## Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	14x	18x	22x	26x	30x
12x	16x	20x	24x	/	28x

The copy filmed here has been reproduced thanks  
to the generosity of:

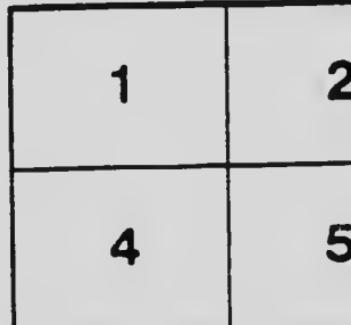

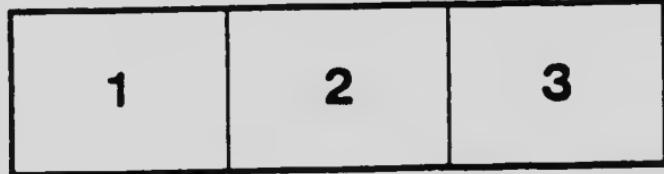

Stauffer Library  
Queen's University

The images appearing here are the best quality  
possible considering the condition and legibility  
of the original copy and in keeping with the  
filming contract specifications.

Original copies in printed paper covers are filmed  
beginning with the front cover and ending on  
the last page with a printed or illustrated impres-  
sion, or the back cover when appropriate. All  
other original copies are filmed beginning on the  
first page with a printed or illustrated impres-  
sion, and ending on the last page with a printed  
or illustrated impression.

The last recorded frame on each microfiche  
shall contain the symbol → (meaning "CON-  
TINUED"), or the symbol ▽ (meaning "END"),  
whichever applies.

Maps, plates, charts, etc., may be filmed at  
different reduction ratios. Those too large to be  
entirely included in one exposure are filmed  
beginning in the upper left hand corner, left to  
right and top to bottom, as many frames as  
required. The following diagrams illustrate the  
method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

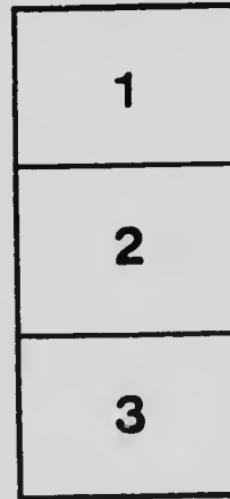

Stauffer Library  
Queen's University

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

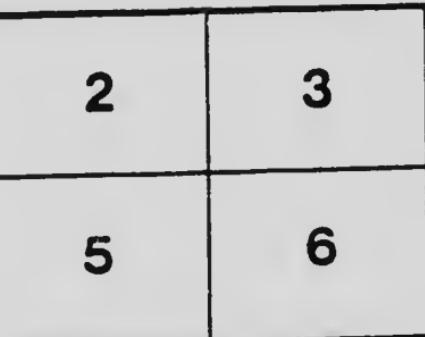

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

## Hydroids of the Canadian Arctic Expedition, 1913-18.

By C. McLEAN FISHER

The number of hydroids collected by the Canadian Arctic Expedition was not large, but along with this collection Mr. Frits Johansen sent some that he collected in Hudson Bay in August, 1920, and some collected at other times, that were found in the Victoria Memorial Museum, Ottawa.

Taken altogether, the collection, although not large, is quite interesting, and as it is all from the northward arctic regions, it is considered in the one report. The largest portion came from Rielmond gulf, east coast of Hudson bay, where 17 out of a total of 25 marine species were obtained.

The species represented give support to the distribution theory advanced on previous occasions, i.e. that most of the hydroids of the north temperate seas, in all the families, with the exception of the Plumulariidae, which, in any case, is not well represented, have had their origin in some Arctic centre from which there has been a circumpolar distribution and from this distribution, southward along each coast of each continent.

No new species has appeared in the collection. Of the 25 marine species obtained, *Abietinaria greenei* was found only in the Bering sea near the Aleutian islands. Previously, it had not been reported farther north than Vancouver island. Of the remaining 24, only one species had hitherto been found in the Pacific, and not to the eastward. This was *Hydractinia larisepina*, obtained from Gabriola pass (20 miles from the Biological Station, Nanaimo, B.C.) in 1921, and just described as a new species. If time of collecting were considered, Bernard harbour would be the original locality.

The two species reported farther east and not in the Pacific are *Gonothryraea loewi*, *Haeckium beani* and *Selaginopsis alternitheca*. The first two are common species on the eastern Canadian coasts, as well as in European waters, and they have not appeared so very far afield since the former was collected in Hudson strait and the latter in Hudson bay. *Selaginopsis alternitheca* was first reported from Davis strait. The only other appearance until now was in some material collected near Chetienmp, Cape Breton, in 1917.

A table will show the comparative distribution. The Arctic refers largely to the European Arctic, although it includes the Greenland area as well.

Besides the marine material, some specimens of *Hydra* were collected by Mr. Johansen, but they were not in good enough condition for classification. Some of them were obtained in a creek at Bernard harbour, Dolphin and Union strait, August 6, 1915. Johansen's record is as follows: "Attached to the underside of stones in the streaming water were many (fully outstretched ca. 15 mm. long) *Hydra* species of the following colour: suitorial disc at hind end, pale rosa; this colour getting first paler but afterwards increasing in intensity forwards; front end, strongly rosa; the 8 tentacles pale."

Some other specimens were obtained at Konganevik, Alaskan coast, but they were not kept, and the particulars are meagre. His note is as follows: "June 25, 1914. Konganevik (Camden bay), Alaskan arctic coast. In a tundra

	Pacific	Atlantic	Europe	Arctic

pond I found attached to water plants, minute, 1 cm. long (fully outstretched, including the five arms), bright red *Hydra* species forming their typical known spores on the side of the 'stalk.' I tried to keep them alive, but they died and rotted later. The temperature of the margin of the pond was 51° F. (2 p.m.)"

#### SPECIES AND DISTRIBUTION

##### Family SYNCORYNIDAE

*Syncoyne eximia* Allman.—Richmond gulf, 15-20 fathoms.

##### Family EUDENDRIDAE

*Eudendrium tenellum* Allman.—Richmond gulf, 15-20 fathoms.

##### Family HYDRACTINIDAE

*Hydractinia larispina* Fraser.—Station 41, Bernard harbour, N.W.T., 3-5 fathoms, July 20, 1915.

##### Family CAMPANULARIDAE

*Campanularia volubilis* (Linn.)—Richmond gulf, 15-20 fathoms.

*Gonothryraea loveni* (Allman).—Richmond gulf, 15-20 fathoms.

*Obelia plicata*, Hincks.—Small island between Long island and Cape Jones, east coast of Hudson bay, Bench water.

##### Family CAMPANULINIDAE

*Calycella syringa* (Linu.)—Port Burwell, Ungava, "Neptune" Expedition, 1903-04; between Black Whale and Olaska harbours, east coast of Hudson bay, 10 fathoms; Richmond gulf, 15-20 fathoms.

*Cuspidella grandis* Hincks.—Richmond gulf, 15-20 fathoms; Station 43b, Dolphin and Union strait, N.W.T., 50-60 metres, September 14, 1915.

*Opercularella laeprata* (Johnston).—Richmond gulf, 15-20 fathoms.

### Family HALECIDAE

*Halecium beani* (Johnston).—King George's sound, south side of Hudson strait, 40 fathoms, "Diana" Expedition, September, 1897.

*Halecium labrosum*, Alder.—Richmond gulf, 15-20 fathoms.

*Halecium muricatum* (Ellis and Solander).—Richmond gulf, 15-20 fathoms.

*Halecium tenellum*, Hincks.—King George sound, south side of Hudson strait, 40 fathoms; Port Burwell, Ungava; Richmond gulf, 15-20 fathoms.

### Family LAFOEIDAE

*Filellum serpens* (Hassell).—Richmond gulf, 15-20 fathoms.

*Lafca dumosa* (Fleming).—Richmond gulf, 15-20 fathoms.

*Lafca fruticosa* Sars.—Richmond gulf, 15-20 fathoms.

*Lafca gracillima* (Alder).—Richmond gulf, 15-20 fathoms.

### Family SERTULARIDAE

*Abietinaria greenei* (Murray).—Station 14, Bering sea, near Umnak, Alaska, July 2, 1913. Surface.

*Abietinaria turgida* (Clark).—Between Blackwhite and Olaska harbours, east coast of Hudson bay, 10 fathoms; Richmond gulf, 15-20 fathoms; Station 19 a-e, off Norton sound, Alaska, July 8, 1913, surface; Station 14, Bering sea, near Umnak island, Alaska.

*Diphasia pulehra* Nutting.—Bay on east side of Grey Goose island (lat. 54° N.), east side of James bay, 10 fathoms.

*Selaginopsis alterniflora* (Levinsen).—Station 27s, Collinson point, Alaska, 3 fathoms, October 3, 1913.

*Sertularella fusiformis* (Hincks).—King George sound, south side of Hudson strait, 40 fathoms.

*Sertularella polyzonias* (Linn.).—King George sound, south side of Hudson strait, 40 fathoms; Richmond gulf, 15-20 fathoms.

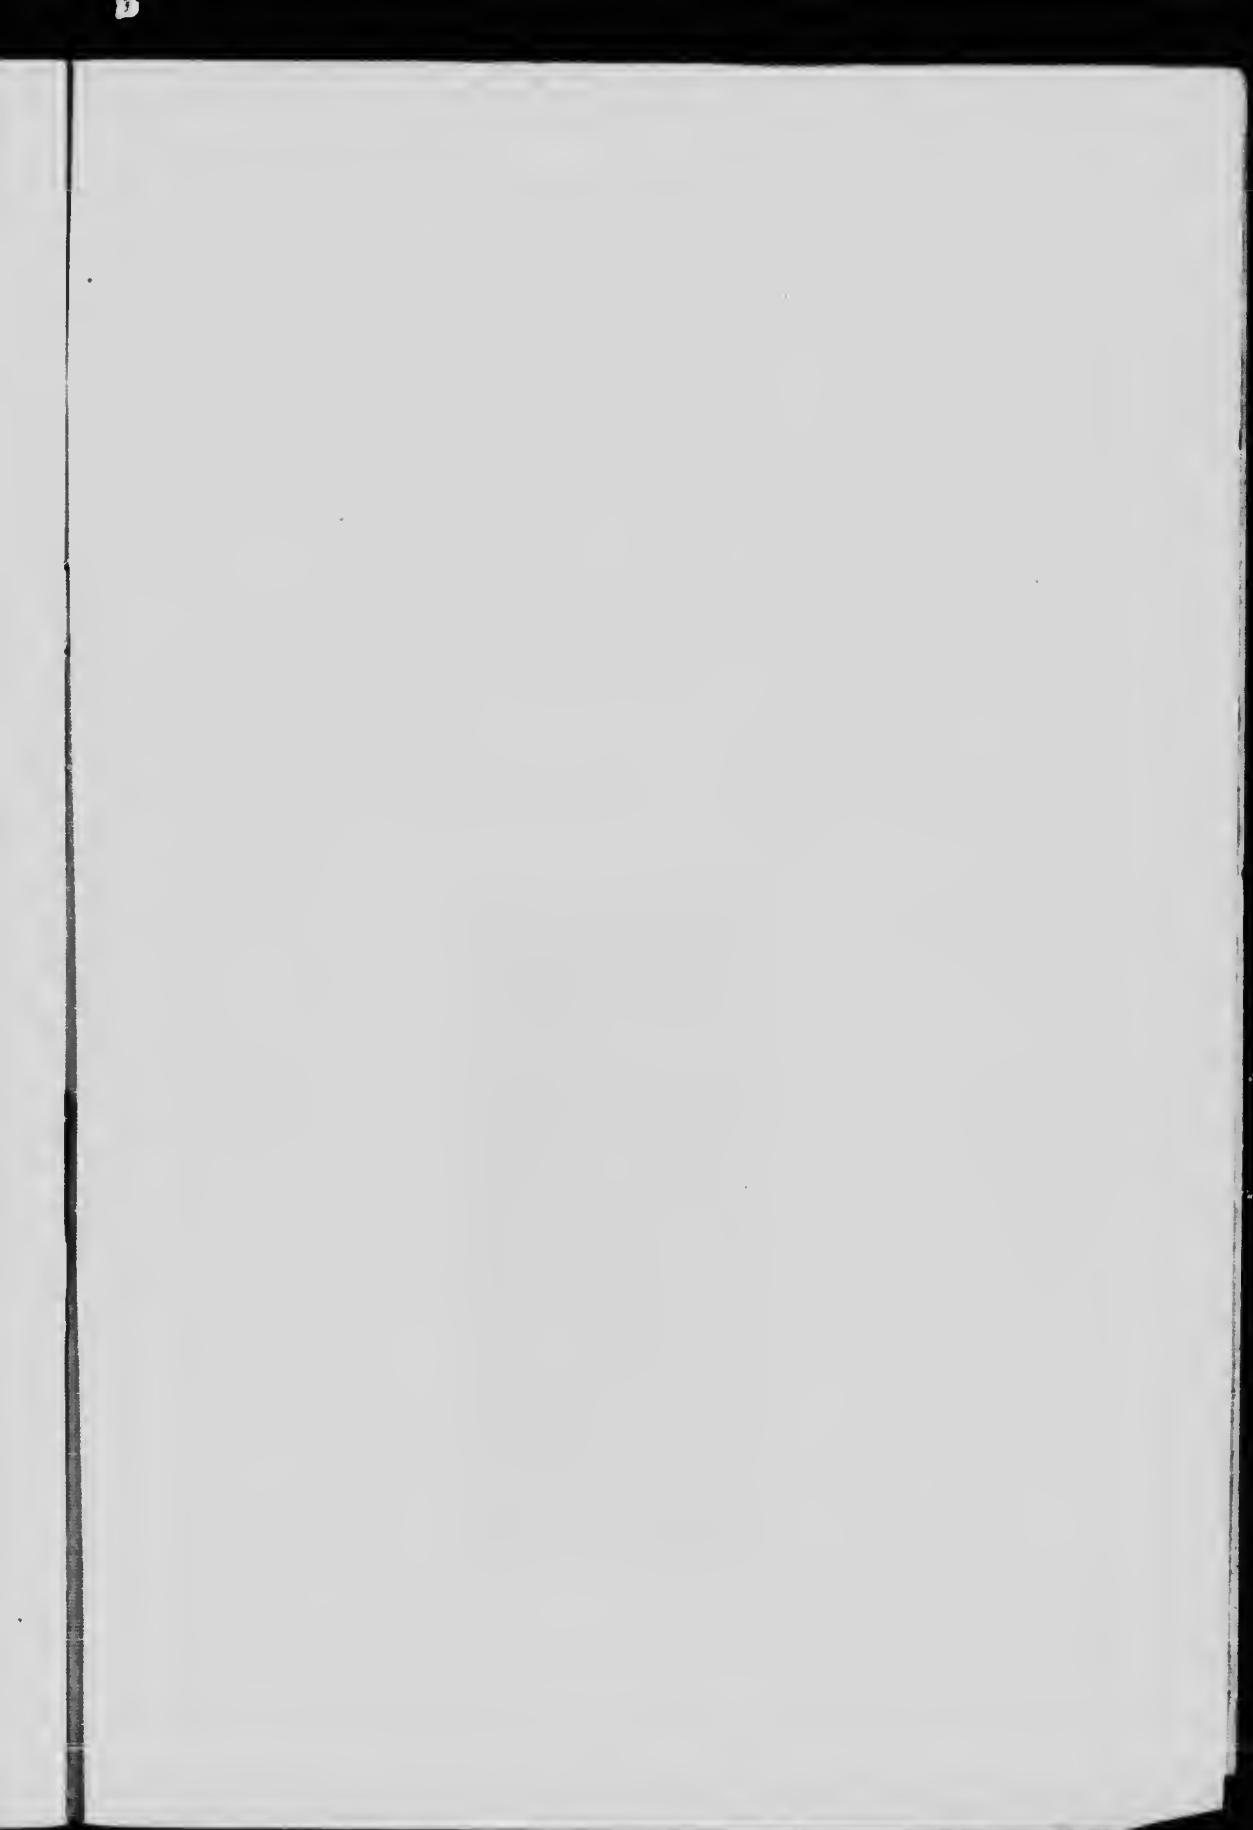

*Sertularella tricuspidata* (Alder).—Station 22, near Icy cape, Alaska, 11-12 fathoms, August 17, 1913, Richmond gulf, 15-20 fathoms.

*Thuiaria similis* (Clark).—Station 22, near Icy cape, Alaska, 11-12 fathoms; Richmond gulf; 15-20 fathoms.

DEPARTMENT OF ZOOLOGY,  
UNIVERSITY OF BRITISH COLUMBIA,  
VANCOUVER.
