The Isles of Roca. The *Roca's* are a knot of little uninhabited Isles, seated sixteen Leagues from the Continent, stretching in length, from East to West five Leagues, and three Leagues broad, at 11 Degrees, 40 Minutes; Latitude 20 Degrees; N. W. by W. from *Tortuga*, and seven to the West of *Orchilla*, another Isle at the same distance from the Continent. Among all these Isles the Northern-most is most remarkable, by reason of a high white Rock at the West end of it, to be seen at a great distance at Sea, and is full of *Boobies*, *Men of War*, *Tropick-Birds* and *Noddies*. The *Noddy* is a kind of a *The Noddy.* small Black-bird, which builds in Rocks, and rarely is seen far from the Shoar; I never saw any of their Nests except in this Place. The *Tropick Bird* is of the big- *The Tropick Bird.* ness of a Pidgeon, but shap'd like a Partridge; it is white all over, with two or three ash-colour'd Feathers only in each Wing; it has also a single Feather, or rather a Quill, seven Inches long, growing out of the Rump in lieu of a Tail. The Bill is short and thick, of a yellowish Colour. It has got its name because it is never seen far from either of the *Tropicks*. Both these Birds are very good Meat, and the last I never saw but at Sea a great way from the Shoar, and in this Isle, where they build their Nests.

On the South side of this Rock, near the Sea-shoar, issues a Spring of fresh Water from the Rocks, but so gently, that in twenty four Hours it does not afford above forty Gallons, being of a rough and aluminous taste. The middle of this Isle is all low and plain Ground, which produces good store of long Grass, which harbours a vast multitude of a kind of small grey wild Fowl, of the bigness of a Black-bird; but they lay Eggs bigger than those of Magpyes, whence *Egg-bird.* they are commonly called *Egg-birds*. The East part of this Isle is covered with *Mangrove* Trees.

Mangrove trees. Of the *Mangrove* Trees there are three different sorts; the *black*, *red* and *white* ones; the first is the biggest of the three, its Circumference being as big as a stout Oak, and its height twenty Foot. The Wood is very hard and durable, but too heavy for Building. The *Red Mangrove* Tree grows near the Sea-side, or by Creeks, and on the Banks of Rivers; this kind grows out from the Roots in divers Stalks, which about eight or ten Foot above the Ground join into one Stem or Trunk; the Wood is good for Timber and other uses; the inside of the Bark is red, and is used by the Tanners in the West *Indies*. The *white Mangrove* is neither so big nor of any considerable use. The Ground on the East end, where they grow, is sandy, and often overflown by the spring Tides: But the Harbour is on the South side, about the middle of the Isle.

The rest of the *Roca* Isles are low; and the next adjacent to the South is very flat and small, full of good Grass, but without Trees. On the South end of it there is a Pond, but the Water is brackish, near it is good Anchorage. Not above a League from this are two other small Islands, covered with red *Mangrove* Trees, which above all the rest delight in marshy Grounds, as these Islands are. The two small Isles are separated from one another by a Channel only, not above 200 Yards broad, which nevertheless affords a safe Passage to Ships of burthen. The East end of the Westernmost of these Islands is a dry sandy Soil, without Trees or Shrubs. On the South side of this Point we Careen'd, because Ships may come close to the Shoar, and a few Guns planted on the Point will secure the Channel. Among, or within, these Islands is good riding, but not without, unless to the W. or S. W. of them; for on the E. or N. E. side the *Monsoon* or Trade-wind makes the Sea very Boisterous, and on the South side there is no Ground at 70, 80 or 100 Fathom, close under the Shoar. 1682

After we had provided our selves with Water, we set Sail again in *April* to *Salt Tortuga*, so call'd for 1682 distinction sake; from the shoals of *Dry Tortuga* near Cape *Florida*, and from the Isle of *Tortuga* near *Hispaniola*, formerly known by the name of *French Tortuga*. It is a pretty spacious Isle abounding in Salt, but destitute of Inhabitants; at 11 deg. N. Lat. 14 Leagues distance to the N. W. from *Margarita*, a rich Isle Inhabited by *Spaniards*; and 17 or 18 Leagues from Cape *Blanco* on the Continent. As you sail betwixt these Isles to the S. you may at once see the Shoar on the Main, and the Islands of *Margarita* and *Tortuga*, provided it be bright Weather. This last Isle is Rocky at the E. end, jutting out a good way into the Sea; and at the S. E. end is a pretty good Road, near the Salt-Ponds two hundred Paces from the Sea; where I have seen a whole Fleet of Ships from the *Caribbe*-Islands, who bring thither good Store of Rum, Sugar and Lime-juice, in *May*, *June*, *July* and *August*; which they exchange for Salt. At the W. end towards the S. is another small Harbour; which, besides the beforementioned Road, is the only place where Ships can safely ride at Anchor. It produces some Goats, and great store of Tortoises, which lay their Eggs in the sandy Bays, whence it has got its Name.

Being disappointed in our design of selling our Sugar here to the *English*, we steer'd our Course to the Isle of *Trinidada*, not far from the Continent, under the *Spanish* Jurisdiction, but the E. winds and Current forcing us betwixt *Margarita* and the Continent, we sail'd forward to *Blanco*, a large Isle to the N. of *Margarita*, 30 Leagues from the Continent, at 11 Degree 30 *The Isle of Blanco.* Min. N. Lat. it is flat and low Ground not Inhabited, but healthy, producing abundance of long Grass, and some Trees of *Lignum-Vitæ*, with good store of Under-wood betwixt them.

This Isle has abundance of *Guano's*, a Creature of the bigness of a Man's Arm, with a small Tail, but *Guano's.* long and sharp at the end, which if you take hold on near the Body, it will come off in one of the Joints; for the rest they are like a Lizard, but of divers Colours, brown, black, yellow, green and speckled. It is an Amphibious Animal, and its Eggs, as well as the Flesh, are good Food; the last affords very good Broth for the sick Sea-men. The Water is so deep near the Shoar, that there is no riding any where, except at the N. W. end in a small Bay. On the W. side is a fresh Water Spring, and on the same Shoar are divers Sands, whither abundance of green Tortoises resort to lay their Eggs; these, both for bigness and good taste, exceed all others in the West *Indies*. Of the several sorts of Tortoises I shall have occasion to say more, when I return to the South Seas.

I know that some modern Authors speak of good store of Goats in this Isle, but tho' I have gone all over it, I never could meet with any; perhaps there may have been some formerly, it being unquestionable, that many Places in the West *Indies* have undergone very remarkable Changes of late Years; witness the City of *Nombre de Dios*, once so famous in those parts, of which, to my own Knowledge, there is at this time nothing left but the bare Name, the place where it stood being now a thick Wood.

After a stay of fourteen Days at the Isle of *Blanco*, we sail'd back to *Salt Tortuga*, and thence in four Days more to the Coast of *Caracca* on the Continent; being a continued Tract of Hills and small Valleys for 20 *The Coast of Caracca.* Leagues in length, running from E. to W. but the Valleys and Ridges pointing to the Shoar from S. to N. about four or five Miles into the Country, tho' most of them are not above one or two Furlongs wide. Behind these Valleys (which lye open to the Sea) runs another Ridge parallel with the broken Hills, the last whereof are so high and close together, that at some distance at Sea the Valleys are not discernable, but the Hills appear like one continued ridge of Mountains. They are barren except on the lowermost parts, which are covered with a good black Mould, the same that is in the Valleys, which are extreamly fertile and well cultivated by the *Spaniards*, who abound in Maiz, Plan-

1682. Plantains, *Indian* Fowls and Hogs; but their chief Product is the *Coco*-Trees, which feed the Nuts whereof the Chocolate is made.

Coco-Trees and Nuts. The *Coco*-Trees don't grow in all Parts of the *West-Indies*, nor of the N. Sea; but only in the Bay of *Campeachy*, on *Costa Rica*, betwixt *Porto Bello* and *Nicaragua*, along *Carpenter's* River, and on the Coast of *Caraccos*, as high as the Isle of *Trinidada*. In the S. Sea you meet with them upon the River of *Griaquil* to the S. of the Line, in the Valley of *Collima*, and on the S side of the Continent of *Mexico*; some of them are also left at *Jamaica*, but these are not many, because notwithstanding all the care taken with them, they are very subject to be blighted. The Coco Nuts of *Costa Rica* are flat, and larger than those of the Coast of *Caraccos*; but these last are much fatter, and consequently better, being so oily that the *Spaniards* here (who use abundance of Chocolate) dry them before they rub them up, which if you you don't do, you must rub them with Water. I know that my old Companion Mr. *Ringrose*, prefers the Nuts of *Griaquil* before all the rest; but as I have been acquainted with all the parts where the Coco-nuts grow, so I freely assert, that those of *Caraccos* exceed all the others for goodness, tho' at the same time, after they are dry'd up by the *Spaniards*, they may not be so acceptable in *Europe* for the making of Chocolate.

Their difference.

How they are cultivated. The largest Coco-Trees have a Trunk of one Foot and a half thick, and 7 or 8 Foot high to the Branches, which spread like those of an Oak, with smooth dark green Leaves, like the Plum-tree, but larger. The Cods, which contain about 100 Nuts each (bigger or less in proportion of the Cod) are commonly of the bigness of two Mens Fists, hanging on a small tough Stalk from all parts of the body of the Tree, but especially near the joints of the large Branches, but never on the Boughs. A good Tree produces two Crops every Year, *viz.* in *December* and *June*, the last is the best, tho' commonly you seldom see more than 20 or 30 Cods upon one Tree. The Cod, or Shell it self, is much of the same substance as those of the Lemons, but something harder and brittle, knobb'd and unequal like them. At first it is dark green, and the side towards the Sun dark red, which as it ripens turns to a lively red, and the green to a bright yellow. They ripen, and are gathered not at once, but for a Month successively as they turn red; the Cods thus gathered are laid up in heaps to sweat, and afterwards the Nuts are taken out (which lie close together) and dry upon Matts in the Sun. The Oil, in which they abound, preserves them without any further care, so that even the Sea Water will do them no harm, as I have found by my own Experience. The young Trees are raised out of the Nuts with the thick end downwards, in a black Mould, and in the same places where they bare, which is in four or five Years. I have seen set from 500 to 2000 of them in one Plantation, or Coco Walk as they call them) which they shelter for the first two or three Years with Plantains, especially near the Shoar, where the Vallies lie altogether open to the N. yet have I never seen the Cocos here blighted, as I have done in other places. In the Bay of *Campeachy* they use Coco-nuts instead of Money.

Ordered.

The Town of Caraccas. A considerable way within the Country, behind the beforementioned ridge of Mountains, is situate the City of *Caraccas*, the chief of all this Country, inhabited by the Owners of the Plantations in these Vallies, and consequently very rich, being seated in a Champain Country, which maintains great store of Cattel. I heard a *Spaniard*, who inhabited there, say, it is as big and more populous than *Corunna* in *Gallicia*.

The Town of Griare. Upon the Coast, close to the Sea side, is a goodly Town called *La Griare*, which tho' but a bad Harbour, yet is much frequented by the *English* and *Dutch*, who ride safe enough in some of the sandy Bays of the Vallies. The Town has no other Defence but a pretty strong Fort, which together with the place, was taken some Years ago by Captain *Wright*. It lies five Leagues W. of Cape *Blanco*, the Easternmost Point and Boundaries of this Coast. About 20 Leagues more to the East, the Sea sends forth a Branch into the Country, but the entrance of this same is not capable of admitting any Ships of Burthen, tho' it has many goodly Towns round its borders: It is called *Laguna del Venezuela*, and near its Mouth is a place called *Comana*, famous for its brave Defence, this being the only place in the North-sea the *Buckaneers* attack'd in vain for several Years. Not far from it is the Village of *Varina*, famous for its Plantations of Tobacco, reputed the best in the World.

The Lake of Venzuela.

Varina Tobacco.

As I have been often upon this Coast, I have always observed, that we used to be pester'd with scab-by Lips, occasion'd, as I supposed, by the dry N. E. Winds, which blow on this Coast frequently in different Seasons, for the rest of the Air is very serene and Healthy. The *Dutch*, and some of our *Jamaica* Men, have a considerable Trade here, by vending the *European* Commodities, but especially Linnen, which they exchange for Silver and Cocoes.

We took on this Coast 7 or 8 Tuns of Coco, and three Vessels laden with Hides, Earthen-ware, Brandy and other *European* Merchandizes, and sailed with them to the *Roca* Isles, where we shared our Booty and Vessels, and twenty of us set sail in one of them directly for *Virginia*. We took in our way several sucking Fishes with Hooks. These Fishes are of the bigness of a large Whiting, and not unlike in shape, only that their Head is flatter; from thence, down to the middle of the Back, grew a hard grizly Substance, like that of the *Limpit*, or the Head of a Shell Snail. This excrescency is oval 7 or 8 Inches long, 6 broad, and half an Inch high, and composed of small ridges, wherewith it will fasten it self to any thing it meets with, as a Snail does to a Wall; in fair Weather they swim about the Ship, but as soon as it grows boisterous they fasten to the Vessel, their chief Food being the filth that is thrown over-board. They will also stick to large Fishes, such as the Shark, to Tortoises, Trees, Planks, &c. perhaps this may be the *Remora* of the Ancients. They are found in great numbers in the Bay of *Campeachy*, and thence to the Coast of *Caraccos*, and among the Isles.

Sucking Fish.

CHAP. V.

The Author's Voyage to the Isles of John Fernando, *in the* South *Sea. Their arrival at the Isles of Cape* Verd. *A description of these Islands, of* Sherborough *River on the Coast of* Guinea, *and of the Isle of* John Fernando; *of the* Pacific *Sea; the* Andes *of* Peru *and* Chili; *of the Isles of* Cocos, *Cape* Blanco, *the Bay of* Caldera; *of the Isle and Harbour of* Rio-Leka, *and of the Gulf and Isles of* Amapalla.

1683. CAptain *Cook* coming in *April* with a *French* Prize of 18 Guns he had taken in *Virginia*, and such of my Fellow Travellers over the Isthmus of *America*, as were then in *Virginia*, engaged with the said Captain to enter with him upon an expedition into the South Seas. Accordingly we set sail (our Ships Crew consisting of 70 Men) *August* 23. and met with nothing remarkable but a most violent Storm, till we arrived at the *Salt-Isles* one of the most Easternmost of the Cape *Verd* Islands, of which there are ten in number; extending from the *African* Cape *Verd* about 5 Deg. of Long. in breadth, and as many of Lat. in length, *viz.* from 14 to 19 N. and inhabited by *Portuguese* Banditties. The Isle of *Salt* it self, is situate at 16 D. Lat. and in Long. 19 D. 33 M. W. from the *Lizard* in *England*. Its length from N. to S. is 9 Leagues, and its breadth about 2 Leagues. It has abundance of Salt-ponds, (whence it has got its Name) but no Trees or Grass, that ever I saw; some few poor Goats feed upon Shrubs near the Sea side. I have also seen some wild Fowl here, and especially the *Flamingos*, a reddish Fowl, of the shape of a *Hern*, but much larger, living in Ponds or Muddy places; we shot about 14 of them, tho' they are very shie. Their Nests they build with the Mud in the shallow places of Ponds, or standing Waters; this they raise up like Hillocks, tapering to the top, two Foot above the surface of the Water, where they leave a hole to lay their Eggs in; which when they do, or are hatching them, they stand with their long Legs in the Water, close to the Hillocks, and so

The Flamingos.

How they build their Nests.

1683. so cover the hollowness only with their Rumps, for if they should sit down upon them the weight of their Bodies would break them. The young ones can't fly nor come to their true Colour (being grey at first) or Shape till they are ten or eleven Months old, but run very fast; their Flesh is lean and black, but not ill tasted; they have large Tongues, and near the root of them a piece of Fat which is accounted a great Dainty. I saw at another time great store of these Birds at the Isle of *Rio la Hacha* near the Continent of *America* opposite to *Querisao*, but never could so fully observe their Nests or young ones as here.

We found not above five or six Men in the Isle of *Sall*; the Chief of them brought us three or four poor Goats, in requital of which and some Salt we bought of him, we gave him some old Cloathes. One of the *Portugueses* did secretly sell a piece of Ambergreese to one of our Men at a cheap rate, tho' I believe it was dear enough, for it had no Smell, was soft, and of the Colour of Goat's Dung. At the *Nequabars* in the East *Indies* I saw some sold that was of a much lighter Colour and hard, but of as little Scent, which makes me suppose it was a Cheat as well as this, tho' both these Places afford true Ambergreese: For I remember that one *John Read* who was an Apprentice to a Merchant trading to the Isles of *Cape Verd*, that once he saw a great lump of true Ambergreese swimming near *Fogo* (one of these Isles) and that at another time he took up a good piece; at the same time it is certain, that the Natives of these Places as well as of *Florida* have got the way of adulterating this precious Commodity: I remember that Mr. *Benjamin Barker*, a curious Person and of my old acquaintance, told Mr. *Hill* our Chirurgion, that in one of the Isles of the Bay of *Honduras*, he found a-shoar of a sandy Bay something above high Water-mark, a lump of true Ambergreese which weighed above two Pounds. Mr *Hill* shew'd me a piece of it which Mr. *Barker* bestowed upon him for a Present; it was of a dark brown Colour, of the hardness of a good mellow Cheese, and of a very agreeable Scent. I am credibly inform'd that at *Bermudos* and the *Bahama* Isles in the West *Indies*, as also on the *African* Coast with the adjacent Isles from *Mozambique* to the *Red Sea* abundance of Ambergreese is found and sold by the Natives.

Amber-greese.

Adulterated by the Natives

St. Nicholas, another of the Cape Verd Isles.

We set Sail from *Sall* to St. *Nicholas* another of the *Cape Verd* Isles 22 Leagues W. S. West, from thence we came to an Anchor on the S. E. side: It is of a Triangular Form, the longest side to the East being thirty Leagues in length, and the other two twenty Leagues each. Near the Shoar it is rocky and barren, but has some Valleys deeper into the Country which produce Vines and Grass for Goats. The chief of the Isle with two or three Gentlemen brought some of the Wine aboard us, which was of a pale Colour, and tasted like the *Madera* Wine, but was muddy: He told us that the principal Village was in a Valley fourteen Miles from the Bay where we then were, and contained about 100 Families: They were of a dark swarthy Complexion.

After having spent five or six Days here in digging of Wells to get fresh Water, we sailed to *Mago* another of the *Cape Verd* Isles forty Miles East by South from the last, where we came to an Anchor on the N. W. side of it. We would have provided our selves with some Beef and Goats here (of which they have good store) but they would not let our Men come a shoar, because one Captain *Bond* a *Bristol* Man had not long before carried off some of the chief Inhabitants under the same Pretext. This Isle is but small, and the Coast full of Shoals, yet has a considerable Traffick in Salt and Cattle. In *May*, *June*, *July* and *August*, a sort of Tortoises lay their Eggs here, but they don't approach in goodness to those of the West *Indies*. They also plant here Potatoes, some Plantains and Corn, tho' the Inhabitants live exceeding poorly here as well as in all the other *Cape Verd* Islands, except those of the Isle of St. *Jago* four or five Leagues hence to the West.

St. Mago, another of these Isles.

St. Jago, another of these Isles.

For, tho' the Isle of St. *Jago* is mountainous, yet is it the best inhabited of all, as having a very good Harbour on the East side, much frequented by *European* Ships bound to the East *Indies* and the *Guinea* Coast, as also the *Portugese* Ships bound for *Brasil*, who come hither to provide themselves with Beef, Pork Goats, Fowls, Eggs Plantains and Cocoe Nutts in exchange for Shirts Drawers, Handkerchiefs, Hats, Wastecoats Breeches and all sorts of Linnen Cloath which is in high esteem here with the Inhabitants, who are much inclined to Theft. There is a Fort on the top of a Hill that commands the Harbour; I was credibly inform'd that this Isle has two pretty large Towns and divers Villages; and the same sort of Wine we drank at St. *Nicholas*. 1683.

There are two more of those Isles *Fogo* and *Brava*, both small Islands to the West of St. *Jago*; the first is remarkable for its being one intire burning Mountain, on the top whereof issues a fiery Substance, which may be discerned a great way at Sea, but only in the Night time. A few Inhabitants live near the Sea side at the foot of the Mountain, who subsist upon Goats, Fowls, Plantains and Cocoe Nutts. The rest of the *Cape Verd* Isles are St. *Anthonio*, St. *Lucia*, St. *Vincent* and *Buna Vista*.

Fogo and Brava, two of the Cape Verd Isles.

From the *Cape Verd* Isles we steer'd our Course to the South with an E. N. E. Wind directly to the Streights of *Magellan*, but at 10 *d.* N. Latitude, the Wind blowing hard at S. by West and S. S. West, we directed our Course to the *Guinea* Coast and came in a few Days to an Anchor at the Mouth of *Sherborough* River, where is an *English* Factory South of *Sierra Liona*, where, as they told me, we have a considerable Trade with Camwood used by the Dyers. Not far from the Shoar we saw a pretty large Village inhabited by Negroes; the Houses were but low, except one in the middle, where they entertained us with Palm Wine, and brought aboard us good store of Rice, Fowls, Honey and Sugar Canes.

Sherborough River and Factory.

About the middle of *November* we prosecuted our Voyage to the Streights of *Magellan*, but as soon as we got out to Sea we met with frequent Tornadoes three or four in a Day which together with Calms made us advance but slowly, the Wind veering about at Intervals to the South and by East and S. S. East, till we were past the Equinoctial Line about a degree to the East of the before-mentioned Isle of St. *Jago*. After we were come a degree to the South of the Line the Wind turned to the East, which made us steer S. W. by West and the further we got to the South the Wind increased upon us from the East. At 3 *d.* S. Latitude we had the Wind at S. East, and at 5 *d.* at E. S. East, where it held a considerable time, and carried us by the 15th of *January* to 36 *d.* S. Latitude without any remarkable Accident. 1683.

The Sea hereabouts being of a pallish Colour, we thought to have found ground with our Line, but found none at 100 Fathom. At Noon I computed to be 48 *d.* 50 *m.* West from the *Lizard*, the variation 15. *d.* 50 *m. January* the 28th. we made the *Sibbel de Wards* three Isles lying at 51 *d.* 25. *m.* S. Lat. and Longit. West from the *Lizard* of *England* 57 *d.* 28 *m.* the variation 33 *d.* 10 *m.* I persuaded Captain *Cook* to anchor near these Islands, being sensible of the danger that was likely to attend us in our Passage thro' the Streights of *Magellan*; considering especially, that the Men aboard the Privateers are not so strictly at command as in other Vessels. We came to an Anchor within two Cables length of the Shoar of the furthermost of these three Isles, where we found foul rocky Ground, and the Island barren and destitute of Trees, but some Dildo Bushes growing near the Sea side. We saw the same Day vast Shoals of small red Lobsters, no bigger than ones Finger, but were altogether like Lobsters, except in their Colour. 1683.

The Sibbel de Wards

Finding neither safe Anchorage nor fresh Water at these Isles, we made the best of our way towards the Streights of *Magellan*. *Feburary* the sixth we came in sight of the Streights *La Maire*, which we found very narrow, with high Land on both sides; the Wind at N. N. West we sail'd with a brisk Gale till within four Miles of the Mouth, where being becalmed we found a very strong Tide setting out of the Streights to the North, but whether it flow'd or ebb'd we were not able to distinguish, because it did run on all ways, breaking on all sides, and tossing our Ship at such a rate as I never saw before nor since. At eight of the Clock at Night we sail'd with a W. N. W. Wind to the East in order to sail round the *State's* Isle, at the East end of which we cast Anchor the seventh at Noon and found our selves at 54 *d.* 52 *m.* S. Latitude. At this end are three small rocky Islands white with the Dung of Birds; we steer'd to the South with an intention to sail round to the South of Cape *Horne* the southermost Point of *Terra del Fuego*; but the Winds running betwixt the N. W. and West we did not see the *Terra del Fuego* after the first Evening we made the Streight *La Maire*; as I did not see the Sun at rising or setting from the time we left the *Sibbel de Ward's* Isles till we came into the South Sea, so I am not able to tell you the variation. I made indeed an observation at Noon in Latitude 59 *d.* 30 *m.* the Wind at W. by North, and at Night the

The Streights La Maire.

The States Isle.

1684. Wind veer'd about to the S. West at 60 *d.* Lat. the furthest S. Lat. I ever was in.

February the 14th. We were surprized by a most violent Storm at 55 *d.* Lat. to the West of Cape *Horne*, which continued till the 3d of *March* from the S. West and S. W. by West and W. S. West.

March the 3d. It blew a fresh Gale from the South, and afterwards from the East, which brought us into the South Sea. The 9th. We found our selves at 47 *d.* 10 *m.* and the variation 15 *d.* 30 *m.* East. The 17th. we had a fair Gale from the S. East at 36 *d.* Lat. the variation 8 *d.* East. The 19th. early in the Morning we descried a Sail to the South of us, which we supposed to be a *Spanish* Merchant-Man bound from *Baldivia* to *Lima*, but proved one Captain *Eaton* from *London*, who being bound to the South Seas as well as we, we kept company with him quite thro' the Streights.

They pass the Streights of Magellan.

1684. *March* the 24th. We got in sight of the Isle of *John Fernando*, and soon after came to an Anchor in a Bay at the South end in 25 Fathom Water within two Cable's length of the Shoar; we sent immediately a-shoar to look after a *Muskito* Man we had been forced to leave there three Years before, and who notwithstanding all the search made by the *Spaniards* after him had kept himself concealed in the Woods. When he was left there by Captain *Watlin* (after Captain *Sharp* was turn'd out, he had with him a Gun, a Knife and some Powder and Shot which being all spent, he made a Saw of his Knife, by knotching it, wherewith he saw'd his Gun Barrel into small pieces, and these he made up into Harpeens, Hooks and such like Instruments, first heating them in the Fire, and then beating them out and bending them with Stones, or grinding them to an edge, all which tho' it may seem strange, yet is commonly practised among the *Muskito Indians* who make all their fishing Instruments without either Forge or Anvil: And the other *Indians* who have not as yet got the use of Iron from the *Europeans*, make their Hatchets wherewith they cut their Timber and Wood of a very hard Stone; in the hollowing out of their Canoes they make use also of Fire besides their Hatchets. The Stone Hatchets of the *Indians* near *Blewfield* River are 12 Inches long, 14 broad, and 2 Inches thick in the middle, ground away flat and sharp at both ends; the Handle is in the midst, being a deep knotch of a Finger's length, which they bind round with a Withe of about 4 Foot long: Thus the *Indians* of *Patagonia* head their Arrows very artificially with grounded Flints. With these before-mentioned Instruments our *Muskito* Man used to strike Goats and Fish for his Subsistence; his Hut being half a Mile from the Sea side, made of Goat's Skins, as was also his Bed, the same serving also for his Cloathing; those he had when he was left, being quite wore out. As he spied our Ship at some distance, so he had dress'd three Goats with Cabbage for our Reception; and we were no sooner landed, when another *Muskito* aboard our Ship leapt towards his Country-man, and after he had thrown himself with his Face upon the ground embraced him with all the Marks of Tenderness, which Ceremony (according to the custom of their Country) being over, he came to us as his old Friends: His Name was *William*, and [illegible], tho' they have no Names among themselves, they love to have Names given them by the *Europeans*.

A Muskito Man left there by Capt. Watlin.

How the Indians strike Fish.

The Isle of *John Fernando* is about twelve Leagues Circuit, seated 120 Leagues from the Continent at [illegible]. The whole Country is a pleasant mixture of high Hills and Valleys, the sides of the Hills being partly Woodlands, partly *Savannacks*, clear pieces of Land naturally so without Wood; for, Places clear'd of Wood by Industry, are call'd by that Name. In the Bay of *Campeachy* are very spacious *Savannacks*, and near the River of *Plate*, some from 30 to 100 Miles long; in *Jamaica*, *Cuba* and *Hispaniola*, the *Savannaks* are interspersed with Wood. The Grass in the Plains of *John Fernando's* Isle is not so flaggy, but much kinder than that of those in the West *Indies*. They have here also good Wood for Timber, but none for Masts: Their Cabbage Trees are exceeding good, but not so large as in other Places. It is observable that the Goats that feed towards the West end of the Isle are much fatter and better than those of the East end, tho' in the last there is both better and greater plenty of Grass and sweet Water in the Valleys; whereas the West end is a champain Country, the Grass dry, and scarce any Wood or fresh Water. Notwithstanding its Fertility it is destitute of Inhabitants, who might live here in great Plenty, the Plains being in a condition to maintain a great number Cattle, and the Sea affording vast store of divers sorts of Fish, as Seals, Sea-Lyons, Snappers and Rock Fish.

The Isle of *John Fernando* described.

1684. The Seals being sufficiently known and described in other Places, we will pass by in silence here. I will only mention that they are most seen in the North parts of *America* and *Europe*, and the South parts of *Africa*, and on the *American* Coast of the South Sea, from *Terra del Fuego* to the Equinoctial Line, but are never seen in the East *Indies* nor to the North of the Line till at 2 *d.* N. Lat. The Sea-Lyons are not unlike the Seals, but much bigger, being 12 or 14 Foot long, and of the Bulk of a large Bull. They have no Hair, and are of a dun Colour with large Eyes, and Teeth 3 Inches long; one of them will yield a good quantity of sweet Oyl fit to fry Meat withal. They feed upon Fish, yet is their Flesh tolerable good Food. The Snapper Fish has a large Head, Mouth and Gills, the Back red, and Belly ash-colour'd like a Roach, but much larger, and its Scales of the bigness of a Shilling: Their Meat is very good Food; I have seen them no where but in the West *Indies*, and especially in the South Sea.

Seals.

Sea-Lyons.

The Snapper and Rock Fish.

The Rock Fish call'd *Baccalao* by the *Spaniards* from its likeness to a Cod Fish, is rounder than the former, and of a dark brown Colour with small Scales; it likewise affords good Meat, and is found in vast plenty on the Coast of *Peru* and *Chili*.

This Island has only two Bays fit for Anchorage, with a Rivulet of fresh Water in each; both these are at the East end, and so conveniently situate that they might be strengthned and defended by a slender Force against a powerful Army, there being no access to them from the West over the high Mountains: Here it was that five *English* Men left here by Captain *Davis*, secured themselves against a great number of *Spaniards*.

After a stay of fourteen Days at *John Fernando's* Isle, we set Sail again *April* the 8th. in company of Captain *Eaton* to the *Pacifick* Sea, properly so call'd, being that part of the *Mare Australe* or *Mar del Zur*, (as it is call'd in the Maps) which extends from South to North betwixt 30 *d.* and the 40 *d.* S. Lat. and from the *American* Shoar to the West without limitation, as far as I knew. I have sail'd in the Sea 250 Leagues from the Land without any dark or rainy Clouds, Tempests, Tornadoes, Hurricans or any other Winds, except the Trade Wind, notwithstanding which the Sea runs high at the new and full Moon, and makes landing very unsafe. I have however frequently taken notice of hazy and foggy Weather in the Mornings, so as to hinder the observation of the Sun.

1684. The Pacifick Sea.

We continued our Course towards the Line to the 24 *d.* S. Lat. in sight of the Continent of the South of *America*.

The Coast of Chili and Peru.

This vast tract of Land belonging to *Chili* and *Peru* being very mountainous, we sail'd no nearer than 12 or 16 Leagues to it, for fear of being discovered by the *Spaniards*; and the Land from 24 to 10 *d.* S. Lat. still exceeds the former in height, being enclosed by three or four ridges of Mountains within one another, the furthermost within the Country surpassing the rest in height; they exceed in my Opinion in height the Peak of *Teneriff* and of St. *Martha*, and any other in the World that ever I saw. Sir *John Narborough* in his Voyage to *Baldicia* mentions very high Lands near that City lying upon that Coast; and I have been inform'd from divers credible *Spaniards*, that from *Coquimbo* (at 30 *d.* S. Lat.) to *Baldicia* (at 40 *d.* S.) the Shoar is also very high which makes me conclude, that these Ridges extend all along the South Sea Coast from one end of *Peru* and *Chili* to the other, call'd the *Andes* or *Sierra Nuevada des Andes*. This I believe to be their reason why but few, and those very small Rivers exonerate themselves into the Sea, scarce any of them being navigable, and some drying up at a certain season of the Year; Thus the River of *Rio* runs with a brisk Current from *January* to *June*, and then decreases till *September*, when it quite dries up till *January* again, as I can tell by my own experience, and as I have heard the *Spaniards* affirm the same of other Rivers on this Coast, so I look upon them rather as Torrents (occasioned by Rains at certain Seasons) than Rivulets.

The Andes or Sierra Nuevada des Andes.

The Rivers on that Coast.

We continued our Course at some distance along the Coast till *May* the 3d. at 9 *d.* 40 *m.* S. Lat. when we discerying a Vessel Captain *Eaton* took her, being loaden with Timber. Afterwards we steer'd our Course to the Isle of *Lobos* at 6 *d.* 24 *m.* S. Lat. five Leagues from the Continent. This Isle is call'd *Lobos de la Mar*, to distinguish it from another nearer the Continent, and therefore call'd *Lobos de la Terra*; *Lobos* signifying as much

1684. much as a Seal in *Spanish*, of which there is great plenty hereabouts.

Lobos de la Mar. *May* the 9th. we anchored near *Lobos de la Mar* with our Prize. This is properly a double Island, each of a Mile in circuit, separated by a small Channel only, not capable of receiving any Ships of Burthen. A little way from the Shoar on the North side several Rocks lie scattered in the Sea; at the West end of the Eastermost Isle is a small sandy Creek where Ships may be secure from the Winds, all the rest of the Shoar being rocky Cliffs. The Land is also rocky and sandy, without any fresh Water, Trees or Shrubs, or any Land Animal, except Fowls, as *Boobies*; but above all *Penguins*, a sort of Sea-Fowl of the bigness of a Duck and having just such Feet, but the Bill is pointed; their Wings are no more than Stumps (like our Goslins) which serve them instead of Finns in the Water, and they are covered rather with Down than Feathers: As they feed on Fish so their Flesh is but of an indifferent Taste, but the Eggs are very good. The *Penguins* are to be seen all over the South Sea on the Coast of *Newfound Land* and on the Cape of *Good Hope*: I observed here also and at *John Fernando's* Isle a sort of Blackbird that all night rests in holes made in the Sand; the Road is betwixt the before-mentioned Rocks and the Eastermost Isle from 10 to 14 Fathom, which lying East and West shelters it from the Winds which for the most part blow here from the South and S. S. East.

Penguins.

Upon examination of the Prisoners, being convinced that we were discovered by the *Spaniards*, and consequently that they would keep all their richest Ships in Port, it was considered whether we should attack some Places thereabouts, and *Truxillo*, (tho' a populous City and of a difficult access in landing at the Port of *Guanchaquo* 6 Miles thence) being pitched upon as the most likely place, we prepared for the said Expedition, and *May* the 17th found our whole number to consist of 108 sound *Men*

The Design to attack Truxillo.

But the next Day some of our Men descrying three Vessels, two to the West without the Isles, and one betwixt the Isle and the Continent, we gave them chace, we in Captain *Cook's* Ship towards the Continent, and Captain *Eaton* the other two. They were soon taken and proved to be loaden with Flower from *Guanchaquo* to *Panama*. In one of them we found a Letter from the Vice-Roy of *Lima* to the President of *Panama*, intimating, that having certain notice of some Enemies lately come into these Seas, he had immediately sent away these three Ships to supply their want. At the same time being inform'd by the Prisoners, that those of *Truxillo* were erecting a Fort near their Harbour of *Guanchaquo*; we resolved to give over our design of attacking that Place and steer'd with our three Prizes to the Isles of *Gallapagos*. *May* the 19th. Leaving our Timber Prize in the Road of the Isle of *Lobos*, we set Sail with a S. W. Wind (the ordinary Trade Wind) taking our Course N. W. by North, when we came within 40 *m.* of the Line to the West with a moderate South Wind. *May* the 31st. We got in sight of the Islands of *Gallapages*, and at Night came to an Anchor at the East side of one of the Eastermost Isles, a Mile from the Shoar in 16 fathom Water clear, white, hard Sand.

They take 3 Prizes.

After their Resolution and steer towards the Gallapagos Isles.

The Isles of *Gallapagos* are a good number of large Lands situate under and on both sides of the Lines, destitute of Inhabitants, the Eastermost of them being 110 Leagues from the Continent. According to their position in the Maps they are in the Longit. of 181 extending to the West as far as 176, according to which the Longit. from *England* West is 68 *d.* tho' I fear the Hydrographical Charts have not placed them far enough to the West. The *Spaniards* who were the first Discoverers of them, describe them to be a great number of Isles extending N. West from the Equator to 5 *d.* North. We saw no more than fourteen or fifteen, some of which were seven or eight Leagues in length and three or four in breadth, pretty high and flat; four or five of the eastermost we found rocky and barren, without either Trees, Herb or Grass, except what was very near the Sea side, where grew some Bushes of *Burton* Wood which afford good Fuel; of this I saw good store in *Campeachy* Bay and in the *Samballoes*, but never in any other place in these Seas. These Isles produce also the *Dildo* Tree, a sort of a Shrub of the bigness of a Man's Leg and ten or twelve Foot high, but without either Fruit or Leaves, instead whereof it has thick rows of sharp Prickles from top to bottom. These Islands afford also some Water in Ponds and Cavities of the Rocks; some of the Isles are low and more fertile and produce Trees not unknown in *Europe*: Some of the westermost Islands are bigger than the rest, being nine or ten Leagues long, and six or seven broad, and afford store of Trees, especially *Mammee* Trees; they have also some pretty large fresh-water Rivers and many Rivulets.

The Isles of Gallapagos described.

Burton Wood and the Dildo Tree.

1684.

As there is no place in the World so much stored with *Guanoes* and land Tortoises as these Isles, so the *Spaniards* gave them the Name of *Gallapago's*; the first are fat and of an extraordinary size, and exceeding tame; and the land Tortoises so numerous, that some hundred Men may subsist for a considerable time upon them, they being very fat and as pleasant Food as a Pullet, and of such a bigness, that one of them weighs from 150 to 200 Pounds, and are from 2 Foot to 2 Foot 6 Inches over the Belly, whereas in any other Places I never met with any above 30 pound Weight, tho' I have heard them say, that at St. *Lawrence* or *Madagascar*, and at the Isle of *Don Mascarin* (near it) there are also very large ones. There are 3 or 4 sorts of land Tortoises in the West *Indies*; one is call'd by the *Spaniards Hacatee*, which keep most in fresh-water Ponds; they have small Legs and long Necks with flat Feet, and commonly weigh betwixt 10 and 15 Pounds. The second sort they call *Tenopen*, much less than the former and something rounder, but for the rest not unlike them, except that the Shell on their Backs is naturally clouded with a curious carv'd Work; both sorts afford very good Meat, and these last delight in marshy and low Places, and are in vast numbers on the Isle of *Pines* near *Cuba*, among the Woods. The Tortoises in the *Gallapago* Islands are in shape like the first with long Necks and small Heads, but that they are much bigger. These Islands have also some green Snakes and great store of tame Turtle-Doves, something less than our Pigeons, but very sweet and fat.

Land Tortoises here.

Three sorts of Land Tortoises.

Betwixt some of these Islands are large Channels capable of receiving Ships of a moderate Burthen; upon the Shoals grows great plenty of Turtle-Grass which maks these Channels abound in that sort of Sea-Tortoise which is call'd the *Green-Turtle* or *Tortoise*: For you must know, that there are no less than 4 or 5 different sorts of Sea-Tortoises; *viz.* the *Trunk-Tortoise*, the *Loggerhead*, the *Hawksbill* and the *Green-Tortoise*. The first is bigger and has a rounder and higher Back than the rest, but its Flesh is neither wholsome nor well-tasted, no more than that of the *Loggerhead*, which feeds upon the Moss of Rocks; it has got its Name from its large Head. The *Hawks-bill* (so call'd from its long small Mouth) is the least, and that bears the so much esteem'd Shell out of which they make Cabinets, Boxes, Combs, &c. in *Europe*. Of this Shell each has from 3 to 4 Pounds, tho' some have also less; their Flesh is but indifferent, yet somewhat better than that of the *Loggerheads*, tho' those taken betwixt the *Samballoes* and *Porto Bello* make those that eat their Meat vomit and purge most vehemently; the same is observable in some other Fish in the West *Indies*, of which more anon. It is further observable, that the Meat of the *Hawksbill-Tortoise* differs according to their Food; for those that keep and feed upon Moss among the Rocks have a much yellower Fat and Flesh, and not so well-tasted as those that feed upon Grass; besides that, their Shells are not so transparent. These *Hawksbill-Tortoises* are in divers parts of the West-*Indies*, and have their peculiar Isles where they lay their Eggs, and seldom intermix with any other sort of Tortoises.

Turtle Grass.

Four sorts of Sea-Tortoises.

The Trunk-Tortoise.

Hawksbill Tortoise.

However these as well as all other sorts of Tortoises lay their Eggs in the Sands, and after the same manner; their laying time is about *May*, *June* and *July*, a little sooner or later, and they lay 3 times every Season, 80 or 90 Eggs each time, which are round and of the bigness of a good Hen-Egg, but covered only with a white thin Skin. In some of the Bays on the North side of *Jamaica* the *Hawksbills* lay their Eggs, as likewise on the Isles of the Bay of *Honduras*, and in divers places on the Continent of the Coast of *America*, from *Trinidado* to *Vera Cruz* up the Bay of *New Spain*. After a *Sea-Tortoise* gets on Shoar to lay, she is an Hour before she returns, because she always chooses her Place above the high Water-Mark, where she makes a large Hole with her Finns in the Sand to lay her Eggs in, which done she covers up 2 Foot deep with the same Sand she had raked out before; sometimes they will take a view of the Place at Night before-hand, and be sure to return to the same the next Day to lay. They take the Tortoises in the Night upon the Shoar, when they turn them upon their Backs above the high Water-Mark, and so fetch them the next Morning; but a large *Green-Tortoise* will give work enough to two able Fellows to turn her upon her Back. The *Hawksbills* are also found in the East *Indies* and on the *Guinea*

How and when Tortoises lay their Eggs.

How they are taken.

1684. Coast, but I never met with any of them in the *S. Seas*.

The green Tortoise. The *Green Tortoise* has got its name from the greenish Colour of its Shell, which is better clouded than the *Hawks-bill*, but has a round and small Head, and the body is of such a bulk, as to weigh from 200 to 300 Pounds. Its meat is accounted the best of all the rest, tho' there is a considerable difference as well in their Bulk as in the goodness of the Flesh. At *Blanco* in the *West-Indies*, (where they have only this kind) are larger than any in the N. Sea, weighing generall 250 or 300 Pounds; their fat is yellow, the lean white and both very good; but those of *Boca Toro* to the W. of *Porto Bello*, are neither so large nor have so white and well tasted Flesh; and those found in the Bay of *Honduras* and *Campeachy* are less than these, and their fat of a greenish Colour. I was told that at *Port-Royal* in *Campeachy* Bay, they once catch'd one of these *Green Tortoises* which was four Foot thick from the Back to the Belly, which was 6 Foot broad; a Boy of 10 Years old (the Son of Captain *Roch*) went in it, instead of a Boat, aboard his Father's Ship then at Anchor a quarter of a Mile from the Shoar; the fat of this Creature yielded 8 Gallons of Oil. The Tortoises found among the little Isles on the S. side of *Cuba* are some bigger some less, and their Flesh sometimes green, sometimes yellow; these are carried to *Port-Royal* in *Jamaica*, where they are kept in Wires made with Stakes.

Their difference.

A monstrous large Tortoise.

Trees Food. The green Tortoises feed upon Grass of a quarter of an inch broad and six inches long, growing in three, four, five or six fathom Water; it is quite different from the *Manatee's* Grass, which has a slender blade. The Tortoises of the Isles of *Gallapagos*, are a bastard kind of the green Tortoises, their Shell being thicker than the others, but their Flesh not so good; besides that they are much larger, and frequently two or three foot thick, and their Bellies five foot broad. In the S. Sea are another kind of green Tortoise no bigger than the smallest Hawk's Bill; as they feed on Mols, so their Meat is rank, tho' very fat. Both these kinds differ from all the rest; for whereas in other places the Female only goes ashoar, and that in the Night time: among these both the Male and Female go together by Day, and return together; both are very fat at first, but when they are ready to return, they are lean, tho' the Female not so much as the Male.

How they engender. It is the common opinion here, that they are nine Days engendring, the He on the She's back in the Water. This is certain, that at that time the He will not forsake the She, who is much more fearful, and often endeavours to get away, but that the Male keeps her with his Fins; so that if you strike the She first at their coupling time, you are sure of the He. They are supposed to live many Years, being a long time coming to their full growth.

Another kind of Green Tortoise. In the S. Seas on the west end of the Coast of *Mexico*, is another kind of green Tortoises much smaller than all the rest, but their Flesh very well tasted. There is one thing more extreamly surprising in all these Creatures, that for three Months, whilst they are laying their Eggs, they forsake their ordinary places of resort, and get others where they lay their Eggs; and it is generally supposed that they neither Eat nor Drink all that Season. The most noted places where they breed, is the Isle of *Caimanes* in the *West-Indies*, and the Isle of *Ascension* in the western Ocean; and no sooner is their Coupling time past, but they are all gone, tho' it be certain that they must swim a vast way to come to either of these Places; since it has been taken notice of, that all the beforemention'd Tortoises have been found at *Caimanes* in breeding time. The nearest place from whence these Creatures can swim thither, are the Isles of *Cuba*, 40 Leagues thence. Those that breed at the Isle of *Ascension* coming from the Continent, must at least go three hundred Leagues; it being certain that their constant Places of aboad are always near the Shoar. Thus in the S. Sea they go from the *Gallapagos* to lay their Eggs on the Continent, which is above a hundred Leagues thence. It is further observable, that not all the Tortoises leave their ordinary Places at breeding time, but many remain there; and those that go, are follow'd by great numbers of Fishes, especially Sharks, that those Coasts are left destitute of Fish till their return.

Some after Ascension coming the breeding of the Tortoises.

The Air of the Gallapagos. As the Sea Breezes by Day, and the Night Winds without intermission refresh the Air of the Isles of *Gallapagos*; so they are not so much troubled with excessive Heats, nor so unwholsome as most other Places near the Equator. During the rainy Season in *November*, *December* and *January*, they are pelted with most violent Tempests, Thunder and Lightning; before and after these Months they have refreshing Showers, and their Summer Season in *May*, *June*, *July* and *August*, without any Rains. We Anchored near several of these Islands, and found frequently the Sea Tortoises sunning themselves in the Day time, (a thing not usual in most other Places) whereof we kill'd as many as we wanted. Captain *Davis* at another time came to an Anchor on the W. side of these Isles, where he and his Men did feed upon Land Tortoises for three Months, and saved sixty Jars of Oil made of them. He met on that side with divers good Channels and Anchorage betwixt the Isles; several fresh Water Rivulets, and store of good Trees and Fuel. Captain *Harris* (of whom hereafter) found also in some of these Islands abundance of *Mummee*-Trees, and divers large Rivers. The Sea adjoining to these Islands, is well stored with large and good Fish, especially with Sharks. I took the height of the Sun with an *Astrolabe*; at the N. end of the second Isle we Anchored at 28 m. N. from the Line.

After a stay of twelve Days among these Isles, one of our *Indian* Prisoners a Native of *Rio Leka*, having given us an ample Account of the Riches of that Place, and offered his Service to conduct us thither, it was resolved to take his Advice, and accordingly set sail the 12th of *June*, with an intention to touch in our way at the Isle of *Cocos*. We took our Course N. till 4 deg. 40 min. Lat. with a S. and by W. and S. S. W. winds, and as we came W. to the Isle of *Cocos*, the Wind S. W. by S. Thus we continued our Course to 5 deg. 40 min. N. Lat. when despairing to make the Isle of *Cocos* as the Wind stood (being too far to the N. of it) we directed our Course to the Continent.

They take the Galleon Pagolo.

The Isle of *Cocos* (so call'd from its vast plenty of *Coco*-Trees) lies at 5 deg. 15 min. N. Lat. Its Circuit is 7 or 8 Leagues, but has no Inhabitants. Near the Sea side it produces a certain pleasant Herb in the low Grounds, call'd *Geamadael* by the *Spaniards*. As it is environ'd with steep Rocks, so there is no coming near it, except that on the N. E. end Ships may ride safely in a small Creek. This is what I learnt from the *Spaniards*, and was confirm'd to me by Captain *Eaton*.

Cape Blanco, or the white Cape. The fair Weather and small Winds conducted us by the beginning of *July* to Cape *Blanco* on the Continent of *Mexico*, so call'd of two white Rocks half a Mile from the Cape, at 9 deg. 56 min. Lat. they are taper, high and steep, like two high Towers: The Cape it self is about the same height as *Beachy*-head, on the Coast of *Sussex* in *England*; being a full point jetting out with steep Rocks to the Sea; but having an easie descent on both sides from the Flat on the Top; which being covered with tall Trees, affords a pleasant Prospect.

The Bay of Caldera. On the N. W. side from the Cape, the Land runs in N. E. for four Leagues, making a small Bay, call'd the *Caldera*-Bay, at the entrance whereof at the N. W. side of the Cape, a sweet Water Rivulet exonerates it self into the Sea among the low Lands, which are very rich and abounding in lofty Trees, which extend a Mile N. E. beyond the Rivulet, where the *Savannahs* begin, and run several Leagues into the Country; being here and there beautify'd with small Groves of Trees, and covered with a sweet, thick and long Grass, some of the best I ever saw in the *West Indies*. Deeper into the Bay the low Lands are stor'd with *Mangroves*, but further into the Country the Land is higher, partly Woods, partly Hilly *Savannahs*, the Grass whereof is not so good as the former, neither are the Trees in the Woods so tall, but small and short. From the bottom of this Bay, you may travel over Hilly *Savannahs* for 14 or 15 Leagues, to the Lake of *Nicaragua*, on the Coast of the N. Sea.

The Country about Rio Leka. Volcan Veja a burning Mountain.

The Harbour.

Capt. Cook dies. Captain *Cook* who had been very ill ever since our departure from *John Fernando's*-Isle, dyed as soon as we came within two or three Leagues of this Cape (a thing frequent at Sea, for People to die in view of the Land after a long Illness) and as in a few Hours after we came to Anchor a League within the Cape, near the Mouth of the beforementioned Rivulet, at fourteen Fathom clean, hard Sand; so he was immediately carried on Shore under a Guard of twelve arm'd Men, in order to his Interment. Whilst our Men were busie in digging the Grave, three *Spanish Indians* came to them, asking them several impertinent Questions, which our People having answered as they thought convenient, they kept them in discourse till they found means to seize them all three, tho' one of them escaped their Hands again. The other two being carried aboard, confess'd that they were sent hither as Spies, to inform themselves concerning us, from *Nicoya*, a small *Mulatto* Town twelve or fourteen Leagues hence, seated upon the Banks of a River bearing the same Name; which being a place very convenient for building and refitting

The Town of Rio Leka.

Nicoya.

of

1684. of Ships, the President of *Panama* had sent advice of our coming into these Seas to their Magistrates. Con-
The Inhabitants of the Country. cerning the Inhabitants of the Country, they told us, that they lived most upon manuring of their Grounds for Corn, and feeding their Cattle in the *Savannahs* or Plains, of which they had great store; and that they sent their Ox-hides (the Flesh being not much regarded) to the N. Sea by the Lake of *Nicaragua*, as they did also a certain red Wood (which I suppose to be the same call'd at *Jamaica*, *Blood-Wood* or *Nicaragua-wood*,) used for Dying, which they exchanged there for Linnen and Woollen Commodities, brought thither from *Europe*. They added, that not far thence was a large Beef Pen, where we might provide our selves with what Cows or Bulls we had occasion for.

As this was a scarce Commodity among us at that time, so twenty four of us were immediately dispatch'd in two Boats, who under the conduct of one of the *Indians*, landed at a place a League from the Ship, and hawled their Boats upon the dry Sand. Thus led by their Guide, they came to the Pen in a large *Savannah* two Miles from the Boats; where finding abundance of Cows and Bulls feeding, some were for killing three or four of them immediately, but the rest opposed the same alledging they had better stay all Night, and in the Morning kill as many as they had occasion for; hereupon I and 11 more thought fit to return aboard,
A narrow escape of 12 Men left ashoar. which we did without the least opposition expecting the coming of the rest the next Day; but hearing nothing of them by four a clock in the Afternoon, 10 Men were sent in a Canoe to look after them; they were no sooner come into the Bay where they had landed before, but found their Comrades upon a small Rock half a Mile from the Shoar, standing up to the middle in Water, whither they had taken refuge to escape the hands of 40 or 50 well arm'd *Spaniards* with Guns and Lances, who had burnt their Boat; they were got upon the Rock at low-water, but it being then flowing Water, they must have infallibly have perished had our Canoes come but one Hour later, which now brought them safe aboard. We afterwards seized upon two Canoes ready fitted in this Bay, for Ships and Barks they have none, nor any Instruments for fishing, there being scarce any Fish hereabouts. This Country a-
Lance-Wood. bounding in Wood, call'd *Lance-Wood*, growing strait like so many Ashes, and very hard and tough; we cut good store of it to make Handles or Staves for Oars, and scowring Rods for our Guns, they being much more durable than those made of Ash.

The 19th of *July*, the Day before our departure from the Bay of *Caldera*, Mr. *Edward Davis* our Quarter-master, was constituted Captain in the room of Captain *Cook* deceased, and the next Day we set sail in company of Captain *Eaton*, and one of our Meal Prizes, towards *Rio Leka* with a moderate N. Wind, which brought us in three Days over against the said Port.

The Country about Rio Leka. The Country about *Rio Leka* is easily discovered at Sea, by reason of a high peeked burning Mountain call'd *Vulcan Vejo*, i. e. the *Old Vulcan*, by the *Spaniards*.
Volcan Vejo a burning Mountain. It is easily distinguished, being very high, so as to be seen 20 Leagues at Sea, besides, that there is no other Mountain like this on that Coast, and it smoaks all Day and sends forth Flames at Night. If you will make the Harbour, the Mountain must bear N. E. then steering directly with the Mountain, that Course will bring you to the Harbour, the entrance whereof you
The Harbour. see about three Leagues off it. You must take the advantage of the Sea-winds to enter, which are here at S. S. W. The Harbour is enclosed by a low Isle of a Mile in length, a quarter of a Mile broad, and one and a half from the Continent; at each end is a Channel, the E. Channel being narrow and having a very strong Tide is scarce ever used; but that on the W. end being much larger is most frequented by Ships, which must, however, have a care of a certain sandy Shoal on the N. W. point of the Isle, which as soon as they are past, they must keep close to the Shoar of the Isle, there being a Sand Bank which runs above half way out from the Continent; after which there is very good Riding near the main Shoar in 7 or 8 Fathom Water, clear hard Sand. This Port is able to contain 200 Ships.

The Town of Rio Leka. About two Leagues thence is seated the Town of *Rio Leka* in a Fenny Country, full of red *Mangrove* Trees, betwixt two narrow branches of the Seas, the Westernmost whereof reaches up to the Town, and the Easternmost runs up near the back side of it, but no shipping can come up to the Town; the description whereof I will give the Reader in my return hither. We now resume the Thread of our Voyage: Being in sight of the *Volcan Vejo*, 7 or 8 Leagues from the Shoar, the Mount bearing N. E. we took in our Top-sails and made toward the Harbour, and then setting out our Canoes, row'd up to the small Isle that makes the Harbour of *Rio Leka* by 9 a clock in the Morning, where we discovered a House, and soon after three Men going into a Canoe on the inside of the Island, and making what haste they could to row to the Continent, which before they could reach, we overtook them, and carried them back to the little Isle; at the same time we observed one a Horse-back on the Continent riding away full speed towards the Town. They frankly confess'd that they had been placed there by the Governour of *Rio Leka*, who had been advised of our coming into those Parts, to keep watch there Day and Night, and that Horse-man we saw riding away was placed upon the same account on the Continent, within an Hours riding of the Town. Thus finding our selves discovered, the Horse-man being gone three Hours before *Eaton* and his Canoes came to the Island, the design upon that Town was laid aside for this time.

1684.

They are frustrated in their design.

This small Island has a curious Spring of fresh Water, some Trees, and good store of Grass, but no Beasts to feed upon it, and is situate at 12 Deg. 10 Min. N. Lat. We staid till 4 a Clock in the Afternoon, then we went aboard again, and pursuant to a Consultation held betwixt Captain *Eaton* and Captain *Davis*, the 26th of *July*, took our Course, the next Day, for the Gulf of *Amapalla*.

This Gulf is a large Branch of the Sea, entring 8 or 10 Leagues deep into the Country. On the S. side of its entrance it has the Point or Cape *Caswina*, and on the N. W. side St. *Michael's* Mountain, at 12 Deg. 40 min. N. Lat. They both appear very remarkable at Sea; for the Cape is a high round Point, appearing at a distance like an Isle, the Land near it being very low, and Mount *Michael* is a high peaked Hill, not very steep; at the foot whereof, to the S. E is a low Plain of a Mile in length. Here it is the Gulf enters on that side, and betwixt these low Grounds, and Point *Caswina*, are two high Isles at 2 Miles distance from one another, the Southernmost being called *Mangera*, the other *Amapalla*.

The Gulf of Amapalla.

Mangera is a high, round Island 2 Leagues in circuit, enclosed on all sides with Rocks, except in one place on the N. E. side, where is a small sandy Creek. The Soil is black, but not deep, and full of Stones, and produces very lofty Trees; It has one Town in the middle, inhabited by *Indians*, with a goodly *Spanish* Church. The Inhabitants have a few Plantations of Maiz and Plantains, and no other sort of tame Fowl but some Cocks and Hens, nor any other Beasts but Cats and Dogs. From the Town to the Creek is a steep and rocky Path.

The Isle of Mangera.

The Isle of *Amapalla* has the same Soil as the former, but is much larger, having 2 Towns, 2 Miles asunder, one to the N. the other to the E. The last stands in a little Plain on the top of a Hill, a Mile from the Sea, and has a fair Church. The other Town is less, yet has a good handsome Church. I have observed one thing in most of the *Indian* Towns under the *Spanish* Jurisdiction, that the Images of their Saints in their Churches, are represented with an *Indian* Complexion, and partly in their Dress; whereas, in the Towns inhabited by *Spaniards* they retain their own Complexion and Dress. But to return to the Inhabitants, they have good store of Maiz and large Hog-plums, but few Plantains. The Hog-Plum-tree is of the same bigness as our largest Plum-trees, with leaves of the same breadth, but shaped like the Hawthorn-leaf, and light Green; the Wood is brittle, and the Fruit oval, of the bigness of a small Horse-plum. At first it is Green, but when ripe, half red and half yellow, with a large Stone and little Pulp about it. It has a pleasing taste, but it is hard to meet with any of them ripe without Magots in them; this is the only Place I ever saw them at in the *South-seas*. In *Campeachy* Bay they grow in great plenty, and in *Jamaica* they fence their Grounds with them. They have also some Fowls, and no *Spaniards* live there except the Father or Priest, who takes care of these 2 and the Town in the Isle of *Mangera*, As they have little or no Money, so they pay their Tribute in Maiz to the Governour of St. *Michael's* Town, seated at the foot of St. *Michael's* Mount, and the Ghostly Father has the Tenths of all, which tho' it amounts to no great Matter here, and in other places where they are poor, yet in other Towns where the *Indians* are rich, they know very well how to feather their Nests; besides this Priest, we found but one here (the Secretary of the Town) who could speak and write

The Isles of Amapalla.

An observation concerning the Saints of America.

The Hog-plums.

1684 write *Spaniſh*, for their *Caſica*, or Magiſtrate, could do neither.

The Harbour in the Gulf of Amapalla. This Bay, or Gulf, has many other Iſlands, but uninhabited; one pretty large one we ſaw, belonging to a Monaſtery, where four or five *Indians* look'd after the Cattel that fed there in great numbers. This Gulf has 2 Channels, one betwixt the Cape *Caſwina* and *Mangera*, the other betwixt this laſt place and *Amapalla*.

The beſt Anchorage is on the E. ſide of *Amapalla*, oppoſite to the low Grounds, the reſt being high Lands. As you go in deeper you may ride on the N. E. ſide of *Amapalla*, cloſe to the Main; this the *Spaniards* call the Port of *Martin Lopez*. The Gulf extends a great way beyond the Iſle, but is not deep enough to bear Ships of burthen.

Captain *Davis* being ſent before with two Canoes into this Gulf to get ſome Priſoners, he came to *Mangera*, where finding a Path from the Creek, he followed it towards the Town. But the Inhabitants no ſooner had notice of his coming, but they run all into the Woods, leaving only the Prieſt behind them, who being taken with 2 Boys his Attendants, Captain *Davis* made them conduct him to the Iſle of *Amapalla*, where being landed, he march'd up to the beforementioned place, a Mile from the landing-place, on the top of the Hill. *They come into the Gulf.* The Inhabitants, who ſaw them advance, were ready to retire into the Woods; but the beforementioned Secretary, an Enemy to the *Spaniards*, having perſwaded them that they were Friends, who craved their aſſiſtance againſt their common Oppreſſors, they bid *Davis* and his Men welcome; after the firſt Salutations they marched towards the Church (the Prieſt brought along by Captain *Davis* at the head of them) their only place *Churches of the Indians places of Mirth.* of publick Meeting, whether for Conſultations, Diverſions or Paſtimes; where they keep their Vizards, Hautboys, Strumſtrums, (a kind of a Cittern) and other muſical Inſtuments; here they meet to make merry, eſpecially in the Night preceeding or next enſuing any Holy Day, where they dance, ſing and play with antick dreſſes and geſtures, tho' to ſpeak truth, their Muſick and mirth has ſomething very melancholy in it, ſuitable to the heavy yoke they grown under, I mean the *Spaniards*. But to return to Captain *Davis*, his intention was, that as ſoon as they were all got into the Church, to engage them into his aſſiſtance againſt the *Spaniards*, to accompliſh which, the Prieſt had promiſed his good Offices. But juſt as a few of the remaining *Indians* were entring the Church, one of Captain *Davis*'s Men puſh'd them forward, to haſten into the Church, which the *Indian* being frightned at, he ſet up his Heels, and the reſt taking the allarum followed as faſt as they could; ſo that Captain *Davis* and the Fryar being left alone in the Church, he ordered to fire at them, which being done, the Secretary was killed in the Fray, and ſo the whole project vaniſhed into Smoak by the fooliſhneſs of one inconſiderate fellow. 1684

A good project loſt by the folly of one perſon.

The ſame Afternoon, our Ships being entred the Gulf, betwixt Point *Caſwina* and the Iſle of *Mangera*, came to an Anchor on the E. ſide, near the Iſle of *Amapalla*. Captain *Davis* came aboard us with the Fryar, who told us, that ſince the Secretary was kill'd, they had no other way than to ſend for the *Caſica*; which being done by the Prieſt, he came attended by 6 other *Indians*, who did us conſiderable ſervice, in conducting us whither we had occaſion to go, eſpecially to fetch Beef, for which they were rewarded to their ſatisfaction. On this ſame Iſland of *Amapalla* a Company of *Engliſh* and *French* landed afterwards, and thence came to the Continent, and marched by Land to the Cape *River*, which has got its name from its diſcharging it ſelf into the North Seas near Cape *Gratia Dios*. At the ſource of this River they made Bark-logs (deſcribed hereafter) wherewith they paſſed into the North Seas. However they were not the firſt inventers of this Paſſage, ſomething of it having been diſcovered by ſome *Engliſh* thirty Years before, who went up this *Cape River* out of the North Seas in Canoes, to the ſame place where the *French* built their Bark-logs, and thence to an inland Town call'd *Segovia*. They performed this not without incredible difficulty and in no leſs than a Months time, by reaſon of the many Cataracts of this River, which oblig'd them frequently to hale their Canoes aſhoar, and drag them over Land, till they were paſſed theſe Water-falls. I have ſpoke with ſeveral that were in this Expedition, and if I miſtake not, Captain *Sharp* was one of them.

Some French & Engliſh go by Land hence to the N. Seas.

But to return to our Voyage. After we had Careen'd and provided our Ships with freſh Water, Captain *Davis* and *Eaton* broke off Partnerſhip, and the laſt left the Gulf the 2d of *September*.

Capt. Davis and Eaton part.

CHAP. VII.

A Deſcription of the Iſle of Plata; *of the Buildings and Soil of* Peru; *of the Bay, River and Town of* Guiaquil. *Their deſign upon that place miſcarries. The Coaſt betwixt Cape* Paſſao *and Cape St.* Franciſco *to* Panama. *The Inhabitants of the River of St.* Jago. *The Iſles of* Gallo *and* Gorgona, *and the Pearl Oyſters there. The Cape* Corientes *and* Garachina. *Several other Iſlands in theſe Seas. A Deſcription of the Bay of* Panama; *of old* Panama, *and the new City. The Gulf of St.* Michael, *and the Rivers of* Congos, Sambo, *and St.* Maria. *An account of the* Spaniſh *Fleet, and of an Engagement with the Privateers.*

The Author ſets ſail from the Gulf of Amapalla, 1684. THE 3d of *September* 1684, having ſent the Fryar on Shoar, we ſail'd with the Land Wind at W.N.W. out of the Gulf of *Amapalla*, thro' the Channel betwixt *Mangera* and the Iſle of *Amapalla*, directing our Courſe to the Coaſt of *Peru*. As the Turnadoes, with Thunder, Lightning and Rains, are very frequent on theſe Coaſts from *June* to *November*, ſo we had our ſhare of them, coming moſt from the S. E. but afterwards the Wind veering to the W. it held till we came in ſight of Cape St. *Franciſco*, where we met with fair Weather and a South Wind.

The Cape of St. Franciſco. This Cape being a high, full Point of Land, lies at 1 d. 20 m. N. Lat. and is covered with lofty Trees. As you paſs by it from the N. ſide, you may eaſily miſtake a ſmall low Point for the Cape; but ſoon after you paſs it, you will diſcover it with three triple Points. The Land near it is high, and the Mountains appear black; we plied along the Shoar to take the advantage, both of the Sea and Land Winds; the firſt from the S. as the Land-Winds do from the S. S. E. tho' ſometimes, when we come oppoſite to the Rivers Mouths, the Wind would turn to the S. E.

September 20, we came to an Anchor near the Iſle of *Plata*, at 16 Fathom, being now fallen in with the places whence I begun the account of this Voyage, after having compaſſed the whole Continent of the South *America*.

The Iſle of Plata. The Iſle of *Plata*, ſituated at 1 Deg. 10 Min. South Lat. is about 4 Miles in length, and one and a half in breath, of a pretty good hight, and encloſed with rocky Cliffs, except in one place on the E. ſide, where is the only place where a freſh Water Torrent falls down from the Rocks. The top is flat and plain, the Soil ſandy, yet it produces three or four ſorts of low and ſmall Trees, not known in *Europe*. Theſe Trees were much over-grown with Moſs and pretty good Graſs is to be found here in the beginning of the Year, but have no Land Animals to feed upon it; that vaſt number of Goats that uſed to be here formerly, being all deſtroyed now: However they have good ſtore of *Boobies* and *Men of War* Birds. *Whence it got its Name.* Some ſay the *Spaniards* have given it the name of *Plate* Iſland after Sir *Francis Drake* carried thither the *Cacafoga*, a rich Ship of theirs, laden with Plate. The place for anchorage is on the E. ſide, about the middle of the Iſle, cloſe to the Shoar, within two Cables length of the ſandy Bay, in 18 or 20 Fathom, of faſt ouzey Ground and very ſmooth Water; becauſe the S. E. point of the Iſle keeps off the force of the S. Winds which commonly blow here. In this ſandy Bay, oppoſite to the anchoring place, is good landing, this being the only place that leads you up into the

1684. the Isle. From the S.E. point comes out a small Shoal about a quarter of a Mile into the Sea, where when it flows, you see great rising in the Water; the Tide is strong, flowing to the S. and ebbing to the N. At the same Point are three small, but high Rocks, about a Cables length from the Isle; and such another, but much larger, at the N. E. end. All round the Island is deep Water, except in the before mentioned Road, and near the Shoal; it has great plenty of these small Sea Turtles mentioned in the second Book, and bears four or five Leagues W. S. W. from Cape St. *Laurenzo.*

The Point of Hellena. After a stay of one Day we continued our Voyage to Point St. *Hellena*, bearing S. from the Isle of *Plata*, at 2 Deg. 15 Min. S. Lat. It appears high and flat at a distance, like an Isle, being surrounded with low Grounds, and covered on the top with Thistles, but without Trees. As it jets out W. into the Sea, it makes a good large Bay to the N. side, a Mile within which, at the very Sea side stands a wretched Village called alSo St. *Hellena*, inhabited by *Indians*; but the Ground tho' low, being sandy and barren, they have neither Trees nor Grass, or any Fruit or Corn, except Water-Melons, which are very good here, and they are forced to fetch their fresh Water as far as the River *Colanche*, four Leagues thence, at the bottom of the same Bay: They live chiefly upon Fish, and are supplied with some Maiz from *Algatrane*. Near this Town, about five Paces above the High-water Mark, issues forth out of the Earth a certain bituminous Substance, called *Algatrane* by the *Spaniards*, which by long boiling becomes hard like Pitch, and used as such by the *Spaniards*. To the Leeward of the Point, directly opposite to the Village, is good anchorage, but on the W. side very deep Water.

A Village of the same Name.

A kind of Pitch issuing out of the Earth.

Some of our Men being sent in the Night time to take the Village, they landed in their Canoes in the Morning, and took some Prisoners, and a small Bark set on Fire by the Inhabitants, alledging, that they had done it by special order from the Vice-Roy. Our Men returning the same Evening, we return'd again to the Isle of *Plata*, where we anchor'd *September* 26; the same Evening we sent some of our Men to *Nanta*, an *Indian* Village, 2 or 3 Leagues W. of Cape St. *Lorenzo*, to get more Prisoners, in hopes of better Intelligence.

They return to the Isle of Plata.

The Town of Manta. *Manta* is a small Village inhabited by *Indians* on the Continent, 7 or 8 Leagues from the Isle of *Plata*. Its Buildings are but mean and scatter'd, but being built on an easie ascent, afford a very agreeable Prospect towards the Sea side. The Church here is very fine and adorned with good carved Work, because this place was formerly inhabited by *Spaniards*. As the Grounds about it are dry and sandy so they bear neither Grain orRoots, but only a few Shrubs. They are supplied with Provisions by Sea, this being the first place where the Ships bound from *Panama* to *Lima*, and other parts of *Peru* refresh themselves. They have an excellent Spring of fresh Water betwixt the Village and the Sea. Just opposite to the Village, one Mile and a half from the Shoar, is a Rock, which proves often dangerous, because it never appears above Water; but a Mile within this Rock is safe Anchorage, at 6, 8 or 10 Fathom hard and clear Sand. About a Mile to the W. from the anchoring place, a Shoal runs out a Mile into the Sea.

Behind the Town, directly S. of it, a good way into the Country, stands a very high Mountain, rising up into the Clouds like a Sugar-loaf, and therefore serves for a good Sea mark, there being no other like it on all that Coast. But more of this Coast in another place.

Monte Christo.

We return'd to our Men, who landed with Day-break one Mile and a half from the Village; but the Inhabitants being already stirring took the alarum, and so got all away except two old Women, who being taken Prisoners, declared that the Vice-roy upon News brought him, that a good number of the Enemy being come over the Isthmus of *Darien* into the *South-Seas*, he had ordered the burning of their Ships, the destroying of all the Goats in the Isle of *Plata*, and to keep no more Provisions than for their own present use.

With this News we returned the next Day to the Isle of *Plata*, where we found our Ship; here we staid unresolved what course to take till the second of *October*, when Captain *Swan* Commander of the *Cygnet* of *London*, a rich Ship, and design'd to Trade on that Coast, came to an Anchor in the same Road, but being disappointed in his hopes to Traffick thereabouts, his Men had forced him to take aboard a company of Privateers he met with at *Nicoya*, being the same we were told of at *Manta*; for they were come by Land under the command of Captain *Peter Harris*, Nephew to the same Captain *Harris* who was killed before *Panama*. Captain *Swan's* Ship being unfit for service, by reason of his Cargo, most of the Goods were sold upon Credit, and the rest thrown over-board, except the fine Commodities and some Iron for Ballast. Then Captain *Davis* and Capt. *Swan* join'd Company by consent, and *Harris* had a small Bark given him. Our Bark which had been sent 3 days before a Cruizing, brought in a Prize laden with Timber which they had taken on the Bay of *Guiaquil*; the Commander told us, that it was credibly reported at *Guiaquil*, that the Vice-roy was fitting out ten Frigots to chase us out of these Seas. This made us wish for Captain *Eaton*, and it was resolved to send our small Bark towards *Lima*, to invite him to join Company with us.

Capt. Swan arrives at the Isle of Plata.

1684.

This done, we fitted up another small Bark into a a Fireship, and the 20th of *October* set sail for the Isle of *Lobos*; the Wind being very slack we did not pass by the Point of St. *Hellena* till the 23d, and the 25th crossed the Bay of *Guiaquil*. The 30th we doubled the Cape of *Blanco* at 3 deg. 48 min. the worst Cape in the *South Seas* to double, because you can't here, as in most other places, stand off at Sea by reason of the strong Current, which setting N. W. will carry a Ship off more in 2 Hours, than she can get again in 5. Thus we were forced to keep near the Shoar, which is often performed not without great difficulty; for as there are no Land Winds here, so it generally blows hard at S. S. W. or S. by W. The Cape is surrounded with white Rocks on the Sea side, whence questionless it has got its Name; and the Country near it appears steep and rugged.

They continue their Voyage.

The second of *November* we lay about 6 Leagues off of *Payta*, whence we sent several Canoes man'd with 110 Men to attack the Town, a small Sea-port, belonging to the *Spaniards*, at 5 deg. 15 m. built on a sandy Rock near the Sea side, under a high Hill. It has 2 Churches, but only 75 or 80 Houses, low and meanly built; 'tis like most of the other Buildings all along the Coast of *Peru*. They build their Walls with a kind of Brick made of Earth and Straw, dry'd only in the Sun 3 Foot long and 2 broad, and one and a half thick. In some places they only lay Poles across covered with Mats, instead of Roofs; but sometimes they use Roofs. The reason why they build so meanly is, partly because they want Materials of good Stone and Timber, partly because it never Rains, which makes them only sollicitous to keep out the Sun; and these Walls, tho' never so slight and brittle, yet will hold as firm for a considerable time as they were at first, as being not shaken or mouldred by the Wind and Rains. The Timber, the better sort make use of in their Buildings is brought thither from other Places; their Walls as well as those of the Churches, are neatly whitened, both within and without, with very large Beams, Posts and Doors, all adorned with carved work; besides good Pictures brought thither from *Spain*, and rich Hangings of Tapestry or painted Callico's. But the Houses of *Payta* were not of that sort, tho' their Churches are both large and handsome. Close by the Sea is a small Fort, which with Muskets only commands the Harbour, as another on the top of a Hill commands both that and this Fort. They are obliged to fetch their fresh Water, as also their Fowl, Hogs, Plantains, and Maiz from *Colan*, a Town 2 Leagues N. N. E. from *Payta*, a fresh Water River, which disembogues into the Sea.

The Town of Payta.

The Buildings of Peru.

The Torrid or dry Tract of this Country, begins to the N. from Cape *Blanco* to *Coquimbo*, at 30 deg. S. Lat. where I never saw or heard of any Rain, nor of any green thing growing, neither in the Mountains or Vallies, except in some places water'd constantly with divers Rivers.

As those of *Colan* are much addicted to fishing, so they perform it in *Bark-logs*. These are composed of divers round Logs of Wood, in manner of a Rafter, but after a different manner, according to the use they are intended for, or the custom of the People that make them. Those intended for fishing are only 3 or 4 Logs of light Wood 8 Foot long, join'd to each other on the sides with wooden Pegs and Withes. The middlemost is always longer than the rest, especially at the forepart, which ends by degrees into a point, the better to cut the Waves. Those designed for the carrying of Merchandizes are made after the same manner and shape, of 20 or 30 great Trunks of Trees joined together, 30 or 40 Foot long. Upon these they fasten, with wooden Pins, another shorter row of Logs cross-wise; from this double

Bark-logs, how made.

Fishing Bark-logs.

Bark-logs for carriage

Bottom

1684 Bottom they raiſe a Raft of 10 Foot high, by the means of Poſts ſet upright, which are the ſupporters of 2 thick Trees laid a-croſs each other, juſt like our Wood-piles, but not ſo cloſe as in the bottom of the Float, but at the ends and ſides only, the innermoſt part being hollow. In this, at 4 Foot high from the Beam of the bottom they lay ſmall Poles cloſe together, which ſerves for a bottom of another Room, on the top whereof they make juſt ſuch another Floor. The firſt Story ſerves for a Cellar for Ballaſt and Water Casks or Jars, and the ſecond for the Sea-men, and what belongs to them. Above this ſecond Floor the Goods are ſtowed as high as they think fit, which ſeldom exceeds 10 Foot; ſome ſpace is left behind for the ſteers-man, and before for the Kitchen, eſpecially in long Voyages, becauſe they go ſometimes 500 or 600 Leagues. They *How they are manag-ed.* have a very large Rudder, and in the midſt of this Machine a Maſt with a large Sail, like our Weſt-Country Barges. As they can't go otherwiſe but before the Wind, ſo they are only fit for theſe Seas, where the Wind blows conſtantly one way, ſeldom varying above a Point or two in the whole Voyage betwixt *Lima* and *Panama*; if thereabouts they meet, as ſometimes it happens, with a N. Wind, they drive before it till it changes, having nothing elſe to do in the mean while but to avoid the ſhoar, for they will never ſink at Sea. Theſe laſt Bark-logs carry 60 or 70 Tuns of Wine, Oil, Flower, Sugar, *Quito* Cloth, Soap, dreſs'd Goat-skins, &c. They are manag'd by 3 or 4 Boats Men only, who after they come to *Panama*, ſell both the Goods and Veſſel there, becauſe they can't go back in them with the Trade-wind.

The beforementioned fiſhing *Bark-logs* (carrying not above 4 Tun each) are likewiſe furniſhed with Maſts and Sails, and are much eaſier managed than the large ones; theſe get out at Night with the Land-wind, and *East-India Bark-logs.* return in the Day time with the Sea-wind. Theſe ſmall Bark-logs are uſed in a great many places in the *Weſt-Indies*, and in ſome in the *Eaſt-Indies*, on the Coaſt of *Coromandel* (belonging to the laſt) they uſe only one, or ſometimes two Legs, made of a light Wood, without Sail or Rudder, manag'd by one ſingle Man, who with his Legs in the Water ſteers the Log with a Paddle.

Piura. The next Town of conſequence to *Payta* is *Piura*, a ſpacious place 40 Miles thence, ſeated in a Valley upon a River which exonerates it ſelf into the Bay of *The Bay of Chirapee.* Chirapee, at 7 deg. N. Lat. This Bay, tho' much nearer to *Piura* than *Payta*, yet is ſeldom ſailed by Ships of burthen, being full of Shoals; but inſtead *The Harbour of* thereof, ſail to *Payta*, one of the beſt Harbours on the *Payta.* Coaſt of *Peru*, being ſhelter'd at the S. W. end by a Point of Land which renders the Bay very ſmooth, and conſequently ſafe for anchorage from 6 to 20 Fathom in clear Sand. Moſt Ships bound either to the N. or S. touch at *Payta* for freſh Water, which is brought thither from *Colan* at a reaſonable Rate.

November 3, early in the Morning, our Men landed *Payta ta-ken.* 4 Mile S. of *Payta*, where they took ſome Priſoners that were ſet for a Watch, who told us, that the Governour of *Piura* was come with 100 Men to their aſſiſtance; notwithſtanding this our Men attacked the Fort on the Hill, and took it with little oppoſition, whereupon the Governour and Inhabitants quitting the Town, our People ſoon entered it, but found it empty of Money, Goods and Proviſions. The ſame Evening we came with our Ships to an Anchor not far from the Town, a Mile from the Shoar, at 10 Fathom Water, we ſtaid 6 Days in hopes of getting a Ranſom for the Town; but perceiving we were not likely to have any, it was laid in Aſhes.

At Night we ſet ſail hence with the Land-winds towards *Lobos*. The 14 Day we came in ſight of the Iſle of *Lobos de Terra*, bearing E. from us, and at 8 a Clock at Night came to an Anchor at the N. E. end of it, at 4 Fathom Water. The Iſle of *Lobos de la Terra* is of an indifferent hight, and at a diſtance appears *The Iſle of* altogether like the Iſle of *Lobos de la Mar*; we anchor'd Lobos de at the N. E. end of it, in 4 Fathom Water. It has at la Mar. the N. end a Rock a quarter of a Mile from the Shoar, and betwixt it a Channel of 7 Fathom Water. In the afternoon we ſail'd with a S. E. Wind to *Lobos de la Mar*, where we arrived *May* 19. The 26th in the Evening we diſcovered a Bark at a diſtance, which (as we were informed) was ſent to ſee whether we were in theſe Seas; but we keeping cloſe under the Shoar, *The Bay of* remained there undiſcovered. The 29th in the Morn-Guiaquil. ing we ſet ſail for the Bay of *Guiaquil*, ſituate betwixt Cape *Blanco* to the S. and Point *Chandy* to the N. 25 Leagues from Cape *Blanco*; in the bottom of this Bay lies a ſmall Iſle called St. *Clara*, extending E. and W. having many Shoals to the N. which makes the Ships bound for the River of *Guiaquil* to paſs on the S. ſide of it. The *Spaniards* ſay there lies a very rich Wreck on the N. ſide, but that there is very hard coming at it, by reaſon of the great multitude of Cat-fiſhes, a *The Cat-fiſh* Fiſh not unlike a Whiting, but with three Fins, one on the back, and one on each ſide, which have each a Bone, wherewith if they ſtrike into the Fleſh, it proves frequently mortal. They are to be ſeen all along the *American* Coaſts, and likewiſe in the *Eaſt-Indies*. Their Fleſh is both ſweet and wholſome.

From the Iſles of St. *Clara* to *Puna Arena*, i. e. the *Sandy Point*, being the Weſternmoſt Point of the Iſles of *Puna*, is 7 Leagues E. & N. E. Here Ships bound for *Guiaquil* take in their Pilots, which live in a Town of the ſaid Iſle, bearing the ſame Name, on the S. ſide 7 Leagues from Point *Arena*. The Iſle of *Puna* it ſelf *The Iſles of* is low, ſtretching 14 Leagues E. and W. and 5 Leag. Puna. broad. It has a ſtrong Tide round the Shoar, which is full of ſmall Creeks and Rivers. Near this Town is a ſmall Point, where the Inhabitants are obliged to keep a conſtant watch. The inland part of the Iſle is good Paſture Ground, intermixed with ſome Wood-lands, producing divers unknown Trees, and among the reſt abundance of *Palmetos*, a Tree about the *The Palme-to Tree.* thickneſs of an ordinary Aſh, and 30 Foot high, with a ſtrait Trunk without Branches or Leaf, except at the very top, where ſpreading into ſmall Branches of 3 or 4 Foot long, each of them produces at the extremity one ſingle Leaf, of the breadth of a large Fan, which at firſt ſprouts and ſpreads like a Fan pleated together; but by degrees opens and ſpreads like a Fan unfolded. The Houſes of the Town of *Puna* are built on Poſts, 10 or 12 Foot high, into which they go up by Ladders, and are Thatch'd with Palmeto Leaves; the like I have ſeen among the *Malayans* in the *Eaſt-Indies*. The beſt place for anchorage is directly oppoſite to the Town, within a Cable's length from the Shoar, at 5 Fathom Water.

From *Puna* to *Guiaquil* is 7 Leagues, and 1 League to the entrance of the River *Guiaquil*, which is 2 Mile *The River* over, and afterwards runs up into the Country with a *of* Guia-pretty ſtrait Channel; the Grounds on both ſides marſhy quil. and full of red Mangrove-trees. About 4 Miles on this ſide of the Town of *Guiaquil* the River is divided by a ſmall low Iſland into 2 Channels; that to the S. W. is the broadeſt, tho' the other is as deep. From the upper end of this Iſle to the Town is near a League, and the River thereabouts of the ſame breadth, where Ships of great Burthen may ride with ſafety, eſpecially towards that ſide where the Town ſtands.

It is ſeated cloſe by the River, partly on an aſcent, *The Town* and partly on the Foot of a ſmall Hill, with a great de- *of* Guia-ſcent towards the River ſide. It is defended by 2 Forts quil. erected on the low Grounds, and another on the Hill, being one of the beſt Sea-ports belonging to the *Spaniards* in the *South Sea*, under the juriſdiction of a Governour, and beautify'd with divers fine Churches, and other good Buildings. They export Cocoes, Hides, Tallow, Sarſaparilla, Drugs, and woollen Cloath, called *Quito* Cloth.

The Coco grows on both ſides of the River above the Town, having a ſmaller Nut than thoſe of *Campeachy*. The Sarſaparilla delights in watery places near the River ſide, and the *Quito* Cloth is made in an inland Town called *Quito*; it is coarſe and therefore worn only by the Vulgar ſort all over the Kingdom of *Peru*. As the Goods exported or imported from and to *Quito*, paſs to and by *Guiaquil*.

Quito is a populous Place, ſeated in the heart of the *The Town* Country, inhabited by ſome *Spaniards*, but moſt *Indians*, *of* Quito. under the *Spaniſh* Juriſdiction, being encloſed with a ridge of high Mountains, which abound in Gold, the Rivers ariſing among them carry abundance of Gold Duſt along with them into the lower Grounds, eſpecially after violent Rains (wherewith theſe parts are much troubled) and is afterwards cleanſed and waſhed from the Sand; for the manner whereof I refer my ſelf to Mr. *Wafer's* Treatiſe. *Quito* is reckon'd the richeſt place for Gold in all *Peru*, but unwholſome, the Inhabitants being frequently ſubject to Fevers, Head-ach, Griping in the Guts, and Fluxes; but *Guiaquil* is much more wholſome.

Having form'd a deſign again the Town of *Guiaquil*, *They form* we left our Ships at Cape *Blanco*, and ſteered with a *a deſign* Bark and ſome Canoes to the Iſle of St. *Clara*, in the *on Guia-*Bay of *Guiaquil*, and thence in 2 Canoes to Point *Arena*, *quil.* where we took the next Day ſome of the Fiſhermen of *Puna*, and afterwards their Watch, together with the whole

1685. whole Town and its Inhabitants. The next Ebb they took a Bark loaden with *Quito* Cloth coming from *Guiaquil*, the Master whereof told us, that there were three Barks full of Negroes coming with the next Tide from *Guiaquil*; we lying near the Town of *Puna*, we embarked all our Men in Canoes, leaving only 5 Men aboard the Bark, with orders not to fire at any thing till next Morning at 8 a Clock, by which time we supposed we should have taken the Town. We had not rowed above two Miles, but we met with, and took one of the Barks laden with Negroes; the Master whereof having told us, that the other 2 would not come out till the next Tide, we rowed forward; but our Canoes being heavily laden, it was break of Day before we came within 2 Leagues of the Town; there being not above an Hours Flood now, we absconded all Day in an adjacent Creek, and at the same time sent one of our Canoes to our Bark left near *Puna*, not to fire till the next Day, but to no purpose, for the before mentioned 2 Barks with Negroes, being come out of the Harbour, with the Evening Tide, passed by without being seen or heard by us, and falling down with the Ebb towards *Puna*, our Bark seeing them full of Men, fired 3 Guns at them, before our Canoe could bring them our last Orders; but we took the Masters of both the Barks as they were making their escape ashoar.

Mistarry by a Mistake.

The firing of these 3 Guns put us all into a great Consternation, as not questioning but that thereby the Townsmen had taken the Allarum; and therefore some were for advancing to the Town immediately, others for returning to our Ships. But as the Ebb Tide hindred us from going upward, so Captain *Davis* with 50 of his Men resolved to march by Land to the place; the rest judging it impracticable remained in the Creek to see the issue of the enterprize. After 4 Hours Captain *Davis* and his Men, having been almost choaked in the Marshes among the Mangrove Woods, returned without having been able to advance far, on their way to the Town. It was then resolved to row up in sight of the Town, and if we found our selves discovered, to retire without attempting it; so rowing thro' the N. E. Channel, we got in the Night in sight of the Town, when at the discharge of a Musquet, we saw on a sudden the whole Town full of Lights, whereas there was but one seen before. This appeared to the most an infallible sign that we were discovered; but as some alledg'd, that these Lights were used by the *Spaniards* in the Nights before Holidays (the next Day being really such) we upbraided Captain *Swan* and his Men with Cowardice, we landed in a place 2 Miles on this side of the Town; which being all over-run with Woods, we were fain to expect Day-light. We had 2 *Indian* Guides, one who was run away from *Guiaquil*, the other a Prisoner we had taken 3 Days before, this last being led by a Cord by one of Captain *Davis*'s Men who seemed one of the most forward in the Enterprize, but now, perhaps, beginning to repent his rashness, cut the Rope wherewith the Guide was ty'd (as he confest afterwards) and so let him make his escape into the Town; when he judged him to be out of danger of being retaken, he cry'd out that some body had cut the Rope; so that after we had searched in vain for our Guides, it was unanimously resolv'd to desist. However, about break of Day we rowed up into the middle of the River, where we lay still about half an Hour, without being in the least molested from the Town; tho' we landed on the opposite bank to a Beef Enclosure, and killed a Cow.

They return on board.

We returned the 9th to *Puna*, and in our way seized upon the 3 before mention'd Barks, laden with 1000 lusty Negroes; out of them we kept only about 60, and left the rest, with the Barks, behind; whereas if we had carried them all to St. *Maria* (not long before taken and destroy'd by Capt. *Harris*) on the Isthmus of *Darien*, we might with their assistance have work'd the Gold Mines on that side, and by erecting a Fort or two, at the entrance of the River of St. *Maria*, and with the assistance of the Natives, our Friends, and some thousands of *English* and *French* Privateers from all parts of the *West-Indies*, have not only maintained our selves there against all the power of *Spain*, but also extended our Conquests to the Coast and Gold Mines of *Quito*.

Miss great opportunity

1684. We set sail again the 13th, and arrived at the Isle of *Plata* the 16th, where after we had provided our selves with fresh Water on the Continent, we parted our Cloth, and resolved unanimously to direct our Course to *la Velia*, a Town in the Bay of *Panama*; accordingly we set sail *December* 23d, with a brisk S. S. W. towards the Bay of *Panama*; the next Morning we passed in sight of Cape *Passao*, 0 deg. 8 min. S. of the Line, being a round Point, but very high, divided in the middle, bare towards the Sea, but covered with fruit Trees to the Land side. The Land hilly and woody. Betwixt this and Cape St. *Francisco*, you see abundance of small Points, which enclose so many sandy Creeks full of Trees of divers sorts. As our design was to look for Canoes in some River or other unfrequented by the *Spaniards*, so our *Indian* Pilots were but of little use to us; however, as we were indifferent for the rest, what River we came to, so we endeavoured to make the River of St. *Jago*, by reason of its nearness to the Isle of *Gallo* (a place abounding in Gold) where there was safe anchorage for our Ships. We passed by Cape St. *Francisco*, whence to the N. the Sea side is full of Trees of a vast hight and thickness; from this Cape the Land runs more Easterly into the Bay of *Panama*, this Cape being its Boundary to the S. as the Isles of *Cobaya* or *Quibo*, are to the N. Betwixt this Cape and the Isle of *Gallo*, are several large Rivers, but we passed them all to go to St. *Jago*, a large Navigable River 2 deg. N. of the Line; about 7 Leagues up in the Country it divides it self into 2 Branches, which enclose an Isle 4 Leagues in Circumference. The broadest is the S. W. Channel; they are both very deep, but the narrowest has sandy Banks at its Entrance, so that at a low Ebb a Canoe can't pass over them. Beyond the Isle the River is a League broad, the Channel strait, with a swift Current; it flows 3 Leagues up the River, but to what hight I am not able to tell. It runs thro' a very rich Soil, producing all sorts of the tallest Trees usually found in this Climate, but especially *red* and *white Cotton* Trees, and Cabbage Trees of the largest kind.

1685. 15 5.

Cape St. Francisco.

The River of St. Jago.

The white Cotton Tree grows not unlike an Oak, but much taller and bigger; the Trunk strait, without any Branches to the top, where it sends forth strong Branches; the Bark is very good and smooth, the Leaves of a bigness of a Plum-tree Leaf, dark green, oval, smooth and jagged at the edges. They are not always biggest near the Roots, but in the middle of the Trunk. The Cotton they bear is called Silk Cotton, which falls in *November* and *December* upon the Ground; but not not so substantial as that of the Cotton Shrub, but rather like a Down of Thistles; they don't think it worth their while to gather it in the *West-Indies*, but in the *East-Indies* they put it into their Pillows. In *April* the old Leaves fall off, which in a Weeks time are supply'd by fresh ones.

The white Cotton-tree.

Silk-cotton.

The red Cotton-Tree is somewhat less, but for the rest altogether like the other, except that it produces no Cotton, and its Wood is something hard, tho' both are somewhat spungy. They are found in the fat Grounds, both in the *East* and *West-Indies*.

Red Cotton-tree.

The Cabbage-tree is the tallest (as the preceding are the biggest) in these Woods, some being above 120 Foot high. It is likewise without Boughs or Branches, except on the top, where it sends forth its Branches of the thickness of a Man's Arm, and 12 or 14 Foot long; 2 Foot from the Stem comes forth small long Leaves of an Inch broad, so thick and regularly on both sides, that they cover the whole Branch. In the midst of these high Branches shoots forth the Cabbage it self, which when taken out of the outward Leaves, if of a Foot in length, and of the thickness of the small of a Man's Leg, being white like Milk, sweet and wholesome. Betwixt the Cabbages and the large Branches sprout forth other small Twigs 2 Foot long, very close together, at the extremities of which grow hard and round Berries, of the bigness of a large Cherry, which once a Year fall from the Trees, and are excellent food for the Hogs. The Trunk has Rings half a Foot asunder; the Bark is thin and brittle, the Wood hard and black, and the Pith white. As the Tree dies after its head is gone, so they cut them down before they gather the Fruit.

Cabbage-tree.

Indian-Cabbage.

As the Coast and Country of *Lima* is afflicted with continual dry weather, so this part of *Peru* is seldom without Rains, which perhaps is one reason why they have made but small Discoveries on this Coast; add to this, that when they go from *Panama* to *Lima* they don't pass along the Coast, but sail up to the W. as far as the *Cobaya* Isles for the W. Winds, and thence stand over to the Cape St. *Francisco*. In their return they Coast it, but their Ships being then loaden, are not fit to enter the Rivers, which as well as the Sea side are covered with Woods and Bushes, and therefore would serve for fit places for the Natives to lye in ambush. These *Indians* have some Plantations of Maiz and Plantains, as also some Fowls and Hogs.

This part of Peru subject to continual Rains.

1685. We enter'd the River of St. *Jago* with four Canoes *December* 27, by the leſſer Branches, and met with no Inhabitants, till at 6 Leagues within its Mouth, where we diſcovered two ſmall Huts thatch'd with Palmeto-leaves, and at the ſame time the *Indians* with their Families, and Houſhold Goods, paddling againſt the Stream much faſter than we could row, becauſe they kept near the Banks. On the oppoſite ſide, to the W. we ſaw a League off many other Huts; but the Current being very rapid, we did not care to venture croſs it. In the beforemention'd two Huts, on the E. ſide, we found nothing but a few Plantains, Fowls, and one Hog, which ſeem'd to be of the *European* kind, ſuch as the *Spaniards* brought formerly into *America*, but eſpecially to *Jamaica*, *Hiſpaniola* and *Cuba*, where they feed in the Woods (being marked beforehand) in the Day time, and at Night are called and kept in Pens by the ſounding of a Conch-ſhell: On the Continent of *America* they don't turn their Hogs into the Woods.

We enter the River of St. Jago.

We returned the next Morning to the Rivers mouth, with an intention to ſail to the Iſle of *Gallo*, whither we had order'd our Ships to meet us. This Iſle is but ſmall, and without Inhabitants, ſeated at 3 deg. N. Lat. in a ſpacious Bay, three Leagues from the mouth of the River *Tomaco*, and four Leagues and a half from an *Indian* Village of the ſame Name. It is indifferently high, and well ſtor'd with Timber Trees; at the N. End is a good ſandy Bay, near which is a fine Spring of freſh Water, and againſt the Bay is good Anchorage at 6 or 7 Fathom Water; there is but one Channel to approach the Iſle at 4 Fathom Water, but you muſt go in with the Flood and come out with the Ebb.

The Iſle of Gallo.

The River of *Tomaco*, ſuppos'd to have its riſe among the rich Mountains of *Quito*, has borrowed its Name from an adjacent Village of the ſame name; its Banks are well Peopled with *Indians* and ſome *Spaniards*, who Traffick for Gold with them. It's ſo ſhallow at the entrance that only Barks can enter it.

The River of Tomaco.

The Town of *Tomaco* is a ſmall Place, ſeated near the mouth of the River, for the Entertainment of the *Spaniards*, who Traffick in thoſe Parts. From this place to the Branch of the River of St. *Jago*, where we then were at Anchor, is 5 Leagues. As the Land here is low and full of Creeks, we left the River *December* 21, and croſſed theſe ſmall Bays in our Canoes; in our way we ſaw an *Indian* Houſe, whence we took the Maſter and whole Family, and ſo rowed forward, and came at 12 a Clock at Night at *Tomaco*; here we ſeiz'd upon all the Inhabitants, and among the reſt one *Don Diego de Pimit*, a *Spaniſh* Knight, whoſe Ship was not far off at Anchor to lade Timber, ſo we took her, and found 13 Jars of good Wine aboard her, but no other lading. An *Indian* Canoe came aboard us with 3 of the Natives, who were ſtrait and well limb'd, but of low ſtature, with black Hair, long Viſages, and ſmall Noſes and Eyes, and of a dark Complexion. The 31ſt ſeveral of our Men, who had been 7 or 8 Leagues up the River, returned in their Canoe, and brought along with them ſome Ounces of Gold they had found in a *Spaniſh* Houſe, but the People were fled.

The Town of Tomaco.

The Indians near the River Tomaco.

1685. *January* 1, as we were going in our Canoes from *Tomaco* towards *Gallo*, we took a Pacquet of Letters in a *Spaniſh* Boat ſent from *Panama* to *Lima*, whereby we underſtood, that the Preſident of *Panama* wrote to haſten the departure of the Plate-Fleet thither from *Lima*, the Armada from *Spain* being come to *Porto-Bello*. This News made us ſoon alter our Reſolution of going to *Lavelia*, inſtead whereof, it was reſolved to rendezvouze among the *King* or *Pearl Iſles*, not far diſtant from *Panama*, and by which, all Ships bound to *Panama* from the Coaſt of *Lima* muſt of neceſſity paſs. Accordingly we ſet ſail the 7th; the 8th we took a Ship of 90 Tun loaden with Flower, and continued our Voyage with a gentle S. Wind towards *Gorgonia*, an Iſle 25 Leagues diſtant from that of *Gallo*, where we anchored the 9th, at the W. ſide of it, in 38 Fathoms clean Ground, two Cables length from the Shoar, in a ſandy Bay, the Land againſt it being low. This Iſle is ſeated at 3 deg. N. Lat. and is remarkable for two high riſings, call'd the *Saddles*; its length is 2 Leagues and its breadth 1 League, about 4 Leagues from the Continent. At the W. end is another ſmall Iſle. *Gorgonia* is full of large Trees, and watered by many Rivulets. It has no other Animals but Monkies, Conies and Snakes; it is mighty ſubject to Rains, and the only difference obſervable in the Seaſons is, That in the Summer the Rains are more moderate. The Sea round it is ſo deep, that there is no anchorage, except at the W. end, where the Tide riſes 8 Foot: Muſcles and Perewinckles are here in great plenty: the Monkies open the Shells at low Water. 1684.

They take a Pacquet of Letters of conſequence

The Iſle of Gorgonia.

Here are alſo abundance of Pearl-Oyſters; theſe are found 4, 5 or 6 Fathom under Water, to the looſe Rocks, by Beards or ſmall Roots, like the Muſcles. They are like our Oyſters, but ſomething ſharter and thinner; the Fleſh is ſlimy, and not to be eaten, unleſs dry'd beforehand and boil'd; ſome have 20 or 30 Seed Pearls, others one or two pretty large ones, lying at the head of the Oyſters, betwixt the Fiſh and the Shell, but the inſide of the Pearl carries a brighter luſtre than the Pearls themſelves. *Pearl Oyſters.*

The 13th we purſued our Voyage to the *King's-Iſle*, being now 2 Men of War and 2 Tenders, 1 Fireſhip and the Prize; we ſail'd forward with the common Trade Wind at S. along low Land on the Continent, near the Sea ſide, but Mountainous deeper into the Country. The 16th we paſs'd by Cape *Corientes*, at 5 deg. 10 min. Lat. being a high Point with four ſmall Hillocks on the top; the Current did then run ſtrong to the N. The 21ſt we came in ſight of Point *Garachina*, at 7 deg. 20 min. N. Lat. the Land is high Rocks, without Trees, near the Sea ſide; within the Point is plenty of Oyſters and Muſcles. *The Cape of Corientes.* *Point Garachina.*

About 12 Leagues from this Point are, the *King's*, or *Pearl-Iſles*, betwixt theſe and the beforemention'd Point of *Garachina*, is a ſmall flat, barren Iſle, call'd *Gallera*, near which we came to an Anchor for that time. The *King's*, or *Pearl-Iſles*, are a good number of low woody Iſlands, 7 Leagues from the Continent, and 12 Leagues from *Panama*, and 14 Leagues in length N. N. W. by N. and S. E. by S. In the Maps they are call'd the *Pearl-Iſles*, tho' I never could ſee one Pearl Oyſter, or any thing like it, near them. The Northernmoſt of theſe is called *Pachea*, or *Pachequa*, a ſmall Iſle 11 or 12 Leagues from *Panama*; the Southernmoſt's name is St. *Paul's*, the reſt, tho' bigger, have no particular Names. Some of theſe are planted with Plantains, Bananoes and Rice, by the Negroes belonging to thoſe of *Panama*. The Channel betwixt them and the Continent is 7 or 8 Leagues broad, of a moderate depth, and has good anchoring all along. The Iſles, tho' lying cloſe together, yet have their Channels fit for Boats. At the S. end of St. *Paul's* Iſle is a convenient Careening place, in a good deep Channel, encloſed by the Land; you muſt enter it on the N. ſide where the Tide riſes 10 foot perpendicular. The 25th we brought our Ships in with a ſpring Tide, and after having clean'd our Barks firſt, we ſent them the 27th to Cruize towards *Panama*; they brought us the fourth Day after a Prize coming from *Lavelia* with Maiz or *Indian* Corn, ſalted Beef and Fowls. *Lavelia* is a large Town, ſeated on the Bank of a River, on the N. ſide of the Bay of *Panama*, 7 Leagues from the Sea ſide, as *Neuta* is another Town, ſeated in a Plain near another Branch of the ſame River; theſe 2 places ſupply *Panama* with Hogs, Fowls, Beef and Maiz. In the Harbour where we careen'd we found abundance of Oyſters, Muſcles, Limpits and Clams; theſe laſt are Oyſters that ſtick ſo cloſe to the Rocks that you muſt open them where they grow, if you will eat the Meat; we alſo met with ſome Pidgeons and Turtle-doves. *The King's Iſles.* *Lavelia.* *Neuta.* *Clams.*

Our Ships being well Careen'd by the 14th of *Feb.* and provided with Fuel and Water, we ſailed out from among the Iſles the 18th, and anchored in the great Channel betwixt the Iſles and the Continent, at 25 Fathom Water, ſoft ouzy Ground, and the next Day Cruized in the ſame Channel towards *Panama*, whereabouts the Shoar appears very beautiful, with variety of ſmall Woods and Hills; beſides that, a League from the Continent, you ſee divers ſmall Iſles, ſcatter'd parly with, partly without Trees, and the *King's-Iſles* on the other ſide of the Channel, afford a very fair Proſpect, according to their various ſhapes and ſituations. The 16th we anchored within a League of the Iſle of *Pachoque*, in 17 Fathom Water, and the 18th ſteer'd our Courſe with a N. N. E. Wind directly towards *Panama*, where we anchored directly oppoſite to old *Panama*, once a place of Note in theſe Parts, but the greateſt part thereof being laid in Aſhes in 1673, by Sir *Henry Morgan*; it was never rebuilt ſince. 1685. *The Coaſts about Panama.* *Old Panama.*

About 4 Leagues from the Ruins of old *Panama*, near the Sea ſide, ſtands *New Panama*, a very handſome City, in a ſpacious Bay of the ſame name, into which diſembogue many long Navigable Rivers, ſome whereof are not without Gold; beſides that, it is beautify'd with many pleaſant Iſles, the Country about it being of a delightful Proſpect to the Sea, by reaſon of its varieties of adjacent Hills, Vallies, Groves and Plains. The Houſes are for the moſt part of Brick, and pretty lofty. *New Panama.* *The Bay of Panama.*

lofty, especially the President's, the Churches, Monasteries and other Publick Structures, which make the best Show I ever saw in the *West-Indies*. It is encompassed with a high Wall of Stone, on which are mounted a good number of great Guns, which formerly, before they were acquainted with the Privateers in those Parts, were only planted to the Land-side, but now also to the Sea. This City has a vast Traffick, as being the Staple for all exported and imported Goods, to and from all Parts of *Peru* and *Chili*; besides that, once every three Years, when the *Spanish* Armada comes to *Porto Bello*, the Plate Fleet comes hither with the King's Plate, besides what belongs to the Merchants, whence it is carried upon Mules by Land to *Porto Bello*; at that time every thing is excessive dear at this place.

An Account of the Spanish Armada.

The *Spanish* Armada which comes every three Years into the *West-Indies*, arrives first of all at *Carthagena*, whence they dispatch immediately, one Express by Land to *Lima*, and another with two Packets of Letters by Sea, one for the Vice-Roy of *Lima*, the other for the Vice-Roy of *Mexico*. I can't absolutely tell which way the Packet for *Mexico* goes after its Arrival at *Porto Bello*, whether by Sea, or Land, but I suppose by Sea, to *La Vera Cruz*; but that for *Lima*, goes by Land to *Panama*, and so by Sea to *Lima*. Upon this occasion, I can't but tell the Reader, that some time before my first going into the South Seas, being then aboard Captain *Coxon*'s Ship in Company of 3 or 4 other Privateers, we took the Packets bound from *Carthagena* to *Porto Bello* 4 Leagues from this last place; in these we found many Letters from the Merchants of *Spain*, directed to their Correspondents in these Ports, intimating, that the same Year a certain Prophecy being published in *Spain*, *That some* English *Privateers would open themselves a way into the South Seas*, they desired them to be upon their Guard. As by this Door we rightly understood the Passage by Land over the Isthmus of *Darien*, and those *Indians* had sought our assistance of late against the *Spaniards*, so this gave us the first Encouragement to venture upon that Enterprize, and as we knew the *Spaniards* to be a bigotted Generation, we sent most of the Letters (seal'd up again) to *Porto Bello*, to augment their fear.

The occasion of the Privateers venturing into the South Sea.

How they contracted a Friendship with the Indians of Darien.

The first occasion of our contracting a Friendship with the *Indians* on the Isthmus of *Darien* happened thus: About 15 Years before Captain *Wright* took a young *Indian* Lad among the *Samballo* Isles, unto whom he gave the Name of *John Gratt*, and bestowed him afterwards upon some *Moskitoes*, who carried him to their Country, where he married, learnt their Language, and staid among them till 6 or 8 Months before our taking the said Packet. Captain *Wright* took another *Indian* Boy 12 Years old, the Son of a Man of note among them, whom he carried to the Country of the *Moskitoes* to be educated by them. Here meeting with *John Gratt*, he persuaded the Captain to restore the Boy to his Friends, and thereby to entertain a Friendship with them; but the Captain alledging the fierceness of those Nations, *Gratt* offered his Service to bring the matter about: Accordingly being set a-shoar in his *Indian* Habit, he call'd out to them in his own Tongue, and they acknowledging him for their Countryman, he proposed to them a strict Alliance with the *English*, alledging, that they were a good sort of People and declared Enemies of the *Spaniards*, telling also the Father of the Boy, that if he would go aboard the Vessel he shewed them, being at Anchor, he might have his Son again; whereupon about 30 of them went aboard Captain *Wright* with Refreshments, and being kindly entertained there, they returned with the Boy and Captain *Wright* a-shoar, and entred into a strict Confederacy against the *Spaniards*, and thereby opened the way by Land into the South Seas, the Discovery whereof, is in a great measure owing to the before-mentioned Letters, and the taking of *John Gratt*.

The Progress of the Spanish Armada in the West-Indies.

But it is time to return to the *Spanish* Armada at *Carthagena*; the same, after a stay of sixty Days in this Port sails thence to *Porto Bello*, where it tarries only thirty Days, and takes in the King's Treasure brought thither from *Panama*, which is said to amount to 24000000 Pieces of Eight, besides the Merchant's Plate and Goods. When the Merchants have a mind to steal the Custom of the Plate, they pack it up among Merchandizes and send it to *Vera Cruz* upon the River *Chagre*, where they fall down the River and so go further by Sea to *Porto Bello*. From this Harbour they weigh'd Anchor precisely on the 20th. Day to the River's Mouth, where the Admiral will sometimes stay a Week longer to oblige the Merchants. From *Porto Bello* the Armada returns to *Carthagena*, where it meets with the King's Money brought thither out of the Country, as also with a large *Spanish* Galleon (call'd by them a *Patache*) which upon the first Arrival of the Armada at *Carthagena* from *Spain*, goes along the Coast to gather the King's Tribute; after a set time the Armada returns from *Carthagena* by the way of the *Havana* in the Isle of *Cuba*, where meeting with the Flota, or a small Squadron of Ships, come thither from *Vera Cruz* with the richest of the City and Country of *Mexico*, and what is brought thither by the yearly Passage Ship from the *Philippine* Isles, they all joyn and so set Sail for *Spain* thro' the Gulph of *Florida*.

The Flota.

Porto Bello being an unhealthy Place, the Merchants of *Lima* make as short a stay there as possibly they can; but *Panama* is seated in a much better Air, as enjoying the Benefit of the Sea-wind from ten or eleven of the Clock in the Morning till eight or nine of the Clock at Night, and the Land-wind from nine till the Morning; besides that, *Panama* being encompass'd on the Land side with an open champain Country, it is seldom troubled with Fogs, nor is the wet Season which holds from *May* till *November* so excessive at *Panama* as on either side of the Bay, tho' it is severe enough in the Months of *June*, *July* and *August*, which is the reason that the Merchants of *Peru* who are used to a constant serene Air, without Wet or Fogs, cut off their Hair to preserve them from Fevers whilst they were obliged to stay here.

The healthfulness situation of Panama.

The 20th. We anchored within a League of three little rocky Isles call'd the *Perico* Islands, and the 21st. took another Prize loaden with Hogs, Beef, Fowl and Salt from *Soveria*; the 24th. steer'd over to the Isle of *Tabago* in the same Bay, 6 Leagues S. off *Panama*; its Length is 3 Miles and its Breadth 2; it is very rocky and steep, except on the North side, where it has an easie Descent; and as the Soil is black and good up to the middle of the Mountains they produce abundance of Fruit, as Plantains, Bananoes, and near the Sea side Cocoe and Mammet Trees. These last are large and strait, without Knots, without Boughs or Bunches, and 60 or 70 Foot high; at the tops sprout forth some small Branches thick and close together: The Fruit is of the bigness of a large Quince, round and covered with a grey Rind, which before it is ripe is brittle, but when come to maturity turns yellow and will peel with ease. The ripe Fruit is of the same Colour like a Carrot, smells and tastes well, and has two rough flat Stones in the middle, each of the bigness of a good Almond. The S. W. side is covered with Trees and Fire-wood, but the North side has a very fine fresh-water Spring, which falls from the Mountains into the Sea: Near it formerly stood a pretty Town with a fair Church, but the greatest part has been destroyed by the Privateers; opposite to the Town, a Mile from the Shoar is good Anchoring at 16 or 18 Fathoms Water, soft ouzy ground; at the N. W. end lies a small Isle call'd *Tobagilla*, with a Channel betwixt both, and on the N. E. side of *Tobago* another small one without a Name.

The Isle of Tobago.

The Mammet Trees and Fruit.

Tobagilla.

Whilst we were at an Anchor near *Tobago*, we were in great danger of having been trapan'd by a pretended Merchant of *Panama*, who under pretence of trading privately with us, was to bring his Bark loaden with Merchandizes in the Night to the South of the *Perico* Isles, where we were then at Anchor according to his appointment, which was intended for our destruction; for instead of a Bark he advanc'd with a Fireship pretty near us, haling us with the Water-word; thereupon some of our Men more suspicious than the rest, bid her come to an Anchor, which she not doing they fired at her, which so terrified the Men that they got into their Canoes after they had set her on fire, and we were forced to cut our Cables to escape the danger: At the same time Captain *Swan* who lay a Mile from us at Anchor, saw a small Flota with only one Man upon it, driving towards his Ship, but soon after disappear'd; he supposed this to have been a Machine made up with combustible matter to fasten to his Rudder (as it happen'd to Captain *Sharp* near *Coquimbo*) but that the Fellow thinking himself discovered, had not Courage enough to go forward in the Enterprize, but Captain *Swan* thought also fit to cut his Cables and to keep under Sail all the Night.

Davis's and Swan's Ships likely to be burnt by Treachery.

This Fireship was framed and managed by one Captain *Bond*, who formerly run away from us to the *Spaniards*, without whose assistance they could not have fitted her out, it being almost past belief how grosly ignorant the *Spaniards*, especially in the South Seas, are in Sea Affairs; nay, what is worse, you seldom see above one *Spaniard* (perhaps the Commander) in one

Ignorance of the Spaniards in the West-Indies in Sea Affairs.

1685. of their Ships in the *West-Indies*, the rest being *Indians*.

In the Morning whilst we were busie in recovering our Anchors, we discovered a whole Fleet of Canoes filled with Men, pass betwixt *Tabago* and the other Isle, who proved *English* and *French* Privateers, lately come out of the North Sea over the Isthmus of *Darien*; there were of them 280 in all, 200 *French*, and 80 *English*; those last were taken aboard Captain *Davis* and *Swan*, and the rest put in our Flower Prize, under the Command of Captain *Grenes* their Countryman, in Retaliation of which he offered both Captain *Davis* and Captain *Swan* each a Commission from the Governor of *Petit Guavis*, it being their Custom to carry along with them blank Commissions from the said Governor. Captain *Davis* accepted of one, but Captain *Swan* having one from the Duke of *York*, refused it.

1685. Every thing being thus disposed we set Sail *March* the 2d. towards the Gulph of St. *Michael* in quest of Captain *Townley* (who they told us, was coming with 180 *English* over the Isthmus of *Darien*.) This Gulph lies 30 Leagues S. E. from *Panama* and you must turn for your Passage betwixt the *King*'s Isles and the Continent: In it many Rivers disembogue into the Sea; on the South it is bounded by the Point *Garrachina* at 6 Deg. 40 Min. N. Lat. and to the North by Cape St. *Lorenzo*; whereas the Name of Point *Garrachina* in the Maps is given to the North Cape, and that of the South Cape quite left out, as well as that of St. *Lorenzo*, which properly belongs to the North Cape. The most noted Rivers that exonerate themselves into the Gulph of St *Michael*, are St. *Maria*, *Sambo* and *Congos*. This last has its rise deep in the Country, and being joyned by many small Streams on both sides, disembogues on the North side of this Gulph 1 League from Cape St. *Lorenzo*; it is deep and navigable some Leagues into the Country, but not very broad; it is neglected by the *Spaniards*, by reason of the nearness to St. *Maria* River, where they have their Gold Mines.

The Gulph of St. Michael.

Error of the Maps.

The River Congos.

The River Sambo.

As I was never in the River *Sambo*, so I can't tell much of it, except that the Tide at its Mouth seems to denote it a large River; it exonerates it self into the Sea on the South side of the Gulph near Point *Garrachina*. Between the Mouths of these two Rivers on either side the Gulph it runs narrower towards the Land, making 5 or 6 Isles, beyond which, deeper inward; the Shoar closes so near with two Points of low Land, as to make a strait Channel not half a Mile broad; this is the Entrance to the innermost part of the Gulph, making a Bay of 3 Leagues over, to the East end whereof, are the Mouths of divers Rivers, but especially of St. *Maria*, the largest River of all that falls into this Gulph, being navigable for 8 or 9 Leagues, as far as the Tide flows, beyond which, it is divided into several Branches, fit only for Canoes; the Flood rises 18 Foot in this River.

The River of St. Maria.

Near 6 Leagues to the South of the Entrance of the River of St. *Maria*, the *Spaniards* built about 20 Years ago the Town of St. *Maria*, by reason of its nearness to the Gold Mines; soon after it was taken by Captain *Coxon*, *Harris* and *Sharp*, but was rebuilt afterwards again; for, when Captain *Harris* (the Nephew of the former) took it afterwards, he found in it great stores of Wine, Iron, Pickaxes and other Instruments the Slaves used in digging the Gold Mines. I have been told, that besides what Gold they get out of the Oar and Sand, they find sometimes Lumps as big as a Hen's Egg, and bigger, wedg'd in betwixt the Rocks; such a one Mr. *Harris* (who had 120 Pounds of Gold there) keeps by him; it has several Crevises full of Earth and Dust. In the adjacent Mines the *Spaniards* employ their Slaves in the dry Season, but when the Rivers overflow they can't work without great Inconveniency, and then it is, that the *Indians* wash the Gold out of the Sands, forced down from the Mountains by the violent Rains, which the *Spaniards* buy of them, and gain as much by it, as they do by their Mines: For, during the wet Season, they retire with their Slaves to *Panama*. Captain *Grenes* saw Captain *Townley* with his Crew at this Town, making Canoes, being at that time abandoned by the *Spaniards*. Near the Mouth of this River of St. *Maria*, on the North side they have lately built another Town, call'd *Scuchadaroes*, being a more airy Place than that of St. *Maria*. The Land all about the Gulph is low and fertile, producing abundance of large Trees.

The Town of St. Maria.

The Gold Mines near it.

The Town Scuchadaroes.

March the 3d. As we were steering to the Gulph Captain *Swan* kept near to the Continent, as we did nearer to the *Kings* Isles, where at 2 of the Clock in the Afternoon, near the place where we had careen'd our Ships, we met Captain *Townley* with his Crew in 2 Barks which they had taken, one loaden with Brandy, Wine and Sugar, the other with Flower; as he wanted room for his Men, and had occasion for the Jars in which the *Spaniards* carry their Wines, Brandy and Oil in these Parts, containing 7 or 8 Gallons a-piece, so he distributed part thereof among our Ships, being then all at Anchor among the *Kings* Isles; but, as it was towards the latter end of the dry Season, and all the Water dried up, we sail'd to the Point of *Garrachina* in hopes of fresh Water. The 21st. we anchored 2 Miles from the Point, and found the Tide very strong, coming out of the River *Sambo*. The 22d. we anchored at 4 Fathom within the Point; we found the Tide to rise 9 Foot, and the Flood to set N. N. East, and the Ebb S. S. West. The Natives brought us some Refreshments, but as they did not understand in the least the *Spanish* Tongue, so I suppose they had no Commerce with the *Spaniards*.

1685. *They meet with Captain Townley.*

Meeting with no fresh Water here, we set Sail for *Porto-Pinas*, lying 7 Leagues Southand by West hence, at 7 Deg. N. Lat. It has got its Name from the vast numbers of Pine Trees growing there. The Country rises from the Sea side by a gentle Ascent to a considerable height, and is pretty woody near the Shoar. At the entrance of the Harbour are 2 small Rocks, which renders the Passage into it narrow, and the Harbour but of a slender Compass; besides that, it lies exposed to the S. W. Wind. This made us not go into the Harbour, but sent our Boats to fetch some fresh Water, which they could not perform, by reason of the high Sea near the Shoar, so we turn'd towards Point *Garrachina*, where we arrived the 29th. In our way we took a Vessel loaden with Coco from *Guiaquil*. Finding our selves here also disappointed in getting of fresh Water, we set Sail the 30th. for *Tobago*, with a S. S. E. Wind, being now in all nine Ships. The first of *April* we anchored at the Isle of *Pacheque*; and the 3d. at *Perica*: Our Men took a Canoe with four *Indians* and a *Mulata*, who being found to have been in the same Fireship that was sent out to burn our Ship was hanged immediately. Whilst we were employ'd in filling of Water and cutting of Wood for Fuel, we sent four Canoes to the Continent, to get some Sugar in the adjacent Sugar Rocks, to make our Coco up into Chocolate, but especially to get some Coppers, which we much wanted to boil our Victuals in, since our number was so considerably increased; they brought us three Coppers.

The Pine-Harbour.

They come to Tobago.

In the mean while Captain *Davis* sent his Bark to the Isle of *Otoque*, seated in the Bay of *Panama*, but uninhabited, except by a few Negro Slaves, who breed up some Fowls and Hogs there: Here our Men did light upon a Messenger sent to *Panama*, with an account that the *Lima* Fleet was at Sea; most of the Letters had been thrown into the Sea, yet out of the remaining part we understood, that the Fleet was coming under a Convoy composed of all the Ships of Strength that they had been able to bring together from *Peru*. Being inform'd that the King's Ships did always come that way where we now lay, we sail'd the 10th. from *Tobago* to the King's Isles, and the 11th. anchored at the place, where we careen'd: Here we met with Captain *Harris* who had brought along with him some Men, (we had heard the *Indians* mention before) from the River *St. Maria*, but they were not near so many in number. The 19th. 250 Men were sent in Canoes to the River *Cheapo*, to surprize the Town of the same Name. The 21st. we follow'd and arrived the 22d. at the Isle of *Chepelio*, a pleasant Island seated in the Bay of *Panama* 7 Leagues from the City of that Name, and 1 League from the Continent, being about 2 Miles Long, and as many broad, low on the North side, but rising by an easie Ascent to the South. The Soil is very good, producing in the low Grounds store of delicious Fruits, such as Plantains, Sapadilloes, Avogato-Pears, Mammees, Mammee-Sappota's, Star-Apples, &c. On the North side, half a Mile from the Shoar, is a good anchoring Place, where is also a very good Spring of fresh Water near the Sea side: This Isle lies directly opposite to the River *Cheapo*.

The Isle of Otoque.

The Isle of Chepelio.

The Sapadillo-Tree is altogether like a Pear-Tree, and the Fruit like a Burgama-Pear, only it is something longer; when it is first gathered it is hard, and the Juice clammy, but a few Days after becomes juicy and sweet; it has two or three black Kernels like a Pumkin Seed.

The Sapadillo-Tree.

The Avogato-Pear-Tree is as high, and higher than our Pear-Trees, with a black, but smooth Bark, large oval

The Avogato-Pear-Tree.

1685. oval Leaves. the Fruit of the bigneſs of a large Lemon, of a green Colour at firſt, but yellow when ripe; the Pulp is yellowiſh and as ſoft as Butter, and after they have been gathered 3 or four Days the Rind will come off with eaſe; the Stone is as big as a good Horſe-Plum; as this Fruit is inſipid, ſo it is commonly eaten with Sugar and Lime-juice, being look'd upon by the *Spaniards* as a great Provocative, who have therefore planted them in moſt Places in the North Sea where they inhabit.

The Mammee Sappota-Tree. The Mamme-Sappota-Tree is neither ſo big nor ſo tall as the Mammee at *Tobago*, nor is the Fruit either ſo large or ſo round; The Pulp is alſo quite red, with a rough flat longiſh Stone, and the Rind ſmooth; it is a pleaſant and wholſome Fruit: There are alſo ſome *Wild Mammee-Trees.* wild Mammee-Trees which grow very tall and ſtrait, and conſequently uſed for Maſts; but the Fruit is not eſteemed.

The Star ſomewhat reſembles our Quince-Tree, but much larger, bearing abundance of oval broad Leaves; the Fruit is of the bigneſs of a large Apple, it is reckoned a very good Fruit, but I never taſted it.

The River of Cheapo. The River of *Cheapo* has its riſe in the Mountains on the North ſide, being encloſed afterwards betwixt them and the Mountains; on the South ſide it turns to the Weſt, and at laſt forcing its way to the South Weſt, makes a kind of a Semi-circle, and afterwards runs gently to the Sea, where it exonerates it ſelf 7 Leagues from *Panama*; it is very deep and a quarter of a Mile broad, but by reaſon of the Lands that choak up its entrance, is navigable only by Barks.

The Town of Cheapo. About 6 Leagues from the Sea ſide ſtands the Town of *Cheapo* on the left bank of the River, in a champain Country, very pleaſant to behold, by reaſon of divers adjacent Hills covered with Woods, tho' the greateſt part is good paſture Ground; but the South ſide of the River is all Wood-land for many Leagues. The 250 Men before-mentioned ſent to this Place, returned the 24th. having taken the Place without the leaſt oppoſition, but found nothing worth mentioning there: In the way thither they took a Canoe with armed Men, ſent to watch our motions; but the Men eſcaped for the moſt part.

The 25th. being joyn'd by Captain *Harris* (which made us to ſail) we ſet Sail the 26th. and arrived at *Tobago* the 28. and finding our ſelves now 1000 Men ſtrong, it was conſulted whether we ſhould make an attempt upon *Panama*; but being inform'd by our Priſoners, that they had received a conſiderable Reinforcement from *Porto Bello*, that deſign was laid aſide.

May the 4th. we ſet Sail again for the *King*'s Iſles, whereabouts we cruized till the 22d. when we ſent two Canoes to the Iſle of *Chepelio* to get ſome Priſoners; they returned the 25th. with three, being Seamen of *Panama*, who declared that the Preſident of *Panama* having iſſued a ſtrict Order there not to ſerch any Plantains from the adjacent Iſles; this had occaſioned a great ſcarcity among the Poor, and that they expected every Day the Arrival of the Fleet from *Lima*. On the South ſide of the Iſle of *Pacheque* lie two or three very ſmall Iſles, and betwixt them a Channel not above 7 Paces wide, and a Mile in length; on the Eaſt ſide of this Channel we lay at Anchor with our whole Fleet, conſiſting of ten Sail, but only two Men of War. *viz.* Captain *Davis* 36 Guns, 156 Men, and Captain *Swan* 16 Guns, 140 Man; the reſt being provided only with ſmall Arms, and provided in all with 960 Men; we had alſo one Fireſhip. 1685. *They ſtay for the Spaniſh Plate fleet.*

Hitherto we had had the Wind at N. N. Eaſt with fair Weather, but the 28th. the rainy Seaſon began. About eleven of the Clock it beginning to clear up, we diſcovered the *Spaniſh* Fleet 3 Leagues W. N. Weſt from the Iſle of *Pacheque* ſtanding to the Eaſt, we being then at Anchor a League S. Eaſt from the Iſle betwixt it and the Continent. About three in the Afternoon we ſet Sail bearing downright before the Wind upon the *Spaniards*, who kept cloſe on a Wind to come up with us; but Night approaching we exchanged only a few Shot; as ſoon as it began to be dark, the *Spaniſh* Admiral put out a light in his Top, as a Signal for the Fleet to come to an Anchor; in half an Hour after it was taken down again, but appear'd ſoon after as before, which we ſuppoſing to be in the Admiral's Top, we kept under Sail, being to the Windward, but found our ſelves deceived in our expectation by a Strategem contriv'd by the *Spaniards*, who having put this ſecond light on the Topmaſt-head of one of their Barks ſent her to the Leeward, ſo, that in the Morning we found them to have got the Weathergage of us; they came up on us with full Sail, ſo we were forced to make a running Fight of it all day, almoſt quite round the Bay of *Panama*, for we came to an Anchor againſt the Iſle of *Pacheque*. Captain *Townley* being hardly preſs'd upon by the *Spaniards*, was forced to make a bold run thro' the before-mentioned Channel betwixt *Pacheque* and the three adjacent ſmall Iſles, and Captain *Harris* was forced away from us during the Fight: Thus our long projected deſign vaniſh'd into Smoak. The *Spaniſh* Fleet according to the report of ſome Priſoners taken afterwards by Captain *Wright*, conſiſted of 14 Sail, beſides Periagoes, or Boats of 12 and 14 Oars apiece, among which were 8 Ships of good Force, *viz.* from 8 to 48 Guns; they were computed to have 3000 Men aboard the whole Fleet, and two Fireſhips. The 30th. in the Morning we ſaw the *Spaniſh* Fleet 3 Leagues to the Leeward of us at Anchor, and at ten of the Clock with an eaſie Gale from the South making the beſt of their way to *Panama*; we don't know their loſs; we had but one Man kill'd. Captain *Gronet* who was not in the Fight, laid the fault thereof on his Men; he was ordered to leave us in a Conſultation held for that purpoſe, where it was alſo reſolved to ſet Sail for the Iſles of *Quibo* or *Cobaya* in queſt of Captain *Harris*. *Get ſight of it.* *They are engaged by the Spaniſh Fleet,* *and are worſted.*

CHAP. VIII.

A Deſcription of the Coaſt to the Weſt of the Bay of Panama; *of the Iſles of* Quibo, Quicaro, Rancheria, Canales *and* Cantarras. Puebla Nova *and the City of* Leon *taken. The Harbour and Creek of* Rio-Laka. *The* Volcan *of* Guatimala, *and the Coaſt further to the N. Weſt; as alſo the Iſle of* Tangola *and the adjacent Continent, deſcribed. The Iſle* Sacrificio. *The Town and Harbour of* Acapulco. *The Burning Mountain, Town, Valley and Bay of* Colima. *Cape* Corientes. *The Iſles of* Chamethy, *and City of* Purification. *The Point and Iſles of* Pontique. *The River and Town of* Roſario. *The Rivers of* Olerta *and St.* Jago. *Of* California *and the N. Weſt and N. Eaſt Paſſage. They propoſe a Voyage to the* Eaſt-Indies.

1685. WE ſet ſail *June* the 1ſt. with a S. S. Weſt Wind, paſſing betwixt the Point *Garrachina* and the *Kings* Iſles. The 5th we paſs'd in ſight of the Iſle *Chuche*, a ſmall, low, round, woody Iſle 4 Leagues S. S. Weſt from *Pacheque*, uninhabited, and the laſt of the Iſles in the Bay of *Panama*. We ſail'd forward on the North ſide of the Bay (which way all Ships from *Panama* muſt paſs) and came the 10th in ſight of the *Monaro de Porcos*, a high round Hill on the Coaſt of *Lavelia*. This ſide of the Bay of *Panama* runs out Weſt to the Iſles of *Quibo*; on this Coaſts are many Rivers and Creeks, but not near ſo large as thoſe on the South ſide of the ſaid Bay. Near the Sea ſide this Coaſt is partly hilly, partly low Grounds, with very thick Woods, but deeper in the Country; they have fruitful Plains for Cattle. *The Iſle of Chuche.* *The Hogs Mount.* *The Coaſt to the Weſt of the Bay of Panama.*

Some of the Rivers on this ſide afford alſo Gold, but not ſuch a quantity as thoſe on the other ſide. There is ſcarce any Settlement along this Coaſt, except what is along the Rivers, that lead to *Lavelia* and *Nata*, theſe being the only I know of betwixt *Panama* and *Puebla Nova*. From *Panama* is good travelling all over *Mexico* thro' the *Savannahs* or Plains, but towards *Peru* there is no Paſſage beyond the River *Cheapo*, by reaſon of the thick Woods and many Rivers.

In our Voyage to *Quibo* the Wind being conſtantly at S. S. Weſt and S. Weſt we met with very bad Weather, ſo that we did not reach theſe Iſles till *June* the 15th.

1685. 15th. where we met with Captain *Harris*. The Isle of *Quibo* or *Cobaya* at 7 Deg. 14 Min. N. Lat. is near 7 Leagues long, and 4 broad, being all low Land, except at the N. East end, on which side, as also to the East, there is excellent good Water. It abounds in Trees of all sorts, in Deer and black Monkeys, whose Flesh is reackoned very wholsome and good: It has also some Guanaoes and Snakes. From the S. East end of this Isle runs out a sand Bank half a Mile into the Sea, and a League to the North side of this, to the East side is a Rock a Mile from the Shoar, which at the last quarter Ebb is seen above Water: For the rest, Ships may come to an Anchor at any other place a quarter of a Mile from the Shoar at six, eight, ten and twelve Fathom clean Sand and Ouze.

The Isle of Quibo.

Besides this, there are several Isles lying some on the S. West side, some to the North and N. East. The Isle of *Quicaro* is pretty large lying to the S. West of *Quibo*, and to the North of it is a small Isle called *Rancheria*, which produces great plenty of *Palma Maria* Trees; they are very strait-bodied, tough and of a very good length, and consequently fit for Masts, the grain of the Wood running twisted gradually; they have no resemblance to the Palm Tree. To the N. East of *Rancheria* lie the little Isles of *Canales* and *Cantarras* with their Channels betwixt them, where there is good Anchorage: They have plenty of good Water and Trees, and appear at a distance to be part of the Continent; but the Isle of *Quibo* being the longest and most considerable of them all, they are generally comprehended under the Name of the Isles of *Quibo*.

The Isles of Quicaro and Rancaria.

The Palma Maria-Tree.

The Isles of Canales and Cantarras.

June the 16th. it being agreed, that since we had miss'd at Sea, to try our Fortune by Land; the City of *Leon* was pitch'd upon (on the Coast of *Mexico*) as being nearest to us; but wanting Canoes to land our Men, we cut down Trees to make as many as we had occasion for: In the mean time 150 Men were sent to make themselves Masters of *Puebla Nova* (a Town on the Continent near these Isles) in hopes of getting some Provisions there; they took the Town without much difficulty, and returned the 20th. but met with nothing there but an empty Bark. *July* the 5th. Captain *Knight* came to us having been further to the West, where meeting with no Purchase he sail'd to the South as far as the Bay of *Guiaguil*, where he took two Bark-Logs with Wine, Oil, Brandy, Sugar, Soap, &c. The Master declared that the Merchant's Ship design'd to have been sent away with the *Spanish* Fleet to *Panama*, did stay behind at *Peyta* till further Orders, and that, had he had more strength they might easily have been taken. In a Month's time our Canoes being got ready, Captain *Harris* with his Men went on board Captain *Davis* and Captain *Swan* (his Ship being rotten) and the 20 of *July* we set sail from *Quibo* towards *Rio Leka*, the next Port to the City of *Leon*, being now 640 Men, Ships, 3 Tenders and a Fireship, the Wind at S. S. West. Coasting along we pass'd by the Gulph of *Nicoya*, that of *Dulce* and the Isle of *Canao*, the Coast low and covered with Wood, and almost destitute of Inhabitants; we had variable Winds, but most S. W. and W. S. W. the Land Winds at N. N. E. We were much pester'd with Tornadoes.

Puebla Nova.

They set sail towards Leon.

August the 8th. at 11 Deg. 20 Min. Lat. we discover'd the *Volcan Vejo* or *Old Vulcan* (the Sea-Mark of *Rio-Leka*) bearing N. E. by North, and no sooner had we brought the said Mountain to bear N. East, but we made provision for landing the next Day. The 9th. of *August* we sent 520 of our Men in 31 Canoes towards the Harbour of *Rio-Leka*; the Weather was fair and the Wind favourable till two in the Afternoon, when a Tempest mixt with Thunder and Lightning had almost buried us in the Sea; but, after half an Hour it began to abate, and so did the agitation of the Sea, it being observable in these hot Countries, that the Waves soon rise and fall; at 7 of the Clock at Night it was calm, but finding we could not be ready to land before Day, (being 5 Leagues from Shoar) we stay'd hereabouts till next Evening for fear of being discovered; but about 3 of the Clock another Tornado had been likely to have put an end to our Enterprize: However, as the same did not last long, we entred the Creek lying on the S. E. side of the Harbour leading to *Leon* in the Night, but durst not go further till Day break, when we rowed deeper into the Creek, which is very narrow, and the Land on both sides marshy near the Banks, and full of *Mangrove*-Trees, so that there is no passing thro' them. Beyond these *Mangrove*-Trees upon the firm Ground they cast up a small Entrenchment; we rowed as fast as we could and landed 470 Men, leaving the rest (of which number I was one) to guard the Canoes.

They land at the Harbour of Rio-Leka.

The City of *Leon* stands 20 Miles in the Country in a sandy Plain near a peaked burning Mountain, thence called the *Volcan* of *Leon*, the way to it being thro' a campaign Country covered with long Grass; betwixt the landing place and the City were several Sugar-works, and about the mid-way a delicious fordable River, being the only thing they met with in their way. Two Miles on this side the City is an *Indian* Town, where a pleasant sandy Road leads you to the City, the Houses whereof are strong, of Stone, and large with Gardens about them, but low and covered with Pantile: It has three Churches and a Cathedral, its Situation in a sandy Plain with Savannahs all round about it, which drink up the Rain, and afford a free Passage to the Breezes from all sides, and make it both healthful and pleasant, tho' also it is no place of much Traffick, all their substance being in Cattle and Sugar-works. 1685.

The City of Leon

Our Men march'd at 8 of the Clock, Captain *Townley* leading the Van at the head of 80 of the choicest Men, Captain *Swan* follow'd with 100 more, and Captain *Davis* brought up the Rear with 170 in conjunction with Captain *Knight*. Captain *Townley* being advanced two Miles before the rest, having forced 70 Horse to a retreat 4 Miles on this side of the City, he marched forward, and at 3 of the Clock in the Afternoon with his 80 Men only entred the Town without resistance, but met with some opposition from 500 Foot and 200 Horse, first in a broad Street, and afterwards in the great Market-place; but the Foot seeing the Horse take to their Heels, also retreated, leaving the Town to the Enemy's Mercy; Captain *Swan* came not into the Town till 4 of the Clock, *Davis* about 5, and *Knight* with the remainder not till 6. The *Spaniards* kill'd one of our Men that straggled behind, being very old and refusing to accept of Quarter, and took one *Smith* Prisoner. Next Day the Governor sent word he would ransom the Town; we demanded 30000 pieces of Eight and Provisions for 1000 Men for 4 Months, which he not relishing, we set the City on Fire the 14th. and march'd towards our Canoes. The next Morning *Smith* was exchanged for a Gentlewoman; we released another Gentleman upon his Parole, to deliver to us 150 Oxen for his Ransom at *Rio-Leka*, the place we intended to attack next.

is attacked and taken.

The 16th. in the Afternoon we came back in our Canoes to the Harbour of *Rio-Leka*, where our Ships were come to an Anchor by that time.

The Creek that leads from *Rio-Leka* extends from the N. W. part of the Harbour to the North about 2 Leagues from the Isle in the Harbour's Mouth to the Town. The first two third parts are broad, but afterwards closes in a narrow deep Channel, lined on both sides with many Coco Trees; a Mile from the entrance of the Creek it winds to the West: Hereabouts it was that the *Spaniards* cast up an Entrenchment fronting the entrance of the Creek, defended by 100 Soldiers and 20 Guards; below it a Boom of Trees was made cross the Creek, so that they might have kept of 1000 Men, had they not wanted courage to keep their Post; but at the firing of two of our Guns they quitted it, leaving us at liberty to cut down the Boom; this done we landed, and march'd to the Town of *Rio-Leka*, a goodly place seated a Mile thence upon a small River in a Plain; it has three Churches and an Hospital with a handsom Garden to it, the place being seated in an unwholsome Air among the Fens and Marshes which send forth a noisom Scent; we took the Town without the least opposition. The Country about it has many Sugar-works and Enclosures for Cattle; and good store of Pitch Tar and Cordage is made by the Country People: It produces also Melons, Pine-Apples, Guavoes and Prickle-Pears.

The Creek leading to the Town of Rio-Leka.

They land.

attack and take the Town.

The Shrub that bears the Guavo Fruit has long and small Boughs, a white and smooth Bark, and Leaves like the Hazle; the Fruit resembles a Pear with a thin rind, and many hard Seeds; it may be eaten whilst yet green, a thing seldom observ'd in the Fruits both in the *East* and *West-Indies*: It is yellow, soft and well-tasted, after it is ripe may be baked like Pears, and will coddle like some Apples; there are different sorts distinguish'd by their Shape, Taste and Colour, some being red, others yellow on the inside: Before it is ripe it is astringent, but afterwards loosning. The Prickle-Pear grows upon a Shrub of 5 Foot high in many places of the *West-Indies*; it thrives best in saltish sandy Grounds near the Sea-shoar; each Branch of this Shrub has 2 or 3 round Leaves of the breadth of a Man's Hand, not unlike House-leek edged with Prickles of an Inch long. At the extremity of the Leaf grows the Fruit of the bigness of a large Plum, small toward

The Guava Fruit.

The Prickle Pear.

1685. towards the Leaf and thicker to the end, where it opens like a Medler; the Fruit has also small Prickles, is green at first, but turns red by degrees. The Pulp is of the same colour of the substance of a thick Syrup, with small black Seeds. Its taste is pleasant and cooling. I have often observed, that if you eat 20 or more of them at a time, they will colour the Urine as red as Blood, but without any ill consequence. We found nothing of moment in the Town, except 500 Pecks of Flower, and some Pitch, Tar, and Cordage; we received also the 150 Oxen promised by the Gentleman we released at *Leon*, which together with the Sugar and some other Cattel we found in the Country, was extreme welcome to us.

We stay'd here from the 17th till the 24th. The 25th Capt. *Davis* and Captain *Swan* parted, the first having a mind to return to the Coast of *Peru*, the other intending to go further to the W. As I had a curiosity to be better acquainted with the Northern parts of the Continent of *Mexico*, I left Captain *Davis* and went aboard Capt. *Swan*, Capt. *Townley* with his 2 Barks joined with us, but Captain *Harris* and Capt. *Knight* followed Captain *Davis*. The 27th Capt. *Davis* with his Ships went out of the Harbour, but we stay'd some time behind, to provide our selves with Water and Fuel.

They part.

By this time our Men began to be much afflicted with Fevers, which we attributed to the remnants of a contagious Distemper that lately raged at *Rio Leha*; for Captain *Davis*'s Men (as he told me afterwards) underwent the same Fate. The 3d of *September* we set sail again, steering to the W. We had bad Weather all along the Coast, with violent Turnadoes, Thunder and Lightning; the Turnadoes came commonly out of the N. E. The tempestuous Weather kept us out at Sea, so that we saw no Land till the 14th, when at 12 deg. 50 min. Lat. we came in sight of the *Volcan*, or burning Mountain of *Guatimala*. It appears with a double Peak, like 2 Sugar-loaves, betwixt which you see, sometimes, break out the Fire and Smoak, especially against bad Weather.

The Volcan of Guatimala.

The City of *Guatimala* is seated near the Foot of this high Mountain, 8 Leagues from the *South Sea*, and 40 or 50 Leagues from the Gulf of *Matique*, in the Bay of *Honduras*, in the *North Sea*. It is accounted a rich City, the Country about it abounding in several Commodities peculiar to it, and transported thence into *Europe*, especially the four noted Dies, Indico, Otta, or Anatta, Silvester and Cochineel.

Indico.

Indico is made of the Stalk and Herb, growing about 2 Foot high, with Branches and Leaves like Flax, but more substantial; this they put in a Cistern, in the Ground, half full of Water, where they let it soak till all the pulpy substance be dissolved, the rest is taken out, and the Indico afterwards settling to the bottom, they draw off the Water, and let the Sediment dry in the Sun, till it become hard.

Otta, or Anatta.

The Otta, or Anatta, a red sort of Dye, is made of red Flowers, growing on Shrubs 7 or 8 Foot high; they pick the Leaves from the head, and these only they put in Cisterns with Water, like the Indico, till they are dissolved; then they draw off the Water, and make up the Sediment into rolls to be dry'd in the Sun. The *Jamaica* Men buy much Indico and Otta at *Porto Rico*, where they used to buy the first for 3 Rials, and Otta for 4 Rials a Pound, which is no more than 2 *s.* 3 *d.* of *English* Money, and sell it again at *Jamaica*, the Otta for 5 *s.* and the Indico for 3 *s.* 6 *d.* the Pound. But since Capt. *Coxon* by chance met with a vast quantity of both these Commodities, in the Gulf of *Matique*, in the Bay of *Honduras*, and carried it to *Jamaica*, and they have now found the way to trade with the *Spaniards* on that side.

1679.

Cochineel.

The Cochineel is nothing else but an Insect bred in a certain Fruit, not unlike the Prickle-pear, 5 Foot high; the Leaves are not quite so big, but the Fruit exceeds the other in bigness. Just on the top of the Fruit sprouts fourth a red Flower, which as soon as the Fruit is ripe, and begins to open, covers the top of it so that no Rain or wet can enter the inside; in 2 Days after, the Flower being dry'd away by the heat of the Sun, the Fruit opens as broad as the mouth of a Pint Pot, and winged Insects appear on the inside, who having consumed all the substance of the Fruit beforehand, the Country People, who have large Plantations of these Trees, spread a linnen Cloth under the Tree, and by shaking and beating the Branches drive the Insects out of their Nests, who for some time fly about the Tree, till being quite spent by the scorching Beams of the Sun, they fall down dead upon the Cloth, where the

An Insect.

How taken.

Indians leave them for 3 Days longer, till they are well dry'd. When they fly up they appear red, when they fall down black, and as soon as they dry are as white as Paper, but change their colour somewhat afterwards. These are the Insects that afford us the precious Scarlet Dye. Abundance of these Trees are planted about *Guatimala*, *Cheape* and *Guaxaca*, all three in the Kingdom of *Mexico*.

1685.

The Silvester is a red Grain, or Seed, growing in a Fruit much resembling the Cochineel Fruit, and the Shrub that bears it is not unlike the Tree; first of all shoots forth a yellow Flower, which produces the Fruit, something longer than *Cochineel* Fruit. After it's ripe it opens and discovers its Grains or Seeds, which are shaken out with the least touch. These Trees grow wild, 8 or 10 of these Fruits yield about an Ounce of Seed; but of the Cochineel Fruits, 3 or 4 will yield the same quantity of the Insects. The Colour of this is very near as fine as the Cochineel, but of a much lower price, tho' they are often mistaken for one another. I used to be very inquisitive in the *West Indies* how the Cochineel and the Silvester did grow, but could never be rightly satisfied in the matter, till a *Spanish* Gentleman of Credit, who had lived 30 Years in these parts, gave me this account of them.

Silvester.

The Land near the *Volcan* of *Guatimala* is low near the Sea side, but rises by degrees higher and higher; for about 10 Leagues from the Shoar, we saw abundance of drift Wood, and Pumice-stones floating in the Sea; these last were questionless thrown out by the Mountain, and wash'd by the Rains into the Sea. The 24th at 14 deg. 30 min. N. Lat. the Weather being settled, Capt. *Townley* went ashoar with 106 Men to the W. in hopes to find a landing place, and some Refreshments for our sick Men; we lay by till the 26th, when Coasting along to the W. with a N. Wind, we saw a tract of high Land, beginning in the E. and running for 10 Leagues, within the Land, to the W. where it ended by an easy descent. On this side of it, near to the Sea, we saw rich Pasture Plains, mix'd with pleasant Groves; the Country near the Sea shoar was defended by sandy Hills, but the boisterous Waves would not let our Men land with their Canoes; we were forced to Coast still for 8 or 9 Leagues farther, but Captain *Townley* seeing no prospect of Landing returned aboard with his Men, *October* 2: but being resolved to try his Fortune again, he forced his Canoes ashoar in a sandy Bay, where we landed with the loss of one Man, and most of their Powder spoil'd by the salt Water; when they were got ashoar, they found the Country full of Torrents, and unfordable Rivulets, that they were forc'd to return to their Canoes. They were charg'd by 200 *Spaniards* and *Indians*, but these they soon repulsed, and forced them to take the way of *Teguantepeque*, the same Town that Captain *Townley* went to look for, but could not get sight of it.

Drift wood and Pumice stones in the Sea.

Immediately after his return, we set sail again with a brisk E. N. E. Wind, still coasting to the W. within 2 Miles of the Shoar; at 6 Mile from the Land we found 19 Fathom, and 8 Mile 21 Fathom course Sand; we could not discover either Creek or Bay for twenty Leagues farther, till we came to the Isle of *Tangola*, where there is safe Anchorage. It is high but small, yet well furnished with Wood and Water, about a League from the Continent, which has curious Pasture Grounds near the Sea, but high Wood Lands deeper in the Country; we sailed a League farther to the Port of *Guatulco*, one of the best in the Kingdom of *Mexico*, at 15 deg. 30 min. Lat. On the E. side of the Entrance of the Harbour, about a Mile from it, is a small Isle adjacent to the Shoar, and on the W. side of the said Entrance, a great hollow Rock, open at the top, thro' which the Waves of the Sea force their passage like thro' a Pipe, with a great noise and hight, and that even in the calmest Weather, so that it affords a good mark to Sea-men bound for this Port. The whole depth of the Harbour is about 3 Mile, and its breadth 1 Mile, it runs in N. W. The W. side is the most secure because the rest is exposed to the S. W. Winds, which are frequently on this Coast. The Ground is good any where, the soundings being from 6 to 16 Fathom, the shoar sandy and smooth; and at the bottom of the Harbour falls a curious fresh Water Rivulet into the Sea; here formerly stood a *Spanish* Town, destroy'd by Sir *Francis Drake*; there remains nothing of it now except a little Chappel in the middle of a Grove 200 Paces from the Sea side; the Land appears in small ridges rising higher, gradually, deeper in the Country.

The Isles of Tongola.

The Harbour of Guatulco.

A hollow Rock in the Sea.

Here

1685. Here Captain *Townley* landed again with some Men and marching to the E. came to the River *Capalita*, which has a very swift Current, but is deep at its entrance; a League from *Guatulco* two of our Men swam over the River, where they seized upon 3 *Indians* that were placed there to keep watch. As they could not speak *Spanish*, so they made signs they could conduct them to a Village, whereupon 140 Men were sent under the Conduct of Capt. *Townley* (my self being one) who return'd the 8th, having found after 14 Miles march, a small *Indian* Village, where they found nothing else but some *Vinelloes* drying in the Sun.

October 6.

The Vinelloe.

The *Vinello* grows on a small kind of Vine creeping up about the Trees; this at first bears a yellow Flower, which produces a Cod of the bigness of the Stem of a Tobacco Leaf, and about 4 or 5 Inches long. This Cod is green at first, but when ripe turns yellow; the Seeds are black; after it is gather'd they lay them in the Sun, which makes them soft, and of Chesnut colour; they squeeze it flat afterwards with their Fingers. The *Spaniards*, who buy this Commodity very cheap of the *Indians*, sleek them afterwards with Oil; I never heard of any of these *Vinelloes* except hereabouts, about *Caiboca*, in the Bay of *Campeachy*, and *Bocco-toro*. Near this last place I gathered them my self, and endeavoured to cure them, but could not; and as I know other Persons, who have lived many Years in these Parts and have attempted the same with no better success, so I am apt to believe, the *Indians* have some peculiar way to cure them that is unknown to us as yet.

The 16th we sent 4 Canoes before to the W. to expect our coming at Port *Angels*, and in the mean while to endeavour to take some Prisoners; the 12th we set sail with our Ships from *Guatulco*, the Land lying along to the W. inclining to the S. for 20 or 30 Leagues; the Sea Winds at W. S. W. and S. W; the Land Winds at N. we coasted along as near as we could to the Shoar, to take the benefit of the Land-wind, the Sea-wind being against us; besides that, we were kept back by the Current setting to the East, so that we were forced to come to an Anchor at *Sacrificio*, an Isle half a Mile long, a League to the W. of *Guatulco*, and half a Mile from the Continent; to the W. of the Isle appears a good Bay, but is rocky, the best Anchorage is betwixt the Isle and the Continent, at 5 or 6 Fathom Water, tho' the Tide is pretty strong here, the Sea rising about 6 Foot.

They set sail from Guatulco.

The Isles of Sacrificio.

The 18th we continued coasting to the W. near the Shoar, which was high and woody, with divers sandy Bays, but the Waves very boisterous near the Shoar. Two of our Canoes return'd the 22d, and told us they had lost Company of the other two; that they could not find Port *Angels*, and had endeavoured in vain to land at a place where they saw great store of Cattel; Being then just a-breast of Point *Angels*, tho' those in the Canoes did not know it, we went in and came to an anchor there. It is a broad open Bay, having two or three Rocks at the W. end, for the rest there is good riding at 13, 20 and 30 Fathom Water, but Ships lay exposed to all Winds, the Land-winds excepted, till they come at 12 or 13 Fathom Water, when they are sheltred against the Trade-winds, which are W. S. W. The Flood rises about 5 Foot, sets to the N. E. and the Ebb at S. W. the landing place is close to the W. side, before the beforementioned Rock, but as the Waves run very high, there is but indifferent landing. It lies at 15 deg. North Lat. and is enclosed on the Land side by high sandy Grounds, partly Woods partly Plains, stor'd with very good Grass. The 23d we landed 100 Men, who feasted 2 or 3 days upon salt Beef, and got store of Salt, Maiz, Hogs, Cocks and Hens, in an adjacent House to the Plain, but could cary but little aboard, by reason of the great distance from the Sea side.

The Port Angels.

The 27th we set sail in the Morning, with the Land-wind; about Noon the Sea-wind came upon us, and at Night anchored at 16 Fathom Water, near a small rocky Isle, 6 Leagues W. from Port *Angels*, and half a Mile from the Continent. The 28th we continued our Voyage with the Land-wind, the Sea-wind blew hard in the Afternoon, and at Night we met with the other two Canoes we had sent out from *Guatulco*; they had been as far as the Port of *Apulco*, and in their return took in fresh Water in a River in spight of 150 *Spaniards* that would have opposed it; thence they came into a salt Water Lake or Pond, where finding abundance of dry Fish, they brought some aboard us. As we were just abreast of this Lake, we sent 12 Men in a Canoe for more Fish; the entrance of this Lake is so closely hemm'd in with Rocks on both sides, that the passage betwixt them is not above Pistol shot over, but within the Lake is of a considerable compass; the *Spaniards* being allarum'd before, now seeing our Canoe approach the Lake, posted themselves behind the Rocks, and gave such a volley of shot upon our Canoe, at her entring into the Pond, that they wounded 5 of our Men, however our People rowed forward into the Lagune or Pond, without Gun-shot, where they stay'd 2 Days 3 Nights, not daring to attempt to repass the same way they came; at last Captain *Townly*, who lay nearer to the shoar than we, hearing the firing of some Guns that way, man'd one of his Canoes, and beating the *Spaniards* from the Rocks, opened them a free passage, so they returned aboard the 31st of *October*. This Lake is at 16 deg. 40 min. N. Lat.

They meet with 2 of their Canoes given over for lost.

A Salt Water Lake.

1685.

Coasting forward to the W. (the Current setting to the W. also) we pass'd, *Novemb.* 2. by the Rock of *Algatross*; the Land near it is high and woody, and Mountainous in the Country; 6 Miles to the W. of the said Rock, lye 7 or 8 white Cliffs to the S. by W. whereof a large shoal runs out 5 Miles at Sea; two Leagues to the W. of these Cliffs is a handsome River, having a small Isle at its entrance, the E. Channel is shallow and sandy, but that to the W. will admit of Canoes. The 3d we came to an anchor opposite to this River, one Mile and a half from the Shoar, at 14 Fathoms. The *Spaniards* having cast up an Entrenchment along the W. Channel, defended by 200 Men, we landed our Men and forced them thence with little opposition; we found here good store of Salt, design'd for the salting of the Fish they take in the Lake, but we found neither Nets, Hooks or Lines, nor any Bark, Canoe or Boat; marching 3 Leagues into the Country we took a *Mulatto* Prisoner, who informed us that lately there was a stout Ship come from *Lima* to *Acapulco*; Capt. *Townley* standing in want of a good Ship, it was agreed (tho' not without some opposition from Captain *Swan*) to fetch the said Ship out of that Harbour. The 5th we continued coasting to the W. toward *Acapulco*; the 7th, 12 Leagues from the Shoar, we saw the high Land of *Acapulco*, very remarkable for a round Hill betwixt 2 other Hills, the Westernmost being the biggest and highest, with 2 Hillocks on the top, but the Easternmost is higher and more peaked than the middlemost.

The Rock of Algatross.

Acapulco is a Town and Harbour at 17 deg. N. on the W. side of the Continent, belonging to the City of *Mexico*, being the only place of Traffick on the W. Coast, tho' at the same time there are only 3 Ships that come hither, *viz.* 2 that constantly go every Year betwixt this Port and *Manilla* in *Luconia* (one of the *Philippine* Isles, and another once a Year to and from *Lima*.) This last comes to *Acapulco* about Christmas, loaden with Quicksilver, Coco and pieces of eight, and stays there till the *Manilla* Ships arrives; from these she take in her Cargo of Spices, Callicoes, Muslins, &c. for *Peru*, and so returns to *Lima*. This is but a moderate Vessel, but the two Ships from *Manilla* carry about 1000 Tuns; these 2 so order their Voyage, as that one or other of them is always at *Manilla*; one of them sets sail from *Acapulco* about the beginning of *April*, and after 60 Days touches at *Guam*, for Refreshments, one of the *Ladrone* Isles; after 3 Days stay she continues her Voyage to *Manilla*, where she commonly arrives in *June*. Soon after, the other Ship being ready to sail from *Manilla* with the *East-India* Commodities, she steers her Course thence to 36 or 40 deg. N. Lat. before she can get the Wind to carry her to the Coast of *America*; first she falls in towards the shoar of *California*, and then coasting to the S. certainly meets a Wind to bring her to *Acapulco*. After she has made the Cape of St. *Lucas*, the S. Point of *California*, she runs over to Cape *Corientes*, at 20 deg. N. Lat. whence she Coasts to *Sallagua*, where having put ashoar the Passengers, bound for the City of *Mexico*, she continues Coasting along to *Acapulco*, which commonly happens about *Christmas*; and upon her return to *Manilla* the other Ship undertakes her Voyage to *Acapulco*, a Port so large and convenient, as to be able to contain some hundreds of Ships without danger.

The Port and City of Acapulco.

How the Manilla Ships come to Acapulco.

Cross the entrance of the Harbour is a low Isle, one Mile and a half long, and half a Mile broad, stretching from E. to W. At each end is a deep Channel for the entrance of their Ships and their coming out, provided they enter with the Sea-wind, and come out with the Land-wind, and these blow at their certain times of the Day or Night. The Channel at the W. end is narrow, but so deep that there is no anchorage; thro' this the Ships come in from *Manilla*; but the Ships from

Lima

Its entrance.

1685. *Lima* pass thro' the S. W. Channel. The Harbour runs in 8 Miles to the N. then closing up into a narrow Channel goes a Mile farther to the W. At the entrance of this Channel, on the N. W. side, just by the Sea side, stands the Town of *Acapulco*, near which is a Platform with a good number of Guns; and over against the Town, on the E. side, stands a strong Castle, defended by no less than 40 great Guns; Ships commonly ride within reach of this Castle at the bottom of the Harbour.

The Castle of Acapulco.

Captain *Townley* went with 140 Men in 12 Canoes to fetch out the *Lima* Ship, but by stress of Weather was forced into Port *Marquis*, a good Harbour, a League E. of the Port of *Acapulco*; here they stay'd all Day. and the next Night rowed softly to *Acapulco*, where they found the Ship riding at anchor, 100 Yards from the Castle and Platform, so that finding it impossible to carry her off, he returned much dissatisfied aboard.

Port Marquis.

Captain Townley's design upon a Ship in this Port miscarries.

The 11th we set sail further to the W. with the Land-wind at N. E. as the Sea-winds are here at S. W. We sailed along a sandy Bay 20 Leagues in length, where there was good anchorage two Mile from the Shoar, but the Sea Waves fall with such a violence against it, that there is no safe landing place. Near the Sea side the Grounds are low, and well stor'd with Trees, especially with spreading Palm-trees, which are sometimes 20 or 30 Foot high, but no bigger than an ordinary Ash. The inland Country is intermix'd with many small peaked Hills, which are for the most part barren, but the Vallies very fertile.

A Bay of 20 Leagues long.

At the W. end of this Bay jets out into the Sea the Hill of *Petaplan*, at 17 deg. 20 min. N. Lat. being a round Point that appears like an Isle at Sea; a little farther to the W. is a knot of round Hills; we entred betwixt these and the Point, where we anchored at the N. W. side of the Hill, at 11 Fathom Water. Here we sent 170 Men ashoar, who marching 14 Miles into the Country, came to a wretched *Indian* Village, left by the Inhabitants, so that we met with no body but a *Mulatto* Woman with 4 small Children. Being brought aboard she declared, that a Caravan of Mules, laden with Flower and other Goods, design'd for *Acapulco*, had stop'd their Journey on the Road to the W. of this Village; so we sailed farther to the W. the 18th about 2 Leagues, to a place called *Chequetan*, a pretty good Harbour, having the conveniency of a fresh Water River, and good store of Wood. We landed 95 Men the 19th, in 6 Canoes (having the *Mulatto* Woman for their Guide) at *Estapa*, a League W. of *Chequetan*; hence they were carried, by their Guide, thro' a pathless Wood along a River, into a Plain, and near which, in a Farm House, they found the beforementioned Caravan, consisting of 60 Mules laden with Flower, Chocolate, Cheeses, and Earthen-ware; all this they convey'd, except the Earthen Vessels, with some Beef they had killed, and brought to their Canoes, and thence to our Ships. Capt. *Swan* went afterwards ashoar and kill'd 18 Cows more, without the least opposition. The Country is woody, but fertile, and water'd with many Brooks and Rivers.

The Point of Petaplan.

The Harbour of Chequetan.

They take a Caravan of Mules.

The 21st we sail'd with the Land-wind, which is at N. here, and the Sea-wind at W. S. W. Coasting along to the W. At first the Land appears with ragged Hills, but further to the W. with fruitful Vallies betwixt them. The 25th we passed by a high Hill, divided into two Parts or Peaks, at 18 deg. 8 min. N. Lat. the *Spaniards* say there stands a Town call'd *Thelupan*, not far from it, but we could not find the way to it. The 26th 200 Men were sent to endeavour to find out the City of *Colima*, a rich place; but tho' they row'd 20 Leagues along the Shoar, they could not meet with any place to land in, and saw not the least sign of any Inhabitants. At two places they saw two Horse-men, and our Men followed them, but lost the tract in the Woods, so we returned the 28th aboard, and soon after the *Volcan* or burning Mountain of *Colima*, very remarkable for its height, at 18 deg. 36 min. N. Lat. 6 Leagues from the Sea side appeared, with two high Points, from each of which issues always, either Fire or Smoak. The Valley in which it stands bears the name of the Mountain, as does likewise the adjacent Town, the chief City of all the Circumjacent Country.

The Volcan of Colima.

The Valley of Colima.

If we may credit the *Spaniards* it is a most delightful and fertile Valley, abounding in Cocoes, Corn and Plantains, being 10 or 12 Leagues wide to the Sea, and stretching a great way into the Country; but there is no landing place near it, by reason of the impetuosity of the Waves: for about two Leagues from the E. side is low woody Ground, at the end whereof is a deep River which disembogues into the Sea, but by reason of a Land-bank at the Mouth, there is no entrance, even for Canoes. 1685.

The 29th 200 Men were sent again to try whether they could find any Path or Tract leading to the Town of *Sallagua*, seated, as the *Spaniards* report, at the W. end of the Bay of the Valley of *Colima*; but the Waves running so high that there was no landing, they returned aboard the 30th. The first of *December* we came in sight of the Port of *Sallagua*, at 18 deg. 52 min. It is a Bay parted by a rocky Point about the middle, so that it appears like two distinct Harbours, in either of which is safe anchoring at 10 or 12 fathom Water, tho' the W. Harbour is the best, having besides this the conveniency of a fresh Water Rivulet falling into the Sea; we saw a good number of armed *Spaniards*, unto whom we gave a visit the next Morning with 200 of our best Men, but the Foot never stood one Charge, and the Horse did soon follow them. In the pursuit, our Men fighting upon a broad Road leading thro' a woody and rocky Country, followed it for 4 Leagues, but finding not the least foot-steps of any Inhabitants, they turned back, and in their way took 2 straggling *Mulatto's*, who assured them that the broad Road did lead to the City of *Carrah*, four long Days travelling from hence, and that these Men were sent from that City, to secure the Ship from *Manilla*, that was to set Passengers ashoar there. The *Spanish* Maps place the Town of *Sallagua* hereabouts, but we could see no signs of it.

The Port of Sallagua.

The City of Carrah.

The 6th of *December* we set sail again, Coasting it to the West towards Cape *Corientes*, in hopes of meeting thereabouts with the Ship expected from the *Philippines*. The Sea-winds are here N. W. and the Land-wind at N. the Land indifferent high, interspers'd with many ragged Points, and woody. Here I was afflicted with the Dropsy, and so were many of our Men, this being a common Disease on this Coast: the Natives pretend to cure it with the Stone, or Cod, of an Allegator, (of which they have four, *viz.* one near each Leg, within the Flesh) beaten to Powder, but we had not the good Fortune to meet with any of these Creatures, tho' they are sometimes found hereabouts.

The Dropsy a general Distemper on this Coast.

Betwixt *Sallagua* and Cape *Corientes* are divers good Ports we did not touch at; as we approach'd the Cape it appear'd with many white Cliffs, and deeper into the Country with peaked Hills; to the W. of these runs a ridge of Mountains, beginning with a high steep Mountain at the E. end, with 3 Peaks resembling a Crown, whence the *Spaniards* call it *Coronada*, i. e. the *Crown Land*; but at the W. end it terminates into an easie descent.

The Coronada.

The 11th we were in sight of Cape *Corientes*, bearing N. by W. and the *Coronada* to the N. This Cape is pretty high, very steep and Rocky towards the Sea, but flat on the top, and covered with Trees; it is at 20 deg. 28 min. N. Lat. I found its Longitude from *Tenariff* 230 d. 56 min. keeping my Longitude to the W. according to our Course; pursuant to which computation it is from the *Lizard* in *England* 121 d. 41 min. and the difference of Time 8 Hours 6 min. The Ship from the *Philippines* being obliged to make this Point in her Voyage homewards, we took our Stations, with our 4 Sail so, as that we judg'd we could not well miss the Ship; but as we wanted Provisions, 50 or 60 Men were sent in a Bark to the W. of the Cape to get some; they returned the 17th, but without any purchase, not being able to get about the Cape, the Wind being generally N. W. and S. W. on this Coast, however they left 4 Canoes man'd with 46 Men behind, who intended to row to the W. The 18th we set sail towards the Isles of *Chametly*, 18 Leagues to the E. of Cape *Corientes*; they are five low, small, and woody Isles, surrounded with Rocks, and lying in form of a Half-moon, within a Mile from the Shoar, betwixt which and these Isles, is safe Anchorage; they are Inhabited by Fishermen, Servants to some of the Inhabitants of the City of *Purification*, a considerable place 14 Leagues up in the Country. The 20th we entred on the S. E. side, and anchored betwixt the Isles and the Continent; we found here fresh Water, Wood and Rock-fish in great plenty. The 21st 60 of our Men, under Capt. *Townley*, were sent 7 or 8 Leagues to the W. to surprize an *Indian* Village.

Cape Corientes.

They cruize in expectation of a rich Prize.

The Isles of Chametly.

The 24th the four Canoes left thereabouts by Capt. *Townley's* Bark return'd to us near the Cape, having got beyond it by the help of their Oars, and landed in the Valley of *Valderas*, or *Val d'Iris*, i. e. they *Valley of Flags*, lying at the bottom of a deep Bay, enclosed between

The Valley of Valderas.

1686 reen Cape *Corientes* on the S. E. and the Point *Pontique* on the N. W. The breadth of the Valley is three Leagues; the Sandy Bay is level to the Sea, and affords a good landing place; in the midst is a good fresh Water River, Navigable with Boats; but at the latter end of the dry Season, *viz.* in *February*, *March* and *April*, it becomes brackish. On the Land side this Valley is bounded by a green Hill, which by its easie descent into the Valley affords a delightful Prospect, no less than the spacious Plains of Pasture Grounds stor'd with Cattel, the pleasant Groves of Guavaes, Orange and Lime Trees, which grow wild here in vast numbers.

A fierce Skirmish between the Spaniards and some Privateers.

In this delightful Valley we landed 37 Men, who advancing three mile into the Country, were attack'd by 150 *Spaniards*, Horse and Foot; by good chance there was an adjacent Wood which afforded a happy retreat to our Men, who from thence fired so furiously upon the *Spaniards*, that they kill'd their Leader and seventeen Troopers, besides many wounded, with the loss only of four Men, and two wounded, this made the Enemy retreat; however, had the Foot seconded the Horse, scarce one of our Men would have escaped.

The 28th Capt. *Townley* return'd aboard with forty Bushels of Maiz, which he had taken in an *Indian* Village to the E. of Cape *Corientes*, five Leagues in the Country. We continued Cruizing, off this Cape, till the first of *January*, when we set sail for the Valley of *Valderas*, to provide our selves with some Beef; at Night we anchored at 60 Fathom Water, a Mile from the Shoar. We continued here till the 7th, and landed 240 Men, (50 whereof were constantly employ'd to watch the motions of the *Spaniards*) we killed and salted as much Beef as would serve us two Months, and had we not wanted Salt, we might have had much more.

1685.

Their Design upon the Manilla Ship miscarries.

By this time our hopes of meeting with the *Manilla* Ship being quite vanished, we concluded, that whilst we had been employ'd in looking for Provision ashoar, she had given us the slip to the E. which proved true according to the account we had afterwards by several Prisoners; the loss of so great and rich a Prize must chiefly be attributed to the Wilfulness of Capt. *Swan*, who would needs attempt the taking of the *Lima* Ship in the Harbour of *Acapulco*, when at the same time we ought to have provided our selves (as we could have done) with Beef and Maiz for such an Enterprize, which whilst we were forced to seek we lost our Prey; whereas, had we not wanted Necessaries we might have gone even as far as to Cape *Lucas* in *California*, where Sir *Thomas Cavendish* formerly took one of these *Manilla* Ships. Hitherto we had a double Design in view; first, The taking the *Manilla* Ship; secondly, the search after rich Towns and Mines near this Coast, not knowing that the Wealth hereabouts did lie in the inland Country; but now finding our selves quite deceived in our Hopes we parted, Capt. *Townley* going back to the East, and we in Captain *Swan*'s Ship to the West.

And for what reason.

The Point Pontique.

The 7th of *January* we set sail from this Valley, the Land-wind at N. W. and at Night passed by *Pontique*, the W. Point of the Valley of *Valderas*, 10 Leagues from Cape *Corientes*, at 20 deg. 50 min. N. Lat. A League beyond it to the W. are 2 little Isles call'd the *Pontiques*; beyond these the Shoar runs ragged to the North for 18 Leagues. The 14th we came to anchor in a Channel, betwixt a small white rocky Isle and the Continent, at 14 Fathom, at 21 deg. 15 min. The Isle is 3 Leagues from the Main, we anchored one League from it. From this Island the Land runs in N. making a sandy Bay; we anchored one League from the Continent, but there is no landing; we found the Land-wind all along here at N. E. and the Sea-wind at N. W. The 20th we anchored one League on the E. side of the Isles of *Chametly* (different from the beforementioned) being a knot of 6 small Isles, at 23 deg. 11 min. a little to the South of the Tropick of *Cancer*, 3 Leagues from the Continent; one or two of them, only, have some sandy Creeks to the Sea side, and produce a certain Fruit call'd Penguins. These are of two sorts red and yellow; the last grows on a Stem of the thickness of a Man's Arm, a foot from the Ground, with Leaves of half a Foot long, and one Inch broad, edg'd with prickles. The Fruit grows just at the top of the Stalk in clusters; they are round, and of the bigness of a Hens Egg; the Rind is pretty thick, and the Pulp full of black Seeds, of a delightful Taste. The red Penguin is no bigger than a dry Onion, but of the shape of one of our Nine-pins; it does not grow on a Stalk,

The Isles of Chametly.

The Penguins.

but immediately out of the Ground, standing upright, sometimes 60 or 70 in a cluster, being encompassed with prickly Leaves of one Foot and a half long, or two Foot long. 1686.

Captain *Swan* went with 100 Men to the North, to find out the River *Cullacan*, supposed to lye at 24 deg. N. Lat. in the Province of *Cullacan*, with a fair rich Town upon its Banks; but tho' they had row'd above 30 Leagues they could find no River, neither was there any safe landing place. 7 Leagues N. N. W. from the Isles of *Chametly*, is a Lake with a narrow entrance, at 23 deg. 30 min. call'd *Rio de Sall* by the *Spaniards*; it having Water enough for Canoes to enter; our Men landed on the W. side, and took some Maiz at an adjacent Farm-house; and at another landing an *Indian*, who inform'd us, that 5 Leagues thence there was an *Indian* Town, so our Men marched towards it, and coming near the place were encountred by a good body of *Spaniards* and *Indians*; but these being beaten back after the first Charge, they entred the Town, where they found only two or three wounded *Indians*, who told them, that the Town was called *Massalcan*, and that 5 Leagues thence there were two rich Gold Mines. We staid here till the 2d of *February*, when 80 Men were sent and landed in the River *Rosario*. About three Leagues from the Sea they came to a pretty little Town (of the same Name) where the Prisoners assured them, that the beforementioned Mines were not above two Leagues thence; but as we had present occasion for Provisions, we carried aboard 90 Bushels of Maiz, without searching after the Mines. The 3d we anchor'd against the mouth of the River *Rosario*, one League from the Shoar, in 7 Fathom, at 22 deg. 51 min. N. Lat. But as this small quantity of Provisions was not likely to do our business for our intended Voyage, we landed the 8th 40 Men, to seek the River *Oleta* (supposed to lye to the East of the River *Rosario*) but they returning without any Booty, or without being able to find it, we resolved to go on to the East, to the River of St. *Jago*, where we anchored the 11th, two miles from the Shoar, in 7 Fathom Water, soft ouzy Ground, three Leagues from the white high Rock of *Manenteibo*, bearing W. N. W. as the high Hill of *Xelisco* bore S. E. of us.

The Salt Lake.

The Town of Massalcan.

The River Rosario.

The River of St. *Jago*, one of the most considerable on this Coast, is at 22 deg. 15 min. it has 10 Foot Water on the Bar at low Water, but the hight it flows I am not able to tell; its breadth at the Entrance is about half a Mile, but it is broader within, 3 or 4 Rivers exonerating themselves into it there. The Water is brackish, but near the Mouth, on the sandy Shoar, you may dig fresh Water at 3 or 4 Foot. Captain *Swan* sent out 70 Men to look for a Town, the Country having a fair aspect. After they had row'd up and down two Days, they landed in a plentiful Corn field, where whilst they were busy in gathering the Maiz (which was near ripe) they espy'd, and seiz'd, an *Indian*, who told them, that four League further there was a Town call'd St. *Pecaque*. They were no sooner come on board but Captain *Swan* with 140 Men, went in 8 Canoes 5 Leagues up the River, which was thereabouts not above a Pistol-shot wide, with high Banks, and landing his Men march'd thro' fertile Plains and Woods for 3 or 4 Hours; at their approach the *Spaniards* quitted the place, so we entred it without opposition.

The River of St. Jago.

The Town of St. *Pecaque* is seated on the side of a Wood in a spacious Plain; it is not very large but neatly built, with a square Market place in the middle, as most *Spanish* Towns are, and has two Churches. There are Silver Mines 5 or 6 Leagues from this Town, the Oar whereof, is carried from this Town by Mules to *Compostella*, where it is refined.

The Town of St. Pecaque.

Compostella is the Capital City of this part of *Mexico*, 21 Leagues distant from *Pecaque*, inhabited by about 70 white Families, and 5 or 600 *Mulattoes* and *Indians*. As our Men found plenty of Maiz, Sugar, Salt and Salt-fish here, so Captain *Swan* ordered one half of them to carry the Provisions aboard, whilst the other half took care of the Town; this they did by turns, having got some Horses to ease them in their labour. Thus they continued for two Days, but the 19th Captain *Swan* being inform'd by a Prisoner, that 1000 arm'd Men were lately march'd from St. *Jago* (a rich Town upon the River three Leagues thence) to attack our Men, he order'd his Men to get all the Horses they could, and to march altogether, with what Provisions they could carry, to their Canoes; but they refusing to obey him, till all the Provisions could be carried aboard, he was forced to let

The City of Compostella.

one

1686. one half of them go on with 54 Horſes; but they had not marched a Mile before the *Spaniards* (who did lie in ambuſh) attack'd and kill'd them all upon the ſpot. Captain *Swan* march'd to their relief, but came too late, they being all ſlain and ſtript, tho' at the ſame time they never attempted to engage him, having queſtionleſs paid pretty dear for their Victory. Among the ſlain was Mr. *Ringroſe*, who publiſhed the Account of Captain *Sharp*'s Adventures.

Fifty Priſoners kill'd.

Captain *Swan* being return'd aboard with the reſt of his Men with what Proviſions they had got, it was reſolved to ſail to Cape St. *Lucas* on *California*, in hopes of getting a Commerce with the *Indians* there, and conſequently in the Lake of *California*. This Lake is properly a Channel or part of the Sea betwixt the Iſle and the Continent, but either not much known by the *Spaniards*, or elſe concealed by them, for fear that the other *European* Nations ſhould find out that way to the Mines of *New-Mexico*, for they vary conſiderably about it in their Charts; ſome make it an Iſle, ſome joyn it with the Continent, but not one of them, that I know of, give an account of the Tides the Depth, Harbours in or near this Lake, whereas their Hydrographical Maps deſcribe the Coaſt towards *Aſia* on the Weſt ſide of the Iſle from Cape St. *Lucas* to 40 Deg. N.

The Lake of California.

New-Mexico.

New-Mexico (according to the report of the *Spaniards* and ſome *Engliſh* Priſoners there) lies near 50 Leagues N. W. from *Old-Mexico*, where the richeſt Mines of all this Country are ſuppoſed to be, tho' there are queſtionleſs ſome alſo in other Parts hereabouts as well as on the Continent near the Continent of *California*; tho' as the *Spaniards* have Mines enough to manage, they have not taken the pains to diſcover them, and the vaſt diſtance of this Country has no doubt been the occaſion that no Diſcoveries have been made by others, nor are likely to be made, unleſs a nearer way could be found hither, I mean by the N. W.

I am not ignorant that divers unſucceſsful attempts have been made for the diſcovery of a N. W. Paſſage, the reaſon whereof, I attribute to their ſearching for that Paſſage at the beginning thro' *Davis*'s or *Hudſon*'s Bay; whereas in my opinion, the ſame ought to be begun in the South Seas, and thence along by *California*, and ſo ſeek a Paſſage back into the Weſt Seas. The ſame Rule might be obſerved in diſcovering the N. E. Paſſage, *viz.* to winter about *Japan*, *Corea* and the N. E. part of *China*, and ſo to take the advantage of the approaching Spring and Summer to go along the Coaſt of *Tartary*, whence you may have time enough to reach *Archangel* or ſome other Port on thoſe Coaſts. 1686.

The N. W. and N. E. Paſſages.

From hence we ſet ſail the 21ſt. towards *California* with a N. W. and W. N. W. Wind; after we came paſt the Iſles of *S. Maria*, we had ſtrong Winds at N. and N. N. W. and at N. (the uſual Trade-wind) and conſequently loſt ground till the 6th. of *February*; ſo that the 7th. we were forced to ſteer to the Eaſt again to the *Maria*'s, where we anchored the 7th. at the Eaſt end of the middlemoſt of theſe Iſles in 8 Fathom good clean Sand; this Iſle we call'd *Prince George*'s Iſle.

The Iſles call'd *Maria*'s are three Iſlands ſtretching N. W. and S. E. 14 Leagues, of an indifferent height, ſtony, barren and uninhabited, at 21 Deg. 40 Min. Lat. 40 Leagues diſtant from Cape St. *Lucas* on *California*, bearing E. S. E. and 20 Leagues from Cape *Corientes*, bearing upon the ſame Points of the Compaſs with Cape St. *Lucas*. They produce ſome Cedars, and near the Sea ſide a green prickly Plant, with Leaves not unlike the *Penguin* Leaf, and a Root like that of the *Semper-vive*, but much longer. The *Indians* of *California* have great part of their ſubſiſtance from theſe Roots; we bak'd and eat ſome of them, and found them to taſte like the *Engliſh* Burdock boil'd. I had been long ſick with the Dropſie, ſo I was laid in the Sand and covered up to the Head for half an Hour; I did ſweat exceedingly, and I believe with good effect, for I began to mend ſoon after. We ſpent here in careening till the 26th; but as there is no freſh Water to be got here in the dry Seaſon, ſo we were forced to ſail to the Valley of *Valderas*, where we anchored the 28th. near the Mouth of the beforementioned River, which being alſo brackiſh at this time, we ſail'd 3 Leagues nearer to the Cape *Corientes* and anchored by a ſmall round Iſle half a Mile from the Shoar, 4 Leagues to the N. of the Cape. The Rivulet where we fill'd our Water is on the Continent juſt oppoſite to the Iſle.

The Iſles Maria's

Being by this time ſufficiently convinced of our miſtake concerning the Riches of this Coaſt, and the Probability of finding ſome Sea-ports worth our taking, founded upon an erroneous opinion, we had conceived, that the Commerce on this Coaſt was carried on by Sea, whereas the ſame is managed by Land, by the help of Mules; I ſay, we being now to our coſt convinced of our error, we were the ſooner prevail'd upon to try our Fortune in the *Eaſt-Indies*.

CHAP. IX.

They ſet Sail for Guam, *and thence to the* Eaſt-Indies. *A Deſcription of the* Philippine *Iſlands, and the Port and Town of* Manilla. *Of the Iſle of* Mindanao; *of* Pulo Condore. *The Iſle of St.* John *on the* Chineſe *Coaſt. Of the Iſles of the* Piſcadores *and* Formoſa.

OUR Men, as I told you, being encouraged with the hopes of better ſucceſs for the Future (notwithſtanding a thouſand obſtacles that lay in our way) and the perſuaſions of Captain *Swan*, we ſet ſail from Cape *Corientes March* the 31ſt. with the Land-wind at E. N. E. till 4 Leagues at Sea, when a freſh Sea-wind at W. N. W. carried us by Night 9 Leagues S. W. from the Cape. Next Morning the Sea-wind blowing briskly at N. N. E. we were at noon 30 Leagues from the Cape; for ſo ſoon as you are clear of the Shoar and Land-winds, the Sea Breezes are at E. N. E. where it ſtood till we found our ſelves within 40 Leagues of *Guam*. After the firſt Day we advanced apace in our Voyage, having very fair Weather and a freſh Trade-wind. At our firſt ſetting out we directed our courſe to 13 Deg. Lat. which is much the ſame Latitude with *Guam*; then we ſteered Weſt in that Latitude. In all this Voyage, we ſaw neither Fiſh nor Fowl, except once, being then, according to my account 4975 Miles W. from Cape *Corientes* in the Kingdom of *Mexico*; then we ſaw a vaſt number of Boobies, ſuppoſed to come from ſome Rocks not far off, and mentioned in ſome Hydrographical Maps; but we did not ſee them. After we had ſail'd 1900 Miles our Men began to murmur, but being encouraged with fair words by captain *Swan* we ſail'd forward, and ſeeing ſome Clouds ſetting in the Weſt, the ſame were look'd upon as the forerunners of Land. The 20th of *May* at 4 of the Clock in the Afternoon (being at 12 Deg. 55 Min. Lat. and ſteering Weſt) we diſcovered to our great joy the Iſle of *Guam* at 8 Leagues diſtance; for as our Bark paſs'd over a rocky Shoal, and that no mention of ſuch a Shoal is made in the *Spaniſh* Charts, we were not a little doubtful, whether the Land we ſaw was the Iſle of *Guam*; for we had only 3 Day's Proviſion left. Now the Iſle of *Guam* bore N. N. E. 8 Leagues; this gives 22 Min. to my Latitude, and takes 9 from my Merid. diſtance; ſo, that the Iſle is at 12 Deg. 21 Min. Lat. and the Meridian diſtance from *Corientes* 7302 Miles, or 125 Deg. 11 Min.

1686. *They ſet ſail for the* Ladrone *Iſlands.*

The Sea-men murmur.

They diſcover Guam.

Guam is one of the *Ladrone* Iſles under the *Spaniſh* juriſdiction; its length is 12 Leagues, and its breadth 4, lying North and South, defended by a ſmall Fort with 6 Guns, and a Garriſon of 30 Soldiers, under the conduct of a *Spaniſh* Governor; for the conveniency of the *Philippine* Ships that touch here for refreſhments in their Voyage from *Acapulco* to *Manilla*. The Soil is indifferently fruitful, producing Rice, Pine-Apples, Water-melons, Musk-melons, Oranges, Limes, Coco-Nuts and a certain Fruit call'd the Bread-fruit, growing on a Tree as big as our large Apple Trees, with dark Leaves. The Fruit is round and grows in the Boughs like Apples, of the bigneſs of a good Penny Loaf; when it ripens it turns yellow, ſoft and ſweet; but the Natives take it green and bake it in an Oven, till the rind is turn'd black; this they ſcrape off and eat the inſide, which is ſoft and white like the inſide of new-bak'd Bread, having neither Seed nor Stone;

The Iſle of Guam.

The Bread-fruit.

1686. but if it is kept above 24 Hours it turns harsh. As this Fruit is in season 8 Months in the Year, the Natives feed upon no other sort of Bread during that time; they told us, that all the *Ladrone* Isles had plenty of it; I never heard of it in any other place.

1686. *May* the 21 we came to an Anchor on the West side of this Isle near the middle of it 1 Mile from the Shoar, there being no anchoring on the East side, by reason of the Trade-wind, which forces the Waves with great violence against it on that side. The Natives are strong limb'd, copper-colour'd, with long black Hair, small Eyes, high Noses, thick Lips and very white Teeth, and of a stern Countenance, tho' they were very affable to us. The Air is accounted very wholsome, except in the wet Season betwixt *June* and *October*. They are extremely ingenious in building certain Boats or Proes (used all over the *East-Indies*) of about 26 or 28 Foot long, and about 5 or 6 Foot high from the Keel, which is made of the Trunk of a Tree (like the Canoes) and sharp at both ends. They manage these Boats by a Paddle, instead of a Rudder and a square Sail, with such incredible swiftness, that they will sail 20 or 24 Miles an Hour: These Boats are perpendicular on one side like a Wall, but the other is round and full-belly'd like other Vessels; along this side parallel with the Boat at 6 or 7 Foot distance, is fastned a Log of light Wood of one Foot and a half wide and sharp at each end, by 2 Bamboes of 8 or 10 Foot long laid at each end of the Boat; this Log keeps the Boat from oversetting; the *Dutch* and *English* call it an Outlayer. For the rest, these *Indians* inhabit in small Villages on the West side near the Shoar, and have certain Priests to instruct them in the Christian Religion. By the means of some Presents sent to the Governor, and an obliging Letter from Captain *Swan*, we obtained good store of Hogs, Coco-Nuts, Rice, Wheaten Biskets and other Refreshments, besides 50 Pounds of *Manilla* Tobacco; and being inform'd by one of the Fryars, that the Isle of *Mindanao*, one of the *Philippine* Isles inhabited by *Mahometans* (lying in our way towards *Manilla*) was well stored with Provisions, we set sail *June* the 2d. with a strong East Wind, and

1686. arrived the 21st. at the Isle of St. *Joan* one of the *Philippine* Islands.

The *Philippine* Isles are a Range of large Islands reaching from 7 Deg. N. Lat. to 19 Deg. in length, and in breadth to 16. Deg. Longit. The chief of them is *Luconia*, where *Magellan* was kill'd with a poisoned Arrow, and is now entirely under the *Spanish* Subjection. Their Capital City here is *Manilla*, a large City and Sea-port seated at the S. E. end opposite to the Isle of *Mindora*, a place of good Strength and vast Trade, because the 2 great beforementioned Ships from *Acapulco* fetch thence vast quantities of *East-India* Commodities, brought thither by the *Chineses* and *Portugueses*, and sometimes also by the *English* of Port St. *George*; tho' by stealth; the *Spaniards* allowing no Commerce here to the *English* or *Dutch*, for fear they should discover both their Weakness and Riches of those Isles which abound in Gold. To the South of *Luconia* are 12 or 14 other large Isles (besides an infinite number of lesser ones) inhabited by *Spaniards*; but the two southermost, *viz.* that of St. *John* and *Mindanao*, are the only ones not subject to the *Spanish* jurisdiction. The Isle of St. *John* lies at betwixt 7 and 8 Deg. N. Lat. on the East side of *Mindanao* about 4 Leagues from it: Its length from N. N. W. to S. S. E. is 38 Leagues, and its breadth about the middle 24 Leagues: The Soil is very fat and fertile. The 22d. coming one League of the East side of the Isle of *Mindanao* with a S. East Wind, we steered along the East side toward the North end, till we came at 7 Deg. 40 Min. where we cast Anchor in a small Bay a Mile from the Shoar, in ten Fathom rocky foul Ground.

The Isle of *Mindanao* is next to *Luconia*, the largest of all the *Philippine* Isles, its length being 60 Leagues, and its breadth 40 or 50; the South end at 5 Deg. N. Lat. and the N. W. end reaching almost to 8 Deg. N. Lat. The Soil is generally fat, and the stony Hills produce great store of Trees, most of which are not known among us. The Valleys are watered with fresh Brooks and Rivulets, and stored with divers sorts of Semper-virent-Trees, with Rice, Water-melons, Plantains, Bananoes, Guavoes, Nutmegs, Cloves, Betel-nuts, Durians, Jacks or Jacas, Coco-nuts, Oranges, *&c.* But above all the rest a sort of Trees which grow wild in Groves Woods several Miles long, call'd the Libby-Tree, by the Natives, which furnishes the *Sago*; the poor People feed upon it instead of Bread here for 3 or 4 Months in the Year. The Tree is not unlike the Cabbage-tree, the Bark and Wood hard, full of a white Peth like that of the Elder-tree: They cut down the Tree and splitting it in the middle take out the Peth, which they stamp or beat well in a Mortar or Trough: which done, they put it in a Cloth, and pouring Water upon it, stir it up well till the Water carries also the best substance with it thro' the Cloth into the Trough; this after it is well settled they separate from the Water (by drawing it off) and bake it into Cakes. The *Sago* transported hence into other parts of the *East-Indies* is dried into small pieces like Comfits, and used with Milk of Almonds, as a good Remedy against Fluxes, being very astringent. The other Fruits being either very well known or sufficiently described by divers Authors we will forbear to describe in this place. I will only add, that the Nutmegs here are extremely large and good; but they don't care to propagate them, for fear the *Dutch*, who monopolize the Trade of the Spice Islands, should be inticed to give them a visit.

This Isle affords also both wild and tame Beasts in good numbers, as Horses, Cows, Buffles, Goats, wild Hogs, Deer, Monkeys, Guanaoes, Lizards, Snakes, Scorpions (whose Sting is in their Tails) and those call'd Centupees or 40 Leggs by the *English*, no bigger than a Goose-quill, but 5 Inches long; they sting fiercer than a Scorpion. Of tame Fowls they have only Ducks and Hens; but of the wild kind, Pidgeons, Parrots, Parakites, Turtle-Doves, Batts as big as our Kites, and of small Birds an infinite number. Their Hogs feed in a prodigious number in the Woods, and have thick knobs growing over their Eyes. In the heart of the Country are Mountains that afford a considerable deal of Gold. Their chief Fish are Bonetoes, Snooks, Cavallies, Bremes, Mullets and Sea-Tortoises; neither do they want Harbours, Creeks and Rivers. The Climate of *Mindanao* is not so excessive hot, especially near the Sea side, considering its situation near the Line, where the Sea Breezes cool the Air by Day, as the Sea-winds do at Night. The Wind blows from the East from *October* till *May*, when it blows West till *October* again. These West Winds produce the wet Season, which is fiercest in *July* and *August* and begin to remit by degrees in *September*, and cease in *October*, when the East Winds brings fair Weather till *May*.

Tho' the Inhabitants of the Isle of *Mindanao* are generally alike in Colour, Stature, and in their Religion (being *Mahometans*) yet they differ in their Language and Government. I will only mention such as are come to my knowledge; the *Hilanoones* or *Mountaineers* living in the heart of the Isle are Masters of the Golden Mines, and abound also in Bees-wax, both which they exchange with the *Mindanayans* for foreign Commodities. The *Sologues* inhabiting the N. W. end of the Isle traffick without those of *Manilla*, and some other adjacent Islands; but not with those of *Mindanao*. The *Alfoorees* were formerly under the same Government with the *Mindanayans*, but were separated from them by falling to the share of the younger Children of the Sultan of *Mindanao*, who of late has laid claim to them again. The *Mindanayans* properly so call'd, are low statur'd with small Limbs, little Heads and strait Bodies; small Eyes, short Noses, large Mouths, thin red Lips and black Teeth, but sound: Their Hair is black and strait, their Complexion tawny, but something lighter than most of the other *Indians*: They are ingenious and nimble, but much addicted to Idleness; are civil and obliging to Strangers; but implacable when once disobliged.

Their Clothings are a Turbant tied once round the Head with both the ends fringed or laced, tied in a knot and hanging down; they wear also Breeches and Frocks over them, but neither Stockings nor Shooes. The Women tie their black and long Hair in a knot hanging down behind; they are smaller featured than the Men, and have very little Feet; their Garments are only a piece of Cloth sew'd together at both ends, and a Frock reaching a little below the Waste: They covet the acquaintance and conversation of white Men, and will be very free with them, as far as they have liberty to do: One peculiar Custom they have in the City of *Mindanao*, that so soon as any Strangers arrive, the Men of *Mindanao* come aboard to invite them to their Houses, where they are sure to enquire whether one of them has a *Pagally* (or innocent Female Friend) the Strangers are in civility obliged to accept of the offer made them of such a Friend, and to shew their gratitude by a small Present; as the continuance of the same Friendship must be purchased by some other Trifles; in return whereof they have the liberty

to

1686. to eat, drink or sleep in the Friend's House (for their Money) they having no other entertainment there *Gratis*, but a little Tobacco and Betel, a certain way of begging, tho' practised even among the richest of the place.

The City of Mindanao. The Capital City of this Isle bears the same Name with the Island, and is seated on the South side 2 Miles from the Sea side upon the Bank of a small River at 7 Deg. 20 Min. N. Lat. Their Houses are built upon Posts from 14 to 20 Foot high, having only one Floor, but with many Rooms or Partitions. The Sultan's House did rest upon 150 great Posts, and was much higher than the rest, with great broad Stairs leading up to it: In the Hall stood twenty iron pieces of Canon placed on field Carriages; the General and other great Men have also some Guns in their Houses; the Floors whereof are generally well matted, they using no Chairs, but sitting cross-leg'd. *Their Food.* Their ordinary Food here is Rice, Sago and some small Fish; but the better sort eat Boufflos and Fowl, but a great deal of Rice with them; they use no Spoons, but take their Victuals up in their Fingers. *Languages.* They speak in the City of *Mindanao* both the *Mindanayan* and *Mahayan* Languages; their Prayers are in Arabick, and they retain also some *Turkish* words: Some of the old People of both Sexes can speak *Spanish*, because the *Spaniards* had formerly divers Forts on this Isle, and would without question have brought it under their subjection, had not the fear they were in of being attack'd by the *Chineses* at *Manilla* obliged them to withdraw their Troops thither, which opportunity the present Sultan's Father laid hold on to make himself Master of their Forts, and to expel them from the Isle; but at this time, as they are most afraid of the *Dutch*, so they have often invited the *English* to make a settlement there, as believing them not so encroaching as either of the beforementioned Nations.

Trades. The chief Trades in this City are Goldsmiths, Blacksmiths, Carpenters and Shipwrights; for they build good Ships for Trade, War and Pleasure. *Traffick.* Their chief Commodities exported are Gold, Bees-wax and Tobacco; the two first they purchase from the *Highlanders* or *Mountaneers*, and the last grows all over the Isle in vast plenty: These they exchange for Calicoes, *Their Tobacco.* Muslins and *China* Silks. The *Mindanao* Tobacco is reckoned not inferior to that of *Manilla*, yet you may buy ten or twelve Pound of it for a Rial. The People of *Mindanao* are generally affected with a dry Scurf all over their Bodies with violent Itchings, which when scratched, raiseth the Skin into small white Flakes, like the Scales of small Fish, and after it goes away, leaves broad white Spots on their Bodies: As it is not infectious, so I did not perceive they made any great account of it. They are also sometimes troubled with the Small-Pox; but their ordinary Distempers are Fe- *Distempers.* vers, Agues, Fluxes, violent Pains and griping in the Guts. They have many Wives, but I never could learn *Marriages* their Ceremonies, except that they feast their Friends for the most part of the Night. They are under the *Their Sultan.* Government of a Sultan, who is poor enough, but so absolute, that he even commands every private Subject's Purse at pleasure; he was betwixt fifty and sixty Years old, and had twenty nine Concubines besides his Queen. When he goes abroad he is carried in a Couch upon four Mens Shoulders, attended by a Guard of *his Brother* eight or ten Men. He has a Brother call'd *Raja Laut*, who is both chief Minister and General; a shrewd Man *Their Wars.* of good Conversation, who both speaks and writes *Spanish* very well. In their Wars they make use of Swords, Lances and Hand-Cressers, a weapon much like a Bagonet, which the greatest to the meanest always wear about them; they never fight any pitch'd Battle in the Field, but make small wooden Forts defended by Guns, wherein they encamp, and so endeavour to surprize one another by small Parties; and they neither give nor take Quarter.

Religion. They are *Mahometans*, their Sabbath being on Friday, when the Sultan goes to his Mosque twice. In his Mosque they have a great Drum with one head only, call'd a *Gong*; this they use instead of a Bell, and is beaten by a Man at twelve, three, six and at nine of *Circumcision.* the Clock Day and Night. They never circumcise their Males till they are eleven or twelve Years old, which as it is done with a great deal of Solemnity, so private People keep their Children till some Man of quality or other circumcises his, and so make a general Circumcision. This Office is perform'd by a *Mahometan* Priest, who takes hold of the fore Skin with two Sticks, and snips it off with a pair of Scissars. We were present at the Circumcision of *Raja-Laut's* Son, which was performed with extraordinary Magnificence. 1686.

Their great Fast. Their only Fast I ever heard of is their Ramdam time, which was then in *August*; then they spend a whole Month in fasting every Day till Evening, when they spend an Hour in Prayers and afterwards go to Supper. This Fast begins at the new Moon, and continues till they see the next new Moon.

They anchor near the Isle of Mindanao. But it is time to return to our Voyage; we came to anchor at the N. E. side of the Isle; but understanding by some of the Natives, that the City of *Mindanao* was on the West side, we steered to the S. E. with a S. W. Wind. Coming to the S. E. end of the Isle we sail'd to the East of two small Isles three Leagues distant from the Shoar, and the 4th. of *July* anchored on the S W. side of a deep Bog four Leagues N. W. from the two beforementioned small Isles, in fifteen Fathom Water. The Land within the Bay on the East side was high and woody, yet watered with several Rivers; but on the West side bordering on the Sea, we saw large Plains abounding in long Grass, and vast store of Deer, of which we kill'd as many as we thought fit. We staid here till the 12th. when steering our Course to the W. we arrived *July* the 18th. at the entrance of the River *Come to the Mouth of the River of* of *Mindanao* at 6 Deg. 22 Min. N. Lat. and 23 Deg. *Mindanao.* 12 Min. Longit. West from the Lizard of *England*, where we anchored in 15 fathom Water clear hard Sand two Miles from the Shoar. Soon after *Raja Laut* and one of the Sultan's Sons came aboard us and demanded in *Spanish* who we were, and being told that we were *English*, they asked whether we were come to settle among them, of which they had had some promise before, and were now in hopes to see it effected, and to serve them for a Protection against the *Dutch*, whom they much dread. Truly, had we consider'd the matter, it would have been much for our advantage to have done so, considering the advantageous situation of the Isle of *Mindanao* betwixt the spice Islands (the three Isles of *Meangis* abounding in Spice and Cloves being scarce twenty Leagues hence) and the *Philippine*: *A Probability of a settlement here.* Neither did we want any thing requisite for such a settlement, being provided with all sorts of Artificers, as Carpenters, Bricklayers, Shoomakers, Taylors, &c. As also with convenient Tools and Arms, Guns, great and small, and Ammunition sufficient for such a beginning. And considering the great distance of this Island from *England*, yet we needed not to have been without hopes of seasonable Supplies thence, provided the Ships did set out from that Kingdom the latter end of *August*, and passing round *Terra del Fuego* stretch over towards *Mindanao*; or else they might coast down near the *American* Shoar, as far as it was found requisite, and then direct their Course for this Isle to avoid the *The best way to sail to the Philippine Isles.* *Dutch* Settlements, and to have the advantage of the East Trade-wind after they were past *Terra del Fuego*, by which means this Voyage might be perform'd in six or seven Months, which in passing by the Cape of *Good Hope* would at least require eight or nine Months.

But to return to *Raja Laut* and his Nephew, they invited Captain *Swan* a-shoar, and promised to furnish him with what Provisions he wanted; designing, that in the mean time we would secure our Ship in the River, for fear of the approaching West Winds, which Captain *Swan* after some consideration agreed to.

The River of Mindanao. The River on which *Mindanao* stands being but narrow, and having not above eleven foot Water on the Bar at Spring Tide, we had much ado to get our Ship about a quarter of a Mile within the Mouth, where we moved her Head and Stern in a hole, so that she always lay afloat. The City of *Mindanao* is a Mile in length, but not very broad, stretching along the right Bank of the River as you enter it, tho' it has also some Houses on the opposite side. The Inhabitants frequently came aboard us, and invited our Men to their Houses, where they were kindly entertain'd after their manner, with Tobacco and Betel; and such of them as had Money and Cloaths, did not want their *Pagallies* or *Platonique* Companions: Captain *Swan* was daily entertain'd at *Raja Laut's* House, and such of his Men as had no Money, had boil'd Rice, scraps of Fowl and of Buffloes Meat given them. After their Ramdam was over we were diverted with the Women Dancers, and such like Sports, as are usual in this Country. *They are kindly receiv'd by their Inhabitants.*

But notwithstanding all these outward appearances of Friendship, we soon after began to discover *Raja Laut's* sinister Intentions; for our Ships bottom being much eaten with the Worms (for this is the worst place in the World for Worms) and we beginning in *November* to remove the sheathing Plank to see whether the Worm had penetrated to the main Plank, in the presence of the said *Raja*, he could not forbear to discover

1687. ver his Diſappointment, by ſhaking his Head and telling us, *That he had never ſeen a Ship with two Bottoms before.* Beſides, that he did not perform his Promiſe in providing us with Beef, pretending he could get none; and borrow'd a conſiderable Sum of Gold of Captain *Swan*, which he never paid, notwithſtanding he had received conſiderable Preſents of him before. Theſe Diſappointments began to induce the greateſt part of our Men to think of leaving this Place (ſuch eſpecially as had not much Mony) therefore our Ship being provided with new Plank inſtead of the Worm-eaten, and the Bottom Sheathed and Tallow'd, by the 10th of *December*, they began to urge Captain *Swan* to prepare for the continuation of their Voyage. Captain *Swan* appointed them the 13th of *January* to be all aboard ready to ſail; but many of them being unwilling to part ſo ſoon, others having diſpers'd themſelves in the Country, (by the encouragement of *Raja Laut*) and the Captain himſelf not being very ready to come aboard by reaſon of ſome Diſorders among our Men; they depoſed him from his Command, and having choſen Captain *Teat* in his room, they weighed the 13th in the Morning, and ſet ſail the 14th of *January* from the River *Mindanao*, leaving Captain *Swan* with about ſourty four of his Men, (beſides ſixteen buried there) behind in the Town and City of *Mindanao*. We coaſted to the W. along the S. ſide of the Iſle of *Mindanao*; and the next Day we paſt in ſight of *Chambungo*, a Town of this Iſle 30 Leagues from the River of *Mindanao*, ſaid to be a good Harbour; ſix Leagues on this ſide of the W. end of the Iſle of *Mindanao*, we ſaw a great many ſmall low Iſles, and three Leagues to the S. of them another Iſland ſtretching twelve Leagues in length N. E and S. W. Betwixt theſe Iſles, and alſo betwixt them and the great Iſle, are good Channels but a ſtrong Tide. The 17th we anchored on the E. ſide of theſe Iſles in eight Fathom; and to the W. upon the Shoar of *Mindanao*, ſaw the Ruins of an old Stone Fort formerly belonging to the *Spaniards*. The 27th, we got about the W. point of *Mindanao*, lying under the Shoar to the N. with a freſh N. N. E. Gale, and continued the ſame Courſe till we came abreaſt ſome of the other *Philippine*-Iſles to the N. of us, and then ſteer'd towards them, yet ſo as to keep on the W. ſide. *February* 3d. we Anchored in a Bay on the W. ſide of a nameleſs Iſle, at 9 deg. 15 min. on the W. ſide of the Iſle of *Sebo*, in thirteen Fathom Water ouzy Ground. Its length is eight or ten Leagues. In the middle of this Bay we ſaw a low ſmall woody Iſle, haunted by a ſort of Batts of the bigneſs of a large Fowl, their Wings when extended being ſeven or eight Foot long. Every Night we ſaw them in vaſt ſwarms take their Flight towards the great Iſle, and return to the little one in the Morning.

Prepared for their Departure. *They leave Mindanao.* *And Proceed on their Voyage.* *Prodigious Batts.*

February 10th, we ſet Sail hence with a N. wind, coaſting along on the W. ſide of the reſt of the *Philippine*-Iſles. In our paſſage by *Panay* (a large Iſle Inhabited by the *Spaniards*) we ſaw many Fires, ſuppoſed to be lighted to give notice of our Approach, it being rare to ſee a Ship on this Coaſt. The 18th, we came to an Anchor at the N. W. end of the Iſle of *Mindora* in ten Fathom. It is a large Iſle, the middle of it lying at 13 deg. Lat. it ſtretches in length 40 Leagues N. W. and S. E. A ſmall Brook of freſh Water runs into the Sea near the Place were we Anchored; and we ſaw good ſtore of Hogs and Oxen, but they were ſo wild we could catch or kill none.

The Iſle of Mindora.

Whilſt we were here a Canoe with four *Indians* came hither from *Manilla*, who told us, *That the Harbour of* Manilla *was ſeldom without twenty or thirty Veſſels*, Chineſe, Portugueſe *and* Spaniards; *and that if we had a mind to Trade (clandeſtinely) they would carry our Letters to certain Merchants there.* The 21ſt, we ſet ſail again, and the 23th came to the S. E. end of the Iſle of *Luconia*, we took two *Spaniſh* Barks from *Pagaſanan*, a ſmall Town on the N. end of this Iſle, bound to *Manilla*. One of theſe had Goods aboard for the *Acapulco* Ship. The Iſle of *Luconia* extends in length 6 or 7 deg. of Lat. and its breadth near the middle 60 Leagues. The S. end is at 12 deg. 30 min. and the N. end at 19 deg. N. Lat. It is ſurrounded by many other ſmall Iſles, eſpecially at the N. end. *Mindora* is the Chief and the neareſt to it, and imparts its Name to a Channel that runs betwixt it and the Iſle of *Luconia*; call'd the Streights of *Mindora*. The Country is partly compoſed of large paſture Plains, partly of Mountains. Theſe afford ſome Gold, as the Savannahs or Plains are well ſtor'd with Buaffaloes, Bullocks, Horſes, Sheep, Goats and Hogs. The Inhabitants who live in little Towns, are *Indians* under the *Spaniſh* Juriſdiction, and inſtructed in the Romiſh Religion by *Spaniſh* Prieſts.

The Iſle of Luconia. *The Streights of Mindora.*

1687.

Manilla is the Chief, if not the only City of the Iſle of *Luconia*, ſeated at the foot of a ridge of high Hills fronting the Harbour, near the S. W. point of the Iſle, at 14 deg. N. Lat. It is defended by a ſtrong Wall, the Houſes are ſpacious, ſtrong, and covered with Pantile; and the Streets large and regular, with a Market-place in the midſt. They have many fair Churches and Convents. The Harbour is very large. Beſides the two great *Acapulco* Ships they have abundance of ſmall Veſſels of their own, the *Chineſe* have commonly thirty or forty Junks or ſtout Veſſels here; and the *Portugueſe* have alſo liberty of Trafficking in this Iſle. Many *Chineſe* Merchants reſide conſtantly in this City, a League on this ſide. The City is a ſtrong Fort to defend the Harbour where the great Ships lay at Anchor. The greateſt part of this Relation I had from Mr. *Coppinger*, our Chirurgion, who came hither from the Coaſt of *Coromandel*.

The City and Harbour of Manilla.

The time of the Year being too far ſpent for our purpoſe, we reſolved to ſail for *Pulo Condore*, a knot of ſmall Iſles on the Coaſt of *Cambodia*, and to return in *May* to lay in wait for the *Acapulco* Ship. Accordingly the 26th of *February* we ſet ſail from *Luconia*, coming to 14 deg. N. Lat. we ſteer'd S. by W. for *Pulo Condore*, and in our way thither got ſight at the S. end of the *Pracel* ſhoals, of three little ſandy Iſles or large ſpots of Sand ſtanding juſt above the Water a Mile from us. The 13th of *March*, we came in ſight of *Pulo Condore*, i. e. The Iſle of *Condore*, and Anchored the 14th on the N. ſide of the Iſle in ten Fathom clean hard Sand, two Mile from the Shoar. *Pulo Condore* is the Chief of a knot of Iſles, and the only Inhabited one of them, at 8 deg. 40 min. N. Lat. forty Leagues S. by E. from the mouth of the River of *Cambodia*. Two of theſe Iſles are pretty high and large, the reſt very ſmall. That we ſpeak of is five Leagues long lying E. and W. and three Miles broad, but in ſome places not a Mile; the other large Iſle is three miles long, ſtretching N. and S. Betwixt theſe two at the W. end of the largeſt, is a convenient Harbour, the Entrance at the north ſide, where theſe two Iſles lie a Mile aſunder. On the largeſt Iſle grows a tall Tree, the Trunk three or four Foot Diameter; which the Inhabitants cut horizontically half through a Foot from the Ground, and then cutting the upper part aſlope inwardly down till it meets with the tranſverſe Cut; thence diſtills a Liquor into a hollow made in the ſemicircular Stump, which when boil'd becomes good Tar, and if boil'd more, perfect Pitch; and anſwers both uſes. Such a Tree affords two Quarts of Juice every Day for a Month together, then dries up and recovers again. Here are alſo *Mango*-Trees, the Fruit whereof they Pickle whilſt green, with Salt, Vinegar and a little Garlick. Grapes grow in this Iſle on a ſtrait Tree of a foot Diameter, in cluſters about the Body of the Tree like the Cocoes, They are both Red and White much like our Grapes, and of a pleaſant Taſte.

The Pracel-Shoals. *The Iſle of Condore.* *A Tree affording Pitch and Tar.* *Mangoes.* *The Vine-Tree.*

This Iſle alſo abounds in wild Nutmeg Trees: Theſe are of the bigneſs of our Walnut-Trees, and the Fruit grows among the Boughs like our Walnuts: It is ſmaller than the true Nutmeg, but grows like it, and is of the ſame ſhape, but without Smell or Taſte. Beſides Hogs, Guanoes and Lizards, theſe Iſles have divers ſorts of Birds, as Parrots, Parakites, Turtle-Doves, Pigeons and wild Cocks and Hens. The Sea affords Limpits, Muſſels and Tortoiſes. They have many freſh Water Brooks running into the Sea for ten Months in the Year; and lie very conveniently for Traffique with *Japan*, *China*, *Manilla*, *Tunquin*, *Cochinchina*, &c. The Inhabitants of the Iſle of *Condore*, are originally *Cochinchineſes*; of a mean Stature, but well ſhaped, much darker than the *Mindanayans*; their Hair is ſtreight and black, their Eyes of the ſame Colour, but ſmall, and ſo are their Noſes, yet pretty high; their Lips thin, with a little Mouth and white Teeth. They are very Civil but Poor, having no other Employment but to gather the Juice for Tar, and draw ſome Oil from the Fat of the Tortoiſes; which they Tranſport to *Cochinchina*. They offer their Women to all Strangers for a very ſmall matter, a Cuſtom uſed alſo at *Peru*, *Siam*, *Cochinchina* and *Cambodia*, in the *Weſt-Indies*, and on the Coaſt of *Guinea* in *Africa*, and alſo at *Tunquin*. They are Pagans, and Worſhip chiefly the Elephant and Horſe, beſides other Images of Birds and Fiſh; but I obſerved none of a human Shape. The 15th of *March* we look'd for a Place to careen in, and having met with one, we entred the ſame the 16th, where we ſtay'd till the 16th of *April*; when we went hence

Wild Nutmeg-Tree. *The Inhabitants.* *Their Religion.*

1687 hence to the place where we Anchored before on the north side of the great Isle, to fill fresh Water, which being accomplish'd by the 21th, we set sail again from *Pulo Condore*, our Course W. by S. with an E. N. E. Wind for the Bay of *Siam*.

Pulo Ubi. The 23th we came to the Isle of *Ubi* forty Leagues W. of the Isle of *Condore*, lying at the Entrance near the S. W. Point of Land, that makes the Bay of *Siam*; call'd the Point of *Cambodia*. Its Circumference is seven or eight Leagues, being higher Land than any of the *Condore*-Isles. It has good Water on the N. side, where you may Anchor; but the best Anchorage is on the E. side against a small Bay. The 24th we entred the Bay of *Siam*, which is very deep; and went in among the Isles at the bottom of the Bay. In one of these we found a small Village inhabited by Fishermen, but no Fish, so we turn'd back; but being becalm'd did not return to *Pulo Ubi* till *May* 13th, where we cast Anchor on the east side, and were detain'd by Tempests till the 20th. The 21th of *May*, we set sail thence back for *Pulo Condores*, where we came to an Anchor the 24th. Here five or six of our Men going aboard a *Malayan* Vessel, were stabb'd by the Ship's Crew. *June* the 4th, being provided with Fuel and fresh Water, we set sail from *Pulo Condore* with a S. W. Wind, intended to sail for *Manilla*; but the Wind soon after turning E. and S. E. and continuing so for ten Days, we were forced to alter our Course, and to steer for the Isle of *Prata*, a small low Island enclosed with Rocks, in the way betwixt *Canton* (a *Chinese* Sea-Port) and *Manilla*, at 20 deg. 4 min. N. Lat. But the east Winds continuing for five or six Days longer with great violence; we saw our selves obliged to alter our Resolution once more, and to follow the Wind which brought us near the *Chinese* Shoar the 25th of *June*, where we came to an Anchor on the N. E. end of the Isle of S. *John*, lying on the Sea Coast of *Quanteng* or *Canton* in *China*, at 22 deg. 30 min. N. Lat. The only Grain we observed here, was Rice in great plenty. Their tame Cattle were *China* Hoggs, Buffaloes, Goats and some Oxen. The Inhabitants were *Chineses*, and consequently now under the Subjection of the *Tartars*. For a more particular Account of both these Nations, I will refer my self to other Authors who have dwelt a considerable time in this vast Empire. In the Isle of S. *John* was a small Town built in a marshy Ground upon Posts, the Houses mean and low and ill Furnish'd. The Inhabitants live for the most part upon cultivating their Grounds, which produce Rice. Whilst we lay at Anchor here a *Chinese* Jonk Anchored near us. She was flat both at the Head and Stern, with little Hutts on her Deck of three Foot high, covered with *Palmeto*-Trees. She had a large Cabbin with an Altar and Lamp burning in it. The Hold was divided into several Partitions each of them so tight, that if a Leak should spring in one, the Goods in the next would receive no Damage. Every Merchant has his peculiar Room, where he stows his Goods, and sometimes lodges in it himself. These Jonks have no more than two Masts, *viz.* a Main-mast and Fore mast. The last has a square Sail and square Yard; but the Main-mast has a Sail narrow aloft like a Sloop's Sail; in fair Weather they use also a Top-sail, which they hawl down on the Deck in foul Weather, Yard and all. The Main-mast of the biggest Jonks are as big as any of our third Rate Men of War, but not pieced, being all of one Tree.

The Isle of Prata. *The Isle of S. John.* *A Chinese Jonk.*

As we saw the fore-runners of an approaching Tempest, we weighed Anchor not to want Sea room. It was not long before we found our guess too true, for the next Day being the 4th of *July*, the Wind coming to the N. E. we were surprized by the most violent Tempest I ever remember in all my Voyages, which lasted by intervals till the 6th, when the Weather proved very serene; we refitted our Ship, but our Men being terrify'd to the highest degree by the last Storm and dreading the approaching full Moon, resolved to steer towards the *Piscadores* or *Fisher*-Isles, at 23 deg. N. Lat. These are a good number of Islands lying betwixt the Isle of *Formosa*, and the Continent of *China*. Betwixt the two eastermost is a good Harbour; and on the west side of the eastermost is a large Town and Fort, defended by a *Tartarian* Garrison of three hundred Men. The Houses were low, but neatly built. On the Island on the west side of the Harbour near the Sea side, we saw another small Town Inhabited by *Chineses*, and most of the other Isles have some *Chineses* (more or less) living on them. We came to an Anchor in the Harbour *July* 20th, and sending our Boat ashoar, were civilly received by the *Tartarian* Governor; who sent us some Presents (among the rest a Heifer, the finest Beef I ever eat in my Life) but would not allow us either to Trade there, or come ashoar on that Isle. In return of which Mr. *Read* (now our Captain) sent him a Silver hilted Sword, a Carbine and a Golden Chain.

The Pisca-dore-Isles.

1687.

We set sail again from hence the 29th, with a S. W. Wind steering for certain Islands we had pitch'd upon that lie betwixt *Formosa* and *Luconia*, being known by no other Names than the *Five*-Isles. We sail'd by the S. W. end of *Formosa*, a large Isle situated betwixt 21 deg. 20 min. and 25 deg. 10 min. N. Lat. from S. to N. Its Longit. is from 142 deg. 5 min. to 143 deg. 16 min. E. from the Pike of *Teneriff*. It was formerly well Inhabited by the *Chinese* and *English*, but the *Tartars* have since spoil'd the Harbour for fear the *Chineses* should Fortifie themselves there. *August* 6th, we came to an Anchor on the east side of the northermost of the *Five*-Isles in fifteen Fathom Water. They lye at 20 deg. 20 min. N. Lat. and their Longit. according to the Charts is 141 deg. 50 min. Contrary to our expectation we found on the Isle near which we Anchored, three or four large Towns. The westermost Isle is the biggest; this the *Dutch* among us call'd the Prince of *Orange*'s Isle, being seven or eight Leagues long, and two broad, stretching N. and S. There are two more large Isles; the northermost we call'd *Grafton*-Isle; it stretches four League in length N. and S. and is one League and a half broad; unto the third great Isle, we gave the Name of *Monmouth*-Isle, lying to the south of *Grafton*-Isle, three Leagues long N. and S. and one broad. The other two Isles lying E. and W. betwixt *Monmouth* and the S. end of *Orange*-Isle, they are call'd the *Bashee* (from a certain Liquor we did drink there) and the *Goat*-Isles. *Orange*-Island is the largest but uninhabited, being Rocky and Barren, and no Anchorage near it. *Monmouth* and *Grafton*-Isles are Hilly, but well Inhabited. The *Goat* and *Bashee*-Isles, are flat and even, and the first has one Town in it.

The five Isles. *The Isle of Formosa.* *Orange-Isle.* *Grafton-Isle.* *Monmouth Isle* *The Goat and Bashee Isles.*

The Hills of all these Isles are Rocky, but the Valleys fertile in Grass, Plantains, Bananoes, Pine-Apples, Pumkins, Sugar-Canes, Potatoes, and some Cotten; and are well watered with Brooks of Fresh Water. They are also well stor'd with Goats and Hogs, but scarce any Fowl either Wild or Tame. The Natives are short and thick, round Visaged, with low Fore-heads and thick Eye-brows; their Eyes of a Hazel colour and small, but much bigger than the *Chineses*. Their Noses are both low and short; their Lips and Mouth middle siz'd, with white Teeth; and thick, black, lank Hair, cut short to the Ears; their Complexion is of a dark Copper colour. They go always bare Headed, and the greatest part have no other Cloaths but a Clout about the middle. Some have Jackets of Plantain-leaves as rough as a Bear-skin. The Women have a kind of a short Petticoat of a course Callicoe (of their own making) which reaches a little below the Knees. Both Sexes wear Ear-rings made of a yellow Metal (they dig out of their Mountains) having the weight and colour of true Gold, but something paler, whether it were such in effect or no I am not able to tell; for it looks of a fine Colour at first, but afterwards fades; which made us suspect it, and therefore our People did not buy too much of it. We observed the Natives to besmear it with a red Earth, and then putting it into a quick Fire till it was red hot, brought it to its former Colour again. Their Houses are small and scarce five foot high. They inhabit in Villages built on the sides of rocky Hills, three or four Rows above one another. These rocky Precipices are fram'd by nature into different degrees, or as it were deep Steps or Stories, upon each of which they build a row of their Houses, and ascend up to them gradually by Ladders set from each of these Rows, up to one another in the middle of it; which if they remove, there is no coming at them.

The Inhabitants. *A Metal like Gold.* *Their Houses and Villages.*

They are also very expert in building their Boats (for the Men live most upon Fishing) much like our *Deal*-Yalls. They have also larger Vessels managed with twelve or fourteen Oars, two Men on one Bank. They never kill any Goats or Hogs themselves, but feed upon the Guts or Entrails, and their Skins, which they broil after they have singed the Hair off. They make also a Dish of Locusts which come at certain Seasons to devour their Potatoes; they take them with Nets, and broil or bake them in an earthen Pan: This Dish eats well enough. Their ordinary Drink is Water, but besides this they boil a sort of Liquor out of the Juice of Sugar-Canes, mix'd with a sort of black Berries. This they put afterwards into Jars and let it work

Their Boats. *Their Food and Drink.*

1687. work four or five Days; after it is settled it becomes clear, and affords a strong and pleasant Liquor in Taste and Colour not unlike *English* Beer. The Natives call this Liquor *Bashee*, whence our Crew gave this Name to one of the Isles. What Language they speak I know not, as having not any affinity either with the *Chinese* or *Malayan* Languages. The Men's only Arms, are Lances headed with Iron; and they wear a kind of Armour of a Buffaloe's Hide, without any Sleeves, and reaches down below the Knees, where it is three Foot wide, and as stiff as a Board; but close about their Shoulders. I could not find them to worship any thing, nor saw I any Idols; or any Precedency or Government among themselves, except that the Children were very respectful to their Parents. However 'tis likely they have some antient Customs instead of Laws, for we saw a young Lad buried alive, as we supposed, for Theft. They have but one Wife, and the Children are very obedient to their Parents. The Boys are educated to Fishing, and the Girls to work with their Mothers in the Plantations, which are in the Valleys, where every Man plants his own Ground according to the bigness of his Family. For the rest they are a sort of civil and quiet People, not only to Strangers but also among themselves; for in all the time we were here, whilst they came frequently aboard us, and used to exchange their yellow Metal, their Goats and Fruits for Iron, we never observed them to differ either among themselves or with our Men, even when there was not occasion wanting. They have no Coin or Seals, but give their Pieces of yellow Metal by guess. During our stay here we had provided our selves with seventy or eighty fat Hogs, and good store of Potatoes for our intended Voyage to the Isle of *Manilla*. But the 25th of *September*, being again surprized by a most violent Tempest, which forced us out at Sea, where we were every moment in danger of being swallow'd up by the Sea till the 29th, when the fury of the Winds being somewhat allay'd, we made the best of our way back towards the Isle, of which we got sight the 30th, but could not come to an Anchor in the same place where we were before till the first of *October*. This last Storm so disheartned our Men, that they all resolved to lay aside their design of Cruizing before *Manilla*; but at the persuasions of Captain *Read*, and Captain *Teat* the Master, they resolved to go to Cape *Comorin*, and thence into the *Red* Sea. As the Eastern Monsoon was at hand, our nearest and best way had been to pass through the Streights of *Malacca*. But Captain *Teat* persuaded them to go round on the east side of the *Philippine*-Isles, and so keeping S. to the *Spice*-Isles, to pass into the *Indian* Ocean about the Isle of *Timor*.

CHAP. X.

The Isle Celebes *and* Bouton. Callasusung, *its Chief Town and Harbour.* New Holland. *The* Nicobar-*Isles.* Cudda *a Harbour on the Coast of* Malacca. *A Golden Mountain in* Sumatra. *The River and Town of* Passange Jonca. *Of Prince* Yeoly *who dy'd at* Oxford, *and the Isle of* Meangis *his Native Country. A Description of the Cape of* Good Hope, *and the* Dutch *Factory.*

1687. WE set sail the 3d of *October* from the Isles to the S. intending to pass through the *Spice*-Islands. We sail'd on the east side of *Luconia* and the other *Philippine*-Isles coasting to the S. From the Isle of *Luconia* we steer'd to the S. and on the 15th with a N.E. wind directed our Course W. for the Isle of *Mindanao*, where we Anchored at the S. E. end the 16th, between two small Isles lying at 5 deg. 10 min. N. Lat. four Leagues from the Isle of *Mindanao*. Whilst we laid here, the young Prince of one of the adjacent *Spice*-Islands, came aboard us, and told us, *That Captain* Swan *and some of his Men were still in the City of* Mindanao, *and highly esteem'd there for the great Services they had done against the* Alfoores. But I have been inform'd since that he and his Surgeon as they were going aboard a *Dutch* Ship in that Road, were overset and drown'd by the Natives, by *Raja Laut*'s Order (as was supposed) who had seized all his Gold.

November 2d, We set sail hence for the Island *Celebes*, where we Anchored the 9th at the N. E. end. The Isle extends its length from N. to S. at 7 deg. Lat. and in breadth 3 deg. It lies under the Line, the north end at 1 deg. 30 min. N. Lat. and the south end at 5 deg. 30 min. S. Lat. At the S. end of the Isle is a Gulph eight Leagues wide and fifty long, running directly N. into the Country, having divers small Islands in the middle of it. Near the S. end at the W. side of the Isle is seated *Macasser*, a rich and strong Town belonging to the *Dutch*. By reason of the strong Current setting to the W. we had much ado to get to the E. side of the Isle, and the 22d, being at 1 deg. 20 min. S. Lat. we saw a large Opening like a Creek, and 6 Leagues to the S. of it, a rang of large and small Isles, and many Shoals; betwixt which and the Isle of *Celebes*, we pass'd not without trouble, and came to an Anchor half a Mile from the great Island in eight Fathom sandy Ground, at 1 deg. 50 min. S. Lat. we stay'd there till the 29th, and the 30th steer'd away S. betwixt two Shoals, at 3 deg. S. Lat. ten Leagues from the Isle of *Celebes*. Towards the Evening we saw two or three Spouts. A Spout is a Piece of a Cloud hanging down seemingly sloping, and sometimes bending like a Bow, but never perpendicular. After which the Sea begins to foam, and you see the Sea move gently round, till increasing in a whirling motion, it flies upwards a hundred Spaces in circumference at the bottom, but lessening gradually to the smalness of a Spout; through which the Sea Water appears to be convey'd into the Clouds; as is manifest by the encrease of the Bulk and Blackness of the Clouds. Then you see immediately the Cloud (which was immoveable before) drive along, and the Spout keeping the same course for half an hour, till the sucking is over, and then breaking off, all the Water which was below the Spout or pendulous Cloud, falls again into the Sea with a terrible Noise and Clashing. However these Spouts are more terrible than hurtful.

The Isle of Celebes.

A Spout at Sea.

December 1st, steering S. with an E. S. E. wind at 3 deg. 34 min. S. Lat. we got sight of the Isle of *Bouton*, about ten Leagues S. W. of us. The 5th we got close to the N. W. end of *Bouton*-Isle, but the Harbour is at the east side at 4 deg. 54 min. S. Lat. This Island stretches twenty five Leagues in length S. W. and N. E. four Leagues from the S. E. end of the Isle of *Celebes*; its breadth is ten Leagues. Within a League of the Harbour and a Mile from the Sea, is a large Town call'd *Callasusung*, seated on the top of a small Hill, in a pleasant Plain enclosed with a Walk of Cocoe-Trees, and about these with a strong stone Wall. The Inhabitants are not unlike the *Mindanayans*, but neater, are Mahometans, and speak the *Malayan* Language. The Sultan is absolute Master over them. The 6th they brought us Eggs, Fowls, Potatoes, &c. aboard, and the Sultan came soon after in Person, in a Boat guarded by ten or twelve Musquetteers. We stay'd here till the 12th and then steering to the S. E. we pass'd near four or five small Isles at 5 deg. 40 min. S. Lat. six Leagues from *Callasusung* Harbour; we saw three Towns on them, and heard the Drums beating all Night as we were among the Shoals, lying on the S. W. side of these Isles. The 16th we got clear of the Shoals, and the 20th pass'd by *Omba*, a high Island at 8 deg. 20 min. S. Lat. six Leagues from the N. E. part of the Isle of *Timor*. Its length is fourteen Leagues its breadth six Leagues. Eight Leagues to the West of *Omba* we saw another Isle with a large Town on it, and Fires by Night, which by its situation we guess'd to be the Isle of *Pentare*; here we were beaten among the Shoals till the 23d. when we got thro' with a N. Wind keeping close by *Pentare*. The 28th. we saw the N. W. Point of *Timor*, distant eight Leagues S. E. by East. The Isle of *Timor* is high and mountainous stretching in length seventy Leagues N. E. and S. W. its breadth sixteen Leagues; the middle of it at 9 deg. S. Lat. The 29th, we discover'd two small Isles near the S. W. end of *Timor*, and being got clear of these, we stood off S. towards *New Holland*, part of the *Terra Australis incognita*.

The Town of Callasusung.

The Isle of Omba.

The Isle of Pentare.

The Isle of Timor.

The 31st. we stood to the S. wind at W. at 13 deg. 20 min. Lat. At Night we stood to the N. for fear of a Shoal, laid down in the Charts at 23 deg. 50 min.

bear-

1688 bearing S. by W. from the E. end of *Timor*. In the Morning we saw the Shoal, being a spot of Land appearing above the Surface of the Water, with divers Rocks about it ten Foot above the Water; it is of a triangular Form, each side one League and a half long. This Shoal is represented in our Charts sixteen or twenty Leagues from *New Holland*; but we run at least sixty Leagues afterwards due S. before we fell in with it; and I am very certain that no part of *New Holland* lies so far to the N. by forty Leagues as it is laid down in our Hydrographical Maps; for I found the Tides on the Coast of *New Holland* keeping their constant Course, the Flood running N. by E. and the Ebb S. by E. The 4th of *January* we fell in with the Land of *New Holland*, at 16 deg. 50 min. Lat. and running along to the E. twelve Leagues, came to a Point of Land, three Leagues to the E. of which is a deep Bay. We Anchored a League to the E. of this Point *January* the 5th, two Mile from the Shoar, in twenty nine Fathom hard Sand and clean Ground.

Error of the Maps concerning N. Holland.

1688.

New Holland is a vast Tract of Land, but whether an Isle or part of the Continent, is unknown hitherto; thus much I am sure of, that it neither joins to *Asia*, *Africa*, or *America*. Hereabouts it was even, low and sandy Ground, the Points only excepted, which are Rocky, and some Isles in this Bay. This part had no fresh Water except what was dug, but divers sorts of Trees, and among the rest the Dragon-Tree, which produces the Gum-*Dragon* or *Dragon's Blood*. We saw neither Fruit Trees, nor as much as the Tract of any living Animal except one, which seem'd to be the Foot-step of a Beast of the bigness of a large mastiff Dog. Some few Land Birds they have, but none bigger than a black Bird, and scarce any Water Fowl. Neither does the Sea afford any other Fish except Tortoises and Manatees, of both which they have vast Plenty. The Inhabitants are the most miserable Wretches in the Universe, having no Houses or Covering but the Heavens, no Garments, except a piece of the Bark of a Tree ty'd like a Girdle round the Waste; no Sheep, Poultry, or Fruits; but feed upon a few Fish, Cockles, Mussels and Periwincles; without Religion or Government, but co-inhabit promiscuously. For the rest, their Bodies are strait, thin, and long Limb'd; with great Heads and Eyebrows, and round Foreheads. Their Eye-lids are constantly half closed to keep the Flies out, which are excessive troublesome here. They have large bottle Noses, thick Lips and wide Mouths. Both Men and Women, Old and Young, want the two Fore-Teeth of the upper Jaw, but whether they draw them I am not able to tell. They have no Beards, but black short curl'd like the *African* Negroes, and are as black as these. Their Weapons are a sort of wooden Cutlasses; instead of a Lance they have a strait Pole sharpned and hardned at the end. Of their Language I can say nothing, but that they speak pretty much in the Throat. We landed several times, and at last brought them to something of a familiarity with us, by giving them some old Cloaths; but could never prevail with them to give us the least Assistance in carrying Water or otherwise, they being very averse to working.

N. Holland.

The Dragon-Tree, and Gum-Dragon.

Its Inhabitants.

1688. We set sail from hence *March* the 12th, taking our Course N. The 26th we were in the Latit. of the *Cocoe*-Island, which lies at 12 deg. 12 min. The 28th we fell in with a small Isle at 10 deg. 30 min. We set sail from thence the same Afternoon, the wind at W. and N. W. which continued with tempestuous Weather till *April* 7th, when we got sight of the Isle of *Sumatra*, bearing N. being then at 7 deg. S. Lat. and the 8th saw the W. end of that Isle, being at 6 deg. S. Lat. We sail'd along the W. side of *Sumatra*, and the 12th came to *Triste*, an Isle scarce a Mile in Circumference, so low that the Tide over-flows it; it has a sandy Soil, and store of Coco-nuts. Its situation is 4 deg. S. 15 Leagues W. of *Sumatra*. The 19th being in 3 deg. 25 min. S. Lat. we saw the S. W. point of the Isle of *Nassaw*, bearing N. five Mile distance. The 25th we crost the Line, coasting to the N. on the W. side of *Sumatra*. *May* the 1st, we run down by the N. W. end of *Sumatra*, directing our course to the *Nicobar* Islands; we got sight of them the 4th. A cluster of Islands lying S. of the *Ordemans* Isles, but the most southerly of them is properly called the *Nicobar*, lying forty Leagues N. N. W. from the N. W. end of *Sumatra*. The Inhabitants Trade promiscuously with all the European Nations, their chief Commodities being Ambergreese and Fruits. The 5th of *May* we Anchored in a small Bay at the N. W. end of the Isle of *Nicobar*, properly so call'd, in eight Fathom Water. Its length is twelve Leagues, the breadth three or four, at 7 deg. 30 min. N. Lat. It produces great plenty of Cocoes and Mellories, a Fruit of the bigness of the *Bread*-Fruit at *Guam* (before-mentioned) which the Natives boil with Water in covered Jars. The Inhabitants here are strait Limb'd, long Visag'd, with black Eyes, and well proportion'd Noses; their Hair is lank and black, their Complexion of a Copper-colour. The Women have no Eye-brows, I suppose they pull'd them out, because the Men did not like them. The Men wear only a kind of Sash round their middle: And the Women nothing but a Petticoat from the Waste to the Knees. Their Language had some Words of *Malayan* and *Portuguese* in it. Their Habitations were built upon Posts near the Sea side; but I could find no settled Government among them. Their Canoes were flat on one side with Outlayers like those of *Guam*. Mr. *Hall*, Mr. *Ambrose* and I, being desirous to leave this unruly Crew, were set ashoar on this Isle, with an Intention to go hence to *Achin*.

1691. *The Inhabitants.*

The Author leaves the Ship.

1688. Accordingly we left this Isle *May* the 15th, with four *Malayans* and a *Portuguese* in a *Nicobar* Canoe, not much bigger than one of our below Bridge *London* Wherries. We Row'd to the S. four at a time, by turns. The 17th we look'd out for *Sumatra*, supposing we were within twenty Leagues of it, but instead thereof saw *Nicobar* at eight Leagues distance. At Noon we found 6 deg. 55 min. Lat. The 18th the Wind encreasing upon us, we were forced to run before the Wind and Sea. The Tempest was so violent, that we expected every moment to have been swallow'd by the Sea-waves. The 19th to our great Joy, one of our *Malayan* Friends, cry'd out, *Pulo Way*, i. e. the Isle of *Way*, situated near the N. W. end of *Sumatra*, which about Noon we discovered to be the Coast of *Sumatra* it self; the high Land they had mistaken for the Isle of *Way*, proved the *Golden*-Mountain of *Sumatra*. The 20th we steer'd with a W. wind for the Shoar, and in the Afternoon Anchored near the Mouth of the River *Passange Jonca* (in the Isle of *Sumatra*) thirty six Leagues to the E. of *Achin*, and six Leagues to the W. of *Diamond*-point. As we were half dead with the Fatigues of this Voyage, we were carried to a small Fisher Town near the River, where we were kindly treated by the Inhabitants, and staid till *June*, when we left this place and in three Days sail arrived at *Achin*. In *July* following I went with Captain *Welden* to *Tonquin*, and return'd to *Achin* in *April*, where I staid till *September*, when making a short Voyage to *Malacca*, I came thither again at *Christmas*. Soon after I went to Fort S. *George*, whence after a stay of five Months, I came back to *Bencouli*, an *English* Factory on the W. Coast of *Sumatra*. But before I give you an Account of my return to *England*, I must not forget to remember one Passage concerning the Painted Prince who dy'd at *Oxford*. His Name was *Feoly*, and was purchased by one Mr. *Moody* at *Mindanao*, together with his Mother. Mr. *Moody* and I went together to *Bencouli*, where at parting he gave me half the share in this Painted Prince and his Mother, and left them in my custody. They were born in the Isle of *Meangis*, abounding in Gold, Cloves and Nutmegs, as he himself told me. He was curiously Painted down the Breast, betwixt his Shoulders behind, but most of all on the Thighs before; after the nature of Flower-works. By what I could understand this Painting was done by pricking the Skin, and rubbing in it a certain Gum of a Tree call'd *Dammer*, used instead of Pitch in some parts of the *Indies*. He told me that they wore golden Ear-Rings, and Bracelets about their Arms and Legs. That their Food was Potatoes, Fowl and Fish. As to his Captivity, he said, that one Day as he, his Father and Mother, were going in a Canoe to one of the two adjacent Isles, they were taken by some *Mindanayan* Fishermen, who sold them all to the Interpreter of *Raja Laut*, with whom he and his Mother lived as Slaves five Years, and then were sold for sixty Dollars to Mr. *Moody*. Some time after Mr. *Moody* presented me also with his Share in them, but the Mother died not long after, and I had much a do to save the Son's Life.

The Painted Prince.

During my stay at *Bencouli* I served in the quality of a Gunner of the Fort; but my time being expired, I got aboard Captain *Heath* with my Painted Prince, aboard the *Defence*, in order to my return for *England*. We set sail *January* the 25th in Company of three Ships more, but had not been long at Sea before a fatal Distemper raged aboard us, which we attributed to the badness of the Water taken in at *Bencouli* during the Land-floods, which are often impregnated with the Tinctures of poisonous Roots or Herbs. The best Remedy we had was to mix some Tamarinds with

1691. the Rice they eat, which I believe preserv'd the lives of many of our Men, having scarce so many left as were able, and not without great difficulty, to bring us to the Cape of *Good-Hope*, where we came to an 1691 anchor the beginning of *April*, by the assistance of a *Dutch* Captain and his Men.

The Cape of Good-Hope. The Cape of *Good-Hope* is the Southernmost Point of the Continent of *Africa*, at 34 deg. 30 min. S. Lat. in a very temperate Climate. It appears at Sea in divers remarkable Points or Eminencies, affording an agreeable Prospect, the most considerable among which is a Mountain on the W. side of the Cape, called the *The Table Mountain.* *Table Mountain*, from its flatness on the top. To the North of it is a large Harbour, with a low flat Isle lying off it, by which you may enter at either side; the best riding is near the Continent. The Country hereabouts produces good, but short, Grass and Trees, *The products of the Country.* but not in great plenty, and when cultivated affords plenty of Wheat, Barly and Pease, besides Fruits of divers sorts, as Apples, Pears, Quinces, large Pomgranates, and such plenty of Grapes as furnishes them with Wine sufficient not only for their own use, but also for sale to such Ships as come to this Cape; the Wine is sweet, pleasant and strong. Near the Harbour are but few Farms, but twenty Leagues in the Country are many Settlements of the *Dutch* and *French* Refugees. They have also plenty of Sheep, Goats, Hogs, Horses and Cows, but Oxen thrive not so well here, by reason of the short Pasturage; they have some wild Beasts, but I saw only the wild Ass, a beautiful Creature, with black and white stripes; neither do they want Ducks, Dunghil Fowl, and Ostriches, and the Sea *The Dutch Fort.* affords them abundance of Fish. Opposite to the Harbour, near the Shoar, the *Dutch* have a strong Fort (the Residence of the Governour) and to the West of it a *Dutch* Town; on the back-side whereof is the House belonging to the *East India* Company, with a spacious neat Garden, stor'd with all manner of Fruits, Herbs, Roots, Walks and Arbours.

The Hottentots. The Natives of this Country are call'd the *Hottentots*, a middle siz'd People, with small Limbs, and active Bodies, flat oval Faces, large Eye-brows and black Eyes. They besmeer their Bodies with Grease; upon their Heads they wear nothing but some Shells, and on their Bodies a Mantle of Sheep Skin, with the woolly side outwards, and another piece like an Apron hanging before from the Navel; instead of this the Women have a Sheep Skin fastned round the middle. Their Houses are very mean, and so is their Furniture, 1691. consisting only in two or three Earthen Pots to dress their Victuals in, which is Herbs, Flesh, or Shell-fish, these they catch among the Rocks. They have neither Temples, Idols, or any other peculiar place of Worship; they celebrate indeed several nocturnal Dances, with singing, at the new and full Moon; but these are performed near their Huts, and seem to be rather Pastimes, or merry meetings than any thing relating to religious Worship; for the rest, they are a lazy Generation, for they never manure their Grounds, but are contented with feeding their Cattle which they exchange for Tobacco.

After a stay of six Weeks here, we set sail, *May* 23. towards St. *Helena*, an Isle seated at 16 deg. S. Lat. where we arrived the 20th of *June*. It is about nine Leagues long, and tho' 400 Leagues from the Continent, enjoys a serene Air (except in the rainy Season) and a temperate and healthy Climate, which together with the refreshing Herbs this Isle produces, is the reason that our *East-India* Ships touch here to recover their Sea-men from the Scurvy, which they do in a little time. *They leave the Cape of Good-Hope.*

This Isle, after its first discovery by the *Portuguese*, was possess'd by the *Dutch*, but these relinquishing it for the Cape of *Good Hope*, the *English* settled here till 1672, when they were beaten out by the *Dutch*, but were forced soon after to surrender it again to the *English*, under Captain *Monday*, who have now a Fort there with a Garrison, and a good number of great Guns to defend the common landing place, being a small Bay not above 500 Paces wide; within this Bay stands a small *English* Town, the Inhabitants having their Plantations deeper into the Country, which furnish them with Potatoes, Plantains, Bonanoes, Hogs, Bullocks, Cocks and Hens, Ducks, Geese and Turkies, in vast plenty. *The Isle of St Helena.*

July 2, we left this Isle, steering our Course for *England*: we took the mid-way betwixt *Africa* and the *American* Continent, till to the North of the Line, and came to an Anchor in the *Downs* the 16th of *September* following. After my arrival in the *Thames*, being in want of Money, I sold at first, part of the Propriety I had in the beforementio'nd Prince *Icely*, and by degrees all the rest: I understood afterwards, that he was carried about for a sight, and shown for Money, and that at last he died of the small Pox at *Oxford*. 1691.

CHAP. XI.

The Author's departure from Achin *through the Streights of* Malacca. *The River* Domao. *His arrival at* Cachao. *A description of* Tonquin, *and of* Cachao. *The state of Christianity in these Parts. The Author's departure from* Tonquin. *Of the Country of* Cambodia. *The Author's departure from* Malacca, *and arrival at* Achin; *a description of that place; of the Coast of* Sumatra *and of* Malacca; *of the Isle of* Dinding; *of Fort St.* George, *and of* Bencoyl *in* Sumatra.

1688. *The Author's departure for* Achin. IN the last Chapter I told you, that I took several Voyages from *Achin* to divers places on the adjacent Coasts. I set sail with Captain *Welden* thence thro' the Streights of *Malacca*, and keeping near the Shoar past'd by the mouth of the River *Ichore*, owing its name to the capital City of the little Kingdom of *Ichore*, on the Continent of *Malacca*, inhabited by Mahometans. At the farther end of the Streights of *Malacca* are the Isles of *Ora* and *Timaon*. Being got clear of the Islands, we steer'd away in the Ocean till we came in sight of the Isle of *Condore*, which leaving on our Starboard, we haul'd over for the Continent to the River of *Cambodia*; but leaving that also on our Starboard side, we coasted to the East, near the *Champa* Shoar, till we had doubled the S. W. Point of the Bay of *Tonquin*. This Isle is at 13 deg. N. bordering upon the *Cochinese*. We kept Coasting along this Shoar to the Isles of *Champello*, on the Coast of *Cochinchina*, at 16 deg. 45 min. and 13 deg. 45 min. Opposite to these, on the Continent, a large navigable River exonerates it self into the Sea, upon which stands *Quinam*, the Capital City of *Cochinchina*, trading in Pepper, Lignum, Aloes and Agoala-wood.

We kept just without the Isles 6 Leagues further, and then stood over towards the N. E. End of the Bay of *Tonquin*; the entrance of this Bay is between the S. E. Point of *Champa* on the West side, 12 deg. N. Lat. and the Isles of *Aynam* near the S. W. part of *China* on the East side. This Isle lies at 19 deg. N. Latitude, and is Inhabited by *Chineses*. Just before the mouth of the Bay the great Shoal of *Pracel* stretches for a considerable length, yet so, that Ships may pass thro' the two Channels at each end. The Bay of *Tonquin* is twenty Leagues wide, and forty six Fathom Water where it is deepest. The chief River of *Tonquin* exonerates it self in several Branches into this Bay; one is call'd *Rokbo*, near the N. W. corner of the Bay, at 20 deg. 6 min. N. Latitude; the other call'd *Domea* disembogues twenty Leagues N. E. of *Rokbo*, at 20 deg. 45 min. this is both longer and deeper than the former, and frequented by the *European* Ships; we entred at about half Flood at fourteen Foot and a half Water at the Bar. Six Leagues within the mouth is the Village of *Domea*, where the *Dutch* always anchor, but we went one League higher, where we staid for the coming of our Merchants in Boats from *Cachao* the chief City of this Kingdom; eighty Miles higher up the River from our anchoring place, the Tide runs forty Miles beyond where we now lay, and sixty Miles thence stands the City of *Hean*, Inhabited by Soldiers and some *Chinese* Merchants. Here the *French* have also their Factory, and one of their Bishops resides in this place, as does the *Two Branches of a great River.* *The City of Hean.*

1688. the *Indian* Governour of the adjacent Province, without whose Licenſe no Ship or Boat can go up or down the River. From this City to *Cachao* is two Days rowing againſt the Tide.

The Kingdom of Tonquin. The Kingdom of *Tonquin* borders to the N. and N. E. upon *China*; to the W. upon the Kingdom of *Laos*; to the S. and E. upon *Conchinchina* and the Sea; the Land is for the moſt part very low, and the Soil rich and fertile, and water'd with divers good Rivers that join their Waters with the two beforemention'd Branches of the grand River, which about *Cachao* is as broad as the *Thames* at *Lambeth*, yet fordable on Horſe-back in the dry Seaſon: at *Hean*, twenty Miles lower, it is as broad as at *Graveſend*, and ſo lower, to the place where it divides it ſelf into two Channels.

Its eight Provinces. This Kingdom is compoſed of eight large Provinces, *viz.* The Eaſt and Weſt Provinces, the North and South Provinces, and the Provinces of *Cachao* in the midſt of theſe four; the three Provinces of *Tenan*, *Tenehoa* and *Ngeam*, lie upon the Frontiers. Theſe Provinces produce whatever is neceſſary, either for the Subſiſtence or Pleaſure of Life; they have great ſtore of Rice, Potatoes and Herbage; wild Purſlain, and among the reſt a ſort of Herb growing on the ſurface of ſtanding Waters, which is reputed a great Antidote. Their Gardens furniſh them with Onions, Bonanoes, Pumpkins, Melons, Pine-apples, Mangoes, Oranges, Limes, Cocoes, Guavaes, Mulberries, Betle, *&c.* Their Land Animals are, Elephants, Buffloes, Bullocks, Goats, Deer, Hogs, ſome Sheep, Dogs, Cats, Lizards, Snakes, Scorpions, Centupees, Toads, Frogs, *&c.* They abound alſo in tame Fowls, as Cocks, Hens, Ducks, Geeſe, Parrots, Partridges, Parakites, Turtle-Doves, Wild-ducks, Widgeons, Teals, Herns, Pelicans and Crabcatchers; they have alſo a certain kind of Locuſt of the bigneſs of a Man's Finger, which are good Food either freſh or pickled. Their Rivers and Ponds abound in ſeveral ſorts of very good Fiſh, and in large Frogs, which they take with the Angle; the Sea furniſhes them with Sea and Land Crabs, Crawfiſh, Shrimps and Prawns, beſides Sea Tortoiſes; they have alſo good ſtore of Anchovies; their way of fiſhing is much like ours. All theſe Proviſions are ſold in the Market once a Week, and their Shambles are, beſides other Meat, furniſhed likewiſe with Horſe-fleſh, Cats and Dogs, and Elephants Fleſh, and the Trunk of this Beaſt is look'd upon as a ſingular Dainty here.

Their product. *Land Animals.* *Wild and tame Fowls.* *Fiſhes.*

The Air and Climate. The Kingdom of *Tonquin* is very Healthy and pleaſant in the dry Seaſon; but in the wet Seaſon, if the Sun breaks thro' the Clouds, it is exceſſive hot. The wet Seaſon begins about *May*, and holds till *September*, then they are peſtred with violent Rains, yet not without ſome intervals of fine Weather, which occaſion thoſe Land-floods that never fail at their annual Periods to the Countries betwixt the Tropicks. In *Auguſt* the Weather begins to be more moderate, both in reſpect of heat and wet, and *September* and *October* are more moderate ſtill; but theſe Months are the moſt dangerous for Seamen, by reaſon of certain violent Storms from the N. E. which at intervals infeſt this Coaſt for twelve Hours together. *November* and *December* are very dry, warm and pleaſant Months, and ſo are the three ſucceeding Months, except that it is commonly Foggy in the morning, and often very ſharp, eſpecially if the Wind is at N. E. or N. N. E.

The Natives. The Kingdom of *Tonquin* abounds in People and Villages; they are clean limb'd and middle ſiz'd, and not ſo tawny as moſt of the other *Indians*; their Faces are flat, but their Noſes and Lips like the *Europeans*; they have black, lank, and thick Hair hanging over their Shoulders. As they look upon black Teeth as a ſingular Ornament, ſo they dye them with a black Pigment when they are Ten or Twelve Years old; for the reſt they are very Active and Ingenious, witneſs their Silk-ſtuffs and Lacker-work; they are very Docile and Faithful, and conſequently make good Servants, but are much addicted to gaiming as well as the *Chineſes*.

Their Cloaths The poorer ſort wear Cloth made of Cotton, and Perſons of Quality *(Mandarins) Engliſh* Cloth; green and red are the Colours they moſt affect; when they appear in the King's preſence they wear long Gowns and Caps, the vulgar ſort go always bare-headed, have a Jacket and Breeches, but without Shirts, Shoes or Stockings. *Houſes.* Their Houſes and Furniture are ſuitable to their Cloathing; they are low, made of Mud, and divided in two or three Partitions with Canes; the Furniture conſiſts in a mean Bed, two or three in the inner Room, and a few Benches, or Chairs in the outer Room, a Table and a little Altar with two Incenſe-pots on it, in one you ſee abundance of Ruſhes burnt at the ends; this ſerves alſo for a Kitchen; for the reſt they dwell together in Villages ſurrounded with Banks and deep Ditches, to keep out the Land-floods, and to preſerve the Water in the dry Seaſon. 1688.

The City of Cachao. *Cachao*, the Metropolis of the Kingdom, is ſeated on the Weſt ſide of the great River, eighty miles from the Sea, on a ſandy riſing Ground, without either Wall, Bank or Ditch; their Houſes are the ſame as before deſcribed, except that they have a kind of an arched Oven ſix Foot high in a back Yard, contrived on purpoſe to ſave their Goods in caſe of Fire, which happens very frequently here; theſe Ovens are of Brick. The Streets are broad, and pav'd very ill with ſmall Stones. *The Royal Palaces.* As this City is the reſidence of their Kings, ſo he has two or three Palaces here; two are but mean, and of Timber, yet have large Stables, and Squares to draw up the Soldiers in; the third is more magnificent, but alſo of Timber, the Wall about it is three Leagues in circuit, its hight ſixteen Foot, and its breadth the ſame, fac'd on both ſides with Brick.

The Engliſh and Dutch Factories. The Houſe belonging to the *Engliſh* Factory is a handſome, but low Structure, facing the River at the North end of the City; the *Dutch* Factory adjoins to it on the South ſide, but is not ſo large as ours. The Bank of the River, on which the City ſtands, is lin'd with a maſſy Frame of Timber ſeventeen Foot above the Water, to contain the River within its bounds on that ſide.

But to return to the People; the trading part is very civil, but the *Mandarins* are exceſſive proud, the Soldiers inſolent, and the Poor addicted to Theft. I never ſaw any of their Marriage Ceremonies: Polygamy is allowed here; they have alſo a Cuſtom (even not excepting the great Men) to let out their Daughters at a certain rate to Strangers to get them a Portion; they have no publick burying places, every Man being interr'd in his own Ground; a Month after they make a funeral Feaſt, which is chiefly manag'd by the Prieſt. If it be a Man of note, a wooden Tower twenty five Foot high, and eight Foot ſquare, is erected over the Grave, from whence the Prieſt makes a Speech to the People, which done, they burn the Tower, and fall to the Meat provided for them. *Their Funerals.*

Annual Feaſts. They have two annual Feaſts, the firſt begins with the firſt new Moon of the Year, which begins with the firſt new Moon that falls out after the middle of *January*, then they make merry with feaſting and ſporting for twelve Days ſucceſſively; the ſecond Feaſt is at the beginning of *June*, after their *May* Crop is houſed.

Religion. They are Pagans, yet acknowledge an Omnipotent, ſupreme Being, the Immortality of the Soul, and a reward of good and evil Actions. *Their Idols.* Some of their Idols are made in humane Shape, but ſo as to repreſent, either in their Countenance, or in their make, ſomething extraordinary; the reſt are like Beaſts, but eſpecially Horſes and Elephants, theſe ſtand in the midſt of their Pagodes or Temples, which are neither large nor magnificent; *Temples.* their Prieſts have their Habitations near them *Prieſts.* who are obliged to Abſtinency from Women and ſtrong Liquor; their buſineſs is to offer the Petitions of the People to the Idols. The *Mandarins* ſeldom frequent the *Pagodes*, but have their Prieſts at home, and perform their religious Worſhip, with Eyes lift up to Heaven, without any Idols. *Language.* The *Tonquineſes* ſpeak much thro' the Throat, and their Language has a great affinity to the *Chineſe* Language, eſpecially that uſed at their Court, contrary to what Mr. *Tavernier* aſſerts upon that Head, *viz.* That the *Malayan* is the Court Language here; for their Characters are the ſame with the *Chineſe*, and they have no Commerce with the *Malayans*. They have certain Nurſeries for the Education of Youth; ſince the coming of the Jeſuits into theſe Parts, they are much improved in Aſtronomy, natural Philoſophy and Mechanicks; they have Smiths, Carpenters, Sawyers, Joiners, Tanners, Weavers, Taylors, Potters, Painters, Bell-founders, Lacker Work-men and Paper-makers. They have two ſorts of Papers, one of Silk, the other of the Bark of Trees. The *Lack* is a Gummous Liquor which iſſues both from the Trunk and Branches of the Trees; they have alſo plenty of Turpentine, of *Commodities.* coarſe Earthen-ware, and ſome Dying-wood.

Government. The Government here is Tyrannical, managed by two Kings at once, call'd *Bova* and *Chova*, the firſt whereof being deſcended from the Race of their antient Kings, retains the Royal Title, whilſt the *Chova*, whoſe Predeceſſors uſurp'd the Kingdom, manages all Affairs of State, keeping the other like a Priſoner in the grand Palace beforementioned. *Trees and Arms.* The *Chova* has above 300 Horſes, and 200 Elephants in his Stables,

1688. and maintains betwixt 70000 and 80000 Soldiers as his ſtanding Army, 30000 of which he always keeps near his Perſon, and the reſt near the Frontiers, tho' they have no Forts, and fight no pitch'd Battles, but make Excurſions, and Skirmiſh with one another; they are for the moſt part Foot, arm'd with Swords and Hand-Guns four Foot in the Barrel, the Bore not above the bigneſs of a Horſe-piſtol. Their Field-pieces are ſo ſmall as not to carry above four Ounces of Shot, the Barrels ſix or ſeven Foot long; one of theſe is carried upon a Man's Shoulder upon the March, and another bears the Carriage. Their Naval force conſiſts of ſome flat bottom'd Gallies, from fifty to ſeventy Foot long, and ten or twelve broad; theſe they chiefly uſe, either for State, or the tranſportation of Soldiers; they have a ſmall Sail, but are chiefly managed by ſixteen, twenty or twenty four Oars, and are very ſerviceable in Rivers, or near the Shoar.

Juſtice. They have no Courts of Judicature, but Juſtice is adminiſtred by ſingle Magiſtrates, who iſſue Warrants for the apprehending of Criminals; after they are taken they are tried immediately, and as the Sentence admitts of no appeal, ſo it is put in Execution upon the Spot: Theft is not puniſh'd with Death.

The Mandarins. Their Magiſtrates and great Men are call'd *Mandarins*, and ſuch of them as are generally about the King are Eunuchs, without which they can hardly pretend to any preferment at Court; I never heard of but three *Mandarins* of note that were not Eunuchs. Theſe *Mandarins* live in great State, and are attended by a certain number of Soldiers, and have the chief Government of the Provinces; among other things, it is their Duty once a Year, to receive the Oath of Allegiance to the King, from all the Officers under their Juriſdiction: They cut the Throat of a Hen, and ſave the Blood in a Baſon of *Arack*; of this every Man, after having taken the Oath, takes a ſmall draught, as a confirmation of his ſincere Intentions.

After my firſt coming to *Cachoa*, I return'd after a few Days ſtay to our Ship, where I lay ſick for ſome time, till finding my ſelf a little on the mending hand,
1688. I went a ſecond time to *Cachoa* on Foot in *November*, and got the fifth Day to the City of *Hean*, where I addreſs'd my ſelf to the *French* Biſhop reſiding here, at
The Authors Conference with a French Miſſionary. the North end of the Town, near the River ſide: Here I met with a *French* Prieſt who ſpeaking *Spaniſh* and *Portugueſe* very well, we had abundance of Diſcourſe together, concerning the progreſs of the Goſpel in theſe Parts; he told me, that there was a *French* Biſhop in *Siam*, with ſeveral Miſſionaries, by whoſe indefatigable Care, *Conſtant Faulion*, the chief Miniſter of State, was converted to the Chriſtian Religion, and that the King ſhew'd a great Inclination to follow his Foot-ſteps, and had given leave to the Miſſionaries to uſe
The progreſs of the Goſpel. their utmoſt endeavour to propagate the Goſpel among the People, who were not much inclin'd to it. That on the other hand, the Court of *Tonquin* was averſe to our Doctrin, and that therefore the Miſſionaries were forced to appear there in the Quality of Merchants, but that nevertheleſs, they had made about 14000 Converts. But I have been credibly inform'd ſince, that moſt of them were very poor People, who had chiefly embraced Chriſtianity for the ſake of the Rice they uſed to diſtribute among them in ſcarce times, and that moſt of them, ſo ſoon as the Rice became cheap, returned to their former Idolatry. He afterwards entertained me with ſome broil'd Fowl, and got me a Lodging in a *Tonquineſe* Chriſtians Houſe. After having refreſhed my ſelf a little, I got into a Boat about the bigneſs of one of our *Graveſend* Wherries the ſame Night, and by the next morning at nine a Clock, was ſet aſhoar ſix Miles ſhort of *Cachao*, whither the reſt of the Company went along with the Boat; here I was detained for ſome time by a Flux, ſo that my weakneſs encreaſing, I took the opportunity to go along with Captain *Weldon* aboard the *Curtane*, bound for Fort St. *George*.

We ſet ſail from the River of *Tonquin* in the beginning of *February* with an Eaſt Wind; coming out of
1689. the Bay we ſtood away to the South, the Shoals of *Pratel* on our Larboard, and the Coaſts of *Cochinchina*,
Cambodia *Champa* and *Cambodia* on our Starboard. *Cambodia* is a low and woody Country (much like *Tonquin*) lying on both ſides of a large River, which has its riſe in the North, and paſſing thro' a large Tract of Ground diſembogues into the Sea near the Iſle of *Condore*. Both the Kingdom and the River are not much known to the *Engliſh*; we kept ſtill to the South till we came near the Iſle of *Condore*, and thence ſteer'd more to the Weſt, to paſs thro' the Streights of *Malacca*, thro' which we came before; but finding our ſelves the next Day to the S. of the Streights firſt Mouth, we ventur'd to go in at the Southernmoſt entrance (call'd *Brewers Streights*) which is ſometimes frequented by ſmall Veſſels from *Batavia* to *Malacca*, being a nearer cut than to ſail as far as the Iſle of *Timaon* or the Streights of *Syncapore*. We found but fourteen or fifteen fathom Water in this Channel in ſome places, but lying among the Iſles there runs no great Sea. We ſtaid for ſome time at *Malacca*, and then ſteer'd towards *Achin*, where Captain *Weldon* had a mind to touch in his way to Fort St. *George*. We came to an Anchor in the Road of *Achin* in the beginning of *March*; I found my ſelf ſo weakned with the Flux, that notwithſtanding the advantageous Offers made me by Captain *Weldon* at Fort St. *George*, I thought it my ſafeſt way to continue for ſome time at *Achin*.

1689. *Brewer's Streights.*

This Kingdom, which makes the N. W. end of the Iſle of *Sumatra*, is the moſt populous of all the other petty Kingdoms in this Iſle, and extends fifty or ſixty Leagues from the N. W. Point to the Eaſt. Near the N. W. end of *Sumatra* ſtands the *Golden Mountain*: within five or 6 Miles of which is the City of *Achin*: This Mount may be ſeen forty Leagues at Sea. The Road of *Achin* is encloſed by a range of Iſles (under the Juriſdiction of that King) ſtretching along in form of a Half-moon, of about ſeven Leagues Diameter. The Eaſternmoſt is called the Iſle of *Way*, being alſo the largeſt; and twenty Miles Weſt from *Way*, and three Leagues from the N. W. Point of *Sumatra* is another large Iſle called *Gomez*. There are three or four more Iſlands hereabouts, as that call'd *Pulo rondo*, i. e. the *Round Iſle*, at the bending of the N. E. part of the Semi-circle. Betwixt all theſe Iſles are deep Channels, capable of affording a ſafe Paſſage to Ships of good Burthen; the *Surat* and *Bengal* Channels are moſt frequented, being the deepeſt and largeſt. Betwixt the Iſle of *Sumatra* and the Iſle of *Way* is another Channel of three or four Leagues broad; here is good riding at what diſtance you pleaſe; in it a ſmall navigable River diſembogues into the Sea, the entrance of it ſeven Leagues from the *Round Iſland*, four Leagues from *Way*, and as many from *Gomez*; the two laſt are water'd with ſeveral freſh Water Brooks, and afford divers ſorts of Animals, but eſpecially Hogs in vaſt plenty.

The Kingdom of Achin.

The Iſles of Way and Gomez.

The Kingdom *Achin* in general has many Rivulets, but are not navigable; the River of *Achin* it ſelf admitting only ſmall Veſſels. The Land is partly woody, partly fit for paſturage; they have ſome Coco and Cabbage-trees; their other Fruits are Plantains, Bonanoes, Oranges, Limes, Durians, Pomplenoſes, Mangoes, Mangaſtans, Citrons, Water-melons, Musk melons, Pine-Apples, &c. The Mangeſtan is not unlike a Pomegranate, but leſs, with a thicker, but ſofter rind, of a dark red; the Pulp is white and juicy, divided into four Cloves, incloſing a ſmall black Kernel. There is another Fruit at *Achin* not unlike a Sloe, which the Author of the *New Voyage to the* Eaſt Indies, has miſtaken for the Mangeſtan. The Pomplenoſe is like a large Citron, with a thick uneven Rind; the Pulp conſiſts of many juicy Cloves, as big as a Barley Corn. Of late they have planted abundance of Rice. They have a certain Herb called *Ganga* or *Bang*, it appears like Hemp, and if infuſed in any Liquor, it exerts its operation, upon thoſe that take it, after a very odd manner, according to their different Conſtitutions; for ſome it ſtupifies, others it makes ſleepy, others merry, and ſome quite mad. They have great plenty of Camphire; this they ſend to *Japan*, where it is refin'd before it is tranſported to *Europe*. The whole Iſle abounds in Pepper, and the Kingdom of *Achin* in particular in Gold. Their Land Animals are Deer, Hogs, Elephants, Goats, Bullocks, Bouffloes, Horſes, Porcupines, Monkies, Squirrels, Granoas, Lizards, Snakes, &c. Of tame Fowls, they have only Dunghil Fowls and Ducks; but the Woods afford Maccaws, Parrots, Parakites, Pidgeons and Turtle-doves of divers ſorts. The Rivers and Sea furniſh them with plenty of Fiſh, as Snooks, Mullets, Eels, Cavallies, Crawfiſh, Shrimps, &c.

Its product.

The Mangeſtan.

The Pomplenoſe.

Land Animals.

The Inhabitants of the Kingdom of *Achin* are originally *Malayans*, ſpeak the ſame Language (with very little difference) of the ſame *Mahometan* Religion, and of the ſame Temper; for the reſt, they are of a middle ſize, and well ſhap'd: Their Complexion is dark like the reſt of the *Indians*; their Hair lank and black, with black Eyes, tolerable good Noſes, thin Lips and black Teeth. They are naturally lazy and idle, and the poorer ſort addicted to Theft, but good natur'd to Strangers. They build their Houſes on Poſts.

The Inhabitants.

Their

1689. Their common Food is Rice, but the better ſort eat Fowls, Fiſh and Bouffloes Fleſh dreſs'd with Garlick and Pepper and ſeaſoned with Pickles. The Poor wear a pair of Breeches only and a Turbant, the Rich a Cap fitted to their Heads, and a piece of Silk thrown over their Shoulders, and a pair of Sandals, but no Stockings.

Their Food and Dreſs.

The City of *Achin*, the Metropolis of the whole Kingdom, is ſeated on the Banks of a River two Miles from the Sea, not far from the N. W. end of the Iſle of *Sumatra*; it contains about eight thouſand Houſes much larger and better furniſhed than thoſe of *Mindanao*, and inhabited, beſides the Natives, by the *Engliſh*, *Dutch*, *Danes*, *Portugueſes*, *Chineſes* and *Guzurats*. It has neither Walls nor Ditch. The chief Trades of *Achin* are Carpenters, Goldſmiths, Blackſmiths and Fiſhermen; theſe laſt are the richeſt and moſt in number.

The City of Achin.

Their Gold Mines are near the *Golden Mountain*, none but *Mahometans* are permitted to go thither; theſe carry thither ſuch Commodities (thro' very difficult ways) as are wanting by the Miners, in lieu whereof they bring back Gold. The *Engliſh* are highly eſteem'd here. Such of the *Hollanders* as are free Merchants may trade hither; but the Company's Servants have not the ſame Liberty. But the *Chineſes* out-do all the reſt. Many of them dwell conſtantly in the City; the reſt come with their Ships in *June*, take up their Shops in the *Chineſe* Quarter, where they ſell their Commodities for two or three Months. They don't much frequent the Moſques, yet are very zealous in their Religion. They are very ſtrict and ſhort in the Adminiſtration of Juſtice; for as ſoon as a Criminal is brought before the Magiſtrate, he is either acquitted or puniſhed upon the ſpot. Theft is puniſhed with the cutting off a Hand or Leg; the Stump they bind up tite with a piece of Leather or Blader to ſtop the Blood. Such as deſerve Death are generally impal'd; but thoſe of a noble extraction have a Priviledge to fight for their Lives with their uſual Weapons, which ſtand them in little ſtead, for the whole Multitude falls upon them and diſpatches them in an Inſtant.

Their Gold Mines.

Their Puniſhments.

Government.

The Kingdom is governed by a Queen, and is elected out of the Royal Family; ſhe muſt be a Maid, and is in a manner confin'd to her Palace; the management of all Affairs belonging to twelve *Oronkeys* or Great Men of the Kingdom. Mr. *Hackluit* or *Purchas* mention a King here in our King *James* the I. time: But certain it is, that of late Years they have conſtantly been govern'd by Queens; and the *Engliſh* reſiding here are of opinion, that it was always the ſame. During my Voyage to *Tonquin* there was an Election of a new Queen; but ſome of the *Oronkeys* being againſt it, an inteſtine War enſued, which was however ſoon compoſed to the advantage of the new Queen. The Weather at *Achin* is much the ſame as in other Countries to the North of the Line, and ſo are the dry and wet Seaſons and the Land-Floods; as the River here runs only a ſhort Courſe, ſo it ſooner overflows its Banks, and a great part of the City. I can't forbear to add, that they frequently waſh in this River, both upon a religious account, and in reſpect of Health: For my part, I can aſſert it by my own experience, that it cured me of the Flux that had afflicted me ſo long before, which I attributed to its cooling quality, of which I found the effects in my Bowels as often as I waſhed in the River. The Heat is not ſo exceſſive here as at *Tonquin*, for they are conſtantly refreſhed every twenty four Hours with the Sea and Land Breezes.

1689. About the middle of *September* I ſet ſail in quality of Mate to Captain *Minchin* (who had purchaſed a Veſſel here) from *Achin*, but being often becalmed we did not come in ſight of Point *Diamond* (forty Leagues from *Achin*) till eight Days after. About four Leagues ſhort of this Point we had like to have ſuffer'd Shipwrack by the careleſsneſs of the Man at the Helm (whilſt we were at Supper) who inſtead of ſteering E. S. E. as he was ordered to do, ſteered S. S. E. directly upon the Shoar. We ſail'd on towards the River *Dilly*, twenty eight Leagues from Point *Diamond*; the Land as far as this River belonging to the Kingdom of *Achin*. A League on this ſide the River, two Miles from the Shoar we perceived the Water of a muddy grey colour and ſweet, it being a thing not uncommon at Sea, to take up freſh Water againſt the Mouth of a River; it floats above the Water, and therefore you muſt not let your Bucket go in above a Foot deep. This River is at 3 Deg. 50 Min. N. Lat. It is very large but little known to the *Europeans*. In the Morning we ſaw the Iſle of *Verero*, lying at 3 Deg. 30 Min. N. Lat. 7 Leagues from the Mouth of the River *Dilly*, where we came to an Anchor at 8 of the Clock at Night; where we met with a *Daniſh* Ship riding at Anchor. Thence we ſteered in nearer ſtill to the Shoar of *Sumatra*, till we came in ſight of *Pulo Arii* at 3 Deg. 2 Min. N. Lat. Theſe Iſles lie S. E. by E. 32 Leagues to the Eaſt from *Pulo Verero*, being very good Marks for Ships, bound thro' the Streights; for when they bear S. Eaſt four Leagues diſtant, you muſt take your Courſe E. by S. for the *Malacca* Shoar, which is twenty Leagues thence. The firſt Land we got ſight of was a peaked Hill, ſome Miles within the Shoar of the Coaſt of *Malacca*, ſtanding in the midſt of a low Country call'd *Pulo Parſelore*, from its appearance like an Iſle; then keeping within the Shoar we had the City of *Malacca* eighteen Leagues to the S. E. by E. where we arrived about the middle of *October*. After having paſs'd a good broad Channel betwixt the Land and ſome Shoals ſtretching along the Shoar, the ſafeſt way is to keep near the Continent, where there is dead Water and good anchoring.

The Iſles of Arii.

The Mount Pulo Parſelore.

Malacca is a handſome City inhabited by two hundred or three hundred *Dutch* and *Portugueſe* Families, beſides the *Malayans* and *Chineſes* living in the Suburbs. The Streets are ſpacious, but not paved, and the *Dutch* Houſes of Stone; at the N. W. end is a Wall and Gate, and a ſmall Fort; its Situation is low, cloſe by the Sea: On the Eaſt ſide of the Town is a Rivulet which at Spring-Tide will bear ſmall Boats; from the midſt of the Town (one hundred Paces from the Sea) there is a Draw-bridge leading croſs the River to a ſtrong Fort on the other ſide. This is built on a low level Ground at the foot of a ſmall Hill, which is ſurrounded by it in form of a half Moon, being founded upon rocky Ground, and defended by high and thick Walls which are waſhed by the Sea every Tide. On the back of the Hill a Channel is cut from the Sea, thro' the low Grounds to the River, which makes it an Iſland, which being Paliſadoe within makes it inacceſſible, except by the Draw-bridge. The Church belonging to the City ſtands on the top of this Hill. The *Portugueſes* were the firſt that poſſeſs'd themſelves of this place, but were forced thence by the *Dutch*, who are now Maſters of it. This City is more conſiderable for its ſituation on this Paſſage towards the more Eaſtern Nations, than for Traffick: For the reſt they have plenty of Fiſh; neither do they want Fruits, ſuch as theſe parts afford, as Plantains, Bonanoes, Pine-Apples, Oranges, Water-melons, Mangoes, Pomplenoſes, &c. But thoſe are only the products of their Gardens. Moſt of our walking Canes uſed in *England* are brought from this place. As they have but little Paſturage ſo they don't abound much in Cattle, yet they have ſome Oxen and Bullocks, but good ſtore of tame Fowl.

The City of Malacca.

The great Fort.

Belonging to the Dutch.

Having diſpoſed of our Goods and loaded our Veſſel again, we ſet ſail from *Malacca* towards *Achin* about the middle of *November* with the Land-wind, which turning to the N. W. with great violence, our Fore-yard broke, which being repair'd we continued plying with the Ebb till we came to *Pulo Parſalore*, where our Captain would not paſs the ſame way we came in, but within the Shoals: However it was not long, before he had reaſon to repent of it; for we did run upon a Shoal and had much ado to get off; and keeping along the Shoar came in three Days to the *Pulo Sambilura i. e.* the Nine Iſlands, ſo call'd from their number; thence we ſail'd along the Coaſt to a *Dutch* Iſle call'd *Dinding*, ſeated near the Continent. On the Eaſt ſide betwixt the Iſle and the Continent is good anchoring; the Sea-wind brings the Ships in, and the Land-wind carries them out; it is only inhabited by *Dutch* who have a four-ſquare Fort about twelve Yards ſquare, without any Baſtions, in a ſmall Creek on the Eaſt ſide cloſe by the Sea, defended by fourteen Guns mounted on Platforms within the Wall, and thirty Soldiers. The Governor treated us very handſomly at Supper; but before we had half done we were alarm'd by a falſe Rumour of the approach of the neighbouring *Malayans* from the Continent. The next Day we ſet ſail with the Land-wind ſteering to the North along the Coaſt; but the next Day the Wind turning N. and N. N. E. we ſtood over to *Sumatra*, and paſs'd by *Diamond* Point the ſame Evening, and in two Days more with an E. N. E. Wind got to *Achin* about the end of *November*.

1689.

Pulo Dinding.

The Dutch *Fort.*

1689. In the beginning of *January* we ſail'd again from *Achin* towards the *Nicobar* Iſles, and leaving the ſame our Sternboard ſtood more to the North as high as *Pallacat*, whence with a fair N. E. Wind we run along the Coaſt to the Fort of St. *George*; the beautiful Proſpect thereof with its ſituation, being ſufficiently known to our Countrymen, I will forbear to repreſent

They arrive at Achin. 1690.

Fort St. George.

1674. sent to you at this time. Here I ſtaid till *July*, when I engaged my ſelf aboard Captain *Hord*; we kept along the Coaſt of *Coromandel*, before we ſtood over to *Sumatra*, and then made all the ſail we could to *Bencouli*, ſeated on the Weſt Coaſt of *Sumatra* at 4 Deg. S. Lat. The Port is very remarkable for a high adjacent Hill in the Country, and a ſmall Iſle at its entrance, within which the Ships ride at anchor. The Point of *Sillabar* lies to the South of it about three Leagues, making a ſmall Bay; as ſoon as you come within two or three Leagues of the Shoar, the *Engliſh* Fort makes a very glorious appearance fronting the Sea; to the N. W. whereof is a pleaſant Rivulet. Near the Sea ſide ſtands an *Indian* Village in a marſhy Ground. The Climate is not very agreeable nor wholſome, by reaſon of the great Rains and exceſſive Heats: 'Tis true, the the Sea Breezes in fair Weather are very comfortable, but the Winds otherwiſe when ſomewhat high, as they often are, render it exceſſive cold; and the Land-winds blowing over the Marſhes bring a very nauſeous ſtench along with them. The Soil is very different, but generally fruitful enough, and produces the ſame Fruits as the Country about *Achin* and *Malacca*, and the ſame Animals. The Natives are ſwarthy like the reſt of the *Indians* here, ſlender and active of Body; they uſe the *Malacca* Tongue, are *Mahometans*, and have ſome Mechanicks; as Smiths, Carpenters, *&c.* among them. The generality live upon fiſhing and planting of Roots, Rice and Pepper-buſhes. It was the Pepper-Trade that brought the *Engliſh* hither, after the loſs of *Bantam* in 1685. They have ſince built a Fort fronting the Sea, one hundred Paces from the Shoar; but it is neither regular nor faced with brick Work, tho' deſign'd for a Pentagone.

1674. *The Author's departure for* Jamaica.

IN the beginnig of the Year 1674 (being then two and twenty Years of age) I left the *Thames* aboard the *Content* of *London*, Captain *Kent* Commander, bound for *Jamaica*. After we had paſs'd the Iſle of *Barbados* we got ſight of the Iſle of *Lucia*, one of the *Caribee* Iſlands, thirty Leagues thence. The *Engliſh* have endeavoured to ſettle here, but in vain hitherto, for fear of the *Caribees*, a ſort of *Indians* inhabiting chiefly on the Continent, who infeſt thoſe Seas and the *Caribee* Iſles, in their Canoes at certain Seaſons of the Year. St. *Vincent* is another of theſe Iſles, near St. *Lucia*; in this laſt we bought ſome Plantains, Bonanoes, Pine-Apples and Sugar-Canes of the Natives. From hence we ſteered farther to the Weſt, till falling in with the Eaſt end of *Hiſpaniola* we coaſted along the South ſide to Cape *Tiburon*, on the Weſt end of that Iſle, and thence got in a ſhort time to *Jamaica*.

The Caribees.

He arrives at Jamaica.

The next Day after my Arrival I went to St. *Jago de la Vega* a *Spaniſh* Town, whence I travell'd to ſixteen *Mile Walk*, a Plantation belonging to Captain *Hellier*. After ſix Months ſtay here, I engaged my ſelf to Captain *Hening*, to look after his Plantation at St. *Anns*, ſo was forced to croſs the *Mount Diabolo*, part of the ridge of Hills ſtretching all the length of this Iſle from Eaſt to Weſt. The Eaſt part is called the *Blew Mountain*.

Mount Diabolo.

1675. *His departure from* Jamaica *for the Bay of* Campeachy.

In the beginning of *Auguſt* we ſet ſail aboard Captain *Hodſel* from *Port Royal* in *Jamaica* towards the Bay of *Campeachy*, to load Logwood. As this Voyage all the way before the Wind, and the Weather proved fair, we were not above fourteen Days in our Paſſage thither; we ſail'd by the Iſle of *Pines* and thence Weſt to Cape *Corientes*, and ſo along the South ſide of *Cuba* to Cape *Antonio*, and thence by *Yucatan* to Cape *Catoch*, and ſo farther to Cape *Condecedo*: Theſe two Capes are eighty Leagues aſunder, and betwixt them is the River *de la Gartes*, a ſmall, but pretty deep River; to the Eaſt of it are a few Huts belonging to *Indian* Fiſhermen, who catch here good ſtore of Snappers, Gropers, Snooks, Dogfiſh and Torpens. To the Weſt of this River along the Coaſt are ſeveral Watch-Towers, contrived by the *Spaniards* for the *Indians* to watch in, in their turns; hereabouts are alſo divers ſalt Ponds belonging to the Towns of *Linehanchee* and *Chinhanchee*; not far thence is a *Spaniſh* Fort, guarded by fifty Soldiers, from whence there is a Road to the City of *Merida*, the Capital City of the Province of *Yucatan*, which is none of the moſt fruitful, but pretty populous, at ſome diſtance from the Sea ſide. From Cape *Condecedo* we ſteer'd South for *Triet*, an Iſle where is the only Road for big Ships; but ſmall Veſſels croſs a kind of a Lake or inland Sea, where they anchor at a place call'd *One Buſhkey*, a little Iſle about forty Paces long, and ſix broad, covered with Shells, and having only one crooked Tree, whence it has got its Name; here we anchored at twelve foot Water, ſoft and ouzy Ground: Our Cargo was Rum and Sugar, which we exchanged with the Logwood Cutters for Logwood, the Commodity we came for. The latter end of *September* we ſail'd from *One Buſhkey* again, and in fourteen Days got no further than to the Eaſt at the River *de la Gartos*; whence we ſteer'd for the Shoar of *Yucatan*, near which we ſtruck upon a Rock, and had not the Water been very ſmooth muſt have been infallibly loſt. Upon taking a view of our Draught we found we were fallen foul of the *Alcranes*, five or ſix low Iſles twenty five Leagues from the Coaſt of *Yucatan*, two or three Miles diſtant from one another with deep Channels betwixt them. They have good anchoring on the Weſt ſides; they have great plenty of large Rats, of *Boobies*, of *Men of War* and *Egg-Birds*; each of theſe keep in their particular Iſlands. Of Fiſh they have *Shark*, *Sword-Fiſh* and *Nurſes*. To the North of theſe Iſles ſtretches a long ridge of Rocks in the form of a half Moon, three Leagues from them; they are in length four Leagues, and about twelve Yards wide, joyning cloſe together above Water, except in two places, where the Paſſages are not above ten Yards broad. It was in one of theſe we ſtruck on the Rock in the Night time; we ſtay'd two or three Days among theſe Iſlands, and then ſteer'd South for the Continent, till we came to the Leeward of Cape *Catoch*, and thence to the North towards Cape *Antonio*, the Weſt Point of the Iſle of *Cuba*, forty Leagues from Cape *Catoch*. In a Week after we got up with and coaſted along the Iſle of *Pines* for eight Leagues together, and thence ſtanding again to Sea, fell in the 3d. Day with the Weſt end of the Iſle of *Caymanes* forty Leagues South from the Iſle of *Pines*. From hence we went back to theſe Iſles of *Pines*, where we anchored in four fathom Water, clean Sand, about 5 Miles North from the Weſt end againſt a ſmall Creek.

The Iſles of Triet, *of* Pines *and the* Triangle *Iſlands.*

The Town of Campeachy.

The River of Campeachy, Campeton *River and* Port Royal *Iſle and Harbour.*

The Iſles of Alcranes.

A Riff of Rocks in the Sea.

The Logwood-trees.

The Iſle of *Pines* lies South towards the Weſt end of *Cuba*, four Leagues diſtant; Cape *Corientes* is five Leagues to the Weſt of it. Betwixt this Iſle and *Cuba* are divers ſmall Iſlands, near any of which is good anchoring in the Channels; and Ships have the advantage of good Land-winds. The Iſle of *Pines* is twelve Leagues long, and four broad: The Weſt and South ſide towards the Sea is low Ground, but rocky; but the inland Country is hilly, with a high peaked Mountain in the middle: In the marſhy Grounds are abundance of red Mangroves, but the Hills abound in Pine-Trees ſo ſtrait and tall that they are fit to make Maſts for ſmall Veſſels. Their Land Animals are Bullocks, Hogs, Deer, *Indian* Rabbets, Land-Tortoiſes and Land-Crabs of two ſorts, white and red; both theſe live under ground like Conies, and come out only in the Night time to feed upon Herbs and Fruit: Thoſe that feed on *Manchianel* are noxious to thoſe that eat them; but the reſt are wholſome Meat. The white ones are biggeſt; they have alſo many Alligators and Crocodiles on this Iſle, and the *Spaniards* keep their Herds of Hogs here: We went a-ſhoar to hunt wild Hogs and Bullocks, but got none, except one, which we roaſted. Having ſcarce any Proviſions left, it was reſolv'd to go to the *South Keys* or Iſles which might have proved a troubleſome Voyage, conſidering the want we lay under; but to our good Fortune we ſoon got ſight of *Blew-fields* Hill, and of the adjacent Coaſt

The Iſle of Pines.

Land Crabs.

The Logwood Cutters.

and

1676. and anchored the next Day at Point *Nigril*; whence we sail'd the next following Day with a N. W. Wind to *Port Royal* in *Jamaica*.

The Author's second Voyage to the Bay of Campeachy.

After a short stay here I engaged my self as a Passenger on board Captain *Johnson*, bound for the Bay of *Campeachy*; we set sail *February* 1676 and had fair Wind and Weather as far as Cape *Catoch*, from whence we got with the Trade-wind at E. N. East to the Isle of *Triest*.

A Description of that Bay. 1676.

The Bay of *Campeachy* runs in deep within the Land betwixt Cape *Condecedo* to the East and a Point of high Land of St. *Martins* to the West, 120 Leagues distant from one another; it has many navigable and broad Lakes. From Cape *Condecedo* to the *Salinas* is fifteen Leagues, the Coast running South, being a small Harbour for Barks; a little way from the Shoar is a large *Salina* or salt Pond, which affords abundance of Salt, and is thence transported to the Bay of *Mexico*. From hence to *Campeachy* is twenty Leagues, the Coast running South by West; six Leagues on this side of it is the Hill of *Hina*. *Campeachy* is a handsome City seated near the Shoar in a small Creek, the only place on this Coast near the Sea from Cape *Catoch* to *La Vera Cruz*. It is defended by a strong Fort at one end, which commands the Town and Harbour, yet it was taken from the *Spaniards*; first by St. *Christopher Mims* in 1659, and afterwards in 1678 by the *English* and *French* Privateers. The place is not very wealthy, they having no other vendible Commodities but Cotten-Cloth and Salt. Formerly it was also the sale of Logwood Trade, which the *Spaniards* used to cut at the River of *Campeton*. From this River the Harbour call'd *Port Royal* is eighteen Leagues; it has a broad entrance into a salt Lake ten Leagues in length, with two Mouths at each end: The West entrance is made by a low Isle call'd thence *Port Royal* Isle; it stretches three Leagues long East and West. On the West side of this is another small Isle call'd *Trist*, making also East and West four Leagues in length: This together with the *Beef* Isle makes the second entrance into the Lake three Miles wide, which is call'd *Laguna Termina* by the *Spaniards*: On the East part as you enter it is the River *Summa Senta*, which discharges it self on the South side near the middle of the *Lagune*. From this River to *One Bushkey* the Shoar runs five Leagues to the West: Hereabouts are several small Creeks, and the Country abounds in Logwood.

The Town of Campeachy.

The River of Campeton.

Port Royal.

The River Summa Senta.

This part of the Bay of *Campeachy* lies at 18 Deg. N. Lat. The Sea-winds are here at N. N. E. or North; the Land-winds at S. S. East. The dry Season holds from *September* till *April* or *May*. The Logwood-tree grows in wet Grounds, not unlike our white Thorns in *England* (but much bigger) and the Leaves are the same; some of the old Trees are five or six Foot in circumference: It is a very ponderous Wood; when the old Tree is cut, the Sap is white and the Heart red; the last being used only for dying; they chip off all the white Sap before it is carried aboard; it will after some time turn so black, that it tinges Water like Ink: The chief Places where it grows are here at Cape *Catoch* and on the South side of *Yucatan* in the Bay of *Honduras*; and that only in some places near the Sea side.

The Logwood-trees.

The Animals of this Country are Horses, Bullocks, Deer, Warrees, Pecary, Squashes, Possums, Monkeys, Ant-Bears, Sloths, Armadilloes, Porcupines, Land-Tortoises, Guanoes, and Lizards of all kinds. Their Fowls are *Humming*-Birds, Blackbirds, Turtle-Doves, Pigeons, Parrots, Parakites, Quames, Correscoes, Turkeys, Carrion Crows, Subtle Jacks, Rill-Birds, Cockerecoes, &c. As for the Water Fowls here they are the Duck and Mallard, Curlews, Herons, Crabcatchers, Pelicans, Cormorants, Fishing-Haws, Men of War Birds, Boobies, &c. Their Fish are Mullets, Snooks, Tenpounders, Turpoms, Cavallies, Paricotas, Garfish, Stingrays, *Spanish* Mackrel, &c. besides *Manatees* and *Tortoises*. This Country affords also Alligators and Crocodiles.

The Logwood Cutters.

The Logwood Cutters inhabit the Creek of the East and West *Lagones*, where they erect their Huts, which are slightly built, but well thatch'd with Palmeto Leaves; they are hard working Fellows, but when invited aboard a Ship will drink very hard, and spend all their Money in strong Liquor. Commonly they go a hunting every Saturday for Beef, which is very fat in *February*, *March* and *April*, and fleshy at all times; these feed in the Savannahs and are droven into the adjacent Woods when they have a mind to kill them. After some stay here I perceived a hard red swelling like a Boil in my Leg, which I brought to a head with roasted white Lilleys, and squeezed out of it two small Worms of the bigness of a Hen's quil, and near an Inch long: These Worms were of a quite different kind from the *Guinea* Worms, which are frequent in several places in the *West-Indies*. 1676.

Worms in the Legs.

Soon after there happened the most violent Tempest that had been heard of in the memory of Man; several *English* Vessels were damaged by it, and some cast ashoar, especially at *Beef-Island*, extending seven Leagues in length East and West, and the East end being towards the Isle of *Trist*. The West end is washed with the River St. *Peter* and St. *Paul*: Three Leagues higher from the Mouth of this River comes forth a small Branch running to the East and dividing this Isle from the Continent on the South, and making a great Lake of fresh Water, call'd *Fresh Water Lagune*, which falls into the salt Lake, call'd *Man of War Lagune*, and this afterwards into *Laguna Termina*, two Leagues from the S. E. Point of the Isle. This Isle properly belongs to one *John d'Acosta* a *Spaniard* of *Campeachy* Town, who used to trade with the Privateers and to furnish them with Beef, which he hocksed after the *Spanish* fashion, a way peculiar to themselves. The Hocksers is mounted on a Horse with a Hocking-iron fastened to a Pole in his Hand; thus armed he rides after the Cattle, and hamstrings them till they fall down dead upon the Ground.

Beef Isle.

How they hocks Cattle.

The River of St. *Peter* and *Paul* has its rise twenty Leagues from the Sea in the Mountains of *Chia*. Nearer to the Sea it divides it self into two Branches; the Western River falls into the River *Tobasco*; the other continues its Course four Leagues from the Sea and there subdivides again: The Eastermost separates *Beef-Isle* from the Continent; the other disembogues betwixt *Beef-Isle* and the Island of *Tobasco*. This River is said to be very broad before it sends forth its Branches, and near it are fruitful Plains, full of Bullocks, Horses and other Animals, among which the Mountain Cow call'd *Ante* by the *Saniards*, a Beast not unlike a Cow feeding on a kind of Mos that grows in the Woods near the great Rivers, but never in the Savannahs or Plains.

The River of St. Peter and St. Paul.

The Mountain Cow.

The West Branch of the River of St. *Peter* and *Paul* loses it self four Leagues from the Sea in *Tobasco* River and so makes *Tobasco* Isle, which is twelve Leagues long, and four broad. The River of *Tobasco* rises also in the Mountains of *Chiapo*, and afterwards being augmented by the beforementioned Branch of St. *Peter* and *Paul*'s River, it runs North till it falls into the Sea. There is no Settlement on this River till above eight Leagues from the Mouth, where the *Spaniards* have raised some Entrenchments. About four Leagues beyond it stands a small Town with a Fort at the West end of it, and four Leagues beyond it the Town of *Estapo*, and three Leagues further another rich City, call'd *Halpo*, four Leagues beyond which is a wealthy place call'd *Taentalp*. The Ships that bring *European* Commodities into these parts go up no further than *Villa de Moise*; near this last place grows a sort of white Coco I never saw any where else, and good store of Maiz. They have *Spanish* Priests among them to instruct the Natives in the Christian Religion. *These have their Tithes from their Ducks, Turkeys and other dunghill Fowl. Their Clothing is a Jacket and Breeches of Cotten stuff, and Petticoats for Women. They are middle-siz'd and well-shap'd, and the Women generally fatter than the Men, with low Foreheads, little Eyes, small but full Mouths, white Teeth and a tawny Complexion. Their Beds are only Hammocks fastned to Poles, and their Houshold Goods a few Earthen Pots and Calabashes. They are a harmless and submissive sort of People, yet when harrass'd beyond their Ability by the *Spaniards*, will leave whole Towns desolate, and retire with their Families into the Woods.

The Isle and River of Tobasco.

The Town of Villa de Moise.

**See Mr. Gage's Survey of the West-Indies.*

The Natives.

As to the West Coast of *Campeachy* Bay the River of *Checopeques* is seven Leagues from *Tobasco* River; it is rather a Creek than a River; it runs E. S. E. for two Miles, and then turns to the South. A League West from this River is another small River call'd *Dos Boccas*, fit only for Boats, and that not above a League within the Mouth. The *Indians* cultivate no more Maiz than is requisite for their Families, and to pay their Taxes, but breed abundance of Poultry, and some good store of Cocoes, which they exchange with the Carriers that bring hither all sorts of *European* Commodities upon Mules. From *Dos Boccas* to the River *Palmas* is four Leagues; from thence to the *Halecover* (a small neck of Land betwixt the Sea and a Lake) two Leagues, from the *Halecover* to St. *Anns* six Leagues, being the Entrance of the said Lake; from thence to *Tondelo* is five Leagues. The River of *Tondelo* is narrow, but

The River of Checopaque.

The River of Tondelo.

1699. but capable of carrying Vessels of fifty or sixty Tuns: From this River to that of *Goasick Walp* is eight Leagues, the Coast still West; it is one of the chiefest Rivers on this Coast, not half so broad as *Tobasco* River, but deeper, and has its rise near the South Sea; and the River *Tegoantepequo* that disembogues into the South Sea, has its Source near the head of the River of *Goasick Walp*, not above twelve Leagues asunder; the Town of note on the South Sea is *Tegoantepaquo*, and on the North Sea *Keyhooca* near this River; this last is a wealthy place, four Leagues to the West from the River *Goasick Walp*.

The Cape of St. Martins. From this River the Land runs West three Leagues, and then to the North sixteen Leagues to the Cape of St. *Martins*, the West Bounds of the Bay of *Campeachy*.

The River Alvarado. From this Point to the River *Alvarado* is twenty Leagues; it is a Mile broad at the Entrance, but very shallow; the Land on each side, Sand Banks of two hundred Foot high; it come out of the Country in three several Branches which rejoyn just within the Mouth. Six Leagues from this River to the West is another large opening, which, as some report, has a Communication with the River of *Alvarado*: From hence to *La Vera Cruz* is six Leagues more to the West. This

La vera Cruz.

1699. last is a handsome Town seated in the bottom of the Bay of *Mexico* at the S. W. side; it has a very good Harbour, and a Fort that commands it, call'd St. *John d'Ulloa*. This is a place of vast Trade, being the Sea-port to the City of *Mexico*, and of most of the other places of that Kingdom. Hither the Riches brought from *Mexico* are brought by Land from *Acapulco*; the Flota from *Spain* comes hither every three Years, and the *Barralaventa* Fleet arrives constantly in *October*. This is a small Squadron of *Spanish* Men of War which every year visit all the *Spanish* Sea-port Towns in those parts, to clear the Seas of Privateers and Interlopers. From hence to *Old Vera Cruz* is five Leagues, and thence to *Tippo* fifteen Leagues: From this place to the River of *Panuck* is twenty Leagues, a spacious River coming out of the heart of the Country and disemboguing in the Gulf of *Mexico* at 21 Deg. 50. Min. The noted City of *Panuck* (a Bishop's See) stands upon it twenty Leagues from the Sea: One Branch of this River arises out of the Lake of *Tompeque* and joyns its Water with it three Leagues before it runs into the Sea, when as it is sometimes call'd the River of *Tompeque*.

The Barralaventa Fleet.

The River of Panuck.

CHAP. XIII.

The Author's Voyage to New-Holland. *A Description of the Bay of* All-Saints *in* Brasil, *with the Forts and Town; Of* Shark's *Bay, and the Isles and Coast of* New-Holland.

The Author's Voyage from the Downs *to the Canaries.* ON Saturday *January* the 14th. I set sail in his Majesty's Ship the *Roe-Buck*, and passing up the Channel, the first Land that I got sight of afterwards was Cape *Finisterre*, which we made the 19th. and the 28th. *Lancerota*, one of the *Canary* Islands, standing away for the Isle of *Teneriffe*, where I anchored *January* the 30th in the Harbour of St. *Cruz* at the East end of the Isle, as *Oratovia* lies at the West end. St. *Cruz* is a small unwall'd Town defended only by two Forts: Here Admiral *Blake* burnt the *Spanish* Galleons, the Wrecks whereof lie in fifteen fathom Water. Soon after my Arrival I went by Land to the City of *Laguna*, the Metropolis of this Isle and the Residence of the present Governor General of the *Canary* Isles, a Native of this Country; it is strongly, but not regularly built, part on the side of a Hill, and part in a Level, and has two Parish-Churches, two Nunneries, one Hospital, four Convents and divers Chappels and Gentlemens Houses handsomely built. Near the Prison you see a goodly Conduit, which being supplied with Water from the Hills behind the Plain, adjacent to the City, furnishes the Inhabitants with fresh Water. On the S. W. side beyond these Hills you see a small peaked Mountain higher than the rest, which is the so much celebrated Pike of *Teneriffe*. Besides the *Canary* and *Verdona* or *Green-Wine*, this Isle produces the true *Malmesy* Wine. The *Canary* Wine growing chiefly on the West side, is for the most part sent to the Port of *Oratavia*, a Place (as they told me larger than *Laguna*) where the *English* Consul and most of the Merchants reside, tho' the Fort is very indifferent, especially when the N. W. Winds blow. This Island as well as the other *Canary* Isle have also store of Beans, Pease and Cockle, a sort of Grain like Maiz, Papahs, Apples, Pears, Plums, Cherries, excellent Peaches, Apricocks, Guavoes, Pomegranets, Citrons, Oranges, Lemons, Limes, Pumkins, the best Onions in the World, Cabbages, Turnips, Potatoes, &c. They are also well stor'd with Horses, Cows, Asses, Mules, Sheep, Goats, Hogs, Conies and Deer.

The City of Laguna.

The Peak of Teneriffe.

Oratavia.

The Products of the Canary Isles.

1699. *February* the 4th. we set sail from St. *Cruz* towards the Isle of *Mayo*, one of the *Cape Verd* Islands. The 9th. being in the Lat. of 15 Deg. 4 Min. we steer'd away W. N. West for the said Isle, where we anchored the 11th. in the Road, which is the Leeward part of Isle in 14 fathom clean Sand and smooth Water. The Isle of *Mayo* is roundish seven Leagues in Circuit at 15 Deg. N. Lat. On the West side of it where the Road for Ships is, there is a large sandy Bay, within which is a spacious salt-Pond; those who come hither to lade Salt take it up as it kerns, and lay it up in heaps. The *English* have a considerable Trade here in Salt, which costs nothing but the labour to take it out and wheel it from the Pond, and the Carriage thence to the Trake-Boat (by which it is conveyed aboard the Ships) being perform'd by Mules is very cheap. For the rest it is generally barren, the Soil being Sand or loose Stone, without any fresh-water Rivers or Ponds, except one Spring in the Center of the Isle running thro' a Valley where the Inhabitants have three small Towns, *Pinose*, *St. Johns* and *Lagoa*. The Inhabitants are Negroes, *Africans* by Descent, and resembling those of *Africa*; as they are Subjects of *Portugal*, so they follow their Religion, but have Priests and a Governor of their own Nation. Their Fruits are chiefly Figs and Water-Melons; their best Land Animals, Goats and Asses: The Sea affords them Dolphins, Bonettaes, Mullets, Snappers, Silver-Fish, Garfish and Green Tortoises, during the wet Season in *May*, *June*, *July* and *August*.

The Isle of Mayo.

Its Inhabitants.

The 19th. of *February* we set sail from hence for St. *Jago* six Leagues to the West, and the next Day anchored near St. *Jago* Town, lying on the S. W. side of the Isle at 16 Deg. N. Lat. the Residence of the *Portuguese* Governor and of the Bishop of all the *Cape Verd* Isles. The Town being built on the sides of two Mountains, there is a Valley of two hundred Yards broad betwixt them, thro' which runs a fresh-water Rivulet into the Sea, in a sandy Creek, where there is very good landing. Just by this place is a small Fort level with the Sea, and on the top of the Hill above there stands another. The Inhabitants are generally black or swarthy (some few of the better sort excepted) and for the most part wan, having no Trade but what comes by chance Ships; who export some of their strip'd Calicoes, and about one hundred Tun of Sugar. They have Vines sufficient for their own use; Oranges, Plantains, Lemons, Citrons, Melons, Limes, Guavoes, Pomegranets, Quinces, Custard Apples and Papahs. The Custard Apples are not unlike a Pomegranate, but have a white, sweet and soft Pulp resembling a Custard, with some small black Kernels, but no Core; the Tree resembles a Quince Tree. The Papah is like a Musk-melon both on the in and outside, but has blackish Seeds instead of flat Kernels; they are of the bigness of a Pepper-corn, and hot on the Tongue. Their Land Animals are Horses, Asses, Bullocks, Mules, Deer, Goats, Hogs and Monkeys; of Fowls Cocks and Hens, Ducks, Parakites, Parrots, Pidgeons, Turtle-Doves, Herons, Hawks, Crabcatchers, &c. Their Fish are the same as at *Mayo*. The Road of St. *Jago* is one of the worst that ever I saw.

The Isle and Town of St. Jago.

February the 22d. we set sail from St. *Jago* with a brisk E. N. E. and a N. E. Wind towards the Coast of *Brasil*. The 10th. of *March* we pass'd the Line, and the 23d, came in sight of the Coast of *Brasil*, and the 25th. came to an Anchor directly against the Town of *Bahia de Todos los Santos* at 13 Deg. S. Lat. It is the chief City of all *Brasil*, as well in respect of its Bulk, as of its Trade and Harbour, capable of receiving Ships of the greatest Burthen: Its Entrance is defended by the Fort of St. *Antonio*, besides several others, one where-

1699. *The Author's Voyage to Brasil.*

Bahia de todos los Santos.

of

1699. of ſtands on a Rock in the Sea, half a mile from the Sea; betwixt this and another call'd the *Dutch* Fort, all Ships muſt paſs that Anchor here. There is alſo another Fort on the ſame Hill where the Town ſtands, which has at leaſt two thouſand Houſes, beſides thirteen Churches, Chappels, Hoſpitals and Convents, and one Nunnery. The Governors and Archiepiſcopal Palaces are very noble Structures, but indifferently furniſhed within. Abundance of rich Merchants reſide here. I ſaw here betwixt thirty and forty great Ships at a time. They are moſt *Portugueſes*, Foreigners having ſcarce any Commerce here. The chief Commodities brought hither from *Europe*, are Bays, Serges, Hatts, Stockings, Biskets, Wheat, Flower, Wine, Oil, Butter, Cheeſe, Salt-beef, Pork, *&c.* as alſo Iron and Pewter-Veſſels, Looking-glaſſes, and Toys. In lieu whereof they tranſport thence Sugar, Tobacco in Roll or Snuff, Dye-woods, *Braſil*-woods, raw Hides, Tallow, Whale Oil, *&c.* The *Braſil*-Sugar is better than what is brought from our Plantations, being all refin'd with Clay.

The Country of Braſil.

The Country about the City is flat, neither very high nor exceſſive low, ſufficiently Water'd with Rivers and Brooks. The Soil is generally good, and when cultivated, produces beſides other Vegetables, Sugar-Canes, Cotten, Indico, Tobacco, Maiz and Fruit-Trees, beſides ſome Trees peculiar to this Country, as the *Sapiera*, *Vermiatico*, *Comeſteric*, *Gritteba Serrie*, three Sorts of *Mangrove* Trees, and as many ſorts of Cotten Trees both wild and planted. They have alſo a ſort of baſtard Coco-Nut, not near ſo big as the common ones in the *Eaſt* or *Weſt Indies*. The Kernel is ſweet but hard. At the top of theſe baſtard Coco-Trees, grows a black Thread like Horſe-hair, but longer; of theſe they make Cables, which are more ſerviceable and laſting than thoſe made of Hemp. The reſt of their Fruits, are Oranges of ſeveral ſorts, eſpecially *China* Oranges, Limes, Pome-granates, Pome-citrons, Plantains, Bonano's, right Coco-Nuts, Guavoes, Coco-Plumbs wild Grapes (beſides *European* Grapes) Hog-Plumbs, Cuſtard-Apples, Sourſops, Caſhews, Papahs, Jennipahs, Manchinel Apples and Mangoes, (tho' theſe laſt are but rare as yet) Ariſahs, Mericaſahs, Petangoes, *&c.* (Fruits not to be ſeen in other Countries) Petumbos, Mungareos, Mackiſhaws, Juguas, Otee, Muſteraw de Ovas, Palm-berries, Phyſick Nutts, Cabbage Trees, *&c.* They have alſo good ſtore of Ground Fruit, ſuch as Callavances, Pine Apples, Pumkins, Water-melons, Musk-melons, Cowcumbers, of Wots, Yams, Potatos, Caſſavas, of Garden-herbs, Cabbages, Turnips, Onions, Leeks, and all ſorts of Salading. They have great plenty and variety of wild Fowl, *viz.* Yemmas, Maccaws, (a large ſort of Parrots) common Parrots, Flamingoes, Carion-Crows, Chattering-Crows, Cockrecoes, curious colour'd Bill-birds, Correſoes, Turtle-Doves, Pigeons, Jenetees, Clocking-Hens, Crabcatchers, Curreeos, *Muſcovy*-Ducks and common Ducks, Widgeons, Teal, Curlews, Men of War Birds, Boobies, Noddies, Pelicans, *&c.* The chief of their tame Fowl, are Ducks and other Dunghil Fowl, of theſe they have two ſorts, one of the ſame ſize with ours, and another much larger, which are ſold at a dear rate here. Their Land Animals are Horſes, black Cattle, Sheep, Goats, Conies, Hogs, Leopards, Tygers, Foxes, Monkeys, Pecary, (a ſort of wild Hogs) Armadillos, Allegators, Guanoes, Lizards, Serpents, Toads, Frogs, and a ſort of amphibious Creature, call'd *Cachora de Agua* by the *Portugueſes*, and Water-Dogs by the *Engliſh*, from their reſemblance to a ſhaggy Maſtiff-Dog, with four ſhort Leggs They have here alſo the *Amphisbana*, or two headed Snake, of a grey Colour with black Streaks. Its Bite is reckoned incurable; the beſt is, that it ſeldom wounds, having only two Specks in the Head inſtead of Eyes; ſome ſay it is altogether blind, and lives under Ground like a Mole. Its length is about fourteen Inches, with a Head on each end; whence the *Portugueſes* call it *Cobra de dos Cabeſes*, i. e. *The Snake with two Heads*. The Sea hereabouts affords Tarpems, Mullets, Gropers, Snooks, Garfiſh, Goraſſes, Barramas, Coquindas, Cavallies, Dog-fiſh, Herrings, Serrew, *Oleo de Boy*-Whales, Lobſters, Craw-fiſh, Shrimps, Crabs, common Oiſters, Conchs, Wilks, Cockles, Muſſels, Perriwinkles, and three ſorts of Sea-Tortoiſe, *viz.* The Hawsbill, Loggerhead, and Green Tortoiſe. The firſt is the moſt eſteem'd, its Shell being the moſt beautiful before the reſt; and therefore ſold very dear. Beſides the Harbour of *Bahia de todos los Santos*, there are two more excellent Ports in *Braſil*, viz. *Peruambuco* and *Rio Janeiro*: Next to theſe the Haven of St. *Paul* is much in requeſt, by reaſon of a good quantity of Gold found thereabouts; but the Country is Inhabited by a ſort of Banditti.

Their living Creatures.

The Amphisbana, or 2 headed Snake.

1699.

The 23d of *April* in the Morning we ſet ſail from this Harbour, and at twelve a Clock Cape *Salvadore* bore N. diſtant ſix Leagues. The 27th we came in the Lat. of the *Abrohlo*-Shoals at 18 and 19 deg. S. Lat. The 3d of *May* at 20 deg. 0 min. Lat. our Merid. diſt. from Cape *Salvadore* was 234 mil. the variat. 7 deg. The 12th being in Lat. 31 deg. 10 min. we began to have W. Winds, but met with nothing of moment, except a dead Whale, the Carcaſs whereof was covered all over with Birds of divers ſorts, as Pintado-Birds, Shear-Waters, Petrels, *&c.* We ſaw alſo abundance of Sea-weeds at 39 deg. 32 min. Lat. near the Meridian of the Iſle *Triſtian d' Aconha*. The 2d of *June* I ſaw a large black Fowl with a white flat Bill, which are ſaid never to fly above thirty Leagues from the Cape of *Good Hope*, whereas according to my account, we were ninety Leagues thence; but ſoon after found I was not above twenty five Leagues from the Cape. The 3d of *June* ſteering to the E. we ſaw a Sail which proved the *Antelope* of *London*, coming the Day before from the Cape. We kept Company till the next Day, when they ſteer'd for the *Eaſt Indies*, and I for the Coaſt of *New Holland*, lying N. E. from the Cape; we did not loſe ſight of one another till *June* the 6th. The 7th it was very tempeſtuous Weather, and the Wind continued pretty high till the 16th, and moderate till the 19th, the Wind from W. N. W. to S. by W. when we had run ſix hundred Leagues, when we were at 34 deg. 17 min. S. Lat. and Long. from the Cape 39 deg. 24 min. E. The Winds continued at N. E. by E till the 27th, and afterwards between the N. N. W. and S. S. W. till the 4th of *July*, in which time we ſail'd ſeven hundred eighty two Miles. All this while we met with nothing of remark, except ſome Birds and Whales, eſpecially as we came nearer to the Shoar. About ninety Leagues from the Land, we began to ſee Sea-weeds, and about thirty Leagues diſtant, ſome Scuttle-bones floating on the Water. *July* the 25th, being at 26 deg. 14 min. S. Lat. and Long. from the Cape of *Good Hope* 85 deg. 52 min. we ſaw more Sea-weeds like Moſs. The 28th the ſame encreaſed upon us, and the 29th we ſaw Scuttle-bones, Bonetoes and Skip-Jacks, a Fiſh of eight Inches long, not unlike a Roach. The 30th we ſaw more Scuttle-bones and Sea-weeds, and a ſort of Fowls we had not ſeen before, of a grey Colour, with red ſharp Bills, but for the reſt not unlike Lapwings.

1699. *They ſet ſail from* Bahia to dos los Santos.

Auguſt the firſt, as we ſtood inſtowards the Land to ſeek for a Harbour to refreſh our ſelves after a Voyage of 114 deg. from *Braſil*; we ſaw an opening at 26 deg. S. Lat. but finding nothing but Rocks and foul Ground, we ſtood off again the 2d. *Auguſt* the 4th, we had ſixty, fifty ſix, and fifty five Fathom Water, and the 5th ſaw Land again ten Leagues diſtant, at 25 deg. 30 min. Lat. The 6th we ſaw an opening in the Land, in which we Anchored in two Fathom and a half of Water. *Auguſt* 7th, I call'd the Mouth of this Sound, *Shark's* Bay, lying at 25 deg. S. Lat. and according to our reckoning 87 deg. Longit. from the Cape of *Good Hope*, which is leſs by a Hundred ninety five Leagues than is laid down in the common Draughts. The Land is pretty high, but even; the Shoar ſteep to the Sea. The Grounds produce ſome Graſs, Plants and Shrubs, but none above ten foot high. We ſaw ſome Eagles, but few other Land Fowls except ſome ſmall Birds. As for Water Fowls, they are Ducks, Curlews, Crabcatchers, Cormorants, Gulls, Pelicans, and ſome Water Fowl I never ſaw any where elſe. The Land Animals I ſaw here, were a ſort of *Raccoons* different from thoſe in the *Weſt Indies*. but as good Meat as theſe; as alſo a ſort of *Guano's* differing from thoſe deſcribed before in their Heads, which are larger; and their Tail, which is only a ſtump. The Sea-Fiſh here, are Sharks, Skates, Thornbacks, Garfiſh, *Bonettoes*, Muſſels, Periwincles, Limpits and Oiſters, both for eating and of the Pearl kind; ſome Cockles and green Tortoiſes.

They ſee the Coaſt of New-Holland.

Shark's Bay.

Its Living Creatures.

We Anchored at three ſeveral Places in this Bay. 1. The 7th of *Auguſt* at the W. ſide, here we ſtaid till the 11th. We ſearch'd for freſh Water but found none, however we got ſome Wood for Fuel. The 11th we ſteer'd further in, and in the Afternoon ſaw the Land a-head that makes the S. of the Bay; but meeting with Shoals, I ſteer'd away to the E. and the 12th paſs'd the N. point of the Land; and ſtood further into the Bay to ſee what Land we could ſee to the E. which we ſaw right a-head; but having but ſhoal Water, I made the beſt of my way to return to the W. entrance.

1690 *August* the 14th, I ſet ſail again out of this Bay to the N. E. coaſting along the Shoar. The 15th we were at 24 deg. 41 min. And the 16th at 23 deg. 22 min. The 17th we ſaw Land again. The 18th we ſaw abundance of Whales near a Shoal point, at 22 deg. 22 min. and the 19th at 21 deg. 42 min. The 20th, at 19 deg. 37 min. The 21ſt, we ſaw abundance of Sea Snakes of two different ſorts and ſhapes. At Noon bearing in S. E. by E. the Land appear'd like a Cape, but Anchoring about five Leagues from the bluff Point, it proved the E. end of an Iſle ſix Leagues in length, and one in breadth; being ſurrounded on all ſides with many other ſmall rocky Iſles, which in all appearance are a range of Iſlands ſtretching from E. N. E. to W. S. W. perhaps as far as *Shark*'s Bay, and nine or ten Leagues in breadth towards *New Holland*. The Tides I met with a little while after, gave me a ſuſpicion that there might be a kind of Archipelago of Iſles, and a paſſage to the S. of *New Holland* and *New Guinea* into the great S. Sea Eaſtward; but being in want of Water I could not attempt the Diſcovery of it. This Place is at 20 deg. 21 min. whereas *Taſman* in his Draught has laid it down at 19 deg. 50 min. and has repreſented the Shoar as joining in one ridge to the Continent. We went aſhoar in the Iſle with the bluff Point, where I found two or three Shrubs, one like Roſemary (whence I call'd it Roſemary-Iſle) and two ſorts of Grain like Beans; one growing on Buſhes, the other on a kind of a creeping Vine. We ſaw alſo ſome Cormorants, Gulls, Crabcatchers, *&c.* as alſo Limpits, Perriwinkles, Oiſters on the Rocks; ſome green Tortoiſes, Sharks and Water-Snakes. 1690

Auguſt 23th, we ran out again, and the 25th we ſtill coaſted along. The 27th and 28th we ſaw no Land; but the 30th at 18 deg. 21 min. made the Land, and Anchored in eight Fathom Water thirty Leagues from the Shoar. The 31ſt, we went aſhoar well Arm'd to find ſome freſh Water; we dug pretty deep, but could find none but what was brackiſh. We got ſight of ſome few of the Natives, who appear'd to me much the ſame I had ſeen on this Coaſt in my Voyage round the World, and ſo did the Country; the place where we landed at that time being not above fifty Leagues to the E. from hence. We ſaw here ſome Shrubs with Bloſſoms of a delicious ſmell, ſome Yellow, ſome Blew and White, as alſo a Fruit like Peaſe-Cods with ten ſmall Peaſe in each. We ſaw alſo ſome of the ſame Beans I mentioned in *Roſemary*-Iſle. The Land Animals we ſaw here, were Lizards, and ſome Beaſts like lean and hungry Wolves. Their Land Fowls were Crows, Hawks, Kites, and ſmall Turtle-Doves, but fat. The Sea Fowl, Pelicans, Boobies, Noddies, Curlews, Sea-pies, *&c.* The Sea has large Whales in plenty, and green Tortoiſes, as alſo ſome Sharks, Oiſters, Conchs, Muſſels, Limpits, Perriwinkles, *&c.* Being diſappointed in our hopes of meeting with freſh Water here, and my Men growing ſcorbutick, I had no opportunity to ſearch further, but reſolved to ſail thence towards *Timor*, which I did accordingly in the beginning of *September*. *The Natives and Coaſt of New Holland.*

CHAP. XIV.

A new Diſcovery of a large Country in the Northern America, *extending above Four Thouſand Miles. By Father* Lewis Hennepin.

A Voyage to North America.

FInding in my ſelf a ſtrong Inclination to retire from the World, I entred into the *Franciſcan* Order, where I was overjoy'd in reading the Travels of the Fathers of my own Order, who were indeed the firſt that undertook Miſſions into any Foreign Country. I thought nothing Greater or more Glorious than to Inſtruct the Ignorant and Barbarous, and lead 'em to the Light of the Goſpel. In order to which I went Miſſionary for *Canada*, by Command from my Superiors; and embarked at *Rochel* in Company of Mr. *de Laval*, ſince Biſhop of *Quebec* the Capital City of *Canada*. Our Crew was about one hundred Men, to three fourths of whom I adminiſtred the Sacrament, they being Catholicks. I likewiſe performed divine Service every Day when the Weather was Calm, and we ſung the *Itinerary* of the Clergy, Tranſlated into *French* Verſe, after Evening Prayers.

I ſhall omit the Accidents that befel us, being ſuch only as are inſeparable Companions of all great Voyages. Soon after my Arrival I was ſent in Miſſion about One hundred and twenty Leagues beyond *Quebec*, accompanied by Father *Luke Buiſſet*. We went up the River St. *Laurence* ſouthwards till we came to Fort *Frontenac*, diſtant from *Quebec* One hundred Leagues. It was built to prevent the Excurſions of the *Iroqueſe*, and to interrupt the Trade of Skins theſe Savages maintain with the Inhabitants of *New York*, who furniſh them with Commodities at cheaper Rates than the *French* of *Canada*.

The *Iroqueſe* are an inſolent and barbarous Nation, and have ſhed the Blood of more than two Millions of People in that vaſt extended Country. They would never ceaſe from diſturbing the repoſe of the Europeans, were it not for fear of their Fire-Arms. For they entertain no Commerce with them unleſs it be for Arms, which they buy on purpoſe to uſe againſt their Neighbours; and by means of which they have extended their bloody Conqueſts five or ſix hundred Leagues beyond their own Precincts, exterminating whatever Nation they hate.

I had already acquired ſome ſmall knowledge of the *Iroqueſe* Language, and Father *Luke* and I tranſlated the Creed, Lord's Prayer and Litany, which we cauſed them to get by heart, and repeat to their Children. They pronounce no Labial Letters, ſuch as B, P, M, F. Here we remained two Years and a half, till we ſaw our Houſe of Miſſion finiſhed, and then returned in a Canoe down the River St. *Lawrence* to *Quebec*.

1678 Having tarried there till thoſe who were expected from *Europe* to bear part in this Diſcovery were arrived, I embarked in a ſmall Canoe, made of the Bark of Birch-Trees, carrying nothing with me but a portable Chappel, one Blanket, and a Matt of Ruſhes, which was to ſerve me for Bed and Quilt. I arrived at Fort *Frontenac* the 2d of *November* 1678. and on the 18th embark'd in a Brigantine of about ten Tuns and fifteen Men, the Sieur *de la Motte*, Commander. We ſailed on till we came to the further end of the Lake *Ontario*, and on the 6th of *January* entred the River *Niagara*; where we ſet our Carpenters and the reſt of the Crew to work in building a Fort and ſome Houſes; but foreſeeing that this was like to give Jealouſie to the *Iroqueſe*, and to the *Engliſh* who dwell near them, and have a great Commerce with them, we told thoſe of the Village of *Niagara*, that we did not intend to build a Fort on the Bank of their River, but only a great Store-houſe to keep the Commodities we had brought to ſupply their Occaſions. And to remove their Suſpicion, Mr. *de la Motte* thought it abſolutely neceſſary to ſend an Embaſſie to the *Iroqueſe*; telling me, *He was reſolved to take along with him ſeven Men out of ſixteen that we were in all, and deſired me to accompany him becauſe I underſtood in a manner the Language of their Nation.* We paſſed through Forreſts thirty two Leagues, and after five Days Journey came to a great Village, and were immediately carried to the Cabin of their Principal. The younger Savages waſhed our Feet, and rubbed them over with the Greaſe of Deer, wild Goats, and Oil of Bears. They are for the moſt part tall and well ſhaped, covered with a ſort of Robe made of Beavers and Wolves Skins, or black Squirrels, holding a Pipe or *Calumet* in their Hands. The Senators of *Venice* do not appear with a graver Countenance, and perhaps don't ſpeak with more Majeſty and Solidity than thoſe ancient *Iroqueſes*. 1678 *January.* 1679 *January.* 1679

One of our Men who well underſtood their Language, told the Aſſembly.

1. That we were come to pay them a Viſit, and ſmoke with them in their Pipes. Then we delivered our Preſents, conſiſting of Axes, Knives, a great Collar of white and blew Porcelain, with ſome Gowns. The ſame Preſents were renewed upon every Point we propoſed to them.

2. We deſired them to give notice to the five Cantons of their Nation, that were about to build a Ship or great Canoe above the great Fall of the River *Niagara*, to go and fetch *European* Commodities by a more convenient Paſſage than that of the River St. *Laurence*, whoſe

1679 Whose rapid Currents make it dangerous and long. And that by these means we should afford them our Commodities cheaper than the *English* of *Boston*, or the *Dutch* (at that time Masters) of *New York*. This Pretence was specious enough, and very well contrived to engage the barbarous Nation to extirpate the *English* and *Dutch* out of that part of *America*.

3. We told them that we should provide them at the River *Niagara*, with a Blacksmith and a Gunsmith to mend their Guns, Axes, *&c.* they having no Body among them that understood that Trade. We added many other Reasons which we thought proper to persuade them to favour our Design. The Presents we made unto them in Cloth or Iron, were worth above four hundred Livres, besides some other *European* Commodities very scarce in that Country. For the best Reasons in the World are not listned to among them unless they are enforced with Presents.

The next Day their Speaker answer'd our Discourse Article by Article, seeming to be pleased with our Proposals tho' they were not really so, having a greater Inclination for the *English* and *Dutch* than for us. Whilst we were with them their Parties had made an Excursion towards *Virginia*, and brought two Prisoners. They spared the Life of one, but put to Death the other with most exquisite Torments. They commonly use this Inhumanity towards all their Prisoners, and their Torments sometimes last a Month. When they have brought them into their *Canton*, they lay them on pieces of Wood like a St. *Andrew*'s Cross, to which they tie their Legs and Arms, and expose them to Gnats and Flies, who sting them to Death. Children cut pieces of Flesh out of their Flanks, Thighs or other Parts, and boyling them, force those poor Souls to eat thereof. Their Parents eat some themselves, and the better to inspire into their Children a hatred of their Enemies, give them some of their Blood to drink. This Cruelty obliged us to leave them sooner than we would have done, to shew them the Horror we had of their Inhumanity, and never eat with them afterwards; but returned the same way we went through the Woods to the River *Niagara*, where we arrived the 14th of *January*, much fatigued with our Voyage, having no Food on the way but *Indian* Corn. Mr. *de la Motte* no longer able to endure so laborious a Life, gave over his Design and returned to *Canada*, having about two hundred Leagues to travel.

January. On the 20th, Mr. *de la Salle* arrived from Fort *Frontenac* with a great Bark to supply us with Provisions, Rigging and Tackling for the Ship we designed to build at the Mouth of the Lake *Erie*; but that Bark was unfortunately cast away on the Lake *Ontario*, within two Leagues of *Niagara*. On the 22d, we went two Leagues above the great Fall of *Niagara*, where we made a Dock for building the Ship; Mr. *de la Salle* returned to Fort *Frontenac*, leaving one *Tonti* an *Italian* for our Commander. He undertook this Journey a-foot over the Snow, having no other Provision but a little Sack of roasted *Indian* Corn. However he got home safely with two Men and a Dog, who dragged his Baggage over the frozen Snow.

Most of the *Iroquese* were now gone to wage War on the other side the Lake *Erie*, and our Men continued with great Application to build our Ship; for the *Iroquese* who were left behind, were not so insolent as before, though they came sometimes to our Dock and expressed some discontent at what we were doing.

We made all the haste we could to get our Ship afloat, tho' not altogether finished, to prevent their designs of burning it. She was called the *Griffin*, about sixty Tuns, and carried five small Guns. We fired three Guns and sung *Te Deum*, and carrying our Hammocks aboard, the same Day were out of the reach of the Savages.

Before we could proceed in our intended Discovery, I was obliged to return to Fort *Frontenac*, to bring along with me two Monks of my own Order to help me in the Function of my Ministry. I concealed part of the Discouragements I had met with, because I designed to engage Father *Gabriel* and *Zenobe* in our Voyage. Having dispatched our Affairs, we three went aboard a Brigantine, and in a short time arrived at the River which runs into the Lake *Ontario*, where we continued several Days, our Men being very busie in bartering their Commodities with the Natives, who exchanged their Skins for Knives, Guns, Powder and Shot, but especially Brandy, which they love above all things. Mr. *de la Salle* arrived in a Canoe eight Days after. These Impediments retarded us so long that we could not reach the River *Niagara* before the 30th of *July*. Father *Gabriel* and I went over Land to view the great Fall, the like whereof is not in the whole World. It is compounded of two great cross streams of Water and two Falls, with an Isle sloping along the middle of it. The Waters which fall from this vast height do foam and boil after the most hideous manner imaginable, making an outragious Noise more terrible than that of Thunder; so that when the Wind blows from the S. their dismal Roaring may be heard above fifteen Leagues off. 1679 *July.*

The River *Niagara* having thrown it self down this incredible Precipice, continues its impetuous Course for two Leagues with an inexpressible Rapidity; and the Brinks are so prodigious high, that it makes one tremble to look steadily on the Water, rolling along with a Rapidity not to be imagined. It is so rapid above the descent, that it violently hurries down the wild Beasts, endeavouring to pass it to feed on the other side, casting them down headlong above six hundred Foot. A Bark or greater Vessel may pass from Fort *Frontenac* until you come within two Leagues of the Fall, for which two Leagues the People are obliged to carry their Goods over-land; but the Way is very good, and the Trees are but few, and they chiefly Furs and Oaks. Were it not for this vast Cataract which interrupts Navigation, we might sail with Barks or greater Vessels above four hundred and fifty Leagues further.

On the 7th of *August* we went on board, being in all thirty four Men, and sailed from the Mouth of the Lake *Erie*, and on the 11th entred a Strait thirty Leagues long and one broad, except in the middle, which makes the Lake of St. *Claire*. On the 23d we got into the Lake *Huron*. The 26th we had so violent a Storm that we brought down our Yards and Topmasts, and let the Ship drive at the Mercy of the Wind, knowing no Place to run into to shelter our selves. Mr. *la Salle* notwithstanding he was a couragious Man, began to fear, and told us we were undone, whereupon every Body fell on his Knees to say his Prayers and prepare himself for Death, except our Pilot, whom we could never oblige to pray; and he did nothing all that while but Curse and Swear against Mr. *la Salle*, who had brought him thither to make him Perish in a nasty Lake, and lose the Glory he had acquired by his long and happy Navigations on the Ocean. When the Wind abated we hoisted our Sail, and the next Day arrived at *Missilimakinak*. *August.*

On the 2d of *September* we weighed Anchor and sailed to an Island at the Mouth of the Bay of *Puans*, forty Leagues from *Missilimakinak*. The Chief among them who had been formerly in *Canada*, received us with all the Civility imaginable. Mr. *la Salle* without asking any other Body's Advice, resolved to send back the Ship to *Niagara*, laden with Furs and Skins, to discharge his Debts. Our Pilot and five Men with him were therefore sent back, and order'd to return with all imaginable Speed to join us towards the southern Parts of the Lake, where we should stay for them among the *Illinois*. They sailed the 18th with a westerly Wind, and fired a Gun as taking leave. It was never known what Course they steered, nor how they Perished; but 'tis supposed that the Ship struck upon a Sand, and was there buried. This was a great loss for Mr. *la Salle* and other Adventurers, for that Ship with its Cargo cost above sixty thousand Livres. *September.* *The Ship Griffin lost.*

We continued our Voyage in four Canoes, being fourteen Men in all, and departed the 19th of *September*. We steered to the South towards the Continent, distant from the Island near forty Leagues. On the first of *October* after twelve Leagues Rowing, we were in so great danger by stress of Weather, that we were forced to throw our selves into the Water, and carry our Canoes on our Shoulders to save them from being broken to pieces. I carried Father *Gabriel* on my Back, whose great Age, being sixty five Years, did not permit him to venture into the Water. *October.*

Having no acquaintance with the Savages of the Village near which we landed, we prepared to make a vigorous Defence in case of an Attack, and in order to it possessed our selves of a rising Ground where we could not be surprized. We then sent three Men to buy Provisions in the Village, with the *Calumet* or Pipe of Peace, which those of the Island had given us. And because the *Calumet* of Peace is the most sacred Thing among the Savages, I shall here describe the same.

1679

It is a large Tobacco-Pipe, of a red, black, or white Marble. The Head is finely polished. The Quill which is commonly two Foot and a half long, is made of a pretty strong Reed or Cane, adorned with Feathers of all Colours, interlaced with locks of Womens Hair. Every Nation adorns it as they think fit, and according to the Birds they have in their Country.

Such a Pipe is a safe Conduct amongst all the Allies of the Nation who has given it. And in all Embassies the *Calumet* is carried as a Symbol of Peace. The Savages being generally persuaded that some great Misfortune would befal them, if they should violate the publick Faith of the *Calumet*. They fill this Pipe with the best Tobacco they have, and then present it to those with whom they have concluded any great Affair, and smoke out of the same after them.

Our three Men provided with this Pipe, and very well Armed, went to the little Village three Leagues from the Place where we landed; but finding no Body therein, took some *Indian* Corn, and left instead of it some Goods, to let them see that we were no Robbers, nor their Enemies. However twenty of them armed with Axes, small Guns, Bows and Clubs, advanced near the Place where we stood; whereupon Mr. *la Salle* with four Men very well Armed, went toward them to speak with them, and desired them to come near us, for fear a Party of our Men who were gone a Hunting, should meet with them and kill them. They sat down at the foot of the Eminence where we were Posted, and Mr. *la Salle* spoke to them all the while concerning his Voyage, which he told them he had undertaken for their Good and Advantage. This was only to amuse them till our three Men returned, who appearing with the *Calumet* of Peace, the Savages made a great Shout, and rose and began to dance. We excused our taking some of their Corn, telling them we had left the true value of it in Goods; which they took so well, that they sent immediately for more, and gave us next Day as much as we could carry away in our Canoes. They retired towards Evening, and Mr. *la Salle* ordered some Trees to be cut down, and laid cross the Way, to prevent any surprize from them. The oldest of them came to us next Morning with their *Calumet* of Peace, and brought us some wild Goats. We presented them with some Axes, Knives, and several little Toys for their Wives, with which they were well pleased.

We left that place the 2d of *October*, and coasted along the Lake, which is so steep that we could hardly find any place to land. The Violence of the Wind obliged us to drag our Canoes sometimes to the top of the Rocks to prevent their being dashed in pieces. The stormy Weather lasted four Days, during which, we suffered very much, and our Provisions failed us again; which with the Fatigues of Rowing, caused old Father *Gabriel* to faint away in such manner, that I thought verily he could not live. We had no other subsistence but a handful of *Indian* Corn once every twenty four Hours, which we Roasted or else Boyled in Water; and yet Rowed almost every Day from Morning till Night. Being in this dismal Distress, we saw upon the Coast a great many Ravens and Eagles, from whence we conjectured there was some Prey; and having landed upon that place, we found above the half of a fat wild Goat which the Wolves had strangled. This Provision was very acceptable to us, and the rudest of our Men could not but praise the divine Providence who took so particular a care of us.

Having thus refreshed our selves, we continued our Voyage directly to the southern parts of the Lake. On the 16th we met with abundance of Game. A Savage we had with us killed several Stags and wild Goats, and our Men a great many Turkies very fat and big; wherewith we provided our selves for several Days, and so embark'd again. *November.* On the first of *November* we came to the Mouth of the River of the *Miamis*, which runs from the South and falls into the Lake. Here we spent all that Month in building a Fort forty Foot long, and eighty broad; made with great square pieces of Timber laid one upon the other.

December. On the 3d of *December* we embarked, being thirty three Men in eight Canoes, and having Rowed about twenty five Leagues up the River *Miamis* to the S. W. we could not find the place where we were to land, and carry our Canoes and Equipage into the River of the *Illinois*, which falls into *Mississipi*. Our Savage who was hunting afloar, not finding us at the place of Portage, came higher up the River, and told us we had missed it. So we returned and carried our Canoes over Land to the head of the *Illinois* River, which is but a League and a half from that of *Miamis*. We continued our Course upon this River very near the whole Month of *December*, towards the end of which we arrived at the Village of the *Illinois*, about One hundred and thirty Leagues from Fort *Miamis*. We found no Body in the Village, which caused a great Perplexity among us: For tho' we wanted Provisions, yet we durst not meddle with the Corn they had laid under Ground for their Subsistence, and to sow their Lands with; It being the most sensible Wrong one can do them, in their Opinion, to take some of their Corn in their absence. However our Necessity being very great, and it being impossible to continue our Voyage without it, Mr. *la Salle* took about forty Bushels of it, hoping to appease them with some Presents.

1680

We embarked again with this fresh Provision, and fell down the River the first of *January* 1680. We *January.* took the Elevation of the Pole, which was 33 deg. 45 min. Although we used all the precaution we could, we found our selves on a sudden in the middle of their Camp, which took up both sides of the River. The *Illinois* being much terrified, tho' they were several thousand Men, tendred us the *Calumet* of Peace, and we offered them ours. Mr. *la Salle* presented them with *Martinico* Tobacco, and some Axes. He told them, *He knew how necessary their Corn was to them; but that being reduced to an unspeakable Necessity when he came to their Village, and seeing no probability to subsist, he had been forced to take some Corn from their Habitations without their leave. That he would give them Axes and other Things in lieu of it if they could spare it; and if they could not, they were free to take it again.* The Savages consider'd our Proposals, granted our Demands and made an Alliance with us.

Some Days after *Nikanape*, Brother to the most considerable Man among them, who was then absent, invited us to a great Feast. And before we sate down, told us, *That he had invited us not so much to give us a Treat, as to endeavour to dissuade us from the Resolution we had taken to go down to the Sea by the great River* Mississipi. He said, *That the Banks of that River were Inhabited by barbarous and bloody Nations, and that several had perished upon the same Enterprize.* Our Interpreter told him by order of Mr. *la Salle*, *That we were much obliged to him for his Advice; but that the Difficulties and Dangers he had mentioned, would make our Enterprize still more glorious. That we feared the Master of the Life of all Men, who ruled the Sea and all the World, and therefore would think it Happiness to lay down our Lives to make his Name known to all his Creatures.* However *Nikanape's* Discourse had put some of our Men under such terrible Apprehensions, that we could never recover their Courage nor remove their Fears, so that six of them who had the guard that Night (among which were two Sawyers, the most necessary of our Workmen for building our Ship) ran away, taking with them what they thought necessary. But considering the Country through which they were to Travel, and the Season of the Year, we may say, that for avoiding an Uncertainty, they exposed themselves to a most certain Danger.

Mr. *la Salle* seeing those six Men were gone, exhorted the rest to continue firm in their Duty; assuring them, that if any were afraid of venturing themselves upon the River of *Mississipi* because of the Dangers *Nikanape* had mentioned, he would give them leave to return next Spring to *Canada*, and allow them a Canoe to make their Voyage; whereas they could not venture to return home at this time of the Year, without exposing themselves to Perish with Hunger, Cold, or the Hands of the Savages.

On the 15th we made choice of an Eminence on the Bank of the River, defended on that side by the River, and on two others by two deep Ditches made by the Rains; so that it was accessible only by one way. We cast a Line to join those two natural Ditches, and made the Eminence steep on every side, supporting the Earth with great Pieces of Timber. By the first of *March* our Fort was near finished, and we named it *Crevecœur*, because the desertion of our Men, with the difficulties we laboured under, had almost broke our Hearts: We had also built a Bark for the continuance of our Disco-

They build Fort Crevecœur.

very

1680 very. It was forty two Foot long by the Keel, and was in such a forwardness, that we should have been in a condition to sail in a very short time, had we been provided with all other Necessaries. But hearing nothing of our Ship *Griffin*, and therefore wanting the Rigging and other Tackle we expected by her, we found our selves in great Perplexity, and did not know what to do in this sad Juncture, being above five hundred Leagues from Fort *Frontenac*; whither it was almost impossible to return at that time, because the Snow made Travelling very dangerous by Land, and the Ice made it impracticable to our Canoes.

Mr. *la Salle* did now no longer doubt but his beloved *Griffin* was lost; but neither this nor the other Difficulties dejected him. His great Courage buoy'd him up, and he resolved with three Men to return to Fort *Frontenac* by Land, notwithstanding the Snow and the unspeakable Dangers attending so great a Journey; and so to bring along with him the necessary Things to proceed on our Discovery; while I with two Men should go in a Canoe to the River *Missisipi*, to get the Friendship of the Nations inhabiting the Banks thereof. Then calling his Men together, told them, *He would leave Mr. Tonti to Command in the Fort, and desired them to obey his Orders in his absence, to live in a Christian Union and Charity, to be Courageous and Firm in their Design.* He assured them, *He would return with all the Speed imaginable, and bring with him a fresh Supply of Meat, Ammunition, and Rigging for our Bark; and that in the mean time he left them Arms and other Things necessary for a vigorous Defence, in case their Enemies should attack them before his return.*

Mr. la Salle *returns with three Men to Fort* Frontenac *by Land, above five hundred Leagues.*

Then telling me, *That he expected I should depart without further delay.* He embraced me and gave me a *Calumet* of Peace, with two Men to manage our Canoe, *Picard* and *Ako*, to whom he gave some Commodities to the value of about one thousand Livres, to Trade with the Savages or make Presents. He gave to me in particular, and for my own use, ten Knives, twelve Shoemaker's Awls or Bodkins, a small Roll of *Martinico*-Tobacco, two Pounds of *Rassade*, i. e. little Pearls or Rings of coloured Glass to make Bracelets for the Savages; and a small Parcel of Needles; telling me, *He would have given me a greater Quantity if it had been in his Power.*

Thus relying on the Providence of God, and receiving the Blessing of Father *Gabriel*, I embraced all our Men and took my leave of Mr. *la Salle*, who set out a few Days after for *Canada* with three Men, without any Provisions but what they killed in their Journey, during which they suffered very much by cold Weather, Snow and Hunger.

The Author departs in a Canoe with two Men to discover the River Missisipi.

We set out from Fort *Crevecœur* 29th of *Feb.* my self, *Picard* and *Ako*, and when we had gone fifty Leagues down the River, we came to the Place where it falls into the *Missisipi*, between 35 and 36 deg. of Lat. The *Missisipi* runs to the S. S. W. between two ridges of Mountains, is in some places a League broad, and half a League where it is narrowest. The Ice which came down stopt us here till the 12th of *March*. Then after Prayers we embarked, and continuing our Course down the River, we discovered three Savages on the 15th, and landing, marched up to them; whereupon they ran away. But after some signs, one returned, and presented us the *Calumet* of Peace, which when we had received, the two others came back. We could not understand one Word of their Language: And *March.* when we named two or three different Nations to them, one answered three times, *Chiquacha*. They gave us some Pelicans they had killed with their Arrows, and we presented them with part of our Meat. Two Days after we saw many Savages near the River, crying aloud, *Sasacouest*, that is, *Who goes there?* as I have been informed. They sent a Pirogue or heavy wooden Canoe towards us, wherein were the three Savages we had met two Days before. We presented our *Calumet* of Peace, which they received, but gave us to understand by signs that we must go to the *Akansa*, pointing to the Savages ashoar. We could not avoid it, and as soon as we were landed, the three *Chiquachas* took our Canoe upon their Shoulders, and carried it to the Village. These Savages received us very kindly, and presented us with Beans, *Indian* Corn and Flesh to eat. We made them also a Present of some of our *European* Commodities, which they admired, putting their Fingers upon their Mouths, especially when they saw our Guns. The 18th we embarked again, after having been entertained with Dancing and Feasting; and carried away our Commodities, tho' the Savages were very loath to part with them; but having accepted our *Calumet* of Peace, they did not presume to stop us by force. 1680

We passed by the Nations of *Taensa* and *Coroa*, by both which we were kindly received, and on the 24th came to the Nation of *Quiniquissa*. The next Day we came to a Point where the *Missisipi* divides it self into three Channels. We took the middle one, which is very broad and deep. The Water began there to tast brackish, but four Leagues lower was as Salt as the Sea. We rowed about four Leagues further and discovered the Sea. The mouth of the River is very deep, without being interrupted with any Sands, so that great Ships may go up as far as the *Illinois* River, which is two hundred Leagues. Its Course from its Source to the Sea, may be eight hundred Leagues, including windings and turnings. It falls into the Gulph of *Mexico*, between 27 and 28 deg. of Lat. Its Mouth may be about thirty Leagues from *Rio Bravo*, sixty from *Palmas*, and eighty or one hundred from *Rio Panuco*, the neareſt Habitation of the *Spaniards*.

They come to the Sea.

My two Men were very glad of this Discovery: But on the other hand they expressed a great deal of Dissatisfaction to have been at such trouble without making any Profit, having found no Furs to exchange for their Commodities. They were also much afraid of the *Spaniards* of *New Mexico*, and were perpetually telling me, *That if they were taken, the* Spaniards *would never spare their Lives, or at least give them the Liberty to return into* Europe. I knew their Fears were not altogether unreasonable; and therefore I resolved to go no further, tho' I had no reason to be afraid for my self, our Order being so numerous in *New Mexico*, that on the contrary, I might expect to have had in that Country a peaceable and easie Life.

We lay during the time we were ashoar, under our Canoe supported with four Forks, and made Curtains of some Rolls of Birch Bark, hanging from the Top to the Ground, to defend us from the Rain. We saw no Body, and therefore cannot tell whether that Coast be Inhabited. We squared a Tree of twelve Foot high, and making a Cross of it, erected it in that Place, leaving there a Letter signed by me and my two Men, containing an Account of our Voyage, Country, and Profession. Then kneeling near the Cross, we sung some Hymns, and embarked again on the first of *April*, to return towards the Source of the River. *April.*

They return.

'Tis observable that during the whole Course of our Sailing, God protected us against the Crocodils, which are very numerous in that River, especially towards the Mouth. They look'd dreadful, and would have attack'd us, had we not been very careful to avoid them.

Our Canoe being loaded with three Men only, and our Provisions, did not draw three Inches Water, and therefore we could Row very near the Shoar, and avoid the Current of the River. The next Day, *April* 2d, we saw towards break of Day a great Smoak not far from us, and soon after discover'd four Savage Women loaden with Wood, marching as fast as they could to get to their Village before us. But some Buffards coming near us, one of my Men could not forbear to shoot at them, which so frighted the Women that they left their Wood, and ran away to their Village, where they arrived before us. The Savages having heard the noise, were in as great Fear as their Wives, and left their Village upon our Approach. But I landing, immediately advanc'd alone with the *Calumet* of Peace, whereupon they return'd, and received us with all the Respect and Civility imaginable. We made them some small Presents to shew our Gratitude, and left that Place *April* the 4th, and Rowed with such diligence that we arrived the same Day at *Koroa*. I was surprized to see their *Indian* Corn which was left very green, grown already to maturity: But I have learned since, that their Corn is ripe sixty Days after it is sown. They have three or four Crops of *Indian* Corn in a Year, having no other Winter than some Rain. They have all sorts of Trees we have in *Europe*, and many other unknown to us. There are the finest Cedars in the World, and another Tree from which drops a most fragrant Gum, which in my opinion exceeds our best Perfumes. The Cotten Trees are of a prodigious height; the Savages make them hollow with Fire, to make their Pirogues of them. We saw some of them all of a Piece above one hundred Foot long. They told us, *That to the Westward are some Beasts who carry Men upon their Backs*, and shewed us the Hoof and part of the Leg of one, which was certainly the Hoof of a Horse. And surely Horses are not utterly unknown in the Northern *America*, for near the Cape named

Cotten-Trees one hundred Foot long.

1680 named by us St. *Anthony*, we saw a Horse and some other Beasts Painted upon the Rock with red Colours by the Savages. But whereas we had been told that the *Spaniards* of *New Mexico* lived not above forty Leagues from them, and supplied them with *European* Commodities; we found nothing amongst them that might be suspected to come from thence, unless it be some little pieces of Glass strung upon a Thread, with which the Women adorn their Heads. We left the Habitations of the *Akansas* the 4th of *April*, and during sixty Leagues saw no Savage. Our Provisions being spent, we had nothing to live upon but the Game we killed, or the Fish we could catch. On the 12th as my two Men were boyling a Bussard, and my self refitting our Canoe on the Bank of the River, I perceived on a sudden, about two of the Clock in the Afternoon, no less than fifty Canoes made of Bark, manned with one hundred and twenty Savages stark Naked, coming down the River with an extraordinary swiftness to surprize the *Miamis* and *Illinois* their Enemies.

We threw away the Broth which was preparing, and getting aboard as fast as we could, made towards them, crying out in the *Iroquese* and *Algonquin* Languages, *Comerades, We are Men of wooden Canoes*; for so they call those that sail in great Vessels. This had no effect; for they understood not what we said; so that surrounding us immediately, they began to let fly their Arrows at us, till the Eldest amongst them perceiving that I had a *Calumet* of Peace in my Hand, came up to us and prevented our being Murther'd by their Warriours.

They are taken Prisoners by the Savages.

They presently jumped out of their Canoes, some upon Land, others into the Water; surrounding us on all sides with Shrieks and Outcries that were indeed very terrifying. 'Twas to no purpose to resist, being but three to so great a number. One of them snatch'd the Pipe of Peace out of my Hand. We presented them with some small Pieces of *Martinico* Tobacco, and made signs to them with our Oars upon the Sand, that the *Miamis* their Enemies, whom they were in search of, had passed the River, and were gon to join the *Illinois*.

Being then out of all hopes of surprizing their Enemies, three or four of the eldest of them laid their Hands on my Head, and began to weep bitterly, accompanying their Tears with such mournful accents as can hardly be expressed; while I with a sorry Handkerchief I had left, made shift to dry up their Tears: However to very little purpose; for refusing to smoke in our Calumet, they thereby gave us to understand, that their design was still to murther us; and one hundred of their Leaders coming up to us, made us to understand by Signs, that their Warriors were resolved upon our Death. This obliged me to apply my self to their Chiefs, and presented them with six Hatchets, fifteen Knives and some pieces of Tobacco; after which bending my Neck and pointing to a Hatchet, I signified to them by that submission, that we threw our selves on their Mercy.

The Present had the good effect to soften some of them, who, according to their Custom, gave us some Beaver's Flesh to eat, themselves putting the three first Bits in our Mouths, having first blown upon it, because it was hot; after this they set their Platter before us, made of the Bark of a Tree, leaving us at liberty to feed after our own fashion. These Civilities did not hinder us from passing the Night away very uneasily, because in the Evening before they went to sleep, they had returned us our Calumet of Peace. The two Canoe-men resolved to sell their Lives as dear as they could, and to defend themselves like Men to the last, in case they should attack us. For my part, I told them, I resolved to suffer my self to be slain without the least resistance, in imitation of our Saviour. However, we watch'd all Night by turns, that we might not be surprized in our Sleep.

The next Morning early one of their Captains who had been for killing us, came and demanded my Pipe of Peace, it being deliver'd him, he fill'd it with Tobacco, and made the rest who had been for putting us to Death to smoke in it; then he made Signs that we must go along with them into their Country to which they were then returning. This Proposal was very welcome to us, and we rowed in their company for nineteen Days together, sometimes North, and sometimes N. East, according to the best observations we could make by our Compass; so that after these Barbarians had forced us to follow them, we made more than two hundred and fifty Leagues up the River *Mississipi*, and we were got about one hundred and fifty Leagues up the same, above that of the *Illinois*, when we were first taken by them. One of the fifteen Days of our most irksome Voyage a Captain call'd *Aquipaguetin*, who afterwards adopted me for his Son, had killed a large fat Deer, to which he invited the chief Captains of the Warriors. After the Repast the Savages with their Hair anointed with Oil of Bears, and stuck all over with red and white Feathers, and their Heads covered with the Down of Birds, began to dance with their Hands upon their Hips, and striking their Feet with great force against the ground. During the Dance one of the Sons of the Master of the Ceremonies made them all smoke in the Pipe of War, himself shedding abundance of Tears. The Father in the mean while laying his Hands on our Heads, and lifting up his Eyes to Heaven, bathed himself in Tears. As for us, as far as we could judge, all this Grimace boaded us no good: And indeed, we afterwards understood, that he meant nothing less than our Destruction by it. But finding the opposition he was like to meet from the other Chiefs, who were of a contrary opinion, he was content to suffer us to reimbark, resolving however to make use of some other Straragem to get into his own Hands by little and little the rest of our things; not daring to take them from us openly by force, for fear of the rest of his own Nation; by which it plainly appears, that he was a crafty designing Knave. His Son was kill'd by the *Miamis*, and finding he could not revenge himself on that Nation, vented his Passion upon us. Having thus travell'd nineteen Days in our Canoe by Water, we came within six Leagues of the Fall of St. *Anthony*, where they held an Assembly to consult what they should do with us. At last they separated and gave us to three of their Chiefs, instead of three of their Sons which had been kill'd in the War. Then they seized our Canoe and took away all our Equipage; our Canoe they pull'd to pieces; their own they hid among the Alders; so that tho' we might have gone conveniently enough quite up into their Country by Water, yet were we obliged by their conduct to travel no less than sixty Leagues a-foot.

1680

Our ordinary Marches were from break of Day till ten at Night; and when we met with any Rivers we swam them, themselves (who for the most part are of an extraordinary size) carrying our Cloaths and Equipage on their Heads. We never eat but once in twenty four Hours, and then nothing but a few scraps of Meat dried in Smoak, after their Fashion, which they afforded us with abundance of regret.

I was so weak that I often lay down, resolving rather to die than follow these Savages any farther, who travell'd at a rate so extraordinary, as far surpasses the strength of any *European*: However, to hasten us, they sometimes set fire to the dry Grass in the Meadows thro' which we pass'd; so that our choice was, march, or burn. When we had thus travell'd sixty Leagues a-foot, and undergone all the Fatigues of Hunger, Thirst and Cold, besides a thousand Outrages daily done to our Persons, as soon as we approached their Habitations, which are situated in Morasses inaccessible to their Enemies, they thought it a proper time to divide the Merchandize they had taken from us. Here they were like to fall out and cut one anothers Throats about the Roll of *Martinico* Tobacco, which might still weigh about fifty Pound: Then arose a high dispute about the distribution they were to make of our Persons. At last *Aquipaguetin*, as Head of the Party carried it; who turning towards me, presented me his Calumet of Peace to smoke in, receiving from me at the same time that which we had brought, and then adopted me for his Son in the room of him he had lost in the War.

Two other Captains did the same by the two Canoe-Men. This separation was very grievous to us, tho' somewhat allay'd by the satisfaction we had to find our Lives were safe. *Picard* being sensible of the uncertain condition his Life was in among so barbarous a People, took me aside to confess him. I should have been overjoy'd to have seen *Ako* so well disposed. Being thus parted, the Savages led us away, each to his own Village.

I came to *Aquipaguetin*'s Habitation in the Month of *May* 1680. The next Day he shewed me to six or seven of his Wives, telling them that they were to esteem me as one of their Sons, and ordered those about him to give me the Title that was due to the rank which I was to hold amongst my new Kindred. *May.*

I spent three Months very ill in this place among the *Issati* and *Nadoveſſians*. My new Father gave me nothing to eat but a few wild Oats five or six times a Week, and the Roes of dried Fish. He sent me into a neighbouring Isle with his Wives, Children and Servants,

1680. vants, where I digged with a Pickax and Shovel I had recovered from those that robbed us. Here we planted Tobacco, and some *European* Pulse which I brought from thence, and were highly prized by *Aquipaguetin*.

During my stay among them, there arrived four Savages in Embassy, who said they were come above 500 Leagues from the West, and had been four Moons upon the way. They assured us there was no such place as the Strait of *Anian*, and that they had marched without resting, except to sleep, or kill Game for their subsistence, and had not seen or passed over any great Lake; by which Phrase they always mean the Sea.

No Strait of Anian.

They farther inform'd us, that the Nation of the *Assenipoulacs*, who lie N. E. from the *Issati*, was not above six or seven Days Journey from us: That none of the Nations within their Knowledge, who lie to the W. or N. W. of them had any great Lake about their Countries, which were very large, but only Rivers, which coming from the North run cross the Countries of their neighbouring Nations which border on their Confines on the side of the great Lake, which in their Language is the same as Sea. They farther assured us, that there were very few Forests in the Countries thro' which they passed in their way hither, in so much that now and then they were so put to it for Fuel, that they were forced to make Fires of Bulls Dung to boil their Victuals. All these Circumstances make it appear, that there is no such place as the Streights of *Anian*, as we usually see them set down in Maps. And whatever Efforts have been made for many Years past by the *English* and *Dutch*, the two Nations of the World, who are the greatest Navigators to find out a Passage to *China* and *Japan* thro' the frozen Sea, they have not yet been able to effect it. But by the help of my Discovery and the assistance of God, I doubt not but a Passage may still be found, and that an easy one too. For example, One may be transported into the *Pacifick* Sea by Rivers which are large and capable of carrying great Vessels, and from thence it is easy to go to *China* and *Japan* without crossing the Equinoctial Line: And in all probability *Japan* is on the same Continent as *America*.

July. Toward the end of *July* the *Sieur de Luth* accompanied with five Men arrived in our Camp from *Canada*; and because I had some knowledge of the Language of the *Issati*, he desired that I, with *Picard* and *Ako*, might accompany him to the Villages of those People. I was very willing to undertake it, especially when I understood that they had not received the Sacraments in the whole two Years and a half that they had been out upon their Voyage. We arrived at the Villages of the *Issati* the 14th of *August*, and having exchanged our Commodities we returned to the Camp. Towards the end of *September* we let them understand, that to procure them Iron and other Merchandizes which was useful for them, it was convenient that we should return to *Canada*, and that at a certain time when we should agree upon between us, they should come half the way with their Furs, and we the other half with our *European* Commodities; upon this they held a great Council, and consented to our return. *Ouasicoude* their chief Captain gave us some Bushels of wild Oats for our subsistence by the way, having first regaled us in the best manner he could. These Oats are better and more wholsome than Rice: Then with a Pencil he marked down on a sheet of Paper which I had left, the Course we were to keep for 400 Leagues together. 1681.

We put our selves into two Canoes, being eight *Europeans* of us in all. We fell down the River of St. *Francis* into the *Mississipi*, and thence went up the River *Ouisconsin*, navigable for large Vessels above one hundred Leagues; then we carried our Canoes over-land half a League. Thus having made more than four hundred Leagues by Water since our departure from the Country of the *Issati*, we arrived at last at the great Bay of the *Puans*, where we found many *Canadians*, who were come hither to trade; they having some Wine with them, I administred the Sacrament and preached. After two Days stay we departed, and after one hundred Leagues rowing, having coasted along the great Bay of *Puans*, we arrived at *Missilimakinak*, where we were forced to winter.

They are set at liberty.

We parted from *Missilimakinak* in *Easter* Week 1681, 1681. and having rowed one hundred Leagues along the side of the Lake *Huron*, we passed the Streights which are thirty Leagues thro', and the Lake of St. *Claire* which is in the middle: Thence over the Lake *Erie* to the fall of *Niagara*, from whence we carried our Canoe two Leagues below, and came to the Lake of *Ontario* or *Frontenac*. When we came to the Fort we were kindly received by Father *Luke Buisset* and Mr. *la Fleur*, who had the command of the Fort in the absence of Mr. *la Salle*. But our Men being eager to return to *Canada*, we took leave and went for *Quebec*. In two Days we came to *Montreal*, sixty Leagues. Count *Frontenac* looking out at a Window saw me in the Canoe, and took me for Father *Luke Fillatre*, who served him as Chaplain: But one of his Guards knowing me again went to him and acquainted him with my coming: He was so kind as to come and meet me, and gave me the best reception that a Missionary might expect from a Person of that Rank and Quality: He wondred to see me so much alter'd, being lean, tired and tann'd. He carried me to his own House, where I continued twelve Days to refresh my self: He forbad all his Servants to give me any thing to eat, lest I should fall sick if left to my own discretion after so long Hardships; and gave me himself what he thought best.

When I desired his permission to go to *Quebec*, he appointed two of his Guards who understood very well to manage a Canoe, to carry me thither, where the Provincial Commissary of the Recollects order'd me to return to *Europe*.

CHAP. XV.

An Account of Mr. la Salle's *undertaking to discover the River* Mississipi, *by way of the Gulph of* Mexico, *By* Lewis Hennepin.

MR. *Robert Cavelier de la Salle* was a Person qualified for the greatest Undertakings and may be justly ranked amongst the most famous Travellers that ever were. This will appear to whomsoever will consider that he spent his own Estate about the greatest, most important and most perilous Discovery that has been yet made. His design was to find out a Passage from the Northern to the South Sea without crossing the Line, which a great many have hitherto sought in vain. The River *Mississipi* does not indeed run that way; but he was in hopes by means of that River to discover some other River running into the South Sea. In order whereunto he endeavour'd to find out by Sea the Mouth of *Mississipi*, which discharges it self into the Gulph of *Mexico*, to settle there a Colony and build a good Fort to be as his Magazine, and serve as a retreat both by Sea and Land in case of any mishap.

He made his Proposals to the *French* King's Council, who approving the design, his most Christian Majesty gave him all necessary Authority, and supplied him with Ships, Men and Money. The Ships were the *Toby*, one of the King's Men of War of fifty six Guns, a great Fly-Boat, a small Frigat and a Ketch. This Fleet was commanded by Mr. *Beaujeau*, who was victualled for a Year; and Mr. *du Salle* had under his Command one hundred and fifty Land-Men who were to settle in the Country: He had also with him twelve Gentlemen who appeared to him vigorous, and like to bear the Fatigues of the Voyage, among whom were two of his Nephews, *viz.* Mr. *Moranger* and Mr. *Cavalier*, the last but fourteen Years old.

They sailed from *Rochel August* the 5th. 1684 and 1684. passing by *Martinico* and *Guardalupe* took in fresh Provisions and Water, with divers Volunteers. The Ketch being separated by Storm was taken by the *Spaniards*; the other three Ships arrived about the middle of *February* in the Bay of *Spirito santo*, and about ten Leagues off found a large Bay, which Mr. *la Salle* took for the right Arm of the *Mississipi*, and call'd it St. *Lewis*. He sounded the Bay, which he found deep, but narrow, and therefore had expresly forbid the Captain of the Fly-Boat to attempt to come into it, without having on board the Pilot of the Frigat, who was an experienced Man; and for a greater security, had commanded him to August.

1685 to unlade his Guns into the Pinnace to make the Ship the lighter; yet that Brute neglecting those Orders, and without taking notice of the Poles they had placed on the Sands to shew him the Channel, sailed his Ship at random, and ran her against a Sand where she remained. Mr. *la Salle* was a-shoar, and fearing the fate of his Ship, was going on board to save her, but was prevented by about one hundred and twenty Savages who came to attack him. He put his Men in a posture of Defence, but the noise alone of the Drums put the Savages to flight. Mr. *la Salle* following them presented the Calumet of Peace, which they accepted, and came along with him to his Camp, where he entertained them, and sent them back with some Presents. They were so pleased that they brought some Provisions the next Day and made an Alliance with him, which would have proved very advantageous to Mr. *la Salle* had not an unlucky Accident broke that good intelligence.

As they were unlading the Fly-Boat which had struck upon the Sand to endeavour to get her off, a Pack of Blankets fell into the Sea, which the Waves drove upon the Shoar. The Savages found it; and Mr. *la Salle* having notice of it, sent to demand it of them in a very civil manner: They shewed some reluctancy, whereupon the Officer instead of acting the prudent part, threatened to kill them unless they restored it immediately. This so frighted and incensis'd them, that they resolv'd to be avenged of that affront, and in order
1685. March. thereto got together in the Night time the 7th. of *March*, and marched to surprize the *French* Camp. They advanced as near as they would, the Centinel being asleep, and made a discharge of their Arrows, which killed four Gentlemen Officers and Volunteers, and wounded M. *Moranger* and another Volunteer. The *French* ran to their Arms and fired upon the Savages, who ran away, tho' none were wounded; and the next Day kill'd two of Mr. *la Salle*'s Men whom they found sleeping.

In the mean time the Fly-Boat was unladed, which was too far sunk to be got off, and most of the Goods saved; and as they were endeavouring to save the rest, she was dashed in pieces by the violence of the Waves, and several Men were in danger of being drowned; but by the Grace of God all escaped.

Mr. *Beaujeau* seeing all the Goods and Merchandize landed, and a Fort almost finished, sailed the 12th. of *March* for *France*; and Mr. *la Salle* having fortified his Magazine or Fort, left one hundred Men under command of Mr. *Moranger* his Nephew for defence of it, and with the rest being fifty, and three Missionaries, *viz.* Mr. *Cavalier*, Brother to Mr. *la Salle*, *Zenobe* and *Maxime*, advanced into the Country, in hopes of finding the *Missisipi*.

Fort Lewis. They built a Fort in a very advantageous Post, defended by twelve pieces of Canon, and then razed the first Fort. The Men grew so sickly that a great many died within a few Days, notwithstanding they were carefully look'd after and supplied with proper Remedies. On the 9th of *August* three of our Men being gone a shooting, the noise of their Guns was heard by the Savages, who immediately got together in great numbers and surrounded the three *Europeans*, who killed with the first Shot the General of the Savages. This sad Accident terrified them so much that they ran away, notwithstanding the disproportion in number; but they continued lurking about the Fort, and kill'd a *French* Man who had advanced too far into the Woods.

Mr. *la Salle* seeing no way to bring them to an Alliance, resolved to make War upon them to oblige them to come to Peace, and supply him with their *Pirogues* or wooden Canoes, which he wanted. Therefore he set out from his Fort the 13th. of *October* with sixty stout Men, having provided them with a kind of Breast-piece of Wood to cover them against the Arrows of the Savages. He was not far advanc'd when he found them encamp'd, and had several Skirmishes, killing and wounding a great many, and returned with many Prisoners. He had order'd the Captain of the Frigat to suffer none of his Men to lie a-shoar; however the Captain with six of his best Men charm'd with the sweetness of the Country went a-shoar, and leaving their Canoe upon the Owze with their Arms, went into a Meadow where they fell asleep, and were all kill'd by the Savages, who broke their Arms and Canoe. This sad Accident put the Colony into a consternation. Mr. *la Salle* having buried his Men resolved to travel along the Coast to find out the Mouth of the *Missisipi*, and leaving the Inhabitants and Soldiers who were to remain in the Fort, set out with twenty Men and Mr. *Cavalier* his Brother. The continual Rains made the Ways very bad, and swelled several small Rivulets, which gave him a world of trouble. 1686. At last on the 13th. of *February* he thought to have found his so much wish'd for River; and having fortified a Post on his Bank, and left part of his Men for its security, he returned to his Fort the 31st. of *March*, charm'd with his Discovery. But this Joy was overbalanced by Grief for the loss of his Frigat: This was the only Ship left unto him, with which he intended to sail in few Days for St. *Domingo*, to bring a new supply of Men and Goods to carry on his design: But it ran unfortunately a-ground by the negligence of the Pilot, and was dash'd in pieces. All the Men were drowned, except the Sieur *Chefdeville*, the Captain and four Seamen: The Goods, Linnen and Cloth of the Colony with the Provisions and Tools were all lost. February. March.

Mr. la Salle seeing all his affairs ruined by the loss of his Ship, and having no way to return into *Europe* but by *Canada*, resolved upon so dangerous a Journey, and took twenty Men along with him, with one Savage call'd *Nicana*, who had followed him into *France*, and had given such proofs of his affection to his Master, that he relied more upon him than upon any *European*. Mr. *Cavalier*, *Moranger* and Father *Anastas* desired likewise to accompany him. They took with them Powder and Shot, two Axes, two dozen of Knives, several Pounds of glass Beads, and two Kettles to boil their Meat, contenting himself with these Provisions, in hopes to find out easily the *Illinois* and return in a short time. Having assisted at the Divine Service in the Chappel of the Fort to implore God's Mercy and Protection, he set out the 22d. of *April* 1686, directing his March to the N. E. 'Tis likely they wanted Pirogues and Canoes, or else Mr. *la Salle* was not sure that he had found out the Mouth of *Missisipi*, otherwise it had been much easier to have found out the *Illinois* Country by Water, he knowing that the River of the *Illinois* runs into the *Missisipi*. *He sets out with twenty Men to find the Illinois River.* April.

After three Days March they discovered the finest campain Country in the World, and were met by many Men on Horse-back, with Boots, Spurs and Saddles, which shews they had Commerce with the *Spaniards*: Then marching two Days over vast Meadows, they saw such numbers of wild Oxen, that the least Droves consisted of about four hundred: They killed ten of them, and rested two or three Days to broil the Meat for the rest of their Voyage.

Mr. *la Salle* here alter'd his Course, marching directly to the Eastward. As he told no body the reason of it, it was impossible to know what was his Motive: He was secret to a fault, and likely would have prospered better, had he been somewhat more communicative. In their March *Nicana* the Savage cried out of a sudden that he was a dead Man, having been stung by a Rattle Snake. This obliged them to tarry some Days in that place. They gave him immediately some Orvietan, and having scarified the Wound, applied to it some Salt of Vipers, whereby he was recovered.

After several Days march thro' a most delicious Country, they came to a Village of the *Cenis*, one of the most populous and largest in *America*, being about twenty Leagues long, not in a continued Street, but because the Hamlets are so near one another, that the Whole looks as if it were but one. They found among them several things which they must have from the *Spaniards*, as Pieces of Eight, Silver Spoons, Lace, Cloaths and Horses. They had also a Bull of the Pope, exempting the *Spaniards* of *New-Mexico* from fasting in Summer. Horses are so common, that one was exchanged for an Ax, and a fine one was offer'd for Father *Anastas*'s Capuch. They presented Mr. *la Salle* with their Calumet of Peace in great Ceremony. By them he understood their Country to be but six Days Journey from the *Spaniards*. Having tarried several Days among the *Cenis*, he continued his march thro' the Country of the *Nassonis*, where four of his Men ran away to that People, which sadly vexed him; and a few Days after, he together with Mr. *Moranger* his Nephew fell sick of a violent Fever which obliged our Travellers to tarry in that place for several Weeks: For notwithstanding they recover'd, it was a long time before they were able to continue their Voyage. This Distemper disappointed all their Measures, and was the occasion of several Misfortunes that befel them afterwards. They tarried two whole Months, being reduced to the greatest extremities. Their Powder was almost spent, tho' they were not advanced above one hundred and fifty Leagues in a direct Line. Some of his Men had deserted; others began to be irresolute; and all these things being carefully considered, Mr. *la Salle* resolv'd

to

1686. to return to Fort *Lewis*. Every body approving it, they returned the ſame way, without meeting any remarkable Accident, except that one of them was ſwallowed by a Crocodile of a prodigious ſize, in repaſſing a River. They came to their Camp the 17th. of *October* 1686, where they were received with an incredible Joy by their Companions, who gave them over for loſt among thoſe barbarous Nations. He remained two Months and a half at Fort *Lewis*, during which time he forgot not to comfort his ſmall Colony, which began to multiply, ſeveral Children being born ſince their Arrival.

He returns to Fort Lewis.

October.

Having caſt up an intrenchment about a large Enclosure, wherein were the Habitations of the Colony, under the Cannon of the Fort and taken all other Precautions for their ſecurity, he call'd the Inhabitants together, and made ſo pathetical a Speech to them about the neceſſity he was under to make a Voyage to the *Illinois* Country, that he drew Tears from every one of the Aſſembly; for he was very much beloved: Then taking twenty Men with him, with his Brother, his two Nephews, Father *Anaſtaſius* and the Sieur *Joutel*, after publick Prayer, he ſet out a ſecond time from Fort *Lewis*, and reſolv'd not to return till he had found the *Illinois*.

1687. Mr. *la Salle* ſet out from the Fort the 7th. of *January* 1687, and having croſſed the River *Salbonniere* and *Hiens*, with divers others which were mightily ſwoln by the Rains, they came into a fine Country for hunting, where his People refreſh'd themſelves after their tireſome Travel with excellent good Chear for ſeveral Days together. He had ſent out Mr. *Moranger* his Nephew, his Laquey *Saget* and ſeven or eight of his Men to a certain place where *Nika* his Huntſman aforementioned, had laid up a ſtock of wild Bull's Fleſh, that they might get it ſmoaked and dried to carry along with them, and ſo not be obliged to halt ſo frequently to hunt for Proviſions.

January.

He ſet out again to find the Illinois.

With all his Prudence he could not diſcover the Conſpiracy of ſome of his People to kill his Nephew; for they reſolved upon it, and put it in execution all of a ſudden on the 17th. of *March*, wounding him in the Head with a Hatchet: They ſlew likewiſe the Laquey and poor *Nika*, who had provided for them by his hunting, with great Toil and Danger. *Moranger* languiſhed under his Wound for two Hours, forgiving his Murtherers, and embracing them frequently. But theſe Wretches not content with this bloody Fact, reſolv'd not to ſtick here, but contrived how to kill their Maſter too, for they feared he would juſtly puniſh them for their Crime. Mr. *la Salle* was two Leagues from the place where *Moranger* was killed, and being concerned at his Nephew's tarrying ſo long (for they had been gone two or three Days) was afraid they were ſurprized by the Savages; whereupon he deſired Father *Anaſtaſius* to accompany him in looking after his Nephew, and took two Savages along with him. Upon the way he entertained the Father with a pious diſcourſe of Divine Providence, which had preſerv'd him in the many dangers he had undergone during twenty Years abode in *America*; when all of a ſudden Father *Anaſtaſius* obſerved that he fell into a deep Sorrow, of which he himſelf could give no account: He grew mighty unquiet and full of trouble, a Temper he was never ſeen in before.

March.

Mr. Moranger kill'd.

When they were got about two Leagues he found his Laquey's bloody Cravat, and perceived two Eagles (a common Bird in thoſe parts) hovering over his Head; and at the ſame time ſpied his People by the Waterſide: He went to them and inquired for his Nephew, they made him little anſwer, but pointed to the place where he lay. Father *Anaſtaſius* and he kept going on by the River ſide, till at laſt they came to the fatal place, where two of the Villains lay hid in the Graſs, one on one ſide, and one on the other, with their Pieces cock'd: The firſt preſented at him but miſſed Fire; the other fired at the ſame time and ſhot him into the Head, of which he died an Hour after, *March* the 19th. 1687.

Mr la Salle murthered.

Father *Anaſtaſius* ſeeing him fall a little way from him with his Face all bloody, ran to him, took him up in his Arms and wept over him, exhorting him as well as he could in this conjuncture to die a good Chriſtian. The unfortunate Gentleman had juſt time enough to confeſs part of his Life to him, who gave him Abſolution, and ſoon after died. In his laſt moments he performed as far as he was capable whatſoever was proper for one in his condition preſſing the Father's Hand at every thing he ſaid to him, eſpecially when he admoniſhed him to forgive his Enemies. In the mean while the Murtherers ſtruck with horror at what they had committed, began to beat their Breaſts and deteſt their Raſhneſs. *Anaſtaſius* would not ſtir from the place till he buried the Body as decently as he could, and placed a Croſs over his Grave.

1687.

Thus fell the Sieur *de la Salle*, a Man of conſiderable Merit, conſtant in Adverſities, intrepid, generous, courteous, ingenious, learned and capable of every thing. He had formerly been of the Society of *Jeſus* for ten or eleven Years, and quitted the Order with conſent of his Superiors. He once ſhewed me a Letter written at *Rome* by the General of the Order, teſtifying that the Sieur *la Salle* had behaved himſelf prudently in every thing, without giving the leaſt occaſion to be ſuſpected guilty of a venial Sin. He had the ill hap to be maſſacred by his own Servants in the vigour of his Age. The pious deſign he was upon, in relation to the Converſion of thoſe ignorant Nations, ſeems to have deſerv'd a better Fate; but as God's ways are not our ways, we muſt ſubmit to Divine Providence, without troubling our ſelves about a vain inquiry into the Secrets of God Almighty.

Father *Anaſtaſius* haſtned to find out Mr. *Cavalier*, Brother of the Defunct Mr. *la Salle*, who was a pious and diſcreet Eccleſiaſtick, perfectly qualified for a Miſſionary, to whom he related his Death. The Murtherers came rudely into the ſame Cabbin or Hut preſently after, ſeizing upon all they found in it. Mr. *Cavalier* and the Sieur *Cavalier* his Nephew, expecting the Villains came to butcher them, fell down on their Knees and prepared themſelves to die like Chriſtians: But the Aſſaſſines moved with compaſſion at the ſight of the venerable old Man, and being ſorry beſides for their late wicked Deeds, reſolved to ſpare them upon condition they ſhould never return into *France*; but they were a long time e're they fix'd upon granting them Mercy. Some of them that had a mind to ſee their Kindred once again, endeavour'd to clear themſelves from ſo deteſtable an action; others ſaid it was ſafeſt to rid their hands of theſe two innocent Men, or elſe they might one Day call them to an account, if ever they met again in *France*. They choſe the Murtherer of Mr. *de la Salle* for their Leader, and upon deliberation reſolved to go to the famous Nation of the *Cenis*. Theſe infamous Murtherers in their march made the two *Cavaliers* ſerve them as Valets, giving them nothing but their leavings to eat. Upon the way a Conteſt aroſe betwen the Murtherer of Mr. *la Salle* and one *Hans* a *German* about Superiority; whereupon their Men divided, one Party following *Hans*, the other the Murtherer; *Hans* taking his opportunity fired a Piſtol at the Murtherer, the Bullet pierced his Heart, and he drop'd down dead upon the place. One of *Hans's* Crew ſhot him that killed Mr. *Moranger* in the ſide, and another let fly juſt at his Head; there was no Ball in his Musket, but the Powder ſetting fire to his Hair, catched his Shirt and Cloaths with ſo much violence that he could not put it out, but expired in the Flame.

Thus *Hans* became Leader of this miſerable Troop, and the *Cenis* being then ready to march againſt their Enemies took *Hans* and ſome other *Europeans* along with them; the reſt waited till they ſhould return, tho' *Hans* would have perſuaded them all to go, but they would not ſtir. As ſoon as *Hans* and his Party were gone, the two *Cavaliers*, the Sieur *Joutel*, Father *Anaſtaſius* and others departed out of the Country. The *Cenis* gave them two Savages for Guides. Each had his Horſe, Powder and Lead, with ſome Goods to defray their Charges on the way. They march'd N. Eaſtwards thro' the fineſt Country in the World. On the 5th of *September* they arrived at the Mouth of the River *Illinois*, diſtant one hundred Leagues from Fort *Crevecœur*, and navigable all the way for large Veſſels. A Savage ſeeing them enter his Village, ran by Land to carry the News to Mr. *Belle Fontain* Commander of the Fort, who would not believe him. They following apace after him came to the Fort *September* the 14th, and were preſently conducted to the Chappel, where *Te Deum* was thankfully ſung. They tarried here till the Spring 1688, and arriving at *Quebec* the 27th. of *July*, they ſailed for *France* the 20th. of *Auguſt* following.

September.

Some Obſervations of the Author's on the barbarous and uncivil Manners of the Savages.

In the Northern Parts the Men and Women hide nothing but their Privities; and thoſe of the South are quite naked, having not the leaſt ſentiment of Shame. They do the neceſſities of Nature before all the World without the leaſt Scruple, and without regard to any Man. The

1690 common discourse both of Men and Women is downright bawdy.

They never wash their wooden Platters or Spoons. When the Women have cleaned their Infants with their Hands, they wipe them very superficially upon a piece of Bark, after which they will handle the Meat that they eat. This often turned my Stomach that I could not eat with them, when I was invited to their Cabbins. They seldom or never wash their Hands or Face. When they eat fat Meat, they rub their Hands upon their Face and Hair to clean them; and are perpetually belching. They seldom cut their Nails. Those that have truckt Shirts with the *Europeans* never wash them, but commonly let them rot on their Backs. Instead of Hatchets and Knives they make use of sharp Stones, which they tie with Thongs of Leather in the end of a cleft Stick. Instead of Awls, they use a sharp Bone, which is above the Heel of an Elk.

To make Fire, they take a Triangle of Cedar-wood of a Foot and a half, in which they make some holes of a small depth; then taking a Switch or little stick of hard Wood, they twirl it between both their Hands in the hole, and by the quick motion produce a kind of Dust or Meal, which is converted into Fire; then pouring out this white Powder upon a bunch of dried Herbs, they rub altogether, blowing upon the Powder which is upon the Herbs, and the Fire blazes in a moment.

They swathe their Children with bands of large Skins and a sort of Cotten, that they may not be too hot; then tying them upon a board with a skin girdle, hang it on the branch of a Tree, or in some place of their Cabbin; so that their little ones never lie in Bed. They hang perpendicularly; and to the end their Urine may not hurt them, they place conveniently a piece of birch Bark, so that it runs away as it were in a Gutter, and touches not the Child's Body.

When they marry, they don't intend to bind themselves for so long time as they shall live, but for so long only as they shall agree together and love each other. As soon as they are discontented, they say, my Wife is uneasy to me, and I to her; she'll agree well enough with such a one who is weary of his Wife; there's no reason why we four should live unquietly all our Days: So without more ado, without any clamour or noise they separate, making no more Words on't than I quit thee; that's all, and are perfectly indifferent to each other ever after, and take no more notice when they meet, than if they had never seen one another.

Among the Northern Savages, and particularly the *Iroquois*, some have two Wives; but not for any long time. When they part, the Children commonly follow their Mother. If the Women would keep their conjugal Vows, we might marry as many of them as we would to *Europeans*; but they have no inclination to Constancy, and there are but very few of them that can withstand the temptation of a woolen Blanket, or any other trivial Present.

When the Savages go to hunt the Beaver in the Spring, they frequently leave their Wives in the Village to sow *Indian* Corn and Gourds, and hire another to go along with them. When they return, they give them a Beaver or two, and send them back to their Cabbin: But if the last pleases best, they take her, and turn away the first without more ado, and wonder the *Europeans* don't take the same Course.

Those that intend for the Wars seldom have to do with the Women till thirty Years of age; because, say they, it exhausts their Strength, weakens their Knees and renders them heavy in the Course. Those who marry before that age, are look'd upon as Men unfit for War or hunting, and are despised as effeminate Persons.

They bury their Dead with the greatest magnificence they can devise. They put on the Corps the best Attire, painting the Face and Body with all sorts of Colours; then putting it in a sort of Coffin made of the bark of Trees, they polish the outside with light Pumice-stones and place it in a manner of a *Mausoleum*, encompassed with Stakes or Palisadoes twelve or thirteen Foot high.

They put into the Coffin whatever they esteem valuable, tho' to the value of two or three hundred Crowns. They put in Shoes of pinked Skins, a pair of Tongs, a Hatchet, Necklaces of Purple, a Pipe, Tobacco, a Caldron, *Indian* Corn and some fat Meat. If it be a Man, they bury with him a Gun, Powder and Ball; or if he have no Fire-arms, with Bow and Arrows, to use in hunting when they come into the Country of Souls.

Of the Obstacles that are found in the Conversion of the Savages. 1690

There are many Obstacles which hinder the Conversion of the Savages.

1. The indifferency they have to every thing. When we speak to them of the Creation of the World, or of the Mysteries of the Christian Religion, they applaud all we say: For 'tis their Custom not to contradict any Man, and think every Man ought to be left to his own Opinion without being thwarted. They believe or make as if they believed all you say to them, but at the same time are so indifferent for every thing, especially Matters of our Religion, that they never trouble themselves about it.

2. The second Obstacle is, That every Nation has a peculiar Language, and those Languages have little or no affinity one with another; So that some of them who live not ten Leagues asunder, must use an Interpreter to talk together.

3. The third is, That they are not fixt to a place, tarrying no longer in the Villages than till Harvest be over, which is but a small time; all the rest of the Year they pass in Wars and Hunting. Then they carry their Families with them, and are absent eight or nine Months. Their Children then which had begun to learn something, forget all, and return to their former manner of Living.

4. Another Obstacle is, The deceitful Dealing of Christian Merchants, who never scruple at Cheating and Lying to get the Furs of the Savages cheap. This without doubt causes an Aversion from a Religion which they see accompanied, by the Professors of it, with so many Artifices and Cheats.

5. Another great Obstacle to their Conversion is, That most of them have several Wives, which in the northern Parts they change as often as they please, and can't conceive how People can tie themselves indissolubly to one Person.

6. The last Obstacle proceeds from their great Superstition. One would be apt to suspect that these *Americans* originally sprung from the *Jews*, some of whom might casually have been wrack'd and cast upon that part of the World; for they have several Customs not unlike theirs. They make their Cabins in the form of Tents like as the *Jews* did. They anoint themselves with Oil, and are superstitiously addicted to Divination from Dreams. They bewail over their Dead with great Lamentation. The Women go into Mourning for their near Relations a whole Year, wearing a sort of Hood upon their Heads: And commonly the Father or Brother of the Deceased take care of the Widow. Moreover we may observe some Conformity between *Moses*'s Relation of the Creation of the World, and the Belief of these Savages about it. Their Notion of the Creation of the World is this, That a Woman came down from Heaven; and hovered a while in the Air because she could find no place to set her Foot upon. The Fish of the Sea compassionating her, held a Council to determine who should receive her. The Tortoise offered himself, and presenting his Back above Water, the Woman placed her self upon it, and staid there. In time the Filth of the Sea gathering and setling about the Tortoise by little and little, form'd a great extent of Land, which is that we now call *America*.

Now say they, This Woman being uneasie at her living solitary, and troubled to have no Body to pass the time with more agreeable than she did; there descended from high a Spirit, who found her fallen asleep with Melancholy. He approached her unperceived, and from that Conjunction came forth two Sons out of her side, who after they were grown up could never agree together. One was a better Hunter than the other, and every Day there was some Scuffling between them. At last their Animosities grew to so great a height, that they could not endure one another. He that was of a peaceable Temper, unable any longer to submit to his Brothers rude Behaviour, resolved to separate himself from him. So he flew up into Heaven; whence to denote his just Resentment, he rattles his Thunder from time to time over his unhappy Brother's Head. 1683.

Some time after the Spirit came down again to the Woman, and then she brought forth a Daughter, from whom is descended that numerous People, who now take up one of the largest Parts of the World.

How fabulous soever this Story be in it self, yet we may discern a Ray of Truth in it. This Woman's sleep, and the Birth of two Sons, has something in it a kin

o

1683. to *Adam*'s ſleep, whilſt God took one of his Ribs to form *Eve*. The diſagreement of the two Brothers, reſembles the irreconcilable Hatred of *Cain* and *Abel*. The retreat of one of them to Heaven, repreſents the Death of *Abel*. And the Thunder grumbling in the Sky, may be compared with the Curſe pronounced by God upon the wretched *Cain* for inhumanly killing his Brother.

Beſides it ſeems as if God had laid a particular Malediction upon thoſe People as he did upon the *Jews*. They have no fixt Place of Abode, and perſiſt unalterably in their Opinions. They are ſubtil and crafty in their worldly Concerns, and obſtinately Superſtitious.

It requires a great deal of time to ſhew them the falſity of their Superſtitions, and much more to perſuade them to embrace the Verities of the Goſpel. So that Chriſtianity is not like to gain much ground among them, and we ſee that after ſo many Years of Miſſion, there has been but little Progreſs made. They are the ſame they were forty Years ago and above, and yet many Books are publiſhed of the great Converſions of the *Iroqueſe* and *Hurons*. I do not deny but that the Miſſionaries have faithfully diſcharg'd their Miniſtry: But the Seed has fallen upon an ungrateful Soil, either upon the high Way, or among the Thorns; ſo that unleſs the Holy Ghoſt do inſpire extraordinarily, little Fruit can be expected from theſe barbarous People. 1683.

CHAP. XVI.

A Voyage to North America. *Or a Geographical Deſcription of* Canada. *By the Baron* La Hontan, *Lord Lieutenant of the* French *Colony at* Placentia *in* Newfound-Land.

'TIS above a Century and a half ſince *Canada* was firſt Diſcover'd by *John Veraſan*, who was eaten up by the Savages. *James Cartier* was the next that went thither, who after he had ſailed above *Quebec*, return'd to *France* with a ſorry Opinion of that Country. About the beginning of the laſt Century a Colony was ſent thither from *Rovan*, which ſettled there after a great deal of Oppoſition from the Natives.

At this Day the Colony is computed to contain One hundred and eighty Thouſand Souls. The common People live in good and well furniſhed Houſes, which are of Wood two Stories high. They pay no Taxes, enjoy the Liberty of Hunting and Fiſhing, and live with more Eaſe and Conveniency than many Gentlemen in *France*. The Cold is extream from *December* to *April*, during which time the River is always frozen over, notwithſtanding the Flowing and Ebbing of the Sea, and the Snow upon the Ground is three or four foot deep; which is very ſtrange in a Country that lies in the Latitude of 47 deg. and ſome odd Minutes. The Capital City is *Quebec*, which is divided into the upper and lower City; both Commanded by a Caſtle which ſtands on the higheſt Ground. There are ſix Churches in the high City. The Cathedral conſiſts of a Biſhop and twelve Prebendaries, who live in common in the Chapter-Houſe, the Magnificence and Architecture of which is truly wonderful. Theſe poor Prieſts are a very good ſort of People; they content themſelves with bare Neceſſaries, and meddle with nothing but the Affairs of the Church, where the Service is performed after the *Roman* Way. The Jeſuits Church ſtands in the Center of the City, and is a ſtately Edifice. But their College is ſo ſmall, that at the beſt they have ſcarce fifty Scholars at a time. *Quebec* wants two eſſential Things, a Key and Fortifications, both which might be eaſily made, conſidering the conveniency of Stones lying upon the ſpot. The Governor General reſides here, and has twenty thouſand Crowns a Year, including the pay of his Company of Guards, and the particular government of the Fort: Not to mention the Preſents made to him by the Farmers of the Beavers Skins, and other ways and means whereby he ſucks as much Money out of the Country as the above mentioned Articles amount to. The Biſhops Incomes are ſo ſmall, that if the King were not graciouſly pleaſed to add to his Biſhoprick ſome other Benefices in *France*, he would be reduced to as ſhort Commons as a hundred of his Character are in the Kingdom of *Naples*. A Captain has one hundred and twenty Livres a Month; a Lieutenant ninety, and a common Soldier ſix *Sous* a Day of the current Money of the Country.

1683. From *Quebec* I went up the River St. *Lawrence* to *Trois Rivieres*, and thence to *Montreal*. Both ſides of the River from *Quebec* to this place are ſo repleniſh'd with Inhabitants, that one may juſtly call them two continued Villages of ſixty Leagues in length. When the River is frozen, they travel hither upon Sledges drawn by Horſes, which will run fifteen Leagues in a Day. Others have their Sledges drawn by two Maſtif Dogs; but then they are longer by the way. This River affords the biggeſt and longeſt Eels in the World, which they catch in this manner. At low Water they ſtretch out Hurdles at the low Water-mark, and that ſpace of Ground being then dry by the retreat of the Water, is ſhut up by the Hurdles. Between the Hurdles are placed Baſkets like Beehives: Then they let all ſtand in this faſhion for three Months in the Spring, and two in the Autumn. Now as often as the Tide comes in, the Eels looking out for ſhallow places, and making toward the Shoar, crowd in among the Hurdles, which hindring them from retiring with the Ebb Water, they are forced to bury themſelves in the Baſkets, which are ſometimes ſo over cramm'd that they break. They give an admirable reliſh in all Sauces, and being ſalted up in Barrels, will keep a whole Year without ſpoiling.

Here every one is allow'd to trade; and indeed 'tis the beſt place for getting an Eſtate in a ſhort time. All the Merchants have ſuch a perfect underſtanding one with another, that they all ſell at the ſame Price. Gentlemen who have a charge of Children, eſpecially Daughters, are obliged to be good Husbands, in order to bear the expence of the magnificent Cloaths with which they are let off; for Pride, Vanity and Luxury reign as much in *New-France*, as in *Old-France*. They muſt alſo be very cautious in carrying fair with the Eccleſiaſticks, it being in their Power to ſerve the Daughters of ſuch Gentlemen, by finding them agreeable and rich Husbands. It can hardly be imagined to what a pitch theſe Eccleſiaſtick Lords have ſcrewed their Authority in this Country. They excommunicate all the Masks wherever they ſpy them; they run after them to uncover their Faces, and abuſe them in a reproachful manner. They prohibit under pain of Excommunication the reading of Romances and Plays, and playing at *Ombre* or *Lanſquenet*. Their Zeal goes ſo far as even to name Perſons in their Pulpits. They cry out againſt thoſe that do not receive the Sacrament once a Month; and at *Eaſter* oblige all ſorts of Perſons to give in Bills to their Confeſſors. They prohibit and burn all Books that treat of any other Subject but Devotion. The Curate of this place came one Day to my Lodging, and finding the Romance of the Adventures of *Petronius* upon my Table, he fell upon it with an unimaginable fury and tore out almoſt all the Leaves. The Governor General himſelf that means to neglect no opportunity of inriching himſelf, does commonly hear two Maſſes a Day, and is obliged to confeſs once in twenty four Hours. He has always Clergymen hanging about him wherever he goes; and indeed properly ſpeaking, they are his Councellors. When a Governor is thus back'd by the Clergy, the Intendants, the Under-Governors and the ſovereign Council, dare not cenſure his Conduct, be it never ſo faulty; for the Protection of the Eccleſiaſticks ſhelters him from all the Charges that can be laid againſt him.

CHAP. XVII.

The Expedition of Mr. de la Barre *the Governor General, against the* Iroquese.

1684. I set forth with my Company from *Monreal* the 23d. of *June* 1684, every Canoe carrying two Soldiers; we arrived at Fort *Frontenac* in twenty Days. Towards the end of *August* Mr. *de la Barre* joyned us with the Militia he had raised in the neighbourhood of *Quebec*, to march against the *Iroquese*; but he and his Men were so sickly, that he was forced to send most of them back to the Colony. As soon as he was recovered he imbark'd, and rowing Night and Day we came in six Days before the River of *Frainin*. The Governor being in great perplexity, and having no hopes of compassing the end of his expedition, sent Mr. *le Moine*, who understood their Language, to their Village, which lay eighteen Leagues up the River, with Orders to endeavour by all means to bring along with him some of the old Standers of that Nation. He return'd in few Days with one of their most considerable Grandees, who had a Train of thirty young Warriors, and was distinguish'd by the Title of the *Grangula*. The Governor had used the precaution of sending the sick back to the Colony, that the *Iroquese* might not perceive the weakness of his Forces; and to favour the Stratagem, Mr. *le Moine* represented to the *Grangula*, that the Body of the Army was left behind at Fort *Frontenac*, and that the Troops he saw in our Camp were the General's Guards. But unhappily one of our *Iroquese* who had a smattering of the *French* Tongue, having strouled in the Night towards our Tents, over-heard what we said, and so revealed the Secret. Two Days after they had an Interview, the *Grangula* being seated at some distance before his Men, who all set squat upon their Tails, with his Pipe in his Mouth and the great *Calumet* of Peace before him; Mr. *de la Barre* being placed in a Chair of State spoke to him by his Interpreter to this purpose.

The King my Master being informed that the 5 Iroquese *Nations have for a long time stript, rob'd and abus'd all the Forest-Rangers Trading to the Country of the* Illinois *and other Nations who are my Master's Children, hath ordered me to demand an Interview in the neighbourhood of my Camp. This great Monarch means that you and I should smoke together in the great* Calumet *of Peace, provided, that you engage to make reparation to his Subjects: And in case of refusal, War is positively proclaimed.*

This Colier makes my Words good.

Coliers are Swathes 2 or 3 Foot long and 6 Inches broad, decked with Beads made of Shells found on the Sea-shoar. No Contracts are made among the Savages without them.

The Warriors of the 5 *Nations have introduced the* English *to the Lakes belonging to the King my Master, and into the Country of those Nations to whom my Master is a Father. This they have done with a design to ruin the Commerce of his Subjects, and to oblige those Nations to depart from their due Allegiance; notwithstanding the Remonstrances of the late Governor of* New-York, *who saw thro' the dangers that both they and the* English *exposed themselves to.*

This Colier warrants my Words.

The same Warriors have made several barbarous Incursions into the Country of the Illinois *and* Oumamis, *and have massacred Men, Women and Children, and carried off an infinite number of the Natives. These are my Master's Children, and therefore I charge you to restore them to their liberty, and to send them home without delay: Otherwise I have express Order to declare War.*

This Colier makes my Words good.

My Master wishes that the 5 *Nations had not obliged him to send a potent Army to the Fort of* * Cataracony, *and will be much troubled if it so falls out that this Fort which is a work of Peace, must be employ'd for a Prison to your Militia. I wish my Words may produce the desired Effect; for if they do not, I am obliged to joyn the Governor of* New-York, *who has Orders from the King his Master to assist me to burn the* 5 *Villages, and cut you off.*

* call'd by the *French Frontenac.*

This Colier confirms my Word.

During this Harangue the *Grangula* did nothing but look upon the end of his Pipe; then rising and taking 5 or 6 Turns in the Ring that the *French* and Savages made, he return'd to his place, and standing upright spoke thus to the General, sitting in his Chair of State: 1684.

Onnuntio, *I honour you, and all the Warriors who are with me do the same. In setting out from* Quebec *you must needs have fancied that the scorching Beams of the Sun had burnt down the Forests, which render our Country inaccessible to the* French; *or else, that the Inundations of the Lakes had confined us Prisoners. But now you have an opportunity of being undeceiv'd: For I and my Warlike Retinue come to assure you, that the* 5 Cantons *are not yet destroy'd. I return you Thanks in their name for bringing the* Calumet *of Peace; and at the same time I congratulate your Happiness in having left under Ground the bloody Ax that has been so often died with the blood of the* French. *I perceive that the* Onnuntio *raves in a Camp of sick People, and that while he pretends to come with no other design than to smoke with us in the great* Calumet *of Peace, he intended to knock us on the head, if the* French *Arms had not been so much weakned.*

This Title they give to the Governor of *Canada.*

Burying the Ax signifies Peace.

We have rob'd no French, *but such as have supplied our Enemies with Fusees, Powder and Ball. We have conducted the* English *to our Lakes, in order to trafick with the* Hurons: *just as the* Algonkins *conducted the* French *to our* 5 *Cantons, in order to carry on a Commerce that the* English *lay claim to as their Right. We are born Freemen, and have no dependance either upon the* Onnuntio, *or the* * Corlar. *We have a Power to go where we please, to conduct whom we will to the places where we resort to, and to buy and sell where we think fit. If your Allies are your Slaves and Children, you may treat 'em as such, and rob 'em of the liberty of entertaining any other Nation but your own.*

* The Title of the Governor of New-York.

This Colier comprehends my Word.

We fell upon the Illinois *and* Oumamis, *because they cut down the Trees of Peace that served for Limits or Boundaries to our Frontiers. They supplied our Enemies with Fire-arms, and hunted Beavers upon our Lands. We have done less than the* English *and the* French, *who without any right have usurped the Grounds they are now possess'd of, and of which they have dislodged several Nations, to make way for their building of Cities, Villages and Forts.*

This Colier contains my Word.

My Voice is the Voice of the 5 Iroquese *Cantons, who declare that they interr'd the Ax of* Cataracony *in the presence of your Predecessor in the very Center of the Fort, and planted the Tree of Peace in the same place; that it was then stipulated that the Fort should be used as a place of retreat for Merchants, and not a refuge for Soldiers. You ought to take care that so great a number of martial Men as I now see, being shut up in so small a Fort do not stifle and choak the Tree of Peace, and hinder it from shading both your Country and ours with its Leaves; and I do assure you that we will never dig up the Ax to cut it down, till the* Onnuntio *and the* Corlar *shall either joyntly or separately offer to invade our Country, which the great Spirit has disposed of in favour of our Ancestors.*

This Colier contains my Word.

As soon as he had done Mr. *le Moine* and the Jesuits that were present, explained his Answer to Mr. *de la Barre*, who thereupon retired to his Tent, storming and blustering. The *Grangula* danced by way of prelude to his Entertainment, in which he regaled several of the *French*. Two Days after he and his Retinue return'd to their own Country, and our Army set out in their Canoes for *Monreal*.

Having frequent occasion to mention their Warriors, you must take notice, that the way of waging War among the Savages is so harsh, that one must have a Body of Steel to bear the Fatigues they are obliged to undergo. They give but little Quarter, and if any are taken Prisoners, they are never exchanged. As soon as they are put in Chains, their Relations and the whole Nation to which they retain, look upon 'em as dead, unless they were so much wounded when they were taken, that they could not possibly kill themselves. These indeed they receive when they make their escape; but if the other Prisoners should offer to return, they would be contemned by their nearest Relations, and no body would receive them: So that we must not think it strange, if the number of their Warriors is so small, that sometimes one Nation can scarce muster up a Thousand.

CHAP.

CHAP. XVIII.

The Expedition of the Marquess Denonville *against the* Iroquese.

1687. IN the beginning of *July* 1687 the Marquess *Denonville*, who succeeded Mr. *de la Barre*, came from *Quebec* to *Monreal* with all the Militia of the Country, being fifteen Hundred who were joyned by our twenty Companies of Mariners and five hundred converted Savages. He had the Year before sent to our Allies to favour our design of extirpating the *Iroquese*. Mr. *Campigni* was sent before us with a strong Guard, and arriving at Fort *Frontenac*, presently sent away two or three hundred *Canadees* to surprize two Villages seven or eight Leagues from the Fort. The *Canadese* coming upon them when they least thought of any alarm, had no great difficulty in mastering them, and brought them Prisoners to the Fort, where they were tied to Posts with Cords round their Necks, Hands and Feet. The poor Wretches sung Day and Night, as their practice is when they fall into the hands of their Enemies. I told one of them who was about twenty five Years old, and had frequently entertained me in his Hut in the Year of Mr. *de la Barre*'s Expedition, that I was heartily grieved to see him in that dismal posture; that I would take care to have Victuals and Drink conveyed to him twice a Day, and would give him Letters to my Friends at *Monreal*, in order to his being used more favourably than his Companions. He replied hat he saw and was very well acquainted with the horror that most of the *French* were affected with, upon view of the Cruelty they underwent; and that he scorned to be fed or used more civilly than his Fellow Prisoners. Some young Savages on our side burnt the Fingers of these poor Wretches in their lighted Pipes, which provoked me to thresh 'em soundly; but I was severely reprimanded for my pains, and confin'd to my Tent for five or six Days. The poor Prisoners were carried to *Quebec*, from whence they were sent to the *French* Gallies.

The Sieur *de la Forest* arrived at the Fort with the News that the *Illinois* and *Oumamis* waited for the *Hurons* and the *Outaouas* in order to joyn them, and to march with joynt Forces against the *Iroquese*: He added, that Mr. *Durantais* assisted by the Savages our Allies, had taken an *English* Company near *Missilimakinac*, conducted by some *Iroquese*, who had fifty thousand Crowns worth of Goods in their Canoes: As also that Mr. *Dulhut* had taken another *English* Convoy, and kept the *English* and *Iroquese* as Prisoners, as well as their Commander, call'd Major *Gregory*. In fine, he represented to Mr. *Denonville*, that it was high time for him to set out from Fort *Frontenac*, if he meaned to appear at the general Rendevouze. So the next Day being the 3d. of *July* we imbarked and stood to the opposite side of the Lake. As soon as we landed we hawl'd up our Canoes and set a strong Guard about them. The next Day a young *Canadese* was unjustly shot to death. His Case is this: Having travell'd all over the Continent, he was perfectly well acquainted with the Country; and after the doing several good Services to the King, desired leave from the Governor to continue his Travels, in order to carry on some little Trade; but his Request was never granted. Upon that he resolv'd to remove to *New-England*, the two Crowns being then in Peace. The Planters of *New-England* gave him a very welcome Reception; for he was an active Fellow, and understood almost all the Languages of the Savages. Upon this consideration he was employed to conduct the *English* Convoys I spoke of but now, and had the misfortune to be taken along with them. Now to my mind, the usage he met with from us was extreme hard, we being then in Peace with *England*; and besides, that Crown lays claim to the property of the Lakes of *Canada*.

The next Day we began our march towards a great Village of the *Iroquese*, without any other Provisions than ten Baskets a Man, which every one carried for himself: We had but seven Leagues to march in a great Wood of tall Trees in a smooth even Ground. The Forest Rangers with a Party of Savages led the Van, and the rest of the Savages brought up the Rear, our regular Troops and Militia being posted in the middle. The first Day we marched four Leagues, and the advanced Guards made no discovery. The second Day our advanced Parties marched up to the very Fields of the Village without perceiving any thing, tho' they passed within a Pistol-shot of five hundred *Iroquese* who lay flat upon the Ground. We marched up with equal Precipitation and Confusion, thinking that the *Iroquese* were fled, and that at least their Women, Children and superannuated Persons would fall into our hands. When we came to the bottom of the Hill upon which the Ambuscade was placed, they began to raise their wonted Cry, which was follow'd by the firing of some Muskets. Our Batalions were divided into straggling Parties, and instead of firing upon the Enemy, we fired upon one another: We were so disordered that the Enemy were going to close upon us with their Clubs in their Hands, when the Savages on our side repulsed the Enemy, and brought off the Heads of eighty, wounding a great many. In this Action we lost ten Savages and one hundred *French*: We had twenty two wounded, among whom was Father *Ancleran* the Jesuit, who received a Musket-shot in his Privy Parts. When the Savages brought in the Heads of their Enemies to Mr. *Denonville*; they asked him why he halted, and did not march up? He answered that he could not leave his wounded Men behind, and that he thought it proper to encamp, that the Chirurgeons might have time to dress their Wounds. To obviate this Pretence, the Savages offered to make Litters to transport 'em to the Village that lay but a little way off: But our General did not approve of their advice; whereupon they drew up into a Body, and tho' they consisted of ten different Nations, agreed in a joint Resolution of pursuing their Enemy. Our General earnestly desired them to rest one Day and not to depart from his Camp, and that the next Day he would burn their Villages, and starve them to death by spoiling their Crop: But they took this Complement so ill, that most of them returned to their own Country; remonstrating, *That the* French *came to fetch a Walk, rather than to wage War: That their Ardour, like a flash of Fire, was extinguished as soon as kindled: That 'twas a fruitless Adventure to draw together so many Warriors from all parts to burn some Huts of Bark that the Enemy could rebuild in four Days: That the* Iroquese *did not matter the spoiling of their Corn, because the other* Cantons *were able to supply them: In fine, That since they had joyned the* French *twice together to no purpose, they would never trust 'em for the future.* The next Day we marched to the great Village, carrying our wounded Men upon Litters; but found nothing there but Ashes, the *Iroquese* having burnt the Village themselves; then we spent five or six Days in cutting down their Corn with our Swords; and having done the like Exploits at two little Villages three Leagues off, we returned to the Lake side. We found in these Villages plenty of Horses, black Cattle, Fowl and Hogs. The Forests were repleniss'd with Oak, Walnut and wild Chesnut Trees. 1687.

Two Days after we imbark'd for *Niagara*, where we arrived in four Days. The Water Fall is seven or eight hundred Foot high, and half a League broad; towards the middle of it is an Island that leans towards the Precipice, as if it were ready to fall. All the Beasts that cross the Water within half a quarter of a League above this Island, are suck'd in by force of the Stream; and both Beasts and Fish that are thus kill'd by the prodigious Fall, serve for Food to about Fifty *Iroquese*, who are settled about two Leagues below. Between the surface of the Water that shelves off prodigiously, and the foot of the Precipice, three Men may cross in a breast without any other damage than a sprinkling of some few drops of water.

The Savages our Allies took their leave of Mr. *Denonville*, telling him, that they depended upon his Promise of continuing the War till the five Nations should be either destroyed or dispossess'd by their Country; and that since their Alliance with *France* was chiefly grounded upon the Promises the *French* made of listening to no Proposals of Peace till the five Nations should be quite extirpated, they therefore hoped they would be as good as their word, especially considering that a cessation of Arms would sully the Honour of the *French*, and infallibly disengage their Allies. Mr. *Denonville* protested that he would prosecute the War so vigorously, that in the end these Barbarians should be quite cut off, or obliged to shift their Seats.

The

1687. The General calling for me that very Day acquainted me, that in regard I understood the Language of the Savages, I was to go with a Detatchment to cover their Country, pursuant to their Request. In obedience to my Orders I made all suitable preparations for my Voyage, and took leave of my Friends, who made me Presents of Cloaths, Tobacco, Books and other things they could with conveniency spare: And three Days after Mr. *Denonville* return'd to the Colony. 1688.

CHAP. XIX.

The Author is sent with his Detachment to Fort St. Joseph; *from whence being joyned by some of the* French *Allies, he makes another Expedition against the* Iroquese.

I Imbarked with my Detachment in Canoes *August* the 3d. and arrived the 14th. of *September* at Fort St. *Joseph*; of which I was ordered to take possession. In *December* following I had intelligence by some *Iroquese* Prisoners, that the Fort of *Niagara* was block'd up by eight hundred *Iroquese*, who meaned to appear before my Post very speedily. This troublesome piece of News galled me to the last degree, and finding that my Provisions were almost out, I resolved to go to *Missilimakinac* to buy Corn from the *Hurons*; so leaving some Soldiers to guard the Fort in my absence, I imbarked
1688 with the rest of my Detachment the first of *April* 1688, and arrived the 18th. It lies in Latitude 45 deg. 30 min. and is a place of great Importance; all that trade with the Savages of the South and West being obliged to pass this way. The Jesuits have here a little House or College adjoyning to a sort of Church. These good Fathers lavish away all their Divinity and Patience to no purpose, in endeavouring to convert such ignorant Infidels: All they can bring them to is, that oftentimes they'll desire Baptism for their dying Children; and some few superannuated Persons consent to receive the Sacrament of Baptism, when they find themselves at the point of Death.

My Orders were, that as soon as I had bought Corn, I should march to Fort St. *Mary* to engage the *Sauteurs* to joyn with us and the *Outaouas* against the *Irequese*. I set out from *Missilimakinac* with my Detatchment the 2d. of *June*, and arriving at *Saut* St. *Mary*, I persuaded forty young warlike *Sauteurs* to joyn the *Outaouas*, who tarried for us at the Isle of *Detour*, where we arrived the 16th. We imbarked again the 18th. and in four Days made the Island of *Manitoualin*, which is twenty five Leagues long, and seven or eight broad. On the 25th. we made the River of *Theontucale*, where we were detained four or five Days by a W. S W. Wind. We reimbarked the 29th. and arrived at Fort St. *Joseph* the 1st. of *July*, where the Soldiers I had left waited for us with great impatience. Having landed some Sacks of Corn at the Fort, we set out again on the 3d. for the *Iroquese* Country; and sailing thro' the Strait, stood to the South side of the Lake *Erie*, and arrived on the 17th. in the River of *Conde*. Immediately upon landing, the Savages cut down Trees to make a Redoubt for securing our Canoes and Baggage, and for a safe retreat in case of necessity.

The 20th. they march'd, each Man provided with a little Bag containing ten pound of the Flower of *Indian* Corn. They had resolved if they found the Country clear, to march up and surprize some of their Villages; but they were soon eased of their trouble: For, they had not march'd two Days when their Scouts discovered three hundred *Iroquese*, and had much ado to return to the Body of the Party which immediately betook themselves to flight. The next Day a Party of *Iroquese* appear'd in sight of our Redoubt, and a Slave who made his escape thither, assuring us that the *Iroquese* were no less than four hundred, we thereupon imbarked again on the 24th. and steer'd with a great deal of Precaution and Care, rowing all Night and lying by all Day.

On the 28th, as we lay in a Creek, we descried two Canoes making towards us; we judged them to be *Iroquese*; the Leader of the *Sauteurs* offer'd to go ashoar with his Men, and post himself without discovery till such time as we could force 'em ashoar. As soon as the Enemy perceived us, they made towards the Shoar with all imaginable Precipitation; and just when they were going to knock their Prisoners on the Head, the *Sauteurs* fell upon them, but missed of their aim in taking them all alive. The *Sauteurs* lost only four Men; and of twenty *Iroquese* they kill'd three, wounded five, and took the rest Prisoners, so that not one of 'em escap'd. They had with them eighteen Slaves of the *Oumamis*, who were all wounded, and seven big Belly'd Women. By these we were inform'd, that the rest of the Party were then upon their return by Land upon the Banks of the Lake, having thirty four Prisoners of both Sexes, and that they could not then be far off. Hereupon it was resolv'd to attempt the rescue of these Prisoners. So having made up a little sort of a Fort in seven or eight Hours, we sent out our Scouts on every side, while the main Body was kept in readiness to march upon the first Alarm.

August the 4th, two of our Spies return'd upon full Speed, to acquaint us that the *Iroquese* were not above three Leagues off, advancing towards us, and that there was a little Brook on the Road, upon which an Ambuscado might be conveniently laid. Our Savages ran immediately to take possession of that advantagious Post, but knew not how to make a right use of it. The *Outaouas* were too hasty in Firing, and by shooting at too great a distance, gave all the Enemies opportunity of making their Escapes, except twelve, whose Heads they brought with them to the little Fort where I staid. The Slaves indeed were all retaken, and stowing them in our Canoes, we steer'd through the Strait of the Lake of *Huron*, and arrived the 24th at Fort St. *Joseph*.

Assoon as I landed, I was inform'd that the Scurvy had made such a terrible havock at the Fort of *Niagara*, that it had swept off the Commander and all the Soldiers except twelve; and had carried off as many Soldiers at Fort *Frontenac* as at *Niagara*; and that Mr. *de Denonville* was negotiating a Peace with the *Iroquese*. Thereupon consulting with the three different Nations posted in my Fort; they after mature Reflection upon the Intelligence laid before them, came to this Resolution, That since the Marquis *de Denonville* had a mind to clap up a Peace, and the Fort of *Niagara* was abdicated, the Fort I then commanded would be of no use. In pursuance of this Resolution, we set Fire to the Fort on the 27th, and embarking the same Day, arriv'd at *Missilimakinac* the 10th of *September*.

Here I received Orders from the Governour to return to the Colony if the Season and other Circumstances would permit, or else to tarry till the Spring. I advised with the *French* and Savages, who all thought it impossible for me to return with my Soldiers before the Spring. And because I would not mew my self up all the Winter, I resolved to make the best use of my time in travelling through the southern Countries, and engaged four good Huntsmen of the *Outaouas* to go along with me.

CHAP.

CHAP. XX.

The Author's Journal of his Voyage from Miſſilimakinac *to the River* Miſſiſipi, *and thence up the Long River.*

1688. I Departed from *Miſſilimakinac* the 24th of *September*, accompanied with my own Detachment and the five Huntſmen of the *Outaouas*, who did me a great deal of Service. All the Soldiers were provided with new Canoes loaded with Proviſions and Ammunition, and ſuch Commodities as are proper for the Savages. The Wind at North wafted us in three Days to the Bay of *Poutcotamis* that lay forty Leagues off. The 29th we came to the Villages of the *Sakis*, the *Poutcotamis*, &c. on the ſide of a little River, where the Jeſuits have a Houſe or College. Aſſoon as I landed, the Warriors of thoſe Nations came by turns to regale me with the *Calumet* Dance, and with the Captains Dance; the former being a token of Friendſhip, and the latter of Reſpect. I return'd the Complement with a Preſent of ſome Rolls of *Braſil* Tobacco, which they value mightily, and ſome Strings of *Venice* Beads. They invited me to a Feaſt next Day. Firſt we had Singing and Dancing, which laſted two Hours. Then the Company ſet down, every one being provided with his Meſs. Four Platters were ſet down before me, in the firſt of which were two white Fiſh boiled: In the ſecond, the Tongue and Breaſt of a Roe-buck boiled: In the third, two Wood-hens, the hind Feet or Trotters of a Bear, and the Tail of a Beaver, all roaſted: And the fourth contain'd a large quantity of Broth made of ſeveral ſorts of Meat. Our Drink was Syrrup of Maple beat up with Water. The Feaſt laſted two Hours. I took my leave of them, and purſuing my Voyage we landed on the 13th of *October* upon the Shoar of a little Lake where the Head of the *Outagamis* reſided.

After we had rear'd up our Hurs, that General gave me a Viſit, and inquired, *Which way I intended to move.* I anſwer'd, *That I was ſo far from deſigning to march towards the* Nadoveſſians *his Enemies, that I ſhould not come near 'em by one hundred Leagues: And to confirm the Innocency of my Intentions, I pray'd him to ſend ſix Warriors along with me to the long River, which I deſign'd to trace up to its Source.* He replied, *That he was extream glad to find that I carried neither Arms nor Cloaths to the* Hadoveſſians; *and that inſtead of ſix Warriors he would give me ten who underſtood the Lingua.* I ſtaid with him two Days, during which time he regaled me nobly. I preſented him with a Fuſee, twelve Flint Stones, two Pound of Powder, four of Ball, and a little Ax. I gave to each of his two Sons a great Coat and a Roll of *Braſil* Tobacco. My four *Outaouas* were ſo tranſported with this little Reinforcement, that they told me, *We might venture ſafely as far as the Plantation of the Sun.* I embarked the 16th at Noon, and arriv'd at Night at the Land-Carriage of *Ouisconſine*, and ſo leaving the River of *Puants*, we tranſported our Canoes and Baggage to the River *Ouisconſine*, being about three quarters of a League.

The 19th we embarked, and arrived in four Days at the place where it empties it ſelf into the River *Miſſiſipi*, which is about half a League broad in that part. We ſounded as we went, and found nine Foot Water in the ſhalloweſt place. The 3d of *November* we entred *November.* the Mouth of the long River, which looks like a Lake full of Bull-ruſhes. In the middle is a narrow Channel upon which we ſteer'd. The next Morning we found the River pretty narrow, and the Shoar covered with lofty Trees. In our Paſſage we killed ſeveral wild Beevas, which we broiled, and catch'd ſeveral large Dabs. The 6th. a gentle Gale ſprung up, which wafted us twelve Leagues higher, where we landed. Our Paſſage to this place was very quick, notwithſtanding the great Calm that prevails upon this River, which I take to be the leaſt rapid River in the World. 'Tis ſtrange, that we ſaw no Bucks nor Turkies in theſe parts, which we met with ſo frequently elſewhere. The 7th. the ſame Wind drove us to an Iſland ten or twelve Leagues further, where my Savages killed thirty or forty Pheaſants.

The 8th. the Wind proving unſerviceable to us, by reaſon it was intercepted by Hills covered with Firs, we plied our Oars, and deſcried on the left hand large Meadows, and ſome Huts a quarter of a League from the River. Our Savages and ten of the Soldiers jumped a-ſhoar, and directed their Courſe to the Houſes, where they found fifty or ſixty Huntſmen prepared to receive them with their Bows and Arrows. As ſoon as the Huntſmen heard the voice of the *Outagamis* they threw down their Arms, and preſented the Company with ſome Deer they had juſt killed, and helped to bring it to my Canoes. They were ſome of the *Eokaros*, who had left their Villages and come thither to hunt. I preſented them with Tobacco, Knives and Needles, which they could not but admire. Upon this, they repair'd with expedition to their Villages to acquaint their Aſſociates what a good ſort of People they had met with, which had ſo much influence, that the next Evening there appear'd upon the River ſide above two thouſand Savages, who danced as ſoon as they diſcried us. Thereupon our *Outagamis* went a-ſhoar, and after a ſhort conference, ſome of the principal Savages imbarked on board our Canoes, and ſo we all ſteered to the chief Village, which we did not reach till Midnight. I ordered our Huts to be made up on a point of Land a quarter of a League from the Village, and the *Outagamis* caution'd the Savages not to approach our Camp in the Night. Next Day I went to viſit the Grandees of this Nation, to whom I gave Preſents of Knives, Sciſſars, Needles and Tobacco. They gave me to underſtand, that they were infinitely well pleaſed with our Arrival in their Country, becauſe they had heard the Savages of other Nations ſpeak very honourably of the *French*. I took leave of them on the 12th. and ſet out with a Convoy of five or ſix hundred Savages, who march'd upon the Shoar, keeping pace with our Canoes. I paſſed from Village to Village without ſtopping, unleſs it were to encamp all Night, or to preſent the Savages with ſome Trinkets, and ſo ſteered on to the laſt Village, with a deſign to get Intelligence. As ſoon as we arrived, the great Governor, who indeed was a venerable old Gentleman, ſent out Hunters to bring us good Cheer. He inform'd me that ſixty Leagues higher I ſhould meet with the Nation of the *Eſſanapes*, who waged War with him; that if it had not been for their being at War, he would have given me a Convoy to their Country: That however, he would give me ſix Slaves of that Country which I might carry home, and make uſe of as I ſaw occaſion; and that in ſailing up the River, I had nothing to fear, but the being ſurprized in the Night time. 1688.

The Commanders of this People told me, they had twelve Villages peopled by twenty thouſand Warriors. Both Men and Women were naked all over, except their Privities. There ſeems to be ſomething of Government and Subordination among them; and they have their Houſes fortified with the Branches of Trees, and Faſcines ſtrengthened with fat Earth.

The 21ſt. we imbarked at break of Day, and on the 25th. being come within ſixteen or eighteen Leagues of the *Eſſanapes*; I ſent two of the Slaves of that Nation to give notice of our Arrival. The 27th. we approached the firſt Village, and putting up the great *Calumet* of Peace upon the Prow of one of my Canoes, lay upon our Oars.

Upon our firſt appearance, three or four hundred *Eſſanapes* came running towards us, and after dancing, invited us a-ſhoar. I landed with the ten *Outagamis*, the four *Outaouas* and twenty Soldiers. Our Conductors ſtopped us at the Gate, till the Governor, a Man of fifty Years of age, marched out with five or ſix hundred Men, armed with Bows and Arrows. The *Outagamis* of my Company charged 'em with Inſolence in receiving Strangers with their Arms about them, and called out to them to lay down their Arms; upon which they flung their Bows and Arrows aſide all on a ſudden. We entred their Village with our Fuſees in our Hands, which the Savages admired mightily. When I and my twenty Soldiers had entred, they ſtopt the *Outagamis*, affirming, that they did not deſerve the priviledge of entring within the place of Peace, ſince they had endeavoured to create a difference between us and them. In the

1688 the mean time I ordered my Men to open the Door and to call out to the *Outagamis*, that they should offer no manner of Injury. But they instead of coming in, press'd me to return with all expedition to the Canoes, which accordingly I did, without loss of time, and carried with me the four *Essanape* Slaves, in order to leave them at the first Village we came to. We had no sooner imbarked than the two other Slaves came to acquaint me, that the Governor would stop me in his River; but the *Outagamis* made answer, that he could not do that without throwing a Mountain into it; so we rowed to the next Village about three Leagues off, and there I resolv'd not to stop at the other Village, where I should only lose time and lavish my Tobacco, but steered directly to the Metropolitan, in order to complain to their Generalissimo.

We arrived at the Capital Canton the 30th. of *November*, and there met with a very honourable Reception. The *Outagamis* complained of the affront they had receiv'd; but the Head General being already inform'd of the matter, made answer, that they ought to have carried off the Leading Officer, and brought him along with them. In passing from the first Village to this, we run fifty Leagues. After our Men had fitted up our Huts at the distance of a Cannon shot from the Village, we went in a joynt Body with the *Outagamis* and *Outaouas* to the Cacick of that Nation; and in the mean time the six *Essanape* Slaves were brought before him by ten of my Soldiers. I was in the presence of this petty King, when these Slaves spent half an Hour in prostrating themselves before him. I made him a Present of Tobacco, Knives, Needles, Scissars, two Fire-locks, some Hooks and a very pretty Cutlas. He was better satisfied with these trifling things, which he had never seen before, than I could have been with a plentiful Fortune. He testified his acknowledgment by a seasonable Counter-present of Pease, Beans, Bucks, Roe-Bucks, Geese and Ducks, of which he sent great plenty to our Camp. He told me, that since I design'd to visit the *Gnasitares*, he would give me a Convoy of two or three hundred Men: That they were a very honest sort of People, and were linked with his People, by a common Interest in guarding of the *Mozemleks*, which were a turbulent and warlike Nation, who never took the Field with less than two hundred thousand Men. I asked four Pirogues of him, which he granted very frankly, allowing me to pick and choose that number out of fifty. I ordered my Carpenters to plane them, by which they were thinner and lighter by one half. I left my Canoes with the Prince, and begg'd of him that they might remain untouch'd by any body; in which point he was very faithful to me.

December. *December* the 4th. I took leave, having ten Soldiers on board of my own Pirogue, besides the ten *Outagamis*, the four *Outaouas* and the four *Essanape* Slaves. Here ended the Credit and Authority of the *Calumet* of Peace. The first day we had enough to do to run six or seven Leagues, by reason of the Bulrushes with which the Lake is incumbred. The two following Days we sailed twenty Leagues. The 4th. Day, a W. N. W. Wind surprized us with that violence, that we were forced to put a-shoar, and lay two Days upon a sandy Ground, where we were in danger of starving for Hunger and Cold: For the Country was so barren that we could not find a chip of Wood wherewith to warm our selves, or to dress our Victuals; and as far as our Eye could reach, there was nothing to be seen, but Fens covered with Reeds and Clay. On the 19th. of *December* we arriv'd at the Point or Lands end of that Island marked in my Map with a Flower-de-luce. As soon as I had landed and fitted up my Huts, I sent my *Essanape* Slaves to the first of the three Villages that lay before us. They returned in a great alarm occasioned by the unfavourable Answer they received from the *Gnasitares*, who took us for *Spaniards*, and were angry with them for conducting us to their Country. I thereupon immediately imbarked, and posted my self in another Island. In the mean time the *Gnasitares* sent expeditious Courriers to the People, who live eighty Leagues to the Southward of them, to desire they would send some of their number to examine us; for that People were supposed to be well acquainted with the *Spaniards* of *New-Mexico*. The length of the Journey did not discourage them, for they came as chearfully as if it had been upon a national Concern; and after taking a view of our Cloaths, Fusees, our Air, Complexion and manner of Speech, were forced to own that we were not true *Spaniards*. These Considerations joyn'd to the account I gave 'em of the reasons of my undertaking the Voyage, had so much influence as to undeceive them. They then invited me to incamp in their Island, where- 1688
upon I crossed with my Savages and ten Soldiers well arm'd; and after breaking the Ice in certain places (for it had freezed hard for ten or twelve Days) I landed within two Leagues of one of their Villages, to which I walk'd up by Land. In this and the other Islands, I saw large Parks or Inclosures stock'd with wild Beeves for the use of the People. On the 7th of *January* I had an Interview for two Hours with the *January.* Governor or *Cacick*: Our Conferences related chiefly to the *Spaniards* of *New Mexico*, who, as he assured me, were not distant from his Country above eighty Tazous, each of which is three Leagues. Two Days after he came to make me a visit, bringing with him four hundred of his Subjects and four *Mozeemlek* Slaves, whom I took for *Spaniards*. They were clothed, had thick bushy Beards, their Hair hanging down under their Ears, their Complexion swarthy and of a grave Meen. They gave me a Description of their Country, which the *Gnasitares* represented by way of a Map upon a Deer's Skin, as you see it drawn in this Map. These Villages stand upon a River that springs out of a ridge of Mountains; from which the long River likewise derives its source, there being many Brooks there, which by their confluence form the River. When the *Gnasitares* have a mind to hunt wild Beeves, they set out in Pirogues, which they make use of till they come to the Cross mark'd thus ✝ at the confluence of two little Rivers; and this hunting of wild Bucks, with which all the Vallies are covered in the Summer, is sometimes the occasion of a cruel War: For the other Cross ✝ which you see in the Map is one of the Boundaries of *Mozeemlek*; and if either of these two Nations advances but a little beyond their Limits, it gives rise to a bloody Engagement. These Mountains are six Leagues broad, and so high that one must make many Windings and Turnings to cross them. Bears and wild Beasts are their only Inhabitants. 1689.

The *Mozeemlek* Nation is numerous and puissant. The four Slaves of that Country inform'd me, that one hundred and fifty Leagues from the place where I then was, their principal River empties it self into a salt Lake of three hundred Leagues in circumference; the said River runs all along Westward, and its Mouth is about two Leagues broad; that the lower part of that River is adorn'd with six noble Cities, the Houses whereof have no Roof, but are open above like a Platform, as you see 'em drawn in the Map; that besides the Cities, there were above one hundred Towns round that sort of Sea, upon which they navigate in such Boats as you see drawn in the Map; that the People of that Country made Stuffs, Copper-Axes and several other Manufactures, which my Interpreters could not make me understand, being altogether unacquainted with such things; that their Government was despotick; that they call themselves *Tahuglauk*, and that the *Mozeemleks* supply 'em with great numbers of little Calves which they take upon the above-mentioned Mountains; and they not only eat their Flesh, but bring 'em up to labour, and make Cloaths, Boots &c. of their Skins. One of 'em had a reddish sort of a Copper Medal hanging upon his Neck, the Figure of which is represented in the Map. I had it melted; and it became heavier and deeper coloured, and withal somewhat tractable. I would fain have satisfied my Curiosity in being an Eye-witness of the Manner and Custom of the *Tahuglauk*; but that being impracticable, I was forced to be instructed at second hand by these *Mozeemlek* Slaves. 1609.

In the mean time it began to thaw, upon which I gave notice to the great *Cacick* of the *Gnasitares*, that I was desirous to return to *Canada*. Upon that occasion I repeated my Presents, in compensation of which, my Pirogues were stowed with Beef as full as they could hold. This done, I imbarked, and cross'd over from the little Island to the Continent, where I fixed a great long Pole with the Arms of *France* upon a plate of Lead. I set out the 26th. of *January*, and arrived the 5th. of *February* in the Country of the *Essanapes*. The Stream *February.* of the Long River is very slack, altho' the Channel be so strait that it scarce winds at all. 'Tis true, 'tis not very pleasant, for most of its Banks have a dismal Prospect, and the Water has an ugly Taste. 'Tis navigable with the greatest ease, and will bear Barks of fifty Tuns, till you come to that place which is mark'd with a Flower-de-luce in the Map, and where I put up the Post which my Soldiers named *La Hontan's* Limit. *March* the 2d. I arriv'd in the *Missisipi*, which was now *March.* much more rapid than before, by reason of Rains and Land-floods. Its narrowest part is half a League over, and the shallowest is a Fathom and a half deep. As for

Shelves

1693 Shelves or Banks of Sand, I met with none in it: 'Tis full of Isles which look like Groves: Its Banks are Woods, Meadows and Hills. I cannot be positive whether it winds much in other places; but as far as I could see, its Course is very different from our Rivers in *France*. And indeed all the Rivers of *America* run pretty strait. On the 9th of *April* we came to the River of the *Illinois*, and in six Days more arrived at Fort *Crevecœur*, where I was received by Mr. *Tonti* with all imaginable Civility. The 24th I arriv'd at *Chekakou*, where my ten *Outagamis* took leave of me, in order to return to their own Country. The next Day I imbarked and arriv'd the 22d. at *Missilimakinak*. Having put my Soldiers into Quarters, I set out *June* the 8th with two Canoes for the Colony, and on the 9th of *July* arriv'd at *Montreal*. 1690 *April.*

CHAP. XXI.

Giving an Account of Mr. de Frontenac's *Arrival. A fatal Embassy sent by the* French *to the* Iroquese. *And an Expedition of the* English *against* Quebec.

THE Marquess *de Denonville* being recall'd, Mr. *de Frontenac* who had been Governor seven or eight
1689. Years before, was reinstated in his Government. He arriv'd at *Quebec* the 15th. of *October*, and brought with him some of those *Iroquese* that Mr. *de Denonville* had sent to the Gallies (as is related in the 3d. Chap) the rest having perished in their Chains. Four or five Days after his Arrival, he set out in a Canoe for *Montreal*, notwithstanding all the Remonstrances drawn from the Hardships and Inconveniences of his Voyage, when the Season was so cold and so far advanced, and he then in the 68th. Year of his age. I had the honour to accom-
1609. pany him, and had a free access to his Table during the Winter. As soon as the Rivers were navigable, he propos'd to send me with offers of Peace to the *Iroquese*. I made answer, that since his Pocket and Table had been free to me, I could not imagine that he had a mind to be rid of me so soon. Being oblig'd by this reply to unfold my meaning, I remonstrated to him, *That the King of* England *having lost his Crown, and War being proclaimed, the Governor of* New England *and* New-York *would infallibly use their utmost Efforts to excite the* Iroquese *to redouble their Incursions: That for that end they would furnish them with Ammunition* gratis, *and even joyn 'em in order to attack our Towns.* I therefore humbly requested of him, *To have some other Person in view, in case he persisted in his design of making a Trial of that Nature.* The Chevalier *De* was singled out for this fatal Embassy, being attended by one *Colin* as Interpreter, and two young *Canadans*. They set out in a Canoe, and when they came in sight of the Village of the *Onnontagues*, were received with the honourable *Salvo* of several good Blows, and conducted with the same Ceremony to the Village. The antient Men being quickly assembled thought it most proper to send 'em back with a favourable Answer, and in the mean time to engage some of the other Cantons to lie in wait for 'em at the Cataracts of the River, and there kill three and send the fourth back to *Quebec*. This Project had actually been put in execution, if it had not been for some of the Planters of *New-York* who were then among 'em, having come thither on purpose to animate 'em against us. These Planters knew so well how to influence the *Barbarians* who were already bent upon revenge, that a Company of young *Barbarians* burnt 'em all alive, excepting the Chevalier *De*, whom they tied Hand and Foot, and sent him bound to *Boston*, with a design to pump out of him the condition of our Colonies and Forces. When Mr. *de Frontenac* receiv'd this dismal News, he declar'd, that out of twenty Captains that offer'd to execute that Commission, and would have taken the employment for an Honour, I was the only one that foresaw its bad Success.

In the beginning of *October* Mr. *de Frontenac* then at *Montreal*, receiv'd advice that a strong Fleet of *English* Ships amounting to thirty four Sail, was seen near *Tadoussac*. Immediately he got aboard his Brigantine, and ordered all the Troops to imbark in Canoes and Boats, and to row Night and Day to prevent the Enemy. At the same time he ordered Mr. *de Callieres* to bring down as many of the Inhabitants as possibly he could. We rowed with such expedition, that we arriv'd the third Day at *Quebec*. As soon as Mr. *de Frontenac* debarked, he ordered the weakest Posts to be fortified without loss of time. He raised Batteries in several places, and tho' in that Capital City we had but twelve great Guns and but little Ammunition, yet he seem'd to be resolutely bent upon an obstinate resistance to the efforts of the Enemy's Fleet, which in the mean time stood catching of Flies at the distance of two Leagues from *Quebec*. We took the advantage of their slow approaches, and work'd incessantly to put our selves in a posture of Defence. Our Troops, our Militia and our confederate Savages came to us on all hands. 'Tis certain, that if the *English* Admiral had made his descent before our Arrival at *Quebec*, or even two Days after, he had carried the place without striking a blow; for at that time there were not two hundred *French* in the City, which lay open and exposed on all hands. But instead of doing that he lost three Days in consulting with the Captains of the Ships before they came to a Resolution. He took the Sieur *Joliet* with his Lady and Mother in Law in a Bark on the River. Pursuant to the Resolutions of the Councils of War, the *English* Admiral sent out his Sloop with a *French* Flag on his Prow, which made up to the City with sound of Trumpet. Upon this Mr. *de Frontenac* sent our another with a *French* Officer to meet it, who found an *English* Major in the Sloop, who told him, that he had the charge of a Letter from his General to the Governor of *Canada*, and hoped he might be allowed to deliver it himself. Upon that the *French* Officer took him into his Sloop, and having blind-folded him, conducted him to the Governor's Chamber, where his Face being uncover'd, he delivered him a Letter, the substance of which was this:

I Sir William Phips, *General of the Forces of* New-England, *by Sea and Land, to* Count Frontenac *Governor General of* Quebec, *by Order from and in the name of* William *and* Mary *the Third, King and Queen of* England, *am come to make my self Master of this Country: But in regard that I have nothing so much in view as the preventing effusion of Blood, I require you to surrender at discretion your Cities, Castles, Forts and Towns, as your Persons; assuring you at the same time, that you shall meet with all manner of good Usage, Civility and Humanity. If you do not accept of this Proposal without, any restriction, I will endeavour by the assistance of Heaven on which I rely, and the force of my Arms to make a Conquest of them. I expect a positive Answer in writing in the space of an Hour, and in the mean time give you notice, that after the commencement of Hostilities, I shall not entertain any thoughts of Accommodation.*

Signed,
William Phips.

After the Interpreter had translated the Letter to Mr. *de Frontenac*, who was then surrounded with Officers, he ordered the Captain of his Guards to make a Gibbet before the Fort, in order to hang the poor Major, who in all appearance understood *French*; for upon the pronouncing this fatal Sentence, he was like to swoon away. And indeed I must say the Major had some reason to be affected, for he had certainly been hang'd, if the Bishop and Intendant, who to his good luck were then present, had not interceded on his behalf. Mr. *de Frontenac* pretended that they were a Fleet of Pyrates, or of Persons without Commission, for that the the King of *England* was then in *France*. But at last the Governor being appeased, ordered the Major to repair forthwith on board his Admiral, against whom he could defend himself the better, for not being attack'd. At the same time he declared, that he knew no other King of *Great Britain* than *James* II. that his rebellious Subjects were Pyrates, and that he dreaded neither their Force nor their Threats. This said, he threw Admiral *Phip's* Letter in the Major's Face, and then turned his Back upon him: Upon that the poor Ambassador took fresh Courage, and looking upon his

1690 his Watch, took the liberty to ask Mr. *de Frontenac* if he could not have his Answer in writing before the Hour elapsed. But the Governor made answer with all the haughtiness and disdain imaginable, that his Admiral deserv'd no other Answer than what flew from the Mouth of Cannons and Muskets. These words were no sooner pronounced than the Major was forc'd to take his Letter again, and being blind-folded, was reconducted to his Sloop, which rowed toward the Fleet with all Expedition.

The next Day about two in the Afternoon, sixty Sloops were sent a-shoar with ten or twelve hundred Men, who stood upon the Sand in very good order. Then the Sloops went back to the Ships and brought a-shoar the like Compliment of Men, which was afterward joyn'd by a third Compliment of the same number. As soon as these Troops were landed, they began to march towards the City with Drums beating and Colours flying. This Descent was made over against the Isle of *Orleans*, about a League and a half below *Quebec*; but 'twas not so expeditious, but that our Confederate Savages with two hundred Forest-Rangers and fifty Officers had time to post themselves in a Copse of thick Brambles which lay half a League from the place of landing. It being impossible for so small a Party to come to an open Battle with a numerous Enemy, they were forced to fight after the manner of the Savages, that is, to lay Ambuscadoes from place to place in the Copse, which was a quarter of a League broad. This way of waging War proved wonderfully successful to us, for our Men being posted in the middle of the Copse, we suffer'd the *English* to enter, and then fired upon them, lying flat upon the Ground till the *English* fired their Pieces, after which we sprung up, and drawing into Knots here and there, repeated our Fire with such success, that the *English* (perceiving our Savages) fell into confusion, and their Battalions were broke, insomuch that they betook themselves to flight, crying out, *Indians, Indians*, and gave our Savages the opportunity of making a bloody Slaughter among them, for we found three hundred left upon the spot, without any other loss on our side than that of ten Forest-Rangers, four Officers and two Savages. The next Day the *English* landed four pieces of brass Cannon mounted like Field-pieces, and fought very bravely, tho' they were very ill disciplin'd. 'Tis certain there was no want of Courage on their side, and their want of Success must be imputed to their unacquaintedness with Military Discipline, to their being enfeebled by the Fatigues of the Sea, and to the ill Conduct of Sir *William Phips*, who upon this Enterprize could not have done more than he did, if he had been engaged by us to stand still with his Hands in his Pockets. This Day pass'd over more peaceably than the next; for then the *English* made a fresh attempt to force their Passage thro' the Copse by the help of their Artillery; but they lost two or three hundred more in the attempt, and were forced to retire with all Diligence to the landing place. On our side we lost Mr. *de St. Helene*, who died of a Wound in his Leg, and about forty *French* Men and Savages. This Victory animated us so much, that we pursued the *English* to their Camp, and lay all Night flat upon the Ground by it, with a design to attack it by the break of Day; But they saved us the labour; for they imbarked about midnight with such confusion, that we kill'd fifty more of 'em, rather by chance than dexterity, while they were getting into their Boats. When Day came we transported to *Quebec* their Tents and their Cannon which they had left behind 'em, the Savages being employ'd in stripping the Dead in the Wood. 1690

The same Day the Descent was made Sir *William Phips* weigh'd and came to an Anchor with four great Ships, at the distance of a Musket-shot from the lower City, where we had only one Battery of six or eight Pounders. There he cannonado'd so handsomely, that the Fire of the great Guns equal'd that of the small Arms, and the like damage they did to the Roofs of Houses, amounted to five or six Pistoles; for the Walls of the Houses are so hard, that a Ball cannot pierce them.

When Sir *William Phips* had made an end of these glorious Exploits, he sent to demand of Mr. *de Frontenac* some *English* Prisoners in exchange for the Sieur *Joliet*, with his Wife, Mother, and some Sea-men, which was forthwith put in Execution. This done, the Fleet weighed Anchor and steered homeward. Mr. *de Frontenac* ordered a Frigat to be rigg'd, and told me, that the making of *France* as soon as I could would be a piece of important Service, and that I ought rather to perish than to suffer my self to be taken by the Enemy, or to put in at any Port by the way. I put to Sea the 20th of *November*, and meeting with contrary Winds about one hundred and fifty Leagues off the Coast of *France*, I did not arrive at *Rochel* untill the beginning of *January*.

CHAP. XXII.

Containing an Account of the Author's Departure from Rochel *to* Quebec. *Of a Rencounter with an* English *Ship. Of an* Iroquese *burnt alive.*

1691. August. WE sailed from *Rochel* 28th of *July* 1691, the Count of *Aunay* being order'd to keep us company as far as Cape *Finisterre*. On the 5th of *August* we perceived a great Ship, which the Count having a better Sailer, gave chase to and came up with her in three Hours time, whereupon they put up *Genoese* Colours. Some of the fore-chase Guns we fired to oblige her to strike, but the Commander was so obstinate, that Mr. *d'Aunay* was forced to give her a Broad-side, which kill'd four or five of the Sea-men, which obliged the rest to put out their Long-boat, and carry to his Ship their Pass-ports and Bills of Lading.

On the 10th the Pilots thinking they were even with Cape *Finisterre*, Mr. *d'Aunay* sent out his Long-boat to acquaint me, that he was then upon his return home, upon which I wrote him a Letter of Thanks. On the

September. 6th of *September* we discovered a Ship bearing down upon us with a full Sail. We thought at first that they were *French*, but their way of working the Ship discover'd to us that they were Enemies. They being about a League to Windward of us, were quickly within Musket-shot: Presently they put up *English* Colours, and gave us a Broad-side; and we put up our own Colours and paid them home in their own Coin. The Fight lasted two Hours, and both sides fired continually; but the Sea being tempestuous, we were oblig'd to shear off as Night came on, without suffering any other loss than the wounding of two Sea-men, and the receiving about thirty Shot in our Masts, Sails and Rigging. On the 18th we anchored before *Quebec*. I landed with the Chevalier *Meaupou*, whom I conducted to the House of Mr. *Frontenac*, who offer'd to him as well as to me the use of his Table and House. Here I was told, that three hundred *English* and two hundred *Iroquese* had two Months before approach'd to the Isle of *Montreal*; That the Governor of the Isle having transported fifteen Companies from the other side of the River to watch their motions, a Detatchment of the Enemy having surprized our Out-guards, attack'd the whole Body of 'em, and our Camp at the same time with so much vigour and courage, that they kill'd upon the spot more than three hundred Soldiers, besides two Captains, six Lieutenants and five Ensigns, and that after this fatal Expedition, Mr. *Valrenes* a Captain of the Marines, set out from *Montreal* with a Detachment of *French* and Savages, and meeting a Party of *English* and *Iroquese*, attack'd 'em vigorously and defeated them.

About the beginning of this Year the Governor order'd the Chevalier *Beaucour* with one hundred and fifty Soldiers and fifty Savages to march on the Ice to- 1692.
wards *Frontenac*. About thirty or forty Leagues from *Montreal*, they met a Company of sixty *Iroquese*, who were all kill'd or taken Prisoners. The Sieur *de la Plante* who liv'd in Slavery with these Wretches, had the good Fortune to be present in their Company when they were defeated, and had certainly been kill'd with his Masters if he had not cried out with all his might, *Spare me, I am a* French *Man*. The Chevalier *Beaucour* brought with him twelve Prisoners. As soon as they arrived at *Quebec*, Mr. *Frontenac* did very judiciously condemn two of the wickedest of the Company to be burnt alive with a slow Fire. This Sentence extreamly terrified the Governor's Lady and the Jesuits. The Lady used all manner of supplication to procure a moderation of the terrible Sentence, but the Judge

was

1692 was inexorable, and the Jeſuits employ'd all their Eloquence in vain upon this occaſion. The Governor anſwer'd 'em, 'That it was abſolutely neceſſary to make 'ſome terrible Examples of Severity to frighten the *Iroqueſe*: That ſince theſe Barbarians burnt almoſt all the *French* who had the misfortune to fall into their Hands, they muſt be treated after the ſame manner, becauſe the Indulgence which had hitherto been ſhewn them ſeem'd to authorize them to invade our Plantations, and ſo much the rather to do it, becauſe they ran no other Hazard than that of being taken and well kept at their Maſters Houſes: But when they ſhould underſtand that the *French* cauſed them to be burnt, they would have a care for the future how they advanced with ſo much boldneſs to the very Gates of our Cities; and in fine, That the Sentence of Death being paſt, theſe two Wretches muſt prepare to take a Journey into the other World. This Obſtinacy appear'd ſurprizing in Mr. *Frontenac*, who but a little before had favoured the eſcape of three or four Perſons lyable to the Sentence of Death, upon the importunate Prayer of Madam the Governeſs. The Jeſuits were ſent to baptize 'em, and oblige 'em to acknowledge the Trinity and the Incarnation, and to repreſent to them the Joys of Paradiſe, and the Torments of Hell within the ſpace of eight or ten Hours. This may ſeem a very bold way of treating theſe great Myſteries, and that to endeavour to make the *Iroqueſe* underſtand them ſo quickly, was to expoſe them to their Laughter. As ſoon as they were acquainted with this fatal News, they ſent back the good Father without ever hearing them, and then began to ſing the Song of Death, according to the Cuſtom of the Savages. Some charitable Perſon having thrown a Knife to them in the Priſon, he who had the leaſt Courage of the two thruſt it into his Breaſt and died of the Wound immediately. Some young *Hurons* of fourteen or fifteen Years old, came to ſeize the other, and carry him away to the *Diamant Cape*, where a great pile of Wood was prepared. He ran to Death with a greater unconcernedneſs than *Socrates* would have done, if he had been in his caſe. During the time of Execution he ſung continually: 'That he was a Warrior brave and 'undaunted, That the moſt cruel kind of Death could 'not ſhock his Courage; That no Torments could extort from him any Cries; That his Companion was a 'Coward for having kill'd himſelf for fear of Torment: 'And laſtly, That if he was burnt, he had this Comfort, that he had treated many *French* and *Hurons* after the ſame Manner. All that he ſaid was very true, and chiefly as to his own Courage and firmneſs of Soul. For I can truly ſwear that he never ſhed Tears, nor was ever perceived to ſigh; but on the contrary, during all the time that he ſuffer'd the moſt horrible Torments that could be invented, and which laſted about three Hours, he never ceaſed from ſinging. The Soles of his Feet were roſted before two great Stones red hot, for more than a quarter of an Hour: the tops of his Fingers were ſcorch'd in a Stove of lighted Pipes; during which Torture he did not draw back his Hand. After this, the ſeveral Joynts of his Body were cut off, one after another. The Nerves and Limbs of his Arms were diſtorted with a little iron Wand, after ſuch a manner as cannot poſſibly be expreſſed. In fine, after many other Tortures, the Hair of his Head was taken off after ſuch a manner, that there remained nothing but the Scull, upon which the young *Hurons* were going to throw ſome burning Sand, when a certain Slave by order of Madam the Governeſs, knock'd him on the Head with a Club. The Prologue of this Tragedy created in me ſo great a Horror, that I had not the Curioſity to ſee the end of it, nor to hear this poor Wretch ſing to the laſt moment of his Life. I have ſeen ſo many burnt againſt my Will, amongſt thoſe People where I ſojourned, during the Courſe of my Voyages, that I cannot think of it without trouble: 'Tis a ſad ſpectacle at which every one is obliged to be preſent, when he happens to ſojourn among theſe Nations; for if any one ſhould pretend to ſhun this ſight, or expreſs any Compaſſion for them, he would be eſteem'd by them a Man of no Courage. All the Savages practiſe this barbarous Cruelty when Evidence is brought that the poor Slave has kill'd Women or Children in his Life time. But if he can make it appear that he only kill'd Men, they content themſelves with ſhooting him. 1692

CHAP. XXIII.

Of the Author's Departure for France, *and his ſtopping at* Placentia, *which was attack'd by an* Engliſh *Fleet. How the* Engliſh *failed in their Deſign. He purſues his Voyage to* France, *where the King beſtows on him the Lieutenancy of* New-found-Land *and* Acadia. *He returns to* Placentia. *A Fleet of Thirty* Engliſh *Ships come to ſeize the Place. The Reaſon of their bad Succeſs. The Author's Adventure with the Governor of* Placentia, *and Departure for* Portugal.

I Had formerly ſpoken to the Governor about building three Forts upon the Courſe of the Lakes, with ſome Veſſels to go with Oars, mann'd with forty Sea-men; which Project if well executed would oblige the *Iroqueſe* in two Years time to abandon their Country. He now concurr'd with me in that Opinion, and reſolved to ſend me to Court with the Propoſals.

July the 27th, I imbarked at *Quebec*, and arrived the 18th of *Auguſt* in the Port of *Placentia*, where I found fifty fiſhing Veſſels of *French Biſcay*, and thought to have ſet out for *France* along with them in four Days. But they were longer in getting ready than I thought for, and when we were juſt ready to break ground we were inform'd by ſome Fiſher-men, that five large *Engliſh* Ships were come to an Anchor near Cape St. *Mary*. This Intelligence proved very true; for on the 15th of *September* they caſt Anchor in ſight of *Placentia*. The 16th they weigh'd and came to an Anchor in the Road out of the reach of our Guns. Upon this the Governor was not a little perplexed, for he had but fifty Soldiers in his Fort, and but little Ammunition; beſides the Fort was commanded by a Mountain, from whence he might be galled with Stones out of Slings; and 'twas to be fear'd the *Engliſh* would poſſeſs themſelves of that high Ground. I march'd with ſixty Sea-men belonging to the Fiſher-men to prevent their Landing, in caſe they attempted to make a Deſcent at a place call'd *la Fontain*, and compaſs'd my end without firing a Gun. Six or ſeven hundred *Engliſh* put into the Land with twenty Sloops, with a deſign to have landed at that Place, upon which my Men appear'd too ſoon upon the Shoar in ſpight of my Teeth, and by that means oblig'd the *Engliſh* to row with all their Might to the back of a little Cape, where they threw in a Barrel of Pitch that burnt ſome Thickets. The 18th about Noon, perceiving that a little Sloop put off from the Admiral with a white Flag on its Prow, and made toward the Fort; I ran in thither immediately. The Governor had ſent out one of his own Sloops with the ſame Flag to meet the other, and was ſurpriz'd when ſhe return'd with two *Engliſh* Officers on board. Theſe Officers gave the Governor to underſtand, that the Admiral deſired he would ſend an Officer on board of him, which was done accordingly; for Mr. *de Coſte Belle* and I went on board the Admiral, who receiv'd us with all Reſpect and Civility, regaling us with Sweet-meats and ſeveral ſorts of Wines, with which we drank the Healths of the Admirals of *France* and *England*. He ſhew'd us his whole Ship, to the very Carriages of the Guns, and then told the Sieur *de Coſte Belle*, that 'twould be a great trouble to him to be oblig'd to take *Placentia* by force of Arms, in regard he foreſaw ſuch an Enterprize would prove fatal to the Governor, to the Garriſon and all the Inhabitants upon the account that he ſhould find a great deal of difficulty in preventing Pillaging and other Diſorders. That in order to avoid this Misfortune, 'twould be a prudential part in the Governor to come to a Compoſition. Our Officer being fully acquainted with the Governor's Mind, made anſwer in his Name, That he was reſolved upon a vigorous Defence, and would rather ſpring the place in the Air than ſurrender it to the Enemies of the King his Maſter. After a mutual exchange of Compliments we took leave of him, and being ready to get into our Sloop, he told us with Embraces, that he was infinitely ſorry he could not ſalute us with his

1692 Guns, in the room of which he ordered 5 or 6 Huzza's with a *Long Live the King*. When we went into the Boat, we return'd him the same number of Shouts, to which he return'd a seventh that finished the Ceremony. Upon our return to the Fort, Mr. *de Coste Belle* gave the Governor an account of the Force of the Admiral's Ship. She was call'd the *St. Albans*, carried 66 Guns, and 600 Men, but the rest appear'd to be of less Force.

The next Day which was the 19th, they advanced within Cannon-shot of the Fort, where they lay by, while a Sloop rowed up to the Batteries. The Governor sent out another Sloop to know what the matter was, and was answer'd, that if he had a mind for a Party in the time of the Engagement, he should put up a red Flag for a Signal. I was then posted at *la Fontain* to oppose a Descent; for that was the only place that could be serviceable to the *English*, in order to master *Placentia*. The *English* ought to have consider'd that their Cannon would do no service against an impenetrable Rampart, and that they would lose their labor in shooting against Flints and Earth. But it seems they were oblig'd by express Orders from the Prince of *Orange* to do it, and at the same time to expose themselves to the danger of being sunk; which had certainly been effected, if we had had Powder and Ball enough; for the Cannonading lasted almost 5 Hours.

The 20th, a *French* Prisoner who was on board of the Admiral made his Escape, by throwing himself into the Sea in the Night. He landed at the place where I lay in Ambuscade, and after he had given me an account of what had pass'd in the Fleet, I sent him to the Governor's House. He inform'd me that they had design'd a Descent with 7 or 800 Men, but altered their Resolution upon the Apprehension that there were 14 or 1500 Sea-men ready to oppose 'em. That they were of opinion, that my 60 *Biscayans* who discovered themselves upon the Shoar of *la Fontain*, had no other view but to draw 'em into an Ambuscade, by tempting 'em to come up. The 21st they set sail, after having burnt all the Houses at Point *Verte*. I may justly say, that if it had not been for the Captains of the *Biscay* Ships that were then at *Placentia*, that place had undoubtedly fall'n into the Hands of the *English*. In this Expdition the *English* lost 6 Men; and on our side the Sieur *Boat* had his Arm shot off. The *English* did all that Men could do; so that nothing can be said against their Conduct.

October the 6th, I took shipping in pursuit of my Voyage to *France*, accompanied with several other Vessels. The westerly Winds were so favourable, that we anchored on the 23d. at St. *Nezere* 8 Leagues from *Nantes*; from whence I went to *Versailles*, where I presented Mr. *Frontenac*'s Letters to Mr. *Ponchartrain*. I was answered that it would not be proper to execute the Project I proposed, because the 40 Sea-men which were necessary for my purpose, could not now be allow'd me; and besides the King had given Orders to Mr. *Frontenac* to make Peace with the *Iroquese* upon any terms whatsoever. This Inconveniency also was found to attend the Project, that after the Forts which I intended to build upon the Lakes were intirely finish'd, the Savages that are our Friends and Confederates, would, when they were sure of such Places of Retreat, rather seek after Glory by making War upon the *Iroquese*, than take pleasure in hunting the Beavers, which would be a considerable damage to the Colonies of *Canada*. Thus my Project about the Lakes of *Canada* came to nothing: However, I had the good Fortune to have the Lieutenancy of the Isle of *New-found-Land* and *Acadia* conferred upon me by his Majesty; for which I must own my self oblig'd to the *English* who attack'd us at *Placentia* last Year; who after their Arrival in *England*, publickly declar'd, tho' without any just ground, that they had infallibly taken that place, if I had not opposed their Descent: Whereas in truth, I had no share in that Action: and hereby we may see that Men are often prefer'd, who have no other Patrons in the World but pure Chance.

1693 I sailed again from *Nantes* the 12th of *May*, and arriv'd at *Placentia* the 20 of *June*. After I landed, I went to salute Mr. *Brouillon* Governor of *Placentia*, and declar'd to him, how glad I was to obey the Orders of so wise a Commander. He answer'd that he was much 1693 surpriz'd to find that I had follicited to be employ'd there without acquainting him with it the preceding Year; and that he now plainly perceived, that the Projects about the Lakes of *Canada* (which I had mentioned to him as the cause of my Voyage to *France*) was a meer sham Pretence. I endeavour'd in vain to persuade him to the contrary; for t'was not possible for me to undeceive him.

On the 16th of *September* we perceived an *English* Fleet of 24 Sail which cast Anchor in the Road. It was commanded by Sir *Francis Wheeler*, who had gone to *Martinico* with a design to seize that Isle, and in his return from thence had sailed to *New-England*, to take in some Forces and Ammunition there, in order to make himself Master of *Placentia*. But when he discovered a Redoubt of Stone lately built upon the top of the Mountain, he thought it more advisable to return quickly into *Europe*, than to make a fruitless Atrempt. We had planted 4 Cannon upon this high Redoubt, which so gall'd the Ships of his Fleet that they were forc'd to weigh Anchor sooner than they intended. The Fault of the *English* was, that they did not enter the Harbour the same Day that they appear'd before the Place. I have observed it many times, that Atrempts do commonly miscarry by delaying them for a little while. But now I return to the Quarrel the Governor had with me.

Fancying that I had sollicited my Employment without taking notice of him, he treated me with all manner of Reproaches and Outrages from the time of my landing to that of my departure. One Night while I was entertaining at Supper some of the Inhabitants, he came mask'd into my House with his Servants and broke the Glass-Windows, Bottles and Drinking-Glasses, throwing down the Tables, Chairs, Chests of Drawers, and every thing that came to hand. Next Morning his Servants fell upon mine, who expected nothing less than to be thresh'd to Death with Clubs. As I was meditating some Revenge, the Recollects came and remonstrated to me, that I must dissemble my Resentment, to prevent any Innovation in the King's Affairs; and advised me withal to go and see him, and to intreat him to put an end to these Differences, assuring him at the same time, that I was intirely his Servant and Friend. I went accordingly to his House, and being with him alone, spoke to him for a quarter of an Hour in the most submissive Terms; but instead of listning to my Reasons and treating friendly with me, he loaded me with a Torrent of bitter Reproaches. At last the Recollects remonstrated to him of what consequence it would be for us to live in a good Correspondence; so we soon embrac'd one another with mutual Protestations of forgetting all that had pass'd between us.

After this Reconciliation, I had reason to believe that his Heart would not give the Lye to his Mouth, because I thought he was not so imprudent as to inform the Court of some Trifles, wherein he would appear to have prostituted his Honour, but I was deceived; for his Papers by chance falling into my Hands, I shew'd 'em to the Recollects, who, when they had read the Allegations contain'd in them, made no scruple to advise me to take care of my self. This wholesome advice made me perceive the danger to which I should be expos'd if I continued any longer at *Placentia*; insomuch that the fear I had of being sent to the *Bastile*, after the Arrival of the Ships from *France*, made me resolve to abandon all hopes of making my Fortune here, and to throw up my Places. Pursuant to this Resolution (leaving at *Placentia* a great deal of Houshold Furniture, which I could neither sell nor carry off) I imbark'd the 14th of *December* in a little Vessel, which was the only one, and the last that was to go for *France*. My Enemy had used the precaution of writing to the Governors of *Belle* Isle, the Isle of *Rhe* and of *Rochelle*, to seize me as I should land. But I had agreed with the Captain for 1000 Crowns to land me on the Coast of *Portugal*, and after the encountring 3 terrible Storms in our Passage, in the last of which, we ran 150 Leagues in 3 Days, without any Sail, he set me ashoar at *Viana*, and continued his Course to *France*.

CHAP. XXIV.

A short View of the Manners and Customs, and of the Diseases and Remedies of the Savages.

THose who have represented the Savages as rough as Bears, have never had the opportunity of seeing them; for they have no Beards, neither have they Hair in any part of their Bodies, not so much as under their Arm-pits. They are generally proper, well made Persons, of an Olive Colour, their Eyes large and black, as is also the Hair on their Heads. 'Tis a great rarity to find any among 'em lame, hunch back'd, one-ey'd, blind

1693 blind or dumb. They are Strangers to diſtinction of Property. Money is in uſe with none of them but thoſe that are Chriſtians, who live in the Suburbs of our Towns. The others will not touch nor ſo much as look upon Silver. They think it unaccountable that one Man ſhould have more than another, and that the Rich ſhould have more Reſpect than the Poor. They ſcoff at Arts and Sciences, and laugh at the difference of Degrees obſerv'd among us. They pretend that their contented way of living far ſurpaſſes our Riches, and that all our Sciences are not ſo valuable as the Art of leading a calm peaceful Life.

Their Feaſts are the bane and ruin of their Stomachs, at which they value themſelves upon leaving nothing. Their Victuals are either boil'd or roaſted, and they lap great quantities of the Broth both of Meat and Fiſh. Their Meat is little more than half done, but their Fiſh is always over-boil'd. They cannot bear the taſt of Salt or Spices, and wonder that we are able to live ſo long as 30 Years, conſidering our Wines, our Spices, and immoderate uſe of Women. They never touch Sallad, becauſe all cold Herbs oblige the Stomach to hard labour.

Their Health is firm, notwithſtanding they uſe no Caution to preſerve it; but on the contrary, uſe violent exerciſe in hunting, and in their warlike Expeditions, in which they have frequent returns of Heats and Colds in a Day, which in *Europe* would occaſion a mortal Diſtemper. They are unacquainted with a great many Diſeaſes that afflict the *Europeans*; ſuch as the Palſy, Dropſy, Gout, Phthiſick, Aſthma, the Gravel and the Stone. Sometimes indeed they are ſeized with Pluriſies, but theſe are as unfrequent as they are mortal: For this is the only Diſtemper that all their Remedies cannot conquer. The Small-Pox are as common in the North as the Great-Pox are to the Southward, and is very dangerous in Winter, by reaſon of the difficulty of Perſpiration; but the Savages matter it ſo little, that when it is upon 'em they walk about from Hut to Hut if they are able, or are carried about by their Slaves. The Venereal Diſtemper is very common in the Southern Parts: I ſaw one of them who uncovering himſelf, ſhew'd me part of his Body that was ready to fall off with Rottenneſs: He was then buſied in boiling Roots, and told me, that he hoped to be cured in a Month's time, by drinking the Juice of 'em, and eating conſtantly the Broth or Decoction of Meat and Fiſh.

When they are ſick of a Pluriſie, they only drink Broth, and eat ſparingly; but as for other Diſeaſes, they get over 'em with the greateſt danger in the World, uſing all means imaginable to burſt themſelves by eating and drinking when they have groſs Fevers upon 'em; and when the Fit is over, ſmoking of *Braſil* Tobacco, which without diſpute is the ſtrongeſt ſort that we know of.

Brandy makes a terrible havock among 'em. That Liquor, which of it ſelf is murdering ſtuff, and which is brew'd and adulterated before 'tis imported into this Country, ſweeps off Men ſo faſt, that one who has not ſeen the fatal Effects of it can ſcarce credit 'em: It extinguiſhes their natural Heat, and throws almoſt all of 'em into that languiſhing Diſorder which we call a Conſumption, and makes 'em to look pale, livid and gaſtly like Skeletons. 1693

They are alwaies againſt making uſe of our Surgeons and Phyſicians; they affirm that all mixtures of Drugs are Poiſon, that deſtroys natural Heat, and that Glyſters are only proper for the *Europeans*. They think all Purgations inflame the maſs of Blood, and weaken the Veins and Arteries by their violent Shocks, and cannot conceive how we come to be ſuch Fools as to make uſe of Vomits; for whenever they ſee a *French* Man take down ſuch a violent Remedy, they cannot forbear ſaying, that he ſwallows an *Iroqueſe*. But they are yet more aſtoniſh'd at our cuſtom of Bleeding; For, ſay they, the Blood being the Taper of Life, we have more occaſion to pour it in than to take out; and that after loſs of Blood, Nature acts but feebly; the Entrals are overheated, and all the Parts are dried, which gives riſe to Diſeaſes that afflict the *Europeans*. All their Cure conſiſts in ſweating well, in drinking Broth, in keeping themſelves very warm, in ſleeping if they can, and in drinking the Lake or Spring-water, in the Paroxims of Fevers, as well as in other Diſtempers.

They are never 8 Days together without ſweating, whether they be well or ill; only they obſerve this difference, that when they are perfectly well, they throw themſelves, while the ſweating Moiſture is yet upon 'em, into the River in Summer, and into the Snow in Winter; whereas when they are out of order, they go immediately into a warm Bed. The reaſon of throwing themſelves into the Water is, that the Pores being unlock'd by ſweating, to let out the deprav'd Humours, they take care to ſhut 'em ſoon after, leſt the nutritive Juice ſhould glide out by the ſame Paſſage. Five or ſix ſweat together in a ſort of Oven or Stove covered with Mats, Skins, *&c.* In the middle of this Bagnio, there ſtands a Diſh or Porringer full of burning Brandy, or of great red hot Stones, which cauſes ſuch a piercing heat, that in the twinkling of an Eye they ſweat prodigiouſly.

There's no Wound or Diſlocation which they cannot cure with Simples or Plants, whoſe Virtues they are well acquainted with; and which indeed is ſingular, their Wounds never run to a Gangrene. But after all, this is not to be imputed to theſe Herbs, nor to the Air of the Country, but to their hale Conſtitutions; for notwithſtanding the uſe of theſe very Remedies, a Gangrene invades the Wounds of the *French*. This People attribute our liableneſs to Gangrenes, and indeed all our Diſeaſes, to the Salt that we eat; for they cannot taſt any ſalt thing without being ſick, and drinking perpetually. 'Tis in vain to viſit 'em when they lye at the point of Death, in order to preſs 'em to bleed or take a Purge; for they ſtill make anſwer, that they cannot conſent to the forwarding of their Death by the Remedies of the *French*, which they take to be as bad as the Perſons who exhibit them

CHAP. XXV.

Of the Beaſts, Birds, Fiſhes, Inſects, Trees and Fruits of the Northern America.

A Great Beaver is 26 Inches long from the hind Head to the root of the Tail; 'tis about 3 Foot and 8 Inches round; its Head 7 Inches long and 6 broad; its Tail 14 Inches long and 6 broad. Upon this they carry the Clay and Earth to make their Banks and Kennels. Before their Muzzles are four Fore-teeth, two in each Jaw, an Inch long and a quarter of an Inch broad, very ſtrong and ſharp, with which they cut down Trees as big as an Hogſhead. When they have cut down Trees in that manner, they drag them along as they ſwim in the Water, and ranging them acroſs at the bottom of a Meadow, load themſelves with Graſs and fat Earth, which they tranſport upon their great Tails, and throw in between the Trees with ſo much Art and Induſtry, that the moſt skilful Bricklayer can hardly make a ſtronger Wall with Lime and Mortar. In the Night they are heard to work with ſo much Vigour and Diligence, that one would think 'em to be Men at work: And thus they will make Banks of 4 or 500 Paces long, 20 Foot high, and 7 or 8 thick, tho' there are not above 100 of them at moſt. Their Art of making them fall upon the Water is very ſurprizing, for it requires Judgment and cloſe Attention to ſucceed in it, and chiefly to nick the time when the Wind can aſſiſt them to make the fall of the Trees more eaſy, and to make them fall that way they would have them. They never go above 20 Paces from the edge of their Lake, and always ſet Centinels to watch, who cry out to give 'em notice when they hear the leaſt noiſe, whereupon they all dive under Water, and return to their Kennels which are placed exactly in the middle of the Lake; ſo that neither Wolves, Foxes nor Bears, *&c.* can attack them, and they have no danger to fear but only from Men.

The Writers of natural Hiſtory are very much out in relating that Beavers bite off their Teſticles, which is impoſſible to be done without rendring the Nerves of the Groin, in which they are ſeated juſt by the Share-Bone: Neither is *Caſtoreum* lodg'd in the Teſticles, but in a certain Bag which Nature ſeems to have form'd on purpoſe for theſe Animals, and which they make uſe of to clean their Teeth. They are caught by Traps baited with pieces of red Aſp. They may likewiſe be kill'd when they ſwim upon the Water, or when they come a-ſhoar to cut down Trees; but then you muſt lye hid and not ſtir. They are taken in Autumn, by making a great hole under their Banks and draining out the Water: And in Winter when the Lakes are frozen, they make holes, round the Kennels of the Beavers, upon which they place Nets that reach from one to the other; then laying open the Kennels with an Ax, the Beavers throw themſelves into the Water, and coming to take breath at theſe holes, are catch'd in the Nets. At this rate not one of 'em eſcapes; but the Savages having

1693 having no mind to extirpate 'em, throw back into the holes a dozen of Females and half a dozen Males.

The *Michibichi* is a sort of Tyger less than the common Tyger, and not so much speckled. As soon as it descries a Man, it runs away and climbs up the first Tree. It attacks all bruit Animals whatsoever, and conquers them with ease; and which is very singular and peculiar to it above all other Animals, it runs in to the assistance of the Savages when they pursue Bears and wild Beeves, and sallies out with fury upon the hunted Animal. The Savages esteem 'em to such a degree, that they would choose rather to die than to kill one of 'em.

The reddish Bears are mischievous Creatures, and fall fiercely upon the Huntsmen, whereas the black ones fly from them. The former sort are less and more bimble than the latter.

The white Bears are a monstrous Animal and extraordinary long. They are so fierce, that they'll attack a Sloop in the Sea with 7 or 8 Men in it. 'Tis said they'll swim 6 or 7 Leagues. They live upon Fish and Shels upon the Sea-shoar. I never saw but one of 'em in my Life, which had certainly torn me to pieces, if I had not spied it at a distance, and so had time to run back for shelter at *Placentia*.

The Flying Squirrels are as big as a large Rat, and are so call'd in regard that they fly from one Tree to another by means of a certain Skin which stretches it self out in form of a Wing, when they make these little Flights.

The white Hares are only such in Winter, for as soon as the Spring comes on they begin to turn grayish, and by degrees recover the same Colour our Hares have in *France*, which they hold till the end of Autumn.

The Crocodiles of *Missisipi* are exactly the same with those of the *Nile*. The most usual method for taking them alive, is to throw great Wreaths or Cords made of the Barks of Trees, with a running Knot upon their Neck, middle of their Body, Paws, &c. And when they are thus seized, they shoot 'em between 10 or 12 Stakes, and there tie 'em after their Belly is turn'd upwards. While they lie in this posture, they flea 'em without touching their Head or Tail, and give 'em a Coat of Fir-Bark, to which they set fire, to make 'em howl and cry dreadfully. The Savages in swimming over the River, or in sleeping upon its Banks, are frequently devoured by 'em.

Birds. The Red Partridges are wild and little, and much different from those we have in *Europe*, as well as the Pheasant, whose Feathers being of a white colour with black specks, make a very agreeable diversity.

The White Partridges are as big as our Red. It is the most stupid Animal in the World; it sits upon the Snow and suffers it self to be knock'd on the Head with a Pole without offering to stir. I am of opinion, that this unaccountable numness is occasioned by its long flight from *Greenland* to *Canada*.

The Black Partridges are very pretty. They are bigger than ours, and their Beak together with the circle of their Eyes and the Feet are red, their Plumage being of a shining black colour.

Parrots are met with in the *Illinois* Country, and upon the River *Missisipi*. They are very small, and are the same with those we bring from *Brasil*.

Fish. The White Porpoises are as big as Oxen: They go up with the Tide till they come at fresh Water, and then retire with the Ebb.

The Lake Sturgeons are commonly 5 or 6 Foot long: But I have seen one of 10 and another of 12 Foot in length.

The *Missisipi* Carps are of an extraordinary size, of the same Form with ours, and admirably well tasted.

The largest Trouts are 5 Foot and a half long, and 1 Foot Diameter; their Flesh is red, and they are catch'd with great Hooks fastned to pieces of Wier.

The Fish in the Lakes are better than those of the Sea or Rivers; and the Savages prefer the Broth of Fish to Meat Broth, when they are indisposed.

The Rivers of *Canada* are replenished with an infinity of other Fish not known in *Europe*. Those taken in the *Long River* which disembogue into the *Missisipi*, savour so rank of Mud and Clay, that it is impossible to eat 'em.

The Adders of *Canada* do no harm at all. The Asps indeed are very dangerous when the People bath in the stagnating Water towards the South Countries.

The Rattle Snake is so call'd from a sort of Case in the extremity of its Tail, containing certain Bones, which make such a noise when the Serpent creeps along that 'tis heard 30 Paces off. These Serpents betake themselves to flight when they hear the sound of Mens Feet, and never sting but when they are trod upon.

The Lowing Frogs are so call'd from their croaking, which sounds like the lowing of an Ox, and are twice as large as those we have in *Europe*.

The Brulots are a sort of Hand Worms, which cleave so hard to the Skin, that their prickling occasions the same pain as if it were a spark of Fire. These little Animals are pretty numerous, but so small that they are unperceivable.

Trees and Fruits. The Birch Trees are different from ours, both for bulk and quality. The Savages make Canoes of the Bark, some of which is red, and some white; and Books may be made thereof, the Leaves of which will be as fine as Paper.

The Pine Trees are very tall, strait and thick, and are often transported to *France* for Masts. 'Tis said some of 'em are big enough to serve for a Mast to a First Rate Ship.

The Maple Trees are some of 'em as tall as the loftiest Oaks, and as big as an Hogshead. It bears no resemblance to that sort we have in *Europe*. It yields a Sap which has a much pleasanter taste than the best *Limonade* or Cherry-Water, and makes the wholsomest Drink in the World. This Liquor is drawn by cutting the Tree 2 Inches deep in the Wood, the Cut being run slooping to the length of 10 or 12 Inches. At the lower end of this Gash a Knife is thrust into the Tree sloopingly, so that the Water running along the Cut or Gash, as thro' a Gutter, and falling upon the Knife that lies across the Channel, runs out upon the Knife, which has Vessels placed underneath to receive it. Some Trees will yield 5 or 6 Bottles of this Water a Day; and some Inhabitants might draw 20 Hogsheads of it in one Day, by notching all the Trees in their respective Plantations. The Gash does no harm to the Tree. Of this Sap they make Sugar and Syrup, which is so valuable, that there can't be a better Remedy for fortifying the Stomach. The North Country Maples have more Sap than those of the South, but the Sap is not so sweet.

The Vines twine round the Trees to the very top; and the Branches of those Trees are so covered with Grapes, that one would take the Grape to be the Fruit of the Tree. There has been some Wine press'd towards *Missisipi*, where the Grape is long and thick, which after long standing became as sweet as Canary, and as black as Ink.

The Citrons are so called because they resemble ours. Instead of a Rind they have only a single Skin. This Fruit is wholsome, but the Juice of its Root is a mortal subtil Poison.

Maidenhair is as common in the Forests as Fern in *France*; insomuch that the Inhabitants of *Quebec* prepare great quantities of its Syrup, which they send to *Paris*, *Nants*, *Rouan* and other Cities in *France*.

CHAP. XXVI.

Of the Interest of the French and English in North America.

ALtho' in several Treaties of Peace between these two Kingdoms, the Boundaries were in a manner marked out in some places, yet the Limits of *New-France* and *New-England* have never been well adjusted, especially in the Island of *New-found-Land* and *Acadia*, as also *Labrador*, *Hudson's* Bay and other Countries lying to the Northwards of the River St. *Laurence*.

See the Map p. 25.

The Island of *New-found-Land* is 300 Leagues in circumference; it lies at the distance of 650 Leagues from *France*, and 40 or 50 Leagues from the Bank of the same Name. The South side of the Island belongs to the *French*, who have several Settlements there for the fishing of Cod. The East side is inhabited by the *English*, who are possess'd of several considerable Posts in certain Ports, Bays and Havens, which they have taken care to fortify. The West of the Island is waste, and was never yet possess'd. The Island is of a Triangular Figure, and full of Mountains and impracticable Forests; it has some great Meadows, or rather Heaths, which are covered with a sort of Moss instead of Grass. The Soil of this Country is good for nothing, as being a mixture of Gravel, Sand and Stones; so that the Fishery was the only motive that induced the *French* and *English* to settle there. It affords great store of Game,

1693 Game, for Water-Fowl, Partridges and Hares; but as for the Stags 'tis almoſt impoſſible to come at them, by reaſon that the Mountains are ſo high and the Woods ſo thick. There are no ſettled Savages in the Iſland, but they ſometimes croſs over to it in great Sloops at the Strait of *Belle-Iſle* to ſurprize Fiſhermen upon the Coaſt. Two conſiderable Inconveniences attend the landing upon this Iſland. In the firſt place, the Fogs are ſo thick in Summer for 20 Leagues off into the Main, that the moſt expert Sailers dare not ſtand into the Land while they laſt; ſo that all Ships are oblig'd to lye by for a clear Day, in order to make the Land. The ſecond Inconveniency, which is yet greater, proceeds from the Currents which run to and again, by which means Ships are ſometimes driven in upon the Coaſt, when they reckon upon ten Leagues Offing: But which is worſt of all, the motion of the rowling Waves throws 'em back upon the Rocks, which they cannot poſſibly avoid, for want of Ground to anchor upon.

The *French* Settlements are at *Placentia*, the Iſland of St. *Peter* and in the Bay of *Trepaſſez*. The firſt is the Poſt of the greateſt importance and ſervice to the King, in regard that 'tis a place of Refuge to the Ships that are oblig'd to put into Harbour when they go or come from *Canada*, and even to thoſe that come from South *America*, when they want to take in freſh Water or Proviſions, and have ſprung their Maſts, or been damaged in a Storm. It is ſituated in the Latitude of 47 deg. and ſome minutes, almoſt at the bottom of the Bay that goes by the ſame name. The Bay is 10 or 12 Leagues broad, and 20 odd Leagues long. The Fort ſtands upon the ſide of a Neck or narrow Strait, which is 60 Paces over, and 6 Fathom deep. The Ships that enter into the Port are oblig'd to graze (ſo to ſpeak) upon the Angle of the Baſtions. The Port or Harbour is a League long, and a quarter of a League over. Before the Port there's a large firm Road, which is a League and a half wide, but lies ſo bleak to the N. W. and W. N. W. Winds, that neither Cables nor Anchors, nor large ſtout Ships can withſtand their furious Shocks; tho' indeed theſe violent Storms ſeldom happen but in the latter end of Autumn. This Road has ſome hidden Rocks on the North ſide, beſides thoſe at Point *Verte*. The Inhabitants and *French* Fiſhermen ſend their Sloops every Day 2 Leagues off the Port to purſue the Fiſhery, which commences in the beginning of *June*, and ends about the middle of *Auguſt*: There commonly come 30 or 40 Ships from *France* every Year, and ſometimes 60. Some come to fiſh, others to truck with the Inhabitants: To conclude, *Placentia* is in great want of Gravel to ſpread their Cod-Fiſh upon, in order to have 'em dried by the Sun after they are ſalted. The Soil is good for nothing, and bears neither Corn, nor Rice, nor Peaſe; and if it were as good and fertile as any in *Canada*, yet no body would give themſelves the trouble to cultivate it, becauſe one Man earns more in Cod-fiſhing than ten would do in the way of Husbandry.

Acadia extends from *Kenebeki* one of the Frontiers of *New-England*, to *l'Iſle Percee*, near the Mouth of the River of St. *Laurence*. This Sea-coaſt runs almoſt 300 Leagues, and has upon it two great navigable Bays, namely, the Bay call'd *Francoiſe*, and the Bay *des Chaleurs*: It has many little Rivers, the Mouths of which are deep and clean enough for the greateſt Ships. The River of St. *John* is a very pleaſant River, and navigable for 12 Leagues up from its Mouth. Between the Point of *Acadia* and the Iſland of Cape *Breton* is the Strait *des Canſeaux*, about 2 Leagues broad, and deep enough to carry the greateſt Ships in *France*, which is clear at all ſeaſons of the Year, whereas the Channel of Cape *de Raye* is oftentimes covered with Ice in *April*.

Moſt part of *Acadia* abounds with Corn, Peaſe, Fruit and Pulſe. Several Places afford Maſts as ſtrong as thoſe we have from *Norway*; and if there were occaſion all ſorts of Ships might be built there, the Oak of that Country being thought by Carpenters to be better than ours in *Europe*. The Knowledge I have of this Country makes me foreſee that the *Engliſh* will be Maſters of it ſome time or other: They have already begun to ruin the Commerce the *French* had with the Savages, and in a ſhort time they'll compaſs its intire Deſtruction. The *French* will priz their Goods too high, tho' they are not ſo good as thoſe of the *Engliſh*, and yet the *Engliſh* ſell their Commodities cheaper. 'Twere a pity that we ſhould tamely leave to the *Engliſh* a Country, the Conqueſt of which they attempted ſo often, in conſideration of our Fur-trade and Cod-fiſhing. 'Tis impoſſible to hinder 'em from poſſeſſing the Settlements on the Coaſt of *Acadia*, by reaſon that they lie at ſuch a diſtance from one another; ſo that they'll certainly ſucceed in ſuch Enterprizes, as indeed they have done already. The *French* Governors act with the ſame view, as many of thoſe who are employ'd in Poſts beyond Sea. They look upon their Places as Gold Mines given 'em in order to inrich themſelves; ſo that the Publick Good muſt always march behind private Intereſt. Mr. *de Meneval* ſuffer'd the *Engliſh* to poſſeſs themſelves of *Port Royal*, becauſe that place was cover'd with nothing but ſingle Paliſadoes: But why was it not better fortified? I can tell you the reaſon; he thought he had time enough to fill his Pockets before the *Engliſh* would attack it. This Governor ſucceeded Mr. *Perrot* who was broke with diſgrace, for having made it his chief buſineſs to inrich himſelf; and after returning to *France* went back again with ſeveral Ships laden with Goods, to ſet up for a private Merchant in that Country. While Mr. *Perrot* was Governor, he ſuffer'd the *Engliſh* to poſſeſs themſelves of ſeveral advantagious Poſts, without offering to ſtir. His chief Buſineſs was to go in Barks from River to River, to truck with the Savages; and after he was diſgrac'd, he was not content with a Commerce upon the Coaſt of *Acadia*, but would needs extend it to the *Engliſh* Plantations; but it coſt him dear, for ſome Pyrats fell in with him, and after ſeizing his Barks, duck'd himſelf, upon which he died immediately.

1693

Thoſe Savage Nations who have fix'd Habitations upon the Coaſts of *Acadia*, are intirely in the Intereſt of the *French*; and I muſt ſay that in time of War, they gall the *Engliſh* Colonies with their Incurſions ſo much, that we ought to take care to perpetuate a good underſtanding between them and us.

Port-Royal, the Capital or the only City of *Acadia*, is in effect no more than a little paltry Town that is ſomewhat inlarg'd ſince the War broke out in 1689, by the occaſion of the Inhabitants that liv'd near *Boſton* the Metropolis of *New-England*, who retir'd hither upon the apprehenſion that the *Engliſh* would pillage 'em and carry 'em into their Country. Mr. *de Meneval*, when he ſurrendred this place to the *Engliſh* (as I ſaid before) capitulated with the Commander of the Party that made the Attack; but the *Engliſh* Officer broke his Word to him, and uſed him both ignominiouſly and harſhly. It lies in the Latitude of 44 deg. and 40 min. upon the edge of a Baſin, a League broad and 2 Leagues long, having at the entry 16 or 18 fathom Water on one ſide, and 6 or 7 on the other.

On the other ſide of the River St. *Laurence* lies the wide extended Country of *Labrador*. The *Danes* were the firſt Diſcoverers of this Country which is full of Ports, Havens and Bays, which the *Quebec* Barks reſort to in Summer, to truck with the Savages for the Skins of Sea-Calves. It is a very large Country, and their number of Warriors, or Men that bear Arms, amounts to 30000 Men. They croſs over to the Iſland of *New-found-Land* every Day, at the Strait of *Belle Iſle*, which is not above 7 Leagues over; but never come ſo far as *Placentia*, for fear of meeting with other Savages there. *Hudſon*'s Bay adjoyns to *Labrador*, and extends from the 52th deg. and 30 min. to the 63d. of Lat. Captain *Henry Hudſon* an *Engliſh* Man, obtain'd a Ship from the *Dutch*, in order to trace a Paſſage to *China* thro' an imaginary Strait to the Northward of *America*. He had firſt form'd a Deſign of going by the way of *Nova Zembla*, but upon ſeeing the Memoirs of a *Daniſh* Pilot who was his Friend, he dropt that thought. This Pilot, whoſe Name was *Frederic Anſchild*, had ſet out from *Norway* or *Yſlandia* ſome Years before with a deſign to find out a Paſſage to *Japan* thro' that Chimerical Strait. The firſt Land he deſcried was *Savage* Bay, on the North ſide of *Labrador*; then ſweeping along the Coaſt he entred a Strait, which about 20 or 30 Years afterwards was chriſten'd *Hudſon*'s Strait; after that ſteering to the Weſtward, he came upon ſome Coaſts that run North and South; upon which he ſtood to the North, flattering himſelf with the hopes of finding an open Paſſage to croſs the Sea of *Jeſſo*: But after ſailing to the Polar Circle, and running the riſque of periſhing in the Ice, without meeting with any Paſſage or open Sea, he took up a reſolution of turning back; but the Seaſon was then ſo far advanced, and the Water ſo cover'd with Ice, that he was forc'd to put into *Hudſon*'s Bay and winter there, where ſeveral Savages furniſh'd his Crew with Proviſions and excellent Skins; and as ſoon as the Sea was open he return'd to *Denmark*. Captain *Hudſon* being acquainted with this *Dane*, undertook up his Journal to attempt a Paſſage, but the Enterprize fail'd, as well as that of one Mr. *Button* and ſome others. However, *Hudſon* put into the Bay that now goes by his Name, where he receiv'd a great quantity of Skins from the Savages, and after that diſcover'd *New-Holland*, now call'd *New-York*, and ſome other Countries retaining to *New-England*. Upon this the *Engliſh* form'd a Company for carrying on this new Commerce, and fitted out ſome Ships under the Command of Captain *Nelſon*, who loſt ſome of 'em in the Ice not far from the Strait, having eſcap'd narrowly himſelf. At laſt he entred the Bay,

and

1693 and placed himself at the Mouth of a great River, which rises towards the Lake of the *Assimpoualis* and falls into the Bay at a place where he built a Redoubt, and mounted some Cannon upon it. In the space of 3 or 4 Years after, the *English* made some other little Forts near that River, which prov'd a considerable Baulk to the Commerce of the *French*, who found that the Savages who used to deal with them in Furs on the North side of the upper Lakes, were not then to be seen.

It came to pass in process of time, that two *French* Men met some Savages in that Lake, who promis'd to conduct 'em to the bottom of the Bay, where the *English* had not yet penetrated, and were as good as their Word. The two *French* Men return'd to the upper Lake the same way they went, and thence to *Quebec*, where they offer'd to the chief Merchants to carry Ships to *Hudson's* Bay, but their Project was rejected. Thence they went to *France* in hopes of a more favourable hearing at Court. But after presenting divers Memorials, and spending a great deal of Money, they were treated as whimsical Fellows. Upon that occasion, the King of *England's* Ambassador did not lose the opportunity of perswading 'em to go to *London*, where they met with such a favourable Reception, that they got several Ships, which they carry'd to the Bay, not without difficulty, and built several Forts in different places that did great service in promoting Commerce. Then the Court of *France* repented, tho' too late, that they did not give ear to their Memorials; and finding no other Remedy, resolv'd to dislodge the *English* at any Rate. In effect, they attack'd 'em vigorously by Sea and Land, and dispossess'd 'em of all their Forts, excepting Fort *Nelson*, where they could not expect such an easie Conquest. Some Years after, the *English* resolv'd to make their utmost Efforts to retake these Posts; and their Resolution was crown'd with Success, for they dislodg'd the *French* in their turn, and at this Day the *French* are making preparations to repay 'em in their own Coin.

I must say, that the *English* in these Colonies are too careless and lazy. 'Tis well known that there's a great Consumption of Cod-fish in the Southern parts of *Europe*, and that few Commodities meet with a better and readier Market. It therefore behoves the Inhabitants of *New-England* to render the Cod-fishing more beneficial to the Colony, by taking such measures as many other People would, if they were as advantagiously seated. They ought to engage the Savages of *Acadia* in their Interest, which they may do with little charge. As for the fitting out of Fleets to destroy the Colony, if they were assur'd of Success, 'tis but some Places that can be reckon'd worth the while.

'Tis the Interest of the *English* to perswade the five Nations of the *Iroquese*, that the *French* have nothing less in view than to destroy them as soon as they meet with an opportunity; that the growing populousness of *Canada* is a sufficient cause of alarm; and that the only way to oblige the Inhabitants to abdicate the Colony, and discourage others from coming from *France*, is by ravaging their Settlements, and waging continual War against them.

Farther, if the *English* would pursue their measures to the best advantage, they ought to engage the *Tsonontouans* or the *Gogoguans* to go and settle upon the Banks of the Lake *Errie*, near the Mouth of the River of *Conde*; and at the same time they ought to build a Fort there, with some long Barks or Brigantines: This being the most convenient and advantagious Post of all that Country. Besides this Fort, they should build another at the Mouth of the River *des Francois*, and then 'twould be absolutely impossible for the Forrest-Rangers to carry Arms and Ammunition to the Allies of the *French* upon the Lakes.

The *French* of *Canada* subsisting chiefly upon the Fur-trade, 'tis their Interest to encourage the Savages to shoot Beavers, by furnishing 'em with what Arms and Ammunition they have occasion for. 'Twould be no difficult matter to draw the *Iroquese* over to their side, to keep 'em from plaguing their Allies, and at the same time to ingross all the Commerce with the 5 *Iroquese* Nations, that is now in the hands of the *English* at *New-York*. This might be effected by building Barks at Fort *Frontenac*, to convey to the River of the *Tsonontouans* and the *Onnontagueses* such Commodities as are proper for 'em; for whereas they now transport their Beaver Skins 60 or 80 Leagues upon their Backs to *New-York*, they have not above 7 or 8 Leagues travelling from their own Village to the Banks of the Lake of *Frontenac*. It is also very difficult for the *Iroquese* to find subsistence upon the Road, between their Villages and *New-York*, because they go thither in the great Bodies for fear of being surpriz'd, and there's no Venison on that side of the Country: And besides, in marching so far from their Villages, they expose their Wives, Child ren and superannuated Men for a Prey to their Enemies. 1693

To alledge that these Barbarians have a dependence upon the *English*, is a foolish Plea; their Respect for the *English* proceeding meerly from the occasion they have to make use of 'em. This is the only motive which induces 'em to treat the *English* as their Brethren; and if the *French* would sell 'em the Necessaries of Life, as well as Arms and Ammunition at easier Rates, they would not make many Journeys to the *English* Colonies.

1588 *Spanish* Invasion, 1588.

Those who alledge that the Destruction of the *Iroquese* would promote the Interest of the Colonies of *New-France*, are Strangers to the true Interest of that Country, for if that were once accomplish'd, those Savages who are now the *French* Allies, would turn their greatest Enemies, as being then rid of their other Fears; they would not fail to call in the *English*, by reason that their Commodities are cheaper and more esteem'd than ours; and by that means the whole Commerce of that wide Country would be wrested out of our hands.

I conclude therefore, that 'tis the Interest of the *French* to weaken the *Iroquese*, but not to see 'em intirely defeated. I own, that at this Day they are too strong, and have nothing less in view than to cut off all the Nations they know, let their Situation be never so remote from their Country. 'Tis our business to reduce 'em to one half of the Power they are now possess'd of, if 'twere possible; but we do not go the right way to work. There's an infinity of Disorders that want to be reform'd. In the first place, the Militia ought to be model'd and disciplin'd, that upon occasion they may be as serviceable as the regular Troops. Officers should be prohibited to stop the Soldiers Pay, and should be enjoyn'd to discipline their Men every *Sunday* and *Holy-day*. Commodities ought to be rated at a reasonable Price, so that the Merchant may have his Profit without exacting upon the Savages. The setting up Manufactories for Linnen, Stuffs, &c. would be very useful. And I have often wondred, that instead of Banishing the Protestants out of *France*, who in removing to the Countries of our Enemies, have done so much damage to the Kingdom by carrying their Money along with them, and setting up Manufactories in those Countries, that the Court did not think it more proper to transport 'em to *New-France*. I am convinc'd that if they had receiv'd positive Assurances of enjoying a liberty of Conscience, a great many of 'em would have made no scruple to go thither. Some have reply'd, that the Remedy would have been worse than the Disease, in regard that some time or other they would not have fail'd to expel the Catholicks by the assistance of the *English*: But to that may be answer'd, that the *Greeks* and *Armenians*, who are Subjects to the Grand Signior, and of a different Religion from that of the *Turks*, did scarce ever implore the aid of foreign Powers, in order to rebel and shake off the Yoak: And 'tis as probable, that if the *Huguenots* had been transported to *New-France*, they had never departed from the Fealty they ow'd to their Natural Sovereign; and by this means *New-France* would become a finer and more flourishing Kingdom than several others in *Europe*.

F I N I S.

APPENDIX.

The SPANISH *INVASION.* Anno Christi, 1588.

1588 *Spanish Invasion,* 1588.

TO name no other Reasons for this Grand Expedition, than that *Elizabeth* Queen of *England* assisted the Revolt in the *Netherlands* from the Crown of *Spain*; and that *Philip* II. was an ambitious Prince, and emulous of new Conquests: There were some Years spent in making vast Preparations for the Conquest of *England*, which would much faciliate the Subjection of the *Netherlands*; the *Spanish* Fleet, taken in all Respects, was the best that ever before Sailed upon the Ocean, the same consisting of One hundred and thirty Ships, whereof these were the Principal, *viz.* the Admiral Galleon of St. *Martins* of One Thousand Tun, had in her One hundred seventy seven Mariners, Three hundred Soldiers, Fifty Pieces of Canon, *&c.* The Galleon of St. *Johns*, One thousand and seventy Tuns, One hundred and sixty Seamen, Two hundred thirty one Soldiers, Fifty Pieces of Canon, *&c.* The Galleon of St. *Mark*, Seven hundred ninety two Tun, One hundred and seventeen Seamen, Two hundred ninety two Soldiers, *&c.* The Galleon of St. *Philip*, Eight hundred Tun, One hundred and seventeen Seamen, Four hundred fifteen Soldiers, *&c.* The Galleon of St. *Lewis*, Eight hundred and thirty Tuns, One hundred and sixteen Seamen, Three hundred seventy six Soldiers, Forty Guns, *&c.* The Galleon of St. *Matthew*, Seven hundred and fifty Tun, Fifty Seamen, One hundred seventy seven Soldiers and Forty Guns, *&c.* The Galleon of St. *James*, Five hundred and twenty Tun, One hundred Seamen, Three hundred Soldiers and Fifty two Guns, *&c.* The Galleon of *Florence*, Nine hundred sixty one Tuns, One hundred Seamen, Three hundred Soldiers and Fifty two Guns, *&c.* The Galleon of St. *Christopher*, Three hundred fifty two Tuns, Ninety Seamen, Three hundred Soldiers, Thirty Guns, *&c.* A Ship of St. *Angelo*, Seven hundred sixty eight Tuns, One hundred and fourteen Seamen, Three hundred twenty three Soldiers, Thirty Canons, *&c.* The *Gangrine*, One thousand one hundred and sixty Tuns, One hundred and ten Seamen, Three hundred Soldiers, Three hundred and sixty Canon, *&c.* The Ship St. *James*, Six hundred and sixty Tuns, One hundred and two Seamen, Two hundred and fifty Soldiers, Thirty Guns, *&c.* The *Manuel*, Five hundred and twenty Tuns, Fifty four Seamen, One hundred and thirty Soldiers, Sixteen Guns, *&c.* The St. *Mary*, Seven hundred and seven Tuns, Fifty Mariners, Two hundred and twenty Soldiers, Thirty Guns, *&c.*

Its not necessary we should descend to any more such Particulars; let it therefore suffice, that in their Fleets consisting of One hundred and thirty Ships as already mentioned, which contained Fifty Seven Thousand, Eight hundred and eight Tuns, Eight Thousand, forty five Seamen, Nineteen Thousand two hundred ninety five Soldiers, And Two Thousand eighty eight Gally-Slaves: There was all other suitable Provision made. They had Twenty Thousand two hundred Canon-Balls. Four Thousand two hundred Quintals of Powder, each Quintal containing One hundred Pound weight. One hundred Quintals of Lead for Bullets. One Thousand two hundred Quintals of Match. Seven thousand Muskets. Ten Thousand Partisans and Halberts, with sufficient Store of battering, double Canon and Field-Pieces. They had likewise a great Stock of Provision, enough to last for six Months: In a word, the Army was Thirty two Thousand strong, and Cost the King of *Spain* Thirty two Thousand Ducats every Day. The General was the Duke of *Medina Sidonia*, the Admiral *Don John Martinez de Richalde*. The Prince of *Parma* likewise in the *Netherlands*, by the Command of the King of *Spain*, built Ships and a great many flat-bottom'd Boats, each of them big enough to carry thirty Horse, with Bridges fitted to ship and unship the Horses; One hundred flat-bottom'd Boats more lay ready in the Port of *New Port*, tho' not as big as the former, besides Thirty seven Men of War at *Dunkirk*. He sharpned Piles to stop up the Mouths of Rivers; at *Gravelin* they had Twenty thousand empty Casks, with Cords and other Furniture to make floating Bridges to stop up the Havens, besides an infinite number of Faggots; they shipped likewise a great number of Saddles, Bridles, *&c.* Near unto *Newport* there lay ready Thirty Companies of *Italians*, Two of *Walloons*, and Eight of *Burgundians*: At *Dixmude* there were Eighty Companies of *Netherlanders*, Sixty of *Spaniards*, as many of *High-Dutch*, and among them about Seven hundred fugitive *English* under the Command of Sir *William Standley*; there were moreover Four Thousand Men posted at *Conick*, and Nine hundred Horse at *Walene*: These being the vast Preparations made for the Invading of poor *England*, and the same having received the Pope's Benediction; The Queen to obviate this grand Design, constituted *Charles* Lord *Howard* of *Effingham*, Admiral; Sir *Francis Drake*, Vice-Admiral; and the Lord *Henry Seymour* to lye upon the Coast of the *Netherlands* with Forty Ships, to watch the Motion of the Prince of *Parma*; the Earl of *Leicester* was constituted General by Land, and Twenty thousand of the Militia were disposed along our South Coast; besides which she had two Armies, one of which consisting of a Thousand Horse, and Twenty two Thousand Foot, was Incamped at *Tilbury* near the *Thames's* Mouth, where the Enemy designed to Land: The other was Commanded by the Lord *Hunsdon*, consisted of Thirty four Thousand Foot, and One Thousand Horse, who were to Guard the Queen's Person: *Arthur* Lord *Grey*, Sir *Francis Knolles*, Sir *John Norris*, Sir *Richard Bingham* and Sir *Roger Williams*, were appointed to Consult about the Management of the Land Service.

1588

On the other hand the *Spaniard* to amuse her Majesty to a Security, seemed very desirous to treat of Peace; and imploying the Prince of *Parma* as his Instrument therein, he writ very pressingly into *England* that a Treaty might be set on foot, affirming, That he had full Authority from the King of *Spain* for that purpose. Her Majesty on her part, being sincere and desirous of Peace, in *February* sent *Henry* Earl of *Derby*, *William Brook* Lord *Cobham*, Sir *James Crofts*, *Valentine Dale* and *John Rogers*, Doctors of Law, her Pleniporentiaries, into the *Netherlands*; and *Ostend* was appointed for the Place of Treaty. The *Spanish* Pleniporentiaries, who were the Count of *Aremberg* Governor of *Antwerp*, *Richardot* President of *Artois*, with some other Civilians, staid at *Bruges* notwithstanding their pretended haste; But having at last adjusted the Point about Precedency in favour of the *English*, these last demanded a Cessation of Arms: That the Foreign Troop should

1588 be ſent away out of the *Netherlands* for the Security of *England*; That the Queen ſhou'd be reſtor'd the Mony ſhe had lent to the States, and which the King had promis'd; That the *Netherlanders* might enjoy their antient Liberties and Priviledges, have Liberty of Conſcience; and that the Pacification of *Ghent* and the like Treaties might be obſerved. To which the *Spaniards* reply'd, That their Sea Preparations, which the Queen miſtruſted, did not at all concern *England*. That the King could not reſolve to ſend away the Soldiers out of the *Netherlands*, till the Country had ſubmitted to him. That as to their Priviledges, it not belonged to the Queen, neither was ſhe to preſcribe Laws to the King of *Spain*; and he was ſo far from tolerating Religion, that he would not as much as hear of it. And as for thoſe Places which had been taken from him, and the Mony expended about them; they ſaid that the *Spaniard* might demand as many Myriads of Ducats to be repaid him by the Queen, as he had expended upon the *Low-Country* Wars, from the time ſhe had ſupported the Revolters, and took them into her Protection: In a word, there was ſuch Artifice uſed in the Management of this Treaty, that the ſame was ſpecious till the *Spaniſh* Fleet came within ſight of *England*, and the Thundring of the Canon was heard from Sea; which made the *Engliſh* Plenipotentiaries very uneaſie: However the Prince of *Parma* gave them a ſafe Conduct for *England*, who as well as the *Spaniard*, had in the mean time put on the Fox's Skin on the Lyon's Head, and made diligent Preparations to give the Enemy a ſharp Reception.

And now that we are come to ſpeak of this Invincible *Armada*, Twelve of which Ships were called by the Names of the Twelve Apoſtles; the Fleet on the 29th of *May* ſet Sail from the *Tagus*, ſteering towards the *Groyne* in *Gallicia*, the Place of general Rendezvous; but a cruel Storm ariſing, drove the Duke of *Medina Sidonia* back into the *Groyne*; eight of the other Ships were diſperſed at Sea and loſt their Maſts; beſides three *Portugal* Gallies which were driven upon the Coaſt of *Bayon* in *France*, where, by the Valour of one *David Gain* an *Engliſh* Captive, and the Aſſiſtance of other Slaves. *French* and *Mahometans*, they were deliver'd into the Hands of the *French*. About the ſame time the *Engliſh* Admiral, who had in all about One hundred Ships, whereof Fifteen were Victuallers, and Nine Volunteers of *Devonſhire* Gentlemen, having certain Information that the *Spaniſh* Fleet was ready to Sail, reſolved to put out of *Plymouth* to meet them; but being drove back to that Port by Storm, and Intelligence being brought that the *Spaniards* were in want, their great Ships diſperſed, the reſt much damaged by a Storm, and their Men ſwept away in great Numbers; The Admiral thinking to make ſome Advantage hereof, upon the 8th of *July* put to Sea, and Sailing almoſt within ſight of *Spain*, deſign'd there to Surprize and Fight the Enemy upon their own Coaſt; but the Wind coming ſuddenly about to the South, and he wiſely foreſeeing that the Enemy might paſs by him undiſcover'd, he returned again to his own Coaſt and came to an Anchor in *Plimouth*. At the ſame time they had freſh, tho' falſe Advice, not only in the Fleet but alſo at Court, that the *Spaniſh* Fleet could not poſſibly put to Sea that Year; which was ſo far believ'd by her Majeſty, that ſhe order'd four of her biggeſt Ships to be brought about and laid up at *Chatham*; but the Admiral fearing the worſt, got the Order countermanded, and expreſt himſelf willing to retain them at his own Charge rather than be without them in ſuch a Juncture; and indeed it very providentially fell out, that in the very nick of time, News was brought him by Captain *Fleming*, that the *Spaniſh* Fleet was come into the Britiſh Seas, and ſeen near the *Lizzard*. Accordingly on the 20th of *July*, they were deſcry'd by the *Engliſh*, ſailing on with a S. W. Wind, and was a kind of Surprize to them, ſince it was ſaid, that many of their Men were gone aſhoar. However the brave Admiral took ſuch Ships as were ready, out of the Haven, and being come in ſight of the *Spaniards*, they ſaw their Ships with lofty Towers like Caſtles, in Front like a half Moon, and extending ſeven Miles in breadth; they carried an eaſie Sail, and ſeemed as if they made for *Plymouth*; but when they deſcryed the *Engliſh* out of the Harbour, they ſteered towards *Calais*, in Expectation to meet with the Prince of *Parma* from the *Netherlands*; and the *Engliſh* willingly ſuffer'd them to paſs by, that they might more conveniently give Chaſe as they ſaw occaſion.

On the 21ſt of *July* the *Engliſh* Admiral ſent a Pinace called the *Defiance*, to denounce War againſt them by Firing upon the Enemy, and following himſelf in the *Ark Royal*, fell upon (as he thought) the *Spaniſh* Admiral, but it proved to be *Alonſo de Leva*'s Ship; between whom enſued a ſmart Engagement: Soon after *Drake*, *Hawkins* and *Forbiſher*, came up with the hindermoſt Squadron of the Enemy, Commanded by *Richalde*, who did all he could to keep his Men from running for ſhelter to the main Fleet. At what time the Duke of *Medina* put the whole Fleet into Order, and kept his intended Courſe towards *Calais*; and indeed he could not well do otherwiſe, ſince the Wind favour'd the *Engliſh*, and that he himſelf found the Inconveniency of their great and high-built Ships, that could defend well, but at the ſame time were very unweildy; whereas the *Engliſh* were nimble and ready on all ſides to annoy them, but being low-built were eaſily overſhot. Hereupon he order'd them to draw up cloſe in the form of an half Moon, and to ſlacken their Sails, that their whole Fleet might keep together. But the *Engliſh* Admiral having now been hotly Engaged for the ſpace of two Hours, thought not good to continue the Fight any longer, eſpecially ſince he had yet hardly Thirty Ships with him. In this firſt Day's Engagement, the St. *Catherine* a *Spaniſh* Ship, having been ſeverely Battered, was taken into the midſt of their Fleet to be repaired; and a great Ship of *Biſcay* of *Don Quevedoes*, wherein was a great part of the King's Treaſure, began to be all in a Flame by the Powder that was fired on purpoſe by a *Flemiſh* Gunner, for being miſuſed by them; but the Fire was ſoon quenched: However the *Spaniards* for want of Courage, which they called Commiſſion, endeavoured all they could to decline Fighting, and forming themſelves continually into Roundells, (their ſtoureſt Ships as it were Walling in the reſt) they made all the Sail they could towards *Calais*, before which a great Galleon wherein was *Don Pedro Devaldes* and ſeveral other Noblemen, having been much ſhattered by the *Engliſh*, fell foul upon another Ship, and having loſt her Fore-maſt, ſhe was diſabled from keeping up with the reſt of his Fleet; which being perceiv'd by the *Engliſh* Admiral, who ſuppoſed they had left neither Soldiers nor Seamen aboard her, and fearing to loſe ſight of the Enemy, he paſſed by her, and follow'd the Lanthorn, which he thought to be carried by *Drake* according to Order; but he was eagerly in Chaſe of five great Hulks, which he took to be *Spaniards*, tho' when he came up with them, they prov'd to be Eaſt Country Ships and Friends: Yet by this Miſtake of Sir *Francis*, the greateſt part of the Fleet wanting the direction of his Light, was forced to lie by; ſo that himſelf and the reſt of them could not till towards the Evening of the next Day with the Admiral himſelf, who all the preceding Night with the *Bear* and the *Mary-Roſe*, follow the *Spaniſh* Lanthorn. 1588

July 22. *Drake* eſpying the forementioned lagging Gallion, ſent his Pinace to command her to Yield: But *Cõdes* anſwer'd they were four hundred and fifty ſtrong; that himſelf was *Don Pedro*, and propoſed Terms, which the other refuſing, the Spaniard thought it beſt to Strike; he and forty of his Companions went on Board Sir *Francis*, and by way of Complement, proteſted, that both himſelf and his Men were reſolv'd to have died Fighting, had they not fallen into his Hands whoſe Valour and Felicity was ſo great, that *Mars* and *Neptune* ſeem'd to wait upon him in all his Enterpriſes, and whoſe Noble and generous Mind had been often experienc'd, even by the greateſt of his Enemies: To verify which, *Drake* entertain'd him at his own Table, and gave him his own Cabin; but for the reſt, he ſent them to *Plymouth*, where they remain'd Priſoners for eighteen Months, till by the Payment of their Ranſom they obtained their Liberty: In the mean time *Drake*'s Men having beſides other things, found 55000 Ducats of Gold in the Ship, they merrily ſhar'd it among themſelves. The ſame day *Michael de Oquendo*, Admiral of the Squadron *Guypuſco*, and Vice-Admiral of the whole Fleet, ſuffer'd no leſs a Diſaſter; for his Ship, which was one of the biggeſt Galley's, taking Fire, all the upper part of her was Burnt, and moſt of them loſt: However, the Powder in the Hold not taking fire, the Ship fell into the hands of the Engliſh, which together with the ſcorched *Spaniards* in her, were brought into *Plymouth*. The Duke of *Medina* did all he could this day to bring his Fleet into Order, and

Com-

1588 commanded *Alphonso de Leccа* to unite the first and last Squadrons, and form a Line, and order'd every Ship to her Station, pursuant to the Form prescrib'd them before they came out of *Spain*, and requir'd them not to desert the same upon pain of Death. After which he sent *Glitich* an Ensign, to the Prince of *Parma*, to acquaint him with his Condition.

Next day, *viz.* the 23d. the *Spaniards* early in the Morning taking their benefit of a Northerly Wind, when they came over against Port *Claud* tacked about upon the English; but they being nimble, so worked their Ships, that at last they got the Weather-gage of the Enemy, and continued the Fight from Morning till Night, with very great Fury; on the one side, the English bravely relieved the *London* Ships that were hem'd in by the *Spaniards*; and on the other, the *Spaniards* as bravely disengaged *Richalde*, and brought him off: The chief of the Engagement was indeed this day, and yet the Shot of the *Spaniards* for the most part flew over the English, without doing them damage; only *Lock*, an English-man, died with great Honour in a little Ship of his own, in the midst of the Enemy: The English Ships being far smaller than the Enemy's, attack'd them with great Activity, and Tacked frequently as they saw occasion; however the Admiral did not think it proper to grapple with them, as some unadvisedly would have perswaded him; for he knew they had an Army of Land-Soldiers on Board, whereas he had none; that their Ships were more Numerous, Larger, Stronger, and could not be Boarded without Disadvantage: Wherefore continuing the other and better way of Engaging, before the Day was spent, a great *Venetian* Ship with some other smaller ones, were Supriz'd and Taken by the English, and the *Spaniards* forced for their farther Safety, to draw up into a Roundel, as already mentioned.

The Fight on the 24th, was only between four great Galleasses and some of the English Ships; the *Spaniards* upon this occasion, had great Advantage, since their Ships had Oars, and ours, by reason of a Calm, had no use of their Sails: However the English gauled the Enemy very much with their great and Chain Shot: But at last wanting Powder, and other Necessaries to continue the Fight, the Admiral sent some Vessels into the next Port for a Supply, which occasion'd divers Discourses and strange Surmizes in *Holland*, that we should thus want upon our own Coasts. In the mean time, a Council of War was held, wherein it was agreed the Fleet should be divided into four Squadrons, to be Commanded, one by the Admiral himself in the *Ark-Royal*, the next by *Drake* in the *Revenge*; the third by *Hawkins*; and the fourth by *Forbisher*. Besides these, there were several other brave Commanders in others of her Majesty's Ships, as the Lord *Thomas Howard* in the *Lyon*, the Lord *Sheffeild* in the *Boar*, *Baker* in the *Victory*, and *Fenner* in the Galleon *Leicester*. It was likewise farther agreed, that out of every Squadron some small Ships should attack the Enemy from divers Posts in the dead of the Night; but the Calm continuing, his Design could not be executed. The *Spaniards* on the 25th, being come over against the *Isle of Wight*, a terrible Fight ensued between them and the English, now not above 120 Yards from them: Here the St. *Ann*, a *Portugueze* Galleon, being not able to keep up with the rest, was attacked by several small English Ships, and *Don Diego Telles Enriques* with three Galleasses coming to her Assistance, the English Admiral himself, and the Lord *Thomas Howard* towed their Ships to bear to them by reason of the Calm, and attacked them with so much Fury, that they had much ado to bring the Galleon off; so that none of the Galleasses from thence forward would undertake the Fight. The *Spaniards* reported that the *English* the same Day beat the *Spanish* Admiral, slew many of his Men, brought his Main-mast by the Board, and he had been in great Danger of being lost, had not *Mexia* and *Richalde* come timely to his Assistance; but that the *Spanish* Admiral and his Men, seconded by *Richalde* and others, set upon the *English* Admiral, who by the turning of the Wind happily escap'd: That the *Spaniards* hereupon gave over the Pursuit, kept on their Course, sent to the Prince of *Parma*, to come speedily with his Fleet to joyn the *Armada*; and withal, to send them a Supply of Cannon-Ball; but these Things the *English* knew nothing of. We have an Account that they shot down the Lantern from one of the Enemy's Ships, and the Peak-Head from another, and that they had done much Damage to a Third; that the *Non-Pareil* and *Mary-Rose* fought for some time with the Enemy, and that other Ships had relieved the Triumph, which was in Danger. In short, the *English* had so batter'd the Enemy, that they had recourse once more to the Form of a Roundel, for their better Security. The *English* Admiral the next Day, to encourage his Commanders, conferr'd the Honour of Knighthood upon the Lords, *Howard* and *Sheffield*, *Roger Townsend*, *John Hawkins*, *Martin Forbisher* and others: yet such was the Vanity of the Enemy, that they caused a Report to be spread in *France*, that *England* was entirely conquer'd by them. Another Council of War was held by the *English*, wherein it was resolv'd, they should no more attack the Enemy till they came to the Streights of *Calais*, where the Lord *Henry Seymour* and Sir *William Winter*, with the Ships under their Command for the Guard of the narrow Seas, waited their coming; soon after which, the *Spanish* Fleet bore away, and the *English* close at the Heels of them; nay, so far were they from terrifying our *English* Coast with the Name of Invincible, that a great many brave *English* Gentlemen with wonderful Alacrity, leaving their Friends and dearest Relations, hired Ships from all Parts at their own Charges, and Mann'd the Fleet in several Numbers, among whom were the Earls of *Oxford*, *Cumberland* and *Northumberland*; *Thomas* and *Robert Cecil*, *Henry Brook* and *Charles Blunt*, *Walter Raleigh*, *William Hatton*, *Rober Carey*, *Ambrose Willoughby*, *Thomas Gerard* and divers others. 1588

July the 27th. The *Spanish* Fleet came to an Anchor before *Calais*, intending for *Dunkirk*, there to joyn with the Prince of *Parma's* Forces. The *English* on their Part follow'd them close and anchor'd within Culverin Shot of them, at what time being joyn'd by *Seymour* and *Winter*, the *English* Fleet consisted now of 140 Sail fit for fighting, tho' there were not above 15 that had sustain'd the main Burthen of the Engagement. The Duke of *Medina* sent from hence once more to hasten the Junction of the Prince of *Parma*, with which Messengers many of the *Spanish* Noblemen went a-shoar, having had their Bellies full of the liquid Element, of which Number was the Prince of *Ascoli*, the King's Natural Son, who return'd to his Ship no more; and indeed it was well for him, since his Galleon was afterwards cast away upon the Coast of *Ireland*. The Messengers press'd the Prince of *Parma* very much to put to Sea with his Army, which should be protected safely by the *Spanish* Fleet, till landed in *England*. And they tell us, that the Prince hearing the best, and not the worst of the Expedition, made all the necessary Preparations for the intended Conquest of *England*, whose Crown Cardinal *Allen* flatter'd him he should wear; that he left the Government of the *Netherlands* in the Hands of Count *Mansfield* the Elder, and having made his Vows to the Lady of *Hall in Heinault*, he marched away for *Dunkirk*; and upon the way thither hearing the Thundring of the Cannon at Sea, he had next Evening News of the bad Success of the *Spaniards*, and let him do all that ever he could, he could not be ready at their Call for his flat-bottom'd Boat; for the shallow Channels leak'd, his Provisions were not ready, and his Seamen, who had hitherto been detain'd against their Wills, deserted him; there lay also before *Dunkirk* and *Newport*, from whence he was to put to Sea, the *Holland* and *Zealand* Men of War, that were so well provided with Cannon and small Arms, that he could not well put off from the Shoar without manifest Danger of being ruin'd.

But the Queen of *England's* Fore-sight prevented both the Prince's Diligence and the vain Hopes of the *Spaniards*: For the Lord Admiral pursuant to her Command, the next Day after the *Spaniards* had cast Anchor, made eight of his worst Ships ready, and fill'd them with Wild-fire, Pitch, Rosin, Brimstone and other combustible Matter. They also charg'd their Cannon with Bullets, Chains and the like destructive Things. Then ordering all the Men to quit the Vessels, they were, *July* 28th. at two in the Morning suffer'd to drive with the Wind and Tide, (under the Conduct of *Young* and *Prouse*) among the *Spanish* Fleet; and so the Pilots returning, and the Trains taking Fire, the sudden Blow strangely amazed the *Spaniards*, who for fear of being burnt cut their Cable, but in such Confusion, that one of their greatest Galleasses fell foul upon another Ship and lost her Rudder, and run aground upon the Sands near *Calais*. She was commanded by *Hugh de Moncado*, who expecting Relief from the Prince of *Parma*, made a stout Resistance; but Sir *Amias Preston* ply'd him so close, that the Com-

1588 Commander being slain, he boarded her, and having kill'd and drown'd a great many *Spaniards*, took her. She carried four hundred Soldiers and three hundred Slaves, and had aboard 50000 Ducats of the King of *Spain*'s Treasure; a due Reward for *English* Valour.

The *Spaniards* relate, that the Duke of *Medina*, when these Fire-ships drew near, order'd the whole Fleet to weigh Anchor, only to avoid the present Danger, and then to return again to their former Stations, upon a Signal given by the Admiral: But that in this general Consternation was heard but by a few; so that many of their Ships were drove out to Sea, and others upon the Flats of *Flanders*. The *Spaniards* next Day managed the Fleet as well as they could, and stood over against *Gravelin*, where the *English* once more getting the Weather gage of them, depriv'd 'em of the Conveniency of *Calais* Road, and kept 'em from receiving any Supply from *Dunkirk*. In the mean time *Drake* and *Fenner* fir'd very furiously upon 'em, and were briskly seconded by *Fenton*, *Southwel*, *Beston*, *Cross*, *Riman*; and lastly, by the Admiral himself, with the Lords *Thomas Howard* and *Sheffield*. On the other hand, the Duke of *Medina*, *Leva*, *Oquenda*, *Richalde* and others of the Enemy, with much ado got clear of the Flats, tho' not without being severely handled by the *English*, who continu'd the Fight from Morning till Evening, sunk a great Galleon of *Biscay*, and two great Saiks more; and the Galleon St. *Matthew* coming to relieve *don Francisco de Toledo* in the St. *Philip*, they were both miserably shatter'd by *Seymour* and *Winter*, and being driven on the Coast of *Ostend*, were likewise there also ill handled by the *Zealanders*. But the *Spanish* Commander, *Don Diego Picmentelli*, for whom the Duke of *Medina* sent his own Ship, refusing to leave his Ship, did all he could to disengage himself, and therefore making towards the Coast of *Flanders*, he was there again attack'd by five *Dutch* Men of War, and was forc'd at last to strike to *Peter Bauderdues*, who carried him into *Zealand*, and for a Trophy of his Victory, hung his Flag in the Church of *Leyden*, which reach'd from Top to Bottom; during which, another of the *Spanish* Ships was cast away on the *Flemish* Coast. *Francisco de Toledo*, who, as well as *Diego*, was Colonel over thirty two Companies, Steering with his Galleon for the Coast of *Flanders*, she prov'd so leaky, that he was forc'd to quit her and go a-shoar at *Ostend*, and the same fell into the Hands of the *Flushingers*.

The *Spaniards* were now very glad to be on the Defensive; but the Wind coming S. W. and the *English* Admiral fearing the Prince of *Parma* might lay hold of the Opportunity to put to Sea, dispatch'd the Lord *Henry Seymour* with his Squardron to the *Flemish* Coast, to join there with the *Dutch* under *Justin Nassaw* their Admiral, to keep them in. The *Dutch* Fleet consisted of Thirty five Ships well Manned with Seamen, besides One thousand Two hundred Musketeers. On the last Day of *July* the Wind blowing hard N. W. the *Spanish* Fleet endeavour'd to recover the Streights of *Calais*, but were driven towards *Zealand*, upon which the *English* gave over the Chase, expecting hardly any thing else than their utter Ruin, for they could not under those Circumstances well avoid running aground upon the Sands and Flats of *Zealand*: But the Wind coming about to the S. W. and by W. they sail'd before the Wind and got clear of the Flats, and having that Evening call'd a Council of War, they resolv'd by the Northern Ocean to return into *Spain*, since they wanted many Necessaries, especially Canon-Ball; that their Ships were much shatter'd; and that there was no hopes of their being joined by the Prince of *Parma*. Pursuant to this Resolution they put out to Sea, and steering Northward, the *English* still following them lest they should put into *Scotland*, against whom they now and then turn'd head, yet stood not into it, but steer'd away for *Norway*; and being now got to 57 Deg. North Lat. the *English* Admiral left them there, and only sent some Advice-boats to observe their farther Motion. The *Spaniards* on their Part being now got clear of the Enemy, seriously consulted what was next to be done by them. They were very tender of the *Pope*'s Reputation, who had Prophecy'd, that this Enterprize would prove successful. They were also afraid of the Indignation of King *Philip* their Master, and their Invincible *Armada* would become a Scorn to the *English*, if they should return home without making any further Attempt; but considering on the other hand, that Five thousand of their Soldiers were slain, a great many of their Men sick and wounded, twelve of their greatest Ships sunk, lost or taken, their Rigging sorely torn by the Enemy's Shot, their Anchors left in *Calais* Road, their Provision short, their Water spent, the Enemy bold and successful, the Prince of *Parma*, tho' long preparing, yet not ready, and kept in by the *Dutch* Squadron; they resolv'd to make the best of their way for *Spain*. But withal, knowing that the King of *Scotland* would afford them no Relief, and that they had as little Hopes of having any thing from *Norway*, they thought it best to throw all their Horses and Mules over-board to save their Water; and so steering about *Cathness* and for the Coast of *Ireland*, they pass'd between the *Orchades* and the Isles of *Farr*, to 61. Deg. N. Lat. from whence the Duke of *Medina*, with those Ships that were best provided, made the best of his way for *Biscay*, and at last arriv'd in *Spain*, where he was forbid to come to Court, and live privately. The rest of the Ships, being in all about forty, fell in with the *Irish* Coast, and intended to touch at *Cape Clear*, in hopes of meeting there with some Refreshment; but the Wind proving contrary, and the Weather tempestuous, many of them perish'd on the *Irish* Shoars; and amongst others, a great Galleon under the Command of *Michal de Oquando*, and two other *Venetian* Ships of great Burden, besides thirty eight more with most of the Men on board them. Those that got clear, were some of them driven by a strong W. Wind into the *English* Channels, where Part of them were attack'd again, and taken by the *English*, others by the *Rochellers*, and some arriv'd at *New-Haven* in *Normandy*; so that of 134 Sail that came out of *Lisbon*, only 53 return'd to *Spain*. Of the four Galleasses of *Naples*, but one; the like of the four Galleons of *Portugal*; of the 91 Galleons and great Hulks from divers Provinces, only 33 return'd, 58 being lost. In a Word, they lost 81 Ships in this Expedition, and 13500 and odd Soldiers. There were above 2000 Prisoners taken in *England*, *Ireland* and the *Low Countries*. Amongst these in *England* were *Don Pedro de Valdez*, *Don Vasques de Silvea*, and *Don Alonzo de Saies* and others were kept for their Ransom. In *Ireland* *Don Aolnzo de Lazon*, *Roderigo de Lesse*; and in *Zealand*, *Don Diego Piementelli*. In a Word, there was hardly a Noble Family in all *Spain* that had not lost a Son, Brother or Kinsman; whereas the *English* lost not one Ship, save only that of Captain *Cocks*, and not above 100 Men in all. To perpetuate the Memory of this Glorious Defeat of the *Spaniards*, the *English* stamp'd Medals, whereon there was a Fleet flying with full Sails, with this Inscription, *Venit Vidit, Fugit*. Others were done in Honour of the Queen, with Flaming Ships, and a Fleet in great Confusion, and this Motto, *Dux Femina Facti*.

1588

In the fore-mentioned Wreck above 700 Soldiers and Sea men were forc'd a-shoar in *Scotland*, who, at the Request of the Prince of *Parma* and the Queen's leave, were after a Years time sent over into the *Netherlands*. But for those whose hard Fate it was to be cast on the *Irish* Shoar, some of them were slain by the Wild *Irish*, their old Friends, and others put to Death by the Lord Depury's Command; for he fearing they might joyn with the *Irish* to disturb the Peace of the Kingdom, commanded *Bingham*, Governor of *Conaught*, to destroy them. But that Gentleman refusing to exercise such Cruelty to those who had surrender'd themselves Prisoners of War, *Force*, the Depury Marshal was sent thither, who cut off above 200 of those miserable Wretches, to the Grief afterwards of the good Queen. The Remainders being terrified therewith, committed themselves to the Mercy of the Sea in their shatter'd Ships, and were many of 'em swallow'd up by the Waves.

Here it is observable, that Queen *Elizabeth* being one Night in the Army at *Tilbury*, the old Lord Treasurer *Burleigh* came hither, delivered to the Earl of *Leicester* the Examination of *Don Pedro*, who was taken by Sir *Francis Drake*, which the Earl gave to Dr. *Sharp*, in order to Publish it in his next Sermon to the Army; and the same in substance was, *That* Don Pedro *being ask'd by some of the Privy Council what was the Intent of their coming*, He boldly answer'd, *What? But to Conquer your Nation and Root it out*. Well, said the Lords, *What then did you intend to do with the* Roman Catholicks? *We design'd* said he, *to send them, Good Men, directly to Heaven, as well as you that are* Heretick's *to Hell*. But continued the Lords, *What had you to do with your Gold and*

Wier

1588 *Wier Whips, whereof you had such a Number in your Ships. What?* Reply'd he, *We intended to whip the Hereticks to Death, that have assisted my Master's Rebels, and done such Dishonour to our Catholick King and People. But what would you have done,* said they, *to their young Children? They,* answer'd he, *which were above seven Years old, should have gone the same way with their Fathers; the rest should have liv'd; only we would have branded them in the Fore-head with the Letter* L *for* Lutheran, *and kept them in perpetual Bondage.* 1588

England being thus freed from the impending Storm, on the 8th. of *September* was appointed a Day of Thanksgiving in the Cathedral Church of St. *Pauls*, to the Almighty, for this great Deliverance, at what time eleven of the *Spanish* Standards were hung upon the lower Battlements of that Church; and on the 24th. the Queen her self went from her Palace at *White-Hall* to *Westminster*, the Streets being hung with blue Cloth and lin'd with the Trainbands, and was from thence drawn in her Chariot to St. *Paul's* Church, where on her Knees at the West Door she audibly Praised God for her and her Peoples Defender; and after a Sermon suitable to the Occasion, she after a most Royal and Christian manner exhorted her Subjects to a due Performance of those Religious Duties of Thankfulness, which the Almighty expected at their Hands. About the same time the Fair being kept in *Southwark*, the *Spanish* Flags were hung out upon *London* Bridge, and *Tuesday* the 19th. of *Nov.* appointed a solemn Day of Thanksgiving throughout the Kingdom. On the other hand, the *Zealanders*, to perpetuate the Action, caus'd Silver Medals to be strück, on one side of which they had the Arms of their Country with these Words, *Glory to God alone*; and on the Reverse, great Ships under writ, the *Spanish* Fleet; and round, *It Came, it Went, it Was, Anno* 1588. On other Medals, there were Ships floating and sinking; and on the Reverse, Supplicants upon their Knees, with this Motto, *Man proposeth, God disposeth*, 1588. Others there were with *Spanish* Ships, and this Motto, *Impius fugit nemine sequente.*

An Abstract of the Portugal *Voyage*, A. D. 1589. *under Sir* John Norris *and Sir* Francis Drake, *Generals.*

WHEN our Generals first set out from *England*, they were disappointed of several Things necessary for this Expedition, for they wanted eight of the twelve Pieces of Artillery, which lost her Majesty the Possession of the *Groyne* and several other Places; they wanted six hundred *English* Horses, and seven of the old Companies from the *Low-Countries*; four *Dutch* Companies, and six of their Men of War, all which Things were promis'd them before they left *England*: Besides the loss of twenty thousand Pounds of Adventures, and of our Victuals, during the Month we lay Wind-bound at *Plymouth*, and of twenty five of our Companies ship'd in part of the Fleet, which were parted from us by cross Winds, being either unable or unwilling to double *Ushant*. But tho' the want of these Things hinder'd us from attempting or performing several things which otherwise we might have done, yet notwithstanding all these Disadvantages by the good Conduct of our two Excellent Generals, *Norris* by Land, and *Drake* by Sea, we did in a short time archieve several considerable Exploits, as will appear in the Sequel of this Discourse. Some that had a mind to return home, after a short stay with us, quarrel'd, but without just Cause, at the great Mortality that was among us, the neglect of Discipline in the Army, wherein Men were suffer'd to be drunk, the scarcity of Surgeons, the want of Carriages for the Sick and Wounded, and the scarcity of Victuals in the Camp: But it appear'd by a strict Examination of our Musters, that we were never thirteen Thousand in all, and we brought home with us above six Thousand, from whence we may plainly see how false the Report was, which was spread abroad that we had lost sixteen Thousand by Sickness.

After six Days sailing from the Coast of *England*, on the 20th. of *April* 1589. we landed in a Bay more than an *English* Mile from the *Groyne*, in our Boats and Pinaces without any hindrance; from whence we presently march'd toward the Town, and within half a Mile of it we were encounter'd by the Enemy, whom we charg'd and drove backward within the Gates. For that Night our Army lying in the Villages, Houses and Mills round about the Town, was shot at by some Ships and Gallies which lay in the Road. But the next Morning General *Norris* having landed some Artillery, upon the planting the first Piece, the Gallies left the Road, and upon discharging our Guns and Muskets, the Galleon (which was one of the last Years *Armada* against *England*) left off playing upon us. Our next Design was to surprize the lower Town; for that end we appointed to be landed twelve hundred Men in Long-Boats and Pinaces, on one side by Water, who were to play upon the Town with Artillery as they approach'd it; and on the other side five hundred Men were to enter at Low-Water, if they found it passable, or else to scale the Walls with Ladders; and by Land three hundred Men were to enter by Escalade: and all these were to charge at the same Instant. The Boats landed without any great Difficulty, only some Men were wounded; and those who assaulted it by Land enter'd without any Resistance. And thus the Lower Town being entred in three several Places at once, the Inhabitants fled to the Upper Town by such ways as we knew not, except by those that were put to the Sword, or fled to the Rocks, or hid themselves in Chambers and Cellars, of which there were great Numbers; and among the rest, one *de Luna* surrender'd himself, and a Commissary of Victuals was taken, who confess'd that there were in the Town five hundred of these Soldiers that had been in the Voyage to *England*, and all kind of Provision for Shipping and War, which was the beginning of a Magazine for a new Voyage into *England*. We kill'd about five hundred after we entred the Town, and the Soldiers finding the Cellars full of Wine, indulg'd themselves so much in excessive Drinking, that many of 'em fell sick and dy'd,

The next Morning the Enemy abandon'd their Ships, and left the Galleon on fire, having so overcharg'd the Pieces in her, that of fifty there remain'd only sixteen entire. The same Day we took the Cloyster, standing on the South-side close by the Wall of the Town, and the 2d. Day Colonel *Huntley* went into the Country and brought home great Store of Kine and Sheep. The 3d. Day the General design'd to take a long Ammunition-House upon the Wall, which would have been of great Advantage to us, but was disappoined by the Enemy, who set fire to it in the beginning of the Evening.

The 4th. Day we planted under the Guard of the Cloysters two Demi-Cannons and two Culverins against the Town, which were defended with a Cross-Wall thro' which our Battery lay; but the first and second Tire of it shook all the Wall down, so that the Ordnance lay open to the Enemy, and some of our Men were wounded and some slain. However the General having planted his Ordnance, caus'd the Town to be surrounded, and they desir'd a Parley, to tell us, that he who had shot at our Drum was hang'd; but they would not surrender the Town.

General *Norris* having taken a View of the Town caus'd a Mine to be dug, in which a great quantity of Gunpowder was lodg'd to blow up the Wall, and appointed several Companies to make an Assault upon the Town at the same time, some at the Breach made by the Cannon, and others which should be made by the Mine; but the Powder breaking out backwards (for the Mine was too high) nothing could be done in either Place for that Day. But the Mine being afterwards better laid under the Wall, Fire was laid to the Train, which blew up one half of the Tower under which it lay: Whereupon the aforesaid Companies, according to Order, presently made the Assault; but as it happen'd, too soon; for having entred the top of the Breach, the other half of the Tower, which at first was only shaken with the force of the Powder, fell upon our Men and kill'd twenty or thirty of 'em, which so amaz'd the rest, that they forsook their Commanders. And the Breach made

1589 by the Cannon, tho' it was well assaulted by our Men, who came to push off Pike at the top of the Breach, and were ready to enter, yet the loose Earth slipping outwards, by reason of their Weight, half the Wall remain'd entire; and so nothing was done, because our Culverin and Demi-Cannon, of which we had but three Pieces, were not sufficient to batter a defensible Rampart.

In our Retreat from both Breaches thro' a narrow Lane, many of our Men were wounded; and the Insuccessfulness of our Attempt may chiefly be attributed to the fall of the Tower, which hindred our Men from proceeding in that Attack, whereby they might doubtless have taken the Town, because the Enemy had made but little Defence there where they did not expect to be assaulted.

The next Day the General hearing by a Prisoner that was brought him, that *Conde de Andrada* had assembl'd an Army of eight Thousand at *Puente de Burges*, six Miles from us, and that they were suddenly to be increas'd with a greater Army that was coming to 'em, and were to march either to relieve the *Groyne*, or to hinder our imbarking by encamping near the Place, or to hinder the Excursions of our Men into the Country, who brought us in great Store of Provisions: The General, I say, hearing of this Army, resolv'd the next Day to visit 'em, against whom he carry'd but nine Regiments, leaving the other five with General *Drake* for the Guard of the Cloyster and Artillery. The next Day being the 6th. of *May*, our Army march'd in three Bodies, and Captain *Middleton* having given the first Charge, was seconded by Captain *Wingfield*, who beat 'em from place to place, till they fled to a Stone-Bridge over a Creek of the Sea: On the further side of which the Enemy's Camp was strongly intrench'd. Nevertheless Sir *Edward Norris* at the Head of the Pikes, with divers others pass'd over the Bridge to the further end of it, which was barricado'd with Barrels: But they who should have guarded it, seeing our proud Approach forsook the Barricade, where Sir *Edward* entred, and charging the first he met, with too much eagerness, he fell and was wounded with a Sword, as were also several other Gentlemen that accompanied him; yet were they so well seconded by the General, that the Enemy's bravest Men being destroy'd, the whole Army was put to flight, whom our Men chas'd for three Miles in four sundry Ways that they took. We took the Standard with the *King's Arms*, and kill'd as many as two thousand Men could reach in the Pursuit: Besides a great many that were dispatch'd in Vineyards and Hedges, and two hundred that our Men put to the Sword in a Cloyster. After the Battle was over, our General sent the Van-Guard one way, and the Body of the Army another way into the Country, of which you might have seen more than three Miles in compass all on fire. On our Side only one Captain and one private Soldier were kill'd, and several wounded. There was found in the Camp good Store of Ammunition and Victuals, some Plate and rich Apparel. Our Seamen also landed in an Island next adjoyning to our Ships, where they burnt and spoil'd all they found. After this we return'd to the *Groyne*, and the next Day was spent in Shipping our Artillery that was landed, and the rest taken at the *Groyne*, and at our Departure we set fire to every House in the Lower Town, and to all the Rooms in the Cloyster.

The next Day being the 8th. of *May*, we imbark'd our Army without loss of a Man, which we could not have done, if we had not defeated the Enemy at *Puente de Burges*. And having put off from thence, we had the Wind so contrary, that we could not under four Days recover the *Burlings*, in which Passage the Earl of *Essex* with his Forces came into the Fleet: For tho' he had put off with the same Wind from *Falmouth* with which we left *Plymouth*, yet not knowing, it seems, where we were to land, he had been as far as *Cadiz*, and sail'd up and down about the South *Cape*, where he took some Ships laden with Corn, which he brought in to us.

The 16th. Day we landed at *Piniche* in *Portugal* under the shot of the Castle, more than a Mile from the Town, and many were in danger of drowning by the greatness of the Wind, which overturn'd one Boat wherein twenty five Men perish'd. Five Companies of *Spaniards* sallied out of the Town against us: But the Earl of *Essex* having landed two Troops, left one to go by the Water-side, while he led the other over the Sand-hills; which the Enemy seeing, drew theirs likewise further in to Land now to encounter us. But that they might have a speedier Passage by flight, which yet they perform'd in such sort, that being charg'd by ours, they stood it till they came to push off Pike, and kill'd one of our Captains. The Enemy being fled further than we had reason to follow 'em, all our Companies were drawn to the Town, which being unfortify'd was presently taken; and the same Night the Castle being summon'd, was surrender'd by the Governor, upon Assurance given him, that *Don Antonio* was landed. We found in the Castle about a hundred Muskets and Pikes, and twenty Barrels of Powder, which *Don Emmanuel* had furnish'd his *Portugals* withal; and here we rested one Day, and some *Friars* and other poor Men came to their new King, and promis'd, that in two Days he should have a Supply of Horse and Foot for his Assistance from the Neighbouring Country. 1589

Here it was resolv'd that the Army should march over Land to *Lisbon* under General *Norris*, and that General *Drake* should meet him there in the River with the Fleet: And in this March one of our Men having broke open a House for Pillage, was hang'd, which Example restrain'd the rest from doing the like. That Night we lodg'd at *Lorinha*, and next Day came to *Torres Vedras*, where we took Possession of the Town and Castle, being desested by the Enemy. Here we were in great want of Victuals, but the King being told of it, took care to provide better for our Army.

The 3d. Day we lodg'd at three several Villages, and in this March Captain *Turk* made Trial of the Enemies Horse, by breaking thro' two hundred of 'em with forty, and one of his Corporals by charging with eight Horses thro' forty of 'em, who stay'd no longer than they could make away from 'em. The next Day we march'd to *Lores*, where we expected to meet with the Enemy, who shew'd themselves upon an Hill, but they retir'd. But General *Drake*'s Regiment having lodg'd that Night about a Mile nearer the Enemy, they came down upon it, crying, *Viva el Rey don Antonio*, whereupon they were kindly receiv'd by our young Soldiers; but having got within the Guard, they fell to cutting of Throats. This occasion'd an Alarm to be given, which brought down two of the next Companies, who fell upon 'em and drove 'em away with the loss of several of their Men, after they had kill'd fourteen of ours, and wounded six or seven.

Next Day we lodg'd at *Alvelana* about three Miles from *Lisbon*, where many of our Men were poyson'd by drinking standing Waters: And the Earl of *Essex* having laid an Ambuscade of about a thousand Men, allarm'd the Enemy, but they did not issue forth.

May the 25. we came to the Suburbs of *Lisbon*, where Captain *Wingfield* scour'd the Streets with thirty Musketeers, and met with none but old Folks and Beggers crying up the new King. We disposed of our Van-Guard and Rere-Ward in convenient Places, who kept Guard that Night, and the main Battle stood in Arms all Night in a Field near to *Alcantara*: But our Men being weary with their marching and watching, fell a-sleep, of which the Enemy having notice, sallied out and fell upon us, but chiefly on Colonel *Bret*'s Quarter, who having rous'd his Men and rally'd 'em as soon as he could, made Head against 'em, and he with two other Captains perish'd in the Encounter: But the Enemy met with so warm a Reception, both here and in our Quarters, that they were suddainly put to flight, in which the Earl of *Essex* chas'd 'em to the Gates of the Town, and they lost many of their best Commanders: Many of 'em also that fled into Houses for shelter were slain by our Men; so that their Loss was triple to ours, both for Quality and Quantity.

During our March to this Place, General *Drake* with the Fleet was come to *Cascais*, and possess'd the Town without any Resistance; but many of the Inhabitants fled into the Mountains, till a *Portugal* Pilot sent by General *Drake*, upon promise of kind Treatment, provided they would accept their King, and furnish Necessaries to the Army, persuaded 'em to return, which they gladly offer'd to do by two of their Chief Men. But as our Fleet was casting Anchor, a Ship from *Brasil* coming into the same Road, was by a Pinace or two of ours forc'd upon the Rocks, where all the Men escap'd, and the Lading being Sugars was spoil'd by the Salt-Water: And as we sail'd thither, we took some Ships off the Port of *Portugal*, sent from thence, and fifteen others laden with Men and Victuals to *Lisbon*.

The

1589 The next Day General *Norris* conſulted with all his Colonels, whether it would be more expedient to tarry here and wait for the *Portugal* Horſe and Foot the King had promis'd to ſend, and to bring hither the Artillery and Ammunition that was left at our Ships; or whether it were better to march away preſently, rather than wait for the promis'd Recruits, of which there was little Appearance. Some Colonels were of one Opinion and ſome of another: But the General being willing to cut off all occaſion of Blame that might be laid upon him, reſolv'd to wait for the Performance of the King's Promiſe, that he ſhould have that Night three thouſand of his Country-men. But after two Nights ſtay at *Lisbon*, the King could not with all his Horſe make a Cornet of forty, nor with his Foot furniſh two Enſigns, tho' he had aſſur'd the General, that upon his firſt landing there would be a Revolt of his Subjects. The General therefore ſeeing it was in vain to depend any longer upon his Promiſes, and that by ſtaying longer he might engage himſelf ſo far as he could not with Honour come off again, againſt a Town well fortify'd, wherein there were more Soldiers than we had to aſſault it withal, gave Order to the Army to march out of the Town, having appointed two Captains to guard the Rear, in caſe the Enemy ſhould attack 'em which they did not; and ſo we march'd the firſt Night to *Caſcais*. Had we march'd thro' his Country as Enemies, our Army had been well ſupply'd with all ſorts of Proviſions; or had we plunder'd the Suburbs of *Lisbon*, we had made our ſelves the richeſt Army that ever came out of *England*, for beſides the Wealth of private Houſes there were many great Ware-Houſes by the Water-ſide, full of all ſorts of rich Merchandize; but we were reſtrain'd from both theſe. As we travel'd along the River-ſide the Gallies ſhot at us, but did us little harm, and the Horſe Men follow'd us afar off, and cut off the ſick Men for whom we had no Carriage. After we had ſtay'd two Days at *Caſcais*, we had Intelligence by a Fryar, that the Enemy was marching towards us, and was come as far as St. *Julian*, which News was ſo welcom to the Generals, that each of 'em promis'd to give the Meſſenger a hundred Crowns if it were true: And to provoke 'em to fight, the Earl of *Eſſex* ſent a Meſſenger with a Cartel to the General of the Army, wherein he challeng'd him to meet him next Morning with his Army, and to try the Juſtice of their Cauſe by a Battle, or to fight himſelf with any one that was of his Quality, or to fight with ten Men againſt an equal Number of theirs to try their Fortunes. Accordingly the General march'd the next Morning to the Place where they had been encamp'd with his Army; but found they had fled away in the Night-time, and the Trumpet who follow'd 'em to *Lisbon*, was threaten'd to be hang'd for bringing ſuch a Meſſage, tho' they durſt not do it, for fear of our taking Reprizals upon the Priſoners we had of theirs. After this our Army ſummon'd the Caſtle of *Caſcais* to yeild, which the Governor promis'd to do, after we had ſhot off five or ſix Cannon; but he ſurrender'd after the firſt Tire was diſcharg'd, and Capitulated to march off with his Baggage and Arms, tho' he might have held out much longer, having ſixty five Soldiers well provided with all Neceſſaries. We put one Company into it, till the Artillery was all taken out, and then our Army imbark'd ſafely, which otherwiſe we could not have done. 1596

During the time we lay in the Road, our Fleet fetch'd in about ſixty Hulks of *Dantzick*, *Stetin*, &c. laden with *Spaniſh* Goods and going for *Lisbon*, into which our Men that before were in Fly-boats were put, and the Fly-boats ſent home with an Offer of Corn to the Value of their hire: But the Wind being fair for *Rochel*, they choſe rather to loſe the Corn than the Wind, and ſo departed: And with 'em the General ſent his Horſes to be tranſported from *Rochel* to *England*.

On the 2d. of *June* we imbark'd all our Army, and on the 6th. the Earl of *Eſſex* upon receipt of Letters from her Majeſty by them that brought us Victuals, preſently departed for *England*. About this time four or five Ships were ſent to *Peniche* to fetch away the Companies left there; but Captain *Barton* having receiv'd Letters from the Generals over Land, was departed before, being unable by the Enemies coming thither, either to bring away the Artillery or all the Men; for he was no ſooner gon than the Enemy took poſſeſſion of the Town and Caſtle, and ſhot at our Ships as they came into the Road. And the 12 Gallies which lay in the River of *Lisbon* and durſt not attempt us, when we lay by 'em at St. *Julian*, being now joyn'd by nine more, upon our Departure fell in with our Fleet and ſeiz'd a Bark, and two Hulks that had ſtraggled from the other Ships, which we could not get up to relieve, by reaſon of a great Calm, tho' they fought ſo long that we judg'd the Enemy muſt needs ſuffer great Loſs.

From that Day to the 19th. of *June*, according to our General's Direction, we ſteer'd to *Bayon*, where Admiral *Drake* put in alſo, and paſs'd up the River more than a Mile above *Vigo*.

The next Day we landed all our fighting Men, which were not above two Thouſand (having left many on board) and with 'em we imbark'd to the Town of *Vigo*, where Captain *Wingfield* entred with a Troop on one ſide, and General *Drake* on the other; but tho' every Street's end was ſtrongly barricado'd, all but one Man abandon'd the Town, and fled to *Bayon*, our Vice-Admiral with ſome Ships lying cloſe before the Town to batter it with Artillery. In the Afternoon three hundred of our Men burnt a Village between *Vigo* and *Bayon*, call'd *Borſis*, and all the Houſes and Corn in the Country for the ſpace of ſeven or eight Miles. Next Morning two Troops were ſent into *Vigo* to ſet all the Houſes in it on fire, after which we imbark'd again.

After this General *Drake* having put to Sea with twenty of the beſt Ships, to ſee if he could meet with the *Indian* Fleet, General *Norris* with the reſt directed his Courſe for *England*, and on *July* the 2d. arriv'd at *Plymouth*, where he found General *Drake* and all the Queen's Ships, with many of the others, but not all, ſome having put in with their Hulks into other Ports to make their private Advantage by 'em.

An Abſtract of a Voyage to Cadiz, *and the taking of it by the* Engliſh *Fleet in* 1596.

CAdiz had been in the Poſſeſſion of the *Engliſh* for the ſpace of two hundred and two Years, from the time of *Edward* the III. who took it *An.* 1346. But after that it was firſt taken by the *French* in the Days of Q. *Mary*, and then by the *Spaniard* in *April* 1596. Whereupon Q. *Elizabeth* reſolv'd to ſend a Fleet under the Command of the Earl of *Eſſex*, and the Lord *Howard* High-Admiral of *England*, Sir *Walter Raleigh*, Lord *Warden*, beſides many others, both *Engliſh* and *Dutch*, who joyn'd with 'em in this Expedition.

Before they departed from *Plymouth* they Printed a Manifeſto, ſhewing the juſt and urgent Cauſes why the Queen at this time ſet forth ſo great a Navy, and threatning all Nations which ſhould any way aſſiſt the *Spaniard* againſt 'em: And then having got all things ready, on the 1ſt. of *June* they put to Sea, with one hundred and fifty Sail of Ships, or thereabouts; and coming to the *North-Cape* we call'd a ſelect Council, by hanging out a Flag of the Arms of *England*; and many Letters of Inſtruction were ſent to every Captain of a Ship, which they were requir'd not to open upon pain of Death, unleſs they happen'd to be ſeparated from the reſt by a Storm; but if they fell into the Enemy's hand, ſeal'd as they were, ſhould be thrown into the Sea. Beyond the *North-Cape* of St. *Vincent* two of our Ships fought three *Hamburgers* and took 'em; and on the 18th. we took an *Iriſh-Man*, who came from *Cadiz*, and told us, there were many Ships at *Cadiz*; that eighteen or nineteen Gallies were ready, among which was the *Philip* of *Spain*. On the 20th. we came to *Cadiz*, where we met with ſome tall Ships coming out of the Bay attended by the Gallies, which kept cloſe to the Town, Caſtle and Forts, and that Day we did nothing but ſalute one another with ſome great Guns: But on the 21ſt. we ſet upon the Ships being fifty nine, attended with nineteen or twenty Gallies, as they were coming out of the Mouth of the Bay of *Cadiz* towards *Puente de Suaro* on *Granada* Side.

The

1596 The Enemy seem'd to have the advantage of us from the straitness of the Place, and the situation of the Bay; for tho' it is very large, so that from *Cadiz* to *Port St. Maries* is 6 or 7 *English* Miles over; yet there are so many Rocks, Sands and Shallows in it, that there is not above two or three Miles Sea-room for Ships of any great Burden, but they must either run aground, or fall foul upon one another. But notwithstanding this our Generals order'd the Vice-Admiral, the Lord *Howard*, and the Rear-Admiral, *Sir Walter Raleigh*, with some others to give the onset, whom the Generals themselves with others should second: And the Fight growing hot, the Earl of *Essex* on *Port St. Maries* side, thrust himself among the foremost; and the other General perceiving that he could not come near in his great Ship for want of Water, put himself in a Pinnace, where he continued till the Battle was ended. The Fight was terrible on all sides, and the event was doubtful till about two a Clock in the Afternoon, when the *Philip*, in which they trusted most, began to yield, and her Men hastned a-shore, having fir'd the Ship. Presently after two other great Ships were set on Fire, and then the rest of the Ships ran aground as far as they could, two of them were taken and boarded by our Men, but the rest at the Bridge *Puente de Suaro* so shelter'd themselves, that our Ships could not come at them.

The Ships were richly furnish'd, being bound either for the *Indies* or for *Lisbon*, insomuch that for the Redemption of them we were offer'd two Millions and a half of Ducats. In this cruel Fight we had not above 100 of our Men either killed or wounded, tho' divers of our Ships were shot thro' and thro'. We lost also a Pinnace which was burnt with the *Philip*, when we thought to board her, but all the Men were sav'd. But one of the *Fleming* Fly-Boats was unfortunately blown up with its own Powder, in which we suppose there were no fewer than 100 Men, who were all lost except seven or eight, who were sav'd by the help of some other Ships.

Immediately after this Victory at Sea, the Earl of *Essex* landed about three thousand Soldiers, whereof one half was sent to the Bridge *Puente de Suaro*; and with the other half the Earl himself with several other Lords march'd on Foot toward the Town of *Cadiz*, whom the Enemy stood ready to receive without the Town, having a great number of Horse and Foot. But the Earl and his Troops run towards them with such unspeakable Courage and swiftness, that in less than an Hour the Horse were put to flight, the Leader being struck down at the first Encounter; and the Foot being frighted with the *English*-men's fierce Attack, retir'd with all haste into the Town. After this our Men with invincible resolution scal'd the Walls, and in half an Hours time beat off the Enemy, and possess'd themselves of the Wall; and then having display'd the *English* Colours upon it, they march'd thro' the Town with Sword and Musquet, fighting his way at every turn, wherein he was seconded by my Lord *Howard*, who joyn'd the Earl with his Companies, and gave him the best assistance he could. And when they came to the Market-place, there was a hot Skirmish, in which Sir *John Wingfield* was slain: But before eight a Clock that Night, the Generals were Masters of the Market-place, the Forts, and the whole Town; only the Castle held out, to which they sent a Message, that if they did not surrender it the next Morning, they should all be put to the Sword; but before break of Day they hung out a Flag of Truce, and yielded themselves to their Mercy. After this Surrender, Proclamation was made to forbear all manner of Cruelty and Violence to Man, Woman or Child, which was strictly observ'd by the *English*, tho' they had the Spoil of some part of the Town for certain Days. 1596

In the mean time the next Day being the two and twentieth of *June*, all the Ships that had run aground in the Bay of *Cadiz*, were by the *Spaniards* themselves set on Fire, and about three Days after, the Gallies that run aground at *Puente de Suaro*, put to Sea, and escap'd to *Rota* near *St. Luca's*.

Cadiz is a beautiful and large and very strong Town, the Buildings are all of hard Stone, flat-roof'd at top, on which were great Heaps of Stones pil'd up, which the Women might throw down upon such as walk'd the Streets, which are generally very narrow. It had in it 4000 Foot and 600 Horse at least, well provided with all Necessaries. We may guess at the Wealth of the Town by the goodly Furniture that was defac'd, and the great quantity of Spices and Raisins left by the Soldiers, as not worth carrying away.

We show'd great Respect to the Religious Men and Women, and transported them in convenient Barks, and more then a hundred Gentlewomen and Merchants with several Suits of Apparel, and many Jewels and Chains. After this above sixty Gentlemen were Knighted, and Divine Service being read in the Abbey, the Bishop of *Cusco*, whom we had taken Prisoner in one of the Ships going to the *Indies* was releas'd without any Ransom. And 32 *Turks*, who had been a long while Gally-slaves, having made an Escape at the time of the Sea-fight, petition'd our Admirals, who were pleas'd to Cloth them, furnish them with Mony, and give them a Bark and Pilot to convey them safe to *Barbary*.

The 28th Day our Admiral wrote Letters to the Duke of *Medina Sidonia*, for the deliverance of *English* Captives who serv'd at the Gallies, of whom 39 were releas'd on the fifth of *July*, some whereof had been there six Years, some Eight or Ten. But on the fourth of *July* the Town of *Cadiz* was set on Fire and defac'd as much as could be, and all the Provision for Shipping which we could not either carry away, or had no occasion for, was destroy'd.

The true Reason why *Port St. Maries*, *Xeres* and *Rota* were not attack'd, was because we believ'd there was no Wealth left in them, and they might have prov'd a Trap and a Snare.

As to the Taking and Burning of *Faraon* in *Portugal* as we were returning Home, the Account of that Action may be better given by one that was present at it. But 'tis certain, that the taking of *Cadiz* so terrified the neighbour Towns, that the Inhabitants fled out of them, and *St. Luca* had been easily taken, if a few Ships had assaulted it; and that 18 *Spanish* Ships coming from the *Indies*, were taken by the *English*, being very wealthy.

An Abstract of the Relation of the barbarous Proceedings of the Dutch *against the* English *at* Amboyna. *Publish'd by the* English East-India *Company.*

AFter several fruitless Treaties between the *Dutch* and *English*, at last all matters relating to Trade and Commerce, and any Differences between their two *East-India* Companies, were fully setled by the Treaty made in, 1619. by which it was agreed, that the *Dutch* should enjoy 2 Thirds of the Trade in the Isles of the *Molucco's* *Banda* and *Amboyna*, and the *English* the other Third; and that the charge of maintaining the Forts should be levied upon the Merchandise by an equal Tax. But not long after the *English* who liv'd in a House of their own at *Amboyna*, under the protection of the *Dutch* Castle, complain'd, that they were not only put to unnecessary Expences in building their Forts, which were brought to the common Accompt; but that the *Dutch* paid the Garrisons with the Victuals and Cloath of *Coromandel*, which they put off to the Soldiers at three or four times the Value, which was not allow'd to the *English*, who were oblig'd to pay their part in ready Mony, which amounted to more than two thirds of the whole Charge, instead of one third which was their due. These Complaints were first sent to the Council of Defence of both Nations at *Jaccatra* in *Java Major*, who not agreeing, sent them over into *Europe*, to be decided by both Companies here, or in default of their Agreement, by the King's Majesty and the States General, according to an Article of the Treaty in 1619. In the mean time these Differences still continued and encreas'd, until a Sword was found to cut the Knot asunder which could not be otherwise unty'd. And this hapned after the following manner.

About the 11th of *February* 1622. a *Japonese* at *Amboyna* walking in the Night upon the Wall ask'd a *Dutch*

1623 a *Dutch* Sentinel some Questions about the strength of the Castle, and the People that were in it, which he had reason to do, that he might understand the course of their Watches, and the strength of the Aid he might expect, if any sudden attempt should happen in his Quarter, where he served the *Dutch* upon occasion as a Soldier. Yet the *Dutch* who wanted a Pretence to make a Plot, laid hold of this opportunity to wreek their Malice upon the *English*, and having apprehended the *Japoneſe* put him to the Torture, and extorted from him a Confession that himself and others of his Country-men, by the instigation of the *English*, had contriv'd to take the Castle: Whereupon other *Japoneſe* were also examin'd and tortur'd, as also a *Portugueſe*, the Guardian of the Slaves under the *Dutch*, which lasted three or four Days. During this Examination the *English* went freely to the Castle, heard of their Accusation and Torture, but being conscious of their own Innocence never offered to fly. At the same time *Abel Price*, Surgeon to the *English*, being a Prisoner in the Castle for offering to set a *Dutch* House on Fire in his Drunkenness, was told that the *Japoneſe*, whom they shew'd him most grievously tortur'd, had confeſs'd that the *English* had conspir'd with them to take the Castle on New Years Day 1623. and that if he would not confeſs, they would use him as bad or worse than the *Japoneſe*. Whereupon having given him the torture, he quickly confeſs'd whatever they ask'd him, on *February* 15th 1622. And the same Day they sent for Captain *Towerſon* and the rest of the *English* that were in the Town, who came all save one to the Governors, who told them they were accus'd of a Conspiracy to surprize the Castle, and were to remain Prisoners till further Trial. After this they presently seiz'd him who was left at home in the House, took the Merchandize of the *English* Company into their Custody by Inventory, and seiz'd all the Chests, Boxes, Books, Writings and other things in the *English* House. Captain *Towerſon* was committed to his Chamber with a Guard of *Dutch* Soldiers, *Emanuel Tomſon* was kept Prisoner in the Castle, and the rest being seven, were sent aboard the *Dutch* Ships riding in the Harbour, and all made fast in Irons. The same Day the Governor sent to the two lesser Factories in the same Isle, and apprehended *Colſon*, *Clark* and *Sharrock* at *Hitto*, and *Coſtins*, *Webber* and *Sadler* at *Larica*, and they were all brought Prisoners to *Amboyna February* 16th, on which Day three more were apprehended at *Cambello*, and three more at *Lobo*, two little Factories of the *English*, and brought in Irons to *Amboyna*, *February* the 20th.

Having thus extorted by Torture from the *Japoneſe* and others a Confession, or rather Declaration of what they knew to be false, they proceeded in the next place to Torture the *English* whom they had seiz'd to make them confeſs themselves and one another to be guilty of this pretended Conspiracy. The manner of their Torture was as follows: They first hois'd him up that was tortur'd by the Hands upon a large Door, where they made him fast upon two Staples of Ivory, at the top of the Door-posts, with his Hands stretch'd out as wide as they could endure; then his Feet being rais'd two Foot from the Ground, they stretch'd them out as far as they could, and fasten'd them to the Door on each side. After this they bound a Cloth about his Neck and Face so close, that little or no Water could go by, and then pour'd the Water softly upon his Head until the Cloth was full up to the Mouth and Nostrils, and somewhat higher, so that he could not draw Breath, but he must suck in the Water, which being still continu'd to be pour'd in softly, forc'd his inward Parts, came out of his Nose, Ears and Eyes, and many times so stifled him and took away his Breath, that he fell into a swooning Fit, which as soon as they perceiv'd they quickly took him down, and made him Vomit up the Water. But after he was a little recover'd, they drew him up again, and pour'd in the Water as before, still taking him down as soon as he seem'd to be stifled. In this manner they handled him three or four several times with Water, till his Body was swell'd twice or thrice as big as before, his Cheeks were like great Bladders, and his Eyes star'd out beyond his Fore-head; and if he would not accuse himself and others of this Conspiracy after all this Torture, as several of them did not, then they hoisted him up again as before, and burnt him with lighted Candles in the bottom of his Feet, until the Fat dropping put out the Candles, and then applied fresh Lights unto him. They burnt him also under the Elbows, on the Palms of the Hands, and under the Armpits, until his inward Parts might plainly be seen: And after he was thus wearied and overcome with Torments; if he did not make any Confession of himself, they propos'd to him leading Questions of their own framing, to which he answer'd yea; and this was taken for his Confession, and produc'd as Evidence against himself and others, tho' he deny'd it upon Oath before and after the Torture. But to finish their barbarous Torture. The poor Man who had been thus Martyr'd, was carried away to a Dungeon, where he lay five or six Days without any Surgeon to dress him, until his Flesh being putrified, great Maggots dropt and crept from him in a most loathsom and noysom manner. 1623

Of the *English* that were examin'd, some endur'd this Torture by Fire and Water to the last extremity, before they were forc'd to confeſs what they never knew, as Mr. *Thomſon*, *Johnſon*, *Collins* and *Clark*: others endur'd the Torture of Water for an Hour or two, before they could be brought to accuse themselves and others of this pretended Conspiracy, as Mr. *Brown*, *Collins*, *Wetheral*, *Fardo*, &c. Others being terrified with the fear of the Torture, which produc'd dreadful Effects in others, chose rather to confeſs all they were ask'd, or to devise a Lye to save themselves from Torment: But most of them at the time of the Examination, before or after the forc'd Confession of a design to seize the Castle, declar'd and protested their Innocence and the Falshood of all they had said in accusing others of a Conspiracy, as Mr. *Collins*, *Sharrock*, &c. and so Mr. *Colſon*, *Grigs* and *Fardo*, being brought to confront Captain *Towerſon* (who deeply protested his Innocence) fell down upon their Knees, and praying God to forgive them, declar'd that all they had said against him was false, and spoken only to avoid Torment. Tho' after that being threatned with the Torture, they then affirm'd their former pretended Confessions. In fine all the *English* that were condemned to Die (the rest being either acquitted or pardon'd by the Interest of some *Dutch* Friends) did after Sentence solemnly vow and protest, as they hop'd for Pardon and Salvation, that themselves and all whom they had charg'd were innocent of the Crime for which they Died. So Captain *Towerſon* at the end of a Bill writes, *That he was innocent of what was laid to his Charge, for which he was then to Die.* And *Grigs* who had accus'd him, writes in his Table-Book in the Name of himself, Mr. *Beaumont*, *Price* and *Brown*; That by extreme Torment they were constrain'd to say what they never meant, and take it upon their Death, that they died guiltless of the Accusation laid to their Charge. And *Samuel Colſon* writes, that upon his Salvation, as he hop'd for Redemption by the Death of Christ, he was clear of that Conspiracy for which he was to Die, neither did he know any *English* Man guilty thereof. And in another Writing he declares, That he did confeſs that, which as he hopes to be sav'd is not true (particularly against Captain *Towerſon*) being forc'd for fear of Torment, and that as he hopes for pardon of his Sins, he knows no more of this Business than the Child unborn: Dated *March* the 5th, subscrib'd with his Name. These Writings were preserv'd, but other Writings to the same purpose, particularly of Captain *Towerſon's*, who was observ'd to write much in Prison, were suppreſt by the *Dutch*; and his Examination and *Tomſon's* being kept apart, are not yet come to light.

On the 26th of *February*, when all the Prisoners were brought into the Hall of the Castle (except Captain *Towerſon* and Mr. *Tomſon*) to be prepar'd for Death, all the *Japoneſe* cry'd out, O ye *English*! when did we ever eat or talk with you? And the *English* answering, Why have you then accus'd us? The poor Men shew'd them their tortur'd Bodies, and said, *If a Stone were thus burnt, would it not change its Nature, how much more we that are Fleſh and Blood?* And when the *Dutch* Ministers came to the ten *English* in the Hall, exhorting them to make a true Confession, because they had but a short time to live, they still profeſs'd their Innocence, and pray'd they might receive the Sacrament, as a Seal of the Pardon of their Sins, and to confirm this their Profeſſion; and this was deny'd them. But when the Preacher told them the clearer they were of any guilt, the greater should be their Reward, Mr. *Colſon* gave him his Purse, and pray'd him to exhort the

1623 Governour (whom he freely forgave) to repent of this bloody Tragedy acted upon theſe innocent Souls. And all the reſt of the *Engliſh* ſignified their conſent to what he ſaid. And when Mr. *Fardo* charg'd them all as they will anſwer it at God's Judgment Seat, if any of them were guilty of this matter, to confeſs the Truth for ſatisfaction of the World: Mr. *Colſon* anſwer'd, *If I be guilty of it more or leſs, let me never be partaker of the Joys of Heaven*: At which Words, every one of the reſt cry'd out, *Amen for me, good Lord.* After this, each of them knowing whom he had accus'd, went one to another, begging Forgiveneſs for their falſe Accuſation, being extorted by the pains or fear of Torture; and they all freely forgave one another, for none was falſly accus'd, but himſelf had falſly Accus'd another. After this, they ſpent the reſt of the Night in Prayer, ſinging of Pſalms, and comforting one another, while the Dutch Guards offer'd them Wine, and bid them drink *luſtick*, and drive away Sorrow.

February 21, being the day of Execution, the Condemn'd Perſons firſt requeſted *John Powle*, and afterwards all that were Acquitted and Pardon'd, to bear Witneſs to their Friends in *England*, of their Innocency, and that they were meerly Murder'd by the *Dutch*, whom they pray'd God to forgive, and to have Mercy on their own Souls.

Being brought to the place of Execution, *Emanuel Tomſon* told the reſt, he did not doubt, but God would ſhew ſome ſign of their Innocence, and then every one of them ſeverally took it upon theirDeath, that they were utterly Guiltleſs, and ſo they cheerfully ſubmitted to the fatalStroke, *viz.* Mr. *Towerſon*, Agent of the Engliſh at *Amboyna*, Mr. *Colſon*, *Tomſon*, *Johnſon*, *Wetheral*, *Clarke*, *Grigs*, *Fardo*, *Price* and *Brown*. The *Portugueſe*, whoſe name was *Perez*, ſwore upon the Croſs, that he was Innocent; and the *Japoneſe*, being Nine in number, in their way, profeſs'd alſo their Innocence.

At the inſtant of the Execution, there aroſe a great Darkneſs with a ſtormy Wind and Tempeſt, whereby two of the Dutch Ships riding in the Harbour, were driven from their Anchors, and hardly ſav'd from the Rocks: And in a few days after, one *Dunckin*, (who told the Governor, that Mr. *Brown* had ſaid to him, he hop'd in ſix Months the Engliſh would have as much to do in the Caſtle as the Dutch) fell down on the Grave where all the Engliſh were Buried (except Mr. *Towerſon*) and having lain there a while, he roſe up again ſtark Mad, and ſo continued two or three days, and then died. Quickly after there was a new Sickneſs at *Amboyna*, which ſwept away about 1000 People, *Dutch* and *Amboyners*; in the ſpace wherein there did not uſually die above 30 at other times. Which Signs were by the Engliſh, referr'd to the Prediction of Mr. *Tomſon*; and by the Natives, interpreted as a token of God's Wrath for the barbarous Tyranny of the *Hollanders*. The next day, the new Dutch General ſent Mr. *Beaumont*, *Sharrock*, *Collins*, and *Webber*, the four that were Pardon'd, to ſeveral Factories, and diſpatch'd *Collins*, who was free'd by caſting Lots to *Faccatra*, whither Captain *Welden* having ſent three of them to other Places, he quickly after carried them all in a Pinnace.

The Narrative of theſe Proceedings is taken out of the Depoſitions of ſix *Engliſh* Factors, whereof four were Condemn'd and Pardon'd, and the other acquitted at *Amboyna*, being ſince their return into *England* examin'd upon Oath in the Admiralty-Court. And becauſe the *Dutch* defend themſelves by the Confeſſions of the Parties executed, I ſhall here put together ſeveral Circumſtances whereby the Innocence of the *Engliſh*, and the unjuſt Proceedings of the *Dutch* againſt them will plainly appear.

And Firſt, The *Japoneſe* being examin'd and tortur'd for three or four Days before the *Engliſh* were ſeiz'd, who knew on the firſt Day what was the Crime charg'd upon them, for which they were Tortur'd, the *Engliſh* had time enough, if they had been conſcious to themſelves of any guilt, to have made an Eſcape by the Curricurries or ſmall Boats of the Natives; but ſince they neither fled, nor attempted to flee in this Caſe, this is a ſtrong Preſumption, that they were as little privy to any Treaſon of their own, as ſuſpicious of any treacherous Deſign laid for their Blood.

2. Let us conſider how apparently impoſſible it was for the *Engliſh* to compaſs ſuch a Deſign of ſeizing the Caſtle of *Amboyna*: For in this Caſtle is a Garriſon of two or three hundred Men, and there are as many free Burgers in the Town; and durſt ten *Engliſh*, with as many *Japoneſe*, being all unarm'd, attempt a Place of ſo great Strength? What hopes could they have of Succeſs, eſpecially when in the *Engliſh* Houſe there was no more found, but three Swords, two Muſquets, and half a Pound of Powder, and the *Japoneſe* are not allow'd to have any Arms except a *Catan* or ſhort Sword. But ſuppoſe theſe twenty Perſons ſhould be ſo deſperate as to attempt the Caſtle, how ſhould they be able to maſter the *Dutch* in it, or to keep poſſeſſion of it when they had gotten it? Whom had they to ſecond them? There was neither Ship nor Pinnace in the Harbour; and there was not one *Engliſh*-man more, and not above twenty *Japoneſe* in the Iſland. The *Engliſh* at *Banda* who were neareſt, were forty Leagues from *Amboyna*, and thoſe were but Nine, who were all clear'd from any ſuſpicion of this pretended Crime. But on the other ſide, the *Dutch*, beſide the ſtrength of the Caſtle and Town of *Amboyna*, had three other ſtrong Caſtles in the ſame Iſle, and at *Cambello*, well furniſh'd with Soldiers; they had alſo in the Road at *Amboyna* eight Ships and Veſſels: And what a madneſs were it, for ſo few Perſons deſtitute of Arms, or any hope of Supplies, to attack a Caſtle ſo well provided with Arms and Men, and freſh Recruits of Forces ready to aſſiſt them. 1623

3. Suppoſe it were poſſible for the *Engliſh* to have overcome all theſe Difficulties, yet to what purpoſe ſhould they put themſelves in ſuch Danger? They knew that it was agreed between both Companies, that the Forts of the *Indies* ſhould remain in the Hands of thoſe that were poſſeſs'd of them at the date of the Treaty in 1619. and that his Majeſty is a Religious Obſerver of his Treaties with all the World; what then could they hope for as a Reward of the dangerous Exploit, but to be treated as diſturbers of the Peace between both Nations, as is provided in the Treaty.

4. Let them be as fooliſh as the *Dutch* would have them, yet who can believe that all of them ſhould be ſuch deſperate Villains and Hypocrites, as to deny at the time of their Examination, or after Sentence, that they ever knew of any ſuch Plot, and to affirm with moſt ſolemn Proteſtations their Innocence, and the falſhood of the Confeſſions and Accuſations which were extorted by the Fear or Pains of Torture; that they ſhould crave God's Mercy or Judgment according to their Innocence in this Cauſe, and deſire to receive the Sacrament in token of it. And Laſtly, that they ſhould all perſiſt in the ſame Mind to the laſt, profeſſing to their Country-men at parting with them, their Innocence, and ſealing thisProfeſſion with their laſt Breath and Blood, in the very Article of Death! what horrible Diſſimulation were this? If one or more had been ſo fearfully deſperate, yet 'tis incredible but there ſhould have been one who durſt not appeal to a future Judgment for his Innocence, or ſhould have relented at the laſt, when he ſaw there was no hopes of Mercy, and that he was inſtantly to give an Account of what he ſaid to the great Judge of the World; and it were ſtrange, that all the four *Japoneſe* and the *Portugueſe* ſhould all concur in the ſame Story, and not one confeſs the Truth at the laſt. But we find that at the time of Execution every one took it upon his Death that he was innocent.

The *Dutch* to colour this barbarous Proceeding pretend that the Governor dealt ſo impartially as to execute ſome of their own Country-men for the ſame Treaſon; which appears to be a mereSham, both by the Teſtimony of the ſix Witneſſes aforementioned, and of other credible Perſons lately come from theſe Parts; from all which I conclude that it was not any real Crime in the *Engliſh*, but the inſatiable Covetouſneſs of the *Dutch*, to gain the whole Trade of the *Moluccas*, *Banda* and *Amboyna* into their own Hands, (which they have now ſeiz'd) that was the Cauſe of this bloody Tragedy; a Tragedy ſo full of barbarous inhumanity to thoſe who liv'd in Partnerſhip and Amity with them, confirmed by a moſt ſolemn Treaty, that it is not capable of any Aggravation.

But becauſe the *Dutch* have endeavour'd to vindicate themſelves in a Declaration of their proceedings, at *Amboyna*, I ſhall briefly ſhew the weakneſs and falſhood of their Allegations which may ſerve to confirm further the truth of the Preceding Narrative.

And 1ſt. the Author of the ſaid Declaration alledges the great ſuſpicion there was of a Plot from the unwonted Inſolence of the *Ternatans* in the *Moluccoes* and *Amboyna*; for theſe in the *Moluccoes*, he ſays, had con-

1623 contrary to the Treaty in 1606. made with the *Dutch*, and without their knowledge, made Peace with the King of *Tedore*, and a Truce with the *Spaniard*: But how impertinently this is alledg'd to his preſent purpoſe of confirming the pretended Plot of the *Engliſh*, does plainly appear by the Journals of theſe Parts, which ſhew that this Treaty between *Ternate* and *Tedore* was in *November* 1621. *i. e.* fifteen Months before this forg'd Conſpiracy, and that it was diſſolv'd by the *Dutch* the ſeventh of *December* next, when an Edict was publiſh'd by the King of *Ternate*, commanding all the *Tedorians* to depart from his Iſle, upon pain of being made Slaves: After which, the *Dutch* contin'd in good correſpondence with the *Ternatans*, who communicated with them in the Triumphs of their Daily Exploits againſt the *Spaniards*, until after the Execution of the *Engliſh* at *Amboyna*, as may be prov'd by many particular Inſtances; ſo inſincere and impertinent is the Author in pretending a diffidence between the *Dutch* and the King of *Ternate*, and applying it to the Buſineſs of *Amboyna*.

The next point is, that the *Ternatans* in the *Molucco's* made a Truce with the *Spaniards*, without the knowledge of the *Dutch*, which is no leſs impertinent than the former Pretence; for it appears by the Journals that this Truce was made *July* the 19th 1623. which was five Months after the Execution of the *Engliſh*, and ſo can be no cauſe of ſuſpicion againſt them.

The next Suſpicion is rais'd from the Inſolence of the *Ternatans* of *Amboyna* dwelling at *Lobo* and *Cambello*, who ſlew ſome of the *Dutch*, and burnt two of their Houſes, one at *Lobo*, and another at *Manichels*, for which Injuries, when the *Dutch* crav'd reparation, they were brav'd by the *Ternatans* with a ſtronger Fleet. But this alſo appears to be a mere ſham pretence; for when the *Dutch* ſet forth their laſt Fleet, they were in good Terms with the *Ternatans* at *Lobo*, neither of the Factories here mention'd being then burnt or injur'd. 'Tis true the *Dutch* and *Engliſh* joyn'd together to retake an *Engliſh* Slave, who was fled and reſcu'd, and inſtead of Mr. *Beaumont* who was way-laid, a *Dutch* Servant was ſlain; but the next Day *Beaumont* was ſhot in the Hand by the Reſcuers, and Mr. *Grigs* had like to have been Kill'd, who retook the Slave; upon which occaſion both the *Engliſh* and *Dutch* left the Factory at *Lobo*, and ſo this could give no ſuſpicion to the *Dutch* againſt the *Engliſh*, that it was ſhortly after burnt by theſe *Ternatans*, and much leſs the burning of the other Factory at *Manichels*, which was done after the *Engliſh* were ſeiz'd, or the braving of the *Dutch* Fleet by the *Ternatans*, which was after the Execution of the *Engliſh*.

The laſt Suſpicion is this, That about this time the *Dutch* underſtood that theſe of *Lobo* and *Cambello* held ſecret Correſpondence with the *Engliſh*: But the Author gives no particular Proof of this matter; but there is plain Evidence to the contrary, from the burning of the *Engliſh* as well as *Dutch* Factories there, from their aſſaulting Mr. *Beaumont* and *Grigs*, and outraging our People as well as the *Dutch*: How then came they to underſtand this ſecret Correſpondence with the *Engliſh*; except it was by the Governor's Dreams, which as he told Mr. *Welden* and others were a motive to him to examine the firſt *Japoneſe*.

After this Preface of Suſpicion, the Auther ſets down the occaſion and manner of the Diſcovery of this pretended Plot, and then the Confeſſions of the *Japoneſe* and *Engliſh*. But he mentions no Preſumption why the firſt *Japoneſe* ſhould be put to the Torture, but only his Queſtions about ſetting and changing the Watch, and the number of Soldiers in the Caſtle, which he being a Soldier of their own had reaſon to put, that he might know the courſe of the Watches, and the aid he was to expect in caſe of a ſudden Attack, and this inquiry was no more a juſt Preſumption than the Dreams of the Governor. But he conceals what leading Queſtions were put to the *Japoneſe*, to make the Plot juſt as the *Dutch* had contriv'd it, and what other Anſwers they made before they were thus directed. I ſhall not now repeat what has been ſaid to prove the improbability, or rather impoſſibility of this prerended Plot, but conſider ſome Circumſtances in this *Dutch* relation of it, that are not in the *Engliſh*, that the Truth may the more clearly appear.

And Firſt it is alledg'd that *Abel Price* the *Engliſh* Barber was made uſe of as a Meſſenger to concert this Deſign with the *Japoneſe*; and 'tis true indeed he would Dice and Drink with them and the *Dutch* alſo. But is it credible, that Mr. *Towerſon* would entruſt a Matter of ſuch dangerous Conſequence to a drunken Sot, who had threatned to cut his Throat for chaſtiſing him; beſides, this relation makes *Price* ſay, that all the *Engliſh* Merchants in the out Factories were privy to this Plot, when the Governor found Mr. *Powle*, *Ramſey* and two others innocent. 1623

In the next place he hath enroll'd a goodly Army for executing this pretended Plot; for of the ten *Japoneſe* eight were to have been plac'd by two in a company at the four Points of the Caſtle, to kill all that ſhould reſiſt, and take the reſt Priſoners; which Project muſt ſuppoſe, that the three or four Hundred *Dutch* in the Caſtle would ſcorn to make any advantage of their Numbers, but would fight the *Japoneſe* by two at a time, and ſo give them leave to kill or take them. The other two *Japoneſe* were to have waited in the great Chamber to kill the Governor; yet this Relation ſays elſewhere, that this Plot ſhould have been executed when the Governor was abroad. Thus the *Japoneſe* were diſpos'd of within the Caſtle; but who ſhould have open'd the Gates to the *Engliſh* and their other Aids, who ſhould have kill'd the Court of Guard at the Gate? Theſe things muſt be done by thoſe that were without: And therefore let us take a View of the Army which the *Dutch* Relation has muſter'd up for this purpoſe, which is ſaid to conſiſt of fourteen *Engliſh*, whereof eleven were Merchants, beſides many *Engliſh* Saylors, Slaves and *Ternatans*. And firſt for the *Engliſh* Merchants, how skilful they are in taking Forts, is very well known; and how ill they were provided for ſuch a Deſign appears by what was found in the *Engliſh* Houſe when the *Dutch* ſeiz'd it, which was no more than three Swords, two hand Guns, and about half a Pound of Powder. But ſtill it is pretended, that the *Engliſh* Ships would have brought both fitter Men and better Proviſion. This were ſomething if they could tell us, how Mr. *Towerſon* knew that thoſe in the *Engliſh* Ships when they came would joyn with him in a Work ſo dangerous and contrary to the Treaty; why he did not delay the opening of the Plot till the Ships were come; and how he came to open the Plot to all the *Engliſh* at *Amboyna*, ſo long before the execution of it, and before he knew the Minds of his chief Aſſiſtants, of whoſe arrival he was uncertain. But ſay the *Dutch*, he was ſure of the Slaves of the *Engliſh*, and the *Ternatans* of *Lobo* with their *Curricurries*. This is the remainder of the Army. Now the Slaves of the *Engliſh* were juſt ſix, and all Boys, and the *Ternatans* were Enemies to the *Engliſh* as well as *Dutch*, as is already prov'd. And if there had been any ſuch aſſiſtance expected from the *Ternatans*, it muſt have been enquir'd after, and confeſs'd by one or other amidſt ſo many Tortures: But there is no ſuch Confeſſion in all the Examinations; and the truth is, the *Dutch* Governor knew well enough, that whatever had been confeſs'd in this Point, would not have been believ'd by their own People there, who knew the outrages committed by the *Ternatans* upon the *Engliſh* as well as *Dutch*.

As to the time of executing the Plot, the *Dutch* ſay it was not yet fix'd, but left to the next Meeting, which ſhould be ſhortly holden. This is a ſtrange Plot indeed! They met on *New-Years-Day*, and plotted, as is above related, and now it was the twenty fifth of *February*, and nothing is done all this while, not ſo much as a new Conſultation held, and this is ſaid to be confeſs'd by all the *Engliſh*. But as to Mr. *Towerſon*, the *Dutch* ſay, that at his Examination he confeſs'd, that if he had taken the Caſtle, he would have crav'd the aid of the *Engliſh* at *Jaccatra*, which if they granted, he would have held the Caſtle for the *Engliſh* Company; but if they deny'd him, he would have held it for himſelf, and he would have agreed with the *Indians* to aſſiſt him. And this alſo is a very ridiculous Pretence, for what hope could Mr. *Towerſon* have that the Preſident and *Engliſh* Council at *Jaccatra*, who live under the command of the *Dutch* Fort, and are ſubject to them, durſt joyn in any ſuch Action as might give the *Dutch* occaſion to Torture and Condemn them of Treaſon, eſpecially conſidering what Advantages they ſeek againſt the *Engliſh*, and how captious and zealous they are in all their Dealings with them, whereof there were many Inſtances well known to Mr. *Towerſon*: And that he ſhould keep the Caſtle for himſelf, and agree with the *Indians* for their help, is yet more improbable;

for

1623 for if the *Portugueſe* and *Indians* were not able to keep out the *Dutch* when they had no footing at *Amboyna*, how could twenty or thirty *Engliſh* and *Japoneſe*, without Ship or Pinnace, with the help of the naked *Indians*, be able to drive them out, when they have three Caſtles there well furniſh'd with Men and Arms, beſides their Naval Strength? And this Author confeſſes, that the *Indians* themſelves durſt not undertake any thing againſt the State of *Amboyna*, without the aid of ſome Nation of *Europe*: How then could Mr. *Towerſon* being forſaken by his own Nation, as the Caſe is here put, hold the Caſtle for himſelf by the help of thoſe *Indians*? And indeed to all that know the Power of the *Dutch* and weakneſs of the *Indians*, this will appear a mad Plot.

This Author inſiſts much on a ſaying of Mr. *Towerſon*'s after he was examin'd, who being upbraided by the Governor with the many Civilities receiv'd from him, anſwer'd with a deep Sigh, *Oh if this were to be begun again, it ſhould never be done!* which is atteſted by the *Dutch* Governor and five others: This, ſays the Author, was his voluntary Confeſſion made the Ninth of *March*, when the Plot was to be put in execution, after he was examin'd *February* the twenty eighth before. But 1ſt this pretended Confeſſion is not deliver'd upon the Credit of the Court or Council of *Amboyna*; but of the Governor and five other *Dutch* Men, the principal Actors of this bloody Tragedy. Secondly, Neither is the time nor place mention'd in their Certificate, where or when the Words were ſpoken, tho' this Author without any ground ſays, they were ſpoken the ninth of *March*; for they might be ſpoken on the Day when he was examin'd, and in the Place of Torture, and then they are no more voluntary, according to their own Law, than the Confeſſion made upon the Rack. But ſince he makes ſo much of this poor Circumſtance, which is deliver'd upon the Troth inſtead of the Oath of the Certifiers, 'tis a plain Argument that they wanted other good Proof: What, was there not a Letter or other Paper to be found in all the Cheſts and Boxes of the *Engliſh*, ſo ſuddenly ſeiz'd at *Amboyna*, *Larica*, *Hitto* and *Cambello*, to diſcover this Treaſon? Among ſo many Complices was there no falſe Brother to betray the reſt, and accuſe them voluntarily; but the Proceſs muſt begin with the Torture, without any juſt Preſumption; and the Heathens Confeſſion upon Torture, be ſufficient to bring Chriſtians to Torture, and the debauch'd and infamous *Price*'s Confeſſion muſt bring ſober and good Chriſtians to the Torture; tho' this Author owns, that *Price*'s Confeſſion was drawn from him by the Examiner's ſpecifying of Place, Perſons and Time to him.

But here is no particular of any one's Confeſſion but *Price*'s, *Towerſon*'s and all the reſt being blended together in one Body. Did not ſome of them confeſs more than the reſt? Where is *Sharrock*'s Confeſſion that he was at *Amboyna* on *New Years* Day, when ten or twelve of the *Dutch* witneſs'd, that he was at *Hitto*? Where is his Confeſſion of *Clark*'s Plot to go to *Macaſſar*, and deal with the *Spaniards* there? Where is *Collins*'s Confeſſion of another Plot about two Months and a half before his Examination, undertaken by himſelf and five more? Where be the leading Interrogatories, by which they were directed how to frame the Accuſation, leſt there ſhould be as many ſeveral Treaſons confeſs'd, as there were Perſons examin'd? Not a Word of all this, nor a great deal more of this kind, which are here prov'd by the Oath of credible Perſons, to have paſs'd in the Examinations.

As to the Formalities of the Proceſs the Author proves, that the States General are Sovereign in all Cauſes, Criminal and Civil, and can puniſh Treaſon with Death in their own Subjects and Servants, as theſe *Japoneſe* were: And then he adds, that the *Engliſh* were not apprehended upon the firſt Suſpicion, but after the joynt Confeſſion of the *Japoneſe*, that the *Engliſh* bir'd 'em to execute the Treaſon: But if the whole Proceſs was begun from the Confeſſion of one Perſon tortur'd without juſt Cauſe, which mov'd 'em to apprehend and torture another without other Evidence, tho' it brought forth more Confeſſions and other Circumſtances, yet it was againſt all the Laws about Tortures. But he ſays, ſome of the *Engliſh* confeſs'd without or before Torture, and to this Purpoſe he alledges, that *Price* was either not at all, or but very ſlightly tortur'd. But then he was ſhew'd the tortur'd Bodies of the poor *Japoneſe*, Martyr'd with Fire and Water; and told, that if he would not confeſs, he ſhould be tortur'd as bad, or worſe than they: and the fear of Torture is by their own Law equal'd to the Torture it ſelf, and conſequently the Confeſſion made upon that Fear, is no more an Evidence to bring another to Torture, than the Confeſſion made upon the Rack. 1623

Next as to the Juriſdiction of the *Dutch* Governor and Council at *Amboyna*, over the *Engliſh* there, by the thirtieth Article of the Treaty in 1619. 'tis expreſsly order'd, that all Diſputes which cannot be decided by the Council of Defence, ſhould be remitted into *Europe*, firſt to the two Companies there; and if they do not agree, to the King and States: Why then was not the Diſpute firſt referr'd to the Council of Defence, ſince there is nothing in the former Articles to hurt their Power? And this Article enlarges their Power to ſuch Caſes as were not before expreſsly provided for, as appears plainly by the Explanation of the Commiſſioners on both ſides agreed and ſubſcrib'd to in 1619. wherein this way of Proceeding is expreſsly directed, in all Matters happening in the common Abodes; and from the King's Declaration ſent to the States, that both Nations in the *Indies* ſhould lay aſide all Pretence of Sovereignty, which was by them accepted before this bloody Butchery was executed. But ſuppoſe the *Dutch* are abſolute Lords of their Partners the *Engliſh* in thoſe Parts, yet at leaſt they are bound to obſerve the Laws of the united Provinces. And do theſe allow to begin the Proceſs at the Torture, and to bring Perſons of honeſt Fame to the Rack upon others Confeſſion made in the Torture? Do their Laws allow of the leading Interrogatories above-mention'd, to direct the Priſoner what to ſay to avoid the Torture? Where in the united Provinces is the drowning with Water, or the Torture with Fire in uſe, that were us'd to ſeveral of the *Engliſh*? Where do they uſe to ſplit Mens Toes, lance their Breaſts, put in Gun-powder, and then ſet Fire to it? By which Torments *Clark* and *Tomſon* were both ſo mangl'd, that they were fain to be carry'd to the Execution, tho' they were tortur'd many Days before.

Laſtly their Confeſſions were contradictory, apparently falſe, and of things impoſſible to be done, and therefore ought not by their Law to have been believ'd, nor the Priſoners to have been condemn'd upon 'em, without other ſufficient Evidence beſides.

In the laſt Place, as to the Torture, he ſays, there was no Cruelty us'd in it, becauſe there is no mention of a cruel Torture in the Acts. But is it any Wonder, that the Authors of this barbarous Proceſs, who drew up the Acts, ſhould omit that which made againſt themſelves? It is to be preſum'd, that the Acts kept by the People at *Poloway* in *Banda*, have omitted many things of their Proceſs againſt the poor *Polaroons*, whom in *Auguſt* 1622. being about ſix Months before the Execution of the *Engliſh*, their Governor us'd much after the ſame manner as the Governor of *Amboyna* did the *Engliſh*, of which I ſhall give a ſhort Account, to ſhew the merciful Diſpoſition of the *Dutch*, which this Author boaſts of.

Polaroon, one of the Iſles of *Banda*, being poſſeſs'd by the *Engliſh* at the time of the Treaty 1619. was to remain in their Hands: But after this Treaty came to the *Indies*, the *Dutch* would not ſuffer it to be Publiſh'd in the Iſles of *Banda*, till they had taken *Polaroon*. But knowing that it muſt be reſtor'd again, according to the Treaty, they take care to demoliſh the Buildings, tranſplant the Nutmeg-Trees to their own Iſles of *Nera* and *Poloway*, and at laſt find a means to diſpeople it, that ſo it might be of no uſe to the *Engliſh* worth the Charge of keeping it; which was upon this Occaſion. A young Man of *Polaroon* having comitted Felony, for which he was to die by the Law, to ſave his Life fled to another Iſle of *Banda*, and there turn'd Chriſtian: But underſtanding that would not ſave him, he fled to *Nera*, another Iſle where the *Dutch* have a Fort, and told the *Dutch* Governor, that the *Orankeys*, or Gentlemen of *Polaroon*, had contriv'd to maſſacre the *Dutch* at *Polaroon* and *Poloway*, with the help of the People of *Saran*, that ſhould ſend over thirty Curricurries for that purpoſe. Immediately upon the diſcovery of this Malefactor, certain Fiſher-Boats of the *Polaroons* were ſeiz'd, and the People made Priſoners, and an Order was ſent by the *Dutch* Governor to *Polaroon*, that all the *Orankeys* ſhould come over to him: whereupon the Prieſt of the *Polaroons* and ſeventy *Orankeys* inſtantly took a Prow, or ſmall Veſſel, and imbark'd for *Poloway*. And as they were at Sea, being met by

Captain Smith's Birth and Education

His firſt Travels and Return.

Goes to France and is rob'd.

by a Fisher-Boat of *Bandanese*; they were told how all the rest were apprehended, and that if they went to *Poloway* they were all but dead Men. Nevertheless the Priest and the rest, tho' they might easily have escap'd to *Seran* and other Places of safety; yet being Conscious of their own Innocency, would go to *Poloway* to purge themselves. Where as soon as they were arriv'd, they were carried Prisoners to the Castle, whither the Governor with a Force of 200 Men brought all the rest of the *Orankeys* that were at *Polaroon*. As soon as they were come they were presently brought to the Torture of Fire and Water, as was done to the *English* at *Amboyna*, but with this difference, that Two of these who were Tortur'd at *Poloway*, died in the Tortures, and the rest being 162 were all upon their own forc'd Confessions Condemn'd and Executed. When the Priest came to the Place of Execution, he spoke to the People in the *Malayan* Tongue, *All ye Great and Small, Black and White, look to it, we have Committed no Fault.* And when he would have Spoken more, he was taken by the Hands and Feet, laid along, and Cut in Two by the Middle with a Sword. And immediately the Governor caus'd the Wives, Children and Slaves of those of *Polaroon* to be Transplanted into other Isles subject to the *Dutch*, and so clear'd the Country of all the Natives, without whom neither the *English* nor *Dutch* can maintain their Trade in the *Indies*: And indeed 'tis no wonder that they use so little Justice and Moderation, since few of their Fiscals and the rest of the Country know any thing of Law, being for the most part very young Men, and lew'd, drunken and debauch'd Persons: And yet these must be Judges as well of our *English* as the *Indians* there.

The Author endeavours to justify their Proceedings from the Law of *England*, which orders Men to be press'd to Death, which he saith is much more cruel then any Torture us'd by them. But this Argument is wholly impertinent, for no Man in *England* is press'd for not confessing, which is the Cause of Torture in *Dutchland*, but because he refuses to be try'd by his Country, and challenges the Judges as incompetent. Yet no Man blames them for proceeding according to the Law of their Country, when they break the Legs and Arms of Malefactors, and then set them upon a Wheel on the end of a great Pole, there to languish to Death, which is a much more painful and dreadful Death than the *English* way of pressing them, which puts them suddenly out of pain, and is so seldom us'd. The Author pretends indeed that little or no Torture was us'd in this Process against the *English*, because the Officers of *Amboyna* have conceal'd it. But shall we not believe those who have suffer'd it themselves? Or being themselves acquitted, yet heard the Cries and saw the tortur'd Bodies of *Johnson*, *Clark* and *Tomson*, and have confirm'd the Relation by their corporal Oaths? As to the Act of the 25th of *February*, it cannot be a true Act, because it says that all the *English* were examin'd on that Day, one by one, and some before and some after the Torture confess'd the Fact: Whereas it appears not only by the *English* Relation, but by the very Author in the preceeding Page, that the Examination lasted six Days together, to the 3d of *March* inclusive. How then could the Act of the 25th of *February* have all their Confessions? And by this it plainly appears what Credit is to be given to these Acts or to this Author. This is all that deserves an Answer in this *Dutch* Relation, which has not been already sufficiently answer'd; and from what has been said, That this Relation is stuff'd with groundless Suspicions, false Narratives ridiculous Absurdities and Impossibilities, impertinent Allegations and Arguments.

An Abridgment of the Travels, Adventures and Observations of Captain John Smith.

Captain Smith's Birth and Education.

Captain *John Smith* was born of good Parents at *Willoughby* in *Lincolnshire*, and being from his Infancy of a Rambling Temper, while he was yet at School, he sold his Satchel and Books with a Design to go in quest of his Fortune; but being diverted from that by the Death of his Parents, and detain'd at Home till the Age of Fifteen, he was then Bound Prentice to a Merchant of *Lynne*, who not sending him immediately to Sea as he expected, deserting his Apprentiship, he got to attend a Person of Quality's Son to *France*; (for tho' his Father had left him a competent Fortune, his Guardians gave him only Ten Shillings to begin his Travels with) but soon after his Arrival at *Orleans*, being dismiss'd from his Service, and having Money given him to return to *England*; he having no Inclination homewards, took the Road to *Paris*, where falling Acquainted with a *Scotch* Gentleman, he obtain'd of him Recommendatory Letters to his Friends in that Country; but Listing himself by the way in the Army, he did not go thither till four Years afterwards; and after some stay there, returning to *Willoughby*, and recovering (it seems) a part of his own Estate, he put himself in a better Condition than that in which he formerly had been, to Travel into Foreign Countries, being equally disgusted with idle Company and Solitude, of both which he had taken a trial at *Willoughby*.

His first Travels and Return.

Goes to France and is rob'd.

In this Resolution he happen'd to fall into the Company of an unknown Adventurer, who being attended by three such Villains as himself, pass'd for a *French* Lord, and perswading *Smith* to go with him by the way of *France*, to the War in *Hungary*, upon his Arrival in *Picardy*, he was Robb'd of his Baggage and Money by his four Companions, in concert with the Master of the Vessel; but being inform'd by a Soldier of the Place, of their Birth, and finding some of them in *Britany* (but in no Condition to make him any Satisfaction) being reduc'd to great Extremities, and by various Accidents reliev'd, meeting in his Rambles with one of his Robbers in a more miserable Condition than himself, he Fought and desperately Wounded him; and so passing by *Rhenes*, *Nants*, *Rochel*, *Poitiers* and *Bourdeaux* to *Bayonne* in *Biskay*; he afterwards travell'd thro' *Gascony* and *Languedoc* into *Provence*, (making at that rate a Circuit of above a thousand Miles) and imbarking himself at *Marseilles* for *Italy*, after being driv'n into *Thoulon* by contrary Winds, putting to Sea again, he was by some mutinous *Provencials* and Pilgrims a going to *Rome*, thrown over-board; and getting safe to a desolate Island, was thence accidentally deliver'd next Morning by Captain *La Roche* of St. *Maloes*, with whom having Coasted a great part of the *Mediterranean*, when they had discharged their Loading at *Alexandria*, sailed thence to *Scandaroon*: After having passed by the Coasts of *Asia* and *Graecia*, they arriv'd in the Mouth of the *Adriatick* Gulph, where they had a most desperate Conflict with a *Venetian* Ship, the Event of which was this, That *La Roche* having with the loss of Fifteen of his Men, taken her, and loaded his own Ship with the most precious of the Cargo, to a great Value, dismiss'd the remaining *Venetians* with the rest; and soon after rewarding *Smith's* Courage with a large Sum of Money, and (at his own request) setting him ashoar at *Antibes*, he there imbark'd himself for *Leghorn*, and passing thence thro' many famous Cities in *Italy* to *Rome*, he happen'd to see the Pope and Cardinals creep up the Stair call'd *Holy*, by which 'tis by them pretended, that our Saviour went up to *Pilate*. And afterwards imbarking at *Civita Vecchia* for *Naples*, after he had visited a great many Places on the *Adriatick* Gulph and elsewhere in *Italy*, going to *Grates* in *Stiria*, he there had the Honour to be known to the Lord *Ebershaughe*, Earl of *Meldrich*, and several other Persons of Quality, with whom going to *Vienna*, he entred into the Emperor's Service, in the aforesaid Earl of *Meldrich's* Regiment of Horse.

Goes to Italy and is cast over-board. Is sav'd.

A Fight.

Smith Lands, goes to Rome and sees the Ceremonies.

Goes to the Army of the Emperor.

Soon after he went to the Field, the *Turks* having Besieg'd *Olumpach*, of which the aforesaid *Ebershaughe* was Governor, *Smith* acquainted him by a Signal formerly agreed to between them, of the Time that the Imperialists should attack the Besiegers, which having been very well manag'd, and the *Turks* put into a Consternation by a Stratagem of *Smith's*, who caus'd some Thousand of Matches, supported by Staves, and stuck full of Gun-Powder, to be Fir'd at such a distance, that the *Turks* thinking that there was an Army on that side, and preparing to encounter those false Fires, the Besieged by these means receiv'd such Succours, that the *Turks* were

And performs several notable Stratagems.

forc'd to raise the Siege; for which Service *Smith* was rewarded with the Command of a Troop of 250 Horses, in the Regiment in which he serv'd. Not long after that the Emperor having divided his Army into three Bodies, that under the Command of the Duke of *Mercœur*, receiv'd Orders to Besiege *Stoll Weissenburgh*, a Place so Fortify'd by Nature and Art, that it was judg'd almost impregnable. But Captain *Smith* having put in practice a certain new Invention of his, did upon all Occasions so terribly annoy the Besieged with a sort of Fire-Works which he threw into the Town, that Duke *Mercœur* and Earl *Meldrich* taking an Opportunity while the *Turks* were in Confusion within, surpriz'd the Place, put most of the Garrison to the Sword, and took the *Bashaw* Prisoner. After which the *Grand Signior* sending *Assan Bashaw* with 60000 Men against the Imperialists, 20000 of them being sent to Besiege *Stoll Weissenburgh* again; the Grand Army of the *Turks* was overthrown by Duke *Mercœur*, the Siege was rais'd; and the Duke dividing his Army and returning to *Vienna*, after receiving great Honours there, in his way to *France* to raise Forces for the next Campaign, Died suddenly by the way. In that Battle *Smith* was Dismounted and Wounded, but soon recovered.

Alba Regalis is besieg'd and taken.

And being again besieg'd by the Turks, the Siege rais'd, and Duke Mercœur dies.

Mean time Earl *Meldrich* going with the Troops he Commanded to serve Prince *Sigismund* in *Trasilvania*, after meeting with extraordinary Difficulties in his March, having laid Siege to a Town before which it was not easie to raise Batteries; in the Interim a *Turkish* Officer having Challeng'd any of the Christian Captains to Fight a single Combat with him, *Smith* accepted the Challenge; a Truce was concluded, and the *Turk* appearing in the Field with a vast Train of Hautbois and a Magnificent Equipage, was some Minutes afterwards met by *Smith*, preceeded only by a Page that carried his Lance; and after the ordinary Salutation, the Trumpets sounding a Charge, *Smith* overthrew the *Turk* at the first Encounter, and Cutting off his Head (which he presented to the General) was receiv'd with the universal Acclamations of the Christian Army. And having next Day accepted the like Challenge from a Friend of the deceased *Turk*, he serv'd him in the same manner that he had done the other, tho' with a little more Difficulty and Danger. But he was yet worse put to it by a third whom he had Challeng'd himself, and of whom having receiv'd a Blow which had almost thrown him on the Ground, while the *Turk* was Ravish'd with the Shouts that were made from the Rampant, to Congratulate his supposed Victory; *Smith* recovering his Saddle with his Senses, having Pierc'd him thro' the Body, left him as Headless as he had done his other two Companions. Upon which the whole Army admiring the extraordinary Courage and Resolution of that brave Gentleman, conducted him with a Guard of 5000 Men and three led Horses (a *Turk*'s Head being carried before each) to the General's Tent, where he was receiv'd with all imaginable Tokens of Respect and Esteem, and had several valuable Presents made him.

Smith *fights 3 single Combats and Conquers.*

His Triumph.

The Batteries being by this time rais'd against the Town, Fighting soon began to be more universal, and the Town being taken with a great Effusion of Blood, the Garrison retiring to the Castle, and offering to Capitulate, were refus'd any Conditions, and the Earl having taken it next Day, put all to the Sword that were able to bear Arms, and set their Heads upon Stakes round the Walls, as they had formerly serv'd the Christians. After which the Army having sack'd *Veratio*, *Solmos*, and *Rupronka*, retiring to *Esenberg*, where Prince *Sigismund* having been presented with the Prisoners (which were about 2000, for the most part Women and Children) and being acquainted with the signal Services perform'd by Captain *Smith*, having bestow'd upon him a Yearly Pension of 300 Ducats with his own Picture in Gold; she gave him a Patent under his Hand and Seal, to wear three *Turk's* Heads in a Shield for his Arms, with an Oath that he should always afterwards wear the same thing in his Colours.

The Town is Taken, and Smith *greatly honour'd, &c.*

However, the Emperor being jealous of Prince *Sigismund's* Success, sent a powerful Army under the Conduct of his General *Busca*, to try his Fortune in *Transilvania*, to which tho' he unjustly pretended, its lawful Sovereign Prince *Sigismund* having agreed upon certain Conditions to yield his Country to the Emperor, his Lieutenant having without his knowledge attackt the *Imperial* Army, was defeated; but the Emperor being inform'd of the Prince's Innocence, did punctually keep the former Capitulation, and so being put in possession of *Transilvania*, his Troops likewise entered *Wallachia*, as well as those of Prince *Sigismund*, all under the Command of the Imperial General *Busca*, who making a Feint as if he intended to avoid coming to Blows, drew the *Turks* into a Place so disadvantagious to them, that he entirely routed them, killing several *Bashaws*, a great many other Officers, and little less than 20000 Soldiers. Upon which there coming News that some straggling *Crim Tartars* were Foraging and Wasting the adjacent Country, *Meldrich* having been sent out against them with 13000 Men, instead of Straglers found the *Cham* of *Tartary* with his two Sons and above 30000 Men, besides the *Turkish* General who had escap'd out of the late Battel with 15000 more, upon which having in vain us'd all their endeavours to make their Retreat, after having kill'd or taken Prisoners 2000 *Turks* (with whom they accidentally met one Morning as they came out of a Wood, thro' which with incredible Celerity they had cut a Passage) being inform'd of the Place where the 15000 *Turks* were separately encamp'd; Captain *Smith* having propos'd another Stratagem, *viz.* To accommodate some Hundreds of Trunks with Wild-fire upon the Heads of Lances, and setting Fire to them in the Night, to attack the Enemy at the same time; that being perform'd, the *Turkish* Horses (as well as their Men) were so amaz'd with the blazing of the Flames, that immediately falling into Confusion, they were cut to pieces, with scarce any loss at all to *Meldrich*. But it being still impossible for them to secure their Retreat from the huge Army of the *Tartars* that were at hand, the Valiant *Meldrich* drawing up his victorious (but unfortunate) handful of Men, in a Valley near *Rottenton*, in the manner that the disparity of their numbers requir'd; after one of the most obstinate and resolute Battels that ever was fought (in which the *Christians* kill'd almost twice their number of the *Tartars*) there only escap'd from the Slaughter, or from Captivity about 13 or 1400 Horse, who with their General bravely swam the River in the face of their Enemies. Captain *Smith* being desperately wounded was taken Prisoner and after his Cure, being Sold for a Slave at *Axopolis* to Bashaw *Bogal*, he was by him sent for a Present to his Mistress at *Constantinople*, whither he was led with a great many others, Chain'd by the Neck, twenty and twenty together.

His Troops enter Wallachia and defeat the Turk twice.

Meldrich with a Detachment is entirely routed, and Capt. Smith is taken and made a Slave, and sent to Constantinople.

That Lady (who could speak *Italian*) understanding by himself that he was an *English* Man whom her Gallant had bought (and not a *Bohemian* Lord vanquished by his Hand with a great many others, whose Ransoms should adorn her with the Glory of his Conquests, as he had written to her) compassionating his unfortunate Circumstances, and being apprehensive that her Mother might sell him, sent him immediately with recommendatory Letters to her Brother, the *Timor Bashaw* of *Nalboits* in *Cambia*, which is a Province of *Tartary*. But the cruel and inhumane Brother suspecting by his Sister's kind Expressions in favour of the unfortunate Captive, the Design which she entertain'd of making him her Husband, if she could, caus'd him to be treated much more barbarously than any of the other Slaves in that Country, tho' in effect, the happiest of them is miserable, beyond our Imagination; but his Cruelty prov'd at last to be the occasion of the Captain's Liberty.

Cambia in Tartary.

The Cambian Tartars Food, Rayment and Habitations.

'Tis almost impossible to believe how miserably the *Cambian Tartars* live, the proud *Bashaw* himself thought boil'd Rice and Garnaces, with some little bits of Mutton amongst it, very good Cheer; and 'tis very ordinary amongst them to eat Horse-flesh, and that of other Animals much less edible; nor do the common People often feed so delicately, so that I shall not pretend to be able to express the miserable Diet of the Christian Slaves; whose best Victuals is the Entrails of Horses and other more loathsom Animals. The Bread of *Cambia* is proportionable to the rest of their good Fare, their best Drink is very bad Coffee, and they have a great Opinion of any sort of Milk, for which they have Reason, if things be only valuable for their Rarity. Their Quality dress like the *Turks*, but the Attire of the common sort is a black Sheep's Skin upon their Back, and another upon their Belly, with the Legs tied about their Neck and Middle; two other Skins serve them for Breeches, and a Cap of the same Stuff adorns their

Head

Head. As for their Habitations, there are few (if any) in moſt Places of *Tartary* that deſerve the Name of *Houſes*, their principal Shelter being a ſort of Tents.

The Crim-Tartars. The *Crim-Tartars* do much excel the *Cambians'* both in their Food, Rayment, Habitations, Diſcipline and Manners; and the removing Court of their Prince is as orderly as ſome *European* Camps for the ſituation and rank which every one obſerves; and (not to ſpeak of the great Attendance of their *Cham*) ſome of their Lords or Princes will have above 100 Tents upon great Carts drawn by Oxen and Camels, for themſelves and their Wives: They are much better dreſs'd than the *Cambian Tartars*, for tho' they wear divers ſorts of Skins, they are lin'd with a ſort of Stuff made of Cotton: They have better Meat than the others, but as they eat very little of it, they abound in Cattle, and the multiplicity of Captive Women they have to Breed upon, make them very numerous; for (as all the *Mahometans*) they may keep as many Wives as they can maintain. They uſe their Slaves very barbarouſly, putting them to all ſorts of Work, as we do Beaſts. Their Princes uſe Foreign Ambaſſadors ſometimes barbarouſly, but for the moſt part bountifully; however, they muſt deliver their Meſſage and their Preſents Kneeling, and ſometimes they're gratified with Veſtures of Silk wrought with Gold, with a Horſe or two, and perhaps a Slave of their own Country. And indeed, the *Cham* of *Crim Tartary* is ſerv'd and attended by his Subjects with very much Reverence and Reſpect. That Prince can make no War without the Permiſſion of the Grand Signior, whom he is oblig'd to aſſiſt with an Army within a Month after he receives his Orders, which he can eaſily do. Every Soldier being oblig'd to provide himſelf three Months Victuals, which principally conſiſt in parch'd Millet ground to Meal, (which they mix with Water) and Curds dried and beat to Powder, which being infus'd into Water makes it ſomething like Milk; and ſome dried Fleſh. Their *Cham* and his Nobles have ſome Bread and *Aqua Vitæ*, and likewiſe live Cattle, of which they are very ſparing. There is no Foot in their Army, but all Horſe, which by their ſwiftneſs do abundance of Miſchief; their principal Arms are Bows and Darts, for the Nobility only can afford to wear ſuch Arms as the *Turks*, in which they very much glory; and ſome of the other Troops have ſometimes *European* Arms, which they take from the *Chriſtians* they can ſurpriſe. When they invade any Country, they put moſt of the Men to the Sword, but ſpare all the Women and Children, of whom they make Slaves; of whom their *Cham* or Emperor picking out ſuch as he likes, the reſt are divided amongſt the Army, according to each Man's quality, and ſo remain in perpetual Servitude, except they can be ranſom'd. The only thing Good amongſt them, is their Law, which (being utter Strangers to Lawyers) is very plain and ſimple; they have Juſtices in every Village, but make no uſe of Attornys; and all Affairs of Moment are decided by the *Cham* and his Privy-Counſel, with ſo little Partiality, and ſo great Expedition, that even amongſt that barbarous People, ſcarce ſix Cauſes are heard in ſix Months.

Their Cuſtoms.

Their Laws.

Their Wars.

Smith kills the Timor and eſcapes to Muſcovy. After *Smith* had remain'd a conſiderable time in this miſerable Captivity, being made a Threſher in a Grange about a League from *Nalbrits*, the *Timor* going frequently to viſit his Granges, took occaſion to beat him moſt unmercifully, inſomuch that *Smith* one Day that he was alone, being exaſperated with that unſupportable uſage, beating out the *Timor*'s Brains with his Threſhing-Bat, put on his Cloths, and hiding his Body under the Straw, fill'd his Knap-ſack with Corn, and ſhutting the Doors, mounted upon the *Timor*'s Horſe and recommending himſelf to God, rid out into the Deſart, without well knowing whither he went, till falling accidentally upon a Road, which by ſome Poſts that were ſet up upon it, he knew to be that which led to *Muſcovy*. After 16 Days Travel in that barren Country, arriving at *Ægopolis*, and diſcovering himſelf, he was kindly entertain'd by the *Muſcovite* Governour, from whom obtaining Recommendatory Letters to the Governor of *Caraganaw*, he thence paſs'd by *Letch*, *Donko*, *Berniske*, *Newgrod*, *Coroski*, *Duberesko*, *Duritchell*, *Drohobus*, *Oſtroge*, *Saſtaw*, *Laſco*, *Hallico* and *Colionia*, to *Hermanſtadt* in *Tranſilvania*; in all which Journy from *Ægopolis* to *Hermanſtadt*, he was treated with a great deal of Civility, by the Governors and other Perſons of Quality, who not only defrayed his Charges, but gave him ſeveral valuable Preſents. And after many Congratulations, and much good Entertainment in *Tranſilvania*, paſſing thro' *Hungary* and *Moravia*, he arrived at *Prague* in *Bohemia*; and going to *Lipſwick* in *Miſenland*, was there moſt graciouſly receiv'd by the Illuſtrious Prince *Sigiſmund*, who giving him a very honourable Paſsport and 1500 Ducats of Gold; taking his leave of the Prince, and viſiting *Saxony*, *Bavaria*, *Heſſe*, *Franconia*, the *Palatinate*, and moſt other Places that he had not ſeen in *Germany*, paſſing thro' *Lorain*, he went into *France*; and departing from *Paris* by the way of *Orleans* and *Angiers*, to *Nants*, imbarking there for *Biſca* in *Spain*; after viſiting *Madrid*, *Sevil*, *Cadiz*, and all the other moſt remarkable Towns in that Country, he paſs'd over from *Gibraltar* by the way of *Ceuta* and *Tangier*, to *Saffee* in *Barbary*; where falling acquainted with the Captain of a *French* Man of War, he went with him and twelve more to view the Monuments of the famous City of *Morocco*, of which little then was ſtanding but the King's Palace (which ſeem'd almoſt to be a City it ſelf) and the *Inderea*, which is likewiſe very large, and inhabited by the *Jews*; there were likewiſe ſome Tents for *Moors*, and every where there was to be ſeen the Ruins of a great and Magnificent City, but little elſe.

He goes to Tranſilvania.

And thence to Bohemia.

He is remarked by Prince Sigiſmund, and goes thro' Germany and France *to* Spain, *and thence into* Barbary.

As for the Temper and manner of Government of the Emperors of *Morocco*, 'tis ſo univerſally known, that there needs not much here to be ſaid about it; they are Tributary to the *Turks*, and of the Religion of *Mahomet*; and the *Chriſtians* which are taken at Sea by their Pyrates, are made Slaves. Their Kings by the multiplicity of their Concubines, cannot miſs of having a numerous Iſſue; yet is there no Country under the Sun where the Royal Family (if theirs deſerves ſo great a Name) is more in danger of failing, for upon the Death of the Father, all the Brothers generally fall by the Ears, and cut each other's Throats, till there's but one remaining, and then he curs off his Brother's Iſſue (if any remains) that he may be ſure of the Kingdom for himſelf; their Princes are more Magnificent (as being more converſant with the *Europeans*) than thoſe of the *Tartars* before-mention'd; but for all that, they are ſtill ſo little civiliz'd, that they are moſtly very impertinent to Foreign Ambaſſadors. Their Complexion is Tawny or Yellowiſh (yet is there to be found ſome very handſome Women amongſt them) and as for their Country, it produces very many precious and valuable Commodities, which they vend to the *Engliſh*, *Dutch*, *French* and other *European* Nations.

The Cuſtoms, &c. of Barbary.

Amongſt other fierce Animals, with which all *Africa* abounds, there is plenty of Lyons; and two young ones having been given to one Mr. *Archer*, who then liv'd at *Saffee*; he putting them into a Garden, the Male having kill'd the Female, he afterwards took it into his Houſe, and letting it lie upon his own Bed like a Dog, it grew in a little time as big as a Maſtiff; nor was there ever a Dog more tame and tractable than was that Lyon, with ſuch as he knew. However, Mr. *Archer* being about to return into *England*, made a Preſent of this Lyon to a Merchant at *Marſeilles*, and he having afterwards preſented him to the *French* King, he ſent him over to King *James* I. So that one Mr. *Bull*, who had been Mr. *Archer*'s Servant when the Lyon was given him in *Barbary*, going one Day with ſome of his Friends to ſee the King's Lyons in the Tower of *London*, tho' 'twas above ten Years after the Lyon had ſeen Mr. *Bull* at his Maſter's Houſe in *Barbary*, he ſo fawn'd and made ſuch Signs of Submiſſion and Joy, at the ſight of Mr. *Bull*, that he being inform'd in what manner the Lyon was brought thither, prevail'd with the Keeper to open the Door and let him in, upon which the Lyon fell immediately to licking of his Hands, Face and Feet, and expreſs'd ſuch Marks of Joy and Satisfaction as a Brute could ſcarcely be believ'd to be capable of; and was ſo dejected at Mr. *Bull*'s departure, that he fell a roaring and making a moſt hideous Noiſe, and would neither eat nor drink for above four Days; which Story for its oddneſs, I thought did here deſerve to be inſerted.

An odd Story of a Lyon.

After theſe Travellers had ſufficiently view'd what moſt deſerv'd to be ſeen in the Inland Parts of *Barbary* already mention'd, upon their return to *Saffee*, the Captain of the Man of War having invited Captain *Smith* to a Treat on Board of his Ship, and ſparing nothing to make him and the reſt of the Company welcome, they ſtaid till it was too late to go aſhore; for there ariſing a furious Tempeſt about Midnight, they

1639 they were forc'd to slip Cable and Anchor, and put to Sea; and being driven in towards the *Canaries*, after they had spent some time in refitting themselves, putting again to Sea to return to *Saffee*, they took in their Passage some small Barks, one of which was loaded with Wine from *Teneriff*, and two others in their Ballast; but coming up soon after with two *Spanish* Men of War between *Bojadora* and *Cape Nos*, upon the *African* shore, *Merham* (for so was the Captain nam'd) hailing the *Spaniards* to know what they were, they hoping to put a Trick upon him, answer'd that they were two distressed Ships of *Biscay*, and added, that he might come aboard if he pleas'd and take what he would; but *Merham* being too cunning to be decoy'd by that fair Sham, they soon began to explain themselves by the louder Language of their Ordnance, and so commenc'd one of the most obstinate Fights that ever has perhaps been heard of, which continued two Days successively, during which time *Merham* was twice boarded, and his Ship once Fir'd; but notwithstanding, by his own, Captain *Smith's*, and some other Gentlemen's extraordinary Conduct and Bravery, and the undaunted Courage and Resolution of his Mariners, he got clear of both the *Spaniards*, after having kill'd 200 Men in the greatest Ship (which was so shatter'd that 'twas judg'd she would founder at Sea) and likewise done a great deal of Damage and kill'd a great many Men in the other, with the loss of 27 Men kill'd in his Ship, besides 15 wounded; after which arriving in a short time at *Saffee*, Captain *Smith* being desirous to take another View of his Native Country, return'd with the first Opportunity to *England*. 1639

An obstinate Sea-Fight.

After this, Captain *Smith* made many useful Voyages to *Virginia*, *New-England*, *Barbadoes*, the Isle of *Mevis* and several other Plantations, where he did the Nation considerable Services; but there being much later Accounts of the State of those Places than his, and there happening but few Occasions in which he could have an opportunity to signalize his personal Valour, it would seem preposterous to insert them in this Place; since a sufficient Account is already given of all those Plantations.

The Captivity of William Okeley, William Adams, John Anthony, John Jeplis, *&c. at* Algiers, *with their wonderful Escape in a Boat of Canvass, and the Extremities they endur'd at Sea, till their Arrival at* Majorca.

The Captivity of Okeley, Adams, &c. in Algiers.

HAving in *June* 1639. Embarked on board the *Mary* of *London*, carrying six Guns, of which Mr. *Boarder* was Master, and being bound for the Isle of *Providence* in the *West-Indies*, and having two Ships more in Company, on the sixth Day after they set sail from the Isle of *Wight*, and discover'd three Ships in the Morning, about three or four Leagues to Leeward of them, which indeed prov'd to be *Algerines*, and well perceiving the *English* run for it, quickly came up, Fought, Boarded, and took them all three, the *Mary* having six Men Slain and wounded in the Action: They were kept close Prisoners while at Sea, and after five or six Weeks time were brought to *Algiers*, which City is pleasantly situated on the side of the Hills, overlooking the *Mediterranean* that lies to the North of it: It's pretty large, the Walls being above three Miles in Circumference, beautified and adorned with five Gates; Port *Marine* to the North, and Port *Piscadore* not far off, and *Porta Nova* to the South; the West Gate, which they call *Bubamile*, and the East *Bubagoon*: The private Buildings are beautiful enough, flat roof'd, adorned with Galleries towards their Courts, supported by Pillars, and their Temples or Mosques very magnificent. Next Day after their being brought ashoar, the Captives were conducted to the *Basha's* Palace, who according to Custom, is to have the tenth of every Slave for his share, and the Day after they were carryed to Market, publickly to be expos'd to Sale, which is performed in this manner; they lead them up and down the Place, and when a Chapman bids any Mony, they presently cry a *Rache! a Rache!* That is, here is so much Mony bid, Who bids more? and they that cheapen them are very circumspect, and examine the Mouth, and all other parts of the Body, and more particularly see whether the Hands be hard or delicate and tender, from which last, as supposing them to be Gentlemen or Merchants, they expect a large Ransom.

William Okeley, the Author of this Relation, was sold to a *Tagareen*, and for about half a Year; his Business was to trudge on Errands, bear Burdens, and perform other servile Offices; but his Patron having a share in a Man of War that carryed twelve Guns, and being with the rest of the Owners much elated with a rich Booty she had lately made of an *English* Ship laden with Plate, and bound from *Cadiz* to *London*, they resolv'd to fit her out again, and *Okeley* must by his Patron's Command go also aboard her; but the Ship having cruised nine Weeks at Sea, within and without the *Streights*, without meeting any Prize worth taking, *Okeley's* Patron, now he came ashore, told him he must live there, and pay him ten Dollars *per* Month, let him get it where he could. Perplext with this hard Sentence, he at length fell in with a Country-man of his own, and his Patron, upon his representation of the matter, having lent him a small Modicum to set up, he became Partner with the other, who privately sold Lead, Iron, Shot, Strong-Waters, Tobacco, and other Things; and beginning to thrive upon it, they ventur'd upon no less than a whole But of Wine, but the other Partner proving a bad Husband, the whole stress of the Business fell upon *Okeley*, who had now an opportunity of affording some Relief to *John Randal*, his Wife and Child, that had been made Captives at the same time with himself.

Now it hapning that *Okeley* and *Randal* (who was not well) should take a Walk one Day into the Fields; when they came to the end of their Tedder, they were desirous to go a little farther to view the Coasts, tho' not with any Design of making their Escape: However they were presently charg'd with a Spy for attempting it, and then met by another, by whom they were led to a little House, where they searched them, and took away 20 *s.* which *Okeley* had before put into his Friends Hands, and after that his Doublet, and then carryed them before the Vice-Roy and his Council: They were very strictly examined, and threatned with the Batroon, but they stifly denyed all, refusing to make themselves Criminal, when they were not so, and then see if they must abide the Bastinado, they would sit down by the Sticks: As for the way of Punishment by the *Batoon*, 'tis thus; they have a strong Staff about 6 Foot long, in the middle whereof there are two Holes bored, into which a Cord is put, and the ends of the Cord fastned on the one side the Staff, with Knots, so that it makes a Loop on the other side; into this Loop of the Cord, both the Feet of the Person Condemn'd to this Punishment are put; then two lusty Fellows, one at each end of the Staff, lifts it up in their Arms, and twitting the Staff about, till his Feet are fast pinched with the Cord by the Ankles, they raise his Feet with the Soles upwards near as high as their Shoulders, and in this Posture they hold them, the poor Man in the mean while resting only with his Neck and Shoulders on the Ground: Then comes another lusty sturdy Knave behind him, and with a tough short Truncheon gives him as many violent Blows on the Soles of his Feet as the Council shall Order: The Basha and Council, indeed deferred the Punishment upon these two supposed Runaways, but ordered them to be laid in Chains, till their Patrons should demand their Liberty. It was *Randal's* severe Fate to have a barbarous Master, who ordered him 300 Blows upon the Soles of his Feet before his Enlargment; whereas *Okeley* by his Master's direction was put to Weaving; but being no proficient in that Trade, he commanded him to go to the Shop and make Mony of his Goods, in order to pay what he had borrowed of him towards his setting up; but alas you must think they were gone to wreck, for his Partner had some time before this Misfortune left him; and so returning to his Master again, whom he acquainted he could sell nothing, he remanded him to the Shop,

there

there to Trade, paying him the two Dollars a Month as before; but at length *Okeley*'s Patron falling to Decay, and it being his fortune and another's to be mortgaged to a Cap-Maker and a grave old Gentleman, who could not well agree about the Division of them, they were both ordered to appear at noon Day at an appointed Place, where they agreed to cast Lots for them; only because *Okeley* was in a handsome way of Trade, they agreed that he to whose share he fell, should pay the other 50 Doubles: It was his good Fortune to fall into the old Gentleman's Hands, who was exceeding kind to him; but for all that, being not able to bear the thoughts of Slavery, he was continually projecting how to make his Escape, and judging seven Persons would be enough to manage and carry on the Design, he communicated the same to *John Anthony*, a Carpenter, who had been a Slave 15 Years; to *William Adams*, who during his Captivity had learnt to be a Bricklayer, who had been a Slave 11 Years; to *John Oeples* a Sea-man that had been a Captive above five Years, and to *John*——— a Carpenter, who had been a Slave five Years; also there were two others, whose Business it was to wash small Cloths on the Sea-side, who had their share in carrying on the Work, tho' they went not along with them; *William Okeley* the Author of this Narrative, who was taken *Aug.* 11th 1639. and escaped *June* 30th 1644. made up the number of Seven.

Thus having fixed their Resolutions to attempt an Escape, they provided a piece of Timber about 12 Foot long to make the Keel of a Boat, which was to be wrought in *Okeley*'s Cellar; then took care of Timbers or Ribs for the Boat, every one of which was made of three Pieces, and joynted in two Places, yet these Joints were not made with Mortice and Tenon, but the flat side of one of the three Pieces was laid over the other, and two Holes were bored in every Joynt, into which two Nails were to be put when they were to joyn the parcels of the Boat together. But it must be noted that these two Holes at every Joynt were not made in a strait Line parallel with the Sides of the Pieces, for then the three Pieces, which make one Rib, being joyned together, would have made one strait Piece, a form that would not at all serve their turn, but so that when both the Nails were in the Holes, each Joynt would make an obtuse Angle, and so incline as near a semicircular Figure, as occasion required; and for the Cloathing of the naked Ribs of their Boat, instead of Boards, they bought as much strong Canvass, as would cover it twice over, upon the Convex of the Carcen, as also as much Pitch, Tar and Tallow, as would make it a kind of a Tarpawling Sear-Cloth, with earthen Pots to melt down their Materials in; having with no small difficulty fitted up the whole Boat, and then taken all to Pieces again, the next Work was how to convey all out of Town, and fix them in a secure Place; and first for the Keel, they unanimously agreed that *William Adams* was the fittest Person to execute that part, who for that purpose having accoutred himself with his Apron before him, his Trowel in his Hand, and one of the Pieces upon his Shoulder, went cleverly away with it, and having hid it in the bottom of an Hedge, soon after carryed and lodged its fellow in the same Place; as for the Timbers they were easily, because of their folding in the middle, carryed off by one of those who washed small Cloaths, in his Bag, and hid near the Keel. But to convey the Tarpawlin safe, was the greatest difficulty; by Night it was impossible, and by Day exceeding difficult; however they ventured on this way; they put it into a large Sack, and committed it to him that used to wash Cloaths, and left any should clap a jealous Hand upon it; they put a Pillow over their Canvass within the Bag. Oars were still wanting; for the supplying of which, they took two Pipe-staves, and slitting them across from Corner to Corner with a Hand-saw; they made of each of them two rude Things, which they named the Blades, for a pair of Oars, and these were easily conveyed out without Suspition. The next thing was Provision for the Voyage, of which they laid up but a small quantity of Bread: They had also two Goats Skins stripped off whole, and so tanned (a kind of Bottle much used by the *Algerines* to carry Milk and Water in) and these they filled with Water. They also called to mind, that a Sail might be of good use to them in their Expedition, and therefore having bought as much Canvass as would serve, *Okeley* undertook to carry it, but had not gone a quarter of a Mile out of the Town, when he discovered the same Spy, who had once before seiz'd him, which put him to a great Non-plus; however, having on a sudden plucked up his Spirits, and espying an *English* man washing Cloaths by the Sea-side, he went directly to him, and desired his help to wash that Canvass, while the leering Spy all the while stood upon a Rock just over their Heads to watch their Motions; but *Okeley* having a little formerly washed the Canvass, still to amuse him, spread it before his Face on the top of the Rock to dry, after which the Spy sheer'd off, but so that the Christian remaining still very Jealous of him, thought it best, fairly to carry his Burden back again into the City. His Companions tho' not a little discouraged hereat, yet at length agreed on the Time and Place where they should meet in the Night for their departure: They pitched upon a Hill for this purpose, but at their meeting together, retired to an adjacent Valley: They had indeed hid several of their Materials near the top of the Hill, where there grew also a small Fig-tree, which they had marked with their Eye, as judging it would be useful to strengthen the Keel of their Boat, and therefore two of them were immediately dispatch'd to saw it down, and to bring it and the Parcels of their Boat there deposited away with them: Having accomplish'd this Work, not without danger of being discovered by two Men with Dogs that came near them; they by Signs by reason of the vicinity of some Gardens, went about to joyn their Boat together; they soon fix'd the two parts of the Keel; then opening the Timbers, which had already a Nail in every Joynt, they groped out for the other Hole, and puts its Nails into it: Then they opened them at their full length, and apply'd them to the top of the Keel, fastning them with Rope-Yarns and small Cords, and so they served all the Joynts to keep them firm and stable; then they bound small Canes all along the Ribs length-ways, both to keep them from veering, and also to bear out the Canvass very stiff, against the pressing Water: After this they made Notches upon the ends of the Ribs, wherein the Oars might ply, and having tyed down the Seats, and strengthned their Keel with the Fig-tree, they lastly drew on their double Canvass Case, which before had been fitted on: This done, Four of the Company carry'd it on their Shoulders to the Sea-side, which was about half a Mile off; being come upon the Sea-shore, they immediately stripp'd themselves naked, and putting their Cloths into the Boat, carryed both it and them as far as they could wade into the Sea, and then all Seven of them got into her; but alass! they were no sooner imbarked, then that the Boat was ready to sink under them; but at last one whose Heart most failed him, going Ashore, and another soon following, she then held up her Head very stoutly, and seemed hearty enough for the Voyage.

They launched out on the 30th of *June* 1644. as afore-noted, and laboured the harder that Night, because they would gladly be out of the Ken of their old Masters by Daylight; but for all that they were within sight of their Ships that lay in the Haven and Road, yet the Boat was so small and snug, that they were not discovered, or else seemed not worth taking notice of. They found upon all Occasions their want of forecast, for now their Bread had lain soaking in the Salt-Water, and was quite spoiled, and their Fresh-Water stank of the tanned Skins and Owze, having lain sobbing in the Salt-Water, which made it nauseous, to supply the want or defect of which, they had nothing but their own Urine; and their Bread, tho' very bad as it was, yet lasted them but three Days; and what yet still seemed to be worse than all the rest, the Wind proved so very contrary, that they came to debate at last, whether it were not better for them to go back to *Algiers* with ease, than painfully make towards their Freedom. However they manfully carryed it for the last, as that their Labour was without intermission, and the heat of the Sun was so extream, that the only help they had (if it might be so called) was from the fifth Man, who emptyed the Boat of the Salt-Water, and threw it upon the Bodies of the rest that rowed to cool them, with which and the scorching of the Sun they were so bleached, that they rose up all over in Blisters, and brought them much Pain. The Directions they steered by in the Day time, was only a Pocket-Dyal that one of the Company had, and they were in the Night guided by the motion of the Stars, and when they dis-

appear'd, by that of the Clouds, having continued four Days and Nights in this wretched Condition, and being now so far upon the brink of Despair, as to lay by their Oars and leave off Labour. On the 5th they discovered a Tortoise, not far from them, asleep in the Sea, and having silently rowed to the Prey, they took it into the Boat with great Triumph, cut off her Head, and having let her bleed into a Pot, drank the Blood, eat the Liver, and sucked the Flesh, with which they were much refreshed; and about Noon they discovered, or at least thought they discovered Land. Being in a short time after fully satisfied it was Land, they laboured hard to come at it; but being at length wearied with Labour, and cooled a little with the Sea, into which they had now unwarily enough jumped to refresh themselves, they took a little repose in the Boat, and then renewing their Diligence, towards Evening discover'd another Island: The first they saw was *Majorca*, and this *Fromentere*, which last being very much infested with venemous Serpents, and very little, if at all Inhabited, they resolved to make for the other, rowed very hard all Night, kept within Sight of it all the next Day, which was the sixth of *July*, and about ten at Night came under the Island; but the Rocks were so steep and craggy, that they could not climb up, but having at length found a convenient Place, where they might thrust in their Weather-beaten Boat, they got safe Ashore.

They had no Food since the Tortoise before-mention'd, and therefore leaving three of their Company with the Boat, the other two, *viz. William Okeley* and *John Anthony*, which last could speak both *Spanish* and *Italian* very well, and the other a little *Spanish*, were sent out in search for fresh Water, and coming to a watch Tower of the *Spaniards*, as soon as they were within call, they spoke to the Watch, and having acquainted him with their miserable Condition and Circumstances; he kindly threw down an old mouldy Cake to them, and then directed them to fresh Water hard by: Having with some difficulty got some of the Cake and Water thro' the diffused Passage of their Throats into their clamorous Stomachs, they return'd with the good Tidings to their Companions at the Boat, and crawling as well as they could towards the Well, *William Adams* attempting to Drink, and after many Essays, being not able to swallow the Water, sunk down to the Ground, and faintly said, *I am a Dead Man*; but his Companions coming to his assistance, they after much forcing, got some of the Water and Cake down his Throat; and being all of them in some measure refreshed, they rested themselves here by the Well-side till the Morning. When the Day fully appear'd, they made their application once more to the Man upon the Watch-Tower, intreating him to direct them the ready way to the next House or Town; this he kindly did, and pointing to a House about two Miles off, they made the best of their way thither, and upon a true representation of their deplorable state, received a very kind Entertainment, after which they began their Journy towards the Town of *Majorca*; being come next Morning into the Suburbs, the strangeness of their Habit, they being bare Foot, bare Legg'd, and having nothing on but loose Coats over their Shirts, drew a Crowd of People about them, and shew'd themselves human enough to relieve them, but told them they must be oblig'd to tarry in the Suburbs till the Vice-Roy sent for them, who as soon as he had information of their being there, commanded their appearance before him. Having examined them about many Affairs touching *Algiers*, and their own Escape he ordered them to be maintained at his own Charge, till they could find Passage into their own Country. In the mean time the People having made a Collection for them, bought them Cloaths and Shoes. Now *Majorca* being a Place where *English* Ships seldom come, they petitioned the Governor that they might have Passage in the King of *Spain*'s Gallies then in the Road, and bound for *Alicant*, which he readily granted; and imbarking at *Alicant* on board two *English* Merchant Ships, they were soon chased by two *Turkish* Rovers, but being near *Gibralter*, they escaped, and here *William Okeley*, *John Anthony*, and *John*—— Carpenter, having already known enough of Slavery, went ashore, from whence *Okeley* having got Passage by Sea to *Cadiz*, and the rest travelling thither by Land, they agreed to go to St. *Lucar*, and imbarking on Board Captain *Smith* of *Redriff*, after five Weeks sailing, safely arrived in the *Downs* in the Month of *September*, 1644.

Johnson's *Narrative of a great Deliverance in a Voyage to the* East Country.

EMbarking at *Harwich Sept.* the 29th 1648. they had not been many Days at Sea, when the Ship sprung a Leak or rather a Plank, and having try'd in vain to remedy the Evil, they threw out their Long-boat, having first fired off eight or nine Guns, as a Signal to *Bartholamew Cook*, Master of another Ship that went out in Company with them, to come to their Relief: The Divine, I mean *Johnson*, who had been sick all the while, was in great danger of being drowned by getting into the Boat; however all of them being safe in, and rowing now they knew not whither in the North Seas, without Compass to guide them, or Provision to sustain them, the three Bags of Pieces of Eight, to the value of three hundred Pounds Sterling, which they had reserv'd could do them no good, the same in the Author's own Words being then but *inutile Pondus*, a Burden of no value: But when they were reduced to an absolute Despair of all outward Means of deliverance, they saw a Vessel make towards them; but being not able to get on board her by reason of the badness of the Weather, they found themselves ready to perish, when they looked Safety in the Face; however Night coming, tho' it was an Evil in it self, yet it proved a Benefit to them; for not perceiving then so well their Danger, they applyed two to an Oar, and made the best way they could, as they conceived, towards the Ship, the Master of which hung out a Light to guide them: But lest the *Howzon*, for he was one of *Howzon*, should think they were lost, and so hoise Sail and be gone (because he could not see them in the Night) they agreed when a Wave took them up to give a great Shout: Being come near at length, and the Sea-men nimbly enough getting on Board, the poor Doctor was in greater Danger of being lost than before; for besides the natural weakness he had in his Hands, they were so benummed with the wet and cold, that he could not climb up a Rope, tho' it were to save his Life: Having try'd several ways for his Deliverance, at last two Sea-men came down the side of the Ship, and would have heaved him up; but the wetness of his Cloths having made him too heavy a Burden for them, one of the Mariners threw him a Rope with a Nooz for him to put it about his Middle, with which he first drew him into the Sea, but his weight forc'd the Rope so fast thro' the Sea-man's Hands, that had there not been a Knot at the end of it by meer Chance, he had gone to the bottom in a Moment: The next pull struck him severely against the side of the Ship, which he says was like an Opiate, that made him forget himself as well as his Sorrow, for he found himself next Morning in the Master's Cabin, where he had slept all Night very well, but yet very sore and lame all over.

Next Day it blew very hard for the Coast of *Norway*, whither their Ship was bound, and about Noon descry'd Land; but that Night the Ship with full Sail ran upon a Rock, and stuck so fast in the Cleft or rather between two Sledges of Rocks, with her Bow over the main Rock, that the fore-part of it stood as firm for the present as the Rock it self; but quickly breaking in the Stern, one of the Sea-men leaped from the Bow with a Rope in his Hand, which was fastned to one of our Masts, and held it so tightly that another slipt down by it, and so all the Company, and some of the Danes, to the Number of eight and twenty got safe to the Rock that way: Our Author was the last that got down the Ship that way, which from that very Moment began to decline from them, and with which the Master (who was still on board) and four of his Seamen perished.

Some of the Crew upon the Rock having measured it round with their Feet, found it both a Rock and an Island, and contrary to all their Hopes uninhabitable;

table; so that waiting with all the patience they could till Morning, they had a glimpse of the Coast of *Norway*, but at such a distance, that they could not possibly reach it any otherwise than with their Desires: However about ten that Day having discovered a Ship with full Sails making towards them, it revived their drooping Spirits; but tho' they made all the Signals they could from the top of the Rock, they never came at them, nor sent out their Boat, to know what they were: Despairing of relief this way, the Sea-man that first leaped upon the Rock, proposed to make a Raft and Venture to Sea, saying he had rather be drowned, than lye there and be Starved. All things fell out happily to further the Design, for the Water had now fallen from the Rock, and left on the side of it the Bottom of the Ship, the Anchors, Masts, and Sails lying on the Rock as Linnen upon a Hedge, so that in a short time they brake a Mast in Pieces, untwisted a Cable, made small Cords, tyed four or five Boards to the broken Mast, put up the small end of the Missen-Mast, cut out a small Sail, with some slight Stern they had made, and so two *Danes* and as many *English* venturing to Sea on these Ruins, they got safely on shore on *Waller* Island in *Norway*; from thence the rest of the Men were fetched off by several Shawls, and having received a kind Entertainment here, they travelled to *Frederickstade*, and so to *Osterfound*, where our Author and the other *English* imbarking for *England*, after many Difficulties arrived at last safely at *Yarmouth*.

The Discoveries of John Lederer *from* Virginia *to the West of* Carolina, *and other Parts of the Continent of* North-America, *begun in* March, 1669. *And ended in* September, 1670.

Lederer's *discoveries in* North-America, 1669, &c.

NOrth as well as South *America* may be divided into three Parts, *viz.* the Plains, Highlands and Mountains; the first being the Territories between the Eastern Coast and the Falls of the great Rivers that run into the *Atlantick*, in extent taking generally ninety Miles; the High-lands begin at those falls, and end at the foot of the great ridge of Mountains, that run thro' the middle of the Continent, North and South-East, called *Apealatei* by the *Spaniards*, and *Pemolnick* by the *Indians*, they lying, according to the Author's best Observation, parallel to the *Atlantick* Shoar, that bearing from *Canada* to Cape *Florida*, North East and South West, and then falling off directly as the Mountains do at *Sara*, where they take the name of *Suala*. As for the Flats or Plains already so well describ'd by others, he only says, that by the rankness of the Soil, and saltish moistness of the Air, dayly discoveries of Fish-Shells three Fathom deep in the Earth are made, and by the Tradition of the *Indians*, these Parts are supposed some Ages ago to have lain under Water. The high Lands, tho' under the same Parallel, have yet a more temperate and healthful Air, the Earth is overgrown with Under-wood in divers Places, and that so interwoven with Vines, that a Traveller must here sometimes cut his way thro': These Thickets harbour all sorts of Beasts of Prey, as Lions, Leopards, &c. tho' not so large and fierce as those of *Asia* and *Africa*; as also small Vermine, such as wild Cats, Foxes and Ratoons: These Parts were formerly possessed by the *Valli* or *Dogi*, but they are extinct, and the *Indians* fixed here are distinguished into the several Nations of *Maboe*, *Nuntaneck* or *Naulaly*, *Nahyssan*, *Sapan*, *Manageg*, *Maugoack*, *Akenatzi*, *Manakin*, &c. who have one Language in common, tho' they differ in Dialects; the Parts inhabited are pleasant and fruitful, clear of Wood and laid open to the Sun; the Valleys feed numerous Herds of Deer and Elks, larger than Oxen; they are called Savena's, the same being Marshy Grounds, and Yearly laid under Water, in the beginning of Summer, by Floods of melted Snow falling down from the Mountains. The *Apalatean* Mountains are barren Rocks where live nothing but Bears in the Hollow Clifts, yet to the Eastward they shoot out into great Promontories of rich Land, known by the high and spreading Trees which they bear, and are called by the *Indians Tauz Pemotnick* or *Aquott*; the Mountains rise higher to the N. E. and at *Sara* they sink so low, that they are easily passed over, but here as before noted they change their Course and Name, running due West, and are called *Sualy*, which rise higher and higher to the Westward.

The *Indians* in these Parts are none of those which the *English* removed from *Virginia*, but were driven by an Enemy from the North West, and invited to fix here by an Oracle, as they pretend above 400 Years ago; for the ancient Inhabitants of *Virginia* were far more rude and barbarous, feeding only upon raw Flesh and Fish, untill those taught them to sow Corn, and shewed them the use of it. These People have three ways of supplying their want of Letters; first by Counters; secondly by Emblems or Hierogliphicks; thirdly by Tradition from Father to Son, in Cony-holes, which when Children, they must learn by rote: They use Pebbles or short scaullings of Straw or Reeds for Counters, and where a Battle has been fought or a Colony Planted, they erect a small Pyramid of these Stones, consisting of the Slain or transplanted Numbers: Their Reeds and Straws serve them in Religious Ceremonies, for they lay them orderly in a Circle, when they are preparing for their Devotion or Sacrifices, and that performed, the Circle still remains; since 'tis Sacriledge to disturb or touch it; and the Dispositions and sorting of the Straws and Reeds, shew what kinds of Rites have been there celebrated, as Invocation, Sacrifice, Burial, &c. The Faculties of the Body and Mind, they usually express by Emblems, as by a Stag they instance Swiftness, Wrath by a Serpent, Courage by a Lyon, Fidelity by a Dog, and by a Swan they signifie the *English*, alluding to their Complexion and flight over the Sea; they keep an Account of Time and other Things on a String or Leather Thong tyed into small Knots of several Colours, and the *Oenacks* use small Wheels; every Nation gives his particular Arms, the *Sasquesabanaugh* bear a Tarapine or small Tortoise; the *Akenatzi* a Serpent; the *Vahyssanes* three Arrows, &c. They Worship one God, the Creator of all Things, who some call *Okee*, others *Mannith*, to whom alone the High Priest or *Perikn* offers Sacrifice, and that they believe he had no regard to sublunary Things; but Commits the Government of Mankind to lesser Deities, as *Quiaxosough* and *Tagkamsough*, i. e. Good and Evil Spirits; to these the inferior Priests pay their Devotion and Sacrifice, at which they recite in a lamentable Tone the Feats of their Ancestors: From four Women, *viz. Pask*, *Sepoy*, *Askarin* and *Maraskarin*, they deduce the Race of Mankind, which for that Reason they divide into four Tribes, distinguished under those several Names; they very religiously observe the degrees of Marriage, which they limit not to distance of Consanguinity, but difference of Tribes, which are continued in the Issue of Females, and for two of the same Tribe to Match, is abhorred as Incest, and punished with the greatest severity; they divide their Burying-Place into four Quarters, assigning one to every Tribe; for to mingle their Bodies, even when Dead, they esteem to be wicked and ominous. They commonly wrap up the Corps in Beasts Skins, and with it buy Provision and Houshold Stuff for its use in the other World, and when their great Men dye, they also kill some Prisoners of War to bear them Company: They believe the Transmigration of Souls; for they say, the Angry is possest with the Spirit of a Serpent, the Bloody with that of a Wolf, the Amorous of a Deer, the Faithful of a Dog, &c. and therefore they are figur'd by these Emblems: They Place the Residence of their lesser Deities beyond the Mountains and *Indian* Ocean; and tho' they want those means of improving natural Reason, which the use of Letters does afford us, yet they are not wholly destitute of Learning and Sciences, for by those little helps they have found out, many improve themselves to a considerable knowledge in Physick, Rhetorick, and Policy of State, for the Author, says he, had been present at several of their Consultations and Debates, and to his Admiration had heard

heard some of their Seniors deliver themselves with as much Judgment and Eloquence as he could have expected from Men of a liberal Education and good Literature.

He began his first Expedition *March* the 9th 1669 in the Company of three *Indians*, and went out at the Falls of *Pemeoncock*, or *York* River in *Virginia*, from an *Indian* Village called *Shichehamani*, and lay that Night in the Woods, encountring nothing remarkable but a Rattle-Snake of an extraordinary size, since he judged it two Yards and an half long, and as thick as a Man's Arm; by the distention of her Belly they thought her big with Young, but having killed and opened her, they found a small Squirrel there, and the *Indians* in resolving our Traveller's Doubts about the strangeness of such a Thing, plunged him into a greater astonishment, when they told him it was usual with these Serpents, when they lay basking in the Sun, to fetch down these Squirrels from the Tops of Trees by fixing their Eyes stedfastly upon them, with the Horror of which those little Animals were so terrified, that they had not Power to keep themselves from tumbling down into the very Jaws of their Enemy, who took in all his sustenance without chewing, tho' others have affirm'd that these Serpents climb up the Trees, and surprize their Prey in the Nest. Entring next Day into Marshy Grounds between *Pemeoncock*, and the head of the River *Matanenenah*, the heaviness of the way obliged him to cross *Pemeoncock* at the Confluence of it, and South Branches of it, in the *Peninsula* made, by which a great *Indian* King called *Totopotteme* was formerly Slain in Battle, fighting for the Christians against the *Malecocks* and *Nalissians*, from whence it retains its Name to this Day: Travelling thro' the Woods, a Doe seiz'd by a wild Cat, crossed the way, the miserable Creature being even spent with the Burden and Cruelty of her Rider, who having fastned on her Shoulder, ceased not to suck her Blood till she sunk under him, which being perceived by one of the *Indians*, he luckily shot her thro' the Belly with his Arrow, made her quit her Prey, making a terrible Grimace at them, but they escap'd her Revenge, which very probably had ensued, if the Wound had not been mortal: This Cat was somewhat bigger than an *English* Fox, of a reddish Grey, fierce, ravenous and cunning; for finding Deer too swift for them, they watch them upon the Branches of Trees, and as they walk or feed under them, jump down upon them; the Fur of the wild Cat, tho' not very fine, is yet valued for its vertue in removing Colds, Aches and Pains, if worn next the Body; their Flesh tho' very rank is eaten by the *Indians*: They found the way rough on the eleventh and twelfth, but on the thirteenth they reached the first Spring of *Pemeoncock*, having crossed the River that Day four Times, which was so shallow that it could hardly wet his Horses Patterns; here a little under the Earth, he found flat Pieces of petrified Matter, being Loadstone on one side, but Isinglass on the other, several of which Pieces, with a transparent Stone like Crystal, that cut Glass, and a white *Marchasite* that he bought of the *Indians*, he presented to Sir *William Berkley*, Governor of *Virginia*: On the fourteenth they descry'd from an high Hill the *Apalatean* Mountains to the West of them, but at such great distance that he could not distinguish whether they were Mountains or Clouds, until his *Indian* Fellow-Travellers prostrating themselves by way of Adoration, howled out after a barbarous manner, *Okie Peze*, i. e. God is nigh; next Day passing over the South Branch of *Rappahanock* River, he was almost swallowed up with a Quick-Sand: He dayly saw great Herds of red and fallow Deer, and Bears crashing most like Swine, on the sides of the Hills: Small Leopards he saw in the Woods, but never any Lyons, tho' their Skins are much wore by the *Indians*. The Wolfs are extreamly ravenous in these Parts, and are only feared by Fire; Beaver and Otter are in every River, and the Woods are full of Grey Foxes. On the seventeenth they reached the *Apalatei*, where the Air is very thick and Chill, and the Waters issuing out of the Mountains side, of a blue Colour, and allomith Taste. Having on the eighteenth attempted in vain to ride up, he left his Horse with one of the *Indians*, and with the other two *Indians*, and no small difficulty, got at last up to the Top of the Mountain, which is so high, that tho' he set out with the first appearance of Day, yet it was late before he reached the Top of the Mountain, from whence next Morning he saw the *Atlantick* Ocean, washing the *Virginian* Shoar; but to the North and West his sight was suddenly bounded with Mountains higher than that he stood upon; here he wandred in Snow for the most part till the 29th, hapning to find some Passage thro' the Mountains; but he was so oppress with Cold, that he was necessitated at last to return to the *Indian* with his Horse at the foot of the Mountain, the same way he went.

The Author began his second Expedition on the the 20th of *May* 1670. in Company with one Major *Harris*, twenty Christian Horsemen, and five *Indians*; and marched from the Falls of *James* River in *Virginia* towards the *Manakins*, by whom on the 22d they were welcomed by Volleys of Shot; near that Village they observed a Pyramid of Stone piled up together, which their Priests laid there, was the number of an *Indian* Colony drawn out by Lot from a neighbouring Country overstocked with People, and led thither by one *Monack*, from whom they were denominated. Here inquiring the way into the Mountains, an old Man with a Staff describ'd two Paths on the Ground, one pointing to *Mahocks*, and the other to *Nahyssans*, but the Author's *English* Company (for by the way you must know he was a *German*) slighting the *Indians* direction, formed their Course by the Compass due West, and so it fell out with them, as it does with those Land-Crabs that crawling backwards in a direct Line, cannot avoid those Trees that stand in their way, but climbing over their very tops, descend again on the other side, and so after a whole Days Labour, gain not above two foot of Ground; thus the Company going direct West, rode over steep and craggy Clifts, which beat their Horses quite off the Hoof, and in these Mountains they wandered from the 25th of *May* till the 3d of *June*, finding very little Sustenance, either for Man or Horse; but then they came to the South Branch of *James* River, which Major *Harris* observing to run southward, vainly suppos'd to be an Arm of the Lake of *Canada*, and was so elevated with the fancy, that he would have erected a Pillar in memory of the Discovery, if the fear of the *Mahock Indians*, and want of Food, had allowed him to stay; here our Author would have them cross the River and march on, but the rest of the Company were so weary of the Enterprise, that he must have run some danger of his Life, had he not been furnished with a private Commission from the Governor of *Virginia* to proceed, tho' the rest of the Company should forsake him. The lesser Hills or *Akeutshuck* are here impassable, and the Rocks at a distance resembled Eggs set an end. *James* River is here as broad as 'tis a 100 Miles lower at *Manakin*, and the Passage over it very dangerous; from the observation they made of Straws and rotten Chunks hanging in the Boughs of Trees on the Bank, and 22 Foot above Water, they argued that the melting Snow falling from the Mountains swelled the River to that height, the Air in these Parts was so moist, that all their Bisket became mouldy, and not fit to be eaten, so that some of them would now be glad of *Indian* Meal parched.

On the 5th of *June*, the Author and his Company parted good Friends, they return'd, and he with *Jack Setacon*, a *Susquesahanough Indian*, pursuing his Journy changed his Course from West to South West and by South, to avoid the Mountains. Major *Harris* at parting gave him a Gun, believing him a lost Man and given up as a Prey to *Indians* or savage Beasts, which made him forwarder in *Virginia* to relate strange things to his own Advantage and my Discredit: From the 5th to the 9th he travelled thro' difficult ways, without seeing any Town or *Indian*, and then arrived at *Stapan*, a Village of the *Nahyssans*, about 100 Miles distance from *Mahock*, upon a Branch of *Shawan* or *Korenock* River, and tho' he had just cause to be afraid of these *Indians*, because they had been in continual hostility with the Christians for ten Years before, yet presuming that the Barter which he carryed with him would procure him welcome, he entrusted himself with them, who examined him strictly from whence he came, whither he was going, and what his Business was; but when he had bestowed some Trifles of Glass and Metal amongst them, they were contented with easy Answers, and shewed him all the demonstrations of Kindness imaginable, as offering of Sacrifice, a Compliment shewed only to such as they designed to honour in a more particular manner. Yet they went further and consulted their Gods, whether they should admit him

into their Nation and Councils, and oblige him to dwell amongſt them by a Marriage with the King's, or ſome of their great Men's Daughters; but having with much ado waved their Courteſy, he got his Paſs-port, after he had given his Word he would return to them within ſix Months again. *Sapon* is within the Limits of *Carolina*, pleaſantly and advantageouſly ſituated, and tho' it ſtands high and upon a dry Ground, has the benefit of a fine River and a rich Soil. Their King's Reſidence, called *Pintabe*, is not far from hence, upon the ſame River, and happy in the ſame Advantages, both of Pleaſure and Profit; this Nation is governed by an abſolute Monarch; the People tall of Stature, Warlike and Rich: He ſaw great ſtore of Pearl unbored in their Temples or Oratories, which among other Spoils they had won from the *Indians* of *Florida*, and value as much as we do. From hence he directed his Courſe to *Akenatzi*, an Iſland bearing South and by Weſt, and about 50 Miles diſtant from *Sapon*, on a Branch of the ſame River: The Country tho' high is level, and for the moſt part a rich Soil, as he judged by the growth of the Trees; yet where it was inhabited by *Indians*, it lay open in ſpacious Plains, has a very good Air, and tho' he travelled in *June*, the heat of the Weather hindred him not from riding at all Hours, without being much incommoded by the Sun; he arrived at *Akenatzi June* 12th, where the Current of the River was ſo ſtrong, that his Horſe had much difficulty to reſiſt it; this Iſland tho' ſmall, maintains many Inhabitants, who are here ſecure enough, being naturally fortifyed with faſtneſſes of Mountains and Water on every ſide: Upon the North Shoar they Yearly reap great Crops of Corn, of which they always have a twelve Months Proviſion beforehand, for fear of an Invaſion from their powerful Neighbours: They are under the Government of two Kings, one excelling in Arms, and the other in Hunting and Agriculture: They hold all things, except their Wives, in common, and their Cuſtom in eating is, that every Man in his turn Feaſts all the reſt, and he that makes the Entertainment is ſeated between the two Kings, where having highly commended his own Cheer, they carve and diſtribute it among the Gueſts. At his arrival here, he met four Stranger *Indians*, whoſe Bodies were painted in various Colours, with the forms of Animals, the likeneſs of which he had never ſeen, and from ſome Diſcourſe and Signs that paſſed between them, he collected that they were the only Survivors of 50; who ſetting out together from a great Iſland, as is ſuppoſed from the North Weſt they croſſed a great Water, wherein moſt of them periſhed in a Storm, the reſt being famiſhed to Death in the Marſhes and Mountains, after two Months Voyage by Land and Water, in queſt of this Iſle of *Akenatzi*: The moſt reaſonable Conjecture he can form of this Relation is, that theſe *Indians* might come from *New Albion* or *California*, from whence we may imagine ſome great Arm of the *Indian* Ocean or Bay ſtretches into the Continent, towards the *Alapatean* Mountains in the nature of a midland Sea, wherein many of theſe *Indians* might have periſhed; to confirm which he adds, that he had heard ſeveral *Indians* teſtify, that the *Rickohockans*, who inhabit not far Weſt of the *Apalatean* Mountains, are ſeated upon a Land, as they term it, of great Waves, whereby 'tis ſuppos'd they mean the Sea-ſhoar: The Day after his Arrival at *Akenatzi*, a *Rickohockan* Ambaſſador, attended with five *Indians* with painted Faces, was receiv'd, and that Night invited to a *Ball*, according to their Faſhion, but in the height of their Jollity, the Room was ſuddenly darkned by a Smoak contrived on purpoſe, and for what Cauſe is unknown, the *Rickohockan* and his Retinue were barbarouſly Murdered, at which the *German* was ſo terrified, that he ſtole away next Day with his *Indian* Companion, without taking his leave of them.

On the 14th of *June* he purſued his Journey a South South Weſt Courſe, ſometimes by a beaten Path, and ſometimes over Hills and Rocks, and was forced to lye in the Woods; for tho the *Oenock Indians*, whom he ſought in a direct Line were not above thirty odd Miles diſtant from *Akenatzi*, yet he was obliged by the way to go ſo far round about, that he could not reach *Oenock* till the 16th, where the Country by the Induſtry of theſe *Indians* is very open and clear of Woods; their Town is built round a Field, where in their Sports, they exerciſe ſo much Labour and Violence, and in ſuch great Numbers, that he ſaw the Ground wet with the Sweat that dropped from their Bodies. Their chief Recreation is flinging of Stones; the People are of mean Stature and Courage, Covetous and Thieviſh, but induſtrious to earn a Penny, and therefore hire themſelves out to their Neighbours, who imploy them as Porters or Carryers. They plant abundance of Corn, reap three Crops in a Summer, and ſupply all the adjacent Parts out of their Graneries: They build their Houſes of Watling and Plaiſter; in the heat of Summer they go abroad in the Night under their Arbours of wild Palm; ſome make their Houſes of Reed and Bark: They generally build them round, and to each Houſe belongs a little Hovel like an Oven, where they lay up their Corn and Maſt, and keep it dry. They parch their Nuts and Acorns over the Fire, to take away their rank Oilineſs, which being afterwards preſſed, yield a Milky Liquor, and the Acorns an Amber-coloured Oyl: In theſe mixed together they dip their Cakes at great Entertainments, and ſo ſerve them up to their Gueſts as an extraordinary Dainty. Their Government is Democratical, and the Sentences of their old Men are received like Laws, or rather Oracles by them.

The *Shakory Indians* dwell fourteen Miles W. S. W. of the *Oenocks*, in a rich Soil, abounding, but yet agreeing in Cuſtom and Manners with the other; he paſſed them by, and after two Days Journey on the 19th of *June* arrived at *Watery*, about 40 Miles diſtant, and bearing W. S. W. off *Shakory*. This Nation differs in Government from all the other *Indians* in theſe Parts, for they are Slaves rather than Subjects to their King; their Monarch when he was there was a grave Man, and courteous to Strangers; yet he could not without ſorrow ſee his barbarous Superſtition, in hiring three Youths, and ſending them out to kill as many young Women of their Enemies as they could light on, to ſerve his Son, then newly dead, in the other World, as he vainly fancyed; and accordingly theſe Youths returned with the Skins torn off the Heads and Faces of three young Girls, which they preſented to his barbarous Majeſty, and were gratefully accepted by him. *June* 21ſt he left *Watary*, and keeping a Weſt Courſe, for near 30 Miles, came to *Sara* or *Suala*, ſituate near thoſe Mountains, from whence the *Indians* draw great quantities of Cinabar, with which when beaten to Powder, they colour their Faces, it being a deeper Purple than Vermilion, and is the ſame which is in ſo much eſteem with Phyſitians, being the firſt Element of Quickſilver; he alſo wondered to find here Cakes of white Salt amongſt them, but whether made of Sea-water, or taken out of Pits he knew not; tho' he was apt to believe the latter, becauſe the Sea was ſo remote from them: Theſe *Indians* are ſo indiſcreetly fond of their Children, that they will not chaſtiſe them for any Miſchief or Inſolence done by them. A Little Boy would have ſhot our Traveller thro' the Body with an Arrow had he not reconciled him with Preſents, and all this, becauſe he ſpurred his Horſe out of another Arrows way, which he levelled at him; this cauſed ſuch a Mutiny among the Youth of the Town, that the Seniors taking his Horſe and himſelf under Protection, had much ado to appeaſe them.

From *Sara* he kept a South South Weſt Courſe till the 25th of *June*, and then reached *Wiſacky*, which three Days Journy was more troubleſome to him than all his Travels beſides; the direct way from the one place to the other, being over a continued Marſh over-grown with Reeds, from whoſe Roots ſprung knotty Stumps, as hard and ſharp as Flint; he was forced to lead his Horſe all the way: This Nation was ſubject to a neighbouring King, reſiding on the Bank of a great Lake, called *Uſhery*, invironed on all ſides with Mountains and *Wiſacky* Marſh. Having on the 26th croſs'd a freſh River that runs into the Lake of *Uſhery*, he came to a Town which was more populous than any he had ſeen in his Journy. The King lived about three Miles from it, and tho' his Dominions were large and populous, yet he was in continual fear of the *Ouſtack-Indians* living on the oppoſite ſide of the Lake, a People ſo addicted to Arms, that even their Women take the Field, and ſhoot Arrows over their Husbands Shoulders, who ſhield them with Leathern Targets; the Men it ſeems fought with Silver Hatchets, for one of the *Uſheries* told him they were of the ſame Mettle with the Pommel of his Sword. They are a cruel Generation and prey upon People, whom they either ſteal or force away from the *Uſheries* in *Periagos*, to ſacrifice them

to their Idols. The *Ushery* Women delight much in Feather Ornaments, whereof they have great variety, but Peacocks are most in esteem; they are tolerably handsome, and are civiler in their Demeanor than the other Nations: These miserable Wretches are strangely infatuated with Satanical Illusions; it was horrible to see one of them with his Neck all on one side, foam at the Mouth, stand bare-foot upon burning Coals for near an Hour, and then recovering his Senses, leap out of the Fire without any sign of hurt. The Water of *Ushery* Lake seemed a little Brackish to his Taste, which he rather imputes to some mineral Waters that flow into it, than any Saltness it can have from the Sea; many pleasant Rivulets run into it, and it is well stored with Fish. He judged it to be about 10 Leagues broad, but how far the Lake extended westerly, he could neither learn nor guess: He understood upon enquiry, that two Days and an halfs Journey from hence to the South West there was a powerful Nation of Bearded Men, whom he supposed to be *Spaniards*, because the *Indians* never have any Beards, it being an universal Custom amongst them, to prevent their growth by plucking the young Hair up by the Roots. Westward lay a Government inhospitable to Strangers, and to the North, over the small Mountains lay the *Kickekockans*; he thought it not safe to venture himself amongst the *Spaniards*, and therefore on the 28th faced about and looked homewards.

To avoid *Wisacky* Marsh, he shaped his Course North East, and after three Days travelling over hilly ways, where he met with neither Path nor Road, he fell into a barren sandy Desart, where he suffered miserably for want of Water, the heat of the Summer having dryed up all the Springs, and left no sign of any, but the gravelly Channels thro' which they ran, so that if he had not now and then found a standing Pool, beset by Nature with shady Oaks, to defend it from the Ardour of the Sun, his *Indian* Companion, Horse and himself must certainly have perished. In this distress he travelled till the 12th of *July*, but then found the Head of a River, which afterwards proved to be the *Ernco*, whereby they were not only refreshed, but likewise had hopes of coming into a Country again, where they might find Game for Food at least, if not discover some new Nation or People. Wherefore having twice crossed that River, they were led by it on the 14th of *July* to the Town of *Katearas*, a Place of good Trade, and the Residence of the haughty Emperor of the *Toskiroro's*, called *Kaskesara*, vulgarly *Kaskous*: The grim Prince at his first appearance demanded his Gun and Shot, which he readily parted with, for fear of a worse Treatment. The People here at that time seemed prepared for some extraordinary Solemnity, for the better sort both of Men and Women, had very finely adorned themselves with bright Pieces of Copper in their Hair and Ears, and about their Arms and Necks, which upon festival Occasions they used as an extraordinary Bravery, whereby it seemed this Country had rich Mines of Copper; but feared the bloody *Kascous*; would not allow him to tarry for further information; wherefore leaving *Kascaras*, he travelled thro' the Woods till the 16th, when he arrived at *Kawitziokan*, an *Indian* Town upon a Branch of the River *Rorenoke*, which there he pass'd over and continued his Journey to *Meucherick*, from whence departing the 17, he lay all Night in the Woods, and next Morning betimes passing by *Natoway*, he that Evening reached *Apamatuck* in *Virginia*.

Lederer began his last Expedition *August* 20th 1670. in the Company of Colonel *Collet* of *Virginia*, 9 *English* Horse-men and 5 *Indians* on Foot, and that Night reached the Falls of *Rappahanock* River in *Indian-Manatepeuk*; next Day they passed it over, where it divides into two Branches North and South, keeping the main Branch North of them. They found it so shallow on the 23d, that it only wet their Horses Hoofs; on the 24th they travelled thro' the *Savanas*, and a little after arrived at the *Promontories* or Spurs of the *Apalatean* Mountains; the *Savanas* now mentioned are exceeding Pleasant, and feed vast numbers of red Deer, who for their unusual largness are improperly called *Elks*; for indeed the right *Elk*, tho' very common in *New-Scotland*, *Canada*, and those Northern Parts, is never seen on this side the Continent, since that which the *Virginians* call *Elk*, differs not at all from the red Deer of *Europe* but in his Dimensions, which are far greater, but yet the true *Elk* far exceeds them in bigness: Their Heads and Horns are not very different, but the Neck of the *Elk* is so short, that it hardly separates the Head from the Shoulders, which is the reason they cannot feed upon level Ground, but by falling on their Knees, tho' their Heads be a Yard Long; therefore they commonly either Brouse upon Trees, or standing up to the Belly in Ponds or Rivers feed upon the Banks; their Cingles or Tails are hardly three Inches long.

On the 26th of *August*, they came to the Mountains, where they were necessitated to leave their Horses with two or three *Indians*, and go up on foot; the ascent was so steep, and the Cold so intense, that after they had gained the top, they were discouraged from attempting to proceed any further, they seeing from hence another Mountain bearing North and by West to them of a prodigious height; for according to the Observation of the distance taken by Colonel *Collet*, it could not be less than fifty Leagues from the Place where they stood. Here *Ledeger* was stung in his Sleep by a Mountain-Spider, which had killed him, had not an *Indian* sucked out the Poison; for receiving the hurt in the tip of one of his Fingers, the Venom immediately shot up into his Shoulder, and so inflamed his Side, that its impossible to express the Torment: The method of Cure used, was first a small Dose of Snake-Root Powder, which he took in a little Water, and then making a kind of Plaister of the same, applyed it near to the Part affected. Having so done, the *Indian* swallowed some by way of Antidote himself, and sucked the Patients Finger's Ends so violently, that he felt the Venom retire back from his Side into his Shoulder, and from thence down his Arm: Having thus sucked half a score times and spit as often, he was eased of all his Pain, and perfectly recovered. This venemous Mountain-Spider is not unlike our great Blue-Spider, only 'tis sometimes somewhat longer, and he supposes the nature of its Poison to be much like that of the *Tarantula*: Our Patient being thus recovered, they unanimously returned back to the Place where they had left their Horses, and from thence rode home without attempting any further Discoveries.

Our Author says, they must certainly be in a great Error, who imagine that the Continent of *America* is but 8 or 10 Days Journey over from the *Atlantick* to the *Indian* Ocean, which must be acknowledged, if it be considered that *Drake* kept a W. N. W. Course from Cape *Mendocino* to *California*; however by what he could gather from the stranger *Indians* at *Akenatzi* of their Voyage by Sea, to the very Mountains from a far distant N. W. Country, he is brought over to the Opinion of those who think that the *Indian* Ocean does extend an Arm from *California* into the Continent, as far as the *Apalatean* Mountains, answerable to the gulphy end of *Florida* and *Mexico* on this side; yet he is far from believing that such great and Navigable Rivers are to be found on the other side of the *Apalateans*, falling into the *Indian* Ocean, as those which run from them to the Eastward: His first reason he deduces from the knowledge and experience already had of South *America*, whose *Andes* send the greatest Rivers in the World into the *Atlantick*, but none into the *Pacifick* Sea; and then he insists that all our Water-Fowls which delight in Lakes and Rivers, as Swans, Geese, *&c.* Come over the Mountains from the Lake of *Canada*, when 'tis frozen over every Winter, to our fresh Rivers, which they would never do, could they find any on the other side of the *Apalateans*.

As for those who would go upon Discoveries into the North Continent of *America*, they must take notice there are two Breaches in the *Apalatean* Mountains, opening a Passage into the western Parts of the Continent, one according to the Account he had from the *Indians*, is at a Place called *Tynodon*, to the Northward, the other at *Sara*, where he himself had been; but the way thither being thro' a vast Forest, where they seldom meet with any Path or Road, a Traveller must form his Course by a Compass; and for want of that some have taken their direction from the North side of the Trees, which is distinguished from the rest by quantities of thick Moss growing thereon. There will not many Obstructions occur to you on Horse-back, in your Passage to the Mountains, but where the Course is interrupted by the Branches of the great Rivers, which in many Places are not fordable, and therefore if you be unprovided of means or strength to make a Bridge by felling Trees across,

you

you may be forced to go a great way about: In this respect Company is necessary, but in others so inconvenient, that he would not advise above half a dozen or ten at most, to travel together, and of these the major part *Indians*, since the Nations in your way are apt to be jealous of Christians coming amongst them in any Numbers, but are as courteous and hearty to a few, from whom they apprehend no Danger: When you pass thro' an even level Country, where you can take no particular remarks from Hill or Waters to guide your self when you come back, you are not to forget to notch the Trees as you go along, with your small Hatcher, that at your return you may know when you fall into the same way you went: Instead of Bread, our Traveller used Meal of parched Maiz or *Indian* Wheat, which he seasoned at Meals with a little Salt; the same being more portable and strengthning than Bisket, and will suffer no mouldiness by any Weather; as for other Provisions, you may safely trust to your Gun, both for Deer and Fowl, but you must not forget to dry or parboil some of the last before you come to the Mountains, where you will meet with no Game, except a few Bears. Such as cannot lye on the Ground must be provided with light Hammocks, which hung in the Trees, are more cool and pleasant than any Bed whatsoever. The Expedition should be thus ordered; an *Indian* Scout or two ought to march before the Company as far as they can in sight, both for the finding out Provision, and discovering of Ambushes, if any should be laid by Enemies: The other *Indians* should keep on the right and left, armed not only with Guns, but Bills and Hatchets, to build some Arbours or Cottages of Boughs and Barks of Trees, to shelter and defend you from the injury of the Weather: Its necessary to make great Fires at Night round about the Place where you take up your Quarters, as well to scare wild Beasts away, as to purify the Air; neither must you fail to go the round at the close of the Evening, for then, and betimes in the Morning, the *Indians* put all their Designs in Execution; and never attempt any thing in the Night. When in the remote Parts you draw near to an *Indian* Town, you must by your Scouts inform your self whether they hold any Correspondence with the *Saſqueſahanaughs*; for to such you must give notice of your Approach by your Gun, which is not to be practised amongst other *Indians*, who not knowing their use, it would frighten and dispose them to some treacherous Practice against you. When you come to a Town, enter into no House till you are invited, and then seem not afraid to be led in pinioned like a Prisoner, for that is the Ceremony they use to Friends and Enemies without distinction: You must accept of an Invitation from the Seniors, before that of young Men; and refuse nothing that is offered or set before you, since they are very Jealous and sensible of the least slight and neglect from Strangers, and prone to Revenge.

As for Trade with the *Indians* our Traveller says, if you design to have one with Neighbouring *Indians* for the Skins of Deer, Beaver, Otter, wild Cat, Fox, *&c.* their best Truck is a sort of coarse trading Cloth, of which a Yard and an half makes a Mantle-Coat or Mantle fit for their wear; as also Axes, Hoes, Knives, Scisars, and all sorts of edged Tools; Guns, Powder and Shot, *&c.* they will greedily barter for; but to supply the *Indians* with Arms and Ammunition is prohibited in all *English* Governments. In dealing with the *Indians* you must be positive and at a Word, for if they find you fall any thing in your Price, they will spend time in higling for farther Abatements, and seldom conclude any Bargain. You may sometimes with Brandy or strong Liquor dispose them to an Humour of giving you ten times the value of your Commodity, but at other times they are so hard bound, that they will not offer half the Market-Price, especially if they be aware you have a design to Circumvent them with Drink, or that they think you have a desire to their Goods, which you must seem to slight and disparage: To the remoter *Indians* you must carry other kind of Truck, such as small Looking-Glasses, Pictures, Beads and Bracelets of Glass, Knives, Scisars, and all manner of Toys for Children, which they will purchase at any rate, either with their Current Coyn of small Shells, or perhaps with Pearl, Vermilion, and Pieces of Cristal; and towards *Ushery* with some odd Pieces of Plate or Bullion, which they sometimes receive in Truck from the *Oestacks*: To justify which Account our Traveller purchased some Pieces of unwrought Silver of the *Usheries*, for no other end than to justify this Account he gave of his second Expedition, which had not determined at *Ushery*, had he been accompanyed with half a score resolute Youths, that would have stuck to him in a farther Discovery towards the *Spanish* Mines.

The Captivity of Thomas Phelps *at* Machaness *in* Barbary, *and his strange escape from thence.*

Phelps *his Captivity at* Machaness *and Escape,* 1684, &c

ON the 27th of *Aug.* 1684. he sailed from the *Downs* in the *Success* of *London*, bound with Salt for *Bantry* in *Ireland*, from whence on the 20th of *September* he set Sail for the *Maderas*; but on the 5th of *October* being 100 Leagues West off the Rock of *Lisbon*, he espyed a Sail to Windward, who gave him Chase, and upon hailing one another made answer she was from *Algiers*, and sent out her Boat, but the *English* giving three Shouts, it so surprised the Enemy, that they went on board again; but tho' the *English* Man hereupon made all the Sail he could, yet the *Turk* quickly fetcht him up again, kept after her all Night, and in the Morning put up *Turkish* Colours, commanded the *English* Man to brace his Head Sails, and sent a Boat to demand his Pass. Aboard her was an ancient Moor, who had formerly been a Slave in *England*, and spoke the Language very well; he seeing the *English* in a readiness, with what Arms they had, asked if they had a mind to break the Peace, and told the Master out of the Boat, that he need not trouble himself to keep them out of his Vessel, for none of them could be persuaded to come on board him: The Master hereupon having shewed his Custom-house Cockets, for he had no Pass-boards, the *Moor* carryed them to the Captain, whom nothing would satisfie but that the Master himself must come on board him; after which having wheedled all his Men, under pretence that they were *Portuguese* on board him also, except two; he now as freely discovered what before he as industriously concealed, that he was a *Salle*-Man, and took the Ship, after which they cruised about 30 Leagues to the west of the Northern Cape, and in about a fortnight took one *Samuel Crompton* from *Faro*, and then a small Ketch from *Cadiz*, with Sherry and Raisins, bound for *Limerick*; so that the number of Christians taken on board the three Prizes, amounted to 25, besides 12 that were before on Board the Pyrate: This done, he made all the Sail he could for *Salle*, on whose Bar runs a great Sea, which obliged them to come to an Anchor near it, at what time all the Christian Captives were let loose from their Iron Shackles, and the Captain sent his Boat ashoar, during which the Christians observing the *Moors* fell all asleep, and that the Captain also with his Head over the Rail upon the half Deck, seemed deeply engaged; *Phelps* observing the Opportunity, would have engag'd his fellow Slaves to have dispatch'd the Infidels, and seized the Ship, but one of them standing off, the design proved abortive. They stood in at four in the Afternoon for the Bar, and at Night the Prisoners being carryed Ashoar, were lodged in an old Barn, without the least Accommodations, and in a short time an Order came, that all of them should be carryed to *Machaness*, which is about 70 Miles distant from *Salle* where they arrived in two Days and an half; being brought before the Emperor, *Muley Ismael*, he ordered them to be sent amongst the rest of his Slaves: Its impossible to relate the many Cruelties of this Prince; our Author was an Eye-Witness the second Day after his arrival there, of his lancing 27 Negroes one after another, and every Day after till

New-

New-Years Day, he saw or heard of some inhuman Action perpetrated by him. Nay *Hansed Ben Haddu* that was Ambassador in *England* two or three Years before, notwithstanding all the Civility shewed him there, and his seeming good Deportment, was so far from retaliating our Nations Kindness, that his usual Salutations to the *English* Slaves was *Alli Hazzebuck*, i. e. *God roast your Soul.* The Bread they were fed with was of Barley, but Black, and withal stunk, the Corn being kept seven Years under Ground before used, and one Days allowance, if sold, would not yield above three Farthings: Beef and Mutton was cheap, but Mony very scarce. The work of the Slaves was continually building Houses and Walls, the Materials and Method very odd; for there are Boxes of Wood of Dimensions according to Pleasure, which they fill with Earth powdred, and Lime and Gravel well beat together, and tempered with Water, and when full they remove the Box according to order, and withdraw the Box Planks, and leave this matter to Dry, which then will acquire an incredible hardness, and is very durable: The Emperor himself has sometimes worked in the Lime and Dirt for an Hour together, and would incourage the Slaves, saying *Liferal, God send you to your own Countries.* The Reader may very well imagine, how weary the Christians were of their Captivity: Indeed *Phelps* his Friends in *England* had given order to Mr. *Luddington*, an *English* Merchant in *Barbary*, to endeavour his relief, if 150 *l.* would effect it; but that being refused, he resolved to search out all Opportunities to make his Escape, tho' with the hazzard of his Life; at length he open'd his Mind to Mr. *Baxter*, who about two Years and an half before had made an unlucky Attempt to run away, but being taken, received the Bastinado in such a manner, that he could not Work for a 12 Month after, having Irons continually on his Legs, and who, notwithstanding all he had suffered, engaged in the Enterprise with two *Bristol* Men, who were ready at an Hours warning, when the other appointed: There were then about 800 Christian Slaves of all Nations at *Machaness*, of which 260 were *English*, many of whom offered good Ransoms, and the King refused to discharge none particularly, but that they should go all together, and having set forwards on the first of *July* towards *Santa Cruz* with a Potent Army against his Nephew, so as to leave none of them any hopes of their Liberty till his return; *Phelps* and his Companions, *viz. Edmund Baxter*, *Anthony Bayle*, and *James Ingram*, thought it high time to put their projected escape in Execution.

They agreed on the 29th of *May*, with their Guardian *Moors* for a Blankil, *i. e.* two Pence apiece to have the liberty to be excused from Working that Day; wherefore they went to the Town of *Machaness*, and having but a small matter of Mony about them, *viz.* nine Blankils, they laid it out in Bread, and two small Bullocks Bladders, with a little Burdock to carry Water in. About three in the Afternoon they began their Journy, designing to go as far as an old House, called the King's House, 3 Miles from the Town, where they designed to hide themselves till Night; but proceeding in their Journy they discovered upon a loaded Horse, the *Moors* who lived at that House, which obliged them to quicken their Pace, and keep ahead of him, and coming near the House they discovered about 20 *Moors* sitting there, at which they were much surprised, but providentially discovering a Parcel of Lime-Kills on one side of the House, they struck up to them immediately, without the *Moors* observations, where they lay flat on their Bellies: About half an Hour after came two *Moorish* Women thither to gather some loose Wood, at which they thinking it not convenient to show themselves fearful, lest they should be taken for Renagadoes, spoke to them, and so continuing there without any molestation till Night, they pursued their Journey, travelled 19 Miles that Night, and passed by a great many Tents, from whence the *Moors* saw 'em, but mistook them for their own Country-men: They crossed the great River that runs down to *Mamora*, and about a Mile from the Creeks thereof, found a convenient Bush, where they remained all the following Day, without any disturbance: They found themselves under a necessity at Night of returning to the same River to be supply'd with Water, and so continued their Progress twelve Miles before Day-break, when they found a convenient Bush near to a great Valley, where they reposed themselves, and tho' they saw a great many Cattle in the bottom, and *Moors* looking after them, yet by Divine Providence none came near them, and so they lay safe all that Day, which was the last of *May*.

They set forwards at Night thro' the Woods, where there were no *Moorish* Inhabitants, but only wild Beasts, who never attempted to come near them: They travelled 10 Miles that Night, then crossed a River, which supplyed them with Water, whereof they stood in need; on the other side of the River they observed the Footsteps of a great many Cattle, which rendred the Place, as they thought, unsafe for them, and therefore they advanced a little farther in the Morning to the top of the Hill, where under a large Oak they found a Bush convenient for their reception that Day, but they were soon disturbed, for observing the Cattle to come grasing up the Hill, directly to that Bush, with *Moors* at their Heels, they hastily trussed up their Baggage, and ran a Mile farther undiscovered, till they came to a Pear-tree surrounded with long Grass, where they took up their Quarters all that Day. They thought to have pursued their Journy next Night; but *Phelps* hapned to be so lamed with the Gout, that he was not able to stand, and therefore they were necessitated to tarry there all that Night, and next Day also. The readiest Expedient he had for his Distemper was to make a Fire in a Hole in the Ground, into which he put his Foot, to draw out the Pain, having also a Lancet with them, he endeavoured to breath a Vein in his Foot, but could not, however the force of the Fire gave him some Ease: His Company being sensible of the delay occasioned by his Distemper, told him, if he could not march with them that Night, they must leave him; the apprehensions whereof made him strain his utmost *June* 3d at Night to advance forward, tho' in great Pain, so that he could not proceed above three Miles, and therefore they consented to rest with him the remainder of that Night under a Pear-tree; he kept bathing his Foot all the next Day in the Ground, till about two in the Afternoon, in the interim of which he got Mr. *Baxter* to make him a Wooden Leg, and having perswaded his Companions to travel about 3 or 4 Miles that Afternoon, which would a little ease the Labour of the Night, he went four Miles with that Leg, and then rested on the top of an high Hill till Night, when they shaped their Course clear of the Tents in the Valley before them, and travelled over the Edge of the Plain about six Miles, passing by several Corn-Fields, from which the *Moors* in the mean time hallowed to frighten the wild Beasts: Crossing a River that Night, they saw and heard several Lyons, some of which drew so near, that they could almost have touched them, but as soon as they struck Fire, they presently went off. They rested and concealed themselves next Day as well as they could, and at Night pursued their Journey. *Phelps* was still lame, and much obstructed his Companions. Their Bread was also almost spent, the Consideration of which made him strain hard to get 8 Miles that Night; by resting next Day he found himself somewhat better, but to qualifie his Joy, *Anthony Bayle* began to sink and give over. They travelled ten Miles on the 6th of *June* at Night; and coming to a great Swamp, where *Phelps* his Pain renewed, he could by no Intreaties perswade his Companions to stay, and therefore sharing their Bread, it came to no more than two half Rusks apiece; but suddenly thro' Divine Mercy his Pain abated, and they travelled that Night over a high barren Hill, from whence they fancyed they heard the Noise of the Sea, which made them mend their Pace till they came to a Garden, where their Bread being now spent, they were refreshed with some small Pumkins: They travelled no more than eight Miles that Night, for meeting with a great Oak which was blown down, they would not overslip so advantageous a retirement for next Day, and the rather because they heard a great many *Moors*, tho' they could not see them. They lay still all the next Day, being much pleased with hearing the Noise of the Sea, and in the Night going upon the Shoar, they found themselves to the Southward of *Mamora*, which made them direct their Course for two Miles Northwards, when they could discern the Castle, but could not get to the North of it, because the great River goes directly up into the Country, wherefore they retired to a convenient Bush, and tarryed there all that Day.

They

They gathered about half a Peck of Snails on the 8th, and caught a Land Torroiſe, which they roaſted and eat heartily, and the ſame Day they ſaw a Ship in the *Offing*, in the Night made down to the Caſtle, and before they were aware fell upon a *Moor* making a Fire, ſo that they were forced to take a round to the Caſtle, where there was ſo ſtrong a Watch, that they reſolved to go for *Salle*, about 18 or 20 Miles to the Southward, and reſolved to ſteer their Courſe by the Sea-ſide, but reſt all the next Day without any diſturbance: As they travelled on the 9th they ſaw a great deal of Raft-Timber, which made them reſolve, ſeeing the Ship in the *Offing*, to make a Raft, but it would not Swim, and ſo they came aſhoar, and cutting all their Laſhings, left it to the mercy of the Sea; that Night they travelled 5 Miles towards *Salle*, and took up their Quarters in a Fir-tree, about ſeven Miles ſhort of it, they ſet forward on the 10th, and fell upon a parcel of Tents, where tho' the Dogs were ready to ſeize them, they paſſed on without making any Anſwer to the *Moors* that called to them, gathered ſome Pumkins in an adjacent Garden, and lay in a Buſh in a great Valley about a Mile out of the Town: About Eleven a Clock that Day, they ſaw a Boy with a Dog keeping of Sheep, but yet not forgetting his Game, which was hunting Partridges, he beat the Buſh wherein they lay, threw in Stones, and the Dog alſo did his Part, but by a Miracle, as they thought, they were not diſcovered. On the 11th at Night they went down to the River of *Salle*, about a Mile above the Town, where they found a Boat, but could not with all their Strength launch her. *Phelps* and *Bayle*, who were the only Swimmers, made over to the South Side of the River, where they found three Boats, but all aground, ſo that they could do no good with them; but then ſearching about the new Ships building there, which were Five in Number, they found two Oars, with which they Swam over to their Comrades, and going down by the Rivers ſide to the Harbours Mouth, they could meet with no Boat to put their Oars in, they ſaw two *Dutch* Men in the River, who kept ſuch ſtrict Watch, that they could not carry off their Boat, wherefore having concluded to bury their Oars in the Sand, they betook themſelves to find out a Sanctuary for the following Day, which was in a Fig-tree full of Leaves, in an unfrequented Place, as they thought, on the North ſide of the River, yet within call of the Ships, which were then a building. Here they ſafely had protection for the next Day, tho' a *Moor* came and hung up his Shirt to dry upon the very ſame Tree, and ſate down not far off, to lowſe himſelf; on the 12th at Night they went down to the River Side, to look after a Boat they obſerved was moored there, and padled her down cloſe by the *Dutch*-men, who ſaw, but ſaid nothing to them, then putting aſhoar, and fetching their Oars, they continued padling till they had paſt a *French*-Man, who likewiſe took no notice of them, after which having ſhipped our their Oars, they rowed right into the Sea, their Courſe by the North Star being W. N. W. having rowed about four Miles they ſaw a Ship at Anchor, which obliged them to alter their Courſe, and row Northward till they had paſſed her about two Leagues then lay upon their Oars: When Day broke they ſaw her with her Sails looſe, upon which *Phelps* told his Comrades, that it was his Opinion, if ſhe were a *Sale-Man*, ſhe would make in for the Bar at that time, becauſe the Tide and the Sea-Breeze were then both favourable, it being high Water at 7 a Clock, but if ſhe were an *Engliſh* Man of War, as they heartily wiſhed, then they thought the Sea-breeze would make her ſtand off to Sea; and at length having perſwaded the Company to row in to her, they happily found her to be the *Lark* Frigate, Captain *Leighton* Commander.

After ſome Examination and Diſcourſe about the Means and Methods of their Eſcape, *Phelps* propoſed to the Captain that if he would accommodate him with his Boat and thoſe belonging to the other two Men of War in Company, he would undertake to Pilote them in, and burn what Ships there were then in *Mamora*, which made the Captain immediately ſtand to the Northward and come up with the other two Ships, which were the *Bonadventure* and *Greyhound*: The Admiral was Sick at *Cadiz*, ſo that they went on Board Captain *Mackdonald*, who was the Eldeſt Commander, and ſending for Mr. *Fairborn*, who was then Captain under Captain *Prieſtman*, Sick as aforeſaid, they held a Council what to do, and at laſt conſidering the forwardneſs of the Men, who that very Day had eſcaped a heavy Slavery, and were yet willing that Night to engage in the Action, they concluded the Enterpriſe both poſſible and feaſible; after which *Phelps* returning on Board the *Lark*, and having communicated the reſult of the Council to his Comrade Mr. *Baxter*, he being well acquainted with the Bar, was much pleaſed, and ordered into the *Bonadventure*'s Boat. This done, Orders were preſently given to ſhave ſome Deal-Boards, and ſaw ſome Tar-Barrels, and all Things being ready by ſeven at Night, the *Greyhound*'s Boat, wherein was *Phelps*, was commanded ahead, and the reſt had Orders to follow them; there were three Barges in all and one Yawl, the number of Men engaged in the Action was 42, who were ſtrickly charged upon pain of Death, not to ſeek after Plunder, which was punctually obſerved; about 8 they put off from the Ships, and betwixt 9 and 10 fell a little to the Northward of the Bar; but by *Baxter*'s aſſiſtance they quickly righted themſelves, and found the Bar: There was a great Noiſe on the Shoar, all having taken the Alarm, but the *Engliſh* not a wit diſcouraged, perſued their Deſign towards the Ships, aboard which there being a great many Lights, they obſerved the *Moors* looking over the ſide of the firſt they came to, which was the biggeſt, and called to keep off, but they anſwering the Infidels with about 20 Granadoes, ſoon drove them over-board, ſo that the *Engliſh* preſently entred, and being not long in taking in their Shavings and Tarr-barrels, ſet her on Fire in ſeveral Places; ſoon after which hearing the Noiſe of ſome People in the Hold, they opened the Hatches, and thereby ſaved the Lives of three *Dutch* Men and one *French* Man, who told them that the Ship on Fire was Admiral, and belonged to *Aly-Hackum*, and the other which quickly after run the ſame Fate, and was called *Plummage Cortike*, was the very Ship that in *October* before took *Thomas Phelps*, the Author of this Relation Captive: The Flame was ſo fierce, that they were forced to keep off from the Ship's Sides, whereby they became expos'd to the great and ſmall Shot of the *Moors* from the Caſtle Walls, tho' with little or no Execution, for the *Engliſh* made very ſmart returns upon them, and with that eagerneſs, that they quite neglected their Oars, ſo that if the Tide had not turned to Ebb, they ſhould have ran a great Riſque; the Men were ſo full of Joy, that they never minded the Dangers they might be ſubject to, they were therefore forced to tow the *Bonadventure*'s Yawl, who had loſt all her Oars. They had but one Man mortally wounded, and two or three ſlightly hurt in the whole Action: *Phelps* and his Comrade Captives continued on Board Captain *Mackdonald*, till they came to *Cadiz*, where they went aſhoar, in order to a Paſſage for *England* with the firſt Opportunity, *Mackdonald* having firſt given them Certificates of their Service in the late Action, and then *Phelps* and *Baxter* took their leave of him, and not long after having the conveniency of a Paſſage, on Board Captain *Atkins*, they left *Cadiz July* 1ſt, 1658. and on the 26th of the ſame Month arrived ſafely in the *Downs*.

The Expedition of the Engliſh *and* Dutch *Fleets to* Vigo *in* Gallicia, *with the Land Forces under the Command of the Duke of* Ormond, *in* 1702.

Expedition to Vigo. 1702.

SIR *George Rook*, Vice Admiral of *England*, and Admiral of her Majeſties Fleet, returning home on the 21ſt of *September* from the unfortunate Expedition before *Cadiz*, ſent the *Eagle*, *Sterling-Caſtle*, and the *Pembroke*, with ſome Tranſports to take in Water at *Lagos-Bay*, where arriving on the 22th about five in the Afternoon, the Land Officers on Board the *Pembroke* went aſhoar, in whoſe Company was Mr. *Beauvoir*, Chaplain of the Ship: When they came to the Town they could find no Body that could underſtand them, ſo that rowing for ſome time from Place to Place, the Chaplain at length eſpying a Gentleman, who by his Countenance and Garb appear'd to be no *Portugueſe*, and addreſſing himſelf to him in the *French* Language, he proved to be the *French* Conſul, into whoſe Favour Mr. *Beauvoir* ſo far inſinuated himſelf, that the other offered the uſe of his Houſe, both for himſelf and ſome of his Friends; they lay there two Nights, during which time, the Chaplain having an opportunity of ſeveral Converſations with the Conſul; the later boaſtingly magnified the Power of *France*, adding that his Moſt Chriſtian Majeſty would have ſuch a Potent Fleet at Sea the following Summer, that neither the *Engliſh* nor *Dutch* ſhould dare to ſtir out of their Harbours; for the proving of which he gave the Chaplain broad Hints of Mr. *Chateaurenaud*'s being ſafe not far off with the Galleons. On the 24th in the Evening the Chaplain being informed that there was a Gentleman come from *Lisbon*, bound for the Fleet, and that he deſigned next Morning to go on board one of the *Engliſh* Men of War, his Curioſity led him to ſend to the Gentleman, to acquaint him, that if he did not go on Board that Night, he would looſe his Paſſage, ſince the Squadron was to ſail away early next Morning, and that if he pleaſed to go off, he had a Boat at his Service, and he ſhould be welcome on board the *Pembroke*; the Gentleman having accepted the Invitation, and both of them now waiting aſhoar for the Boat, *Beauvoir* asked the Gentleman what News, great News anſwered the other, for *Chateaurenaud* is at *Vigo*, with thirty Men of War, and two and twenty Galleons, being much the ſame Number the *French* Conſul had mentioned to the Chaplain, whoſe Curioſity increaſing, he inquired farther who he was, and from whence he came, to which the Gentleman replyed, he was both a *Spaniard* and a *German*, that he came from *Lisbon*, was ſent by the Imperial Ambaſſador at that Court to *Faro*, in order to go on Board the Fleet, which they ſuppoſed to be ſtill before *Cadiz*; but that coming thither, he found the Fleet had paſſed by, and that being informed of an *Engliſh* Squadron being in *Lagos-Bay*, he came to that Town to get him a Paſſage, and that he had two Letters, one for the Prince of *Heſſe*, and the other for Mr. *Methwen*, Junior; which contained the particulars of that Important News, for the confirming of which he pulled them out of his Pocket, and ſhewed them to Mr. *Beauvoir*; the latter being ſatisfied with the Truth of what the Gentleman ſaid, and at the ſame time knowing that the Prince of *Heſſe*, and Mr. *Methwen* were gone from on Board the Fleet for *Lisbon*, he had ſo much Preſence of Mind as to conceal it from the Meſſenger, leaſt he ſhould refuſe to go along with him, and ſo carryed him on Board the *Pembroke*, where they found the Captain already a Bed, and the Meſſenger being tired with his long Journy, went alſo immediately to repoſe himſelf. However the Chaplain impatient of diſcovering what Intelligence he had got, bolted into the great Cabbin, awaked Captain *Hardy*, and having acquainted him with the News of the *French* Squadron and *Spaniſh* Galleons being at *Vigo*, the Meſſenger next Morning confirmed the ſame, and produced his Letters; but when he heard that the Prince and Mr. *Methwen* were gone by Sea to *Lisbon*, he was much ſurpriſed, and earneſtly deſired to be put Aſhoar, which the Captain agreed to, and having at the ſame time acquainted Captain *Wiſhard*, who Commanded the *Eagle*, and all the Squadron with the Intelligence he had gained; there was immediately a Conſultation of Captains held, wherein it was reſolved, that this News was of ſuch vaſt Importance that a Ship ſhould be ſent to acquaint the Admiral with it, and as Captain *Hardy* had the beſt Sailor, and was Maſter of the Intelligence, he was pitched upon to ſail a head to find out the Fleet; he was put upon ſo very difficult a Piece of Work, that had he not been a very experienced Sea-man, and eminently Zealous for the Service, he had ſcarce ever have been able to have effected it; for to ſay nothing of the Fleets having ſteered various Courſes, by reaſon of the variableneſs of the Weather, the Head of his Ship was looſe, which endangered his Maſts, his Ship very leaky, and himſelf and all his Men were reduced to two Biskets a Day. However, bravely ſurmounting all thoſe Difficulties, and the preſſing Inſtances of his Men to bear away for *England*, he traverſed the Sea, and Cruiſed till the Sixth of *October*, when he happily found the Fleet, and acquainted the Admiral with the News, he imparted the ſame immediately to the *Dutch* Admiral, and having declared it his Opinion that they ſhould all directly ſet ſail for *Vigo*, the *Dutch* Admiral readily concurr'd; and Sir *George* having next Day called a Council of Flag-Officers, it was reſolved that in regard the attempting and deſtroying the *French* and *Spaniſh* Ships at *Vigo*, would be of great Advantage to her Majeſty, and no leſs honourable to her and her Allies, and lead in a great meaſure to reduce the exorbitant Power of *France*, the Fleet ſhould make the beſt of their way to that Port, and fall on immediately with the whole Line, if there were room ſufficient for it, otherwiſe to attack the Enemy with ſuch Detachments as might render the Enterpriſe moſt effectual and ſucceſsful.

The Fleet, purſuant to the Reſolutions of the Council of War, began to ſteer their Courſe towards *Vigo*, and the Admiral having diſpatched two Frigats for Intelligence, they return'd on the 9th of *October* at Night, with a Confirmation of Captain *Hardy*'s Account, adding, that the Enemies Ships lay up the River in *Radondella* Harbour, and one of Sir *Cloudſley Shovel*'s Squadron coming into the Fleet next Morning, that that Admiral was off Cape *Finiſter*, there was Orders ſent him to joyn the Grand Fleet: On the 11th in the Afternoon the Fleet came to an Anchor at *Vigo*, the Weather having proved ſo hazy, that the Town never diſcovered them, till they were juſt upon it, and tho' they fired very much from that Place, yet the Confederates took little notice of it. The *French* Admiral *Chateaurenaud* to give him his due Commendation, had taken all humane Precautions to ſecure his Fleet, for he had not only drawn them up beyond a very narrow Streight, defended by a Caſtle at the one ſide, and Platforms on both Sides of the Streight, whereon he had planted his beſt Guns, but he had likewiſe laid athwart it a very ſtrong Boom, made up of Maſts, Yards, Cables, Top-Chains and Caſts, about three Yards in Circumference, and kept ſteddy by Anchors caſt on both ſides of it: On the other hand, as ſoon as the Confederate Fleet came to an Anchor, the Admiral called a general Council of Sea and Land Officers, wherein it was concluded; that ſince the whole Fleet could not attempt the Enemies Ships without manifeſt Danger of running foul upon one another, a Detachment of fifteen *Engliſh* and ten *Dutch* Men of War, of the Line of Battle, with all the Fire-ſhips, ſhould be ſent in with Orders to uſe their beſt Endeavours to take or deſtroy the Enemies Fleet; that the Frigates and Bomb-Veſſels ſhould follow the rear of the Detatchment, and that the great Ships ſhould move after them and go in, if there ſhould be occaſion; that the Army at the ſame time ſhould Land and attack the Port on the South of *Rodondella*, and thence proceed on, where they might moſt effectually annoy the Enemy; that becauſe it was not well known what depth of Water there might be, the Attempt ſhould be made with the ſmaller Ships, and that to give the better Countenance to the Service, all the Flag-Officers ſhould go in with the Squadron.

For

For the better Execution of these Resolutions, the Admiral spent a great part of the Night in going from Ship to Ship, in his own Boat, to give the necessary Orders, and to incourage both Officers and Sea-men to do their Duty next Day, which was the 12th of *October* in the Morning, the Duke of *Ormand* being landed in a Sandy-Bay about two Leagues distance from *Viga*, with near 2500 on the South Side of the River, and without any opposition, ordered the Granadeers, under my Lord *Shannon* and Collonel *Pierce*, to march directly to the Fort that guarded the Entrance into the Harbour, where the Boom lay, which they executed with much Alacrity and Courage; and the Duke himself at the Head of the rest of the Forces marched on Foot over craggy Mountains to sustein the first Detachment: At the same time there appeared about eight thousand Men, between the Fort and the Hills, yet made only a feint shew of Skirmishing at a distance, and as the Granadeers advanced, they retired, and the former in like manner driving before them another Party of of the Enemy, followed them to the very Port, and bravely made themselves Masters of the lower Platform, whereon were 28 Pieces of Cannon; hereupon Lieutenant General *Churchil's* Regiment advanced on the left, and took their Posts as they saw most Convenient: The Batteries being taken, the Enemy retired into an old Castle or Stone-Tower, and from thence for some short time fired briskly upon the *English*, but the Granadeers plying them warmly with their Granadoes, and pelting them with their Fuzees as soon as they appear'd on the Wall. M. *de Soree*, a valiant *French* Captain of a Man of War, who Commanded in the Fort, having incouraged his Men to make a daring push for their Lives, opened the Gates, intending to force his way thro' the *English* with Sword in Hand; but the Granadeers rushing immediately into the Castle, made themselves Masters of it, and took near three hundred *French* Seamen, and fifty *Spaniards*, with their Officers, Prisoners at discretion: A small Party of the Enemy endeavoured to make their escape thro' the Water, but were stopped by a Detatchment of the *Dutch*; nor were those in the Fleet Idle Spectators of all this Bravery of our Men by Land, for as soon as the Land Forces were got on Shoar, the Admiral gave the Signal to weigh, the Line was formed, and the Squadron was briskly bearing up to the Boom, but when the Van was got within Cannon Shot of the Batteries, it fell calm, so that they were necessitated to come to an Anchor again, however a fresh Gale coming up not long after, Vice-Admiral *Hopson* in the *Torbay*, being next the Enemy, immediately cut his Cables, clapt on all his Sails, and bearing up directly upon the Boom, amidst all the Enemies Fire, broke thro' it at once, cast Anchor between the *Bourbon* and *L'Esperance*, or the *Hope*, two *French* Men of War, which Count *Chateaurenaud* had placed near the Boom, and with unparelled Resolution received several Broad-sides from them: The rest of Vice-Admiral *Hopson's* Division, and Vice-Admiral *Vandergoes*, with his Detatchment having weighed at the same time, sailed a breast towards the Boom, to add the greater weight and force to the Shock, but being becalmed they all stuck and were obliged to hack and cut their way thro'; but a fresh Gale blowing again, the *Dutch* Vice-Admiral made such good use of it, that having nicked the Passage which the valiant *Hopson* had made, he boldly went in and made himself Master of the *Bourbon*. All this while Admiral *Hopson* was in extream Danger, for being clapt on Board by a *French* Fire-ship, whereby his Rigging was presently set on Fire, he expected every Moment to be Burnt, but it very fortunately fell out, that the *French* Ship, which indeed was a Merchant Man laden with Snuff, and fitted up in haste for a Fire, being blown up, the Snuff in some measure extinguished the Fire, and preserved the *English* Man of War from being consumed: However the Vice-Admiral received considerable Damage in this Action, for besides his having the Fore-top-mast Shot by the Board, 115 Men killed and Drowned, and Nine Wounded, most of his Sails were Burnt and Scorched, his Fore-yard burnt to a Coal, and his Larboard Shrouds fore and aft burnt at the Dead Eyes, insomuch that he was afterwards necessitated to leave his own Ship, and hoist his Flag on board the *Monmouth*: At the same time Captain *Bucknam* in the *Association* laid his Broad-side against a Battery of 17 Guns on the other side of the Harbour, so that for a long while there was a considerable Firing of great and small Shot on both sides, till the *French* Admiral seeing the Platform and Fort in the Hands of the victorious *English*, his Fireship spent in vain, the *Bourbon* taken, the Boom cut, and the Confederate Fleet pouring in upon him, he set Fire to his own Ship, and ordered the rest of the Captains under his Command to follow his Example, yet could not be so punctually obeyed, but that several Men of War and Galleons were taken by the *English* and *Dutch*, as appears by the following List.

French Ships in the Harbour of *Redondello*.

Thirteen Galleons, with from 20 to upwards of 30 Guns each, and all burnt and ſunk, except Five Galleons which we took.

Of theſe 13 Galleons which carryed from twenty to upwards of thirty Guns, four were taken by the *Engliſh*, five by the *Dutch*, and the reſt were all deſtroyed; and to make this Victory ſtill the more glorious and memorable, it was obtained with very inconſiderable Loſs on the Confederates Side, for beſides the Dammage received by Vice-Admiral *Hopſon*, as before-mentioned, the *Kent* had only her Foremaſt ſhot, and her Boatſwain wounded; the *Aſſociation* her Main maſt Shot, and two Men killed, the *Barfleur* had her Main-maſt Shot, two Men kill'd, and as many wounded; and the *Mary* her Bolt-ſprit Shot: Of the Land-men two Lieutenants and about forty Soldiers were killed, Colonel *Pierce* was wounded with a Cannon Shot from our own Men of War in the Thigh, and Colonel *Seymour*, Colonel *Newton*, and Mr. *Talmaſh*, with about thirty private Men were alſo wounded. The conſequence of this Victory was a vaſt Booty both of Plate and other Things, the value of which can never be computed; but tho' the Duke of *Ormond* poſſeſſed himſelf of *Redondello*, and would have attacked *Vigo* and Wintered there, yet the Circumſtances of Things would not allow of it, ſo that both the Land Forces and Fleet returned for *England*, where they ſoon after happily arrived.

An

An ABRIDGMENT *of a Relation of the Wonderful Preservation of Eight Men who were accidentally left in* Greenland, *Written by* Edward Pelham, *one of their Number.*

THIS *Edward Pelham*, with seven other Men, having, about the middle of *August* in the year 1630. been sent ashoar by the Captain, (who was a Whale fishing upon the Coast of *Greenland*) to hunt for some Venison for the Ship's Provision; and having very good Success, killing in two days time above twenty Deer (with which the parts about *Green Harbour* abound;) the third, embarking themselves and their Purchase in their Shallop, they found that their Ship had been obliged to put to Sea, to get clear of the great Shoals of Ice, which were already driven upon the Coast. Upon which hurling their Venison over-board, and making all the speed they could to *Bell-Sound*, which was then the Rendezvous of all the *English* Ships then in *Greenland*; having unhappily miss'd the Point, by the obstinate Humour of one of their Number, who affirm'd it to be more to the Southward than it was, and discovering too late their Error, at their Arrival there they found, to their great Sorrow, that all their Ships were sailed for *England*; which afforded them sufficient matter of dismal and melancholy Reflections and Lamentations. And indeed it must be acknowledged that their Circumstances were miserable beyond Expression, being left in a Country destitute of all things necessary for human Life, without any Cloaths to protect them from the Rigour of that most frigid Climate, having no Food of any sort to subsist on, and no Fuel to dress it with, if they had had never so much Meat. However, it pleased Almighty God so to bless their own Industry and Endeavours to preserve their Lives, that their Deliverance does really seem to be miraculous; and that so much the more that the Difficulties which they had to wrestle with, were more insuperable far, than those under which several *Dutch*, who were left on purpose with all manner of Necessaries, were forced to succumb; as well as nine *Englishmen*, who had been formerly left as they were, by the same Man that left them, which nine Men all died of Hunger and Cold upon the place.

However, considering that Astonishment and Confusion would only add to their Misery, they took a generous Resolution, to use their utmost endeavours for their own Preservation, in hopes that God would provide for their Subsistance by some means which might be beyond their Imagination. And so they all agreed to take the next Opportunity of fair Weather, to go to *Green-Harbour*, and kill what Venison they could for their Winter Provision. And accordingly, arriving there the 25th of *August*, they went next day to a place called *Coals-Park*, about two Leagues distant from *Green Harbour*, and returned that night with seven Deers and four Bears.

That day's good Success encouraging them to make a second Voyage to *Coles-Park*, spying some Deer upon the side of a Hill in their way thither, they there went ashoar, and killed twelve Deer besides several Bears, with all which returning to *Green-Harbour*, they loaded another Shallop, left there by the Ship's Company, with the Greaves of the Whales that had been boil'd that year; and sanctifying as well as they could (without Books or Persons very capable to perform any part of Divine Service to a Company) the Sabbath day which ensued, they next day set out for *Bell-Sound*, to which place the Conveniency of a vast Tent or sort of a large House of Boards, erected for the Lodging and Accommodation of the Coopers, &c. invited them to take up their abode during that Winter. But being in their way thither benighted, they having hal'd up their Boats and fix'd them as well as they could, getting ashoar themselves to seek some shelter against the Rigour of the Cold, their Boats were driven from their places, and a great part of their Venison wash'd over-board and cast ashoar. But *Sept.* 3. being a clear day, having pick't up their Venison and launched their Boats, they got safe into *Bell-Sound*; where being arrived they applied themselves with all possible Diligence to make as good Provision as they could for their Subsistence during the Winter Season, in that place.

The great Tent, already spoken of, was 80 Foot in Length and 50 in Breadth; and not far from it their being another of a more narrow compass, they pull'd down the latter to get materials for building a little Habitation for themselves within the great Tent; which having accomplish'd, and made a very warm sort of a Chamber, by the means of about a 1000 Bricks, a few Casks of Lime, and good Store of Boards and Ratters, which they found in the little Tent they had pull'd down, they afterwards made four little Cabins to lie in; their Beds were the Deer-skins dried, which they found to be very warm and useful to them in their great Distress; and as for Firing, they made bold with some hundreds of empty Casks, which they found in the aforesaid Tents, besides several old Boats or Shallops, which had been left there by the Fleet. And so recommending themselves to the powerful Protection of Almighty God, they patiently expected a happy Deliverance in due time.

However patient and submissive they endeavour'd to be, their Case was very lamentable, especially during several months together; that being in fear of starving for want of Food, because they found that what they had, was not near sufficient for their Maintenance till the arrival of the Fleet, and had no hopes of getting any more in that Country; they were forc'd to reduce themselves to three meals a week on Bear and Venison; besides which, they had nothing to feed upon during the other four days of the week, but the unsavory and mouldy Frittars and Greaves of Whales (which are the scraps of Fat, that after the Oil is taken out of them, are thrown away) which had been spoil'd too, by the wet they got; and for an addition to their Misfortunes, they began at the same time to lose sight of the Sun, which did not appear from the 14th of *October*, till the 3d of *February*, all their day being a glimmering sort of light, which lasted but some few hours, and from the 11t to the 20th of *December*, did not appear at all, but left them in continual Darkness.

With the New Year, the Cold began to be so very excessive, that there being no possibility of finding any Water below the Ice, as formerly they had done, all the Drink they had from the 10th of *January* till the 20th of *May*, was melted Snow.

By the last of *January*, the days coming to be prolong'd to seven or eight hours, they begun to take a little more Heart; but viewing their Provisions, and finding, that even at the miserable rate they then lived, they could not last above six weeks, it put them once more upon very melancholy Reflections; till the Weather beginning to be tolerably fair, and the Wild Beasts now appearing, besides a Sea-Horse or two that they kill'd, and seven or eight Bears, they caught above fifty Foxes in Traps, and likewise thirty Fowls as big as Pigeons, by which means they liv'd much better than they had formerly done, taking sometimes two or three Meals a day, till the 25th of *May* following; when there arriving in the Sound, two Ships from *Hull*, the Master of the first having heard that some Men had been left, sent ashoar some of his Crew, with order to hale up their Boat, and walk over the Snow to the great Tent, to see whether they were yet alive; but they being about to go to Prayers in the Inner Tent, and only waiting for one of their number that was doing something in the great one, the *Hull-men* according to the Fashion of the Sea, crying *Hey*, upon their approach to the Tent, were immediately answered by him that was in the great Tent, *Ho*; upon which the other seven turning all out, after many kind Embraces and Congratulations, they led their Friends into the Tent, and presented them with some Venison that had been roasted four months before, and a Cup of cold Water which they for Novelties sake did very kindly accept; and afterwards carrying the eight Men on board their Ship, they remain'd there till the arrival of the *London* Fleet, which happening three days afterwards, they going on board of the *Commadore*, were very kindly receiv'd and entertain'd; he having immediately commanded Cloaths and all other Necessaries to be given them, so that in a matter of fifteen days they had all recover'd their former Vigour, and so returning with the Fleet to *London*, were gratified and rewarded by the *Muscovy* Company, in whose Service they had endur'd the aforesaid Hardships.

An ABRIDGMENT *of Two Journals of Fourteen Sailors, seven of which passed a Part of that preceeding the Year* 1634, *and seven others a Part of the following Winter; the first in the Isle of St.* Maurice *in* Greenland, *and the second at* Spitzbergen, *in which two Places they all died.*

To which is Subjoin'd,

An ACCOUNT *of the Death of Forty-two Persons who perish'd by Shipwreck, near the aforesaid* Spitzbergen, *in the Year* 1646.

And a DESCRIPTION *of the* Island *likewise Abridg'd.*

THE Committee of the *Dutch-Greenland*-Company, having in the year 1633, publish'd a Resolution they had taken, of making as exact a Discovery as could be of the Climate of *Greenland*; seven bold and able Sea-men voluntarily presenting themselves for that Service, were by order of the Company left on the Island of St. *Maurice*, and provided with what Provisions and Materials were thought necessary for their subsistance in that uninhabited Place; who having all died there, I shall here-under give the Reader, in a very small Compass, the Substance of what was found in the Journal they left behind them, as it was publish'd in their own Language and Country, by Publick Authority.

The *Dutch* Fleet having set Sail for *Holland* on the 26th of *August*, the Wind frequently chang'd from *N. W.* to *N. E.* at which Points it continued with pretty Sun-shiny days, and now and then a little Snow, till the 7th of *September* at Night, that the Wind blowing *S. E.* by *S.* it turned very Rainy; the 8th at Night, they were frightned by a noise of something falling as they thought very heavy upon the Ground, but could see nothing; the 9th was a warm Sun-shiny Day, and the Night Rainy; that Day they saw plainly the *Bears Mountain*; and about this time they could find a little Sallering, as they did likewise eight Days after that: and in short, from the 11th to the 20th, they had various Changes of Winds from *S. E.* and *S. W.* *N. E.* and *N. W.* *N. W.* and by *W.* &c. during which time they saw abundance of Sea-Gulls, and had various Changes of Weather, sometimes Rain, sometimes Snow, and sometimes clear Sun-shiny days, and Moon-light nights. The 20th (which it seems is the latest that any Ship is seen in those Parts) they discharg'd their great Guns, being out of all danger of Privateers, &c. for that Season; the 23d they saw a Whale, which they could not catch; and about the same time they made a diligent search for Salering, but all was gone. The Weather then began to be more tempestuous and stormy than before, and the Frosts were sometimes very violent till the 9th of *October*, when they observ'd the Sun, from their Hutt, to be in the *South*, a little above the *Red-Hill*; and they could likewise spy the *Bears Mountain*. The Wind turning the 8th to the *N. E.* and afterwards to the *N.* it began to be exceeding tempestuous with Frost and Snow, which increasing on the 9th, they could no longer subsist without a continual Fire, and the Wind turning now to *N. E.* by *N.* the which alteration they began to be sensible of in their Bodies, by a giddiness in their Heads. &c. The 12th their Beer froze in the Barrel, tho' within a Fathom of the Fire. The 14th they went abroad and saw two Whales, which (being too few in number) they in vain endeavour'd to catch; and the 16th, the Severity of the Weather, made a greater alteration than before in their Bodies: However, the 18th they observed the Sun to set between *S. W.* by *N.* and *S. W.* The 19th was a Sun-shiny day, but the Sun did not rise high enough to reach over the Hill to their Hutt, which was in the Bay. The 20th they spy'd a Bear, which they would gladly have caught, but could not. The Beasts now began to come down towards the Sea-side, and the Bay to be almost entirely fill'd with Ice; nor was there one drop of Water to be found upon the Island, and several of their Vessels were frozen to peices; but their Beer they sav'd by putting it in a Cellar, where neither could it have been safe, without a continual Fire. The 1st of *Nov.* the Wind being *N. E.* the Cold extremely increas'd, and the Bears appear'd towards night in such numbers about their Tent, that they scarce durst venture abroad; and tho' they still had ten hours day, the Sun Beams appear'd only on the South-side of the Hill. The 2d they had the good Fortune to kill a Bear, and the 3d another; upon which they fed (for want of other fresh Meat) with a great deal of satisfaction. The 5th a South-wind brought such a violent Snow, that they durst not stir out of their Hutt, and the 7th and 8th, the Wind turning *N. E.* and afterwards *N.* it was excessive Cold, and they made use of melted Snow instead of Water. The 9th they got to the Southern Shore, where they saw no Ice, but plainly discover'd the Sun, which they had not seen for three weeks before that, and then observ'd to be above half an hour above the Horizon; and about that time they saw some Sea-Gulls, as they likewise did abundance of Bears, which always retir'd, upon their appearance, to the Ice in the Bay. The 19th, the Wind being again at *N.* they pass'd once more (but with great difficulty) to the Southern Coast, where they had a plain view of the *Bears Mountain*, and saw the Sun just above the Surface of the Sea; having no more light than was requisite to let them see to read and write, which now (to their exceeding Grief) they could not do in their Hutt. The 23d the Wind turning *N. W.* by *W.* brought Weather which continued 5 or 6 days (they thought) as mild as it us'd to be in *Holland*, at that Season. They shot the same day, a Bear thro' the Body, but he, notwithstanding the lois of very much Blood, escap'd to the Ice in the Bay, without seeming to have receiv'd much harm; which (tho' ordinary there) would seem very odd here: During that time they saw great numbers of Sea-Gulls, which always retir'd to the Mountains towards night. The 29th they past again to the Southern Shore, which was then all cover'd over with Ice, tho' scarce any was at that time to be seen within half a Mile of the Northern-shore. The first of *December* a Southerly-wind produc'd Rain, both which in some measure continued with as mild an Air (in their Opinion) as it could then be in *Holland*. The 10th the Wind being Westerly, they went upon the Hill, from whence they could spy nothing but Ice. The 12th, having shot a young Bear thro' the head, they fed heartily upon a Leg of him which they roasted, and from that to the 22d, the Wind being mostly *S. E.* and *S. W.* and sometimes *E.* they had various changes of Weather, and the Ice was several times blown out of the Bay, and back again; except on the 17th, when the Wind being at *South*, it thaw'd, and they saw abundance of Sea-Gulls: During this time, they went up the Hill, but discover'd nothing. The 22d they had still four hours day-light, but it being the coldest day they had yet felt, they durst not stir out of their Hutt; and so the Weather continued very severe, with various changes of the Wind, which was mostly to the *S.* and *S. W.* till the end of that Month and Year.

The 1st of *January* 1634, after wishing each other a Happy New Year, they recommended themselves to God by Prayer, desiring good Success in their Enterprise. But the severity of the Weather (especially of the Nights) increased so sensibly, for the most part with Easterly and North-East Winds, that they felt the Effects thereof in their Bodies. The 9th the Shoals of Ice in the Bay appear'd from the Top of their Hutt like white Hills or Skies; and they could not now see the Moon till she was seven or eight days old, because of the great Hills between her and them. From that to the 16th North-East, South-East, and Easterly Winds produced very severe Weather; and then a Southerly Wind (as it usually did) brought a milder Day: but the Wind turning

ing to the East and North-East, the Weather was again very sharp till the 23d, when it appearing clear, they got with great difficulty to the South-side, but could not make any Observation about the Height of the Sun, because of the Clouds which appear'd; till returning on the 30th, which was fairer, they guess'd him to be an Hour and an half high.

The first of *February* being fair and calm, they saw the Sun from the Hill very clear, and tho' the Wind was changeable, the Weather began to grow milder. The Bears being now very shy of them, having caught none since the 13th of *January*, they heartily wish'd for one, but in vain. The Weather continuing much the same, on the 16th they spy'd a Falcon and two Wild-Fowls not unlike Geese, but (to their exceeding Grief) could not come within reach of them. The 19th they got to the Red-Hill, but saw nothing; and so they did the the 21st. The 25th in the Afternoon, the Weather clearing up with a Westerly Wind, they saw the Sun again from their Hutt; and observ'd it to set at South-West by South. The 27th a Southerly Wind brought milder Weather and a Thaw, removing the Ice from the Bay almost out of sight, into the Ocean.

In the beginning of *March* a North-East Wind brought the Ice partly into the Bay again, and Northerly and North-East Wind brought sharp Weather, till the 11th that it began to be so mild and pleasant that they greatly rejoiced at it; and on the 12th the Ice was removed out of sight of the Bay. The 25th they happily shot a Bear through the Head, and dressing what their present Necessity requir'd, they sprinkled the rest with a little Salt; for they began by that time to be grievously afflicted with the Scurvy, which was occasion'd by nothing else but their Salt Victuals and want of convenient Refreshments. From that time to the 22d, several Changes of the Wind produc'd Alterations in the Weather, and several times removed and brought back the Ice. About this time they all began to be mightily discouraged for want of Refreshments, being grown so very ill of the Scurvy that they could scarce stand. The Wind being for the most part Southerly and South-East. On the 28th they spy'd a huge Whale in the Morning, and several others that Day, both on the Northern and the Southern shoar, whither they had made a shift to walk; and almost every day after that, they saw vast numbers of those great Animals, and prodigious Quantities of other such Fish as that Place affords. The Winds had been for the most part Southerly, and the Season tolerable good in the Month of *March*; on the 30th day of which they got sight of a She-Bear with three young ones, but to their extream Sorrow they all escap'd out of their hands. And in short, being destitute of all manner of refreshment, now comes on the melancholy part of their dismal Story.

The Weather turning very sharp in *April*, with changeable Northerly, North-West, and sometimes Westerly Winds, the Bay was several times filled again with Ice, which was now and then carried off with Southerly Winds, which did not last. The 3d of this Month five of the seven were quite crippled with the Scurvy, and in a very miserable condition, they kill'd the only two Pullets they had left, at the request of the sick Men, who fed heartily upon them. The Weather still continuing sharp, the two that yet retain'd some Health, went but very little abroad; about the middle of the Month, they grew worse, and I don't see that after that time any of 'em went much abroad. The 16th, being *Easter-day*, their unfortunate Number began to be lessen'd by the Death of him they call'd their Clerk; and from that time they grew worse and worse, beginning to give over all thoughts of Recovery; not only because of their great want of Necessaries, but because of the excessive Cold, from which they were not able to defend themselves by any Exercise, in that condition. By the 23d, they were reduced to that deplorable state, that but one of them was upon his legs. That day he help'd their Commander out of his Cabin, and says, that he being then struggling with Death, imagin'd by that Motion, to ease in some measure his Pain. They had some time before that given over all Hopes of Relief, and now had no other thoughts but of Gods Mercy, of which they stood very much in need. The 27th they made a shift to kill their Dog for Want of other Refreshment: and now (the Weather continuing very bad, for the most part with Northerly, North East and North-West Winds) they all grew towards their End. The latest date of their Journal, which was continued by him that remained longest in Health, was the last of *April*; which he says was a clear Sun-shiny Day, with a North-East Wind, and then concludes with the melancholy word *D I E*; so that probable being about to write something else, and finding his Spirits to fail him, he had only time to write these three Letters before he got into his Cabin, where he surrendred his Spirit to his Creator.

The first of the *Dutch* Fleet arriving at that Island the fourth of *June* following 1634, found his Body who died first in a Coffin, and the other six (who probably died much about one time, which must be supposed to be the beginning of *May*, since their Journal was continu'd to the end of *April* and mentions only the Death of the first) in their Cabins. Near one of them lay some Bread and Cheese, which 'tis like was his last Victuals; and hard by another was found a Prayer Book and a Box of Ointment, with which 'tis probable he had been rubbing his Joints and Teeth, his Arm being extended to his Mouth. 'Tis certain they might have resisted the Cold if they had been able to defend themselves against the Scurvy, which I believe might not have been impossible, if sufficient Precautions had been taken for it. How miserable their Condition was (and especially they or he who out-liv'd the rest) I shall leave it to the World to judge, being sensible that 'tis far beyond Human Capacity to express it.

The Commodore having order'd the other six to be immediately put in Coffins, and all to be buried under the Snow, till the Heat of the Sun had render'd the Ground more tractable; they were on S *John*'s day following as honourably inter'd, as the Place and Circumstances could permit; with a general Discharge of all the Artillery from the Fleet.

The Second Journal of Seven other Dutchmen, *who died next Year at* Spitzbergen; *in which the Observations about the Weather are omitted.*

THE following Year, *viz.* 1634. seven other Seamen being left in the same manner at *Spitzbergen* with what Provisions were thought necessary for their Subsistence till the next Season; after various Changes of the Weather, and the entire Departure of the Sun, which left them the 21st of *October*, on the 24th of *November* the Scurvy beginning to appear amongst them, they in vain search'd after green Herbs, Bears, Foxes, &c. and finding none endeavour'd to comfort each other, in hopes God would be pleased to provide some Refreshment for them. But in the beginning of *December* growing worse and worse, several of them took Medicinal Potions for the Scurvy; and tho' they saw now and then a Bear, not having the good fortune to catch any, they fell into a very deplorable Condition. So that one of them dying the 14th and another the 15th of *January* 1635, the 17th likewise died he in whom (under God) they had put their Trust; leaving the other four in a condition miserable enough to give them some ground to envy their Happiness whose Misfortunes had been ended by Death. However, bad as they were, they made a shift to perform the last Offices of Humanity to their three dead Companions, whom they put in Coffins. The 7th of the following Month, they catch'd (to their great Satisfaction) a Fox; but in effect, were too far gone in their Distemper to receive any benefit thereby. They now began to see abundance of Bears, sometimes eight or ten together; but being seiz'd with most exquisite Pains in their Loins, Belly, and elsewhere, they were not able so much as to gnaw their Biskets, and much less to handle their Muskets. The 23d they were reduced to such a low Condition that they could not stir out of their Tent. The 24th they saw the Sun for the first time, and 26th (suppos'd the last day that any of them was able to write) they left the following Memorial of that date. *Four of us that are yet alive, lie flat upon the ground in our Tent; We believe we could not feed if our Pain had not disabled us all from stirring out to get some Fuel; we employ our time in constant Prayers, that God may be pleas'd to end our Miseries by Death, for which we are ready at his Call, and cannot certainly subsist long without Food or Fire, but every one must bear his own Burthen.*

When the *Dutch* Fleet arriv'd there in 1635. the three first were found in Coffins, two others in their respective Cabins, and the remaining two lay upon some Sails spread upon the Ground, having their Knees drawn up to their Chin. And Coffins having been prepar'd, by order of the Commodore, they were all decently buried.

An Account of the Shipwreck of Forty-two Persons, who all perish'd but one, amongst the Ice near Spitzbergen *in* Greenland, *in the Year* 1646.

JOHN CORNELIUS *of Munniken*, being, in the beginning of *June* 1646, a Whale-fishing without the Bay of *Spitzbergen*, the Men who row'd the Sloop, which was sent out to watch the Motion of those huge Animals, discovering something white upon a great shoal of Ice, which was floating upon the Water; they at first took it to be a Bear, (which Animals are there of that Colour:) but making up that way, and coming nearer, they found it to be a Man, who making what signals he could of great Distress, and rowing with all their Oars to the Shoal, they were much surprized to find there (besides one dead) four Men alive, expressing upon their bended Knees, their Thankfulness for such unexpected Deliverance from the jaws of Death. Upon enquiry they found them all to be *Englishmen*; and carrying them from thence on board their Ship, which then lay in the Bay, they made their Deliverers the following Relation of their Disaster, *viz.*

"That they being, at the time of their Shipwreck, "forty two, and escaping in their Sloop, with some Victuals and Tools, to huge shoal of Ice; their Commander, thinking that a very dangerous situation, had "gone ashore with seventeen of the Men in the Sloop, "in order to endeavour to bring them some Assistance "from thence; but probably had perish'd in the way, "it having blow'd very hard after his departure, and "they never having heard of him since. The Provisions of the twenty four remaining upon the Ice, being "entirely exhausted, they had divided themselves into "several Parties upon separate shoals of Ice, in hopes "that some of them meeting with Succour, might induce their Relievers to go in quest of the rest. The "four taken up alive had digged a sort of a subterraneous Cave in the Ice, at the entrance of which they "had placed the pieces taken out of the Cavity, to defend themselves against the Violence of the Weather; "and their only Food, during their miraculous abode "in that cold and miserable Habitation, had been a "Leathern Belt, which they had equally divided amongst 'em.

Tho' the *Hollanders* used all possible means to save the unfortunate Remainder which they had taken up, they all died a few days afterwards, but one, who, by God's blessing upon the *Dutch* Doctor's Endeavours, recover'd; and arriving in the *Meuse* in *September* following, did thence come over to *England*, which (as I have already said) was his Native Country.

A Description of ISELAND.

ISELAND (qu. *Iceland*) so called it seems by its Discoveries, because of the great quantities of Ice which are mostly to be seen about it, is an Isle under the obedience of the King of *Denmark*, situates in 13 *deg.* 30 *min.* Longitude, and 65 *deg.* 44 *min.* Latitude; bounding towards the *North* by the frozen Sea of *Greenland*, having likewise the Cape of *Farewel* in that Country opposite to it, upon the *West*; being wash'd by the *Den-Caledonian* Sea towards the *South*, and by the *Hyperborean* on the *East*.

The Sentiments of the Learned concerning the time when this Isle was peopled, are various; but the Inhabitants themselves being very curious, not only in their own Annals, but likewise in the History of other Neighbouring Nations, they have kept exact Account enough of their later Transactions; and tho' *Arngrim Jonas* (a Native of that place) does obstinately averr, That *Ingulph* (of whom more shall be said hereafter) was the first Planter of that Isle; I am positively of the Opinion of several other Learned Men, who agree that *Iseland* is the *Toule* of the Antients; for which they bring Reasons which to me seems very satisfactory; but being too tedious to be here related at length, I shall content my self with barely mentioning one or two of them.

In the first place the famous *Casaubon*, in his Commentary upon *Strabo*, tells us positively, that our modern *Iseland* is the antient *Thule*, mentioned by that great Geographer; and, amongst other Reasons for maintaining that Position, takes notice, that all the Antients having situated *Thule* at the Extremity of the *Caledonian* Sea, and made it the most remote of the *British* Isles; that Name and Situation can agree with no place but *Iseland*, which Reason I truly think unanswerable.

Secondly, I shall mention a Passage of the aforesaid *Arngrim Jonas*, where he seems to confute himself, by taking notice that the *Islanders* were very nice in recording the Histories of several *European* Nations, which Records (he says) they keep in their Libraries, and look upon them as Authentick Proofs of their own Antiquity. Now, there being yet extant, in *Denmark*, a Record of the *Western* part of *Iseland*, in which they are to be found several Passages of the antient History, not only of *Norway*, *Denmark*, the *Orcades*, and other adjacent Isles, but likewise of *England* and other Countries, and particularly of the Invasion and Settlement of the *Normans* in that part of *France* to which they gave their Name; that Invasion having happen'd before the Arrival of *Ingulph* (whom *Arngrim Jonas* and several others would have to be the Planter of *Iseland*) in that Country; it consequently follows, That *Iseland* was inhabited before *Ingulph* went thither; it being absurd to imagine that any other Nation could record the Transactions and History of an unknown and uninhabited Isle. So that, to reconcile both Parties, I think it may rationally be suppos'd, that what formerly was Pagan *Thule* of the Antients, is now Christian *Iseland* of the Moderns; it being very probable that *Ingulph* was the first that planted here the Christian Faith, in the Year 870, or soon after, tho' 'tis acknowledg'd that Paganism was not entirely abolish'd 'till the Year of our Lord 1000.

As to this *Ingulph* or *Ingulphus*, the aforesaid *Arngrim Jonas* says, *That being a Baron of* Norway, *he and his Brother-in-law* Hiorleifus *having killed two of the most considerable Men in that Kingdom, and being banished for that Fact, and it was then customary for Exiles to carry the Doors of their Houses with them*; Ingulph *having cast Anchor upon the Coast of* Iseland, *threw his Doors overboard to facilitate his Landing*; *but being driven thence to another place of the Isle, and finding, a long time afterwards, his Doors cast ashore, he took a Resolution to settle there for good and all, in the Year* 874. *whence the Chronicles of* Iseland *takes their* Epocha.

Now, as this very Chronicle says that *Ingulph* found the Isle desart and uncultivated, 'tis not therefore to be imagin'd that it was then entirely destitute of Inhabitants, or never had been possess'd before; for the same Chronicle does likewise acknowledge, that some *English* and *Irish* Miners had been cast ashore there, and likewise that there had frequently been *Irishmen* on the Isle, upon other occasions; and that the antient *Islanders* call'd the *Irish Papa's*, and thence gave the Western part of the Isle, where the *Irish* used to land, the Name of *Paper*. So that, in all probability, the antient *Thule* and the modern *Iseland* are one and the same thing; for as to the Desarmess of the Isle, and Scarcity of Inhabitants, 'tis probable that they might have been reduced to that low pass, in which *Ingulph* found them, by Famine, Tempest, and Pestilencious Diseases, to which it may reasonably be suppos'd such a barren Country may easily expose its Inhabitants.

As to its Extent, for Length or Breadth, we have no very exact account of that, but 'tis generally suppos'd to be about twice as big as the Isle of *Sicily*. About the Summer Solstice, while the Sun is in the Signs of *Gemini* and *Cancer*, it never goes entirely below the Horizon, but some part of it always remains above it, in the

the *North* of *Iſeland*; and during the longeſt days one half of it remains above the Horizon from ten at Night till two in the Morning, at which hours it ſets and riſes; and conſequently about the Winter Solſtice, while the Sun is in *Sagittarius* and *Capricornus*, the whole Body of the Sun does not riſe above the Horizon, and in the ſhorteſt days not above the half of it is ſeen, and that only from ten in the Morning till two in the Afternoon, at which hours it then riſes and ſets.

It was formerly reputed to be very fertile in Wheat, and abounding in Wood fit for building of great Ships, in which, and in all the parts of Navigation, the Inhabitants were ſaid to be very expert, and 'tis alleged that they were then very powerful at Sea: but now, having no Corn of any ſort, they are frequently forced to beat dry'd Fiſh into powder, of which they make Bread, when the Rigour of the Winter-Seaſon hinders their being ſupply'd by their good Neighbours, to whom if they were not obliged for Flour and other Neceſſaries (ſuch as Wood for their Buildings, and Fuel) they would certainly ſtarve; tho' for their ordinary Firing they have two ſorts of Turf, and they likewiſe make uſe in their Buildings of the Bones of Whales and other great Fiſhes: and ordinarily in the Month of *May* the Wind brings from the more Northerly parts, together with the ſhoals of *Ice*, vaſt quantities of Wood, of which they make uſe in their Structures; it being recorded in the Chronicles of that Country, that a Tree was driven thither with the Ice, ſixty three Cubits in length and ſeven in circumference. And beſides that, there are driven likewiſe with theſe ſhoals of Ice, a great many Beaſts, ſuch as white and black Bears, Unicorns, Stags, Wolves, red and white Foxes, *&c.* of which the *Iſelanders* do daily go in queſt each ſeaſon.

The Country is ſtrong and mountainous, and (however barren in other things) ſo fertile in paſture, that their Cattle (if not duly remov'd) are ſometimes in danger of burſting; and their Graſs is of ſo good a Scent that Foreigners tranſport it dried to put among Linen. However their Beef is not reckoned to be of the beſt, and their Mutton is pretty rank, but they much abate that by drying it (as they do their other Meat) in the Sun and the Wind, which preſerves it better than Salt. They make abundance of Butter, which they keep in Tubs, if they have any, and otherwiſe pile it up in the Houſe without any further Ceremony. Their ordinary Drink is Milk or Whey, which they ſometimes mix with Water. They have pretty good Horſes, which, during the Winter, feed upon dry'd Fiſh, when Hay falls ſhort, as well as their Oxen and Sheep. They have abundance of fine, clear and wholſome Springs, and, amongſt others, ſome whoſe water has a nouriſhing Quality like Beer. Nor are they deſtitute of Hot Springs fit for Bathing, nor of ſeveral Hot and Cold Springs, Lakes, and Currents, which have various Virtues and Effects upon Perſons and Things; a particular Deſcription of which this ſhort Abridgment cannot well admit. But I muſt not forget to tell, that their Ponds, Lakes, navigable, and other Rivers abound with many different ſorts of excellent Fiſh.

Iſeland affords no Mines nor Minerals but Brimſtone, which is plenti'ul in moſt places of the Iſle, but eſpecially in Mount *Hecla* ſituate in the South-Eaſt part thereof; which ſometimes appearing all in flames, like Mount *Veſuvius*, ſends forth whole Torrents of ſulphurious Liquor, which burns like Spirits of Wine; and thoſe Eruptions are frequently follow'd by vaſt Quantities of black Aſhes and Stones. They commonly ceaſe with a Wetterly Wind, and the Inhabitants take that occaſion to go up the Mountain, when they have a mind to ſee it, but frequently they have been ſwallow'd up by the Earth that has ſunk under them in the Aſcent. About this there are many ſuperſtitious and imaginary Stories, amongſt the ignorant Inhabitants, who imagine that to be the place where the Souls of the Damn'd are tormented.

They have no Trade but the Barters they make with Foreigners of ſeveral Nations, to whom they give dry'd Fiſh, Butter, Tallow, Brimſtone, and Foxes, Bears, Stags and Wolves Skins, for Flour, Beer, Wine, Strong-waters, Iron, Woollen and Linen Cloths, Cloaks, Shoes, Looking glaſſes, Knives, and ſuch like Toys. *Bleſkenius* talks of another ſort of Commerce, pretty odd, alleging that the Women of that Country (who are tolerable handſome but miſerable clad) do ordinarily go to the Tents of thoſe Strangers who come to traffick with them, to whom they proſtitute themſelves for a little Bread, ſome Biſket, or any ſuch Trifle. Nay further, he ſays, that their Fathers often carry them to thoſe Foreigners themſelves, eſteeming it a lucky chance if they happen to be with Child by them; which, he ſays, contributes very much to the Advancement of their Fortunes by Marriage among the *Iſelanders*, who, at that rate, would ſeem to be afraid of (or at leaſt to have an Averſion for) Maidenheads.

Some other very indecent Maxims and Cuſtoms this *Bleſkenius* attributes to the Females of *Iſeland*; but as the aforeſaid *Arngrim Jonas* boldly accuſes him of Falſhood for cauſleſsly expoſing the Reputation of his Country-women, affirming them to be as modeſt in their different Stations as their Equals in other Countries; I ſhall leave the Reader the Freedom of uſing his own Judgment for the Deciſion of that Controverſie.

Bleſkenius further talks of Sorcerers in *Iſeland*, and ſays, that the Inhabitants in general pretend to ſell a Wind to any Foreigner that will purchaſe it, at a very ſmall Price, he likewiſe adds, that the *Iſelanders* have Familiar Spirits, by whom they are attended as Servants, and are acquainted when they ſhall be ſucceſsful in running, *&c.* with ſeveral other things of that nature: ſome of which truly do not ſeem abſolutely improbable, conſidering the miſerable Ignorance and Superſtition of the Inhabitants of that Country, who are not yet ſo well inſtructed and enlightned by the feeble Knowledge to which they have attain'd in the *Chriſtian Religion*, as to have entirely relinquiſh'd the remaining Habits of their Primitive Darkneſs and Idolatry.

Their Religion is now the *Lutheran*, as is that of the *Danes*, to whom they are ſubject, and their Laws are a mixture of thoſe of their own Iſle and of *Denmark*. They were firſt conquer'd by the Kings of *Norway*, and fell, with that Kingdom, by Succeſſion to thoſe of *Denmark*, who now govern *Iſeland* by their Vice roys, whoſe ordinary Reſidence is in the Caſtle of *Beſeſtat*, ſituate in the Weſtern part of the Iſle; and to whom (or to perſons appointed by them) the Tributes impoſ'd by the King of *Denmark*, are paid in ſuch Commodities as I have already ſaid to be the Product of the Iſle.

Many other odd Cuſtoms, *&c.* are related of them by antient Authors; but theſe being neither very uſeful nor diverting, did not ſeem neceſſary to be inſerted in this Abridgment; in which I only propoſed to mention what ſeem'd moſt worthy to be taken notice of amongſt 'em.

An Account of the Shipwreck of a Dutch *Veſſel upon the Coaſt of the Iſle of* Quelpaert; *with a Deſcription of the Kingdom of* Corea *in the* Eaſt-Indies.

ALSO

Of the Tedious Captivity of 36 Men, who got aſhore upon that Iſle; and of the Eſcape of 8 of 'em to Japan, *and thence to* Holland. *Firſt publiſh'd in that Country by the Clerk of the Ship, who was one of them that eſcap'd: ſince Tranſlated and Abridg'd.*

A *Dutch* Veſſel, in the year 1653. being bound from *Batavia* to *Japan*, after ſuffering a moſt violent Storm of ſeveral days continuance, ſpringing a Leak ſo wide that there was no means to drain the Water that ruſh'd into the Hold, ſeveral that happen'd to be then under Deck were drowned before they could get up, and each Man betaking himſelf to his ſhifts, 36 (of 64 that they were in all) got aſhore upon the Iſland of *Quelpaert*, and thoſe too ſeverely bruiſed and hurt in ſaving themſelves from the terrible Fate of their more unfortunate Companions. However

However, walking next day along the shoar, to see whether the Bodies of those that had been drowned were cast upon the Land by the Waves, they found none but that of their Captain, which they buried with as much Decency as their Circumstances could then permit.

They then made a diligent search along the Sands, to see whether any of their Provisions had been cast ashore, but found only one Sack of Meal, a small Cask of Salt Meat, a little Bacon, and a Hogshead of Claret; which was a very acceptable piece of news to the Sick Men.

Their Shipwreck happening the 15th, on the 16th at night they gather'd enough of the Sails and other Ruins of the Wreck, to make them a sort of a Shelter or Tent, and on the 17th, being discovered by the Inhabitants, there came down in the Evening an hundred Armed Men, who, after counting them, kept them inclosed all that Night.

On the 18th in the Morning, they began to enlarge their Tent; but there coming down, about Noon, two thousand Armed Men, both Horse and Foot, who drew up in Battalia before their Tent; their Clerk, chief Pilot, with his Mate and a Boy going forth to meet them; their Commander immediately caus'd an Iron Chain with a Bell to be put about their Necks, and in that Equipage were they forced to prostrate themselves before him, upon which all his Men gave a shout, and immediately afterward those in the Tent were served in the same manner. And being afterwards made to kneel, many Questions were put to them, which they could not understand; no more could the *Chinese* what they endeavour'd to make them comprehend, *viz. That they were* Dutchmen, *bound from* Batavia *to* Nangasaky *in* Japan. Upon which the Commander of the *Chinese* ordering a Cup of a certain Liquor called *Arac* to be given to each of them, sent them back to their Tent; and understanding that they had little or no Provisions, sent them an hour afterwards, Rice boiled in Water, of which the *Chinese* gave them very sparingly lest it should do them harm; for they imagin'd that before they had been half starved. In the Afternoon they came with Ropes in their hands, which a little surprized the *Dutch*, till they saw that their Design was to draw what they could of the Wreck ashoar; and the Admiral of the Island coming down with the Commander, the *Dutch* presented each with a Perspective-Glass and some pots of Claret, which they fill'd out in their Captain's Silver Cup; and they, liking the Liquor very well, drank till they were pretty merry, and then returning them the Cup, with many Tokens of Friendship, return'd to the place of their Residence, and let the *Dutch* retire to their Tent.

On the 29th, the *Chinese* burn'd the Wood of the Ship to get out the Iron, which they value at a high rate, and the Fire coming to two Guns which hapned to be loaded, they were so frightned at the Report they made, that they all ran away, and would not return till the *Dutch* by signs assur'd them that the Danger was over, and that would happen no more.

The 21st, some Persons were accus'd before the Governour of having embezzled some inconsiderable matters found in the Wreck, for which they were immediately condemn'd to have thirty strokes given them on the Soles of their Feet, with a Cudgel as thick as a Man's Arm, which made several of their Toes to drop off. And the rest of the things sav'd out of the Wreck being seal'd up, Horses were provided for the *Dutch*, who being attended by a numerous Guard, arriv'd the 22d in the Evening at the Town of *Moggan* or *Moxco*, the Residence of the Governour of the Island, before whom being prostrated as formerly, and interrogated about their Country and Design, they answer'd all those Questions by signs which were partly understood, and were that night conducted to a Castle, where they had an Allowance of twelve ounces of Rice, and as much Flour a day for every Man; and were treated with a great deal of Humanity and Civility by that Governour, who allow'd them to go abroad by turns, six and six at a time, to take the Air and wash their Linen; and their Sick were taken care of; and in a word they were used by that compassionate Lord with more Bounty and Tenderness, than they would have been by some Christians.

The 29th of *October* they were again called before the Governour, where they found an old *Dutchman*, who had been detain'd in *Corea* ever since the Year 1626. that had been taken coming ashoar out of a *Dutch* Ship to fetch Water, with two others who were dead. He told them that he was sent thither by the King of *Corea*, to interpret for them, and that it was not the Custom of that People to let any Strangers depart thence, that fell into their hands; but that they would have Diet and Cloaths provided them as long as they liv'd.

The Governour being exactly inform'd of our Circumstances, gave us every one (during his Abode there) fresh Marks of his Bounty and Compassion; but his time being unhappily expir'd the beginning of *December* following. 'Tis almost impossible to express the Marks of Kindness and Affection he shew'd them at his Departure, giving each of them a Coat well-lin'd, two pair of Shoes, and a pair of Hose made of Skins, which was a very seasonable Present for Persons in their Circumstances.

The new Governour being of a much less Humane Temper, gave them Barley instead of *Rice*, and Meal instead of Flour, and us'd them in every thing with so much Harshness and Severity, that meditating their Escape, and six of them entring into a Shallop, with which they designed to put to Sea; being overtaken, they were puni'h'd by receiving 25 strokes upon the bare Buttocks with a flat piece of Wood four fingers broad and an inch thick, which obliged them to keep their Beds a long time; and all the rest were more closely guarded and hardly used than before.

In the month of *May* they were sent for to Court, and being put on board of Boats, with Fetters on their Feet, were carried over from the Island to the Continent.

This Island (which the Natives call *Schesure*) lies 12 or 13 Leagues South of the Coast of *Corea*, it abounds with Horses and Cattel, but the Inhabitants are very poor, and despis'd by those of the Continent of *Corea*: which Continent, as well as the Island, is of very difficult Access to such as are unacquainted with the Coast.

After travelling about seventy five Leagues Northward in the Continent, they arriv'd at the City of *Sior*, which is the Residence of the King; who having himself examin'd them by his *Dutch* Interpreter; refus'd to let 'em return to their Wives and Families; and incorporating them in his Guards, caus'd a Musket and Sword to be given to every one of them, bidding them give over all thoughts of returning to their native Country. In their Journey to the Court one of their number died, and was decently buried by order of the Governour of the place where he happen'd to die.

Some time after, news being brought to Court of another Vessel being Shipwreckt upon the Coast of the Isle of *Quelpaert*, three of them, that best understood the *Corean* Language were order'd to go thither to interpret for the Persons that were sav'd; the other *Dutch* Interpreter being too old to perform that Journey.

The *Coreans* being Tributary to the *Tartars*, the *Cham* of *Tartary's* Ambassador comes three or four times every Year to receive the Tribute, which obliged the King, during the Ambassador's stay, to remove the *Dutchmen* out of his way, for it seems that the *Tartar* does not allow the *Coreans* to entertain any Strangers; but two of the *Dutchmen* presenting themselves to him as he passed by, which he not understanding, order'd them to follow him to the place where he was to lie that Night; of which the King having notice by the old *Dutch* Interpreter, who was sent for by the *Tartarian* Ambassador; but the King having made him a Present, that matter was entirely stifled, and the two poor *Dutchmen* convey'd to a Prison, where they soon after died, whether by a natural or violent Death is uncertain. And if the King had not been a more merciful and compassionate Man than his Courtiers all the rest had been destroy'd; but he being advised by his Council to rid himself of them, sent them back to the Isle of *Quelpaert*, where they were soon after join'd to the other three that had been sent thither before, so that they were now thirty three in all.

They remaining several years Prisoners in a Castle appointed for them, were sometimes very kindly, and sometimes very barbarously used by the Governours of the Province where they liv'd; for those Governours being changed once in three Years, most of them at their first Accession to the Government, depriv'd the *Dutch* of their Liberty and Advantages which had been granted them by the former. However, having obtained leave to make the best provision they could of Cloaths and other Necessaries by begging; they found the *Chinese* in general (but especially their Religious Men) very charitable. And so, notwithstanding a grievous Death, which lasted some Years, they subsisted very well, and liv'd pretty easy till the Year 1660, when there came a Governour, who was kinder to the *Dutch* than any of his Predecessors; but he being succeeded soon after by a very wicked one, they were depriv'd of all their Privileges, and reduced to a very miserable Condition; till he being succeeded by another more worthy of that Station, they were relieved of all their Hardships, had their former Privileges restor'd, and new ones added to them. But however, in his time they had the

Misfortune

Misfortune to be separated by a positive order from Court; and being harder used than ever they had been by any other Governour, five of them, that liv'd together, having got a *Coresian* that was their particular Acquaintance and Friend, and to whom they had done several pieces of Service, to buy them a Bark under pretence of going to beg Cotton in the Neighbouring Islands; they sending for another *Dutchman*, whom they knew to be an able Mariner, and detaining two others whom their good Fortune had brought to visit them, embarked in a very dark Night, and carrying aboard Rice and what other Provisions they could get, together with a Cask of fresh Water, they pass'd undiscover'd by all the King's Frigats; and about two days afterwards arriving upon the Coast of *Japan*, and seeing several Boats come off towards them from one of the Islands upon that Coast: being ask'd by Signs who they were and whither they were going? they answer'd by displaying a Flag with the Arms of *Orange*, crying *Holland*, *Nangasaki*; upon which the *Japonese* making them signs to go ashore, after they had remain'd three days at Anchor before that Island (called *Gotto*) where they were most courteously treated by the Inhabitants of all sorts, they were conducted in their own Bark to *Nangasaki*; where being very well receiv'd and provided with every thing necessary for them, they were thence sent by the first Ships to *Batavia*; where having presented their Journal to the General, he, after a very favourable Reception, put them on board a Fleet soon after bound for *Holland*, where all the eight that had escap'd arriv'd safely the 20th of *July*, 1668.

The Kingdom known to us by the Name of *Corea*, is called by the Natives sometimes *Tiozencouk*, and sometimes *Coali*. It is of the form of a long Square, situate from 34 to 44 degrees of North Latitude, lying North and South about 150 Leagues, in length, and 75 in breadth.

It is divided into eight Provinces, containing 360 Cities and Towns, besides Forts and Castles, which are generally built upon Mountains.

Towards the South-East it is but little more than 20 Leagues distant from *Japan*, between which and the Kingdom of *Corea* is situated the Island *Suissima*, which is called *Taymaera* by the *Coreans*, who at a certain Treaty of Peace concluded between the two Nations, exchanged it with the *Japonese* for the Isle of *Quelpoerts*, which formerly belong'd to them. The Bay of *Nanking*, interposes on the West between *Corea* and *China*, which are only join'd on the North by a long and high Mountain; and on the North-East *Corea* is wash'd by the Ocean, where a great many Whales are taken, and likewise in the Winter-time great store of Herring.

The Cold is sometimes so intense in that Country, and there is such abundance of Snow, that upon the Mountains they make Paths to go under it, and such as go above it only wear under their Shoes small Boards like Battledores to keep them from sinking.

The People inhabiting the Northern Coasts of *Corea*, are very poor and have few Cloaths but such as are made of Skins; nor does that part of the Country produce any valuable Commodity, but the Root called *Nissy*, with which they pay the *Tartars* their Tribute, and drive a great Trade to *China* and *Japan*. The rest of the Country is fruitful, and produces Rice and other Grain, Hemp, Cotton, Silver, Lead, Horses, Oxen, Beans, Deer, Swine, &c. and several other Animals. They have likewise Silk-worms, but cannot work the Silk right. As for Fowls and Birds, they have Swans, Geese, Ducks, Herons, Storks, Eagles, Faulcons, Kites, Pigeons, Woodcocks, Magpies, Daws, Larks, Lapwings, Pheasants, Hens, &c. all which they have in abundance.

Their King is a Sovereign Prince, and none dare call any thing in question that he does. He keeps a good Army always on foot about his Capital City; and once in seven years all the Provinces must send their Freemen, who guard the King's Person (besides his ordinary Guards) by turns. Their Horsemen wear Cuirasses, Head-pieces and Swords, besides Bows and Arrows; and the Foot likewise wear Corselets and Head-pieces, and carry Muskets and Half-Pikes and Swords. Every Town in *Corea* is obliged to maintain a Ship of War, such as they use, and to provide Ammunition and all Necessaries for it, and every Province has its Admiral to command 'em. These Ships of War are a sort of Gallies, carrying about 30 Oars, with some small Pieces of Cannon, and abundance of Artificial Fireworks.

Most of the King's Revenue, for the maintenance of his Houshold and Army, arises out of the Duties paid upon the Product of the Country, and upon Goods imported. His chief Officers attend every day at Court to serve him in whatever occurs, and his Counsellours must give their Advice in nothing till ask'd. The Governours and most other Officers have no great Estates but the Revenues annex'd to their Offices, and the Lands granted to them by the King, revert to him upon the Death of the Grantees; by which means he keeps most of the Great ones in a continual dependance upon him. The great Offices about Court are for Life, except some Misdemeanour intervene, and in that case Justice is very severely administred. Rebellion is punish'd by the Death of the Rebel and all his Race, but private Crimes involve only the Guilty in the Punishment. 'Tis no great matter amongst them for a Man to kill his Slave for a small fault; but, in all other cases, Murder is severely punished. If a Man catch his Wife in Adultery, he may lawfully kill her; but that happens but seldom, because the *Coresians* are so jealous that they hardly permit their best Friends to see their Wives. Double Adultery is punish'd with Death, and the Criminal's Father or nearest Relation must be the Executioner: and if a single Man commits that Sin with a married Woman, after much ignominious and shameful Usage, his Punishment ends with 40 or 50 stroaks with a Cudgel on his bare Buttocks, of which many die; but Women receive that Chastisement with wet Drawers on: and all their Punishments are so inhumane, and extort such heavy Cries and Lamentations from the Criminals, that 'tis no small Punishment to be a Spectator of them.

The *Coresians* have scarce any Religion, nor do they respect their Idols half so much as other barbarous Nations do. They believe however that Vertue shall be rewarded, and Vice punished in the other World; and their whole Country swarms with religious Men and Women, much of the same nature with those that are in *Roman Catholick* Countries, from whom (besides several other points) they differ in this, *viz.* That it is lawful for any Man in *Corea* to go in and come out of a Monastery when he pleases, and their King may make such Alterations as he pleases in all Affairs of this Nature.

The Houses of the *Coresians* are only one Story high, having a Garret to lay their Provisions in, those of their Great Men are generally very magnificent, according to their manner, having a large Square before them, with Walks, Fish-ponds, and other Ornaments. The Women are kept in the most retir'd place of the House; and tho' they are allow'd to have each but one Wife, they may divorce them for a very slender Fault, and turn them out of doors with their Children; and likewise may keep as many Concubines abroad as they please, but the Great Men keep them in their own Houses.

They are generally very careful in the Education of their Children, and diligently instruct them in all their Learning, which chiefly consists in Reading and Writing, and in explaining the History of their own Country, in all which they use no severe means to make their Youth good Scholars, but excite by Praises and Rewards to a Noble Emulation to out-do one another, which is a very commendable and successful Method. In every thing the Parents are very indulgent to their Children, who are no less respectful to them. When a *Coresian* dies, his Children mourn three years for him, during which time they lead a Life austere beyond credibility, and at their Funerals practise so many Fopperies, that it would be too tedious here to mention them.

The *Coresians* are generally of a fraudulous Temper, and yet very credulous. Before the Irruption of the *Tartars*, and the Descent of the *Japonese* into that Country, they minded nothing but Luxury and Debauchery; but the Tributes they now pay to their imperious Masters oblige them to live harder then they us'd to do. However, they are still very effeminate and cowardly, which Qualities are no ways scandalous amongst them; for they hate Fighting, and bemoan their Fate who are forc'd to that Exercise: in so much that when the *Tartars* invaded their Country, many more died by Cold and Hunger in the Woods, than by the Sword of the Enemy.

They have no Trade but with the *Chinese* and *Japonese*, who bring them Pepper, Allom, Sweet-wood, and other trifling Commodities in exchange for the Product of their Country. They weigh their Silver in little Ingots, like those brought from *Japan*.

When their King goes abroad, he is attended by a vast number of Courtiers and Guards, which march after him at a distance, but with such a deep Silence that not the least Noise is to be heard within a great way of him; and all persons, Guards as well as others, before whom

whom he passes in the streets, must turn their Backs to him, without so much as coughing or making any other Noise: and when the *Tartarian* Ambassadour comes (which is thrice every year) to receive the Tribute, he is, by all manner of Persons, as much (if not more) respected as the King."

A Description of the Isle of FORMOSA, *situate on the Coast of* China *in the* East-Indies; *first written by Mr.* George Candidius, *a* Dutch *Minister, who resided at the Factory of that Nation, in the aforesaid Island, a considerable time; now Abridg'd.*

WITH

Some Additional Remarks upon the Empire of JAPAN.

THE Island of *Formosa*, being 130 Leagues in circumference, is situate in the 22d degree of Northern Latitude; 'tis very populous and full of large and beautiful Villages; it abounds in Cattel and Wild Beasts, and there is likewise good store of Fish in that Country, which if it were cultivated and improv'd would be very fertile; and as it is it produces Cinamon, Ginger, and several other valuable Commodities.

The Men are tall and well-limb'd, the Women low and fat, and both of a darkish brown Complexion, like the other *Indians* thereabouts. The Men go frequently naked in the Summer, but the Women are never seen so, but when they wash themselves, which, in warm Weather, they commonly do twice a day.

Tho' the Inhabitants appear to be wild and barbarous, they prov'd very good natur'd, affable and kind to the *Dutch*. They are so faithful to one another, that rather then betray their Trust they'll suffer Death; and so honest, that if they happen to discover any stol'n Goods, they're never at ease till they're restor'd to the Owner.

Notwithstanding their inviolable Fidelity to one another, they don't deal very fairly by their Enemies, either when they're at War among themselves, or have to do with Foreign Enemies.

As to their Religion and Government, 'twould be a very hard task to give any tolerable account. In the first, they have this particular to themselves, That Women only are employ'd in their Sacred things. They believe the Immortality of the Soul; but entertain ridiculous Notions about the Distribution of Rewards and Punishments in another World; for they look upon the grossest Immoralities as Trifles, and make heinous Vices meritorious amongst them. For example, their Priestesses forbid all Women to bring any living Children into the World till they be past the Age of six and thirty; and accordingly the Infants are murder'd in the Mother's Womb by these inhumane Priestesses, who thereby put the Mother to much more torment than if their Children were born into the World in the ordinary manner; and if any Woman has sav'd her Child before she come to that Age, they hold her to be in a worse condition after Death, than such as have committed the greatest Crimes. What other things they reckon most heinous, are only breaches of their own foolish and impious Traditions.

They have an Infinity of imaginary Gods, of which the chief are called *Temigisanchan*, *Taxancpada*, *Talafula* and *Tapaliape*; unto whom they offer Prayers and Sacrifices, and other pieces of Homage and Religious Adoration.

Their Worship, I think, of all the Nations under the Sun, is the most impious and abominable; for those infernal Priestesses, (whom they call *Inibs*) after abundance of ridiculous Ceremonies, pretending that their Gods have appeared to them; strip themselves of all their Cloaths, in the presence of the whole Congregation, pointing with their hands, and pretending to shew their Gods what Nature has ordain'd to be hid, address in that posture, their impious Prayers, in a long and tedious Harangue.

As for Government, they have in effect none at all; for all the Resemblance that is amongst them of a Civil Society, is a sort of Council of 12 Men in every Village, who remain in that Office only two years, and have scarce any Power at all; for the greatest Punishment they can impose is a Fine of a few Buck-skins or such sleight Penalty as that, but they cannot in any manner inflict any Corporal Punishment, much less put any body to death. Murder is but a Trifle with them, and is usually made up between the Relations of the Defunct and the Murderer for a few Skins or some such Trifle; and as for Fornication, imagining that their Gods take a great deal of pleasure in it, they indulge it in their young People, the Men not being allow'd to marry before the Age of 21, but the Women as soon as they come to Maturity. And the Women, having in their own hands the Dispensation of their Sacred things, are pleased likewise to keep possession of the Breeches, for the Men are there as much subject to the Women in most things, as that Sex are to the Men in other Countries; and in case of hard usage they have their Grievances as easily redress'd, and likewise obtain a Divorce, if occasion be. And generally speaking, Men and Women both are lascivious; and in that Country Fornication never spoils a Woman's Marriage.

There being in this Island a great number of little Villages independent one of another, there frequently fall out Differences which occasion Wars, in the Prosecution of which 'tis hard to determine whether they are most treacherous or cruel. For, lying in wait for their Enemies in the Fields or elsewhere, if they catch but one or two poor innocent Creatures, tho' not in Arms, but employ'd in Agriculture &c. immediately murdering them, they sometimes cut them into 20 or 30 pieces; and returning with their Heads upon their Lances, they enter their Villages in Triumph, feasting and revelling for 14 days afterwards; during which Solemnity, the Performers of that great Exploit are had in such Respect, that scarce any body dares come near 'em.

As in most other things, they are likewise very ridiculous in their Funerals; for they neither bury nor burn the Dead Bodies, as other barbarous Nations do; but drying them before a Fire, and washing them for several days consecutively, they let 'em afterwards lie above ground about three years, when, there remaining generally nothing but the Bones, they inter them with abundance of Foppish Ceremonies. Which is all that I thought necessary to insert for the Reader's Diversion in this Abridgment of the Description of it.

The

A JOURNAL of the Expedition undertaken to Surrat, by Mr. WILLIAM DANIEL.

HE left *London*, May 4. 1700. At *Graves-end* the Wind and Tide being against him, he took Post for *Dover* next Morning early, and ariv'd there by Eleven o' Clock. Being there at a loss for a Conveyance to the *French* Coast, a Merchant of that Nation, who had hired a small Boat for *Bologn*, frankly entertain'd him; but the whole Crew being only six Men, his Companion and himself, he was forced to be Steersman. But a great Storm arising, with extreme Thunder and Lightning; beside Night coming on, and that Coast being very rocky and dangerous, they were forced to put before the Wind for *Calais*; till soon after accidentally meeting with a Billander of *Dunkirk* bound for *Bologn*, they embark'd thereon, (it being morally impossible their small Boat could have liv'd in such a Tempest much longer) and got safe there at 7 next Morning; where being handsomly regaled by his Companion, while his Horses were getting ready, and refitted with a Hat, his own being lost in the Storm; departing immediately he lay that Night at *Abbeville*, 28 Leagues from *Calais*; where, having Letters of Recommendation to the Post-Master, he was furnish'd with the best of his Horses, wherewith, having no Luggage, he reach'd *Paris* next day.

Early next Morning *May* 9. he took Post for *Lions* and *Marseilles*, at which last he arrived on the 15th. and next day waited on Messieurs *S. Amand Lamb* and *Barker*, upon whom he had Bills; which having receiv'd in Pistoles, *May* 17. he embark'd in a *Felucca* for *Genoa*, in Company of a *French* Marquis going to *Venice* on account of an Amour, concerning which he, as are most of that Nation, was very free in discovering himself. They lay that night in an old Castle, 80 Miles from *Marseilles*; whence next day wanting Wind they made but 60 Miles to a Village call'd *S. Turpe*, where contrary Winds forced them to lie by two days. Then it being somewhat calmer, they put to Sea again, and in two hours were strangely frighted with the Sight of a small *Tartan*, which they apprehended to be an *Algerine*, but prov'd to be no better than a Boat of *Trepano* fishing for Coral. The *Genoese*, who are cowardly and superstitious to excess, during this doughty Consternation, lighted up a Lamp, and placed before it a little Saint they had painted on a Board, whose Assistance they implored with such Eagerness and Devotion, as if they seriously thought the *Punchanello* could indeed have serv'd 'em much in their Distress. Mean while the Marquis and Mr. *Daniel* diverted themselves with shooting Rabbets; and upon their Return found their Fear, and consequently their Devotion, to be at an end: so they sail'd again, and lay that night at *Monaco*. Next morning they had not been out above 4 hours, but it blew so hard, they were forced to put into *S. Remy*. Here tarrying for the Settlement of the Weather, and being tired with Delays, he agreed with a Bark bound for *Civita Vecchia* to put him ashore at *Legborn*, where he arrived *May* 26. too late for a Ship he expected, which was departed four days before; and here he receiv'd the ill News of his Father Sir *Peter Daniel's* Death.

June 2. He embark'd on a *French* Ship bound for *Alexandria*, where, after an indifferent Passage of 18 days, he safely arrived; and thence immediately hired a Bark for *Scanderoon*, and dispatch'd an Express to *Grand Cairo* to Consul *Fleetwood*, who had travel'd *Judea*, for his Advice; and next day after the Return thereof, which gave him great Encouragement, he hired a Boat for *Rosetto*, and arrived there about Noon, after a very dangerous Passage over a *Bogasse* or *Bar*, at the Disembogation of the *Nile*, which about that time began its Increase.

Here he fortunately met with a *French* Merchant bound for *Cairo*, and hiring a Boat to themselves they put off that Evening, and arriv'd safe there; after some Impositions, entring the Suburb called *Bollack*, whence he sent to the Consul at Old *Cairo* for his Janizaries to conduct him to his House; where during his 4 days stay, he was most civilly treated by him; as well as Messieurs *Vernon*, *Goodman*, *Merchant* and *Bower*, Factors there. The *French* also, who abound here, as in most Scales of the *Levant*, were very courteous, accompanying him with the *English* Merchants to shew him the Curiosities of the Place; as the famous *Pyramides*, the Castle, and several other famous Antiquities. Amongst which, five Miles *South-East* from thence, where once flourish'd the Regal City of *Memphis*, the Strength and Glory of old *Egypt*, stands the sumptuous Temples of *Apis* and *Vulcan*, the ancient *Mummies*, *Joseph's*-Well, and his *Granaries*; obliging to the Curiosities of most Strangers; as also the *Pillar* of *Marcus Aurelius*; and at his Return to Old *Cairo*, most kindly entertained him at the Convent of *Capuchines*, where our Blessed Saviour CHRIST and his Holy Mother were hid, when the Soldiers of *Herod* pursued them. This City is very large and populous, to such a vast degree, that it is credibly aver'd, that in the year 1618, there died above 600000 People of the Plague, and scarcely to be miss'd. This City is divided into 4 Parts, as Old *Cairo*, New *Cairo*, *Bollak* and *Carafar*; (but by the *Arabians* only known by the name of *Mizar* and in the midst of which is a large fair Plain, which is very pleasant in all its Seasons, especially in *March*, being full of Corn: and in the Month of *June* he had the Diversion of seeing the *Bashaw* drawing up his Soldiers, consisting of several thousand beautiful Horse and Foot, adorn'd with very rich Equipage and Furniture; Yet tho' this Plain in the Season of *June* be proper and convenient to exercise their Military Affairs, yet it is otherwise in that of *August*, being emerged by the Overflowing of the *Nile*, and during that time, as full of Boats as the River *Thames* on a *Lord-Mayors-Day*; and in the Night illustrating their Splendour by frequent and admirable *Fire-Works*, and rejoycing, after their barbarous Manner, as much as possibly they can, for the expected Plenty of the Year ensuing; the Water leaving a strange kind of *Nitre* behind, as its ebbing away, which improves the Land for the Growth of Grain to a very wonderful degree.

This City by several Authors is accounted to be the largest in the World, whose Extent, Number of Houses, Streets, Mosques, Caves, Bazars, *&c.* may be found in many modern Authors.

Here he luckily found an *Englishman* of the *West*-Country, surnamed *Gardiner* before, but now called *Haggi Biram*, who was grown very rich, and extremely civil, being indeed the only person there that thought it worth his while to be civil to Strangers, the Natives being generally morose, slothful, and lazy: The Men daily lie basking in the Sun, wholly depending upon the *Nile's* Fertility for their Subsistence; and the Women so sauntring, sluttish and negligent, not caring for Employment, tho' 'tis to keep themselves clean, having, by reason of the Heat, very few Cloaths on, and the Virgins commonly wearing none at all.

This kind Renegade *Haggi Biram*, whose great Courtesie Mr. *Daniel* most gratefully acknowledges, not only procured him a *Firmand* from the *Bashaw*, to embark on the *Red-Sea*, but also recommended him to a Guide to conduct him safe to *Sues*, who was the Prince of the Rogues of that Country; obliging him to be very careful in furnishing him with good Camels, which he did accordingly, and mounted him on his own Mare.

Thus having taken leave of his Friends, *July* 7. he departed with a Caravan consisting of about 12000 Camels laden with Merchandise for *Sues*, and tho' 'tis not above 70 Miles from *Cairo*, it cost 'em a four Days Journey, by reason of the vast and almost unpassable Sands, with the violent Heat; and having no other Water than what they carried with them, all which rendred the Fatigue beyond expectation intolerable. At last however they arrived at SUES, a Sea-Port-Town at the bottom of the Red-Sea, giving Name to the Isthmus of *Sues*, to which Port belong about 40 Sail of Ships, who Trade every Year between that Place and *Judda*, their outward Merchandise being little or nothing but *Provisions* and *Pieces of Eight*, and their Return all sorts of *Spices*, *Muslins*, *Silks*, precious *Stones*, *Pearls*, and *Amber-Greese*, *Musk*, *Coffee*, and many other *Drugs*, which are brought by the Trading-Vessels which come yearly from *India* to *Mocha* and *Judda*, and transported over Land on Camels to *Cairo* and *Alexandria*. Here Mr. *Daniel* arriving late was forced to take up his Lodg-

ing on the Terrace of a poor Greek Church, where he was miserably annoy'd with all the Vermin of the Season; but in a little time after he had Advice of a Ship just departing for *Judda*, aboard whereof were 100 of the best *Janizaries* from Grand *Cairo*, appointed for that Years Guard for the Mosque of *Mecca*. With some difficulty, and not 'till he produced the Grand Seignior's *Firmand*, with a Purse of Gold, he agreed with the Capt. *July* 12. he embark'd, and after 18 Days of fruitless stays and unnecessary Anchorings every Night, with time of refitting after a terrible Storm, they arrived *Aug.* 1. at a small Village called *Mocha*, where they took in fresh Water, and the next Day departed for *Jembo*, and that Evening came to an Island in the middle of the *Red-Sea*, where they were more embarass'd than in any of their former Voyage.

The *Red-Sea*, or *Mar de la Mecca*, is a Branch of the *Indian*, or *Ethiopian Ocean*, parting *Arabia* from *Africa* and *Egypt*, and runs from N. to S. above 1200 Miles. And tho' Mr. *Thevenot*, who, it seems, travel'd some Days on its shoars, affirms it not to be above 8 or 9 Miles over towards the *North*, he assures it to be above 100 Leagues in breadth, in some parts, tho' full of sunk Rocks very dangerous to Sailors, and innumerable Islands; for which, and other reasons, it is not much frequented, since the way to the *Indies* was discovered by the *Ocean*. That part of it which lies between *Boges* and *Egypt*, and *Judda*, the Port of *Mecca*, is two Days sail, and full of Flats and Rocks, and some little Islands, which in the Winter have no Inhabitants, except *Seamend* and *Sameri*, which are always inhabited; the latter by *Samaritan Jews*. It is good Sailing in the middle of this Sea by Day or Night, in clear Weather, being 25 or 30 Fathom deep; but towards the Western Shoar, by reason of Shoals and Rocks, 'tis unnavigable by night, and abounds with all manner of Fish. The *Hebrews* call this Sea *JAMSUPH*, or *Mare algosum*; this *Red-Sea* will be famous to all Ages, upon the Account of the *Israelites* passing through it dry-footed, when they went up out of *Egypt*.

Here they were obliged to go ashoar, and pray to a Saint formerly buried there, and also to present him with a Shirt, and light his *Lamps*; this being accustomed time out of mind, and perform'd by all Ships that pass this way: The Ceremony over, they proceeded on their Voyage, much Joy appearing in the Faces of all the Company, proposing to themselves a Certainty of good Success, after having paid their Devotion to their *Saint*. But it happen'd quite otherwise, for they were scarce out of sight of the Saint's Mansion, when there arose a terrible Storm, and in the most dangerous part of the Sea; which was in a few Minutes afterwards so violent, that it drove 'em fast on a sunk Rock, where they stuck four Days, using all means to get off, but in vain; and at last they were forced to throw over above 200 *Bales* of Goods: And no sooner were they got off, but the leaky Vessel set them to pumping 3 Days and 3 Nights together, after which, with much Pains and Diligence, they arriv'd safe in the Harbour of *Jembo*.

Here it may be taken Notice of, that tho' the Storm aforemention'd was very violent, yet they had not run their Ship ashoar, had not there been a mischievous design between the Capt. and Pilot: For their Ship being full laden, before the Arrival of the 100 *Janizaries* aforesaid, which was not expected, and he being obliged to carry the Goods before on board, having receiv'd *Freight*, and sign'd *Bills of Loading*, could not possibly receive these *Janizaries* and their Effects, without this *Fraud* as follows; which was by taking out clandestinely by night the Merchants Goods, and putting them aboard other Ships in Port, to make room for the live Cargo; and then *Aug.* 4. he purposely ran the Ship ashoar; and under pretence of clearing her again, threw over the foresaid Quantity of Goods of the *Janizaries* and *Merchants*; in which Mr. *Daniel* had a considerable Share; and this done, upon their Arrival at *Jembo*, the Capt. delivered the rest of the Goods to the Factors there, and at *Judda*, made a Protest, that he was forced to use those means, the violent Storm running him ashoar. But afterwards the Goods he had put aboard the other Ships, came all safe to *Judda*, which this Villain converted to his own Use.

JEMBO is the Sea-Port Town of that famous City *Medena*, where lies the Body of their Prophet *Mahomet*; and understanding there that five *Indian* Ships were at *Judda* ready to depart, he hired a Boat and took four *Janizaries* into his Service, designing to go off at midnight; but the Governour being inform'd that he was a Christian, stopt him and detain'd him two days; but by the Assistance of his *Janizaries*, whom he had well feed, he got off, after being forced to make the Governour a Present of 100 *Venetian Chequeens*, and as many among his Officers; besides a Present of Rice, Honey, Sugar, Coffee and Tobacco, for his Wives and Slaves, and the Lois of his Boat-hire.

This is the chief City of the *Beniequebys* or *Bengebres*, formerly call'd *Saracens*, living mainly upon Robberies, being very numerous, and able in 24 hours to raise 50000 men. An Instance he gives in that about 4 hours after he paid the Money extorted, as is said before, there arriv'd an Express to the Governour, from his Brother, to the great Joy of the People of that Town, with the News of their having robbed and destroyed the whole *Caravan* of *Pilgrims* and Merchants in their Return from *Mecca* to *Damascus*, and other Parts of *Asia*, consisting of 70000 men, giving a glad Account how they had barbarously murdered those that resisted, strip the rest stark naked in that wild, scorching, and intolerable Desart; and most savagely forced their Women away with them. The Number of these Villains was computed at 100000.

This News not only affrighted him, but his *Janizaries*. However they embark'd, and *Aug.* 29. arrived at *Judda*; but the *Indian* Ships being departed three days before, *Hagge Joseph* a Turk, to whom he was recommended, gave him hopes of overtaking the Ships, they sometimes using to water and take in fresh Provisions, and Coffee, in the Country *Temen*, where being arriv'd, he understood they were past by for *Mocha* two days before. Hereupon, having hired *Dromedaries*, and, as he thought, fully satisfied the Governour of that Place, who took from him 20 pieces of Eight, and two valuable Strings of Coral, as a *Cafar*, or *Passage-Money*, he departed the same night. But he being inform'd that he was a *Frank*, sent four Horsemen after him to bring him back again, and he was forced for his Liberty to present him with 100 Pieces of Eight; which the Haste of his Business would not give him time to complain of to the King, who would have righted him. So he went onward, and arrived at *Mocha*, *Sept.* 13. hoping to have found there some *European* Vessel, if the *Indian* had been gone; but it proved quite otherwise; so that after many Endeavours in vain to get a Conveyance, he had no Choice left him, but either to stay there till next year, or to return to *Europe*. The former of these would have been to no purpose, therefore with the same Dromedaries he return'd to *Temen*, where telling the Governour his Misfortune, and shewing the Bassa of *Mocha*'s Letter, who was his Superiour, he was treated more civilly than before.

Temen is a small Village, but Sea-port of the City *Collebee*; from whence is exported all the Coffee which supplies *Europe*, by way of *Suez* and *Grand Cairo*, (as *Mocha* is the Sea-port-Town of *Bideilfeke*, whence comes all the Coffee that supplies *India* and *Europe*, by way of the Cape) and from whence were exported that year for *Judda* 40000 Bales.

Sept. 21. He embark'd for *Judda* on one of their largest Vessels, in which were 1400 Bales of Coffee: Her Keel, Beams, Planks, and Rudder being sew'd and ty'd together, and then pitch'd; not having one Nail, or piece of Iron in her: Her Sails were made of Date-Leaves matted or plaited together, and adorn'd with Ostriches Eggs and Feathers; and her Stern very prettily painted. After a fair Wind for about 12 hours, they had a violent North-West-Wind, which put them to some trouble; and they had hardly out-rid that, and cast Anchor near the Island *Comaran*, but they had dreadful Thunder and Lightning continually flashing, and Rain pouring from the Clouds, not by Drops, but by Streams; which they were forced to endure four days and four nights, which caus'd many of their Men to die of the Bloody-flux.

Sept. 26. The Storm ceasing they refitted, and arrived at *Judda*, *Octob.* 4. where being obliged to stay 50 days for a Conveyance, in great Uneasiness and Danger; seeing in that time an Instance of their outragious Insolence; when the *Xeriff* of the *Arabs* coming in person before the City, with 20000 Horse, demanded of the Bassa, his only Friend, 100000 Chequins, saying, 'That his Master 'the Grand Seignior was the Son of a Christian Whore, 'and that he would not own him to be a Protector of the 'Mahometan Religion, since he had made a Peace with 'those Unbelievers the Christians; but that he would marry his Daughter to the King of *Morocco*: Whereupon the Bassa was forced to send him the Money, to save his Head. Few days after, a Vessel arrived from *Abys*, on the Coast of *Ethiopia*, on board of which was a *Frenchman*, who had been sent with a Jesuit, as an Interpreter, to the King of *Abyssinia*; But the Jesuit died, leaving him to return to the Court of *France*, to give an Account of his Expedition and Proceedings.

This

This *Frenchman*, among other divertive Discourses of his Travels, gave him in effect the following Account of the *Nile*: "As to the Original and Rise of this great "*African* River, there are different Judgments: Some "will have its Beginning to be in *Upper Ethiopia*, in "the Kingdom of the *Abysses*, from very high Moun-"tains, which are called the *Mountains of the Moon*; "but our modern Opinions agree more reasonably, "That the *Nile* is form'd the Increase of two Lakes "called *Zembre* and *Zaflan*, which are fill'd by Rain "falling into 'em from Precipices." And for several days Journey he observ'd himself, the Source of Water is heard roaring through the Caverns under ground, a great way off, before it is seen to enter these Lakes. And particularly Mr. *Daniel* declares, "That, as other "Writers affirm its Evacuation into the *Mediterranean* "to be by five or seven Streams, it only flows from *two*, "which form a triangular Figure, like △; the Eastern "Branch falling into the *Mediterranean* at *Damiata*, and "the Western near *Roset*; both which he pass'd going "and returning, with great Satisfaction and Pleasure; "the Banks all along being delicately beautify'd with "Villages, having, between *Grand Cairo* and *Roset*, a-"bove 500.

The *Genius* of the *Egyptians* can never enough extol the extraordinary Effects and Blessings proceeding from this *Nile*, which causes the Fertility of the whole Kingdom of *Egypt*; beginning every year to flow in *June*, and swelling sometimes to 24 Cubits, which over-flows their whole Country about the middle of *August*, and decreases about the middle of *September*, and in *October* they cultivate and sow their Ground, and in *April* following reap their Harvest, without half the Trouble of our Northern Fatigues. Nor do the *Egyptians* owe only their Food, but in a great measure their Lives too to the flowing of this River; it being observ'd, that when 500 die of the Plague in *Grand Cairo* the day *before*, not one dies *after* it begins to increase; but more especially after the Feast of St. *John*, on which day the Plague has been observ'd to cease, tho' it had raged several Weeks before.

The Waters are sweet and grateful to the taste, cool, wholesome and very nourishing both to Plants and Animals. It abounds with great Plenty of Fish, but not very wholsome, the Bottom being muddy, not having any Gravel or Stones, and very much infected with Crocodiles, that are very pernicious, some of them having been taken thirty foot long.

During the Over-flowing of the *Nile*, the Country People keep their Cattel upon the tops of the Hills, till the Decrease of the Waters; their Towns and Villages appearing in the time of the Flood, like so many little Islands, holding a Commerce by Boats and Chaloups, in which they transport their vendible Commodities. 'Tis generally noted among the Natives, that if the River does not overflow, it is not only a Fore-runner of the Plague and Famine, but prognosticates some ensuing Mischief to the Prince and State, as is confirmed by the Testimony of good and credible Authors. And in the year 1688, Mr. *Daniel* was an Eye-witness of its Effects, being then in the Holy Land, whither many Families came for Refuge from the Plague, which not flowing of the River, the year before fore-told.

December 8. They embark'd for *Sues*, and, after an indifferent Passage, they arriv'd at *Jembo*. Here they were forc'd to remain some time, the Captain having private business at *Medena*; whereof he gave the following account.

Medena is one of the chiefest Cities of *Arabia Petræa*, and is very considerable among the *Mahometans*, the Body of their famous Prophet *Mahomet* being there deposited; which some say was removed hither from *Mecca*, after *Albukerk* (General of the *Portuguese*) attempted to take it thence, and surprize the Town of *Judda* to favour his Retreat; but others, of his Profession, that were more zealous, will have it that *Mahomet* himself desired to be buried there, to be reveng'd on the incredulous People of *Mecca* (the place of his Birth) for banishing him and despising his Doctrine, when he first set up for a Prophet. This City is about four days journey from *Mecca*, and stands upon a small River called *Lakie*. The Houses are very low, except those inhabited by the *Dervises* and other Religious *Mahometans*, who are very much esteemed by the *Turks* for their pretended Sanctity and Skill in the *Alcoran*. The chief Mosque is called *Mosque Akiba*, which signifies *Most Holy*; it is supported by 400 Pillars, and adorned with 3000 Silver Lamps, and there is within the Mosque, at the end, a small Chappel, glittering with Plates of Silver, in which stands *Mahomet*'s Coffin, cover'd with Cloth of Gold, under a very rich Canopy, which the *Bassaw* of *Egypt* renews every year, by the *Grand Seignior*'s Order. 'Tis commonly reported that his Coffin is Iron, and suspended in the Air by two Load stones; but this is a meer Fable, and the ridiculous Assertion only of such who would impose upon the Ignorant by their travelling Authority; for 'tis supported by two black Marble Pillars of fifteen foot high, each surrounded with a Balister of Silver, on which hang a great number of Silver Lamps, whose Smoak and Height (being very high) render the Place obscure, and the black Marble Pillars invisible. The *Turks* are obliged by an Article of their Religion to visit this Mosque once in their Life-time; but yet there are but few that strictly observe it, except the Common-People, the *Mufties* absolving the Richer sort from that Obligation. The other four Articles are, 1. To observe Cleanness in the outward parts of their Bodies and Garments. 2. To pray five times a day. 3. To observe the *Ramazan* or Fasts: and 4. To perform the *Zeckat* or giving Alms. All Christians are forbid, upon pain of Death, to come within fifteen Leagues of this place.

All this the Captain, at his return, gave him an account of; and also of the more famous City of *Mecca*, where is the greatest and most frequented of all *Mahometan* Mosques, it standing in the middle of the City, and being conspicuous at a great distance by his Roof, which is rais'd in the fashion of a Dome, with two Towers of extraordinary Height and Architecture. It has above an hundred Gates, each having a Window over it. The Plan of the Mosque has a Descent of twelve steps, which the Zealous here account to be Holy; they alleging that *Abraham* built his first House there: but especially that 'tis the place of *Mahomet*'s Birth. This Mosque is adorn'd with rich Tapestry and Gildings, and fine Inscriptions; and a certain particular Place at the East Corner of the Mosque there is, which has no Roof, and which is supposed by them to include the place where *Abraham*'s House stood: the Entrance into it is by a Door of Silver of the Height of a Man; on one side whereof is a Fountain whose Water is salt, and believ'd by the superstitious *Mahometans*, to have the Virtue of *washing away their Sins*. They solemnize a Festival here once a year, *viz. May* 23, where meet four Caravans, one from *Egypt* on the Coast of *Barbary*, another from *Constantinople*, another from *Persia*, and a fourth from the Country of *Yemen*; which meeting together are computed to be near 400000 Souls, who come there as Pilgrims, and under pretence of Religion; but Merchandizing is their chief Business, each Caravan bringing the Commodities and Product of their respective Countries, which they barter one with another this Fair: it continues twenty days; and all this time the Dervises are wholly employ'd in distributing and selling the *Holy Water* to the ignorant People.

This and such like was the Captain's Discourse when he came again on board, *Jan.* 5. Then they sail'd again, but meeting with contrary Winds and bad Weather, they arriv'd at *Sharne*, a Village not above 200 Leagues from *Jembo*, not till *March* 12. Here, having endur'd many Hardships through the Want or Damage of their Meal and Provisions, they resolv'd rather to venture the Danger of the murd'rous *Arabs* by Land, than their paltry Galley. Accordingly Mr *Daniel* dealt with one of the Country (and they are all very Rogues) to furnish him with Camels, and to conduct him to Mount *Sinai*; where at last, through many Fears and Fatigues, he arriv'd, having by the way almost lost his Sight by the Heat and Sand; and having been forc'd to go two days about, by reason of an Earthquake, which had thrown down a Mountain, and stopt the usual Passage.

Zinai or *Sinai*, according to the Relation he had, is a Mountain of *Arabia Petræa*, two days Journey from the *Red-Sea*, of which Mount *Horeb* is a part. This, as antient Authors generally agree, and as my Interpreter told me, was the twelfth Station of the *Israelites*, in their passage to the *Holy-Land*; about which Mountains they wander'd near a year, during which time all those things happen'd which are mentioned in the Scripture, from *Exodus* 19. to the end of *Leviticus*, and from the beginning of *Numbers* to Chap. 10. the Chief of all was, the Almighty's giving the Law in person there to *Moses*. The *Mahometans* call this Mountain *Gibel Mousa*, or the *Mountain of Moses*. It's form'd of the uniting of three Mountains, as it were, one standing on the Top of the other, and had formerly many Chapels upon it; several yet remaining, serv'd by 1400 Hermits; among which are three famous, on account of three Sons of a King of *Ethiopia*, who led retir'd Lives there above 40 years; as also of the famous Convent called *Orei*, which was very strong and rich, and the Walls not inferiour to

those of the Tower of *London*; all Pilgrims who come there being drawn up by a Pulley, fearing the Insult of the *Arabs*.

From this Convent Pilgrims go up to the top of the Mountain by 1400 Steps cut out of the Rock, by the Order and Charge of S. *Helena*.

At some distance from the Foot of this Mountain, there still runs that excellent Spring of Water, which gush'd out of the Rock when *Moses* struck it, at the Murmuring of the Children of *Israel*; and at the third part of the way are two Gates shut, which are not to be open'd till they have made their Confession; and then, the Gates being open'd, they are permitted to pass. Somewhat higher is a great Stone, which an Angel, as 'tis said, laid there to hinder the Passage of *Elias*. On the top of the Mountain, under a great hollow Rock, opening towards the West, is the place where *Moses* liv'd, during the forty days that he was upon the Mount. And a little beyond this Rock, going towards the Right, there is a *Greek* Church, dedicated to St. *Katherine*.

Having staid there all Night, next Morning they visited the Monastery of the forty Martyrs, which is in the Valley between Mount *Horeb* and that of *Sinai*. Here there is a fair Church and most delicious Gardens, with all sorts of Fruit-trees and Flowers, a Spring running through the middle of it; and 'tis so much the more delightful, that there is no other Garden, great Trees or Water, within ten days Journey of it; as also the *Grotto* of St. *Onuphrius*, cut out in the Rock; and many other Curiosities.

After twelve days stay here, the Patriarch gave him a Pass to his *Caffargees*, and also some necessary Provision for his Journey to *Cairo*, and a Promise of his daily Prayers for him, his Friends and Relations; it being a venerable Custom among the *Greek* Pilgrims that come there to give five Crowns for themselves or any others, for whom they have the greatest Love and Care (to use their Interest with God Almighty, and procure them a good place in Heaven.) He presented them with forty Crowns and two pair of Spectacles, to pray for King *William*, the Honourable *East-India* Company, himself and Relations.

Hence he went to *Grand Cairo*, ten Days Journey, then terribly infected with the Plague, which so raged, that in ten Days time there died above 40000, and all the *Europeans*, as *English*, *French*, *Dutch*, and *Venetians* were close shut up, having laid in their Provisions at the beginning of the Plague, and keeping no Communication with the People of the Town. Even the *English* Consul would not at first entertain him; but soon used him kindly, and furnished him with Cloaths and other Necessaries.

April 20. He hired a Boat, and arrived at *Alexandria* the 25th, where he embark'd for *Marseilles* in his way for *England*.

AN

An ABSTRACT OF THE CHARTER Granted by His MAJESTY K. CHARLES II. TO THE *EAST-INDIA* COMPANY,

Under the Great Seal of *England*, the Third Day of *April*, in the Year 1661, and the Thirteenth of that PRINCE's Reign.

CHARLES II. by the Grace of God King of *England*, *Scotland*, *France* and *Ireland*, Defender of the Faith, &c. To all to whom these Presents shall come greeting. Whereas our well-beloved Subjects, the Governour and Company of Merchants trading to the *East-Indies*, have been of long time a Corporation, to the Honour and Profit of this Nation, and have enjoy'd, and do still enjoy divers Liberties, Privileges and Immunities, by virtue of Letters Patents and Charters, heretofore granted them, by our late Royal Progenitors, Queen *Elizabeth*, and King *James* of Blessed Memory. But of late divers Disorders have been committed, as well by our own Subjects as by Foreigners, to the great Detriment and Interruption of the Trade of the said Company; they having humbly besought us to confirm their said Charters, and to grant and allow some Alterations and Additions, tending to the Benefit and Advancement of their Traffick.

Know ye, that we taking the Premises into our Royal Consideration, and well considering how much it imports this our Realm, that the Grievances of the said Corporation be redress'd, the better to remove all Incumberances and Inconveniences that may have hitherto obstructed their Trade; have granted and confirmed unto the said Governour and Company, for Us, our Heirs and Successors, that they from henceforth be, and for ever shall be, one Body Corporate and Politick, in Deed and in Name, by the Name of the *Governour and Company of Merchants of* London, *trading to the* East-Indies. And we do ordain, that by the Name aforesaid, they shall have perpetual Succession, and that they and their Successors by the said Name, be now and at all times hereafter, Persons able and capable in Law, and a Body Corporate and Politick, capable in Law to have, purchase, receive, possess, enjoy and retain Lands, Rents, Privileges, Liberties, Jurisdictions, Franchises and Hereditaments, of what kind, nature and quality soever they be, to them and their Successors. And also to give, grant, devise, alien, assign, and dispose of Lands, Tenements, and Hereditaments, and to do and execute all and singular other things, by the same Name that to them shall or may appertain to do. And that they and their Successors, by the said Name, may plead and be impleaded, answer and be answered, defend and be defended, in whatsoever Courts and Places, and before whatsoever Judges and Justices, and other Persons and Officers, in all and singular Actions, Pleas, Suits, Quarrels, Causes, and Demands whatsoever, of whatsoever kind, nature or sort, in such Manner and Form, as any other of our Liege People of this our Realm of *England*, being Persons able and capable in Law, may or can have purchase, receive, possess, enjoy, retain, give, grant, devise, alien, assign, dispose, plead, defend and be defended, release and be released, do permit and execute: And we also grant and allow, that the said Company and their Successors, under the Name aforesaid, may have a Common Seal, and may likewise break and alter the same at their Pleasure.

And further we ordain, that the said Company shall elect one of the Members thereof to be their Governour, and twenty four of the said Members to be Committees; who shall have the Direction of the Voyages of and for the said Company, and the Provision of the Shipping, and Merchandizes thereunto belonging; and also the Sale of all Merchandizes, Goods, and other things return'd, in all or any of the Voyages and Ships, of or for the said Company, and the managing and handling of all other Business, Affairs, and things belonging to the said Company. And we ordain, that the said Governour and Company, shall be ruled and ordred as is hereafter express'd, and not otherwise; and that they shall likewise enjoy the Liberties, Privileges, and Immunities herein specified, and no other. And for the better execution of our said Will and Grant in this behalf, we nominate, constitute and appoint, Sir *Andrew Riccard*, to be the first and present Governour, and *George* Lord *Berkley*, Sir *John Lewis*, Sir *William Thomson*, Sir *Richard Ford*, Sir *James Drax*, Sir *John Frederick*, Sir *Theophilus Biddulph*, Sir *William Vincent*, Sir *Thomas Bludworth*, Sir *William Ryder*, Sir *Stephen White*, and Sir *George Smith*, Knights; *William Love*, Esq; *William Williams*, *John Jolliffe*, *Peter Middleton*, *Thomas Kendal*, *Maurice Thomson*, *Samuel Mayer*, *Christopher Boone*, *Francis Clerk*, *John Masçal*, *Thomas Pearle*, and *Christopher Willoughby*, Gentlemen; to be the twenty-four first and present Committees for the said Company, from the date of these Presents, until the said tenth Day of *April*, then also next following; and so until new Committees shall be chosen in form hereafter express'd. And further we will and ordain, that the said Governour and Company, at any General Court, may elect a *Deputy Governour*, who shall take an Oath before the Governour, and five or more of the Committees for the time being, well, faithfully and truly to execute his said Office of *Deputy* to the Governour of the said Company. And the said Governour and Company shall have Power yearly, between the 10th and the last Day of *April*, to meet and to elect a Governour for one whole year, who shall take an Oath before the last Governour or his Deputy, and six more of the Committees, that he shall well and truly execute the Office of Governour of the said Company: And in like manner, every Member of the said Company, before their admission into it, shall take an Oath before the Governour of the said Company or his Deputy, to such effect, as by the said Governour and Company, or the greater part of them in any Court, to be held for the said Company, shall be in a reasonable manner devised.

And

And further we Will and Grant, that the ſaid Governour or Deputy-Governour, and the Company or their Succeſſors, for the time being, may meet yearly, between the 10th and the laſt of *April*, and elect twenty four Committees for the year enſuing, who ſhall, before their admiſſion into their ſaid Stations, take an Oath before the Governour or his Deputy and five more of the laſt Committees, their immediate Predeceſſors, that they ſhall truly and faithfully execute their ſaid Office of Committees.

And further we will and grant, That upon the Death or Removal of the Governour of the ſaid Company (which Governour not demeaning himſelf well in his Office we will to be removeable at the Pleaſure of the ſaid Company or the greater part of them, at any of their General Courts) the Reſidue of the ſaid Company or the greater part of them, may elect another Governour, who ſhall exerciſe the ſaid Office during the Reſidue of the Year, having firſt taken an Oath, as aboveſaid, for the due Execution thereof. And in like manner, any of the Committees dying or being removed (which Committees not demeaning themſelves well, may be removed at the Pleaſure of the Governour and Company at any of their General Meetings) the Governour, or his Deputy, and Company for the time being, may elect and nominate one or more of the ſaid Company, to be Committee or Committees of the ſaid Company, in the place and ſtead, or places and ſteads of him or them of the former Committees ſo dying or removed; which Perſon or Perſons ſo elected ſhall take an Oath (as aboveſaid) for the right and due Execution of their aforeſaid Office or Offices.

And further we will and grant, That the Sons, Factors and Servants of the Members of the ſaid Company, that are of one and twenty years of age or above, may freely trade in any part of *Aſia*, *Africa* and *America*, (beyond the *Cape of Good-Hope*, to the *Streights of Magellan*, in ſuch manner as ſhall be agreed to at any General Court, and not otherwiſe.

And we further will and grant, That the ſaid Governour or his Deputy, and the ſaid Company may aſſemble in any place to hold Court, and there make Laws for the Government and Management of their Trade, and may impoſe Penalties on Offenders, and may levy the ſame without any Accompt, ſo as the ſaid Penalties be reaſonable, and not contrary to Law.

And alſo we will and grant, That the ſaid Governour and Company of Merchants, and their Agents, Factors and Aſſigns ſhall have ſix Months time for the Payment of one half, and ſix Months time longer for the payment of the other half of all Duties, Poundage, Cuſtoms, and Subſidies, for all manner of Goods; they, the ſaid Governour and Company of Merchants, always giving ſufficient Bond with Surety for the Payment thereof at the Terms aforeſaid. And when any Goods exported from *England*, for which the ſaid Governour and Company have paid the Cuſtom here, or given Bond for the payment thereof, ſhall happen to miſcarry, or be loſt before their ſafe Arrival at the Ports for which they were deſigned; due Proof being made thereof before the Treaſurer of *England*, the Duties paid for ſuch Goods ſhall be deducted out of the Duties of the firſt Goods ſhipt off afterwards for the ſaid Company's Accompt.

And further we grant unto the ſaid Governour and Company, That it ſhall be lawful for them and their Succeſſors, or any the natural Subjects of this our Realm which may or ſhall buy any *Eaſt-India* Goods by them imported, to tranſport the ſame in *Engliſh* Bottoms freely out of this Realm, without paying any further Duties than thoſe that were paid at the Entry, provided the ſaid Goods be exported within the ſpace and term of thirteen Months.

And moreover we grant to the ſaid Governour and Company, That it ſhall be lawful for them to tranſport in their Voyages all ſuch Foreign Coin of Silver, *Spaniſh* or other Foreign Silver or Bullion of Silver, as they ſhall bring or cauſe to be brought into this Realm of *England* from the Parts beyond the Seas, either in the ſame kind, ſort, ſtamp or faſhion which it ſhall have when they bring it in, or in any other form, ſtamp or faſhion to be com'd in our Mint within our Tower of *London*, at their pleaſure, ſo as the whole Quantity tranſported exceed not 50000 *l.* in one Voyage.

And we further will and grant, That the ſaid Company and their Succeſſors ſhall have and enjoy the whole and entire Trade to the *Eaſt-Indies*; and in any time of Reſtraint, they may ſend ſix good Ships and ſix good Pinnaces well furniſh'd with Ordnance and other Munition for their Defence, and 500 Marriners, *Engliſhmen*, to guide and ſail in the ſaid ſix Ships and ſix Pinnaces; except when we having juſt cauſe to arm our Navy in Warlike manner, in Defence of our Realm, or for Offence of our Enemies, or that it ſhould be found needful to joyn to our Navy the Ships of our Subjects, to be alſo arm'd for the Wars, to ſuch a number as cannot be ſupply'd if the ſaid ſix Ships and ſix Pinnaces ſhould be permitted to depart; then, upon knowledge given by us or our Admiral to the ſaid Governour and Company, about the 20th day of *July*, or three Months before the ſaid Governour and Company ſhall begin to make ready the ſaid ſix Ships and Pinnaces, then they forbear to ſend the ſame, till we ſhall recal or withdraw our Navy from the Service againſt our Enemies.

And further we prohibit and forbid all our other Subjects to viſit or trade into the *Eaſt-Indies*, unleſs by Licence from the ſaid Governour and Company upon pain of Forfeiture of Ship and Goods, one half to us and the other half to the Company, and the Offenders to ſuffer Impriſonment during our pleaſure, and ſuch other Puniſhment as we ſhall think fit to inflict on them.

And further we have granted and condeſcended, That the ſaid Governour and Company may give Licence, under their common Seal, to any Perſon or Perſons to ſail, Trade or Traffick into or from the *Eaſt-Indies* upon ſome conſideration or benefit by them to be given. And we, our Heirs or Succeſſors ſhall not give nor grant any ſuch Licence to any Perſon or Perſons without their Conſent.

And we further grant, That if it ſhall happen that any Perſon or Perſons that are or ſhall be free of the ſaid Company, ſhall, before the going forth of any Ship or Fleet, ſubſcribe for any Sum or Sums of Money towards the furniſhing Proviſion or Maintenance for any Voyage or Voyages, ſet forth or to be ſet forth by the ſaid Governour and Company, and ſhall not, within the ſpace of twenty Days, next after warning given to him or them, by the ſaid Governour and Company, or their known Officer or Miniſter, bring in and deliver to the Treaſurer or Treaſurers appointed for the Company, the Sum or Sums ſubſcribed for; it ſhall be lawful for the ſaid Governour and Company, at any General Court, to diſfranchiſe the ſaid Perſon or Perſons. And alſo the ſaid Governour and Company, at any General Court (as aboveſaid) may admit into their Freedom all ſuch Perſons as they ſhall think fit.

And further the ſaid Governour and Company do, by theſe preſents, for themſelves and their Succeſſors, promiſe and covenant to and with us, that within ſix Months after every Return from every Voyage (the firſt Voyage only excepted) they ſhall bring into this Realm, from the *Eaſt-Indies*, or from other Parts beyond the Seas, as great or a greater Quantity of Bullion, Gold or Silver, reſpectively for every Voyage, as that which by virtue of our Letters Patents they exported. And that all the Silver which ſhall be by them or their Succeſſors tranſported out of our Dominions, ſhall be ſhipt off at the Port of *London*, being firſt duly enter'd without Cuſtom or Subſidy, as likewiſe what ſhall be imported.

And to prevent Clandeſtine Trading, no Entry of *Eaſt-India* Goods ſhall be permitted to be made, but what is allow'd of by the Company. And all Adventurers in the Company ſhall have Votes according to their Stocks.

And we do further grant, That all the Company's Plantations, Forts, Fortifications, Factories and Colonies ſhall be immediately under their own Command; and that they may appoint Governours and Officers who may judge all Perſons living under them, in all Cauſes whether Civil or Criminal, or elſe may tranſmit them to *England*. And may ſend Ships of War, Men, and Ammunition for defence of their Factories; as alſo to make Peace or War with any not Chriſtians, and right and recompence themſelves for any Injuries or Wrongs received or ſuſtained by them.

And we further grant, That they may build, plant and fortifie at St. *Helens*, and ſend out ſupplies of Cloathing without Cuſtom.

And we alſo grant to the ſaid Governour and Company the Power of inflicting Puniſhments for Miſdemeanours; and likewiſe to ſeize upon the Perſons of all ſuch of our Subjects as they find in the *Indies* without their Licence, and ſend them into *England*. And that the Company may puniſh all Perſons in their own Service there; or, in caſe of Appeal, ſend them Priſoners into *England*.

And further we will and grant, That, for Diſcovery of Injuries, the Officers of the ſaid Company there may examine upon Oath all Perſons whom they ſhall think it meet and convenient ſo to examine; ſo as the ſaid Oath

Oath, and the matter therein contained be not repugnant to the Laws of *England*.

Provided always, and our Will and Pleasure is, that these our Letters Patents and Charters shall not give the said Company leave to Trade to any place already in the possession of any Christian Prince in League and Amity with us, who shall overtly declare against it.

Provided also, That if we find this Grant unprofitable for us or our Realm, then after three Years warning the same is to cease. Charging all our Admirals and other Officers to be aiding thereunto, *&c.*

In witness whereof we have caused these our Letters to be made Patents. Witness our self at *Westminster* the third Day of *April*, in the thirteenth Year of our Reign.

An ABSTRACT OF THE CHARTER Granted by His MAJESTY King JAMES II. TO THE *EAST-INDIA* COMPANY,

Under the Great Seal of *England*, the 12th Day of *April*, in the Year 1686, and the Second of that PRINCE's Reign.

JAMES II. by the Grace of God, *of England, Scotland, France*, and *Ireland*, King, Defender of the Faith, *&c.* To all to whom these Presents shall come greeting. Whereas our well beloved Subjects, the Governour and Company of Merchants trading to the *East-Indies*, have been of long time a Corporation, to the Honour and Profit of this Nation, and have enjoy'd, and do still enjoy divers Liberties, Privileges and Immunities, by Virtue of Letters Patents and Charters, heretofore granted them, by our late Royal Progenitors and Predecessors, Queen *Elizabeth*, and King *James*. And whereas the late King *Charles* II. our dearly beloved Brother of ever blessed Memory, did by his Royal Charter, dated at *Westminster* the third Day of *April* in the thirteenth Year of his Reign, confirm the said precedent Charters and Patents, and grant that the said Governour and Company should be for ever a Body Corporate and Politick in Name and in Deed; and that their Sons, Apprentices and Servants might for ever freely Trade and Merchandise to and from *India*, by the ways then or thereafter to be discovered, in such manner as should at any General Court (the Governour or his Deputy being always one) be limited and agreed to, any Statute, *&c.* to the contrary notwithstanding; so as they Trade not to any place in the lawful possession of any Christian Prince or State in League or Amity with this Nation, that would not accept of such Trade, but openly declare against it.

And further the said King did thereby for himself, his Heirs and Successors, grant unto the said Governour and Company for themselves and their Successors, that they should for ever enjoy the whole and entire Trade to the *Indies*; and that no part of the said *Indies* should be frequented and visited by any of His Majesty's Subjects. And his said Majesty did also by his Prerogative Royal, straightly prohibit all his Subjects from Trading into the said *Indies*, other than the said Governour and Company, their Factors and Servants, *&c.* except by License obtain'd of them, under their Common Seal, under the Penalties, Pains, and Forfeitures, in the said Letters Patents, at large express'd.

And whereas the said late King *Charles* II. by his Royal Charter, or Letters Patents, dated at *Westminster* the 27th Day of *March*, in the 20th Year of his Reign, by the Advice of his Privy-Council, in all the Grants and Matters therein; did grant, transfer, and confirm for himself, his Heirs and Successors, unto the said Governour and Company, all the Port and Island of *Bombay* in the *East-Indies*, with all the Rights, Profits, Territories, and Appurtenances thereof whatsoever, and all and singular Royalties, Revenues, Rents, Customs, Castles, Forts, Buildings and Fortifications, Privileges, Franchises, Preheminences, and Hereditaments whatsoever, within the Premises, or to them, or any of them belonging, or any ways appertaining in as large and ample manner, to all Intents, Constructions and Purposes, as the said late King then had and enjoy'd the same, or might or ought to have had and enjoy'd the same, by Virtue and Force of the Grant of the then King of *Portugal*, and not further or otherwise. And them the said Governour and Company, did make and constitute the absolute Proprietors thereof, always reserving unto himself, his Heirs and Successors, the Faith and Allegiance to him due and belonging, and his Royal Power and Sovereignty of and over his Subjects and Inhabitants there: To have, hold, possess and enjoy, the said Port and Island, and all and singular the Premises therein before granted, or mention'd to be granted unto the said Governour and Company, their Successors and Assigns, and to the only Use of them for evermore: To be holden of him the said late King, his Heirs and Successors as of his Mannor of *East-Greenwich*, in the County of *Kent*, in Free and Common Soccage, and not *in capite*, or by the Knight's Service; yielding and paying therefore to him the said late King, his Heirs and Successors, at the Custom House, *London*; the Rent and Sum of 10*l.* of Good and Lawful Money of *England* in Gold, on the 30th Day of *Sept* Yearly, for ever. And the said late King did, by his said Charter, also grant them, and order that they should enjoy in the said Island, all the Privileges and Advantages that they might enjoy in the other Parts of *India*, by Virtue of his said Majesty's former Patent, dated the 3d Day of *April*, in the 13th Year of his Reign, in as large and ample manner, as if particularly express'd in the second recited Charter or Letters Patents. And whereas the said late King, by his Charter dated the 5th of Oct. in the 28th Year of his Reign, did confirm all Rights formerly granted the said Company

pany, notwithſtanding any former Miſ-uſer, Non-uſer, or Abuſer thereof whatſoever. And whereas the ſaid late King, by his Royal Charter dated the 16th of *Decemb.* in the 25th year of his Reign, did grant unto the ſaid Company, the Iſland of St. *Helena*, with all and ſingular the Rights, Profits, Territories, and Appurtenances whatſoever; and all the Soil, Lands, Fields, Woods, Mountains, Farms, Lakes, Pools, Harbours, Rivers, Bays, Iſles, Iſlets, ſituate or being within the Bounds or Limits thereof; with the fiſhing of all ſorts of Fiſh, Whales, Sturgeons, and all other Royal Fiſhes in the Bays, Iſlets, or Rivers, within the ſame Premiſes, and the Fiſh therein taken, and all the Veins, Mines and Quarries, as well Royal Mines, as other Mines; wherher the ſame were then diſcover'd, or not diſcover'd; and alſo all Gold, Silver, Jems, and precious Stones, and all other whatſoever, be it of Stones, Metals, or any thing whatſoever then found, or to be found within the Veins, Mines and Quarries, of the ſame Iſland and Premiſes, with all and ſinguler Royalries, Revenues, Rents, Cuſtoms, Caſtles, Forts and Buildings, then erected or to be erected. And whereas the ſaid late King did create and conſtitute the ſaid Company, abſolute Lords and Proprietors of the ſaid Iſland (always reſerving the Faith and Allegiance of the Inhabitants) to the only uſe of the ſaid Company, to be holden of the ſaid late King, his Heirs and Succeſſors as of the Mannor of *Eaſt-Greenwich*, in Free and Common Soccage, and not *in capite*, nor by Knight's Service, as in and by the ſaid Letters Patents, may more fully appear.

And whereas the ſame late King, by his Royal Charter, dated the 9th of *Aug.* in the 35th Year of his Reign, did erect a Court of Judicature to be holden as the Company ſhould direct, to determine all Caſes of Forfeitures and Seizures of Ships, as alſo all Cauſes *Mercantile* or *Maritime*, and all Treſpaſſes upon the High-Sea, or any of the Regions and Territories, Countries or Places, therein for that purpoſe mentioned, concerning any Perſon or Perſons reſiding, being or coming into the Parts of *Aſia*, *Africa* and *America*, within the Bounds and Limits therein mentioned; all which Caſes ſhall be judg'd and determin'd by that Court, upon due Examination and Proof, according to the Cuſtoms of Merchants, and the Rules of Equity and good Conſcience; and by ſuch Methods, as the ſaid late King ſhould direct, under his Great or Privy-Seal, and for want thereof, as the Judges of the ſaid Court ſhould think meet; and all Judgments, Determinations and Decrees of that Court, were to be put in Writing, and ſignify'd to the Perſons that were preſent at the making of them, and ſhould contain a ſhort ſtate of the Matter of Fact, as it appear'd to them and their Sentence and Adjudication thereupon; as in and by the foreſaid Charter and Letters Patents, doth and may more fully appear.

And whereas ſeveral Perſons, in Contempt of the firſt recited Letters Patents, have preſumed (without Licenſe) to ſend out Ships, and to Trade within the Limits compriz'd in the ſaid Charter, to the great Damage of the ſaid Company, and the manifeſt Hazard of ruining of that Trade; whereupon the ſaid Governour and Company have humbly beſought us to grant and confirm the ſaid Charters, with ſome Additions. Now well weighing how highly it imports the Honour and Welfare of this Realm, that thoſe Diſorders ſhould be redreſs'd, and that Trade improv'd to the utmoſt; that the ſaid Company may be encourag'd by all lawful Aſſiſtance, in that difficult and hazardous Trade. Know ye, that we taking the Premiſes into our Royal Conſideration, have of our ſpecial Grace, *&c.* ratify'd and confirm'd, and by theſe Preſents, for Us, our Heirs and Succeſſors, do ratifie and confirm unto the ſaid Governour and Company, and their Succeſſors for ever, all the ſaid Charters and Letters Patents, and all and ſingular the Rights, Grants, Liberties, Covenants, Franchiſes, Preheminences and Authorities, in all the ſaid Charters, or any of them compriz'd, as fully to all Intents and Purpoſes; as if ever diſtinct Right, Grant, Power, Liberty, Covenant, Franchiſe, Preheminence and Authority, compriz'd in the ſaid Letters Patents, were herein recited, and hereby confirm'd ſeparately and apart by itſelf. And further we eſtabliſh to them, all ſuch and the like Liberties and Privileges, as ever they had; with Power to the ſaid Company, their Preſidents, *&c.* to adminiſter the Freeman's Oath, and ſuch other lawful Oath, as the Court ſhall direct. And we do further erect and eſtabliſh a Court of Judicature, at ſuch Places as they ſhall appoint; which Court ſhall conſiſt of one Perſon learn'd in the Civil Law, and two Merchants, who (or the Major part of them, the Civilian being always one) ſhall have Power to determine of all Forfeitures, Seizures, *&c.* and all Cauſes *Mercantile* or *Maritime*, and all Treſpaſſes on the High-ſeas, or any of the Regions aforeſaid, according to the Cuſtoms of Merchants, and the Rules of Equity and Good Conſcience, and according to ſuch Methods of proceeding as we ſhall appoint, and in Default thereof, by ſuch ways as they ſhall think fit, all which Judgments and Determinations, *&c.* ſhall be put in Writing, according to the manner preſcrib'd in the Letters Patents of the ſaid late King *Charles* II. as aboveſaid.

And whereas the ſaid late King, did grant the ſaid Company Power to appoint Governours of Forts, Caſtles, Factories, *&c.* to raiſe Arms, train and muſter what Military Forces to them ſhould ſeem requiſite; we do hereby confirm the ſame. And further, underſtanding that many of the Native Princes, taking Advantage of the late Licentious Trading, and the Evil Conſequences thereof, have violated many of the Company's Privileges and Liberties, for which they intend to demand Satisfaction in a peaceable way; and if not that way attainable to uſe Force of Arms for recovering their Loſs. We do therefore grant them full Power to appoint Admirals, Vice-Admirals, Rear-Admirals, Captains, and other Sea Officers, from time to time, in all or any Ship or Ships, ſerving the ſaid Company in the *Eaſt-Indies*, within the Limits of any of the above recited Charters; who have hereby Power to raiſe, train and muſter Sea-men or others, and to execute Martial Law, beyond the Cape of *Good-Hope*, reſerving to our ſelves Power to revoke this Grant touching Martial Law.

And further by theſe Preſents, we give the ſaid Company Power to coin any Species of Money uſually coin'd by the Princes of thoſe Countries, ſo as it be agreeable to their Standards in weight and fineneſs, and that they coin not any *European* Money.

And laſtly, we ſtrictly charge and command all our Admirals, and all other our Officers whatſoever, to be aiding and aſſiſting to the ſaid Governour and Company, in executing and enjoying the Premiſes: And finally, our Will and Pleaſure is, that theſe our Letters Patents, ſhall be conſtituted in the moſt favourable manner on behalf of the Company that can be, any Statute, Act, Proclamation or Reſtriction, or any other thing to the contrary, in any ways notwithſtanding. In Witneſs whereof, we have cauſed theſe our Letters to be made Patents; Witneſs our ſelves at *Weſtminſter* the 12th day of *April*, in the Second year of our Reign.

By Writ of Privy-Seal,

Pigott.

An

An Abstract of a Charter of Regulations, *granted to the* East-India Company, *by their Majesties King* William *and Queen* Mary; *under the Great Seal of* England, *on* Nov. 11. 1693. *in the fifth Year of their Majesties Reign.*

WILLIAM and MARY by the Grace of God King and Queen of *England, Scotland, France* and *Ireland*, Defenders of the Faith, &c. To all to whom these Presents shall come Greeting. Whereas the Governour and Company of Merchants trading to the *East-Indies*, have been long a Corporation, to the Honour and Profit of this Nation, and have enjoy'd divers Liberties, Privileges and Immunities by vertue of Letters Patents and Charters, granted them by our late Royal Progenitors and Predecessors, Queen *Elizabeth*, King *James* I. King *Charles* II. and King *James* II. And whereas some Doubt hath arisen touching the Validity of the Charters heretofore granted to the said Company, by the not actual payment of the first quarterly payment of the Tax of five pounds *per Cent.* charged on the general Joint-Stock of the said Company, according to a late Act of Parliament entitled, *An Act for continuing certain Acts therein mentioned, and for charging several Joint-Stocks.*

We having taken the same into our Royal consideration, and well weighing the Disorders and Inconveniences that would befal the said Company and the persons employ'd in their Trade every where, and especially in the more remote places of the World, if advantage were taken of that Forfeiture; did, by our Letters Patents dated the 7th of *October* last, constitute Sir *Thomas Cook* Kt. and one of the Aldermen of the City of *London*, *Francis Tyssen* Esquire, *George* Earl of *Berkley*, Sir *John Fleet* Kt. then Lord Mayor of the City of *London*, Sir *Josiah Child* Bar. Sir *William Langhorn* Bar. Sir *Benjamin Bathurst* Kt. Sir *John Moore* Kt. one of the Alderman of the City of *London*, Sir *Samuel Dashwood* Kt. and one of the Aldermen of the City of *London*, Sir *Edward de Bouvery* Kt. Sir *Tho. Rawlinson* Kt. Sir *William Gore* Kt. and one of the Aldermen of the City of *London*, Sir *Joseph Herne* Kt. Sir *Rowland Ainsworth* Kt. *John Pery* Esq; *George Bohun* Esq; *Richard Hutchinson* jun. Esq; *Frederick Herne* Esq; *Ralph Marshall* Esq; *Richard Alton*, *John Cook* of *Hackney*, *Francis Gosfright*, *John du Bois*, *Isaac Houblon*, *Samuel Ongley* and *Nathaniel Mountency* Gentlemen, and all and other Person and Persons who were Members of the said Company on the 24 day of *March* last past, who had not before the said last recited Letters Patents parted with their Stocks in the said Company, and all and every other Person or Persons, who after the said 24th Day of *March* last past, and before the date of the said recited Letters Patents, by buying Stocks or otherwise had come into and then remained in a capacity of being Members of the said Company, should be a Body Corporate and Politick in deed and in name, by the name of *The Governour and Company of Merchants of* London, *trading to the* East-Indies. And them by that name one Body Corporate and Politick in Deed and in Name, really and fully for ever, for Us, our Heirs and Successors, we did make, declare, establish and confirm. And also granted and restored unto them all the Ports, Islands, Plantations, Territories, Forts, Castles, Ordnance, Armour, Artillery, Munition, Arms, Guns, Powder, Shot, Victuals, Magazines, Stores, Ammunition and Provisions of War, Ships, Junks, Vessels, Boats, Joint-Stocks, Mannors, Lordships, Messuages, Houses, Lands, Tenements, Hereditaments, Goods, Wares, Merchandizes, Cattel, Chattels real and personal, Debts, Dues, Duties, Right of Actions and Demands in Law or Equity, Powers, Privileges, Liberties, Franchises, Jurisdictions, Customs, Rights, Royalties, Immunities and Advantages whatsoever, and all and sundry other things, which were or might be lawfully enjoy'd by them on or before the 24th of *March* last, or at any time before the Date of the said last recited Letters Patents, by Virtue of any Charters formerly granted or confirmed to them, to enjoy the Premises in the same manner they might have done on the 24th of *March* last past, as if the Powers and Privileges by the said Charters granted, had been particularly recited, but under the Limitations therein contained.

And whereas in the said Charter of the 7th of *October*, is contain'd the *Proviso* following, *viz. If the Company do not accept of and effectually execute such Orders, Directions, Additions, Alterations, Restrictions and Qualifications, relating to the Constitution, Continuance, Determination, Rights, Powers, or Privileges of the said Company, or of the Government thereof, or of the said Governour and Company, or of the Encouragement, Management, Regulation, or Advancement of Trade, or of the present or future Joint-Stock of the said Company, or concerning any future Subscriptions, to be made by way of Increase or Addition to the Joint-Stock, or for ascertaining the true Values of the said Joint-Stock, at and during the time of any such future Subscriptions, which we, our Heirs and Successors, with the Advice of our or their Privy-Council, shall at any time before the 29th day of* Sept. 1694, *think fit to make, insert, limit, direct, appoint or express, in or by any further or other Charters or Letters Patents, under our or their Great Seal of* England; *then these presents may be determin'd, made void, and revok'd, and all the Powers therein contain'd shall cease.*

Now know ye, that we considering how highly it imports this Kingdom, that the *East-India* Trade should be continu'd, and being desirous to make the same more National (which is best to be done in a Joint-Stock) have, for the Purposes aforesaid, by the Advice of our Privy-Council, ordain'd and constituted; and the said Company does agree, that all our natural Subjects and Persons naturaliz'd and endeniz'd, who shall hereafter subscribe and pay down the Sums of Money by them subscrib'd, in such manner as is herein after directed, shall be Members of the said Company, as is after expressed.

And our Will and Pleasure is, that 744000*l.* be subscrib'd in a Book of Vellum (within six Days to be provided) to lye open daily from 8 to 12 in the Morning, and from 2 to 6 in the Afternoon, till the 10th of *January* next; none being to subscribe above 10000*l.* And if the Subscriptions exceed the aforesaid Sum of 744000*l.* they shall be reduc'd to that Sum by the Court of Committees; the Subscribers being to make Oath, that the Money subscrib'd is their own, and not in trust; which Oath the Governour or his Deputy, and three more of the Committees are to take care to administer to them, and one third part of all Sums subscribed for, shall be paid down to the Committee of the Treasury of the Company or their Cashier, at the time of the Subscription, and the rest before or upon the 10th of *January* next.

And further our Will and Pleasure is, that in all General Courts every qualified Member shall have a Vote for every 1000*l.* he has in the Fund, but no Person shall have above ten Votes, and no Person shall Vote under 1000*l.*

And we further order and appoint, that all persons who were before free of the said Company, or capable to be so by former Charters, and all new subscribers, who shall pay into the Joint-stock the Sums by them subscribed for, in manner above-directed, shall have their Freedom *gratis*; but such as shall come in by purchase of any of the said Company's Joint-stock, shall pay for their Freedom 5*l.* and they, with the Subscribers, shall take the Oaths appointed to be taken by a late Act of Parliament, entitled *An Act for the abrogating the Oaths of Supremacy and Allegiance, and appointing other Oaths*; and also the Oath usually taken by all Persons made free of the said Company, before the Governour or Deputy-Governour for the time being, to whom we hereby give Power to administer the same accordingly.

And further it shall be lawful for the Governour or Deputy-Governour of the said Company to call General Courts and Courts of Committees, to consist only of such as have 1000*l.* in the Joint-stock, each in their own right, and have taken the Oaths aforesaid; and the Governour or (in his Absence) his Deputy shall have a Casting Voice in the said Courts. The said Governour, Deputy, and twenty four Committees shall be chosen yearly in *April*; the Governour to have 4000*l.* in the Joint-stock in his own right, the Deputy as much, and each Committee 1000*l.* And if the Governour, Deputy, or any of the Committees die within the year, others (duly qualified) shall be elected in their stead.

The Governour, Deputy and Committees, before they enter upon the Exerciſe of their Offices, being to take the ſeveral Oaths as aboveſaid.

And further we grant, That the Governour and other qualified Members of the Company may aſſemble and hold general Courts where they pleaſe, and (the Governour or Deputy being preſent) may make By-Laws for the Company's better Government, and revoke or alter them, and may impoſe lawful Penalties, Fines, *&c.* upon Delinquents, and levy the ſame to their own uſe, all which By-Laws, *&c.* ſhall be kept and obſerved, if approv'd by a general Court, and not repugnant to the Laws of the Land. Provided always, and our further Will and Pleaſure is, that no permiſſion be granted to any Perſon to trade, or Ships to paſs into or from the *Eaſt Indies* on any private account, on penalty of forfeiting this and the laſt Charter. And further, no private Contract for the Sale of any Goods or Merchandizes ſhall be made, (excepting only ſuch Salt-petre as ſhall be ſold for the uſe of Us, our Heirs and Succeſſors) but all the Company's Goods ſhall be openly and publickly Sold by Inch of Candle at their publick Sales, and the Money ariſing thereby apply'd to the Company's uſe; no Lot (except Jewels) being to exceed 500 *l.*

And, for the better Increaſe of Trade, and encouraging the Manufactures of this Kingdom. Our Will and Pleaſure is, that the ſaid Company do yearly export to *India*, of the Growth and Product of *England*, the value of 100000 *l.* And the ſaid Governour and Company do hereby covenant, promiſe and agree to furniſh the Crown yearly with 500 Tun of good, clear and merchantable Salt-petre, conſiſting 112 *ll.* to the hundred weight, at 38 *l.* 10 *s.* *per* Tun in time of Peace, and 45 *l.* in time of War.

And our further Will and Pleaſure is, that all Dividends of Profits, ariſing to the Company by the Joint-ſtock, be made in time to come in Money only, and not otherwiſe. And further, we do order and appoint, that the Company and their Succeſſors do cauſe an Accomptant to enter in a Book or Books, to be provided and kept in their publick Office for that purpoſe, the Value of the Joint-ſtock of the ſaid Company to be atteſted upon Oath, which Book ſhall from time to time lie open to be viewed and peruſed by all Perſons concerned. And our Will and Pleaſure further is, that all Mortgages, Alienations, Transfers and Aſſignments be from time to time enter'd and regiſter'd either in the Ordinary or in other Books, likewiſe to lie open to the view of all concerned.

And our further Will and Pleaſure is, and we do hereby, for Us, our Heirs and Succeſſors, order, direct, limit and appoint that the Joint-ſtock of the ſaid Governour and Company of *Merchants trading to the* Eaſt-Indies, ſhall continue for twenty one years, to be compured from the date of theſe Preſents; a year before which time Books for new Subſcriptions ſhall be provided by the Governour and Company, and lie open at their publick Office for a new Joint-ſtock.

Provided always, and our expreſs Meaning is, that if the ſaid Governour and Company do not accept of and act and conform themſelves in every thing to all the Orders, Directions, Additions, Qualifications, Reſtrictions, *&c.* which we, our Heirs or Succeſſors by the Advice of our or their Privy-Council, ſhall from time to time, at any time before the 29th of *September* 1694. think fit to make and appoint, then not only theſe Preſents, but likewiſe our former Charter or Letters Patents of the 7th of *October* laſt paſt, herein beforementioned, ſhall be by Us, our Heirs and Succeſſors, by Letters Patents under the Great Seal of *England*, revoked, and made null and void. And from and immediately after the paſſing ſuch Letters of Revocation, all the Powers and Privileges, *&c.* contained in our ſaid former Charter or Letters Patents of the 7th of *October* laſt ſhall ceaſe, determine and be abſolutely void to all intents and purpoſes, any thing to the contrary notwithſtanding. In witneſs whereof we have cauſed theſe our Letters to be made Patents. Witneſs Our ſelves at *Weſtminſter* the 11th day of *November*, in the fifth year of our Reign.

By Writ of Privy Seal.

Pigott.

An Abſtract of the Charter of Regulations *granted to the* Eaſt-India Company *by their Majeſties King* William *and Queen* Mary, *under the Great Seal of* England, Sept. 28. 1694, *in the ſixth Year of their Majeſties Reign.*

WILLIAM and MARY by the Grace of God of *England, Scotland, France* and *Ireland*, King and Queen, Defenders of the Faith, *&c.* *To the Governour and Company of* Merchants *Trading to the* Eaſt-Indies, and to all others to whom theſe Preſents ſhall come Greeting. Whereas by our Charter dated the 7th of *October* 1693. we did appoint Sir *Thomas Cook* Kt. *Francis Tyſſen* Eſq; and others, to be a Body Corporate and Politick in deed and in name, by the Name of *The Governour and Company of Merchants of* London *trading to the* Eaſt-Indies, under the *Proviſo's* therein mentioned; and did grant them and their Succeſſors divers Liberties, Privileges and Powers, *&c.* with a Clauſe, *That if the ſaid Governour and Company ſhould not comply with and accept of ſuch farther Regulations and Reſtrictions as by Us, our Heirs and Succeſſors, with the Advice of our Privy Council, be made and propoſed at any time between the* 29th *of* September 1694. *and put under the Great Seal of* England, *then the ſaid Charter ſhould be revokable, and immediately after paſſing of Letters of Revocation under the Great Seal of* England, *the Powers, Privileges and Grants therein contained ſhould be void and ceaſe.* And whereas by our Charter dated the 11th of *November* laſt ſeveral Regulations and Reſtrictions, *&c.* have been propoſed purſuant to the ſaid *Proviſo*, and the ſaid *Proviſo* has been renewed and repeated, *viz. That the Company not conforming themſelves, and acting in every thing according to the Regulations and Reſtrictions, &c. which by Us, our Heirs and Succeſſors, with the Advice of our or their Privy-Council, ſhould be made before the ſaid* 29th *of* September 1694. *then the ſaid Charter and the precedent ſhould be void and ceaſe, and the Powers and Privileges therein granted, ſhould abſolutely end and determine to all intents and purpoſes.*

Now know ye, that in purſuance of the ſaid two *Proviſo's*, and by virtue of what otherwiſe we may lawfully put in execution, We do by this Writing under our Great Seal, by Advice of our Privy-Council order and direct that every Perſon qualified to vote by our laſt Charter or otherwiſe, in a General or other Court, to be hereafter holden by the Company; ſhall, before admittance to ſuch Votes, take an Oath before the Governour or Deputy or any of the Committees (if requir'd by any Member of the Committee having 1000 *l.* in his own right in the Joint-ſtock) that he or ſhe deſiring to vote is then really entitled to ſo much Stock for his or their own uſe and right (and not in truſt) as qualifies him or her to give in ſuch Votes as he or ſhe deſires. Which Oath the Governour, Deputy, or any of the Committees are requir'd to adminiſter, and no Perſon, not taking ſuch Oath, ſhall be admitted to give any Vote, nor their Votes to be of any effect or avail, if given.

And our further Will and Pleaſure is, That no Perſon, not being born our natural Subject or endeniz'd, ſhall be admitted a Freeman of the ſaid Company. And further, every Perſon fairly elected by the Plurality of Voices to be a Governour, Deputy or Committee ſhall, before his being or acting as ſuch, take an Oath in the General Court before the Governour or Deputy or one or more of the 24 Committees, that at the time of his election and taking his Oath he is entitled in his own right, and not in truſt, to ſo much Stock as qualifies him for ſuch Election, which Oath the ſaid Governour or Depury are requir'd to adminiſter, and ſuch Perſon elected, not taking the ſame, his Election ſhall be null and void; and the Court ſhall proceed to a new Election, according to this and the laſt Charter.

And

And our further Will and Pleaſure is, that no Perſon that is or ſhall be choſen Governour or Deputy of the Company ſhall continue in their Places more than two Years together, and no Perſon that hath ſerved therein two Years together ſhall be capable of being re-elected till two Years after. And further, if above ſixteen of the precedent Years Committee-men be new choſen at the next annual Election, the Supernumeraries, who have the feweſt Votes, their Election ſhall be void, and others choſen in their places, ſo that at leaſt eight new ones ſhall be elected.

And whereas by our Charter of *Nov.* 11. 1693. we did order that the ſaid Governour and Company ſhould not give Licence to any Perſon or Ships to Trade or Sail into or from the *Eaſt-Indies*, upon any private Account on pain of making void the two laſt Charters. Now we do hereby direct, That the ſaid Governour and Company may licenſe the Commanders and Mariners of their own Ships (and no other) to Trade in ſuch Commodities, and to ſuch a value as ſhall be allow'd of by any general Court and no otherwiſe. Provided always that due Entries be made thereof, and the Duties paid at the Cuſtom-houſe before the Landing; any former Charter to the contrary notwithſtanding.

And whereas by the aforeſaid Charter we order'd the ſaid Governour and Company yearly to export the value of 100000 *l.* of Engliſh Manufacture; to the end the truth thereof may appear, we do hereby order them to give in unto us, in our Privy Council, in the Month of *Auguſt* yearly, a true Accompt fairly written, under the Governour or Deputy's Hand, of the Nature, Quantity, Value, and Coſt of ſuch Goods by them exported yearly, and from what Place, and that upon the Oath of the proper Officers and Servants of the Company. And we do hereby order, that none of the Goods ſo exported ſhall be again landed in *England*, or carried elſewhere, than within the Limits of the Company's Charter.

And our further Will and Pleaſure is, that if any ſix or more of the Adventurers have 1000 *l.* each, or more in his own Right in the Joint-Stock, and qualified to vote by the laſt Charter, ſhall at any time hereafter, by writing under their Hands deliver'd to or left for the Governour or Deputy at the *Eaſt-India* Houſe, requeſt that a general Court may be call'd; the Governour or his Deputy ſhall within eight days ſummons a general Court, accordingly which (or any other) ſhall not be broken up without the Conſent of the majority of the preſent Members capable to vote. And our further Will and Pleaſure is, that all private Committees ſhall be choſen by the general Court, and no Governour, Deputy or Committees, ſhall lend any of the Company's Money, unleſs they be previouſly authoriz'd by the general Court; nor ſhall any Goods ſold be deliver'd to the Buyer, till the Money is paid down for the ſame, or ſecurity given to the Company's Satisfaction; nor no Court of Committees, nor any Members of the ſaid Company, ſhall by any Agreement bind the general Stock of the Company for receiving or delivering Stock without leave of a General Court.

And further our Will and Pleaſure is, That the Company's Cath be kept in effective Money within their own Houſe, and always be in Cuſtody of three (at leaſt) of the Committees of the Treaſury, and by them iſſued out to the Caſhier, as the Company's occaſions require. And no Sum of Money ſhall be allow'd on the Company's Accompt, but when it ſhall appear when and to whom, and for what it has been paid, excepting only when the General Court has previouſly authoriz'd any to diſpoſe thereof without Accompt.

And whereas by the late King *Charles's* Patent of *April.* 3. 1661. the Company was allow'd two ſix months for the payment of the Duties and Cuſtoms of Goods. Notwithſtanding that Clauſe in the aboveſaid Charter, they ſhall after two years hence (in caſe we ſhall require the ſame writing) make preſent Payment of the Cuſtoms due by them on Goods imported, and ſhall be allow'd for ſuch payment a Diſcount of 4 *l.* 10 *s. per cent. per annum*, in lieu of the ſaid two ſix Months; and 6 *l.* 5 *s. per cent. per annum* on Additional Duties, in lieu of the four three months allow'd by Act of Parliament.

Provided always, and our poſitive and expreſs Meaning is, That if the ſaid Charters of the *October* 7, or *November* 11. or theſe Preſents, or the Continuation thereof in whole or in part, ſhall not appear to be profitable to us or our Realm; then, after three Years warning, all the ſaid Charters ſhall be determined and void, and the ſaid Governour and Company ſhall no longer continue a Corporation.

And further, the ſaid Governour and Company ſhall by writing under their common Seal, to be approved of by our Attorney or Sollicitor-General, declare their Acceptance and Submiſſion to the Conditions and Regulations of the two laſt and this preſent Charter. Which if they either refuſe or neglect to do, they ſhall no longer act as a Corporation. In witneſs whereof we have cauſed theſe our Letters to be made Patents. Witneſs our Selves at *Weſtminſter*, the 28th Day of *September*, in the ſixth Year of our Reign.

Per ipſos Regem & Reginam.

Pigott.

An Abſtract of the Charter *granted to the* New Eaſt-India Company *by His Majeſty King* William, *under the Great Seal of* England, Sept. 5. 1698. *and the Tenth Year of His Majeſty's Reign.*

WILLIAM the Third, by the Grace of God, King of *England*, *Scotland*, *France*, and *Ireland*, Defender of the Faith, &c. To whom theſe Preſents ſhall come greeting. Whereas by a late Act of Parliament, Entituled, *An Act for raiſing a Sum not exceeding two Millions, upon a Fund for Payment of Annuities, after the rate of* 8 per Cent. per Annum, *and for ſettling a Trade to the* Eaſt-Indies. It is, amongſt other things, Enacted, That all the Monies ariſing by the ſeveral Duties upon ſeveral Commodities therein mentioned, ſhall be brought and paid in the Receipt of our Exchequer, as is there preſcribed, under the Penalties therein mentioned; and that yearly, (Reckoning the firſt Year to begin the 29th of *September* 1698.) the full Sum of 160000 *l.* of the ſaid Moneys, ſhall be the whole and entire Fund; and if the ſaid Moneys do not extend to that Sum, then they ſhall be part of the Fund towards the paying of the ſeveral Annuities there expreſſed.

And it is further Enacted, that it might be lawful for us to appoint Perſons to take in voluntary Subſcriptions of all Natives and Foreigners, for themſelves or in truſt, and Bodies Politick and Corporate (the Governor and Company of the Bank of *England* only excepted) no Perſon ſubſcribing for leſs than one hundred Pounds, all the Subſcriptions not to exceed two Millions to be paid into our Exchequer, ſubject to ſuch Allowances and defalcations as are therein expreſſed, and the Subſcriptions to be made on or before the ſaid 29th Day of *September* 1698. And that all Bodies Corporate and Politick, and all other Perſons whatſoever, ſo Subſcribing, and paying in their Subſcriptions and their Succeſſors, &c. ſhould have for ever one certain Yearly Sum or Annuity, at the rate of 8 *per Cent per Annum*, in the manner thereby preſcrib'd.

And it is further Enacted, That it might be lawful for us to incorporate all ſuch Perſons ſo ſubſcribing and paying, as is in the ſaid Act expreſſed into one Body Politick and Corporate, by the Name of, The GENERAL SOCIETY, *Entituled to the Advantages given by an Act of Parliament for advancing a Sum not exceeding two Millions for the Service of the Crown of* England. And that the ſaid Sum of two Millions, one Moiety or any greater Part thereof being ſo ſubſcribed, on or before the ſaid 29th of *September* 1698. All ſuch Subſcribers and their Succeſſors, for ever, ſhould have Liberty freely to Traffick, and uſe the Trade of Merchandiſe into, and from the *Eaſt-Indies*, and Parts and Limits in the ſaid Act, mentioned

tioned, and subject to such Restrictions as are there expressed. And that it should be lawful for us by our Charters or Letters Patents, to direct how the Shares of all Persons concern'd in the Fund of the General Society, should be transferr'd.

And it is likewise Enacted, That in case the Duties appropriated for the Payment of the Annuities of the said Fund, should be at any time deficient, the said Annuites should be made up out of the next Aids raised by Parliament, in the manner therein mention'd.

And whereas by our Letters Patents under the Great Seal of *England*, of the 14th of *July* last past, we did Nominate and Appoint Commissioners for taking and receiving such Subscriptions as above-said. And did declare, That if that Sum, or one moiety thereof at least were subscribed for, by that time we would make out our Royal Charter for the Incorporation of the Subscribers into a General Society; and that we would also make out another Charter, constituting them to be *One Company* by the Name of The *English Company Trading to the* East Indies. With such Powers and Privileges as are therein expressed.

And whereas we have by our said Letters Patents, declared, That the Share and Shares of all, or any of the said Subscribers, may be transferrable and assignable to any other Person or Persons whatsoever, willing to purchase the same, so as the said Transferrences and Assignments be made in Writing, and in such manner and form as has already been in the said Charter, or is or shall be in this or any other, by Us, our Heirs or Successors appointed.

And whereas it appears to us, that the Sum of two Millions of Pounds Sterling, have been already subscribed, and the first Tenth part thereof hath been paid or Answer'd to our Use, pursuant to the said Act on or before the 16th Day of *July* last past, by Us, and by, *&c.* And by several other Persons in the said Book of Subscriptions, and in the Duplicate, thereof particularly nam'd.

And whereas by our Royal Charter or Letters Patents of the Third day of this present Month of *September*, we Created and Established the said Corporation or Body Politick, called *The General Society*, Entituled to the Advantages, *&c.* And they being desirous to be incorporated as a Company, with a Joint Stock, the better to manage their Trade. *Now Know Ye*, That We, in pursuance of the Powers and Clauses in the said Act of Parliament, and of Our gracious Promise and Declaration, and by Virtue of Our Royal Prerogative, *&c.* have made, ordained, constituted, declared, appointed and establish'd the said Subscribers and their Successors for ever, and all Persons and Bodies Politick or Corporate deriving Title from them or any of them to any Share in the Fund or Annuities of the said Subscribers to be one Body Politick and Corporate, under the Name of *The English Company Trading to the East-Indies*, and them and their Successors for ever, under the said Name one Body Corporate and Politick in Deed and in Name, we make, constitute and appoint for Us our Heirs and Successors for ever, granting, allowing, and ordaining that they shall have a perpetual Succession, and may use a Common Seal for the Affairs and Business of the Company, with Power to break, alter, and renew their Seal, as often as to them shall seem meet; and they shall for ever be capable in Law to have purchase, receive, hold, possess, and retain for the use of themselves and Successors, any Mannors, Messuages, Lands, Rents, Tenements, Liberties, Privileges, Franchises, Hereditaments, Possessions, Goods and Chattels, of what kind, nature or quality soever; and moreover to purchase and acquire all Goods and Things whatsoever, from which they are not restrained by the said Act, and also to sell, grant, demise, alien, or dispose of all the abovesaid Things, or any of them; and also sue and implead, and be sued and impleaded, answer and defend, and be answered and defended, in all Courts whatsoever, and before all Judges, Justices, Officers and Ministers of Us our Heirs and Successors, and in all Causes, Suits and Pleas whatsoever. And all Corporations or Persons who shall derive any Right or Title from any of the said Subscribers or their Successors, shall be esteemed Members of the said Company, and received and admited as such *Gratis*.

And our Royal Will and Pleasure further is, that if any Person being a Member of the general Society, and not of the Company, shall hereafter desire to be received as a Member of the said Company, and to join his Share in the Capital Stock of the general Society, to and with the English Company trading to the *Indies*, the general Court of the Company (if they think fit) may admit him, and after such Admittance, his Share of the Capital Fund of the Society shall be transferr'd to the Company and become part of their Capital Stock. Provided always, that within six days after such Admittance an Entry thereof be made in the Books of the Company, and notice thereof be given to the Auditor of our Exchequer, that he may pay the Annuity to the Company. And we do hereby direct our High Treasurer, Commissioners of the Treasury, and under Treasurer, to pay the said Annuities without any other Warrant from us, as far as the Moneys arising from the Deputies appropriated to that Use, come in.

And it shall further be lawful for the said Company to augment their Capital Stock (if the Trade require it) but with such Limitations always, as in the said Act of Parliament, are expressed. But the said Company shall not send out of *England*, or any other Country, Goods, Wares, Coin, Bullion or Merchandize, above what is expressed in the said Act of Parliament but shall be subject in every thing, to the Restrictions therein contained, but shall trade according to the true meaning of the said Act, to the Parts of *Asia*, *Africa* and *America*, beyond the Cape of *Good Hope*, and to the *Streights* of *Magellan*. And all Persons, before their admission into the said Company, shall take an Oath before two or more of the Directors or Managers to be faithful to the said Company, and always to assist with their best Advice and Council, for the good Management and Government thereof; and that they shall not in any manner or way whatsoever, trade within the Limits of the Company's Charter, for their own private Account. And *Quakers*, instead of such Oaths, shall make a Solemn Declaration in Writing to the same effect.

And Our further Will and Pleasure is, That the said Company shall cause Books to be kept in their Office, in which Entry shall be made before two or more of the Directors of the said Company (upon the Oath of the proper Officers) of all Goods and Coins, *&c.* Shipt off, *&c.* And in case more be shipt off then Entered, they shall be seized, and together with the Penalties, to be levied upon the Offenders, according to the Act of Parliament, shall be applied to the Uses mentioned in the said Act.

And Our further Will and Pleasure is, That the said Company shall give Security, as the Act directs, for bringing their Goods to *England* or *Wales*, (except in such Cases as the Act excepts.) And also all Goods so imported by them into *England* or *Wales*, shall be sold publickly by Inch of Candle, and not otherwise, and no Lot of Goods so Sold (except Jewels) shall exceed 1000*l.* And further, the said Company Promise and Covenant by those Presents, that they shall export yearly, in Goods of the Growth and Product, and Manufacture of *England*, the value of one tenth part of the Fund, with which they trade to the said *East Indies*, of which they shall give us in yearly to our Privy Council, in the Month of *October*, a true Account fairly written, and Signed by two or more of the Directors, that the Truth thereof may the better appear, and that upon the Oath of the proper Officers; nor shall any of the said Goods be landed again in *England* or carried into any Place or Country, without the Limits of the Company's Charter.

And the said Company does hereby propose and Covenant to furnish to the Crown yearly (the Crown allowing the Prime Cost, Charges and Duties) such a quantity of *Salt Petre*, as is under, *viz. As the Sum of two Millions reckon'd in Money, is to five Hundred Tuns of Salt Petre, in the whole, so the Sum which the said Company may by Virtue of the Act, trade for in one Year, shall be to the quantity of Salt Petre, the said Company shall furnish to the Crown.* Which quantity the said Company (as Members of the General Society) was to furnish according to the Act of Parliament.

And for the Encouragement of the said Company, we further promise, That they and their Successors shall be allow'd the same Discompt in the payment of their Duties and Customs, that was granted to the present Governour and Company, trading to the *Indies* by a Clause in our Charter of Regulations of the 28th of *Sept.* 1694.

And We do hereby Will and Appoint, that the said Company maintain a Minister and a School-Master in the Island of St. *Helena*, as soon as the said Island shall be in their Possession, and also a Minister in every Garrison and Superior Factory, and a Chaplain in every Ship of 500 Tunns or upwards, all which Ministers and Chaplains shall be first approved by the Arch-Bishop of *Canterbury*, or Bishop of *London*; and at their Arri-

val

val there, shall give themselves to the learning of the *Portuguese* Language, and the Language of the Countries where they reside, the better to instruct the People, and when any such Minister dies, his Place shall be supplied by the Chaplain of the next Ship. And the Company shall also provide School-Masters in the said Factories and Garrisons.

And for the better managing their Affairs, the Company shall chuse twenty four Directors, who (or any thirteen, or more of them) shall be called, *A Court of the Directors, for the ordering, managing, and directing the Affairs of the* said Company and Corporation. And We do further appoint, That *Edward Allen, Abraham Beake, James Bateman, John Cary*, Sir *Henry Furnese, Peter Godfrey, Peter Gost, Gilbert Heathcote, Edmund Harrison*, Sir *Theodore Janssen, Samuel Lock, Edward Littleton, Joseph Martin, Streynsham Masters, Ephraim Montague, Peter Paggen, Robert Raworth, Benjamin Rokeby, Samuel Shepherd*, Sir *William Scawen, William Steward, Thomas Vernon, William Withers*, and *George White*, (who are chosen for this purpose by a Majority of the Subscribers) shall be the first and present Directors, and shall continue in that Station till the 25th of *March* 1700, at which time others shall be chosen; and if any of the said Directors die or be removed before that Time, another shall be chosen in his stead.

And We do further grant, That the said Company may meet about their Affairs in a general Court, when and where they please. Their Directors shall be chosen yearly, between the 25th of *March* and the 25th of *April*; each Person having 500*l.* share, and being personally present, shall have a Vote; and each Corporation having that Sum, shall depute such Person as they please to Vote; and none shall have Power to Vote as an Elector, nor at the General Courts for making of By-Laws, who does not (he being required to do it by any Member of the Company there present having 500*l.* in the Stock) take the following Oath, *viz.* I *A. B. do swear, that* 500*l. or more, of the Capital Stock of the Body Politick, call'd by the Name of* The *English* Company trading to the *East Indies, doth at this time belong to me in my own Right, and not in trust for any other Person or Persons whatsoever.* And no Members shall give more than one Vote, whatever Interest they may have in the Stock. And *Quakers* shall take a solemn Declaration in lieu of the Oath. And the Deputies of Corporations shall swear or declare, That, to the best of their Knowledge, their respective Corporations have 500*l.* or more in the Stock in their Right; nor shall any Person be capable of being chosen a Director, but natural or naturaliz'd Subjects of *England*, and such as have in their own Right 2000*l.* at least in the Stock, which all Persons already, or hereafter chosen Directors, shall be oblig'd to take their corporal Oath upon, as also to take this other Oath. *viz.* I A. B. *do faithfully promise, that in the Office of Director,* &c. *I will be indifferent and equal to all manner of Persons, and give my best Advice and Assistance for the Support and good Government of the Company; and in the Execution of my said Office, I will faithfully and honestly demean my self, according to the best of my Skill and Understanding.* Such as are *Quakers* shall take a Declaration to this Effect, and the said Oaths and Declarations may be administred by Our Chancellor of *England*, Chancellors of the Exchequer, or two or more of the Directors, they having themselves taken the said Oaths first. And the said Court of Directors shall have Power to administer Oaths of Fidelity to all inferior Officers, Agents, Factors, and Servants, &c.

And Our Will and Pleasure further is, That the said Directors summon four General Courts every Year, in the Months of *December, March, June* and *September*, and any of them failing to meet in the Month appointed, shall meet the Month after. And the said Directors shall (being thereto requir'd by nine or more Members qualify'd to Vote) shall be oblig'd to call General Courts within ten Days after such Request made to them, failing of which it shall be lawful for the said nine, or more Members aforesaid, upon ten days Notice in Writing, to be fix'd upon the *Royal Exchange* of *London*, to summon and hold a general Court, to dispatch any Business and cognosce of any Complaint against any Director, of which if he cannot vindicate himself to the Court's Satisfaction, he may in another General Court, to be holden ten Days after that, be depos'd, and another qualify'd Member chosen in his Place. And We do further grant, that the said Directors may meet about the Business of their Company, and act in every thing according to the By-Laws given them by any General Court; and where they have no By-Laws, as they think meet. And the General Courts of the said Company may punish Delinquents amongst themselves as they please, and levy the Mulcts and Fines impos'd upon such without being accountable to any. And the first General Court of the said Company We appoint to meet within 40 Days after the Day of the Date of these presents. And the said Company shall cause a Book or Books to be kept by an Accomptant in their Office, in which shall be enter'd, from time to time, the Accompt as well of the principal Joynt Stock of the said Company, as of the additional Stock, (if any be) which the said Accomptant shall attest upon Oath, if requir'd so to do.

And we do appoint the Method of Assigning to be as follows, *I A. B. this Day of in the Year of our Lord do assign and transfer of my Interest or Share, or being my Interest or Share, in the principal Stock and in the additional Stock,* &c. *Fund of the* English *Company trading to the* East-Indies, *and all Benefit arising thereby, unto his Executors, Administrators, and Assigns, Witness my Hand*

Or if the Person be not present, it must be done by another, by Vertue of a Letter of Attorney, of which mention must be made in the Assignment. And by dying Persons it may be done in their Wills, attested by three credible Witnesses.

And our further Will and Pleasure is, that when there shall happen an Equality of Voices in a General Court, the matters in question shall be determined by Lots.

And whereas by the said Act of Parliament all Goods imported are charged with a Duty of 5 *per Cent.* for the uses therein mentioned, We hereby charge all our respective Officers to pay back the said Duty to the Company, deducting only the necessary Charges for collecting it, to be applied as in the said Act is expressed.

And further Our Royal Will and Pleasure is, that they, the said Company, enjoy the whole and entire Trade to the *East Indies*, and that none other of our Subjects presume to visit or haunt the same; so as the Governour and Company of Merchants of *London*, formerly constituted and trading to the *Indies*, be not hereby restrained from continuing to trade thither till *Sept.* 29. 1701. and so as such Ships, not in the Service of the said Governour and Company, as were cleared outward from *England* or elsewhere, for the *East Indies* or Limits aforesaid, before *July* 1. 1698, or the Lading thereof, so as they return into some Port of this Kingdom, without breaking bulk in any other part of *Europe*, shall not be liable to the Penalties aforesaid.

And We further grant Power to the said Company to seize all Goods in the *Indies* or in *England*, that are seizable, by virtue of the said Act of Parliament; allowing the said Company Power to license their own Officers and Servants to trade and import what precious Commodities they think fit, due Entries being first made of the same. And we also grant to the said Company the Power of appointing Governours and Officers for their Forts and Factories, who may raise, train and muster such military Forces as shall be necessary for their Defence. Reserving always the Sovereign Right, Power and Dominion over all the said Forts, Plantations, to us, our Heirs and Successors.

And further We grant the said Company power to establish one or more such Courts of Judicature as the other Company of Merchants trading to the *East Indies* was allow'd to establish, by the Charter granted them by the late King *James*, in the second Year of his Reign.

And further We grant that the said Company shall enjoy, to all intents and purposes, all Privileges in the City of *London* as fully as any Company of Merchants whatsoever. And we hereby charge and command all our Admirals, &c. and other Officers by Sea and Land, to be aiding to them in the Enjoyment of the Premises.

And We further declare, that these our Letters Patents or the Inrolment thereof, shall be in and by all things valid and effectual in Law, according to the true intent and meaning of the same, and shall be taken, construed, and adjudged in the most favourable and beneficial Sense, for the best advantage of the said Company, as well in all our Courts of Record as elsewhere; notwithstanding any Non-recital, Mis-recital, Defect, Incertainty or Imperfection in these our Letters Patents.

And We further promise and declare, that We, our Heirs and Successors in all times coming, will from time to time give and grant to the said Company all the Liberties, Privileges and Immunities, that may or can be reasonably desired by them or granted by us. In witness whereof we have caused these our Letters to be made Patents. Witness *Thomas* Archbishop of *Canterbury*, and the rest of the Keepers and Justices of the Kingdom, at *Westminster*, the fifth day of *September* in the tenth Year of our Reign.

By Writ of Privy-Seal, Pigott.

Heads

Heads of Agreement between the Two East-India Companies.

1. THAT the Effects of each Company be brought home with all convenient ſpeed for their ſeparate Accounts, and that all Proviſions be made for enabling both Companies to bring home their Effects with ſecurity, and that neither the Crown nor the New Company take any Advantage, under Pretence of Forfeiture from the Old Company, in reſpect thereof.

2. That mutual Releaſes be given to each Company from the others, and to their reſpective Factors and Servants.

3. That the Old Company pay 315001. and the Fund, be immediately, upon Execution of their Agreement, united to the Capital Stock of the New Company.

4. That the Old Company do purchaſe, and the New Company do procure 8 Members to transfer to the Old Company in their Politick Capacity, 673500*l.* in the Capital Stock and Fund of 1662000*l.* with the Benefits, after the Execution of the Agreement, to ariſe thereby; ſo that the Old Company may have 988500*l.* in the ſaid Fund, which will make the Old Company equal with the New in Fund and Title to the Trade, which Stock of 673500*l.* ſhall be transferred as follows, *viz.* one fourth part at the Execution of the Agreement; one fourth part at *Michaelmas* next; one fourth part at *Lady-day* after, and the remaining fourth part *Michaelmas*, 1703; and each fourth part ſhall be paid for at the time of ſuch Transfer, at a 160*l.* for a 100*l.*

5. That the Old Company's Dead Stock at home and abroad be valued at 330000*l.* and the New Company's Dead Stock at home and abroad at 70000*l.* and that the Old Company at time of transferring the firſt fourth part of the ſaid 673500*l.* do transfer all their Dead Stock abroad and at home to the New Company; the New Company paying for one Moiety thereof at the ſame time 165000*l.* and that the Old Company do alſo pay to the New Company 35000*l.* for the Moiety of their Dead Stock; and thereupon the Old Company ſhall have and be entituled to a Moiety of both the ſaid Dead Stocks, as Members of the New Company.

6. That the Old Company have the ſole Benefit of their Dead Stock at home for 7 Years.

7. That the Members of the New Company transferring, ſhall be entituled to the Arrears of the Annuity, until the time of the ſeveral Transfers; after which time all Annuities ariſing by ſuch Transfers, and by the Old Company's 315000*l.* ſhall be paid to ſuch Perſons, as ſhall be appointed for that purpoſe, by the Old Company for their Uſe.

8. That the New Company ſhall have the Benefit of all Moneys ariſing by ſuch Licenſes granted before their Agreement, and alſo the 5 *per Cent.* on all Ships enter'd or cleared out before this Agreement, except the Ships of the Old Company now abroad, or that ſhall go out before the executing their Agreement, and the 5 *per Cent.* that ſhall ariſe upon the Effects loaden on the ſaid Old Company's Ships, ſhall be wholly for Benefit of the Old Company.

9. That each Company do deſiſt from any ſeparate Exportation, from and after the executing of the Agreement.

10. That during ſeven Years, each Company ſhall have an equal Power in the Adminiſtration and Management of the Fund and Trade, and that for that Purpoſe 12 Perſons ſhall be Yearly appointed by the general Courts of each Company reſpectively, out of the Court of Committees and Directors of the ſaid Companies, who ſhall be called in the New Charter, the Managers of the united Trade to *India*.

11. That a new Additional Stock ſhall be raiſed for carrying on the future Trade, and advanced in ſuch Proportions, as the ſaid 24 Managers, or the *major* part of them ſhall from time to time appoint: The general Courts of each Company agreeing thereunto.

12. That during the ſpace of 7 Years, the Old Company ſhall preſerve their Stock in their Politick Capacity, and for that time remain a ſeparate Corporation, and transfer and aſſign in their own Books, as now they do; and at the end of the ſaid 7 Years, the Old Company ſhall transfer and aſſign in the Books of the New Company their ſhare in the Fund to their ſeveral Members, who ſhall be then entituled to the ſame; and thereupon the ſaid Members of the Old Company ſhall become and be admitted Members of the New Company, *Gratis*.

13. That each Company do indemnifie the other from their Reſpective Debts and Demands, and that a proper Proviſion be made for that Purpoſe.

14. That the New Company ſhall not, after the executing their Agreement, take up any Money upon their Common Seal, or do any other Act, except what relates to their ſeparate Effects as aforeſaid, without the Concurrence of the Old Company.

15. That the Old Company within 3 Months before the end of the ſaid ſpace of 7 Years, ſhall grant and aſſign to his Majeſty, the Effects and Produce of their preſent Stock, as ſhall be then ſtanding out to the Intent; his Majeſty may regrant the ſame to ſuch Truſtees as ſhall then be nominated by the Old Company in truſt, in the firſt place to indemnifie Them from all Expences and Damages they ſhall ſuſtain in the Execution of their Truſts, and in the next place for the Payment of the Creditors of the Old Company, if any ſuch there ſhall then be; and afterwards in truſt for the Members of the Old Company, or for ſuch other Purpoſes as the Old Company ſhall appoint.

16. His Majeſty covenants to make ſuch a Regrant within 10 Days after the making ſuch Grant and Aſſignment as aforeſaid.

17. A Covenant from the Old Company within one Month after the ſaid ſeven Years, to ſurrender their Charters and Corporation, and a Covenant to the King to accept the ſame.

18. A Covenant from the King within 10 Days after ſuch Surrender, to make a new Grant to the ſame Truſtees, and ſubject to the ſame Truſt of all ſuch Eſtates and Effects of the Old Company, as ſhall come to or devolve upon the Crown, by reaſon of ſuch Surrender.

19. That immediately from and after the ſaid Surrender, the New Company does change its Name, and be called the United Company of Merchants of *England* trading to the *Eaſt-Indies*; nevertheleſs the future Management of the ſaid Stock and Trading, after the ſaid term of 7 Years, is to be according to the New Company's Charter of the 5th of *Sept.* 1698.

20. That for the better attaining of the Purpoſes aforeſaid, there be a Tripartite Indenture to be executed by his Majeſty, if he ſo pleaſe; and both the ſaid Companies, wherein ſuch proper Covenants and Proviſions may be made, as ſhall be thought reaſonable, with proper Releaſes from his Majeſty to each Company.

An

The Charter of Settlement *for the Trade to the* EAST-INDIES.

Granted upon the Agreement *of the* Two Companies.

By way of *ABSTRACT.*

Being an Indenture Tripartite, dated July 22, 1702. *between the* Queen, *the* Governour *and* Company of Merchants Trading to the *Eaſt-Indies, and the* Engliſh Company Trading to the *Eaſt-Indies.*

REciting, That the Governour and Company being poſſeſſed of 315000*l.* in the General Society, and in right thereof entitled to 25200*l. per Annum* in the Fund. And the Engliſh Company entitled to 1662000*l.* Capital Stock, and 132960*l. per Annum* in the Fund. To obviate all future Diſputes, &c. both Companies do agree,

That the Governour and Company ſhall purchaſe of the Engliſh Company ſo much as will make each Company's ſhare equal to the other. And the whole Trade to be carried on for the ſaid two united Stocks for ſeven Years, for the benefit of all the Members of the Engliſh Company. And that the ſaid Governour and Company ſhall have a Right and Power equal to the reſt of the Members of the Engliſh Company, in the Management of the ſaid Trade for ſeven Years. And at the end of ſeven Years the Trade to be carried on by the Engliſh Company, by whatſoever Name it ſhall then be called (ſubject to the Redemption by Parliament) according to their Charter of *Sept.* 5. 1698.

The Engliſh Company covenant to ſell and transfer to the Governour and Company 673500*l.* Capital Stock, the Governour and Company paying for the ſame an 100*l.* for 100*l.* the firſt Payment to begin on *July* 25. 1702. the ſecond on *Sept.* 29. following, the reſt at two half yearly Payments following. The Engliſh Company to receive the Arrears of the Annuity till the Stock is transferred; and the Governour and Company to accept the Stock, and pay for the ſame accordingly. The Charge of the Transfers to be born by both Companies equally: and both Companies covenant to do any further Act that may be neceſſary for more effectually uniting them.

The Governour and Company to keep their Stock in their Politick Capacities for ſeven years, without transferring to their particular Members.

It being agreed that the Dead Stock of the Governour and Company ſhall be valued at 330000*l.* and that of the Engliſh Company at 70000*l.* 'tis covenanted that it ſhall be veſted in the Engliſh Company for the Benefit of the United Trade, and to be accepted as 400000*l.* towards the new Additional Stock agreed to be advanced: In purſuance of which, the Governour and Company are to convey theirs to the Engliſh Company; and the Engliſh Company to pay to them 130000*l.* to make up their proportion, and to ſtand ſeized of the ſaid Dead Stock, and of their own Dead Stock, for the Benefit of the united Trade.

The Governour and Company to receive the Arrears of Rents and Profits, &c. of their Dead Stock, and pay all Charges to the Date hereof, and to have the uſe of their Dead Stock at home for ſeven Years.

Her Majeſty confirms the Engliſh Company's Charter of *Sept.* 5. 1698. and each Company be as a Corporation for ſeven Years, and ſeparately hold general Courts, &c. raiſe Money to be furniſhed two ways for carrying on the United Trade, and to their own ſeparate Buſineſs; and each Company are made liable to their own Debts; and the particular Members of both Companies to be liable thereunto, ſo far forth, as they are made ſo by the Act of Parliament; and the two Companies to bear each other harmleſs, from either Company's Debts reſpectively; But the Debts contracted on account of the United Trade, to be for and paid by the Stock of the United Trade.

The Governour and Company to bring home their ſeparate Eſtate with all convenient ſpeed, and divide it amongſt their Members; and the Engliſh Company to aſſiſt them in getting in their Effects.

The Engliſh Company are to pay the Governour and Company ſo much of the 5 *per Cent.* as ſhall, after the Date of theſe Preſents, be due and paid by the ſaid Governour and Company, their Officers, &c. in purſuant of the Act of Parliament: But the Governour and Company are not to ſend any Goods, Bullion, &c. on their ſeparate Account after the Date hereof; as alſo the Engliſh Company are to ſend more on theirs.

The Engliſh Company to bring home their ſeparate Eſtates with all convenient ſpeed, and divide the ſame amongſt their Members: The Governour and Company obliging themſelves to aſſiſt them in getting in their Effects: both Companies for their ſeparate Effects, ſhall have ſuch Uſe of the Ware-Houſes in *India*, as the Managers ſhall direct; and the Governour and Company further covenant to do any other Act that ſhall be thought neceſſary to enable the Engliſh Company to collect the Reſerv'd Annuities, with the Arrears and Deficiencies of them, and the Debts, Goods, Merchandizes, Eſtate and Stock in Trade, belonging to the Engliſh Company, and the Duty of 5 *per Cent.* for Goods ſent before the final Execution of this Agreement (excepting the Goods of the Governour and Company, their Factors, &c.) alſo the Profits and Money ariſing by Licenſes, &c. to that time; and to diſtribute the ſame amongſt the aforeſaid preſent Additional Stock, excluſive of the aforeſaid Governour and Company, and without laying any Claim to the ſame, in reſpect of their Stock of 315000*l.* of 673500*l.* to be by them purchaſed.

The carrying on of the United Trade to be (for 7 Years) by ſuch Orders as ſhall be made by the General Courts of both Companies, in the Name of the Engliſh Company trading to the *Eaſt-Indies*, but by Direction of 24 Managers, whereof 12 is to be choſen out of each Company, who are to act according to ſuch Rules as ſhall be given them by both General Courts, or for want of ſuch Orders at their Diſcretion, and may appoint a Treaſurer, a Caſheer, Governours abroad, Factors, &c. as they think fit.

Both Companies are to chuſe their 12 Managers on the 10th of *April*, and each ſend the Names to the other in 3 days after; and the ſaid General Courts have Power, without aſſigning any Cauſe, to remove any Manager they have choſen at Pleaſure; and every Year each Company obliges them to chuſe 4 new ones of the 12 they are to elect: all the Managers are to take an Oath to be Indifferent and Equal to all manner of Perſons, and to give their beſt Advice and Aſſiſtance for the Management of the Trade, &c. and upon neglect of taking the Oath for fourteen days, the Office to be void.

Both Companies covenant to pay an equal Proportion for carrying on the United Trade, which ſhall be called the New Additional Stock of the Engliſh Company. And the Members of each Company may tranſfer their Stocks in the Books of the ſame Company reſpectively, ſo as the Governour and Company keep their Stock in their Politick Capacity for 7 years.

It is further covenanted, That the Annuity after the 24th of *July*, 1702. ſhall be paid to the Managers Treaſurer, authoriz'd under the Common Seal for 7 years, and afterwards to the Treaſurer of the Engliſh Company.

Both Companies covenant with her Majeſty, That the Engliſh Company ſhall export to the *Eaſt-Indies* of the Growth, &c. of *England*, at leaſt a 10th of the whole Sum that they ſhall Trade for, by Virtue of the Act of Parliament; and that an Accompt thereof ſhall be

be delivered to the Privy-Council in *April* yearly. And that they will ſell and deliver to the Office of Ordnance 494 Tun and a quarter of good Salt-Petre at 45*l. per* Tun, in time of Peace, and 35*l.* in time of War; the Refraction whereof ſettled at 15*l. per Cent.*

Her Majeſty appoints that a Proteſtant Miniſter and School-maſter be maintained in St. *Helena* and all the ſuperiour Factories; and a Chaplain on board every Ship of 500 Tuns, to be approved by the Archbiſhop of *Canterbury*; who ſhall be next after the fifth Perſon that ſhall be of the Council in any of the ſuperiour Factories, and ſhall have the like Treatment in their Paſſages, to and from *India*; who ſhall be obliged within one year after their Arrival to learn the *Portugueſe* Language, and ſhall apply themſelves to learn the Native Language of the Country where they ſhall reſide.

It is appointed by Her Majeſty, That the Companies Seals ſhall be taken for all Cuſtoms except the Duties of 15 *per Cent*, on Muſlins.

And empowers the Managers, or thirteen of them to adminiſter an Oath to their Officers, Agents, *&c.* That they ſhall faithfully execute their reſpective Offices, *&c.*

The General Courts of both Companies are empower'd to make By-Laws for the united Trade: and each Company ſeparately for their ſeparate Affairs.

The Engliſh Company are to borrow no Money on their Common Seal, nor contract any Debts, except for Cuſtoms, *&c.* on the ſeparate Accompt, or elſe by conſent of both Companies, or the Managers, by whom the Seal is to be kept: and to uſe no other Seal during the ſeven years, which the Engliſh Company may have recourſe to for their ſeparate concerns.

Her Majeſty grants, That the Managers or any deputed from them, may ſeize Ships or Goods forfeited, and do all things that Cuſtom-houſe Officers can do. One fourth part of the Forfeitures to go to the Informer, and the other three Fourths (after the Deduction of Charges) to be divided amongſt all the Members of the united Trade.

But it is provided and agreed, that the Engliſh Company ſhall grant Licenſes to the Factors, Mariners, *&c.* employ'd in the united Trade, to traffick, in the manner and form as the Managers ſhall think fit: and alſo to the Governour and Company to bring home their Effects; likewiſe to licenſe Free Merchants to import Diamonds.

Her Majeſty grants, That the General Courts of both Companies, or the Managers, to have the ſole Government of Forts, *&c.* and liberty to build any Forts and Caſtles, *&c.* and to provide Military Forces, *&c.* with liberty likewiſe to coin Foreign Coins in *India*. And that the Governour and Company may convey to the Engliſh Company *Bombay* and St. *Helena*. And commands her Admirals, *&c.* to aſſiſt the Engliſh Company trading to the *Eaſt-Indies*, and thoſe employ'd under them.

It is further agreed, That the Governour and Company will not give their ſingle Voices at the General Courts of the Engliſh Company. And Her Majeſty grants to the Governour and Company, that they may admit any Perſon into their Company, without Fine or Oath unleſs they think fit to require it, during the ſeven years time they are to continue a Corporation, notwithſtanding any preceeding Charters.

It is further appointed, That the Governour and Company ſhall, after ſeven years, within forty days, transfer their Stock amongſt the then Members of their own Company, except 100000*l.* which may be aſſigned to particular Perſons in truſt for ſecuring the Payment of ſuch Debts as they ſhall then own, and the then ſeveral Members of the Governour and Company ſhall thereupon be ſeverally admitted to become Members of the Engliſh Company. *&c.* by whom, after the ſaid ſeven years, the whole Trade ſhall be managed, in purſuance of their Charter, *Sept.* 5. 1698.

The Governour and Company, at ſome time before the end of the ſeven years, are to grant all their Debts and Effects to the Crown, which the Queen will regrant back again, within ten days, to Perſons in truſt for the Company. And the Governour and Company oblige themſelves to ſurrender their Charter within two months after the end of the ſeven years; which her Majeſty promiſes to accept; and after the Surrender, the Engliſh Company is to change its Name, and be called, *The United Company of Merchants trading to the Eaſt-Indies*. And from that time are to carry on their Trade by their own Directors, and according to the Charter before-mentioned.

Her Majeſty covenants to grant any further reaſonable Powers and Privileges. And releaſes both Companies of all Forfeitures, Miſdemeanours, *&c.* that they may have committed either in *England* or Parts beyond Sea. Likewiſe declares, That this Indenture ſhall be conſtrued in the moſt favourable ſenſe for the Advantage of both Companies.

AN INDEX OF THE

Kingdoms, Countries, Rivers, Towns, Places, &c. in the Second Volume of *Navigantium atque Itinerantium Bibliotheca.*

Note, For Shortneſs; *cp* ſignifies *Cape*, *ct Coaſt*, *ctry Country*, *dm Dukedom*, *f Fort*, *il Iſle*, *l Lake*, *pr Province* or *Principality*, *r River*, *t Town*, *City* or *Village*, &c.
