Marine and the steamships of the Canadian Pacific Railway Company. I am no particular friend of the Canadian Pacific Railway Company; in fact I have always delighted in taking a bang at them whenever the opportunity presented itself. But after all, we have the power to do what we will with these steamship services, in reason. Instead of going after them and browbeating them in this manner I think the government would have been better advised to approach the management of the Canadian Pacific Railway Company prior to making arrangement with Sir William Petersen and attempt to effect an agreement with them which would enable Canada to co-operate in breaking the combine, if it can be broken. It would have been better to do that than to make an arrangement with somebody abroad to have boats built abroad with Canadian money, subsidized by Canadian money—all to help somebody else; it can never help us. The thing certainly does not appeal to me. The whole proposal is so hazy, so absolutely incomprehensible, that frankly I look upon it as the hallucination of some imaginative gentleman who had a little poetic frenzy at the moment. Possibly he had been reading about David and Goliath, and conceived the idea that in the year 1925 we could break a combine by setting a mouse-trap on its tail.

Mr. PUTNAM: Perhaps he read about Noah's monopoly on tonnage.

Mr. GARLAND (Bow River): Yes; and I have also read about Samson and the Philistines.

Mr. MARTELL: Will my hon. friend permit me right there? The Canadian Pacific Railway Company got a charter from the Dominion parliament, under certain terms and conditions, to do certain things. Why should we interfere with them unless they are violating the criminal laws of the country? Having got their charter in accordance with the conditions pertaining at that particular time, have they not the right to manage their own affairs?

Mr. GARLAND (Bow River): I have not contended otherwise, Mr. Speaker—not yet; I may before I get through. Up to the present all I have suggested is that the government might have gone to the Canadian Pacific Railway Company before approaching Sir William Petersen and tried to come to some terms with that company, which, after all is largely our own. Hon. members have often referred to it in glowing terms as one of the great assets of Canada, a splendid thing, a thing of which we should be proud.

Mr. MARTELL: Would my hon. friend confiscate the property of any person or any corporation which has obtained certain rights from the federal parliament or from any legislature of this country? If the government of Canada want to make an agreement have they not the right to go to any firm or corporation they wish? If they do not go to the people that my hon. friend thinks they should go to, then is there any reason why those people should be compelled by act of a legislature or of this parliament to enter into such an agreement? In other words, does the hon. member approve of the principle of holding the big stick over people who have charters from the parliament of this country?

Mr. GARLAND (Bow River): I would ask my hon. friend to be so good as to allow me to dissect the several questions he has put, and to reply to them to-morrow. I could not hope to answer them to-night, and all at once.

The Prime Minister in the early stages of his speech the other day said, referring, to the resolution before the House:

> The resolution is the first necessary step to be taken by the government preliminary to the introduction of a bill to give the government control of ocean rates. The

resolution relates to the control of ocean rates; that is the principle underlying it, and hon. members in voting upon the resolution are passing on the important question whether or not in their opinion the government should undertake to control ocean rates. Whether the method which the government is taking to control ocean rates may be effective or not is a subject which, I think admits of debate.

I think so; I will agree with the Prime Minister there. There is no doubt about it; but if it does admit of debate, of discussion, of alteration, or possibly of total elimination, why are we asked now to vote upon it? The Prime Minister says we are simply voting on the question of control. If I could convince myself that that was all we were voting on, I should be only too pleased to vote with the government. But this House is governed by certain rules—and mind you, I think a good many of those rules could be amended. I do not like some of them—they hamper us; they are restrictive from the point of view of modern business methods. For example, there is one rule that prevents me from expressing my real opinion on this matter.

As I understand it, the motion before the House is that the Speaker do now leave the chair for the House to resolve itself into committee of the Whole on a certain resolution. The amendment before the House is that the Speaker do not now leave the chair but that the House resolve itself—and so on; I need not quote that. Frankly, with all kindness to my friends to my right, I do not think they have been very constructive. I do not think there is anything in the amendment which I could support, with the exception, and this is my personal opinion, on the evidence so far produced, that this report of Mr. Preston's and the policy of the government are ill advised, costly and futile. To that extent I can agree with the amendment. But as to the proposal which it offers, co-operation in joint inquiry with other portions of the empire—well, I hate to think that we lack sufficient intelligence to find a solution before such a conference could decide upon the subject. So that so far as the amendment is concerned I am afraid I shall have to vote against it.

As to the motion itself, what does it say? That the Speaker do now leave the chair for the House to resolve itself into committee of the Whole on this resolution—and I will ask hon. members to listen to the opening words of the resolution:

> Resolved, that to give the government of Canada control over certain ocean rates it is expedient to ratify and confirm the agrement between His Majesty and Sir William Petersen.

If the resolution simply read:

[Mr. E. J. Garland.]

> Resolved, that to give the government of Canada control over certain ocean rates it is expedient that this whole question should be referred to a select standing committee for consideration and recommendation—

—then we could vote for it. But it goes further than that; it states specifically that the control which the government says it wants to secure is control by virtue of an agreement between this government and Sir William Petersen. Now the Prime Minister, whose kindness in the matter I appreciate, told us that we did not necessarily bind ourselves to the subsidy in voting for the resolution. I cannot for the life of me see how he can excuse us from voting for the subsidy if we vote for the resolution, and if any hon. gentleman opposite speaks after me I will be very glad indeed if he would release my mind from this understanding, because I would be only too willing to support the government in further prosecuting their investigations in the hope of arriving at a solution. But as it stands I am hampered. Suppose we accept his statement, that this is a motion that the House now resolve itself into committee of the Whole. Once we get into committee of the Whole, where are we? We are in a trap absolutely, those of us who do not think this is a practical proposal, those of us who are opposed to subsidies in principle. We are in a trap which can only be opened for our escape by the government itself. And what is the trap? The trap is this, that the second reading of the resolution determines the principle of the resolution; that is as I understand it. The second reading of the resolution when passed carries the principle of the resolution forward into the bill, which will be brought down later, and is again concurred in. True, I may oppose it in committee; I may vote against it, but the vote is not recorded; it is simply a counted vote. Effective opposition to the proposal can hardly come in committee of the Whole.

There is one suggestion I have to make to the Prime Minister, and I do so with all kindness because I am anxious to support him in his investigation into this whole question of control. Will the Prime Minister or will the government make this offer to us? Will he give me an undertaking that the following will be his attitude? That if we go into committee of the Whole this question will not be pressed to a second reading of the resolution in committee of the Whole, when the principle would be determined, but that the government will after a certain formal debate has taken place, move that the debate be adjourned? Then we will find on the order paper next day Item No. 16 or Item No. 18, or whatever it may be, "House again

in committee of the Whole on a certain resolution". Next day the hon. Minister of Trade and Commerce could rise in his place and move that that item be struck from the order paper, and that this whole question be referred to a special committee. I offer that to the government as a solution, as a way out of its dilemma and a way out of ours. I am anxious to support the government, but I cannot tie myself to the principle of this hopelessly futile subsidy to ten small ships.

Were I permitted to move an amendment to the amendment, were I even permitted to move an amendment after the amendment now before us had been disposed of, I would move one in terms not dissimilar to this:

> That Mr. Speaker do not now leave the chair, but that it be resolved:
>
> That it is advisable that a select special committee be appointed to make inquiry into the question of steamship transportation, it having been alleged that a combine exists known as the North Atlantic Conference; and
>
> That it is advisable to afford opportunity to all interested parties to submit their views upon the subject matter of the inquiry to the said committee, with particular regard to the possibility of discovering the best method for effectively controlling steamship rates by the Dominion of Canada;
>
> And that the said committee shall have power to send for persons, papers and records including what minutes and evidence and reports of previous investigations may be considered necessary, and to examine witnesses under oath and to report from time to time.

That, Mr. Speaker, would be my amendment if I had the power to move it. I have not the power to move it now under the rules. I do not wish to embarrass the government. I wish to co-operate with them in this matter, and I cannot move it very well on second reading of the resolution without embarrassing them further. I ask now, if the government are honestly anxious to arrive at a solution of this problem, that they either take this step or any other that appeals to them that may save themselves and ourselves from the position in which we find ourselves, and refer the whole matter to a committee. I am quite sure many hon. members on the other side of the House—I look at the hon. member for Brome (Mr. McMaster), I look at the hon. member for St. Lawrence-St. George (Mr. Marler)—and many others who would be only too delighted to see some such solution of this question put forward by the government. I make this suggestion with the sincere desire to co-operate with the government.

Before I take my seat I wish to express my regret that when the Prime Minister was speaking he did not read the whole of the report of the special committee on Agricultural Conditions. I also must take this opportunity of telling my hon. friend from South Oxford (Mr. Sutherland) that he was incorrect and unfair when he said that the special committee had reported without discussion.

Mr. SUTHERLAND: If my hon. friend will permit me, I am sure he does not wish to misrepresent me. I think I made it perfectly clear in speaking on this motion that I did not censure the committee in any way. I merely pointed out that in so far as I was concerned I had not heard the report, and I was not present when it was passed.

As far as the question put to the Prime Minister was concerned, I still think there is an error in the report of what I said. If you will compare it with the words I used in speaking on this motion, you will find that I made it perfectly clear that this report of the committee was passed on one morning several weeks after the evidence had been submitted to it, that I was not present at the committee meeting, that I had not heard the report read, and did not know anything about it until after parliament had prorogued.

Mr. GARLAND (Bow River): I am quite willing to accept the hon. gentleman's explanation, but the fact of the matter is that an impression was left upon the House to the effect that the special committee had hurriedly jammed through their report without discussion. There is no doubt that was the impression left. Now in fairness to the chairman of that committee, who in my opinion is one of the fairest minded men in the House of Commons, I wish to quote from the report of the committee, at page lvi: This report is dated Wednesday, June 13, 1923. I quote:

> Chairman submitted to committee for approval a suggested further report to the House on ocean freight rates. After discussion of same, clerk was ordered to have sufficient copies typed forthwith to supply each member of the committee with a copy.

Again on Friday, June 15, 1923, I find this:

> The fifth interim report—that of ocean freight rates—was again taken up and discussed, and laid over until the next meeting of the committee.

Again on Monday, June 18, 1923, I find:

> Chairman read redraft of proposed report to the House on ocean transportation.
>
> Discussion followed.
>
> On motion of Mr. Caldwell, seconded by Mr. Munro, the draft report as read by the chairman was adopted, and the chairman ordered to present it to the House as the fifth interim report of this committee.

I do not put this on record in any carping spirit of criticism, nor with any desire to reflect upon the hon. member for South Oxford, but simply because my impression and the impression, that others who heard him speak gathered from his remarks was that no discussion had taken place on the report. I do

not think it was the hon. member's intention to create that impression.

Mr. SUTHERLAND: I attempted to point out while the Prime Minister was speaking that the report of this committee was not read when it was submitted to the House, and consequently the members were not familiar with it. When I spoke on this motion, I made it perfectly clear that the chairman of the committee had done everything possible to get all the evidence that was available and I asked the Prime Minister to read the seventh and final report which indicated that owing to inability to digest the evidence taken it was advisable to have the committee reappointed.

Mr. GARLAND (Bow River): The Prime Minister referred to this report of the special committee on Agricultural Conditions and he quoted at some length from Mr. Lubin and other witnesses. But he did not quote all; let me quote some more that he might have referred to. At page 20 the following appears:

> The question of ocean freight is a world problem and one of very great importance to all countries. As a world problem it cannot be settled satisfactorily by any one nation nor by any one interest acting alone.

Mr. Lubin was then quoting from Mr. Hippwood, the assistant secretary of the Marine department. He goes on to quote Mr. Alexander, the chairman of the committee of the House of Representatives on merchant marine matters:

> It is true that our government would be impotent to enforce reasonable rates or stabilize rates on farm products in international trade in the absence of an international agreement. It is an international problem and can only be solved by international agreement.

I wish the Prime Minister had not left these quotations out.

Mr. IRVINE: Why not vote for the amendment then?

Mr. GARLAND (Bow River): We come now to page 21, where we find that the committee reported as follows. Part of this has been already put on Hansard, but it is so important as to warrant repetition by way of emphasis:

> Your committee, in view of the foregoing and of the evidence adduced before them and referred to in a previous interim report, are of the opinion that action is desirable to control shipping rings or conferences.
>
> It is suggested that the Canadian representatives in attendance at the next meeting of the International Institute of Agriculture should be given authority to see that the matter is thoroughly discussed, in order to discover whether an international system of control is feasible through such agency.
>
> In view of the fact that a very great deal of the shipping coming to Canadian ports is British shipping concurrent action by the British authorities is respectfully suggested. The matter might well be made a subject for discussion and consideration at the nert Imperial Economic Conference.

> Meanwhile it would appear wise to recommend that the government through one of its departments—we suggest the Department of Trade and Commerce—should entertain complaints from shippers of unfair or oppressive treatment by ocean carriers and should hold investigations publicly or privately into such complaints.

This last recommendation is the only part of the report which the government would appear to have carried out; the government certainly has entertained complaints of all kinds from every one in the matter and I congratulate them in that respect. At the bottom of the page we find the following:

> The Canadian people are the owners of 67 ships. Some of these are of fair though not large size. Your committee suggest that a certain number of these ships might be selected to be operated in conjunction with our National railway lines, that the freight rates on such steamers could be established on the cost of carriage plus a reasonable profit based upon the real, as opposed to the cost, value of the ships. If these ships are of the size and type which can be economically and efficiently run in conjunction with the National railways (and on these points your committee have taken no evidence) the following desirable objects would be obtained. The National Railways would be enabled to grant through bills of lading on a transportation system by land and by water altogether under their own control; the Canadian people would be able to obtain transportation facilities at reasonable and known rates; the service thus given on the ocean would tend to maintain rates on a reasonable basis and would act as a deterrent to the charging of unreasonable rates by other lines; and finally the knowledge obtained by the government as to the actual cost of ocean transportation would aid it in determining whether rates charged by other lines are fair and reasonable.
>
> Should it appear—

And it was really amusing to me, Mr. Speaker, to hear the Minister of National Defence quote this.

> Should it appear that there are no ships or not a sufficient number of ships belonging to the Canadian Government Merchant Marine suitable for this service then it would appear that wisdom would dictate the disposal of some of the smaller ships to enable ships of the class required to be secured.

I have asked several of the members of the committee the meaning of that sentence in the report and there is no question as to what it signifies. If these boats were too small for the service or were not efficient, the suggestion was that they should be sold and that other boats, government owned, should be purchased in their stead.

Now let me offer a suggestion as a constructive proposal—and I offer it humbly as coming from a junior member. If the government wishes to meet the problem there are two principal things which in my opinion it can do. First of all, it should endeavour at once to secure a joint inquiry, international in its scope, into the question. There are several ways in which that could be taken up. The British Board of Trade may be ridiculed by hon. members opposite as hope-

less, but I venture to suggest that they would receive a friendly hearing. At least I should like to have their report after a real conference had been held. Again the government might take up the matter with the International Institute of Agriculture at Rome with a view to seeing what could be done or the government could take steps to bring about if possible an international conference under the League of Nations. So that there are several ways in which action might be taken. Secondly, I urge that in the meantime something be done, and I do think that the government should take some steps in the matter. What should those further steps be? There are two methods by which immediate relief might be brought to the present situation. One would be to amplify the present merchant marine service by adding to it ships constructed in Canada. The government could help the employment situation by building ships of its own. Why not capitalize this subsidy and issue bonds that would necessitate the payment of annual interest equal to $1,350,000, and so have enough money to build all the boats needed to augment the present Canadian Government Merchant Marine service and provide a really competitive force on the Atlantic? I offer that suggestion to the government. I understand that the capital so invested would provide about 21 new boats, efficient and up-to-date, instead of ten. But if the government does not want that, there is an abundance of empty tonnage on the market of the world anxiously awaiting a purchaser. Buy what tonnage may be needed and use it to control rates if you think you can break the combine that way. The second method is this: The government might take into consideration the possibility of getting the present Canadian Government Merchant Marine and the Canadian Pacific Railway boats to work in harmony in some attempt to create competition in Atlantic rates.

For the life of me I cannot understand how any government or any body of men can imagine that ten small boats, or even twelve or fifteen, of the tonnage specified in the agreement, can hope to make the least impression upon a combine of such an immense and powerful character nor affect rates unless those ten boats carry only a few commodities of a special kind at special rates. They can unquestionably establish competitive rates on the commodities which they carry in large enough quantities, but this would not be the case with other commodities. I regret therefore that unless the government can make some intimation, such as I suggested in the earlier part of my remarks, and not press to a vote the second reading of the resolution, I shall be compelled to vote against the motion.

Mr. SUTHERLAND: Will the hon. member permit me to direct his attention to what I really did say on that occasion?

Mr. GARLAND (Bow River): I do not question the hon. member's intentions in the least. Possibly he did not mean what he said.

Mr. SUTHERLAND: This is what I said:

> I do not wish to take exception to anything that was done by the committee, but I can say that, so far as I am concerned, I never saw the report referred to nor heard of it until after it was printed, long after parliament prorogued. . . . It was called on a Monday morning near the end of the session, and that may account for my absence. I did attempt to attend the meetings of the committee as well as I could.

Mr. GARLAND (Bow River): I envy the hon. member his opportunity of frequently getting home.

On motion of Mr. Vien the debate was adjourned.

On motion of Mr. Mackenzie King the House adjourned at 11.05 p.m.

Friday, March 20, 1925

The House met at three o'clock.

TAX COLLECTIONS

PROPOSED INQUIRY BY PUBLIC ACCOUNTS COMMITTEE

Mr. W. C. GOOD (Brant) moved:

> That the standing committee on Public Accounts be instructed that they have power to investigate the methods by which the business profits and income taxes, especially in the case of large concerns, have been assessed and collected.

Hon. J. A. ROBB (Acting Minister of Finance): The Minister of Customs (Mr. Bureau), whose department now administers the business profits tax and the income tax, is absent, as also is the Acting Minister of Customs. I am not sure that they have had notice of this motion, and in their absence I would ask my hon. friend to allow the motion to stand as notice.

Mr. GOOD: A word of explanation might be due the House in this connection. Last year, on the 16th of June, there was a fairly lengthy debate on this question, and at the conclusion of the debate the very same resolution that I am now asking to be passed was adopted by a large majority. Unfortunately, it was fairly close to the end of the session and the Public Accounts committee was

called four times in succession without securing a quorum. Last year the first and final report of the Public Accounts committee, which was presented on the 17th of July, read as follows:

> Your committee, to which was referred instructions "to investigate the method by which the business profits and income taxes, especially in the case of large concerns, have been assessed and collected," was summoned on four occasions, in the usual way, to meet for the consideration of the business in question, and on each and every occasion a quorum failed to appear.
>
> All which is respectfully submitted for the information of the House.

All I am asking is that there be a renewal of the instructions given last year to the committee. Nothing was done, and as the authority lapsed with prorogation it is necessary that a motion be made in the House this session in order to renew the instructions given to the committee last year. The motion is in identically the same words as the motion of last year, and I do not think there can be any objection to it. I submit that the House should authorize the committee to go ahead with the work that was in contemplation last year and which was not proceeded with for the reasons I have mentioned.

Mr. ROBB: The minister in charge has some responsibility, and may I again ask my hon. friend to let it stand until the minister or his representative is in his seat?

Mr. GOOD: Let it stand, then, Mr. Speaker.

Motion stands.

RAILWAY ACT, 1919, AMENDMENT

Mr. T. L. CHURCH (North Toronto) moved for leave to introduce Bill No. 31, to amend the Railway Act, 1919.

He said: The object of the amendment is to restore the special rates that applied prior to the war in regard to tickets purchased on such special occasions as Thanksgiving Day and certain other holidays and for the purposes of attendance at fall fairs, conventions and sporting events which are held throughout Canada. Before the war, single fares or a fare and a third were charged, instead of the full return fare, to persons attending various functions of this character on certain days, and special occasions and conventions of different kinds held by farmers' and other organizations. In connection with sporting events, such as soccer, lacrosse, football, hockey, and other games, there was also a cut rate for week-ends. If the old special rate that obtained on such occasions prior to the war were restored there would be a large increase in the earnings of the railways from this class of traffic, in the ordinary course of good business.

Motion agreed to and bill read the first time.

PRIVATE BILL

FIRST AND SECOND READINGS

Bill No. 30 (from the Senate) to correct a clerical error in chapter 166 of the statutes of 1924, intituled: "An Act for the relief of James Henry Kirkwood."—Mr. Anderson.

MINERS AND STEEL WORKERS

On the Orders of the Day:

Mr. W. A. BLACK (Halifax): Mr. Speaker, I would like to call the attention of the government to an article in the Montreal Gazette of this date. It is headed:

> Nova Scotia Premier Slams Mackenzie King in Provincial House.

The Prime Minister of Canada was quoted as having said that the responsibility was with the Nova Scotia government, and the Premier of Nova Scotia, according to this despatch, said:

> The Prime Minister, if he really said it, doesn't understand the first principles of responsibility. The responsibility is just as much his as it is mine.

Then Premier Armstrong went on to say that legislative action would be taken at the proper time, and with the consent of the whole House.

It would be gratifying to myself, and I am sure to the people of my province, and especially to the workers of the mining district of Cape Breton and of the other coal areas of the province of Nova Scotia, if the Prime Minister would reconsider his attitude.

Mr. SPEAKER: Order. On the orders of the day only a question is allowed.

Mr. BLACK (Halifax): May I ask if the Prime Minister will reconsider his attitude, and if he would be prepared to grant assistance to the sufferers down there, which would have my support and that of many members around me.

Mr. SPEAKER: Order. I am sure the hon. member does not want to break the rules of the House. He is allowed to put a question on the orders of the day, and must not amplify it.

Mr. BLACK (Halifax): I am sorry, Sir, if I was out of order.

Right Hon. W. L. MACKENZIE KING (Prime Minister): As to the despatch to which my hon. friend refers, I would say, first of all, I am not responsible, and I imagine

Premier Armstrong is not responsible, for a despatch that appears in the Gazette. I would like to assure myself of the source of the despatch, and then in addition, reading the language of it, I would want to know before commenting upon it, what communication was read by Premier Armstrong before he used the words he is reported to have used. I have a copy of the despatch here, and my hon. friend probably noticed that Premier Armstrong said, "The Prime Minister, if he is correctly reported—" Well, I do not know what reports have been going from Ottawa to Halifax and appearing in the Halifax Herald and other papers, but I should feel that Premier Armstrong would be quite justified in using language such as he did there, with respect to some of the reports at least that I have seen of things that I was supposed to have said and have never said.

Mr. MEIGHEN: Mr. Speaker—

Mr. MACKENZIE KING: Will my right hon. friend allow me. He is not content with interrupting everyone on his own side who rises to speak, but attempts to interfere as well with everyone who gets up to speak on this side of the House.

I was saying, Mr. Speaker, when the leader of the opposition got up to interrupt in his usual way, that I do not know what report it was that the Premier of Nova Scotia was supposed to be referring to. I would wish to see that report before I commented on the despatch that has just been referred to. However, with respect to the position of the government in regard to the Nova Scotia situation, it remains exactly what it has been, and as I have stated it in this House over and over again. In Hansard of March 10 my hon. friend will find the following statement:

> The position the government takes in the matter is this: The Premier of Nova Scotia has already intimated to the president of the Mine Workers' Union that the government of Nova Scotia would be prepared to co-operate in any matters of distress where it appears that the municipalities are not able to take care of the situation. This government, therefore feels, that unless requested by the government of Nova Scotia to do so, we should not intervene at this time.

I have repeatedly said that unless the government of Nova Scotia requested this government to intervene in this matter, we did not intend to intervene. When requested, we will take the request of the government of Nova Scotia under consideration.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Do I understand the Prime Minister to mean that no action for purposes of relief can be taken by this administration, or will be taken, unless requested by the government of the province where the relief is needed?

Mr. MACKENZIE KING: I have stated that until this government is requested by the government of Nova Scotia to interfere in the Nova Scotia situation—

Mr. MEIGHEN: With regard to relief.

Mr. MACKENZIE KING: In any particular—this government intends to await a communication from the government of Nova Scotia.

Mr. WILLIAM IRVINE (East Calgary): I think that the Prime Minister just quoted from Hansard the position of the government based upon a press report regarding what Premier Armstrong had said.

Some hon. MEMBERS: Order.

Mr. IRVINE: My question is this: Why does the Prime Minister accept that report of the press, and not the one that has just been read to him?

Mr. MACKENZIE KING: Because, on the face of it, it appears to be correct; the other does not.

Mr. MEIGHEN: The other report is exactly in accord with what the Prime Minister did say.

Mr. LAPOINTE: Another question on the orders of the day!

INQUIRIES FOR RETURNS

ORDERS OF SESSION 1924

On the Orders of the Day:

Hon. H. H. STEVENS (Vancouver Centre): Regarding returns, I want to bring to the attention of the government, and indeed, I think, to Your Honour's attention, that certain returns ordered last session have not yet been laid on the table. I have particular reference at the present moment to one in my own name, passed on April 30, 1924:

> For a copy of all evidence or statements made before the Royal Pulpwood Commission by Mr. Piché and other witnesses, members or officers of the government of Quebec.

That return has not been brought down yet. I understand, Sir, that under the rule, returns ordered during one session, if the government cannot produce them before prorogation, are to be laid on the table immediately after the opening of the following session. I have already brought this matter to the attention of the government, and I would ask the Prime Minister, or the responsible min-

ister in this case, if we can expect this return immediately.

Right Hon. W. L. MACKENZIE KING (Prime Minister): When the matter was brought to my attention the other day I mentioned that I was quite sure that it was through inadvertence the return had not been brought down, and I immediately spoke to my colleague the Secretary of State (Mr. Copp), and asked if he would have the officer in his department who is responsible for seeing that these returns are brought forward, communicate with the departments of the government concerned and see that the returns were prepared and brought down as speedily as possible. I have since been informed by my colleague that he has taken that step, and I think the return will be brought down very shortly.

Mr. E. B. RYCKMAN (East Toronto): On the 9th of June, 1924, an order for a return was passed:

For a copy of all telegrams, letters or other messages, or documents, despatched from the Department of Justice to the authorities of Portsmouth penitentiary respecting the non-infliction of lashes on the person commonly known as Red Ryan.

That return has not yet been brought down, and I would ask the government when I may expect it.

Hon. ERNEST LAPOINTE (Minister of Justice): I will look into the matter.

BUSINESS OF THE HOUSE

NOTICE OF MOTION—MR. MEIGHEN

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I am rising to make a request of the government which I made some time ago. I have a resolution on the order paper the importance of which I do not think anyone will deny. There has never been opportunity to move it yet except at twenty minutes to six on a Wednesday and at about a quarter to eleven on another day. No hon. member with any intention of being reasonable would have suggested the resolution could have been gone on with then. In view of its importance I am going to ask the government if they will be good enough to set a day to the extent of saying that government business will not be gone on with on that day in advance of this business. I am quite aware that the government cannot guarantee that a private member will not go on on a private members' day; but the government is not being asked anything unreasonable if it is asked to fix a day for the discussion of this resolution in so far as it is in the power of the government to give it. This has been done repeatedly. I think this request should have been acceded to before, and an opportunity provided for debating this resolution before the budget. I make that request still.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I might say that several hon. members of the House have been making special requests regarding their resolutions, and with due deference to my right hon. friend, I think all are entitled to equal treatment. Much as I would like to please my right hon. friend in the matter of his particular motion, I feel that the government owes a like obligation to every member of the House who has a motion appearing on the order paper. As far as the motion is concerned, I should think my hon. friend would have ample chance to move it, if he wishes, as an amendment to the budget, and if he so desires may debate the matter at great length there.

EASTER ADJOURNMENT

On the Orders of the Day:

Mr. J. FRED JOHNSTON (Last Mountain): I would like to ask the government if the length of the Easter recess has been decided upon; and to say in this connection: if it is to be brief, the majority of members in this quarter of the House would like it to be very brief; If it is to be lengthy, make it long enough so that members living at a distance will have an opportunity to go to their homes without losing their time.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The one desire of the government is to expedite the business as far as possible. The intention, as far as the government is concerned, is to adjourn on Wednesday night of Easter week until the following Tuesday.

THE BUDGET

On the Orders of the Day:

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Is it the intention of the government to press the budget on prior to other measures that have been promised, especially in view of the fact that the Senate has nothing to do?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The intention of the government is to carry out the programme as originally arranged to expedite the business of parliament. The budget will be brought down on Tuesday.

AUSTRALIAN TRADE TREATY

On the Orders of the Day:

Hon. R. J. MANION (Fort William and Rainy River): I should like to draw the attention of the Minister of Trade and Commerce to a telegram—which I shall not read to the House but which I shall hand to the minister for his kind consideration and on which I shall base a question—that I have received from a very outstanding business organization in northern Ontario dealing with the Australian trade treaty. I should like to ask the minister if any further progress has been made in regard to the Australian trade treaty. I will pass the telegram over to my hon. friend later.

Hon. J. A. ROBB (Acting Minister of Finance): I shall be glad to look over the telegram and discuss it with my hon. friend. There has been no further progress to that announced the other day.

IMPORTATION OF HOGS

On the Orders of the Day:

Mr. J. L. BROWN (Lisgar): I desire to call the attention of the Minister of Agriculture (Mr. Motherwell) to an article that appeared in the weekly issue of the Manitoba Free Press, from which I read the following sentence:

> The minister's refusal last week to allow the Hon. Mr. Hoadley, minister of agriculture in Alberta, to bring in some hogs from Denmark to show hog breeders in that province what a real select hog looks like—

And so on. Is it true that there was such a refusal, and if so would the minister briefly indicate why?

Hon. W. R. MOTHERWELL (Minister of Agriculture): Yes there was such a refusal. There has been an embargo on hogs from Europe for the last twenty years.

PEACE RIVER RAILWAY OUTLET

On the Orders of the Day:

Mr. H. E. SPENCER (Battle River): Would the Minister of Railways inform the House if a decision has been arrived at between the Canadian National Railway and the Canadian Pacific Railway officials regarding an outlet in the Peace river district, and whether the government has received a report on the subject?

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): I have not received a report, and I cannot say whether the heads of the railways have arrived at any decision as to what they will suggest.

FEDERAL AID TO HIGHWAYS

On the Orders of the Day:

Mr. A. L. BEAUBIEN (Provencher): Has the Minister of Railways (Mr. Graham) any intention of bringing down legislation at this session to continue federal aid to highways?

Hon. GEORGE P. GRAHAM (Minister of Railways and Canals): My hon. friend will find a resolution on the order paper extending the time two years, to allow those provinces that have not already expended the amount to which they are entitled under the original act to do so.

Mr. BEAUBIEN: I mean to grant further aid.

Mr. GRAHAM: Further than the extension of time as I have suggested, it is not the intention of the government to introduce any legislation.

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—MOTION FOR RATIFICATION DISCUSSED

The House resumed, from March 19, the adjourned debate on the motion of Hon. T. A. Low (Minister of Trade and Commerce) to ratify and confirm a contract between His Majesty and Sir William Petersen providing for the establishment of a subsidized steamship line on the Atlantic, and government control of certain ocean rates, and the proposed amendment thereto of Mr. Clark.

Mr. FRANK S. CAHILL (Pontiac): I have not read the Preston report, and I do not know Mr. Preston, but I wish to say that if he is responsible for the admissions contained in the reply to the Preston report he is entitled to the gratitude of his Canadian fellow countrymen. This reply contains enough admissions to convince the country at least that there is a combine known as the North Atlantic Steamship Conference. They start by saying:

> The North Atlantic Steamship Conference is not in any sense a combine, but the interests of the large number of individual companies operating steamers from north Atlantic ports required some form of joint action in respect to rates.

So that they admit joint action in respect of rates, and if that is not a combine it must be what was formerly called by the present right hon. leader of the opposition (Mr. Meighen) a monopoly. They admit the combine. We also have the admission of the chief spokesman for the authors of this reply in this House that there is a combine. The right hon. leader of the opposition admitted

the combine. He also stated in 1913 that there was a combine or a monopoly. The monopoly existed in 1913 to such an extent that my hon. friend, as was pointed out by the hon. Minister of National Defence (Mr. Macdonald) yesterday, moved the adjournment of the House to debate the subject, and he said that alarming increases had taken place in the two years, which would be the two years after the 1911 election. My hon. friend made a very good speech on that occasion, a much better speech than the one he made yesterday. And I have noticed in reference to my hon. friend that his best efforts are not put forth when he is declaiming against the interests of the Canadian people. His speech in 1913 was so good a speech that it attracted the attention of the leader of the government of the day, and my hon. friend a few weeks later was taken into that government and proceeded to forget all about the North Atlantic conference. He then started climbing the ladder of fame and kicking out the rungs as he went up. He went on climbing from that time, and forgetting the interests of the Canadian people until he reached the pinnacle of his political ambition and became the leader of a great party; and when time compelled him to again appeal to the country he found that he had so forgotten the interests of the Canadian people that the electors of the country merely returned a corporal's guard of that once great party to this parliament, minus the corporal. The right hon. gentleman (Mr. Meighen) said at that time:

> In my opinion the time has come when not only this House but the country should have that importance impressed upon them.

Speaking of the combine he further said:

> The responsibility will rest upon this government; they will be loaded with it only if they should not avail themselves of any remedy within their reach to relieve the present situation.

And he went on further to say:

> Whatever may be the difficulties of the solution, its magnitude will demand that it be attempted.

So that even in 1913 the subject of the North Atlantic conference was one which was agitating the minds of the Canadian people. My hon. friends opposite were then in power, and they attempted to do something about it. Another distinguished member of the Conservative party made his first official trip to Europe as a delegate to try to arrange with the British government to control the rates on the north Atlantic. My hon. friend the member for West York (Sir Henry Drayton), then chairman of the railway commission, made a trip, and returned to say that he could not accomplish anything. He made subsequent trips but accomplished nothing further, save getting for himself a knighthood, and he and the government promptly forgot all about the North Atlantic conference. It was stated then that my hon. friend in reviewing his career did think of his first rung of the ladder and decided he should do something about it, either write a letter to the Times or to Dr. Magill; so he sat down and wrote a letter to Dr. Magill, and then he promptly forgot all about it. He did not even expect a reply to the letter. Certainly he expected no report, and never thought of the letter again until this question was before the House at this session, when he demanded of the government of the day the production of a reply to his letter to Dr. Magill. That was the sum and substance of his effort towards controlling the North Atlantic combine, but during all that time the Conservative government of the day, for the ten years they were in power, continued to grant subsidies to the ocean shipping combine. They granted subsides of $2,000,000 a year for several years of their tenure of office. They granted in all in the ten years more than $18,000,000 or $1,800,000 a year. The present subsidy added to the subsidy that is now in the estimates for the current year amounts to only $1,900,000. So I wonder why all the uproar about this particular subsidy! Is it because it is not going to the friends of my hon. friends opposite? Is it because there is to be something in this subsidy for the benefit of the Canadian people? They paid the subsidies I have indicated and nothing was said about the matter. There was no question of rate control. The only "control" that was thought of was control of the money, and that was left to the people who got it. But my hon. friends attack this now as being a waste of the taxpayers' money. They thought nothing of that when they themselves were paying out more money which did not give any advantage to the Canadian people. They attack it because they say it will not be effective. The leader of the opposition (Mr. Meighen) in 1913 had a remedy. His remedy—he was speaking then of American rates—was as follows:

> I refer to it in order to suggest that perhaps that by the joint operation of both governments, with the co-operation if necessary of the British government, a tribunal might be formed that would be able to control freight rates on the north Atlantic in something the same way in which the railway commission controls railway rates in Canada.

After ten years of doing nothing his friend the hon. member for Burrard (Mr. Clark) produces the same old film and decides to

shoot another picture from it. He moves practically the same motion that they incubated for ten years when they found they were trying to hatch a nest egg. The hon. member for Burrard moves:

That Mr. Speaker do not now leave the chair, but that it be resolved: That effective control of ocean rates can be exercised only with the co-operation of all portions of the empire, and by a body on which all are represented.

That is the thing which they have been at for ten years, and in regard to which they could not accomplish anything. Now they propose to form another League of Nations to deal with this matter. Of course, they know it is futile; that nothing can be done along that line; but it would have this result that it would save their friends in the combine from any hardship under this legislation. It would not hurt any person; it would still allow them to go on as they have been doing during the ten years; it would allow them to collect those exorbitant rates which the leader of the opposition said in 1913 were so alarming, and which he said last night had increased 47 per cent since that time. But now he says: It is all right; rates are not too high after all. He argued last night just as the reply of the steamship lines argued. First they admit the combine; second, they admit that rates are high; but they say that they must have high rates in order to make adequate returns. That is all that any person wants, as long as he is allowed to determine what is "adequate."

Then the right hon. member proceeded to argue that rates had not increased very much. That is exactly what the reply does. That is exactly what the hon. member for Vancouver Centre (Mr. Stevens) said. There does not seem to be any argument except—leave it alone, do not interfere with this huge combine. They argue that there is no way of enacting legislation that can control ocean rates. If you cannot enact legislation that will control ocean rates, what other remedy is there? That means that there is only one remedy—competition. How are you to get competition? My right hon. friend asks: Why not use the merchant marine? He suddenly discovered that there was something valuable in the merchant marine. He was exercised over this question for ten years. Why did he not try the merchant marine? He did not do so, but he chooses one of his supporters to move an amendment to create a tribunal of all the governments of the empire and then, in his own speech, he proposes that the merchant marine be put on to break this combine. Why did he not move that as an amendment to this resolution if he thinks so much of the merchant marine? Why did he not move that the total fleet of the merchant marine be put on the north Atlantic? I notice that he does not seem to think very much of the merchant marine. He is quite calm about it. But he does, on occasion tell us that the Liberal party were just as strong in support of the merchant marine as he was at the time it was inaugurated. As hon. members will remember, when the merchant marine was inaugurated, the war was on. The merchant marine was inaugurated in 1918, and the first vote on the subject was not opposed by the then Liberal opposition, but it was strenuously opposed in the next session after the war was over; it was more strenuously opposed in the following session; and in the final session my right hon. friend had to put through his vote by closure. That is the kind of "support" which the Liberal party gave to his merchant marine that cost this country $70,000,000 and that my right hon. friend does not seem to think very much of, —yet that he now advocates should be put on the north Atlantic in order to break the combine.

My right hon. friend chided the government for not taking action sooner on the McMaster report. He thought the government was subject to censure for not taking action sooner. I agree with him to some extent. I think a Liberal government that could not accomplish more in ten months than a Tory government could in ten years is somewhat liable to censure. The Liberal government is, I think, making an attempt, but it should be able to accomplish more in a few months than my hon friends opposite could in a whole lifetime.

Hon. gentlemen opposite are attacking Preston; they are attacking the merchant marine; they are attacking the management of the merchant marine; they are attacking everything but the resolution that should be the means of reducing rates on the north Atlantic. If the outcome of this resolution will not be a reduction in the rates, what can be done about the matter? The leader of the opposition yesterday said: We have no right to attempt to control rates on the Atlantic. Where does he get that theory, that a country has no right to control rates on its exports and imports? Such a statement is absurd, and it will be taken as an absurd statement by the people of the country when they have a chance to pass on it. Of course, the people of Canada have a right to control the transportation of their commodities both in and out of this country. There is only one effective way of regulating the rates and that is by competition. If you cannot control your own shipping, if you cannot put on your own boats, and now must adopt other means,

I do not believe the merchant marine could compete; in the first place, they have not the docking facilities in Europe, and, second, they are not fitted for this trade. These boats built by the Petersen company will have the docking facilities and will be built for the trade; they will be an effective factor in reducing rates on the north Atlantic, and the government of the day will be congratulated by the Canadian people for putting through this legislation and will be rewarded for their efforts when the time comes at the next election.

Mr. JAMES ARTHURS (Parry Sound): Mr. Speaker, I rise for the purpose of opposing the resolution now before the House. I do so for various reasons, the principal being that to my mind no necessity has been shown for this legislation, and no proof produced that it would accomplish the purpose for which it has been introduced.

The last speaker (Mr. Cahill) has laid great stress upon the alleged fact that there is at the present time a shipping combination on the Atlantic. There is no question of doubt that there is an Atlantic conference, but it is questionable whether this conference has a malignant influence. We should remember that the various shipping concerns using our ports must have some arrangement whereby shipping may be more or less regular; this is most essential to the trade, and for this purpose at least a conference is necessary. True, the government endeavoured to prove that there was a combine oppressing the shippers of Canada, and for this purpose they had our friend Mr. Preston go over to the Old Country to investigate and report. But the government did not wait for his report. They made a bargain with Sir William Petersen some weeks or months before Mr. Preston submitted his report, trusting that what it contained would justify their action. But we now find that not one single member of the government has treated the Preston report as being reliable. The Minister of Trade and Commerce (Mr. Low) in introducing the bill quoted from various files of the department showing that investigations had been made in the past, and he relied largely on an investigation made by the committee on Agricultural Conditions of a few years ago; but not for one moment did he say that he pinned his faith to the Preston report.

I think, Mr. Speaker, the country is entitled to a thorough investigation before it is committed to an expenditure of many millions of dollars. This experiment will be costly to us. Further, it can have no real value in defeating the combine, if there is one; on the other hand it may injure our trade very materially. For instance, if there is a combine, the shipping companies forming it might say; We will withdraw our ships from the St. Lawrence for one week. What would the result be? We would have a repetition of the situation on the Great Lakes two years ago, when this government undertook to regulate lake shipping rates, and had ultimately to beg United States vessel owners to come to their rescue and violate the law which had been enacted at the instance of the government itself.

It is significant that if there has been a combine on the Atlantic, the government has actually been a member of that combine, until the last few days at least; so have been the Shipping Board of the United States and the Canadian Pacific Railway Steamship service. And yet we have no evidence that the government made anything out of the operation of the merchant marine even under the combine. Then again, the government has for two years had full opportunity to withdraw their ships; indeed, they had before them a recommendation made by a committee of this House headed by the hon. member for Brome (Mr. McMaster), which brought in a report in these words:

> The committee desire to bring the facts in this regard to the earnest attention of the House, and to respectfully suggest that the Minister of Railways and Canals should take the matter up with those responsible for the management of the boats, so that the complicity of the Canadian Government Merchant Marine in this combine may be brought to an end immediately.

Yet in spite of this recommendation the government continued to operate the merchant marine in the combination, and the excuse given by the Prime Minister in the present debate was this:

> I am told—I speak subject to correction—that one of the operations of this combine is, that if any line withdraws from it it will immediately attempt to undertake to put that line completely out of business.

Now, Mr. Speaker, the only way in which a combination could put one of its member companies out of business would be by reducing freights to an unprofitable point. Therefore, if the government had withdrawn our merchant marine, and the combine had taken the action which the Prime Minister feared, he would have accomplished all he could possibly hope to accomplish if he gets all the good results which he anticipates from this proposal.

Let me point out what the real cost of this subsidy will be to Canada. We are asked to subsidize the Petersen boats to the extent of $1,330,000 per annum. The boats will cost

approximately $600,000 each. In other words, we are paying each year for two of the boats. Or to put it another way, these ten boats are capable at their best of making some eighty voyages, fifty to the St. Lawrence and thirty to the Maritime ports; that is, providing they are at sea and busy every day,—we will give them the benefit of that assumption. But even if we calculate eighty voyages per annum we find that we are paying them a bonus of $16,660 for each voyage. Later I propose to quote the figures given by the Minister of Trade and Commerce as to the actual cost of operating these boats, but for the present I may say that we will be paying about 62 per cent of the total cost of operation.

Now, the Minister of Trade and Commerce in speaking on this subject admitted that the Petersen ships were small, having a deadweight tonnage of approximately 9,000 tons, and he said that although they were small they were effective, to prove which statement he pointed out that the Canadian White Star line had six vessels, the largest one of a gross tonnage of 6,000 tons, which had been operating for many years in the Canadian service quite satisfactorily and were one of the chief factors in our export trade. One of these boats was built as long ago as 1898, and the others were built previous to 1900. He also pointed out that the Anchor-Donaldson line also had six boats in the Canadian service, the largest having a tonnage of only 5,300 gross tons, and that they had been operating successfully; that the Cunard line had six boats, the largest being approximately of 5,600 tons gross tonnage; that the Withy-Furness line had three, and the Head line six, all of about the same tonnage, 5,000 tons gross; the Manchester line had a large number and also the Cairn line. In each and all of these services the boats are smaller in tonnage, older, and less modern in every way than the twenty-six or twenty-eight vessels of the Canadian Government Merchant Marine. The boats of the merchant marine are more up-to-date and better in every respect than the boats enumerated in Hansard, which were said to be so successful in their operations by the Minister of Trade and Commerce. The boats of the Canadian Government Merchant Marine also have a greater speed than the majority of the boats mentioned by the Minister of Trade and Commerce,—they have greater horse power and in every way are better equipped. I think it has been a set purpose on the part of the government to throw mud at the Canadian Government Merchant Marine simply because the vessels happened to be built by the Union government. As a matter of fact, these boats cost too much; there is no question about that. But let us remember that they were not built to make money but were built solely because there was an absolute necessity for additional shipping at the time they were first put into operation.

Mr. CARROLL: And the cost seems too high at the present day.

Mr. ARTHURS: Certainly. Indeed, I think we are foolish to retain this book value against the ships; we should write them down to modern cost and see how we can get along in that event. As I was going to remark, however, it seems to be the policy of the government and of those ministers particularly who have spoken on the subject to throw mud at the merchant marine. I do not want to take up much of the time of the House discussing the speech of the Minister of Agriculture (Mr. Motherwell); I do not usually tilt at windmills. Referring to the merchant marine, however, he said that the objection to these ships was that they were too small for the ocean and too large for the lakes.

Mr. MOTHERWELL: Too large for the canals.

Mr. ARTHURS: Well, it amounts to the same thing. And the Prime Minister (Mr. Mackenzie King) went even further; in so many words, he said they were no good. The Prime Minister expressed that opinion during the course of the speech delivered by the hon. member for Burrard (Mr. Clark). Now, I have discussed this matter with men who have a greater knowledge of maritime affairs than I have, and I find that the universal opinion is that, while the boats of the merchant marine are not the best in the world, they are fully equal to others of the same tonnage and class, and that, if properly handled, they should be able to give good service. What the ships need is more cargo; that has been their only trouble in the past, and the only reason they are not making money now is that they are not given sufficient cargo to carry. How can we secure that cargo? What chance have our boats against the boats of the combine or of any other line of steamships which have regularly established offices in foreign countries? The very fact that this government kept them in the combine was injurious to the merchant marine, because naturally these agents had affiliations throughout the country and directed trade to the boats with which they had had dealings for many years. The only way our merchant

marine could have succeeded; the only way it can succeed now, would be to give some inducement to the public to patronize the vessels. If the government would give a lower rate, making a ten per cent reduction in freight rates as compared with the other lines, the merchant marine ships would be filled with cargo. Is it not better to have a steamer filled at ninety cents than half-filled at a dollar? The management is the same, the overhead is the same; and the only way to make the marine a success is to see that it is properly represented abroad and to give a freight rate that will induce shippers to patronize it.

Not satisfied with keeping our boats in the combine, if there is a combine, the government went further. I would refer hon. gentlemen to a sentence or two quoted by the Minister of Trade and Commerce in his speech on this subject, which will be found at page 717 of Hansard. The statement he quoted is as follows:

> I feel that the steamship companies, including the Canadian merchant marine, are only preventing trade coming to them by demanding such exorbitant freight rates, and I sometimes think that the Canadian merchant marine are the worst sinners of the lot.

The correspondent goes on to give instances in which he had found it cheaper to ship by other lines rather than by our own boats.

I shall say a few words now regarding the contract itself. The country is obligated to pay at the rate of $16,600 per voyage regardless of the number of ships operated. If Petersen puts on one ship he gets a bonus; if he puts on ten ships he gets ten times as much; and it is not necessary for him to make any particular number of voyages per month or in a year. Sir William Petersen may make three or four voyages per year and he gets the same bonus; so that instead of $16,000 odd per voyage the amount he will get will be double or treble that sum. Let us take it on the other basis. Sir William Petersen invests a certain sum of money; at the end of ten years he has a full return for every cent of principal and interest invested and has $6,000,000 over and above that. And he has his ships entirely free of debt. There can be no question therefore about the advisability of the contract from Sir William Petersen's point of view; I should imagine that he and his associates would be most anxious to have it go through. So far as the people of the country are concerned, however, I can see no possible reason why they should be compelled to make a gift of that kind to him. There is absolutely no reason for it.

4 p.m.

[Mr. Arthurs.]

Now a word as to the fixing of rates. We were told, I think by the Minister of Agriculture, that the government would fix all rates; and the Prime Minister informed us that the government would select certain commodities. I do not care which horn of the dilemma they take, whether they decide to reduce the rates on all commodities or to reduce them on certain articles only, what I want to know is: how will the government reduce the rates at all or how will they find out on what commodities they should be reduced? As a matter of fact, it would be utterly impossible to lower rates by a certain percentage pro rata throughout; and we have no means of knowing whether the rates are profitable or unprofitable so far as the shipping companies are concerned. The government themselves do not know whether or not certain of the main articles of export come under the combine at all; they do not know to-day. There is not a man who has stood up in this House who will either affirm or deny that wheat, one of our principal articles, is free from the combination. I myself do not know; it is not my place particularly to know; but it would be my place to find out before making a treaty of this kind.

Before closing I want to re-affirm what I said before, that it is most desirable that the merchant marine should be put into open competition with the combine, if there is one, and that we should give the ships a fair chance to make money, and see whether by that means we cannot accomplish the end which is sought by the present legislation. I would point out again that the merchant marine is charged against the people at the rate of approximately $200 a ton, while the real value to-day is probably one-quarter of that. The people are charged with five per cent depreciation on that inflated value, and they are charged also five and one-half per cent interest not only on the money invested but on all back deficits. So that every time they go in the hole the interest is added on to the succeeding year. Now, it is not possible as a business venture to get along that way. There is not a business man either in this House or in the country who after the war did not write down his assets to an ordinary commercial value; if he did not he went out of business, he could not carry on. Why should we not do the same in the case of the merchant marine? I have no mud to throw at any scheme; I have no brief for the Canadian merchant marine; but I do think that we should give it a decent chance to live and see whether we cannot accomplish results.

Mr. HERBERT MARLER (St. Lawrence-St. George): Mr. Speaker, it was not my intention, for various reasons which it is unnecessary to relate to this House, to take part in this debate just at the moment; I had determined to wait until the report of the special committee to be appointed to consider this matter had been brought down. But the question is of such vital and far-reaching importance to the country as a whole that I do not think I should hesitate to state my view that the bill to be based on this resolution should be sent to the committee and there considered.

In the course of discussion in this House, particularly in the heat of debate, we are apt to lose sight of the most important point under consideration, either by simply side-tracking it or by submerging it in some other idea. In this debate the Petersen contract is not the main point under consideration; it is but an incident, a proposal which may or may not be ratified by the committee to which it is to be referred. To me the main point we have to consider, Mr. Speaker, is the advisability, indeed, the vital necessity, of having lower transportation rates in this country, rates from point of production to point of consumption which will enable those who grow things, and who raise things, and who manufacture things, to obtain reasonably profitable results. As to whether the Petersen contract is the proper method of bringing about that result, that is a question. There may be other ways of bringing it about; indeed, other methods may be suggested to the special committee which will deal with the matter. But what possible objection can there be to submitting the bill containing this contract to a committee which will inquire into the proper ways and means of bringing about a lowering of transportation rates? That is the attitude I take in regard to this measure.

Mr. STEVENS: Will the hon member permit me? Can he show me anything in this resolution which, if adopted, will carry this measure to a committee? Secondly, if my hon. friend supports this resolution is he not, on the face of it, approving the Petersen contract?

Mr. MARLER: My hon. friend's questions are perfectly proper, and I am obliged to him for putting them. It is quite true that there is nothing in this resolution which provides that the bill shall be submitted to a committee. But when he presented the resolution the Minister of Trade and Commerce (Mr. Low), at the outset of his remarks, pointed out that the bill would be submitted to a special committee. That, therefore, is clearly and distinctly stated, and I think it is fair in our parliamentary procedure to take the word of a minister who makes an assertion of that kind to the House. My hon. friend asks me also, if in adopting the resolution containing the contract we do not ratify the contract itself. I say to that, no; because the Prime Minister (Mr. Mackenzie King) has distinctly stated—I will quote his remarks later—that we shall be at liberty to bring the contract back into the House with such corrections, additions and amendments for the consideration of the government as the committee may think proper. But perhaps I will answer my hon. friend a little more fully later on, if he will forgive me in the meantime.

Mr. GOOD: May I ask a question just in that connection? Did not the Prime Minister say, at the same time, that if Sir William Petersen would not agree to any of the modifications suggested by the committee the government would stand by the contract as it is?

Mr. MARLER: No, I cannot understand it in that way. But if my hon. friend also will forgive me—

Mr. GOOD: I hope I am wrong.

Mr. MARLER: —I intend to take that matter up specifically in the course of my remarks. But by way of partly answering my hon. friend's question, I may say that I am supporting this measure on the understanding that it is to be sent to a committee. The main attitude I take is the attitude I have previously taken in this House and out of it—I emphasized that view particularly in an address before the Canadian Club in the city of Montreal on the fifteenth of December last—and I intend to adhere to it, namely, that it is absolutely necessary if we are to have profitable production in this country that we have such transportation rates as will enable that production to go to the markets of the world. So that, if I may repeat myself, I view the resolution now before the House as a means of enabling us to discuss the transportation structure so far as ocean freight rates are concerned, and I hope at a later day we shall have an opportunity of discussing the question of lower rates on land.

The hon. member for Vancouver Centre (Mr. Stevens), in his very proper question, suggests that if we approve this resolution we approve the contract. I do not think so,

because the Prime Minister stated in his speech two days ago that he concurred in the suggestion of the Minister of Trade and Commerce that this contract be referred to a special committee which should go thoroughly into all matters connected therewith. Now take the converse of the argument: Suppose sufficient members vote against the resolution to negative it, will the opportunity that we are all looking forward to, that of discussing the question of ocean freight rates, which beyond doubt are tied up with land transportation rates—will that opportunity be realized? We shall be enabled in the committee, with this contract before us as a basis of discussion, to hear witnesses and get all the information which it is necessary to have on the subject? I ask again, shall we have the same opportunity of discussing the great question of transportation if the measure now before the House is not referred to a committee? To me that is an extremely important point. I say quite frankly that I want to hear all sides of this question before making up my mind, but I do not want there to be taken away from me the opportunity of hearing the various ship owners and other transportation experts who will be called before the committee, and thereby enlighten me and enlighten the House on a subject which I think is one of the most difficult in the whole Dominion of Canada.

Mr. KENNEDY (Edmonton): Could not that object be attained without voting on this resolution at all?

Mr. MARLER: Yes, and that was the contention of my hon. friend from Bow River (Mr. Garland) last night in a most excellent speech. I think his idea was most excellent in every way, and I frankly say before the House I would very much prefer adopting the manner he suggested last night. But that is not the point at the present moment, if I may say so to my hon. friend. I am not at liberty, and my hon. friend from Bow River is not at liberty, to put that method of procedure before the House and to have it carried through the House. As a matter of fact, the procedure which he suggested he frankly admitted could not be brought before the House and carried through the House. Therefore I say the next best thing to do is to accept the procedure, accept the tools, which are now before the House, so as to enable us to have this measure brought before a committee and there discussed in the fullest possible way.

Mr. GARLAND (Bow River): Will not my hon. friend also state to the House that the government has full power to put into force the suggestion which I offered?

Mr. MARLER: Yes, I think my hon. friend is quite right in that respect.

Mr. STANSELL: I do not wish to interrupt, but there is a point of great importance which I should like cleared up. If this matter is referred to a special committee, and in their wisdom they recommend certain changes in some of the clauses of the contract, the contract if these recommendations were adopted would not, of course, be in its present form. Would it then be in order to go to Sir William Petersen for another contract? In other words, what would be the effect on the contract itself of adopting the changes recommended by the committee?

Mr. MARLER: Changes cannot be made in a contract without the consent of both parties; that is perfectly clear. If the contract comes back from the committee with changes in it which the government will not accept, or which Sir William Petersen will not accept, then the situation is again open for discussion on the floor of this House, and I am waiting for that situation. I admit frankly in answer to the question of my hon. friend that I am not doubting the good faith of the government as shown on the floor of this House in submitting this selfsame contract to a committee. In the discussion, responsible ministers of the crown have stated that if any changes are made in the present contract, if the spirit of the contract is not to be carried out, then the whole matter is open for discussion again; and I shall reserve my own attitude and my vote for that position, when the matter comes back again from the committee.

Mr. BOYS: Does my hon. friend say that if changes are made in the committee which are not acceptable to Sir William Petersen, the matter again returns to the House for further discussion?

Mr. MARLER: No.

Mr. BOYS: Surely if the government do not accept the changes made, that puts an end to it finally.

Mr. MARLER: The report of the committee has to come back to the House.

Mr. BOYS: Perhaps I misunderstood my hon. friend. I thought he stated at first that if the committee made changes which were not acceptable either to the government or Sir William Petersen that ended it. Then it seemed afterwards that he said the matter would come back again for further discussion

before the committee. What I submit is that if Sir William Petersen will not accept the changes made, that puts an end to the whole matter.

Mr. MARLER: That puts an end to the contract, but it does not put an end to further discussion before this House. The report of the committee must certainly be discussed in this House: there is no other place for the committee to report to but this House which has constituted it.

Mr. BOYS: I suppose my hon. friend will agree that the discussion would be futile, because if Sir William Petersen will not accept the changes, the contract is at an end.

Mr. MARLER: Not necessarily so. Let me put it to my hon. friend in this way—and I think he will acknowledge the open and non-partisan manner in which I am debating this point. Supposing changes are made by the committee, and that Sir William Petersen is not willing to accept those changes. Then without a doubt the contract would certainly not be the same contract, and consequently there would have to be another contract entirely. But what I claim is this, that all this discussion in the committee, and all the evidence that we shall have before us as regards ocean freight rates, cannot do else than enlighten our minds very much upon the whole situation, and perhaps enable that committee to suggest to the government some means, which may or may not be acceptable, but which in the committee's opinion will go to the root of what I claim is one of the most vital and one of the most serious problems with which this country has to deal.

Mr. STEVENS: Then why should not this matter be referred to this investigating committee prior to the confirmation by this House of this contract?

Mr. MARLER: I answered that question in reply to my hon. friend from Bow River a few moments ago.

Mr. STEVENS: No.

Mr. MARLER: Yes, I did, but I will answer it to my hon. friend. There is no reason in my opinion why it should not be so submitted, and I would prefer to see it so submitted myself. I think my hon. friend cannot doubt the straightness of that answer.

Mr. GOOD: Does my hon. friend think that in the event of the committee voting against the contract, the government would be willing, in view of all the evidence submitted before the committee, to consider some other method of controlling rates?

Mr. MARLER: I am not speaking for the government in any way. The government may not look on me as a very good adviser in certain matters, as my hon. friend knows. But I would be extremely surprised if that committee brought forward some other means for coping with this situation and the government did not accept what was brought forward by such a committee. I would, in fact, be very disappointed indeed if the government did not.

But let me again say to my hon. friend from Brant (Mr. Good) and to other hon. members that the reason I am supporting this means of getting the matter before the committee, in the absence of other means of getting it there, is so that this whole transportation question can be open and we can have people before the committee who know their business, and who can tell us what the situation is; and then we will be in a position to judge, not as men without knowledge, but as men with all the possible knowledge that can be placed before us, and thereby be in a position to cope with what I consider, and what I believe most hon. members consider to be a serious and vital problem in this country.

But there is more than that. These steamship companies have been reprimanded. They have been questioned. It has been stated that a combine of the most serious nature exists. It has been stated that they have been killing trade, and many other statements of that description have been made. These steamship men will have an opportunity of appearing before that committee and of justifying their charges, if they claim they can be justified; and if they are not justified in charging these rates, we will perhaps be able to place before these steamship men and other witnesses appearing before the committee certain means whereby not only the country but the steamship companies can be assisted, and be allowed to go on with their business in a just and reasonable way.

Let me make it quite clear, Mr. Speaker, that my intention in voting for this resolution is to ventilate the situation and be seized of all the possible intricacies of transportation rates, and so be in a position to advise my constituents as to what should be done in the interests of the country as a whole. That is the position which I have already taken in the city of Montreal, and it is the position which I intend to adhere to. I want the information and proof placed before me so that I can substantiate in every just and reasonable way the position which I have already taken. If this resolution to me meant the depriving of any company or

any individual of any right that they were reasonably and properly entitled to exercise in the course of their business, I doubt very much whether I would support it, but I do not think it will have that effect.

Let me for a moment remind hon. gentlemen in the briefest possible terms of what I said in the debate on the Address. At that time after considerable study and, I think, with correctness, I analyzed to the best of my ability the financial situation of the Dominion, and the conclusion which I then reached on the figures submitted—which I in no way intend to re-submit to-day—was that until our railways could be made to pay we would have no chance in the world of reducing the taxation which the country needs in the very worst possible way. In order to make our railways pay, I quoted the old and oft repeated phrase, that we had to have more people in this country. But I added that we could not retain our present population, much less could we expect to get newcomers, unless those who were here could profitably live by means of their production. I stated at that time in the most positive terms that any immigration policy would fail, no matter how wisely conceived and how efficiently carried out, unless the immigrants brought here could profitably produce and live in reasonable comfort. Otherwise they would not stay, and consequently we would not only lose our population but it would be impossible to secure others to take their place, and any money spent on immigration would therefore be wasted. Those opinions I stated again in the city of Montreal on the fifteenth of December last, and I repeat them to-day.

Following down the idea underlying those opinions, Mr. Speaker, can you tell me how we are to have profitable production in certain sections of the Dominion unless we have reasonable transportation rates? How can we, looking at the map of Canada and realizing the way our population is scattered over such a far-flung area—how can we, I say, expect those people to be successful unless they have reasonable transportation rates to get their products to the point where they are to be marketed? I said then that it was not a question to me of Crowsnest pass rates, nor, I may add, of combine rates; to me the question is that these rates, both ocean and rail, must be fixed in such a way as to enable the products of the country to reach their market so they can compete with like products from other countries. Further, I said—and I have repeated it in my own constituency—that perhaps the railways and the steamship companies could not give such rates and continue in operation. I believe that these transportation companies should be allowed to live, and I do not think any fair-minded man would deny that they should have sufficient remuneration for the services they have to sell. But if the transportation companies cannot give us the low rates I have in mind, and continue in operation, then some other means will have to be found to bring down transportation rates to a point that will enable our products to reach their market at a profit to their producers.

That brings me, it is true, to the question of subsidies. Hon. gentlemen need not doubt my opinion in this regard. I do not think subsidies are economic in many ways, but we have to take into consideration not what perhaps at the moment is the most economic way. As a matter of fact we have not an economic country to develop. Our natural market for many of our products of the west is a few miles to the south; that is the natural market for much of our Alberta coal and other products of the west. But can we get that market? No. Therefore we have to haul those commodities across the continent in a most uneconomical way and then transport them across the ocean in order to reach their point of market. And therefore when we talk about subsidies, although they may be uneconomic, still they are necessary, I claim, in order to bring transportation rates down to a basis sufficiently low to take our products to the final destination where they can be marketed. It is quite true that it may be possible to do without subsidies to some extent, to so balance up our transportation rates both by land and by water that certain commodities will be made to bear a little heavier rate and allow other basic commodities a necessarily lower rate. That is what I want to find out, and this special committee will enlighten me because transportation experts will appear and tell us whether it is possible or not to make transportation rates on the basis I have suggested.

Mr. WOODSWORTH: Would not the hon. gentleman's purpose be equally well accomplished if there was a subsidy paid to the farmers instead of to the railways?

Mr. MARLER: My hon. friend from Centre Winnipeg (Mr. Woodsworth) is absolutely right in that respect, and I am very glad indeed that he has mentioned the point to me. I was going to deal with it later on, but I will take it up now. The question which always has arisen in my mind is whether from

point of production to point of consumption any lowering of transportation rates might not be entirely lost and the actual producer not reap any benefit at all. I think that is the point my hon. friend raises. There is no question that our system of distribution is one of the most expensive in the world. To my way of thinking there is no question that the farmer produces at a low rate and sells at a low rate, and yet when you come to the retail distribution the consumer is charged an enormous rate. Where does the spread go? I do not know. Likewise in the question of transportation, if a rate is made on cattle or some such other commodity, I am not so sure that the lowering of that rate will go as I should like to see it go, to the producer. And I for one agree with my hon. friend from Centre Winnipeg that it would be a great deal better if possible, and it would hit the situation right at the initiation and at the point of production, to say to the cattle producer: If you ship a hundred head of cattle we will see that so much per head is taken off your transportation rates. And we could go to the transportation companies and make a reasonable basic agreement with them.

Mr. KENNEDY (Edmonton): Suppose we go in for a somewhat comprehensive system of subsidies, that will mean additional taxation.

Mr. MARLER: Oh, yes.

Mr. KENNEDY (Edmonton): Unless we solve the problem of the incidence of taxation, you may just be taxing the people who get the subsidy the full amount of the subsidy in order to pay it.

Mr. MARLER: That is true to this extent only, and my argument is this: that if you increase our population very greatly in this country you will increase the traffic which we give to our railways. If my hon. friend will look at the financial statement of this country year by year he will find that we are making our way, excepting in so far as our railways are concerned. Give the railways sufficient traffic and the railways will themselves make up that deficiency. I agree with my hon. friend who has just taken his seat that it may be that we will have incidental taxation, but that taxation I claim would be overcome very quickly if we have an increased population to increase our traffic. But let me put it to my hon. friend the other way. Suppose we do not do that, and suppose we still maintain a transportation structure and a transportation rate which does not pay the purchaser to ship his animals or to ship his produce, will those producers remain in the country? They will not, because they cannot make a living. Therefore it should follow that if we have a larger exodus from the country the present taxation will be increased still more.

This resolution will send this bill before the special committee, hence I think the government has this aim and this object in view: namely that they desire this discussion to be had before the special committee of the House to be formed, so that that committee can be seized of the matter and submit to the government a plan for the developing of a profitable production in this country, the procuring of profitable markets, and thereby retaining our population and attracting new population. And further I take it that the government has no desire to deprive any person or company of a just return on any investment made by him or it. I am sorry the Prime Minister (Mr. Mackenzie King) is not in his seat. I should like to have asked him that particular question. I think his answer would be yes. If his answer were yes it would show me that in supporting the reference of this measure to a special committee I was supporting the carrying out of the identical ideas I have myself in mind: that is to say, the development of profitable production in this country.

I will return for a moment to the question of ocean rates. I said in part of my remarks that the shipping companies had been subject to very serious and adverse criticism. That criticism did not start merely at the time of the Preston report. It did not start in the fairminded way in which my hon. friend from Brome (Mr. McMaster) placed the matter before the House in his report. It did not start with the letters which the Prime Minister read to the House some days ago. It started very much further back than that. My right hon. friend who leads the opposition (Mr. Meighen)—and I may say, Mr. Speaker, that I am not quoting him in any partisan way—went into this question with the utmost clarity and fullness in a debate as far back as 1913. He made a most illuminating speech on this question of transportation rates. He placed the whole question before the House, and from the manner in which he dealt with the subject no one could doubt where he stood. I say again that I do not quote my right hon. friend in any partisan viewpoint, I simply quote his clear remarks as emphasizing the question that transportation rates have been before this country for many years before the present reports were brought be-

fore the House, or before the present debate took place at all. I will read some of the remarks which my right hon. friend made at that time. He first of all asked for leave to move the adjournment of the House for the purpose of discussing a definite matter of urgent public importance, a proceeding which, as hon. gentlemen are very well aware, is, to say the least of it, a very unusual proceeding, a proceeding which predicates at least that there is a very important matter to bring before the government, one which should not be put off for two or three years, but which is to be taken up at once. In moving that adjournment he—

> Asked for leave to move the adjournment of the House, for the purpose of discussing a definite matter of urgent public importance, namely, the rapid and alarming increase in rates on the north Atlantic and the duty of the government in relation thereto.

Now I am not assuming the attitude of any partisan in so far as the matter of steamship companies is concerned. I am not at this moment criticizing their rates and I am not criticizing their means of procedure, and I am not saying that the Petersen contract as submitted to the House in the form it now stands is the most satisfactory manner of solving this problem, but what I say is that if in 1913 this matter was one of great urgency, it is far more urgent now, because the difficulty of the situation in this country has increased more and more in the way of taxation and expenditure, by reason of the fact that we have acquired many miles of railways that we must feed, which means that the question of profitable production and profitable markets is far more important now than it was in 1913. I do not think anybody can deny that assertion. Following on in that speech my hon. friend said:

> Whatever may be said upon that score, there can be no question that the subject is one of great and increasing importance.

Further on he says:

> With the exception of the United States of America, no country is so vitally interested in ocean rates on the north Atlantic as is the Dominion of Canada. We import very largely from the United Kingdom; we sell a great part of our surplus products to the United Kingdom. On the reasonable level—

I ask hon. gentlemen to mark these words.

> —on the reasonable level of ocean rates depends to an enormous extent the profits from that trade, and consequently depends to an enormous extent the prosperity of this country.

Let me repeat to my hon. friends opposite that I am not quoting the right hon. leader of the opposition in any contentious or malignant manner, or with any idea of making party conflict or with any party idea. I quote these opinions because I respect them.

[Mr. Marler.]

I believe these opinions at that time were well considered. I believe at the present time we have to consider precisely the same questions which were brought up in this debate in 1913; that we have to understand them and to settle them; that we must not take the attitude in a childish way that there are in this country certain people, owners of steamships who are not doing right; but we must ask those owners of steamships to come before this committee, as they will come, and state their case in fairness and equity to this committee, so that we, as representatives of the people of Canada, can try, if possible, to make rates which will be fair to them and fair to us also. Further on, my right hon. friend who now leads the opposition said, also in clear terms:

> Whatever may be the difficulties of the solution, its magnitude will demand that it be attempted.

Then he gives a statement of rates. Further on, in the closing remarks of his address, he stated that at that time he thought a monopoly existed, and stated also in very clear and precise terms that he thought the question of monopoly should be looked into. He stated this not in arrogant or unreasonable terms, but in the same terms as I am speaking in this House to-day, that we need, desire and want information on this subject before we enter into any new contract, and also with the object in view that we shall attempt to make these rates, if possible, what they should be.

Curiously enough, the same attitude was taken in that debate by my friends in the Conservative party. Hon. George Perley, now Sir George Perley, was Acting Minister of Trade and Commerce in those days. The debate of which I speak was most protracted, but my right hon. friend (Mr. Meighen), who at that time was a simple private member, used these words which are most significant and which I share in every respect:

> At all events, the purpose of my bringing this discussion up is to draw the attention of the people of this country through this parliament to the great increase that has taken place, to call attention to the serious aspect of this matter in relation to our prosperity and to enlist behind the government the active co-operation and sympathy of the Canadian people in whatever steps they may see fit to take in order to bring about a betterment of conditions.

That is the stand which I take on the floor of this House to-day. I want to enlist the sympathy of all members of all parties in this House in a non-partisan movement, if it is possible to make such a movement, in order to investigate and to inquire into this situation, to see if it exists, and if it does exist, to see if we cannot better it. No hon. gentleman can deny the fairness of that

attitude. No one in the city of Montreal, not even my hon. friends who are in the steamship business, can deny the fairness of that attitude. Nobody can meet me in my constituency and say that I want to do anybody any harm, or that I am trying to do something that is not right. All I say is, using again the words of my right hon. friend: Let all the people in Canada clarify their views and come forward and see if this situation cannot be bettered for the general good of the whole country. What does this mean—the general good of the whole country? What is the use of us in the city of Montreal stating that we there shall not have an investigation in order to ascertain whether this is right or wrong? Is the welfare of the city of Montreal not bound up with the welfare of the whole country? Some people do not think so.

Mr. McMASTER: They are ignorant, if they do not.

Mr. MARLER: Well, some people do not think so. Some people question anything said against a certain policy which may be here or a certain policy which may be there. I am not one of those who say that any one fixed policy is good for the whole country. What I say is that this whole country has to move forward as one country and we must develop it in the fairest and most reasonable way with a view to all its interests.

But continuing this discussion, as I stated a moment ago, the debate of the 5th May, 1913, took a considerable time. At that time Sir George Perley was Acting Minister of Trade and Commerce, and subsequently he was Canadian High Commissioner. What were his words in 1913? What did he think of the attitude of my right hon. friend who at that time was a private member and who brought this matter before the House? Did he oppose it? Not at all. These were the words Sir George Perley used, and the words were well used in reference to the statement made by my right hon. friend:

> I think the thanks of this House are due to the hon. member for Portage la Prairie (Mr. Meighen) for bringing up this question in such a fair and non-partisan way.

That is the same way that I speak in this House to-day—in a fair and non-partisan way. That is why I have no hesitation in asking every hon. gentleman in this House to view this great question in a fair and non-partisan way, so that we can discuss it and understand exactly what the situation is. Sir George Perley continues:

> I believe this is one of the most important problems that we have to face in Canada to-day, the question of ocean rates on our produce going to the Old Country. Western members have chiefly spoken on the question of ocean rates, and I am rather sorry the discussion was not confined to that particular phase of the transportation problem.

Then he goes on:

> The transportation problem is one of the greatest problems, perhaps the greatest, that we have to face in Canada.

Mark these words, my hon. friends. I have quoted them time and time again. They contain my views, for what my views may be worth, but they are words we should all mark well. Sir George Perley continues:

> We have built great canals, we have spent money on our railways and we have taken the step of providing a railway commission to regulate rates, a commission of which I think we are all justly proud.

He goes on to say that the commission is performing its duty efficiently. But what I want to draw to the attention of hon. members is this: We have our railway system, our canal system, our highway system. What good is all the money that has been spent on all these systems going to be unless we have people in Canada to use these systems? How are we going to keep people in this country and put them on the farms or anywhere else, unless their production is profitable? No hon. member, looking at a map of this Dominion, can say that the question of transportation, particularly the bridging and going across of that vast expanse of rock that runs west of Sudbury for some hundreds of miles, with the geographical problems we have before us, can be considered in the same way that the question of transportation is considered in the United States which has a large intermediate market before the products of that country reach the seaboard. We have not that market; we cannot stop at the seaboard; our produce has to go over the ocean before it reaches its market, and that is the question we have to consider now.

In the same debate Sir Robert Borden, who was then Mr. Borden and who if I mistake not, was Prime Minister, also emphasized previously the same point. These were the closing words of his remarks:

> A country such as this, which has a great export trade in agricultural products, particularly in cereals, notably in wheat and in flour, is undoubtedly deeply interested in the establishing of reasonable freight rates, and no matter could more worthily engage the attention of parliament than the bringing about of any legislation which might tend to remove any injustice or hardship in this regard that may have been created in the past or that may exist at present.

So I say, I gather a great deal of encouragement from that particular debate.

I think that what was stated in that debate was sound common sense, and that is precisely what I hope will happen in view of this bill going before a committee.

Let me now take up another point, and I again quote my right hon. friend who leads the opposition (Mr. Meighen). I am sorry he is not in his seat because I should like him to hear it. He has a resolution on the order paper at the present time, the last paragraph of which reads:

That to enable the products of the western and Maritime provinces to reach more readily the markets so developed—

Mr. STEVENS: Order.

Mr. SPEAKER: The hon. member may not quote a motion of which notice has been given and which appears on the order paper,—

Mr. MARLER: I apologize, Mr. Speaker.

Mr. SPEAKER:—although I must say that the Prime Minister the other day quoted a part of that same motion.

Mr. STEVENS: I would rise to a point of order simply because my leader (Mr. Meighen) is not here, and even if he were present he could not discuss the motion. So that if the hon. member quoted it he would have an advantage which would be wholly unfair.

Mr. SPEAKER: The hon. member was no doubt out of order.

Mr. MARLER: My hon. friend is perfectly right and I take no exception whatever to his point of order. I may refer indirectly, however, if that is in order, to certain views as expressed in a particular resolution now on the order paper, which declares—

Mr. STEVENS: Order. I do not wish to appear captious, but it is a well-established rule that a motion on the order paper may not be discussed by an hon. member while he is speaking to some other subject before the House. The reason for my objection is obvious. The right hon. gentleman in whose name the motion in this instance stands is absolutely precluded from discussing its subject matter himself; he cannot even reply to the hon. member who raises it. The situation is therefore clearly unfair.

Mr. MARLER: I myself stated in the city of Montreal on December 15 that, in order to allow the products of the west and of the Maritime provinces to reach their markets profitably, transportation rates should be so fixed, if necessary, as to have them borne in part by the country as a whole. That opinion which I expressed at that time has been repeated by others; it has been commented on in this House by the Prime Minister and it has been repeated also in the daily press. I would ask this question: What is the use of levelling transportation rates on land if we leave the rates up in the air at the end of the land? Why not continue the levelling process so that the products may be subject to a reduced rate on board

5 p.m. ship until they finally reach their market? It seems to me that this line of argument is reasonable; and as I suggested it in the city of Montreal, and as others have suggested the same thing elsewhere, I think it would be futile for me or any other gentleman who has taken that view to come before the House and say, "Yes, we should level transportation rates on land to a certain figure and if necessary have the whole country bear the cost; but we must not carry that principle further and also attempt to have our ocean rate structure made in such a way as to be compatible with land rates in order that the same products shipped from the same place, in the prairie section of the country for example, might reach Liverpool, Dundee, Aberdeen or any other port on the same equitable basis." I do not think that such an attitude is rational. In order to establish some parity between land and ocean rates the government has brought down, as a basis for discussion, a certain contract made between it and Sir William Petersen. That contract is at present before parliament in the shape of a resolution and will later be embodied in a bill.

But mark this: the contract is subject to ratification by parliament. There is a special clause in the agreement providing that it shall be ratified, and until it is so ratified it does not become a contract at all. The government have not come forward in any unreasonable attitude. They do not say: "Here is a contract, take it or leave it. We do not care what members on this side or opposite may think about it; we do not care what their attitude may be. We have made the contract and it is for you to take it or leave it; but you shall have nothing more whatever to say about it and nothing further to do with it." From the very initiation of this debate the government declared that the contract would be submitted to a special committee for consideration and that that committee would have every means of thoroughly examining into the agreement to decide whether it was good or bad. That statement was repeated by the Prime Minister in his address the other day. Exception has been taken to

that stand on the part of the government as one that is not characteristic of other parliaments; it is said that other contracts having been entered into by a government, and having been signed and sealed, they have simply been submitted to parliament to be accepted or rejected as parliament might see fit. That is not the attitude of the government in the present instance. And what is the difference? In those days when other contracts were ratified the questions involved were entirely different from the one under consideration now. It was not then a matter of building up a general scheme of transportation rates; it was not a matter of production on a large scale; it was not a matter in which the profitable livelihood of the people at large was at stake. All these things are vitally involved in the present contract and therefore it is only fitting that the government should afford parliament, through a special committee, an opportunity of studying the contract from every point of view and of offering such amendments as may suggest themselves. And I am free to admit that had the contract been brought down in such a way as to preclude discussion, had I been asked to accept a grave situation of this kind without the fullest means of investigation, I should have hesitated before committing myself. But that is not the case, and that has been made perfectly clear, to me at least, in the Prime Minister's statements. The Prime Minister declared, at page 1212 of Hansard:

> Whether the method which the government is taking to control ocean rates may be effective or not is a subject which, I think, admits of debate and which should be discussed fully and carefully.

He then points out what the Minister of Trade and Commerce (Mr. Low) had said.

> The agreement which the government has made with Sir William Petersen with respect to placing on the Atlantic the ten ships mentioned, will be sent to a special committee of this House, together with the bill in which it is included, for full consideration, and that hon. members will have the opportunity afforded by such a select committee to weigh carefully all sides of that agreement, and to pass upon it, only after they have thoroughly considered it.

These words of the Prime Minister are, I think, of considerable weight. But there is more than that. I quote from page 1213:

> The point I wish to make clear at the moment is that the government was careful in presenting this resolution to indicate at the outset that the intention was that, once the resolution was carried and the bill introduced and given second reading, it would be referred to a select committee of the House on which there would be representatives of the different parties in parliament, and that such committee would have all the powers which belong to a select committee of parliament, to investigate and consider the merits of the particular proposition submitted.

And further on the Prime Minister says:

> I want to make that clear because I have noticed in the course of the debate that some hon. members have felt some hesitancy about supporting the resolution as introduced, fearing that they were committing themselves in some way to the specific terms of the contract.

To revert to what I said at the commencement of my remarks: Here is a contract submitted by this government as a basis for discussion, to be referred to a special committee so that we as a whole can come to a decision whether the contract is a wise and fair bargain for this country to enter into.

There is another point I want to take up, and it is a point which more or less concerns myself and my own constituency. I do not take it up for that purpose, because I say quite frankly I believe that the question of transportation rates should be solved and must be solved. But I want to make this point also clear: Many of my friends are heads of steamship companies. I respect them; I am sure they are honourable men in every way and I believe they are doing the best they can in their own way to develop this country. I for one would not like to see anything done which would deprive them of what is their fair and just due. Does this contract deprive any steamship company or any persons operating steamships of what is their fair and just due? I do not think it does, because provision is made in this contract for the making of a similar arrangement with other companies. Further than that, the Prime Minister in his address on the seventeenth instant, page 1215 of Hansard, says:

> And may I say here, Mr. Speaker, that the government has made it known from the outset that it was prepared to make a similar contract with any shipping company in this country that was prepared to give it like terms. The government to-day is prepared to give the Canadian Pacific Steamship Company and other steamship companies doing business out of Canadian ports, the opportunity of entering into a contract along identical lines with the Petersen contract, if they are prepared to do the same as Sir William Petersen is prepared to do.

That is perfectly clear. If any steamship company, learning how the rates are to be made under this Petersen contract, come before this committee and offer to do the same thing, a like contract may be made with them. It may be urged by some of the steamship companies that the government will establish rates which are unfair, but I do not think that is the point in question. Anyone who is accustomed to reading contracts and acts of parliament will know that matters of this description have to be put in more or less general terms, and when the government invites other steamship companies to come forward and agree to a similar

arrangement, that does not mean that the government intends to give them anything other than a fair deal. I think my hon. friend the Minister of Railways and Canals (Mr. Graham) will confirm that.

Mr. COOTE: Does the hon. member think this country could afford to pay this subsidy in respect to every ship that would be needed to handle our traffic on the north Atlantic?

Mr. MARLER: Yes, if it increases profitable production. We will have to go about it in this way in order to reach our markets more cheaply.

Mr. MEIGHEN: Can the hon. member give us an estimate of what the annual subsidy would be?

Mr. MARLER: Under these conditions?

Mr. MEIGHEN: Yes.

Mr. MARLER: No, I cannot do that. I can tell my hon. friend a great deal but I cannot tell him just that. Can he give it?

Mr. MEIGHEN: Yes, I think so. It would be just about $34,000,000 per year.

Mr. MARLER: I cannot question my right hon. friend's figures, but that $34,000,000 would go to increase the traffic on our railways and would get less and less on that account.

Mr. MEIGHEN: I have not seen so great faith!

Mr. MARLER: Not at all. There is nothing I would like better than to debate that point with my right hon. friend. The right hon. gentleman has been out of the chamber this afternoon but I would point out to him —in fact, I made the assertion in the city of Montreal—that if our railways are to pay we must have greater traffic on them; the only way to get greater traffic on them is to get profitable production; and the only way to get profitable production is to have more people. How can it be denied, having regard to our geographical situation and our scattered population, that we must even, if necessary, subsidize certain basic industries for the purpose of promoting them until our population increases to such an extent that traffic will be given to our railways and our railway deficits gradually eliminated? I can see no other way of doing it.

Mr. MEIGHEN: Is the steamship business a basic industry?

Mr. MARLER: Now, my hon. friend is not fair.

Mr. MEIGHEN: That is what we are subsidizing here.

[Mr. Marler.]

Mr. MARLER: No, no; that is not a fair attitude to take. The steamship industry, my right hon. friend knows, is simply a transportation agency. I am not talking about steamship industries; I am talking about the ordinary industries of the country. In order to promote those industries it is necessary to have lower rates. That is a fair statement, and I know my right hon. friend agrees with me in that respect; he does not deny it.

Mr. MEIGHEN: Suppose we start in with a race of subsidies on steamships in order to get to the goal that my hon. friend is seeking, thereby incurring an expenditure of thirty-three or thirty-four millions a year, does my hon. friend not think that other countries will start in the competition with us? And if so, where will we land?

Mr. MARLER: That is not the point at all. Will my right hon. friend say that it is advisable to lower land transportation rates unless water transportation rates are lowered at the same time?

Mr. MEIGHEN: I did not get the question.

Mr. MARLER: My right hon. friend has pronounced himself in the press and otherwise in favour of the advisability of lowering certain transportation rates on land, and if necessary—I do not know that it is necessary, but it may be; I am in agreement with him in this respect—if necessary, having those burdens borne by the country at large. The question I put to him is this: What is the advantage of lowering land rates unless the water rates also are brought to a reasonable figure? Are you going to leave the stuff on the wharf at the end of the railway journey and not transport it overseas? Does my hon. friend get my point?

Mr. MEIGHEN: Oh yes, but I never said it would not be advantageous to have water rates lowered; nobody ever argued that in this world that I ever heard of. But there is any amount of land transportation that is interprovincial, and the great purpose of low rates over the long distance is to bring the provinces closer together, rather than to have relation to export. Does my hon. friend not see the point?

Mr. MARLER: Certainly, I see the point perfectly clearly, but my right hon. friend is absolutely begging his own question. He has stated time and time again in this House that he does not confine the question of lower rates simply to interprovincial traffic. What

is the use of interprovincial traffic anyway? Are you going to sell all our cattle from the prairie provinces in the city of Montreal, and all our wheat from the west in the province of Ontario? That is interprovincial.

Mr. MEIGHEN: Does the hon. member think that interprovincial trade is no good?

Mr. MARLER: Not at all.

Mr. MEIGHEN: You asked me what good it was.

Mr. MARLER: I want something a little better than interprovincial traffic.

Mr. MEIGHEN: So do I.

Mr. MARLER: When my right hon. friend comes to debate another part of this subject I think he will agree with me that transportation rates have got to be lowered over the long haul in such a way as to bring our products to tidewater. That is the only good of lowering transportation rates, and that is not interprovincial.

Mr. MEIGHEN: Both should be lowered.

Mr. MARLER: Now my hon. friend agrees with me; I knew he would sooner or later.

Mr. MEIGHEN: I always did, but you did not see the point. You only thought you did.

Mr. MARLER: Now we are in agreement on that point. We get the cattle on the wharf at Montreal, the rates in the meantime from Alberta being lowered—we will leave out of the situation just now the manner in which they have been lowered. The cattle are on the wharf at Montreal, subject, remember, to a lowering of rates. Now does my hon. friend say for one moment that we should not attempt in some fair, reasonable and just way to lower the rates on these cattle to Dundee and Aberdeen?

Mr. MEIGHEN: Nobody ever suggested we should not.

Mr. MARLER: Does my hon. friend deny that it is worth while looking into that?

Mr. MEIGHEN: I never did deny it.

Mr. MARLER: He has denied it by the amendment before the House. He has tried to throw this discussion out of the House. That is the point I made some time ago, and I am very sorry he was not in the House.

Mr. MEIGHEN: I have been out quite a while. But would my hon. friend say now, does he favour this contract or does he not? Now, please give me an answer.

Mr. MARLER: That is not the point at all. If my hon. friend had been here a little while ago he would have heard me quote word for word and letter for letter his address in the debate of the 5th of May, 1913. Now I would recommend most humbly that he—

Mr. MEIGHEN: Why not answer the question?

Mr. MARLER: Just one moment; I am answering it. If my right hon. friend compares my remarks in Hansard to-morrow with his own address of the 5th of May, 1913, he will see that I have stated word for word and letter for letter exactly what he stated himself.

Mr. MEIGHEN: I will admit, then, the hon. member has made a good speech. But will he now be good enough to answer the question I asked?

Mr. MARLER: Most of my speech has been based on my right hon. friend's address, so it could not be otherwise than good. Answering the question if I approve of the word and letter of the Petersen contract, I approve of having that contract sent to a committee for investigation as a basis for discussion.

Mr. MEIGHEN: That is not the motion.

Mr. MARLER: Why certainly it is. I wish my hon. friend had been in the House before, because he would then have received a great deal of light on the situation; but unfortunately he did not do me the honour of hearing me repeat his speech of May, 1913, and hear my reasons.

Mr. MEIGHEN: I have not got much light lately from the hon. member.

Mr. McMASTER: If the leader of the opposition had been in his place he would have had some light.

Mr. MEIGHEN: Why? Was the hon. member for Brome (Mr. McMaster) speaking?

Mr. McMASTER: He was listening attentively.

Mr. MARLER: Mr. Speaker, I think I have explained pretty clearly the attitude which I take on this measure. I do not think it is necessary for me to continue my remarks any longer, unless my right hon. friend the leader of the opposition desires me to repeat them for his enlightenment, which I shall be glad to do, or unless he has any questions to ask.

Mr. MEIGHEN: I will put another question as soon as I get an answer to the last.

Mr. MARLER: I have answered that question in the course of my remarks, not once, but half a dozen times, and I would commend to my right hon. friend the reading of my remarks very carefully in Hansard to-morrow morning. He will find they are based almost literally on his own remarks of a few years ago. He will probably not be able to recognize them except as being his own.

In conclusion, I have only to repeat that I am desirous of having all the necessary information brought before this committee. We cannot without that committee have any basis for discussion. I had intended to say a few words about the Canadian Government Merchant Marine, not to discuss why it was built or should not have been built, but I would say this to the government: If it is possible to use the merchant marine for this purpose, that suggestion might be very well worth while taking into consideration; but that question also will be taken up before the committee.

Mr. COOTE: Would the hon. member be good enough to inform the House how in his opinion the money for this subsidy should be raised? How are we going to get this $30,000,000 required for the subsidy?

Mr. MEIGHEN: By income tax.

Sir HENRY DRAYTON: And more income tax.

Mr. MARLER: Not at all. My hon. friends on the other side are afraid to take a fair and reasonable attitude towards a matter of this description. Perhaps they are afraid it will be successful. I do not know whether it will or not.

Mr. MEIGHEN: Don't forget the hon. member for Macleod (Mr. Coote).

Mr. MARLER: Let me repeat for the benefit of my hon. friend from West York (Sir Henry Drayton), if my hon. friend from Macleod will excuse me for a moment, that this carries out precisely and identically the idea my hon. friend has in his own mind. It is an extension of it—nothing more and nothing less. It is not a question of more income tax, except perhaps in the meantime. But will my hon. friend from West York tell me how we are going to get more traffic for the railways unless production is made profitable?

Mr. IRVINE: Refer it to a committee.

Mr. MARLER: Certainly, refer it to a committee. That is what my hon. friend from East Calgary (Mr. Irvine) always wants to have done. He would have this whole House a committee to discuss credit and everything else, if he had his way. But he objects when a serious measure of this kind is proposed to be referred to a committee, and says: "No, I will vote against that. I will take up the time of the Banking and Commerce committee for two or three months discussing lines of credit, and bringing people out from England to give evidence."

Mr. IRVINE: I would ask my hon. friend if he has read the resolution, and if not, if he will kindly read it to the House.

Mr. MARLER: No, I will not. My hon. friend can read it for himself just as well as I can read it to him.

Mr. IRVINE: I just wanted my hon. friend to know what the resolution was that he is supposed to be discussing.

Mr. MARLER: Mr. Speaker, I conclude these somewhat drawn-out remarks. This measure will be submitted to a committee for investigation, to determine first of all whether there is a combine or not; secondly, if that combine is malignant or not. At that investigation the officers of the various shipping companies will have ample opportunity to state their case in every particular. That committee will then be enabled to come to a decision as to whether or not ocean rates can be profitably reduced in the manner suggested, and report to the House accordingly. If they cannot be profitably reduced, then the point I make—and it is the main point of my whole argument—is that they will have an opportunity to suggest to this House such other means as will bring about this most desired and this great end.

Mr. T. L. CHURCH (North Toronto): Mr. Speaker, I wish to take this opportunity of congratulating the hon. Minister of Trade and Commerce (Mr. Low) on his rapid advancement to the important post of First Lord of the Admiralty; and after listening to the splendid speech of my hon. friend from St. Lawrence-St. George (Mr. Marler), whom I think I may regard as the junior Lord of the Admiralty, I have no doubt that one of the ten ships of the Petersen fleet will be named after him.

The question of ocean rates and their regulation is not a new one. It has been the subject of prolific inquiry and discussion since 1896. Are rates too high? Can they be reduced? And how? Is there a combine? A monopoly? A restraint of trade? In bringing down this contract the government ask us to validate it. But it is already signed, sealed

and delivered by the two parties thereto, His Majesty the King, represented by the Minister of Trade and Commerce (Mr. Low), and Sir William Petersen, and is enforceable in the Exchequer Court of Canada. Now the government say the contract cannot be varied and that they are prepared to stand or fall by it. This is their plan to bring about a reduction of ocean rates. Well, there are three or four ways of attempting relief: One, by the appointment of a joint imperial board, similar to our railway commission, who have jurisdiction by legislation; second, the government's subsidy plan; third, the development and encouragement of tramp ships and indirect aid to them in more freedom of use of our ocean ports.

This particular method has been approved by the Interstate Commerce Commission. The government are relying on the report of a special committee of the House regarding agricultural conditions, presented to the House a few years ago. This committee was not appointed for the purpose of dealing with ocean rates. It was appointed to investigate agricultural conditions, but instead of staying in their own pond they wandered away out into the lake and the ocean. I would not call their rate "investigation" an investigation at all. True, they had prominent agriculturists appear and give evidence, but so far as my recollection goes only a few railway officials were called on the question of transportation and ocean rates. Yet to-day the government are basing their action in this matter on the report of that committee.

In contrast to that report let me call the attention of the House to the report on interstate, international, and ocean transportation of the committee on Interstate Commerce of the United States. That committee summoned world-renowned rail and shipping experts, including Mr. Acworth, the British railway expert who jointly with Sir Henry Drayton, reported on Canada's railways. This report shows that competition on the ocean is the prime factor in regulating rates. For instance, before the opening of the Panama canal practically every large city and town of the United States was in rebellion against railway rates, but with the competition which followed the opening of the Panama canal, the competition of rail versus water, the railways of that country were brought to time. I am sorry this voluminous, modern and practical report has not been quoted more frequently. The evidence goes to show that where there are competitive rates between all-parallel-water and all-rail traffic there is opportunity for regulating transportation rates, but out on the ocean it is different. You cannot regulate the broad ocean like the land and especially when ships have a monopoly it is practically impossible to regulate ocean rates. The report is both pertinent and practical as a guide on this case in Canada. This report shows that what I say is correct and it is a good report. I think this parliament should order a very careful inquiry. After all, a committee of this House, with all due respect to the House and to the committees, is not a proper forum to deal with such a problem. I differ from the Prime Minister (Mr. Mackenzie King) and the Minister of Railways and Canals (Mr. Graham) in that regard; and I think I am borne out by the report of the Interstate Commerce Commission which investigated the economic side of the question, as to how these things affected the farmer, the manufacturer and the consumer. We can only obtain lower rates in my opinion by competition on the ocean on the basis of the law of supply and demand. The opening up of the St. Lawrence waterways, from the head of the Great Lakes, will do a great deal to stabilize matters in Canada along these lines. I have given three of the reasons which I have to offer. The fourth remedy for present conditions is the extension and better use of the Canadian Government Merchant Marine, and the fifth suggestion is to leave it to open competition and the free trade law of supply and demand, and to in time secure a reduction through education, negotiation and publicity, with all the cards on the table.

Coming from a large distributing centre in Central Canada, and as chairman of an inland port and harbour commission, I have been very much interested for many years in the question of ocean and lake transportation. The two things that I have wondered at at the outset of this subsidy contract are: (1) why specifications were not prepared, and tenders were not called for, if the government has decided on the subsidy plan, and Canadian and English companies given a chance to tender, and the same principle adopted that applies to the gulf and sea ports regarding subsidies for mails and subventions of the Trade and Commerce department; and (2) why Sir William Petersen should be singled out for special favours in view of the fact that you had a contract with Sir William Petersen in 1897 and he treated it simply as a scrap of paper. Why was he singled out among all the different companies on the Atlantic and the Pacific? And why was a private tender given to him for this work? I think the government of Canada, after the

experience that they had, should have adopted a policy of "once bitten, twice shy" in dealing with this particular gentleman, especially as the present contract, as the hon. member for East Toronto (Mr. Ryckman) showed last night, is not like the contract of 1897. That former contract was more carefully drawn up regarding bona fides and penalties. Nine or ten sections of penalties were imposed on the contractors in the contract of 1897, but the present contract contains no penalties. Sir William Petersen is by it a law unto himself. As the present contract has no penalties for breach or default, and no adequate protection for specific performance, what is there to compel Sir William Petersen to carry out the contract? There is no way of enforcing performance of the contract. No farmer, artisan or mechanic would make a contract without some way of enforcing it. Here we have a government making a contract which contains no penalties and no method for specific performance at all. I agree with the hon. Minister of Railways and Canals (Mr. Graham) when he says that the question is, are the rates too high or not; should they be subject to government control or regulation, and what regulation? By whom? Would such regulation or control secure lower rates? Should a joint imperial board regulate rates, and could such legislation be made workable on the Atlantic and other seas when rate regulation by legislation in Canada has been somewhat of a failure on land?

The question of ocean rates is a very involved one and has been prolific of discussion here and in England for nearly twenty years.

I do not wish to criticize Mr. Preston. He was properly retained by the government, and he certainly knows a good deal about conferences. He was formerly an alderman of the city of Toronto, is a member of the Methodist church, has been a member of many conferences, of that good church, and therefore knows something about them. Far be it from me to say anything about his retainer. He had a proper retainer no doubt, and I do not blame him for getting all the work he can from the government. If the Conservative party were in power those who worked for that party would also try to obtain contracts. No particular blame should attach to him for that reason.

Ocean rates in my opinion should not be made the subject of a parliamentary inquiry, because we had one parliamentary inquiry by the committee on Agricultural Conditions and they reported and asked leave to sit again, but they never had a chance to continue. As I have stated, a committee of parliament cannot go into this question. They could not afford the time, even if they wanted to, because of the other work they have to attend to. Therefore I urge that it should be the subject of a judicial inquiry, something similar to the inquiry held by the Interstate Commerce Commission. The inquiry should be conducted by judicial officers and business men and it should be an impartial inquiry. It should not be conducted as a committee of this parliament is conducted, but should be surrounded with all adequate and proper safeguards for the protection of the consumer, the producer, the shipper, the ship owner and the ship employee; we must be fair to all of these men. One may say, there are three views of this question—your own, the other fellow's, and the right view. But one must not forget the other fellow's view and his side of it, especially in a period of such high prices and unusual conditions as exist to-day on the seven seas. Up to now, while this important question has been the subject of numerous negotiations, government inquiries, conferences and reports, there has been no active or direct attempt, either on lake or ocean, so far as Canada is concerned, to crystallize into legislation any of the various reports so as to assure direct legislative control of ocean rates, either on behalf of this parliament, or jointly with the Mother Country and overseas dominions.

The tramps and liners and the Atlantic conference and merchant marine have a commodity to sell, namely, transportation, and have been selling it for centuries free of government regulation, according to the basic economic free trade law of supply and demand. Tramps have regulated rates to some extent, and in the future will be more and more a rate regulator and factor.

So that we may start off with the presumption that the so-called shipping combines and conferences, so far as the law goes, have done nothing legally wrong, as they were under no direct government control, so far as Canada is concerned, and no control has been exercised over sea or lake for that matter either.

There was a proposition made by the late member for East Lambton, Mr. Armstrong, to place lake shipping under the control of the railway commission. I believe it would have been a good thing for our lake shipping if we had placed it under the control of a commission. As I say, however, no control has been exercised over sea or lake for that matter, although the British merchant marine is subject to the Combines' Act of England and also to the rules of the Imperial Shipping

Board, an advisory body to the British government. In addition to that, every boat, whether it is in the navy or the British merchant marine, is subject to a greater law. In the days of Richard the Lion-hearted, a code of laws was framed larger than the volume I hold in my hand, which applies to every man whether in the navy or the merchant marine, who goes on to the sea. When you read the present conditions of the Merchant Shipping Act, an act very nearly half the size of the revised statutes, with its very elaborate provisions and restrictions, for instance, how the ship owner must look after the construction and fitting out of his ship, food and health of his crew and passengers, the cleaning out of the boat, the wharves and many other things, you realize that the conditions imposed upon the British ship owner are very heavy and add greatly to the overhead.

A great deal of information has been produced during this debate and much good will be effected by it. It has been said that the debate has been going on too long, but I believe that it will shorten other debates, because this is one of the most important measures we have had in this parliament. The eyes of the people of this country from coast to coast are on this parliament in regard to this important subject, and I do not think the time has been wasted. In fact, I think it is the time that has been best spent since this parliament opened, and it has been better spent than the time consumed by private members in discussing resolutions to abolish racing and so forth. I am glad to note the moderate tone of all the speeches that have been delivered in this debate. No one in this House wants a combine. No one in this House wants an injury to trade and commerce by high rates or extortion. All in this House are taxpayers and all want low rates, if we can get them, and relief given to both producer and consumer.

We may differ as to how this may be obtained. For example, the Minister of Railways and Canals (Mr. Graham) who, I may say incidentally, has done a great deal for transportation and who is one of the best Toronto members we have, and his colleagues, say that they want low rates, and instead of joint action by Great Britain and Canada for control, he and his colleagues believe that they will get rate control or some action taken by making this contract with and granting a subsidy to Sir William Petersen for £275,000 for ten years. This would give Sir William Petersen the cream of the business for ten years, and in my opinion, it would amount to no control at all. Canada has a merchant marine of fifty-seven ships, many of which are tied up at the docks doing nothing. She could send these out on to the ocean to fight fight, fight, and I believe if the merchant marine was sent out with the backing of the Canadian National Railways and of the government, it could do more towards lowering rates than Sir William Petersen with his ten ships.

I was very much impressed on reading the speech of the Minister of Railways and Canals in reference to "nibbling" by those owners of steeds that follow a hay wagon on the highway and get a square meal free. Everyone wants to stop this "nibbling" of the profits of the property of the producer, and this increase in the cost to the consumer by the excessive rates on land, lake and sea, imposed through the greed of transportation companies. I might suggest that a start be made to stop the "nibbling" by these two agencies, the Canadian National Railways on land and the merchant marine on lake and sea, stopping "nibbling" and sitting in on land and sea with other champion "nibblers" to fix similar and high rates in the transportation business. Let them quit the conference meetings to fix rates on both land and sea and let them act for themselves of their own volition.

The Minister of Railways and Canals is and always has been somewhat of an amateur sportsman. There is none better in the land than he. He knows certain games and he is a close student of them. One of them is baseball and he knows what "control" means in connection with a pitcher. I once attended a game and he said to me: "This pitcher has no control." For that reason, I am surprised that he has permitted—to use the language of the sporting column—Scout Preston to travel all over the world and to put over such a pitcher as Sir William Petersen on the minister's team, as he has never on any occasion, shown any control whatever over the rate game, or any other game, to entitle him to such a grant as this. I am afraid that Scout Preston has put over a gold brick on the sporting Minister of Railways and Canals as regards any control or semblance of control by Sir William Petersen as a pitcher in the game of tossing ocean rates downwards. Pitcher Petersen did not fulfil his last contract, but treated it more or less as a scrap of paper, and he may do the same with this one now. You will never succeed by going back twenty-five years and reviving now, when the complications of ocean control are ten-fold what they were in 1897, the subsidy plan which absolutely failed then. The subsidy plan is the wrong plan for rate regulation on the ocean. If the subsidy plan is the gov-

ernment's idea of rate regulation, tenders should have been called for on carefully drawn specifications. They should have been open to all and not been given without any competition whatever to Sir William Petersen, who, as I say, treated his former contract as a scrap of paper. State aid to break a conference or combine will not solve the question. We have learned since the debate started that the committee can amend the contract and that the Canadian Pacific can come in second-hand on the same terms. What is this all going to cost, with this now free-for-all extension of the subsidy plan?

If ocean rates are too high, another effort should be made to secure control through the medium of a joint imperial board working as a unit. The re-creation of the subsidy plan is a relic of the mistakes made on land in Canada's extravagant railway subsidy policy. State aid by subsidy is no cure at all to lower lake and ocean rates. Canada would get better results either by building or by purchasing new ships for the merchant marine, with new and faster ships for the Atlantic and the re-routing of some of the present merchant marine vessels for Atlantic trade, than by giving $13,000,000 in a ten-year subsidy without competition. How can ten ships with fifty sailings a year control a thousand ships with fifty thousand sailings a year in a rate war? Canada's best interests would be better served by a spirit of co-operation with the British government in solving the problem, and by utilizing Canada's investment in railway facilities, merchant marine and other resources in unison with the British government. Canada learned in the war the good results that flowed from co-operation in shipping and trade and commerce with the British authorities.

Let us not forget that:

1. The Petersen Company signed a somewhat similar contract with the Laurier government in 1897. It was unable to live up to the contract and it was cancelled.

2. If the rates are so excessively high, why is the Canadian merchant marine losing $9,000,000 a year?

3. Why did the United States Shipping Board lose $35,000,000 in the operation of 317 full vessels last year, with 913 inactive vessels?

4. How can the Petersen line, with ten vessels, which at most can make only fifty voyages in a season between Montreal and Great Britain, break a combine, when in 1924 nine hundred and thirty-seven vessels cleared from the port of Montreal?

[Mr. Church.]

5. What is the need of subsidizing out of the treasury of the country an English line which has to build its ships when Canadian government-owned ships are rusting in Canadian harbours?

The west is not taking kindly to this measure, for I read in a western paper the other day a strong article opposed to it. The Progressives in this House have a fiscal organ of their own, the Grain Growers' Guide, and that journal has this to say on the subject:

> W have no more use for an ocean shipping combine than we have for any other kind of a combine, but when we have a government line of merchant ships and when the taxpayers have to make up the losses of that line every year to the tune of $9,000,000, because the ships cannot get cargoes to bring into this country, it is very apparent that it is not by subsidies to private shipping concerns that lower ocean rates are going to be secured. We could at least try the effect of lower rates on our own ships, and thus find out whether the lack of inward cargoes is due to high rates or the high rates are due to a lack of cargoes.

6. Why not hold a proper inquiry under the direction of such a body as was constituted by the United States government to investigate a similar question? Before such a body you could take evidence and examine witnesses on a proper scale; you could call experts who would know something about ocean rates and water traffic generally.

At six o'clock the House took recess.

After Recess

The House resumed at eight o'clock.

PRIVATE BILLS

WEST VIRGINIA PULP AND PAPER COMPANY

The House resumed from March 17, consideration in committee of Bill No. 13, respecting a patent of West Virginia Pulp and Paper Company—Mr. Jacobs—Mr. Gordon in the chair.

Mr. MEIGHEN: I do not see very much use in going on with this bill. The hon. member in whose name it stands is not here to explain it.

Mr. McGIVERIN: I can make the explanation. This bill and the following one, Bill No. 14, respecting a patent of Edgeworth Greene, were brought before the committee of which I have the honour to be chairman. Under section 47 of the Patent Act of 1923 the Commissioner of Patents is authorized to use his discretion in reviving or refusing to revive any patent, but the application must be made to him, under the act, within two years. In this case they did not apply within the two years, and therefore they have had

to come to parliament for that right. The committee did not pass the bill as requested by them; they are simply put in the position of appearing before the commissioner under the general act and making their application. They had not paid their second instalment of fees within the time required. The committee were satisfied with that explanation, but they left it to the Commissioner of Patents himself to hold court on this bill and on Bill No. 14; and he will decide under the general act whether or not the right should be granted.

Mr. MEIGHEN: The Patent Act has definite provisions as to renewal of patents. Of course, if a man neglects those provisions and his patent dies he must go to parliament and parliament can either restore the patent or put him in the position of having to apply again on the merits, just as if no default had taken place. But I do not understand why one man should be relieved of the penalty of his default while another should not. I do not see any difference at all between this case and that presented the other night by the hon. member for St. Lawrence-St. George. The rule that has been followed as long as I can remember is this: If the applicant can show special circumstances—for instance, that the instructions he left with his counsel were quite clear but through neglect or oversight, through something for which he was not himself responsible, his patent lapsed—then the practice has been to consider his peculiar position and relieve him of the penalty. Possibly the circumstances that I have revealed might not be considered sufficient. The hon. member has not brought out any special circumstances in this case; the patentee simply lost his patent through neglect. While it is true we are only putting him back where he can apply again on the merits, still we are relieving him wholly of the default. What right has he to that?

Mr. McGIVERIN: I was not here the other night, and I do not know which case my right hon. friend is referring to. But there was another patent which the committee refused—it was an extension of the life of a patent. If that is the one referred to, it is quite a different case.

Mr. STEVENS: It did not go to the committee.

Mr. MEIGHEN: This House listened to an eloquent appeal from the hon. member for Norfolk (Mr. Wallace) the other night to throw that bill out.

Mr. BROWN: The patent referred to by the hon. member across the way was similar to the one that was turned down here in the House.

Mr. STEVENS: I quite agree with the leader of the opposition in this matter. Two years ago we revised the Patent Act with great care; the discussion was as thorough as we have had on any statute in recent years. The question of patents is a highly technical and complicated matter. I recall that, if anything, the House leaned to the side of leniency to applicants; that we softened many of the provisions suggested by the Commissioner of Patents and, on the whole, we dealt very generously with the public in the matter. Now, as far as I can see—and I am speaking only from the knowledge I gained through an examination of the bill; I do not know the parties at all; I know nothing about it—here we have an American citizen who six years and a half ago allowed his rights under the patent to lapse. To-day he comes along and wants the rights granted him under the Patent Act extended. Now we propose by a special act to, as it were, wipe out the conditions of the main statute, the Patent Act, and place this man in a specially favoured position. I would say that certainly there is no rush about this thing. The man himself has allowed it to rest for six years. There must be some special reason why he now desires to revive the patent. It may be that some one has discovered or is trying to patent some process, or whatever it is that this covers, similar to this man's patent. It may be that someone else is very much more deserving than he is. It may be that in the evolution of the pulp and paper business this particular process or patent has a prospect of becoming more valuable, and therefore he desires to revive it, after he has allowed all these six years to elapse without protecting his rights.

I agree with what the hon. member for Lisgar said the other night, that certainly we have to give the discoverer of a process or device protection, but we give that protection under the Patent Act. After years and years of consideration in this country, and in other countries, we have come to the conclusion that a certain well defined period is justified and warranted, but this practice of coming back to the House and asking for the revival of some extinguished rights, which has been growing of late years, I think is a very dangerous practice.

What I would suggest to the House is this: Let this thing stand. Let it go over for a year. The gentleman who is asking for it allowed it to go for six years, and it is not going to hurt a particle to let it rest

for another year. We have just as much right to revive this patent next year as this, and in the interim the business, whatever it is that is affected by this, would have disclosed itself, as undoubtedly it will. I certainly object to blindly passing this bill without a very great deal more information than is before us at the present time, and particularly so—I do not know whether this is a reason, but still I advance it, not particularly as a reason, but rather as something to take note of—as we are asked to revive this patent for a gentleman by the name of Viggo Drewsen, of the city of Brooklyn, in the state of New York. I question very much, Mr. Chairman—indeed, I do not think there is any question about it, I venture to say—that a Canadian citizen under parallel circumstances would get short shrift in Washington. I doubt if he would get his application as far as the outer doors of the Capitol, and I doubt very much whether we are helping Canadians, in fact, the chances are we are depriving some Canadian of a parallel right, by resurrecting this extinguished right under the general Patent Act.

Mr. McGIVERIN: I do not know anything more about it than as chairman of the committee all that we have done is to bring it before the commissioner. The matter has got to be threshed out before the commissioner as a judge sitting just as he would under the Patent Act. I would rather let this stand until the member who is in charge of the bill is present. I merely made the explanation as chairman of the committee.

Mr. STEVENS: I am not attacking my hon. friend at all. I quite understand the point he raises, but I would put it the other way round. Wait until the commissioner comes before the minister or the government, and asks for the power. I would drop this bill altogether, and if the commissioner recognizes that he is unable to do what he thinks is justice in this case, let him make his appeal to the minister, and then the government can bring in a bill as a government measure. That would be the proper course. It is quite possible the commissioner does not approve of this, but as Commissioner of Patents naturally he does not like to attack the application publicly. On the other hand, if it is a case that the commissioner feels himself warranted in intervening, he can go to the minister and suggest to him that here is a case that is,—what shall I say?—harshly dealt with by the provisions of the act, and he can get his minister to bring in an amendment. I do not think a serious measure of this kind which affects the statute itself, and is introduced by a private member, should pass.

Mr. LOGAN: Might I suggest that as the hon. member in whose name this bill stands was called away this evening, we report progress. I think it would be scarcely fair or courteous to him under the circumstances to throw the bill out. It does seem to me, however, that the hon. member for Vancouver Centre has made a very strong case, and that there is a very poor argument in favour of the renewal of this patent. At the same time, I think we should hear the hon. gentleman in whose name the bill stands.

Progress reported.

CONSIDERED IN COMMITTEE—THIRD READING

Bill No. 17, respecting the Alberta Railway and Irrigation Company—Mr. Jelliff.

MANITOBA AND NORTH WESTERN RAILWAY COMPANY OF CANADA

The House in committee on Bill No. 18, respecting the Manitoba and North Western Railway Company of Canada—Mr. Stewart (Humboldt)—Mr. Gordon in the chair.

On section 1—extension of time for construction.

Mr. JOHNSTON: I find it necessary to protest against the passage of this bill through committee and against its third reading. My remarks would better have been made in the committee of Railways and Canals. The notice calling that meeting, which appeared in the Votes and Proceedings, set eleven o'clock as the hour of meeting. A further notice was sent through the mail calling the meeting for ten o'clock, but this did not reach me in time, and consequently I was not before the committee.

I just wish to say that this bill has to do with a branch of the Canadian Pacific for a line from Theodore to a point between Govan and Lanigan in the province of Saskatchewan. Renewals of this charter have been asked for every two years since I have been a member of this House, and for many years before that. I believe the charter itself is twenty years old. I can see no good reason why we should prolong the life of such a charter. If the railway company is not ready to begin operations after this length of time, I think it is time an extension of the charter should be refused, and for that reason I wish to protest against the passage of this bill.

Section agreed to.

Bill reported, read the third time and passed.

PATENT ACT—WALTER W. WILLIAMS

Mr. ANDREW McMASTER (Brome) moved the second reading of Bill No. 26, respecting a patent of Walter W. Williams.

He said: Mr. Speaker, when a patentee wishes to get letters patent in this country for an invention he has to make a payment of $15 on applying for his patent, and a further payment of $20 within six months of the date when the patent is issued to him. If he does not pay within the six months his patent is forfeited. Now, the petitioner in this private bill applied for a patent, and he paid $15 with his application. Then when the patent was issued to him he forgot to pay the other $20, the six months elapsed, and his patent became forfeited. Thereupon he applied under section 3 of the Patent Act, which reads as follows:

A forfeited application may be restored and the patent granted thereon on application to the commissioner within six months of the occurrence of the forfeiture, or the passage of this act, on payment with the application for restoration, in addition to the fee payable on the granting of the patent, of a further sum of $15.

He made his further payment of $15; then even before the patent was issued he made a further payment of $20. The patent was issued and the commissioner at least thought that everything was perfectly correct. But as this House has no doubt observed, lawyers sometimes differ, and a counsel who had to look into the validity of the patent raised the question, whether the patentee should not have paid the last $20 at the same time as he paid the $15. Now, I am inclined to think that that view is rather narrow and technical. The commissioner evidently thought so, because he allowed the patent to issue, the man having paid, prior to the issue of the patent, all the fees in connection therewith. But I can quite understand that a lawyer might read clause 3 to mean that when a patent was forfeited you had not only to pay the ordinary fee on the new application but also the fee on the new issue. I do not think that is really what parliament intended, but it is open to that construction. The patentee desires that his patent should be free from any possibility of doubt, and so he has asked for the passage of this act, which in effect says: Your patent is all right; it was issued to you properly; the commissioner's action was satisfactory in the premises. That is the object of the bill. There is this saving clause:

If any person has prior to the seventh day of February, 1925, commenced to construct, manufacture, use or sell in Canada the invention covered by the said patent, such person may continue to construct, manufacture, use or sell the said invention in as full and ample a manner as if this act had not been passed.

I cannot see that any public or private interest is affected by this legislation. It is merely sought for the purpose of placing the validity of the patent beyond any doubt.

Mr. MACDONALD (Pictou): Would the hon. gentleman say what is the nature of the article patented?

Mr. McMASTER: It is a patent granted for a liquid fuel atomizer.

Sir HENRY DRAYTON: What is that?

Mr. McMASTER: It is an atomizer used in connection with liquid fuel.

Hon. H. H. STEVENS (Vancouver Centre): Mr. Speaker, here again we have a bill similar to a large number of bills which have been introduced in recent years and affecting very seriously the issuing of patents. In this case, according to the statement of my hon. friend (Mr. McMaster), which I notice follows pretty closely the preamble, a gentleman comes to the House, through an hon. member, and asks that a special act be passed. To do what? To confirm a patent which the Commissioner of Patents has already issued, and which in his judgment—and his judgment should guide this House—is a perfectly valid patent under the statute. I am not a lawyer, and I ask my hon. friends who are lawyers not to judge my objection and suggestion too critically. In the last section of the bill we have what purports to be a saving clause. Now I submit this suggestion to the House, and I should like to have the Minister of Justice (Mr. Lapointe) give his opinion on it: Would it not be possible under this saving clause for the applicant to have made a secret arrangement regarding the manufacture of the article patented, and then later to sell the patent to some large firm, we will say to the Westinghouse Company, and within six months or a year afterwards for the party with whom he had made the secret arrangement to come forward and say, "Oh, but I manufactured the patented article during that hiatus, and under this clause I claim the right to continue the manufacture, although in the meantime the patentee has sold his patent to a bona fide purchaser?" I am afraid the House may not be saving this gentleman from a loss or a possible loss, but rather creating a condition under which it is perhaps possible to defraud an innocent and honest purchaser of his patent. Bills of this character, which I discussed a moment

ago when the minister was not in his seat, directly affect a statute which governs the whole intricate question of patent, and I do not think one of them should be brought before the House until it has been most carefully scrutinized, first by the Commissioner of Patents who is an expert, and his assistant, and secondly by the law officers of the crown. I think the public are entitled to that safeguard.

Mr. LAPOINTE: In view of the strong objection raised by the hon. member for Vancouver Centre (Mr. Stevens) I ask the hon. member for Brome (Mr. McMaster) to postpone consideration of this bill till a further sitting of this House so that the matter may be looked into. I had not read the bill until I heard the remarks of the hon. member for Vancouver Centre.

Mr. McMASTER: I shall be very glad to accede to even a more onerous request.

Motion stands.

OCEAN SHIPPING RATES

AGREEMENT WITH SIR WILLIAM PETERSEN—MOTION FOR RATIFICATION DISCUSSED

The House resumed consideration of the proposed resolution to ratify and confirm a contract between His Majesty and Sir William Petersen providing for the establishment of a subsidized steamship line on the Atlantic and government control of ocean rates and the proposed amendment thereto of Mr. Clark.

Mr. T. L. CHURCH (North Toronto): Mr. Speaker, when the House took recess at six o'clock I was pointing out to parliament that in my opinion the Agricultural Conditions committee, although it accomplished very excellent work, was not the proper forum to consider this particular contract, I was showing what the joint committee of the United States Senate and Congress on Interstate Commerce had done in 1919 on this very important question of ocean and railway transportation and how they had been taking evidence for many months on the question of rates, and summoning eminent traffic experts who were really experts from all over the world, men like Mr. Acworth, the eminent British engineer who with Sir Henry Drayton composed the royal commission to investigate Canada's railways and who reported to this parliament in 1917. In my opinion we should have a properly constituted tribunal similar to the United States Interstate Commerce Commission to report on this ocean question. That commission investigated the matter fully in the United States. A contract of this kind is a contract, no matter whether it is made with Sir William Petersen or anybody else, and should be thoroughly investigated. In looking over the report of Mr. Preston, I find that his report is a biased one—and is full of inaccuracies. But looking over the pages of Mr. Preston's report hon. gentlemen will find that he prejudges the case. He speaks of this being a combine before he starts to investigate at all, and this is not an impartial unbiased or reliable report. It is only fair to use his own language. He says:

With a view to bring this about I presented the following memorandum to those with whom I came in contact in this matter.

A frank statement of the matter. This memorandum was written in April, 1924, nearly a year ago, or eight months before this Petersen contract and in this report he announced the very policy which has been announced in the House by the Minister of Trade and Commerce on a contract made December 11, 1924. Mr. Preston says: I thought it better to have a frank discussion on the whole situation. With a view to bring this about I presented the following memorandum to those with whom I came in contact in this matter.

FRANK STATEMENT CANADIAN CASE

Strictly Private and Confidential

Memorandum With Respect To Traffic Between Canadian And British Ports

The Canadian government has decided to take action in order that Canadian interests shall not be so seriously affected as heretofore by the operations of the North Atlantic Steamship combine.

Of two phases of the situation, the government has taken particular notice:—

(1) The occasional discrimination in freight rates against Canadian ports and in favour of United States ports.

(2) Freight rates which are believed to be excessive in connection with the carrying of natural products and manufactured articles to overseas markets.

One of the reasons alleged for the discrimination against Canadian ports is that the insurance rates are higher in the St. Lawrence river than to or from American ports. The government has this question under serious consideration and is hopeful of permanently establishing a parity of insurance rates on the St. Lawrence with those to and from American ports. So that phase of the question need not be commented upon. There are two solutions of the disadvantages under which the ocean transportation of Canadian products labours:—

(1) By an arrangement with an independent steamship company with government assistance, and government control over freight rates.

(2) The establishment of a government service between British and Canadian ports with modern vessels.

The former is regarded as the more desirable, if satisfactory arrangements can be effected.

One or other of these alternative solutions is regarded by many interests in Canada as inevitable.

During the session of parliament, 1923, a committee of the House of Commons heard evidence on the question of the North Atlantic Steamship combine, and in reporting to the House of Commons, recommended the government to take action with a view of overcoming the disadvantages connected with the transportation of Canadian products overseas.

This recommendation moved by Mr. A. R. McMaster, chairman of the committee, was unanimously approved by the House of Commons in the session of 1923.

In accordance with the instructions of parliament, the government has been making inquiry into the various phases of the question. In the Speech from the Throne at the opening of the session of parliament, now sitting, the present administration announced its policy upon this question. The Speech from the Throne was adopted in the House of Commons by an overwhelming majority a few weeks ago, parliament and the government and the people and public opinion, supported not only by the agricultural community but by large manufacturing interests, whose oversea trade is hampered by the operation of the combine, is supporting the government in this determination to place Canadian interests, in respect to oversea transportation, upon a more satisfactory basis.

The government railways traverse the Dominion of Canada in about 24,000 miles of tracks of service. It is fair to presume that whatever action the government takes in the matter, will be towards linking up the suggested ocean transportation with this enormous mileage of National railways; and it is also fair to presume that the government railway will cooperate with such shipping interests in solving the question of ocean rates and transportation, so necessary to the development and prosperity of the Dominion.

W. T. R. PRESTON.

LONDON, April, 1924.

This is his full memorandum.

Thus he goes on to announce the very policy of the government in making an arrangement with an independent steamship company by way of subsidy which we have before us today. As above he says that they have had an inquiry by Mr. McMaster, chairman of the committee on Agricultural Conditions and that they are going to link up the subsidy to an ocean line with the 24,000 miles of the Canadian National Railways. Nearly a year ago Mr. Preston announced in a letter while in England the policy announced by the government in this very contract and in my opinion that is an improper proceeding. He prejudged the case and his report is a biassed one.

After all is said and done, on the government of the day is the responsibility for this contract. It is not on parliament or on any committee thereof. They cannot evade their responsibility for the contract by sending it to a committee. They must stand or fall by it. The principle of responsible government makes them responsible for it. There is a responsibility collectively and individually, so long as they are the government of the country, for this contract. The contract and the whole scheme are theirs. They have gone ahead with it and they are plunging the people of this country into debt. It is a one-sided agreement and is not in the interests of the country. It will not regulate rates, while it is doing untold injury to trade and shipping. People talk about regulation on the ocean by way of subsidy. What has regulation ever done in this country? What has it done for the regulating of freight and passenger rates on railways? Is the artisan or mechanic or farmer satisfied with the way the railway commission regulates rates and tolls in this country? Application after application has been made by the companies for rate increases. All have been readily granted. Take the case of the Bell Telephone Company, for instance. The city of Toronto spent $40,000 in 1921-22 to fight the application of the Bell Telephone Company for an increase in rates. The railway commission accepted the rates asked for by the Bell Telephone Company and the increase went through. The steam railways asked for various increases in freight rates and the applications were granted. Passenger rate increases also were granted by the railway commission almost every time they were asked for. The same remark applies to telegraph and express rates. Although numerous deputations from the municipalities appeared before the railway commission and opposed these applications, the railway commission accepted the figures of the applicant companies and granted every one of the increases. What is the good of regulation on the ocean in the face of the failure of regulation on the land? The same thing will happen on the ocean. Canada spent nearly a billion dollars in direct and indirect aid to the railways of the country and on the merchant marine and railway transportation. Canada has a deficit every year of from sixty to seventy million dollars on the government owned railways, and of several million on the Canadian Government Merchant Marine, and these deficits have to be made up by taxation. These deficits are in effect a subsidy to create and maintain a free and healthy competition on land and lake and sea between the Canadian Pacific Railway and National Railways.

The subsidizing policy for Canada's railways has been a bitter experience—hundreds of millions have been spent in useless duplication and waste, in addition to millions towards land and cash grants. We have also had an experience subsidizing the carrying of mails from gulf and ocean ports. Canada has spent a large sum on harbours, canals and ocean ports. and all more or less to develop and stimulate shipping, trade and commerce.

I believe in the freedom of the seas—for the merchant marine—as far as possible free from legislative control, and I think the history of Britain's merchant marine, and what it has done in its long and honourable history for shipping, trade and commerce, for humanity and the human race. and the over-sea dominions—will justify my contention that it is entitled to fair treatment and not to be condemned hastily and that the government in trying the subsidy plan is seeking to accomplish the impossible.

I believe we should leave the whole question to the economic law of supply and demand, and as far as possible free of direct legislative control, which has not got us anywhere, even on the land, as a regulator of rates.

I believe it is neither desirable nor advisable or at all practicable to invest any external authority with power to fix rates for the ocean by arbitrary methods and compulsion; whereas negotiations, conferences and conciliation, education and publicity are in the long run better and more effective. The government's subsidy plan is virtually a declaration of war against the whole merchant marine, whom the Preston report criticizes and literally denounces as rate robbers. It is a declaration of martial law out on the ocean by mobilizing ten ships of the line to fight the conference. Such a toy fleet could not fight a combine or a conference on lake Ontario, let alone on the ocean, and it will lead to nowhere. I should like to quote an eminent authority regarding the folly of trying to regulate rates, whether by subsidy or by any other control of the sea. This empire came into being by the sea. It could not continue to exist without the sea. One of the most eminent authorities on the mercantile marine is Mr. E. Keble Chatterton, and he writes at page 244 of his new work, issued after the war, with regard to the folly of trying to interfere with the freedom of the seas. He says:

> Thus, with glorious traditions behind them, and an equally glorious future in front, the mercantile marines of the nations of the maritime world have every reason to be proud of their respective services. Competition there assuredly will be, not merely between British and American, but, presently, German merchant fleets. That is all for the good of the services concerned and for the world in general. The lesson from past history is that maritime legislation in the long run is better omitted except where it is necessary as a reply to that of another country setting up unfair competition. The real freedom of the seas is to allow the merchant ship to pursue her way freely, unhampered; and to find her trade where she can, and be allowed to develop that trade as it has been in the past by Venetian, Spaniard, Dutch, Briton, American and others. To interfere with this system is to court trouble which in the long run fails to benefit the very organization it was intended to protect.

[Mr. Church.]

> Navigation laws are all very well in intention; but far better still is it to allow free trading over the seas; free flow of emigrants and commerce, fair opportunities for all. The best must win in the last instance, but why not let each marine go about its own business as each trading concern ashore is allowed to carry on its own affairs? The merchant fleets mean too much to be controlled by the state in any country, except under exceptional circumstances and with the most weighty excuse. That is one of the lessons in the history of our subject, and we may leave it at that.

These are prophetic words used at the present time. The hon. member for West York (Sir Henry Drayton) was doubtful whether we could accomplish anything by rate regulation. Mr. Justice Mabee was of the same opinion, and the Minister of Railways and Canals (Mr. Graham) the other night said that there was no use in going any further in trying to regulate ocean rates. I might quote from other economic text book writers, but time will not permit.

The government is to be criticized for failure to aid in making the Canadian people a sea-going people and mariners. If we are ever to become or try to become a maritime people, we should attempt to turn out from our population a supply of merchant marine men. In the United States they are turning their war plants into peace plants, and they are building up a merchant marine fleet to go out over the seven seas of the world and capture the trade for the United States. In the United States this preparation for the sea is being carried out with that thoroughness which was shown during the war for making sailors out of raw landsmen. The recruiting for the American workers of marine, according to the latest official reports to hand, already consists of a personnel which is 68 per cent American. Its Sea Training Bureau has training stations and training ships, and in the first three years it turned out between 30,000 and 40,000 unlicensed ratings. In addition there are the navigation and engineering schools and advanced courses for men already holding licenses. Such subjects as the operation, repair, adjustment and general upkeep of marine turbines and matters dealing with electricity and oil, are included in the last-mentioned curricula. The result was that in four years licenses were granted to over 10,000 graduates as masters, first, second and third mates, chief engineers, first, second and third assistant engineers. By means of a sea service bureau maintained at various Atlantic, gulf and Pacific coast ports, during one year over 100,000 officers and men were placed in United States ships.

In my opinion the railway commission should be consulted in regard to this matter. We had an inquiry some years ago by the hon.

member for West York (Sir Henry Drayton) and Mr. Acworth, and they say in their report presented to parliament in 1917 in connection with rates on land and ocean:

> Railway policy is a sealed book to the ordinary citizen. Why tariffs should be fixed as they are, why the train service should not be arranged so as better to suit his individual requirements, why cars cannot always be available for everybody everywhere, he cannot understand The normal attitude of the public towards the railway management, whether in the hands of a company or a government, is one of mistrust, if not of active hostility. It is a good thing both for the railway itself and for its patrons to bring the management out into the open; to have the reasons why such and such conditions exist, why certain concessions demanded cannot reasonably be granted, frankly explained in public.

The report goes on to refer to the ocean again and the principle of subsidies. It reads:

> We think also that no subsidy or guarantee should be granted except after a similar report from the commission; and that no subsidy or guarantee should be voted in any session, unless it has been provided for in the financial budget of the year; and unless a substantial deposit of cash or securities has been made by the promoters, to prove the bona fides of their application.

That is a sound policy, and had Canada pursued that policy on land, for instance instead of three railways running along the north shore of lake Ontario where one railway with a double track would have been sufficient, only one line would have been constructed, and a waste of money which amounts to about a billion dollars would have been prevented. What has been done on the land can be done on the ocean.

The subsidy principle will benefit neither the producer, nor the farmer, nor the shipper, nor the grain grower, nor the manufacturer. It benefits simply one ship-owner at the expense of all the others. It benefits also the middleman. If the object is to assist the producer, the farmer, the grain grower, or the raiser of cattle, it would be better to bonus that industry. This would go directly to the farmer. Otherwise the farmer secures no direct benefit from this subsidy.

I was going to say something about how the tramp ships succeeded to the carrying trade, the tramp steamer as a factor in carrying goods and in the regulation of rates, and the creation of liners and their effect on higher rates. To-day the finest merchant ships in the world are not freighters, but passenger ships. It is the tramp which has succeeded to the carrying trade of those pioneer ships; and after the Indian monopoly had disappeared, and there came a need for people to go to the East, it was quite an innovation to provide more accommodation for passengers. Then the same thing happened in regard to China, but especially with the emigration to Australia. Gradually this element increased and again people began to travel all over the world, for business, for administrative reasons, for pleasure; and as the number of passengers increased, so the amount of cargo space was encroached upon. Especially was this the case in the trans-Atlantic ships, so that to-day the principal liners on that route carry practically no cargo beyond mails and the passengers' luggage. Thus, within a hundred years, the needs of the public have entirely altered the character of the shipping.

It was natural enough that the East should for so long have instigated all the improvements in shipping for the reason that travellers went to the Orient long before America was discovered, and the East India Company had a continuous need for the best ships. But since the introduction of steam and the rapid progress of the United States, it is the West, and not the East which has always seen the greatest enterprise in shipping. Bigger and better vessels, compound engines, twin screws, triple screws, quadruple screws, turbines, oil fuel, increased speed, luxurious accommodation—all these most important and progressive factors in the mercantile marine have come as a result of the Atlantic, and not the oriental trade. These reflect, as everybody knows, on the rates, the high cost of ocean travel and so forth. If this subsidy goes through, you may be in a British port and you may see one or two of these ten ships of the line under subsidy at a dock. At the next dock you will see a tramp ship, and the tramp ship will have quite a grievance against the state-owned ship, subsidized as it is, and against the citizens of Canada for helping to pay for and maintain that ship over there. Such a policy will interfere with free competition for the tramp ship, because the tramp ship, as the evidence showed before the Interstate Commerce Commission, is one of the most important factors in rate regulating. This policy of subsidizing ships may drive tramp ships out of business; it may drive some of them to the wall.

In my opinion the subsidizing of these ten steamships under the present contract will strike a decided blow at the free competition which exists ordinarily with the operation of tramp ships. And according to the text book writers, the owner of tramp vessels is to-day a public benefactor; indeed, the tramp ship-owner is a greater benefactor than Sir William Petersen would ever be, even though the latter may be state-aided. The tramp ship gets no bonus or subsidy but it proves an important factor in our Canadian trade. In 1921 there were 301 tramps from

Montreal; in 1922, 409; in 1923, 246 and last year 447. As an hon. member has pointed out, some 153,000,000 bushels of grain were carried out of the port of Montreal in the past year, of which tramp steamers carried 60 per cent. We had a case in Toronto of both rail and rail and water rates quoted by the railways from Toronto to Vancouver on package freight. A tramp ship obtained from the Canadian merchant marine was bought by the Kirwood line and it set a cheap all water rate from Toronto to Vancouver via the Panama canal; it cut the rates materially and saved the merchants in Toronto a lot of money.

The government's policy will so hamper the freedom of tramp steamers as to remove competition in the open market for freight. In other words, the government will bonus the tramp's competitor, taking away a part of his customers. Now, the tramp ship has an important function to perform, and if hon. gentlemen will only consult the figures for any ocean, gulf or lake port in Canada they will see what an important factor the tramp steamer has been in Canadian shipping. Let us beware of this policy; we do not want to do anything that will eliminate competition. Let us ensure regular business for the tramp steamers and in that way maintain competition. The regular liner has a different function to perform from that of the tramp, for the liner's sailings are always advertised in advance. The liner takes its business in a different way from the tramp and often confines its traffic to one point.

All these things must be borne in mind. I do not think that any hon. gentleman in this House can have any doubt in his mind as to what effect this contract will have on the tramp steamers. The hon. member for South York (Mr. Maclean) and the hon. member for North Waterloo (Mr. Euler) have both expressed on this subject views to which I must take exception, namely, favouring the co-ordination of the Canadian National and Canadian Pacific Railways. Let me say emphatically here that it is not public ownership that has got our railways into their present condition, but private ownership. I do not believe in the policy which these hon. gentlemen have enunciated, for it strikes me as being—another way only of handing over the Canadian National railways to the Canadian Pacific Railway, which is the very thing that the Canadian Pacific Railway Company wants to bring about. Competition is the life of trade, and there is every reason why we should encourage competition between the Canadian Pacific Railway and the Canadian National system. I am sorry that the hon. member for South York, the dean of the House a public ownership man, is not here to-night, because I should like to say to him that the policy he advances will not prove a solution of the problem we have to cope with. What is suggested would only create a vaster combine than has so far existed.

It is my firm belief that a measure of such supreme importance, before being adopted by this parliament, should be submitted to the people for their approval or otherwise. I certainly do not think that we should undertake at this time to endorse it. It seems to me that we stand in the greatest need of a control of rates, not only as they affect ocean transportation but also as they apply to our railways. There is no doubt whatever in my mind that a combine exists in the passenger associations of the Canadian National Railways and the Canadian Pacific, and that combine meets to fix rates to suit itself. Let us realize once and for all that it is not only on the ocean that a conference dictates the rates that shall be charged; there is a conference on the land as well known as an association, and it is as bad as the Atlantic combine on the ocean. The representatives of our two great railway systems sit around a table and fix rates, and both of them have an eastern and a western passenger association. These two railways utterly ignore the Board of Railway Commissioners, and this has been proved to be the case. It seems to me that if the Canadian National Railways were really anxious to secure the cream of the passenger traffic from the large centres of population, they would adopt the system that prevails in connection with the railways in Great Britain, Australia, France and in the United States; that is to say, they would give to the working people who are paying the taxes something in return for their money, in the form of reduced rates for week-end holidays, fall fairs, conventions and similar occasions. This would enable the working classes to get out of the large and congested cities into the country and so have some chance of building up their health, instead of living in close tenement houses. Let me inform the House that the British railways have found these cut rates on special occasions to make good business. But what are our National Railways doing? They simply sit around a table with the Canadian Pacific Railway, and when the representatives of that railway suggest a rate as their policy, the Canadian National says, "Me too". That is their policy—"Me too". Would it not be infinitely better for the Canadian National

9 p.m.

Railways, by means of reduced rates on such special occasions to have their trains filled going out of Toronto, Hamilton and other large centres, instead of as at present with hardly anyone on them? Let them cut their rates and in that way obtain the cream of the passenger business. Talk about a combine on the Atlantic! Why, a greater combine for the fixing of rates exists in connection with railway transportation in this country and this in face of the fact that a railway commission is supposed to exercise of their own volition some oversight in railway matters. During the last two years the railway commission might be described as lost, strayed or stolen, so far as any influence it has exerted is concerned. For all the good it has done recently it might as well be abolished, and it seems to me that if railway rates cannot be regulated within the four corners of Canada on land there is not much hope of success when the government undertakes to apply control of rates on gulf, lake and river, and even on the ocean. If this subsidy policy is extended it will cost the country a great deal more than $13,000,000 in ten years. If, as the Prime Minister has suggested, an offer is made to other concerns, say the Canadian Pacific Steamship Company, and they come in on the same basis, and if others also come in on the same basis, where is this thing going to end? Nobody knows what it will cost. The farmers do not know; this House does not know. It may be analogous to the case of the Grand Trunk and the Grand Trunk Pacific where years ago it was stated that the cost to the country would be $14,000,000, but the hon. member for South Oxford (Mr. Sutherland) showed the other night that up to date the cost had been over half a billion —and we are not through with it yet. More than that, the deficit on operation of the National railways is sixty or seventy millions a year; and this is nothing but an added subsidy put into the taxes for the boon of free competition between the Canadian Pacific and the Canadian National.

The British authorities, who have done so much for Canada in maritime matters are very much alarmed about this proposal. So moderate a paper as the Morning Post, of London, England, a very conservative organ says:

> In this country the principle of subsidizing shipping is considered to be unsound. It tends to relaxation of effort on the part of the subsidized. Moreover, that one province of the empire should confer an advantage by means of a state subsidy upon one particular line of steamships is to interfere with the unity of the shipping services of the Empire. It is to the profit of every part of the empire that sea transport should be conducted upon a common policy, in which the interests alike of shippers, passengers, and ship owners are impartially and fairly recognized. And the British shipping industry may justly claim that it has been, and is being, conducted upon that principle. It was built up by individual enterprise, without state assistance other than payment for the carriage of mails or retaining fee for the use of vessels in war; and at a time when shipbuilding is three and four times what it was before the war, and the cost of management double and treble, British ship owners continue to conduct their business without asking anything from the government except freedom from regulations which would place them at a disadvantage as compared with the foreigner. The duration of the contract made by the Canadian government is stated to be ten years. It may be doubted if it will last quite as long.

I doubt it, too. The last contract in 1897 with Sir William Petersen lasted less than a year, and then Sir William Petersen was handed back his money with interest in 1899. I quote from another despatch from Great Britain, dated at London, February 16:

> Sir Halford MacKinder, chairman of the Imperial Shipping Committee, the body erected by the Imperial Economic conference of 1923 to consider disputes, writes a complaining letter in to-day's Times. He says several of the complaints made by W. T. R. Preston were not first presented to the Imperial Committee and that two favourable reports on other Canadian complaints were made by the committee and two more are in preparation. Hon. Mackenzie King voted for the creation of this committee, which he now disregards.
>
> The idea is growing in England that Preston's report, much of which is characterized by the Atlantic Conference as wild and unfounded, is only a step in a political move by Premier King. The Morning Post devotes a column to this thesis.
>
> Meantime the rumour persists that the Canadian Pacific will jump out of the conference and accept the Canadian government's subsidy to avoid the competition of rival lines to Canadian ports, consequent upon the reduction of the United States quota. The handing to the Canadian Pacific Railway of immigrants now sent by the Cunard and White Star lines, as well as those by the Dutch and Scandinavian lines, would mean big business to the Canadian Pacific Railway, especially in view of the attempt of the Liberal government shortly to be made to increase Canada's waning population by indiscriminate recruiting on the continent of Europe.

That is what the chairman of the Imperial Shipping committee says. Then, in the British House of Commons the other day, on the orders of the day, the Parliamentary Secretary of the Board of Trade, Sir B. Chadwick, in reply to Mr. B. Smith, socialist, Rotherhithe, who asked whether there was a great disparity in the freight rates to Canada for settlers' effects charged by conference lines and non-conference lines, said that the whole question of trade rates would shortly be investigated by a special parliamentary committee in Canada. I quote from a report in the Morning Post:

> Mr. B. Smith asked whether, in accordance with the Preston report, which was a Canadian government official report, that colony intended to treat the favouritism between Germany and other countries as against British exports and imports to Canada as a first-class political issue, having regard to the fact

that they claimed that British peers, knights, and directors of the shipping conference in this country had whittled away the preference granted by Canada to this country?

Sir B. Chadwick—That will be the subject of the investigation. He had no idea as to the date or constitution of the inquiry.

Now we have another authority, Sir Frederick Lewis, at the annual meeting of the Gulf line, a subsidiary of Furness-Withy, who stated that only five per cent had been earned by the vessels of this line engaged exclusively in the Canadian trade. He said:

"These results," said Sir Frederick, "throw an interesting sidelight upon criticism brought against the lines operating in the north Atlantic trade by W. T. R. Preston, who has reported to the Canadian government that the steamship lines are throttling Canadian industry by their exorbitant freight rates, and "must be earning enormous profits." As a matter of fact, two of our vessels have been engaged exclusively in the Canadian-United Kingdom trade during 1924. On one-third of the voyages there was an absolute loss, and on the year's trading the net earnings of these two vesels represented a bare two per cent on the cost of the vessels, which has to cover depreciation, interest and overhead. We are able to maintain a dividend of five per cent per annum simply and solely because in other times we have prudently written down the value of our steamers and have received a more satisfactory return on our money investments than from our steamers trading."

It has been contended, Mr. Speaker, that the Canada Steamship Lines have constituted a monopoly on the lakes. I need not give the history of this company, but I would point out that a union was effected of several lines, including Inland Lines, Limited; Northern Navigation Company, Limited; Niagara Navigation Company, Limited; St. Lawrence River Steamboat Company, Limited; Richelieu and Ontario Lines; Thousand Islands Lines; The Steamships Jacques and Bickerdike; Ontario and Quebec Navigation Company; the steamer Haddington; and not less than 80 per cent of the shares of the Canada Interlake Line Limited and the Quebec Steamship Company, Limited. These companies united to carry on a lake, gulf and ocean service. We in the Toronto district have been sometimes very much dissatisfied with the rates to Niagara and other lake ports, but we are going through a period of high prices. I have a clipping here from the Globe of March 20 in which it is also pointed out that there was a shrinkage of over 12 per cent in revenue, with net profits equal to only a little more than one per cent on the preferred stock, despite substantial reductions in operating expenses, interest charges, debts written off and even depreciation allowance. The statement is as follows:

Total revenue amounted to $10,435,115.15, a decrease of $1,448,767.28, or 12.2 per cent, from the previous year, of which amount $1,145,237.54 represents decreased revenue from lake and river freight vessels, and $303,529.74 represents decreased revenue from all other company operations.

The net earnings for the year before interest, bonds, discount, depreciation and taxes were $1,656,027.21, a decrease of $499,486.18 from the previous year; and the profit for the year after all charges, bond discount and reserves was $143,818.99, a decrease of $333,424.86 from the previous year.

It is said that a good lawyer has drafted this Petersen contract. Well, that does not make it any better. Very brilliant lawyers, the late Hon. S. H. Blake and the late Mr. Christopher Robinson, drafted a street railway agreement for the city of Toronto in 1892 on which fifteen decisions were given by the Privy Council. It was finally decided that the agreement as drafted did not carry out the intent of the contract, and the whole result was a mass of litigation extending over thirty years. The agreement was found not to carry out the understanding of the parties to it. I do not think there ever was a contract in the history of the world which was so prolific of litigation as that street railway agreement. But this present contract, I am sure, is going to be very prolific of litigation. Consider its lack of penalty clauses, its lack of clauses with regard to specific performance of the contract, to say nothing of the jokers that may be found in it.

The steamship companies say that the increase in ocean rates is justified; that it is purely an economic consideration and that it is the result of the increased cost of ships, increased wages, increased cost of food, fuel and operating expenses; increased cost of labour and so on compared with pre-war figures; increased cost of organization and overhead. It is pointed out that many vessels running on the north Atlantic between Canada and Great Britain were lost during the war and had to be replaced at tremendous cost. A vessel which cost £150,000 in pre-war days would cost a million pounds to-day. The present rates, they say, of passage are not due to any conference between steamship lines; they are absolutely necessary to make it possible for the steamship companies to provide an adequate service to meet the requirements of the present day public.

The Prime Minister said the other night that he had received many complaints in regard to rates. I do not doubt that he has received complaints. I have received complaints myself about rates, not only on the lakes but elsewhere. The Canadian merchant marine and the publicly owned Niagara-St. Catharines line to Port Dalhousie and the Falls could have regulated the lake rates out of Toronto to the Falls but fell down and

sat in with the Canada Steamships to fix the same high rates instead of allowing free and impartial competition to give relief.

High rates are not confined to the ocean. We have in this country high telephone rates, high express rates, high telegraph rates, high railway rates. The railway commission virtually allows all these public service corporations to do what they please. We have high sales taxes and high income taxes. How is it that this is the only combine that is attacked? What about all these other combines on land that we have in this country—the bread combine, the oil combine, the bankers' combine, the American millionaires' combine grabbing our resources, the gasoline combine, the grain growers' combine, the coal combine, the elevator combine, the transportation combine and the manufacturers' combine? We have a Combines Act, passed in 1923, but how many prosecutions have ever been made under it? Not one. How many prosecutions have been made under the criminal code with regard to restraint of trade? None. We tried to get a bill of indictment a few years ago against the milk industry in Toronto, at a time when there were a lot of people out of work and the rates for milk were raised unduly. We also attacked the bread and restaurant combines. We said there was a combine of the milk association that met and fixed prices and we presented a bill of indictment to a judge at the Toronto assizes but could get nowhere. Trusts and combines are flourishing like a green bay tree in this country from coast to coast. They can regulate them in England and the United States but we cannot do it here. Yet the government ignores these land combines to interfere with the law of supply and demand on the ocean. They do not attack the trusts and combines within the confines of Canada where they have jurisdiction. Charity should begin at home instead of away out on the ocean, where we have no jurisdiction. We should first deal with the combines at home. The Imperial Shipping Board is to meet in the Old Country in a few days and take evidence. A new investigation has been ordered in England into the whole ocean rate problem in view of Canada's action.

In conclusion, I want to say a word on behalf of the party of which I am a humble member. It has been charged in this House, and in a number of party papers, including some Progressive papers, and we heard a great deal of talk also along the same line during the last election, that this party is allied with the big interests in this country. The Prime Minister and the Minister of Labour—I am not criticizing them particularly—have referred to us as the party supporting the big interests. Last session when legislation was brought down with reference to the agricultural implement industry, it was charged that this party represented the agricultural implement industry of this country. That is not so. In the Ontario election, the agricultural implement industry did its best to keep the Drury government in power. The Conservatives are not the allies of the big interests and of the agricultural implement manufacturers. I can speak not only for myself but I think for the whole Conservative party when I say that we serve no big interests. Some of us have suffered in the battle against the big interests and are prepared to suffer again. We have battled against them in Toronto, to give that city freedom from combines in light, transportation and power. Conditions were such that only a rich man could afford to have electricity in his house, because it was costing from two to three dollars per unit for light and power. But to-day every workman in the city of Toronto has electric light in his home at a cost of 92 cents per unit as compared with two or three dollars a few years ago. So I say the Conservative party represent no big interests. On the contrary, we have battled against them, and are prepared to do so again. While we criticize this policy of the government we desire, and I believe every member of this House desires, to see lower rates on the ocean and on the lakes as well. I agree with the object the government is seeking to attain, but I disagree with the method they propose to accomplish that object. For these reasons, Mr. Speaker, I am opposed to the proposed Petersen agreement.

Mr. D. M. KENNEDY (West Edmonton): Mr. Speaker, I had hoped during the progress of this debate that some substantial reason would be advanced by the government, or by some member on the opposite side of the House, to show why we should support this resolution; but instead of that, we have had various explanations regarding the issue that is before us, and most of them have been to the effect, in my judgment at least, that the subject matter of this resolution is not really before the House at all, but something else. That would be especially true, I think, of the explanation made by the hon. member for St. Lawrence-St. George (Mr. Marler) this afternoon.

But let us take just the first three lines of the resolution:

> Resolved, that to give the government of Canada control over certain ocean rates it is expedient to

ratify and confirm the agreement between His Majesty and Sir William Petersen, K.C.B.E., as set out in the schedule to this resolution.

Now if I understand at all the question that is before the House, we are asked to say that it is expedient to ratify this agreement in order to give the government control over ocean rates. Control over ocean rates is to grow out of ratification of the agreement contained in this resolution, and we are to have none except by the ratification of this agreement with Petersen. That is as I understand the question before us. I know that the Prime Minister has explained that the question that was before the House was generally the control of ocean rates, and that we were not necessarily tied up to this agreement with Sir William Petersen. It would not be very hard in my judgment to have the resolution redrafted to meet that view, and it would be just as easy to do it now as after the special committee reports to the House after the second reading of the bill.

As far as I am concerned I am personally opposed, in a general way, to voting subsidies to private individuals or private corporations. I do not want, however, to take the attitude that if a specific proposal to grant a subsidy for a specific purpose should be made, and substantial reasons should be given to show that the subsidy would be in the general interests of the country, that I would not in that case support it. So from the start I followed this debate as closely as I could, in order to see if there was any substantial reason offered by the government or any of its supporters as to how ratification of this agreement would really give us control over ocean rates; and so far, Mr. Speaker, I have failed to find a substantial reason for coming to that conclusion. I suppose it would be unreasonable to expect that most of us in this House, inlanders as we are, with very little knowledge of the sea, would in the first instance be prepared to say whether or not ratification of the agreement would give control over ocean rates. So for that reason, I say, I approached this matter with as open a mind as possible, and I have come to the conclusion that up to the present time there has not been advanced one strong argument in favour of the ratification of this agreement.

The purpose, then, of the resolution and this is the question that will be referred to the special committee after the second reading of the bill, is to provide by this agreement a subsidy to Sir William Petersen to help the government get control of ocean rates. The question, of course, at once arises: Will this agreement do that? There emerges also the second question: Is this the best possible method of doing it? I wish to examine what in my judgment would happen if we ratified this agreement. When the hon. member for East Calgary (Mr. Irvine) was speaking the other evening he stated that he did not believe we were going to get a greater reduction in freight rates than the equivalent of the annual subsidy. The Minister of Trade and Commerce (Mr. Low) intervened and said that he expected the reduction would total two or three times the amount of the annual subsidy. Now, I cannot believe that Sir William Petersen is going to enter into a contract with this or any other government or any individual under which he will give two or three dollars in service for every dollar he receives in subsidy or freight rates, as the case may be. The very first thing that appeals to me then is this, that if we give Sir William Petersen this annual subsidy we may get a reduction in freight rates equivalent to the total amount of our annual payment to him. Well, suppose we get that reduction, what will be the attitude of the combine? It may take one of two positions: It may say, "We will fight this Petersen line and the Canadian government's action." If the combine takes that position, do we not right there get the grossest kind of discrimination possible between shippers of wheat, cattle, apples or any other commodity by the Petersen line and by the combine respectively? But suppose the combine says: "We are going to take the Canadian government at its word when it says that this offer is open to all lines." Then are we not going to be obliged, under the terms of the resolution itself, to give the same consideration to all other lines that are willing to come in? To my mind it is simply opening the door to a system of subsidies that at this stage I certainly am not willing to vote in favour of.

Now as to the subsidy itself. It has been examined by some hon. members, but it will be necessary for me to go over some of the ground again in order to round out my argument. The subsidy we are offering to Sir William Petersen is £275,000 per annum, or about $1,250,000 on ten ships for ten years. This means that in that period we will pay him $1,250,000 for every ship that he operates. Each ship therefore will earn in the ten years the equivalent of one year's subsidy—$1,250,000. This is very much more than the capital cost of the ships, if the statements made by the Minister of Trade and Commerce and the Minister of Railways (Mr. Graham) are correct. They compared the cost of shipbuilding to-day with the cost when the

ships of the Canadian Government Merchant Marine were constructed, and it will be found that at page 722 of Hansard the Minister of Trade and Commerce stated:

I might add myself, in addition to that, that the Canadian Government Merchant Marine probably cost three times the amount it would cost to build to-day.

And at page 1128 of Hansard will be found this statement by the Minister of Railways:

We were not responsible for the Canadian Government Merchant Marine, which cost three or four times as much as it would now.

Now, according to Mr. Ballantyne, the cost of the merchant marine in 1921 figured out at $191.95 per deadweight ton. Perhaps I had better read his statement, which will be found in volume 2 of the 1921 Hansard at page 1274:

Now I come to the comparative cost of construction. The average cost of constructing all the vessels under the government shipbuilding programme figures out at $191.95 per deadweight ton. The average cost of the vessels constructed by the United States Shipbuilding Board has been stated in a recent official communication to be about $215 per deadweight ton.

If we take the figures of Mr. Ballantyne, and accept the statement of the Minister of Trade and Commerce and of the Minister of Railways that the cost to-day is one-third of what it was in 1921, $191.95, we find that the cost per deadweight ton to-day should be about $63.98. Multiply that by 9,000 tons, the deadweight tonnage of the Petersen boats and apparently they will cost $575,820 each. So it would appear that if Sir William Petersen can organize a company to take the ships off his hands, he can almost make a present of them to the company and have a very profitable bargain by retaining the surplus over and above the cost of the vessels, which would allow him something after providing liberally for interest in connection with the time payments on the ships, supposing that was the arrangement made.

We may compare the subsidy in relation to the cost of shipping in another way. Before the committee dealing with the Canadian National railway estimates last year Sir Henry Thornton gave a statement with regard to the earnings of the merchant marine boats going to the Old Land. There is not very much difference between some of the gross earnings there and the gross earnings worked out here in connection with the proposed Petersen boats for the typical cargo set out on page 723 of Hansard. Their earnings for the round trip are given at $43.599. The earnings of most of the trips of the merchant marine boats last year ran from $30,000 to $40,000. Now, if we take the subsidy and break it up into about sixty trips for the boats, we are paying about one-half of the total cost of operation, and we could cut the rates in half and still Sir William Petersen would be able to carry on. That shows of course how tremendous the discrimination would be between shippers using the Petersen boats and those using other boats. But if we are going to pay more than the cost of the boats in the first place, and if this arrangement is going to be open to all the shipping companies, are we not going to be in the position practically of having to buy all the tonnage on the Atlantic and then hand it over to the private concerns in order that they may give us low rates?

Now, Sir William Petersen is asked to operate his fleet in loyal co-operation with the Canadian Government Merchant Marine and the Canadian National railways. In the Preston report at page 11 we have a paragraph headed "Efforts to co-operate with combine" and another paragraph headed "Frank statement Canadian case." Mr. Preston in addressing his memorandum to the various members of the combine says that the Canadian government has evidently in mind, two possible methods of trying to co-operate with members of the combine or with others in connection with a reduction in rates. The first is:

(1) By an arrangement with an independent steamship company with government assistance, and government control over freight rates.

(2) The establishment of a government service between British and Canadian ports with modern vessels.

In the last paragraph of that same letter we have the following:

The government railways traverse the Dominion of Canada in about 24,000 miles of tracks or service. It is fair to presume that whatever action the government takes in the matter, will be towards linking up the suggested ocean transportation with this enormous mileage of National railways; and it is also fair to presume that the government railway will co-operate with such shipping interests in solving the question of ocean rates and transportation, so necessary to the development and prosperity of the Dominion.

Now coming back to page 723 of Hansard we have a letter from Sir Henry Thornton to the Minister of Trade and Commerce (Mr. Low) where he refers to the possibility of a certain relation between the Canadian National Railways and the Petersen boats or the Petersen line that is somewhat interesting in connection with the statement of Mr. Preston as to the steamship companies. The letter reads:

Dear Mr. Low:

I have had an opportunity of looking over Teakle's figures in connection with Sir William Petersen's proposition, and I note there is a substantial agreement

with respect to operating costs which would seem to bear out the essential claim of Sir William, although neither has included anything for what may be called "managerial expenses." I should hardly think, however, this would be a very large item as our own shipping officers and freight solicitors on this side could canvass freight for the new proposition as well as the railway without additional expense.

There is a clause in the agreement to the effect that they will co-operate with the Canadian Government Merchant Marine and the Canadian National Railways. I contend that that clause is not really a provision to guard the interests of the National Railways, but it is really a clause that gives something to Sir William Petersen, or compels him apparently to go into a relation which would be of very great advantage to himself. I submit that it may be of some value to the Canadian National Railways to get ten modern ships, or ships possibly better than the ones they have, if they really are, some advantage for the National Railways to have some improvement in the steamship service in direct connection with the railway; but when it comes to the other side of the bargain, when we consider the advantage to Petersen, in addition to the subsidy, of being linked up with the Canadian National Railways, there is absolutely no comparison between the advantage of Sir William Petersen and the advantage to the Canadian National Railways. The advantage to Sir William Petersen is overwhelming, and the advantage to the Canadian National Railways is almost nothing. The things are not on a parity; there is no comparison. So that that clause in my opinion is of very little value so far as the country is concerned.

There is another matter I wish to refer to, and that is that we have at present the Canadian Government Merchant Marine, and we have in the north Atlantic apparently a surplus tonnage, and this policy calls for an addition to surplus tonnage. Does that not mean that the Canadian Government Merchant Marine will have proportionately less chance to get full cargoes than they have at the present time, and so increase the difficulty of earning dividends or getting return cargoes? That is the great difficulty, according to Sir Henry Thornton, in the way of making them pay. Why are we seeking to follow this policy of putting additional tonnage on the north Atlantic? But suppose these ships are a great improvement on the present Canadian Government Merchant Marine boats? The right hon. leader of the opposition claims that these boats are not necessarily an improvement. I think possibly in most respects they are not, but there seems to be one feature in which there is just a little improvement, and that is the proportion of net tonnage of the boats to the gross tonnage. Most of the Canadian Government Merchant Marine boats have a tonnage running about five thousand and over gross, and a net tonnage less than thirty-five hundred, while the Petersen boats have a gross tonnage of five thousand with a net tonnage of thirty-five hundred. There is not very much difference. But in any case if the government and Sir William Petersen are fitting those ships up to efficiently serve the trade in the north Atlantic, surely they have been collaborating together in order that we may get suitable boats, and drawing from the experience that has been gained from the operation of the Canadian Government Merchant Marine, they will be able thereby to judge more accurately the needs of the trade; and if these boats are better and practically brought into the Canadian National service, are we not going to turn to Petersen the profitable end of the shipping business, and hold for ourselves the less profitable end, the Canadian Government Merchant Marine, if that merchant marine is as unsuitable as has been claimed. And I do not therefore see why Petersen should be brought into this bargain at all. Petersen can get his subsidy, but what guarantee has the government of Canada or the Parliament of Canada that this business is going to be extended? What knowledge are they going to obtain of the business by handing a subsidy to Sir William Petersen? I submit the Canadian government and the merchant marine can operate boats as successfully as Sir William Petersen, and if they can do so and if the boats are profitable and successful, we will have the same access to knowledge of the shipping business as carried on by the new boats, as we now have with the Canadian Government Merchant Marine. But if the profitable end of our business is to be in private hands and the private company is to obtain all the advantage of being connected with a national system of railways, and all the advantages that the Canadian National can give them in the way of soliciting freight, I say we are letting business that ought to be in our hands get into the hands of private owners, and the government will be in this position, that seeking to fix reasonable rates they will not have access to the accounts and therefore will not have a proper knowledge of what the rates ought to be.

For a few moments I wish to examine some of the reasons that have been given as to why we do not use the Canadian Government Merchant Marine. The right hon. leader of the opposition referred yesterday to the statement of the Minister of Agriculture (Mr.

Motherwell) who said that the ships were too small for the ocean and too large for the lakes. When I heard that statement I could not help thinking of the old explanation of why men do not marry. The explanation was that young men are too young and old men are too old. I think that matter was dealt with sufficiently yesterday, and there is no object in referring to it again. The hon. member for Lunenburg (Mr. Duff) went into another explanation. He stated at page 1070 of Hansard:

> The Canadian Government Merchant Marine ships are of very different construction and, with the engines they have, in very rough weather cannot make more than five knots actual speed.

Then he said regarding the Petersen boats:

> You will find that with the Diesel engines with which these ships will be equipped, they will be able to make their eleven knots at any time except, of course, in a very heavy gale of wind.

That is not a very good explanation, because it gives the speed of the merchant marine in very rough weather, and gives the speed of the new boats in fairly good weather. Perhaps the hon. member was canny in that regard. But in any case what is it that very largely determines the speed of a ship? Is it not the ratio of power to tonnage? You will find, if you examine the specifications of the Petersen boats, the 9,000 deadweight ton boats, or 5,000 gross tons, have an indicated horse-power of 2,250 and a brake horse-power of 1,850, while the boats of approximately the same size in the merchant marine have an indicated horse-power of 3,000 and up to 4,000 with a brake horse-power of about 80 per cent of the indicated horse-power. Therefore, there is no reason for concluding, as far as I can see, that the Petersen boats with less horse-power in proportion to their weight, can have any greater speed, especially in rough weather, than the present boats of the Canadian Government Merchant Marine.

The Minister of Railways and Canals (Mr. Graham), gave us in his speech as the reason that the merchant marine boats could not be used, that they were at present in use and could not be switched to the north Atlantic. I am not very well convinced that this is a good argument, because wherever you read about shipping to-day, there is a surplus tonnage everywhere and it would not appear that with a surplus tonnage throughout the world to the extent of millions of tons, there would be any great disturbance of trade on any route by the transfer of a few boats. But in any case, as I have argued before, there is no reason why we should hand over these boats to Sir William Petersen when we might utilize them and do the same business as Sir William Petersen can do, the only difference being that in the one case we have to pay a subsidy without an actual knowledge of the returns and, in the other, we would pay any deficit, if there was a deficit, with the fullest knowledge of the transaction. Sir Henry Thornton, speaking before the select standing committee on National Railways and Shipping last year was asked this question:

> Q. Would you say this particular fleet we have now, of sixty vessels—has it any possibility of ever arriving at that condition? You spoke of the Canadian Pacific Railway? They have different kind of vessels? —A. Yes.
>
> Q. Is it possible to secure success, in your opinion, with vessels we have now, or will it be a continual loss from year to year?—A. I would not like to make a positive assertion, but I will say this, somewhat tentatively; that, considering our merchant marine as a whole, we have to go either forward or backward. If we feel that the merchant marine service has a value to the people of Canada in all of their industrial activities, and to the railway itself, I think I should answer that question in the affirmative. Then we have to face up to, I think, putting these vessels, these implements in such shape as to get the maximum efficiency out of them.

There is just one other quotation I wish to read here, and that is with regard to the north Atlantic business. Sir Henry Thornton was asked this question:

> Q. These returns are not very encouraging. You must have something to offset them?—A. Probably not to the United Kingdom, because if I remember the figures rightly, our total United Kingdom trade showed a deficit of about half a million dollars.

A little further on Sir Henry Thornton said:

> We do not show any profit to the United Kingdom, and we can charge all of that to the wretched condition of the westbound movement.

I am opposed to this method of attempted control which, in my judgment, will not control at all, or at least I am not convinced that it is leading us in that direction. I am opposed to the resolution because I believe it is a step backwards and not the step forward that the man whom we have put in charge of the National railways and merchant marine has said that we should take. We are taking a backward step. I am opposed to the resolution because it is definite and specific with regard to this agreement. I am opposed to subsidies in general, and I am opposed to this one in particular until I get more information. If I am forced to vote on this question without additional information, I must vote against the resolution. I am opposed to it, in addition, because I believe we are not standing in the way of the measure of control that we could get through putting on additional boats, because we have the unit of organization now in the merchant marine,

which, if its present boats are not sufficient, can be supplied with additional ships at just as little expense as we are supplying Sir William Petersen with boats under this resolution, and we would be more certain of the actual results obtained by putting them under our Canadian Government Merchant Marine. I am opposed to subsidies in general because, in the history of the country, possibly there is nothing that has led to more political corruption than the granting of subsidies to private individuals.

As regards the amendment, I am not very well satisfied with it either. We are not going to get any hasty action, I fear, if one goes back over the investigations that have been conducted with regard to shipping throughout the Empire for the last ten or fifteen years. I have in my hand the report of the Imperial conference of 1923, and it refers to the nugatory character of the recommendations of the Dominions Royal Commission. Nothing was done as a result of the investigation of the royal commission. I find that when the report which Sir Halford Mackinder presented to the Imperial conference, the most they had to recommend was that, instead of carrying on under the old system of deferred rebates that had been repudiated by a few of the dominions, they recommended a general application of the agreement system whereby shippers agreed to ship by conference lines. So, with the Imperial Shipping Committee coming up nearly to that point, in 1923 a point that South Africa had reached before by legislating against deferred rebates and recommending, instead agreements, I fear that the Imperial Shipping Committee, which apparently would be the body that would take this into consideration, would not give us results in time to save the cattle industry or any other industry that is in a very difficult position at this time. So, while I do not want to shut out this question, I am not willing at this stage to support the resolution as it stands. I shall, therefore, vote against the resolution if it is pressed to a vote in its present form, and I shall also vote against the amendment.

Sir HENRY DRAYTON (West York): Mr. Speaker, I had intended addressing an argument to you and making a statement to the House in connection with this very important matter. I do not, however, do so, simply because this afternoon some time after three o'clock our whip tells us that, against all usual parliamentary practice in this House, this matter is to be pressed to a vote on

[Mr. D. M. Kennedy.]

Friday night. Under those circumstances, it is idle, I think, for me to take up the time of the House. Of course, I shall have ample opportunity of discussing the question while the matter is in committee. But I point out that in the past, I think I am right in saying, a major motion of this kind has never been pressed on, contested, or got rid of, on a Friday night, certainly not without at least a day's notice being given to the other side. Everybody knows that hon. gentlemen leave on Friday, and everybody also knows that many Ontario members leave by the eleven o'clock train.

An hon. MEMBER: Why should they?

Sir HENRY DRAYTON: An hon. gentleman asks, why should they? The question is idle. Gentlemen on the other side know before making their arrangements just what is going to happen. We do not; we are told on Friday what is going to be done. And we have in connection with this most novel kind of legislation a novel kind of parliamentary practice. I therefore address no argument to-night to you, Sir. But I am going to do one thing which I think necessary, a thing which hon. gentlemen from Montreal have failed to do. The hon. member for St. Lawrence-St. George (Mr. Marler) did take part in the debate, and he gave us first-rate periods; he gave us some sentences that bring us back to where we were when we started.

What the hon. gentleman has said is entirely for the purpose of showing that the English language does not mean what it says. But there are written documents which I think ought to be submitted to the House, and I do not think that Montreal should be forced to be inarticulate because its members, under the whip of party necessity, must remain silent.

Mr. MARLER: Has Montreal been inarticulate? Have I not expressed my opinion clearly—perhaps not for the whole of Montreal but certainly for one section of it?

Sir HENRY DRAYTON: My hon. friend will hardly make any of us believe, in view of what our newspapers tell us, and in view of what is contained in the papers laid upon the table, that he was giving very loud utterance to the real feelings, the real ideas of Montreal on this question.

Mr. MARLER: I take entire issue with the hon. member in that regard.

Sir HENRY DRAYTON: It is getting late and the hon. gentleman is interrupting rather than asking questions; I shall therefore

have to press on. The hon. member for George Etienne Cartier (Mr. Jacobs) filed two petitions from Montreal bearing on this subject, but he was not kind enough to tell us just what they were. I got them this afternoon and I think it is only fair and just that they should be placed on Hansard. The first petition is from the Montreal Corn Exchange Association, addressed to the House in the usual form, humbly showing:

That the question of ocean shipping is a complex and difficult one, and has been investigated by the very best authorities for many years;—

That the conclusions of these various investigations have not been unanimous;—

That any drastic legislative action concerning ocean transportation is fraught with the gravest danger, and should be based on a report made by a properly constituted commission with the fullest possible powers to thoroughly investigate all phases of this most involved question, as well as to closely analyse all reports issued by various commissions, committees and individuals regarding it;—

Wherefore, the committee of management of the Montreal Corn Exchange Association earnestly prays your honourable House not to ratify the proposed contract between the Dominion government and Sir William Petersen for the establishment and operation of a regular steamship service between Canadian ports and British and continental ports.

And your petitioners as in duty bound will ever pray, et cetera.

I at once assure the Prime Minister that the petition is duly signed both by the president and by the secretary of the association. The other petition is from the Montreal Board of Trade and reads:

That the government of Canada has contracted, subject to the ratification of the Dominion parliament, with one, Sir William Petersen, or a company to be formed by him, for the establishment and operation of a regular steamship service between Canadian ports and British and continental ports, the consideration for said service being an annual subsidy to be paid by the government, amounting to approximately $1,340,000, on the basis of a service of ten ships, the government having the right to demand that the service be doubled, in which case the subsidy will be increased proportionately;—

That the reasons adduced by the government for entering into the contract are that trading communities and interests of the country are seriously handicapped in their overseas trade by disadvantages artificially created by the indiscriminate and uncertain rates and conditions enforced by shipping combines or conferences, the existence of which combines or conferences, however, together with the disadvantages for which they are held responsible, seem to have been predicated largely on the report of an individual investigator, who, however sincere, did not possess the necessary authority or technical knowledge to conduct an investigation into a question which is international in its scope and character;—

That, it is impossible to influence ocean rates generally by the method proposed because it provides lower rates on a small part of the traffic only, such lower rates benefiting only those shippers whose goods are carried by ships operating under the contract, and that at the cost of the already overburdened taxpayer;—

That the expenditure of such a large sum annually as is called for under the contract cannot but be contemplated with alarm, in view of the state of the national finances;—

Wherefore, the council of the Montreal Board of Trade earnestly prays your honourable House not to approve of the proposed contract, which would involve the country in such a heavy annual outlay without commensurate benefits to the citizens of Canada.

And your petitioners, as in duty bound, will ever pray, et cetera.

That petition also is duly signed by the president and the secretary of the board.

Mr. MARLER: And what is therein set forth is precisely what the committee will do; it will make an investigation before the contract is ratified.

Sir HENRY DRAYTON: There are evasions sometimes that work and evasions sometimes that recoil on themselves, and I am inclined to think that my hon. friend will find that most people are of the opinion that the English language means just what it says. The hon. gentleman says that what the government proposes to do in appointing a committee to investigate the matter is just what is asked in these petitions. That is not so. These petitions say definitely: "Don't have anything to do with the contract; don't overburden the tax-payer who already has a heavier load than he can carry. Don't do something ridiculous, something that will cope with only a very small modicum of the traffic, something that will have absolutely no effect on any general reduction of rates but will mean a tremendous expense to the rate-
10 p.m. payers". I have tried to be as brief as possible, Mr. Speaker, because I do not desire to delay hon. gentlemen who have made arrangements which they are bound to keep.

Mr. JEAN J. DENIS (Joliette): I have only a few words to say on the resolution but before casting my vote I should like to make my position clear and explain to the House my view of the question. What is sought in this proposed legislation is a reduction of ocean freight rates; and of all the problems which might come before the Parliament of Canada at any time there is none more arduous or more difficult than the problem of attempting to reduce the cost of ocean transportation. I say, therefore, at the very outset that any government that has the courage to try in any way to tackle this question and to wrestle with it ought to deserve the sympathy of the community at large as well as of hon. members of this House. I think we are all agreed that the reduction of freight rates, whether on land or on sea, is absolutely necessary in the interests of this country. Since the war freight rates have increased enormously, and this increase has

to a very large extent hampered the trade and the industrial development of Canada.

It is all very well to say we have an enormous country with unlimited resources, but those resources have to be carried to the markets of the world and unless we are able to carry them under conditions profitable to the growers, to the producers, to the miners, these magnificent resources can be of no avail. Therefore the government should be praised for their worthy attempt to reduce freight rates. Any such reduction would benefit all classes, more particularly the farmers; and in that connection I cannot forget the farmers of my own province, the old historic province of Quebec. I know what hardships the farmers of my province are facing now and have been facing since the conclusion of the war. Only through their thrift, their industry, their endurance and their patience have they been able to cope with the situation brought about not through the fault of any government but on account of circumstances arising out of the war and post-war conditions. I know that the farmers not only of my province but of every province of this Dominion are anxious that freight rates should be reduced; and this applies also, as I have just said, to all other classes of the community. That being the case; everyone being anxious to see the rates reduced—and that has been the desire not this year only, but for many years, as was mentioned this afternoon—the government have made a move; they have come to parliament with a contract. They have asked parliament to examine that contract and to pass judgment upon it, not as it is set forth in the resolution, but as subsequently submitted by the committee of parliament to which the matter is to be referred. What is now being submitted to us, unless I am mistaken, is not a final, irrevocable proposition; it is a draft contract; and I base my opinion as to that on the declarations made by the hon. Minister of Trade and Commerce (Mr. Low) and the right hon. Prime Minister (Mr. Mackenzie King).

I do not desire to pass judgment upon the procedure of this House, Mr. Speaker, but it would appear to me that the opposition have opposed the resolution altogether too soon. What was asked was merely the reference of the resolution to a committee for examination and investigation, and that being the case every hon. member might very well reserve his final judgment, as I intend to do, until the special committee reports back to the House. Unless I am greatly mistaken, the fate of this scheme will not be finally determined until the report of that committee is presented and until a vote of the House either gives effect to the contract or nullifies it. It seems to me, therefore, that it would have been much more appropriate to have deferred the discussion on the subject until after the committee had brought in their report. But hon. members on the other side were so anxious to engage in combat that they attacked the resolution immediately upon its being introduced and brought all their arguments to bear against it. For my part I do not intend to-night to discuss the merits of the resolution, except to say that on the face of it, it appears to me to be a worthy attempt on the part of the government to give the people of this country cheaper freight rates on the ocean. Is the resolution perfect? Are there any flaws in it? Can it be made better? All these questions will be submitted to the committee, and after the committee has made its report it will be time for us to judge as to the merits or demerits of the contract.

It appears to me that in following this procedure the government have not only acted in good faith but have also proceeded in a most democratic way. The autocratic method would have been to submit the contract to parliament and ask for a decision at once on the contract as submitted. The democratic way is to have the contract sent to a committee to be thoroughly examined, thoroughly sifted, thoroughly tested, and then for parliament to make its final decision when the report is brought in.

I listened this afternoon with a great deal of pleasure to the speech delivered by the hon. member for St. Lawrence-St. George (Mr. Marler) and I must say that I am fully in accord with what he said. I wrote down one of his sentences as correctly as I could, and if I made no mistake it would read like this: "I reserve my attitude and my vote until the bill comes back from the committee." This is the stand I intend to take, Mr. Speaker. In accord with the hon. member for St. Lawrence-St. George I think that all hon. members who are anxious that ocean freight rates be reduced should give this resolution an opportunity to be discussed in committee; should have this question, so important to all classes of the country, fully gone into both in the committee and in the House when the report of the committee is presented. For these reasons, Mr. Speaker, I will vote with pleasure for the resolution.

Mr. T. W. BIRD (Nelson): Mr. Speaker, after listening to most of this debate I have concluded that the only sensible thing to

do is to allow this proposal to go to a special committee. We are told that it would be a breach of parliamentary technique to vote for this resolution simply to enable the matter to be referred to a committee. Well, all I can say if technique stands in the way of the only sensible course to be taken, then so much the worse for the technique. I believe that the method of discussing trade resolutions prior to the introduction of a bill is something of a nuisance. It has involved us in a lot of waste time this week; in fact, we have wasted a whole week of parliamentary time over what is after all only a relic of procedure that has outlived its usefulness. I cannot see where there is any place in reason for discussion of this kind which leads to no practical results. I doubt whether in voting for this resolution we are transgressing, those of us who may ultimately be opposed to the final proposal, the technicalities of parliament. I believe it has been customary in the practice of this House to use this stage of the discussion on a proposal of this kind to settle the general principle involved. I think that is all that has ever been expected from this stage of the discussion. Now I notice that the general question, the underlying principle, has been accepted in an almost unqualified way by almost all sides of this House, and yet we have wasted almost a week over that one particular. The general question of the desirability of the control of ocean freight rates has been almost universally accepted by this House.

I shall not try to delve into the motives of the government or of the Prime Minister in introducing the motion as they have. The official opposition attributed it to the desire of the Prime Minister to wriggle out of—I think that was the word used—the responsibility which is supposed to attach to the Prime Minister and his government. As I say, I do not know what the motive of the Prime Minister was. I do not care very much, although I desire to credit him with the best of motives. But whatever his motives were, I think his action in submitting this motion to the House with the proviso that it is only the general principle which is to be decided upon is to be commended in itself. I think it is in full accord with the tendencies of parliaments in modern times. The circumstances under which governments of old came down to the House with a policy in one hand, and a big stick in the other, fortunately are of the past. I think this ought to be dwelt upon a little. I think it is significant in these days that prime ministers do consult the wishes of the people, and the wishes of the representatives of the people. To illustrate my point I want to refer to what I consider to be one of the most significant parliamentary incidents of modern times. I refer to the debate in the British House on the Trades Union Levy Amendment Bill. You will remember that the Conservative government in Great Britain came into power with the avowed policy of destroying the trades union political levy. That was their declared policy, but in the debate the other day on that proposition, Mr. Baldwin made history. He delivered a speech the like of which I venture to say has not been equalled in the British House. This is what the Manchester Guardian says of Mr. Baldwin's effort. After criticizing the old way of doing things that is, the big stick method of government, in which the government comes down to the House and says—take it or leave it—the Guardian goes on to say:

> Mr. Baldwin's way was different. He made no promises about fulfilling his pledges later on when he had time to remember them; no threats against the recalcitrant members of his own party; no impassioned pleas for the due observance of parliamentary procedure. "We abandon what we have laid our hands to," he said. "We, at any rate, are not going to fire the first shot. We stand for peace and to remove suspicion in the country. We want to create a new atmosphere in a new parliament for a new age in which the people can come together."

Then the editorial goes on to say:

> If he (Mr. Baldwin) lives up to the spirit of this speech he will be a great Prime Minister. It was the speech of one, who though the leader of a great party and a great majority tries to interpret the will of the people irrespective of party, who would rather conciliate than dominate, who can look at the other fellow's point of view, and who does not forget that a Prime Minister owes more to his country than to his party. Whether so striking, so emphatic, and so unusual an appeal to idealism in party politics will meet with a fitting response from either his supporters or his critics remains to be seen. But we may be grateful that the appeal has been made.

Mr. Speaker, I will not be trespassing very much on the time of the House if I read one of the closing paragraphs of that wonderful speech. In the Manchester Guardian of the 7th of March the debate in the British parliament is given in full. I will read the second to the last paragraph of the speech:

> We have our majority—

Hon. gentleman to my right ought to pay attention to this. This is a speech of a famous Tory leader:

> We have our majority, we believe in the justice of this bill which has been brought in to-day, but we are going to withdraw to one side, and we are not going to push our political advantage home at a moment like this. We at any rate are not going to fire the first shot. We stand for peace. We stand for the removal of suspicion in the country. We want to create an atmosphere, a new atmosphere in a new

parliament, for a new age in which the people can come together. We abandon what we have laid our hands to. We know we may be called cowards for doing it. We know we may be told that we have gone back on our principles. But at this moment we believe we know what the country wants, and we believe it is for us in our strength to do what no other party can do at this moment, and to say that we at any rate stand for peace.

That speech created a profound impression on all parties in the British House, and I venture to say in every quarter of the British islands. It met with immediate commendation from Labour and Liberal, and I cannot see how it can escape the commendation of every reasonable man. That is the tendency of the times. The big stick type of government is an outworn superstition, and whatever the motives of the Prime Minister may be—hon. gentlemen to our right who seek to prove that those motives are other than strictly virtuous are following a line of reasoning which I think is not strictly relevant to the question before the House. I believe the Prime Minister's action in itself is just what a modern democracy expects from a Prime Minister. To introduce a cut and dried proposition and try to ram it down the throat of parliament is the last thing that the ordinary citizen expects from a government to-day, and if that is the kind of government we are to get from the right hon. leader of the opposition, I think his chances of ever succeeding to power are exceedingly slim, because there is a temper abroad not only in Britain but in Canada which is absolutely against that spirit.

Now, Mr. Speaker, I contend that the debate so far, if it has proved anything at all, has proved that we cannot get any further intelligently without submitting this thing to a special committee. I have carefully followed the speeches and even the best of them, I think, are clouded over with a doubt. They have consisted for the most part of excerpts from different sources more or less well digested—less rather than more. One hon. gentleman said that we as a House could not be expected to know much about marine affairs. I heartily agree with him after hearing some of the speeches to-night. I think as the debate has proceeded we have not had very much real light shed upon the problems of shipping. So I contend that the only thing we can do is to send this resolution to a special committee, where we can meet transportation experts face to face and get their opinions. We are not experts; I venture to say that most of us know as much about the horse marine as we know about the merchant marine.

I think probably three questions ought to be put to a special committee. We do not need to ask if a combine exists; we are agreed that it does, and we are also agreed that some form of control is necessary. What we need ask the special committee is whether the combine which exists is hurtful or is one of the domestic type that is not ferocious to any degree. I do not know how the special committee would answer that question. It certainly has not been answered in this debate. There have been many attempts to do so, but I must confess that as yet I am no nearer deciding whether the combine is hurtful or not. Some hon. members have endeavoured to show that it is a monstrous affair, and others—mostly on my right—have attempted to show that it is comparatively harmless. Well, we do not know as yet, and we require the experts to get us anywhere in that direction. There is not enough knowledge among the whole of us to advance us one inch along that particular line. With respect to certain features of the situation I am more clear in my judgment than with respect to others. I believe that with regard to the important factor of grain the combine is not doing Canada very much harm. We have that proved in black and white. With respect to cattle we are in grave doubt. With respect to package and passenger freight we are equally in the dark. We cannot get any further than we are to-night—and we are nowhere—unless we have the experts face to face with us, and we might as well recognize our helplessness. Another appropriate question to put before the committee is: What kind of control if necessary, will be best? Of course, if the combine is harmless no control will be necessary. Does the proposal now before us promise to be effective in giving us control of ocean rates? I will not seek to enter into that question, because I believe we are just in the same position in regard to it as we are with respect to the nature of the combine itself. I do not think anyone to-night is qualified to give a convincing opinion as to whether this proposition is going to work or not. There is just as much haziness in the House on that score as there is on other aspects of the case.

Now, certain alternatives have been put forward, and I think it is the duty of hon. members to put forward alternatives when they disagree with any proposal presented by the government. I have noticed no less than five or six alternatives submitted during the debate, some of them more or less practical, others purely idealistic. For instance, there is an alternative in the amendment. There are certain things we do not know about the motion; but there is nothing we do not know about the amendment; it is so perfectly

transparent. The amendment belongs entirely to the realm of improbabilities. The leader of the opposition in his excellent contribution to the debate argued that it was incompetent for Canada alone to set rates between here and Europe. Well, it was an impressive argument and delivered with some dramatic display, but I immediately thought to myself: Well, if that argument is good against Canada, how much more is it good against the empire setting rates for itself? Why, I think the leader of the official opposition has only to reflect for a moment to realize how absurd in a world like this it would be for the British Empire to try to set rates against other countries. The world would blow up at once. Farewell to the League of Nations, farewell to pacts of peace if once the British Empire set itself against the world in this respect. There is no such thing as inter-imperial trade pure and simple. The empire is just as much enmeshed in international trade as the other nations are, and it is beside the mark to say that Canada herself cannot control rates.

I have been very much interested in reading opinions expressed in the British newspapers on the Petersen contract. I notice in the Economist—a periodical quoted by the leader of the opposition—that the new president of the Chamber of Shipping, giving his opinion, said that Canada unfortunately—I suppose he meant certain people in Canada—believe that it was possible for her to do all of the selling and none of the buying. I believe there is a widespread conviction in Great Britain that Canada is out to sell Britain everything and buy nothing from her. If ever the empire is to be persuaded to control rates on behalf of the Dominion, the empire would expect something from the dominions and that something is just what our friends to the right are unwilling to give them. They know that any bargain between us and Great Britain must be on a give and take basis, that if we are to get consideration in the matter of transportation we must give them consideration in this other regard. There is a certain amount of selfishness in an attitude of that kind, and I believe the time will never come when Great Britain, to whom shipping is so vital, will accept a one-sided arrangement of that kind. I was somewhat interested in the view put forward by the hon. member for North Waterloo (Mr. Euler). He deprecated the mixing of poetry and politics, but hon. members will notice that he was not so hesitant himself in entering the realm of prophecy, and it was very long range prophecy at that. He looked forward to the time when the Canadian Pacific Railway and the Canadian National Railways would join hands for the welfare of the country. He reminds me of the prophet who looked forward to the time when a little child would play with impunity on the hole of the asp and the lamb would lie down with the lion. I think it is a very attractive object but utterly idealistic, and we do not always associate idealism with the mind of an hon. gentleman who is so practical in his method of reasoning.

Mr. CAMPBELL: Did the hon. member for North Waterloo (Mr. Euler) not imply that there was a possibility of the Canadian Pacific being taken over by the Canadian government?

Mr. BIRD: I believe he did, but that possibility verges on the realm of impossibilities, a possibility which is far from being a probability.

I wish to enter the realm of prophecy on my own account, a little short-range prophecy for a change. There is one thing that has not been mentioned in this debate, and I am going to take upon myself the honour of mentioning it; and that is that in this country there are springing up mighty co-operative organizations. In the west we have monster grain co-operative pools. We have cattle pools also making great strides. Now these movements which are characteristic of the age spell co-operation, and I declare to-night, Mr. Speaker, that co-operation is the only alternative to combination, so we might as well face it to-night. All these other things are doubtful, probably visionary, and will bring upon us the bitterness of disappointment, but in this movement which is so characteristic of our western life at the present time some of us see the only hope of checking the menace of these combinations. Those of us who have been interested in the co-operative movement for a good many years, as though it were a kind of religion, have wondered at times at the indifference of governments to the movement. It seems to me that the movement could not do better to-day than to throw its weight into the scale on behalf of a movement of that kind. I do not say that the co-operative movement in Canada is ripe for any practical proposal as to shipping and transportation, but it will be in that position very speedily. And I would suggest to the government that it keep its eyes upon that movement, because I believe that in a short time it will have arrived at a stage of development where some proposition of that kind will be very feasible, and it is the only thing in Canada that holds out

the least hope of successfully combating the combine. There is another short-range prophecy that I want to make, and the House will pardon me if I refer to the Hudson Bay railway.

An hon. MEMBER: Order, order.

Mr. BIRD: It hit somebody in a very tender place. It has seemed to me during this debate an odd thing that the Hudson Bay railway has never occurred to the minds of hon. members of this House as being an alternative proposal, perhaps not an alternative but a subsidiary proposal. I listened with great attention to the speech of the hon. member for St. Lawrence-St. George (Mr. Marler). His speeches in this House compel one to listen because they give signs that they originate in his own mind. They are not pale copies of dead philosophies, and so on. We may disagree with him considerably, but he speaks with such originality on Canadian problems that we are compelled to sit and listen to him, notwithstanding the extreme length of his speeches. When he was talking about the idea of universal subsidies in order to relieve the farmer in regard to his transportation problem, I wondered that his logical mind did not turn to the Hudson Bay railway, because if this government would complete the Hudson Bay railway—and there are only ninety short miles to build, and it is all graded—if they would spend a few million dollars, which would be a mere flea bite compared with this doubtful proposition before us to-night, in completing the Hudson Bay railway, they would bring the western farmer just one thousand miles nearer to Liverpool, and it is the worst thousand miles too, because while the ocean stretch is infested by sea serpents, this other thousand miles is infested by worse animals. At one stroke they would take that thousand miles of land transportation forever from the sphere in which it is at present, being now wide open to the exploiters of this country.

Talking about exploiters on the Atlantic ocean, they are not to be compared with the exploiters on the land. Somebody said something about not stopping at the shore. I would not begin at the shore. You want to go a long way this side of the shore if you are going to do the thing right. The fight on the ocean is problematic, but the fight on land is a real fight with those whom we know and we meet face to face with men of our own country. There is not much heroism in fighting the British merchant marine. It is of no political significance to rub them the wrong way. But it takes really hard fighting to get rid of some of the pests that exist along our land transportation lines. By a very simple process, by spending just a few dollars which have been promised for many years by both political parties, they would cut out 1,000 miles. This would solve the grain problem. It would solve the cattle problem more than the grain problem. That is something which the western farmer can understand, but I question whether he can understand five words of the debate that has been going on during the last week. It means nothing to him; it is a medley of words, sound and fury signifying nothing to an inlander.

To return again to the attitude of my hon. friend to whom I refer, his attitude both in his speech on the Address and his speech this afternoon shows to me that a new light is breaking upon the statesmen of this country. I would say that my hon. friend ranks in that class. I think he has raised himself above the position of mere politician. I think he has endeavoured to look at the problems of this country in a fair, broad, statesmanlike way, perhaps not from the particular angle that we view them and not arriving at the conclusions that we arrive at. But we are getting somewhere when we have men stand up in this House and throw the old precedents and old ways of thinking to the winds and try to build up something constructive, not for political reasons, but as he says, and as we believe him, for the good of this country. I have no faith in subsidies as such; but I believe if a subsidy, as someone has said, can be proved to be of national benefit, not very many scruples will remain in the hearts of the farmers of this country. I believe we are fast coming to a kind of parliamentary government in which subsidies will be a comparatively safe form of national development. It has not been safe in the past because we have had the wrong kind of parliamentary domination. You could not entrust subsidies in the hands of politicians with whom we have been blessed for the past number of years; but I believe that the process is coming about by which this parliament, when it is thoroughly representative of the people and when the people have proper control over it, will be able to subsidize necessitous concerns of this country. I look forward to that age. I believe a complex civilization cannot go on without some form of mutual help; but this all assumes a very much advanced form of parliamentary government, and I am afraid that as yet we have not reached that stage. The hon. member is just a forerunner. I am afraid there is just a sprinkling of this spirit.

I am not in a position to make sweeping statements. I think this House is well meaning, but I believe the attitude taken by my hon. friend is not yet come. I should like to see more of it. As I said, when he was speaking, it was a wonder to me that his logical mind did not throw out some crumbs to the western farmer with respect to the thing for which he has been longing for almost half a century. I cannot conceive of anything that this parliament could do which would tend more completely to heal up the sores, the wounds, that are open and gaping in this fair country of ours. I was talking to a professional man in this city some time ago and naturally I reverted to this subject. He said to me: "Now, I do not know anything about the Hudson Bay railroad. I am not going to set myself up as a critic of that railway. I do not know the facts. I am going to refuse to accept the leading articles of these eastern newspapers which are most obviously inspired against it. This is the attitude I take. If this thing was going to cost twice the money, I would gladly concede it, because I cannot conceive of anything that would bring the west and the east together more effectively than that concession." It is a wonder to me that the government has not had something to say in that regard.

Finally I think the suggestion which has been made from different sides of the House that the proper solution lies in the use of our merchant marine, is the one that is finding most favour on this side of the House and, I believe, in the country. There is a wonderful appeal in the thought that we can make use of our merchant marine in order to reduce rates upon the Atlantic, and the government, when the time comes, will be well advised, in that spirit which I have tried to enunciate tonight and which was so wonderfully exemplified in Premier Baldwin, which I believe to be the spirit of the new age which is upon us, to reconsider the proposal which they have on the order paper and try to meet what I believe to be the overwhelming opinion in large sections of this country, that the use of the merchant marine with this end in view is the logical, reasonable and wise course to pursue.

Mr. JOS. T. SHAW (West Calgary): Mr. Speaker, such few observations as I have to make will, at least, have the merit of brevity. I have listened with the greatest interest to the arguments that have been advanced on all sides of the House in connection with this very important matter. I think one can readily dissect the subject matter into the three orthodox parts. First of all, does a combine exist? It may be called by a different name; the delightful term of conference may be applied to it; but not a voice in this House will be raised against the proposition that a combine does actually exist on the north Atlantic. The second question naturally follows: Is this a pernicious combine? Does it engage in unreasonable rate fixing? To that question, too, many of us, judging from the investigations that have been made not only in this country and in England, but in the United States, will agree, I think, that certainly on some occasions and probably on the great majority of occasions, the rates fixed are unreasonable. I do not now want to deal with that matter further. I think we all agree that there should be some measure of control in connection with ocean rates. We admit the principle immediately when we consider transportation rates on land. When it comes to the sea, perhaps some of us have a difficulty in the matter, but I for one find no difficulty whatever in coming to the conclusion that it is absolutely essential and vital that ocean freight rates should be governmentally controlled.

That brings me to the next proposition. We have before us two plans for meeting the situation. We have the plan embodied in the amendment proposed by the official opposition. We have on the other hand the plan proposed by the government. As regards the Conservative plan, because of the fact that it postpones action, because we can see no end to the road, I have no hesitation whatever in dismissing that plan from my consideration.

With regard to the government plan, I am not in a position to say whether or not the ten Petersen ships working in co-operation with the Canadian National Railways and with the Canadian Government Merchant Marine will be able to effect a reduction in ocean freight rates. I do not know; and that I think must be the position of a great many members of the House. We are not in a position to say, owing to lack of information. I suggest, therefore, that this is essentially a matter which should go to a special committee, a committee which can call before it representatives of the steamship companies and ascertain the rates that are charged, and which will have the facilities for determining what moneys the steamship companies are making as a result of their undertaking—a committee, in short, which will be in a position after listening to all the evidence to determine precisely what the real effect will be of this particular plan.

There will be another advantage in connection with the proposed committee: it will have an opportunity to call before it the man who framed the agreement, Mr. Lafleur,

who undoubtedly is one of the most distinguished jurists in this country, and who I have no doubt will be ready to answer many of what I think have been very severe reflections on the draftsmanship of this contract. It seems to me that the only reasonable objection offered to the reference of the matter to a committee rests in the fact that some members are of the opinion that the second reading of the bill commits them to its principle and that they are bound in consequence and feel themselves fettered and unable properly to deal with the subject when it comes from the hands of the committee. But so far as this objection is concerned I have not the slightest difficulty in view of the statement made by the Prime Minister on March 17, as follows:

> Let me emphasize the fact that hon. gentlemen, in agreeing to the resolution and the second reading of the bill, are committing themselves only to the principle of governmental control of rates.

That is the statement of the Prime Minister in connection with this proposal to refer the matter to a committee. Now I am not one of those who for a single moment will suggest that we should not take seriously the undertaking of the Prime Minister in this regard. I believe of every hon. gentleman in this House, as indeed I would have the House believe of myself, that an undertaking once given will be honoured; and we are justified in concluding that this particular undertaking will be carried out, especially when made by the responsible first minister of the country.

Mr. SPENCER: Did not the Prime Minister also say that the government would stand or fall by the resolution?

Mr. SHAW: What I have just quoted is the last statement of the Prime Minister on the subject, it is surely the considered undertaking of the Prime Minister and the one that should be given primary consideration. I say consequently that, the House not committing itself to the principle of the measure in supporting the resolution, one should find no difficulty whatever in voting for it. I commend the Prime Minister in this regard, although I should have preferred, instead of the matter being carried to a second reading of the bill as is proposed, that the whole question be referred immediately to a committee after the passing of this resolution.

11 p.m.

Mr. MACKENZIE KING: If my hon. friend will allow me to intervene here, I may say that I have had before me all evening a motion which I intended submitting to the House the moment the resolution before the House carried. That motion is to the effect that instead of the committee proceeding with the resolution we are discussing, it be referred immediately to a special committee. I have gathered from the trend of the discussion that there is a doubt in the minds of some hon. members as to whether or not they would be committing themselves to the measure if they voted for the second reading of the bill. The government, when the resolution was first introduced, made it perfectly clear that the intention was that it should go to a special committee for consideration and that there would be ample opportunity before the committee to consider and discuss the whole matter. So that there may be no misunderstanding, I may tell the hon. gentleman that such is the intention of the government; when the resolution carries the matter will at once be referred to the special committee.

Mr. SHAW: I need not assure the Prime Minister that this meets with the approval of a great many hon. members, myself included, although I am frank to say that I am prepared to rely on his undertaking, whether or not the second reading is moved. I commend the Prime Minister on the step he has just indicated, because in my opinion one of the serious problems we have to deal with to-day is the problem of cabinet autocracy. The principle is one that arose in the war and it is a principle from which we should get away as rapidly as possible. I disagree fundamentally and entirely with the view of the leader of the opposition (Mr. Meighen) in this regard; for if members of parliament are to be mere rubber stamps to register approval or disapproval of governmental action, then it seems to me we could do just as well by staying at home. I prefer the situation in which the member of parliament can feel that his suggestions and his criticism may have some definite part in the formulation of government policy. For that reason if for no other I commend the Prime Minister for having put this particular resolution in the form in which it is drafted, so that the committee may bring to it their unfettered consideration and their unbiased judgment. I shall have no difficulty whatever in voting against the amendment and, especially under the circumstances that have now developed, in supporting the resolution as proposed.

Mr. C. H. DICKIE (Nanaimo): There has been a great deal said both pro and con this resolution and we are well aware what the result of the vote will be; the amendment will be voted down and the resolution

carried. So that any words of mine will be futile. But I feel it my duty to place some of my views with respect to this important question before the House. We were assured from the outset that our good friends to the left would not see the party directly opposite in difficulty; their life boat is always to be seen coming through the mist when the government is in trouble, as my leader (Mr. Meighen) observed. However, the government is not in trouble in this instance. The Prime Minister doubtless expected when this proposition was put before the country that the agricultural population would be swept off their feet in favour of it, but for once some of the agriculturists have displayed a little incredulity and it is necessary to prolong debate in order to bring them to terms. We see them hour by hour being brought around to the government's way of thinking. With respect to the government's attitude in this matter, I can see that the Prime Minister did not feel quite happy when he perceived that it was not going over as strongly as he wished it to do. He is looking for a place on which to land; he is tired of the sea and I am sure that terra firma will loom up when this matter reaches the committee stage. I do not believe that the Petersen proposal will be ratified by this parliament; I do not believe that the public of Canada are in favour of it. It is folly to expect that ten small ships will have any influence on the immense shipping of the seven seas.

I come now to the immigration phase of this subject, on which the minister in charge of the measure (Mr. Low) dwelt with some emphasis. He stressed the great benefits that would accrue to the immigration problem in the operation of these ships. The Prime Minister touched upon it more lightly than the Minister of Trade and Commerce. The Minister of National Defence (Mr. Macdonald), if I remember rightly, did not touch on it at all. The reason was that a few well expressed remarks on the part of the hon. member for Burrard (Mr. Clark) entirely dissipated any hopes in that direction. No accommodation is to be provided on these ships for immigrants. We know that in Europe thousands are waiting to get into the United States when they can under the quota laws, willing to pay the rates exacted by the steamships. These people do not want to come here. This is not the time to discuss the reason why, and I assure you the Petersen line will not bring immigrants here who would not come otherwise. So that you can consider the immigration argument pretty well dissipated.

Another argument is based on the alleged exorbitant freight rates on the ocean. But there is not one jot or tittle of evidence to show that freight rates are exorbitant on the Atlantic.. We have not one tittle of evidence that the steamships in the combine—and doubtless it is a combine; I do not see how it could very well be otherwise and give good service—are paying huge dividends or even making adequate profits. On the other hand we have the fact that our merchant marine, although it has been sitting in at the conference, has been losing money. That is a very good argument that the combine as a whole is not making exorbitant profits; at least, we have no reason to assume that they are, so that is a very doubtful argument. We know that high rates are being charged on the ocean, but we know also that in these progressive days the ship-owners have to improve their services from time to time. We know that they have gone through very difficult times. We know that the Cunard line at one time was almost down and out, requiring assistance. These lines must vie with each other in giving service that is adequate to meet the demands of a rather critical travelling public, yet they must make money, they must make profits in order to maintain the service, keep the ships in proper condition and make renewals from time to time. Unless it can be proved that they are making excessive and exorbitant profits, that argument falls to the ground. And these two arguments, the one with respect to immigration and the other with respect to exorbitant freight charges, were the two strongest arguments used in favour of this resolution.

It has always been the practice when in doubt to hammer the big interests. But I am getting a little ahead of my subject. In a very eloquent address the Prime Minister read numerous letters with respect to the lack of success of shippers and others in Canada. But has there ever been a time in our history when people did not attribute to exorbitant freight charges, or to something else, what was probably due to their lack of business ability? Our agricultural people, my hon. friends to my left—have they not year after year hammered and hammered for a decrease in freight rates—hammered until they made one think of the horse leech's daughters who said, "Give, give, give?" Yet they are not satisfied. They would not be satisfied if they had lower rates; it is not natural for them to be satisfied. But I am not blaming them for one moment. The manufacturers of Canada are in the same position. We are always hammering at the big interests for

making too much money, but we have no proof of it, and the sooner we recognize that the big interests must succeed, the sooner we will put Canada on such a basis that capital will be attracted here. There has been too much hammering of the Canadian Pacific Railway Company and of other railways; the end aimed at is not a desirable one. We must get capital in Canada if we are to succeed. I can quite see how these remarks of mine can be construed as indicating that I am arguing in favour of the big interests, but I am not doing so, believing that we cannot control any interest that may exist in Canada.

Large combinations of capital are necessary if we are to succeed in competition with the United States. Let me cite just one incident with respect to combinations. I have lived a while on the land, and I remember in Pennsylvania that throughout that state there were independent oil wells everywhere. One oil man was cutting rates against another. We had a poor quality of oil; at times unsafe to burn in our lamps. Millions of dollars' worth of by-products went to waste. The Standard Oil Company came in, a company which has been greatly abused and which probably deserved it in later years. They came in and gradually consolidated these interests. Independent oil well owners, if they had ability, were given positions with the Standard Oil Company and made more money than they did when operating their own oil wells, and the public got a very much better grade of oil at a lower price. The Standard Oil Company made money. They employed an army of men. They never had a strike; they treated their men well. The whole state of Pennsylvania prospered because of that combine. Later the Standard Oil was knocked as a monopoly; in fact, it became a monopoly, but one that could be handled by the United States government. These are arguments, Sir, that ought to appeal to us.

With respect to the proposed subsidies in the amount of $13,000,000 to a small steamship line, I do not say that Sir William Petersen is not a good steamship man, nor do I say that he would not play the game with the government if the scheme had merit. But I do not think it has merit. Canadians in general view it in this way: they consider that this subsidy is being given for the benefit of a few. Canada to-day is struggling under the burden of an enormous and ever increasing debt; we are gasping in the stranglehold of an almost appalling railway situation; we are harassed to distraction by taxation. I assure you that the great public of Canada will never view with favour any subsidy that will only have the effect of benefiting a few of the people.

We do not admit that the grain trade will receive very much benefit from the operations of this line of steamers. We do feel almost sure that the cattle trade will. Suppose that they cut the rate on cattle to $10 a head, I contend, Sir, as many others do, who know much more about the cattle trade than I know, that it will be impossible to ship cattle on the hoof to Great Britain from Alberta and give the farmers of Alberta returns commensurate with what they should have when they can be fattened and shipped to England in the shape of chilled beef. It may take some time to work up a trade; we have tried it in a moderate sort of way. The Minister of Agriculture (Mr. Motherwell) informed us the other day that an experiment had been made in the shipment of chilled beef to England but that the experiment had not been large enough to demonstrate whether or not shipment on a large scale would be a success.

I have been struck very forcibly by another thing with respect to the cattle trade as bearing upon this agreement. Suppose Sir William Petersen carries cattle at $10 instead of $20, he can only carry a small proportion of the 60,000 head that already go across to England. Whose cattle will be carried at $10 a head, while all the rest pay $20? I do not see how the discrimination can be made. Who is to get the benefit of these rates? As I say, the proportion of the freight that could by carried by these ships, having regard to the enormous volume that goes through the city of Montreal, is only trifling.

Why not put our ten merchant marine boats on first and make an experiment with them, and let us know where we are at, and then if we found that they were going to succeed and would be something more than a pebble cast into the Atlantic ocean, which I believe is all they would or will be, we could go ahead and get other ships, and pay for them and own them ourselves. I do not know of any reason why we could not operate our own steamers just as well as Mr. Petersen can operate his ships. All this talk about Petersen having docks here and there throughout the world is nonsense. The majority of tramp steamers plying the waters of the seven seas have no trouble whatever in getting docks, and there is no reason at all why we could not operate our own steamers, provided we were assured they would have any effect on the control of ocean rates. But such an effect I do not believe they will have, and I think the time is inopportune for any such experiment. It is a foregone conclusion that the amendment will

be defeated and the resolution carried, and that this thing will go to a committee, and then I judge that some small isle will appear, and the government will disembark and we will hear no more of the Petersen contract.

Mr. SPEAKER: Is the House ready for the question?

Hon. H. H. STEVENS (Vancouver Centre): The House was pretty nearly ready for the question, Mr. Speaker, an hour ago. We are faced at this time with perhaps one of the most unfair actions on the part of the government, one of the most flagrant departures from the long recognized practice of this House, and that is: bringing to a vote, in this House, without notice, on a Friday night a major measure. I am quite aware, Mr. Speaker, and you with your long experience in parliament are no doubt equally well aware, that there is no rule of the House calling for this special consideration to be given to members; but there has been a practice stretching back as long as the memory of the oldest member of this House, and much longer, that no major question shall be brought to a vote on Friday night. And why? Not that it ever advantages me a particle; I happen to come, Mr. Speaker, from the extreme west, and am fated with some other members to attend here at all times. I have not the privilege of going to my home every week end, as have members from Ontario and Quebec. But there is perhaps a third or more of the members of this House who so arrange their affairs that they go home on Friday afternoon or Friday evening regularly. It is well known and understood what has been the practice. It is this: That on Fridays, government measures that are not of major importance shall be before the House, usually such matters as estimates and the like, or measures that are not looked upon as controversial. I venture this assertion, Sir, and I invite you to search your memory for the past twenty-five or thirty years that you have graced a position in this House, and see if you can recall—I certainly cannot—a single case where without notice, without previous arrangement, a major question has been brought to a vote on a Friday. There was absolutely no thought of this matter being brought to a vote to-night, and when our whip consulted with the government authorities after the session opened to-day he was coolly informed that a vote would be taken to-night.

Mr. LAPOINTE: Will my hon. friend permit me a question? Does he think that it is more unfair to compel a vote on Friday than to force members of parliament to vote under closures, as he and his friends have forced us to vote so many times.

Mr. STEVENS: Not so many times. I have no objection whatever to the government introducing closure on any measure on which they choose to introduce it. The closure is part of the rules of this House, and I bow to it. What I was pointing out, though was this. Once the government took that stand, what was our position? We had twelve further members who wanted to speak. We called every one of them off except one or two who spoke this afternoon and into this evening. We were prepared to stop, but the debate has been carried on, not by us at all, until the hour is past when hon. gentlemen could take their train.

Now we are faced with this situation. Here are some hon. gentlemen in this group, legal members, who had made arrangements to attend certain cases in the courts in Toronto. I am aware you can say: That is none of our business. It certainly is not, but the point is that following the long established practice of this House, following what has been understood from time immemorial, these hon. gentlemen made their arrangements and left, and the consequence is, and the government can I suppose gleefully chuckle to themselves over it, that if a vote is forced to-night this particular group will show a very depleted force, and that, of course, is a very, very delightful situation for the government.

Mr. VIEN: Does my hon. friend know that eighteen of his friends, out of fifty-one, have already secured pairs?

Mr. STEVENS: Certainly I am aware of that. But it makes it all the worse. What is the situation regarding the pairs? The pairs were given largely to hon. gentlemen from Quebec who left at 3.30, and that arrangement was made before we knew a vote was to be taken to-night. Had we been advised, as the common courtesy of parliament demands, of this vote to-night, there would have been no pairs, or very few of them, only in extreme cases, and we would have had our members here ready to take the vote. But as the matter now stands, they are not here. I consider, Mr. Speaker, it is one of the most unfortunate occurrences. Why do I say unfortunate? For this reason: Public life is fraught with difficulties enough, goodness knows. There are bound to be questions coming up which cause schisms and divisions among us in this House and in the country; there is enough bitterness engendered in our ordinary public life. But there is one thought I have cherished as perhaps the great saving feature of our public life, and that is

the splendid spirit of co-operation that has characterized the actions of all groups and parties in this House on almost all occasions where suitable arrangements could be made to discharge the business of the House without unduly interfering; and it has been one of the pleasures, Sir, as you also well know, to be able to contract a pair with hon. gentlemen in opposing factions. All this, however, has been violated; all of this has been swept aside. I am quite aware there are hon. gentlemen who welcome what they call, as one hon. gentleman said to-night, smashing the precedents of parliament, and violating these old time-worn customs, as I think he called them. But I want to say to this House that the precedents of parliament, the rules of parliament, and the practice of parliament have been proven from experience, spreading over the last three hundred years in the case of Great Britain, and the last seventy-five or one hundred years in Canada, to be the best method of carrying on public business. When my hon. friend from Nelson (Mr. Bird) a few moments ago sneered, as he does, on every occasion when he addresses this House, and not only sneered at the practice of parliament, but also impugned the honour of hon. members of this House, as he did to-night—

Some hon. MEMBERS: Order. Order.

Mr. STEVENS: Am I out of order, Mr. Speaker?

The ACTING SPEAKER (Mr. Logan): To impugn the honour of an hon. member is going a little bit too far.

Mr. STEVENS: I did not say that at all. I said that what the hon. gentleman did was this—

Mr. VIEN: I rise to a point of order. The question before the House is the Petersen agreement, and my point is that the hon. member is not discussing the question before the chair.

Mr. STEVENS: I will discuss the question before the chair quite soon enough for the hon. gentleman. It is a queer thing to me, Mr. Speaker, that my hon. friend to whom I am about to refer (Mr. Bird) could read long extracts from the Manchester Guardian for over half an hour about what Mr. Baldwin said in London on parliamentary practice, which had absolutely nothing to do with the question before the House, while my other hon. friend (Mr. Vien) could sit by smilingly. Why? Simply because, he said, he rather congratulated the Prime Minister on this measure and he was watching the clock in order to prevent closing of the debate before that hour. I close this portion of my remarks with this further reiteration of what I have already said. It is one of the most unfortunate occurrences, because it creates in parliament a schism which ought not to be there, we have enough difficulties without introducing these somewhat disagreeable matters.

Now, Mr. Speaker, my hon. friend (Mr. Vien)—and I notice that he has taken to himself a seat on the treasury bench—says that I am not addressing myself to what is before the House. I will address myself now directly to the question. What is before the House? My right hon. friend the Prime Minister spent three hours of his time the other night talking on what? The matter before the House? No, in discussing something that was going to be referred to or debated in a committee, provision for which was not before the House at all. I want to make this point perfectly clear. I think scarcely an hon. member has spoken on this subject who has not directed all his remarks to the appointment of a special committee. That matter is not before the House, and any discussion of it was out of order. Strictly speaking, Mr. Speaker, if my hon. friend (Mr. Vien) had been in the chair and had been ruling as he seeks to have you rule now, not one iota of that discussion would have been in order, because there is no such question before the House. And let hon. gentlemen ponder this. What is before the House is this resolution—which when the vote is taken does not go to a special committee—and I propose to analyze it. What we are asked to do is to disregard the question before the House. This is what my hon. friend from West Calgary (Mr. Shaw) discussed, this is what is being discussed by almost every hon. gentleman supporting the government's view. What is before the House is simply, "that Mr. Speaker do leave the chair." The resolution is not even the Petersen agreement; it is, "that Mr. Speaker do leave the chair." What for? That we go into committee to discuss the resolution authorizing the Petersen agreement. That is what is before the House and nothing more. What are we asked to do? We are asked to disregard that, simply because the Prime Minister—and he takes three different steps—abandons his first position, which was that the government would stand or fall on this motion whether it carried or whether it did not carry. Those were his words; that was his attitude the first day it was introduced.

Mr. MACKENZIE KING: Keep to this resolution.

Mr. STEVENS: So I will.

Mr. MACKENZIE KING: The government will stand or fall on this resolution.

Mr. STEVENS: Yes. My hon. friend from West Calgary based his position a moment ago on the last word of the Prime Minister. Now we have the Prime Minister's fourth utterance.

Mr. MACDONALD (Pictou): Order.

Sir HENRY DRAYTON: What is the trouble?

Mr. MACDONALD (Pictou): My hon. friend should address the chair.

Mr. STEVENS: My hon. friends opposite apparently desire not only to violate the practice of parliament, but also to disregard even its decencies. I was addressing the chair. There was not one utterance of mine that was not preceded by the proper parliamentary term, namely, the hon. member. I addressed my remarks in this way, and I now repeat them, that the hon. member for West Calgary a moment ago said that he would stand by the last utterance of the Prime Minister. That remark was based upon a query from another hon. gentleman that the Prime Minister had previously said something else. Thereupon the hon. member for West Calgary said "I am not taking his first utterance, I am taking his last." I invite him now to take the last utterance of the Prime Minister. What is that? That he will stand or fall by this agreement.

Mr. MACKENZIE KING: Just a moment. He did not say that at all.

Mr. STEVENS: By this resolution.

Mr. MACKENZIE KING: Stick to the word. What I said, and what I wanted to make perfectly clear, was that the government was taking the quickest procedure possible to get this proposed bill to a committee. If the government are prevented in that step, they certainly will stand by the action of the House in the matter.

Mr. STEVENS: What does the Prime Minister mean by "will stand by the action of the House"?

Mr. MACKENZIE KING: By the decision of the House. The government will take its course in accordance with the decision of this House. My hon. friend will find that this resolution will carry in this House. If it does not, he will very soon find that the resolution is taken elsewhere for consideration.

Mr. STEVENS: The proper parliamentary procedure is this. Primarily this is a government resolution dealing with money matters, and it is the peculiar prerogative of the government to deal with such matters. It is the primary practice of constitutional government that the administration submit any measure to parliament as its considered judgment, and by that considered judgment it stands or falls. That is responsible government. That is where we differ with some hon. members in this House, not because we are old-fashioned, not because we do not appreciate progress, but because we are convinced that responsible government is the best system under which a country can progress. I am quite aware that another practice might be adopted, that parliament should ipse dixit, be like a county council, and that measures might be introduced from any quarter, here, there or elsewhere, and no one take responsibility for them. But I ask hon. gentlemen to ponder what sort of chaotic condition would this country be in within a measurably short period of years if that course were followed? Again I repeat that the practice we are standing for, the practice we are insisting shall be followed in this parliament, is the practice that has been proven for hundreds of years to be the best. What is that practice? What are the rules of this House? In heaven's name, Mr. Speaker, let us amend the rules and do things in an orderly way if we are going to depart from the regular practice. What is the practice in dealing with this resolution and this amendment? If the government desire to send this contract to a committee later on, let them introduce a resolution accordingly. But why inject it into this debate? I would ask hon. gentlemen to use just simple common sense in the matter. Here is a signed and sealed contract. No one disputes that the contract cannot be changed or varied except with the consent of the two parties to it. Here is a resolution. It is before this House to put its stamp of approval upon it. Let me read it:

> That to give the government of Canada control over certain ocean rates, it is expedient—

What?

> —it is expedient to ratify and confirm the agreement between His Majesty and Sir William Petersen.

That is what we are considering in plain simple English. If this parliament says, "Yes, we ratify that agreement," I ask hon. gentlemen, Mr. Speaker, what position will we find ourselves in if two, three or four weeks from now we come back and say, "Why, we did not know what we were doing, we acted hastily without information; now we want to change this whole thing".

Mr. SPEAKMAN: Does the hon. member contend that in the vote about to be taken we are ratifying or refusing to ratify this agreement?

Mr. STEVENS: Absolutely—

Mr. SPEAKMAN: Might I ask one more question? Did the hon. gentleman not state that the question before the House at the present time was not the agreement itself but the resolution, that Mr. Speaker leave the chair?

Mr. STEVENS: If you will allow me to finish my answer—yes, absolutely we are ratifying this. But this is where British parliamentary practice and Canadian parliamentary practice are sound. What does it do? It provides for certain processes to be followed. What are they for? To safeguard the rights of the people or those who desire to criticize or object. What is the process in this case? The first thing is the introduction of the notice of motion. Then we come to the position we are in now, that Mr. Speaker do now leave the chair for the House to go into committee. The next thing is that the committee considers the resolution. The resolution is reported out of committee, then it is read a second time. Then there is a bill based upon that. Then leave is asked to introduce the bill. Then next it is read the first time. After that it is read the second time. That is what some hon. gentlemen call red tape, unnecessary parliamentary methods, something that should be largely done away with, and they say "let us take a short cut." The point is this: such processes are fixed in our rules and regulations for the purpose of protecting the public in just such cases as this. Ordinary bills, which on the face of them are non-controversial, we pass through these stages very rapidly, and the procedure is called useless red tape, but it is nothing of the kind. These formalities are prescribed in our rules for the purpose of protecting just such important measures as this. What I want to point out to the House is this: we might very well use the analogy of the budget. There is a process followed in that case, and it is virtually the same process as this. This resolution has the same effect as the budget. This is a vote of money. We are voting here at least fifteen million.

Mr. HOEY: At what stage in the procedure is the resolution ratified, or is not the whole procedure necessary before ratification?

Mr. STEVENS: Absolutely. The hon. gentleman is quite right. It has to go through the procedure I have mentioned, and finally come to a third reading. There are certain stages in the procedure of this House that through long parliamentary practice are recognized as very important stages. This is what I want to place before my hon. friends to my left, because I apprehend what is in their minds: they say they are not quite satisfied that this is a good measure. Some distinctly disagree with it. Some of them, and practically all, say they do not like the general idea, the trend of the legislation, but they say, "We are convinced that something should be done." We agree with them. I do not think anybody in the House disagrees with that statement, but what I want to put before my hon. friends is this: they rest their case for a complete departure from parliamentary rules of procedure on what? Upon the word of the Prime Minister interjected in the middle of a debate. I am not impugning the Prime Minister's word, nor am I challenging his sincerity. Let us take it at a hundred per cent for the sake of argument, but if the Prime Minister is absolutely sincere in this, before bringing this measure in a finished form before parliament for ratification, why did he not move for the appointment of a special committee? What is the resolution my right hon. friend will have to move? It will be a resolution something to this effect: that a special committee consisting of fifteen members, or whatever number he chooses to name, shall be appointed for the purpose of doing certain things. The order of reference will be the whole value of that committee. My hon. friends do not know what the order of reference is to be. They are voting blindly on this on the assumption that the order of reference is going to be of a character that will please and satisfy them. Suppose the Prime Minister says in his order of reference that he moves for a committee of fifteen members to be appointed for the purpose of considering this agreement and for the purpose of reporting to the House its finding. What better are you off in that case than you would be if you adopted such course right here?

The Prime Minister states that so far as this agreement is concerned he stands or falls by it. Let us take another supposition: suppose my right hon. friend goes the full limit of the expectation of my hon. friends to my left and moves a committee be appointed for the purpose of inquiring into the alleged effect of the combination on the north Atlantic in restraint of trade, and to ascertain if general rates are too high, and to report, and if there can be some measure of control, to secure it, and

report their findings to the House. Assume he goes that distance—and that or something similar to that is what they want—what was there to hinder him from moving that at any time in the last three weeks or a month? For the first few weeks after the opening of the House no committee sat at all. A committee might have been holding sittings during that period. In the Speech from the Throne he forecast this measure, and stated that the government had made up its mind on this question. He stated it had made up its mind on the 24th December, or before Mr. Preston put in his report. He, Mr. Preston, says in his letter contained in his report that the government's mind was made up as to what it would do, and is precisely what this resolution says: to organize a company for the purpose of competing with the North Atlantic Steamship Conference. This is not a new thing. The government knew about it when parliament met. If the Prime Minister is sincere, and if he was sincere, why did he not introduce such resolution and have this committee hold sittings before we are asked to ratify the agreement at all?

I ask my hon. friends, are we to take what the rules of the House declare is the interpretation of this proceeding; or are we to vote in a manner which virtually ratifies the agreement and then trust to the Prime Minister to bring in a resolution later on with the proper order of reference? I will give my hon. friends another procedure which could have been followed. When notice of the resolution was given and it was placed on the order paper, it was still open to the Prime Minister to appoint a committee, and it has been open to the Prime Minister ever since the debate started, to let the debate stand in abeyance, appoint a committee, and have the committee report before we were called upon to vote upon the resolution. I ask my hon. friends as sensible men, how do we vote on this? We vote in the light of the information we have. That is how I am called upon to vote. I am not called upon to take the evidence of the hon. member opposite and his interpretation of some circuitous process to get some further evidence that we know nothing about. I am not called upon to do that, and he has not the right to ask members of parliament on this side, or any other side of the House, to accept his word in this matter, and I should not be expected to conform to that procedure. I accept the plain English of this resolution.

I want to examine the resolution for a moment. I am not going into the agreement, or going to again go through the process, but I want to examine the procedure. We have two things before us and one of them is that Mr. Speaker do now leave the chair. I have under my hand an interpolation of the Prime Minister to the speech that was delivered a few minutes ago by the hon. member for West Calgary (Mr. Shaw). That hon. member had just stated that he accepted the word of the Prime Minister that this resolution would go to a committee ultimately and ample scope would be given to consider it and vary it in any way they chose. He said he accepted that. But the Prime Minister rose and interpolated this:

> Not only will we do that, but as soon as this resolution under consideration carries I intend to move, and before it goes into committee at all—

And I want hon. members to follow me—

> —before it goes into committee of the whole House, I am prepared to move the appointment of this special committee.

Let us examine his position. Surely the rules of the House and plain, simple English ought to govern. The resolution is that Mr. Speaker leave the chair. If the resolution is carried, ordinarily what position are we in? The position we are in is this, that Mr. Speaker is out of the chair and this House is in committee of the Whole on this resolution. It is not competent for the Prime Minister to interject such a resolution as the one he mentions now.

Mr. MACKENZIE KING: I beg my hon. friend's pardon. What I said was that when the House went into committee and the committee reported progress and asked leave to sit again, I would move an amendment that the committee do not sit again, but that the resolution be referred to a special committee, that being the quickest way to get the matter before a special committee.

Mr. STEVENS: This is another. The fifth position the Prime Minister takes.

Mr. MACKENZIE KING: That is the position I took.

Mr. STEVENS: Hitherto the position was that what would be done would be this, that the bill on its second reading would be referred to a special committee. That has been told us time and time again. What I am arguing and pleading for in this House is simply to let us stand by the rules of the House and the plain English of this measure. Let me illustrate my point. Eminent authorities on law have pointed out certain things in this agreement. What have we had in reply? We have had in reply this from the Prime Minister: I do not care what is in the agreement: I say so and so. Surely we are not going to

be called upon to accept a position of that kind. We are not children; we are not here to accept the ipse dixit of the Prime Minister; we are here to deal with measures in black and white and plain English. The Minister of Justice (Mr. Lapointe), the Acting Minister of Finance (Mr. Robb), and several other ministers of the crown, who have had long experience in parliamentary life, know that one of the most important things in legislation is to have measures carefully, properly and clearly drafted, and there is no sense or use in introducing to parliament a measure that does not convey the intention of the government, if it is a government measure. If the Prime Minister has any desire to change this, if, as he says, his private interpretation of this measure is what will control, then why does he not and why has he not embodied it in the resolution itself? Further than that, when this resolution passes this committee, it is not competent for private members to change the principle of the bill that is based upon the resolution. I know it is quite competent for parliament to reverse its own action. But for instance, this resolution, when it carries, authorizes the payment to Sir William Petersen of a certain sum of money as a subsidy, not as a charter, as the Minister of National Defence (Mr. Macdonald) would have us believe. It is not a charter or any distant relation of a charter; it is a subsidy pure and simple, and no private member of this House has any right to substitute anything else for it. There is one of two courses, one of two destinies for this bill and only those, in the minds of the government now, in the mind of the Prime Minister as he sits in this House—I am not quite sure which of the two he intends to take—one is a deliberate intention to kill this measure in committee and then to go to the country at large and say: We tried to do our best, but we were defeated in parliamentary committee on the matter. The other is to use his majority in the committee, which he will have over both oppositions, to force this thing through, then to come back to the House and say it was carried after careful investigation, and go before the country and say: This was given careful consideration by a parliamentary committee, approved by that committee, approved by a majority of the House and, therefore, we are justified in carrying it into effect. One of these two courses the Prime Minister has determined to pursue. It is all balderdash to my mind—the idea of giving to a committee an opportunity to study carefully this matter. Let hon. gentlemen take note of the voluminous reports on this subject. Do hon. gentlemen who have read those reports expect to get in that committee any better information than they can get from the reports of the Shipping Committee of 1909, or the Dominions Royal Commission, or the committee that sat in 1918 on shipbuilding, or the latest one, the Imperial Shipping Committee? Any one of those will give us not only British but Canadian testimony. There is any quantity of it and it has been conned over by hon. gentlemen in this House. There is nothing you can bring up in a committee that will help to solve the question any more than that.

Mr. CANNON: Am I to understand that my hon. friend contends that this government could spend any money simply because a resolution had been voted without a bill following the resolution in the regular course?

Mr. STEVENS: No, I have already outlined the procedure. My hon. friend probably did not hear me.

Mr. CANNON: I followed my hon. friend.

Mr. STEVENS: I carefully followed the proper parliamentary procedure. I will do it again so that there will be no mistake in regard to my position. I said, first, there was notice given of a resolution; second, the resolution was moved into committee of the Whole; third, the resolution was reported; fourth, it was read a second time and agreed to; fifth, leave to introduce a bill was asked for; sixth, the bill was read a first time; seventh, the bill was read a second time; eighth, it was sent to a committee, and lastly, it came back to the House and was read a third time. That is the procedure.

Let me refer to the amendment. You cannot brush aside this resolution by any simple gesture, saying: Let us slip it out of the way and we shall have it up in the committee in some fashion or another. There is the resolution for our consideration. It is one of the most important documents that has been introduced in this House during this session. It involves the expenditure of a large sum of money. It makes possible the expenditure of an unlimited sum, as I want hon. gentlemen to realize as well. In addition to that, it deals with a very serious principle, that of subsidizing ocean steamships in competition with others in connection with the freight handling business. We do not agree with that. We have been charged that we have offered no constructive criticism. This is what we suggest, and I invite hon. gentlemen to give some thought to this. We say that

we do not agree with this Petersen contract at all. We want to reject it absolutely and we say that, instead of Mr. Speaker leaving the chair and the House going into committee on this question, this be done:

That Mr. Speaker do not now leave the chair but that it be resolved: That effective control of ocean rates can be exercised only with the co-operation of all portions of the empire, and by a body on which all are represented, and the contract made by the government with Sir William Petersen, based on the report of W. T. R. Preston, is ill-advised, costly and futile and unworthy of the serious consideration of this House.

This is what we offer to the House. There is not in this amendment a word that is inconsistent with the report, the advice and the recommendation of the Agriculture committee of 1923, upon which the Prime Minister now says he bases his measure. I am not going to read the report again as it has been read several times. What did it recommend? First, it cited and reviewed a great deal of the testimony and said that it was a tremendously important question; that it was a question that required the utmost care and consideration. It suggested a reference to the International Institute of Agriculture at Rome. Then it recommended that we should co-operate with other parts of the empire in bringing about some stabilization and control of freight rates. We suggest that there should be co-operation with all portions of the empire.

My right hon. leader yesterday showed with such clarity that all must have seen the point and accepted it as beyond contravention, that the government could not possibly control rates between Canada and any other country. We could not control rates between Canada and the United States nor between Canada and Great Britain. We could control them by owning the ships and carrying freight at a loss, but we could exercise no control nor could we direct the transportation of freight between this country and another. And that is what the amendment says; it declares that in order to secure that control there must be co-operation with other parts of the empire. My right hon. friend, the Prime Minister, in his speech, in a somewhat light vein I admit, said that the time may come when an international board may be set up. Well, I know of no better way of starting than by setting up an inter-imperial board which would comprehend half of the liner steamship tonnage of the world, thus taking a long step towards the goal which the Prime Minister has in view at some distant date in the future. We say that there should be co-operation. in which all parts of the empire should be represented; and further we say that this contract entered into by the government with Sir William Petersen is ill-advised, costly and futile. I invite hon. gentlemen to examine these last few words. I have not heard any hon. gentlemen in this House, with the exception possibly of the minister himself (Mr. Low) and the Prime Minister (Mr. Mackenzie King), say anything else than that the agreement was ill-advised and that they questioned the wisdom of proceeding with it. I have not heard one single gentleman say anything to the contrary, nor have I read in any leading journal in this country, with the exception of the Manitoba Free Press, any editorial which openly commended the contract. Take my hon. friend from St. Lawrence-St. George (Mr. Marler); he knows perfectly well that the contract is undoubtedly ill-advised and he knows it is costly and futile. Nor would he under any circumstances stand in this House and say he approved of it. Yet the hon. gentleman will vote for it; he will vote in support of it. The hon. member knows perfectly well that the whole thing is absolutely futile; he knows that it is in direct contravention of the very policy about which he has been speaking so learnedly in the last few months. There is not a single thing in this contract, not a principle of it, not one of its terms, which is consonant with his attitude during recent months. Yet he will vote for it.

Mr. MARLER: I did not say I would vote for the contract; I said I
12 m. would vote in support of a motion to investigate the facts as set out in the contract, using the contract as a basis for discussion.

Mr. STEVENS: My hon. friend represents probably the greatest city in Canada and if he and others on his side, together with some hon. gentlemen to my left, had simply taken a clear stand on the question they could have had their investigation, because the Prime Minister would not dare for a moment under the circumstances to press the matter to a vote. I could name a dozen hon. gentlemen opposite who dare not stand in this House this evening and support the government in this measure except by a subterfuge which will enable them to escape the consequences of their action. If they thought that the resolution would come out of the committee confirmed they would not risk their position in this House by supporting it; they would not dare face their constituents after voting for the measure. There are I say a dozen gentlemen opposite who would not support it if they thought that anything of the

kind would ensue. Hon. gentlemen to my left have taken a more honourable and moderate stand, but a large number of them, if they were certain that the matter would come out of the committee confirmed and that the agreement would go into operation, would not support the motion now. I plead with the House to take the plain simple English of the resolution before them and to say whether they are for or against the contract. That is the position. We say in our amendment that the agreement is ill-advised, that it is costly, and that it is unworthy of serious consideration. Let me refer to the costliness of it.

Mr. GOOD: Before the hon. member leaves that point, would he be satisfied if the debate were adjourned now and a committee appointed to look into the matter and report later?

Mr. STEVENS: Certainly; let the Prime Minister adjourn the debate and suspend this thing. If the Prime Minister is sincere that is what he will do. My hon. friend has put his finger on the spot. What object is there in forcing the matter to a vote and placing us in the compromising position of supporting or rejecting it—supporting it when hon. gentlemen desire to reject it? What is the object in doing that? I venture the suggestion right now that if the experts on our rules were to look carefully into this matter it is doubtful whether the Prime Minister's motion would be considered in order at all. It would be but sound parliamentary procedure for the Prime Minister to move the adjournment of the debate, or have one of his supporters move it, and then appoint a committee. That is sound parliamentary procedure and certainly it is the plain common sense of the situation, if he wants to play the game square with hon. gentlemen to my left whom he wants to support the measure. I am not suggesting to hon. gentlemen to my left that they should line up with us and vote against the government to put them out of office. Not at all; I should prefer the government to stay in office a little while longer, for they are killing themselves faster than we could kill them. I do not want to defeat the government now. But if half a dozen honourable gentlemen would politely tell the Prime Minister that the ordinary parliamentary procedure should be followed, if they would challenge his sincerity by asking him to have the debate adjourned and to appoint a committee to investigate the matter, they could secure the object they have in view. But my hon. friends are not particularly anxious to investigate the Petersen contract; what they want to do is to investigate the broad question of ocean freight rates.

Mr. MACKENZIE KING: Oh, Lord.

Mr. STEVENS: My right hon. friend says "Oh, good Lord."

Mr. MACKENZIE KING: No he didn't; he left out the "good."

Mr. STEVENS: That is fine parliamentary language for the Prime Minister to use. The right hon. gentleman says that I am wrong, but I thought that I was interpreting him generously. The Prime Minister inferred that we should have an opportunity of investigating ocean freight rates; that is how I view the matter. He says "Oh Lord" to that; whatever that interpolation means I do not know. However, let him now tell the House what his order of reference is to be; let him tell the House, before he asks us to vote, what is going to the committee. Let the Prime Minister in some definite form, in the form of a resolution to which we can hold him and his government, tell us where we are drifting in connection with this subject. He has probably sixty or eighty members behind him who have not yet spoken. Let some hon. gentlemen from Montreal and Quebec tell us; let the Minister of Justice (Mr. Lapointe), who has not yet spoken, rise in his place and inform the House how the matter will be referred. Will the Minister of Justice move the adjournment of the debate?

Mr. LAPOINTE: Has the hon. member concluded his speech?

Mr. STEVENS: Let the Minister of Justice adjourn the debate and then let the Prime Minister move his resolution for a committee of the House to go into the matter.

What I want to say in conclusion is simply this: we have before us a resolution that Mr. Speaker do now leave the chair in order that the House may consider a contract that the governement has agreed to and signed, a contract which is subject only to final ratification; and that ratification the government now seeks to obtain. The other motion before the House is that instead of doing that, the matter be taken up in conjunction with other sections of the empire and a definite method of control of ocean freight rates worked out by that process, consonant with and in harmony with the report of the agricultural committee of two years ago, upon which report the Prime Minister declared the other day he based this present proposal.

Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, I cannot resist the urgent appeal of the hon. member for Vancouver Centre (Mr. Stevens). He will forgive me, however, if I do not take his display of passion too seriously. I wish merely to say a word on the question of procedure. Seven full days have been devoted to the consideration of this resolution. It was introduced on the third of March—I merely give these dates in order to show that the charge of unfairness proffered so violently by my hon. friend is not well founded—and was considered on that date. It was further considered on Tuesday the tenth of March, on Thursday the twelfth of March, on Friday the thirteenth of March, on Tuesday the seventeenth of March, on Thursday the nineteenth of March, and to-day, the twentieth of March. All this was on the motion which merely asks that Mr. Speaker leave the chair, as my hon. friend has stated, for the purpose of considering this resolution. My hon. friend speaks very eloquently of the procedure of parliament. He knows very well that a bill concerning trade or involving an expenditure of money has to be preceded by a resolution.

Mr. STEVENS: And I approve of it, wholly.

Mr. LAPOINTE: My hon. friend approves of it. It is merely to give the House an opportunity to provide another stage for discussion on the part of the House. But that discussion has always been, and should be, merely on the general lines of the measure submitted. Here is what Bourinot says concerning this matter:

> The rule, as generally understood in the Canadian House—and English practice bears it out—simply requires the House to go into committee to consider a general proposition, setting forth the expediency of bringing in a measure on a particular question affecting trade.

Now, my hon. friend says we all agree—

Mr. MEIGHEN: Will the hon. gentleman permit me? The motion is that the Speaker leave the chair for the House to resolve itself into committee on a certain resolution. Does he say that the policy embodied in that resolution is not submitted to the House for determination?

Mr. LAPOINTE: In a general way—the broad principle of it, not the principle of the bill which is going to follow it; not the details; not the particulars as they have been discussed during this debate.

Mr. MEIGHEN: Not the principle of the bill which is to follow it?

Mr. LAPOINTE: In a general way.

Mr. MEIGHEN: Certainly.

Mr. LAPOINTE: If my hon. friend is serious when he says, as he said a few minutes ago, that we are in agreement on some things: first, that there is a combine, and secondly, that there should be a measure of control of ocean rates; if we are all in agreement on that, I submit that this resolution should have been voted on long ago.

Mr. MEIGHEN: Will the minister please define in his own words what he considers the general principle of this resolution?

Mr. LAPOINTE: Control of ocean rates.

Mr. MEIGHEN: By what means?

Mr. LAPOINTE: The details of the—

Mr. MEIGHEN: By any method at all?

Some hon. MEMBERS: Order.

Mr. MEIGHEN: Does the minister mean by that, controlled by any method at all?

Some hon. MEMBERS: Order.

Mr. MEIGHEN: I do not want any bear garden; I want some thoughtful discussion. Does the minister mean that the only principle here at stake when we approve of this motion is control of ocean rates by any method at all? Will he answer that?

Mr. LAPOINTE: Surely the particular method proposed by the government is entitled to some discussion. But as a bill will be presented following the adoption of the resolution, and as that bill will have to be read a second time and the whole principle of the thing discussed again by the House, I claim that the discussion of the details and the clauses of the agreement that has taken place during this debate was not called for.

Mr. MEIGHEN: Will the minister permit me again? Will he say that the particular method proposed by the government for the control of rates is not now under review and for determination?

Mr. LAPOINTE: My right hon. friend knows full well—

Mr. MEIGHEN: Will he answer that?

Mr. LAPOINTE: —that the method itself, the particulars of the agreement, will be discussed later. That is never done on the resolution preceding the bill. My hon. friend speaks of precedents. Well, I have been in the House just as long as he has, I think a little longer. I have been in this House longer than my right hon. friend

the leader of the opposition, and very seldom indeed—I do not remember more than one or two occasions—has any amendment been moved to a resolution preceding a bill, as has been done here.

Mr. MEIGHEN: Will the hon. gentleman permit me? He is a lot nearer the point than any other minister that has spoken. When the motion is made that the Speaker leave the chair for the House to resolve itself into a committee of Ways and Means on the budget resolution, is not the budget as presented at stake, and has not this House voted on that motion, and have not hon. members to my left voted against it? Further, have amendments not been moved to that motion?

Mr. LAPOINTE: My right hon. friend knows very well that the resolution preceding a bill concerning trade or involving an expenditure of money is not at all in the same class as a resolution on the occasion of the budget debate, to which he referred.

Mr. MEIGHEN: Oh yes.

Mr. LAPOINTE: By no means.

Mr. MEIGHEN: What is the budget debate but exactly that thing—a debate on a resolution preceding the budget bill? It is precisely the same thing.

Mr. LAPOINTE: I crave the indulgence of the House, because I did not want to take up as much time as I have taken. I wanted to be brief, but my right hon. friend is responsible for the prolongation of my remarks.

Mr. MEIGHEN: I accept that.

Mr. LAPOINTE: I say that we are not open to any charge of unfairness in this regard. So far as voting on Friday is concerned, my hon. friend is still wrong. Apart from having no rules in any book that I know of concerning the prohibition against voting on Friday, if the word prohibition may be used by me—

Mr. STEVENS: Which I admitted, and stated.

Mr. LAPOINTE: I say again to my hon. friend that I have been in this House as long as he has and I voted on Friday on many occasions.

Mr. STEVENS: Will the minister permit me?

Mr. LAPOINTE: I will tell him further—

Mr. STEVENS: My point was—and I know the minister does not desire to misrepresent me—that it has always been the practice to make an arrangement if a major matter was to be under discussion.

Mr. LAPOINTE: Surely my hon. friend is not serious when he speaks of arrangements being made in every case.

Mr. STEVENS: Yes, I am.

Mr. LAPOINTE: When we have been forced to vote under compulsion, does the leader of the opposition claim that he selected his days? Does he say that Fridays were excluded?

Mr. MEIGHEN: Yes, and under the rules it cannot be done on Friday.

Mr. LAPOINTE: It has been done every day on questions at least as important as this one, on questions which were identical with this one.

Mr. BOYS: Will—

Mr. LAPOINTE: Will my hon. friend allow me to proceed? Really, I do not interrupt hon. gentlemen all the time when they are making speeches, but if my hon. friend insists—

Mr. BOYS: I was just going to ask the minister if he would say when the government determined to force a vote to-day?

Mr. LAPOINTE: I do not know. There has been no determination of forcing a vote. We have been discussing this matter seven days, and I think the vote should have been taken at the beginning of the week. We are not responsible for that. If we have to vote to-night, it is because my hon. friend's friends have been discussing this contract all week; we are not responsible for that. I say that in the very session that preceded the last general election, when my right hon. friend the leader of the opposition was Prime Minister, we were forced under closure to vote I think eight millions of dollars for the Canadian merchant marine, after only one night of discussion. And now these hon. gentlemen are protesting because, after having discussed this resolution for seven days, a resolution preceding a bill, which will be introduced and which they will still have full opportunity to discuss, which bill will be referred to a committee and be reported back to the House—with all this opportunity for discussion, they claim they are being treated unfairly. Well, Mr. Speaker, we have had the administration of the affairs of this country under my right hon. leader and he has been leading parliament now for his fourth session, and the present government has never yet applied closure to the business of parliament. This charge

of unfairness I throw back at my hon. friends over there.

Mr. W. A. BOYS (South Simcoe): I had not the slightest thought of occupying the House at this time of night in connection with this debate, but I feel I cannot allow the remarks of my hon. friend the Minister of Justice (Mr. Lapointe) to pass without making some observations.

It has been my pleasure and my privilege to act as whip of this party now for nearly four years. I am glad to say we have managed to get on without any misunderstanding, with an exchange of courtesy and fair play in our proceedings during all that time, and I would like to pay the whip of the government party the compliment of saying that I am of the opinion that if he had not been laid up at his house with sickness, we would not have had the situation we have to-night. I asked the minister if he would say when the government determined to force a vote. He said he did not know the government did determine to force a vote.

Mr. LAPOINTE: I know the government wanted a vote to be reached at the beginning of the week.

Mr. BOYS: That is a different thing. I concede at once the right of the government to force a vote whenever they want to. But I do think that the custom of years and the courtesy of years should play some part in that determination. I want to say that when I discussed this morning in no exceptional way, but in the ordinary way, the matter of those who had yet to speak, not to obstruct, but to make speeches, there was no suggestion on the part of the government whips that there would be a vote to-day. Not until I got into the House at three o'clock was there ever such a suggestion, and I feel it my duty in order that those at all events in my own group may see that the trouble we have got to-day is one that cannot be laid at my door, to make the situation clear. I think I have always tried to be fair in conducting the business of this House so far as this party is concerned, and I believe the whips with whom I have worked will do me the justice of saying so. But it has certainly been forced upon me that we have now reached the stage where one of two things must happen: We must either continue to be frank and fair with each other, and maintain the customs of the past, or else come to the conclusion that they are to be at an end.

Now I got this note after three o'clock. This was after a preliminary talk when there was no suggestion that there was to be a vote to-day. It has been known for two weeks that we had eight or ten more speakers, and I suggest it would be hardly fair to ask them to speak at two or three o'clock in the morning. As a matter of fact, most of the government members from Quebec want to go home at 3.30 on Friday afternoon, and frankly I may say that most of our members from Ontario want to go away at eleven o'clock on Friday night. I naturally wished to avoid this vote to-night, and I suggested that it could go over till Tuesday, that the budget could be introduced on Tuesday, and then could be left over a day or two for consideration, and that we could then go on with this, and I promised that so far as we were concerned there would be a vote on this resolution on Tuesday night.

I got this letter from one of the government assistant whips. He did not say to me: There will be a vote to-night. He said, "We will try to vote to-day." I thought that was a little strange, and I wrote back and said, "Does this mean you intend to force a vote? If it does, I do not think it is fair, for I have had no notice, and I have not notified my members. Nobody expected a vote." The answer came back, and I give him credit for being frank with me, "Yes that is the intention." I have not the slightest doubt the government made up their minds yesterday to force a vote on this resolution to-night. I notice in the House to-night members who have not been here for quite a long time, who have come from a long distance, upon word from somebody upon the government side to be here on hand to vote.

I want to say most emphatically that if we are to be fair and frank with each other the least courtesy that could have been shown to me was to tell me this morning, at all events, when I was negotiating for the proceedings of to-day, that there was to be a vote to-night, so that I could notify the members. But that was kept back. Now I appeal to the Prime Minister. I do not think that I suffer from a chronic grouch, but I admit that I am disappointed. To me this is one of the most unfortunate days since I have been in the House of Commons. I do not think it a creditable performance. I do not know who is absolutely responsible for it, but I do not believe the whips are. I think if we are going to use the whips at all in the House, then surely we must be fair with each other. If I had been asked to agree to a day and had refused, or had been unreasonable, it would have been quite in order to say: We will force a vote. But I have never been asked to do it. I see the Acting Minister of Finance (Mr. Robb) in

his place. He once occupied the position I occupy, the whip of the opposition, and I wonder what he would have thought if he had been treated that way.

I have said enough, I think, to show that this proceeding is not fair. It comes to this: If we cannot be fair with each other, the only way to get business done will be to do business at arm's length, and to cancel all pairs. That is not my desire. I would be very sorry to see that done. I appeal to the Prime Minister: I do not think we have been treated fairly on this occasion, and I trust that if we do come to some understanding for the future, that a repetition of this incident will not take place. If it does, then so far as I am concerned I would no longer want to be whip of the Conservative party, for I would be unable to do business with the whip on the other side under those conditions.

Mr. MACKENZIE KING: My hon. friend has made a reference to me. Probably he will permit me to remind him and the House that some ten days ago I mentioned that the governnment was ready on that Thursday to bring down the budget, and that we were anxious to have the budget debate over before Easter. Again this week I mentioned that the budget would be brought down this week. I made it perfectly plain that if we did not get it down this week, we would bring it down on Tuesday next, and at the very outset I intimated that when the budget was brought down it would take precedence over everything else, and that we hoped to conclude the budget debate by Easter.

Now this resolution has been before the House eight or ten days. It has been understood all along that we wished to get the bill to a committee before the budget debate came on. My hon. friend knows that Monday is private members' day, and that if we did not take the course of getting this vote to-night the chance of getting this bill to a committee might remain over until after the recess. I do not think anyone would wish that. To-day I was told that no undertaking could be given by my hon. friend that this bill would get to a committee even on Thursday, if Thursday were set apart for further debate. When that intimation was given to me I made it perfectly clear that we would have to take the vote to-night.

Mr. BOYS: I simply wish to add this. As a rule—and my right hon. friend knows it perfectly well— we have an understanding, or try to have at all events, as to the day on which the vote will take place. That practice has obtained for years and meets the mutual convenience of all members of the House. That practice was absolutely abandoned in this case, and that is why we find ourselves in this position.

The House divided on the amendment (Mr. Clark) which was negatived on the following division.

TEMPORARY

Messrs:

Putnam,	Ross (Kingston),
Vien,	Anderson,
Delisle,	Maclean (York),
Healy,	Church,
Crerar,	McCrea,
Hodgins,	Kellner,
McConica,	Arthurs.

Mr. VIEN: I was paired with the hon. member for Halton (Mr. Anderson). Had I voted I would have voted for the motion.

Mr. BOYS: I was paired with the hon. member for Cape Breton South and Richmond (Mr. Kyte). Had I voted I would have voted against the motion.

Mr. MALCOLM: I was paired with the hon. member for North Grey (Mr. Duncan). Had I voted I would have voted for the motion.

Sir HENRY DRAYTON: I was paired with the hon. Minister of Customs and Excise (Mr. Bureau). Had I voted I would have voted against the motion.

[Mr. Malcolm.]

Mr. McCONICA: I was paired with the hon. member for Parry Sound (Mr. Arthurs). Had I voted I would have voted for the motion.

The House thereupon went into committee on the resolution, Mr. Gordon in the chair.

Mr. MACKENZIE KING: As I intimated in the course of the discussion, that as soon as the resolution was referred to the committee of the Whole, it was my intention to move that the committee should report progress and ask leave to sit again in order that I might at once have the resolution referred to a special committee, I beg to move that the committee rise, report progress and ask leave to sit again.

Progress reported.

Mr. SPEAKER: When shall the committee sit again?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I move that the committee do not sit again, but that the resolution be referred to a special committee.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): I submit that the motion is not in order. In the first place, it is not a substantive motion and, notice not having been given, if for no other reason, it would be out of order on that account. That is the point of order I raise first.

Hon. ERNEST LAPOINTE (Minister of Justice): I would refer you, Mr. Speaker, to Bourinot, page 527 which reads:

> In case a committee of the Whole has reported progress a motion may be made immediately before fixing the committee for a future day, that the bill be referred to a select standing or other committee.

Mr. MEIGHEN: A motion is frequently made immediately, but notice must be given of the motion. Any motion may be in order, but it is subject to the usual rules of debate.

Mr. SPEAKER: I was aware of that dictum of Bourinot which reads:

> In case a committee of the Whole has reported progress a motion may be made immediately before fixing the committee for a future day, that the bill be referred to a select standing or other committee.

Now it is stated that notice should have been given. I find in the Journals of the House, on May 7, 1901, the following:

> The order of the day being read, for resuming the adjourned debate on the question which was, on Friday last proposed, that Mr. Speaker do now leave the chair (for the House in committee on the bill to incorporate the Canadian Nurses' Association);
>
> And the question being again proposed—The House resumed the said adjourned debate.
>
> And the question being put on the motion—It was resolved in the affirmative.

The House accordingly resolved itself into a committee on the said bill, and, after some time spent therein, Mr. Speaker resumed the chair; and Mr. Macdonald reported, that the committee had made some progress.

On motion of Mr. Clarke, seconded by Mr. Bell (Pictou).

Ordered, That the bill to incorporate the Canadian Nurses' Association be referred back to the select standing committee on Miscellaneous Private Bills, for further consideration.

No notice was given in that instance, and it is my firm opinion that rule 40 does not apply in the present case, inasmuch as it is a consequential procedure as regards the main question before the House; and if at each stage of the proceedings notice were required the session would be protracted indefinitely. My ruling therefore is that no notice is necessary in the present instance.

Mr. MEIGHEN: I would call your attention, Mr. Speaker, to this, in regard to the case mentioned, that in the first place the point as to notice was never raised; and in the second place it was the case of a bill. It is not the custom of this government to give any notice that can prepare one; they prefer the other method. I would point out, however, that no precedent can be found for a reference to a special committee—

Mr. CANNON: Am I to understand, Mr. Speaker, that your ruling is being debated?

Mr. MEIGHEN: —of a resolution—

Some hon. MEMBERS: Order.

Mr. MEIGHEN: I am rising at the moment to another point of order. I say that there is no precedent for the reference of a resolution to a special committee.

Mr. SPEAKER: I did not quite catch the point submitted by the right hon. member.

Mr. MEIGHEN: In the first place, I raise the point that in the case cited there were these distinctions: it was the case of a bill, and as well the point of order was not raised as to the request for notice. In the second place, my point of order is that this resolution has a certain set purpose, a certain set course, and the rules and practices of the House provide that course through many decades: it goes to committee of the Whole. And I have never heard of a resolution which has that purpose and which follows that course, being moved to a special committee. I submit further that such a resolution is not capable of being moved to a special committee.

Mr. SPEAKER: As regards the distinction between a resolution and a bill, in my judgment a bill is the legal child of a resolution. A money or a trade bill is always based on a resolution. As to the other point, I have not the case at hand; but certainly it is within my recollection that on several occasions resolutions have been referred to special committees.

Mr. MEIGHEN: That is not my point, Mr. Speaker. I do not say that no resolution can be referred to a special committee; what I say is that such a procedure cannot be followed in the case of a resolution of this character, which, under the rules, has a set purpose. A resolution moved by a private member often is referred to a special committee, but this resolution is for a different purpose; it must follow a certain procedure, and the practices of the House have never warranted any other.

Mr. SPEAKER: In my judgment the opinion of Bourinot is peremptory on this matter. Bourinot states that in case a committee of the Whole has reported progress, a motion may be made, immediately before fixing the committee for a future day, that the bill—or in my judgment a resolution—be referred to a select standing or other committee. I must stand by the first ruling I gave.

Mr. MEIGHEN: Before the motion is put, Mr. Speaker,—

Mr. MACKENZIE KING: The motion is not debatable. My right hon. friend has occupied a good deal of time this evening and I think, Mr. Speaker, that the motion had better be put.

Mr. SPEAKER: The right hon. member was discussing the point of order, as he had a right to do. Of course, the motion is not debatable, per se, under rule 17(a).

Mr. MEIGHEN: I shall not fail to thank the Prime Minister and hon. gentlemen for the exceeding courtesy they have shown throughout the day. I simply want to say that I do not wish my failure to appeal against the ruling to be regarded as acquiescence. I considered it a serious matter that a resolution of this kind should be submitted to a special committee in the absence of any precedent to justify it.

Mr. SPEAKER: I gave my ruling conscientiously and would not be affronted at all if an appeal were taken against it. Under the rules of the House, when the Speaker gives a decision it may be appealed against.

Mr. LAPOINTE: And that is all that may be done.

Mr. STEVENS: May I ask one question? Do I understand, Sir, that you interpret this resolution as constituting the order of reference to the committee?

Mr. SPEAKER: The motion speaks for itself. The motion is that the committee do not sit again but that the resolution be referred to a special committee. In my judgment the resolution which was adopted is thereby referred to the committee.

Mr. MEIGHEN: I am sorry to rise again. I understood that the motion included the clause, "that the committee do not sit again." I submit that this clause makes it doubly clear that the committee should sit again on the resolution.

Mr. SPEAKER: The special committee will have to report to the House and its report will be debated before the House.

Mr. MEIGHEN: Before the House?

Mr. SPEAKER: Yes.

Mr. MEIGHEN: My point is that under the rules this resolution must pass through committee of the Whole. The motion now is that it do not; and for the simple reason that the motion is contrary to the rules it cannot be in order.

Mr. GRAHAM: Will my hon. friend see this? I know he will see it if he thinks of it: You cannot have a resolution before two committees at the same time. It is now resolved to send the resolution to a special committee, and that committee will submit its report.

Motion agreed to.

On motion of Mr. Mackenzie King the House adjourned at 1.20 a.m. (Saturday).

Monday, March 23, 1925

The House met at three o'clock.

TAX COLLECTIONS

PROPOSED INQUIRY BY PUBLIC ACCOUNTS COMMITTEE

Mr W. C. GOOD (Brant): I should like to know if I may proceed now with the motion that I made on Friday last regarding the investigation of certain matters before the Public Accounts committee. This motion stood at the request of the Acting Minister of Finance (Mr. Robb).

Mr. MACKENZIE KING: Go on.

[Mr. Lapointe.]

Mr. MACDONALD (Pictou): What are the terms of the motion?

Mr. GOOD: I should like to move:

> That the standing committee on Public Accounts be instructed that they have power to investigate the methods by which the business profits and income taxes, especially in the case of large concerns, have been assessed and collected.

This is simply a renewal of the instructions given to the committee last year, the committee not having secured a quorum last year, and not having performed the work that was assigned to it.

Hon. J. A. ROBB (Acting Minister of Finance): I do not wish to unduly delay my hon. friend in presenting his motion and reaching a conclusion on it, but I think it fair to point out to the House, and for the information of the Public Accounts committee, before which committee I suppose my hon. friend will bring these matters for investigation, certain considerations. I was a member of the House at the time when the business profits tax and the income tax were introduced. I think that both these taxes are based upon the legislation of the British House, and that it was the desire of the representatives of the people in parliament that in so far as possible we should follow the British practice. My recollection—and I stand in the judgment of hon. members who were then in the House—is that parliament at that time unanimously decided that there should be secrecy, that confidential reports made to the government either by firms or private individuals should be treated as confidential. For the information of the House and of the Public Accounts committee, I especially desire to direct their attention to section 14 of the Business Profits War Tax Act, chapter 11 of the statutes of 1916, and my recollection is that the same clause will be found in the Income Tax Act:

> No person employed in the service of His Majesty shall communicate or allow to be communicated to any person not legally entitled thereto any information obtained under the provisions of this act, or allow any such person to inspect or have access to any written statement furnished under the provisions of this act. Any person violating any of the provisions of this section shall be liable on summary conviction to a penalty not exceeding two hundred dollars.

I am not going to oppose the resolution of my hon. friend. This is a new House, and the Public Accounts committee is constituted from members representing all parties in this House, and it will be for the Public Accounts committee, having regard to the

law as laid down by parliament, to determine how far they should go. I should like to say that so far as this government is concerned, we have endeavoured to carry out the principle of the law and to maintain secrecy so far as possible in connection with these reports. I have had the honour of presiding over the department administering these acts, and although personally I had the right, under the rule that the Minister of Finance is an officer of the department, to look into these matters, I have never attempted to dig into the affairs of firms or individuals making these reports.

Mr. GOOD: May I ask whether the minister does not recall that this matter was pretty fully debated last year? The resolution as it stands does not necessarily imply that private files are to be gone into. I think that matter was pretty fully considered and settled last year.

Motion agreed to.

RURAL CREDITS—REPORT OF DR. TORY

On the Orders of the Day:

Mr. E. J. GARLAND (Bow River): I desire to ask the Acting Minister of Finance (Mr. Robb) if the report from Dr. Tory has yet been received, and if so, when it will be tabled.

Hon. J. A. ROBB (Acting Minister of Finance): It has not yet been received, but I expect to receive it on Tuesday of this week. Dr. Tory has been very busy the last few days attending the sittings of the Industrial Research Council, but I understand that he is now rounding out his report, and I expect to receive it shortly.

EXPENDITURE AND COMMITMENTS

On the Orders of the Day:

Sir HENRY DRAYTON (West York): We are to have the budget, I understand tomorrow. There is a question on the order paper, question No. 10, standing in my name, the answer to which would give information which, I think, the House would like to have when considering the budget. The question refers to outstanding claims for capital expenditure for the current fiscal year, and the total amount of commitments as yet unpaid.

Hon. J. A. ROBB (Acting Minister of Finance): I shall direct this matter to the attention of the Deputy Minister of Finance. I am not sure that we have that information available in the department. It refers to all the different departments of the government, does it not?

Sir HENRY DRAYTON: Yes. In other words, the country's claims, commitments and the like.

Mr. ROBB: I will try and get the information for my hon. friend.

Sir HENRY DRAYTON: I would also like ordinary as well as capital.

PROPOSED IMMIGRATION OF LABOURERS

On the Orders of the Day:

Mr. WILLIAM IRVINE (East Calgary): I want to ask the government a question arising out of a short news item which appears in the Lethbridge Herald of March 17. I will read it:

> Orders for thirty cars of cement from Exshaw, a million bricks from Redcliff, ninety tons of lime from the Summit lime works, Crowsnest, have been placed by the Utah-Idaho Sugar Company. Five cars of lumber have also been ordered, and heavy stocks of hardware. To meet the labour requirements of the beet growers, an order has been placed with the Canadian Pacific Railway Colonization Department for twenty-five Russian-German families.
>
> The Beet Growers' Association will bring in a limited number of selected Japanese labourers, while there is also talk of a colony of Highland Scotch being brought out. The company have decided to operate in Canada under a Dominion charter.

I would like to ask, if this company has been granted a Dominion charter, and if so whether the government would consider trying to prevent if possible an importation of workers until we have absorbed the surplus labour that is now without employment.

Hon. J. A. ROBB (Minister of Immigration): The question of my hon. friend is rather a large order. I shall first have to inquire in the Department of the Secretary of State whether a charter has been granted; my hon. friend could have obtained that information himself, I think. I have always regarded the Lethbridge Herald as a fairly reliable newspaper.

Mr. WOODSWORTH: I should like to ask whether as a matter of policy the government is content to allow a large number of foreign labourers to be brought to this country without some protest or without any regard to the unemployment which now exists. I think we have a right to that information.

Mr. ROBB: I think my hon. friend had better put his question on the order paper in the regular way, and we will look into it.

Mr. LAPOINTE: I may say that this question would be ruled out of order if it was made in the regular way, because it makes an assertion of fact.

QUESTIONS

(Questions answered orally are indicated by an asterisk)

CANADIAN NATIONAL RAILWAYS—FREIGHT REVENUE

Sir HENRY DRAYTON:

What were the average receipts and expenses for revenue freight per freight ton mile in each of the years 1923 and 1924, in the different regions of the Canadian National Railways and affiliated companies?

Hon. Mr. GRAHAM:

	REGIONS				
	Atlantic	Central	Grand Trunk Western	Western	System
	1924—1923	1924—1923	1924—1923	1924—1923	1924—1923
Revenue from rates per freight ton mile (cts.).	1.080—1.093	1.152—1.150	1.307—1.377	.771—.718	1.010— .999
Total revenue..	1.111—1.129	1.191—1.192	1.365—1.440	.784—.733	1.040—1.032
Expenses per revenue ton mile..	1.285—1.402	.922— .941	1.045—1.000	.711—.703	.875— .884

Sir HENRY DRAYTON:

What were the average receipts and expenses for revenue freight per freight train mile in each of the years 1923 and 1924, in the different regions of the Canadian National Railways and affiliated companies?

Hon. Mr. GRAHAM:

	REGIONS				
	Atlantic	Central	Grand Trunk Western	Western	System
	1924—1923	1924—1923	1924—1923	1924—1923	1924—1923
Average receipts per freight train mile (dollars)..	3.86—3.90	5.96—5.92	7.52—7.52	4.52—4.01	5.39—5.18
Average expenses (ditto)..	4.46—4.84	4.61—4.67	5.75—5.22	4.09—3.85	4.53—4.44

DEPUTY MINISTERS

Mr. DOUCET:

Referring to questions answered by the ministry, page 515, Hansard, "How many deputy ministers are there at present and what are their names and salaries?"

Are any of the deputy ministers named, in receipt of any other moneys or remuneration from the public treasury than that stated in the government's reply to said question? If so, what is the total amount, yearly, received by each such deputy minister?

Hon. Mr. COPP: No.

GOVERNMENT PROPERTY, VANCOUVER

Hon. Mr. STEVENS:

1. What amount of insurance is carried on property in Vancouver: (a) In the name of the Dominion government; (b) In the name of Vancouver Harbour Commissioners; (c) In the name of the Board of Grain Commissioners?

2. What was the total premium paid on said insurance for each of the years during 1922, 1923, 1924?

3. To whom was the said insurance given and who were the agents of the companies with whom said insurance was placed?

Hon. Mr. COPP: This information has to be received from Vancouver. It will therefore be some time before the question can be answered. The same applies to question No. 8.

CANADIAN NATIONAL RAILWAYS—BOX CARS

Sir HENRY DRAYTON:

1. What was the number of empty box cars moved over the central region territory by the Canadian National Railway System in each of the years 1923 and 1924, in preparation for the movement of grain from prairie points?

2. What was the approximate cost of such movement?

3. Is the movement of empty box cars for this purpose in the central region charged to the expenses of the central region?

4. What percentage of the rail grain movement east in each of the said years stopped at the head of the lakes?

5. Are all the receipts of such movement to the head of the lakes credited to the western region?

Hon. Mr. GRAHAM:

1. 1923, 16,344; 1924, 10,963.

2. These cars were moved in the ordinary course of business and no attempt was made to record the cost of their movement.

3. Yes.

4. 1924, 95.49; 1923, 94.54.

5. Yes.

BANKRUPTCY ACT

Mr. SPENCER:

1. Is it the intention of the government to introduce legislation at this session of parliament, in connection with amendments to the Dominion Bankruptcy Act as proposed by the standing committee on Banking and Commerce at the close of last session?

2. If so, when will such legislation be brought down?

Hon. Mr. LAPOINTE:

1. The matter is engaging the attention of the government at present.

2. Answered by No. 1.

CANADIAN GOVERNMENT MERCHANT MARINE—CARRIAGE OF COAL

Mr. CLARK:

1. How many tons of American coal were carried from United States ports to eastern Canadian ports on vessels of the Canadian Government Merchant

Marine during the calendar years 1922, 1923 and 1924?
2. What proportion of said coal was anthracite and what proportion was bituminous?

Hon. Mr. GRAHAM:

1. 1922, Nil; 1923, 2,235 tons; 1924, 9,249 tons.
2. All bituminous.

JUDGE CODERRE

Mr. BENOIT:

1. Is the Department of Justice aware that Judge Coderre has been sitting for some months on a police inquiry in Montreal as commissioner?
2. Has the Minister of Justice authorized such judge to devote his time to this inquiry?
3. Is the Department of Justice aware that the said judge has sent in a bill to the city of Montreal for more than $8,000 for his services?
4. Has the said judge drawn his salary during the time devoted to this inquiry?

Hon. Mr. LAPOINTE:

1. Not officially.
2. No.
3. No.
4. Yes.

CROSS POINT-CAMPBELLTON FERRY

Mr. JONES:

1. Was the department communicated with about the time of the expiration of the contract of the Cross Point-Campbellton Ferry Service?
2. If so, by whom, and what offers were made?
3. Were there any representations made to the department that it would be in the interest of interested parties on both sides of the river to have this contract open to tender?
4. If so, what representations and by whom?

Hon. Mr. KING (Kootenay):

1, 2, 3 and 4. As the license for Cross Point-Campbellton ferry service expires on the 30th of April, 1925, the licensee, having made substantial expenditures on his boat to provide more efficient service and better accommodation, made application to have license renewed. Upon a thorough investigation made by the department, and in view of the request for renewal of license having been approved by the municipalities concerned, it was decided to grant the renewal as authorized by the act for an additional period of five years from May 1, 1925. At the time the matter was under discussion, in the summer of 1924, representations were made by Robert L. Sinclair, G. B. Harper, A. A. Andrew and Capt. Frank J. Allard, all of whom desired that the renewal of the contract be opened to tenders, but sufficient reason was not found to exist to grant their request.

GOVERNMENT EMPLOYEES'—FREE TRANSPORTATION

Mr. JONES:

1. When free transportation is provided for government employees as authorized by law, is the department whose official receives the transportation charged with the same and the amount credited to government railways when the service is performed by the Canadian National Railways?
2. Otherwise, how is the matter dealt with?

Hon. Mr. GRAHAM:

1. No charge is made a government department by Canadian National Railways, nor is credit taken, when a government employee presents free transportation authorized by law.
2. Answered by No. 1.

LEGER'S CORNER SHOOTING RANGE

Mr. DOUCET:

1. Has the Militia department a shooting range at Leger's Corner, in the county of Westmorland, New Brunswick?
2. If so, is it the intention of the government to use this range during the coming summer or in the future?
3. Has the Militia department or the government received any complaints from the residents of this community opposing the use of this range as being dangerous to the residents?
4. If so, what steps have the government taken to remove this danger?

Hon. Mr. MACDONALD (Pictou):

1. Yes.
2. Yes.
3. Yes in the spring of 1922.
4. It was found on investigation that firing on this range is not dangerous to the residents of the vicinity.

RICHIBUCTO PUBLIC BUILDINGS

Mr. DOUCET:

1. Were tenders invited for repairs and improvements on public buildings at Richibucto, Kent county, New Brunswick?
2. If so, what tenders were received and amount of each tender?
3. Who made the repairs and at what cost?
4. Was the work passed as satisfactory by the district engineer?

Hon. Mr. KING (Kootenay):

Fiscal Year 1924-1925.

1. Yes.
2. For general repairs to masonry, Richard J. Daigle, $250; for the interior minor repairs and painting, John Blanchard, $580; Chas. Lovelock, $550; H. C. Cameron, $498.
3. General repairs, Richard J. Daigle, $250; interior minor repairs and painting, H. C. Cameron, $498.
4. Yes, by the district resident architect.

HARTLAND PUBLIC BUILDING

Mr. JONES:

1. Have electric lights been installed in the Dominion building at Hartland, Carleton county, New Brunswick?
2. If so, on whose recommendation?
3. Has John W. Adams resigned or been dismissed from the position of caretaker of said building?
4. If dismissed, what were the reasons for dismissal?

5. Who has been appointed to fill the position, and upon whose recommendation?

6. What are the names and occupations of the applicants for said position?

7. Which of said applicants were returned soldiers?

8. Was the person appointed a returned soldier, and, if not, why?

Hon. Mr. KING (Kootenay):

1. Yes.

2. The district resident architect and the mayor of Hartland.

3. Dismissed.

4. Incompetency.

5. No appointement yet made.

6. Wm. Fraser, labourer; Lewis E. McFarlane, carpenter; John A. Drake, clerk; Geo. I. Movers, no occupation given; E. A Britton, Cement worker; John F. Murdock, town marshal; W. E. Price, farm helper.

7. Wm. Fraser, E. A. Britton, W. E. Price.

8. Answered by No. 5.

EXPENSES OF GOVERNMENT OFFICIALS

Mr. HARRIS:

1. For what purpose were travelling expenses paid to A. H. Brown, W. H. Casselman, R. S. Glass, W. Kearns, J. W. Reid and J. N. Tribble, as shown in Auditor General's report, page BB. 7?

2. Is it a part of the duty of these officials to go on trips of inspection?

3. What reports, if any, were received from the said officers?

4. Will the government lay said reports on the Table?

Hon. Mr. ROBB:

1. To inquire into the methods of accounting of revenue and expenditure at the office visited and to make a test audit of stores.

2. Yes.

3. Reports were made to the Acting Auditor General in each case.

4. Reports will be tabled if asked for.

QUESTIONS PASSED AS ORDERS FOR RETURNS

CANADIAN PERMANENT FORCE

Mr. LANCTOT:

1. What is the present number of officers of the Permanent Force who are qualified for a higher rank, but who are waiting for a promotion: (a) lieutenants for the rank of captain; (b) captains for the rank of major; (c) majors for the rank of lieutenant-colonel; (d) lieutenant-colonels for the rank of colonel; (e) colonels to command a military district?

2. Does the Minister of the Department of National Defence intend to retire the generals and other officers who have been in the service for some years, thus stopping the promotion on the staff and in the permanent force?

Mr. LANCTOT:

1. What is the actual strength of the Canadian Permanent Force?

2. What is the present number of officers of the staff and permanent force who are holding the full, temporary and brevet ranks: (a) colonel; (b) lieut.-colonel?

[Mr. Jones.]

3. What is the position and the salary of the following generals who are yet in the service: General MacBrien, General Ashton, General Panet, General Macdonell, General King, General Elmsley, General McNaughton, General Thacker, General Bell, General Ross, General Ormond, General Ketchen, General Armstrong, General Landry?

4. What is the name of each of those generals whose tenure of appointment or the extension of term will end during the fiscal year, 1st April, 1925, to 31st of March, 1926?

5. Does the Department of Defence allow a six months' leave with pay and allowances to the officers before being pensioned?

6. If so, is it the intention of the Minister of National Defence to notify, through the Adjutant General, each general six months before the expiration of his tenure of appointment or his extension of term that he will be retired from the service for giving promotion to other officers?

PAS MINERAL BELT—GOLD CLAIMS

Mr. BIRD moved:

For a return showing the total income from gold claims in the area known as the Pas Mineral Belt, for the years 1922, 1923 and 1924; the income for the same years from the following sources: entry fees, in lieu of development work, renewals, surveying, rentals, royalties; also total amount expended by the Department of Mines during the above years for development and administration of the said area.

Hon. CHARLES STEWART (Minister of the Interior): It would be a little difficult to give the administration costs for this particular area, but we will give it as closely as we can. The other information we can furnish.

Motion agreed to.

FINANCIAL CREDIT

PROPOSED INVESTIGATION BY COMMITTEE ON BANKING AND COMMERCE

Mr. W. C. GOOD (Brant) moved:

That, in the opinion of this House, the select standing committee on Banking and Commerce should be instructed, in accordance with that committee's recommendation at the 1923 session of parliament, to continue during the present session of the House, the investigation into the basis, function and control of financial credit and the relation of credit to commerce and industry, with a view to advising this House as to the desirability of some constructive and fundamental changes in the present financial system.

He said: I should like the close attention of the Acting Minister of Finance (Mr. Robb) for a few minutes at all events.

Mr. ROBB: I am always much interested in the remarks of my hon. friend.

Mr. GOOD: On the 9th March, 1923, the House ordered as follows:

That in accordance with the recommendations contained in the second report of the select standing committee on Banking and Commerce, the said committee be given power to investigate the basis, the function and the control of financial credit, and the relation of credit to industrial problems.

In accordance with that order the committee spent very considerable time in hearing a number of witnesses on the question under consideration, among whom were the following: Messrs. Bevington and East from Alberta; Sir Frederick Williams-Taylor from Montreal; Sir John Aird from Toronto; Major Douglas from England; Sir Edmund Walker, Toronto; Professor Adam Shortt, of Ottawa; Professor Swanson, of the University of Saskatchewan; Professor Irving Fisher, of Yale University; Mr. Tom Moore, of the Dominion Trades and Labour Congress; and Mr. H. T. Ross, Secretary of the Canadian Bankers Association Immediately after the evidence of these gentlemen was received the committee proceeded, not to consider that evidence, but to consider the revision of the Bank Act, and that revision took up the remainder of the session. At the last sitting of the committee the following resolution was passed which formed the eighth report of the committee:

> Your committee in obedience to the order of the House of March 9, 1923, have had under consideration the question of investigating the basis, the function and the control of financial credit and the relation of credit to the industrial problems; and in connection therewith have held several meetings and examined the following witnesses, namely: Messrs. Bevington, Douglas, Fisher and others, but have not been able to complete their inquiry into the matter covered by the order of reference.
>
> Your committee specially recommend that a further reference be made at the next session of parliament on the matters referred to in the said order of reference.
>
> Your committee beg to submit printed copy of their proceedings on such reference and all documents submitted and not contained in the proceedings.
>
> All which is respectfully submitted.

This report from the committee was made to the House and acquiesced in by the House. It was necessary, however, that the matter should be revived last year if anything further was to be done. Therefore the hon. member for East Calgary (Mr. Irvine), if my recollection serves me, placed a resolution on the order paper with the intention of reviving the matter, but as hon. members will recollect the disastrous failure of the Home Bank necessitated the Banking and Commerce committee last year devoting its whole attention for the complete session to that particular matter and to various questions arising therefrom. Moreover the resolution which the hon. member for East Calgary placed on the order paper, along with many other resolutions, was not reached, on account of the fact that the government took private members' day very early last session. This matter therefore was not revived last session, and I am asking this year that the committee be given power to complete the investigation undertaken two years ago. I should like to remind the House and the Acting Minister of Finance (Mr. Robb) that so far the Banking and Commerce committee has not held any meetings, and, so far as I know, it has very little business before it this year. It seems to me therefore that the time is opportune for the completion of the work begun two years ago. In my judgment there is no need to spend further money in securing further witnesses. We have a vast amount of very useful information already in the report, information which has never been discussed,—which has not had five minutes' discussion in the committee. It seems to me to be only reasonable and fair that this year the committee, with very little to do, should be given instructions by this House to complete the report which they should have made two years ago. Indeed, I am asking nothing further than the committee itself recommended at the conclusion of the session of 1923. If the government were disposed to grant this request I would feel disposed to save the time now by not setting forth further reasons why, in my judgment, the work of this committee should be completed, and if I may, Mr. Speaker, I should like to pause to ask the Acting Minister of Finance (Mr. Robb) whether or not, with the information I have already placed before him and the House, he will not grant the request that I have made. I should not like to exhaust my right to speak, but I would ask him the question now, if he feels disposed to answer it, as to whether or not, in view of the facts I have set forth, it is not a fair and reasonable request that I make.

Hon. J. A. ROBB (Acting Minister of Finance): If my hon. friend would so amend his resolution as to carry out the statement just made, that no additional witnesses would be required, I would not be disposed to offer any opposition to it; but if I may be permitted—following the example of my hon. friend,—without exhausting my right to speak later on, I would point out that if he is going to call witnesses this resolution might conflict somewhat with the resolution of his coworker the hon. member for Macleod (Mr. Coote) who only recently brought in a resolution and made a speech emphasizing the importance of the House going over and reviewing carefully all expense before the expense was incurred. If my hon. friend will give a guarantee in resolution that there will be no additional expense of witnesses I will not oppose it.

Mr. GOOD: I am very pleased indeed to have the assurance of the Acting Minister of Finance. It was not my intention at all to ask for the hearing of further witnesses. I think we have abundance of information already before the committee, and while, just at the moment, I do not know exactly how the resolution should be amended, I should be very glad to consider amending it in such a manner. I presume there are other hon. members of the House who would like to speak to the motion, and if the minister is agreeable I will reserve what further I have to say until the close of the debate. Meanwhile I shall see what can be done to amend the resolution as has been suggested.

Mr. ROBB: Perhaps my hon. friend would like to have the motion stand until he can have it amended.

Mr. DEPUTY SPEAKER: That means it will have to stand until the next motion is taken.

Mr. GOOD: No. If I may have consent, I would move as I have already read the motion with the addition of the words:

—providing, however, that no further witnesses are to be called.

Mr. ROBB: "Outside witnesses".

Mr. GOOD: Very well:

Providing, however, that no further outside witnesses are to be called.

The suggestion has been made as to outside witnesses. I think the feeling is that any of the departmental officials who are here might be available. Does that meet with the approval of the Acting Minister of Finance?

Mr. ROBB: Yes. No further witnesses outside of Ottawa.

Right Hon. ARTHUR MEIGHEN (Leader of the Opposition): Mr. Speaker, this seems a most amusing form for a resolution to take to be submitted to parliament. It expresses the acquiescence of this House in the Banking and Commerce committee continuing an investigation providing it does not make the investigation useful. The House is quite ready in its opinion that the Banking and Commerce committee

—should be instructed, in accordance with that committee's recommendation at the 1923 session of parliament, to continue during the present session of the House, the investigation into the basis, function and control of financial credit and the relation of credit to commerce and industry, with a view to advising this House as to the desirability of some constructive and fundamental changes in the present financial system.

—providing the committee does not get any witnesses outside of officers of the government. I know the amendment is put on at the suggestion of the Acting Minister of Finance, but surely the hon. member sees that it is making simply a farce of the whole resolution. The House is to have a continuation of an investigation into a question that is not only vital but so abstruse that the numbers of those who really comprehend it in any country are remarkably limited, and the committee are to be hobble-skirted as soon as they start out. They are told that they already have had enough expert advice on the question, and all they can get from this on is from officers of the department. At the same time, there is an implication in this resolution that this Dominion requires a constructive and fundamental change in its whole financial system. I cannot help remarking on the absurdity of the House intimating that our financial system requires constructive and fundamental changes, and our committing the task of devising those changes to a committee whose powers are abbreviated, whose investigations are limited, into making inquiries from a few officers of the department. Is the thing not absurd?

Mr. GOOD: Does my right hon. friend not recall that we have already on hand from experts a large quantity of evidence, that has never been considered or discussed or reported on at all?

Mr. MEIGHEN: Very well. Then I think the committee would use its own judgment. How does the committee know, before it has studied that evidence, whether it requires any more evidence or not, and how does this House know, when it has no word from the former committee on the subject? If we are going to appoint a committee on a question so important, we must trust the committee not to waste the money of the treasury. It is a small compliment to the hon. member for Brant (Mr. Good), as well as all hon. members of the committee, that the minister should be quite willing that they should investigate, dig, delve, think and report as long as they do not spent a cent.

Mr. DEPUTY SPEAKER: The amendment must be moved by another hon. member. Moved by Mr. Hoey, seconded by Mr. Lewis, that the resolution be amended by adding at the end thereof, the following words:

Providing, however, that no further outside witnesses are to be called.

Is it the pleasure of the House to adopt the resolution as amended?

Mr. GOOD: Just before the amendment carries, I would say very frankly that I should

have much preferred that the government would leave this to the discretion of the committee, but I am willing to concede the point, and if the Acting Minister of Finance is worried over the question of expense—

Mr. ROBB: I am.

Mr. GOOD: —I will try to get along.

Mr. CARROLL: I think my hon. friend will be able to call all the witnesses he wants under the amendment.

Mr. GOOD: I just wanted to state my position for the benefit of the leader of the opposition (Mr. Meighen). I quite appreciate what he says, and I think it would have been a little more courteous to the committee on the part of the Acting Minister of Finance if he had allowed them a little more liberty. But at the same time if there is any anxiety on his part in regard to the matter, I am quite willing to concede the point, and we shall try to get along with the limitation imposed by the amendment.

I was prepared to argue the whole case before the House on this occasion; but quite a large number of private members have resolutions on the order paper, and out of consideration for them, perhaps I ought to reserve what I have to say for the committee, now that the committee is open to discuss the question. The House will recall that about a week ago there was a debate on the taking away of private members' days, and a very strong feeling was expressed on that occasion that an opportunity ought to be given to private members to bring forward their resolutions. For this reason and out of courtesy to them, I have decided to say nothing further on the present occasion, provided the resolution carries, as I see now it is likely to do.

Motion as amended agreed to.

UNEMPLOYED IMMIGRANTS

MOTION BY MR. WOODSWORTH FOR MAINTENANCE UNDER CERTAIN CONDITIONS

Mr. J. S. WOODSWORTH (Centre Winnipeg) moved:

That, in the opinion of this House, if at any time during the first two years after his arrival in Canada any immigrant is unable to obtain employment, the federal government should accept full responsibility for his maintenance.

He said: Mr. Speaker, it will be noted that this resolution does not cover the general question of unemployment, but rather limits itself to responsibility for unemployed immigrants. In reality, it involves little more than a regulation that will check up the effectiveness of the government's immigration policy. If the government brings in only those immigrants who are needed, there will be no necessity whatever for any added responsibility. If, however, the government's policy is unsound or its administration inefficient, why should the resulting burdens be laid upon the provinces or the municipalities? If the principle of this resolution is adopted, it might lead to a correlation of the activities of, if not to a consolidation of, the Departments of Immigration and Labour. At the present time there appears to be no correlation at all between these two departments. We have on the one hand the reports of the Department of Labour showing that there is to-day altogether too great a supply of labour, and on the other hand there is the utmost activity being put forth by the Department of Immigration to bring in still more labourers. It would seem to be only reasonable that these two departments should work in close co-operation; indeed, it would seem advisable to consolidate them under one departmental head.

With regard to the question of the acute unemployment that exists at the present time little need be said. This government within the past few months has been literally deluged with deputations from the nearby cities, and with resolutions from the cities that are more remote. I have no thought whatever of attempting to bring before the House the sheaf of resolutions which have been submitted to the government. I think we all recognize that from Halifax to Sydney representations have been made within the last few months to the effect that there is a very great deal of unemployment.

Although I have said that the resolution is directed specifically to the question of the unemployed immigrant, it must be remembered that the general question of unemployment cannot be ignored, inasmuch, as if work is found for immigrants in an already overcrowded labour market, others are bound to be displaced in consequence. This has happened again and again through the high-pressure methods which have sometimes been adopted by the Immigration department. New arrivals have been quickly placed, and the department has boasted of their quick placements, at the very time that other workers who have been longer in the country have been wandering about in search of positions.

We all recall that a few months ago there was held in the city of Ottawa an unemployment conference, or perhaps more correctly a national conference with regard to winter unemployment in Canada. This conference, although it was called primarily to deal with winter unemployment, broadened out into a

discussion of the whole question of unemployment. There were some fifty delegates present representing the Dominion and provincial governments, the municipalities, the Canadian Manufacturers' Association, Canadian building and construction, labour, the Canadian railways, and the employment service of Canada. Evidence was given of much unemployment in all sections of Canada. Mayors and responsible officials from one end of the country to the other testified to the serious character of the unemployment situation in their several cities, and at the conclusion of the conference there was passed the following very significant resolution:

The existing conditions are being aggravated by the present policy of bringing immigrants to this country who are drifting to our industrial centres as casual labourers without possibility of employment. Immediate action being necessary to correct this condition, we urge upon the federal and provincial governments that all such immigration shall be immediately regulated until it is proved that there is a reasonable demand for labour and that it is possible of being absorbed.

That seems to be a very reasonable contention; but it is a rather strange commentary on our immigration policy that a group of responsible officials should pass this resolution and send it out broadcast, declaring that we have no further need for immigration because of the large volume of unemployment that exists at the present time. It is not my intention to read at any length from this report, although I think that every hon. member should read it carefully. There are, however, one or two very interesting statements made by representatives from the Scandinavian countries. They show very conclusively that these immigrants whom we have always regarded as most desirable are often not easily placed after their arrival in this country. Here is one of the statements presented by the mayor of Vancouver from a Scandinavian emigrant station:

Mayor and Council of Vancouver:

Many hundreds of Scandinavians have lately arrived here, and we are glad to see them. But we admit it pains us often when young men and girls arrive without funds, no work, no friends, and not knowing the language. We try to find jobs for them, but with the city full of idle men, what chance has a newcomer? We find men among them who are educated. We find among them mechanics, chemists, musicians, almost starving. And this is what they tell us: that the government carries on propaganda in Norway, Sweden and Denmark, employing agents whose business is to induce as many as possible to migrate to Canada.

Now I, for one, do not believe that this government employs such agents. I rather think the railroads, together with the steamship companies, are the guilty ones, and they should be made to look after them when they get here.

In the meantime here they are, and more arriving almost daily. Would someone think of a plan to help these sturdy Norsemen, and be a big brother to them in their hour of need?

[Mr. Woodsworth.]

Just one more thing. If these companies persist in such methods of bringing in settlers we will consider ways and means by which we can counteract their propaganda, to wit: write a strong protest and explain in the publications of Europe the rotten methods employed by these people. Give us a square deal.

Respectfully yours,

J. J. PETERSEN,
In charge.

Since the unemployment conference last autumn the situation has grown steadily worse. I will not emulate the example of the Prime Minister (Mr. Mackenzie King) and read the large numbers of letters which might be produced regarding this matter. I would simply indicate that from almost every industrial centre there have been sent in protests against the present policy. It will be remembered that two years ago from my own city of Winnipeg there came a resolution which I placed on the order paper to this effect, in part:

And whereas a percentage in excess of 33⅓ per cent of persons under relief are returned soldiers, or persons with short residence in Manitoba, who might properly be classed as "citizens of Canada at large", and that the relief of such persons should be borne by the country as a whole;

This clause calls attention to the fact that a considerable number of the people in Winnipeg who need help have recently arrived in the city.

Mr. FORKE: Who passed that resolution?

Mr. WOODSWORTH: It was passed two years ago by the Winnipeg city council. I have quoted one clause calling attention to the character of those seeking relief. According to the last report of the city relief officials, an extensive document, on relief given by the city of Winnipeg this year up to date, the cost is set down at over $180,000 while the number of persons aided was 11,304.

Now when this is the situation prevailing in Winnipeg the large number of people who have been unemployed throughout these many months can hardly view with equanimity the introduction at the present time of large parties of new immigrants. The state of affairs existing in most of our western cities is very well indicated by an article which I shall read from one of the Calgary papers of recent date:

Unemployed in large numbers are pouring in
New class coming to Calgary who do not fulfil the conditions required by city
Many immigrants whose need is very apparent
Mayor Webster sends strong message to Ottawa: calls attention of Alberta government

Married men, immigrants to Alberta during the past two years, are constituting a serious problem to the

city with their pathetic and deserving appeals for relief, since the majority of them do not fulfil the conditions required by the city's relief policy. Mayor Webster and Commissioner Graves are daily confronted with pitiful stories of sorrow, hard luck and actual privation. Only a heart of stone could turn away the foreign women whose eyes hold a mute resentment for cruelties received in what was to have been the promised land, or their bright, thin-faced kiddies, whose scanty clothing tells all to plainly the state of family finances.

If the truth were told, Mayor Webster and Commissioner Graves and members of the city hall staff have dug deep in their own pockets to alleviate the miseries of those who cannot claim relief from the city. The majority of these foreign families do not belong to Calgary, they cannot meet the requirements of the relief department as either residents for ten months, or taxpayers. Their real need is apparent, but the executives of the city are faced with the more serious problem of making Calgary the mecca for the unemployed of the entire province, if the relief policy laid down by the council is not adhered to in the strictest manner. The voluntary creation of a class which yearly subsist on public charity is a dangerous procedure for any city.

Wires to Labor Minister

Feeling that these people could not be allowed to starve, nor could the city assume responsibility for them, Mayor Webster yesterday wired James Murdock, minister of labor, as follows:

"Very considerable number married men with families demanding relief from city account unemployment, who do not come under our regulations, being immigrants come to Calgary recently and now destitute. Our policy takes in married men residents ten months or more and relief to this class is costing city large sums each month and impossible to do more. We cannot consider relief to immigrants and there are many cases absolutely destitute and suffering. Can you authorize some representative federal authorities to investigate and care for these cases in Calgary.

GEORGE H. WEBSTER, Mayor.

This unsatisfactory situation is leading to quite a movement on the part of the unemployed themselves. They are gathering their forces in almost all of our cities—in Montreal, in Toronto, in the cities of western Ontario, in Fort William, in Winnipeg, in Calgary, in Edmonton and in Vancouver; they are formulating a very definite policy which they will carry out if the government persists in its present programme. Here, for example, is a little manifesto issued by the Unemployed Workers of Canada with regard to the press and immigration:

Whereas, in view of the campaign of slander and misrepresentation by the press of the number and position of the workers unable to get employment; which campaign is echoed and supported by many of our public and official men;

And whereas, there are one million unemployed workers in Canada;

Therefore be it resolved that this organization of 900 unemployed workers of the city of Edmonton will, by marking said passages as they appear in the press, and forwarding them to our class-conscious brethren in the Old Countries from which we came, and by other means do all in our power to prevent immigration to this country, so long as such conditions shall continue to exist;

And further, that a copy of this resolution be sent to the National Council of Unemployed in Toronto, and as many other organizations as possible, requesting action.

And still further, that a correspondence bureau be established between organizations in different parts of Canada, for the purpose of collecting statistics relating to unemployment, assignments, business failures, banking conditions, mortgage foreclosures, tax sales, number of farms abandoned, population statistics, and other vital facts for the benefit of the prospective immigrants and investors;

Mr. IRVINE: Mr. Speaker, I should like to ask the hon. member if he does not think it would be advisable to send for the Minister of Labour (Mr. Murdock) and the Prime Minister (Mr. Mackenzie King) to hear these statistics, if we are to expect any result?

Mr. WOODSWORTH: Mr. Speaker, I should be very glad indeed to have both the Prime Minister and the Minister of Labour in their seats, but I cannot compel their attendance. I trust their attention may be directed to these statistics. The manifesto concludes:

And further still, that copies of this resolution be forwarded to the press, and public bodies; and that this campaign be not launched unless sympathetic consideration of the problems of the unemployed workers be withheld;

And lastly, that this manifesto be translated into foreign languages and printed.

Now, Mr. Speaker, I submit that with the very large immigration from all parts of Great Britain and the continent, there are already a sufficient number of people in Canada to either make or break any immigration policy that the government may devise. If the people now here are not satisfied, and continue to write to their home papers telling the actual conditions that prevail in Canada, it is almost hopeless, even with the expenditure by the government of enormous sums of money, to induce any more immigrants to come to this country. I notice, for instance, in the Daily Herald, the one labour daily which is printed in Great Britain, there occurs the following statement, in the issue of February 5:

4 p.m.

Notices displayed outside employment exchanges in Britain declare that thousands of men are wanted in Canada.

Why do the authorities lie to our unemployed?

The Canadian papers are full of reports of unemployment and suffering in that country.

Here are a few of the headlines from three recent issues of the "Evening Telegram," an important Toronto newspaper:—

"All types of men seek jobs. Veteran's badge isn't a help. Labor Bureau up against big task hundreds of applicants. Outsiders come to city: single men out of work suffer—some cases of near starvation."

"No food for four days. Man's pitiable plight. Sought work, not alms—fell exhausted at 'House of Industry' door."

"How 'Other Half' Lives. Told by mother. Distressed wife shows how furniture is broken up to keep her children warm."

These headings are not taken from a Canadian Labour paper, nor from any paper that is confessedly out of sympathy with the government's immigration policy; they are taken from the files of the Evening Telegram of Toronto. We are already in such close touch with the Motherland that conditions here cannot continue to be unsatisfactory without their becoming very definitely known by the Labour papers of the Old Country; and I would repeat, that conditions being so known, all the efforts the Canadian government officials overseas may put forth to induce immigration to Canada will be largely nullified.

The Department of Immigration has emphasized the statement that only farm labourers and domestic servants are being sought for in England or in Europe. At the unemployment conference the Minister of the Interior (Mr. Stewart), for years the Acting Minister of Immigration, stated:

> The most careful scrutiny is made of entrants to Canada, and they are the agricultural class very largely.

Now, is this actually true? I notice a very interesting editorial in The Federated Railwayman of November, 1924, commenting upon this statement of the Minister of the Interior. That editorial contains a very enlightening table showing the emigration from Great Britain to Canada by occupations. With the permission of the House, I should like to place excerpts from this editorial and the table it contains on record in Hansard.

The document submitted is as follows:

> Since the unemployment conference was held, evidence has come to hand, which shows that the statements made by the Hon. Charles Stewart were not in accordance with facts. The British Board of Trades Journal in a recent issue contained tables showing the number of emigrants from the British Isles to various countries including Canada for the years 1921, 1922 and 1923. The following tables give this information in so far as it relates to Canada, for both male and female emigrants.

Emigrants from Great Britain to Canada in 1921, 1922 and 1923, by occupations

Males	1921	1922	1923
Agricultural	4,996	3,601	9,815
Commercial, Finance and Insurance	2,526	1,492	2,243
Professional	835	494	552
Skilled Trades—			
Mining and Quarrying	554	648	1,344
Metal and Engineering	1,334	1,103	2,816
Building	340	208	687
Other	1,811	1,230	2,610
Transport and Communications	667	366	725
Laborers not in Agriculture or Transport	3,551	1,016	3,827
Other and ill-defined occupations	1,483	1,234	1,630
*Total (18 years and over)	18,097	11,392	26,249

Females	1921	1922	1923
Domestic, Hotel, etc., Service	4,764	3,279	3,852
Commercial, Finance and Insurance	850	380	426
Professional	802	524	486
Clothing Trades	324	215	270
Wife or Housewife (not otherwise described)	10,975	6,455	8,622
Other and ill-defined occupations	908	652	1,040
†Total (18 years and over)	18,623	11,505	14,696

*Inclusive of 152 males of 12 years of age and over in 1921, 75 in 1922, and 82 in 1923, whose ages were not specified.

†Inclusive of 138 females of 12 years of age and over in 1921, 99 in 1922, and 64 in 1923, whose ages were not specified.

It will be noticed that just slightly a little more than one-third of the male emigrants for the period covered by these tables, were agricultural, in other words, out of a total of 56,738 male emigrants from Great Britain entering Canada during the years 1921, 1922 and 1923, only 18,412 entered as agricultural workers. While the female emigrants who entered Canada during the same period less than one-fourth were for domestic or farm service.

This report covers only Great Britain, and we have every reason to believe that the immigration from other countries, for the period stated, is at least in similar proportion.

In view of these facts and the statements made by the Hon. Charles Stewart, one of two things are very evident, either the government does not practice what they preach on immigration, or they are being badly hood-winked by their own agents and the agencies who are interested in flooding this country with immigrants.]

Now I should like to ask: upon whom should the responsibility for these unemployed immigrants fall? First of all, should it fall upon the individual and his family? That is largely where it falls to-day. Mr. Speaker, I regard it as absolute cruelty to induce people to come here either by false statements or by statements that are not sufficiently understood by the intending emigrant, and then allow that man to be thrown out upon an overcrowded labour market. I do not suggest that the government deliberately makes false statements in inducing people to come here, and yet I know sufficient of English life and of the viewpoint of the ordinary Englishman to know that a great many of the statements that are made leave a very false impression. I hold in my hand one of the posters which is broadcast on the other side. In large type appear the words "Why Pay Rent? Why not own your own farm?" And there is a picture of quite a comfortable farm house. I do not think I need to go into this question very fully to show to hon. members that there are tens of thousands of farmers who have been a good many years out on the western prairies who do not own as comfortable a house as the one pictured. I know perfectly well, on the other hand, that there are hundreds of

houses that are equally comfortable, and some much more comfortable than the one pictured. But the impression left is that any man may have a house like this, and that he may secure it very readily.

Mr. GARLAND (Bow River): Does the advertisement indicate that there is a mortgage on that house?

Mr. WOODSWORTH: No, nor does it indicate that the vast proportion of the farms in the three prairie provinces are very heavily mortgaged. There is nothing said about that. The poster goes on:

> The British and Canadian governments have arranged to advance funds for the settlement of farm workers and tenant farmers of limited means, and other suitable families who desire to engage in farming, on improved farms in Canada.

It states that there are farms ready for occupation within a reasonable distance of schools, railways and markets. I will leave the agricultural members of this House to say whether all these farms spoken of are within easy range of schools, railways and markets. If so, how is it that a large number of rural schools in my own province of Manitoba were closed last year? If so, how is it that bills for new railways were placed before this House last year? Surely this would indicate the necessity of bringing railways nearer to the homes of those already located?

Mr. COOTE: Might I ask the hon. member if this is one of the farms that the government is going to sell to these new settlers on twenty-five year terms, and easy rates of interest?

Mr. WOODSWORTH: I believe so. Another statement made is that loans repayable over twenty-five years, with interest at 5 per cent per annum can be secured. That is a better rate of interest than people already living here can secure. I do not know that I need go any further in reading this poster. My point is simply this: that although the statements may not be absolutely false, yet in the atmosphere in which they are published in England they convey an absolutely misleading idea as to the conditions that actually prevail in Canada, and we have large numbers of people coming over in response to such advertisements who are bitterly disappointed after they have been here for a short time.

I ask whether the individual should be allowed to bear the whole brunt of the unemployment, and permit me in this connection to quote one or two brief paragraphs from speakers who presented a case a few months ago before the mayor of the city of Montreal. This clipping is taken from the Montreal Daily Star of October 17, 1924:

> A thorough review of the condition of unemployment in this city was given by H. B. Mackenzie, president Board of Trade; Geo. Lyman, chairman of the special committee, interviewing His Worship; J. T. Foster, president of the Trades and Labour Council; Right Rev. John Farthing, Bishop of Montreal; Lady Drummond, and several others. Mayor Duquette presented his views. He summed up by attacking the immigration policy of the country for allowing more men to come to Canada than could be absorbed in industry, and suggested that an embargo on the country's natural resources would help to promote manufacturing and give work.

In the course of that discussion I notice this appeal from J. Howard T. Falk, a prominent social worker in the city of Montreal:

> You may leave the unemployed alone, but if they are left alone with their wives and children, you will have all the other problems crowding in, sickness, character breaking, wife desertion, non-support, delinquency, for which you will have to pay through the nose later on.

Undoubtedly, under modern conditions, the question of unemployment cannot be settled by the individual. There are admittedly shiftless individuals, and lazy individuals, and drunken individuals, but the great part of unemployment to-day is involuntary, and hence the state in some form cannot divest itself of certain responsibilities. I should say that one of the first responsibilities of the federal government here is to insist that there shall be a greater correlation between the work of its own officials and that of the officials of the several railway companies. The other day I asked several questions, which were passed as an order for return, as follows:

> What salary was paid to the manager of the Colonization Department of the Canadian National Railways in Europe in the year 1924?

The reply came:

> The management does not consider it in the public interest to publish this information.

I asked further:
