

Bad Breath
Is Usually Due to Constipation

When you are constipated, not enough of Nature's lubricating liquid is produced in the bowel to keep the food waste soft and moving. Doctors prescribe Nujol because it acts like this natural lubricant and thus secures regular bowel movements by Nature's own method—lubrication.

Nujol is a lubricant—not a medicine or laxative—so cannot grip. Try it today.

Nujol
A LUBRICANT—NOT A LAXATIVE

Lady Wyvernes' Daughter.

CHAPTER XX.
Then he drew forth a little packet, and laid it in her hands; it contained a lock of dark curling hair, and a plain signet-ring.

"He wished me to bring you these," continued Luigi. "The chain you gave him is round his neck; it has never been removed." Then she spoke.

"I must see him," she cried, "nothing on earth shall prevent me. I will see him once again—then I can die, too."

A nervous look came over the young man's face, and he said, gently: "I shall be glad to tell you. You can never see him again."

"Do you mean that he is buried?" she cried—"but away, out of my sight forever!"

He took her hands tenderly in his own, and spoke again, gently: "Hush, it was obliged to be."

"And this," she cried, wildly, "is all that is left to me of my husband—my love—my one only beloved?"

"That, and the memory of his love," replied Luigi. "And now let me give you his message!"

He gave her loving, tender words, but he said had been uttered by the dying man. It would be better, he said, when her grief was over, to try and forget him; and he left his last urgent wishes that the secret of their love and marriage should remain a secret still.

"To reveal it now," he continued, "would be worse than useless; it would draw down upon you the anger and indignation of your friends."

"I do not mind that," she murmured. "And what is worse," he continued, "it would draw down reproach on"

Building a Baby

Mother—your baby's body is being built now for life. To-day you can influence his future health; in a way you can never do when once the muscle and nerve tissues are developed and the bones are set. The material out of which the body is built is food and food only, but it must be suitable to the infant's power of assimilation.

VIROL is a food that has been specially designed by Medical Experts and Food Specialists to meet the particular requirements of growth. It contains just those vital principles which play so mysterious a part in transforming food into living tissue.

VIROL with milk supplies in correct proportions all the elements necessary for healthy development, and also increases baby's power of resistance to disease.

VIROL

Sold in more than 3,000 Infant Clinics, Hospitals, and Dispensaries.

your husband's memory. They would not understand how he loved you. They would insult him even more now he is dead than they would have done when living. Preserve the memory of his deep love, and keep his memory from reproach. You have still something to live for, Madame Montalti. I, on my part, have taken an oath of secrecy to poor Rinaldo, and I renew the same to you."

He could not tell whether she heard his words or not; for the white face never changed, and the dark eyes still wore the look of vague horror and dread that had terrified him.

Madame, I was your husband's friend," he resumed, sadly; "let me be yours also. You look ill and exhausted. It would be better for you to go home and rest."

"You can do me one favor," she replied, dearly. "Go now, and leave me with my dead. I shall die if I am not left alone. Come and see me again when I can speak; and tell me more of him."

He thought it best to comply with her wishes. When he turned round to look once more at her, he saw that she had hung herself on the ground, and buried her face in her hands.

CHAPTER XXI.
The dark shades of night had covered the trees and flowers when Inez rose from her long stupor of grief, and found her way home. She was as one dazed with sorrow; she could neither see nor hear. No tears came to relieve the pent-up agony of her tortured heart. He was dead, he who had loved her so; never would that dark face smile on her again; never again would those eyes, so full of love, look down upon her; never more would the musical voice whisper sweet words in the evening gloaming. It was all over; she had seen him for the last time. The golden light that had brightened her life had changed into the deepest gloom. If she could but have seen him—if he had but clasped her in his arms, and bidden her farewell!

All night she paced drearily up and down her little room.

"If I could but weep," she cried, "this burning pain would leave me!" but no tears came to her relief. When morning dawned, and she did not appear as usual, Nita, full of solicitude, went up to her young lady's room; she found her lying white, and cold, and senseless upon the floor.

Some young girls would have died if they had been called upon to suffer that poor child's anguish. In great alarm Nita summoned Caterina, and between them she was laid upon her little white bed. They saw that it had not been slept upon. One bathed her forehead with fragrant waters, and the other made a cup of strong coffee. They both agreed it would be better to say nothing of their young lady's illness, lest it should alarm Madame.

It was all the same to poor Inez. Had a dozen solicitous friends surrounded her, she would neither have seen nor heard them. She lay throughout the day lost in a stupor of grief, going over and over again the whole of her short love story—the bright summer day when she had first seen him, his passionate love for her, his tender words, his deep devotion. And now she was never to see him again! Ah, if she could but close her eyes and die! Then, like a sharp sword, came the memory of that day when he had spoken to her of death, and asked her what she would do without him. She had told him then that she should die with him; and now the time he had foreseen had arrived, yet she was obliged to live on, and bear her sorrows as best she could. She was had been alone in her happiness and her love.

For two days she lay there, dreading to rise, dreading to begin again the dreary, monotonous life that would have to be lived, nor hope. On

the third day she rose. In the wardrobe that had belonged to her young mother she found a black dress. Carrying nothing for the remarks that would be made, she put it on, and went to Madame's room.

"I am better this morning, grand-mamma," she said, "and am come to read to you."

Madame Monteleone gazed at her with something like alarm. What had taken the color from her voice? Could that pale, sad, drooping girl, in the heavy mourning dress, be the bright, radiant child, whom no one had been able to manage or govern?

"You have been very ill, Inez," she said, gently; "and, my dear child, why have you put on that black dress? Do take it off—it makes me quite sad to see it."

"Let me wear it," said Inez; "it suits me—and I like it. I never wish to wear anything but black again."

"That's a very strange fancy for a young girl," said Madame, inwardly resolving that, as soon as Inez looked better and stronger, she would force her to put away the gloomy robe.

It was four days before Inez summoned courage again to visit the "trysting-tree." She longed to go once more to say good-bye to a spot where she had been so happy. Only once more, and then she would never see that part of the grounds again. She had ceased to care about the world she had so passionately longed for. If all Seville were to pass along the high road, all the gay nobles and fair ladies, she would not wish to see them.

She was still half child, half woman; and, with trembling steps, she sought the scene of her former happiness. Even when she came again to the spot where she had seen Rinaldo for the first and last time, no tears came to soften the grief that seemed to be consuming her young life. She went into the orange grove, where she had stood with Luigi Carnello four days since; she sat down, and looked listlessly around her. Suddenly her eyes fell upon a small discolored paper, that lay half hidden among some dead leaves upon the ground.

(To be continued.)

What Do You Think of a Fluid

That will draw roaches and ants out of every hole, crack, or crevice before killing them and not poison food?

That will kill bugs instantly and not leave an unpleasant odor?

That will knock flies off the wall and not harm paint or paper?

That will keep the bedroom, kitchen, or veranda clear of flies, mosquitoes, etc., for several hours after a few sprays?

That will take fleas off a dog and not harm the dog?

That will destroy chicken lice without any injury to your stock?

That applied in small quantities to the exposed parts of the body will insure you from Mosquito bites?

That as a general disinfectant is stronger than the ordinary carbolic solution.

THAT FLUID IS **SAN-O-SPRAY.**

No insect can live where San-O-Spray is used. Yet San-O-Spray is non-poisonous to human beings and can be used with perfect safety in pantry, kitchen, dining room, and cellar, moreover San-O-Spray has an agreeable and delightful odor, removing all fetid or unpleasant odors. In addition San-O-Spray is a disinfectant and germicide. Keeps the home sanitary and free from infectious diseases.

"Protected Where the Wear Comes"

HOLMES & EDWARDS
SILVERPLATE

The Bridal Gift of Quality

THE very reasons which make silverplate the most desirable of all gifts to the bride—beauty coupled with utility—are the very reasons why you should make it a point to secure "Holmes & Edwards".

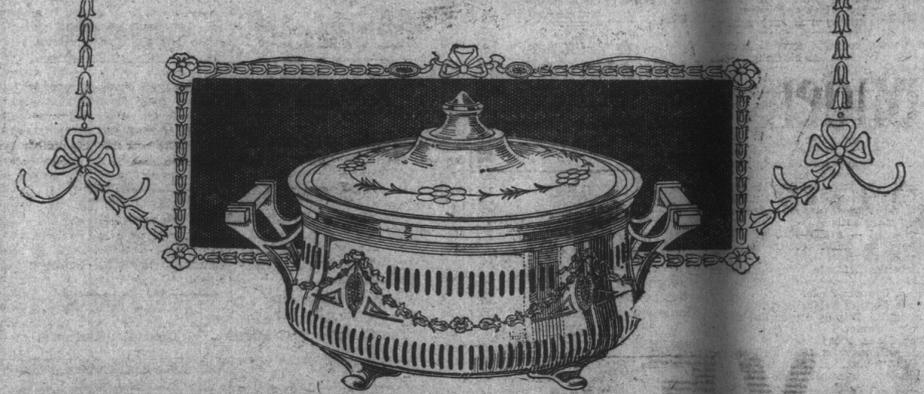

It costs more—true, but such a trifle that the extra quality will well repay the possessor in a lifetime of service.

The fascinating lustre of "Holmes & Edwards" Silverplate is attained by hand burnishing. Added attraction is superbly evident in the charming patterns. But the generous use of silver gives "Holmes & Edwards" tenacious wearing qualities that crown all other merits.

Let your jeweler explain the two processes, "SILVER INLAID" and "SUPER PLATE" by which protection is given "Holmes & Edwards" at the wear points. Ask for "Holmes & Edwards" Silverplate if you are looking for the best.

Manufactured Exclusively in Canada by
THE STANDARD SILVER CO. OF TORONTO LIMITED

You can get Holmes & Edwards table appointments such as Tea Services, Casseroles, Bread Trays in the same high quality. If your jeweler is temporarily out of stock he can get any piece for you on short notice. See his catalogue for further suggestions.

Just Folks.
By EDGAR A. GUEST.

WHEN IT COMES HOME.

Oh, we may read and hear of it and talk the tragic tale. And we may think we understand the anguish mother's wail. And we may dry a neighbor's tears and hold a neighbor's hand. But when the grief comes home to us, 'tis then we understand.

Oh, we may see the dappled room where sad-faced people sit. And we may send our flowers of love to light the gloom of it. And we may tell how sad it is, but we shall never know. Until the hurt comes home to us, the bitterness of woe.

For sorrow seems a distant thing when other hearts must mourn, And far away the pain and grief when other hearts are torn. For all the things we read about and all the things we hear are but the clouds which drift across the sky and disappear.

But when the hurt comes home to us and sorrow finds our door, 'Tis then we learn how real is grief and what our faith is for. When bitter tears are ours to shed and dark the way we fare, 'Tis then we come to understand what others have to bear.

Bulgarian Government Overthrown and Ministers Arrested

Bulgarian Revolution May Mean Trouble in Balkans—French Note Asks Britain to Join in Passive Resistance Stand.

MINISTERS GOVERNMENT OVERTHROWN.

SOFIA, Bulgaria, June 10. The Bulgarian Government was overthrown at 3 o'clock Saturday night by an organization of reserve officers supported by the active officers. All the ministers were placed under arrest and a new Government formed by all Opposition parties with the exception of Communist. The movement is supported in the Provincial garrisons. Order was in the capital and throughout the country.

MILITARY CARRY OUT COUP D'ETAT.

SOFIA, Bulgaria, June 10. The overthrow of the Agrarian Government, headed by Premier Stamboulsky, was carried out by reserve officers with the assistance of the active army. There was no bloodshed. The new regime proclaimed the end of the coup and issued a proclamation to the nation, saying: "Bulgarian liberty dawns again. The reign of deceit, violence and murder is ended under the weight of its own and a new era of law, harmony and peace has arrived." Premier Stamboulsky, who has been living in semi-retirement in his native village at Slavonitz, returned to Sofia, Friday night. At the station he found the troops drawn up and was received in silence. When the Premier asked for an explanation the officers ignored the question. He tried to telephone police headquarters to obtain an explanation, but discovered the wires had been cut. Then he understood he was a prisoner. The coup d'etat was carried out with military precision. Members of the Reserve Officers' Organization and units of the active army surrounded the Parliament House and arrested the Ministers and Deputies, while the Ministers who were absent were arrested later in their homes. All railroad centres are closed and no trains are allowed to leave the capital. "A simple incident of the internal life of the country," is the way in which the first official statement of the new Government describes the coup d'etat. The statement declares "the new Government will be guided by the inflexible principles of justice and democracy in restoring Bulgaria's internal peace and order and will cultivate the closest relations and good

neighbourly friendship with adjoining states and the good will of the great powers by the utmost execution of international obligations." The new Premier, Minister of Foreign Affairs and Minister of War, is M. Zankoff.

THE NEW PREMIER.

PARIS, June 10. The new Bulgarian Premier, M. Zankoff, was on most intimate terms with King Boris, according to the Sofia correspondent to the Havas Agency and it is believed that the King was acquainted with the revolutionary plan; the promptness with which he signed all the decrees presented to him being pointed out as proof he was not ill-pleased with the downfall of the man who exiled his father and only tolerated him. Prof. Alexander Zankoff, the new Premier, is one of the most reputable doctors in the Sofia University. He began gathering about him a year or so ago leaders of intellect in Bulgaria, regardless of party affiliations, for the purpose of joint action against the Government. He is only forty-three years of age. He was educated in Sofia and Munich and travelled extensively in Germany, Austria and Hungary during the war.

CIVIL WAR FEARED.

LONDON, June 10. No event since the Greek convulsion of last October has raised such apprehension regarding the future stability of the Balkans as the Bulgarian revolution. Doubt was expressed in many quarters whether the new revolutionary regime would be strong enough to resist the powerfully organized Agrarian Party which numbers a great part of the Bulgarian peasantry. Some observers fear civil war may result. In such an eventuality, they point out, the future stability of the Balkans as the Bulgarian revolution is merely a police organization of a few thousand men.

OBSERVED WITH ANXIOUS FOREBODING.

PARIS, June 10. The Bulgarian revolution is observed here with anxious foreboding. In both French official circles and Bulgarian diplomatic quarters officials do not conceal their misgivings that it may mean the beginning of very severe trouble with the possibility of an outbreak of hostilities in the Balkans. Allied circles see in the revolt the cropping up of the ever-unwelcome Pro-German element in Bulgarian circles. It is predicted the new Government would not last long. Members of former Cabinets imprisoned for war responsibility have been released.

JUGO-SLAV CABINET MEETS.

BELGRADE, June 10. The Jugo-Slav Cabinet was called into session immediately news of the Bulgarian coup became known.

POINCARÉ'S NOTE TO BRITAIN.

PARIS, June 10. Premier Poincaré's note on German reparations was delivered in London to-day for presentation to the British Cabinet tomorrow. It expresses the hope that Great Britain will join France and Belgium in telling Germany that passive resistance in the Ruhr must cease. It says if Germany complies, France will be disposed to consider with her Allies a solution to the Reparations question, provided the decision keeps within the limits of the French proposal of January.

NEW SUPT. OF MISSIONS.

ST. JOHN, N.B., June 10. Rev. W. J. McConnell of Windsor, Nova Scotia has been appointed Supt. of Missions of the Methodist Church for the Maritime Provinces and Newfoundland. The position was made vacant by the death of Rev. Dr. Geo. Steele. Mr. McConnell will reside in Amherst.

CANADIAN OFFICIAL DEAD.

OTTAWA, June 10. Rodolphe Boudreau, Clerk and Deputy Head of the Privy Council, died suddenly last night.

DAMAGED BY STORM.

MACON, GEORGIA, June 10. Damage estimated at one million dollars was caused to Macon by storm to-day.

Susu Arrives.

S.S. Susu, Capt. Roberts, arrived from the Fogo Mail Service route at 9 o'clock yesterday morning. The fishery reports are very discouraging at present. Cat Harbor and Westville report a very small sign, which is only enough for domestic purposes. The Susu brought a part freight and 35 passengers.

Obituary.

GEOFFREY KELLY.

In the passing of the late Geoffrey Kelly, on May 22nd, at the ripe old age of 85 years, another link is severed from our past; links that are passing out all too quickly. The late Mr. Kelly was the son of the late Edward Kelly of County Waterford, Ireland. In his earlier days he travelled very extensively in America and on the Continent, and his accounts of adventure and travel, told in his own graphic style, often passed many a pleasant hour. On his return to Newfoundland he formed one of a party of a survey in St. George's District, under Engineer Cooper, who came out from Scotland for that purpose, and his work in this direction was very highly recommended. After the finish of the survey he took the position of gatekeeper of H.M. Penitentiary, and by his strict attention to duty and by honesty of character, under Governors Coen, McGowan, McGrath and Parsons, covering a period of 30 years, rose to the position of Chief Warden, which position he held up to a few years of his death, when he retired on full pension. He was married in September, 1875 to Miss Barnes, daughter of the late James and Margaret Barnes, late Road Inspector and out of a family of seven, five sons and two daughters, only one son, Edward, has survived, the others having preceded him to that land from whence no traveller returns. Mr. Kelly was one of the old standard, modest and unassuming, ever ready to lend a helping hand or give a word of advice from his store of knowledge, and many will bear with regret of his passing. May his soul rest in peace.

To-Day's Stupendous Movie Attraction.

HAROLD LLOYD'S FIRST SUPER-FEATURE AT NICKEL.

One of the most stupendous amusement attractions for the season of 1923 is at the Nickel Theatre to-day. The principal attraction is, however, the much talked of picture "Dr. Jack" featuring Charlie Chaplin's superior Harold Lloyd. Harold Lloyd is not a one-man show. Aside from the spectacular comedian's own ability and personality authorities claim this is the outstanding reason for Lloyd's great success. He has surrounded himself with experts in the line of fun-making; he wins their confidence, and then gives them full credit for what they do. Nothing like this comedy has ever been seen in St. John's before. The fun in Dr. Jack is not foolishness, but genuine comedy that will make the greatest crank in St. John's laugh. We won't say who he is, but let him see this picture and we guarantee that he will brighten up and laugh heartily. Five thousand feet of laughs to be experienced at the Nickel to-night—and then there is Cosmo Hamilton's powerful story, "Reckless Youth," featuring the beautiful Elaine Hammerstein. A picture you will enjoy. Dan DeLamar, the novelty singer, will be heard in popular selections. Owing to the high cost of this tremendous programme, the night admission will be 30 cents, and cheap at that considering that in some cities the price of admission to see "Dr. Jack" was \$1.00 and over.

Supreme Court.

The case of Mr. Jas. S. Ayre vs. the Advocate Publishing Co., which was up for hearing on Saturday forenoon before Mr. Justice Kent and a special jury, concluded at 3:30 p.m. when judgment was given in favor of the defendant. Seven of the jurors agreed that the matter complained of was not defamatory to the plaintiff. Two were of a contrary opinion. Seven being sufficient for a verdict, judgment went in favor of the defendant newspaper.

HARDWARE DEPT.

"Paradise of Freedom."

NEW YORK, June 9.—(Canadian Press)—An enterprising architect and engineer by the name of Wilhelm C. Griesser has drawn up plans for an "artificial island" of concrete to be constructed in the Atlantic Ocean just outside the three mile limit, which will cost in the neighborhood of \$30,000,000. This "paradise of freedom" is decidedly not a dream, and within a few years may be a reality, he declares. Stock in the enterprise has attracted public attention and is now selling at \$10 a share par value. It is estimated that at least \$20,000,000 will be required to erect the cement foundation on which the "island's" structures will rest. This concrete base will rise about thirty feet above the level of the ocean. The scheme as planned

thus far provides for the erection of two hotels, innumerable stores, administration buildings, hospital, bank, moving picture theatre, opera house, school, college and church, etc. The colony will make its own laws and employ its own police force to see that they are kept. While the main attraction—liquor—will be purchasable, no old-time bars will be permitted. Refreshment places, however, will be run on the European plan, which necessitates thirsty customers sitting down to be served. Drunkenness, it is emphatically pointed out, will not be tolerated.

"I Avoided an Operation Appendicitis Disappeared"
 Mr. James Wells, Udora, Ont., writes—

Dr. Chase's Kidney-Liver Pills
 GERALD S. DOYLE, DISTRIBUTOR
 At all Dealers.

"I took a severe pain in my right side. It was very bad at times. I tried pills and tablets without gaining any relief. The doctor pronounced it chronic appendicitis. I dreaded an operation and a friend advised Dr. Chase's Kidney-Liver Pills. I used them and not only obtained relief from pain, but I believe it has completely freed me of appendicitis, as it is now over a year since I have had any of the old symptoms."

An Adventure in Naval Gunnery in The "Sixties"

By LORD TEIGNMOUTH.

September, 1863. H.M.S. Gibraltar, the last wooden line-of-battle ship of the British navy, representing the grandeur and majesty of the British fleet in the Mediterranean station, was served for three and a half days by a noble-looking vessel of the class of fighting-ship which the naval supremacy of Great Britain had been built up in times of a mere death-trap for those who attempted to fight in her vis-a-vis against the ironclads or frigates as they were contemptuously styled by old-time sailor men. Carried eighty-one guns, mostly of the type differing little from those which Trafalgar was won; and which represented the accumulated power of 800 horses—equivalent to a modern tug-boat—which was to drive the ship at the grudging speed of about eleven knots. Commanded by the 12,000 h.p. of the steam engine. Gibraltar, at this time, was a ready-dull spot in those days, without a railway, a decent road between the island and its chief port, and quite cut off from the outside world for the most part of telegraphic communication. Only French steamers from Marseilles being the sole link with civilization and the admiral. The only break in the deadly monotony of existence was the quarterly visits of the French frigates to the adjacent waters for exercise and target practice with their great guns. As regards the latter, I

am fain to confess that the science of gunnery, so far as the navy was concerned, was still in its infancy. Almost all the officers of the rank of captain and upwards, nursed on Trafalgar traditions, cherished the conviction that nothing but what was coarsely simple was of any use on a shipboard. Consequently broadsides fired at close quarters were still regarded as the only assured road to victory, to be followed by boarding with pikes and tomahawks, as described by Marryat the novelist. Mere 'drill proficiency,' as always happens during 'piping times of peace,' was magnified out of all proportion to its real value as a preparation for war, the 'patter-master,' or drill-sergeant, being respected as a sort of demi-god. Not that hitting the target was actually forbidden, in spite of loss of time is entailed. Oh head no! But neither the teaching nor the practice of gunnery was consistently, or even intelligently, directed with a view to 'straight shooting.' On one occasion our quarterly allowance of shot and shell was blazed away under the following conditions. The ship, having been placed some three hundred yards from a perpendicular cliff of good, solid limestone, delicately tinted, forming part of the island of Salamis, a well-defined mark about half way up, was indicated as the target, and at the sound of a bugle several awe-inspiring, if not especially well-directed, broadsides were let fly from our guns with deafening uproar. From a spectacular point of view the effect of those salvos was thrilling. Quite a lot of cliff was dis-

god, and dust-clouds hung about the face of it for hours after. We youngsters thought it no end of fun. From a scientific point of view, however, there was little to commend the experiment. It was magnificent, but not war—as the French general remarked of the Balaklava charge. It was not even a serious preparation for war, for not one of the forty odd gun-captains who esied off their pieces had the remotest idea where their shot struck. But what I have since chiefly regretted was that there were no eager quartermen handy with road-material to the highways of the Metropolis, where it was so badly needed. The whole show was just about on a par with the wonderful system of volley-firing, of which infantry officers were so enamoured in the early part of the South African War, by which it was ordained that a soldier must let off his rifle at word of command, whether he caught sight of the enemy or not, trusting to the noise and the whistling of the bullets to put the foe to flight. On another memorable occasion our gun-practice nearly resulted in a tragedy which would have shocked the world. So serious was the affair that I am doubtful whether the details ought to be divulged even now, after the lapse of nearly sixty years. They have never hitherto appeared in print, and I am adverse to telling tales out of school. But as nearly all the actors in the drama have long passed to the bourne whence return is prohibited, no great harm can result from the disclosure. So here goes, *courte coute coute*.

 "KING OF PAIN"

Perils of a World-Flight.

FOR EVERY DAY'S FLYING IN TROPIC AIRMEN MUST COUNT ON SPENDING TWO DAYS IN REPAIRS.

People have flown from England to India, and even from Devon to Australia, but no one has as yet managed a flight around the world. Did it ever occur to you to consider the immense difficulties in the way of such an achievement? If not, it may be worth while to set down a few of them.

In the first place, you must consider the weather, and especially the wind. Since the world's winds are, in the Northern Hemisphere, mostly westerly, the flying men naturally start from west to east.

But in July and August India and its surrounding seas are covered by the storms of wind, rain, and thunder, known as the "monsoons." It is therefore necessary to start at such a time, as to avoid these storms, which are frequently very severe.

The Foggiest Region on Earth. But as they are, they are not nearly so bad as the typhoons or great circular storms which rage in the China Seas. The typhoon season is September and October, and flying in those months is extremely risky in that part of the globe.

Then there is to be thought of, and the Northern Pacific, between Japan and Alaska, is one of the foggiest regions on earth. June is the only month that is tolerably clear.

But why, you will ask, fly so far to the North? I answer that you have no choice. Only once has a plane managed to cross the Atlantic, and the Pacific is far wider than the Atlantic. So anyone who intends to fly round the world must follow the land.

The plane, when it reaches Hong Kong, goes to the Island of Formosa, where the camphor grows. Thence the route runs to the Liu Kiu Islands, and so to Japan.

From Japan it follows the Kuril Islands to the wild unknown peninsula of Kamchatka, and from that point travels by way of the Commander Group to the Aleutian Islands, and so bridges the gap between Asia and Alaska.

Round the World in 120 Days. Once the flying men reach Alaska, they keep all down the coast to Vancouver, in British Columbia, and then sail proceed to cross the American Continent. They come home via Greenland and Iceland.

But the trouble is this: Between Japan and British Columbia there are no shops where you can buy petrol, oil, or stores, so before a flight is attempted depots must be founded all along the lonely chain of uninhabited, fog-bound islands.

This is the work that is now being put in hand by Captain Roger Pocock, who is sailing shortly in the steam

Summer FOOTWEAR Needs

Running Shoes, Sandals and Play Shoes
 For BOYS and GIRLS

Running Shoes
 In Black, Brown and White.

'ATHLETIC SHOES'

Tennis Shoes
 FOR MEN AND WOMEN
 Men's White Tennis Shoes—Rubber sole and heel. (Regulation style) 1.25
 Men's White Tennis Boots—Rubber sole and heel. (Regulation style) 1.45

After Every Meal

WRIGLEYS

"A bite to eat—a bit of sweet"

After a substantial meal, the children naturally want to top off with a bit of sweet. Give them WRIGLEYS, the great Canadian Sweetmeat.

It combines the enjoyment of sweet with many BENEFITS. It cleanses the teeth, removing food particles that lodge in the crevices. It neutralizes the acids of the mouth, soothes the throat, and lastly—WRIGLEYS helps the stomach by supplying saliva to aid in digestive work. Made clean, kept clean, sealed tight in a wax-wrapped package.

Airplanes at \$500.00 for British Amateurs.

London, May 18. (A.P.)—Airplane flying promises to become as popular in England as bicycling or motoring. British manufacturers are now perfecting light models of aircraft that will cost little more than a motorcycle. They are fitted with small engines of four horse-power and have a speed of 50 miles an hour. They leave the ground with a few yards through the ordinary field gate and land at less than 25 miles an hour. The dangers are less formidable than those of the big flying machines, and anyone with a rudimentary knowledge of mechanics can handle the new models.

In an effort further to popularize flying, the British Under Secretary of State for Air has offered a prize of \$2,500 for a light airplane competition confined to British machines with a maximum of 8 horse-power. The cost of the airplane when completed is not to exceed \$500. A commendable condition is ability for the machine to be transported a mile by two persons within three hours, the test to include getting out of a field through the ordinary field gate and travelling along an average country road. The competition is to take place in September over a triangular course of not less than 15 miles, and as the minimum distance which must be flown on the one gallon of gasoline is to be allowed is 50 miles, there will be ample encouragement to produce an economical machine.

A Farmer's View.

NEW YORK, June 9.—(By Canadian Press)—A local paper recently published a letter it received from a Virginia farmer who translated the cost of construction, at current wages, into food at the price the farmer gets. The gist of the letter follows: "It takes 63½ dozen, or 762, eggs to pay a plasterer for one day of eight hours work. "It takes 17½ bushels of corn, or a year's receipts from half an acre, to pay a bricklayer one day. "It takes twenty-three chickens weighing three pounds each to pay a painter for one day's work in New York. "It takes forty-two pounds of butter, or the output from fourteen cows, fed and milked for twenty-four hours, to pay a plumber \$14 a day. "It takes a hog weighing 175 lbs., representing eight months feeding and care, to pay a carpenter for one day's work."

Science in the Fishery.

For years there has been desultory agitation going on in Newfoundland in favor of the establishment of a Bureau, for scientific research, in connection with our fisheries with a view to increasing their productivity and value, but so far nothing of a practical nature has been done. We have an expensive Fishery Department, but so far their operations seem to be confined to methods that show no improvement on the condition that prevailed twenty years ago in the disbursement of allocations and issuing licenses for Lobster Packers. They had a chance to make a great industry of the Herring Fishery, but owing to lack of proper supervision and export control our herring are unsaleable at a profit in the foreign markets to-day. Alaska has taken away our market in America because the Fishery Department of that District realized at the start the necessity of sending none but well packed herring, uniform in size across the continent. The Canadian Fisheries Department at Ottawa will, this summer, make a special effort for the conservation and extension of their fisheries in British Columbia, and will give special attention to scientific research work. Members of the Biological Board met at Ottawa last week and held several days consultation with officials of the Government with regard to a more extended programme of scientific research in the fisheries and a grant will be allocated from the supplementary estimates for this purpose. The Board recommends the following agenda: Laboratory work in the study of all articles used in the preservation and canning of fish. A small curing plant to enable accurate determination of the best methods of curing and the effect of different temperatures on fish. A small drying plant in which temperature and moisture conditions of any part of the coast could be duplicated, once the ideal condition is ascertained. A smokehouse for experiments in curing fish by this process. A small freezing plant. A plant for canning fish and a plant with equipment for reducing fish offal into commercial products.

McMurdo's Store News.

CARE OF THE TEETH.
Dental authorities, almost the world over, are seeking to bring about a new Dental Era. Few people keep teeth free from film, few escape decay. Probably millions of people are affected by diseases local or internal which result in tooth trouble. So in modern tooth pastes dental science aims to combat this film, to destroy it or digest it, and in the tooth brush, science aims at effective film removal. Leading Dental authorities have now agreed that Peppodent Tooth Paste and the Decoater Tooth Brush are the best means for destroying this film. Peppodent Tooth Paste contains no soap, no chalk, no pumice, nothing to harden film, nothing to scratch enamel, nothing which irritates the gums, penetrates the interstices and cleans the teeth.
We are offering this week to introduce this special Tooth Paste, a Tube of Peppodent and Decoater Tooth Brush for \$1.20.

T. MCMURDO & CO., LTD.

Ordination Service.

HELD IN C. OF E. CATHEDRAL.
The Ordination Service held in the C. of E. Cathedral yesterday morning at 10.30 was a very impressive one and was attended by a large congregation of worshippers. His Lordship Bishop White officiated at the ceremony, with Rev. C. M. Stickings acting as Bishop's Chaplain. Rev. Edward Percy Hiseock, B.A., of Sheffield University and Leeds Clergy School, was admitted to the order of Deacons. Reverends F. Alex. Shepard and Walter Bugden were ordained to the Priesthood. Rev. Ewan A. L. Donaldson, M.A., Vice-President of Queen's Theological College, was the preacher. The candidates were presented by Rev. Canon Bolt, the Examining Chaplain. The Bishop was assisted in the laying on of hands by Canon Bolt, Canon Field and Revs. A. Pittman, A. G. Turk, B.A., E. E. Rusted and N. S. Facey, L.L.D. There was also present Revs. A. T. Turk, H. W. Facey, I. Parsons, W. R. Pitcher and J. Brinton. The singing by the choir throughout the service was most pleasing.

At the Casino where plays are best. The season's last and best offering. "Knight for a Day."

June 11.

S. S. Advance Arrives.

The S.S. Advance, Capt. W. J. Mitchell, of the Tri-National Line, of which Messrs. A. E. Hickman & Co. are the agents, arrived from Boston on Saturday at 5 p.m. and is now berthed at Hickman's western wharf, where her full general cargo is being landed. The Advance formerly plied between New York and the Canal Zone, and this is her first trip to this port. She is a single screw ship of 1,335 tons register, has compound engines, and although a coal burner, can easily be converted into an oil burner. The ship is an exceptionally good sea boat and has splendid passenger accommodation. The crew consists of 56 men all told. She will now run between Boston, Halifax and St. John's, and will undoubtedly do a large business. Mr. George Roarke, formerly of the S.S. Stephano, is the ship's Chief Steward and Purser.

Correction.

In our article in Saturday's issue, describing the '46 Great Fire we stated that all of the firms then doing business, only three now survive. We should have stated that four firms remain, as the firm Dunsmoes & Harvey, mentioned in the article are the predecessors to the well known and highly respected firm of Harvey & Co. Ltd., which dates back in a direct line (but under various names) as far as 1790, and is therefore the oldest business house in the colony.

Laughter, love, catchy music, rars of comedy to break up the blues at "Knight for a Day."

June 11.

Distinguished Visitors Coming in July.

(Daily News.)
The Masonic fraternity is looking forward with pleasurable anticipation to the approaching visit of Lord Amphil, Pro-Grand Master of English Freemasonry.
A few years ago, before the war the Craft was honoured by a visit from the English Grand Master, H. R. H. the Duke of Connaught, then Viceroy of Canada. His visit was primarily to Newfoundland, as the guest of Sir Walter and Lady Davidson; Lord Amphil comes for the express purpose of installing the District Grand Master, Designate, Mr. John R. Bennett. He will be accompanied by Sir John Ferguson, K.B.E., Grand Treasurer; Lt.-Col. Hamilton Wedderburn, O.B.E., and Mr. A. E. Carlyle.
Arthur Oliver Villiers Russel, 2nd Baron Amphil, springs from a family illustrious in British history, and to that line has added lustre through his own career. He is a G.C.B.E., G.C.S.I. and G.B.E. He commanded the 13th Lancashire Regiment and later, the 8th Bedfordshire Regiment in France. In India, as his honours suggest, he held high position. At one time he was Governor of Madras. Lord Amphil was appointed pro-Grand Master in 1905, when 38 years of age. Previously he had held the District Grand Mastership of Madras and the Provincial Grand Mastership of Bedfordshire. Educated at Eton and Oxford, Lord Amphil entered the service when quite young, the first step in his public career being his appointment as Assistant Private Secretary to the late Joseph Chamberlain. He is married to a daughter of the 6th Earl Beauchamp, who, like her husband, is a G.B.E., and a Justice of the Peace. She wears the Kaiser-I-Ind Gold Medal, and the Order of the Crown of India was conferred on her in 1899.
Sir John Ferguson, K.B.E., 53 years ago. He is, or was three years ago, Joint General Manager of Lloyd's Bank and a member of the Council of Institutes of Banks in England. During the war he was a very busy man, his activities including the Chairmanship of the following war committees: Contractors' Association (1917); Overtime (1918); Overstating Enquiry (1918); Establishment (1919-20); also, later, Russian Accounts, Committee and Ministry of Munitions (1920). Three years ago Sir John was Financial Adviser on Housing to the Ministry of Health Ceremonies.
Lt.-Col. Henry Kellerman Hamilton Wedderburn, saw active service during the war, and his prominence in Masonry is attested by his rank as a Past District Grand Director of Ceremonies. Mr. A. E. Carlyle, is a Past Assistant Director of Ceremonies.
We understand that Lord Amphil and his colleagues will for Quebec at the end of the present month. They will come to Newfoundland via Sydney and Port aux Basques, and are expected to arrive in St. John's on July 9th. Their stay here will probably not exceed three days, and return to Canada will, in all likelihood, be made by the same route. District Grand Lodges in the Dominion and possibly in the United States will be officially visited. That the Masonic Fraternity will extend a cordial welcome to these distinguished Craftsmen goes without saying; the one regret being that the brevity of their visit will prevent a more comprehensive programme, and necessary, of the fraternal hospitality which the Fraternity and others would rejoice to extend.

Magistrate's Court.

A 44-year-old laborer of Duckworth Street, drunk and disorderly was fined \$2.00 and costs.
A 40-year-old laborer, of Scotland, arrested on a charge of being loose and disorderly, was remanded to the Penitentiary, Serret. Skipton, who gave evidence, stated that he found the man sleeping on the steps of the C. of E. Cathedral at 6.30 yesterday morning and brought him to the lockup. The defendant has no home and has been sleeping out in boxes and stables for some months past. The court will endeavour to arrange for transportation to his home.
Two men were summoned into court at the instance of a citizen of the East End for indecent exposure on the public street. They were each fined \$2 or 7 days.
A 41-year-old tailor for drunkenness was fined \$1.00.
Two ordinary drunks were discharged.
A 24-year-old seaman, a resident of Boof Her, N.D.R., arrested under warrant by his wife for non support during the past twelve months, was held over.

Rugby Football.

EXHIBITION GAME TO-MORROW.
Two picked city teams will play an exhibition rugby game on the Ayre Athletic Ground at 7.15 p.m. to-morrow. So far as is known at present, the players will be:
Nondescripts—J. Withers, E. Fox, A. Bruce, A. B. Perlin, A. W. Johnson, A. S. Goodfellow, J. E. Rowley, J. Paterson, C. G. Paterson, M. E. Taylor, W. J. Clouston, A. Ralph, E. G. Swing, R. Martin, C. Whthers.
Among those who will represent the Guards are—J. Herder, D. Horwood, G. Hunter, R. Macpherson, W. Halford, Young, W. Cave, B. Miller, D. Clouston, B. Halfyard, G. Harrison, Macdonald, R. Hanham.
Rugger is arousing more enthusiasm in this country this year, than ever before, and all who are interested should make it a point to see this game. Mr. Arthur Monroe will be referee.

Knights of all kinds what rights are yours for "Knight for a Day."

June 11.

Four Year Old Boy Missing.

SEEN NEAR BOUND HOUSE YESTERDAY.
This morning a laborer named Peddie reported to the police that his little boy "Billy", aged 4 years, was missing from his home, Rogister's Lane, since yesterday at 3 p.m. Both the father and the child's mother had been searching for about an hour after the little fellow's disappearance without getting any trace of him. A boy answering to a description of Billy was reported seen yesterday evening near the Reid Round House throwing stones into the river. Police are making a search but up to 2 p.m. there were no tidings of the child.

A Wild Rumor.

A report that the body of a man lying in a pool of blood had been discovered in a shack near Jensen Camp by a member of the Girl Guides, who were out that way on Saturday evening, caused quite a sensation in the city yesterday. As far as can be learned there is no foundation for the rumor. Saturday evening when the report became general several police in a motor car drove to the scene of the supposed murder but found nothing to indicate that anything unusual had occurred. May be the Guides were seeing red.

Loading Pit Props.

The S. S. Bessely arrived off the narrows at 4 p.m. yesterday and took on board a pilot who will navigate the ship to her destination, Newman Sound, B.B. The Bessely will load pit-props for Newcastle, on Tru. Mr. M. S. Sullivan is the local agent.
The S. S. Modesta is expected to leave Cardiff, Wales, to-day for this port. The ship is consigned to Mr. M. S. Sullivan, and after arrival she will proceed to Bate Verte to load pit-props.

Train Notes.

Yesterday's west bound express arrived at Bishop Falls 1hr. and 30 minutes late.
The incoming express is due to arrive at 4 p.m.
The Carbonate train arrived at 1:30 p.m.
To-morrow's outgoing express will make connection with the S. S. Home at Humbermouth for points as far as Battle Her.

REVENUE SERVICE.—S.S. Sebastopol, Capt. Couch sails this afternoon for the West Coast on Revenue Service.

Abard's Linnets Luncheonary's Friend.

First Aid.

The following are the results of an examination in First Aid recently held in the First Aid Room, King George Fifth Seamen's Institute:—
1st. Ida Parsons; 2nd. Emma Macpherson; 3rd. Winifred Bailey; Passed Winifred Barker, Catherine Campbell, Marjorie Campbell, Gertrude Chambers, Adelaide Copeland, Mary Carroll, Elizabeth Dunphy, Florence Evans, Nellie Ferguson, Caroline Furlong, Millie Ginn, Mabel Hooley, Beatrice Hooley, Marjory Johnson, Kathleen MacGrath, Joan MacGrath, Doris Ronnie.
S. S. Digby, leaving Halifax on Wednesday, is due to arrive here on Friday.
S. S. Sachem is due here from Liverpool on Thursday next.
S. S. Sable T. arrived in port this afternoon, bringing a general cargo from North Sydney.
S. S. Winona is due to leave Charlottetown to-day for this port.
S. S. Rosalind, which has been on dock at New York receiving the annual clean-up, leaves on Saturday next for here via Halifax.
S. S. Silvia leaves Halifax at noon to-morrow for this port. The ship has about 25 round trippers.
Schr. Atlanta sailed from Aquathuna on Saturday for Louisiana with a load of railway ties.
Schr. Pellean, laden with mining timber, sailed from Aquathuna for Louisiana on Saturday evening.
S. S. Gopher, towing S. S. Glenburnie, left Sandy Point on Friday evening for Montreal.
Schr. General Allenby has loaded 1500 qts. codfish at Lamaline and left for Grand Bank to finish.

A Whale of a Show at the Star To-Night.

What promises to be the biggest yet seen at the popular Star, is the show billed for to-night. As Coney says, "every day and in every way we are growing stronger and stronger." As will be seen from the ad. on another page, the popular screen drama, which is now to be seen in a Paramount Special, "The Frisky Mrs. Johnson," a picture in which the popular Billie makes a decided hit. That popular team, Olvitt and Lawrence, have been rehearsing the biggest hit in which they have yet appeared. This is entitled, "The Cricket on the Hearth," and for which they have prepared a new poppy dance. Very few of the patrons of the Star have thought that Miss Olvitt now enters on her tenth week, and this may be accounted for the fact that she is as eagerly sought for to-day as she was the first week she appeared. We have not yet had in this city a performer who has taken as this talented lady has, for it must also be remembered that this is her second engagement. Mr. Lawrence, who is now appearing with her, has been afforded the opportunity of bringing to the footlights great ability and they are to-day voted the best vaudeville artists yet seen on the local stage. Many people have asked us to have them repeat the "Symphony" song and dance and to meet the request this is being done to-night. In addition to their regular act, in the comedy role that much advertised HAROLD LLOYD will be seen in a comedy feature entitled, "Never Weaken," and whilst the Management of the Star Movie state that he does not stand in the class of Senon and Aubrey, nevertheless, in "Never Weaken" he is at his best. Don't miss this big show to-night.

At the Majestic.

HER HUSBAND'S WIFE.
Saturday night's performance of the comedy "Her Husband's Wife," presented at the Majestic Theatre under the direction of Mrs. John Baxter, was fairly well attended considering the inclemency of the weather. His Excellency the Governor, Lady Allardice, and staff were present. The admirable rendition of the different parts won frequent applause from the audience and during the second act, Miss M. Keegan, whose impersonation of the part of Emily Ladew could not be excelled by a professional, was presented with a bouquet of beautiful tulips. A feature of the performance was a solo by Miss Mary Ryan, accompanied by Professor King, on the piano. The proceeds of three performances of "Her Husband's Wife" will be devoted to the Child Welfare and Daughters of the Empire Funds.

Train Notes.

Yesterday's west bound express arrived at Bishop Falls 1hr. and 30 minutes late.
The incoming express is due to arrive at 4 p.m.
The Carbonate train arrived at 1:30 p.m.
To-morrow's outgoing express will make connection with the S. S. Home at Humbermouth for points as far as Battle Her.

Cows Fed on Fish.

It Sounds Startling, But the Faroe Islands Cattle Yield Much Milk On This Strange Diet.

Most people are aware that the husky dogs which pull sledges in the North-West are fed chiefly on dried salmon; but when it comes to cows living on fish, such an idea does strike one as startling, to say the least of it.

Since, however, this information is contained in a consular report, it seems to be dependable. The cows which have become fish-eaters are owned by the Faroe Island folk, and the fish on which they are fed is coal-fish, a sort of pollack.

The fish is not cooked in any way, it is merely dried, and before being given to the cows is pounded between two stones. It seems to agree with them, for they live on it during most of the winter and yield excellent milk.

Some cattle have queer tastes, for I have myself seen them down on a beach by the sea grazing on some sort of seaweed which they seemed to appreciate. And while most animals know well enough what is good for them, cows sometimes fall in this respect.

Ponies That Eat Nuts. I remember a case in which, some painters having left pots of paint behind a hedge in a meadow where cows were grazing, the animals went and licked up the paint. Ten were badly poisoned and two died.

Not long ago a wild dog, which came from South America, was given to the Zoo. It is not a true dog, but a sort of missing link between the dog and the fox. This creature in its wild state roams the beaches, and its principal food consists of crabs, the shells of which it cracks with its strong teeth.

This reminds me of the ponies which were introduced a good many years ago from South America to the Cook Islands in the Southern Pacific. These animals originally came from Chili, where presumably they lived, like other horses, on grass. But grass is not too common in the Cook Islands, and these ponies, have got into the queer habit of eating coconuts which are very plentiful.

You might imagine that the shell of a coconut would defy any horse to crack, but these ponies are quite equal to the task. Working the nut into a suitable position, they stamp on it until they break the shell. Then they quickly bite away the succulent kernel.

Decision Was Hooted.

London, June 4.—Roland Todd tonight defeated Augie Ratner, of New York, on points in a 20-round boxing contest for the middleweight championship of England.

The referee's decision came as a surprise; many of the spectators greeted it with shouts of disapproval. Todd landed the greater number of blows, but those of Ratner seemed much the harder. Ratner showed great surprise when the verdict of the referee was given against him.

Todd floored Ratner for an instant in the second round. This was the only knockdown in the fight. Both men finished strong.

Master Your Moods.

If We Must Have Moods, Let us Make Them Constructive Rather than Destructive.

"Oh, don't let that trouble you! It's only one of mother's moods! She always gets like that when anything goes the least bit wrong."

Thus did a daughter speak to a friend who was stopping with her for a few days, and who was much perturbed by the silent air of martyrdom which was worn by her hostess. Generally, pleasant character, but she developed moods when she was quite young, and let them get a hold on her.

Now unless we pick ourselves up out of any unpleasant rut, such as indulging in moods which can upset a whole household, we are pretty sure to go through life a misery to ourselves and to everyone else.

If we are going to collect moods let them be good ones. Because after one gets moods of any type they are apt to turn out like the "old man of the sea." Hard to shake off, they "set" you very soon after you have "got" them.

None of us can pick out our inclinations and our tendencies, but we can all choose what we shall cultivate.

Speak Out; Don't Sulk. Sulk and being morose, answering others shortly, or not answering them at all if you don't feel inclined, never really affords any great satisfaction, and even if it did, what right have you or I or anyone to satisfy ourselves at the expense of those others who are forced to come in contact with us.

Perhaps the most distressing type of mood is that which folks acquire, and yet won't let others know why they are moody. A friend of mine has had a servant for many years. As a worker she is a treasure, but her moods at times cast a gloom over the house. One day the mistress, seeing Annie with a whole heap of peas to shell, sat down beside her in the kitchen and lent a hand.

Immediately the girl got sullen and looked glum. When spoken to she barely answered. It was not until a day or so afterwards that her mistress knew what had caused the trouble.

"It seemed as though you thought shelling peas too lary work for me, and wanted to get them done, so I could start scrubbing again," was the explanation. The servant was really hurt. If she had said this at the time things could have been put right.

Draymen are often to be seen rolling a heavy barrel up a plank and into the van. They could not possibly lift the barrel from the ground to the van direct, but the gradual slope of about forty-five degrees up which the weight is slowly pushed makes the work far easier.

The Problem to be Solved. In the same way an aeroplane weighing 3,000 pounds can rise at a slant of fifteen degrees with a motor that has a "pull" of 500 pounds—in other words, the motor can lift a weight equal to six times its own pulling capacity, because it is able to do so gradually.

If, however, the aeroplane of 3,000 pounds in weight were to rise vertically it would need a motor-pull of 3,000 pounds.

As an ordinary motor capable of doing this would be so heavy that it would defeat its own object, the designers aim at motors of exceptional power for their weight, and propellers of greater lifting capacity than those now used.

Standing Still in Mid-Air. When they have achieved a construction that will give them 18 pounds of "lift" per horse power, it is believed that the helicopter will be as reliable as the aeroplane.

It will be able to move forward like an ordinary aeroplane, but in addition it will be able to stop at will and hover over any given spot indefinitely, and this, of course, will mean that landing on the spot chosen—even the flat roof of a building—will be a simple matter for a machine that can fly straight up or down.

So far the highest vertical flight on record was made in 1922 by Capt. Kartman, of the Austrian Army in a helicopter that rose 150 feet with two men on board.

The machine has two propellers, since if there were only one the whole thing would spin round and round like a top in the direction in which the propeller was moving. When the propellers revolve in opposite directions they can exert lifting power, whilst at the same time each neutralizes the spinning motion set up by the other.

The Drawback. The drawback of the Austrian machine is that steering is impossible and it has to ascend whilst held captive with cables. Also balls of leather must be placed underneath the frame-work to absorb shock on landing.

Recently an American machine has been regarded as far more promising. Although it has risen only ten feet, its steering apparatus is much more efficient than that of many helicopters.

The apparatus, weighing 3,750 pounds, and driven by 170 horse-power motors, has four huge propellers having a spread of 380 square feet, and it is believed that if the

TO-DAY'S MESSAGES.

NEW BULGARIAN GOVERNMENT SENDS ASSURANCE TO FRANCE. PARIS, June 11. The French Government has received a message from the New Bulgarian Government giving the assurance that it intends to live up to the terms of the Peace Treaty and all other foreign engagements signed by the Stamboulski Government.

FLEETS MOVEMENTS. MALTA, June 11. An announcement regarding the relief of the seventh destroyer flotilla at present stationed in the Mediterranean, by the third flotilla of the Atlantic fleet, which comprising the latest built British destroyers, is interpreted here as the first step towards putting into effect the proposed redistribution of the fleets, whereby the Mediterranean fleet will again become British main fleet in commission. It is believed here the next step will be the sending out of the battleships of the Royal squadron class to replace the present battle squadron. The newly built Eagle, the largest aircraft carrier and also the Argus are reported as being destined for the Mediterranean; and there is little doubt entertained but that the destroyer strength will be considerably increased. Other steps contemplated are believed to be the relief of the eight flotilla by a more modern one and the sending of an additional flotilla, making altogether two flotillas in the Mediterranean.

FAIL TO APPREHEND STAMBOULSKY. PARIS, June 11. Detachments sent to apprehend Stamboulski, the deposed Bulgarian Premier, have as yet failed in their mission, says Le Journal. Sofia. The correspondent adds that Stamboulski was defending himself in his villa at Algovitza, with the aid of gendarmes and peasants. The new government is said to be willing that the former Premier should leave the country, as the Ministry seek above all, to avoid bloodshed, hence it is loath to send an organized expedition to capture Stamboulski. Reports from the provinces, says the correspondent, say that armoured trains were sent to Plevna to disperse some thousands of peasants who had armed to resist the new regime. The Ministry of war expresses belief that this opposition was put down without difficulty as a similar manifestation at Radomir. Isolated shots were heard in Sofia, Saturday, but no casualties were reported.

NEW YORK OFFICIALLY DRY. NEW YORK, June 11. The post of New York became officially dry at midnight when Customs Officers put into effect the Supreme Court ruling, prohibiting all merchant vessels from possessing the liquor within the three mile limit; despite fact that no definite instructions came from Washington and despite the inadequacy of their force, Customs officers said that the law would be rigidly enforced. Foreign ship owners pending protest by Govt. will meet the terms of the law they announced.

FLOODS IN SOUTHERN STATES. KANSAS CITY, June 11. With at least five persons reported killed and thousands driven from their homes and property damage estimated in millions of dollars many districts in Kansas, Oklahoma and Texas are flooded to-day.

Football League Meeting. PLAYERS GRANTED RELEASE. A special meeting of the Nfld. Football League was held at the office of the President at 1 p.m. to-day, when the matter of releases, as dealt with by the league a few days ago, was again brought up for discussion. After the full hearing of the matter had been laid before the meeting, the delegates took time to consider, and decided to withdraw their former decision. The three players, namely Callahan, Young and Burridge, were granted their release with the full sanction of the League.

A special meeting of the League will be called within a few days to modify the release rule in such a way that there will not be a recurrence of this trouble in the future.

motors failed, the machine, instead of dropping like a stone, would be able to slide to earth like the ordinary aeroplane.

THE MARVELS OF THE HELICOPTER.

The fact that after many years of experiment only a few successful flights have been made with the helicopter—an aeroplane that rises straight up from the ground like a lift—shows the difficulty of the problem which the aeronautical inventor has to tackle.

It might be supposed that if the aeroplane could rise without difficulty at a slant from the ground a little adjustment of the wings would enable it to go up at right angles, but the puzzle to be solved is less simple than that, as a comparison with an everyday sight shows.

Draymen are often to be seen rolling a heavy barrel up a plank and into the van. They could not possibly lift the barrel from the ground to the van direct, but the gradual slope of about forty-five degrees up which the weight is slowly pushed makes the work far easier.

The Problem to be Solved. In the same way an aeroplane weighing 3,000 pounds can rise at a slant of fifteen degrees with a motor that has a "pull" of 500 pounds—in other words, the motor can lift a weight equal to six times its own pulling capacity, because it is able to do so gradually.

If, however, the aeroplane of 3,000 pounds in weight were to rise vertically it would need a motor-pull of 3,000 pounds.

As an ordinary motor capable of doing this would be so heavy that it would defeat its own object, the designers aim at motors of exceptional power for their weight, and propellers of greater lifting capacity than those now used.

Standing Still in Mid-Air. When they have achieved a construction that will give them 18 pounds of "lift" per horse power, it is believed that the helicopter will be as reliable as the aeroplane.

It will be able to move forward like an ordinary aeroplane, but in addition it will be able to stop at will and hover over any given spot indefinitely, and this, of course, will mean that landing on the spot chosen—even the flat roof of a building—will be a simple matter for a machine that can fly straight up or down.

So far the highest vertical flight on record was made in 1922 by Capt. Kartman, of the Austrian Army in a helicopter that rose 150 feet with two men on board.

The machine has two propellers, since if there were only one the whole thing would spin round and round like a top in the direction in which the propeller was moving. When the propellers revolve in opposite directions they can exert lifting power, whilst at the same time each neutralizes the spinning motion set up by the other.

The Drawback. The drawback of the Austrian machine is that steering is impossible and it has to ascend whilst held captive with cables. Also balls of leather must be placed underneath the frame-work to absorb shock on landing.

Recently an American machine has been regarded as far more promising. Although it has risen only ten feet, its steering apparatus is much more efficient than that of many helicopters.

The apparatus, weighing 3,750 pounds, and driven by 170 horse-power motors, has four huge propellers having a spread of 380 square feet, and it is believed that if the

IN PURPLE AND GOLD.

WITH ITS LEAFY SWORD OF GREEN, THE IRIS MAY WELL BE CALLED THE ROYAL FLOWER OF FRANCE.

There are some blossoms that spell enchantment and the iris is one of them. It is a flower of mystery and wonder or reticence, too, which is all that it should be. For is not iris the wife of the West Wind, and the mother of Eros? Whether the Spanish iris, or the beautiful, broad-leaved "flag," there is something about the flower which suggests secrecy.

I have walked among my irises in early morning and looked at the tightly-closed buds, wondering what colors they held, and by evening-time some magic had been at work in the garden, and the blossom is open, with sister buds waiting their day below. So many forms, so many colors, that "witch lady" of the garden may take I know about seventy kinds, and there are, doubtless, as many more.

Ruskin describes the iris as the flower of chivalry, "with a sword for its leaf and a lily for its heart" and if ever you are the owner of an old world-garden, look well, for there is sure to be a border planted with the old-fashioned flag.

THE WHITE TORCH. With leafy swords of green, curlicues and plumes of gold and bronze blue and purple, sentinels of the garden, reminders of Old France, there they stand. For this is the flower of Louis VII, according to at least one authority.

Louis VII of France, whose name was then written Loys, called the flower "Fleur de Loys," then it became Fleur de Louis, and finally Fleur de Lis. Old Tussac, in his list of blossoms, spells it "Fleur de Loys," so does Gerard, who advises its use as a domestic remedy. He says the root, stamped plasterwise, doth take away the breeness and blackness of any stroke," i.e., a bruise. The powdered root was also used as a complexion beautifier.

The white iris, the iris of the Florentine orriarrot, is one of the loveliest blossoms in the iris family. It was a sacred flower of the Greeks. The French call it "la flamme blanche" a beautiful name indeed, and if you walk between the iris borders in May or June, with the moon shining above you, you will understand its significance. It is "the white torch of the garden," in very truth.

How Mistral loved the iris—the yellow iris most of all. But there is a subtle joy about the yellow iris which makes us thrill and understand the passion of the great Provençal. It should grow beside water, of course, and should never be crowded. Those shining breaks of golden-yellow among the tall sword-leaves are too royal for prodigality.

A Way They Have in Japan. Once, last year, I saw a heron stand among my yellow irises, watching the water solemnly, and so unusual was the sight I thought it was a dream. Though I watched early and late, I never saw him again. Perhaps this year when the yellow iris buds and blossoms he will pay me another visit.

There is something occult about the iris, something mysterious. Examine the markings on its petals and you will understand. Even old-long-ago Spencer loved it, although he could not have known some of the lovely blossoms of to-day, for he says no flower "shall match with the fayre Fleur Delice."

There is a delightful story told about one of the irises that has come to us from Japan. Once upon a time there was a mighty famine in that land, and all things that could not be used for food were forbidden to be grown, and no man might plant flowers for beauty only. But the Japanese ladies used the roots of the iris with the jagged crest to powder their pretty faces. The mighty ones of the land might banish the iris from the garden, but the Japanese ladies carried them to the roof, and there they lived and flourished.

The iris, by the way, of a beautiful violet colour, came to England in 1572.

MAJESTI Theatre
TO-DAY

THE WORLD'S SWEETHEART
MARY PICKFORD
With all her glorious curls, her smile and cheerful spirit comes to you in
"The Love Light"

It moves and cheers—it softens and refreshes—it stirs and gladdens—it charms and appeals—it presents "Our Mary" as an Italian girl in a melodramatic story, so human that you will leave the theatre with the exclamation: PERFECTLY WONDERFUL!

MAJESTI Theatre
TO-DAY

Whenever you buy roofing felt you should also buy
Simplex Roofing Nails.

Simplex Roofing Nails are better than nails and tins.

The head of a Simplex Roofing Nail is as large as a 20 cent piece and three times as thick as a roofing tin.

Simplex Roofing Nails are all solid iron and will last as long as your roof—they won't rust out.

When you use Simplex Roofing Nails you may be certain the felt won't blow off your roof.

Simplex Roofing Nails are sold everywhere. Ask to see them.

SIDETALKS.

By Ruth Cameron.

BY BEING HAPPY.

There are two ways of being helped in this world. One is by doing something. The other is by being something. Some people, of course, help both ways; but that is too much to expect of everyone.

I have met a woman recently who seemed to me, at first, in no way to earn her place in the sun. She is married but has no children. She does not keep house, does not sew, does not do any but the most casual work, does not do any social work, or club work, or philanthropic work. She does not even go in for society. She simply plays around with her friends, shops, chats over the telephone, goes down town for afternoon tea, dines with her husband and then helps him fool away the evening.

Like a Parasite.

At first it seemed to me as if this woman were a thoroughgoing social parasite, taking everything and giving nothing. But as I grew to know her I found that she did give something. Because she did not spend her energy in any way she was full of vitality and "pep," and because it was her natural disposition, she was full of gaiety. And just by being this way she vitalized everyone with whom she came into contact.

Her husband adored her. He would sink back wearily in his chair when he came home from work and listen to her as she effervesced over some of

her day's experiences. For a time he would say almost nothing. Then gradually he would seem to become recharged with energy from the battery of her vitality and begin to throw a word here and there into the conversation.

Appealed to Men.

Both men and women liked her. Her attraction for men was difficult to understand until I realized her charm, for she was not pretty, she had no figure at all, was not witty or fascinating. But she charmed them in the same way she did her husband, by her vigor and her gaiety.

She was always quick to laugh heartily at their feeblest jokes, she was always kind hearted and sympathetic, she was always ready to go anywhere or do anything—motor, walk, dance. And she was always happy. Never any cynicism, any mood of depression, any anxiety or irritability. Just happiness, gaiety and light heartedness.

Double Honors Due.

Of course the world could not afford too many of these people who do their share simply by being happy. But we do need some of them.

Or, at least, we need the Happiness. If it can be combined with other gifts, so much the better. Even as I write I think of another woman who is just as full of pep and happiness as this first woman and who, in addition, does her share of the world's daily work, and on top of that is always doing public spirited things.

She earns double honors, of course, but let's not forget to give some honors to the woman who helps by being happy.

Big Purses

Spoil Boxers.

I am often asked why it is the American champions have for so many years been more successful than the bulk of English boxers.

America now holds most of the world's championship titles, and we have only one, namely the world's flyweight title, held by Jimmy Wilde. He will soon be off the active list, with nobody in sight to take his place, so that we shall arrive at the unhappy position of being the home of boxing without one of our sons holding a world's title—unless some new blood is infused into the game in this country.

It is the long spells of inactivity that are mainly responsible for the comparatively poor form of our present-day champions. And in the main it is the big price demanded for their services that brings about long resting periods.

An American boxer regards his boxing as a business pure and simple, and as such one that must not be neglected in any detail. His mission in life is to fight and make money, and he fights as often as he possibly can, and as a consequence makes quite a lot of money.

America is so vast that a boxer can perform in a different city every week and engage in fifty fights a year. That is the greatest factor towards the success of the American champion.

This is not to say that I am of the opinion that a boxer could engage in fifty 20-rounds contests in a year, because he would use himself up too quickly at that rate. They do not fight 20-rounds contests in the States, each of which has its own laws defining the number of rounds a contest must be limited to.

I have heard quite a lot of people denouncing the no-decision contests that rule in nine States out of ten, and while I must concede that there is a certain amount of dissatisfaction over no-decision affairs, these short distance bouts, engaged in so often, make American boxers the champions they are to-day.

If an American champion is engaged for an important contest in, say, six weeks' time, he does not, like our fellows, hire sparring partners and go away for a whole month's costly training. He knows a thing worth ten of that. Your American boxer immediately signs himself up for six or eight short-distance bouts and fights himself into condition, thus getting paid for his training instead of footing a big bill for expenses.

What better instances of the efficacy of American methods can I give than to quote the case of the London boy, Bernardsey Billy Wells? This boxer could not win a championship contest. But the moment he went to the States he began to improve and with short-distance bouts in every town from East to West he has improved out of all knowledge.

We can give some idea of the extent of his improvement by the fact that American sporting writers have written him up as the best English boxer seen in the States since Driscoll.

Whether this is true or not may be passed over at the present, but the fact remains that Wells has been considered good enough to oppose Micky Walker for the world's welterweight title, which the latter won from that great champion, Jack Britton, who for years used to fight regularly once a week.

Directly our boxers learn the wisdom of fighting oftener then so soon shall we have champions in the run-

Two American Women Skilled Laborers.

NEW YORK, June 9.—Two women, one in overalls and the other in blouses, were listed to-day as candidates for the Hall of Fame. Mrs. Katherine Nelson, who has a son, 17, and a daughter, 16, has registered as the first steeple-jill and expert electric welder in Greater New York. She also believes she is the first woman to earn \$30 a day as a skilled laborer. Mrs. Florence Thompson, 26 years old and a mother as well, is this city's feminine bricklayer—the product of a school for artisans conducted by her husband. Now she has become a journeyman, and when she works at the trade, which is whenever she needs a new hat or gown, she draws the prevailing wage, \$10 a day. The

story of one is of a widowed immigrant who played a man's game and did a man's job, first as a means of existence and later in order that she might maintain her beautiful home and educate her children. The other's story is of a wife who read "art" into bricklaying and utilized her avocation to make real the Long Island bungalow of which she had dreamed. In her native Denmark 18 years ago, Mrs. Nelson was a machinist's apprentice in her husband's shop. When he died she became stewardess of a trans-Atlantic liner and came to America. She couldn't get a woman's job, so she became a machinist in the Erie Railway shops and later an electric welder. The quality of her work soon led to her employment by an electric welding specialty firm. Since then she has capered about on smokestacks, skyscrapers and water-towers. In one instance, a high bridge job at Kingston, N.Y., she did a bit of welding men had refused to attempt. Just now Mrs. Thompson is erecting the vast-colored brick facade of her home in Long Island City. When that is finished she will be waiting a new hat, she expects, so she will go on a construction job for a day or two. She does not like to work steadily, for as she says, "I have my housework to do, and baby to care for."

At that the Darwin monkey story is pretty far-fetched, wouldn't cha say.

Correct this sentence: "He held office for eight years and retired to private life without a sigh of regret."

The Detroit man who struck a match to look at his gas tank is learning to read with his fingers.

The thunder rolled, the lightning flashed. The water drenched the window pane. With a new deluge, thunder and a farmer prayed for rain.

Aerial Crashes.
 BY GEORGE STANLEY.
 In the early days of flying it used to be said that no aviator could count himself a true aviator until he had experienced at least three crashes. It may have been true in those days, but now, with modern machines and instruments, such a statement is somewhat sweeping.

They may be divided roughly into two classes—namely, the "unmistakable" and the "Tone's distance." Both have their peculiar characteristics. Of the two, the "unmistakable" crash offers less chance for a successful survey. The term "unmistakable" crash might be applied to a crash that happens as a machine is in the air, or just on the ground. This type is the more frequent and more undesirable, for it happens more quickly, there is less time to think, much less time is required to avoid them, and the aviator realizes some-thing is wrong; the engine has cut out, he has lost flying speed—the sound of cracking wood—his hand seizes him and vio-lently he is surrounded by the de-structive elements of the air. If the crash is a sea-plane, the feeling is different. The hidden hand seizes him suddenly, has a wet touch, and the aviator finds himself in the water. His Majesty is being flouted, and has ex-posed himself for such rashness. All immediate crashes are due to the mechanical part of the machine. With the long distance crash, things begin to get better. By long-distance crash is meant the occurrence of a sud-den defect at a high altitude, necessitating an immediate descent terminating in an unfortunate accident. Here, indeed, is a grand opportunity for an analytical study of the defect, the cause of the crash, and its out of its particular nature, is an aeroplane flying in the air, or a sea-plane flying well out at sea.

The engine suddenly cuts out and the aviator stops. With the ces-sation of the engine's roar, only the five wires through the air are left to chance the aviator's fate. The defect, the cause of the crash, gives place to the de-epened roar of the engine, and nor-mal and normal feelings are re-ported. On the other hand, the de-fect cannot be remedied, the engine stops, and the propeller is as-sailed as the sea beneath, a con-stant of impressions assails the aviator. The engine has stopped, the propeller is pitched, and the wires play. What to do the wires tell. Their falsetto shrieks that all is illusion; the sea be-neath is distant, uninviting as-sembly confirms the absence of the machine. For a moment the aviator is paralyzed, his senses lulled.

Not for long, though, does the song remain unchallenged; the stick of the inexorable altimeter needle from 20,000 feet to 15,000 feet rouses the aviator from his lethargy. All is not illusion. The seductive song is illusion itself. Flick, flick—the needle has reached 14,000 feet. The solid mass of white castles, with their turreted top and cavernous abyss, but a moment ago silent majestic witnesses to the song of the wires, throws off its masks and comes up to meet the machine. The warning has been given within the castle, the gates are flung open, and this misty wings stretch out to coil themselves round the machine in a damp-vapoury embrace, and drag it down into the dark dun-geons. No top, no bottom, no north, no south. Such relative terms of earth-bound man have no meaning here in cloudland. Motion seems still absent—perhaps after all, all is il-lusion, as the wires chant? But wait, it is difficult to tell, in the seat—the altimeter is working overtime—what Ah, the earth appears again, but at a slant. The machine has side-slipped, emerging from cloud land just in time for the aviator to prevent a vertical nose-dive. The wires, cheated of their dupe, take on a shriller tone and threaten dire vengeance on this stubborn two-legged adventurer that has dared to doubt their song. A slight casing back of the elevator checks the fortissimo; the altimeter needle patiently shows 4,000 feet. The aviator, free from the seemingly solid mass of airy mistiness, now pur-suing its dignified course far above him, is able to get a clear view of the situation. If he be in an aeroplane far out to sea, he will cast an anxious eye in all directions for sight of a friendly ship. There is one a long way off—will those on board see him? Will they be in time to pick him up? Turning the nose of the airplane to-wards the ship, the aviator makes his signal of distress. The difference of atmospheric pressure will have caused an unpleasant prickling in his neck and ears. Still the sea makes no ef-fort to rush closer; its eyes-watching over-patrolling never can wait for the victim—a splash, a slight distur-bance in the water, and all traces of the sacrificial rites will be removed. As the aviator speeds downwards the convulsions take the form of de-finite, well-regulated wave-crests, and from them he must make up his mind what way the wind is blowing. Un-less he can make a landing head to wind, the machine is almost certain to execute a complete somersault. The altimeter flicks its needle in mute ap-pel for haste, for soon its activities will cease. At long last the sea, dling-ling aside its patience, comes rushing up; the song of the wires is nearing its end. A group of hungry, evil-eyed sea-gulls, gracefully riding upon the undulating water, watch with fan-guist interest the descent of this very strange winged monster. Will there be any pickings? The cruel hooked beaks quiver; a cold gleam glitters in the watchful eyes as the scavengers of the sea lazily flap up into the air. The aviator, keeping the machine dead into wind, unfastens the safety-belt which stood him in such good stead when passing through the cloudy haze. A slight touch upon the elevator—the waves rush by at the speed of an express train—the tail of the aeroplane falls a little—a century of agonised suspense—the last soft note of the song of the wires. A giant's hand deals a terrific blow on the tail of the machine—a sense of nothing but blue-gray all around, and a burning desire for breath. The aeroplane has crashed. Its fall, on hitting the water, rebounded, and she nose dived straight into an oncoming wave. The aviator, having released his safety-belt, has been catapulted out of the machine, and presently comes to the surface some twenty feet away from the sinking aeroplane. The case of the sea-plane far inland

is a different matter. The aviator is faced with a more serious problem. On his emerging from cloudland he realizes that, being unable to glide back to the sea, where he could make a descent in safety, the prospects for him are anything but alluring. Are there any lakes or rivers into which he can land? No. Then he regretfully realizes that he must choose his lesser of the evils confronting him. That beautifully flat-looking stretch of grass—will it prove to be full of hummocks, or, perhaps, the side of a hill? At this height the contour of the land is difficult to appreciate. Looking in the opposite direction, the aviator sees a collection of cab-bage-like objects. From their shape, his experience tells him that they are oak-trees. Perhaps by would come to less harm if he landed the sea-plane on the tops of these trees? Through his mind flash tales of how various conferees of his have suc-cessfully adopted this expedient. He must make up his mind quickly or he will soon be landing in the middle of the busy town beneath. No, that will never do; better that he should crash anywhere else than make the wayfarers below victims of the ac-cident. He cannot hope to repeat the performance of that lucky aviator, in the early days of flying, who fluttered down into a large back-garden between two rows of house without damaging himself of his machine. The moment has arrived; now or never must he make his choice—an- other few seconds and the initiative will be lost. The grassy stretch of the wood? Quick, which? Very well, the grassy stretch. The chance of a branch tearing through the pilot's seat, though unlikely, is rather ter-rifying. The machine turns into wind and rushes towards the green-sward. The ground hurtles by—steady—a little faster glide—check the forward speed and get the heel of the foot a little lower, still lower. The wires whistled in astonishment at the aviator's skill. That's it, a little slower—the machine, like a nervous, bewildered steed, un-able to fight gravity any longer, trembles uncertainly before the giant's approaching clutch. Crash!—Chambers's Journal.

Gigantic "Pious Frauds" in the States.

Mr. Benjamin Purnell, the long-haired, bearded "king" of the House of David—a religious colony established some twenty years ago at Benton Harbor, Michigan—has been adjudged a "gigantic fraud" by the United States District Court.

An action for damages which resulted in this finding was brought against the "king" by Mr. John W. Hansell, formerly a farmer, of Nashville, Tennessee, who with his wife and family joined the colony in 1912 and labored in it without wages until the "monarch" ejected them last autumn on charges of inciting disaffection among their co-believers. The court awarded Mr. Hansell \$3,000.

Evidence was given of the practice of "group marriages" among young men and women of the colony. Brides drew husbands by lottery.

Girl of Sixteen Strangled.

But a more sinister aspect of the trial relates to the burial of colonists who died. Colonists were taught that if they obeyed the injunctions of their "king" they would achieve immortality. When death occurred it was ascribed to the fact that "our brother has sinned," and the death chamber was immediately abandoned to the undertaker and, on the authority of a certificate signed by an aged, col-onist who had a doctor's degree, the corpse was placed in a box and then thrown into a pit without ceremony or witness.

A gravedigger confessed to the authorities that in the summer of 1921 he buried a coffin supposed to contain the body of a woman of 68. As he pushed it into the grave its top was shattered and he saw the body of a girl of sixteen, who appeared to have been strangled. An order for the exhumation of the body was issued.

Mr. Purnell has been missing since Christmas.

Scotch Woman's Story.

The House of David owns exten-sive properties in Michigan. It has conducted a large business in agricul-tural produce, and its baseball team and brass band are known through-out the State.

Mrs. Margaret Bryson, a native of Scotland, was one of the chief wit-nesses. She said that she joined the religious colony at its English head-quarters in Romford-road, London, in 1915.

She was visited in Scotland by an emissary of the House of David, who warned her that he was the last of the messengers by God to gather in the elect. He exhorted her immedi-ately to come to London, which she did.

There she was informed that Lon-don would be destroyed by a flood in sixty days, and the only way to save her life was to take refuge in the "ark," which was at Benton Har-bor, in Michigan, and she at once went to this ark.

You're darned well right I would!

THE WORLD'S PRESS.

USEFUL THING, A FLIVVER!

Louisville Courier-Journal.—Henry Ford is going to lend Detroit \$2,000,000. The flivver comes along and pulls the city out of the hole.

THE VILLAGE WORTHIES.

Manchester Guardian.—When we have replanted England by scientific methods we may see the return of the village wheelwright and the village carpenter.

CHANGING THEIR TUNE.

Chicago Tribune.—Returning tourists say that the German hotels and restaurants post signs to tell the French and Belgians that they will not be served, and that at the Leipzig-Messe this legend was conspicuous: "No Trade Desired with French and Belgians. English and American Welcome. Especially English." As we recall it, the 1914 slogan was: "Gott strafe England!"

MAN THE LIFEBOAT!

London Daily Telegraph.—We are too apt to forget our reliance on the seamen and the hazards which are their common fortune. But of all who go into peril on the sea the lifeboat man touches the popular imagination most easily. He is the hero of a hundred jingling ditties of the people; he is a favorite model for the artists who wish to catch the eye of the million; and, as usual, the popular instinct is sound. There is surely no service in the world more honorable than his who signs on to sail into the worst sea for the hope of saving life.

THE EXODUS.

Le Canada.—Of those who go to the United States there are some who settle there and do not come back. Others make it a stepping-stone and then depart for some other country. Others still hanker after their native land and want eagerly to return. When the wave of abnormal expansion recedes in the east of the United States, how many of our people will cast their eyes on the old province of Quebec which they have left? It is for these that we must make the return easy and re-establish them once again among us.

THE BARTER SYSTEM.

London Times.—German States have been compelled to issue debentures payable in rye, wheat, and coal in 1927. That is a long retrograde step towards a return to conditions of barter, under which only a fraction of the present commercial transactions could possibly be effected, for the complex modern credit system has been evolved simultaneously with the development of commerce, and each is essential to the other. The lesson for this country is plain. Germany has been able to carry on as long as she has because of her great internal resources. This country, which depends so largely upon overseas supplies of raw materials and food, would, in the same case, have been irretrievably ruined and brought to actual starvation long ago.

U. S. Traffic Law Demands Attention.

WASHINGTON, June 9.—(By Canadian Press)—High tariff republicans in Washington are making the utmost of President Harding's recent statement to a delegation of southern agriculturists to the effect that flexible tariff is not to be used for the destruction of the principle of protection and that there will be no changes in tariff rates except on the most "striking evidence of the necessity for a change in rates. They have no hesitation in interpreting the President's language as really meaning that the flexible tariff is to a large extent to be a dead letter. They are already convinced that there will be few reductions of rates and those will be far between and of little moment so far as the general public is concerned. There is in spite of the fact that when the flexible tariff provisions were put into the law this action was hailed in many quarters as meaning numerous tariff reductions and the beginning of a scientific tariff. President Harding himself made much of the flexible tariff when it was enacted. When it is recalled that the tariff commission is dominated by high tariff members and that the President will get his information about schedules from this commission it is reasonable to conclude there will be few rates changed and certainly few lowered. The fact that the flexible tariff will practically become a nullity is not without its importance in its bearing on Canadian reciprocity. The opposition here is not strong, but the failure to use the flexible tariff and lower rates which are complained of will inevitably lead to increasing dissatisfaction with the tariff law here will serve to bring about demands for its overhauling, and will increase the strength of those who are convinced that the U. S. and Canada should have closer trade and tariff relations.

Professor Trys Unique Test.

BOSTON, June 9.—A professor of psychology at Northeastern University has given his students something to think about. The class was disturbed by a clash between two fellow students a shot was fired, one of the men fell and the other fled. Professor Milton J. Schlagenhaut called on the class to write reports of everything that had occurred. Out of 50 students all but three insisted they saw a revolver, some adding a dash and some smoke. The student supposed to have fired actually held a banana in his hand. The shot was fired in the rear of the room, out of sight. Descriptions of dress varied widely; versions of the exclamations that preceded the shooting were equally incorrect. One student attempted to give the time exactly, saying he had taken out his watch for the purpose. He was an hour out of the way and he gave a date four days wrong. Professor Schlagenhaut staged the incident as a test of observation after he had taken the class to a courtroom where a witness said positively he could describe everything that happened in a burglary that took three minutes.

Tricks With a Camera.

For those who take their holidays by the sea, one of the first camera hints to remember is that sea and sky photograph much quicker than fields and sky. In other words, a picture taken at the seaside needs a much shorter exposure than one taken inland.

Again, the holiday group taken on the seashore is apt to turn out a dreadful failure, with the faces of your friends shown as black as niggers. This will happen if you pose people on the beach with sea and sky for a background, such as a rock or cliff-face, and all should be well.

There is another pitfall into which the amateur camera-man often falls when arranging his friends for a photograph. Suppose the person to be taken is sitting down, on a chair or on the ground. Be careful of the sitter's feet, or you will spoil your picture.

The Long and Short of It.

Do not let your friend pose with his or her feet stretched out towards the camera. If you do, those feet will appear hopelessly out of proportion in the finished photograph. Either place the sitter sideways on to your camera, or else see that the feet are drawn in. They will then be at the same distance from your camera as the rest of the figure, and your picture will be in proportion.

Have you ever considered the question of tall and short people in relation to the camera? You can make a person appear as either without the slightest difficulty in your photograph. The secret can be stated in five words—the height of the lens.

For example, suppose you are photographing the tallest man you know, and you arrange your camera so that the lens is on a level with the man's necktie, your picture will show a short man.

But suppose you are photographing a little man, and you point your camera so that the lens is on a level with his watch-chain, your picture will show a tall man.

An Artistic Portrait.

Lower the camera, and you lengthen the figure you are photographing. Raise the camera, and the figure appears shorter.

An artistic photograph of a sitter's head and shoulders may be obtained without undue difficulty by the following device. Decide what your background is to be. Take a square of cardboard and paint it the same colour. Make a crescent-shaped cut in the cardboard and fix it between camera and sitter, so that the head and shoulders of the sitter show above the crescent. Take your photograph, and you will have a picture the lower part of which blends perfectly with the background, throwing the portrait into perfect relief.

When taking the above photograph the correct position for the cardboard will be about two feet in front of the camera.

Odic Ray to Counteract Pull of Gravity.

PASADENA, Cal., June 9.—Aviation of the future may be based on the use of a newly discovered ray which "shuts off" the pull of gravity. If a theory propounded by Edgar L. Hollingshead, local inventor and experimenter in the field of electricity, is substantiated in practice, Mr. Hollingshead calls the new ray, which he said he discovered after twenty years of experimenting, the odic ray. Its most spectacular property, he says, is the power to increase atomic speed in matter upon which it is focused. When the speed of the whirling atoms reaches a certain point, he explains, the pull of gravity has no effect on them. When the use of the odic ray has been perfected, Mr. Hollingshead predicts, any solid object on which it may be focussed will float in air. Equipped with the proper apparatus, for generating the powerful ray, he asserts, the aircraft of the future could be built of steel and yet rise with the ease of a gas filled dirigible. Heat also accelerates the speed of the whirling atoms composing any substance, Mr. Hollingshead points out, but heat freely applied eventually transforms the solid into a gas. The odic ray, on the other hand, can increase the atomic speed tremendously without causing the disintegration of the solid, he said.

Grace Notes.

The Grace Troop of Boy Scouts had their entertainment in St. John's on Thursday night, 7th June, a big success, the hall was literally packed. A Minstrel show was the first to entertain the boys and the boys with their songs and robed in bright and indeed look most comical in their parts well, the performance as follows:—

Mark Davis

Stanley Martin

Frank Roseworthy

Wilfred Yetman

John Crocker

Bertram Alcock

Max Peddie

Minstrel Troupe had performed Scout exercises were followed by a boxing match between Asst. Scoutmaster W. Stevenson and Pat. C. Payne. Both the Scout and Boxing Exhibition was splendid and it was splendid to see the boys in such good favour comments were those present, at the perfect display. It is needless to say that even a deeper interest in the Scout Movement. The boxing match concluded, there was a short interval, during which the boys and next followed a three act farce, entitled "The Jolly Bum" which kept the boys in roars of laughter from the first to the last. Most of the performers had their debut before the boys but each one played their part as follows:—

Miss Susie Garland

Miss Julia Garland

Miss Mollie Parsons

Mr. Ashton Halliday

Mark Davis

Harold Forsey

John Crocker

Mr. Crocker complimented the Scouts on their first effort in this line and to hearing from them in the future. The proceeds of the evening were \$12.00. The proceeds must have netted a very large sum.

DAVID THE KING.

Mr. David acted as accom-

pany at the scene of a

social event on Thursday evening.

Miss Stella Ledrew and Miss Winnie

IN THE REALMS OF SPORT.

THE TRUTH WITHOUT FEAR OR FAVOR.

BASEBALL.

A fan writing from Grand Falls gives the pleasing information that baseball at the inland city will have a most successful season. There has been an added improvement made to the grounds, while a new ten foot fence has been extended around the field. The teams comprising the Grand Falls League this year will be the C.L.B., captained by Cliff Le Moine, C.C.C. under the guidance of Scott Foran, and a team of Boy Scouts captained by our genial friend, Arthur Cohen. Mr. W. W. Morse, who has taken an active interest in the baseballers in the paper city since its first inception has offered a beautiful cup for competition. The three teams are now practicing hard, and the many fans are looking forward to the opening of the series. The ball players of the inland city are hoping that the ball tossers in St. John's are equally as interested, because they are anxious to defend their laurels in the inter-town series before the season comes to a close.

The annual meeting of the St. John's Amateur Baseball League will be held next Thursday night. At this meeting it is hoped that a large attendance of all enthusiasts of the game will be present. Baseball it appears is on the wane, as far as playing the game in St. John's is concerned, and it depends entirely upon the players themselves, whether or not there will be a ball season. The matter of a playing field will be one of the important topics for discussion, and should the players be agreeable to the propositions about to be laid before them, we have not the least hesitation in saying that the game will be more popular than ever.

FOOTBALL FIVES.

The preliminary football fives for the gold and silver medals to be run off in connection with the St. John's Sports, takes place at the St. Bon's Campus at 7 o'clock this evening. The eight clubs which will participate in the regular League football series, will each send five of their best players into action to-night. Should the evening be fine a large attendance will no doubt take in these games, as it will be the means of giving everyone an opportunity of seeing what the players really look like. The games for to-night will be played in their regular order as follows:—

(a) C.L.B. vs. Feldians.

(b) Guards vs. Star.

(c) Saints vs. B.S.

(d) C.C.C. vs. G.E.L.

All players are asked to make a special effort in being on time.

ST. BON'S SPORTS.

The first real outdoor attraction for the season will be St. Bon's Sports, which take place on the College Campus Wednesday afternoon, next. Rev. Bro. Ryan, the Principal, assisted by the Brothers of the College, has been making elaborate preparations for this much-looked-forward-to event, for several weeks past, and now that everything is in readiness, all that is required is a fine day. The boys have been training hard for the sprints, and middle distance runs. All the racing events will have a large field of entries, and close running in all races is predicted. The usual drills, dumbbell exercises, etc., which have always been the chief feature of the annual sports day, will form a part of the programme, while the two mile turf race, which is confined to our young athletes outside of the College, promises to be one of the most closely contested races of the day. The sports, it is predicted, will eclipse all former attempts; therefore, let us hope that a large throng will be in attendance.

RUGBY.

The development of the game of Rugby in St. John's has been more or less confined to the pupils of the Methodist and Bishop Field Colleges. During the past few years these two colleges have competed in a series of games for a trophy known as the Outerbridge Shield. Although the

game is a very strenuous one, and the plays not so easily grasped at by a beginner, nevertheless, rapid strides have been made, and the game is gaining in popularity every day. The rugby season in the Inter-Collegiate League opened at Colver's Field on Saturday afternoon last, under ideal weather conditions. A large number of pupils and ex-pupils of the colleges were in attendance and saw the Bishop Field team, last year's champions, go down to defeat at the hands of the Methodist College aggregation by 12 points to 3. The exhibition put up by both teams was splendid, the Collegians half line made some very pretty plays. Mr. H. C. Gardner, who refereed the game, placed the ball in motion at 4.45 p.m., and from the very outset, play was lively. The Feldians were awarded a free kick from an off-side play shortly after the game opened; Anderson, for the Blues, scoring on the kick. Blues 3 points. Both teams battled hard to find an opening, and many good runs were made by players on both sides, but were tackled hard and run to earth. Puddister for the Methodist, managed to secure the leather near mid-field, and made a pretty dash into his opponents' territory, but came to grief a few yards from the line only to find the ball captured by Angel, his team mate, who eluded his opponents for a touchdown. The kick was converted by Angel a moment later. At this stage of the game excitement was intense, and if anything, the Collegians appeared to have matters all their own way. Peters for the M.C.'s towards the close of the half, placed a beautiful drop kick between the posts, which netted four points. Collegians 3, Feldians 3.

The second half was very tightly contested, both teams made several furious onslaughts, but nothing materialized until Bishop for the Collegians tore his way through for a touchdown in the dying moments of the game. This was not converted. Howard and Anderson for the Feldians made several spectacular runs during the half, but they found in McLeod the M.C. full back a hard tackler.

The exhibition was a most enjoyable and keenly contested one. The Collegians have a good team of fast runners, which was largely responsible for their win. The second game will take place at the Avre Athletic Field Wednesday afternoon next, when a hard-fought match is predicted.

JUNIOR FOOTBALL LEAGUE. EIGHT TEAMS WILL FIGURE IN SERIES.

A meeting of the Junior Football League was held on Saturday night last, for the purpose of finalizing matters in connection with the forthcoming games. The meeting was a very enthusiastic one, the attendance was large, and the business affairs of the new League were carried out in a very creditable manner. The various Clubs were represented by the following delegates:—Gaelic League, M. Walsh; St. Mary's, E. Crane; Boy Scouts, H. Haynes; Holy Cross, T. Dalton; Cadets, B. Walker; Wesley Literary Class, C. Whitmore; T. A. W. Murphy; B.S., S. Ryan. Eight teams in all will comprise the League and the drawing of the schedule, resulted as follows:—

Gaelic League vs. St. Mary's.

Gower St. B.S. vs. Holy Cross.

Cadets vs. W.Y.M.L.C.

T.A. vs. B.S.

The first game will take place on Wednesday, June 20th. If at any time St. George's Field is not available, the games will take place on some other suitable field. The League will be prepared to play football fires at garden parties, sports, etc., and all organizations planning such are asked to remember the Junior League, in this respect. A formal vote of thanks was passed, thanking Messrs. Higgins and Hunt for donating a cup for competition. The same conditions as adopted by the Senior League will apply to the new trophy, and it is hoped that the Junior games will be attended by the sporting public. The meeting adjourned until Saturday night next, when all players will register their names. No player who has attained his 26th birthday, or who played in Senior League company, is eligible to compete.

Kyle's Passengers.

The following first-class passengers arrived at Port aux Basques on the S.S. Kyle and are now on the incoming express:—R. Fudge, E. W. D. Walton, A. S. Burnham, Miss M. S. Martin, C. P. Rhodes, A. B. and Mrs. Giffin, A. W. Blair, Mrs. C. Adey, W. H. Laidlaw, E. Michoud, J. T. G. Maril, Mrs. J. F. Lacey, S. Thomas, Miss R. Bowring, C. R. Allen, Mrs. A. Parsons, T. W. Phillips, W. Simpson, J. and Mrs. Goodyear, J. and Mrs. Mullen, J. and Mrs. White, J. Hiedenberg, Miss C. Coffey, M. White, Miss Billard, A. Forbes and son, Miss M. Brest, J. Grant.

Obituary.

BWIN WILKS LYON.

There passed away at the General Hospital, yesterday afternoon, one of our most respected citizens in the person of Mr. E. W. Lyon, at the age of 77 years. Mr. Lyon enjoyed good health up to about a week ago when he was stricken with an internal trouble which called for a very delicate operation. He was the son of John and Sarah Lyon of this city, where Mr. John Lyon conducted a watchmaking business, opposite where Curran's Bookstore now is. In early manhood Mr. Lyon went to Harbor Grace where he acted as agent for the late Mr. Chisholm, Bookseller and Stationer, and for the late John Lindberg, Jeweller. After 17 years in the second city, Mr. Lyon returned to St. John's where he established his photographic studio, forty-five years ago, subsequently taking the late Mr. Vey into partnership. The firm of Lyon and Vey long since dissolved, but it is a mournful coincidence that the former partners should pass away within so brief a period. The death of E. W. Lyon marks the departure of the senior photographer in the island.

In Freemasonry Mr. Lyon was an honored brother. For nearly thirty years he held the position of Secretary of Shannon Chapter, R.N.S., and at the time of his death was one of the oldest members of St. John's Lodge. His widow, formerly Miss Elizabeth Peach, of this city, two daughters, Florence, wife of Mr. Claude Noonan, and Ethel, wife of Mr. J. W. Bartlett, one sister, Miss Charlotte Lyon, and three brothers, Henry, Robert and Augustus, are left to mourn. On the bereaved wife, after years of companionship, the blow falls with intense severity, and to her in especial degree the sympathy of her friends goes forth, as well as to the family. They have the joy of knowing that husband, father and brother has left behind him the memory of an upright citizen, and a good and true man. The funeral will take place to-morrow at 3 o'clock from the residence of his son-in-law, Mr. Claude Noonan, 132 Gower St.

The Wrecked Liner Marvale.

WEATHER FAVORABLE FOR SALVAGE OPERATIONS.

During last week the weather was fairly moderate at Cape Pine and the divers from the wrecking tug, Lord Strathcona found it possible to operate every day. The Strathcona will be finishing up during the next few days and will return to Quebec. Daily, numbers of boats are around the wreck, and a quantity of the cargo mostly flour, which has floated out of the hull has been salvaged. One boat getting 100 sacks for a day's work. The schooner Besse H., which is now unloading fish cargo at Baldie's has on deck one of the Marvale's derricks, which was picked up in Trepanay Bay.

Tires to fit all size cars. We carry Goodrich, Converse and Goodyear tires. We mount and inflate them free of charge. Phone 1487 for prices. JOS. McKINLAY. June 11, 1923.

Say it often
