SIAM, which is a Kingdom lying in that Part of the *Indies*, which was anciently called, *India extra Gangem*; or, *The Indies beyond Ganges*; tho' it is placed in our Modern Maps in the 145 D. of Longitude; yet by the Observation of 2 Lunar Ecclipses it is found to be situate in the 121 Degrees. It extends Northward to the 22d D. of Lat. or thereabouts, from the Point of *Malaca*, which lyeth in the 4th Degree: So that the Extent of it from S. to N. is 340 Lgs. and from E. to W. about 180 in the widest Place. It is bounded from the E. to the N. by high Mountains, which part it from the Kingdom of *Laos*, and on the N. and W. by others, which divide it from the Kingdoms of *Pegu* and *Ava*. The *Indian* Sea on the E. and *Chinese* on the W. seem to make it a Peninsula. Between the 2 Ridges of Mountains, which are inhabited by a few poor, savage, but free and harmless People, lies a great Valley, which in some Places is between 80 and 100 Lgs. in Breadth, and water'd from S. to N. by a large River, which the *Siamese* call *Menam*, or, *Mother-Water*, which being encreased by the Brooks and Rivers, which descend on every Side from the Mountains, discharges it self into the Gulph of *Siam* at 3 Mouths, of which the Eastern is most commodious for Navigation.

The chief Cities of it, and Rivers.

The Country being so hot, that it is inhabited near Rivers only, or large Channels cut for that Purpose from them, our Description of it shall follow their Courses, and begin with the chiefest, and almost the

The Menam.

only River of Note, *The Menam*, on the Banks of which, at about 7 Miles Distance from the Sea, is

Bancock.

seated the City of *Bancock*, called by the *Siamese*, *Fan*. This City is famous for the large Gardens which belong to it, and are extended for 4 Lgs. towards the

City.

City of *Siam*. These Gardens supply the Citizens with such a Nourishment as they love best, viz. great plenty and abundance of Fruit. A little higher, after it has water'd several other Places of Note, as, *Me-Tac*, *Tian-Tong*, *Campeng-pet*, or *Campeng-simple*, and *Lancoceuan*, it incloses the Capital City of the Kingdom, which the *Portuguese* have named *Siam*; but the Natives are altogether unacquainted with that Name, and call it, *Crung si ayu, thaya*; and their Histories, *Crung thoeppa ppra ma ha na kon*. This City is placed in the Middle of several Islands, which render the Situation thereof very singular, and the Island whereon it stands is at present all enclosed within the Walls of it, and very spacious; but scarce the 6th part of it is inhabited, and that to the S. E. only. The rest lies desart, where the Temples only stand. The Streets thereof are large and strait, and in some Places planted with Trees, and paved with Bricks laid edge-wise. The Houses are low, and built with Wood, especially such as belong to the Natives, who upon that Account are very much exposed to the Inconveniences of excessive Heats. Most of the Streets are water'd with strait Canals, over which are many small Bridges of Hurdles or Brick, something like *Venice*, but very high and ugly. The King's Palace stands to the N. on a Canal, which embraces the City, and by turning to the E. there is a Cawsey, by which alone, as by an Isthmus, People may go out of the City without crossing the Water. The Suburbs are inhabited by Strangers, which do considerably encrease the Number of the People.

The King's Palace.

Further upward, but at a little Distance Eastward from the River, which thereabout forms divers *Meanders*, stands the City of *Louvo*. Here the King of *Siam* spends the greatest part of the Year, that he may more fully enjoy his Pleasure in Hunting.

Louvo.

Pitsanoulok, which the *Portuguese* do corruptly call *Porselouc*, is the next considerable City on the River's Banks. It has formerly had Hereditary Lords, like the City of *Me-Tac*, and Justice is still administred in the Palace of the ancient Princes. It is a City of great Commerce, and fortified with 14 Bastions.

Pitsanoulok.

About 5 or 6 Miles higher standeth the City of *Menang-fang*, or as some term it, *Menang-fan*, that is, *The City of the Tooth*, because there is kept a Tooth, which is pretended to be a Relict of *Sommona-Codom*, to whose Memory the *Siamese* do erect all their Temples, and to which not only this superstitious People, but also the Inhabitants of *Pegu* and *Laos* pay a mighty Adoration; so that it is continually full of Pilgrims, which flock thither for that End. The like Superstition prevails at a Town called *Prabat*, about 5 or 6 Lgs. to the E. N. E. of the City of *Louvo*. Here there is the Print of a Man's Foot, cut by an ill Graver upon the a Rock. This Impression is 14 or 15 Inches deep, and 5 or 6 times as long as an ordinary Man's Foot, and proportionably as broad. The *Siamese* adore it, and are perswaded that the Elephants, and other wild Beasts of their Woods, do worship it, when no Man is there. The King of *Siam* himself goes once a Year with great Pomp and Ceremony to pay his Devotion to it. They report, that 'twas the Foot of *Sommona-Codom*, who crushed the Rock down from a Mountain to a Plain; but since this Tradition doth not appear to be above 90 Years standing, 'tis probable, that the *Siamese* are but Imitators of the People of *Ceilon*, who pay the like Honours to an Ape's Tooth, and the Print of a Foot on *Adam's Peak*.

Menang-fang.

Pilgrimage to a Tooth.

Prabat.

A Mark of a Foot ador'd.

The *Tenasserim*.

The next River of Note is that which the *Europeans* call *Tenasserim*, from a City of the same Name seated on its Banks, about 15 Lgs. from the Sea. This River discharges it self by 3 Mouths into the Gulph of *Bengal*, and forms an Island, on the N. W. Point of which lies the City of *Merguy*, which has the best Port in all *India*. These Cities, like all the rest in the Kingdom of *Siam*, are only a great Number of *Cabbins*, frequently encompassed with an Inclosure of Wood, and sometimes of Stone, or Brick, but very rarely with the former; yet to express their Pride, they give them great Names, as, *Tian-Tong*, i. e. *A City of true Gold*; *Lacencevan*, i. e. *The Mountain of Heaven*, and the like. In these their Cities their Houses are commonly of Wood, and raised up some Distance from the Ground upon Pillars, because of the frequent and long Inundations of their Rivers, which for 6 Months of the Year, or more, overflow all the Country.

Merguy.

The Country of *Siam* lying almost wholly untill'd, and being cover'd for the most part with Woods, we must expect more from Nature than Art among such Barbarians, and therefore it will be proper to give an Account of the natural Product, before we give a Relation of their Husbandry and artificial Improvements, which are not unworthy of our Observation.

The Trees.

Siam produceth divers Sorts of Trees, some of which are barren, others fruitful, and both made very useful by the Inhabitants. One of their most eminent Trees is a kind of Reed, called by the *Indians*, *Mambou*; by the *Portugueſe*, *Bambou*; and by the *Siamese*, *Maipai*. The *Indians* apply it to many Uses, and *Elian* mentions it as their most ancient Nourishment; but the *Siamese* use it little at present, and that only by putting it into some of their Dishes, when it is tender, or pickling it in Vinegar, as we do Cucumbers and Samphire to preserve it. This Tree resembles the Poplar in Straitness and Tallness, but its Leaves are few, pale and longish. It is hollow, and grows in Shoots like Reeds, and at every Knot has Thorny Branches. These Trees grow very close together, so that nothing is more difficult to pass than a Forest of *Bambou's*, and so much the more, because they are very hard to cut, tho' they are easie to cleave, and therefore the *Siamese* fire them by Friction, *i. e.* rubbing a sharp Piece upon them as a Saw.

The Fame Tree.

The Copan.

The *Siamese* also report, that they have a Tree, which they call *Copai*, and the *Portugueſe*, *Arvore de Reis*, the Wood of which hath this Property, that being laid in any Person's Bed, it drives away the Gnats by the Smell. From the Branches of this Tree proceed several Fibres, which touching the Ground, take Root, and become so many new Trunks, by which means it will spread over a considerable Breadth of Ground, and form a kind of Labarinth; but these Trees are not so common in *Siam*, as in the other Parts of the *Indies*.

Trees for several Uses.

The *Siamese* have other Trees more useful in great Plenty. From one Sort of them they gather Cotton, which may be spun for Cloathing, and another Sort yields them *Capoc*, which is a kind of Cotton, but so short, that it serves as Down for Beds. From certain Trees they extract several Oils, which they mix in their Cements to make them more binding, and a Wall plaister'd with them is whiter, and bears as good a Polish as Marble; and a Basin made of one of these Cements preserves Water better than glaz'd Earth. A kind of Trees very common in their Woods sends forth that Gum, which composes the Body of that excellent Varnish, which we see on several Works of *Japan* and *China*. The *Portugueſe* call this Gum *Cheyram*.

Paper how made.

The *Siamese* make Paper of the Bark of a Tree, called *Tom-coi*, which they pound for that End, as we do old Rags, but these Papers have not the Evenness, Substance and Whiteness that ours in *Europe* have. They write on them with *China* Ink. They very often black them, and then they write on them with a kind of white Earth like our *Crayons*.

Their Books.

Their Books are one large long Leaf, written from the Top to the Bottom, and folded up in Pleats like a Fan. The *Talapoins* write their Prayers upon the Leaves of a Tree like our Palm, which they call *Tan*, with a *Styletto*, or Pin.

Trees for Timber and Building.

The *Siamese* have also Timber proper for the Building of Ships, and furnishing them with Masts. The Wood of the Tree, which the *Europeans* call *Wood-Mary*, is excellent to make the Ribs of Ships, because it will not cleave, though never so many Wedges be put into it. They have other Woods useful for building Houses, and Wainscotting, of which there is one resembling Fir for Lightness and Colour, which will take the Carver's Chizzel any Way. The *Brow*, or green Bark of the Coco-Tree make the Cordage for their Ships. But above all, the *Siamese* have Trees so high and strait, that one of them is sufficient to make a Boat, or *Balon*, as the *Portugueſe* call it, between 16 and 20 Fathom long, only by hollowing it with Fire. They have *Cinnamon-Trees*, inferior indeed to those of the Island of *Ceilon*, but better than any other. They have also the *Sapan*, and other Woods proper for Dying. The Wood *Aquila*, or Aloes, grows also among them, and tho', indeed, it be not so good as the *Calamba* of *Cachin-china*, yet it is better than the *Aquila* of other Countries. 'Tis, indeed, hard to find, because 'tis only certain rotten Places in Trees of a certain Kind, and every Tree of that Species has them not, and those that have, have it not in the same Place, yet it is pretty plentiful.

Cinnamon.

Aloes.

The Fruit-Trees of *Siam* are of several Sorts. The Melons of *Siam* are not true Melons, but the Fruit of a Tree. The Figs, which the *Siamese* call, *Clouey-ngouan-tchang*, i. e. Elephants Trunks, are of the Size and Shape of a Sausage. The Skin of them, which grows Yellow, and spotted with Black when it is ripe, is easily separated from its soft and clammy Pulp, which makes them resemble our Figs, but it has no Vacuity in the Middle, nor Kernels, as ours have. Its Taste is strong, and hath something of Sweetness and Sharpness in it, but is nothing so good as ours.

Fruits.

The *Banana's*, which they call *Clouey-ngaa-tchang*, or Elephant's-Tooth, is almost the same thing with the Fig, save that it is greener and longer, hath flat Sides, which are join'd in a Point at both Ends. These Fruits hang like Nose-gays, or rather Bunches of Grapes upon the Tops of the Trunks of the Trees that bear them. They are not so delicate raw, but being soften'd in the Fire, they acquire the Taste of our Pepins, when they are ripe.

Banana's.

The *Goyave*, which the *Siamese* call *Louc-kiac*, is about the Size of a middling Apple. Its Skin is of a grayish Green, like that of some Pears, and contains a Pulp like a Citron, but not so white. Its Taste at first is like that of a Strawberry, but leaves a Bitterness behind it.

Goyave.

The *Jacks*, in *Siamese*, *Ca-nown*, are of the Shape of a large Melon. Under a grayish Skin, fashion'd like Chagrin, they have a very great Number of Kernels or Stones, near as big as a Pigeon's Egg, which being boil'd or broil'd, resemble our Chesnuts in Consistence, but are more delicate in the Taste. They are included in a Pulp, which is yellow, juicy, clammy and glutinous, of a sweet Taste and Smell, but it can only be suck'd out.

Jacks.

They have a Fruit called *Mouſſida*, which is like our Plumbs, but have the Pulp and Taste of a Medlar, but with bigger and flatter Stones.

Mouſſida.

Their *Mancous* is of the Size and Shape of an *Ox-Heart*, the Skin thin, and the Fruit soft, because the Substance is only a kind of white Cream of an agreeable Taste.

Mancous.

The *Durion*, in *Siamese*, *Tourrion*, is of the Size of our Melons, and hath a prickly Coat like our Chesnuts. It includes several Stones as big as Eggs, in which is contain'd all that is eatable. The fewer the Stones are, the more pleasant the Fruit; but there are never less than 3.

Durion.

The *Mango*, in *Siamese*, *Ma-mouan*, hath a Flavour much like the Peach or Apricock, but in the End is stronger, and less agreeable. They are of the Bigness of a Child's Hand, flat and oval, and pointed at both Ends like our Almonds; the Skin is yellow Flesh like our Peach, but must be suck'd from the Stone. The *Mangouſtan* is said to excel the *Mango*.

Mango.

Mangouſtan.

The *Siamese* have some sharp Fruits, which quench the Thirst, and are upon that Account very agreeable; they are as small as Plumbs, and have a Stone included within a white Pulp, which easily melts in the Mouth.

The *Tamarind-Tree* hath a very large Leaf, resembling that of Pimpernel, the Fruit is sharp, and is enclosed in a Shell like an Almond, and in some 'tis included in a Cod.

Tamarind.

Sugar-Canes.

Siam also abounds with Sugar-Canes, and wants not Pepper-Trees, because the King of *Siam* hath lately caused 100000 of them to be planted in his Country. 'Tis a Plant which is supported like the Vine, and the Pepper hangs upon it on little Bunches like Currants.

The Pepper-Tree.

The

Anana's. The *Anana*, in *Siamese*, *Saparot*, hath a white Meat, and a Taste like our Peaches: 'Tis like a Pine-Apple, and yellow when it is ripe: The Plant which produceth it bears it upon the Top of the Stalk, which is 3 Foot high. Every Plant bears but one, and no more than one; but sometimes from the Body of this Fruit, and from the Sides, there grows like Wens one or two other little *Anana's*.

The Coco. The *Coco*, in *Siamese*, *Ma-praou*, is a kind of Filbert but much bigger. In the Wood of the Coco-Tree is a very pleasant Liquor, of which 'tis so full, that it spurts out a great Way when 'tis pierced; but it congeals as the Fruit ripens. The Bark is an Inch thick, and full of Fibres, of which Cords are made. The Fruit has a good Taste.

Ginseng. But of all the Plants of the *East* the *Ginseng* is the most esteem'd; the best grows in *China*, but *Siam* doth not want it. It is of a yellow Colour, and the Flesh or Pulp of it is smooth, having little Threads like Hair. The Root grows in the shady Valleys, and some of them are found in the Shape of a Man. The *Chinese* Physicians, who make most Use of it, affirm, that it is a Sovereign Remedy for cleansing the Blood, and recruiting the Strength that hath been weaken'd by long Sickness; That he that has this Root in his Mouth will hold out at Labour as long again as he that hath it not. For preparing of it they put Water into a Cup, and having made it boil well, they throw into it the *Ginseng* cut into small Bits, and covering it up close, let it stand and infuse, till the Water becomes Lukewarm, and then they drink it in a Morning fasting, and it worketh great Effects in the former Respects, but is never to be taken in Distempers caused by any internal Heat, nor for Coughs, or spitting of Blood. Corpulent and white People may take more than meagre and swarthy; but none takes more than the Weight of a Shilling.

The Mines of Gold. But the greatest Riches of *Siam* lies in the Bowels of the Earth, there being no Country in greater Reputation for Mines than this. The great Quantity of Gold which appears in their Temples, where are not only innumerable Idols, made of this rich Mettal, but the Wainscot and Roofs are adorn'd with it, shew that they have had large Mines, from whence it was extracted, tho' the King that now reigns hath not been able to find any, tho' he employ'd several *Europeans* to search them out. They, after much Pains, found some mean Copper-Mines, mix'd with small Quantities of Gold and Silver, which yielding little or no Gold, the King caused some Gold to be added to it, which has made a valuable Mettal, called *Tambac*. As for Tin and Lead the *Siamese* have long since discovered very plentiful Mines, from which they have gotten a considerable Revenue; for tho' tis soft and badly purified, as the common Tea-Boxes which are brought from that Country do prove, yet 'tis sold throughout all *India*. To render it harder and whiter, they mix it with a Mineral called *Cadmia*, but this makes it more brittle. This white Tin they call *Tutinaque*. *Tin, Lead.*

Loadstone, Agates, Saphires. Near the City *Louvo* there is a Mountain of Loadstone, and there are curious Agates and Saphires found in several of the Mountains dispersed up and down the Kingdom. Some private Persons lately have discovered some Diamonds, and gave them to the King's Officers, but not meeting with a suitable Encouragement and Recompence, they retir'd to *Pegu*. Near the City of *Campeng-pet* there are famous Mines of excellent Steel, of which the Inhabitants do forge Arms after their Fashion, as Sabres, Poniards and Knives, which last, called *Pen*, are not reckon'd Arms, tho' they may be used for such, the Blades of them being 4 Fingers broad, and a Foot long. They have Iron-Mines, but they are bad Forge-men, and so make little Advantage of them, for their Anchors for their Galleys are of Wood, and they have neither Pins, nor Needles, nor Nails, nor Chizzels, nor Saws. Their Padlocks they have from *Japan*, and other Instruments they use not. Mr. *Vincent*, a *French* Physician, who arriving at *Siam*, was detained by the King of that Country to inspect the Work in his Mines, because he understood Mathematicks and Chymistry, discovered many rich Mines in a little time, *viz.* a Mine of very good Steel on the Top of a Mountain, another of Chrystal, and others of Antimony, Emeralds, white Marble, and one of Gold, which, so far as he could judge without Trial, was very rich, but he would not shew it to the Natives. *Chrystals, Antimony, Emeralds, Marble, and Gold.*

Besides these inanimate Productions, *Siam* affords abundance of Animals of all Sorts, both by Land and Water, in the Air and Earth. The Mountains and Forests of *Siam* are stored with Plenty of wild Beasts, as Elephants, Rhinoceros's, Tygers, Deer, and many other Kinds: Nor do they want tame Beasts as Oxen, Cows, Buffalo's, Goats, Sheep, Horses, Hogs, and the like. Of all the wild Beasts they value the Elephant the most, because he is so serviceable to them. Deer, which to a People greedy or covetous of Dainties would be highest prized for his delicious Flesh, is valued here only for the poor Plunder of his Skin, because they eat little Flesh. *Of their Beasts, their Use and Kinds.*

These People have naturally so great an Esteem for Elephants, that they are perswaded, that an Animal so noble, so strong, and so docile, can be animated only with an illustrious Soul, which has formerly been in the Body of some Prince, or some Great Person; for they say, an Elephant is sensible of Grandeur, he loves a great House, many Grooms to attend him, and some Females for his Mistresses, and without this State he will afflict himself, as not sufficiently regarded, and if he has committed a Fault, the most heavy Punishment that can be inflicted on him, is to deprive him of his State and Attendance. Some of these Elephants they keep partly for State, and partly for Service, both in War and Peace, to ride on and oppose their Enemies. The King of *Siam* hath many Hundreds in divers Cities of his Kingdom, which are chiefly kept for War, tho' they are used upon other Occasions. The best and chiefest of these, are those called *Elephants of Name*, because the King gives them honourable Names, as Marks of his Favour, as he doth to his Great Men. These are of very stately and magnificent Bodies, have Teeth usually of an extraordinary Length and Beauty, which reach above 4 Foot out of the Mouth of some of them, and at certain Distances are adorn'd with Rings of Silver, Gold and Copper. But of all Elephants the white one is highest esteem'd, not only for the Rarity, but Dignity, for they say, *He is the King of the Elephants*. They are not quite white, but of a kind of Flesh Colour, called *Peuak*. The King of *Siam* keeps one of these always in his Palace, which is said to be near 300 Years old, and is attended by divers *Mandarins*. Next to the white Elephant the black is in greatest Esteem, because they are likewise very rare, and they dye some of this Colour, when they are not naturally black enough. *Elephants of Name.* *The White Elephants.*

Horses they have, but not in very great Numbers, and those not so serviceable as they might be, because they know not well how to manage them. *Horses.*

Goats and Sheep here are very scarce, small and not over good; they are to be bought only of the *Moors*, who, because they eat them themselves, part with them unwillingly, and at dear Rates. The King of *Siam* has some nourish'd for himself. *Goats and Sheep.*

The Ox and Buffalo they use for the Tilling of their Land, and sell the Cows, but more to breed on for the Plough than to eat, for they are all but bad Meat.

Swines Flesh is eat only when it is young, for tho' their Pigs are small, and so fat usually, that they are distasteful, yet the Flesh of them is the wholsomest that can be eaten in most of the Countries of the *Torrid Zone*, and is given to sick Persons. The Pigs are excellent also at Sea, when they eat Bisket.

Their Sheep do frequently taste of the Wool, because they eat it one from another, as Poultrey eat their Feathers.

All sorts of Volatiles do multiply extreamly at *Siam*, for the very Heat of the Climate will almost hatch their Eggs alone; yet 'twill appear, perhaps, something strange and singular to us (altho' it be common to *Brasil*, and, perhaps, all other hot Countries) that almost all their Birds are beautiful to the Eyes, but very unpleasant to the Ear. There are several Sorts that imitate the Voice, and all have some Cry, but no wrabbling Note or sweet Singing. Peacocks and Pigeons are wild, and all Partridges are gray. They have great Plenty of Francolins and excellent Snipes. Their Turtle-Doves have fine Variegated Feathers, which, as also their Parrots, and divers other small Birds, are very good to eat. They have many of the Birds which we have in *Europe*, as Sparrows, Crows and Vultures. The Sparrows do boldly enter into their Chambers, and there pick up the little Insects, with which they swarm. Crows and Vultures are very plentiful, and very familiar, because no Person frights them, and the People feed them out of Charity, for they give them their Children which die *Of their Birds.* *No singing Birds.* *Peacocks and Pigeons.* *Vultures, Crows and Sparrows.*

Ducks.

before 3 or 4 Years old; but they have no Nightingales or Canary-Birds. Ducks are found here plentifully; so that Ducks are worth but a Crown a Dozen.

Wild Fowl.

Wild-Fowl is secure among the *Siamese*, for they neither love to kill them themselves, nor hinder their Liberty. They hate the Dogs that take them, and the Height of their Herbage and the Thickness of their Woods do render the Chace difficult; yet the *Moors* do exceedingly divert themselves in the Flight of Falcons, which come to them from *Persia*.

Wild Birds.

In fine, All the wild Birds have most lovely Feathers, and that of various Colours, as Red, Yellow, Blue and Green, and that in great Numbers; for the *Siamese* believing the Transmigration of Souls into other Bodies, kill no Animals, for fear, as they say, of driving out from thence the Souls of their Relations, which may very well be lodged there.

But of all the Birds that delight the Sight, nothing can be pleasanter than the vast Number of *Criel-Herons*, which swarm upon Trees, and at a Distance one would take them for their Blossoms; for the *Criel-Heron* is a Fowl shaped like a common Heron, but much less; it is of a neat Proportion of Body, and hath Feathers as white as Snow; it hath Tops or Tufts upon the Head, Back and Belly, in which its chief Beauty consists, and which render it extraordinary pretty: The White of these Birds mingled with the Green of the Trees, on which they set in Flocks, makes the most lovely Landship imaginable. They have 2 sorts of Hens, some of them are like ours in *Europe*, others have the Skin and Comb black, but the Flesh and Bones white, and when these black Hens are boiled, it is impossible to distinguish them from the white Ones, either by the Taste or Colour, although some People fancy the Black to be generally the best.

Tho' the long Inundations in *Siam* fatten the Land, and destroy many Insects, yet they leave no small Numbers, which mightily incommode the Inhabitants, Nature instructing all the Animals of that Country to avoid the Approaches of the Water; for not only those Birds, which perch not on the Trees in other Countries, as Patridges and Pigeons perch here, but Pismires doubly prudent, do here make their Nests, and provide their Magazines in Trees. The white Ants among other Ravages, which they make, do pierce Books thro' and thro', so that the Lovers of Books to preserve them, are forced to varnish their Covers and Edges with a little *Cheyram*, to secure 'em from their biting: And the Books themselves are made more agreeable, and not a-whit less useful, for it hinders them not from opening, and not being mingled with any thing that colours it, it hath the same Lustre as the Glasses wherewith we cover Pictures in Miniature.

Maringouins.

The *Maringouins*, or Mosketo's are of the same Nature with our Gnats, but as they are more numerous, so the Heat of the Climate gives them so much Strength, that they will sting thro' Peoples Cloaths, and leave the Mark a long time behind them. The *Siamese*, tho' they go naked, feel not the Inconvenience of them that Strangers do, because they are very dextrous at killing them, where-ever they feel them.

The *Millepede*, or Palmer-worm, is known at *Siam*, as well as in the *American* Islands: This Insect is so called, because it hath a great Number of Feet all along its Body, all very short in Proportion to its Length, which is about 5 or 6 Inches: What it has most singular is, that besides the Scales, which resemble Rings, which cover its Body, and which insert themselves one into another in its Motions, it pinches equally with its Head and Tail; but its Sting, tho' it is painful, is not mortal: The *Siamese* say, that this Insect has 2 Heads at each End of its Body, and that it guides it self 6 Months in the Year with the one, and six Months with the other.

They have a Lizzard, which they call *Tocquay*, of which they relate this wonderful Story: They imagine, that this Animal feeling his Liver grow too big, makes a Cry, for which he has gotten the Name of a *Tocquay*, and this he doth to call another Insect to his Succour; and that this other Insect entering into his Body at his Mouth, eats the Overplus of his Liver, and after this repast, returns out of the *Tocquay*'s Body by the same Way he entred in.

Fire-flies.

The *Fire-flies* is an admirable Insect: Their Wings are bright and shining like Fire, and they have Four Wings like Locusts, of which Two only are seen when they are at Repose, the other Two they spread out only when they are flying: They are very numerous, and the Trees by the River-sides are covered over with them; and tho' in the Day-time their Light appears little, yet in the Night, when it is most pleasant sailing in those hot Rivers, they are a most delicious and admirable Sight; for then the Branches of the Trees being covered with them, look as if they were set thick with innumerable Lights, which the Reflexion of the Water, especially if it be calm and smooth, infinitely multiplieth. These are some of the most remarkable Insects of *Siam*: There are innumerable others, which if exactly described would take up Volumes, but they are as if they were not, because no Man among them is inquisitive enough to search into their Natures, and so 'tis not possible for Strangers to get so much as their Names; yet this must not be forgotten, that as there are not fewer in the River and Gulph than on the Land, so those in the River are very dangerous, which is the Reason that the rich Men do bathe themselves only in Houses of *Bambou*.

By the Water-side also there are great Numbers of Monkeys and Sapajou's, which clamber up the Trees, and go together in Troops, and tho' we cannot properly reckon them Insects, yet they are as useless a Vermin. And thus having finished the Relation of Animals, 'twill be proper to proceed to the Productions of Art by Husbandry, Gardening, and other Tillage.

The Land it self is very capable of Improvement, and very fertile to encourage Husbandry, for 'tis very difficult to find a Stone in it, and it seems to be nothing else but a clayish Earth or Mud, which the Rain-Waters have wash'd from the Mountains, or frequent Inundations of the Rivers have lodg'd upon it. These Inundations fatten the Soil so extreamly, destroy Insects, and preserve the Country so much from Drought, and other Inconveniences, which produce Famine and Scarceness in the other Parts of the *Indies*, that this Kingdom becomes thereby the Nourisher of many others.

Rice is the principal Harvest of the *Siamese*, and their best Nourishment, for it refresheth and fattens. To produce it they plow their Land with Oxen or Buffalo's, which they guide with a Rope put thro' an Hole made in the Cartilage that parts their Nostrils, and fasten'd to the Plough-Beam. Their Plough is plain and without Wheels, consisting of a long Beam, a crooked Piece for the Handle, and a short Piece fasten'd underneath with Leather-Thongs, which bears the Share. They do not give many Forms to their Land, but till them and sow them when the Rains have sufficiently softened them, and gather in their Harvest when the Waters are retired, and sometime when they are remaining on the Ground, by Boats; for the Land which is overflow'd is good for Rice, and 'tis said, the Ear of it always stands above the Water; so that if the Water encreases a Foot in 24 Hours, the Rice will grow as much, which seems incredible. Rice is also sown in divers other Cantons of the Kingdom, where the Rivers do not overflow, and this is more substantial, better relish'd, and will keep longer than the other; but this they are forced to transplant into a water'd Land to yield a Crop, and to that End they that live in these Countries have their high Cisterns, or large Ditches of Rain-Water in the Fields. They tread their Rice from its Husks by large Beasts, and when it is trodden out they let it fall from a very high Place, that the Wind may carry away the Chaff, and because the Rice hath naturally an hard Skin like Spelt, they bruise it in a great Wooden Mortar, or Hand-Mill, to make it fit to eat.

On some of the Lands, which are high enough to avoid the Inundation, there grows Wheat, which they water either with Watering-Pots, or by overflowing it, as they do their Rice, but either upon the Account of the Care or Expence, or because the Rice sufficeth better for common Use, there is little sown, but what may supply the King's Table, and that more out of Curiosity than real Gusto, for it makes there a dry Bread not so good as Rice. They sow also a sort of Pease, but different from ours.

Thir Land would bear a Crops a Year, as well as other Parts of *India*, but that the Inundations oblige them to take but one.

The *Siamese* are not less addicted to the Manuring of Gardens, than the Plowing of arable Land, in which they raise Herbs, Pulse and Roots, but all for the most part different from ours. Of their Roots the Potato is in greatest Esteem. It is of the Form and Size almost of

of a Parſnep, and the Inſide thereof is ſometimes white, ſometimes red, and ſometimes purple, and being roaſted in the Aſhes, they eat like Cheſnuts. They are often eaten inſtead of Bread. They have large Muſhrooms, but few of them, and thoſe ill taſted. They have plenty of Cucumbers, which they eat raw, as moſt of the Eaſtern People do, and doubtleſs they muſt be wholſomer than ours, becauſe they do not harden them with Vinegar. They account them a kind of Water-Melons. Their Chibbolds, Garlick and Raddiſhes have a ſweeter Taſte than ours, becauſe their Rankneſs is taken away by the great Heat. Their Citrons, which they call *Macreus*, are ſmall, full of Juice, and very ſowre, but the Skin is very ſmooth. The Lemmons which their Gardens produce are all ſowre, and none ſweet; but on the contrary, their Oranges and Pomegranates are all ſweet, except we will take the *Pampelnouſes*, as the *Siameſe* themſelves do, and call them *Soum-o*, for Oranges, becauſe they have the ſame Taſte and Shape, tho' they are as big as Melons, and have not much Juice. Among the ſweet Oranges, the beſt have the Peel very green and rough; they call them *Soum-keou*, i.e. Chryſtal-Oranges; not that they are tranſparent, but that they are of high Value, as Chryſtal is with them. They give of theſe to their Sick, and ſell them very dear, when the Seaſon is paſt.

But the Tree which they chiefly nouriſh is the *Arequier*, or *Areca-Tree*, which, as all the Trees which are called *Palmites*, hath no Branches, but great, long and broad Leaves on the Top only, like a Palm-Tree. They bear a Fruit which the *Indians* call *Areca*, but the *Siameſe*, *Plou*, which is a kind of great Acron, yet without the Wooden Cup, in which our Acron grows. When this Fruit is tender it has a grayiſh Subſtance in the midſt as ſoft as Pap, but as it ripens it grows yellower and harder. Its Taſte is always bitter and ſavoury. The *Siameſe* cut it into 4 Parts with a Knife, and chew a Piece of it with a Leaf reſembling Ivy, called by the *Europeans*, *Betel*, but by the *Siameſe*, *Mak*, in which they wrap it up with a ſmall Quantity of Lime, made of Cockle Shells, and artificially redded, and ſo put it into their Mouths. This they continually chew. The *Areca*, when it is tender, will wholly conſume in the Mouth, but the dry always leaves ſome Remains. The Effect of this Betel, as the *Indians* certainly believe, is to carry from the Gums whatever may prejudice them, and to ſtrengthen the Stomach, either by ſwallowing the Juice, or by diſcharging all ſuperfluous Moiſture by Spitting, and this may be ſome Reaſon why the *Siameſe* never have a ſtinking Breath. Beſides theſe Effects, the *Areca* and *Betel* ſet a Vermilian Tincture on the Lips, which as it is pleaſing to them, ſo to take away the ill Effect, which is, that it blackens the Teeth, and makes them a bad Sight, they make their Teeth quite black with the Juice of Coco-Root. Theſe Garden-Fruits, with ſuch other as are produced naturally in their Woods, ſupply the *Siameſe* continually with Food moſt grateful to them; for they eſteem Fruit better than all other Things, and will eat it always, if they can have it.

As to the Original of the *Siameſe*, it is very difficult to judge, whether they are only a ſingle People, directly deſcending from the firſt Inhabitants of *Siam*, or whether in Proceſs of Time ſome other Nation has not ſettled there, notwithſtanding the firſt Inhabitants. The Hiſtory of the *Siameſe* is ſo full of Fables, that nothing of Truth can be gathered from it. It is moſt probable from the Nature of the Language, and the Situation of the Country, which lies ſo extreamly low, and ſubject to many Inconveniences, that ſcarce any People could chuſe it for an Habitation, but it was peopled by little and little from the adjacent Nations, viz. *China*, *Tonquin*, *Cochin-China*, and other States of the *Eaſt*; for their vulgar Language is very like theirs in the Simplicity of it, and they are near of the ſame Genius, Shape, and Figure of Face and Complexion. Nevertheleſs, it is certain that the *Siameſe* Blood is very much mix'd with that of Foreigners, who have either fled thither for Safety out of many other Parts of *India* from the Wars that were common among them, or went thither upon the Account of Trade from *Japan*, and other Parts of *Aſia*. The *Siameſe* themſelves ſay, that in *Siam* there are 40 different Nations, which affected Number, tho' it favours much of *Indian* Vanity; yet amounts at leaſt to thus much, that they look upon themſelves to be a Collection of various People from divers Parts of *India*, and other Parts of the World, and then no Wonder if we meet with little elſe but Barbarity from the Dregs of ſo many People, as we ſhall obſerve in the general and particular Survey of their Manners and Cuſtoms.

They have accuſtomed themſelves from their Infancy almoſt to an entire Nakedneſs: They go with their Feet and Head bear, and for Decency only gird their Reins and Thighs down to their Knees with a Piece of painted Cloth, about a Ells and an Half long, which the *Portugueſe* call a *Pagne*; but the better Sort have it ſometimes of Silk, either plain, or embroider'd with a Border of Gold and Silver, but theſe are preſented them by the King.

1. A *Pagne*.

The *Mandarins*, or Great Officers, wear, beſides the *Pagne*, a Muſlin-Shirt, which is as their Veſt, and when they meet with a *Mandarin* of greater Dignity, they pluck it off, and wrap it about their Middle to expreſs their Readineſs to ſerve him. Theſe Shirts have no Neck-band, but are open before upon the Stomachs; the Sleeves hang down almoſt to their Wriſts, being about a Foot wide, and without any Pleats either above or below; but the Body is ſo ſtrait, that it cannot ſlide over the *Pagne*, but ſits in Wrinkles above it.

3. A Mantle or Scarf.

In Winter they put over their Shoulders a Breadth of Stuff, or painted Cloth, either like a Mantle, or a Scarf, winding the Ends of it very neatly about their Arms. But the King of *Siam*, wears a Veſt of ſome excellent Sattin, brocaded with ſtrait Sleeves, that reach down to his Wriſt, and as we cloath our ſelves againſt the Cold under our Waſte-coats, ſo he puts this Veſt under the Shirt before deſcrib'd, and adorns it with Lace or *European* Point. No *Siameſe* may wear this ſort of Veſt, unleſs the King himſelf preſents them with it, as he ſometimes does his moſt conſiderable Officers.

4. A red Muſlin-Veſt.

Tis a general Cuſtom at *Siam*, that the King and all his Retinue in War or Hunting are cloathed in Red, and upon this Account the King gives all his Soldiers, when they go to War, a Veſt of red Muſlin. This Garment reaches to the Knees, and has 8 or 10 Buttons before; the Sleves are wide, but without Ornament, and reach no further than the Elbow: They put it on under their Arms. This Garment they wear alſo upon any Days of Ceremony, as the Entry of an Ambaſſador, or the like.

5. A white Cap.

The King of *Siam* and his Officers uſe a white, long and painted Cap, which is a kind of Coif of Ceremony. The King's is adorn'd with a Circle or Crown of precious Stones, and the Officers with divers Circles of Gold, Silver and Vermilion-Gilt, to diſtinguiſh their Dignity, and ſometimes they wear them without any Ornament. The Officers wear them only before the King, or on their Tribunals, or at ſome Ceremony. They are tied under the Chin, and ſo cannot be pull'd off to ſalute any Perſon.

6. Slippers.

The *Moors* have introduced among them the Uſe of *Babouches*, or Slippers, but they never wear them before the King, or any Superior, out of Reverence, nor in their own or others Houſes, becauſe they will not dirty them.

7. Hats.

They eſteem of Hats for Travelling, and by the King's Order they are made of all Colours, and in the Shape of his Bonnet; but few Perſons wear them, becauſe few People cover their Heads againſt the Heat of the Sun, unleſs it be on the River, where the Reflexion is moſt troubleſome, and then they do it uſually with a Linen-Cloth.

Womens Cloathing.

The Difference of the Womens Habit from the Mens is, that they faſtening their *Pagne* lengthwiſe round about their Bodies, let it fall down broadwiſe half way their Legs, ſomething like a ſtrait Petticoat, whereas the Men pull up one of the Ends between their Legs, and putting it in at the Girdle, form a kind of Breeches.

1. A *Pagne*.

8. Scarf.

The Women have no Muſlin-Shifts, but go all naked to the Waſte, only the richer Sort do conſtantly wear a Scarf, which they do ſometimes wrap about their Arms at both Ends; but the beſt way of wearing them is to put them ſingle over their Boſom before, and let the Ends hang down flying behind. The Women of Quality do greatly eſteem the black *Pagnes*, and their Scarf is frequently of plain white Muſlin.

Their Modeſty.

The Men and Women of this Country, notwithſtanding they go ſo much naked, are very modeſt, and will not endure that thoſe Parts that ought to be covered ſhould be ſeen. Upon this Account they complain'd of certain *French* Men, for going naked into the River; and as they never uncover them for Chaſtiſement, but beat ſuch as deſerve Puniſhment with Clubs, that they may be felt thro' their Cloths,

ſo

so they will not lie down, nor wash without their *Pagne*, tho' the Women, as well as Men, do often bathe themselves, and many of them swim excellently well. Nor is the Modesty of their Eyes greater than that of their Ears; for as they will not permit those immodest Porcelane Figures and Paintings, which come from *China*; so their Laws prohibit all impure and bawdy Songs, and they are so strict Observers of them, that they will not bear with them.

Rings. They wear Rings on their 3 last Fingers on each Hand, and 'tis their Fashion to put on as many as they can possibly keep on.

Pendants. The Women and Children of both Sexes wear Pendants of Gold, Silver, or Vermilion-Gilt, in the Shape of a Pear, and the Children of good Families, till they are 6 or 7 Years old, wear Bracelets of the same Matter on their Arms or Legs indifferently, but not after.

Their Character and Mien. The *Siamese* are rather small than great, and their Bodies are very well proportion'd, which may be attributed to their not Swaddling their Infants, because Nature is impatient of the Government or Contradiction of Art. 'Tis true, that the Breasts of the Women do not uphold themselves, but fall down to to their Navel; but their Bodies are very well proportion'd, and their Husbands are not offended with their hanging Breasts thro' Custom.

Their Face. The Shape of their Faces, as well of Men as Women, is longish, broad, and high at the Cheek-Bones, and their Foreheads contract and terminate almost as much in a Point as their Chin.

Eyes. Their Eyes are small, and slit a little upwards; they are not very brisk, but the White is generally yellowish. Their Jaws are hollowish, because of the Highness of their Cheek-Bones; their Mouth large, their Lips thick and pale, and their Teeth black; their Complexion is coarse, mix'd with Brown and Red.

The Women use no Paint or Patches, but the Great Men blue their lower Parts more or less according to their Dignity, a Lord on his Legs only, but the King up to the Pit of his Stomach.

Large Ears. Their Noses are short, and round at the End, and their Ears are bigger than ours, and the larger they are the more they esteem them, according to the Fancy of all the Eastern People, who will some of them pull down their Ears to their Shoulders.

Their Hair is black, thick and lank, and both Sexes wear it so short, that all round the Head it reaches only to the Top of the Ears, being shaved close all underneath, according to the Fashion used among them, and most pleasing to them. The Women raise it a little before, and some especially, the *Pequins*, let it grow behind, that they may braid it. The Young and Unmarried cut it very close on the Crown of the Head, and then pull off a small Circle of Hair about the Thickness of 2 Crown Pieces, and let the Hair underneath grow down to their Shoulders.

Perfumes. They perfume themselves in several Places of their Body. On their Lips they put a sort of perfum'd Pomatum, which makes them appear much paler than they naturally are.

Their Bathing. They bathe themselves 3 or 4 times a Day, and are so neat, as not to make any Visits of Consequence without Bathing, and in this Case they make a white Spot on the Top of their Breasts with a Piece of Chalk, to shew that they came from the Bath. They bathe themselves either by going into the Water, or having Water poured on their Bodies with Ladles. It needs not be warm'd, no not in Winter, because 'tis always naturally hot. They black their Teeth, wash their Hair with Water and sweet Oils, but use no Powder; they comb themselves and pluck their Beard, tho' they have naturally little; but they cut not their

Long Nails. Nails, being satisfied to keep them neat; yea, they count long Nails a Beauty, as appears from the Usage of certain professed Dancers, who put on very long Copper-Nails for Ornament, though they appear like Harpyes.

The Houses of the *Siamese*. As the *Siamese* are plain in their Habits, so also in their Houses, Furniture and Food, rich in Poverty, because they are contented with a little. Their Houses are small, but encompassed with Ground of a pretty large Breadth. The Floors, Walls and Roofs of them are made of Hurdles of cleft *Bambou*. They are set upon Piles of the same Wood as big as one's Leg, 13 Foot above Ground to avoid the Inundations of their Rivers, which sometimes rise so high. They ascend up to them by Ladders made of *Bambou*, which are fasten'd to them as the Ladder to a Wind-Mill.

Stables. Their Stables also are raised as high as their Houses, and their Cattel go up on Hurdles of *Bambou* to them. They set their Houses alone for Privacy, because all Things done in their Families would be discernible thro' their thin Walls. Their Hearth or Chimney is a Basket full of Earth, supported with 3 Legs; but they always make their Fires in their Courts, and not in their Houses.

No Inns. There no Inns in *Siam*, nor in any State of *Asia*; but in *Turkey*, *Persia* and *Mogul* there are *Caravansera's*, *i. e.* Publick Buildings without Furniture for Travellers, in which the Caravans shelter themselves, and where every one eats and lies according to the Provisions and Conveniences he brings with him; and such a Building there is in the Road from *Siam* to *Louvo*, where the King sometimes refreshes himself in his Travels.

Brick Houses. At *Bancoc*, *Siam* and *Louvo* some *Europeans*, *Chinese* and *Moors* have built Houses of Brick, and the King of *Siam* has attempted to do the like for Ambassadors; but they are not finish'd. Their Great Officers at Court have Timber-Houses, which are said to be great Armories, but only the Master of the House, his principal Wife and their Children are lodged in it. All his other Wives, with their Children, and the Slaves with their Families, have their several Apartments within the same Inclosure of *Bambou*.

The King's Palace. All their Houses are but one Story high, no not so much as their King's Palace excepted, and this is an Argument that they count this sort of Building most commodious both for Room, and for their slight Materials.

Pagods, Idol-Temple. The Palaces of *Siam* and *Louvo*, and several Pagods and Temples are built with Brick, but the Palaces are but one Story, and the Pagods are not raised proportionable to their Bigness. They are of the Shape of our Chapels, but without Ceilings, the Spars which bear up the Tiles being varnished with Red, interspersed with some Streaks of Gold. The King's Palace is still of Wood, and this proves Brick-Building but a late Invention introduced by some *Europeans*. They have no outward Ornament for their Palaces or Temples, but in the Roofs, which they cover with ordinary Tin, which they call *Cabin*, and with Tiles varnish'd with Yellow, as it is in the King of *China*'s Palace; but tho' there appears little or no Gilding in the King of *Siam*'s Palace, they call it, *Praffat-Tang*, i. e. The Golden Palace, according to their Custom of giving pompous Names to every thing they value. Their Stairs are mean, and Gates low.

The Dignity of the Houses. That which among them makes the real Dignity of their Houses is, that tho' there is no more than one Story, yet they are not level neither in the Foundation nor Roof; for in the Palace the King and Ladies Apartment is higher than all the rest, and the nearer any Apartment is to his, the higher 'tis in respect of another, which is further distant; so that tho' they all stand in one Line and join to one another, yet they ascend from one to another by Steps, and this causes an Inequality in the Roofs, which are all high ridg'd, but seem to cover one another; and this Inequality with them denotes Grandeur, and this is the Reason that as in the King's Palace there are ordinarily 7 Roofs proceeding one from another; so the Great Officers have 3. The Pagods usually have an high Roof, under which the Idol stands, and 2 other lower for the People, tho' they will enter any where when 'tis open.

Pyramids by the Pagods. The principal Ornament of the Pagods is several Pyramids of Lime and Brick, some as high as our ordinary Steeples, and the lowest not exceeding 2 Fathoms, with a Tin Spire small and sharp-pointed.

The King's Palace at *Siam* is not to be enter'd further than the Hall, and so can't be describ'd: That at *Louvo* is plaister'd with a Cement very white, smooth and shining; the Hall is encompassed with a Ditch, furnished with Water-Works; the Garden is not very spacious or magnificent, but being planted with Flowers and several sorts of Palmites, is very delightful for its Coolness and Simplicity.

The King's Palaces in the Woods. The King of *Siam* also following his Hunting for several Days, hath in the Woods some Palaces of *Bambou*, or rather some fix'd Tents, which only need Furnishing to receive him. They are red on the Outside, and are only a little Domitory, where the King and his Wives have each a little Cell.

The Furniture of the Houses in the *Siam*. The Furniture of their Houses is neat, plain, and only necessary. For their Buildings (for every one builds his own House, and causes it to be removed at Plea-

Pleasure, which they can do in a short time by the Help of their Slaves) they have certain Utensils, which are more properly for Carpenters than House-keepers, as a great Cleaver, which they use for an Ax, a Chizzel, Saw, Plane, Wimble and Spade. For their eating of their common Meals they have Tables like a Drum-Head, with a Border, but without Feet. They use neither Table-Cloaths nor Napkins; but the varnished Wood of their Tables being easily cleansed with hot Water, they make a Shift very well without any Linen. They have no Occasion for Knives, Forks or Spoons, because their Meat is served up to the Table in Morsels ready cut. Their Seats are Bulrush-Mats finer or coarser. Only those have Carpets to whom the Prince has given them. Their Vessels they use are either Porcelane or Potters-Clay, and sometimes of Copper. Their common Vessels are, *Tad*, a Copper-Dish to serve up their Fish in; *Tchain*, a Porcelane-Bowl to put Rice in; *Mecaou*, a Skillet to boil their Rice in; *Touae*, a Ladle for the Pot; *Toboi-tong-kin-nam*, a Copper-Ladle to drink in; but many bore a Cup of Coco on both Sides, and thrusting a Stick thro' it to serve for an Handle, use it for that Purpose.

Chewing *Areca* and *Betel*.

For the Chewing of their *Areca* and *Betel*, which is their continual Exercise, they have every one a little Knife to cut them, a little Cup of red Calx for their Lime, and a Purse for their *Areca* and *Betel*; but in their Houses they have a Box without a Lid; *Caton*, a Spitting-Pot; for they spit much by reason of their Betel.

For their Lodging the Generality have no other Bed but a Mat of Bulrushes, but the richer Sort have every one their Bed and Chamber apart; for 'tis only the meaner Sort that lie in the same Bed with their Wives. Their Bed is made of *Capoc* instead of Feathers, which is a kind of Cotton-Wool; it is not quilted. Under them they lay a Sheet, but have nothing upon them but a Coverlet. At their Heads they have a longish Pillow, and if they lie together, every one has his own Pillow. Before their Sleeping-Room they hang a Curtain to prevent being seen, because that they have no Doors to their Chambers. These are the chief Utensils of their Houses, unless it be some few for more particular Uses, all mean of Wood or Earth, and if they have any Gold or Silver, 'tis very little, and proceeds only from the Liberty of their Prince, and is given as a Badge of some Office.

The King's Furniture.

The King's Furniture is almost the same with his Subjects, but only richer and more precious than that of private Persons. The Halls of his Palaces at *Siam* are all Wainscotted, and varnished with Red, and the Floors covered with Carpets. The Hall and Council-Chamber at *Louvo* are also adorn'd with Looking-Glasses, and in the latter is a *Sopha*, like a Bedsted with its Posts, Bottom and Rods of Gold. The Bottom is covered with a Carpet, on which the King sits, and leans on Cushions piled one upon another. In the Hall stands a Wooden Chair of State gilded, in which the King shews himself to Ambassadors at private Audiences. At the King's Table there is always used great store of Plate, especially Basins, round and deep with Feet and Covers, in which the Boxes of Rice are served up; for they use not any flat Plate in this, nor other Princes Courts of *India*.

Their Food, Rice and Fish.

Their Food is neither dainty nor sumptuous. As we eat less in Summer than in Winter, so they eat less than we, because of their continual Summer. Their common Food is Rice and Fish. The Sea affords them very delicate small Oisters, excellent small Turtles, Lobsters of all Sizes, and other admirable Fish unknown to us. Their Rivers also yield Fish plentifully, principally very good and curious Eels, but they little esteem fresh Fish, and chuse it rather dry, and ill seasoned (for their Salt is bad, and they are but bad Managers of it) nay, even stinking Fish displeaseth them not, no more than rotten Eggs, Rats, Lizzards, and most Insects, Nature doubtless framing their Appetites to Things which they find most ease of Digestion.

Rotten Eggs, &c.

A *Siamese* will make a very good Meal of a Pound of Rice a Day, and a little dry or salt Fish, which both are not above the Value of an Half-penny. Their *Arak*, or Rice-Brandy, costs not above 3 Pence a Pint, and then no Wonder if they take little Care for Subsistance, and spend their Evenings in Mirth and Singing in their Houses. Their Sauces are plain, a little Water with some Spices, Garlick, Chibbolds and sweet Herbs, as Balm, &c. They highly prize a liquid Sauce like Mustard, which is Cray-Fish corrupted. They have no other Oil but what is extracted from the Coco-nut, which tho' always a little bitter, yet is good when it is fresh drawn, but soon becomes strong and not eatable, but by Custom. The Female Buffalo's affords them good Milk, which yields them more Cream than the Milk of our Cows: but they can make no Butter or Cheese of it, by reason of the Heat of the Clime. They dress or set out their Fish after several Manners for their Tables, by slicing, mincing or cutting them into Figures and Shapes of Animals; but they rarely eat the Flesh of any Beast or Bird, tho' offer'd them, and if they do, they chuse rather the Guts, and Intestines, which are loathsome to us. In their Markets or *Bazars* they sell Insects broil'd or roasted, and they have no other Roast-Meat; but Strangers are allow'd to kill and eat any of their Beasts and Birds, and they themselves will give the Flesh of their Pigs, which is very fat and wholsome, to sick Persons.

Their Oil.

No Flesh.

Insects roasted.

But, notwithstanding this Sobriety, the *Siamese* do not live long, and are as subject to Diseases as others are. The most dangerous and frequent are Fluxes and Dissenteries, which prove most fatal to the *Europeans*, because they cannot live sober enough. They are sometimes afflicted with burning Fevers, which affect the Brain, and cause Defluxions on the Stomach; but Inflammations are rare, and the ordinary Fevers kill none. Agues are never heard of, but Coughs, Quinancies, and all sorts of Defluxions and Rhumatisms are common, by reason of the Moisture of the Air, which is inclined to Rain so great a part of the Year. They have many Cankers, Abcesses and Fistula's. *Erisipela* is so frequent, that scarce one in 20 but is infected with it, and some have 2 Thirds of their Body cover'd with it.

The Diseases that reign at *Siam*.

The Small-Pox.

But the real Plague of the Country is the Small-Pox, which makes such Destruction among them often, that they inter the Bodies without burning them, and tho' they desire to perform this Ceremony to them, yet they dare not do, till they have lain in the Earth 3 Years or more, because they say that if they do it sooner, the Contagion will spread afresh, and then they burn them.

The Fruits.

In *Siam* there are no good Grapes; the Vines planted at the *Louvo* in the King's Gardens produce no Fruit but what is bitter and small, so that their ordinary Drink there is Water, which they love to drink perfumed, whereas to our Palate Water which has no Smell is best; and since they cannot draw it from the Springs, it is wholsome only when it has stood a settling more or fewer Days, according as the Inundation is higher or lower, or wholly run out, for being filled with Mud by the Floud, they are made more corrosive, and do cause Dissenteries and Lasks, till they have stood 3 Weeks or a Month to settle. The King of *Siam* has all the Water that he drinks from a great Cistern made in the Fields, which is kept by a continual Guard, and is nothing but a Collection of Rain-Water, which is more wholsome than the River.

Tea used by them, and how made.

For Pleasure and Conversation the Citizens of *Siam* drink Tea, but it is almost unknown in all other Parts of the Kingdom; but there it is counted a necessary Civility to present it to all that visit them. They call it *Tcha*, as the *Chinese* do. They make it of the clearest Cistern-Water; for they hold, that the finest Tea in the World becomes bad in Water that is not excellent. They put no Sugar in their Dishes, by reason that they have none refined, but what is candy'd, and that melts too slowly, and therefore they take a little in their Mouths, and champ it while they are drinking the Tea. When they would have no more Tea, they turn the Cup down upon the Saucer, because 'tis uncivil among them to refuse any thing, and if they leave the Cup standing, they will fill it again.

Wine drank by them.

But they do not so absolutely confine themselves to these Water-Drinks, but they will freely drink Wine when they can get it, altho' whatever fuddles them is strictly prohibited by their Law, and the *English* and *Dutch* do sometimes bring it them from *Schiras* in *Persia*, and from *Europe*.

Tari and *Neri*.

They have also 2 other Liquors, which they frequently drink, called *Tari* and *Neri*, which they extract from 2 sorts of Trees, called *Palmites*, by making an Incision in the Bark of the Trees, near the Top of the Trunk, and applying a Bottle to it close luted. The *Tari* is drawn from the Coco-Tree, and the

the *Neri* from the Arec-Tree. But because in hot Countries the continual Dissipation of the Spirits makes Men desire what encreases them, therefore the *Siamese* passionately esteem *Aqua vitæ*, and the strongest more than others. They make it with Rice, and frequently rack it with Wine.

Aqua vitæ.

The *English* inhabiting at *Siam* use a Drink called *Punch*, which they make of Brandy, mix'd with a double Quantity of Limonade, and put into it some grated Nutmeg, and toasted Sea-Bisket. The *Indians* count this a delicious Liquor, and the *French* call it, *Bonne Ponche*.

Laſtly, The *Moors* of *Siam* drink Coffee, which comes to them from *Arabia*, and the *Portuguese* Chocolate, which is brought them from the *West-Indies*.

Coffee and Chocolate.

For Carriage and State they make use of Beasts, Sedans and Balons, *i. e.* Boats. The Beasts appropriated to this Service are the Ox and Buffalo; but chiefly the Elephant, which is the sole Domestick Animal. They have no Asses nor Mules, and the Horses they buy at *Batavia* are resty and ungovernable, because they have no Skill to manage them, and so are of little Use. The King sometimes will ride on Horse-back, but he does not love it; but it seems mean, and of little Defence to him.

Their Carriage and Equipage.

The Elephant appears to him much more noble and magnificent in Peace, because of his great Bulk and slow Motion, and much more proper for War, because, as they say, this Animal knows how to defend his Master, and if he falls, to set him up upon his Back again with his Trunk, and to throw his Enemy on the Ground, and he keeps an Elephant always on the Guard in his Palace, that is to say, harness'd, and ready to mount.

Elephants

The way of Riding Elephants in Times of Peace is thus: They that guide them themselves do sear themselves upon his Neck, as upon an Horse, but without any kind of Saddle, and with a Punch of Iron or Silver prick him on the Head, exactly in the middle of his Forehead, or on either Side, telling him whither he must go, and where he must stop; but if one will not take the Pains to guide him, he places himself on his Back in a Chair, instead of a Saddle, and a Servant, or he that takes care of the Elephant, gets up on his Neck, and guides him. The Seat which the King of *Siam* rides in upon his Elephants is all open before, and without an Imperial, and at the Sides and behind do rise up to the Top of his Shoulders 3 great *Foliages* or Feathers gilt, and bent outwards at the Point, and when he stops, a Foot-man at 10 or 12 Paces Distance shelters him from the Sun with an high Umbrella like a Pike.

The way of Riding them.

Chairs and Sedans.

Their Chairs or Sedans are not like ours, but have square and flat Seats, sometimes only with a small Ballister half a Foot high, and sometimes with a Back and Arms like our Chairs of State. They fix them on Biers, and 4 or 8 Men, according to the Dignity of the Person who is carried in them (for that is always measured by Number) do carry them on their naked Shoulders, one or two to each Staff, and others relieve them. The *Siamese* always sit cross-legg'd in them. At present 3 or 4 Lords only are permitted to use these Sedans.

Boats used by all.

But because in this Country they go more by Water than by Land, by reason of the Annual Inundations of the Country, the Boat or Balon is the most universal Carriage, and none can be without one. In the Balons of ordinary Service, there are but a few Pagayers, or Rowers, and there is in the middle a Cabin of *Bamboo*, or other Wood, without Painting, or Varnish, in which a whole Family may be held, and sometimes this Cabin has a lower Pent-house before, under which the Slaves are, and many of the *Siamese* have no other Habitation. In the *Balons* of Ceremony, or in those of the King of *Siam*'s Body, which the *Portuguese* call, *Balons of State*, there is in the Middle but one Seat, which takes up almost the whole Breadth of the *Balon*, and wherein there is only one Person and his Arms, *viz.* the Sabre and Lance. If he be an ordinary *Mandarin*, he has only a single Umbrella like ours to shelter him; but if he be one more considerable, his Seat is higher, and he is cover'd with a *Coup*, i. e. an Arbor open behind and before made of *Bamboo's* woven into one another, and varnish'd with Black or Red. The King's *Balons* are very fine, the *Imperials* and *Pagayes*, or Oars, are all over gilded, and supported with Columns, and adorn'd with several Pieces of Sculpture in Pyramids, and some have Shades against the Sun; and when the King's Person is in them, there are 4 Officers to command the Equipage, 2 before and 2 behind.

Balons of State.

Besides these Carriages, which are more common, they have another, called a *Palanquin* (which is a kind of Bed, that hangs almost to the Ground from a Bar, which Men carry on their Shoulders.) This is permitted to sick Persons, and some diseased old Men, for it is a Carriage, wherein they can only lie along; but the Use of it is allow'd to all *Europeans*; as is also that of Umbrella's, tho' the King of *Siam* grants them not to all his Subjects: Those which are like ours, and have but one Round, are least honourable, and most of the *Mandarins*. The *Talapoins* have Umbrella's in the Form of a Screen, made of the Talapot-Leaf, which they carry before them; and from this 'tis probable, that they have the Name of *Talapoins* given them by Foreigners; for their *Siamese* Name is *Tchaoucou*. To the Superiors of the *Talapoins*, call'd *Sancrats*, the King gives a sort of Umbrella's, call'd *Clot*, which have only one Round indeed, but from it do hang 2 or 3 painted Cloths, like so many Hangings, one lower than another. Those that have more Rounds above the Handle, as if they were several Umbrella's set one upon another, are for the King alone.

Palanquin.

Umbrellas by whom used.

The *Siamese* have several sort of Diversions, which they use to recreate themselves withal, and which are chiefly invented, and encouraged to please the King. The Principal of them is the Elephant-hunting, which is perform'd after this Manner: When the King has a Mind to divert himself with this Sport, he orders 40 or 50000 Men to make an Inclosure of the Woods, where the Elephants are, with great Stakes the Day before; and when that is done, they keep 2 Rows of Fires all round the Wood without the Fence all Night, now and then firing some Field-pieces, that by the Noise and Fires the Elephants might be affrighted into the Woods, and so not attempt an Escape. When the King with his Company is come, they make a Ring of above 100 Elephants of War posted round about the Park, to hinder the wild ones from breaking through the Palisadoes; and then send some of the strongest of the tame Elephants within the Precincts of the Park, every one of them carrying 2 Men with great Ropes, and running Nooses, the Ends of which are made fast to the Elephants they rode on. These make up to the Elephant they have a mind to catch, who finding himself pursued, offers immediately at the Barrier to make his Escape; but all the Way being block'd up with the Elephants of War, they are forced back within the Inclosure again, and while they run to and fro with that Space, the Huntsmen, who are mounted on the tame Elephants, will throw their Nooses so exactly upon the Places where the Beasts are to set their Feet, that they never fail catching of them. And thus they will take 14 or more in an Hour. When they are thus taken, they tie on each side the wild Elephant a tame one, and leaving them with him a Fortnight, he will become perfectly tame. This Hunting the King counts an excellent Sport.

Elephant-Hunting.

There is another Way of taking of Elephants, which is better contrived for the Pleasure of the many, after this Manner: They make a very large and broad Trench, by raising 2 Terrasses of Earth perpendicular on both sides, and on them they place a Multitude of Spectators. In the Bottom of the Trench between these Terrasses there is placed a double Row of Trunks of Trees 10 Foot high, big enough to resist the Attacks of an Elephant, and far enough asunder for a Man to pass between them, but not an Elephant. Between these 2 Rows of Trunks they set a tame She-Elephant, which having been before led thro' the Woods, easily enticeth a wild Male Elephant to her by her Cries. When the wild Elephant is thus entrapp'd, that he cannot return into the Woods again, certain Men, who being appointed for that Purpose, are cover'd with Leaves, do with incredible Dexterity and Swiftness cast certain Nooses on his Feet, and by them tie him to the Trunks. Then they cause another tame Elephant to enter into the Trench, and fastening the tame Elephants on each side the wild one, lead him into a Pent-house near adjoining, and tie him to a Pivot 24 Hours, where having remain'd, they send more Elephants to keep him Company, and comfort him, and then in 8 Days he will submit to his Slavery.

Another Way.

Another Diversion used in the Court of *Siam* is by the Fighting of Elephants, which are prepared for War, as it were, to fit them to engage the Enemies

Elephant-Fighting.

Ele-

Elephants. On the Day of Battel, just before the 2 Combatants are to enter the Lists, they sound their Trumpets after a very harsh and inarticulate Manner, which makes the Elephants which are to fight roar hideously. They are tied by the hind Feet with great Ropes, held by several Men, that they may be drawn off in case the Shock proves too hard. When they come to fight, they approach so near, that their Teeth cross one another, and then they'll encounter one another so fiercely sometimes, that breaking one another's Teeth by their Efforts, the Splinters of them will fly about. They usually set a Man upon each of them to animate them to Battle, and when they have encountred one another 5 or 6 times, they bring in the Females, who part them. At the Great *Mogul's* Palace the Elephants that fight are permitted to approach nearer, so that they endeavour to beat off each other's Rider, and frequently they knock him down and kill him; but at *Siam* they neither expose the Life of Man nor Beast by way of Sport or Exercise.

Besides this Pastime of Elephants fighting one with another, they have another Fight between certain Elephants and a Tyger. It is usual to match 3 Elephants with one Tyger, and that of the largest Size. It is evident that they intend to please themselves more in the Death of the Tyger in this Sport, than in the Fight between them; for as they cover the Elephant's Breast and part of his Trunk with a kind of large Breast-plate, so before they let slip the Tyger, that is to fight, they hold him tied by 2 Ropes, till the first Elephant gives him 2 or 3 Blows with his Trunk, to damp his Courage and abate his Strength, and many times this Stroke is so rude and severe, that it lays the Tyger for dead; and tho' the Fury of the Beast is such, that he will make many brisk Efforts to revenge himself, as soon as he recovers, yet the 3 Elephants do usually maul him so by Turns, by striking him with their Teeth, and tossing him up a great Height into the Air, that he seldom escapes with Life, and the Spectators have the Pleasure to see him dead.

Besides these Sports, the *Siamese* are much delighted with Cock-Fighting. Of these Birds the most couragious are not always the biggest, but those which are naturally the best arm'd, *i. e.* those that have the best Spurs are supposed to have the best Hearts to use them. If in the Combat a Cock falls, they give him Drink, because they have found by Experience, that it is for the most part only the Effect of Thirst. These Battles seldom end but with the Death of one of the Cocks, which because the *Talapoins* look'd upon as a Piece of Cruelty, and gave their Judgment, *That the Owners of the Cocks should for their Punishment be bastinado'd in the other World with Bars of Iron*, the King of *Siam* forbad these sort of Duels.

Another sort of Diversion is their Stage-Plays, which have been brought to them from *China*, and are of 3 Sorts, *viz.* the *Cone*, *Lacone* and *Rabam*. The *Cone* is a Figure Dance to the Sound of the Violin, or some other Instrument. The Dancers are mask'd and arm'd, and represent rather a Combat than a Dance, and tho' every one runs into high Motions and various antick and extravagant Postures, yet they cease not continually to intermix some Words.

The Show which they call *Lacone*, is a Poem intermix'd with Epick and Dramatick, and lasts 3 Days from 8 in the Morning till 7 at Night. They are Histories in Verse, serious, and sung by several Actors by Turns. One sings the Historian's Part, and the rest the several Parts of the Persons represented; but they are all Men that sing, and no Women.

The *Rabam* is a double Dance of Men and Women, who have all very long false Nails of Copper. They sing some Words in their Dancing, which they perform without any Tiring, because it is a simple March without any high Motions, and only with a great many slow Contorsions of the Body and Arms. The Habit of the Actors is almost like that of the *Carthusian* Monks, being clasped on the Sides with 3 or 4 Buckles, with great square Placards before and behind, on which are painted Dragons, and a Girdle 3 Fingers broad, with little Squares of Tortoise-shell, or Horn, or some sort of Wood, and in the *Rabam* and *Cone* they have high gilded Paper-Bonnets like a *Cone*, adorn'd with counterfeit Stones and Pendants of gilded Wood. The Theatre hath a Cloth at the Bottom, but nothing on the Sides like our Mountebanks Stages.

The *Cone* and *Rabam* are always used at Funerals, and sometimes on other Occasions, and the *Lacone* serves principally to solemnize the Dedication of a Temple, when a new Statue of their Deity *Sommona-Colam* is placed therein.

Tumblers. The *Siamese* Tumblers are an admirable and delightful Spectacle. They will mount to the Top of high *Bambou's* planted in the Ground at one End like Masts, and about 80 or 100 Foot high, and stand on the Top of them with one Foot, and holding the other in the Air for an Hour together or more; then placing their Head where their Foot had stood, they will raise their Feet upright, and stand upon their Head. At length having hung by the Chin, that rests only on the Top of the *Bambou's*, their Hands and the rest of their Body hanging in the Air, they come down a long Ladder standing upright, turning their Body about every Step with incredible Agility. Others of them will place upon a kind of Litter or portable Couch 7 or 8 Daggers, with the Points upwards, and sit down, or lie along upon them without hurting their Body, which is stark naked; and sometimes they will cause a very heavy Man to stand upright upon their Bellies, and yet none of the Points which touch'd their naked Skin will pierce them. One of these sorts of Tumblers so exceedingly pleased the King of *Siam* with his strange Feats and Activity, that he made him a Great Lord, and lodg'd him in his Palace. A Tumbler made a Lord.

The *Siamese* have many other pretty Diversions, which would hardly be thought such, if we should give too large a Relation of them, as Puppet-Shews, which differ not much from ours; Dancing of Serpents, which they have tamed and instructed for that Purpose, and which will move themselves at the Sound of an Instrument, as if they would dance; but this passes for Magick, because they who train them to it do it by some Mysterious Words; curious Fire-Works, and magnificent Illuminations, when the Waters begin to fall; for then the whole River is cover'd with Lanthorns of different Sizes, and variously painted, which make a very pleasing Sight; and the like they do for their Harvest on the first Days of their Year, Flying of Paper-Kites with Fire at the Tail, which appears like a Planet, every Night for the 2 Winter Months; Wrestling and Boxing; And Lastly, their Matches of *Balons* in rowing one against the other upon the River, which they do with such Shouts and Acclamations and Betting, that it is exceeding diverting.

Gaming. Besides these Things, the *Siamese* love Gaming exceedingly, and will often ruine themselves, and loose their own and Childrens Liberty. The Play which they love best is *Tick-Tack*, which they call *Saca*, tho' they play also at Chests, and other hazardous Sports.

Smoaking Tobacco. The Smoaking of Tobacco (for they take no Snush) is also one of their greatest Pleasures, and even the most considerable Women are entirely addicted to it. They have their Tobacco from *Manille*, *China* and *Siam*, and though it be very strong, they smoak it without weakening it. These are the Variety of Pleasures which the *Siamese* follow. We will now come to Things more serious.

Of their Marriage. Before Marriage it is the Custom of the Country not to permit the Virgins to converse with young Men, and if by Stealth they get into their Company, as sometimes they will, their Mothers will certainly chastize them for it. The Virgins are marriageable at 12 Years old, and sometimes sooner, and seldom bear Children after 40, and therefore the Custom is to marry both the Boys and Girls very young, unless they resolve against it, as some of them do. When a Marriage is design'd, the Parents of the young Man send some aged Women of good Reputation to desire the Maid of her Parents. If the Parents of the Virgin harken to the Proposal, they give a favourable Answer, but will not resolve upon any thing till they know their Daughter's Mind, and have consulted the Southsayers upon these 2 Points; 1. Whether the Family of the young Man be rich, because every one here studiously conceals his Wealth from the Oppression of the Magistrate, and Covetousness of the Prince. And, 2. Whether the Marriage will continue till Death without Divorce. A favourable Answer to these Questions causes the Marriage to be concluded, and the young Man goes to visit the Virgin 3 times, and carries her some Presents of Betel and Fruits. At the 3d Visit the Relations on both Sides meet, and the Virgin's Portion is paid to the Bridegroom before them Their Way of making Marriages.

them, who is allow'd from that time to consummate the Marriage when he pleaseth. Upon this Occasion it is usual for the Uncles of the new married Couple to present them with some Gifts. The *Talapoins* are not suffered to be present at this Meeting, nor is any Religious Ceremony used at it; but some Days after they go to the House of the married Couple, and sprinkling some holy Water on them, repeat some Prayers in the *Baly* Tongue. The Wedding is usually attended with Feasting and Dancing, but not by the Bridegroom or Bride, or any of the Guests, but Dancers are hired for that Purpose, and the Bride is deck'd with a fine *Pagne*, better Pendants, and more and better Rings on her Fingers than ordinary. The Feast is kept at the House of the Bride's Relations, where the Bridegroom has before-hand provided an Hall and Apartment for that End. Here they usually stay a few Months after their Marriage, and then go and settle where they please to build themselves an House. The greatest Portion at *Siam* is 100 *Cah's*, which do make 15000 Livres, and the Bridegroom's Estate usually equals the Bride's Portion.

Gifts to the Married.

A Virgin's Portion.

Polygamy.

The *Siamese* think it best to have but one Wife, tho' the Rich are allow'd to have more, not for Lust, but State; but where there are several Wives, there is always one Chief, which they call, *The Great Wife*; the rest are called lesser Wives, and are usually Slaves, which are subject to the chief one; and their Children call the Father, *Po Tchgou*, i. e. Father-Lord, whereas the chief Wife's Children call him only *Po*, *i. e.* Father. Marriage is prohibited in the first Degrees of Consanguinity among them, but a Man may marry his Cousin-German; and as to Degrees of Alliance, a Man may marry 2 Sisters, either together, or successively; but the King of *Siam* takes himself obliged by none of these Rules, because he thinks he cannot find a Wife fit for him out of his own Family, and therefore he will marry sometimes his own Sister, and sometimes his own Daughter. The Children of the Great Wife always succeed to the Inheritance by equal Portions, which consists chiefly in Movables, because the King reserves the Property of the Lands to himself, that if he sells any, he will resume them again at Pleasure, tho' 'tis contrary to the Law of the Country; but the little Wives and their Children may be sold by the Heir, and can have no Share of the Father's Goods, but what he has either given them in his Life-time, or the Heir will bestow on them. The Daughters of the little Wives are usually sold for little Wives to any that will purchase them, which make very odd Alliances. The Families are almost all happy at *Siam*, for the Husbands love their Wives and Children exceedingly, and are as greatly beloved of them, tho' they do nothing toward the Support and Maintenance of their Families, but are maintain'd by their Wives and Children, either in the King's Service, which they are obliged to perform 6 Months every Year, and sometimes are detained 2 or 3 Years, or else in Laziness and Ease, because being return'd home, they have no particular Employment to follow. The Women plow the Land, and sell and buy in the Cities, and chearfully maintain their Husbands in Ease and Plenty. But if the Husband and Wife cannot support one another, the usual Remedy is Divorce, of which tho' the Husband is absolute Master, yet he will never refuse it to his Wife, if she desires it, and then he restores her her Portion, and the Children are divided, the odd ones to the Wife, and even to the Husband, and after this Divorce they may both marry as they please, and sell their Children. But this Practice is used only by the Populace; for the Rich, who have several Wives, keep them all, whether they love them or not. The Husband hath an absolute despotical Power in his Family, and can sell all his Wives and Children, except his chief Wife, whom he can only divorce; and Widows have the same Power over their Children, yet with this Restriction, that they cannot sell the Children of the even Number, without the Consent of the Husband's Relations; but none can kill his Children or Wives, because at *Siam* Murther is prohibited in general. In fine; With the *Siamese* Love is looked upon as Marriage, and Incontinency as Divorce, and they are so proud as not to marry any Foreigners, and therefore they marry with the *Peguins*, who being Strangers themselves at *Siam*, do more value Foreigners, and commonly marry with them.

Married Persons keep Holy.

Divorce in use.

Husbands can sell their Wives and Children.

They Children of the *Siamese* are very docible and sweet temper'd, provided they be not discountenanc'd, and their Parents having a marvellous Influence upon them by their despotick Power, which they the more severely exercise, because they must answer to their Prince for their Faults, can easily form in them a due Love and Respect to themselves, and Civility to others, especially to Strangers, which the *Indian* Princes, upon the Account of Traffick, so strictly require, that he severely punishes the least Breach of it. They are accustom'd always to an extream Modesty, as necessary for Trade, and much more for the King's Service, which they are to attend 6 Months yearly. Silence is not greater among the *Carthusians*, than in the King's Palace, nor will the Lords dispense with it. They never affect to be wiser than others, yea, even in the Affairs of their own Country. They are drolling and facetious among themselves, but never with Strangers, because it is often nice to them. They are extreamly complaisant to Women, and as they call them by the most agreeable Things in Nature, as, *Young Diamond*, *Young Gold*, *Young Chrystal*, *Young Flower*; so they will by no means discover that they think any Woman old. In their Salutations they call every Man, *Thaou*, or Lord, and enquire of their Health, *Tgiou de?* How do you? Their Posture of sitting is cross-legg'd, and so they are so well accustom'd to it, that on a Seat they will place themselves no other wise, and if any Person comes before them to whom they owe Respect, they do not rise, but bowe themselves as they sit cross-legg'd. The Slaves and Servants before their Masters, and common People before their Lords fall on their Knees, and so keep themselves with their Body seated on their Heels, their Head a little inclined, and their Hands joined at the Top of their Forehead. A *Siamese* in passing by a Person to whom he owes Respect, stoops with joined Hands more or less elevated, and salutes no otherwise.

The Breading of the *Siamese*, to which they educate their Children.

The Silence

They never affect

They are complaisant to Women, and call them by the most agreeable Things in Nature, as, *Young Diamond*, *Young Gold*, *Young Chrystal*, *Young Flower*; so they will by no means discover that they think any Woman old.

In their Visits, if a Person be much inferior, he prostrates himself and remains on his Knees, and never speaks first: If an Equal, the Master of the House meets him at the Hall-Door to receive him, and at his Departure accompanies him thither, and no farther, and walks upright or stooping, according to the Degrees of Respect due to the Visiter; but all observe to place the Visiter uppermost. They treat one another with Fruits and Preserves, and sometimes with Rice and Fish, and usually the Master of the House presents the Visiter with Areca, Betel and Tea. The highest Places is so far the most honourable, according to them, that none will dare to go up in a Chamber while a Superior is below, and therefore they build their Houses but one Story high, because the Bottom would be useless to them; and tho' their Houses be built on Piles, yet none will make use of the Under-part to be under the Feet of another. At *Siam* the Right-Hand is more honourable than the Left, and the Floor of the Chamber than the Sides, of which that where the Door is, is least honourable; and so if a *Siamese* receives an important Visit, he places the Visiter alone in the Floor of the Chamber, and seats himself with his Back toward the Door, or toward one of the Sides of the Chamber. These, with many other Ceremonies, are in use at *Siam*, which tho' they may seem to us troublesome, yet are not so to them, because they are so much accustom'd to them.

Their Houses built on Piles.

Other particular and remarkable Customs among them are: When a Superior would testifie a great Consideration for an Inferior, he affects publickly not to meet him, to spare his Submissions: Affability to Inferiors, Easiness of Access, and going before them, are look'd upon as Signs of Weakness with them, as they are in the other Parts of the *Indies*. They avoid not Belching, nor turn away their Face, nor hold any thing before their Mouths, no more than the *Spaniards*. 'Tis no Incivility with them to wipe off the Sweat from their Forehead with their Fingers, and then shake them against the Ground; for they have no Handkerchiefs. They spit neither on their Mats nor Carpets, but in Spitting-pots. In the King's Palace they neither cough, nor spit, nor wipe their Nose. They refuse nothing that is offered them, nor dare say, they have enough. The Head, which being the highest Part of the Body, is most respected. It is the greatest Affront that can be offer'd a *Siamese* to touch his Head, Hair or Bonnet, or so stroke it. Their most humble Posture is that which they use to their King, to be prostrate on their Knees and Elbows, with their Hands joined on the Top of their Fore-head, and their Body seated on their Heels, and upon the same Account it is not only more honourable to be

Particular Marks of Respect.

Prostration used to the King.

fear-

seated on an high Seat, than a low one, but to be standing than sitting. To lay a Thing upon one's Head, which is given or received, is at *Siam* a very great Mark of Respect, as it is in *Spain*, and many other Countries. If you put forth your Hand to a *Siamese*, he will put both his Hands under your's, as it were to put himself entirely into your Power, for it is an Incivility with them to give only one Hand; as also not to take what they present you with, with both Hands, or what they receive from you.

Their Education. When their Children are become 7 or 8 Years old, they put them into a Convent of *Talapoins*, and cause them to assume their Habit, where they are taught principally to read, write, and cast Account, to fit them for Merchandize and Traffick, and upon the Account of their Religion the *Bali* Tongue, Morality, and the Fables of their *Sommona-Codom*; but no History, Law, or Sciences.

Their Language. The *Siamese* and *Bali* Tongues have, like our Languages in *Europe*, an Alphabet of few Letters, of which are composed Syllables and Words. It consists, as the *Chinese* chiefly does, of almost all Monosyllables, which are much varied by their several Dispositions and Accents; for this is observable, that whereas in cold Countries, where the Imagination is heavy and dull, every thing is called by its own Name, and they abound as much or more in Words than Things; it is not so in hot Countries, few Words do there suffice to express much, by reason that the Briskness of the Imagination employs them in an Hundred different Ways, all Figurative. They write the *Siamese* and *Bali* Languages from the Left Hand to the Right, after the same Manner as we do our Tongues in *Europe*, and therein much differ from all the rest of the *Asiaticks*, who have ever wrote from the Right to the Left, and the *Chinese* write downward.

Their Writing. Their Arithmetick. After Reading and Writing, they proceed to Arithmetick, which, like ours, hath 10 Characters, to which they give the same Powers as we do in the Disposition and Places of Unites, Tens, Hundreds, Thousands, &c. and the *Indian* Merchants are generally so expert Accountants, that they will presently resolve the most difficult Questions of Arithmetick; but they have no Use of Algebra. Other Studies to which the *Europeans* apply themselves in our Universities are almost absolutely unknown to them, and it may be doubted whether they are fit for them; for tho' their Imagination be quick and spritely, it soon flags with the least Application, and they fall into an invincible Laziness, which is the Reason that tho' they are great Lovers of Chymistry and Astronomy, they have arriv'd at no Perfection in them. They are naturally pretty good Poets, and their Poetry, like ours, consists in a Number of Syllables and Rhime; but their way of Thinking is so different from ours, that their Poems cannot be translated. They are no Orators, but all their Books are either Narrations of a plain Style, or some Sentences of a broken Style, full of Idea's: And their Pleadings are void of Rhetorick, containing bare Matters of Fact, with the Reasons of them. When they preach, they read the *Bali* Text of their Books, and translate it or expound it in the vulgar Language, without any Action. They know how to speak to a Business with a great deal of Insinuation; but their Compliments, tho' very good, are all after one Model, and in the same Ceremonies they always speak almost the same Things. They are absolutely ignorant of all Parts of Philosophy, except some Principles of Morality, and those intermix'd with Truth and Falshood. They have not any sort of Theology.

Their Poetry. Ordinary Writers. Their Preaching. Their Manner of Respect.

Their Laws. They learn the Laws of their Country only in Employments, and then only so much of them as belongs to their Office, of which a Copy is put into their Hands when they enter upon it.

Their Physick. The Art of Medicine merits no Name among the *Siamese*, for all the King's principal Physicians are *Chinese*, tho' he has also some *Siamese* and *Peguins*. They trouble not themselves to have any Principle of Physick, nor regard any particular Symptoms of Diseases, but have only a Number of Receipts, which have been handed down to them from their Ancestors, and in which they never alter any thing, and yet they fail not to cure a great many, because thro' their natural Temperance they are obnoxious to little Distempers usually; but if any miscarry under their Hands, they impute it to some Inchantment. They have some Purgatives, which are used among us, and others peculiar to them, but observe no Time for Purging, nor know what the Crisis is. They highly applaud Sudoricks, and understand the Benefit of Sweating in many Distempers. Their Sick eat only boiled Rice made extreamly liquid, and when their Stomach will bear any solid Meats, they give them Pigs Flesh, which is preferable to all other. They know nothing of Chyrurgery, and so stand in need of the *Europeans*, not only for Trapans, and other more difficult Operations of Chyrurgery, but for simple Blood-letting. They are totally ignorant of Anatomy, and so understand not the Circulation of the Blood, nor any of those new Things which we know about the Structure of the Body of Animals. They are not skilful in Chymistry, altho' they passionately affect it, and will boast of strange Secrets they have discover'd in it. The Father of the present K. of *Siam* spent 2 Millions in a vain Search for the Philosoper's Stone, and some pretend to have found out a Remedy to keep them from Mortality. Their quick and clear Imagination might fit them better for Mathematicks than any other Studies, but they cannot follow a long Thread of Ratiocinations, of which they can't discern the End or Profit, and therefore they know nothing of Geometry or Mathematicks, and no more of Astronomy than is necessary to assist them in Divination, making Horoscopes, and composing their Almanacks. They have had their Calendar twice reformed by able Astronomers, who have taken 2 Arbitrary Epocha's remarkable for some rare Conjunction of the Planets. The most ancient refer to the 545th Year before the Birth of *Jesus Christ*, and the *Siamese* do vulgarly report, that it commences from the Death of *Sommona-Codom*, tho' they have no Relations to prove it, and the latter from the Year of Grace 638. These Astronomers having established certain Numbers upon these Observations, have composed a Table to find out the Place of the Planets for the following Year, almost like that by which we find the Epact of every Year by adding 11 to the Epact of the foregoing. They know only 3 Seasons; the Winter, called, *Nanaou*, i. e. The Beginning of Cold; the little Summer, styled, *Naron*, i. e. The Beginning of Heat; and the great Summer, called, *Naron-jai*, or, The Beginning of great Heat, which strips the Trees of their Leaves, as the Cold doth ours. They have 2 Years together consisting of 12 Months, and a 3d of 13. They have no Word for a Week, but like us call the 7 Days by the Names of the Planets, and their Days correspond with ours, only begin 6 Hours sooner. They begin their Year on the first Day of the Moon in *November* or *December*, according to certain Rules, and do not number them, but count them by the Names of a Sexagenary Cycle, *i. e.* a Revolution of 60 Years, for which they have particular Names, as we have for the Week. Their Months consist vulgarly of 30 Days, but they give no Names to them, reckoning them in order only. The first Month, 2d Month, &c. The 2 first Months, which answer almost to our *December* and *January*, make their whole Winter, the 3 next their little Summer, and 7 others their great Summer. But their greatest Winter is at least as hot as our greatest Summer. Their Winter is dry, and Summer rainy, the Sun by a marvellous Providence drawing the Clouds after it, and the Wind perpetually blowing from one of the Poles, when the Sun is toward the other, and these Things make their Torrid Zone habitable, which otherwise could not be endured.

Chymistry. Mathematicks. Geometry. Astronomy. Their Epocha's. Their Year. Their Cycle of 60 Years.

Their System of the World. They understand nothing of the System of the World, but believe, as all the *East* do, that the Eclipses are caused by some Dragon which devours the Sun and Moon, and they make a great Noise with Fire-Shovels and Kettles, to scare and drive away this pernicious Animal, and deliver those beautiful Planets. They believe the Earth 4 square, and of vast Extent, on which the Arch of Heaven rests at the Extremity, and so all Men are covered with it, as our Plants are with a Glass-Bell. They assert, that the Earth is divided into 4 habitable Parts, so separated one from another by the Sea, that they are like 4 different Worlds. In the middle of them they suppose a Pyramidal Mountain, whose Top touches the Stars, and round about which the Sun, Moon and Stars do incessantly turn, which makes Day and Night.

The Art of Prophesying. The *Siamese* are of Opinion, that there is an Art of Prophesying, and are so superstitious, that neither Prince nor People will undertake any Affair or Expedition, till their Diviners, who are *Brames* or *Peguins*, have fixed an Hour prosperously to set upon it, and they have an Almanack made Annually by a *Brame* Astrologer, that tells them the lucky or unlucky Days

for most of the Things they use to do, and they never stir from Home, or return so long as this prohibits. They take the Howlings of wild Beasts and the Cries of Stags and Apes for ill Omens. A Serpent that crosses the Way, a Thunder-Bolt that falls on an House, any thing that falls as it were of it self, and without any apparent Cause, are Subjects of Dread to the *Siamese*, and the Reasons of laying aside the most important Matters. Many other Superstitions they have, but so fooliſh, that this Taste may satisfie the intelligent Reader.

Musick. Musick is not better understood at *Siam* than Geometry and Astronomy. They make Airs by Fancy, but know not how to prick them by Notes: They have neither Cadence nor Quaver, yet will sing without Words. They understand not the Diversity of Parts in Composition, but sing all Unisons. Their Instruments are ill chose; they have ugly little Violins, Hautboys, 2 Sorts of Drums, the one of which they beat with Leaden-Balls, and the other with the Fists, and the *Pateong*. With all these Instruments, to which sometimes they add the Voice, they make but a confused Noise, yet, as fantastical and odd as it is, it hath nothing unpleasant, especially on the River.

Exercises of Body are of as little Esteem with them, as those of the Mind. They have nothing of the Art of Riding the Great Horse, Arms they want, except their Princes give them some. They muster only by Order of their Prince, and can't in War fire a Musket standing, nor march, because they are so used to keep their Hams bended, that they cannot stand on their Feet with a good Grace, for which Reason they never walk abroad, nor use Running, but Rowing is their only Exercise, and with this they begin when they are Children of 4 or 5 Years old, and are so accustomed to it, that they will row 3 Days and 3 Nights almost without resting.

Their Trades and Arts. They have no Company of Trades, nor any Encouragements for Arts, partly because they are sluggish, but chiefly because they fear that their 6 Months Service should be made a Slavery for Life, if they should be expert at any, wherefore they do a little of all Trades, and desire no more. The Arts which they practise, but with little Skill, are those of Joyners, Carvers, Brick-makers and Masons. They can cast Mettals, and form them in Molds into Plates, with which they cover their Images, Hilts of Sabres, *&c.* but they cannot polish, nor set precious Stones. They are excellent Gilders, and can beat Gold finely. They use only cast Iron, and know not the Art of Tanning or Tawing Leather, and so their Horses are neither shod, nor have Saddles or Stirrups. They can make at *Siam* at little coarse Cotton-Cloth, which they paint ill, but can make no Stuffs nor Silks, nor Tapestry. They understand Embroidery, and their Designs are pleasing; they can paint in Oils, but badly, for their Fancy runs above Nature, and they love Extravagancies in Painting, as to give Men impossible Proportions, and represent Trees, Birds, Flowers and other Animals, that never were. The most general Professions among the *Siamese* are Fishing for the common People, and merchandize for all such as have wherewithal to follow it, the King himself not excepted; but the Foreign Trade being reserved to the King only, their Home Trade is so inconsiderable, that none can get Estates by it. In their Credits a 3d Person writes the Obligation, and this sufficeth in Justice to secure their Debts; they have no Seal, but only make a single Cross, which few are so wicked as to disown. They trade little with Immovables, because no Person thinks it safe to purchase Land, which being wholly in the King's Power, he takes away, or gives as he pleaseth. Their small Trades are almost all of little Consequence, and their Fidelity is so great, that in their Markets the Buyer neither counts what he purchases by tale, nor the Seller the Money he receives, and they are scandalized by the *French* Mens Caution in buying the least things. Their Markets are in the Evening from 5 to 8 or 9 a Clock.

Their Measures. In measuring their salable Goods they use not the Ell, by reason that they buy Muslins, and other Linens, all in whole Pieces. When they buy Cloth by Retale, they measure it by the *Ken*, i. e. the Elbow or Cubit, upon their Arms. Nevertheless, they use the Fathom in Buildings, surveying Land, and measuring the Roads thro' the whole Kingdoms, which every Mile are mark'd by a Post. The Coco serves as a Measure for Grains and Liquors, and because they are unequal, they measure them by little Shells, called *Coris*, which serve for small Money at *Siam*, and are almost of an equal Capacity. To measure Corn they have a kind of Bushel, called *Sat*, made of interlaced *Bambou*, and to measure Liquors, they have a Pitcher, called *Canan*, and by them they make their Markets; but for want of Policy and a Standard, by which Measures are legally regulated, the Buyer is forced to accept them according to his own Models and Measures.

Their Weights and Monies. Their Weights are usually Pieces of their Money, which are the most nice and true of any thing weigh'd, tho' frequently false and light, and therefore the same Name, *Ding*, signifies Weight and Money both. Their Silver-Coins are of the Figure of a little Cylinder or Rowl, very short, and bow'd so in the Middle, that both the Ends touch. Their Stamps are unknown to us. Their *Tical*, which weighs no more than Half a Crown of our Money, is worth 3 *s.* and 3 Half-pence. They have no Gold nor Copper-Money. Gold is a Merchandize among them, and 12 times the Value of Silver, the Purity being supposed equal in both Mettals: They cut it into ill shap'd Pieces, and with them pay for their Commodities, and for that Purpose they always carry a Pair of Gold Scales and a Touch-Stone in their Hands. The base Coin is nothing but little Shells, called *Coris* at *Siam*, fish'd up in abundance at the *Maldives* Islands, and sometimes in the *Philippines*. They are current thro' all *India*, and on most of the Coasts of *Africk*: 800 of them are hardly worth a Penny.

The Manners of the Siamese. As to good Manners, it may be affirmed, that the *Siamese* are good Men. Vices are detestable among them, and every one that is a little above the Refuse of the People is so far from making himself drunk, that he accounts it a Shame to drink Arak. Adultery is rare at *Siam*, not only because the Husband has Power to kill or sell his Wife, if he convicts her of such Infidelity, but because they are employ'd in Labour, and not corrupted with the Luxury of Meat, Cloaths, Gaming or Shows. The Wives of the People managing the Trade, do enjoy a perfect Liberty, and those of the Nobles are very reserv'd, and stir not abroad, but upon some Family-Visit, or to go to the Pagods, and are yet so far from accounting this an uneasie Constraint, that they glory in it, and would think themselves contemned by their Husbands to allow them more. The Women in general chuse rather to be killed by their Husbands, than fall into the Power of their Enemies in time of War. The *Siamese* Lords are not more jealous of their Wives than Daughters, and if any one commits a Fault, they sell her to a certain Man, who has a Privilege to prostitute her for Money, in Consideration of a Tribute he pays the King. 'Tis said, he has above 600 of both at a time. Disrespect to Superiors is very rare at *Siam*. Lying is punish'd very severely both by the King and all Superiors. The Union of Families is such, that should a Child act in any thing against his Parents, he would be abhorred as a Monster. Begging is shameful, not only to the Beggar, but all his Family, which, according to their Custom, are to maintain all Relations out of Charity, who cannot maintain themselves out of their Estate or Labour; so that none beg but the Aged and Impotent, and such as are friendless. Robbing is much more ignominious than Begging, both to the Robber himself and his Relations, who dare not concern themselves with the nearest Friend, if he be accused of Theft; nevertheless, the *Siamese* do seldom refuse to steal whatever they meet withal, and some have so great a Love to Theft, that they withdraw themselves into the Woods from the Government to rob Passengers, but kill none. Fidelity in all sorts of Traffick is exceeding great at *Siam*, but Usury is without Bounds, tho' their Moral Law prohibits it. Avarice is their essential Vice, tho' they heap up Riches not to use them, but bury them. They make no Wills, nor publick Contracts, and as they have no Notaries, so they can have no Suits of Law. The *Siamese* have a natural Aversion to Blood, yet out of Hatred or Revenge will sometimes assassinate or poison, and often accuse before their Judges, who living on their Profession, are ready to gratifie their Spight. They are courteous, polite, fearful and careless. They will contain their Anger long, but if it breaks out 'tis boundless. They are stiff to their Customs out of Laziness and Respect to their Ancestors, who have transmitted them to them. They have no Curiosity, nor admire any thing. They are proud to the Meek, and humble to them that treat them with Rigor. When they promise one another a perpetual

Amity,

Friendship.

Amity, they do it by drinking the same Cup of *Aqua vita* together, and when they swear more solemnly, they taste the Blood one of another; yet after all these Ceremonies, they'll prove sometimes perfidious. They act only by Necessity, and do not, like us, place Merit in Action, because it seems irrational to them, that Labour and Pains should be the Fruit and Reward of Vertue. But this is sufficient to be said of the *Siamese* in general.

The Condition of the *Siamese*.

Concerning the particular Conditions of the *Siamese*, and their Manners relating to them, it may be said, that at *Siam* all Persons are either Free-men or Slaves. Now one may be born, or become a Slave. One becomes a Slave either for Debt, or being taken Captive in War, or by having been confiscated by Justice.

Slaves.

When one is made a Slave for Debt, he recovers his Liberty by making Satisfaction, but his Children born during his Slavery remain Slaves. One is born a Slave, when he is born of his Mother who is a Slave, tho' his Father be a Free-man; for he can claim but his even Ones, tho' he had the Consent of the Master of the Mother-Slave; if not, all the Children belong to the Mother; and if the Father be a Slave, his Share belongs to his Master. The Master has Power over the Slaves in all Things, but to take away their Life, yet is not Slavery accounted so vile by the *Siamese*, but they dread Beggary more than Slavery, as being more painful and ignominious; for tho' they express a great deal of Charity for Beasts, yet they will show very little to Men. They employ their Slaves in cultivating their Lands and Gardens, and other domestick Services, yet allow them so much Time to work for themselves, as to gain a Livelihood for their Families, paying a small Tribute from 4 to 8 *Ticals*.

Free-men.

All the rest are Free-men, and among them there is no Difference: for their Nobility is nothing else, but the actual Possession of Offices, which make the Families that enjoy them illustrious so long as they hold them, but as soon as they have lost them, they have nothing that distinguishes them from the common People, for it is common to see the Son of a Lord and Grandson at the *Pagay*, or Oar. The Distinction of the *Talapoins*, or Priests, from the People is less, for they are continually passing from one of these States to the other; so that the Inhabitants of the whole Kingdom are divided into King, Officers, Priests, and Commonalty, or the People.

Of the *Siamese* People.

The People of *Siam* are all Soldiers, called *Tahan*, and do allow annually 6 Months Service to their Prince, and accordingly are all register'd in the Muster-Roll of their Militia. It belongs to the Prince to arm and give them Elephants or Horses, if he will have them to serve in that Post, but it belongs to them to cloath and maintain themselves. When he is at War with any of his Neighbours, he sends not all his Subjects into the Field, but employs as many as he pleases in Arms, and the rest he puts them upon such other Services as he thinks fit; and that no Man may escape this personal Service, all the People are exactly numbred, and divided into Men on the Right Hand, and Men on the Left, who are again subdivided into Bands, each of which hath their *Nai*, or Captian, whose Office it is to furnish as many Men out of his Band either for War, or the King's 6 Months Service, as are required. The Children are of the same Band with their Parents, and if the Parents are of different Bands, then the odd ones belong to the Mother's Band, and even ones to the Father, unless the Mother's Captain hath not given Consent to the Marriage, and then all the Children belong to the Mother's Band. And tho' Women and *Talapoins* are exempted from all Service, yet they are both inroll'd; the latter because they may return to a Secular Condition, and then they come under the Command of their natural Captain; and the former, because their Children are all, or the greatest part, of their Band. Tis the Privilege of a *Nai*, or Captain, to lend his Soldier before another, and pay his Debts, thereby to make him his Slave, if he be insolvent; and since the King gives every Officer a *Balon*, he has a certain Number of *Pagayeurs*, or Rowers, allotted him, whom he brands on the Inside of the Wrist with an hot Iron, and Anchor over it, and then these Rowers, called *Bao's*, owe their 6 Months Service to him. Now, the more numerous any Band is, the more powerful and honourable is the Captain esteem'd, and according to a greater or lesser Number he is called by one of these 7 Titles, *Oc-ya*, *Pa-ya*, *Oc-pra*, *Oc-Louang*, *Oc-Counc*, *Oc-Meuning* and *Oc-Pan*.

Their Number and Order.

Women and Priests exempted from the King's Service.

The Authority of the Kings of *Siam* is Absolute and Despotical, and his Greatness consists in this, That he can exercise a Power over all, even his own Brethren, whom it is customary for the King to maim in their Body, take away or weaken their Sight by Fire, render them impotent by dislocating their Members, or sottish by Drinks, that they make them incapable of Reigning, and so secure themselves and their Children against their Enterprizes. This sort of Government, tho' it seems most Regal and Monarchical, yet is really very defective as to the true Ends and Benefits of Governing, for it is terrible and burdensome to the Subject, and noxious to the Prince. As to the People, the Yoke is less heavy on the meaner Subjects than the Nobles; Ambition leads to Slavery and Liberty, and Enjoyments of Life are for vulgar Conditions. The more one is unknown to the Prince, and the further from him, the greater Ease he enjoys; and for this Reason it is, that the Imployments of the Provinces in such Kingdoms are considered as a Recompence of the Services done in the Palace. The Ministry is always tempestuous, not only thro' the Inconstancy of the Prince, but because all Ways are open to the Prince for Complaints against his Ministers, which easily overturn the best establish'd Favours. Nevertheless, the King of *Siam* has that Regard for his People, as not to augment his Taxes on tilled Lands, and to lay no Impositions on Corn or Fish, that what is necessary for Life should not be dear. But those Kings, which are so absolutely Masters of the Fortune and Life of their Subjects, are so much the more wavering on their Thrones. They find little or no Fidelity in any Persons, no not so much as in their Domesticks. The People, which have no true Property, and can hardly call any thing their own that is above Ground, look upon themselves to have no Obligation to their Prince or Country, and so care not to do any thing for the Defence of either, so great Defects have absolute Kingdoms.

The Government.

The Inconveniences of it.

Corn and Fish not taxed.

The King of *Siam*, who reigns at present, is without Contradiction the greatest Prince that ever govern'd that State. He is somewhat under the middle Stature, but strait, and well shap'd: He hath an engaging Air, and a sweet and obliging Carriage, especially to Strangers. He is active and brisk, an Enemy to Idleness and Laziness, which is generally so delightful to the Princes of the *East*, and which they look upon as the greatest Prerogative of a Crown; but this Prince is always either in the Woods hunting Elephants, or in his Palace minding the Affairs of his Kingdom. He is no Lover of War, because it ruins his People, whom he most tenderly loves; but if his Subjects revolt, or Neighbouring Princes affront him, no King takes a more conspicuous Revenge, or appears more passionate for Glory.

The present King of *Siam*.

By the Sharpness of his Wit he hath discover'd the Erroniousness of the Religion of his Ancestors, and does not believe a God, that regards not what passes in the World, nor a Thousand other Superstitions taught by the *Talapoins*; but he believes a God who is Eternal, whose Providence continually governs the World, and disposes of all Things; and prays to him with the most profound Reverence Morning and Evening daily; but reigns after the Manner of his Ancestors.

The King of *Siam*'s Faith.

The King of *Siam*'s Palaces have 3 Inclosures, which at *Siam* are so far distant the one from the other, that the Space between them appears like vast Courts. Within the innermost are the King's Apartment, a Court and Garden, called *Vang*, and the whole Palace is called *Praffat*. At *Louvo*, besides an excellent Situation in general, there is nothing remarkable, but the Roof of the King's Apartment, which shines like Gold, for the Tiles are every one varnish'd with Yellow, and cost about 10 Groats apiece. All these Palaces have their Officers within, who always lodge in the Palace, and their Offices are always exercised in it, and their Officers without, who have no Function within the Palace, and yet do nothing without, but for the Service of the Palace. The *Siamese* never pass by the Palace, unless the Stream forces them down, and then the King's Servants pelt them with Showers of Peafe; nor enter, or go out of the *Vang* without prostrating themselves.

His Palace, and the Officers of it.

The *Oc-ya Vang* commands in the *Vang*, takes care of the Reparations of the Palace, the Order to be observed in it, and of the Expence which is made for the Maintenance of the King, his Wives, Eunuchs, and such as dwell with him in the *Vang*.

The

The Gates of the Palace are always shut, and behind each ſtands a Porter, who when any one knocks advertiſeth the Officer of the Incloſure of it, who views the Perſon, and ſmells his Breath, that none arm'd or drunk may enter into it. Between the a firſt Incloſures, and under a Pent-houſe is a ſmall Number of Soldiers unarm'd and ſtooping, called *Kenbai*, or the Painted Arms. They are commanded by an Officer called *Oneavae*, and are the King's Executioners, watch the King's Perſon, and row the King's *Balon*. Theſe are his only Foot-Guard; their Office is Hereditary, and their Number muſt not exceed 600; but on Days of Ceremony, as the Audience of Ambaſſadors, &c. he cauſes his own and Lords Slaves to be arm'd out of his Magazines, and the *Meuing Tchion* is the Captain of them.

His Horſe-Guard is compoſed of Men from *Laos* and *Meen*, 2 Neighbouring Countries, and is as numerous as he pleaſes: An Officer called *Oc Coune-Ran-Patchi* commands this Guard on the Right-Hand, and another called *Oc-Coune-Petratcha* commands it on the Left Hand; but the Guard of *Laos* have an Officer of their own, called *Oc-ya-Lao*, and the *Meens* have their Captain, called *Oc-ya-Meen*. Beſides this, the King of *Siam* has a Foreign Horſe-Guard conſiſting of 60 *Moors*, Natives of the *Mogul's* Country, eſteem'd Cowards; 20 *Chineſe Tartars*, arm'd with Bows and Arrows, and formidable for their Courage; 50 *Reggiouts*, true *Indians*, famous for their Courage. Theſe do not keep Guard in the Palace, but only attend the King upon Notice when he goes out. The King furniſhes this Guard with Arms, and pays them 540 Livres every Man, and gives them a red Stuff-Veſt each every Year. In the firſt Incloſure are likewiſe Stables for ſuch Elephants and Horſes as the King eſteems moſt of, called Elephants and Horſes by *Name*; for the King gives Names of Honour to all Officers and Beaſts he likes. The chief Querry, who takes care of the King's Horſes for their Maintenance and Riding, is called *Oc-Louang Tokumpori*. He has a Privilege of ſpeaking to the King, which neither his *Belat*, or Lieutenant, called *Oc-Meuing Si Sing Toup Patchat*, nor any other inferior Officer has. The Elephants of *Name* are treated with more or leſs Dignity, according as their *Name* is more or leſs honourable; but every one of them have ſeveral Men at his Service, and never ſtir out without Trappings. What Elephants of *Name* cannot be kept within the Compaſs of the Palace have Stables cloſe by.

The Care of the King's *Balons* and of his Gallies belongs to an Officer called *Calla-hom*, who preſides over the Arſenal, which is over-againſt the Palace, the River running between, locks up the Barges in Trenches encloſed with Wood, and appoints Watches every Night to keep them, eſpecially the *Balons* of Ceremony, which are moſt curiouſly and finely adorn'd. In the *Vang* in the Hall of Audience, where the King ſhews himſelf only at a Window, attend 44 young Men, the oldeſt of which hardly exceeds 25 Years, called *Mabaslek* or Pages. They are divided into 4 Bands, and proſtrate themſelves in the Hall, 2 on the King's Right Hand, and as many on his Left. The King gives them every one a Name and a Sabre, and they carry his Orders to the Pages without, called *Calaang*, who are very numerous, and are to carry his Commiſſions both Ordinary and Extraordinary into the Provinces: Beſides, theſe Pages ſerve him with Betel, take care of his Arms, keep his Books, and when he pleaſes read them to him. They are commanded by 4 Officers, called *Oc-meuing*, or *Pra-Meuing*. They are in great Eſteem, becauſe they ſo nearly approach their Prince, but not all in the ſame Degree. There is alſo another Officer in the Palace, who alone has the Privilege of not proſtrating himſelf before the King his Maſter, which renders his Office very honourable. He always has his Eyes fix'd upon his Prince to receive his Orders, which he underſtands by certain Signs, and which he ſignifies by Signs to the Officers which are without the Hall.

There are other Officers, who have Charge of the Wardrobe, and the moſt conſiderable of them is he that toucheth the King's Bonnet, altho' he be not permitted to put it upon the King's Head. He is a Prince of the Royal Blood of *Cambaya*, becauſe the King of *Siam* boaſts of his Deſcent from that Royal Race, not being able to vaunt of a Lineal Succeſſion to the Kings his Predeceſſors. The Title of this Maſter of the Wardrobe is *Oc-ya out haya tenne*. Under him another Officer, called *Oc-ya Rajia Vonſa*, has the Charge of the Cloaths. As to the King of *Siam's* own Chamber, the true Officers thereof are Women, and 'tis they only that have a Privilege of entring therein. They make the King's Bed, and dreſs his Meat: They cloath him, and wait on him at Table; but none but himſelf touches his Head when he is attired, or puts any thing over his Head.

The Purveyors carry the Proviſions to the Eunuchs, and they give them to the Women, and ſhe which cooks them uſes Salt and Spices only by Weight, thereby never to put in more or leſs, which ſeems to be a Rule preſcrib'd by the Phyſicians to the King, by reaſon of his unhealthy Diſpoſition, and not an ancient Cuſtom of the Palace. The Women never go out, but with the King, nor the Eunuchs, without expreſs Order. 'Tis reported, that he has 8 or 10 Eunuchs only, as well White as Black. The late Queen was both his Wife and Siſter, and was called *Nang Achamahiſy*; but the King's Name is carefully and ſuperſtitiouſly conceal'd, for fear any Inchantments ſhould be made on it, tho' others ſay; The King has no Name till after his Death, and then his Succeſſor names him. The Queen rules all the reſt of the King's Wives, which are 8 or 10, as their Sovereign, judges and puniſheth them, which ſhe doth ſometimes ſo ſeverely, that if the King loves any of the Ladies more than the reſt, he removes her from under her Uſage. The Queen hath her Elephants, Balons and Officers to take care of her and accompany her, when ſhe goes abroad, but none but her Women and Eunuchs ſee her; for if ſhe goes on an Elephant or in a *Balon*, ſhe rides in a Chair with Curtains about her, thro' which ſhe can ſee what ſhe pleaſes, but cannot be ſeen of any, and Reſpect commands, that if they cannot avoid her, they ſhould turn their Back to her by proſtrating themſelves when ſhe paſſes along. Beſides, ſhe has her Magazines, Ships and Treaſures, and exerciſes Commerce, which is ſo unalienable a Privilege, that the King's Daughter ſtood for it with her Father.

In this Kingdom Daughters never ſucceed to the Crown; they are hardly look'd upon as free, but the Queen's eldeſt Son is always Heir by Law: Nevertheleſs, by the Favour of the King, and thro' the natural Reſpect that this People have for Age, an elder Son, though of the Concubines, is often preferred.

The common Uſage of the Court of *Siam* is to hold a Council twice every Day, about 10 in the Morning, and 10 at Night. In the King of *Siam's* Council Civil Cauſes and Affairs of State are decided after this Manner: When any Cauſe is brought before him, he commits it to a certain Councellor to hear and examine it, and paſs a Conſultative Sentence upon it, and hitherto the King's Preſence is not neceſſary; but when this is done, the King is to paſs a definite Sentence upon it, and to that End a Report is read to him concerning the former Conſult, and reſuming all the Advices, he confutes thoſe which he approves not, and then decides: But if the Affair ſeems to him to merit a more mature Deliberation, he makes no Deciſion, but propounding his Difficulties to ſuch of his Council as are of a different Opinion, and cauſing them to make a Report of their new Conſultation in a full Council before him, he conſummates his Determination; yet ſometimes in Affairs of great Importance he will conſult the principal *Sanera's*, or Superiors of the *Talapoins*, tho' he is not obliged to ask, or follow any other Advice than his own. He often puniſhes ill, and rewards good Advice, which being ſo eſteem'd according to his own Senſe, his Miniſters ſet themſelves more to divine his Sentiments than declare their own, tho' they often miſtake, becauſe he ſtudies to conceal his Opinion from them. The Affair which he conſults them about is not always real, but feigned to exerciſe their Judgments. He has alſo a Cuſtom to examine his Officers about the *Pra-Fem-Ra*, i. e. The Book of all their Duty, and if they do not anſwer exactly, chaſtize them with the Baſtinado.

'Tis an ancient Law of the State, eſtabliſh'd for the Safety of the King, that the Courtiers ſhall not viſit him without his Leave, and always ſpeak aloud at their Meetings, except at Weddings and Funerals. The Trade of an Informer, ſo odious to free-born Men in all Places, is commanded to all Perſons at *Siam* under Pain of Death for the leaſt Things, ſo that ſcarce any thing is known by 2, but the King hears of it by the one, for fear the other ſhould pre-

vent

vent him, and few can offend in any thing without being punish'd with Rigor; for he puts to Death whom he pleaseth without any Formality of Justice, and that in his own Presence; sometimes the Accuser with the Criminal, and Innocent with the Calumniator. He makes use of Variety of Punishments; sometimes he exposes the Offenders to the Tygers, sometimes to an enraged Bull, and sometimes to the Elephants, either to be trampled under Foot, and slain, or to be toss'd without killing; for they say, that Elephants are so docible, that they will do either as they are order'd. But his ordinary Chastizements are such as have some Relation to the Nature of the Crimes committed. As for Example; Extortion and Robbery, by swallowing Silver or Gold melted, Lying, or betraying Secrets, by sewing up the Mouth; Concealing what ought to be discover'd, by slitting up the Mouth; Neglects in the Execution of Orders, by pricking the Head with a Sabre to punish the Memory. The Punishment of the Sword is exercised not only by cutting off the Head, but cutting a Man in two. The Cudgel sometimes extends to Death, but when it doth not, 'tis very rigorous, and causes Loss of all Knowledge. If a Prince be to be put to Death, they will not shed the Royal Blood, but starve or stifle him.

Besides these Capital Punishments, they have some infamous, as to expose a Man in Publick loaded with Irons, and with his Neck in a kind of Ladder or Pillory, called *Cangue*, or, *Ka*; in the Stocks, or with Manacles. Sometimes they bury the Criminal up to the Shoulders, and for the greater Infamy give him Cuffs or Blows upon the Head, or cause Women to stroke him on the Head, which is esteem'd one of the greatest Affronts. But this is particular among them, that the most infamous Punishment is reproachful no longer than it lasts, and he that is so punish'd to Day, the Prince will take into the most important Office to Morrow. Yea, they'll boast of the Punishments inflicted by the King, as Badges of his Paternal Care and Goodness to them, and he will accept of Compliments and Presents from such as have suffer'd the Bastinado. At *Siam* the Father sometimes shares in the Punishment of his Son, as answering for the Education he has given him; and a superior Officer is punish'd for the Offences of an inferior, because he ought to watch over him, and having Power to correct him, is answerable for his Carriage. Lastly, The Appearance of Guilt renders an Action criminal at *Siam*, and to be accused is enough to make a Man culpable.

At the Court of *Siam* Ambassadors have not the Honour given them which has been thought their Due by all Nations, because they are not look'd upon to represent their Masters, but to be their Messengers, and therefore they give all their Respects to the Letters of Credence, of which they are Bearers. The King sends no Person to reside at any Foreign Court, but to dispatch a Business and return. He never sends more or less than 3 Ambassadors together, of whom the first is called *Kroja Tout*, i.e. The Royal Messenger, and the other 2 called *Oubha Tout*, and *Tri Tout*, are in all Things govern'd by him. When any Ambassador has his Audience of Leave, the King of *Siam* gives him a *Receipis* of his Letter, and if he returns an Answer, he sends an Ambassador on Purpose. A Foreign Ambassador which arrives at *Siam* is stopp'd at the Entrance of the Kingdom, until the King has Intelligence of it. Every Foreign Ambassador is lodg'd and maintain'd by the King of *Siam*, and during his Stay may exercise Merchandize, but cannot treat of any Affair till he has deliver'd his Letters of Credence, and imparted his Original Instructions. No Ambassador can go into the Metropolis, till he is to have Audience, nor stay after his Audience of Leave. All publick Audiences are in the Metropolis, and that with great Ceremony, *viz.* All the Guards in Arms, and the Elephants and Horses in their best Harness. In all Audiences the King speaks first, and having propounded some Questions almost always the same, he orders the Ambassador to answer them to the *Barcalon*. Harangues please him not at all, but he thinks the longer an Ambassador speaks, the less he honours him. After the King has spoken to an Ambassador, he gives him Arak, Betel and a Vest, and sometimes a Sabre and Gold-Chain, all which he immediately puts on. If they receive any Presents in Embassies, they give open Demonstrations of Respect immediately; if it be a Garment, by putting it on; if an Horse, by building a Stable for it, &c. that they may seem to honour the Prince that sends them, tho' indeed they are really pleased with nothing, but the Profit. All the Oriental Princes esteem it a great Honour to receive Embassies, but to send as few as they can, because they look upon them as a kind of Homage, and they retain Foreign Ministers with them as long as they can, to prolong the Honour they receive by it. The Ambassadors of *Siam* are accountable, because they are entrusted with Goods to trade with, and they can seldom discharge themselves so well, as to escape the Bastinado. Thus far of the Court and Officers belonging to it.

The Officers of the Kingdom of *Siam* are called by one general Name, *Mandarins*, which Word also extends to the Children of principal Officers, as Persons of Quality. The King of *Siam* makes no considerable *Mandarin*, but he gives him a new Name, as a Mark of Honour. It is either purposely invented, or has been formerly born by Princes of the Blood Royal, or other Persons of great Dignity. The Law of this State is, That all Offices shall be Hereditary, but none are permitted to sell them; yet very few Families can hold them long, because the least Fault in the Patent, or the capricious Humour of the Prince, or the Dotage of the Inheritor, is enough to deprive any one, and when it happens, 'tis always without Recompence. No Officer at *Siam* has any Salary, but their principal Gain consists in Extortion, Pillaging and Bribes. The King, indeed, lodgeth them, and gives them some Boxes of Gold and Silver for Betel, some Arms, Elephants, Horses, Buffalo's and Slaves, also a Balon and some arable Lands, but they are but lent, for they are to return with the Office, and to obtain them the King makes a Pretence to be Heir to the Officers.

All Officers take an Oath of Fidelity to their Prince, who will not dispence with it to any Persons that are in his Service. It consists in swallowing the Water over which the *Talapoins* have pronounced some Imprications against him that is to drink it, in case he departs from his Allegiance.

The Publick Laws of *Siam* are written in 3 Volumes: The first, called *Pra Tam Ra*, contains the Names, Functions and Prerogatives of all the Offices: The 2d, entituled, *Pra Tam Nen*, is a Collection of the Constitutions of ancient Kings: And the 3d, styled, *Pra Kopia Cammanot*, is a Collection of the Constitutions of this King's Father. A Translation of these Laws would have been useful and pleasant, but it is impossible to be attain'd. There is no Chancellor at *Siam*, but every Officer that has Power to give Sentences or Orders in Writing, which they call *Tara*, has a Seal, which the King gives him, and the King has a Royal Seal, which he gives to no Person whatsoever, and which he uses in all Writings, which proceed from him. The Figure on them is not hollow, but *in Relievo*. The Seal is rubb'd over with a kind of red Ink, and imprinted on the Paper by some inferior Officer, but taken off by him to whom it belongs.

The Kingdom of *Siam* is divided into the Upper and Lower. The Upper lies towards the N. and hath 7 Provinces, which bear the Names of their chief Cities, *Porsleuc*, *Sanqueleuc*, *Lacontai*, *Campeng-pet*, *Cocontephna*, *Pechebonne* and *Pitchai*. The Lower contains the Southern Part of the Kingdom, which has these Provinces, *Jor*, *Patana*, *Ligor*, *Tenasserim*, *Coussebonne*, *Petelong* or *Bordelong*, and *Tenai*. Of these the Province of *Jor* renders Obedience to its own Governour, whom the *Portuguese* call King, because he is in no Subjection to the King of *Siam*, nor is likely to obey him, unless the Kingdom of *Siam* should extend it self to the whole *Peninsula extra Gangem*.

The People of *Patana* are governed by a Woman, whom they elect out of the same Family, and always old, that she may not marry, and in her Name the most trusty Persons rule. The *Portuguese* call her Queen, and tho' she sends to the King of *Siam* every 3 Years 2 small Trees, one of Gold and the other of Silver, either for Tribute, or in Consideration of Trade, yet she owes him no Assistance in his War, nor is his Vassal.

All the rest of the Provinces contain in each of them several Jurisdictions, which have all their President or Governour, with several Under-Officers for Judicature. The Governour is called *Tchaou-Meuang*, i.e. the Lord of the Province. He has a deliberate Voice, whereas all his inferior Officers have but a Consultative. He rules

Siam divided into Upper and Lower.

A Woman Governour.

Governours of Provinces. 1. The Tchaou-Meuang, and his Revenues.

rules the whole Jurisdiction, and commands the Garrisons, unless the Prince hath otherwise disposed of them by express Order. The Legal Rights of this *Tchaou-Meuang*, besides the Presents which come to him from the King, are these that follow: 1. A Share with the King in the Rents of the arable Lands, called, *Naa*, Fields, *viz.* A Quarter of a *Tical* for 40 Fathom, or 200 Foot square. 2. The Profit of all Confiscations, of all the Penalties of the Exchequer, and 10 *per Cent.* of all the Fines to the Party. Confiscation. Confiscations are fixed by Law according to the Cases, and extend sometimes to the Estate only in whole, or part, and sometimes to the Person condemned also, and his Children. 3. Officers to execute the King's Orders, who accompany him every where, and row his *Balon*. They are called *Kenlai*, or, *Painted Arms*, because they pink and mangle their Arms, and lay Gun-Powder on the Wounds, which paints them with a faded Blue. 4. To take Customs of Merchant-Ships in Maritime Governments, but they are inconsiderable. 5. To levy Taxes, as Sovereign, on the Frontiers. 6. To exercise Commerce every where under the Name of their Secretary, or other of their Domestick Servants. 7. In Places where there are Fish-Ponds to take the best of the Fish when the Pond is emptied, but for their own Use only, and not to sell. But the Kings of *Siam* have ruin'd and destroy'd the most potent *Tchaou-Meuang* as much as they can, and have substituted in their Places some Triennial Governours by Commission, whom they term *Pouran*. They *Pouran.* have the same Honours and Authority as the *Tchaou-Meuang*, but not the same Profits, for they have no more Profits than what the King assigns them at naming them. Sometimes this *Pouran* is made to supply the Place of the *Tchaou-Meuang*, when he is obliged to absent himself from his Government, and in that Case he is to take one Moiety of his Profits, and leave him the other.

Officers of Justice. The ordinary Officers of the Tribunals of Judicature, which are subject to these Governours are, 1. The *Oc ya Tchaou-Meuang*: 2. *Oc-pra Belat*: 3. *Oc-pra Fockebateſt*, a kind of Attorney-General. His Office is to be a strict Spy upon the Governour, and he is nominated to that Trust by the King, but he usually conspires with the other Officers to pillage the People. 4. *Oc-pra Peun*, the Captain of the Garrison under the Governour, but he has no Authority but in the Field. 5. *Oc-pra Maha-Tai*, i. e. The Chief of the People, who levies Soldiers, or rather demands them of the *Nai*, sends Provisions to the Army, sees that the Rolls of the People be well made, and in general executes all the Governours which concern the People. 6. The *Oc-pra Sassedi*, who makes and keeps the Rolls of the People. 'Tis a corrupt Office, because every one seeks to have his Name left out of the Rolls for Money, and the *Nai* favours them. 7. *Oc-Louang-Meuang*, who is Mayor of the City. He is to take care of the Government and Watch. 8. *Oc-Louang-Vang*, the Master of the Governour's Palace. He causes it to be repair'd, commands his Guards above the Captain, and orders all the Governour's Charge. 2. *Oc-Louang-Peng*, the Keeper of the Books of their Laws and Customs, according to which they judge. He pronounces Sentences, and reads the Articles of Law, which serves for the Judgment of the Process. 10. *Oc-Louang-Clang*, Keeper of the King's Magazine. He receives the King's Revenues, and sells to the People the King's Commodities, whose Trade he has appropriated to himself. 11. *Oc-Louang-Couca*, who has the Inspection over Foreigners. He protects them, or accuses them to the Governour. 12. Certain Officers in every superior Tribunal to send to the inferior Justices when the *Tchaou-Meuang* or *Pouran* are dead, till the King fills the Place, and they are as many as the inferior Justices. 13. *Oc-Louang*, or *Oc-Counne-Coeng*, the Provost. He is always arm'd with a Sabre, and has *Painted Arms*, like Archers. 14. *Oc-Counne Pa-ya Bat*, the Keeper of the Goal or Prisons.

The Prisons of Siam. *Nai-Gouz*, the true Goaler. Nothing is more cruel than the Prisons of *Siam*, which are Cages of *Bambou*, exposed to all the Injuries of the Air. 15. *Oc-Counne-Narin* commands them that have care of the Elephants, which the King has in every Province almost, because it is difficult to lodge and feed a great Number of Elephants together. 16. *Oc Caunne-Nai-Rang*, the the Purveyor of the Elephants. Lastly, In every Tribunal there is an Officer to read the *Tara*, or King's Orders to the Governour, and an House in some eminent Place to keep them in, as there is in the King's Palace at *Siam* for all Letters he receives from other Kings.

These are the Officers within, and besides them there are other Officers without for the Service of the Province, all depending on the Governour, who tho' they have the like Titles with the Officers within, are inferior to them. All these Officers within have every one their *Balat*, or Lieutenant; *Somien*, their Register, and Hall of Audience in their Houses.

Their Forms of Pleading. 'Tis a general Rule among them, that all Processes should be in Writing, and that they plead not without giving Caution. In managing a Process the *Plaintiff* goes to his principal *Nai*, who is to be his Councellor, and presents him a Petition, which he gives to the Governour, who is to examine it nicely, and if he finds it unjust, not only to reject it, but chastize the Party who presented it, that none may dare to begin any Process rashly, but if he finds it just, then he admits it, and refers it to one of the Councellors, ordinarily to him that presents it, especially if he be the *Nai* of both Parties, putting his Seal to it, and counting the Lines, that nothing be alter'd in it. The Councellor gives it to his Deputy and Clerk, who first make the Report of it at his own House in his Hall of Audience, and then the Clerk presentd by his Master reads it in the Governour's Hall at the Assembly of all the Councellors, but in the Absence of the Governour, who appears not at whatever serves only to prepare the Cause. Here the Parties are called in under a Pretence of reconciling them, which not succeeding (because 'tis for Fashions sake only) the Court orders that the Witnesses be examined before the same Clerk, unless he be declared suspected, and then in such another Court the Clerk reads the Process and Depositions of the Witnesses, and so proceeds to take the Opinions of the Officers, beginning at the last, and writes them down. The Process being thus prepared, the Council appears before the Governour, and his Clerk reads it and the Opinions upon it. The Governour resumes them all, and such Opinions as seem to him not just, he requires the Reasons of, and then pronounces in general such of the Parties condemn'd by Law; whereupon the *Oc-Louang Peng* reads with a loud Voice the Article of Law which respects the Suit, and then the Governour passes Sentence upon the Parties, and it is set down in Writing; but if it be contrary to all Appearance of Justice, it belongs to the *Fockebat*, or the King's Attorney-General, to advertise the Court of it, but not to oppose it. Every Suit ought to end in 3 Days, but some last 3 Years. The Parties may each plead before the Clerk, either himself, or by his Advocate, who must be at least his Cousin German, or he will be punish'd, and the Clerk writes down what they say.

Witnesses examined.

How Sentence is pass'd.

Extraordinary Proofs. 1. By Fire. When ordinary Proofs fail, they have Recourse to several Superstitions used among them for that Purpose, *viz.* By Water, Fire and Vomits. The Proof by Fire is thus: Both Parties with their naked Feet walk upon a Pile of Coles 5 Fathoms long, and one broad, and 2 Men generally walk by the Side of him that passeth over the Fire, and lean with Force upon his Soulders, to hinder him from getting too quick over them. He that has not the Soles of his Feet burnt in this Trial gains his Suit. Sometimes this Proof is perform'd by thrusting their Hands into boiling Oil or Tin, and tho' both of them have been found to fail in a Thousand Instances, yet the *Siamese* cannot be perswaded to change their Form.

2. Water. The Proof by Water is this: The 2 Parties plunge themselves into the Water at the same time, and he that remains longest under Water is thought to have a good Cause.

3. Vomiting. The Proof by Vomiting is this: Both Parties swallow certain Pills prepared by the *Talapoins*, and accompanied with Imprecations: He that can keep them in his Stomach without casting them up is said to have a good Cause.

5. Delivering both Parties to the Tygers, &c. These Proofs are made use of before the Judges and all the People, and if both Parties escape either equally well or ill, the King will deliver them to the Tygers, and he whom they spare is judg'd innocent, and if they devour both they are both esteem'd guilty. Appeals are allow'd in all Cases, but they encrease the Charges. None but the King, and he to whom the King grants a Power can pass Sentence of Death, and therefore all Criminals are kept in Prison till the Arrival of the King's Commissioners, whom he sends into the Provinces for that Purpose.

Robbery how punished.

The usual Punishment of Robbery is to pay double or trible Damages, which are divided equally to the Judge and Party; and this Punishment the *Siamese* extend to the unjust Possessors of real Estates: But if, by the King's Permission, a Judge can put a Robber to Death, he can then at Discretion either inflict Death, and fine him as before, but he can't do both.

The King Supream Judge at *Siam*.

In the Metropolis of *Siam* there is no other *Tchaou-Meuang* but the King, and therefore the Functions of Governour and Judge are divided into 2 Offices, and the other Functions of the lesser Offices are given to the Officers of State, but with greater Authority and more pompous Titles. The President of the Tribunal of the City of *Siam*, to whom all the Appleas of the Kingdom do go, they call *Yumrat*. He generally bears the Title of *Oc-ya*, and his Tribunal is in the King's Palace, but he follows not the King when he removes from the Metropolis, but administers Justice in a Tower near the Palace. To him alone belongs the Determinative Voice; but there lies an Appeal from him to the King, if any one will bear the Expence. In which Case the Process is referr'd to, and examined by the King's Council, who prepare it for his Hearing, as the Council of the *Tchaou-Meuang* does. When the King comes to pass Sentence, he resumes the Opinions and Debates of his Council, examines those which seem to him unjust, and then pronounces a definitive Sentence. The Governour of the City of *Siam* is called *Pra-sedet*, who also bears the Title of *Oc-ya*. His Office is to visit and compliment Ambassadors, and manage other publick Matters in the King's Absence, for the Word signifies, *The King is gone*.

The State-Officers.

Among the State-Officers these are the Chief: 1. The *Tchaery*, who has the Distribution of all the inferior Policy of the Kingdom. To him are brought all the Affairs of Provinces. All the Governours do immediately render to him an Account, and do immediately receive Orders from him. He is President of the Council of State.

2. The *Calla-hom*, who has the Appointment of War. He has the Care of the Fortifications, Arms and Ammunitions. He issues out all the Orders that concern the Army, and is naturally General of it, tho' the King may name whom he pleaseth.

3. The *Oc-pra Pipitcharatcha*, corruptly called *Petratcha*, commands all the Elephants and Horses. This is one of the greatest Employments of the Kingdom, because the Elephants are esteem'd the King of *Siam*'s principal Forces. Some there are that say,

The Number of the Elephants of War.

that this Prince maintains 10000 Elephants. 'Tis certain the Number is very great, tho' not exactly known, and 'tis said, that 3 Men at least are required for the Service of every Elephant, who have Officers to command them, and are all subject to this Great Officer. This Office is generally managed by some Person allied to the Crown, and the present *Oc-pra Pipitcharatcha* is a Man in mighty Reputation with his Prince for his Courage, and with the People for his Success and Moderation.

The *Siamese* no Warrior.

But, notwithstanding such seeming Preparations for War, the *Siamese* are wholly ignorant of all Military Arts and Discipline, and so utterly void of Courage, that a naked Sword is sufficient to put an Hundred of them to Flight; for the Opinion of the *Metempsichosis* inspiring them with an Horror of Blood, deprives them likewise of a Spirit of War. They busie themselves only thro' the whole *Indies* in their Wars

Their Way of making Wars.

in making Slaves, for if an Enemy invade any of them in one Place, they'll enter their Enemies Country in another, and both Parties will carry whole Villages Captives. If their Armies meet, they never shoot one at another, but above each other, that their Arrows falling like a Shower upon their Heads, may make them flie, which they seldom fail to do; for as their King orders them not to kill, so they are as afraid they should be killed, and so flie into the Woods for Safety. 'Tis true, they'll rally again soon, but will never stand to a Fight, unless forced to it by their Officers, who on Purpose stand behind to kill all

Wars usual.

that shall dare to flie. But tho' the *Siamese* are such bad Warriors, yet they do not cease to make Wars frequently with their Neighbours, who are neither more potent, nor valiant. They have little Artillery, no Horses, but their Armies consist of Elephants and Infantry, naked and ill arm'd after the Manner

Their Order of Battle.

of the Country. Their Order of Battle and Encampment is thus: They range themselves into 3 Lines, each of which is composed of 3 great square Battalions: The King or General stands in the middle Battalion, which he composes of the best Troops for the Security of his Person, and every Captain keeps himself in the middle of the Battalion he commands. In every Battalion are 16 Male Elephants placed in the Rear. They begin their Fights with their Artillery, and if that ends it not, proceed to their Arrows and small Shot, but never come to a close Fight, or attack one another with Vigor. They rely much upon their Elephants in their Combats, tho' for want of Bridles they can never be securely governed, and frequently return upon their Masters when they are wounded. They never venture upon Sieges, because they dare not attack any Place which is never so little fortified, but by Treachery or Famine. The King of *Siam* has 5 or 6 small Ships, which in time of Peace, he uses for Merchandize but in time of War he arms as Privateers, but never intends to kill any Body, but only take some Reprizals from his Neighbours that have injured him, as he imagines.

Elephants not under Command.

Besides the Officers for his Stores, Ammunition and Elephants for War, the King of *Siam* has another Great Officer of State, called, 4. The *Pra-Clang*, or, as the *Portuguese* corruptly term him, The *Barcalon*, who has the Appointment of the Commerce, as well within the Kingdom as without. He is the King of *Siam*'s Superintendent of his Magazines, or if you will, his chief Factor. He is the Minister of Foreign Affairs, which relate all almost to Commerce, and to him it is that all the Foreigners at *Siam*, who have come thither for Trade, address themselves in their Affairs. He receives the Revenues of the Cities.

The *Pra-Clang*, or *Barcalon*.

The King of *Siam*'s Revenues.

The King of *Siam*'s Revenues are these: (1.) For every 40 Fathom square of cultivated Land a *Mayon*, or Quarter of a *Tical* by the Year. This Rent is divided with the *Tchaou-Meuang*, where there is one, and is never well paid to the King on the Frontiers. (2.) For Boats, or *Balons*, a *Tical* for every Fathom in Length, and 6 *Ticals* for every *Balon* 6 Cubits broad. This Duty is levied like a kind of Custom at certain Places upon the River, as well upon Foreigners as Natives. (3.) Customs on all Goods imported or exported, besides something for the Body of the Ship according to its Bigness. (4.) For every Furnance where Arak or Rice-Brandy is made 2 *Ticals per Annum*, and one for every one that sells it by Wholesale or Retale. (5.) For every Durion-Tree, whether it bear or not, half a *Tical* a Year. (6.) For every Betel-Tree a *Tical per Annum*. (7.) For every Arak-Tree 6 Nuts. (8.) A Tribute of all Schools of Recreation and the *Oc-ya Meen*; as also for all Coco-Trees half a *Tical*, and for all Orange-Trees, Mango-Trees, Mangoustainers and Pimantiers, a *Tical per Annum*. (9.) The King's Gardens and Demesn Lands tilled by his Slaves, and the 6 Months Service of his Subjects. The Fruits of these Lands are gather'd and kept for Maintenance of his House, Elephants, Slaves, Horses, and other Cattle, and the Overplus he sells. (10.) The Presents which he receives and Legacies bequeathed to him by Officers at their Death, or which he takes from their Succession, and the extraordinary Duties he exacts of his Subjects for maintaining Ambassadors and building Forts. (11.) Confiscations and Fines laid upon Offenders by the Courts of Justice. (12.) Six Months Service, which as it is sometimes converted into a Payment of Rice, Sapan-Wood, *Lignum Aloes*, Salt-Petre, Elephants, Beasts Skins, Ivory, and other Commodities, so it is sometimes paid in ready Money, and upon this Account the Rich are exempted. Their Service is valued at 2 *Ticals* a Month. (13.) His other Revenues arise from Commerce and Merchandize, which he now useth with his Subjects and Foreigners, and that not only by Wholesale, but Retale, for which he hath Shops in the *Bazars*, or Markets, and thus he sells Cotton-Cloth. All the *Calin*, or Tin, dug in the Nation, except at *Jonsalam* on the Gulph of *Bangal*; all the Ivory which his Subjects find or get, Salt-Petre, Lead and Sapan, Arak, Powder, Sulphur and Arms, Skins of Beasts, which his Subjects sell to him, because by a Treaty of Peace he is obliged to sell them again to the *Hollanders*.

The rest of the Commerce of *Siam* in Rice, Fish, Salt, brown Sugar, Sugar-Candy, Ambergrease, Wax, Varnish, Edible Bird-Nests made of Sea-Froth, Gum, Gut, Incense, Oil, Coco's, Cotton, Cinnamon, Nericiphar, Cassia, Dates, and several other Things, is permitted to all, only the *Oc-pra Tainam*, who receives the Revenue of the Rivers, hinders those Ways of

Their Care to preserve Fish.

Fishing, which destroy too much Fish at once. The Revenue of the King of *Siam* is reputed every way to be 2 Millions, and 'tis reported that the present King has doubled it to what it formerly was.

Of the *Talapoins*. Their Original.

Concerning the *Talapoins*, who are the last Degree of Men among the *Siamese*, in my Method, their Original, as also that of their Brethren, the *Bramins*, *Jogues* and *Bonzees*, is so obscure in Antiquity, that it is difficult, in my Opinion, ever to discover it. The *Indians* themselves believe these kind of Men and their Doctrine as ancient as the World, but they name not their Founder, but think that all the Men were of this Profession, whose Statues are now, or formerly have been worshipped in their Temples. They live

Convents.

in Covents, which consist of many little Cells, ranged within an Inclosure of *Bambou*, which take up a very large square Piece of Ground, like the Tents of an Army incamped. In the Middle of the Ground, as

Their Temples.

the Place most honourable, stands a Temple, which they call *Pihan*; but the *Portuguese*, a *Pagode*, from the *Persian* Word *Poutgheda*, i. e. a Temple of Idols, and so it signifies equally an Idol and a Temple. The Cells are little single Houses erected on Piles, and the Superiors is built after the same Manner, but a little

Pyramids about them.

larger and higher than the rest. Certain Pyramids stand near, and quite round the Temple, which are all inclosed within 4 Walls; between which and the Cells there lies a great void Piece of Ground, which is as it were the Court of the Convent. Sometimes these Walls are bare, and sometimes there are cover'd Galleries made by them like Cloisters, along which on a Counter-Wall Breast-high are placed a great Number of gilded Idols.

Talapoinesses.

In some of these Convents there are *Talapoinesses*, or Women, who in most Things observe the Rules of the *Talapoins*, and live in little Cells by themselves among the *Talapoins*. They are all aged Women, and upon that Account are thought to need no Guard for their Chastity.

The *Nens*.

The *Nens*, who are Children placed in the Convents to be educated by the *Talapoins*, are dispersed 2 or 3 to a Cell. Some grow old in this Condition, and the eldest of them is called a *Taten*. To him it belongs to pluck up the Weeds which grow in the Convent, which the *Talapoins* themselves cannot do, as they believe, without Sin. The *Nens* are taught in a School of *Bambou's*, and there is an Hall for the People to carry their Alms to, and for the ordinary Meetings of the *Talapoins*.

Superiors of their Convents, call'd *Sancrats*.

Every Convent is under a Superior, called *Tchaou-Vat*, i. e. Lord or Master of the Convent. Some of these are of greater Dignity than others, called *Sancrats*, and of these the *Sancrat* of the Convent of the Palace is most honourable of all, yet no Superior has a Jurisdiction or Authority over another. Only the *Sancrats* can make *Talapoins*, as Bishops do Priests, and therefore some have compared them to Christian Bishops, and think that Christianity was planted in this Country, and so much the more because the Convents in which they preside have Stones set about them, bearing a Resemblance of a Mitre upon a Pedistal at a Distance. The King of *Siam* gives to the principal *Sancrats* a Name, Umbrella and Sedan, and some Men to carry it; but they never make use of this Equipage, but to wait on the King, and no *Talapoins* ever carry the Sedan. The *Sancrat* of the Palace is new called *Pra-Viriat*.

The Profession of the *Talapoins*, and their Business.

The Profession of the *Talapoins* is to keep themselves from the Sins of the People, to live on Alms, and lead a penitent Life for the Sins of the Givers of them. They eat in common, and are very hospitable to Strangers, and even to Christians, for which End they have every one a Bed in their Cells for the Lodging of Strangers. They are obliged to keep a perpetual Cælibacy, and are exempted from the 6 Months Service to the King. Some of them live in Woods, and are more strict than such as live in the Cities, tho' the King keeps them strictly to their Rules, and especially Cælibacy, lest all his Subjects should embrace that Order. They may be reduced to Seculars for want of Learning, as several Thousands lately were. They educate the Youth, as is above-mentioned, and explain their Doctrine out of the *Baly* Books.

Their constant Preaching.

They preach every next Day after the New and Full Moon, and the People are ever very constant in the Temples. From the time the Rains have fill'd the River, till the Inundation begins to sink, they preach every Day from 6 in the Morning till Dinner, and from one in the Afternoon till 5 in the Evening. The Preacher sits cross-legg'd in an high Chair of State, and several *Talapoins* relieve one another in this Office. The People approve their Doctrine in these Words, *Sa, cou si*, i. e. *It is so, Sir*; and then give them Alms so freely, that such as preach much easily become rich. Now also is the time of their Fasting, and as they are always very sober, so they report that some have fasted above 100 Days.

Their Fasting.

After Rice-Harvest 'tis a Custom for 3 Weeks to watch by Nights in the middle of the Fields under small Huts of Branches of Leaves ranged square, and because they make no Fires to scare away the wild Beasts, the People look upon it as a Miracle that they are not devoured, and think that the very Beasts respect them for their Holiness, which is the Reason that the *Talapoins* of the Woods dwell so securely. They go with naked Feet and bare-headed, like the rest of the People, and about their Thighs wear a *Pagne*, like the Seculars, but of Yellow Linen, which is the Colour of their Kings; but they have no Muslin-Shirt or Vest. Their Habit is of 4 Pieces: 1. The *Angsa*, or Shoulder-Belt, of Yellow. It crosses their Body from the Left Shoulder to the Right Hip, on which it buttons. 2. The *Paschivon*, or Cloth of several Pieces, because it ought to be patched in several Places. 'Tis a kind of Scapulary that covers the Belt, and reaches to the Ground behind and before. 3. The *Pa-Pac*. It is like an Hood, and descends to the Navel before, and as far behind. It is sometimes red, and worn by the *Sancrats* and most ancient *Talapoins*. 4. The *Rappaud*, which is a Scarf of yellow Cloth, girt about the Middle to keep the 2 last in a Posture. When they go a begging, they carry an Iron Basin to receive the Alms given them, put in a Linen Bag, which hangs on the Left Side by 2 Ends of a Rope like a Belt over the Right Shoulder. They shave all their Head, Beard and Eye-brows with Razors of Copper, and defend themselves from the Sun with a little Umbrella made of a Talapot-Leaf. The Superiors shave the young ones and themselves, because none can touch them without Disrespect. They shave themselves on the New and Full Moons, and on those Days both themselves and the People fast, *i. e.* eat nothing from Noon, and the People bring their Alms into their Convents, which consist of Money, Fruits, Pagnes, or live Cattel: They will not eat dead ones, tho' they let them die in their Convents of themselves before they eat them.

Their Watching.

Their Pagne.

Their Habit.

Their Shaving.

Besides these Festival Days common to all the Temples, every Temple has a particular one to receive the Alms, as if it were the Feast of its Dedication. What the People give to their Idols, they present it to the *Talapoins* to offer it, who in a little time take it away, and convert it to their own Use. They never offer bloody Sacrifices, because they are prohibited from killing any thing.

Their Festivals.

On the Full Moon of the 5th Month the *Talapoins* wash their Idol with perfumed Water all but the Head, which they omit out of Respect. Then the *Sancrats* and *Talapoins* are wash'd in the Presence of the People, and in particular Families the Children wash the Parents, without any Regard of Sex, for the Son and Daughter equally wash their Father and Mother, Grandfather and Grandmother.

Their Washings.

After Washing, which is done by Break of Day, they go with the Superior to the Temple to Prayers for 2 Hours, which they sing or repeat out of the *Baly* Books. In these their Morning-Prayers, which the People never miss, they call to mind 3 Things: God, and the Law he hath left them to observe: Their Parents, and the Benefits received from them: Their Priests, and the Reverence they owe them. The *Talapoins* sit cross-legg'd at Prayers. In entring in, or going out of their Temples they all prostrate themselves 3 times before the Statue. In going from Prayers the *Talapoins* go into the City to beg Alms for an Hour, having first saluted their Superior by prostrating themselves to the Ground with their Forehead, and putting one of his Feet on their Head. To crave Alms, they stand at their Gates, saying nothing, and if they receive nothing in as little time as an Ox is drinking, they pass on, and 'tis seldom that the People send them away without giving them something. At their Return from begging, they go to Breakfast, and go to their Studies till Dinner. After Dinner they read a Lecture to the little *Talapoins*, and sleep, and at the Declining of the Day sweep the Temple, sing for 2 Hours as in the Morning, and then lie down. They eat not in the Evening, or if they do, 'tis Fruit only. The Convents have some Gardens and tilled Lands, and

Their Prayers and Singing.

Their Way of Spending the Day.

and Slaves to plow them. The *Talapoins* also have each of them a Servant or two, called *Tapacaon*, who are really Seculars, tho' cloathed like *Talapoins*, only their Habit is white. They have a Care of the Gardens and Lands belonging to the Convent, and act for the *Talapoins* what they cannot do, as they think, without Sin, as receive Money given them, &c.

Their Servants.

When the Superior dies, whether he be a *Sancrat* or not, the Convent elects either the eldest, or most learned in his Stead. If any one would make himself a *Talapoin*, he agrees with some Superior to receive him into his Convent, and if the Superior be not a *Sancrat* to give him the Habit, he goes to a *Sancrat* to demand it, who appoints him the Hour within a few Days, and that in the Afternoon. Whoever opposeth him sins, and the Parents are always glad to see their Children embrace it. When he is to be admitted, his Parents and Friends accompany him to this Ceremony with Musick and Dancing. The Men of his Retinue go into the Temple where the *Sancrat* is, but the Women, Musicians and Dancers enter not. The *Sancrat* gives him the Habit with his own Hands, and he cloaths himself with it, letting the Secular Habit fall underneath, when he has put on the other, and in the mean time the *Sancrat* pronounces several *Baly* Words. When the Ceremony is ended, the new *Talapoin* goes to the Convent, where he must remain, and his Parents and Friends accompany him thither, and from that time he must not hear Musick, nor see Dances. Some Days after the Parents give an Entertainment to the Convent, and exhibit a great many Shows before the Temple, which the *Talapoins* are prohibited to see.

The Election of a Superior, and making a *Talapoin*.

The Habit of the *Talapoinesses*.

The *Talapoineſſes*, who call themselves *Nang Tchii*, are clad in White, like the Servants of the Convent, and are not esteem'd altogether Religious. A simple Superior may give them their Habit, as well as to the *Nens*, and tho' they ought not to have any Carnal Commerce with Men, yet they are not burnt, as the *Talapoins* are, who are surprized in a Fault with Women, but are deliver'd to their Parents to be bastinado'd, because neither *Talapoins* nor *Talapoineſſes* may strike any Person.

The Doctrine of the *Talapoins*.

All the *Indies* are full of *Talapoins*, tho' they have not every where the same Name, nor live after the same Manner; for some marry, others observe a strict Cælibacy; some eat Meat, others none; some kill Animals, others not. Their Doctrine is not the same, tho' the *Metempſychoſis* be always the Foundation, and their Worship varies, tho' it always refers to the Dead. They all believe whole Nature animated, and that not only Men and Beasts, but the Heavens and Earth, yea, Cities and Houses live. They hold, That the Soul is in the Body, and rules it, but seem not to think, that it is Physically united to the Body, or loves to be in the Body, but suffers Penance in it.

The Soul's Felicity and Hell.

The supream Felicity of the Soul is, in their Opinion, not to be obliged to animate any Body, but to remain eternally in Repose, and the true Hell of the Soul is the perpetual Necessity of animating Bodies, and passing from one to another by continual Transmigrations.

The Figure of the World, according to their Doctrine, is eternal; but since the World, we see, is ever decaying, they say, there will spring up other Beings of the same kind, another Heaven and Earth.

The Nature of the Soul.

They generally acknowledge, that the Soul is immortal and imperishable, but material, made of such a Matter, as is free from Touch and Sight; and hold, that after their Departure out of this Life they are punished and recompenced with Punishment or Pleasure proportion'd in Greatness or Duration to their good or evil Works, until they re-enter into Human Bodies, wherein they must enjoy a Life more or less happy, according to the Good or Evil they have done in a former Life; for 'tis their settled Judgment, That no Person suffers any Misfortune, if he has been always innocent, nor can be always happy, if he has at any time done Ill, nor does enjoy any Prosperity which he has not merited by some good Action.

Nine Places of Happiness and Misery.

They reckon several Places out of the World where the Souls are punish'd or rewarded, *viz.* 9 happy Places over our Head, and 9 unhappy Places under our Feet; and the higher a Place is, the happier; and the lower, the more unhappy; so that the Happy reach above the Stars far, and the Unhappy a great way beneath the Earth; but they do not believe, that the Souls in departing out of the Body do pass immediately into those Places, but arrive there after divers Deaths and Regenerations. They hold, That the Souls of the Deceased stand in need of the Things of this Life, and therefore tho' they do not burn any Movables, Slaves, Cattel or Wives with the Deceased, as the *Indians* formerly are reported to have done, by *Strabo* and others, yet they delineate all those Things in Paper cut, and oftentimes painted or gilded, and burning it with the Dead, they believe that it is converted in the other Life into those Things it represents, and so the Deceased are plentifully supplied with all Necessaries at an easie Rate to them.

Their Opinion about the Dead, and their Funerals.

They think, that the Dead have a Power of tormenting and succouring the Living, and from hence proceed their Care and Magnificence in Funerals (in which alone they are magnificent) and their Prayers to the Dead, especially the *Boni* or *Mali Genii*. The Honour paid to the Dead at their Funerals is thus shewn: So soon as any Man is dead, his Body is shut up in a Wooden Coffin varnish'd or gilded, and sometimes in a Leaden one, and so long as the Body is kept in the House, either to expect the Head of the Family, or prepare the Funeral Solemnities, it is set upon an high Bedsted with Feet, they burn Perfumes and Tapers by the Coffin, and every Night the *Talapoins* come and sing in the *Baly* Language some Songs about Death and the Road to Heaven, which they pretend they teach to the Soul of the Deceased, standing by the Walls of the Chamber where the Body lies. The Relations entertain them, and give them Money.

Place of burning the Bodies.

Mean while the Family chuseth a Place in the Fields near some Temple where to burn the Body, and having made a square Inclosure of *Bambou*, they erect a Funeral Pile in the middle, made of sweet Woods, as white and yellow Sanders and Lignum Aloes, according to the Wealth of the Deceased. When the Corps is carried to the Pile (which is always done in a Morning) the Parents and Relations carry it out with the Sound of a great many Instruments. The Body marches first, then the Family of the Deceased all in White, their Heads covered with a white Vail, and lamenting exceedingly, and then the rest of the Friends and Relations. For Burning they take out the Body out of the Coffin, and laying it on the Pile, leave it, and the *Talapoins* of the next Convent sing over it a Quarter of an Hour, and then retire to appear no more. Then begin the Shows of the *Cone* and *Rabam*, which last all the Day upon different Theatres, yet not upon any Religious Account, but to render the Funeral more magnificent. About Noon a *Tapacaon*, or Servant of the *Talapoins*, sets fire on the Pile, unless it be a Prince of the Blood, or the King's Favourite, for then the King does it himself. The Fire burns 2 Hours, and the Body is generally reputed consumed, yet 'tis little more than roasted, and so 'tis put again confusedly into the Coffin, and laid under one of the Pyramids which stand about their Temples. They'll sometimes bury precious Stones and other Riches with the Body, because thereby they put them into a Place which Religion renders inviolable: For to steal any thing from thence is Death, and generally one of the worse, as the Execution of 5 Persons found guilty of that Sacrilege may testifie, who were roasted alive by a gentle Fire. The Family of the Deceased entertains the Train of Attendants, and for 3 Days give Alms, *viz.* On the Day the Body is burnt to the *Talapoins* who have sung over the Body; the next Day to the whole Convent, and the 3d Day to the Temple. The *Talapoins* are buried after a more magnificent Manner, especially if of any Note among them. Their Coffin is of some Aromatick Wood. Round about their Funeral Pile are 4 Pillars of gilt Wood, which carry up an high Pyramid of several Stories, which make a kind of burning Chapel. By them stood several pretty high and square Towers, made of Wood, and cover'd with Pasteboard, rudely painted with many Paper Figures. The Inclosure also had several other Towers at competent Distances, and at each Corner one as high as the Pyramid in the middle. These were full of Fire-Works, and Fuzes came flying out of them. Many *Talapoins* attend these Funerals, who look with a grave and a modest Countenance, now and then singing, and sometimes keeping profound Silence, and infinite Numbers of People follow. The Poor inter their Parents without burning them, but if it be possible they will have the *Talapoins*, who will not stir without a Gratuity. They that have not sufficient to pay the *Talapoins*, think they do Honour enough to their dead Parents to expose them in the Fields on some eminent Place on a Scaf-

Shows.

Burials under the Pyramids.

Scaffold, where the Vultures and Crows devour them.

What Persons are not allow'd to be burnt.

They never burn Malefactors put to Death by Law, nor Infants dead born, nor Women that die in Child-bed, nor such as drown themselves, or have died by any uncommon Accident, because they reckon, that such Misfortunes never happen to innocent Persons.

The *Siamese* have no forced Mourning, but sorrow only according to their Affliction, and therefore 'tis more common for the Parents to mourn for their Children, than Children for their Parents.

The *Siamese* do not invoke their dead Parents, but they believe themselves frequently tormented by their Apparitions, and then they carry *Viands* to their Tombs, which the Beasts do eat, and give Alms to the *Talapoins*, because they think, that Charity is a Ransom for the Sins of the Dead, as well as of the Living; but they almost upon all Occasions offer their Prayers to the good *Genii*, which in their Opinion are only the Souls of such as have been more or less vertuous in this Life; but continuing good after this Life, do Good to Men, and utter their Imprecations against the bad *Genii*, which are the Souls of wicked Men, who have either been put to Death by Justice, or died by some Misfortunes, for which they have been judged unworthy of Funeral Honours, and continuing wicked, do all the Hurt they can to Men, and every thing else.

Prayers to the good *Genii*.

The Morals of the *Talapoins*.

To these Speculative Doctrines of the *Talapoins* must be added their Morals, that we may have a compleat System of their Divinity. They are reduced to 5 Negative Precepts, which are the same in all the Cantons of the *Indies*. They are these:

Not to kill.

I. *Kill nothing*; By which they are not only forbidden to kill either Men or Animals, but further to destroy Plants or their Seeds, which are but the Plant it self in a Cover; nay, not to break the Branch of a Tree, because they believe that it offends the Soul of the Tree, nor destroy any thing in Nature, because they think that all Things are animated, and so to destroy them is forceably to dispossess a Soul. Upon these Accounts they eat nothing but ripe Fruits, and dead Carcasses, and declare a mighty Abhorrence of Blood; so that they will make no Incision in any Creature, whereby the Blood is let out, as if the Soul were principally in the Blood; yet they think it not a Sin to kill in War, because they shoot not directly at their Enemies; nor to kill themselves, because they believe themselves Masters of their own Lives, and it is a Sacrifice advantageous to the Soul, which being then under some Discontent and Fears, they translate to a greater Degree of Vertue and Felicity.

Not to steal, or commit any Impurity.

II. *Steal nothing*.

III. *Commit not any Impurity*. This Command, which prohibits all manner of Uncleanness, extends not only to Adultery, but to all carnal Commerce of a Man with a Woman, and to Marriage it self, which they account a State of Sin, and hold that Celibacy is the only State of Perfection.

Not to lye, or drink Wine.

IV. *Lye not, nor deceive any Man*.

V. *Drink no Wine, or any intoxicating Liquor*. This Precept they extend so far, as not only to forbid Wine to be drunk to Excess, but so much as to taste it, whatsoever Need they may be in, or whatsoever Occasion may press them, and they are extreamly offended when they see Christian Priests drink of it.

To adore God, &c.

VI. *Adore God, his Word, and those that imitate his Vertues*. In Obedience to this Precept they give mighty Adoration to the Images of their Gods, and upbraid the Papists with carrying about their Images, as being very unreverent. They have so great Respect to their Scriptures, that they will not trust them in the Hands of Christians, nor explain their Laws to them, lest they should expose them to their Derision, and the Sin of it be imputed to them. And because they look upon the *Talapoins*, who are their Priests, Monks and Doctors, to be true Followers of God, and that real Vertue is only made for them; whence it is that they allow them in an intolerable Pride, seating them above the Seculars, not suffering them to have any Commerce with Seculars, nor salute them, no not so much as the King himself.

To fast on Holy-days. Not to labour on Holy-days.

VII. *To fast on Holy-days*.

VIII. *Not to labour on those Days*.

These are the Duties which the Priests explain to the People and instruct them in their Sermons, and were they duely observed, their Actions would be very commendable, but they have some Maxims among them which quite spoil their Practice, *viz.* That Vertue is made only for *Talapoins*; That their Law is impracticable, or at least very hard to be kept as it ought to be; That the Trade of Seculars is to sin, and that of *Talapoins* not to sin, but to exercise Repentance for those that desire: And thus they put off Vertue from themselves to others, and hope to be saved by others Merits; for tho' they do not acknowledge an Heaven and Hell, nor any God a Creator, yet they own a supream Felicity, as a Recompence of good Works, and the utmost Degree of Misery, as the Punishment of the Guilty, but 'tis after this odd Manner: They say, That if by several Transmigrations, and by a great Number of good Works in all the Lives, a Soul acquires so much Merit, that there is not in any World any mortal Condition that is worthy of it; such a Soul is exempted from every Transmigration, and neither revives nor dies any more, but enjoys an eternal Inactivity and Impassibility, *i. e.* become a God: This is their supream Felicity; and on the contrary their supream Infelicity is the eternal Transmigration of Souls for their Sins, for which they continually pass from one Body to another. Now tho' they say, that several have attained to the supream Felicity, yet they honour only one alone, whom they esteem to have surpassed all the rest in Vertue, called *Sommona-Codom*, and he is the only God they now adore. The History of him is very strange and fabulous. It is supposed that he was born God by his own Vertue, and that immediately after his Birth, without any Help of a Master to instruct him, he acquir'd, by a meer Glance of his Mind, a perfect Knowledge of all Things relating to Heaven, Earth, Paradice, Hell, and the most impenetrable Secrets of Nature; That at the same time he remembred all that ever he had done in the different Lives he had led; That having given to his Body an entire Agility, he easily transported himself from one Place to another to preach Vertue to all Nations; and that he might allure others to the Belief and Practice of his Doctrine, he became an Example of all Goodness, and devoted himself to Fasting, Prayer, and all the Exercises of a perfect Life. He bestow'd all his Estate in Alms, and his Charity not being satisfied, he gave away his Wife to a poor Man that begg'd of him. He was so much dead to the World and his own Passions in the highest Degree, that without being mov'd he suffer'd a *Bezamen*, who had a mind to try his Patience, and carry away his Son and his Daughter, and torment them before his Face. The Doctrines which he taught the People he left written in Books, that Posterity might be the better for them. These Doctrines are above related under the Title of the Opinions of the *Talapoins*, who are the Priests and Monks professing them, and teaching them. When he had run over the World, declaring to Mankind what is Good and Evil, and teaching them the true Religion, which he had written, that he might leave it to Posterity, and gained several Disciples, who in the Condition of Priests were to make a particular Profession of imitating him in wearing an Habit like his, and observing the Rules that he gave them, he attain'd to the 80d Year of his Age, he knowing that his Departure out of this World drew near, foretold it to his Disciples, and shortly after, as he was one Day eating of Pig's Flesh, he was taken with a violent Cholick, which killed him. His Soul ascended into the Eighth Heaven, which is properly Paradice, where he enjoys that State of Repose, which they call their *Nirvupan*, and can no more be subject to Miseries or Pains, and can never be born again. His Body was burnt, and his Bones, as they say, have been preserved to this Present, whereof one part are kept in the Kingdom of *Pegu*, and the other in *Siam*. They attribute a wonderful Vertue to these Bones, and affirm, that they shine with a Divine Splendor. Before his Death he ordered some Temples and Statues to be erected and consecrated to him, and order'd that after his Death his Picture should be drawn, for fear Men might by little and little suffer his Person to wear out of their Remembrance, and at long-run forget him wholly, and requir'd that the same Honours should be render'd unto him in that Image which were due to his Divinity. He left also the Print of his Foot in 3 different Places in the Kingdom of *Siam*, the Kingdom of *Pegu*, and Island of *Ceilon*, to which the People go on Pilgrimage from all Parts, and yearly honour these Prints with singular Devotion.

Their supream Felicity, or Heaven.

Their supream Infelicity, or Hell.

Sommona-Codom, the God of the *Siamese*, his Character.

His great Charity.

His Doctrines and Preaching.

He foretold his own Death.

His Relicques.

The Mark of his Foot worshipp'd.

With this Account of *Sommona-Codom* and his Doctrine, which is more fully set down in his Books, there is also a Relation of *Thevetat*, his Brother, *viz.*

The Story of *Thevetat* his Opposition to *Sommona-Codom*.

viz. That he was always born with *Sommona-Codom* in the same kind as he was, but inferior in Dignity, because *Sommona-Codom* was ever the Prince of the Animals, whose Shape he took, but *Thevetat* aspiring to Divinity, ambitiously would never submit to his Brother, but endeavoured by continual Practices to disturb his Reign, and omitted nothing that he might deprive him of his Empire, for he killed him when both of them were Apes, and when they were born Men, and *Thevetat* aspired to Divinity, and taught the World Vertue, he found a Way, being a Person of much Wit and Address, to make a new Sect, wherein he engaged several Kings and many People, who embraced his Doctrine, and imitated his Example; and this was the Original of a Schism, which divided the World into 2 Parts, and gave Beginning to 2 Religions, whereas before that all Mankind had but one.

The Original of Schisms in Religion.

Moreover, *Thevetat* being supported by so many Princes, who espoused his Quarrel, employ'd open Force and Treason to ruin his elder Brother. He invented the most heinous Calumnies to blacken his Reputation; and to confirm his Followers in the Faith which he taught them, he had the Boldness to contend with his Brother who should work the greatest Miracles, tho' he was always overcome, but yet he would never harken to *Sommona-Codom*, nor learn of him; and therefore tho' in his new Doctrine which he published he foisted in a great many Things which he had taken out of his Brother's Religion, and so made their Laws very like in several Points, yet not knowing from his Brother what was done in Hell and Paradice, nor the Doctrine of Transmigration of Souls, nor the Changes that had been and were in all Ages, he left nothing about them in his Books; and not being God, and by Consequence not having either the same Agility or Activity of Body, nor the other Perfections of Divinity, tho' he excell'd in several Sciences, as Mathematicks and Geometry, yet he made his Law far less severe than that of *Sommona-Codom*; for it allows Men a great Liberty of killing and eating Animals, tho' the Use of them be really sinful and criminal.

The Law of *Thevetat*, and the Defects of it.

From the Doctrine of *Thevetat*, as out of a Sourse of Schism, the *Talapoins* hold, 7 other Sects are sprung, which have a great deal of Affinity one with another, which they apply to the Separations of the *Dutch*, *English*, and other People, from the Church of *Rome*.

After all the Outrages that *Thevetat* had done to his Brother, without any Respect to the Nature or Divinity, the *Siamese* Scriptures say, 'twas but just that he should be punish'd, and accordingly 'tis said, That *Sommona-Codom*, after he became God, saw his wicked Brother in the deepest Place of Hell, whereby the most terrible Punishment he expiated all the Sins he had committed, and especially the Injuries he had done his Brother. The Punishment *Thevetat* suffer'd was this: He was fasten'd to a Cross with great Nails, which piercing his Hands and Feet, put him to extream Pain; that on his Head he had a Crown of Thorns, and his Body was full of Wounds, and to compleat his Misery, the infernal Places burnt him without consuming of him. *Sommona-Codom* being moved with Compassion at these so sad Sufferings, forgot the Wrongs his Brother had done him, and propounded to deliver him from all his Torments, if he would adore these 3 Words, *viz. Ppy-thang*, which signifies God; *Thamang*, which signifies the Word of God; and *Sankghang*, i. e. The Imitator of God. *Thevetat* consented to adore the 2 first, but denied to adore the 3d, because he said, It signifies a *Priest*, and Priests were sinful Men that deserved no Respect, and for this Pride he still suffers, and must still suffer for many Ages. This latter Story, which is as firmly believed by them as the former of the *Sommona-Codom*, is that which keeps them from embracing the Christian Religion; for finding so great a Similitude between the Sufferings of *J. Christ* and their *Thevetat*, and seeing the Image of our crucified Saviour adored by the Papists, which so plainly represents his Punishment, they are perswaded that the Christians are the Disciples of *Thevetat*, tho' under a different Name, and therefore being afraid of falling into Hell with *Thevetat*, if they should follow his Doctrine, they will not endure to hear any Propositions that are made to them of embracing Christianity; but if any one undertakes to explain to them the Articles of our Faith, they take him up short, and say, they do not need our Instructions, and that they know already better than we do what we have to tell them: So that it is a Thing next to impossible almost to convert them, who are thus prejudiced by a fatal Anticipation against our Saviour by a Romantick Story.

Thevetat's Punishment.

The Cause of the *Siamese* Neglect of the Christian Religion.

Some indeed think, *Sommona-Codom* was not the Author of their Laws, but the Re-establisher of them, and that the Story of him was invented to be the Idea of a Man, whom Vertue had render'd happy, and on the contrary, the Character of *Thevetat* is to give us an opposite Idea of a Man, whom his Wickedness has subjected to great Torments. Others think, that the Gospel has been heretofore preached in this Nation, because there is so great a Similitude in many things in their Doctrines to the Christian, but in Progress of Time hath been so alter'd and corrupted by the Priests: But these Conjectures are but probable at most, not certain. Practice makes it appear, that *Sommona-Codom* is their God, and their crafty *Talapoins* have so contrived their Preachings and Sermons, that they will not in all Likelihood admit any other.

Some Opinions about *Sommona-Codom*.

Thevetat punished in Hell.

THE

THE MEMOIRS and OBSERVATIONS,

Topographical, Natural, Civil and Eccleſiaſtical:

MADE

By *Lewis Le Comte*, Jeſuit, and Confeſſor to the Dutcheſs of *Burgundy*, in his Journey through the Empire of *China*; and Publiſh'd in ſeveral LETTERS, to Perſons of the beſt Quality in *France*:

ABRIDGED,

Together, with what is farther Obſervable in Father *Gabriel Magaillan*'s Hiſtory of *China*.

LETTER I.

To the Lord Pontchartrain, *Secretary of State to the* French *King*; *containing an Account of his Voyage from* France *to* Pekin; *and in it he gives a general Deſcription of* China.

Le Comte's Voyage to Siam.

THE Project of ſending Miſſionaries skill'd in the Mathematicks into the fartheſt Parts of the World, having been found advantagious to Religion, the *French* King in the Year 1685. ſent 6 of his Subjects, Jeſuits, to *China*, with the Character of his Majeſty's Mathematicians, that by teaching thoſe Sciences, they might take an Opportunity to promote the Goſpel. *Lewis Le Comte* was one of them, and with them ſet Sail in the ſame Ship, which carried Monſieur *Chaumont*, his Majeſty's Ambaſſador Extraordinary to the Court of *Siam*. Their Voyage was fortunate to *Siam*, but they arriv'd in a Seaſon unfit for Navigation farther, and ſo were detain'd there 12 Months. Father *Le Comte* in this time got Monſieur *Conſtance* to place him in a Convent of *Talapoins*, who are their Prieſts, that by converſing with them, and conforming to their Garb and Auſterity of Life, he might prevail with them to acknowledge *Chriſt*, which if he could do, he knew 'twould be an effectual Means to convert the whole Nation. This Method was very ſucceſsful at *Madura*, and he hoped for the like Effect at *Siam*, but the Conſpiracy of the *Malai's* and *Macaſſars*, which happened at that Time, created ſo great a Diſturbance, that that good Deſign proved unſucceſsful, and ſo he, with his Brethren, ſet Sail on *June* 17, 1687. for *Nimpo*, a conſiderable City and Haven in *Chikiam*, a Province of *China*.

And from Siam to China.

While he ſojourn'd at *Siam*, he had an Opportunity of obſerving ſeveral particular Animals, which are ſeldom or never ſeen in *Europe*, viz. Tygers, which much differ from thoſe in other Countries as to their Colour, which is a reddiſh Fallow, interlaced with large black Streaks; and Bigneſs, which is ſometimes equal to that of Horſes. They are called *Royal Tygers*. There are alſo others, which they call *Water Tygers*, and do exactly reſemble a Cat. They live upon Fiſh, and therefore are chiefly found in Woods by River ſides. There are likewiſe to be ſeen your Rhimocero's, one of the oddeſt Creatures in the World. It is ſomething like a wild Boar, but a little bigger, the Feet thicker, and Body more clouterly ſhaped. Its Hide is cover'd all over with thick large Scales of a blackiſh Colour, and extraordinary Hardneſs, divided into little Squares like Buttons, and riſing a Quarter of an Inch above the Skin like a Crocodile's. Its Legs ſeem thruſt into a Boot, and the Head wrapp'd up in an Hood, being thick and groſs. Its Mouth is wide, and Muzzle long, arm'd with a long thick Horn, which makes him terrible to Tygers, Buffalo's and Elephants. His Tongue is cover'd with ſuch a rough Membrance, that looks like a File, and flea's off the Skin where it licks. It will eat Thorns with Delight, and tho' they ſometimes fetch Blood, yet that makes the Taſte more pleaſant, as Salt and Pepper doth Meats to us.

They were on Board a ſmall *Chineſe* Veſſel, called a *Somme* by the *Portugueſe*, which having no Shelter againſt the extream Heat, and wanting Room for them, did much incommode them; yet this was nothing ſo great a Trouble as the Idol by which they were placed, black with the Smoak of a Lamp continually burning in its Honour, and worſhipp'd every Day with a Diabolical Superſtition. They attempted, by the Help of their Interpreter, to convince them of the Abſurdity of their Worſhip, but as all Sea-men are generally obſtinate, ſo theirs took great Offence at what they ſaid againſt their Idol, and prepared a Proceſſion to appeaſe the Idol, which they conceived to be angry at their Treatment in the late Diſpute, for there is no Nation more ſuperſtitious than the *Chineſe*, who worſhip the very Compaſs they ſteer by, cenſing it continually with Perfumes, and often offering it Meat as a Sacrifice. Twice a Day they throw regularly little Pieces of gilt Paper in the Likeneſs of Money into the Sea, to keep it at their Devotion by that Salary; but if it ſlights this Kindneſs, and grows troubleſome, they think it to be agitated by ſome Dæmon, and burn Feathers to drive it away with its noiſome Smoak and Scent.

A Chineſe Idol.

The Compaſs worſhipped.

Being come in Sight of *Emoui*, an Iſland of *China*, famous for its commodious Harbour, whither abundance of Ships of all Nations reſort, the ſudden Veering of the Wind, follow'd by a Calm and black Clouds, made the Pilots fear the Approach of a *Typhon*, which blows ſo furiouſly, and beſets a Ship on all Sides ſo with the Waves, that unleſs the Captain be very skilful, the Crew numerous, and the Veſſel ſtout, their

The Iſle Emoui.

A Typhon deſcribed.

their Ruine is unavoidable, but they all vaniſh'd into a favourable Gale, which ſoon brought them in Sight of as terrible Danger from an infinite Number of Rocks and deſart Iſlands, thro' which they were to paſs; but having ſteer'd ſometime among them, and paſs'd thro' a pretty wide Bay, in which the *Chineſe* obſerve an exact Silence, for fear of diſturbing a Neighbouring Dragon (as they ſay) they at length came to an Anchor near the City of *Nimpo*, after 36 Days Voyage.

China hard to be enter'd.

China is a very ceremonious Country, and all Strangers muſt exerciſe their Patience in getting Admiſſion, the *Mandarin* of the Cuſtoms not only examining their Goods, and the Occaſion of their Coming, but being obliged to certifie all to the Governours and Vice-Roy of the Province, before they can allow them to land and converſe freely with the Natives.

Of the Names of *China*.

Of the Names of *China*, F. *Gab. Magaillan* gives us this Account, which may be uſeful to the underſtanding ancient Writers. It is a Cuſtom in *China*, that when a new Family aſcends the Imperial Throne, the Sovereign gives a new Name to his Dominions. Thus under the Reign of the preceding Family it was called, *Tae min que*, i. e. A Kingdom of great Brightneſs; but the *Tartars* that rule it at preſent call it, *Tai cim que*, i. e. A Kingdom of great Purity. In their Books they retain the ancient Names of *Hia que*, *Xam que*, *Chem que*, *Han que*, &c. given to it by ſeveral ancient Families. In their Books and Petitions to the King at preſent they call it, *Xam que*, i. e. An High and Sovereign Kingdom; but the Learned Men in their Books and Writings call it, *Chum que*, The Kingdom of the Center, becauſe they imagine *China* to be in the middle of the World, and this is the moſt common Name. When they ſpeak Hyperbolically, they call it, *Tien Hia*, or the Kingdom that contains all that is under Heaven. The Weſtern *Tartars* call *China*, *Hara Kitai*, or, The Black Barbarians, as alſo do the *Muſcovites*. The Kingdoms of *Chahamalaha*, or *Samahan*, *Tumeh*, or *Tibet*; and *Uſangue* call it, *Catai*; and the Merchants of the *India*, *Cataio*. The Eaſtern *Tartars* formerly gave it the Name of *Nica-Corum*, but now they are Maſters of it, they name it, *Tulimpa-Corum*, or, The Kingdom of the Middle. The People of *Canara*, *Bangala*, and the Countries adjoining it, call it *Chin*, and from them the *Portugueſe* have coined the common Name, *China*. Out of F. *Magaillan*.

China deſcribed.

China, called by the Inhabitants, *Tchoum-coove*, i. e. The middle Kingdom, becauſe they anciently thought themſelves ſeated in the midſt of the World. It is divided into 15 large Provinces, *Quamtum*, *Fokien*, *Chekiam*, *Nankim*, *Xantum* and *Pekin*, which lie along the Eaſtern Ocean from S. to N. as *Xanſi*, *Xenſi*, *Suchuen*, *Yunnan* and *Quamſi* do from N. to S. on the Weſtern Side. *Queycheu*, *Kianſi*, *Huquam* and *Honan*, are encompaſſed by the other 11, and the whole Empire is divided from the Iſlands of *Japan* and *Formoſa* by a Channel, and from *Tartary* by a very long Wall. Geographers have miſtaken in placing the whole Province of *Leaotum* within the Wall, whereas it is undoubtedly without it, tho' a part of the *Chineſe* Dominions, and in fixing the whole Empire 500 Lgs. more Eaſtward than it is. From the City of *Canton*, which lies a little above the 23d Degree, to *Pekin*, which lies in the 40th Degree, are 17 Degrees, which with 20 Lgs. more from *Pekin* to the utmoſt Bounds, make 450 common Lgs. which is the full Length of the Country. The Extent of it from E. to W. is little leſs, ſo that now the whole Kingdom of *China*, which is almoſt of a Circular Figure, is very near 1400 Lgs. in Circumference. The Iſlands of *Formoſa*, *Haynan*, and others of leſs Note (which are large enough to make a conſiderable Kingdom) belong to that Empire, and *Corea*, *Tunkim* and *Siam* depend ſo far on *China*, as that they pay Tribute to that Crown, and their Kings at their Admiſſion are confirm'd by the Emperor of it, but they are ſeparate Kingdoms from it, and differ from it much in the Product and Fertility of the Soil, Beauty and Number of Cities, the Wit, Politeneſs, Number and Manner of the Inhabitants. This the *Chineſe* are ſo ſenſible of, that they call all others Barbarous, and will not match with any other of the *Indian* Nations, leſt they ſhould debaſe their noble Blood.

The true Poſition of it.

Formoſa. *Haynan*.

Kingdoms dependant on *China*.

Tartars deſcribed.

To *China* alſo belongs a great part of *Tartary*, which much encreaſeth its Power; for the *Tartars* are valiant, and Men of Senſe, and tho' their Country be very Woody, and full of Sandy Deſarts, yet it produceth great Variety of Simples, which are uſeful in Phyſick; fine Horſes and Zibelmes, Foxes and Tygers, which yield fine Furs, Commodities which *China* cannot be without; but tho' the *Chineſe* reap ſo great Profit by it, it cannot be imagined what a great Vexation 'tis to them to be mixed with that Nation. This Union has made one Empire of a prodigious Extent, for tho' all *Tartary* does not belong to *China*, yet moſt of it is Tributary to it, and together make up an Empire of 900 Lgs. in Length, as it was fix'd by the Peace between *Ruſſia* and *China*, but the Breadth is uncertain, not being decided by that Treaty. The Occaſion of the Union was this: A petty King of the Eaſtern *Tartary*, whoſe Subjects were called *Mouantcheou*, had ſettled a Trade near the *Long* Wall, and having been knaviſhly dealt with by ſome *Chineſe* Merchants, complain'd of them at *Pekin*, but not receiving Satisfaction as he intended, reſolved to right himſelf, and entred the Province of *Leaotum* with a numerous Army. The Emperor preſently ſent ſome part of his Forces to oppoſe them, and the War continued ſometime with equal Advantage, but one *L. F.* a *Chineſe*, taking the Opportunity of the Abſence of the King's Forces, raiſed a Rebellion in the Provinces moſt remote from Court, and drew over great Numbers of Male-contents to him, who made themſelves Maſters of the greateſt Cities, and drove all before them. The Emperor remain'd at *Pekin*, and had a Garriſon of 70000 about him, but when the Rebel approached it, his Emiſſaries had ſo gain'd upon them, that they open'd the City-Gates to the Traitor. The unfortunate Monarch finding himſelf thus betray'd, would have marched againſt them with 600 Men of his Guards, but they alſo baſely abandoning him, he fled into a Garden with his Daughter, where fearing leſt he ſhould fall into his Enemies Hands, he ſtabb'd the Princeſs, and hang'd himſelf. The Emperor being dead, all bow'd to the Uſurper, except *Ouſanguey*, who was ſent by the King againſt the *Tartars*. He would not acknowledge him, but reſolving to pull down his Tyranny, made a Peace with the *Tartars*, and by their Aſſiſtance routed the Rebel, who found ſuch a Retirement, that all the Art of Man could never find him out. The *Tartars* having thus got Poſſeſſion of *Pekin*, were too cunning not to improve ſo fair an Opportunity, and ſo made themſelves abſolute Maſters of it, under whoſe Command it remains to this Day.

The *Tartars* and *Chineſe* united, and the Occaſion of it.

A Rebellion.

The Emperor hangs himſelf.

Tartars ſubdue *China*.

Father *Le Comte* and his Brethren lay at *Nimpo*, expecting Orders from the Vice-Roy for their Landing and the Progreſs of their Miſſion, but inſtead of that received Intelligence, That the Vice-Roy was offended that they were ſuffer'd to land, and was reſolved to ſend them back to the *Indies*, and to that End obtain'd a Decree from Court, that they ſhould be baniſh'd. To prevent the Effect of this Order they had no other Way, but to write to the Fathers *Intorcetta*, *Fontenay* and *Verbieſt* to contribute their Endeavours for their Safety and Deliverance. Father *Intorcetta* by publick Prayers begg'd God's Protection of them, and Father *Verbieſt* having by a Letter directed to a Friend at Court, which was then in *Tartary*, but contriv'd to fall into the Emperor's Hands, inform'd him of their Arrival, and as ſoon as he return'd to *Pekin*, repreſenting them as his Brethren, who by their Skill in Mathematicks might be uſeful to his Majeſty. The Emperor hearing that, anſwer'd, If it was ſo, he ſaw no Cauſe why he ſhould expel them out of his Dominions, and calling his Council, decreed, that they ſhould be honourably ſent for to Court. This Order being ſent to the Vice-Roy of *Hamcheu*, it happen'd by a ſpecial Providence, that he who endeavoured to turn them ſhamefully out of *China*, was obliged to convey them to Court, and becauſe he fear'd he ſhould be inform'd againſt, he preſented them with 10 Piſtoles, and honour'd their Paſſage with more Ceremony and Conveniency than otherwiſe they could have expected.

Le Comte and his Brethren ſent for to Court.

They left *Nimpo* on *Nov.* 27. and arrived at *Pekin* the 8th of *February* following; but they reſted ſo often, that they ſpent above 6 Weeks in their Journey. At their firſt Arrival they were ſaluted with the afflicting News of Father *Verbieſt*'s Death, their greateſt Friend.

LET-

LETTER II.

Written to her Highneſs the Dutcheſs of Nemours, *and contains what he obſerv'd at the Emperor's Court.*

The Mourning of the Emperor and Court of *China*.

ON their Arrival at *Pekin* they found the Court in Mourning for the Empreſs Dowager. The Courts of Juſtice were ſhut up, and the Emperor gave no Audience for 27 Days, during which Time the Laws oblige him to cloſe Mourning. The Vice-Roy who conducted them, delivered them into the Hands of the *Mandarins*, according to the Cuſtom, who, as ſoon as the Mourning was ended, carried them before the Emperor, when their Attendance was requir'd. They were carried in Chairs to the Gate of the Palace, and from thence went on Foot thro' 8 Courts of a prodigious Length, built round with Lodgings of different Architecture, but all very ordinary, except thoſe large ſquare Buildings over the Arches, thro' which they paſſed from one Court to another; for they were very ſtately, and built of fair white Marble, but worn rough with Age. Thro' one of theſe Courts ran a ſmall Rivulet, over which were laid ſeveral little Bridges of the ſame Marble, but whiter, and of better Workmanſhip. There are no other Pieces of curious Architecture, yet the prodigious Quantity of Buildings, and the infinite Number of adjoining Courts and Gardens, which are all regularly diſpoſed, render it in the whole a Place really great, and worthy of the Monarch that inhabits it.

A Deſcription of the Emperor's Palace.

The Emperor's Throne see FIG. 1.

The moſt ſurprizing Sight, and which ſeems ſingular in its kind, is the Emperor's Throne, which is thus faſhioned: In the midſt of one of the great Courts ſtands a ſquare *Baſis*, or ſolid Building of an extraordinary Bigneſs, whoſe Top is adorned with Baluſtrade, much after our Faſhion: This ſupports another like unto it, but in the Form of a Taper, over which are placed 3 more, growing leſs and leſs as they encreaſe in Height. Upon the uppermoſt is built a large Hall, whoſe Roof being cover'd with gilt Tiles, is ſupported by 4 Walls, and as many Rows of varniſh'd Pillars, between which is ſeated the Throne. Theſe vaſt Baſes, with their Baluſtrades, made and diſpoſed like an Amphitheatre, dazzle the Eyes of the Beholder, when the Sun reflex its Beams upon them, with the Luſtre of the Gold and Varniſh, and being placed in the midſt of a Court ſurrounded with 4 Rows of Building, yield a moſt beautiful Proſpect.

The Emperor's Apartment.

The Emperor's Apartment is alſo noble. The Entrance, indeed, is not very ſplendid, but the Anti-Chamber is adorn'd with Sculptures, Gildings and Marbles, whoſe Neatneſs and Workmanſhip are more valuable than the Richneſs of the Stuff. In the Preſence-Chamber (which in that time of Mourning was diſrob'd of all its Ornaments) there was nothing remarkable but the Perſon of the Emperor, who ſat after the *Tartars* Cuſtom, on a Table, or *Sopha*, raiſed 3 Foot from the Ground, and covered with a fine plain white Carpet, which took up the whole Breadth of the Room. There lay by him ſome Books, Ink and Pencils: He was cloathed with a black Sattin Veſt, furr'd with a Sable, and a Row of young Eunuchs, plainly habited and unarm'd, ſtood on each Side of him cloſe legg'd, and with their Arms hanging down their Sides, which is here look'd upon as the moſt reſpectful Poſture. His Perſon was ſomething above the middle Stature, more corpulent than we *Europeans* reckon handſome, yet ſomewhat more ſlender than the *Chineſe* wiſh to be: He was full viſaged, diſfigured with the Small-Pox, had a broad Forehead, little Eyes, and a ſmall Noſe, his Mouth was well made, and the lower part of his Face very agreeable: But tho' he bears no great Majeſty in his Looks, yet his Face expreſſes abundance of good Nature, and his Ways and Actions beſpeak him to be a Prince truly Great; for he is not only an Admirer and Encourager of the Mathematicks, and other Learning (with whoſe Profeſſors he will ſometimes confer for divers Hours) but he is a Favourer of the Chriſtian Religion, to which he has granted a Toleration, and has ſo good an Opinion of it, thro' the Inſtruction of Father *Verbieſt*, whom he kept above 3 Months near his Perſon, *That he owns the Belief of a God, and has declared, That all the Religions of his Empire are vain and ſuperſtitious in his Opinion; That Idols were nothing, and that he foreſaw, that one Day Chriſtianity would be built on their Ruins.* And, as a farther Teſtimony of his Favour to Chriſtianity and the Profeſſion of it, when Father *Verbieſt* died, he was ſenſibly affected with Grief at the News, and ordered his Funeral to be put off till the Court was out of cloſe Mourning, and then he ſent 2 Lords of the higheſt Quality to pay the uſual Devoirs on his Behalf to the dead Body, who kneel'd before the Coffin, and bowing themſelves ſeveral times, remain'd a long time with their Faces to the Ground, and wept and groan'd heavily, and having perform'd theſe Ceremonies, read an Encomium of him, which the Emperor himſelf had compoſed, declaring of him, *That during all the time he took care of the Mathematicks, his Predictions never fail'd, but always agreed with the Motions of the Heavens; That he ever approved himſelf exact, diligent, faithful, unalterable and conſtant in his Labour till he had finiſh'd his Work.* He ſent him his own Phyſician in his Sickneſs, and was much grieved at his Death, giving 200 Crowns in Gold and ſome Pieces of Silk toward the Charges of his Funeral, which was celebrated with great Ceremony, as well by the *Mandarins* as *Chriſtians*, *March* 11, 1686. Some Days after the Interment the Court of Rites, with the Emperor's Conſent, order'd, that 700 Crowns in Gold ſhould be laid out on a Tomb for him, and the Emperor's Encomium ſhould be engraven on a Marble-Stone, as a Memorial of his Piety and Worth.

The Emperor's Perſon deſcribed.

His Favour to Chriſtianity.

His Reſpect to F. Verbieſt at his Death.

LETTER III.

Written to the Cardinal of Furſtenburgh, *and contains an Account of the Houſes and Buildings of* China.

THIS Cardinal being deſirous to know the Eſtate of *China*, *viz.* The Number and Bigneſs of the Cities, the Multitude of the Inhabitants, the Beauty of its Publick Buildings, and Figure of its Palaces, being a Perſon much delighted in Architecture, Father *Le Comte* having in 5 Years run over all *China*, ſends him this Deſcription of it.

Pekin deſcribed. See FIG. 2.

Pekin, i. e. The North Court, is the chief City of *China*, and the uſual Seat of the Emperors. It is ſo called to diſtinguiſh it from *Nankin*, i. e. The South Court, another very conſiderable City, once the Reſidence of the Emperors, and the moſt commodious Reſidence for them in all his Empire; but the continual Incurſions of the *Tartars* grew ſo troubleſome to them, that they were forced to remove more Northernly, and *Pekin* was thought the fitteſt Place for them. It is ſituate in 40 D. of Northern Latitude in a very fertile Plain, not far from the long Wall. It lies near the Sea on the E. and has a large Canal on the S. which promotes its Communication with ſeveral

several fine Provinces, from which it receives most of its Provision. This City was formerly of an exact square Form, and 4 Lgs. round; but the *Tartars*, which have settled there, have obliged the *Chinese* to live without the Walls, where they have built a new Town, which taking a greater Compass in Length than Breadth, doth with the old one make an irregular Figure; and so *Pekin* is as it were 2 Cities, one of *Tartars*, and the other *Chinese*. They are almost equal in Bigness, but the last is more populous. Both together are 6 Lgs. in Circuit. The *Chinese* dwell very close together; 20 or more of them will lie in as little Room as 10 *Europeans*. The Streets are throng'd with People to Admiration, insomuch, that Persons of Quality have always an Horse-man going before to make Way. Even the widest Streets are not free from Confusion; so that at the Sight of so many Horses, Mules, Camels, Waggons, and Rings of 100 or 200 People, who gather here and there round about the Fortune-tellers, one would imagine, that some unusual Business had drawn all the Country together to *Pekin*, and that our most populous Cities are but Wildernesses to it, especially if we consider, that whereas among us there generally appear more Women than Men, here you shall rarely see a Woman. But these following Reflections will prove to us, that the Number of Inhabitants in a Place is not to be guess'd at, by the Crouds that are seen in it, and particularly at *Pekin*.

Tartars at *Pekin*.

The Populousness, and Causes of it.

First, Because from all the Neighbouring Towns Multitudes of Peasants daily flock to *Pekin* with several useful and necessary Commodities, which, for want of a River, are brought up by Land. This fills the City with Multitudes of Carters, Waggons, Camels, and other Beasts of Burthen; so that Morning and Night, when the Gates are open'd and shut, there are such Throngs of People going in and out, that one must wait a long time for a Passage. Now few or none of these are Citizens.

Secondly, Most Artificers work in their Customers Houses; not only Taylors and Shooe-makers make Cloaths and Shooes at every Man's House or Lodgings, but even their Smiths carry with them their Anvil, Furnace, and other Impliments for their ordinary Use; so that they are continually about looking for Business, which much encrease the Throngs.

Artificers work in Mens houses

Thirdly, All Persons, especially those of any Note, never go abroad but on Horseback, or in Chairs, with a numerous Train.

Fourthly, When a *Mandarin* goes abroad any where, all his inferior Officers follow him in all their Formalities, which form a kind of Procession. The Lords at Court and Princes of the Blood never are without a great Guard of Horse, and being obliged to go almost every Day to Court, that very Equipage is sufficiently troublesome to the City.

These Things shew the Reason why *Pekin* must needs seem much more populous than it is; yet we may allow still the Number of Inhabitants to be at least 2 Millions.

The Streets and Shops.

Almost all the Streets are built in a direct Line, the greatest being about 120 Foot broad, and a Lg. in Length. The Shops where they sell Silk and China generally take up the whole Street, and are a very agreeable Prospect, which is much encreased by the painted and sometimes gilt Boards, which every Shop-keeper sets before his House, containing the Names of the several Commodities he sells. These being placed at almost equal Distances make a pretty odd Shew.

The Houses.

The Houses are not proportionable, being neither well built nor high enough, and the Streets are always pester'd with Mud and Dust, which make the Winter and Summer equally troublesome to all that walk abroad; for the Dirt spoils their Silken Boots, and the Dust their Cloaths, and therefore Horses and Chairs are so much in Request.

A Town in the Emperor's Palace.

Of all the Buildings in this mighty City, there is scarce any remarkable, but the Emperor's Palace, which includes not only the Emperor's House and Gardens, but also a little Town inhabited by the Court-Officers, and a great Number of Artificers, who are employ'd and kept by the Emperor, for none but the Eunuchs lie in the inner Palace. The outward Town is defended by a very good Wall without, and divided from the Emperor's House by one of less Strength. All the Houses are low and ill contriv'd, far worse than those in the *Tartars* City; so that the Quality of the Inhabitants, and the Conveniency of being near the Court, are the only Things that it is commendable for. The inner Palace is made up of 9 vast Courts built in one Line, besides those on the Wings, where are the Kitchin, Stable, and other Offices. The Arches thro' which you go from one to another are Marble, and over every one of them stands a large square *Gothick* Building. The Roof looks oddly, but is handsome; for the Ends of the Joices are continued beyond the Wall in manner of a Cornish, which at a Distance looks very neat. The Sides of every Court are closed by lesser Apartments and Galleries. But when you come to the Emperor's Lodgings, there indeed the Portico's supported by stately Pillars, the white Marble Steps by which you ascend to the inward Halls, the gilt Roofs, the carv'd Work, Varnish, Gilding and Painting they are adorn'd with, the Floors made of Marble or Porcelane, but chiefly the great Number of different Pieces of Architecture, of which they consist, dazzle the Beholder's Eyes, and truly look great, becoming the Majesty of so great a Monarch; yet to any skilful Person in Architecture, there appears great Defects in the *Chinese* Artists, for the Apartments are ill contriv'd, the Ornaments are irregular, and in the Whole there wants that Uniformity, in which consists the Beauty and Conveniency of our Palaces, and which can render Buildings pleasing to the Eye of the Judicious.

The Emperor's Lodgings.

The Guards placed in the Gates and Avenues of the Palace have no Arms but their Scymeters, and are not numerous, tho' they appear so, by reason of the Multitudes of Lords and Mandarins constntly attending at the Times of Audience.

The Emperor's Guards.

The Number of the Emperor's Wives and Concubines is never known, it being very great, and never fix'd. They are never seen by any Man but himself, and none dare hardly enquire about them. They are all Maidens of Quality, which the *Mandarins*, or Governours of Provinces, chuse out and send up to the Palace, where they are kept from all Correspondency even with their Fathers. Most of them are never taken Notice of by the Emperor, and of those that gain his Favour, 3 are singled out to bear the Name of Queen, who are placed in an higher Degree of Honour than the rest, having each of them their Lodgings, their Courts, Ladies of Honour, and other Female Attendants. Nothing is wanting that may give them Content. Their Furniture, Cloaths and Retinue is rich and magnificent, but no ~~Business of Consequence comes to their Knowledge~~, nor are they allow'd to assist the State with their Counsels. For the *Chinese* say, that Heaven has endued Women with good Nature, Modesty and Innocence, that they may look after their Families, and take Care of the Education of Children, but Men only have a Strength of Body and Mind to rule the World, and therefore, by way of Jest, they call *Europe*, *The Lady's Kingdom*, because there the Scepter often falls into the Hands of Women.

Wives and Concubines.

Three Queens.

The Noblemens Houses in *Pekin* deserve not the Name of Palaces, for they are but one Story high, as all the rest are; and tho' they contain Multitudes of Lodgings, yet are without Beauty and Magnificence. Not but that the *Chinese* love to appear great, and spend high, but that the Emperor will not endure any thing that may seem to emulate his Grandure.

Noblemens Houses.

Their Courts of Justice are built no better than common Houses: The Courts, indeed, are large, the Gates lofty, and embellish'd with Ornaments of Architecture something tolerable; but the inward Rooms and Offices shew neither State nor Cleanliness.

Courts of Justice.

Their Idol Temples, which both Prince and People, equally superstitious, have raised at great Expence, and beautified with great Numbers of Statues, appear more sumptuous; for their Roofs are cover'd with Tiles, varnish'd with Yellow and Green, the Sides are adorn'd with curious Figures, and at the Corners Dragons are drawn shooting out themselves. The Emperor has built several within the outward Bounds of his Palace, and 2 of them are very magnificent; but no Christian may enter them.

Idol Temples.

The Imperial Observatory.

The Imperial Observatory has something admirable in it, tho' it comes not up to the *Encomium* given it by a Mathematician, *That there is nothing in Europe to be compared to it*. The Description of it is as follows: You first come into a pretty large Court, where the Lodgings of such as look after the Observatory are upon the Right Hand. As you come in, you meet with a very narrow Stair-Case, by which you ascend to the Top of a square Tower, which is contiguous to the Wall of *Pekin* in the Inside, but is

The old One.

raiſed 10 or 12 Foot higher. Upon this Platform had the *Chineſe* Aſtronomers placed their Inſtruments, *viz.* a Cœleſtial Globe of about 3 Foot Diameter, almoſt oval, but divided with little Exactneſs, and the whole Work very coarſe, and other Inſtruments like our Aſtronomical Rings. In a lower Room near this Place was ſet a Gnomon. The Paſſage thro' which the *Ray* entred was about 8 Foot from the Ground, fix'd Horizontally, and made by Two Copper-Plates, which moving to and fro, made the Orifice larger or ſmaller. Under it lies a Table covered with Braſs, in the midſt of which lengthways they have ſtruck a Meridian Line 15 Foot long, divided by other croſs Lines, which are neither exact nor fine. They have cut little Holes out into the Sides, wherein they put Water to keep it exactly Horizontal. A tolerable Contrivance for the *Chineſe*, which might be ſerviceable to a careful Aſtronomer. But Father *Verbieſt*, who was employ'd to ſurvey them, judged them very uſeleſs, and perſwaded the Emperor to pull them down, and put up new ones of his own contriving, which are large, well caſt, and very well diſpoſed to the Uſe they are deſign'd for, and were but the Niceneſs of the Diviſions anſwerable to that of the Work, and the Teleſcopes faſten'd according to the new Method, nothing could have been brought in Competition with them; however, they are worth a Deſcription, which accept in this Order.

The new One.

See FIG. III

I. Sphæra Armillaris Zodiacalis *of Six Foot Diameter.*

This Inſtrument is ſupported by 4 Dragons, whoſe Bodies, faſten'd to the Ends of 2 Brazen Beams, bear the whole Weight of the Sphere. They have long Hair on their Heads, a fuzzy Beard, flaming Eyes, ſharp Teeth, and a Mouth open, breathing whole Streams of Flame. Four Lions of the ſame Metal ſtand under the End of the aforeſaid Beams. The Circles are divided both in their exterior and interior Surface by croſs Lines into 360 Degrees each, and each Degree into 60 Minutes, and each Minute into Portions of 10 Seconds by ſmall Pins.

II. Sphæra Æquinoctialis *of Six Foot Diameter.*

This Sphere is ſupported by a Dragon, who ſtanding on a Pedeſtal, bears it on his Back bow'd. It is ſupported by 2 Brazen Beams, as the former is. The Deſign is noble, and well perform'd.

III. Horizon Azimuthale, *Six Foot in Diameter.*

This Inſtrument, which is uſeful for the taking of Azimuths, is compoſed of a large Circle. Horizontally placed. The double Index, which ſerves for a Diameter, runs over all the Limb, and carries with it a Rectangle Triangle, the upper Angle of which is faſten'd to a Beam raiſed perpendicular from the Center of the Horizon. Four folded Dragons make the inferior Limb of the Circle faſt, and 2 other winging about 2 ſmall Columns keep the Triangle ſteady.

IV. *A Large Quadrant, whoſe Radius is Six Foot.*

The Limb is divided into Portions of 10 Seconds each: The Lead which ſhews its Vertical Situation weighs a Pound, and is hung from the Center by a very fine Braſs Wyre. The Index moves eaſily round the Limb. The ſeveral Plates are faſten'd to a Dragon folded in ſeveral Rings, leſt they ſhould ſtart out of their due Poſition. The whole Body of the Quadrant hangs in the Air, and a fix'd Axis runs thro' its Center to turn it to all Parts of the Heaven; and leſt its Weight ſhould cauſe it to ſhiver, and looſe its Vertical Poſition, it is ſupported by a Beam on each Side faſten'd to the Axis. The whole Work is ſubſtantial and well contriv'd.

V. *A Sextant, whoſe Radius is about Eight Foot.*

This repreſents the 6th part of a great Circle, born by a Beam, the Baſis of which is concave, faſten'd with Dragons, and croſs'd in the Middle with Brazen Pillars, on one End of which is an Engine with Wheels to move the Inſtrument. On this Engine reſts the Middle of a ſmall Brazen Beam, which repreſents the Radius of a Sextant, and is faſten'd to it. Its upper Part is terminated by a big Cylinder, which is the Center on which the Index turns, and the lower is extended 2 Foot beyond the Limb, that it may be graſp'd by the Pully that raiſes it. Theſe large and heavy Machines are of greater Ornament than Uſe.

VI. *A Cœleſtial Globe of Six Foot Diameter.*

This is the faireſt of all the Inſtruments, being of Braſs, and exactly round and ſmooth. The Stars are well made, truly placed, and all the Circles are of a proportionable Breadth and Thickneſs. It is ſo well hung, that the leaſt Touch moves it, and the leaſt Child may elevate it to any Degree. On its large hollow Baſis ſtand 4 Dragons, which ſupport a noble Horizon, commendable for its Breadth, Ornaments, and Neatneſs of the Work. The Meridian, in which the Pole is fix'd, moves with the whole Globe to give it its required Elevation.

Moſt of theſe Machines being above 10 Foot from the Ground have, for the Aſtronomers greater Convenience, Marble Steps round them, cut Amphitheatre wiſe; but tho' theſe Inſtruments are ſo very fine, the *Chineſe* could never have been brought to make uſe of them and leave their old ones, without a ſpecial Order from the Emperor; for they are more fond of the moſt defective Pieces of Antiquity, than of the moſt perfect modern Invention, clear contrary to us, who love nothing almoſt but what is new: And this may be the Reaſon why the *Chineſe*, tho' they have for above 4000 Years kept cloſe to their Aſtronomical Obſervations, yet they have in ſo long a Time made no great Improvements. For tho' 5 Mathematicians ſpend every Night on the Tower in watching what paſſes in the Heavens, every one gazing ſeveral Ways, that nothing that happens in the 4 Corners of the World may eſcape their Obſervation; they take Notice of the Winds, Rain, Air, Eclipſes, Conjunctions of the Planets, Fires, Meteors, and whatever elſe is unuſual, of which they give an Account every Morning to the Surveyor of the Mathematicks, that they may regiſter it, yet they were ſo unskilful when the Popiſh Miſſionaries entred their Country, that they were not able, without their Help, to compoſe an exact Calendar, and their Tables for Eccliples were ſo very uncorrect, that they could hardly gueſs at the Time they ſhould happen, and when it falls out, they are ſo far from knowing the true Cauſe of it, that they fancy a prodigious Dragon in Heaven, who is a profeſs'd Enemy to the Sun and Moon, and ready at all Times to devour them. And for this Reaſon, as ſoon as they perceive an Eclipſe, they make a terrible Rattling with Drums and Braſs-Kettles, till the Monſter, frightned at the Noiſe, let go his Prey. Many Perſons of Quality, by reading the Miſſionaries Books, underſtand better, but the Superſtition is kept up among the People and Mandarins, who pray for the Sun's Deliverance, while the People endeavour to reſcue it.

The *Chineſe* Lovers of Antiquity.

Their Opinion about Eclipſes.

The noble Gates and ſtately Walls of *Pekin*, which are ſuch indeed as become an Imperial City, muſt not be paſs'd over in Silence. The Gates are not embelliſh'd with Statues, or other Carvings, as moſt of the publick Buildings in *China* are, but all their Beauty conſiſts in a prodigious Height, which at a Diſtance makes the fineſt Show in the World. They conſiſt in 2 large ſquare Buildings, built ſeparately, but join'd together by 2 very tall and very thick Walls; ſo that they form a Square capacious enough to hold 500 Men in Battel. The firſt Building, which is like a Fortreſs, looks toward the Road, and the other commands the City. Here they conſtantly keep a Guard, and a ſmall Magazine to ſupply them with Stores, in caſe of Neceſſity. The Walls are anſwerable to the Gates, ſo tall, that they hide the whole City, and ſo thick, that Centinels on Horſeback are placed upon them. They are defended with ſquare Towers, placed at a Bow-Shot Diſtance from one another. The Ditch is dry, but very broad and deep: All regular, and as well kept, as if they were in continual Apprehenſion of a Siege.

The Gates and Walls of *Pekin*.

The Walls.

All the other Cities and Towns in *China* are of 2 Kinds, *viz.* Cities of War, which are ſolely deſign'd for the Defence of the Country; And, *2dly*, Towns of Traffick. The fortify'd Towns are made ſtronger than the other only by their Situation, which is almoſt inacceſſible, but the Frontier-Towns near *Tartary* are ſo well fortify'd, that it is almoſt impoſſible to force them. Their uſual Fortifications are

The Largeſt of the Cities i. Sunkam.

Its Streets.

Priuiledges

The Temple of Gratitude.

a good Bulwark, ſome Towers, Brick-Walls, and a large deep Ditch, fill'd with running Water, which tho' not comparable to ours in *Europe*, where Guns are uſed, yet one prodigious Work they have, which almoſt ſurmounts all ours, and that is the *Great Wall*, which themſelves ſtile, *Van Licham*, *Chim*, The Wall 10000 *Stadium's* long, reaching from the Eaſtern Ocean to the Province of *Xanſi*. If we reckon all its Windings, 'tis 500 Lgs. in Length. It is fortified with Towers like a City, and in the Places where the Paſſes may be more eaſily forced, there are raiſed 2 or 3 Bulwarks one behind another for their mutual Defence, which are ſo well ſtor'd with great Numbers of Forces, that the *Chineſe* need fear no Attempts that Way. The Wall is carried over the higheſt Hills, and ſo is ſometimes tall, and at other times low, as the Ground allows. It is not above 4, or at moſt 5 Foot thick. It is almoſt all built with Brick, bound with ſuch ſtrong Mortar, that tho' it has laſted ſeveral Ages, 'tis ſcarce the worſe. It was raiſed by the Emperor *Chihohamti*, about 1800 Years ago, to prevent the Inrodes of the *Tartars*, tho' it ſeems Madneſs to have carry'd it up to the Tops of ſome Mountains, which the *Tartars* could never aſcend, and to which they could never carry Materials but with vaſt Coſt and Hazard. The Number of their Fortreſſes is above 1000 of the firſt Rate; the other are leſs remarkable, but all very well Garriſon'd, which ſhews what vaſt Armies there are always kept on Foot.

The Great Wall.

Their Fortreſſes.

But *China* in her Military Capacity is far inferior to herſelf in her Trading Capacity; we can never enough admire the Numbers, Greatneſs, Beauty and Government of her Trading Towns. They are generally divided into 3 Claſſes, the firſt contains about 160, the ſecond 270, and the third near 1200, beſides 300 Wall'd Towns, which they leave out, as not worth obſerving, tho' they come little ſhort of the reſt in the Number of Inhabitants, or Greatneſs of Trade.

The Trading Towns.

The Villages are almoſt numberleſs, eſpecially in the Southern Provinces. In the Provinces of *Xanſi* and *Xenſi* they are for the moſt part ſurrounded with Walls, and good Ditches with Iron-Gates, which the Country People ſhut at Night, and guard in the Day-time to protect themſelves from Thieves, and from Inſults of Soldiers, who are not always to be kept within Bounds by their Officers.

The Villages.

The Largeneſs of theſe Cities is not leſs amazing than their Number. *Pekin*, abovemention'd, is not to be compared with *Nankim*, or, as it is now called, *Kiamnim*, a Town formerly encloſed within 3 Walls, of which the outermoſt was 16 Lgs. round. Some Works of it are ſtill to be ſeen, which one would rather think to be the Bounds of a Province than a City. When the Emperors kept their Courts there, the Inhabitants were numberleſs; its Situation, Haven, fertile Soil and Canals much conducing to the Improvement of Trade. It has loſt much of its former Splendor, yet is more populous than *Pekin*. The Streets are not very broad, but very well paved; the Houſes are not very broad, but very well paved. The Houſes are low, but cleanly, and Shops very rich, being filled with Stuffs, Silks, and other coſtly Wares. In a Word, 'tis in the Center of the Kingdom, and all the Curioſities of the Empire are found here. The moſt famous Doctors and Mandarins, who are out of Buſineſs, uſually ſettle themſelves here, becauſe they have the Conveniency of ſeveral excellent Libraries. Their Printing is fairer, their Artificers better Workmen, their Tongue more polite, and Accents ſmoother. It is beſt fitted for the Imperial Seat, tho' Reaſons of State keep the Emperor nearer the Borders: For, 1. It is ſituate upon the River *Kiam*, which is largeſt, deepeſt and moſt navigable of the whole Empire, being near half a Lg. broad by the City-ſide. 2. There was a Royal Obſervatory on the Top of a Mountain, but now only ſome old Buildings remain, and a large ſquare Hall, newly built in Memory of the Emperor *Camby's* kind Viſit to that City. 3. A large Tower, commonly called the *China-Tower*. 4. An Houſe without the City, called, *The Temple of Gratitude*, built 300 Years ago by the Emperor *Yonlo*. It is raiſed upon a maſſie Baſis of Brick, and encompaſſed with a Rail of unpoliſh'd Marble. You aſcend to the loweſt Hall by 10 or 12 Steps round it. The Front is adorn'd with a Gallery and ſome Pillars. The Roofs are cover'd with green, varniſh'd, ſhining Tiles, and the Ceiling painted in ſeveral Pieces differently wrought, which

The Largeneſs of the Cities i. Nankim.

Its Streets.

Printing.

The Temple of Gratitude.

with the *Chineſe* is no ſmall Ornament. It has no Light, but what comes in at the Doors, which are 3, and thoſe very large ones. It is of an Octangular Figure, about 40 Foot broad, ſo that each Side is 15 Foot wide. There is a Wall built round it of the ſame Form at 2 Fathom and half Diſtance, which ſupporting a Penthouſe, which comes from the Tower, makes a pretty kind of Gallery. This Tower is 9 Stories high, each Story being adorn'd with a Corniſh 3 Foot wide at the Bottom of the Windows, and diſtinguiſhed by little Penthouſes, as the former, but every Story narrower as the Tower riſes higher. The Wall at the Bottom is at leaſt 12 Foot thick, and above 8 and an half at the Top, caſed with *China* Ware, tho' of the coarſer ſort. The Stair-caſe is narrow, and troubleſome to aſcend, becauſe the Steps are very high. Each Story hath a Room floor'd with Timber, and the Ceiling is beautified with Paintings. The Walls of the upper Room have ſeveral ſmall Niches in them, full of carved Idols, which make a pretty kind of Checker. The whole Work is gilt, and looks like carved Stone or Marble, but 'tis thought to be Brick only. The whole Building from the Bottom of the Baſis to the Top of the Cupolo is 200 Foot at leaſt. The Cupolo is a great Ornament to the Building, being like a thick Maſt, about which runs a Spiral Line of Iron at ſome Diſtance from it, and on the Top of it is placed a very large Golden-Ball. The *Chineſe* call it, *The Porcelane Tower*; but the *Europeans*, *The Brick Tower*. Whatever 'tis made of, it is the nobleſt Structure of all the *Eaſt*, and from it you have a Proſpect of the whole City, and eſpecially of the Mountain, where the Obſervatory ſtands, which lies a good Lg. N. E. E. from it.

Nankim is alſo famous for the Bigneſs of its Bells, whoſe Weight has born down the Steeple where they hung. There are but 3 in the City, but a 4th lies beyond the River *Kiam*. They were caſt in the 9th Reign preceding the preſent, and have each a particular Name. One they call *Tchoui*, i. e. *The Hanger*; another *Che*, i. e. *The Eater*; a 3d *Choui*, or *So*, i. e. *The Sleeper*; and the 4th *Si*, i. e. *The Flier*. There is no great Difference in their Bigneſs, and their Figure is almoſt a Cylinder. One of them being meaſured, was found 11 Foot high, beſides the Ear by which it hangs, which is 2 Foot, 7 Foot Diameter, and 22 Foot in Circumference. The Brim is 6 Inches and half thick, but growing thinner and thinner to the Top, where it is but 2 Inches thick, if we compute it at 4 Inches throughout, the Bell will weigh about 50000 Pound, a cubical Foot of Braſs weighing 648 Pound; and ſo this Bell is twice as heavy as that at *Erfort*, which F. *Kircher* affirms to be the biggeſt in the World: And yet theſe Bells are not comparable to thoſe at *Pekin*, which can ſhew 7 Bells, caſt in the Reign of the Emperor *Yonlo*, near 300 Years ago, weighing 120000 Pound each. They are 11 Foot wide, 40 round, and 12 high, beſides the Ear, which is at leaſt 3 Foot high. But as much as their Bells exceed ours in Bigneſs, ours are better than theirs in Sound, for they make a dull obſcure Noiſe, their Clappers being made of Wood. In all their Cities they have Bells of equal Bigneſs almoſt, with which they diſtinguiſh the 5 Watches of the Night, which they reekon from 7 or 8 a Clock in the Evening, and manage them like repeating Clocks. The Metropolis of moſt Provinces, tho' not equal to theſe 2, yet is ſo big, that each were fit to be the Chief of an Empire.

Great Bells, and their Names.

The Bells of Pekin the bigger.

Sigan, the Capital City of *Xenſi*, is 3 Leagues round, the Walls which encloſe it making an exact Square, its Ditches, which are part dry, are very fine, its Wall are thick and tall, as well as the Towers that defend them, its Bulwarks broad, and Gates ſtately, like thoſe of *Pekin*. The City is divided into 2 Parts by an Earthen Wall, which are inhabited the one by the *Tartars*, and the other *Chineſe*. Both Parts maintain a Garriſon, but the *Tartars* are ſtrongeſt. Here is an old Palace, the Reſidence of the ancient Kings of the Country, who were powerful not only in the vaſt Extent of their Dominions, but Courage and Bravery of their Subjects; for among all the *Chineſe* there is no People better proportion'd, more ſtrong, ſtout and laborious, than thoſe of theſe Parts. Their Houſes are low and ill built, their Furniture is not ſo neat as in the Southern Parts, their Varniſh not ſo ſmooth, their China not ſo plentiful, nor their Workmen ſo ingenious.

Sigan deſcribed.

A Palace.

Hamcheu. *Hamcheu*, the chief City of the Province of *Chekiam*, is also one of the richest and greatest Cities of the Empire. It is 4 Lgs. round, the Streets are full of People, the Suburbs very large, and Canals crowded with an infinite Number of Boats, being as populous as the greatest Cities of *Europe*. The Garrison consists of 10000 Men, of which 3000 only are *Chinese*. The Water of their Canals is not clear, nor are their Streets broad, but their Shops are neat, and their Merchants are reputed rich. Eastward from the City runs a River half a Lg. broad, but a little higher 'tis an useless Torrent. Westward lies a Lake close to it about 2 Lgs. round. The Water is clear, but shallow, yet deep enough to carry some large flat-bottom'd Boats, in which the young People take their Pleasure on it. In the Middle stands an Island, where they usually land, having built there a Temple and some Houses for Diversion.

Sucheu. Not far from *Hamcheu* stands *Sucheu*, a City of equal Bigness and Extent (for this is the Wonder of *China*, that having view'd one of their Cities, you think you could hardly find another like it, but you are hardly out of Sight of one, but you come to another.) The Inhabitants say, 'tis 4 Lgs. in Compass. It is the usual Residence of the Vice-Roy, and has as great a Trade as any City in the Empire. One, who has Patience to stand but a few Minutes by the Water-side, and view the Throngs of People that come to cheapen Commodities, and pay their Customs, would imagine it to be a Fair, to which the whole Empire was crowding, and yet it is not so populous as the Cities above-mention'd.

Not far from *Sucheu* you meet with other Cities at small Distances from each other; some a Lg. and half, and some 2 Lgs. round. When you come to the River *Kiam*, you meet with *Chinkiam*, a Town built on its Banks. One of its Suburbs, which lies on the N. W. is a large *German* Mile in Compass. This Place is so populous, that 'tis hard to crowd through it.

Chinkiam.

Qua-cheeu. Over-against it, and on the other Side of the River, stands *Qua-cheeu*, another great Trading Town; and a little beyond lies *Yamcheu*, one of the most remarkable Cities of the whole Empire, which the *Chinese* say, contains 2 Millions of Inhabitants. Most of the Cities of the first Rank are of equal Bigness and Extent; the rest are as big as *Lyons* or *Bourdeaux*. Of the 260 of the second Rank 200 are like *Orleance*; and among the 1200 of the third Rate there are 5 or 600 as considerable as *Rochel* and *Angolesme*, besides an innumerable Quantity of great and populous Villages.

Yamcheu.

[Among the Cities and Towns of *China*, there are some seated in the Provinces of *Yun Nan*, *Quei Cheum*, *Quam Si* and *Su Cheum*, which pay no Tribute to the Emperor, nor yield him any Obedience, but are govern'd by particular and absolute Princes. They are environ'd with high Mountains and steep Rocks, within which are Fields and Plains of several Days Journey, full of Cities, Villages and Towns. The *Chinese* call these Lords, *Tu Su*, or *Tu Quon*, i. e. *Mandarins* of the Country, because, as they think, there is no Emperor in the World but theirs, so there is no Princes or Lords but what he makes. These People speak the same Language with the *Chinese*, but have another peculiar to themselves. Their Manners and Customs differ from the *Chinese*, but their Complexion and Shape of their Bodies is altogether like theirs. They excel the *Chinese* as much in Courage as if they were another Nation, as they have found by several Trials; so that they are forced to let them enjoy their Liberty, and consent to a free Traffick and Commerce with them.] *Out of F.* Magellan.

The Ports and Havens. To the Towns we may add the several Ports and Havens, which do not a little contribute to the Encrease of its Wealth. The *Chinese* Emperors prohibited all Foreigners to enter them, but now the *Tartars*, who are more fond of Money than ancient Customs, have granted a free Access to all Nations.

1. *Macao.* Their first Haven Southwards is *Macao*, famous for the great Traffick formerly maintain'd there by the *Portuguese*, before the *Dutch* expell'd them out of the greatest part of the *Indies*. They have still a Fortress in it, but the Garrison is small, so that they are forced to maintain their Post by a blind Obsequeousness to the *Chinese*. The Town is small, unwall'd, and built on a narrow uneven Soil, on the Point of a small Island, which commands a good Road, where the Ships being shelter'd, with divers other small Islands, which lie to Windward, are secured from Storms. The Haven is narrow, but safe and commodious. All the Customs belong to the Emperor; and tho' the *Portuguese* maintain a sort of Government among themselves, yet they obey the *Mandarins* in all Things relating to the *Chinese*.

2. A River. The 2d Haven of this Coast is form'd by a pretty wide River, up the which great Vessels can go, as far as *Canton*. This Port is convenient for Foreigners, because the City supplies them well with Merchandize and Provisions, but the *Mandarins* will not let them approach the Walls, or let their Merchants deal with them, because they sell them all *European* Goods by their Factors.

3. *Emoui.* In the Province of *Fokien* is another celebrated Haven, called *Emoui* from the Island that forms it. The biggest Ships ride here secure, and may come as near the Shore as they will. The late great Improvement of Trade in this City has made it very populous, and the Emperor keeps a Garrison of 6 or 7000 Men there, under a *Chinese* Commander.

4. *Nimpo.* In the more Easterly Part of *China* is *Nimpo*. The Entrance into it is difficult, and impassable to great Vessels, the Bar at highest Tides not being above 15 Foot under Water. This Place has a great Trade to *Japan*, it being but 2 Days Passage to *Nangazaki*, whither they carry Silks, Sugar, Drugs and Wine, which they exchange for Gold, Silver and Brass. *Nimpo* is a City of the first Class, tho' much damaged by the late Wars; yet the Walls are in a good Condition, the City and Suburbs well inhabited, and the Garrison is pretty numerous. The Town is still full of a kind of Monuments, called by the *Chinese*, *Paifam* or *Pailou*, and by us Triumphal Arches, which are frequent in *China*. They consist in 3 great Arches a-breast, built with long Marble-Stones. The middle one is highest. The 4 Columns that support them are sometimes round, but oftner square. They have no Capitals, but the Trunk is fasten'd into the Architrave. The Frize is too high in Proportion to the rest. They are adorn'd with beautiful Figures, and emboss'd Salptures, with Knots wrought loose one within another, with Flowers curiously carved, and Birds flying, as it were, from the Stone, which are Master-pieces. The best sort are thus made, the rest are more ordinary, and some not worth seeing.

Triumphal Arches.

The Haven of *Nankim*, once famous, is now so wholly disused, that it cannot be reckon'd among them of Note.

5. *Nankin.* This is in general what may be said of the Ports, Fortresses and Cities of *China*, the Number of which is so great, that a Traveller can scarce distinguish them, and therefore the *Chinese* have ever thought no Nation in the World to be compared to them; but since they have been told, that the West hath also Cities and Kingdoms which in several Things exceed theirs, they are much humbled and vex'd to have their Universal Monarchy question'd.

There are besides 205 Royal Hosteries, or Places of Entertainment, called *Ye*, and 103 Courts of Guard, or Royal Hosteries of the 2d Rank, which they call *Cham chin*.

That all these Cities, Towns, Villages, Forts, Havens and Hosteries may be known, and made more useful, the *Chinese* have caused to be printed a publick Itinerary, which contains all the Roads and Passages, both by Water and Land, from *Pekin* to the utmost Parts of the Empire. In this Book all the Royal High-ways are divided into 1145 Days Journey, every one of which have a certain Place where the *Mandarins* are entertain'd and lodg'd at their own Expences, when they go to their several Employments. Here there are Officers kept continually, who having Notice by a Courier sent on purpose, that they are coming, cleanse the Palace, and prepare Diet, Porters, Horses, Chairs, Litters and Barges, if they go by Water, for them. In these Hosteries also are entertain'd all *Chinese* and Strangers, to whom the Emperor allows that Favour, according to their Quality.

LET-

LETTER IV.

Written to the Count de Crecy, *and gives an Account of the Clime, Soil, Canals, Rivers and Fruits of* China.

IN this Letter F. *Le Comte*, who had often raiſed the Admiration of the *Chineſe*, by deſcribing to them the Politeneſs, Beauty and Magnificence of *Europe*, endeavours to make known *China* to that *European*, who is beſt able to judge of its true Grandeur, and to give a juſt Idea of that Country, he has pitched upon the following Particulars, which will afford as much Pleaſure as Profit in reading them.

The Soil. *China* being of a large Extent, the Soil differs according to its Situation, as it lies more or leſs Southward; yet the leaſt of the 15 Provinces is ſo populous and fertile, that in *Europe* it would make a conſiderable State. The Land is divided into Hills and Plains. The latter they have levell'd like Gardens, that by letting the Water thro' them, they may meliorate and improve them. The ſame Courſe they take in tilling and manuring the Hills; for they cut them out like a Pair of Stairs from the Top to the Bottom, that the Rain-Water may ſpread equally, and not waſh down the Ground with its Seeds; and ſo making them, as it were, artificial Plains, have rendred the Soil as fruitful as that of the beſt cultivated Valleys; for their Mountains are not ſtony, as ours are, but the Mould is light, porous and eaſily cut, and ſo deep, that in moſt Provinces you may dig 3 or 400 Foot before you come at the Rock. This much contributes to the Goodneſs of it, becauſe the continual Tranſpiration of Salt-Spirits is ever renewing it, and ſo endues the Soil with a perpetual Fertility: Yet the Provinces of *Xenſi*, *Honan*, *Quamtum* and *Fokien* are more barren than the reſt, tho' their Mountains are not wholly uſeleſs, bearing all ſorts of Trees, which grow tall and ſtreight, and are fit for all kinds of Building, eſpecially Shipping. The Emperor reſerves ſome for his private Uſe, *viz.* for Pillars for Temples, and other Publick Buildings, and the Inhabitants trade much in them; for having cut off the Boughs, they tie 80 or 100 of them together, and making Floats of them of near a Mile long, drag them along the Rivers and Canals, till they have ſold them all. Theſe Timber-Merchants build little convenient Houſes upon them for themſelves and Families, in which they lie during the whole Voyage, which is ſometimes 3 or 4 Months.

Their Husbandry.

Infertility.

Their Trade in Timber.

Nankin.

Mines in their Mountains. They have other Mountains, which produce Iron, Tin, Braſs, Mercury, Gold and Silver. The Silver-Mines are little uſed, partly becauſe they have Plenty of that Mettle, and partly becauſe 'tis dangerous, as well as laborious, to dig it. As for the Gold, the Torrents waſh ſo great a Quantity of it into the Plains, that many People, who have no other Occupation, ſpend all their Time in ſeeking it among the Sand and Dirt, and much enrich themſelves by it; for they find it ſo pure, that it needs no Refining, as it doth in *Peru*.

Miraculous Mountains. Some of their Mountains (as the *Chineſe* pretend, who are credulous to Exceſs) have wonderful Properties; ſome are cover'd with Clouds, others are always ſerene, and others produce only wholſome Herbs; for no poiſonous Herb will grow upon them. They ſay, that in the Province of *Xenſi* is an Hill ſhap'd like a Cock, and crows ſo loud ſometimes, as to be heard 5 Lgs. and that another in *Fokien* moves to and fro againſt a Storm, as a Tree agitated by the Wind. The Tops of others are continually cover'd with Froſts. There is one in the Province of *Kiamci*, called, *The Dragon-Tyger*, becauſe the *Bonzes* ſay, that the upper part is ſhap'd like a Dragon, and aſſaults the lower, that is like a Tyger; and another in *Fokien* repreſents their Idol *Foe*, and is ſo hugely big, that its Eyes are ſeveral Miles broad, and its Noſe many Lgs. in Length. A Mountain in *Xenſi* breaths out Fire and Flames, raiſes Winds and Storms at the Sound of a Drum; and one in the Province of *Huquam* has this ſtrange Property, That it makes Thieves ſo giddy, that when they have ſtollen, they cannot carry off their Booty. Many ſuch Fables they have, which may paſs for Wonders, but their practical Superſtitions have worſe Effects. They believe, that in the Mountains live a ſort of Men, which they call, *The Immortal Race*, believing really that they never die, and being infatuated with this Opinion, ſome of them wander among the Rocks, and then loſe themſelves in Queſt of Immortality. There are ſeveral famous Grotto's, where ſome *Bonzes* lead a very auſtere Life, but moſt of them are odious to the Nobles and People for their execrable Vices. Their moſt famous Temples are built on Mountains, and Pilgrims repair thither 200 Lgs. round in ſo great Numbers, that the Roads are crowded with them. The Women being glad of this Opportunity of going abroad, pretend much Zeal for this ſort of Devotion; but their Husbands having found it prejudicial to their Vertue, force it often into a narrower Compaſs, and confine them to their Homes.

Strange Inhabitants in the Mountains.

The Fertility of the Plains. Having ſurvey'd the Mountains, let us take a View of the Plains; and it muſt be confeſs'd, that no Art can equal their natural Beauty. They are all tilled, and have neither Hedge nor Ditch, nor ſcarce a Tree, for they are afraid to loſe an Inch of Ground. In moſt Provinces they have an Harveſt twice a Year, and between thoſe 2 Seaſons they ſow Herbs and Pulſe. All the Northern and Weſtern Provinces, as *Pekin*, *Xanſi*, *Xenſi* and *Suchuen*, bear Wheat, Barley, ſeveral kinds of Millet and Tobacco, with black and yellow Peaſe, with which they feed their Horſes, as we do with Oats. The Southern Parts, eſpecially *Huquam*, *Nankin* and *Chekiam*, are fruitful in Rice, being low Watery Countries. The Husbandmen at firſt ſow it diſorderly like other Corn, and when 'tis grown 2 Foot high, they pull it up by the Roots, and tranſplant it in a ſtrait Line, in ſmall Parcels like little Sheaves, chequerwiſe, that the Ears may ſupport each other, and more eaſily reſiſt the Wind, ſo that they look like ſpacious Gardens.

Wheat, Barley, &c.

Rice how managed.

The Fruits. The Soil bears all ſorts of Fruits, as Pears, Apples, Apricots, Peaches, Figs, Grapes, of all kinds, eſpecially excellent Muſcadine, Pomegranates, Wall-nuts, Cheſnuts, and generally all we have in *Europe*. Their Olives are not near ſo good as ours, becauſe they are Strangers to the Art of Grafting. They preſs no Oil out of them, becauſe they either know not the Art, or the Fruit is not fit for it. They have 3 ſorts of Melons, which are all excellent. The firſt are ſmall, yellow within, and of a ſweet Sugar-Taſte, which they eat with the Rind, as we do an Apple. Others are very big and long, and the Inſide of ſome is white, and of others red: Tho' they are full of cooling Juice, they never prove offenſive, and may be eaten during the greateſt Heats of Summer without Fear of Surfeiting. Theſe are called *Water-Melons*. The 3d ſort are like our ordinary Melons.

Their Melons of 3 ſorts.

Their moſt delicate Fruits. They have ſome Fruits, which are not known to us in *Europe*. The moſt delicate of them are: 1. The *Leechi*, which grows in the Province of *Quamtum*. It is as big as a Nut, and the Stone is long and large, and the Meat on it is ſoft and wateriſh, but of a delicious Taſte, far beyond any of our Fruits: It is encloſed in a rough Rind, and the whole is ſhap'd like an Egg. It is unwholſome to eat a Quantity, and of ſo hot a Nature, as to cauſe a Man's whole Body to break out in Pimples. They dry it with the Rind, and uſe it in their Tea inſtead of Sugar, to which it gives a little ſharp Taſte, and more agreeable.

1. The *Leechi*.

2. *Louyen*, or *Dragon's-Eye*, a ſmall Fruit, which grows in the ſame Province, and in that of *Fokien*. The Tree that bears it is as large as a Wall-nut-Tree. The Fruit is exactly round, and the outward Rind both ſmooth and gray, but as it ripens it grows yellowiſh. The Meat is white, of a ſharp Taſte, and very full of Juice, fitter for a Deſſert, than to ſatisfie an hungry Stomach. It is very cool and inoffenſive.

2. *Louyen*, or *Lungyen*.

3. The

3. The *Seze*, another Fruit peculiar to *China*, grows almoſt in all Parts of it, and is of ſeveral kinds. Thoſe in the Southern Provinces taſte much like Sugar, and melt in one's Mouth; but in *Xanſi* and *Xenſi* they are firmer and bigger, and may be eaſier preſerved. The Rind of the former is clear, ſmooth, tranſparent, and of a red Colour, eſpecially when the Fruit is ripe. Some are in Shape like an Egg, but uſually bigger: The Seeds are black and flat, and the Meat very Watery, and almoſt liquid, which they ſuck out at one of the Ends. When they are dry'd like our Figs, they grow mealy, but in time there comes a kind of a Sugar-Cruſt upon them, from which they receive a moſt delicious Flavour. Thoſe in *Xanſi* afford a Meat like our Apples, but of a different Colour. They gather them early, either to ripen on the Straw, or dip in ſcalding Water, to free them from an ill Taſte, which they have at firſt Gathering. They have Anana's, Coco's and Goyaves, but they are beholding to the *Indies* for them, and therefore I refer the Deſcription to thoſe Countries.

3 The Size, F. Magell. calls Suſa.

4. *China* Oranges. One ſort of them has been tranſported into *Portugal*, and thrives there well, which is the common Sort, ſo plentiful with us; but there are ſeveral other Sorts in *China*. The moſt valued, which is ſent for Preſents into the *Indies*, is no bigger than a Billiard-Ball. The Rind is of a reddiſh yellow Colour, fine, clear and very ſmooth. Thoſe of *Quamtum* are very agreeable to our Palate and Conſtitution. They are commonly given to ſick People, being firſt ſoften'd by the Fire, and then fill'd with Sugar, which incorporating with the Juice, makes a Syrup moſt wholſome for the Lungs.

4. China Oranges.

5. Lemmons Citrons and Pampelimouſes (as the *Indians* call them) are common here, and not much regarded; but there is a Species of Lemmon-Trees, which they nurſe up with a great deal of Care. The Fruit is no bigger than a Wall-nut, perfectly round, green and ſharp, excellent in all kinds of Ragouſts; and theſe Shrubs they often plant in Boxes, to adorn their Courts and Halls therewith. But of all the Trees of *China* the moſt admirable is,

5. Lemmons.

6. The Tallow-Tree. It is about the Height of our Cherry-Trees, the Branches are crooked, and Leaves ſhaped like an Heart, of a lively brisk Red, its Bark ſmooth, and Trunk ſhort, and the Head round and very thick. The Fruit is encloſed in a Rind divided into 3 Segments, which open when it is ripe, and diſcover 3 white Kernels, of the Bigneſs of a ſmall Nut. This Mixture of White and Red makes a pleaſant Shew. The Kernels have all the Qualities of Tallow, its Smell, Colour and Conſiſtency. They make Candles of it, by mixing it with a little Oil to make it more pliable; but not knowing the Art of purifying it, and making Cotton Wick, the Smell is noiſome, and the Light but dim.

6. The Tallow-Tree.

Candles made of the Fruit.

7. The Pepper-Tree alſo is remarkable in *China*. 'Tis like our Wall-nut-Trees, and the Berry is as big as a Pea, of a grayiſh Colour, with red Streaks. 'Tis ſo ſtrong and offenſive to the Head, that they are forced to gather it by Intervals. When it is ripe, it opens and diſcovers a little Stone, as black as Jet, which they caſt away, becauſe 'tis too hot and ſtrong; the reſt they uſe, and tho' 'tis not ſo agreeable as our Pepper, yet 'tis well enough in Sauces.

7. The Pepper-Tree.

Roots and Pulſe.

No Place in the World produces more Roots and Pulſe than *China*. They are almoſt the only Food of the Inhabitants, and therefore they take great Pains to have them good. They have many Sorts which we have not, as well as thoſe we have. What is moſt rare of this kind, is,

1. Onions.

1. A kind of Onions, which do not ſeed like ours, but towards the latter end of the Seaſon their Leaves bear ſome ſmall Filaments, in the Midſt of which is a white Onion like that in the Ground. This does in time produce its Leaves, and thoſe a like Head, and ſo on, only they grow leſs, and ſhorter as they are further from the Ground.

2. *Perſi*. 2. The Herb called *Perſi*. It is a kind of a Lanifer. It grows under Water, and the Root is faſten'd to a white Matter covered with a red Skin, that divides it into ſeveral Heads, which, when freſh, taſte like a ſmall Nut. It is ſaid to have this Property, that it ſoftens Braſs, and renders it eatable, being put into the Mouth with a Piece of the Plant.

[All manner of Game is there plentiful in the 3 Winter-Months, and among the reſt there is wild Bears of 3 Sorts, which the *Chineſe* call *Gin-Hium*, or Men-Bears; *Qeu-Hium*, or Dog Bears; *Chieu-Hium*, or Pig-Bears, becauſe of their ſeveral Reſemblances, eſpecially in the Head and Paws. The Paws of Bears well boil'd are highly eſteem'd in the *Chineſe* Banquets, and their Fat mix'd with Honey is a great Entertainment for *Tartars*. There are vaſt Numbers of other ſorts of Creatures, as Deer of ſeveral kinds, wild Boars, Ellands, Hares, Conies, wild Cats, Rats, Geeſe, Ducks, all manner of Wood-Fowl, Partridges and Quails of divers Sorts. Tame Cattel they alſo have, as Horſes, Cows, Hogs, Dogs, Mules and Goats. But the moſt admirable of their Creatures is a ſmall Animal no bigger than a Flea, which by a peculiar natural Art makes a ſort of Wax, the whiteſt and cleareſt that ever was ſeen. They are produced of Eggs, which being laid in the Sun produce them. They are no ſooner hatch'd, but by a peculiar Inſtinct run up the Body of certain Trees, which they bite, pierce and penetrate to the very Pith, which, by a peculiar Property that God has given them, they prepare, purifie and turn to Wax as white as Snow. Afterwards they thruſt it thro' the Holes they made, and when it is congeal'd into Drops, the Owners of the Trees gather it, and make it into Cakes of Wax, and ſell it all over the Kingdom.] F. *Magell.*

The Waters of *China* are almoſt as beneficial and uſeful as the Soil. They may be conſider'd, 1. as Canals; 2. as Rivers. The Canals are of great Uſe to water the Country, and further Trade. They add alſo much Beauty to it. They are generally of a clear, deep and running Water, that glides ſo ſoftly, that it can ſcarcely be perceived. There is one uſually in every Province, which is to it inſtead of a Road, and runs between 2 Banks built of coarſe Marble. Over them they have the Conveniency of a great many Bridges, for the Communication of the oppoſite Shore. Some are of 3, others of 5 and 7 Arches, the middle one being always extraordinary high, that the Boats may paſs thro' with their Maſts erect. [One of theſe Bridges, which lies over the River *Cieu li ho'*, or, *The River of Glaſs*, ſo called, becauſe it is clear, quiet and navigable, deſerves a particular Deſcription, being the faireſt in *China*, and, perhaps, in the whole World, for Excellency of Workmanſhip and Materials. It is all of white Marble, very fine and well wrought. On the Sides ſtand 140 Pillars to ſupport it, at a Pace and half Diſtance the one from the other, the Spaces between them being fill'd up with ſquare Panes of Marble, carved with ſeveral Sorts of Flowers, Fruitages, Birds and Creatures. At the Entrance of the Bridge Eaſtward there are 2 fair Pedeſtals raiſed high, and covered with Tables of Marble, upon which are 2 Lions of an extraordinary Size, carv'd with young Lions upon their Back, Sides, Breaſts, and between their Legs, in ſeveral Poſtures, with a ſurprizing Beauty and Delicacy. At the W. End are alſo 2 Pedeſtals, with 2 Elephants, carved with as much Art as the Lions. It has 24 Arches, and has been built above 2000 Years. F. *Magell.*] This great Canal runs out into ſmaller Ones on each ſide, which are again ſubdivided into ſmall Rivulets, that end at ſome great Town or Village. Sometimes they diſcharge themſelves into ſome Lake or great Pond, which waters all the adjacent Country; ſo that theſe clear and plentiful Streams, adorn'd with ſo many Bridges, confined with ſuch neat and convenient Banks, equally divided into ſuch vaſt Plains, and covered with a numberleſs Multitude of Boats and Barges, and crown'd (as I may ſay) with a prodigious Number of Towns and Cities, whoſe Ditches it fills and Streets it forms, do at once make the Country the moſt beautiful and fruitful in the World. And this is the more to be wonder'd at, becauſe they are all certainly the Effects of Art and Induſtry, as their Straitneſs, equal Diſtribution, and Floud-gates made to let the Rivers in and out, do prove.

The Product of the Waters, and the Uſe.

Bridges.

Canals.

All made by Art.

Among the Canals in the Southern Provinces, one above the reſt, is called the Great Canal, becauſe it goes through the whole Country to *Canton*, which is ſituate in the moſt Northern Parts of the Empire. It was dug by an infinite Number of Workmen about 400 Years ago, at the vaſt Charge of the *Tartarian* Emperor, who ſettling his Reſidence at *Pekin*, could find out no other Way to ſupply the City with Plenty of Proviſions, Spices, and other neceſſary Merchandize. It is in Length 3500 *Chineſe* Furlongs, or 245 *Portugal* Leagues. To make it deep, it is furniſh'd with 72 Sluices, that have every one Gates made of large

The Great Canal.

large Pieces of Timber, which are ſhut in the Night, and open in the Day. Moſt of them are eaſily paſſed, but the reſt are ſhot by main Force, as at the Water-falls.

Water-falls.

To paſs from one Canal to another, of which ſome are higher and others lower, according to the Ground, they make uſe of Water-falls inſtead of Sluices, up which they cauſe the Barks to aſcend, by the Help of a great Company of Men, maintain'd near them on purpoſe, who raiſe them by little and little by mere Force of Arms. Where the Waters of 2 Canals have no Communication, they paſs from one to another by a double Glacis, or ſloping Bank, upon which they hoiſe their Boats. In the grand Canal, becauſe of the Emperor's Barks, which are too large to be raiſed by the Arm, there are no ſuch Sluices. Theſe Water-Paſſages, as they call them, are neceſſary for the Tranſportaion of Grain and Stuffs, which they fetch from the Southern Provinces to *Pekin*; and the *Chineſe* ſay, that there are above 1000 Barks, from 80 to 100 Tun, that make a Voyage once a Year, all of them freighted for the Emperor, beſides thoſe of particular Perſons, which are almoſt infinite.

Tranſportation of Stuffs and Grain.

The *Chineſe* have not only made Channels for Traffick, but they dig alſo many others for to catch Rain-Water, wherewith they water their Fields in time of Drought, eſpecially in the Northern Provinces, by drawing it into ſmall Ditches, which they have made a-croſs their Fields. If by Chance they meet with a Spring, 'tis worth Obſervation to ſee how they will husband it. They ſuſtain it by Banks in the higheſt Places; they turn it into an Hundred different Ways, that all the Country may reap the Benefit of it, inſomuch, that a ſmall Rivulet thus managed ſhall make a whole Province fertile.

A Spring how managed.

2. The Rivers of *China* are no leſs conſiderable than the Canals. There are 2 which are moſt famous: 1. The *Kiam*, or *Tyamee*, which they tranſlate, *The Son of the Sea*. This River riſes in the Province of *Yunnan*, croſſes the Provinces of *Sucſuen*, *Huquam* and *Nankim*, and having watered 4 Kingdoms in its Current of 400 Lgs. falls into the E. Sea, over-againſt the Iſle *Cummim*, which was made by the Sand and Mud brought down by this River. The *Chineſe* have a Proverb among them that ſays, *The Sea hath no Bounds, and* Kiam *no Bottom*, which may expreſs its great Depth, but not the Truth. About *Nankim* it is half a Lg. wide. Its Courſe is exceeding rapid and dangerous, ſo that it is grown infamous for Shipwracks. It forms a great many Iſles, all of them beneficial to the Province, by reaſon of the Multitude of Bulruſhes, 10 or 12 Foot high, that it produceth, ſerving for Fuel for all the Cities thereabouts; for they have ſcarce Wood enough for Buildings and Ships. They yield a great Revenue, and the Emperor draws a conſiderable Duty from them. But the Torrents from the Mountains many times ſo ſwell the River, as to carry away the Iſles, or leſſen them by half, and ſometimes form new ones; ſo that the *Mandarins* get them to be meaſured every 3 Years, to augment or diminiſh their Impoſts and Duties, according to the Condition they find them in.

The Rivers of *China*.

1. *Kiam*.

Bulruſhes made Firing.

2. The *Hoambo*, i. e. The Yellow River, becauſe in great Rains it has that Colour. It ariſes out of the Mountains of the Province of *Sucheen*, and running thro' a Part of *Tartary* along the Great Wall, re-enters *China*, between the Provinces of *Xanſi* and *Xenſi*, and waters the Province of *Honan*, and when it has croſs'd a Part of the Province of *Nankim*, and flow'd above 600 Lgs. into the Land, empties it ſelf into the Eaſt Sea, near the Mouth of the *Kiam*. This River has formerly cauſed great Deſolation in *China*, ſo that in many Places they are forced to keep up the Waters with long and ſtrong Banks, which yet do not free them from Fears of an Inundation; for in the Province of *Honan*, the Ground lying very low, they ſurround the greateſt part of their Cities about a Mile from the Walls with a Turrace caſed with Turf, to prevent being ſurpriz'd with Accidents, in caſe the Bank ſhould break. There are ſeveral other Rivers in *China* commodious for Trade, but being leſs famous, and having nothing uncommon, he paſſes them by.

The *Hoambo*.

As for their Fountains, 'twere to be wiſh'd that they were more and better; for the Nature of the Ground hath every where made their Water ſalt and brackiſh; ſo that the People are forced to mix the Leaves of Tea (a Tree which grows plentifully among them) to purge them from their noxious Quality, and make them wholſome and pleaſant. There are in *China* ſeveral Fountains, which ebb and flow as regularly as the Sea doth.

The Fountains.

They have great Lakes and Ponds in almoſt all their Provinces, ſome proceeding from the Torrents that deſcend from the Mountains, and render the Country barren, ſandy, and full of Flints; but others from Springs, which abound in Fiſh, and yield a conſiderable Revenue to the Emperor by the Salt they afford. In *Xanſi* there is one, which has an Iſland in the midſt, where the People divert themſelves in the Summer during the exceſſive Heat, by caſting Water up into the Air to make an artificial Rain. Here they find a Cruſt of a certain Salt, white and well ſcented, ſufficient to furniſh the whole Province, but 'tis not ſo good as Sea-Salt, tho' they uſe it to ſeaſon their Meat with.

Lakes and Ponds.

Salt.

In the Province of *Fokien* is one (as the People ſay, but he dare not warrant it for a certain Truth) whoſe Water is green, and turns Iron into Copper; and in the Room of a Palace, which ſtands on the Bank of another, they hearing the Ringing of Bells, every time the Heaven threatens a Storm. There are Waters in the Province of *Quamtum* that change Colour every Year. In Summer and Winter they are very clear, in Autumn they turn blue, and that ſo fine, that the People make uſe of it to dye Stuffs. In the ſame Place is a Mountain full of Caverns, whoſe very Aſpect is terrible. In it is found a Lake of that Nature, that if one throw a Stone into it, he may hear a Noiſe like Thunder, and ſometime after ariſeth a Miſt, which immediately diſſolves into Water.

Strange Effects of Water.

In the Province of *Yunnan* there is a Lake, which the *Chineſe* would make you believe, came all on a ſudden by an Earthquake, that ſwallow'd up all the Country, with its Inhabitants, except one Child, which was born up by a Piece of Wood. In the Iſle of *Haynan* is a ſort of Water that purifies Fiſh, preſerving their intire natural Figure.

A ſtrange Lake.

Theſe Rivers and Lakes produce all the ſorts of Fiſh which we have in *Europe*, and ſome that we have not, of which the moſt remarkable follow, *viz.* The Gold and Silver Fiſh, which are found in divers Provinces, and are a great Beauty and Ornament to the Courts and Gardens of Great Perſons. They are commonly of a Finger's Length, and of a proportionable Thickneſs. The Male is of a moſt delicate Red from the Head to the Middle, the reſt to the End of the Tail is gilded with ſuch a glittering Gold, that our Gildings will not come near it. The Female is white, its Tail and one part of its Body is perfectly waſh'd over with Silver. The Tail is faſhion'd like a Noſegay, thick and long, which gives a particular Grace to this Animal. They are extraordinary tender, and will not endure the leaſt Injuries of the Sun or Air. If they are touch'd with the Hand, they die ſoon after, or are ſhrivell'd up. Any great Noiſe, as of a Cannon or Thunder, too ſtrong a Smell, too violent a Motion, kills them. They live almoſt upon nothing. The inſenſible Worms that are bred in the Water, or thoſe ſmall Earthly Particles which are mix'd with it, ſuffice to keep them. A Wafer ſteep'd makes a kind of a Pap, of which they are extreamly greedy, and is very ſuitable to their natural Delicacy and Tenderneſs. In hot Countries they multiply very much, provided Care be taken to ſecure their Eggs, which ſwim on the Water, and are apt to be devour'd by bigger Fiſh, and to place them in a Vaſe expoſed to the Sun to preſerve them, till the Heat hatcheth them. The Fiſh come out of the Egg of a black Colour, which ſome of them always keep; but others are changed into Red, White, Gold and Silver, according to their different Kinds. The Gold and Silver begin at the Tail, and ſpread themſelves more or leſs according to their particular Diſpoſitions, and make them Wonders of Nature.

Strange Fiſh.

The Gold and Silver Fiſh.

Their Tenderneſs.

LET-

LETTER V.

Written to the Marqueſs de Torſi, *Secretary of State for Foreign Affairs, giving a particular Character of the* Chineſe *Nation; their Antiquity, Nobility, Manners, and their good and bad Qualities.*

BY the Command of this Stateſman, whoſe Place engaged him upon an Inquiry after Foreign Affairs, *Le Comte* ſends this Account of the Manners and Genius of the *Chineſe*. The Original of the *Chineſe* is ſo ancient, that it is ſcarce diſcoverable. They compute 40000 Years ſince the Foundation of their Empire vulgarly, but the Account given by the Learned and Judicious Men among them comes ſo well confirm'd, ſo evidently proved, and eſtabliſh'd by ſo conſtant a Tradition, that one cannot queſtion it, without paſſing for ridiculous. According to their Reckoning, *China* hath had her Kings above 4000 Years, who have continued to this preſent Time without Interruption; but this long Succeſſion hath not remain'd in one Family all that while, but there have been 22 different Families, which have produced 236 Emperors. It ſeems probable, that the Children or Grand-children of *Noah* diſperſt themſelves into *Aſia*, and at length penetrated as far as thoſe Parts of *China*, which are called at this Day *Xanſi* and *Xenſi*. They lived at firſt in Families, and their Kings were Fathers, to whom a long Continuance of Years, abundance of Flocks, and other Country paſtoral Riches added ſome Authority. *Tobi* was the firſt that laid the Foundation of the Monarchy. His Wiſdom, Diſcretion, good Morals, Power and Reputation, which his great Age had acquired him, made them give ear to him, as to an Oracle. He regulated all Private, as well as Politick and Religious Matters, inſomuch, that his State was in a very flouriſhing Condition in a ſhort time. His Subjects poſſeſs'd the Province of *Honan* at firſt, and ſome Years after all the Lands and Territories that are extended as far as the South Sea.

The Antiquity of the *Chineſe*.

Their Original and firſt Kings.

Tobi.

The Wiſdom of the *Chineſe*.

They ever valued themſelves above other Men, and obſerving the Neighbouring Kingdoms to be barbarous, and inferior to them in point of Wiſdom, laid down this Maxim of State among themſelves, *To have Commerce with Foreigners and Strangers, but juſt ſo much as ſhould be neceſſary to receive their Homage.* Neither did they ſeek after Sovereignty out of a Spirit of Ambition, but that they might preſcribe to other People the Laws and Conſtitutions of perfect Government. This grave Policy acquir'd the *Chineſe* ſo great a Reputation throughout all *India*, *Tartary* and *Perſia*, that they were look'd upon as the Oracles of the World; inſomuch, that when *Xaverius* brought the Chriſtian Faith among them, they objected againſt his Doctrine, *That* China, *a Nation ſo wiſe and intelligent, had not embraced it.* But this Piece of Policy, by which, as a politick Maxim, they at firſt diſtinguiſh'd themſelves from others, degenerated in time ſo into Pride, that for a long time they look'd upon themſelves as a choſen elect People, produced by Heaven, and placed in the Center of the Univerſe, to give Laws to it; the only People able to inſtruct, civilize and govern Nations. They fancy'd other Men as Dwarfs and pitiful Monſters, the Droſs and Off-ſcouring of Nature, and themſelves only to be endued with a rational Form and Size (as their ancient Maps ſhew:) But of late perceiving the People of *Europe* to be inſtructed in all ſorts of Sciences, and that their Workmanſhip in Stuffs, Clocks, Watches, Mathematical-Inſtruments, and ſuch like Curioſities, is admirable, they will now allow, that they were miſtaken in ſaying, Nature hath beſtow'd Eyes upon none but the *Chineſe*; and they now find, that if the *Europeans* do not ſee ſo clearly as they, yet they have at leaſt one Eye apiece.

The Pride of the *Chineſe*.

The Excellencies of the *Chineſe*.

But, abating for this Pride, we muſt own, that the *Chineſe* Nation hath been endued with rare Qualities. They ſhew'd a great deal of Policy in managing the Affairs of the World, and great Senſe and Regularity in their Buſineſs, much Zeal for the publick Good, and true and juſt Idea's of Government, with a Genius mean, indeed, as to ſpeculative Sciences, but right and ſure in Morality, which they have preſerved very conformable to Reaſon: The People principally apply'd themſelves to the Education of Children in their Families: They eſteem'd Husbandry above all other Things: They were laborious to Exceſs, loving and underſtanding Commerce and Trading perfectly well: Their Judges and Governours of their Cities affected an outſide Gravity, Sobriety at their Tables, Moderation in Houſe-keeping, and Equity in all their Judgments, which gain'd them Love and Admiration from all the People in general. The Emperor placed his Happineſs in nothing more than procuring the Proſperity of his Subjects, and look'd upon himſelf not ſo much the King of a mighty State, as the Father of a numerous Family. But now their Civil Wars, and Mixture with the *Tartars* has broken this goodly Order. Avarice, Ambition and Pleaſure go a great way in all their Tranſactions: They cozen and cheat in Traffick: Injuſtice reigns in Judicatures; their Princes and Courtiers are full of Intrigues: Yet their Perſons of Quality take ſo many Meaſures to conceal Vice, and they are ſo cautious in their outward Behaviour, that if a Stranger be not careful to be inſtructed in Affairs to the Bottom, he imagines that every thing is perfectly well regulated.

The Corruptions brought in by the Tartars.

In theſe Things the *Chineſe* reſemble the *Europeans*, but in other Reſpects they are wholly unlike. Their Countenance, Air, Language, Diſpoſition, Civilities, Manners and Behaviour, are not only different from ours, but from all other Nations in the World. They have not the ſame Idea's of Beauty which we have. They love a Man that is big, tall and groſs, with a broad Forehead, little and flat Eyes, a ſhort Noſe, great Ears, a Mouth of a middle Size, a long Beard, and black Hair. The curious Feature, lively Aſpect and ſtately Gate and Deportment, which is ſo much eſteem'd in *Europe*, do not at all pleaſe them; but he is an handſome Man that fills an Ellbow-Chair, and by his Size and Bulk can look big.

Their Differences from Europeans.

They are naturally of as fair a Complexion as we, eſpecially towards the N. but wearing on their Heads only a little Bonnet, very improper to defend them againſt the Sun, and travelling very much, they are as tawny as the *Portugueſe* in the *Indies*. The People alſo of *Quamtum* and *Yunnan*, by reaſon of the exceſſive Heat, and working half naked, are of a dun Complexion.

Their Complexion.

But tho' the Men take no Care of themſelves, the Women do not imitate them, but uſe their utmoſt Endeavours to preſerve their Beauty. 'Tis not certain that they uſe Painting, but they rub their Faces every Morning with a ſort of white Meal, which rather ſpoils than mends their Complexion. They have all of them little Eyes and ſhort Noſes. In other Things they equal the Women of *Europe*, but in their natural Modeſty they excel them. They cover their Necks with a little Collar of white Sattin faſten'd to their Veſts; their Hands are always hid in long Sleeves; they tread ſoftly, caſting their Eyes toward the Ground, and holding their Head on one Side. A Man that looks on them would imagine them to be a Company of profeſs'd Nuns, only taken up with the Service of God. Yet they are not free from the Vanity of their Sex. The more they are confined, the leſs they love Solitude. They dreſs themſelves as gorgeouſly, as if they were to be ſeen in Publick, tho', perhaps, none comes near them, but their Domeſticks. Their Head-Dreſs conſiſts in ſeveral Locks of Hair buckled up, interlaced with Flowers of Gold and Silver, which ſeems to make an odd Figure to us, yet ſavours more of Neatneſs and Sim-

The Women's Beauty and Habit.

Simplicity, than the extravagant Burthen of Head-Cloaths, which our Women in *Europe* wear. The Women wear, as the Men do, a long Sattin or Cloth of Gold Veſt, red, blue or green, according to their particular Fancy; the elder Sort cloath themſelves in Black or Purple, and wear over all a kind of Surtout, the Sleeves of which are ſo long as to trail on the Ground, unleſs held up. But that which diſtinguiſhes 'em from all other Women is the Littleneſs of their Feet, which they affect to that degree, as to be juſtly accuſed of Folly, if Cuſtom did not a little bear them out. So ſoon as ever the Girls are born, the Nurſes take Care to tie their Feet extream hard, that they may not grow, and Nature ſtrangely buckles to the Torment. Their Shooes are of Sattin, embroider'd with Gold, Silver and Silk, very neat, and they ſtrive to ſhew them as they walk, which they would do almoſt always, were they ſuffer'd to go abroad. Some have thought it an Invention to keep the Women within Doors, but the *Chineſe* are ignorant of any ſuch Reaſon.

Their ſmall Feet, and how made.

The Mens Habits are much different from the Womens. They ſhave their Heads all over, but behind, where they let as much Hair grow, as will make a long Treſs. They wear on their Head a Bonnet or Cap, which Civility forbids them to pull off. Their Bonnet differs according to the Seaſons of the Year. That which they uſe in Summer is in the Form of a Coule, wide below, and terminating in a Point. It is lin'd within with a pretty Sattin, and the Top is covered with a very fine Matt, which is much eſteemed in that Country. They add alſo a great Flake of red Silk, which hanging irregularly, gives a particular pleaſing Grace as the Head moves. In Riding they wear a ſort of long Hair, dy'd of a brisk ſhining Red, which Rain will not deface. It grows white upon the Legs of Cows in the Province of *Suchuen*, and receiving this Tincture, is dearer than the fineſt Silk. In Winter they wear a Pluſh-Cap, border'd with a Sable Fox-Skin. The reſt is of a curious Sattin, Black or Purple, cover'd with a great Flake of red Silk like the Summer-Cap. They are very handſome, and are ſold ſometimes for 8 or 10 Crowns, but have this Inconvenience, that they are ſo ſhallow, as not to cover the Ears.

The Mens Habits.

Their Caps for Summer.

Riding.

Winter.

The *Mandarins* in their Formalities wear on the Top of their Bonnet a Diamond, or ſome other precious Stone, ill cut, but ſet in a Button of Gold curiouſly wrought: Others have an huge Tuft of Stuff, Agate, Chryſtal, or ſuch other Matter. Their Habit is long, and convenient enough for Students, but cumberſome for Men on Horſe-back. It conſiſts of a Veſt which reaches to the Ground, the Skirts of which being folded before, is faſten'd on the Left Side with 4 or 5 Gold or Silver Buttons. The Sleeves are wide towards the Shoulder, and grow ſtraiter and ſtraiter to the Wriſts, and cover the whole Hand, ſo that nothing is ſeen but the Fingers Ends. They keep their Veſt cloſe to them by a broad Silken Saſh, whoſe Ends reach down to the Knees. The *Tartars* ſtick an Handkerchief to it on both Sides, with a Sheath for a Knife and Fork, a Tooth-Picker, Purſe, and other pretty Impliments. In Summer their Neck appears bare, and is no good Sight; but in Winter they cover it with a Collar of Sattin faſten'd to the Veſt, or with a Tippet of Sable, or Fox-Skin about 3 or 4 Fingers broad, faſten'd before with a Button, which is very decent, and becomes Horſe men wonderfully. Beſides the Veſt, they wear a kind of Surtout, with ſhort wide Sleeves like Barriſters Gowns. The Students wear them very long, but Gentlemen, and eſpecially the *Tartars*, will have them ſhort, reaching no farther than their Pocket-Holes. Their Under Garment in Summer is only a ſingle Pair of Drawers of white Taffata, under a very broad and ſhort Shirt of the ſame Stuff; but in Winter their Shirt is made of Linnen, and under it they wear Breeches of coarſe Sattin quilted with Cotton, or raw Silk, which is warmer. They wear Boots always, and when any Perſon viſits them, if they have not their Boots on, they will make them wait till they go fetch them. This Mode is pardonable in Winter, becauſe their Boots being of Silk, and Boot-Hoſe of pink'd Stuff, quilted an Inch thick with Cotton, do defend their Legs well from the Cold; but in Summer, when the Heat is exceſſive, no Body living, but the *Chineſe*, to keep up their Air of Gravity, would endure to be wrapt up at that rate, and indeed their Workmen find them ſo inconvenient, that they rarely uſe them. Their Boots are not like ours, for they have neither Heel nor Top. When they ride any long Journey, they are made of firm old Leather, or thick black pink'd Cotton; but in the City they uſually wear them of Sattin, with a coarſe Border of Pluſh or Velvet on the Knee. The People in Publick, and Perſons of Quality within Doors, are ſhod with Pattins inſtead of Shooes. They are made of black Linnen, or ſome very pretty Silk. They ſtick cloſe to the Feet by a Border that covers the Heel, without tying.

Their breeches.

Boots.

Pattins.

Their Doctors, and other Learned Men, let their Nails grow very long, inſomuch, that in ſome of them they almoſt equal their Fingers in Length. This they uſe not only for an Ornament, but as a Diſtinction, that it may be known, that they are wholly withdrawn from Mechanick Arts, and are addicted to Sciences.

Their long Nails.

In ſhort, ſince they affect a ſtarch'd Gravity, and imagine, that a Beard much contributes to the gaining Reſpect, they ſuffer their Beards to grow, and cultivate them much; but Nature having been very ſparing to them in this Point, they envy the *Europeans* for it.

Their Beards

Of theſe Cuſtoms the *Chineſe* are ſo fond, that rather than change their Habit, they renew'd a cruel War with the *Tartars*, and the greateſt part of them choſe rather to loſe their Heads, than their Hair. A Conſtancy admirable in any People, and muſt be imputed to the good Government of the *Chineſe*, that they have kept the ſame Faſhion for above 2000 Years.

The Modes of *Europe* do not appear handſome to them. The Periwig they call a phantaſtical Head-dreſs, proper only upon the Stage for a Man that would repreſent the Devil in Man's Shape. They will not be perſwaded that long Shanks, cover'd only with Stockings drawn ſtrait and narrow Breeches look handſome, becauſe they are accuſtom'd to an Air of Gravity, that gives them other Conceptions, and tho' we ſhew them, that this Dreſs makes our Shapes fine, Gate eaſie, and Carriage quick and diſengaged, yet it will by no means go down with them. Perſons of Quality obſerve all the Formalities and Decencies ſuitable to their State, and never appear uncovered in Publick, how great ſoever the Heat be; but in private and among their Friends they uſe a Freedom which is commendable; for they ever and anon quit their Bonnet, Surtout, Veſt and Shirt, and keep nothing on but a ſingle Pair of Drawers of tranſparent Linnen, or white Taffata, which is the more ſurprizing becauſe they condemn all Nakedneſs ſo much as in Pictures, and ſure 'tis worſe in themſelves. The Vulgar tranſgreſs all Bounds of Modeſty in this Reſpect, eſpecially in the Southern Provinces, where the Water-men and other Handicraftſmen are impudent to the higheſt Degree, for they go along the Streets in ſingle Drawers, without Cap, Stockings or Shirt, which makes them much tann'd, and ſwarthy. In the Northern Provinces they are a little more reſerved, becauſe the Cold, in ſpight of their Teeth makes them modeſt.

Their Judgment of Periwigs.

Their Dreſs in private.

The Immodeſty of the Vulgar.

The moſt obſervable Manufactures in *China* are produced from Silk, which in this Country is without Queſtion the fineſt in the World: They make of it in many Provinces, but the beſt and faireſt is to be found in *Chekiam*, becauſe the Soil is very proper for Mulberry-Trees, and becauſe the Air is endued with a Degree of Heat and Moiſture moſt conformable to the Worms that make it. Every Body deals in it, and the Traffick of it is ſo very great, that this Province alone is able to ſupply all *China*, and the greateſt part of *Europe*. But the fineſt and faireſt Silks are wrought in the Provinces of *Nankim*, the Rendezvous of almoſt all the good Workmen. It is there that the Emperor furniſheth himſelf with the Silks ſpent in his Palace, and with thoſe he preſents the Lords of his Court. The Silks of *Quamsiu* are notwithſtanding valued above all among Strangers, and ſo are more ſaleable than thoſe of the other Provinces of *China*. Their Silks have ſome Reſemblance to ours, yet the Workmanſhip hath ſomething in it that makes a Difference. They have Pluſh, Velvet, Tiſſue of Gold, Sattin, Taffata, Crapes, and ſeveral other Stuffs, for which we have no Names in *Europe*; but their moſt uſual Stuffs are:

Their Manufactures.

Their beſt Silks.

1. *Touanze*, a ſort of Sattin, ſtronger, but not ſo gloſſie as ours; ſometimes ſmooth, and ſometimes diſtinguiſh'd by Flowers, Birds, Trees, Houſes, and ſhady Groves. Their Figures are not raiſed upon

Touanze.

Their Figures.

the Ground by a Mixture of raw Silk, as our Workmen do in *Europe*, but all their Silk is twisted, and the Figures are distinguish'd only by the Difference of Colours. When they mix Silver and Gold with it, it much resembles our Brocades; but their Gold and Silver is wrought after a particular Manner, not drawn fine and twisted with the Thread, as ours is, but laid on Paper, which they cut in little Scrowls, and wrap with the Silk. There is a great deal of Art in thus managing it, but it will not last long, for Water, nay, Moistness will tarnish it quickly; yet when they come out of the Workman's Hand they shew very finely, and one would take them for valuable Pieces. Sometimes they put in only little Scrowls of gilded Paper, without rolling them upon Thread; but then the Figures, tho' finely turn'd, will not last so long, and so the Silk is of lower Price. Of all the Figures they thus draw, the Dragon is the most ordinary. There be 2 Sorts of them, one with 5 Claws, called *Lom*, which is used upon such Stuffs only as are design'd for the Emperor, because 'tis his Arms, which *Tohi*, the Founder of the Empire, first took for himself, above 4000 Years ago. The other with 4 Claws, named *Mam*, which the Emperor *Vouvam*, who reign'd 2832 Years ago, ordain'd that every Body might bear, and since that Time the Use of it is grown common.

Gold and Silver.

Dragons.

Cha.

Another kind of Stuff which the *Chinese* use in Summer, is called, 2. *Cha*, which is not so close, nor has so good a Gloss as our Taffata, but is much more substantial. Several People desire to have it smooth and even, but most wear it powder'd with great Flowers, pierced thro', and cut like *English* Lace. This Taffata makes Garments for the Summer very convenient and neat, so that Persons of Quality use it, and is not dear; for you may buy a whole Piece, enough to make a long Vest and Surtout, for 2 Guinea's.

Taffata, called *Tchetauze*.

A Third sort is, 3. A sort of Taffata, that serves for Drawers, Shirts and Linings, called *Tchecouze*. It is close, and so pliable, that fold or double it as you will, you can hardly make a Wrinkle in it. It is sold by Weight, and tho' it be often wash'd, will lose little of its Lustre.

Besides the former sort of Silk, *China* hath another, which is found in the Province of *Quamtum*. The Worms which make it are wild, and the People seek it in the Woods. This Silk is of a gray Colour, and hath no Gloss; so that such as are not acquainted with it, take the Stuffs made of it to be red Linnen, or a coarse Drugget, yet they infinitely value it, and will give more for them than for Sattins. They call them *Kien-Tcheou*, and say, they last long, do not fret, wash often, and no Spots will spoil them.

Kien-Tcheou

Wool is very common and cheap in the Provinces of *Xensi*, *Xansi* and *Suchven*, where they feed abundance of Flocks, yet they make no Cloth of it. They esteem our *English* Cloths highly, but because they are sold much dearer than the finest Silks, they buy but little of it. The *Mandarins* make themselves studying Gowns for the Winter of a kind of coarse Russet, for want of better Cloth. Their Druggets, Serges and Tammies are as good as any. They are commonly wrought by the *Bonze's* Wives, who much use them, and a great Trade is driven with them all over the Empire.

Their Linnen.

Copou.

Cotton-Linnen is very common, and they use for their long Vests in Summer Nettle-Linnen; but the Linnen most valued by them is called *Copou*. It is found no where else, and is made of a Plant called *Co*, found in the Province of *Fokien*. It is a kind of creeping Shrub, whose Leaves are bigger than those of Ivy, round and smooth within, but white, Cottony and Downy on the Outside. When it is dry they make Sheaves of it, and having steep'd it in Water like Hemp or Flax, they peel off the first Bark, and of the second make this Linnen, by drawing it into fine Threads. It is transparent and pretty fine, but so cool and light, that one would think he had nothing on his Back. All Persons of Quality make long Vests of it during the excessive Heats, with a Surtout of *Cha*. In the Spring and Autumn they put on *Kien-Tcheou*, and *Touanze* in Winter, *i. e.* coarse Sattin, or flower'd Silk. Grave Persons desire to have it plain, others wear it flower'd; but no Body, except the *Mandarins* in their Assemblies, or upon certain solemn Visits, use Silk flower'd with Gold and Silver

The common People habit themselves usually in coarse Linnen dy'd blue or black, and in the cold Weather quilt it with Cotton, or line it with Sheeps-Skin; but Great Persons line their Vest and Surtouts with the noble Skins of Sable or Ermin, Fox and Lamb, as also Plush and Petit-gris. Ermin is rare in *China*, and therefore they only border their Vests and Sleeves with it. Sable is common, and all the chief *Mandarins* wear it. One Skin of a Foot long, and 5 or 6 Inches broad, costs 10 Crowns. Some of the finest for a compleat Habit will cost 5 or 6000 Livres, but one may have a pretty handsome one for 200 Pistoles. Fox-Skins are much used, but those who would be most magnificent take nothing but the Belly of this Animal, where the Hair is long, fine and soft. A Vest and Surtout lined with these will cost 5 or 6000 Livres. They have also several other Sorts of Furs from *Tartary*, of which the *Mandarins* make use to sit on the Ground at the Time of their Audience, and to lay on their Beds under the Quilt to take away the Dampness and Cold. There is another particular Spieces of Fur, called *Ta-chu*, that is perfectly handsome and fine, the Hair long, soft and thick, a whitish Gray mix'd with Black, and striped with black and yellow Lists. They make great Winter-Gowns of them to wear in the City, and tho' when they have them on they look like Bears, yet they think themselves to be very genteel, and to make a graceful Figure. Lamb-Skins are the most common Furs; they are white, downy, and very warm, genteel, and convenient for Winter. Yet are all these Furs easily spoil'd in hot and moist Countries, if great Care be not taken of them; for a Worm breeds in them, and the Hair falls off. To prevent this the *Chinese*, when the Summer approaches, expose them to the Air in fair and dry Weather, beat out the Dust, and then include them in huge Earthen-Pots with Peppar and other Drugs to preserve them.

The Habit of the Vulgar.

Other Furs.

Ta-chu.

Lamb-Skins

Besides their usual Garments, they have 2 Sorts more worth our Knowledge. 1. Their Riding Habit, which is made of a coarse Taffata, crusted over with a condensed Oil, which being well dryed, makes the Stuff green, transparent and extraordinary genteel. Of this they make their Bonnets, Vests and Surtouts, and it will keep out the Rain some time, but it will yield at last unless it be a choice one. 2. Their Mourning Habit. Their Bonnets, Vests, Surtouts, Stockings and Boots are all made of white Linnen, and from the Prince to the meanest Mechanick, none dare wear any other Colour. In close Mourning, the Bonnet is of a Red clear Canvas Cloth, and the Vest is kept close with a Girdle of the same. They affect at first a careless Behaviour, and Grief and Sorrow seems every where painted on their outward Man, but all being nothing but Ceremony and Affectation. They easily put on their own Face again, and laugh and cry all in a Wind. The Popish Missionaries wore a Student's Habit, till the *Tartars* forced them with the *Chinese* to conform to their Fashion.

Their Mourning Habit.

LET-

LETTER VI.

Written to the Dutcheſs of Bouillon, *concerning the Oeconomy and Magnificence of the* Chineſe.

FAther *Le Comte* being deſired by this Perſon of Quality to give her an Account of the Gallantry and Magnificence of the *Chineſe*, ſends her the following Relation of it.

The Chineſe Architecture and Furniture.

'The *Chineſe* come far ſhort of the *Europeans* in the Magnificence of their Houſes; for their Architecture is neither beautiful, nor their Apartments ſpacious, and tho' theſe 2 Things might be ſomething helped by good Furniture and Ornaments, yet that alſo is neglected for theſe 2 Reaſons chiefly. 1. Becauſe all the Palaces of the *Mandarins* belong to the Emperor, and are furniſh'd either by the People or the *Mandarins* themſelves, who are careful to be at as little Charge as they can about them. The *Mandarins*, becauſe their Places are uncertain, and the People, becauſe they have little to ſpare beyond Neceſſaries. 2. Becauſe the Cuſtom of the Country allows not to receive Viſits in any inner Rooms, but only in the *Divan*, which is contrived for that Ceremony. It is a kind of a Banqueting-houſe all open, that hath no Ornaments, but only one ſingle Row of Columns of painted, or varniſh'd Wood, which uphold the Beams and Timber, which bear up the Tyles, and appear naked without any Ceiling to cover them. They have neither Looking glaſſes, Tapeſtry-hangings, nor wrought Chairs. Gildings are not in Faſhion, ſave in the Apartments of the Emperor, or the Princes of the Blood. Their Beds, which among them are one of their principal Ornaments, never come in Sight, and 'twould be a groſs Incivility to carry a Stranger into a Bed-Chamber, even when you ſhew him your Houſe; ſo that all their Magnificence may be reduced to Cabinets, Tables, varniſh'd Skreens, ſome Pictures, and divers Pieces of white Sattin, upon which there is written in a large Character ſome Sentences of Morality, which are hung up and down their Chambers, with ſome Veſſels of Porcelane. Theſe Ornaments, when well managed, are very fine and beautiful.

Their Varniſh how uſed, and what it is.

Varniſh is common all over *China*. It takes all Colours. They mix Flowers of Gold and Silver with it. They paint Men, Mountains, Palaces, Huntings, Birds, Combats, and ſeveral Figures, that make a Baſs-Releif in the Work, and render it extreamly delightful. This Varniſh not only puts a Luſtre and Brightneſs upon the Wood, but preſerves it from Worms. No Moiſture will penetrate it, nor any Scent faſten to it. It is not a Compoſition, as ſome have thought, but a Gum that diſtils from a Tree like Roſin. It reſembles Pitch or Tar, and muſt be mix'd with Oil to make it uſeful; but has no Smell. On Tables and ordinary Chairs they only lay on 2 or 3 Layers of Varniſh, which makes it ſo tranſparent, that all the Veins of the Wood are diſcernible; but if you would hide the Wood wholly, you muſt do it over ſeveral times, till it be nothing but Ice. When the Work is dry, they paint upon it many Figures in Gold, Silver, or any other Colour, and then give it a ſlight Touch of Varniſh to give them a Luſtre and preſerve them. There are very pretty curious Cabinets at *Tankin* thus made; but what is brought to us from *Japan* are no way inferior to the beſt *China* Work.

Porcelane or Earthen Ware of Clays of 3 Colours.

Porcelane is the ordinary Furniture and Ornament of every Houſe. Their Tables, Side-Boards, nay, Kitchin is cumbred with it; for they eat and drink out of it, as the moſt ordinary Veſſels. They have huge Flower-Pots of it, and their Architects ſometimes cover Roofs, and face Marble Buildiugs with it. That which is moſt in Requeſt is of 3 different Colours: 1. Yellow, which tho' the Earth be very fine, appears more coarſe than the other, becauſe that Colour will not admit ſo fine Poliſhing. The Emperor uſes no other in his Palace, and will allow no Body to have any of it; ſo that we may ſay, that the Emperor has the worſt ſort of Porcelane, which as none may have, ſo none need covet. 2. Gray, which has abundance of irregular Lines in it, that croſs one another, as if the Veſſel were ſtriped, or wrought with *Moſaick* Work; then they add a Stration of Varniſh to cover the Inequalities, and by a gentle Fire 'tis made even, and poliſhed as before. Theſe ſort of Veſſels have a particular Beauty, and would be much valued by the Curious. 3. White, with divers Figures of Flowers, Trees and Birds, which they paint in Blue. This is the commoneſt of all, and every Body uſes it, and this is the Sort that is ſent into *Europe*. Of this Sort ſome is but indifferent, and not much better than our Earthen-Ware. Fancy goes a great way in the Value of them; but it is granted on all Hands, that theſe Things muſt concur to make the Work compleat, the Fineneſs and Politeneſs of the Matter, the Painting and Deſign of the Figures, and Faſhion of the Works. The Fineneſs is diſcover'd by the Tranſparency, which is diſcernible chiefly about the Brims, that are thinneſt, and by joining together again, if it be broke, becauſe that is a certain Sign of the Hardneſs, and conſequently of the Fineneſs of the Matter. The Whiteneſs is often confounded with the Varniſh, but as the Skilful may diſcern them aſunder, by carrying them into the Air when they are new, ſo Age will in Time make a plain Diſtinction; for the Varniſh will tarniſh at the long-run, and the Whiteneſs become more apparent. The Smoothneſs and Fineneſs of it conſiſts in 2 Things, the Brightneſs of the Varniſh, and Evenneſs of the Matter. The Varniſh muſt not be too thick, becauſe then there will be a Cruſt upon it, and 'twill ſhine too much. The Matter is perfectly even, when it has not the leaſt Lump, nor any Grain riſing, or Depreſſion to be ſeen, tho' few Veſſels are without ſome of theſe Defects.

1. Yellow.

2. Gray.

3. White.

The Goodneſs of it in what it conſiſts.

Whiteneſs.

The Fineneſs.

The Painting is one of the greateſt Beauties of the Porcelane, and the Colours they commonly uſe are Red and Blue. The Red is ſeldom lively enough, tho' they have lovely Reds, becauſe the Roughneſs of the Matter ſucks in the ſubtle Parts of the Colour, and ſo they uſe Blue moſt, which they have moſt excellent, tho' it is very difficult to hit upon the exact Temperature, that it be neither to pale, deep, intenſe, or too bright. Their Deſigns in Painting are but mean. Their Flowers are pretty well, but their Figures of Men are monſtrous, which tho' Strangers contemn, yet they are more pleaſing to them than the moſt regular Deſigns. They turn their Veſſels very well, of what Size ſoever they be. Their Figures are bold, and well proportion'd. Our skilfulleſt Artiſts cannot out-do them. They ſet a great Value upon all ancient Veſſels, as well as we, but for different Reaſons: We value them becauſe they are fairer, they meerly for their Antiquity. Not but there are very fine ones made at this Day, but the *European* Merchants having no Skill themſelves, and not trading with the Work-men, accept any thing that the *Chineſe* expoſe to Sale, and vend them in the *Indies*. Beſides, no Body takes care to furniſh them with Examples of Draughts, or beſpeak particular Works before-hand. Another Thing which makes the curious Porcelane ſo rare is this: The Emperor has conſtituted in the Province where the Manufacture chiefly, is a particular *Mandarin*, whoſe Care it is to make choice of the faireſt Veſſels for the Court. He buys them at a very reaſonable Rate, which cauſes the Work-men not to do their Beſt; but were there any that would reward them well, we ſhould have as curious Pieces as any Antiquity affords.

Colours.

Ancient Veſſels valued in *China*.

The beſt Porcelane where made.

The beſt Porcelane is made in the Province of *Quamſi*. The Clay is found in one Place, and the Water in another, becauſe 'tis cleaner, clearer, and being impregnated with Salts, is more proper to purifie and refine the Clay, and unite its Parts. The common Opinion, that the Clay is a Compoſition, and that 2 or 300 Years are requiſite to prepare it for the Porcelane, is a Miſtake; for if it were ſo, it would neither be ſo common nor cheap. It is a ſtiff Clay, or rather a kind of ſoft white Stone, that is found in the Quarries of that Province. They firſt waſh it, and purge it from any different Earth, and then bray it to a ſmall Powder, which they continue

The Matter what and how order'd

pounding a long time, becauſe they imagine it makes the Matter more white and tranſparent. Of the Powder they make a Paſte, which they knead and beat a long time likewiſe, that it may become ſofter, and the Water may be incorporated with it. When the Earth is well moulded, they form it with the Wheel into what Figure they pleaſe. As ſoon as their Work pleaſes them, they expoſe it to the Sun Morning and Evening, but take it away again when the Sun grows hot, for fear of warping it: So they dry the Veſſels by Degrees, and paint them, when they judge the Ground proper to receive; and becauſe the Veſſels and Colours have not a ſufficient Luſtre, they make a very fine Ley of the ſame Porcelane, wherewith they waſh the whole Work, to give it a particular Whiteneſs and Luſtre. After all theſe Preparations they put the Veſſels into a Furnace, and bake them with a conſtant, but gentle Fire, which may not break them; and for fear the exterior Air ſhould damage them, they do not draw them out a long while after, when they have acquired a due Conſiſtence, and have been gradually cool'd.

Pictures an Ornament, but not good.

Pictures are another ſort of Ornaments uſed by the *Chineſe* in their Apartments, but they do not excel in this Art, becauſe they are not curious in Perſpective, tho' they apply themſelves diligently to Painting, and take great Delight in it. There are a great Number of Painters among them, of which ſome paint Ceilings only, repreſenting upon the Chamber-Walls an Order of Architecture, without Symmetry, by Bands or Fillets continued all along round at the Bottom and Top of the Wall, and above the Capital of the Column, which contains only ſingle Columns, placed at equal Diſtances, without any Ornament of Architecture. Others only whiten the Chamber, or glew Paper upon it. They hang the Pictures of their Anceſtors up and down their Houſes, with ſome Maps and Pieces of white Sattin, on which are painted Flowers, Fowls, Mountains and Palaces.

Sentences of Morality.

Upon ſome others they write in Capital Letters Sentences of Morality, which explain the Maxims and Rules of perfect Government: Some Chairs, varniſhed Tables, ſome Cabinets, Flower-Pots and Lanthorns of Silk, well order'd, and placed in due Proportion, make a pretty handſome Apartment.

Their Beds.

Their Beds are very fine, tho' few are admitted to ſee them. In Summer they have Taffata Curtains, powder'd with Flowers, Trees and Birds in Gold and Silk Embroidery. This ſort of Work comes from the Province of *Nankim*, and is the fineſt of all the *Chineſe* Furniture. Others have Curtains of the fineſt *Gaze*, which is no Security againſt the Weather, becauſe of its Thinneſs, and only ſerves to defend them againſt the Gnats and Flies, which are intolerable in the Night. In the Winter they uſe coarſe Sattin, wrought with Dragons and other Flowers, according to their Fancies, and the Courterpane is much the ſame. They uſe no Feather-Beds, but thick Cotton Quilts. Their Bedſtead is ordinarily of Joiners Work, beautified with Figures, and ſome of them are very fine and exquiſite. In ſhort, this People keep themſelves within the Bounds of Neceſſity and Convenience, and are little ſolicitous to appear magnificent; for their Houſes are neat and decent, not fine.

Curtains.

Their Gardens not for Ornament or Pleaſure.

In their Gardens they are ſtill more negligent than Houſes, and their Fancies in that Reſpect much differ from ours; for, except in Places ſet apart for the Burial of their Families, they think it Madneſs to leave any Place untill'd, and make it into Alleys and Walks, Beds for Flowers, and Groves of unprofitable Trees. The Laws command, for the common Good, that all Lands be ſown, and they are ſo wedded to their private Intereſt, that they think it Folly to prefer Pleaſure before Profit. And, indeed, the Flowers of the Country are not worth their Care, being none curious; and tho' many of the Flowers which we have in *Europe* are found there, they are ſo ill cultivated, that you can hardly know them again. Nevertheleſs, there are ſome Trees, which, if well order'd, would afford a great Ornament to their Gardens; for, inſtead of Fruit, they are almoſt all the Year long laden with Flowers of a florid Carnation; the Leaves are ſmall, like thoſe of the Elm, the Trunk irregular, the Branches crooked, and Bark ſmooth. If Alleys were made of them, and ſome Orange-Trees mix'd therewith, which might eaſily be done, it would be the moſt pleaſant Thing in the World; but the *Chineſe* are no Walkers, and therefore to them Alleys are uſeleſs. Another Tree very fit for Gardens is that which they call the *Outom-chu*, reſembling the Sycamore, the Leaves are in Diameter between 8 and 9 Inches, faſten'd to a Stalk a Foot long; it is extreamly tufted, and laden with Cluſters of Flowers ſo very thick, that the Sun cannot pierce it with his Rays. The Fruit is very ſmall, tho' the Tree be very large, and is produced after this Manner: About *Auguſt* there ſprings out of the Top of the Branches little Bunches of Leaves different from the other, being whiter and ſofter, tho' as broad. They are inſtead of Flowers, and upon the Borders of each of theſe Leaves grow 3 or 4 ſmall Grains or Kernels, as big as Peaſe, that incloſe a white Subſtance, of a very pleaſant Taſte, like that of an Hazle-nut, not ripe. The Tree and Fruit being both extraordinary, it will be convenient to give you the Figure.

The Outom-chu.

The Fruit of it.

See Fig. 15.

Grotto's and artificial Rocks.

But tho' the *Chineſe* are at little Pains for Ornaments in their Gardens, yet they delight in them, and are at ſome Coſt about them; for they make Grotto's, and raiſe a kind of artificial Rocks in them to imitate Nature, and if beſides theſe they can bring but ſo much Water into their Gardens as to irrigate their Cabbages and liguminous Plants, they are contented. The Emperor has Fountains in his Gardens like ours in *Europe*, but private Perſons ſatisfie themſelves with Ponds and Wells.

Their Magnificence in Publick.

But tho' the *Chineſe* neglect Ornaments in their Houſes and Gardens, according as the Government orders them, yet no People affect to appear magnificent in Publick more than they, and their Laws not only approve of it, but contribute to it upon ſome Occaſions. When Perſons of Quality receive Viſits, or make any, when they go along the Streets, or are upon a Journey, but eſpecially at ſuch time as they are to appear before the Emperor, or make their Addreſs to the Vice-Roys, they are always accompanied with a Train, and Air of Grandeur that fills one with Aſtoniſhment. The *Mandarins* richly habited are carried in a Sedan, gilded and open, born upon the Shoulders of 8 or 16 Perſons, accompanied with all the Officers of their Tribunal, who ſurround them with Umbrella's and other Marks of their Dignity. Some walk before them, 2 and 2 bearing Chains, Faſces, Eſcocheons of varniſhed Wood, upon which you may read in large Gold Characters all the Titles of Honour annexed to their Places of Truſt, together with a Brazen-Baſon, upon which they beat a certain Number of Strokes, according to the Rank they bear in the Province. They continually ſpeak aloud and threaten the People to make Way. Other Officers follow in the ſame Order, and ſometimes 4 or 5 Gentlemen on Horſe-back bring up the Rear. Some *Mandarins* never appear in Publick without a Train of 3 or 4 Score Domeſticks. Such as belong to the Army ride, and if they be of any Note, they appear always at the Head of 25 or 30 Cavaliers. The Princes of the Blood at *Pekin* have always 4 Officers going before them, and then follow themſelves in the midſt of a Throng, that attends them without Order. Their Attendants are not cloathed in Liveries, but are habited according to the Quality of their Maſters, in black Sattin, or painted Linnen. Their Horſes are neither fine, nor well managed, but their Trappings and Harneſs are very magnificent, the Bits, Saddles and Stirrups are gilded, or elſe of Silver. Their Bridles are not made of Leather, but of coarſe pinked Sattin twiſted 3 Fingers broad. Under the Horſe's Neck at the Beginning of the Breaſt-plate hang 2 great Taſſels of curious red Horſe-Hair, which are faſten'd to 2 huge Buttons of Braſs gilded, or waſhed with Silver hung on Rings of the ſame Mettal. This ſhews fine in a Cavalcade, but on a Journey, or in a Race, 'tis cumberſome. Perſons of meaner Quality go always on Horſe-back along the Streets, or in a cloſe Sedan, followed with ſeveral Foot-men. The *Tartarian* Ladies do often make uſe of Calaſhes with 2 Wheels, but they have not the Uſe of the Coach. But the Magnificence of the *Chineſe Mandarins* ſhews it ſelf chiefly in their Journeys by Water, the prodigious Bigneſs of their Barges, almoſt equal to their Ships, the Finery, Carving, Painting, and Gilding of their Apartments, the great Number of Officers and Seamen that ſerve on Board, the different Badges of their Dignities every where diſplay'd, their Arms, Flags, Streamers, and the like, make a glorious Show, and out-do the *Europeans*, who never appear worſe than in their Travels.

Their Feasts, and their pompous Celebration of them.

Vill Lant-horns.

Middle-bird Lant-horns.

Bonfires and fire Works.

Several Organs of the original of the Feast of Lanthorns

Their Feasts, and their pompous Celebration of them.

Their ſolemn Feaſts alſo they celebrate with great Pomp and Charges. The firſt 3 Days in the Year are ſpent in Rejoicing thro' the whole Empire. They array themſelves moſt magnificently, viſit one another and ſend Preſents to all their Friends, and all that they have any Reſpect for. Gaming, Feaſting and Comedies take up every Body's Time, and 10 or 12 Days before there is great Robbing to furniſh themſelves with Money for theſe Diverſions. Their greateſt Feſtival is on the 15th Day of the ſame Month, and is called, *The Feaſt of Lanthorns*, becauſe they hang them up in the Streets and in their Houſes in great Numbers, perhaps, near 200 Millions: A Cuſtom, tho' fooliſh, yet is become the Delight not only of the People, but Perſons of Quality.

They ſet up their Day-Lanthorns of all Prices, ſome of them coſt 2000 Crowns, and ſome of the Nobility retrench every Year ſomething from their Tables to appear magnificent in Lanthorns. The Materials of them are not dear, but the Gilding, Sculpture, Painting, Silk and Varniſh, with the Bigneſs is; for there are ſome of them to be ſeen upward of 27 Foot Diameter, inſomuch, that you may eat, lie, receive Viſits, act Comedies, and dance Balls in a Lanthorn. A Bonfire would be little enough to enlighten them, but becauſe that would be in convenient, they they ſet up a great Number of Lamps, or Wax-Candles in them, which make a pretty Show at a Diſtance. There are alſo repreſented divers Shows to gratifie the Vulgar, in which certain Perſons, concealed by the Help of ſeveral little Machines, make Puppets to play, of the Bigneſs of Men and Women, the Actions of which are ſo natural, that even thoſe who are acquainted with the Trick, are apt to be miſtaken. The middle ſized Lanthorns are moſt numerous, which alſo are magnificent. They are compoſed of 6 Panes, 4 Foot high and a Foot and half broad, and make an Hexagon. They are made of varniſhed Wood, adorned with ſome Gildings, and are hanged in the Inſide with fine tranſparent Silk, painted with Flowers, Trees, Rocks, and ſometimes the Figures of Men. The Painting is curious, and Colours lively, and when the Candles are lighted, the Splendor renders the Works altogether agreeable. They are cloſed a-top by 6 carved Figures, which make the Crown of it. There is hung round about broad Strings of Sattin of all Colours, like Ribbands, with divers other Silken-Ornaments, which fall upon the Angles without hiding any thing of the Light, or Picture. This Feaſt of Lanthorns is alſo celebrated with Bonfires, kindled in all Quarters of the City, and Fire-Works, the fineſt in the World, repreſenting the Figures of Trees, with their Leaves and Fruit ſo lively, that one would imagine them natural, when they are flying in the Air in the midſt of the Flames. Beſides, every Body lets off Squibs and Crackers. The Original of this Feaſt is very obſcure. The Vulgar aſcribe it to an Accident that happened to a famous *Mandarin*, which was this: His Daughter walking upon the Banks of a River, fell into it, and was drown'd. The afflicted Father, with his Family, ran to the Place, and the better to find her, cauſed a great Company of Lanthorns to be lighted. All the Inhabitants of the Place throng'd after him with Torches, and tho' they ſought all the Night in vain, yet it much pleaſed the *Mandarin* to ſee the Readineſs of the People to aſſiſt and condole with him. The next Year the People went again with their Lanthorns, and made Fires on the Shore, and ſo by Degrees it became an Annual Cuſtom. But this ſeems improbable to ſome, that ſo ſmall a Loſs ſhould have ſuch a mighty Influence upon the whole Empire. Some *Chineſe* Doctors pretend the Original of it to be from this Story: *China*, they ſay, was govern'd 3583 Years ago by an Emperor named *Ki*, the laſt of the firſt Race. He was endued with all the Qualities that could conſtitute an Hero, but the Love of Women, and his other Debaucheries, made him a Monſter. Among many other Extravagancies which he was guilty of, they ſay, he exhauſted all his Treaſures in building a Tower of precious Stones in Memory of one of his Concubines, and fill'd a Pool with Wine for himſelf and 3000 young Men to bathe in after a laſcivious Manner. The Wiſeſt of his Court obſerving theſe Diſorders, offer'd him ſome Advice, according to the Cuſtom, but he put them to Death. At length he committed a Fact, that conſummated the Deſtruction of himſelf and Family. One Day, in the Heat of his Debaucheries, he complain'd to the Queen he dotted on, that Life was too ſhort, and ſaid to her, 'I ſhould be content to make you eternally happy; but in a few Years, nay, perhaps, in a few Days Death will put an End to our Pleaſures. 'True, my Lord, ſaid this fooliſh Princeſs, you cannot make your Life eternal, but you may forget the Brevity of it, and live as tho' you ſhould never die. 'Tis theſe Changes of Day and Night that are always reminding us of our Mortality: Build you up a new Heaven, ever ſerene, ever enlighten'd, and always favourable to your Deſires: Erect a great and magnificent Palace, ſhut it up on all Hands from the Light of the Sun, and hang up all round it magnificent Lanthorns, whoſe conſtant Splendor may be preferable to the Sun. 'We will both of us go into this new World, and being all Things to each other, forget the Viciſſitudes of Days and Nights. The Emperor, either to deceive himſelf or pleaſe his Queen, built this inchanted Caſtle, and there immured her and himſelf. When he had ſpent ſeveral Months immerſed in Delights, the People, not able to endure ſuch Exceſſes, obliged one of the wiſeſt Kings of the Empire to declare againſt him. As ſoon as the Emperor heard of this Conſpiracy, he appear'd at the Head of an Army to puniſh this Rebel, but being abandon'd by his People, he was forced to betake himſelf to Flight, and wander'd for 3 Years from Province to Province till he died. In the mean time, the People deſtroy'd his Palace, and to preſerve the Memory of ſo unworthy an Action to Poſterity, they hung up Lanthorns in every Part of the City. This Cuſtom became Anniverſary, and ever ſince has been the moſt conſiderable Feſtival of the Empire. It is ſolemnized at *Hamcheu* with more Solemnity than any where elſe. 'Tis ſaid, that the Illuminations are ſo ſplendid there, that an Emperor, not daring to leave his Court openly, committed himſelf, Queen, and ſeveral Princes of his Family, to a Magician, who carried them in a Cloud, and gave them the Sight of it in a Trice, no Body knowing it; but however that be, certain it is, that they take huge Delight in publick Illuminations, and one of their Kings, who for his good Qualities was become their Darling, to demonſtrate his reciprocal Affection to them, invented ſuch like Feaſts. Once a Year for 8 Nights together he open'd his Palace, which was illuminated with abundance of Lanthorns and Fire-Works. He appear'd in Perſon without any Guards, and would not ſuffer them to diſtinguiſh him from others, to the End that every one might enjoy the Liberty of ſpeaking, playing and hearing divers Conſorts of Muſick there perform'd. This Action hath render'd this Prince renown'd in the *Chineſe* Hiſtory, and might be a truer Cauſe of the Feaſt of Lanthorns than any of the 2 former.

Small Lanthorns.

Middle ſized Lanthorns.

Bonfires and fine Fire-Works.

Several Opinions of the Original of the Feaſt of Lanthorns.

But the greateſt Piece of *Chineſe* Magnificence is ſhewn at the Publick Appearances of the Emperor. He never ſhews himſelf openly, but, like a Deity, he is environ'd with all the Splendor that may attract the Reſpect and Veneration of the People. Anciently they rarely ſhew'd themſelves; but the *Tartars*, who reign at preſent, are much more popular. The preſent Emperor, tho' he obſerves a *Medium* to ſatisfie both the *Tartars* and *Chineſe*, and appears not ſo frequently as his Predeceſſor, yet he never marches but in the Head or Midſt of an Army; for he is accompanied with all the Lords of his Court. There is nothing but Silks, Gildings and precious Stones: Every thing is ſplendid and pompous. Their Arms, Horſes Harneſs, Umbrella's, Streamers, and a Thouſand other Badges of Royal Dignity, every where ſparkle at that Time: Yet there is nothing more regular than this Croud; every one knows his reſpective Rank, and the Head of that Man, or at leaſt his Fortune lies at Stake, who ſhall preſume indiſcreetly to diſturb the Order of his March.

The Publick Appearance of the Emperor.

When he takes his Progreſs to viſit the Provinces of the Empire, he commonly rides Poſt, attended with ſome few Guards, and ſome truſty Officers; but in all the Cities upon the Road, and in all the difficult Paſſages, there are ſo many Troops drawn up in Battalia, that he ſeems to ride thro' an Army. He goes into *Tartary* ſometimes to divert himſelf with Hunting, but is always accompanied with ſuch Numbers of People, as if he went to conquer a new Empire, *viz.* no leſs than 40000 Men, who endure a great deal of Hardſhip, whether the Weather be hot or cold, becauſe they encamp in a very inconvenient Manner, and loſe more Horſes than in a pitched Battle;

His Viſiting the Provinces, or Hunting.

tle; but he counts the Deſtruction of 10000 Horſes nothing on theſe Occaſions. At theſe Times he is addreſs'd by 30 or 40 petty *Tartarian* Kings, who come to pay him Tribute. Some of them bear the Name of *Chams*, or Emperors, but are all of them, juſt as the *Mandarins* of the firſt Order, his Penſioners. He gives them his Daughters in Marriage, and to make them ſure to his Intereſt, he declares himſelf their Protector againſt the Weſtern *Tartars*, who often annoy them, and ſometimes bring Forces great enough to attack *China* it ſelf. When theſe petty Sovereigns appear in the Emperor's Camp, the Court is wonderful ſumptuous, that theſe Barbarians may be poſſeſs'd with ſome Idea of the Greatneſs and Power of *China*. The Train, Habit and Tents of the *Maddarins* are rich and glorious to Exceſs.

Petty Kings.

But the moſt pompous March of the Emperor is when he goes to the Temple to offer Sacrifices to Heaven, which having ſomething odd in it, deſerves to be particularly ſet down. This magnificent Ceremony begins with 24 Trumpets, adorned with Golden Coronets, with 24 Drums, ranked each of them into 2 Files, 24 Men armed with Truncheons varniſhed and gilt, 6 or 8 Foot long, follow them in the ſame Order and Rank. After them march 100 Soldiers, bearing noble Halbards, armed with a Semi-circle of Iron in Form of a Creſcent, followed with 100 Serjeants and Maces, and 2 Officers, whoſe Pikes are painted with red Varniſh in different Places with Flowers and Golden Figures. Next after this firſt File are born 400 Lanthorns curiouſly wrought; 400 Flambeau's of gilded Wood, that flame like our Torches; 200 Lances, charged with huge Tufts of Silk; 24 Banners, whereon are painted the Signs of the *Zodiack*, and 56 others, that repreſent the Coeleſtial Conſtellations. There are alſo to be ſeen 200 Fans with Figures of Dragons and other Animals; 24 Umbrella's ſtill more magnificent, and a Livery-Cubbard born by the Officers of the Palace, whoſe Utenſils are of Gold. All theſe go before the Emperor, who at length appears on Horſe-back, glorioufly attired, whoſe Harneſs is cover'd with Gold and precious Stones, with 100 Life-Guards-Men and Pages of Honour, who bear up before him an Umbrella that ſhades him and his Horſe, and dazles the Sight with all the Ornaments, that Man can poſſibly invent to enrich it. The Emperor is follow'd by all the Princes of the Blood, by the *Mandarins* of the firſt Order and Vice-Roys, with the principal Lords of the Court in all their Formalities. Immediately after comes 500 young Gentlemen of Quality, which may be called, *The Band of Gentlemen-Penſioners*, attended by 1000 Foot-men, array'd in Carnation Silk, border'd with Flowers, ſtitch'd with little Stars in Gold and Silver. This is properly the King's Houſhold. After this Retinue march 36 Men, who bear an open Sedan, that reſembles a Triumphant Chariot; 120 Bearers ſupport another cloſe one, ſo big, that one would take it for an entire Apartment. Afterwards there appear 4 Chariots, 2 drawn by Elephants, and the other by Horſes. Each Sedan or Chariot are guarded with a Company of 50 Men. The Drivers are richly apparell'd, and the Elephants, as well as the Horſes, are cover'd with embroider'd Houſings. Then 2000 *Mandarin* Officers, and 2000 Officers of the Army, all moſt richly cloathed, marching in Order, and according to their Cuſtom, with a Gravity that commands Reſpect, bring up the Rear of this ſtately Show. The Emperor is at little Charges for all this Pomp, but whenever he pleaſes to go to offer Sacrifice they are all in a Readineſs to attend him.

A Triumphal Chariot.

His going to the Temple.

The Emperor's Attire.

But yet the Emperor of *China* never appears greater, than when he gives Audience to Foreign Ambaſſadors: The prodigious Number of Troops at that Time in Arms, the incredible Number of *Mandarins* in their Formalities, diſtinguiſh'd according to their Ranks and Qualities, placed in Order, without Confuſion, without Noiſe, without Diſturbance, in ſuch Order as they would appear in the Temples of their Gods. The Miniſters of State, the Chief-Juſtices of all the Sovereign Courts, the petty Kings, the Princes of the Blood, the Heirs of the Crown, more humble before this Prince, than they are exalted before the People; the Emperor himſelf ſeated on a Throne, who beholds proſtrate at his Feet all this Croud of Adorers. All this bears an Air of Sovereignty and Grandeur in it, that is to be found no where but in *China*, becauſe Chriſtian Humility forbids all *European* Kings ſo much as to deſire it; wherefore tho' the *Chineſe* ſurpaſs us in *Europe* in common and publick Actions, yet we excel them in Domeſtick: Our Apartments are incomparably richer, the Retinue of our Nobles more decently cloathed, tho' not ſo numerous, their Equipage more commodious, their Tables better ſerved, and Expences more conſtant and regular.

The Emperor's Appearance at Audience.

LETTER VII.

Written to the Archbiſhop of Rheims, *Firſt Peer of* France; *Of the Language, Characters, Books, and Morality of the* Chineſe.

LE *Comte*, knowing that a Diſcourſe about Learning would be moſt ſuitable to a Learned Perſon, if not to inſtruct, yet to inform his Curioſity, ſends this Account of the Language, Characters, Books and Morality of the *Chineſe* to this Great Prelate. And becauſe their chief Learning lies in their Writing and Language, he begins with that, and ſays:

Their Writing and Language.

The *Chineſe* Language hath no Analogy with any of thoſe that are in Vogue in the World, no Affinity with them, either in the Sound and Pronunciation of the Words, or in diſpoſing and ranging the Conceptions. Every thing is myſterious in it, and, which is wonderful, all the Words of it may be learn'd in 2 Hours, altho' it requires ſeveral Years Study to ſpeak it well. One may be able to read all their Books, and underſtand them perfectly, and yet if another read them, he ſhall not apprehend what they mean. A Doctor may compoſe a Book with all the Elaborateneſs poſſible, and this very ſame Doctor not know enough of it to explain himſelf in ordinary Converſation. A Mute inſtructed in the Characters, may with his Fingers, without Writing, ſpeak as faſt as his Auditors can conveniently hear him. In fine, the ſelf ſame Words do ſignifie different Things, and if 2 Perſons pronounce them, it may be a Compliment in the Mouth of the one, and foul Language in the Mouth of the other. The Language contains no more than 330 Words, or thereabouts, all of one Syllable, or at leaſt ſeeming to be ſo, by reaſon of their quick Pronunciation. To the Curious it will be a Satisfaction to ſee a whole Language contain'd in one ſingle Page, and therefore he gives us a particular Enumeration of them Alphabetically. Theſe few Words could not be ſufficient to expreſs a Man's ſelf aptly upon all Subjects, to ſupply Words for Arts and Sciences, and to maintain Eloquence in Diſcourſe or Writing, if they had not an Art to multiply the Senſe without multiplying the Words. This Art conſiſts chiefly in the Accents they give them; for the ſame Word, pronounced with a ſtronger or weaker Inflexion of the Voice, hath divers Significations; ſo that the *Chineſe* Language, when it is ſpoken exactly, is a kind of Muſick, and contains a real Harmony, which compoſeth the Eſſence and particular Character of it.

A Table of all their Words.

See Fig. V.

They give 5 Tones to each Word, according to the Senſe one means to give it, the firſt is an uniform Pronunciation, like the firſt Note of our Muſick; the 2d raiſeth the Voice notably higher; the 3d is very acute;

Every Word hath 5 Tones.

acute; the 4th deſcends on a ſudden to a grave Tone, and the 5th paſſes to a more deep Note, like hollowing or framing a kind of Baſe; and thus by a different Pronunciation they make of 333 Words 1665; beſides, they uſually pronounce each Word ſmoothly or aſperately, and ſo encreaſe their Language almoſt half. Sometimes they join the Monoſyllables together, as we put our Letters together, and ſo compoſe different Words; nay, ſometimes a whole Phraſe, according as it follows or goes before, hath a quite different Senſe; and ſo it plainly appears, that this Tongue, which is ſo poor and ſeemingly barren, is made rich and copious in furniſhing us with Variety of Words. All theſe Things render their Language exceeding difficult to Strangers, ſo that they had better drudge in the Mines, than apply themſelves to learn it.

Their particular Characters.

Beſides the Words, the Tongue hath particular Characters, that diſtinguiſh it from all others. They do not ſpeak as they write, and the moſt quaint Diſcourſe is barbarous, harſh and unpleaſant, when printed. If you would write well, you muſt uſe more proper Terms, more noble Expreſſions, more particular Turns, than do occur in common Diſcourſe, and which are only proper for Writing, the Style of which is more different from the common Elocution, than our moſt obſcure *Latin* Poets are from the ſmoothneſt and moſt moral Proſe.

Their Eloquence.

Further, their Eloquence does not conſiſt in a certain Diſpoſition of Periods, ſuch as Orators affect, ſtuffed with Words inſtead of Matter, but their Eloquence conſiſts in their lively Expreſſions, noble Metaphors, bold but neat Compariſons, and abundance of Sentences and Paſſages taken from the Ancients, which amongſt them are of great Moment. They deliver a great many Things in a few Words, their Style is cloſe and myſterious, obſcure and not continued, ſeldom uſing any Particles, that illuſterate and connect a Diſcourſe. They ſeem to ſpeak ſometimes, as if they would not be underſtood, and at other Times they expect you ſhould underſtand many Things, which they never mention, ſo much Senſe and Thought do they include in a few Words. The Sound of their Words is pretty pleaſant to the Ears, eſpecially in the Province of *Nankim*, where the Accent is more correct, than in any other Part, for there many pronounce the different Tones ſo fine and delicately, that a Stranger hath much ado to perceive it. They never uſe *R*, which much mollifies their Language; yet moſt of the *Chineſe*, who pretend to ſpeak very correctly, drawl their Words ſo intolerably, that they ſound very unmuſically, and appear like Sentences. They have a Termination, which we expreſs commonly by a double *ll*, and in their Language often occurs, which ſound ſo uncouth and unnatural, that that is enough to ſpoil it alone, and yet the *Chineſe* think theſe Gutturals a Grace to their Tongue, and that 'twould degenerate into an effeminate Softeneſs without them. They want many Sounds, which we expreſs by our Letters, *A*, *B*, *D*, *O*, *R*, *X*, *Z*; nor are they able to pronounce them exactly. All this muſt be underſtood of the *Mandarin* Language, that is currant all over the Empire, and is unuſually underſtood; for the common People about *Fokien* have a particular Language, which has no Affinity with it.

The fineſt Pronunciation.

The Character of the *Chineſe*.

The *Chineſe* Character is as ſingular as their Tongue. They have no Alphabet as we have, that contains the Elements and Principles of Words; nay, they cannot imagine how we are able with ſo ſmall a Number of Figures, each of which ſignifies nothing to expreſs all our Conceptions, and write ſuch an infinite Number of Books, as to ſtock whole Libraries; and tho' this Cuſtom has obtain'd among ſo many Nations, it is a Myſtery to them, and thought impoſſible. Inſtead of Characters at the Beginning of their Monarchy, they uſed Hieroglyphicks, and painted rather than wrote, endeavouring to expreſs the Idea's of Things by the natural Images of them. As for Example; To write a Bird, they painted its Figure; to ſignifie a Foreſt, they repreſented a great Company of Trees; a Circle ſignified the Sun, and a Creſcent the Moon. This ſort of Writing was not only imperfect, but very inconvenient; for, beſides that their Thoughts were expreſs'd by Halves, and it was utterly impoſſible to avoid Miſtakes, they needed whole Volumes to expreſs a few Things, becauſe their Painting took up abundance of Room. Theſe Things induced the *Chineſe* to change their way of Writing, by little and little, and compoſe more ſimple Figures tho' leſs natural; they likewiſe invented many Characters to expreſs ſome Things that Painting could not, as the Voice, Smell, Senſes, Conceptions, Paſſions, and 1000 other Things, that have neither Body nor Figure: Of ſimple Draughts they after made compound ones, and ſo multiplied their Characters in *infinitum*, becauſe they deſtined one or more of them to each particular Word. This Abundance of Letters is the Cauſe of the *Chineſe* Ignorance, becauſe they muſt ſpend all their Days in ſtudying to read only, and can have no Leiſure to regard the Sciences: And, indeed, they eſteem it ſufficient Learning if they can but read; their moſt Learned Doctors by their indefatigable Study not being able to underſtand them all, which are commonly reckon'd 24000, of which he muſt be a very Learned Man that can read 15 or 20. Among theſe Characters there are ſome of divers Sorts. The firſt are almoſt out of Uſe, and are now preſerved out of Veneration to Antiquity. The ſecond Sort is not ſo ancient by far, and takes place only in Publick Inſcriptions. When there is Occaſion for them they conſult Books, and by the Help of a Dictionary it is eaſie to decypher them. The third Sort is much more regular and fair, and ſerve for Impreſſions and ordinary Writing; but the Strokes or Draughts of them being very exact and curious, there needs a conſiderable Time to write them, and for that Reaſon they have contrived a 4th kind of Writing, the Strokes whereof being more join'd, and leſs diſtinguiſh'd one from another, facilitate their writing faſter, and for that Reaſon they are called, *Valuable Letters*. Theſe 3 laſt Characters reſemble one another, and anſwer our Capital Letters both in Printing, and Writing. Inſtead of a Pen they uſe a Pencil which they hold directly up, as if the Paper were to be prick'd. The *Chineſe* always write from the Top to the Bottom, and begin their firſt Letters where ours end, and to read their Books you muſt begin at the laſt Leaf. Their Paper being thin, and almoſt tranſparent, they double it, that the Letters may not run one into another, when they write on the Back-ſide; but they double their Leaves ſo even, that one can hardly perceive it. Every Body among them is ambitious to write fair, and before one may ſtand candidate for the firſt Degree of Learning, he muſt give a Specimen of his Ability to write well. A Letter ill cut in a Compoſition Work, or Petition, is a conſiderable Fault, and becauſe one Stroke often alters the whole Senſe, there needs no more to make one upon Examination to loſe the Degree of Doctor, and ſo ruine his Fortune; ſo that all the *Mandarins* write fair, and the Emperor himſelf excels in that, as in all other Things.

Hieroglyphicks.

Their Characters invented.

Reading their greateſt Learning

Their ſeveral Characters.

Their Writing.

Their Paper

Printing, which is an Art yet in its Infancy in *Europe*, has been uſed in *China* to all Antiquity, but it is different from ours; for they find it more eaſie and leſs chargeable, by reaſon of the prodigious Number of their Characters, to engrave them upon Wooden-Boards after this Manner: When any one intends to print a Book, he gets it written over fairly by a Maſter-Scribe, and then the Engraver glews each Leaf upon an even ſmooth Table, and with his Graving-Tool draws the Characters ſo exactly, that they have a perfect Reſemblance with the Original; ſo that the Impreſſion is good or bad, according to the Care or Negligence of the Scribe; for the Skill of the Engraver is ſo great, and they are ſo exact in their Work, that if the Leaf be exactly written, 'tis rare that the Engraver will commit any Fault, and when he has done, one cannot diſtinguiſh the Print from the Writing, if the Ink and Paper be the ſame. It muſt be confeſs'd, that this ſort of Printing is ſomewhat incommodious, becauſe there muſt be as many Boards as Leaves, ſo that an indifferent big Chamber will hardly hold all the Tables that are uſed in the Impreſſion of a large Volume; but then when the Engraving is finiſh'd, one is not obliged at the ſame time to draw off all the Copies, but may print them as he can put them off; and if there be Occaſion afterward for any more Impreſſions, the Wooden-Plates are eaſily run over.

Printing ancient in *China*, and how perform'd.

The Paper of *China* is ſo fine, that ſome imagine it to be made of Silk or Cotton, but by Experience neither of them will make a fit Paſte, ſuch as is requiſite for Leaves. All the Paper of *China* is made of the Bark or inward Rind of the *Bambou*, which is a Tree more even, thicker, ſtraiter and ſtronger, than our Elder. They throw away the firſt Rind, as too hard; the undermoſt being whiter and ſofter, they

Their Paper how made.

they pound in fair Water, and ſo compoſe the Matter for the Paper, which they take up with Frames or Moulds, as long and broad as they think fit, as we do here. They'll make ſome Leaves 10 or 12 Foot long, and their Paper is as white, and much more even and ſmooth than ours. They waſh it over with Allom, which does not only hinder it from Sinking, but renders it alſo ſo ſhining, that it appears as waſh'd over with Silver, or impregnated with Varniſh. It is extream ſmooth under the Pen, and eſpecially under the Pencil, which requires an even Ground. But for all this, the *China* Paper is not laſting: It is ſubject to fret; any Moiſture or Duſt ſticks to it, and being made of the Bark of a Tree, infallibly breeds Worms, if Care be not taken to beat the Books now and then, and expoſe them to the Sun; ſo that the *Chineſe* cannot preſerve ancient *MSS.* as we do in *Europe*, but are continually renewing their Libraries, which are therefore only ancient, becauſe they contain Authentick Copies of ancient Originals.

The *Chineſe* Ink.

Their Ink is moſt excellent, but that of *Nankim* is moſt valued. They make it up into Sticks ſo curiouſly, and ſo ſweet ſcented, that one would be tempted to keep ſome of them, tho' they ſhould be of no Uſe at all. The Sticks are ſolid, and reſemble our Mineral Colours, but much lighter. They make them into all Figures, but moſt uſually 4 ſquare, yet not ſo broad as long, and half an Inch thick. Some of them are gilded with Figures of Dragons, Birds and Flowers, and ſo neatly wrought in Moulds, contrived on purpoſe, that nothing finer can be made on Metal.

How 'tis made.

When one has a mind to write, they infuſe one End of the Stick in Water, which they rub gently upon a ſmooth Piece of Marble, and in a Moment, according as they rub, there is produced a Liquor more or leſs black, wherein they dip the Point of the Pencil they write with, and altho' by reaſon of the Fineneſs of the Paper it ſinks, yet it never extends farther than the Pencil; ſo that the Letters are exactly terminated, how groſs ſoever the Strokes be.

The Excellency of it.

It is admirable good for deſigning, and admits of all the Diminutions one can give it. Many Things cannot be drawn to the Life without it. It is made of Lamp Black, drawn from divers Matters, but the beſt is made of Hogs-Greaſe. They mix a ſort of Oil with it to make it ſweeter, and pleaſant Odors to ſuppreſs the Scent of the Greaſe and Oil. When they have brought it to a Conſiſtence, they make of the Paſte little Lozenges, which they caſt in a Mould. It is heavy at firſt, but being dry'd, loſes almoſt half its Weight; a Pound will not weigh above 8 or 10 Ounces.

Their Binding of Books

The Binding of Books in *China* is alſo very pretty and curious, tho' it falls ſhort of ours. They neither gild, nor colour them on the Edges. The ordinary Books are cover'd with a gray Paſteboard, handſome enough. They bind others according as they pleaſe, in fine Sattin, or a kind of flower'd Taffata, made for that Purpoſe, and very cheap. They cover their fineſt Books with rich Silk, flower'd with Gold and Silver. The Form of Binding is always the ſame, and differs only in the Matter, which is more or leſs rich. But the Subject of their Books is more noble.

Their Books the Firſt.

The firſt Hiſtory that was in the World, was without all Controverſie, the Book of *Geneſis*, but it muſt be granted, that of all Books which have reach'd our Knowledge, the Books of *China* were the firſt that have been publiſhed. The *Chineſe* call them by way of Excellency, *The Five Volumes*, and they hold the Doctrine contained in them moſt Sacred. It is about 4300 Years ſince the Emperor *Hoamti* having invented their Characters, compoſed Treatiſes of Aſtronomy, Arithmetick and Medicine.

A Collection of their Laws.

Near 300 Years after they made a Collection of all their Ordinances, and wrote the Hiſtory of King *Tao*, a Prince commendable for his Piety, Prudence, and the mighty Care he took to ſettle a good Form of Government in the State. *Chun* and *Iſu*, his Succeſſors, were no leſs famous; for they conſtituted ſuch Ceremonies as were neceſſary to be uſed in ſacrificing to the Supreme God of Heaven, and the inferior Spirits that preſide over Rivers and Mountains: They divided the Empire into Provinces, and fixed their different Situations according to the Conſtellations of the Heavens.

Taxes appointed.

They appointed ſuch Taxes as the State Affairs required of the People to pay, and made many wholſome and proper Rules to regulate Mens Manners, and eſtabliſh the Kingdom in Order and Peace. All theſe Things were written, and Poſterity have as much Reverence to them, as if they had been delivered by an Oracle. But ſince nothing can be made perfect at firſt by Man, ſome Things will eſcape the Notice of the firſt Law-givers, whereupon the Emperors, who reign'd 1776 Years before our Saviour, upon mature Deliberation, and by the prudent Advice and Councel of their Miniſters, found it needful to make ſome Additions of new Laws.

They report of *Caotſon*, a Prince whoſe natural Endowments were much enobled by his Piety and Zeal for Religion, ſaw in a Dream the Figure of a Man coming from Heaven, and being awaked, he retain'd ſuch a lively Impreſs upon his Mind, that 'twas not a meer Fiction, that he cauſed Search to be made for ſuch a Perſon, as his Image repreſented, and after long Search found him among the Maſons. As ſoon as this Man applied himſelf to the Government, he ſeem'd to act by a Divine Inſpiration, and made many excellent Regulations, which render'd the former Conſtitutions much more perfect, which yet were again augmented in the following Reigns.

The Five Books of their Laws, and their Names.

Theſe the *Chineſe* collected altogether, and made up 5 Books of them. The 1ſt of them they call *Chukim*, which contains Politick Conſtitutions, and is of as great Authority among them, as *Moſes* and the Prophets are among the *Jews*, as to what concerns the Worſhip of God, and Form of Religion. The 2d Book much reverenced by the *Chineſe* for its Antiquity, is called *Chikim*, and is a long Series and Continuation of Odes and Poems, compoſed under the Reign of the 3d Race. In it are deſcribed the Manners and Cuſtoms of the Petty Kings of *China*, who governed the Provinces under the Emperor.

Confucius commends them.

Confucius mentions them with much Reſpect, which makes us ſuppoſe they have by length of Time been much corrupted, ſince they now contain in them Things very Ridiculous, not to ſay Impious. The 3d Book, called *Ukim*, is made up only of certain Poems made by *Tohi*, Founder of the Monarchy. They are ſo very obſcure and intricate, that notwithſtanding all their Pains to put a good Conſtruction on them, they confeſs them not to be intelligible. Yet their Obſcurities hath given Occaſion to many Superſtitions. The *Bonzes* make them ſay what they pleaſe, and ſo render them an inexhauſtible Fountain of Fables and Chymera's which they make uſe of to cauſe the People to pin their Faith upon their Sleeves.

Some collected by him.

The 4th Book, named *Tchum-Siou*, contains the Hiſtory of ſeveral Princes, their Vertues, Vices, and Maxims of Government, that have been collected into one Body by *Confucius*, commented upon by his Diſciples. The 5th Book treats of Cuſtoms and Ceremonies, their Temples, and Sacred Veſſels, the Duties of Children to their Parents, and Wives to their Husbands: Rules of real Friendſhip, Civilities at Feaſts, Hoſpitality, Muſick and War; of Funeral Honours, and a Thouſand other Things, that regarded Society. The 5 Books are very ancient, and all the others that have any Authority in the Empire, are nothing but Copies or Interpretations of them.

Confucius comments on them.

Among abundance of Authors, who have beſtow'd their Pains that way, none was ſo eminent and conſpicuous as *Confucius*, whoſe Comments on theſe ancient Laws, contain'd in 4 Books, are had in great Eſteem, and are look'd upon as the Rule of perfect Government; for there he treats of the great Art of Reigning, of Mediocrity, Vertues and Vices; of the Nature of Things, and of common Duties; but the laſt Tome is ſuppoſed to be written by *Mencius*, his Scholar, whoſe Life was indeed leſs regular than his Maſter's, but his Style is more eloquent and pleaſant.

Other Books.

Beſides theſe 9 Books there are ſome others much in Vogue, as the Univerſal Hiſtory of the Empire, Books about the Education of Children, of Obedience and Loyalty, aſcrib'd to *Confucius*; Diſcourſes of Medicine, Husbandry, Plants, of the Military Art, of the Liberal and Mechanick Arts, of particular Hiſtories, Aſtronomy, Philoſophy, and ſeveral other Parts of Mathematicks. They have their Romances, Comedies, and what is to be rank'd with them; abundance of Treatiſes compoſed by the *Bonzes* concerning the Worſhip of their Gods, which they alter, diminiſh or encreaſe, according as they find neceſſary to inveagle the People.

Their Libraries deſtroy'd.

Of all theſe Books they had compiled very numerous Libraries of above 40000 Volumes at vaſt Pains and Charge, but they were almoſt all deſtroy'd by the Tyrannical Order of one Emperor, called *Chihoamti*. He lived about 300 Years after the Death of *Confucius*, and about 200 Years before the Birth of

our

our Saviour. He was more famous than all his Predeceſſors for his Valour and Military Science, and more eſpecially for building the prodigious Wall to ſecure his Territories from the Irruptions of the *Tartars*. This Prince reſolved to extinguiſh all Sciences, by putting the Doctors of them to Death, and burning all their Books, except ſuch as treated of Agriculture, Medicine and Sorcery. This Conflagration had turn'd the moſt polite and accompliſh'd State in the World into Barbariſm and Ignorance, had not the Love of Sciences revived after the Tyrant's Death, and the ſucceeding Emperor order'd the old Men, who, according to Cuſtom, had in their Youth learn'd almoſt all theſe Books by Heart, to write them faithfully over. Some Copies they found in Tombs, others in the Holes of Walls, which the more Zealous had conceal'd in the late Perſecution; but they had ſuffer'd much Damage by Moiſture and Worms, but yet very ſerviceable to help the Memories of the Aged, and trim up an Edition, which for all their Care and Induſtry, could not eſcape many Defects and Breaks, which are, indeed, made up, but by ſeveral Pieces, which were not in the Originals. The *Chineſe* themſelves own this, but they are ſo ſuperſtitious in preſerving what was handed down to them from Antiquity, that they pay it a Reverence even to the Fault.

The Books reſtored.

Confucius being the chief Philoſopher and Interpreter of the Law of the *Chineſe*, it would be a great Defect in the *Chineſe* Hiſtory, if I ſhould not give a large Account of him. He is the moſt pure Sourſe of their Doctrine and Law-giver, and tho' he was never their King, yet during his Life he govern'd a great part of *China*, and ſince his Death he hath had a greater Share in the Government by his Maxims of State and fair Examples, than any other. His Life is written by many, and what is commonly believ'd is as follows.

Confucius.

His Birth.

Confucius, whom the *Chineſe* call *Coum-tſe*, was born in the Province of *Quamtum*, in the 37th Year of the Reign of the Emperor *Kim*, 483 Years before *Chriſt*'s Incarnation. His Father died before he was born, and therefore he was called *Tſe*, a Child of Sorrow. He was deſcended from *Tiny*, the 27th Emperor of the 2d Race, an Illuſtrious Family, which by his Life he much enobled; for *China* at this Day acknowledges no true Nobility but in this Family, from which the Sovereigns own they have received their Laws, and the People their Happineſs.

His Childhood.

He did not proceed in the ordinary Degrees of his Childhood; he ſeem'd rational a great deal ſooner than other Men; he took no Delight in any Childiſh Sports or Toys, but had a grave and ſerious Deportment, and ſhew'd an unbyaſs'd and exemplary Piety in his earlieſt Years. He honour'd his Relations, and in all Things endeavour'd to imitate his Grandfather, who was then in *China* admired for his exemplary Sanctity. He never did eat any thing, but he firſt proſtrated himſelf, and offer'd it to the Supream Lord of Heaven.

His Education.

After his Grandfather's Death, he became a Scholar to *Tcem-ſe*, a famous Doctor of thoſe Times, and under ſo great a Maſter he grew a great Proficient in the Knowledge of Antiquity by that Time he was 16 Years of Age. When he was a little more advanced in Years, he made a Collection of the moſt excellent Maxims of the Ancients, which he intended to follow and inſtil into the People. Every Province was at that Time a diſtinct Kingdom, and had a Prince of their own, who, tho' ſubject to the Emperor, govern'd by particular Laws, levy'd Taxes, diſpoſed of all Places of Truſt, and made Peace or War as they pleaſed. Theſe Kings had Differences among themſelves, and the Emperor ſtood in fear of them, becauſe he had not Strength enough to keep them in Subjection.

His Preachings.

Confucius ſeeing this, and being perſwaded that the People could never be happy, ſo long as Intereſt, Ambition and falſe Policy reign'd in theſe Courts, reſolv'd to preach up a ſevere Morality, teach Men to contemn Riches and Worldly Pleaſures, and eſteem Temperance, Juſtice, and other Vertues; inſpire them with Grandeur and Magnanimity, and a Sincerity incapable of the leaſt Diſguiſe: In fine, inſtruct them in a Way of Life, that ſhould oppoſe the Paſſions, and improve Reaſon and Vertue. His Words he ſeconded with ſuch an Example, as produced very conſiderable Fruits of his Labour; for Kings were govern'd by his Councels, and the People reverenced him as a Saint. All commended him and admired him that would not imitate him. Being choſen to a great Office in the Kingdom of *Lou*, in leſs than 3 Months time he brought the People into ſuch exact Order and Obſervance of Laws, that the Neighbouring Princes began to grow fearful and jealous of the Event, as knowing that that Kingdom muſt flouriſh and grow more powerful than others, which was ſo well governed.

His Example.

The King of *Tci* was moſt fearful of the Event, and to put a Stop to his Proceedings, he, by the Advice of his Miniſters, choſe out a great Company of young Maids, handſome, and well inſtructed in the Arts of Pleaſing, whom, under Pretence of an Embaſſie, he preſented to the King of *Lou* and his Courtiers. This Contrivance took the deſired Effect, for as it was joyfully accepted, ſo they thought of nothing but diverting themſelves with theſe Strangers. *Confucius* endeavour'd all he could to reclaim them, and bring them to themſelves, but all in vain; the Severity of the Philoſophy muſt give place to the Irregularities of the Courtiers; ſo that this good Man thought it did not ſtand with his Reputation to remain any longer in a Place, where Reaſon and Vertue was deſpiſed, and reſigning his Office, departed, and ſought other Kingdoms more inclinable to follow his Maxims; but he met with great Obſtacles, and ran from Province to Province almoſt without reaping any Advantage; for Politicians dreaded him, and the Miniſters of Princes diſcouraged him; ſo that being forſaken by the World, he was often reduced to great Want, and in Danger of being ſtarv'd and loſing his Life by the Conſpiracies of wicked Men. Nevertheleſs, all theſe Diſgraces did not move him, and he would often ſay, *The Cauſe he defended could produce no ill Effects, no Man could hurt him*; and ſo would never be weary of inſtructiong thoſe that loved Vertue. Many Diſciples put themſelves under his Tuition, of whom he employ'd ſome to write a fair Hand, others to argue exactly, and deliver themſelves elegantly in Publick, and others to frame to themſelves an Idea of a good Government: But thoſe he loved moſt he counſelled to govern themſelves well, improve their Minds by Mediration, and purifie their Hearts by Vertue, telling them, *That Human Nature came from Heaven pure and perfect, but is corrupted by Ignorance, Paſſion and ill Example. To reſtore it we muſt reduce it to its Original, and become obedient to Reaſon, which will inſtruct us to think well, ſpeak diſcreetly, and act holily, obey Heaven, love our Neighbour as our ſelves, and deny Subjection to the Conduct of the Senſes.* Six Hundred of his Diſciples he ſent into different Parts of the Empire to reform the Manners of the People; and, not ſatisfied to benefit his own Country, he often reſolved to paſs the Seas, and preach his Doctrine in all Parts of the Earth. There is hardly any thing that can be added to his Zeal, or the Purity of his Morality. He ſpeaks ſometimes like a Doctor of the Goſpel, and not like a Philoſopher; and that which renders his Doctrine truly admirable, was, that his Actions never bely'd his Maxims; for he was eminent for his Gravity and Mildneſs in the Uſe of the World, his rigorous Abſtinence, his Contempt of Riches, his Watchfulneſs over his Actions, and his Humility and Modeſty, which would make us to think him inſpired by God for the Reformation of the World. The *Chineſe* report, that he often ſaid, *It is in the Weſt where the true Saint is found*; and this Sentence made ſuch Impreſſion on the Minds of his Diſciples, that the Emperor *Mimti*, 65 Years after our Saviour's Birth, ſtirr'd up to it by the Image of a Man, which appear'd to him in a Dream coming from the Weſt, ſent Ambaſſadors that Way, with ſtrict Order to hold on their Journey till they found him; and had the *Mandarins* follow'd his Orders, they had met St. *Thomas*, who at that Time preach'd the Goſpel in the *Indies*; but, fearing the Dangers of the Sea, they ſtopt at the firſt Iſland, where they found the Idol *Foe* worſhipp'd, who had corrupted all the *Indies* with his Doctrine. Here they learn'd the Superſtitions of the Country, and at their Return propagated Atheiſm and Idolatry in all the Empire.

His Doctrine oppoſed, and rendred ineffectual a while.

His Patience.

His Scholars.

The Excellency of his Doctrines.

The Idol *Foe*.

Confucius lived privately 3 Years, and ſpent the latter End of his Days in Sorrow, in ſeeing the Wickedneſs that reign'd among the People, and his Doctrine and Maxims diſregarded.

His Death. Being weary of Life, because he could do no Good, he at length fell into a Lethargy, which held him 7 Days, and then he gave up the Ghost in the Embraces of his Disciples. He was lamented by the whole Empire, and from his Death to this Day is honour'd as a Saint. Kings have built Palaces to him, whither the Learned go to pay him Honours. There are many Places to be seen where these Titles of Honour are given him, and are written in large Characters; *To the Great Master*; *To the Head Doctor*; *To the Saint*; *To him that taught Emperors and Kings*: But the *Chinese* never Deify'd him, tho' they have done it to many *Mandarins* much inferior to him, as if Heaven that sent him to reform Manners would not allow, that even after his Death he should be an Occasion of corrupting them. He was no handsome Man, for he had a Wen on his Forehead that disfigured him; otherwise his Stature was comely and proportionable, his Behaviour grave, his Voice strong; so that being joined with a zealous Warmth, it could not but affect. But his Doctrines give us the best Portraiture of his Soul, which he delivered in certain Maxims, a Specimen of which here follows. It would need an entire Volume to relate them all, but a few may be as profitable as grateful.

His Character.

MAXIM I.

Beauty is not to be desired by a wise Man.

What Beauty is best. *Confucius* going to visit a King of a Province, found him with a Favourite, who was very beautiful. The King seeing him, said, smiling, *Confucius, if I could, I would give thee all the Beauty of this young Man. Confucius* replied, 'That's not the Thing I wish. 'The Beauty of Man does no Good to the Publick. 'I desire a just Symmetry in all the Members of the 'Empire, which makes the Beauty of Government, 'and keeps the State from Deformity.

MAXIM II.

A Man must keep within Bounds, if he would be happy.

Moderation the truest Vertue. *Confucius*, when he heard that his Mother was dead, went into his Country to pay his Duty to her, and wept and fasted 3 Days for her. A Philosopher observing it, reproved him, and said, *I have fasted 7 Days upon the Death of my Relation; but you, who are the Grandson of a Saint, and whom all admire, have satisfied your self with 3 Days Abstinence. Confucius* answered, 'Ceremonies were enjoin'd by the Ancients 'to restrain the Indiscreet, and stir up the Backward. 'We must obey Laws, if we will not do amiss. It 'is in this Golden Mean that Wisdom consists. If 'you will never go astray, remember that Vertue is 'not an Excess, and that Perfection hath its Limits.

MAXIM III.

A Man ought to change often, if he would be constant in Wisdom.

Change with the time necessary. A Person of Quality said one Day to *Confucius*, *Your Grandfather was civil and obliging to Great Persons, and yet his Doctrine, tho' holy, never got Footing, and how can you expect yours should be follow'd, when you are grave, rough, and sometimes haughty? Confucius* replied, 'My 'Grandfather lived in a Time, when Princes were 'polite, and loved Order, and if one would gain upon them, he ought to be polite and regular; but at 'this Day Men value Courage and Haughtiness, and 'a Man must comply with the World, if he would 'win it. A wise Man would cease to be so, should 'he act as the wise Men of former Times did.

MAXIM IV.

The Nobility are not always the greatest Men in the Kingdom.

Nobility are only the best and wisest Men. *Confucius* coming to the Court of one of the Kings of *China*, was kindly receiv'd, and allow'd an Apartment in his Palace. The King coming to visit him, said, *You come into my State to do me some good, probably. Confucius* replied, 'My Intents to present you with 'wise Men to fill the principal Places of your State. *With all my Heart*, said the Prince; *Pray who are they?* 'My Lord, said he, *Li-in*, an Husbandman's Son, is 'a Person whom you may trust. The King fell a Laughing, and said, *I have not Employments enough for my Lords; And would you have me take a Labourer into my Service?* The Philosopher replied, 'The Court sup- 'plies you with evil Ministers; suffer a Country 'Village to present you with a wise Man. You say 'you have not Employments for your Lords. If 'Vertue were rewarded, as it ought, you would find 'in your Court more Places than Officers, and, perhaps, would be glad to call for Labourers to supply them. When the Nobility do not furnish the 'State with Great Men, the People must, and of them 'must be composed the Body of the Nobility.

MAXIM V.

A small Fault often denotes great Qualities.

Small Faults to be excused by. He one Day advised the King of *Ouei* to make a *Mandarin* his General, but the King refused, saying, *When he was* Mandarin *he took a Couple of Eggs from a Country Fellow, and he that has once abused his Authority ought not to command again. Confucius* reply'd, 'Such Sentiments of Equity are laudable in a King, 'but is not the *Mandarin*'s Moderation to be admir'd, 'that he took but 2 Eggs? Such a small Fault shews 'great Qualities in him. Does a Carpenter reject a 'good Beam, that is able to support the Building, be- 'cause there is a Flaw in it? I would not advise your 'Majesty, for the Loss of 2 Eggs, to turn off a Cap- 'tain, who may conquer 2 Kingdoms.

MAXIM VI.

A wise Prince will be no great Speaker, nor deliver his Opinion first.

Princes must be advised. The same King one Day held a Council in the Presence of *Confucius*, where having spoken to his Ministers of some Affairs with a Shew of Wit, they applauded him, and allow'd him to be in the Right, and so all was done. The King ask'd *Confucius, How he liked their Proceedings?* He said, 'He saw no 'Deliberation. You spoke, and they told your Opi- 'nion, but not their own. When the Assembly 'broke up, I expected the Beginning of the Council. Some Days after the same King asked his Opinion of the present Government: He said, 'No Body speaks 'ill of it. *That's my Desire*, replied the King. 'But 'that you ought not to desire, said *Confucius*; 'Persons must not be flatter'd. A Man is bound to 'discover to his Prince the Defects of the Mind, 'with the same Freedom as he does his Disease to a 'Physician.

MAXIM VII.

The wise Man goes forward apace, because the right Way is always the shortest. On the contrary, the crafty Politician arrives late at his End, because he walks in By-ways and crooked Paths.

Vertue to be preferr'd before Policy. The King of *Ouei* confess'd to *Confucius*, *That there was nothing so fine as Wisdom, but it was so difficult to acquire, that is discouraged the best Minds: He had endeavoured after it in vain, and would trouble himself no longer about it. A small Parcel of Policy would supply the Defects of it in Governing. Confucius* reply'd, 'The 'Way to Wisdom is not so difficult as Men imagine. 'It grows plainer and plainer as Men go on; but 'artificial and knavish Policy perplexes the Spirits, 'and runs Men into a dangerous Maze. As for my 'part, I am perswaded, that in Government solid and 'constant Vertue goes farther than the most subtle 'Policy.

MAXIM VIII.

Those who desire the most perfect State do not always search the Perfection of the State, but the Sweetness. Would you be fix'd in the World? Fix this in your Mind, That to take up a new Course of Life is nothing else, but to pass from one Trouble to another.

Our own State is best. A Prince being wrought upon by the Wise of *Confucius*, went to find him out, and told him, *That he resolv'd to abandon all Things to become one of his Disciples; for I am born to a Thousand Sorrows in the Station I am in, but your Life seems to me full of Sweetness and De-*

Delight. Confucius answer'd, 'Since 'tis Sweetness 'you look for in my State, I will not advise you to 'enter upon it. A Man often meets with Trouble 'the more he avoids it. Heaven, which hath in-'spired me with the Love of Privacy, hath sent you 'into the World to rule. Be a King, and seek not 'after Peace too much, but rather if you have no 'mind to lose your State, behave your self gallantly 'against your Enemies, but fight more couragiously 'against your Passions, and the Love of an easie and 'sweet Life, that you destroy not your self.

MAXIM IX.

Those who are diligent, and would do all, put off many Things to the next Day.

To omit some things is the way to do most

Confucius's Son said one Day to him, *I carefully apply my self to all sorts of Studies, whereby I am become a good Scholar, but make but small Progress.* His wise Father said to him, 'Omit something, and you'll 'make great Progress. Men that go long Journeys 'never run. In all Things you must go orderly, and 'consult your Abilities, or your Labour will be use-'less. The Saints first apply themselves to easie 'Things, and then proceeding to more difficult, by 'little and little become perfect. They who, like 'you, would do all in one Day, do nothing all their 'Life, but they who apply themselves to one Thing 'only, find at length that they have done all.

MAXIM X.

One ought not to wonder, that the wise Man walks slower in the Ways of Vertue, than the ill Man does in that of Vice. Passion hurries, but Wisdom guides.

Vertue easi-ed.

One of *Confucius*'s Friends complain'd of his small Proficiency in Vertue, and said, *I have labour'd these several Years to imitate the primitive Saints, and yet am imperfect. Had I applied my self to Wickedness, I might have arrived at the Height of Impiety in a short time. Why is it not as easie to attain to a Perfection in Vertue as Vice? Confucius* said, 'Tis no Wonder: Vertue is on 'high, and it requires Pains and Time to ascend; but 'Vice is in the lowest Place, and a Minute sufficeth 'to fall from the highest Precipice. One, indeed, is 'sooner determined to Evil than Good; but since 'he always repents of it, 'tis a certain Sign, that there 'is less Trouble to do well, than to persevere in Evil.

MAXIM XI.

True Nobility doth not consist in Blood, but Merit. We are truly high and great, when Vertue prevents our grovelling with the rest of Mankind.

Greatness is to be above Reproach.

Confucius seeing a Man carry a Fish, sigh'd, and being ask'd the Reason, said, 'This Fish hath lost its 'Life by complying with the enticing Pleasures of a 'deceitful Bait, but is excusable, because it wanted 'Reason; but are Men excusable to lose Vertue, 'which is more precious than Life, and be catch'd 'by the Baits of Worldly good Things and Vani-'ties? If we knew our Wants, we should take ano-'ther Course. True Riches is to contemn every 'thing. He is truly great and raised above others, 'whom Calumny and Reproaches cannot reach.

MAXIM XII.

In the State wherein we are, Perseverance in Well-doing consists not so much in not falling, as in rising again as often as we fall.

Best Men fall often.

Some *Mandarins*, whom *Confucius* instructed, said to him, *You are happy, because you are arrived at the highest Degree of Vertue, and have left Sin long since. As for us, we labour hard to be good Men, but commit Faults every Day. Confucius* replied, 'Though every 'Fault be blame-worthy, yet you are not so unhappy 'as you imagine, by committing many. Our Life is 'a long Journey, the Way is difficult, and our Rea-'son clouded by Passions affords but little Light to 'guide us: And who can avoid stumbling in the 'Dark? A Fall retards our Journey, but doth not put 'it off; when we get up, we may go on. It would 'be an Unhappiness to us to fall but once, like the 'Wicked, who are stopt by the first Precipice. Ho-'nest Men and good, that continue their Walking, 'fall often.

MAXIM XIII.

No Man knows half his own Faults, and yet he would be ashamed to appear to others what he appears to himself.

Mens Failings not to be known.

One complain'd, *That Nature had bestow'd Eyes upon Men to see Bodies, but none to see Minds, so that Vertue and Vice are confounded in the World. Confucius* answered, 'You would be in a bad Case if it were 'otherwise, because we could not secure our Failings 'and Weaknesses; for I'll maintain, that the Philo-'sopher would suffer more by appearing weak, than 'the wicked Man doth by appearing vicious.

MAXIM XIV.

None to boast.

Never speak either Good or Bad of your self to others: Not Good, because Men will not believe you: Not Evil, because they know more already than you would have them.

When to confess ones Faults.

This he spoke one Day to his Disciples, who took a Pride now and then to blame themselves, and added, 'For a Man to confess his Faults when he is 'reproved for them, is Modesty; To lay them open 'to his Friend, is Ingenuity and Confidence; To 'reprove himself for them, is Humility; But to 'preach them to every Body, is, if one have not a 'great Care, a Piece of Pride.

By these Precepts of *Confucius*'s Philosophy we may see, that Reason belongs to all Times and Places. *Seneca* hath spoken nothing better; and had we a perfect Collection of this Philosopher's Maxims, nothing would be wanting to give him a Place among the greatest Sages of Antiquity.

LETTER VIII.

Written to the Lord Philipeaux, *Secretary of State to the* French *King*; *Of the Wit and Temper of the* Chinese.

All would be thought wise.

OF all the People in the habitable World, there is none, but what stand upon their Wit and Ingenuity, and oftentimes the most Barbarous prefer themselves, before the most Polite and Accomplished. The Inhabitants of the *Cape of Good Hope*, who scarce deserve to be ranked amongst Men, look upon the *Europeans* as Slaves, and *Hollanders* as stuped Fellows, not versed in the Method of Government. The People of *Siam* do usually say, That Heaven hath given the *French* Bravery and Science of War, the *English* the Art of Navigation, the *Hollanders* a Knack in Trading, to the *Chinese* the Wisdom, but Wit only to the People of *Siam*. But above all, the *Chinese*, who term all the People of the *East* blind, reserve to themselves the Preheminence, and believe themselves to be, without all Dispute, the most intelligent Nation in the World. And, indeed, without Question they are an ingenious People, but no Body hath been truly acquainted with their Character. They have Libraries, Universities, great Numbers of Doctors and Observatories; and tho' for these 4000 Years they have allowed Recompences to learned and expert Men, yet they have not had one single Man of great Atchievements in Speculative Science, enjoy-

The *Chinese* think themselves wisest.

ing the Reputation of Knowing Men, becauſe they ſee none but ſuch as are more ignorant than themſelves. They have not that Spirit of Penetration and Exactneſs, which is neceſſary to thoſe who addict themſelves to the Search of Natnre; nor have they that Logick, which is ſo much improved in *Europe*. Geometry, which is brought to ſo high a Degree of Perfection in *France*, and may paſs for the Maſterpiece of human Underſtanding, hath never yet got Admittance in their Academies; and therefore in theſe Matters they will ſo far make their Pride ſtoop, as to confeſs the *Europeans* to be their Maſters. It is true, they have a kind of Philoſophy, and they lay down certain Principles for the Explaining the Compoſition of Bodies, their Properties and Effects: Neither are they altogether ignorant in Anatomy, for they grant a Circulation of the Blood and Humours, but all their Notions are ſo generally confuſed, and moſt an end ſo falſe, that 'tis not worth our while to ſpeak particularly of them.

Their Ignorance in Sciences.

Their Philoſophy.

Anatomy.

Arithmetick. Their Arithmetick is more perfect, altho' they do not make uſe of the Cypher, as we do. They uſe an Inſtrument of Board, a Foot and half long, croſs which they ſcore 10 or 12 little parallel Lines ſtrung with ſeveral moveable Buttons, with which they reckon, as we do with Counters, but with ſuch Dexterity and Eaſineſs, that they will keep Pace with a Man, let him read a Book of Accounts never ſo faſt, and when they have perform'd the Operation, they have a certain Way to prove it.

Their Geometry and Muſick. Their Geometry is very ſuperficial. It is reſtrain'd to a very few Propoſitions, and to ſome Problems of Algebra, which they reſolve without Elements, or Principles, and that only by Induction. They pretend to be Inventors of Muſick, and to have brought it to its Perfection, but that which they practiſe at this Day is ſo imperfect, as not to deſerve the Name of Muſick.

Their Aſtronomy. They addict themſelves much to Aſtronomy, and that Science is beholding to them for abundance of Obſervations, which, tho' only related in general in their Hiſtory, yet is not unprofitable to Poſterity; for they have above 400 Obſervations, as well of Eccliypſes, and Comets, as Conjunctions, that make good their Chronology, and might help to perfect ours. Their Tables are, indeed, imperfect, but are very ſervicable to regulate Time; yet after a certain Revolution of Years they were forced to amend them, becauſe they did not exactly agree with the Heavens, till in the Beginning of this Century, they got ſome Knowledge of our Aſtronomy.

Aſtrology. In Aſtrology they are much greater Proficients, becauſe for the ſucceeding in that Art, little more is required, than to lie handſomely and confidently, in which none may pretend to out-do the *Chineſe*. They have among them many cheating Mountebanks by Profeſſion, who promiſe by their pretended Knowledge of the Stars to diſcover the Philoſopher's Stone, and give Immortality. They mark in the Almanack every Year the good and bad Days for Building, Marriages, undertaking Journeys and Voyages, and other Actions of the like Nature, the Succeſs of which depends more upon the Wiſdom and Deſcretion of Men, than the Influence of the Heavens.

Medicine. Medicine hath not been quite neglected among them, but for want of Natural Philoſophy, and Anatomy, they have made no great Progreſs in it; but we muſt not deny, that they have acquired ſuch a Skill in *Pulſes*, as has made them famous in the World. The Emperor *Hoamti* compoſed a Treatiſe about them 4392 Years ago, and ever ſince the Phyſicians of *China* look upon that Science as the Foundation of Medicine; for they affirm, that their never happens any extraordinary Change in the Conſtitution, but it alters the Blood, and cauſes a different Impreſſion upon the Veſſels; and they pretend, by long Experience, to have diſtinguiſhed all the Differences of Pulſes, and to be able to know all the Diſtempers that are incident to the Body by them. They hold the Patient's Hand a Quarter of an Hour at leaſt, ſometimes the Right, and ſometimes the Left, and ſometimes both. They lay all their 4 Fingers along the Artery, and when they have ſtrongly and uniformly preſſed the Patient's Wriſt, they raiſe their Fingers by degrees, till the Blood recovers its Courſe, then they preſs the Arm again, and hold it a conſiderable Time, and a while after riſe and fall, pinch ſoftly and hard, ſometimes ſlower and faſter, till ſuch time as the Artery anſwers the Touch, and ſo the Strength, Weakneſs, Diſorder, or other Symptoms of the Pulſe be manifeſt. After all this, as if they were inſpired, they play the Prophet, ſaying, *You were never troubled with the Head-Ach, but with an Heavineſs, that hath made you drowſie: You have loſt your Appetite, but will recover it in 3 Days: This Evening, about Sun-ſet, your Head will be freer*, &c. When they are expert in their Art, they will prognoſticate pretty exactly, but as for others, they are commonly falſe Prophets, unleſs they can make uſe of other Arts; for they try all Means imaginable, to get themſelves ſecretly inſtructed concerning the Patient's Condition, before they viſit him; nay, they are ſo cunning (to get themſelves Reputation) as to feign a kind of Diſtemper, which ſometimes they themſelves procure afterward; as a certain Perſon found, who ſent for a Surgeon to Cure him of a Wound: He told him, the Malady was cauſed by a ſmall Worm, that was inſinuated into the Fleſh, which would produce a Gangreen, if not fetched out, and he would do it, if he would give him a conſiderable Sum of Money. The ſick Perſon agreed to it, and the Surgeon put a Worm in the Plaiſter, which he pulled out with Triumph, and tho' he diſcovered the Cheat he loſt his Money.

Their Skill in Pulſes, and their way of handling them.

Their Judgment by the Pulſe.

They prepare their own Medicines, which ordinarily conſiſts of Pills, which according as they are prepared, procure Sweats, purge the Blood and Humours, fortifie the Stomach, ſuppreſs Vapours, or are reſtringent, diſpoſe to Evacuation, but ſeldom work by Stool. They do not let Blood, or know the Uſe of the Glyſter. They apply Cupping-glaſſes not only upon the *Scapulæ*, but upon the Belly to aſſwage the Pains of the Cholick. They are almoſt all perſwaded, that moſt Diſeaſes are cauſed by corrupted Wind, ſlipt into the Muſcles, and diſturbing all the Parts of the Body. The moſt ſure Way to diſſipate it, is (as they hold) to apply red hot Needles, or Buttons of Fire. This Cauterizing they uſe upon the ſlighteſt Occaſions, and every Day almoſt make a great many miſerable Perſons: Yet there are a great many Maladies, which are not curable but by this Means.

Their Medicines.

Their Way to cure the Cholick.

The People of the Country, and eſpecially the Slaves, are much troubled with a violent Chloick, called *Mordechim*, by the *Portugueſe*, occaſion'd by Indigeſtion, and accompanied with Vomiting. The Gripes produceth ſuch Anguiſh, as diſtracts their Minds; and the only Remedy is this: They lightly apply an Iron-Peal, red hot, to the Soles of their Feet, if the Patient feel it, he his cured, but if at the firſt Operation he appears inſenſible, they preſs it on ſtill, till it burns to the Bone, unleſs he complain, and then they ceaſe, and the Diſeaſe leaves them; but if the Fire be not felt, they deſpair of healing, and in a ſhort time the Patient dies.

Cordials their Simples. Among the *Chineſe* Remedies, Cordials are in greateſt Eſteem: They have many very natural ones made of Herbs, Leaves and Roots (for their Simples are very numerous) and all of them have ſovereign and experienced Vertues. Two of their Simples deſerve particular Obſervation, *viz.* 1ſt, Their *Thee*, or as it is called in the *Mandarin* Language, *Tcha*. There are divers Opinions about it: Some aſcribe to it marvellous Qualities, *viz.* That it cures the Gout, Sciatica, Stone, and preſerves againſt all theſe Diſtempers: That it is good for the Gravel, Crudities, Head-Ach, Virtigo, and all Indigeſtions, which becauſe the *Tartars* are ſubject to, they find the Emperor of *China* with all the Horſes that ſerve to remount his Cavalry, that they may have plenty of it. Others hold theſe Vertues to be meer Fancy and Whim of the *Europeans*, who always love Novelties, and admire what they do not underſtand; for they pretend to have experienced many miſchievous Effects of it, *viz.* That it hinders and diſturbs Digeſtion, fills with Crudities, dries, makes lean and obſtructs, and if there be any good Qualities in its Leaves, moſt other Leaves would produce the ſame, eſpecially if mix'd with hot Water, which alone is a good Medicine againſt many Diſtempers. Nevertheleſs 'tis certain, that *Thee* is of a corroſive Nature, and being boil'd with hard Meats, makes them tender; and conſequently is proper for Digeſtion, and reſiſts Obſtructions, conſumes ſuperfluous Humours, puts in Motion thoſe that ſtagnate and corrupt, and evacuates others that cauſe the Gout and Sciatica, tho' it muſt not be ſuppoſed to produce theſe Effects in all Tempers. It is of ſeveral ſorts: That which grows in the Province of *Xenſi* is coarſe, harſh and unpleaſant. The *Tartars* drink

Thee, its Uſe and Vertues.

Several ſorts of *Thee*.

drink of it, becauſe eating raw Fleſh, they need a ſtronger *Menſtruum* than the *Chineſe*. This ſort is very cheap, not above 3 Pence a Pound. In the ſame Province are found 2 other kinds of it; one like Moſs, the other with long thick Leaves, but theſe are not much uſed. That which is commonly drank in *China* has no particular Name, becauſe it is gather'd any where in different Provinces. It is good, the Infuſion reddiſh, and the Taſte faint and ſomewhat bitter. The People uſe it at all Hours of the Day, and drink little elſe. Perſons of Quality uſe 2 other kinds that are in Requeſt: 1. *Thee Soumlo*, from the Place where it grows: The Leaves are longiſh, the Infuſion clear and green, and the Taſte pleaſant, but if good has no Smell at all. They commonly preſent it at Viſits, but it is very corroſive. Too great Uſe of it would ſpoil the Stomach. 2. *Thee Voui*; the Leaves are little, and incline to Black; but tinge the Water with a yellow Colour. The Taſte is delicious, and it agrees with the weakeſt Stomachs. They give it ſick People, and ſuch as take care of their Health drink nothing elſe. That *Thee* may prove excellent, it ought to be gather'd early, when the Leaves are ſmall, tender and juicy. They commonly gather it in *March* or *April*, and dry it on Copper-Plates over a Fire, till it rolls up, as we have it. The *Chineſe* are ſuch Cheats, as that they mingle other Leaves with it to ſwell the Bulk, ſo that it is rare to meet with any unmix'd. It commonly grows in Valleys and at the Foot of Mountains; the choiceſt grows in ſtony Soils. It flouriſhes moſt by being expoſed to the South. Being ſown, 'twill bear in 3 Years. Its Root reſembles that of a Peach-Tree, and its Flowers are like the white wild Roſe. The Trees grow of all Sizes from 2 Foot to 100. They bear 3 ſorts of Fruit, one ſort like little ſlimy Peaſe, green without, and full of yellow Grains within. The other Fruits are as big as Beans, but of different Figures; ſome round, containing one Pea; others long, containing 2; and others triangular, bearing 3, very like thoſe that bear the Tallow-Grain, ſo famous in *China*. Some of theſe Trees Fruits have no Bud, which they call Females; others have, and may be ſown to produce Trees, but the *Chineſe* uſually graft them.

Another Simple, more ſcarce and valued, is called *Gen-Sem*, or the Man-Plant, becauſe it reſembles a Man. The Learned among them give it abundance of Names in their Writings, which ſhew how much they value it, as, *The Spiritous Simple*, *The pure Spirit of the Earth*, *The Fat of the Sea*, *The Panacea*, *The Remedy that diſpenſes Immortality*, and ſeveral other Names of like Nature: It is a Root as thick as half the little Finger, and as long again: It is divided into 2 Branches, and much reſembles a Man, with his 2 Legs: It is of a yellowiſh Colour, and being kept long, it grows wrinkled, and dry'd like Wood: The Leaves are ſmall, and terminate in a Point, the Branches are black, the Flower violet, and the Stalk hairy. They ſay, it produces but one Stem, which has 3 Branches, each of which bears Leaves by Fours and Fives. It grows in the Shade in a moiſty Soil, and comes not to Perfection in many Years. It is commonly found under a Tree called *Kia-cha*, little differing from the Sycamore. It is fetch'd from ſeveral Places, but that which is now commonly uſed comes *Leaotum*, a Province depending on *China*, but ſituate in the Eaſtern *Tartary*. It is the moſt incomparable Cordial, according to the *Chineſe*, in the World. The Taſte is ſweet and delightful, tho' ſomething bitter. Its Vertues are marvellous; it purifies the Blood, fortifies the Stomach, adds Motion to a languid Pulſe, excites natural Heat, and augments radical Moiſture. The *Chineſe* Phyſicians have whole Volumes of its different Uſes, but they particularly uſe it in Diſtempers attended with Faintneſs and Swooning, when it proceeds from Accident or old Age. They likewiſe make Broaths of it, Electuaries, Lozenges and Syrups, which are excellent Remedies for all Diſtempers. The Phyſicians do not employ Apothecaries to compound their Medicines, but do it themſelves in their Patient's Chamber, if it may conveniently be, otherwiſe in their own Houſes, and wonder at our Phyſicians, that they leave their Medicines at an Apothecary's Mercy to mar it, or make it as he pleaſeth. Yet in *China* they are guilty of a greater Fault, in admitting every Body to practiſe Phyſick, as other Mechanick Arts, without Examination; or taking any Degrees; ſo that many pitiful Fellows, who know not where to put their Heads, having, perhaps, ſtudied a Phyſick Book 2 or 3 Months, ſet up for Doctors *cum Privilegio*, at the Expence of their Patients Lives.

The *Chineſe* are much greater Proficients in Arts than Sciences, for tho' they have not brought them to that great Perfection as in *Europe*, yet they know what's neceſſary for the common Uſe of Life, Neatneſs, Commerce, and even to well regulated Magnificence, which would have proceeded farther, had not the Government ſet Bounds to their Expences, and ſo put a Stop to them. Their Workmen are extraordinary induſtrious, and tho' they are not ſo good at Invention themſelves, yet they readily comprehend others, and imitate them tolerably well. There is made in ſeveral Places of the Empire Glaſs, Watches, Piſtols, Bombs, and many other Pieces of Work that they may thank us for; but they have had Time out of Mind Gun-Powder, Printing, and the Uſe of the Compaſs, new Arts in *Europe*, for which, perhaps, we are beholding to them. They divide the Compaſs into 24 Parts only, and did always believe, that the Needle ſhew'd exactly the true Place of the Pole, till the *Europeans* proved to them ſome Variation and Declenſion. The Loadſtone is found almoſt in every Province of their Country, and ſome is brought to them form *Japan*. They uſe it chiefly in Phyſick, and 'tis bought by Weight, the beſt not above 8 or 10 Pence an Ounce. A Loadſtone of 10 or 11 Pound Weight, Guard and all, will raiſe 14 or 15. In *China* they are more dexterous at cutting them than in *Europe*, becauſe they have a better Engine for that uſe.

Navigation is another Point, which ſhews the Addreſs of the *Chineſe*. It is moſt certain, that from all Antiquity they had always ſtout Ships. Some pretend, that a long time before the Birth of our Saviour they had ſailed over all the Seas of *India*, and diſcovered the *Cape of Good Hope*, which tho' uncertain, yet we have Reaſon to believe, that ſo early they underſtood much more of it than the *Greeks* and *Romans*, for tho' they have not perfected the Art of Navigation, yet at this Day they ſail more ſecurely, than the *Portugueſe*. Their Veſſels are like ours of all Rates, but not ſo fine; they are flat-bottom'd, the Fore-caſtle is cut ſhort without a Stem, and the Stem open in the Middle to the End, that the Rudder, which they ſhut up, as in a Chamber, may be defended on each ſide from the Waves. Their Rudder is much longer than ours, and is ſtrongly tied to the Stern-Poſt by 2 Cables that paſs under the whole Length of the Veſſel to the fore Part. Two other Cables hold it up and facilitate the hoiſing of it, or lowering of it, as Occaſion ſerves. The Bar is as long as is neceſſary for the Guiding of it. The Seamen alſo at the Helm are aſſiſted by Ropes faſtened to the Larboard, and Starboard, and rolled upon the End of the Bar which they hold in their Hands, and faſten and ſlacken, as they ſee Occaſion to thruſt or ſtop the Helm. The Mizen-Maſt is quite toward the fore Part, and the Main-Maſt ſtands near the Place, where ſtands our Mizen. A Cord, which goes from the Starboard to the Larboard, ſerves them for a Stay and Shrouds. The Boltſprit, which is very weak, is at the Larboard. Their Round-Tops are very ſhort, but their Main-Maſt is prodigious high and thick, and ſtrongly ſeized by 2 ſide Beams, that ſtrengthen it wonderfully. Their low Sails are of very thick Matt, trimm'd with Laths, and long Poles at 2 Foot diſtance, to ſtrengthen them, and faſten'd to the whole Length of the Maſts by ſeveral little Loops. They are not faſten'd in the Middle, but have Three Quarters of their Breadth looſe, that they may be accommodated to the Winds, and readily tack about as Occaſion ſerves. They do not uſe melted Pitch and Tar for their *Okam* to Calk with, but a Compoſition of Lime and Oil, or rather a particular Gum with Flax of raſped *Bambou*: This Matter is not ſo apt to fire, and 'tis ſo good *Okam*, that their Ships ſeldom or never leak. Neither do they ever uſe the Pump; a Well or two ſerves to keep the Keel dry. In their largeſt Veſſels their Anchors are of Iron, but in their middle ſort of an hard, heavy Wood, ſtrengthen'd at the Ends; but theſe latter are not ſufficient, for a Spring-Tide, or a freſh Gale runs them a Drift, and they often run the Riſque of being caſt away. Their Cables are of Flax of Coco, Canvas or Rotin, a long Cane. The *Chineſe* have in their Veſſels a Captain, as we have, but his Buſineſs is to keep the Crew in Awe, and victual them. The Pilot marks out the Rhumb,

1. *Thee Soumlo.*
2. *Thee Voui.*

Their Cables.

Rhumb, and places the Compaſs. When they ſee no Land, thoſe at the Helm ſteer as they pleaſe, but when they enter a Port, the Mariners are ſo vigilant and careful of their Duty, as not to expect to be commanded. But tho' the *Chineſe* come ſhort of the *Europeans* in Sailing on the Sea, yet they excel us in Sailing upon Rivers and Channels. There they will manage huge Barks, as big as our Ships. They have great Numbers in the Southern Provinces, and keep 9999 equipp'd for the Emperor's Service. [It may ſeem ſtrange, that one more ſhould not be added to make up 10000, but ſince that Number is expreſſed by ſuch Letters only as are neither great nor magnificent, either in Writing, or Pronunciations, they think it not Majeſtick enough to denote the Number of the Emperor's Barks, and ſo keep to a Number, which in their Opinion ſounds great and pompous, as their adored *Nine* has. Some of theſe Barks, called *So-Chuen*, are employed to carry the *Mandarins* to their ſeveral Governments, and bring them back upon their Returns, and therefore are lofty and well painted. Others, which are called *Leam-Chuen*, are to carry Proviſions out of the Provinces to the Court. A 3d ſort, called *Lumy-Chuen*, are to bring the Emperor's Habits, his Pieces of Silk and Taffata to the Court. *F. Magellan.*] They are all flat-bottom'd, and the Body of them is alike broad from Prow to Poop. Upon the Deck they build little Cabbins 7 or 8 Foot high, which they paint within and without, and make very handſome, ſo that the longeſt Voyages ſeem pleaſant in them. They be uſually under Sail, or tugg'd with Ropes, but upon great Rivers, or for croſſing Lakes, they make uſe of Oars. They have a Knack to ſail upon rapid Torrents, which is wonderful and incredible. They in a manner force Nature, and make a Voyage without any Dread, which other People dare not ſo much as look upon without Horror. In ſome of the Rivers the Cataracts are continual, broken by a Thouſand Points of Rocks, that ſcarce have Breadth enough for the Paſſage of a Bark; there is nothing but Turnings and Windings, Caſcades and contrary Currents, that daſh one againſt another, and hurry a Boat like an Arrow out of a Bow: You are always within 2 Foot of Shelves, and if you avoid one, you fall upon another, and from that to a 3d; yet the Pilot, by a Skill not to be admired ſufficiently, eſcapes Shipwrack every Moment. There is none in the World capable of undertaking ſuch Voyages, but the *Chineſe*, who are not diſcouraged by the Shipwracks that happen almoſt every Day. Their Barks are made of a very thin light Timber, which makes them more apt to take all Impreſſions one has a mind to give them. They divide them into 5 or 6 Apartments, ſo that if they touch upon a Point of a Rock, which makes a Breach in their Veſſel, only one part of the Boat is fill'd, and the others are dry, and defend them till they can mend the Hole in the other. To moderete the Rapidity of the Motion, in Places where the Water is not too deep, they thruſt a long Pole to the Bottom, which by continual rubbing ſlackens the Motion of the Bark ſo much, that when the Torrent is even and uniform, you float as ſlowly as upon the calmeſt Channel, but when it winds in and out, they have Recourſe to a double Rudder, made in the Faſhion of an Oar, 40 or 50 Foot long, which the Mariners manage with ſuch Skill and Dexterity to drive it on, or turn it right as they would have it, to fall juſt into the Stream, to ſhun one Rock without daſhing upon another, to cut a Current, or purſue the Fall of the Water without running headlong into it; ſo that if they chance to be caſt away at any time, it is not for want of Skill or Care, but Strength.

Their Barks.

Their Art in ſailing in rapid Torrents.

The Matter and Form of their Barks.

In Fiſhing, beſides the ordinary Inſtruments, as Lines, Nets, and the like, which we uſe in *Europe*, they have 2 Ways of catching Fiſh, which are very ſingular and odd. 1. By Night when the Moon ſhines: They have 2 very long and ſtrait Boats, upon which they nail from one End to the other a Board about 2 Foot broad, varniſh'd, very ſmooth and ſhining. It inclines outward, and toucheth the Surface of the Water. They turn it to the Moon-ſhine, that by its Light it may encreaſe its Brightneſs. The Fiſh playing, and miſtaking the Colour of the Plank for that of the Water, jerk out that Way, and tumble before they are aware, either upon the Plank or upon the Boat; ſo that the Fiſher-men, almoſt without taking any Pains, fill a ſmall Bark with Fiſh in a little time.

Their Way of Fiſhing.

2. The other way of Fiſhing is more pleaſant. They breed in divers Provinces Cormorants, which they order and manage as we do Dogs or Hawks for Game. One Fiſher-man will eaſily look after 100 of them. He keeps them perch'd upon the Sides of his Boat, till he come to the Place of Fiſhing, and then, according to his Order, each takes his Flight the Way that is aſſigned it, dividing to themſelves all the River or Lake. They ſeek up and down; they dive, and come and go upon the Water 100 times, till they have found their Prey, which they immediately ſeize and carry to their Maſter. When the Fiſh is too big, they'll help one another, one taking the Head, and another the Tail, to bring it to the Boat. The Men hold out long Oars to them for them to perch on, and when they have deliver'd their Prey, they go and ſeek for more. When they are weary they let them reſt a while, but give them nothing to eat till they have done Fiſhing, leſt having filled their Bellies, they ſhould leave their Work, and to that End they tie their Throats with a ſmall Cord, that they may not ſwallow the little Fiſhes.

Fiſhing with Cormorants, and how managed.

Their Manufacture and Architecture.

Their Manufactures of Silk are neat and ſerviceable, their *China* Ware inimitable, their Varniſh on their Tables, Skreens and Cabinets is admirable; their Architecture, tho' we imagine our ſelves to have arrived at a greater Perfection in the kind, yet is not to be contemned. They have ſome Pieces of Sculpture perfectly well wrought; and the publick Buildings, as Gates of their great Cities, Towers, Bridges, have ſomething in them great and beautiful. In fine, the *Chineſe*, in reſpect of Arts, are dexterous, laborious and curious to find out the Invention and Contrivances of other Nations, and apt to imitate them, and what is peculiar to them, they perform that with few Tools, that ours do with many.

The Ingenuity of the *Chineſe* in Trade.

Their Ingenuity appears many ways: There is no Nation under the Sun more fit for Commerce and Traffick, nor underſtand them better. One can hardly believe what Tricks and Craft they will uſe to inſinuate into Mens Favour, and how wiſely they'll manage a fair Opportunity, and improve an advantagious Overture. Their Deſire of Gaining torments them continually, and makes them diſcover a Thouſand Ways of Gaining, that would not naturally come into their Heads. Every thing ſerves their Turn, becauſe they know how ſome Way or other to improve it. They'll undertake the moſt difficult Voyages for the leaſt Hopes of Gain, which makes them ſo full of Motion, both by Sea and Land, to carry on Trade and Commerce, which is the Soul of the whole People, and the *Primum Mobile* of all their Actions. If Honeſty did accompany their Diligence, they would be able and compleat Merchants; but it is a natural Quality to them to cheat and cozen where they can, and when they have done they'll boaſt of it, if ſucceſsful; but if they are diſappointed, they'll call it their Weakneſs, not Fault. They falſifie all Things they vend, if it be capable of it, and particularly they'll counterfeit Gammons of Bacon ſo exactly, that if you be not very careful, you will buy Wood inſtead of Fleſh. A Stranger will be always cheated if he buys alone, and if he employs a *Chineſe*, he will be in Danger of a Conſpiracy between the Buyer and Seller to chouſe him. When one lends them, he muſt have Sureties, for their Word is not to be truſted to. Some of them have been obſerv'd to borrow ſmall Sums at vaſt Intereſt, and pay them punctually, till they have got the Reputation of honeſt Men, and Credit enough to borrow very large ones, and then they have diſappeared for ever. When they would obtain a Favour, they'll make way for themſelves whole Years before by Preſents to all the Houſhold of the Perſon of whom they ſeek it, and when they have ſo order'd it, that it will ſeem ungrateful to deny them, then they ſhew their Deſign, and get themſelves well paid for their Toys. This Subtilty is more extraordinary in Thieves and Robbers, who will break thro' the thickeſt Walls, burn Gates without any Flames, by a certain Engine, and penetrate into the moſt private Receſſes without being perceived; ſo that when People awake in a Morning, they are amazed to find their Beds without Curtains and Coverlets, their Chambers unfurniſh'd, their Tables, Cabinets, Coffers and Plate gone, without any Footſteps of Thieves, except an Hole in the Wall or Gate. If theſe Men are taken arm'd, they ſuffer Death, but if they are found with no Weapons to kill or wound any Man, they

they are punished with some Bodily Torture, according to the Nature of the Crime; but if they have taken nothing, the Judges satisfie themselves with giving them 30 or 40 Blows with a Cudgel. They say, these Felons have a Drug, the Fumes of which casts into a deep Sleep, and so gives them an Opportunity to do that Business; and Travellers use a Basin of Water, as an effectual Remedy against the Power of it, which they set in their Chambers in the Inns where they lodge. Not but that you may meet with some *Chinese*, who are honest fair dealing Men, but they are very rare, so that a true Character of the *Chinese* must not be taken from them.

Their Politicks.

But as they have a Genius for Commerce, so also for Affairs of State; their Wit has been a long time engaged in Politicks, and negociating of Affairs, not with Foreigners, with whom they are forbidden Correspondence, as Barbarians, but among themselves, with the Princes and Grandees of the Realm. They continually apply themselves to know the Gusto, Inclinations, Humours and Designs one of another. They keep a fair Correspondence with every Body, and observe a *Decorum* to their Enemies. Duelling is forbidden, and therefore they have many Shifts and Contrivances to ruin one another privately; and to that end will not only dissemble, but seem patient even to Insensibleness, till they can meet with a favourable Opportunity to strike home; and yet they are as cautious of entertaining too close Friendship, lest it should engage them upon any unlucky Adventure, and for that Reason will often huff their best Friends.

Duelling forbidden.

The Lords of the Court, the Vice-Roys of Provinces, and Generals of Armies are in perpetual Motion to preserve or acquire the principal Places of the State, which Business they carry on with Money, Favour and Intrigue; and since the Law gives nothing to the Solicitation, Ambition or Riches of private Persons, but solely to Merit, the most subtle seem always most moderate, whilst in the mean time by an Hundred hidden Springs they endeavour to get the Choice and Esteem of the Emperor. In fine, had the *Chinese* accustom'd themselves to enter into Treaties with their more potent Neighbours, as the Nations in *Europe* do, 'tis probable that that Policy and Negociation would have proved more powerful to have kept them out of the Hands of the *Tartars*, than their prodigious Wall, and so they had preserv'd themselves from that Barbarity, which makes their Character no better at present, and far short of what anciently they deserv'd.

Their Ambition.

LETTER IX.

Written to the Cardinal d'Estrees; *Of the Policy, and Government of the* Chinese.

FAther *Le Comte* having singled out the most exact Politician in the *French* Court, gives him this Account of the Government of it, saying:

Among the Models and Plans of Government which the Ancients have fram'd, none is so perfect and exact as the *Chinese* Monarchy, which the ancient Lawgivers fram'd at first very little different from what it now is, after 4000 Years. They never heard of the Name of a Republick, till the *Dutch* brought them News of it, and they still wonder how a State can regularly be governed without a King. They look upon a Republick to be a Monster with many Heads, form'd by the Ambition and Headiness of Men in the Times of publick Confusion. Nor is their Aversion greater to a Commonwealth than to Tyranny and Oppression, which, they say, proceeds not so much from the Absoluteness of his Power, as the Prince's Wildness.

Their Government form'd perfectly.

Their Laws allow their Emperor an unbounded Authority, but laying upon him a necessary Obligation to use his Power with Moderation and Discretion, have provided sufficiently for the Preservation of the *Chinese* Monarchy. The People respect their Prince with so high a Veneration, as almost to adore him. They stile him, *The Son of Heaven*, and, *The only Master of the World*. His Commands are indisputable, and his Words Oracles; yea, every thing that comes from him is sacred. He is seldom seen, and never spoken to, but on the Knees. The Grandees of the Court, Princes of the Blood, yea, his own Brothers bowe down to the Ground to him, not only in his Presence, but before his Throne; and there are certain Days in every Week when the Nobility meet together in one of the Courts of the Palace to acknowledge his Authority by the most submissive Adoration. When he is ill, especially dangerously, the Palace is full of *Mandarins* of every Order, who both in Habit and Gesture express their Grief, and beg his Recovery of Heaven. Rain, Snow, Cold, and any Inconveniences, cannot keep them from doing this Duty; and so long as he is ill, all behave themselves so, as if they fear'd nothing but the Loss of him. Interest is no small Reason for this Respect, for as soon as he is proclaim'd, all the Authority of the Empire is in his Hands: For,

Their Emperor's Power.

The Honour paid him.

1. All Places in the Empire are disposed of by him, and he gives them to whom he pleases. None are sold, but Merit, *i.e.* Honesty, Learning, long Experience, but especially a grave and sober Behaviour, are the only Things can lay Claim to his Favour. If any Person manages them ill, he dismisses or changes them without more ado. A Peccadillo will serve to do it sometimes, *viz.* Too light a Garb, an underhand Bribe, or minding their Pleasures too much, as many Instances daily prove.

2. Nor has he greater Power over their Offices than Lives. No Vice-Roy or Parliament, or any other Sovereign Court throughout the whole Empire can execute any Criminal without express Order from the Court. They are arraign'd and try'd up and down in the several Provinces, but the Sentence is always presented to the Emperor, who either confirms or rejects it as he pleaseth. Most an end, indeed, he agrees to it, but he very often cuts off part of the Sentence, and makes it less rigorous.

He only passes Sentence of Death.

3. Altho' every Man be perfect Master of his Estate, and enjoys his Lands without Molestation, nevertheless, the Emperor can lay what Taxes he thinks fit upon his Subjects to supply the pressing Wants, and relieve the Necessities of the State, but he rarely makes use of it to go beyond the ordinary Taxes. They have likewise a Custom every Year to exempt one or two Provinces from bearing their Proportion in the Tax, especially if they have suffer'd thro' Sickness, or their Lands by unseasonable Weather have not produced their usual Encrease. It is true, that the Laws allow the Emperor such considerable Revenues, that were not the *Chinese* very industrious, and their Lands fruitful, they must be miserably poor, as the other *Indian* Kingdoms are. By this Income he is able at an Hour's Warning to raise a potent and numerous Army to keep his People in Obedience. It is very difficult to reckon what the Revenues of the Empire amount to, because vast Sums are paid in Goods as well as Money; but the nearest Conjecture that can be given of them is, that they altogether amount to 21600000 *l.* at least.

He rates Men's Estates as he pleaseth.

The Emperor's Revenue.

4. The Emperor has the sole Right of making Peace and War. He may make Treaties on what Condition he pleaseth, provided they be not dishonourable to the Kingdom. As for the Judgments which he himself passeth, they are irrevocable, and to have them executed he need only to send them to his Sovereign Courts and Vice-Roys, who dare not in the least delay to register and publish them; whereas the Sentences pronounced by the Parliaments and Vice-Roys, are no way obligatory, till they are confirmed and approved by the Emperor.

He makes Peace and War only.

5. He may make choice of his Successor, not only from the Royal Family, but from among his other Subjects. This ancient Right hath heretofore been put in Practice with great Impartiality and Wisdom; for

He appoints his Successor.

for ſome of their Emperors finding none of their Family, tho' numerous, able to ſupport the Weight of a Crown, have choſen for their Succeſſors Perſons mean as their Birth and Fortunes, but eminent for their Vertue, and admirable for their Underſtanding, ſaying, *That they thus acted not only for the Good of their Kingdom, but for the Honour and Credit of their own Children, for whom it is more glorious to live privately, than to ſit upon the Throne, expoſed to the Cenſure and oftentimes to the Curſes of all the People.* But ſuch Examples are rare, and the Emperors of late for many Ages have bounded their Choice within their Families, but have not always choſen the Eldeſt Son. He who now reigns with ſo much Wiſdom, was a younger Brother, and ſees his elder Brother as dutiful and free from Ambition as the meaneſt of his Subjects, for the great Number of Princes of the Blood, which creates Fears and Jealouſies in *Europe*, in *China* breeds no Confuſion nor Diſorder, by reaſon of the exceſſive Authority of the Emperor. Further, when the Emperor has made choice of his Succeſſor, and publickly declared him, he may afterward exclude him and renew his Choice, if there be good Reaſon for his ſo doing, and the Sovereign Courts of *Pekin* conſent to it.

Not the eldeſt Son.

He honours or diſgraces the Dead.

6. The Grave puts no End to his Power over his Subjects, but he exerciſes his Authority over the Dead, for he either diſgraces, or honours them, as much as if they were alive, when he has a Mind to reward or puniſh them or their Families. He makes them Dukes and Counts after their Deceaſe; nay, as they ſay, he can make them naked Spirits, or as we ſay, Canonize them. Sometimes he builds them Temples, and if their Miniſtry hath been very beneficial, and Vertues eminent, he commands the People to honour them as Gods. This Authority ſeems to be an Abuſe of Religion, but then the Emperor ſeems to make Reparation for it, when he looks upon himſelf as the Chief Prieſt and principal Servant of Religion, becauſe there are ſome Ceremonies and principal Sacrifices which he alone is thought worthy to offer up to the Creator of Heaven.

He may change the Character of their Letters.

7. The Emperor hath Power to change the Figure and Character of their Letters, and aboliſh any Characters already received, and to form any new ones. He may alſo change the Names of Provinces, Cities and Families. He may likewiſe forbid the Uſe of any Expreſſions and Words generally received, and introduce obſolete Ways of Speaking, in Diſcourſe and Writing. One would think, this illimited Power in the Emperor ſhould occaſion unfortunate Events in the Government, as indeed it hath, but the Laws have made ſuch wiſe Proviſions againſt them, that a Prince muſt be very inſenſible of his Reputation, as well as Intereſt, that ſhall long continue in ſuch Abuſes of his Authority. For,

The Father of his People.

1. The old Law-givers have made this a ſtanding Maxim of Government, That Kings are properly the Fathers of the People, and not Maſters placed on the Throne to be ſerved by Slaves; and this Maxim is deeply impreſs'd upon the Minds of his People, being always inculcated into them by their Teachers and Philoſophers; ſo that the Emperor is obliged to ſhew himſelf pleaſed moſt with this Title, and if he neglects this Maxim, tho' he may be an able Warrior or Politician, he ſhall have no Eſteem from his People.

The *Mandarins* to adviſe him.

2. Every *Mandarin* may tell the Emperor of his Faults, provided he do it with due Submiſſion and Reſpect, and if he does not thereupon amend his Conduct, he is to be put in mind of them again and again, how much he deviates from the ancient Laws and the good Examples of his Predeceſſors; and tho', indeed, many who have attempted ſo good a Work have ſuffer'd much, being turn'd out of their Buſineſs and all Favour with the Emperor, yet their Hiſtories ſhew, that no Means has been found ſo effectual to oblige their Emperors to return to their Duty as this:

His Actions are remarked.

3. If a Prince has any Regard for his Reputation, the Manner of writing their Hiſtories is alone ſufficient to keep them within Bounds. A certain Number of their moſt learned and impartial Men are choſen for this Affair, who remark with all the Exactneſs poſſible not only the Prince's Actions, but Words, and that each of them by themſelves, without communicating one with another. As Things fall out they ſet them down in a looſe Paper, and put them thro' a Chink into an Office erected on purpoſe. In theſe Papers the Emperor's Vertues and Vices are ſet down with equal Impartiality and Liberty. And that neither Hopes nor Fears may byaſs them, the Office is never open'd in the Prince's Life, nor while any of his Family ſit on the Throne. When the Crown goes to another Line, which often happens, all theſe Memoirs are gathered together, and compared, and out of them ſuch an Hiſtory is compoſed, as ſhall render him an Example to Poſterity, if he has acted wiſely, or a common *Odium* that he has neglected his own Duty, or the Peoples Good; ſo that if a Prince be deſirous of Honour, he will be circumſpect how he behaves himſelf. Nor is Intereſt a leſs Motive than Reputation to the Emperor to be guided by the ancient Cuſtoms, and adhere to the Laws; for they are framed ſo much for his Advantage, that he cannot violate them without ſome Prejudice to his Authority, nor alter them without bringing his Kingdom into Confuſion; for ſuch is the Temper of the *Chineſe*, that when their Emperor is full of Violence and Paſſion, and negligent of his Charge, the ſame perverſe Spirit poſſeſſes his Subjects. Every *Mandarin* thinks himſelf Sovereign of his Province or City: The chief Miniſters ſell Places to thoſe that are unfit: The Vice-Roys become ſo many little Tyrants: The Governours obſerve no Rules of Juſtice, and the People by this means being oppreſſed are raſily ſtirr'd up to Sedition. Rogues multiply, and commit Inſolencies in Companies, waiting for an Opportunity to break the Peace. Such Beginnings have occaſion'd fatal Conſequences, and put *China* under the Command of new Maſters; ſo that the ſureſt way to eſtabliſh himſelf on his Throne, is, that the Emperor give an exact Regard and entire Obedience to their Laws.

'Tis his Intereſt to obſerve the Laws.

The ordinary Form of Government which the Law preſcribes is this: The Emperor hath 2 Sovereign Councils, the one is called, *The Extraordinary Council*, and is made up of the Princes of the Blood only: The other is called, *The Council in Ordinary*, and has beſides the Princes ſeveral Miniſters of State, named *Colaos*, admitted to it. Theſe examine all Affairs of State, and make a Report of them to the Emperor, from whom they have their final Determination.

The chief Form of Government.

The *Colaos*.

At *Pekin* there are 6 Sovereign Courts, whoſe Authority extends all over *China*, each of them having different Matters aſſign'd to them. The Names are theſe: 1. *Lipou*, which preſides over the *Mandarins*, and gives or takes away their Offices. 2. *Houpou*, which looks after the Treaſury, and takes care of raiſing the Taxes. 3. *Lipou*, which is to look after the ancient Cuſtoms, to take care of Religion, Sciences, Arts, and Foreign Affairs. 4. The *Pimpou* has Charge of the Soldiery and its Officers. 5. The *Himpou* takes Cognizance of all Criminals. 6. The *Compou* looks after the Publick Buildings, and all the Emperor's Houſes and Palaces. Each of theſe Courts are divided into ſeveral Offices, and ſome into 15. The principal Office is managed by the Preſident, and 2 Aſſiſtants, who inſpect all Things that belong to that Court. The reſt are Under-Offices, and conſiſt of a Preſident and ſeveral Chancellors, who are ſubject to the Preſident of the principal Office, from whom there is no Appeal. But leſt ſuch conſiderable Bodies ſhould weaken the Emperor's Authority, or enterprize any thing againſt the State, therefore Care is taken, that tho' each Court has its particular Charge, yet no conſiderable Thing can be brought to Perfection but by the joint Concurrence of all; ſo that ſcarce any thing of Moment to the State can be tranſacted without the Inſpection of moſt of the *Mandarins*. Beſides, the Emperor places an Officer in each of theſe Courts, who is to have an Eye to all their Proceedings. He either privately adverti'ſes the Court, or elſe openly accuſes the *Mandarins* of the Faults they have committed in their private Capacities, as well as in their Offices. He obſerves their Actions, Behaviour and Words, ſo that nothing eſcapes their Notice, and the Princes of the Blood ſtand in awe of them. They are called *Colo*, and ſo immovably fix'd in their Places, that neither Hopes of getting a better, or loſing it, can tempt them to be partial.

The Six Sovereign Courts.

The Preſident and Aſſiſtants.

The *Colo* Office.

The Provinces are under the Inſpection of 2 Sorts of Vice-Roys; one has only the Government of one Province, as *Pekin*, &c. The other, who is called *Tſounto*, preſides over more; ſometimes 2 or 3, ſometimes 4. Each of theſe Great Officers have their Rights ſo well ſettled and adjuſted, that they never claſh and contend with each other in their Adminiſtrations. Theſe all of them have many Courts in their

The Vice-Roys.

their ſeveral Lordſhips, like thoſe of *Pekin*, but ſubordinate to them; ſo that from theſe they appeal to them. There are ſeveral other inferior Officers for preparing or finiſhing Buſineſs, according to the Extent of their Commiſſions.

Governours of Towns.

There are 3 ſorts of Towns, which have each their particular Governours, and a great Number of *Mandarins* that adminiſter Juſtice, and of theſe the 3d ſort are ſubordinate to the 2d, and the 2d to the 1ſt, who are ſubject to the Juriſdiction of the General-Officers of the Capital Cities, as all the Judges are to the Vice-Roys, in whom reſides the Imperial Authority. They from time to time convene the Principal *Mandarins*, of their Province and having examined them about the good or bad Qualities of the Governours, Lieutenants, and other Officers, ſend private Diſpatches to Court to inform the Emperor, who misbehave themſelves, and thereupon they are either deprived of their Offices, or ſummoned to juſtifie themſelves.

The Great *Mandarins*.

On the other ſide, the Vice-Roy's Power is counterpoiſed by the Great *Mandarins*, who are about him, and may accuſe him when they pleaſe for the publick Good. Further, the People, when miſuſed or preſs'd, may petition the Emperor in Perſon againſt him; but becauſe private Perſons find it difficult to bring their Complaints to Court, and reach their Prince's Ear, the Emperor formerly diperſed up and down ſecret Spies, Perſons of known Wiſdom and Reputation, to inform themſelves how the *Mandarins* behav'd themſelves in the Execution of their Offices, and take them up by his Commiſſion. This kept the Judges mightily to their Duties, till the *Tartars* became Maſters of *China*, who laid theſe Officers aſide, becauſe they took Bribes, and enrich'd themſelves by the Guilty to conceal their Crimes, and by the Innocent, whom they threatned to accuſe as Criminals. Nevertheleſs, that ſuch good Means of keeping the Magiſtrates in awe might not quite be loſt, the Emperor himſelf, out of a tender Love to his Subjects, thinks it his Duty to viſit every Province in Perſon, and hear the Complaints of his People, which he performs with ſo much Diligence, as to be a Terror to the *Mandarins*, and the Delight of his People. Another Means to oblige the Vice-Roys and Governours to take a ſtrict Care of their Charge is this: Every Governour is obliged from time to time, with all Humility and Sincerity, to own and acknowledge the ſecret, or publick Faults, which he has committed in his Adminiſtration, and ſend them up to Court in Writing. 'Tis, indeed, difficult to bring a Man to accuſe himſelf, eſpecially knowing, that he ſhall be puniſh'd, tho' mildly, by the Emperor; but it being very hazardous to diſſemble their Crimes, leſt the Emperor ſhould be advertiſed of them by the Inſpector, their beſt Way is to confeſs their Faults ſincerely, and purchaſe Pardon with Money, which in *China* hath a Vertue to blot out all Crimes; but the Fear even of this Puniſhment makes them exceeding cautious and wary, and ſometimes even vertuous beyond their Inclinations.

The Emperor viſits the Provinces.

Officers muſt confeſs their Faults.

Magiſtrates may puniſh without Trial.

In puniſhing of Criminals, the Law gives theſe Directions following: Where-ever the Magiſtrate ſees a Fault, there is no need of ſending a Warrant to bring the Offender before him, and hear the Accuſation or Plea of the Criminal, but he has Power to puniſh it on the Spot, whether it be in the Street, High-way, or a private Houſe. He may take up a Gameſter, Rook or Debauchee, and without any Formality order any of his Followers to give him 20 or 30 Stripes, and ſo proceed on his Journey without Concern; but the Perſon wrong'd may, notwithſtanding this Puniſhment, accuſe the Criminal in a ſuperior Court, and have him farther puniſh'd. A Plantiff in common Caſes may bring his Action in an higher Magiſtrate's Court, before it has been pleaded in his own Town or Province; and the inferior Magiſtrates may not take Cognizance of it, unleſs it be deputed to him, as it often is. When a Cauſe is of great Conſequence, there lies an Appeal from the Vice-Roy to one of the Supreme Courts at *Pekin*, where the Cauſe being examined by ſome Under-Officers, is reported to the Preſident, who having adviſed with his Aſſiſtants gives Sentence, which the *Calaos* carries to the Emperor. Sometimes the Emperor deſires better Information, and ſometimes gives Sentence immediately, which being, in his Name, tranſmitted to the ſupreme Court, the Vice-Roys are order'd to put it in Execution. A Sentence pronounced in this manner is irrevocable, and is therefore called, *The Holy Commandment*, becauſe 'tis ſuppoſed to be without Defect or Partiality. Indeed, it is almoſt an unconceivable Thing, that one Prince ſhould be able to examine the Affairs of ſo vaſt an Empire as *China* is; but beſides he ſpends no Time in Wars and Negociations, the Laws are ſo plain, and all Affairs are ſo well digeſted, that he can with half an Eye ſee to which Party the Sentence ought to encline.

Appeals.

The chief Rules of Government.

There are 3 Things, which conduce exceedingly to the Publick, and are, as it were, the Soul of the Government of *China*: 1. The Moral Principles which are inſtill'd into the People. 2. The Political Rules, which are ſet up in every thing. 3. The Maxims of good Policy, which are, or ought to be every where obſerv'd. The firſt moral Principles reſpects private Families, and enjoins Children ſuch a Love, Obedience and Reſpect for their Parents, that neither the Severity of their Uſage, nor Impertinency of their Age, nor Meanneſs of their Rank, when Children have met with Preferment, can ever efface it. There is no Point of Obedience which Parents cannot command, or Children can refuſe. They are obliged to comfort them when alive, and continually to bewail them when dead. They proſtrate themſelves a Thouſand times before their dead Bodies, and offer them Proviſions, as if they were alive. They bury them with Pomp and Expence almoſt extravagant, and pay conſtantly at their Tombs a Tribute of Tears. They keep their Pictures in their Houſes with all imaginable Care, and honour them with Offerings. The Kings themſelves are not excuſed from this Duty, and the preſent Emperor has made himſelf eminent for his Devotion at the Tomb of *Tchoumtchin*. The ordinary Time of Mourning is 3 Years, and in that Term the Mourner may not exerciſe any publick Office; ſo that the *Mandarins* and Miniſters of State are forced to quit their Places, and ſpend their Time in Grief. And as Parents are honour'd after their Death as Gods, ſo while alive they are obey'd in their Families like Princes. A Father is an abſolute Maſter not only of his Eſtate, but Concubines and Children, ſo that he can diſpoſe of them as he pleaſes: He may ſell them to Strangers. If a Father accuſes a Son of any Crime, there needs no Proof; he muſt be puniſh'd even with Death, if the Crime deſerves it, and the Father hold to his Accuſation. 'Tis in vain to urge to them, that Parents may have Antipathies againſt their Children; for they anſwer, The Love of Children is ſo deeply printed on the Hearts of Parents, that no Antipathy or Diſlike can raſe it out, unleſs they be provok'd and inflam'd by the Stubbornneſs and Diſorders of Children. If a Son mock his Parents, or lay violent Hands on them, the whole Empire is alarm'd. The Emperor himſelf judges the Criminal; the *Mandarins* of the Town are turn'd out, the Neighbours are reprimanded for not curbing the Iniquity of this Diabolical Temper in the Beginning, and the Criminal is chopt into a Thouſand Pieces, and burnt. His Houſe is laid even with the Ground, and all that ſtood near it, as Monuments of ſo horrible a Wickedneſs. The Emperors themſelves cannot reject the Authority of their Parents, without being in Danger to ſuffer for it. One of the Emperors baniſh'd his Mother for managing a private Intreague with one of the Lords of the Court; and becauſe he knew the Action was obnoxious to the Reproof of his Princes and Mandarins, he forbad them all, under Pain of Death, to admoniſh him of it. They were ſilent for a long time, hoping he would condemn himſelf for his Conduct, but ſeeing he did not, they reſolv'd to appear in it. Three ſucceſſively undertook it, and were put to Death with greater Tortures the latter than the former; but at length their Heroick Conſtancy ſo gain'd upon him, that he repented that he, who was the Father of his Country, had ſo barbarouſly put to Death his Children, and being troubled for the Miſuſage of his Mother, recall'd her home, and reſtored her to her former Dignity, being the more honour'd of his Subjects for honouring her.

Obedience to Parents.

Time of Mourning.

Diſobedience of Parents how puniſh'd.

Reprove ſin the Emperor.

The 2d moral Principle which obtains among them, is, To honour the *Mandarins* as the Emperor himſelf, whoſe Perſon the *Mandarins* repreſent. To uphold this Reſpect, the *Mandarins* never appear in Publick without a Retinue and a Shew of Grandeur which commands Reverence. They are carried in a magnificent Chair open, and all the Officers of the Court go before them, and round about them are carried all their Marks and Badges of their Dignity. The People, where-ever they come, open to the Right and Left to let them paſs. When they adminiſter

To honour the *Mandarins*.

niſter Juſtice in their Palaces, no Body ſpeaks to them but on their Knees, be they of what Quality they will; and ſince they can command any Man to be whipp'd, no one comes near them but with Trembling. When any *Mandarin* journeys, all the Inhabitants of the Town croud to meet him, and conduct him thro' their Territories. When he leaves his Office, if he has managed it to Satisfaction, all the Inhabitants go into the High-ways by which he muſt go at his Departure, and place themſelves here and there for 14 or 15 Miles together, with Tables ſpread with Satin Table-Cloths, and cover'd with Sweet-Meats, Tea, and other Liquors. Every one conſtrains him to ſtay with them and eat and drink ſomething, and when he leaves them, they take ſomething from him as a Memorial; ſome get his Boots, others his Cap, and others his great Coat, but they give him another of the ſame ſort; and ſo it happens that he has 30 ſeveral ones before he can get away. All the while the People follow him with Applauſes and Acclamations, calling him the Benefactor, Preſerver and Father of his People, and at laſt part with him with Tears. But if the People are not pleaſed with his Adminiſtration, they are not obliged to ſhew him this Reſpect, but they diſmiſs him with much Indifference. This extraordinary Reſpect ſhew'd to Parents and Governours is the beſt Means of preſerving Quiet in Families, and Peace in Publick.

That all be Brothers and Civil.

The 3d Rule of Morality eſtabliſhed among them is: That all People do obſerve the ſtricteſt Rules of Modeſty and Civility, and that all their Behaviour have a Mixture of Sweetneſs and Courteſie in it. This (they ſay) is it which differs a Man from a Beaſt, and a *Chineſe* from other Men, and that the Diſturbances of Nations are owing to the Neglect of ſuch good Breeding; for Rudeneſs begets a rough Temper ever diſpoſed to Quarrels, but Civility diſpoſes to Friendſhip and bearing Injuries. The *Chineſe* are exact Practiſers of it. Tradeſmen, Seamen, Servants and Country-Men treat one another with ſuch Kindneſs and Civility, as if they were the greateſt Friends. The State accounting this Behaviour conducive to publick Quiet, have appointed Forms of Salutations, Viſiting, making Entertainments, and writing Letters. The uſual Form of Salutation is to lay your Hand a-croſs your Breaſt, and bowe your Head a little, but when you would ſhew a greater Reſpect, you muſt join your Hands together, and carry them almoſt to the Ground, bowing your whole Body. If a Perſon of eminent Quality paſs by one, or is entertained in your Houſe, you muſt bend one Knee, and ſo remain till he takes you up, which he never fails to do immediately. When a *Mandarin* appears in Publick, 'tis Saucineſs to ſalute him, unleſs you have Occaſion to ſpeak to him; but you muſt ſtep aſide, and holding down your Eyes, and your Arms a-croſs, ſo remain till he paſſes by.

Forms of Salutations, &c. ordered by Law.

Their Manner of Viſiting.

Familiar Acquaintance viſit without any Ceremony, but others have ſet Forms of Viſiting. The Viſiter ſends his Servant before with a Piece of Red Paper, on which is written his own, and the Perſon's Name whom he viſits, with ſome Titles of Reſpect to him, according to his Quality. When this Meſſage is receiv'd, the Viſiter comes in, and meets with a Reception according to his Dignity and Merit; ſometimes in the Hall, ſometimes at the Door, ſometimes in the Court-yard, and ſometimes in the Street: When they come in View, they make a low Bowe to each other, and compliment one another in Form: At every Gate they bowe, and ſeek to put each other firſt, but the Strangers ſuffers himſelf to be perſwaded. When they come into the Room where they are to ſtay, they fall to the Ceremonies of Bowing, Kneeling, giving the Right Hand, ſaluting the Chairs, and contending for the firſt Place. Theſe Compliments laſt a Quarter of an Hour, but without Confuſion, becauſe every one knows what they are to do. They always ſit oppoſite one to another, ſtrait up, their Eyes caſt downward, their Hands ſtretch'd on their Knees, and their Feet even with a ſquare and compoſed Behaviour: They have little Diſcourſe at their Viſits, and ſometimes none; ſo that it may be ſaid, they come to pay their Reſpects: Their Speech is very ſubmiſſive and humble: During the Viſit, the Tea goes round 2 or 3 times, and you muſt uſe a Ceremony when you take it, drink it, and return the Diſh to the Servant. When you depart, you repeat the Ceremonies uſed at coming in. Strangers make great Blunders at their Viſits; and Ambaſſadors have

Their Manner of Sitting.

40 Days to learn them, and a Maſter of the Ceremonies to teach them. Their Feaſts are ceremonious beyond Expreſſion. They have an Officer that beats Time, that the Gueſts may all together in Concord take and eat their Meat. Every Gueſt has a Table to himſelf, without Cloth, Napkin, Knife or Spoon; for all Things are cut ready to their Hands, and they feed themſelves with 2 little Inſtruments, like our Forks. They begin their Feaſts with a Cup of Wine, which is given to every Gueſt, and drank by them at one and the ſame time; but if you hold the Cup to your Mouth, they regard not whether you drink or no. After the Cup comes a *Ragoos*, or Diſh of haſh'd Meat. The Gueſts obſerve the Actions of the Maſter of the Feaſt, and as he manages his Wooden Inſtruments (which he does 20 Ways) ſo do they, and ſo eat and end together. After this comes the Wine again, and then another Meſs, and ſo they bring on 20 ſeveral Meſſes, and Wine between every one with the ſame Ceremonies. The laſt Meſs is Rice, Bread, or Broaths, made of Fleſh or Fiſh, and the Gueſts eat more freely of this, becauſe no Drink comes after it. Their Cups are little, and Wine ſmall. They ſit at the Table ſerious, grave and ſilent 3 or 4 Hours together, and when they have done eating, the Maſter of the Houſe gives a Sign to riſe, and then they withdraw themſelves into the Hall or Garden to divert themſelves a Quarter of an Hour, and then come again to the Table, which they find ſet out with all ſorts of Sweet-Meats and dry'd Fruits to eat with their Tea. Theſe Cuſtoms are ſo troubleſome, and yet muſt be ſo exactly obſerv'd, that they keep the Gueſts from eating, ſo that they long to go home to dine, and yet they muſt ſtay to ſee the Comedy, which is tedious, dull and noiſie, but you muſt not laugh at it, but admire the Politeneſs of their Ceremonies, as it is called, inſtituted by the Diſcretion of the Ancients, and kept up by the Wiſdom of the Moderns. The Letters which they write to one another are as remarkable for their Civilities and Ceremonies, which are as many and myſterious as the others. There are ſo many Formalities to be obſerved about the Bigneſs of the Characters, Diſtance between the Lines, the innumerable Titles of Honour to be given to Perſons of Quality, the Shape of the Paper, the Number of red, white and blue Covers, and the like, that there is ſcarce any one Secretary enough to ſend one of their Letters as it ought to be. Theſe and a Thouſand other Ceremonies muſt be obſerved, unleſs you will be accounted a Clown; and tho' they ſeem to favour more of Affectation than Politeneſs, yet it cannot be denied, that theſe Cuſtoms inſpire them with a Sweetneſs of Temper, and Love of Order. And theſe Principles work their Effect the better.

Their Feaſts full of Ceremony.

Their Cuſtomes.

Strangers not admitted into the Government.

The Way of writing Letters.

2. Becauſe they are ſeconded with a wiſe and well underſtood Policy, the principal Maxims of which are: 1. Never to put any one into an Office in his own Province, becauſe a *Mandarin* of ordinary Parentage is uſually deſpiſed by thoſe that know his Family; or if of a good Family, the Number of his Kindred and Friends might encourage him to raiſe a Rebellion, or at leaſt make it difficult for him to execute Juſtice with Univerſal Impartiality. 2. To retain at Court the *Mandarins* Children, under a Pretence, indeed, of educating them well, but in reality to keep them as Pledges of their Father's Loyalty. 3. When any one goes to Law, he muſt uſe a Commiſſary of the Emperor's Appointment, unleſs the Office or Quality of the Criminal gives him Liberty to refuſe it. If the Emperor diſlikes the firſt Sentence, he may commiſſion new Judges to examine the Cauſe, till the Sentence be agreeable to his Mind; ſo that it is not in the Power of Money or Artifice to ſave a Man. 4. Never to ſell a Place, but beſtow it always upon Merit, *i. e.* To Men well skill'd in the Laws and Cuſtoms of their Country, and that lead good Lives. To this End Informations are exhibited of the Life and Manners of the Candidate, and he is ſo many times examined, that it is impoſſible an *Ignoramus* can be preferr'd. When they reſolve to bring up a Child to Learning, they put him to a Maſter to learn to read and write. When he has made ſome Progreſs in theſe Things, he is preſented to a *Mandarin* of the lower Order to be examined. If he writes a good Hand, he is admitted to the Knowledge of Books, and endeavours to attain a Degree, of which there are 3 ſorts, which anſwer to our Batchelor, Maſter of Arts and Doctor. Batchelors are created by certain *Mandarins*, aſſiſted by a Commiſſary from Court; Maſters by the chief *Man-*

Their Vexations by Policy.

Their Education in Learning.

Their Degrees and Way of Commencing.

Mandarins of the Province, and Doctors at *Pekin* only. Their Examination is severe, and their Studies are to say by heart their Staple-Books, make Comments on their Laws, imitate the Compositions, Eloquence and Knowledge of their ancient Doctors, and Politeness of their modern Ones. If any who is fit, want Money to commence Doctor, it is bestow'd on him *gratis*, that Poverty may not deprive the State of the Service of such Men as may be beneficial to it. The Commissary may not see or speak to the Person he is to examine before he examine him. Their Ability to compose and invent, is tried by being shut up into a Room without Books, where they may have no Correspondence. The Emperor himself engages in creating Doctors, and is fear'd for his Exactness and rigorous Justice more than any of the other Posers. To such as excel in Learning he gives Garlands of Flowers, and other Badges of Honour, and chuses some of them Members of his Royal Academy, from which they never remove but into great Posts. But, lest Promotion should make them negligent, they still undergo divers Examinations, where if they are found so, they are severely reproved; but if they continue to improve their Studies, they are rewarded suitably. This Principle contributes much to the publick Good, by keeping the Youth from Idleness and ill Courses, and forming and polishing their Wits. All Offices by this Means are filled with able Men: No Fees are paid for the Administration of Justice, for the Judge has his Office for nothing, and a sufficient Salary to maintain his Post. 5. Never to suffer Strangers to have any Share in the Ministration, because they say, a Mixture of Natives and Foreigners would bring them into Contempt, and occasion nought but Corruption and Disorder. They fancy, that Strangers, tho' never so well form'd and instructed, are but like adopted Sons, who never have that implicit Obedience and tender Affection to their Country as Children by Nature. 6. With them Nobility is never Hereditary, nor is there any Distinction between the Qualities of People, except what is made by their Offices; so that the whole Kingdom, except the Family of *Confucius*, is divided into Magistracy and Commonalty. All their Lands, even those that belong to their Idol-Temples, are held by Socage Tenure, and are obliged to acknowledge the Imperial Power by paying Taxes and Contributions. When a Vice Roy or Governour of a Province dies, his Children, as well as others, have their Fortunes to make, for his Name gives them no Quality, unless their Ingenuity procure it. The State has many Advantages by this Maxim. Trading is in a most flourishing Condition, and is not likely to be ruin'd by the Laziness of the Nobility. The Emperor's Revenues are encreased, because no Estates are Tax-free: Families are kept from seeking Popularity, and all Men are kept in Subjection; for Hereditary Nobles are like petty Kings, and will scarcely obey. 7. To keep up in Peace, as well as War, great Armies, which command Credit and Respect from Neighbours, and are ready to stifle all Commotions at Home. Anciently they kept a Guard of a Million of Men to secure their great Wall, and an equal Number to garrison their Frontiers and great Towns; but now they keep Garrisons only in their most important Towns, and have a standing Force of 15 or 20000 Men in every Province, under the Command of private Officers. They have Soldiers to secure their Islands, especially *Haynan* and *Formosa*. The Horse-Guards at *Pekin* are above 160000; so that the Emperor in perfect Peace has no less than 500000 Men always in Pay, all arm'd, according to the Custom of the Country, with Scymeters and Darts. Their Infantry is small, and poorly arm'd. Their Soldiers are very graceful and pretty, and well disciplin'd. They make an handsome Figure in their Musters, but are soft, lazy and effeminate. Their own Emperor gives them this Character, They are good Soldiers when opposed to bad ones, but bad when opposed to good ones. 8. Concerning Rewards and Punishments: Great Men, who have faithfully serv'd their Country, never lose their Reward, but 'tis usually in Titles of Honour, which are very acceptable to Subjects, and no Charge to the Prince. They consist in the several Ranks of *Mandarins*, and give Power to take place in Assemblies, Visits and Councils, and after Death they entitle to lofty Monuments, built at the publick Charge, and Elegies made by the Emperor himself: But the highest Honour is to make them Saints, build them Temples, and offer them Sacrifices, as the Gods of the Country. They reward also vertuous Actions in private Men, which have brought no publick Advantage to the State, erecting Temples to Maids for having kept their Chastity inviolable, Trophies with honourable Inscriptions to mere Vertue and Merit.

Their Punishments are severe, as their Rewards are liberal. Their usual Punishment is Bastinado on the Back, and 'tis accounted a Fatherly Correction to receive but 40 or 50 Blows. This Punishment is not very scandalous, and *Mandarins*, as well as others, are subject to it; and the Criminal that has suffer'd it, must, if able, fall on his Knees before the Judge, and bowe 3 times to the Ground, and give him hearty Thanks for taking Care of his Education: Yet this Punishment is violent, and often Persons die of it; but there are Ways of escaping it, which are either by bribing the Executioners, who, for Money, notwithstanding all the *Mandarins* Care, will make it light, and almost nothing; or by substituting a Person in their stead, for in all their Courts there are Men to be hired, who will take the Place of the Criminal, and receive his Punishment for Money; for it is a Trade in *China* with many who are maintain'd by it. The second sort of Punishment is the *Carcan*, which differs from the former in this only, that 'tis inflicted at the City-Gate, and is thereby rendred so infamous, that he that has undergone this Bastinado, can never recover his Reputation. They have several Ways of inflicting Death. Mean and ignoble Persons have their Heads cut off in Disgrace; and on the contrary, Persons of Quality are strangled; but if their Crime be notorious, they are punish'd like mean Persons, their Heads being cut off, and hang'd on a Tree in the High-way. Rebels and Traitors are cut into 10000 Pieces, as they call it; for after the Executioner has cut off the Skin round their Foreheads, which he tears by Force, till it hangs over his Eyes, that they may not see the Torments they are to endure; he cuts their Body in what Places he pleaseth, and then leaves them to the Tyranny of their Enemies and Insults of the Mob. Criminals are often whipt to Death, and, which is the cruellest Death of all, they are tortured till they die. 9. They think it good Policy not to suffer a Woman to trade, but confine them always within Doors to be continually employ'd in the Education of their Children. They neither buy nor sell, and are as seldom seen abroad as if they were Nuns. Princesses never succeed to the Crown, nor have the Regency in the Princes Minority; and 'tis reckon'd mean and ignoble for the Emperor to consult them; in which the *Chinese* seem defective, for Wit and Foresight are common to both Sexes, and 'tis unjust to deny the Emperor the Benefit of it where ever he finds it. 10. To encourage Trade as much as is possible thro' the whole Empire, and this the very Princes and Mandarins practise, by putting their Money into trusty Traders Hands. To encrease Commerce, the *Chinese* not only admit Strangers into their Port (tho' this has been done only of late) but spread themselves all over the *Indies*, and carry Silk, Porcelane, Physical Drugs, Sugar, Japan'd Works, and Wine. They go to *Batavia*, *Siam*, *Achem*, *Malacca*, and especially *Japan* and *Manilla*, from whence they bring Silver, which is brought from *Mexico* to the *Philippines* by the *Pacifick Sea*, and carry it to *Canton*, from whence 'tis dispersed all over the Empire: But their greatest Trade lies among themselves from Province to Province, which like so many Kingdoms communicate to each other their Riches; *Huquam* sends Rice; *Canton* Sugar; *Chequam* good Silk; *Nanquim* neat and handsome Pieces of Workmanship; *Xanfi* and *Xenfi* are rich in Iron, Horses, Mules, Camels and Furs; *Fokien* Tea, and so of the rest. This mutual Commerce unites the People, and fills their Towns with Plenty. These are not all the *Chinese* Maxims, but the most essential.

Good Order in inferior Governments is as useful a Part of Policy as any whatever, and all these are settled in *China*. Among Persons of Quality there never happens any Dispute about taking place, because every one exactly knows what is due to his own and others Quality. Every thing that belongs to the Princes and Mandarins is fully stated, their Pensions, Houses, Number of Servants, the Shapes and Bigness of their Sedans; so that when they come into Publick, their Quality is presently known, and the Respect due to them paid without Trouble. When the *Chinese* govern'd the Empire, all private Men wore their Marks

Their Faith full of Ceremony.

Strangers not admitted into the Government.

Nobility not Hereditary, and the Reason assign'd for it.

Standing Armies.

Rewards and Punishments always given.

Their Punishments. 1. Bastinado.

To encourage Trade.

Trade among themselves.

The good Order of the *Chinese*.

of Distinction, and there was no Learned Man, but his Degree and Rank might be known by the Fashion and Colour of his Garb. Their Towns have a determinate Figure, and they ought to be square, and their Gates set to the 4 Quarters. The Houses have Through-Lights, and are accounted ill built, if their Doors do not lie exactly parallel with one of the Sides of the Town. Towns of several Orders have a different Bigness. The chief Towns are 9 or 12 Miles round. others are 6, and others less. The Streets are strait, laid out by a Line, large and well paved, yet inconvenient, because all Persons of Note either ride on Horseback or in a Chair. Their Houses are very low, that none may overlook each others Yards and Gardens. The whole Town is divided into 4 Parts, and those into small Divisions of 10 Houses, over which presides an Officer, who takes Notice what Contentions happen, what Strangers come in or go out, and what other extraordinary Things happen in his little Ward, and informs the *Mandarin*. In case of an Alarm, the Neighbourhood is obliged to lend an assisting Hand, because they are to make good all Robberies. Lastly, In every Family every Father is answerable for the Disorders of his Children and Servants. The Gates of the Cities are shut up and watch'd every Night. In the Day-time there are Guards to examine all that come in, and if he be a Stranger (for they know their own Country-men by their Mein, Habit and Tones) they take him up, and carry him to the *Mandarin*. In certain Places they tie Chains cross their Streets, and Guards go on the Patrole, and the Horse go their Rounds upon the Fortification, and then Woe be to him that is found from home. Meetings, Masquerades and Balls are only for Thieves and Mob, say the *Chinese*; all orderly People ought to be at home, providing for their Families, or taking their Rest. Gaming is forbidden both the Gentry and Commonalty, and yet they'll sometimes play away their Estates, Wives and Children at Cards; but this Disorder came in with the *Tartars*, and is concealed.

the Bigness of their Towns.

City Gates shut up and guarded.

Gaming disallow'd.

As to their Marriages; such as are inclin'd to take a Wife, do not, as we do, follow their own Fancies in chusing her. They never see the Woman that they are to marry, but take her upon the Word of their Parents, or of certain old Women, who are Inspectors between them, and being generally in Fee with the Woman's Friends, seldom give a true Character of her. The Men usually buy their Wives, as they do other Merchandizes, giving more or less according to their good or bad Properties. When the Parties are agreed about the Price, and the Money paid down, then Preparations are made on both Sides for the Nuptial Solemnities. The Bride is carry'd in a sumptuous Chair, with Hautboys, Pipes and Drums going before, and her Parents and other near Relations following it. Her Portion, which she carries with her, is her Cloaths, and a few Goods which her Father presents her with. The Bridegroom stands at his Door richly attired waiting for her, and having open'd the Sedan, wherein she is shut up close, conducts her into a Chamber, where she, with the Women invited, spend the Day in Feasting, as he doth with the Men his Friends and Acquaintance. This being the first time of the Bride and Bridegroom's Meeting, proves often a Day of Sorrow to themselves, tho' of Mirth to their Friends; for one or both often dislike their Bargain, and sometimes the Man will chuse rather to lose his Money than take his Wife. When they are join'd, the Husband may not divorce his Wife, but for Adultery, and some other Occasions, which seldom fall out, and then they sell them, and buy another. Persons of Quality rarely do it, but the common People do it frequently. If a Man sell his Wife without a just Cause, both the Buyer and Seller are punish'd; yet the Husband is not obliged to take her again. They are allow'd but one Wife, but may have as many Concubines as they please, and all the Children have an equal Claim to the Estate, because they are reckon'd the Wife's Children, and call her Mother, being the sole Mistress of the House, and the Concubines her Servants. They own, that 'tis a Sign of Chastity in the *Europeans* to have but one Wife, tho' they admire they have no Concubines; and if any say, Many Women must needs raise Quarrels in a Family, they say, Nothing is without some Inconvenience, and one Woman may be as troublesome as many. They best Way they own is, to have no Wife at all. The *Chinese* generally are very jealous, and will not suffer their Wives to speak in private with their own Brethren; yet some are so complaisant to their Wives, as to suffer them freely to commit Adultery, and some Women make it a Condition of Marriage; but such Families are abhorr'd by the *Chinese*, and their Children, tho' never so deserving, can never obtain an honourable Office.

Their Marriages.

Divorce for Adultery only.

Of all Civil Institutions, nothing troubles the *Chinese* so much, as the Ordering their Time and Holy-days. There are above 100 Persons in the Emperor's Service on purpose to regulate the Kalendar, which they make new every Year, and send it with a great deal of Ceremony to the Vice-Roys of every Province. They make the Year to consist sometimes of 12, and sometimes of 13 Months, according to the Moon's Course, and it ought to agree with the Sun's. In these Almanacks the Equinoxes, Solstices, the Ecclipses of the Sun and Moon, their Entrance into the Signs, the Courses of the Planets, with their Oppositions, Conjunctions and Propinquity to any Star is described, and, indeed, every thing is calculated which is curious in Astronomy. They add divers Points of Judicial Astrology, which Ignorance and Superstition hath invented, about happy, or unhappy Days, and Times proper for Buildings, Marriage, and undertaking Journeys, which much take with the People; but the Emperor and Men of Sense are wiser than to mind such Trifles. Altho' there be no publick Clocks in *China*, as we have in *Europe*, yet the Day is divided by them into 24 Parts, which have all their particular Names, and begin at Midnight. Anciently they divided their Day into 12 Parts, each of which they subdivided into 8, which made the Natural Day to consist of 96 Parts, which were all exactly distinguish'd in their Calculations; but their Sun-dyals (which are ancient) were divided into 4 general Parts, which were each subdivided into 24 little ones, which being all put together, divided the whole Circle into 100 Parts. This Way of Dyalling is irregular, and of little use. Since they have receiv'd a new Kalendar from the Jesuits, they reckon their Time almost as we do, save that they divide the whole Natural Day into 12 Hours, putting two of our Hours into one. As for the People, they are not curious herein: They think it sufficient to know the Rising and Setting of the Sun, and Noon: In the Night they make use of Bells and Drums, which by their Sound distinguish the Night into 5 Watches: [For in all the Cities and Towns of the Empire, there are 2 Towers, in the one of which is a Bell, and the other a Drum, which serve to tell the Watches thus: At every Watch a Watch-man strikes several Strokes upon the Bell, and the Drum answers him; and so they continue all the first Watch, giving single Strokes, and resting a while. At the 2d Watch the Drum and Bell are struck again a while; and then they continue all that Watch, giving double Strokes, and in the following Watches 3, 4 or 5 Strokes, as the Watch is, and so they know the Hour of the Night at any time; for the Bell and Drum are so large, loud and clear, that they are easily heard all over the City. *F. Magellan.*]

Ordering of their Time.

Their Day

Their 24 Dyals.

Their current Coin is very odd: They have round Copper Pieces, with an Hole in the Middle, full of Characters: The Mettal is neither pure, nor well hammer'd; they are thick, but easily broken; 10 of these make a Penny, and 10 Pence make the 10th part of the *Chinese* Crown, called *Leam*; but by the *Portuguese*, *Tael*. Their Crown amounts to 6 *s.* 2 *d.* 2 *q.* and $\frac{22}{71}$ of a Farthing. This Crown-piece is not coin'd with any Stamp or Image. Their Silver Money is irregular Pieces of Silver, which they take by Weight, and if they distrust the Goodness, they may cut it asunder. They know the Goodness of Silver 3 Ways, by the Colour, by several little Holes made in it by the Melting-pot, and by divers little Circles made by the Air in cooling after it has been melted: If the Colour be white, the Holes small and deep, the Circles many, close and fine, then the Silver is pure, but the more it differs from these Qualities, so much the more Alloy it has. Gold never passes in *China* for Money, no more than Jewels do: They buy it as they do other Merchandize, and the *Europeans* make a good Market of it there, by selling it for a 3d part more than it cost them.

Their current Coin.

The Marks to know good silver.

The *Chinese* sell almost all Things by Weight, and to that End use, among several sorts of Scales, a small portable Ballance, kept in a varnish'd Case, which is very light and useful. It is something like the *Roman* Ballance, consisting of a Dish, an Arm and a Weight.

Their Weights.

It

It will weigh very nicely and exactly, for the Thousandth part of a Crown will ſenſibly turn the Scale. The *Chineſe* divide their Pound Weight as we do, into 16 Ounces, and each Ounce into 10 Parts, called *Tsien*; each of theſe into 10 Penny-weights, and each of theſe again into 10 Grains. They have many other Diviſions which our Language has no Name for.

Their Meaſures. As to the common Meaſures in uſe in this Empire, different Provinces have different ſorts. The Meaſures which they uſe in the Mathematical Courts are the exacteſt. The *Chineſe* Foot is little different from ours, ſave that ours is a little longer.

Their Care of the High-ways. The Civil Government of *China* takes Notice of the High-ways, that they be handſome and eaſily paſſible. The Paſſages for their Water are in ſeveral Places warfed with Stone-Walls for the Convenience of Travelling, and over them there are a great Number of Bridges, which unite the Towns and Fields together. Canals alſo are cut for the Water to paſs thro' all the Towns of the Southern Provinces, to make their Ditches the more ſecure, and the Towns more pleaſant. In marſhy Grounds they throw up prodigious long Banks, which keep the Roads very good in theſe Parts. They'll ſtick at no Charge to make their Ways good; they'll make a Paſſage thro' Mountains, if they are in their Way. The Road from *Sigan* to *Hamcheu* is one of the ſtrongeſt Pieces of Work in the World; for on the Side of the Mountains, which are perpendicular, they have made a kind of a Balcony without Rails, which reaches thro' ſeveral of them, to travel on. Theſe ſort of Roads are hazardous, and terrifie Strangers; but the People are venterous, and the Mules will go on them without Fear. Their Roads are 80 Foot broad, and the Soil is light and ſoon dry, when it ceaſes raining. In ſome Provinces they have on both Sides Cauſeways for Foot Paſſengers, ſupported with Trees, and ſometimes terraſs'd with Walls of 8 or 10 Foot high, to keep Paſſengers out of the Fields. They all terminate at ſome great Town. At about a Mile and half Diſtance from each other, there are ſet up ſeveral Wooden Machines, like Triumphal Arches, about 30 Foot high, upon which in a large Frize is wrote in Characters, which may be read at almoſt half a Quarter of a Mile's Diſtance, how far it is from the Town you left to the Town you are going, and ſo you have no need of a Guide in *China*. Near theſe Piles are fix'd little Towers of Earth, where the Emperor's Standard is ſet, and the Country Militia lodged. Theſe Soldiers in time of Rebellion are to ſuppreſs Tumults, and in Peace to carry Expreſſes and Letters to the Emperor, aſſiſt Travellers, in caſe of an Alarm, and ſtop High-way-men and Robbers. Every Man that goes arm'd is obliged to give an Account to theſe Men whence he came, whither he is going, and upon what Buſineſs, and ſhew his Paſs. By theſe Means the Roads are pretty free from Rogues. Their Poſts are as well regulated as ours in *Europe*. They are maintain'd at the ſole Charge of the Emperor, becauſe they are to carry Diſpatches from Court to the Vice-Roys, who ſend them forthwith by other Couriers to the Governours of the Towns of the firſt Rank, who tranſmit them to the 2d, and they to the 3d; but the Poſt-Master for a little Money will ſend private Letters by them. 'Tis the *Mandarins* Care to ſee the Roads be good, and that they may not neglect them, the Emperor often gives out a Report, that he intends to viſit this or that Province, and then knowing, that not their Fortunes only, but their Lives are in Danger, if they are found bad, they ſpare no Coſts or Pains to repair. In *Xanſi* a Governour hang'd himſelf, becauſe he deſpair'd of getting the Roads in Repair time enough for the King's Coming; but all this Care can't prevent one Inconvenience in their Roads, which is, that the Soil being light, and Travellers almoſt innumerable, the Duſt is ſo great, that they are unpaſſible when there is Heat and Wind.

The *Mandarins* to repair the Roads.

Of all the wholeſome Inſtitutions of *China*, the Method of Levying the Emperor's Revenue contributes as much as any thing to the publick Peace. They are not troubled with Swarms of Officers and Commiſſioners. All Mens Eſtates are meaſured, and all Families are regiſter'd. Whatſoever the Emperor is to have by Exciſe on Goods, or Tax on Perſons, is publickly known, and every Body is to bring what's due to him to the *Mandarins* of the Towns of the 3d Rank; and if any neglect to bring his Dues, he is to ſuffer Impriſonment, and undergo the Baſtinado, till he has made Satisfaction. The *Mandarins* of the lower Rank give an Account to the General-Officer of the Province, who accounts with the Court at *Pekin*, which looks after the Exchequer. A great part of the Revenue is diſburs'd up and down the Province in Penſions, Salaries, Soldiers Pay, publick Buildings, and what is over plus is carry'd to *Pekin* to maintain the Emperor's Court, and other Expences of that Town, where the Emperor keeps in Pay above 160000 Regular Troops, to whom, as well as to the *Mandarins*, is given out every Day Meat, Fiſh, Rice, Peaſe and Straw according to every one's Rank, beſides their conſtant Pay. All this Expence the Revenues of the Southern Provinces alone would anſwer, but they are ſo jealous leſt at any time the Revenue ſhould come ſhort, that they keep Magazines of Rice at *Pekin* ſufficient for 3 Years, which tho' it taſte not ſo well, yet is as wholſome.

The Way of Levying the Emperor's Revenue.

This numerous Army of the *Chineſe* Emperor would (one would think) awe all *Aſia*, but there natural Effeminacy, and continual Idleneſs is ſuch, that makes them not valued. The Weſtern *Tartars* ſay in Deriſion, *That the Neighing of a* Tartary *Horſe will rout all the* Chineſe *Cavalry*; yet all poſſible Care is taken to have good Soldiers, for none is admitted into the Guards as an Officer, till they have made Trial of their Stoutneſs, Skill and Dexterity in Military Affairs. Theſe Officers exerciſe their Troops, form them into Squadrons, march them, teach them to divide their Files, to go thro' narrow Paſſes, ſhew them to give the Onſet and Rally, manage their Bow, and handle their Scymetar, and yet they are ſoon broke and put into Diſorder, becauſe they have no Principles of Honour and Bravery inſtill'd into them from their Childhood; but being educated behind the Counter, or at the Bar, liſt themſelves into the Soldiery to live at Eaſe, as hoping there will be no Occaſion of fighting. This Piece of *Chineſe* Policy prevents, indeed, Domeſtick Feuds, but expoſes them to Foreign Enemies.

The *Chineſe* Army.

LETTER X.

Written to the Cardinal de Bouillon; *Concerning the Ancient and Modern Religion of* China.

Lewis Le Comte, thinking it moſt proper to write of Religion to a Perſon eminent in the Church, ſends him this Account of the ancient and modern Religion of *China*. He ſays, that Religion has always had a great Share in eſtabliſhing the greateſt Kingdoms, which could never ſupport themſelves, were not the People's Minds united by the Outward Worſhip of a Deity. *China* has been happier in this Foundation, than any other Nation under the Sun, for it drew in the chief Maxims of Religion from the Fountain Head. The Children of *Noah*, who in the Time of the Deluge were Witneſſes of the Omnipotency of their Creator, were ſettled all over the Eaſtern Parts of *Aſia*, and in all Probability founded this Empire, and tranſmitted the Knowledge of God to the People of it, as may be collected from their Hiſtories; for *Tohi*, their firſt Emperor, carefully bred up 7 Sorts of Creatures for Sacrifice to the Supreme Spirit of Heaven, and Earth. *Hoamti*, the 3d Emperor, built a Temple to the Sovereign Lord of Heaven, the firſt that was conſecreated to Him, tho' not ſo magnificent as the *Jewiſh*. *Tchoen-hio*, their 5th Emperor, inſtituted Prieſts, or Eccleſiaſtical *Mandarins*, in ſeveral Provinces, to preſide over the Sacrifice. He gave them a ſtrict Command to take care that Divine Service were performed with all Humility and Reſpect, and that all Religious Ceremonies be ſtrictly obſerved. *Tibo*, his Succeſſor, took as much Care of Religion as his Predeceſſors had done, and 'tis probable that Religion was preſerved pure during the Reign of 80 Em-

Religion eſtabliſh'd in *China* by the Children of *Noah*.

Continued by many Emperors successively for many Ages pure.

Emperors, becauſe the moſt Learned among the *Chineſe* maintain, that before the Superſtitions introduced with the God *Foe* into *China*, there were no Idols or Statues ſeen, but the Obſervation of the Emperor *Yao*'s Maxims were recommended to the Princes, of which the moſt eſſential and principal was concerning the Worſhip of the Sovereign Lord of the World. *Vow-van* did, according to the ancient Cuſtom, offer Sacrifices, and under the Reigns of *Tchim Van* and his Son, Peace, Honeſty and Juſtice reigned in *China*, and ſo Things continued for 300 Years after, to the Times of the Emperor *Teou-vam*, who reigned 800 Years before *Chriſt*: So that they preſerved the Knowledge of the true God for near 2000 Years. And they did honour their Maker in ſuch a Manner, as may ſerve for an Example and Inſtruction to Chriſtians themſelves; for they had all along a ſtrict Care to breed up Beaſts for Sacrifices, and to maintain Prieſts to offer them up. The internal Service of the Mind was preſcribed, and they tied themſelves to a nice Obſervation of the ſmalleſt Ceremonies for the Edification of the People. The Empreſſes bred ſilk Worms and with their own Hands wrought Coverings for their Altars, and Habits for their Prieſts. The Emperors themſelves till'd the Grounds which produced the Corn and Wine deſtined for ſacred Uſes. The Prieſts would not offer Sacrifices before the People, unleſs they were fitted for it by 3 or 7 Days Abſtinence from Conjugal Enjoyments. They had their Solemn Faſts and Days of Prayer in Publick. When the Empire laboured under any Publick Calamity either by Barrenneſs, Flouds, Earthquakes, or Foreign Wars; and becauſe the Emperors ſuppoſe that all ſuch publick Calamities are occaſioned thro' their ill Government, they enquire of their Subjects what Faults they have committed, that they may amend them from the Example of one of their Princes, who in the time of Scarcity for 7 Years, obtain'd Plenty by thus humbling himſelf, and offering himſelf to Death, to propitiate the Divine Wrath, and reſtore them to their former Plenty. But tho' the Knowledge of the true God laſted many Ages, even after *Confucius*'s Death, who much improved it, yet it was not always ſupported with the ſame Purity. Their Minds were ſometimes poſſeſſed by Idolatry, and their Manners became ſo corrupt, that the true Faith being but a Cauſe of greater Ill, was by little and little taken away from them by the juſt Judgment of God. Theſe Corruptions and Superſtitions had a double Original. *Li Laokun* gave Riſe to many of them. He was a Philoſopher, who lived before *Confucius*. His Followers ſay, That his Mother bare him 80 Years in her Flanks, and that he came out of her Side a little before her Death. He became famous in a ſhort Time for his pernicious Doctrines; for he taught, That God was Corporeal, and that he governed other Deities, as a King governs his Subjects. He pretended to be an Inventor of Chymeſtry, and fancied, that he had found out a Drink that would make one Immortal; to obtain which, his Followers, both Men and Women, fell to ſtudy Magick, and at length it became the uſual Practice of every Body to avoid Death. The Profeſſors of this Study are called *Heavenly Doctors*; they live together in Societies, and erect Temples to *Laokun* their Maſter, whom both King and People honour with Divine Worſhip. Theſe Doctors in time became dreadful and admired for their Covenants with the Devil, and their Magical Wonders, and there is ſcarce any Body who does not give Credit to their Maxims, and hopes to eſcape Death by their Means. One of theſe Doctors was in ſuch Reputation with the Emperor, that he gave him the Title of *Chamti*, i.e. the Supreme Emperor; a Name only given God before; but their Authors ſay, This Impiety provoked God ſo, that he puniſhed his Wickedneſs by rooting out his Family, and bringing *China* under the Power of the Weſtern *Tartars*. *Laokun* wrote ſome uſeful Books; *Of Vertue*; *Of the Good of avoiding Honour*; *Of the Contempt of Riches*; *Of Retirement from the World to know our ſelves*. We often repeated the following Sentence, which he ſaid, was the Foundation of true Wiſdom; *Eternal Reaſon produced One, One produced 2, 2 produced 3, and 3 produced all things*, which ſeems to intimate his Knowledge of a Trinity, but theſe Things do not make amends for his Errors.

A 2d Sect ſprang up about 32 Years after *Chriſt*'s Death, and introduced the Adoration of the Idol *Fo*, or *Foe*, which, like a poiſonous Infection, ſpread it ſelf thro' all the Provinces and Towns of the Empire, and fill'd the Empire with Idolatry, Atheiſm, Superſtition and Fables, as the Tranſmigation of Souls, and almoſt all ſorts of Errors. No Body can well tell where this *Foe* was born; the moſt probable Account is, That he was a King's Son, born above 1000 Years before *Chriſt*. He was at firſt called *Che-Kia*, but took the Name of *Foe* about 30 Years of Age. His Mother brought him into the World thro' her Side, and died in Child-birth. He ſtood as ſoon as he was born, and pointing to Heaven and Earth ſaid, *I am the only Perſon in Heaven and Earth, that deſerves to be honoured.* He married at 17 Years old, and had a Son, but left him and all the World to retire with 3 or 4 *Indian* Philoſophers into Solitude, and teach them. He was fill'd with the Divinity at 30, and had an univerſal Knowledge of all Things. He began with a vaſt Number of Miracles to gain the People's Admiration, and was worſhipp'd as a God. The Number of his Diſciples became very great, and by their Means all the *Indies* is poiſon'd with his Doctrine. They are called *Talapoins* at *Siam*, *Lama's*, or *Lama-ſem*, by the *Tartars*, *Bonze's* by the *Japaners*, and *Hocham* by the *Chineſe*. He died in the 79th Year of his Age, and at his Death declared to them, That all he had ſaid to them was Ænigmatical, and that the only Principle of all Things from whence they came, and to which they muſt return, is *Nothing*. Theſe laſt Words produced a Sect of Atheiſts among them, but the reſt kept cloſe to his Original Errors, and fancying that their Maſter was tranſmigrated into ſeveral Creatures, as the Ape, Elephant, Dragon, &c. worſhip them with him; and the *Chineſe*, who are of all Nations the moſt ſuperſtitious, multiply the Number of theſe Idols much: Yet it often happens, that if the People do not obtain what they deſire after long worſhipping them, they'll turn them off, and treat them after the moſt reproachful Manner in Words and Deeds, plucking them down, and dragging them in the Streets thro' the Dirt and Mud. A Man, who had long pray'd to an Idol for the Recovery of his only Daughter, and was by the *Bonze*'s promiſed a Recovery; yet failing of his Expectation (for ſhe died) obtain'd of the Vice-Roy of the Province a formal Sentence againſt it, *viz.* That the Idol ſhould be ſent into perpetual Baniſhment, as uſeleſs to the Kingdom, his Temple ſhould be pull'd down, and the *Bonzes* ſeverely chaſtiſed, who repreſented him, and the Sentence was executed; yet theſe Things will not undeceive the blind *Chineſe*.

The *Bonze's*, whoſe Intereſt it is, find out Arts to keep up the Reputation of their Gods, and eſpecially of their Idol *Foe*, by teaching the People theſe Principles of Morality: They ſay, That Good and Evil are not ſo confuſed in the other World as in this, but there are Rewards for the Good, and Puniſhments for the Bad; and to that End different Places are ſet apart for the Souls of Men according to their Merit: That the God *Foe* is the Saviour of the World, born to teach the Way of Salvation, and make Expiation for all our Sins. He has left them 10 Commandments, *viz.* 1. Not to kill any living Creature. 2. Not to take another's Goods. 3. Not to give one's ſelf to Impurity. 4. Not to lye. 5. To drink no Wine, &c. Beſides theſe, they recommend to the People the Practice of ſeveral Works of Mercy, *viz.* To nouriſh and entertain the *Bonze's*; To build them Monaſteries and Temples, that their Prayers and Penances may exempt them from the Puniſhment due to their Sins; to burn Paper waſh'd and gilt with Silver, and Habits made of Stuff and Silk; for they ſhall be turn'd into real Gold and Silver, and into true and ſubſtantial Garments, which ſhall be faithfully given to their Fathers; and if you neglect theſe Commands, you ſhall be cruelly tormented after Death, and expoſed to ſeveral *Metampſycoſes*, or Tranſmigrations into Rats, Horſes, Mules, and other Creatures. Other Arts they have to delude the People, and beguile them of their Money or Goods. Sometimes they'll pretend, the Souls of their dear Friends are in their Ducks, Geeſe or Cattle, and having obtain'd them to ſecure the Souls of their Friends, feaſt on them. Sometimes they pretend to ſignal Acts of Penance, which the People eſteem them mightily for, and will ſhew them much Pity and Compaſſion. They'll drag after them long Chains of Iron, faſten'd to their Neck or Legs; others will beat their Heads with large Bricks, till the Blood trinkle down, to expiate for their Faults; others will ſhut themſelves up in a Sedan full of Nails, with the Points inward; and thus going from Houſe to Houſe,

House, they beg Alms, and the People greedily relieve them, and buy the Nails at 6 *d.* apiece; others get Money out of the People by Magical Arts, ſecret Theſts, horrible Murthers, and a Thouſand other deteſtable Actions, for which, if they can but eſcape the Juſtice of Men (which in *China* ſpares no ſuch Offenders) they fear not God. The generality of the People are prejudiced in Favour of them, but the wiſer ſort are always upon their Guard againſt them, and the Magiſtrates watch them; for ſometimes they will ſacrifice Mens Lives to their Superſtition, which, if diſcover'd, they are puniſh'd ſeverely for.

Their wicked Actions.

Since the *Tartars* have been Emperors of *China*, the *Lamas*, another ſort of *Bonze's*, have been eſtabliſh'd there. Their Habit is different from thoſe of *China*, both in Shape and Colour, but their Religion is the ſame; for they worſhip the God *Foe*, and they differ only in a few ſuperſtitious Practices. At *Pekin* they are Chaplains to the *Tartar* Nobility, but in *Tartary* they are worſhipped as Gods; for they ſet up a *Lamas* in the Temple, and ſay, that the God *Foe* appears in a ſenſible Figure, and never dies; for if the *Lamas* who repreſents him dies, they put another in his Room of the ſame Stature, and as near as can be of the ſame Features, that the People may be the better deceived by it. An infinite Number of *Lamas* ſerve him with an ineffable Veneration, and ſtrive to imprint the ſame upon all Mens Minds, and the People are too often bubbled with ſuch Impoſtors.

The Lamas of China.

In *China* there are but a few *Mahometans*, who have lived there 600 Years in ſeveral Province, and are never diſturb'd, becauſe they never diſturb any Body upon the Account of Religion, being content to enjoy it themſelves, or propogate it among their Kindred by Marriages.

The Mahometans in China.

There is a 3d Sect, which is called, *The Religion of the Learned*: Their Doctrines are ſo obſcure, that the very Profeſſors of it ſcarce underſtand what they teach. The Original of it began about 1400, when the Emperor being willing to ſtir up in his Subjects a Love of Learning, which the Civil Wars, Magick and Idolatry had almoſt baniſh'd out of the Empire, made choice of 82 of their moſt ingenious Doctors to compile a Syſtem agreeable to the Sentiments of the ancient Writers, which might ſerve as a Direction for the Learned hereafter. The *Mandarins*, who were commiſſion'd to this Work, ſet themſelves diligently about it, but being prejudiced with their Idolatrous Opinions, have not follow'd the true Senſe of the Ancients, but have diſtorted their Words and Sayings to their falſe Notions. They ſpeak of God as nothing different from Nature, and ſay, He is a moſt pure and perfect Principle, the Source of all Things, the Eſſence of all Beings, and He that conſtitutes the formal Difference of Things. They allow a licentious Freedom from the Worſhip of God. They tolerate the *Mahometans* willingly, becauſe, like them, they adore the Maſter and King of Heaven, but perſecute all other Sects with great Violence, having at Court taken up a Reſolution utterly to aboliſh them throughout the Empire; but finding many Learned Men Diſſenters from them, and the People ſo prejudiced in favour of Idols, that they could not work their intended Reformation without Inſurrections and Diſturbances, they were forced to lay aſide their Reſolutions, contenting themſelves to denounce all other Sects, Hereticks at *Pekin*. Theſe new Books being honour'd with the Emperor's Approbation, are greedily received by every Body. Some like them, becauſe they deſtroy all ſorts of Religion, and theſe are moſt numerous; others approve them, becauſe they contain ſo little of Religion; for, indeed, tho' they ſeem to honour God with their Lips, yet their Hearts are far from Him: And ſo this People, once ſo wiſe and full of the Knowledge of Religion, are fallen into Superſtition, Magick, Paganiſm, and, Laſtly, Atheiſm it ſelf.

Their Principles.

The Books compoſed by them.

The Emperor, who is a wiſe and politick Prince, manages himſelf prudently as to theſe Sects of Religion. He always keeps in with the People, being ſenſible that their Love is the main Support of his Throne, and is ſo far from provoking them, that he makes himſelf very popular, yet not to ſuch a Degree as to bring upon him the Hatred of the *Mandarins*, and therefore he permits, or rather tolerates Superſtition. He pays a great deal of Reſpect to ſeveral *Bonze's* of the firſt Rank, who have behaved themſelves well in any of the Provinces, or at Court; yea, he forces his Temper ſo far, as to let ſome of them live in his Palace, becauſe his Mother had ſettled them there; but he is no Slave to their Opinions, he perfectly underſtands the Folly of them, and will upon Occaſion laugh at their Principles. When his Mother died, ſeveral Maids of Honour to the Empreſs came and fell at his Feet, deſiring him to ſuffer them to follow her into the other World, where their Services might be uſeful to her; but he anſwer'd, *I have taken Care for that already, you need not trouble your ſelves about it*: But, for fear their cruel Zeal ſhould prompt them to lay violent Hands on themſelves, he commanded that their Hair ſhould be immediately cut off, and they ſhould be confin'd, for they fancy themſelves uſeleſs to ſerve Perſons of Quality in the other World, when they are ſhaved. He honours *Confucius* as the firſt and wiſeſt Philopher in the World. In ſeveral Things he follows Cuſtom, when he judges it for his Intereſt. At certain Times of the Year he offers Sacrifices, but he ſays, 'tis only in Honour of the *Cham-ti*, and that he adores none but the Supreme Lord of the Univerſe. He believes in One God, but State Reaſons and the Gratifications of his Paſſions keep him from ſubmitting to the ſtrict Rules of the Goſpel, tho' he declares, that were he convinced of the Truth of it, he would not ſtick one Minute to be of it; which God, in whoſe Hands are the Hearts of Princes, effect by his Grace and miraculous Power, as a Means to convert the Empire to the Goſpel.

The Emperor's Behaviour towards the different Sects of Religion.

He honours *Confucius*.

The Subſtance of Three Letters; Concerning the Eſtabliſhment and Progreſs of the Chriſtian Religion in China.

The Emperor of China's Objection againſt Chriſtianity.

Lewis Le Comte having in the Beginning of the firſt of theſe Letters propounded an Objection againſt the Chriſtian Religion made by the Emperor of *China*, to this Effect, *If the Knowledge of* Jeſus Chriſt *is abſolutely neceſſary for Salvation, and God deſires that all Men ſhould be ſaved thro' Him, how comes it to paſs, that for theſe* 1600 *Years we in* China *knew nothing of it? Is* China *ſo inconſiderable, as not to be thought on, while ſo many barbarous Nations have been enlightened?* endeavours to anſwer it by giving a probable Account, that *China* was not forgotten in the Commiſſion given to the Apoſtles to inſtruct all Nations; and ſays, There is no doubt but that St. *Thomas* preached the true Faith in the *Indies*, and 'tis as certain that the *Indians* than had great Dealings with the *Chineſe*, to whom almoſt all *India* was Tributary. It is therefore very probable, that this Apoſtle did not neglect *China*, which then out-ſhined all thoſe Eaſtern Parts of the World, as much as *Italy* did the Weſtern, when the *Roman* Empire was in the moſt flouriſhing Condition, and ſo he either travelled there himſelf, or at leaſt ſent ſome of his Followers. This is made almoſt certain by the Hiſtories of thoſe Parts: For the *Chineſe* Hiſtory it ſelf ſays, *That about thoſe Times a Man came into* China, *and preached Heavenly Doctrines. He was not an ordinary Man, for his Life, Miracles and Vertues made him admired by all the World.* Further, in an ancient Breviary of the Church of *Malabar*, written in *Chaldee*, theſe Words are found in the Office for St. *Thomas*'s Day, *It was by St.* Thomas's *Means that the* Chineſe *and* Æthiopeans *were converted, and came to the Knowledge of the Truth.* And in another Place, *It was by St.* Thomas, *i. e. by his Preaching, that the Kingdom of Heaven went into the Empire of* China. We can't tell what Converſions he made in *China*, but ſince Chriſtianity was preached there, 'tis certain, that nothing but their own Fault could keep it out. Nor was this the only Time when *Chriſt* viſited them, for a Catholick Partriarch of *Judea* ſent Miſſionaries thither, who preached there with good Succeſs, as appears by an ancient Marble Monument found in the Province of *Xenſi*, near *Sigan*, in 1625, wherein it was atteſted, 'That in the Reign of *Taiſoam*, a wiſe and honoured Prince, *Olopuen*, a Man of *Judea*, came into *China* in the Year of our Lord 636. 'and taught the Way of Salvation, and his Doctrine be-

St. Thomas preach'd in India.

Prov'd from their Hiſtory.

The Goſpel Preach'd in China, A. C. 636.

'being allowed and approved, a Church was built, 'and 21 Persons nominated to take Charge of the 'Cure. *Kao*, his Son, succeeded him, and endeavour-'ed to make that Religion flourish, which his Father 'had receiv'd; but the *Bonze's*, alarm'd at the Progress 'which Christianity had made, used all Means to stop 'its Course. The Persecution was great, but our 'Lord raised up 2 Persons of extraordinary Zeal to 'defend the Faith, who did it with such Vigour, that 'in a little time it recovered its former Lustre, and so 'continu'd for some Successions of Emperors, till it had 'flourished 186 Years, and, perhaps, longer; for we 'have no Account of its Failure, but it was quite 'extinct, and the Memory if it lost when the Jesuits 'came thither.

Xaverius's Preaching in China.

In the Year 1542. *Xaverius* went into *China*, in hopes to bring that Kingdom over to the Faith of *Jesus Christ*. He made his first Essays in the *Indies*, and contrived to perfect his Design in *China*; but God who had a mind to reward his Zeal, Labours and Charity with that Glory he had procured for so many Nations, deferr'd that Mercy for a time. He died in the Isle of *Sanchou*, or *Saniciam*, as we call it, and was buried there; but before he died he settled upon a solid Foundation all the Missions into the *Indies*, and encouraged his Brethren to enterprize the Conversion of *China*. His Zeal pass'd into the Minds and Hearts of the Fathers *Rogers*, *Pacco* and *Ricci*, *Italian* Jesuits, who resolved to spend their Pains, and if it were necessary, their Blood, in this great Work. The Difficulties which the Devil raised did not discourage them. They entred one after another into the Southern Provinces. The Novelty of their Doctrine procured them Auditors, who for the Holiness of their Lives could not but have a favourable Opinion of them; so that they heard them with Pleasure and Admiration.

F. Ricci preaches in China.

Father *Ricci* was most eminent for his Zeal and Understanding: He spoke their Language fluently, and was thoroughly instructed in their Laws and Religion, which being join'd with a sweet Temper and complaisant Behaviour, soon got him the Repute of a Great Man. He spent many Years in fruitless Labour, through the Policy of Satan, the Superstition of the People, Jealousie of the *Bonze's*, and ill Humour of the *Mandarins*; but, not being discouraged for want of Success, he had at length the Comfort of seeing the Gospel flourish. He made many mighty Conversions in the Provinces. The *Mandarins* embraced our most holy Faith, and the Emperor *Vanlo* entertain'd him with Kindness and Respect, which gain'd him the Good-will of all the Lords at Court; so that he bought him an House at *Pekin*, and laid a Foundation for the Establishment of Christianity: For Religion being known by this Means, came into Esteem, and was boldly preached by the new Missionaries. The Court and all the Provinces sounded with the adorable Name of the true God, and the *Mandarins* preach'd the Gospel with great Zeal and Understanding, by which Means the Affairs of Religion were much promoted.

Some Bonze's and Mandarins oppose Christianity.

But these Successes were much interrupted by a Conspiracy of some *Bonze's* and *Mandarins*, who seeking the Destruction of F. *Ricci* and the Jesuits, in the same Undertaking, stirr'd up a Persecution against them, under a Pretence that they were Spies, who, under a Shew of preaching the Gospel, secretly design'd to seize upon *China*, by the Assistance of the *Japonneses*, *Hollanders*, and *Christians* of the Country. This ridiculous Story, which carried some Shew of Truth, easily gain'd Credit with the *Chinese*, who are very suspicious and fearful of Commotions, and was the Cause of a sharp Persecution, in which the weak Christians apostatized, and F. *Martiner* was imprison'd and bastinado'd till he died. Had this Accusation of the Christians come to the Emperor's Ears, it had been the utter Overthrow of their Religion, but by the Means of a *Mandarin*, F. *Ricci*'s special Friend, the Persecution was stopt, and Peace restored to the Gospel.

F. Ricci's Death.

F. *Ricci* survived this Tempest but a little, tho' he had the Satisfaction to die in the midst of a plentiful Harvest, and was only troubled that the Labourers were so few, to whom he recommended the Care of encouraging all such as should come thither to preach the Gospel, with the most tender Friendship and inflam'd Charity. The Churches of *China* were shaken by his Fall; for tho' the Emperor for some Years after continued his Favour to the Christians, yet in 1615. there arose the cruellest Tempest that they had ever suffer'd. It was occasion'd by one of the chief *Mandarins* of *Nankim*, called *Chinkio*. They chiefly set upon the Pastors, but spared not the Flock, some of whom they cruelly beat, others they banish'd, and imprison'd almost all. It lasted near 6 Years, till, by God's Judgment, the Accuser himself was deprived both of his Offices and Life, and so the Christians obtain'd some Respite and were much multiply'd. About this Time (which was in 1631.) certain Dominicans join'd with the Jesuits in converting *China*, and labour'd with a great deal of Zeal and Success.

A severe Persecution of the Christians.

At the same time F. *Adam Schaal*, a *German*, appear'd at Court, and contributed much to the Rise of Christianity. He was perfectly well skill'd in the Mathematicks, and made use of his Knowledge to obtain the Emperor's Kindness, which he had so fully acquired, that he thought he should be able alone to establish Christianity solidly. He began to make use of his Interest with good Success, when an Insurrection, by over-turning the Government, blasted all his Hopes. *China* presently changed its Aspect, and from the most flourishing Empire, became a Stage of most bloody Wars, Murthers and Barbarities. The Emperor being surprized at *Pekin*, strangled himself for fear of falling into the Hands of the Rebels, who immediately placed their Leader on the Throne. The Princes of the Blood in other Places proclaim'd themselves Emperors. In this Confusion the *Tartars* were called in, and by their Valour and Conduct made themselves Masters of *China*, and in few Years obliged all the Provinces to submit to them. By this Change the Case of Religion was thought desperate, but God inspired the new Prince with a greater Affection to Christianity than could have been reasonably hoped for. He took away the Government of the Mathematicks from the *Mahometans*, who had held it 300 Years, and gave it to F. *Adam*, allowing him an immediate Access to his Majesty in all Things that concerned the Missionaries. This signal Favour raised the Courage of the Christians, and encouraged the Heathen to close with the Truth. Many Persons of Quality at *Pekin* desired Baptism, and great Numbers in the Provinces follow'd their Example; so that the Harvest was greater than the Labourers could gather. Many Persons signalized their hearty Zeal and doubled their Diligence in this Juncture to disperse the Gospel, of whom F. *Faber* was in the foremost Rank. He was a *French* Man, and founded the Mission of *Hanchum*, a great Town in *Xensi*. He was invited thither by a *Mandarin*, and found a small Number of Christians there, which as he was laborious to encrease, so God put an Opportunity into his Hands to do it. One of the great Boroughs of that Province was over-run with such Multitudes of Locusts, as eat up all the Leaves of the Trees, and gnaw'd the Grass to the Roots. The Inhabitants used all Means to remove them, but finding none effectual, apply'd themselves to F. *Faber*, who was then in great Repute. The Father took Occasion from hence to preach the Gospel to them, and promised, that if they would submit to it, they should not only be delivered from this present Plague, but obtain innumerable Blessings, and at length Life everlasting. They embraced it willingly on these Conditions, and the Father, to make good his Word, march'd into the High-ways in his Stole and Surplice, and sprinkled up and down holy Water, which Actions being accompanied with Prayers and a lively Faith, God heard his Voice, and the next Day all the Insects disappear'd. The People being thus delivered, neglected their Promise, and were immediately punish'd with the same Plague, which grew worse than before; whereupon they accused one another of want of Faith, and ran in Crouds to the Father's House, confessing their Fault, and promising, that if he would pardon them, and deliver them this second time from that Affliction, they would all acknowledge his God, who alone can do such Miracles. The Father, to encrease their Faith, made them beg a long while; but at length, inspired as before, he sent up his Prayers, and sprinkled his holy Water, and the next Day there was not a Locust to be found in their Fields: Then the whole Borough believed, and were form'd into a Church by his Instruction, which, tho' abandon'd a while, remains one of the devoutest Places in *China*.

A strange Revolution in China.

The Chief Nobility baptized.

F. Faber's Miracle and Success.

F. Faber converted a whole Town.

While the Christian Religion flourished thus in the Provinces, it spread no less at *Pekin*: The Emperor himself did not seem averse to it. He came to the Christian Assemblies, and adored God with them in a

The Gospel flourishes at Pekin.

a devout Manner, but yet would never fully embrace Chriſtianity, becauſe he imagined the Laws too difficult to be practiſed by Men. He bore a great Reſpect for F. *Adam*, and always called him Father. He put much Confidence in him, made him many Viſits, and gave him Leave to build Churches at *Pekin*; nay, granted him whatever could contribute to the Eſtabliſhment of the Faith; ſo that Chriſtianity had made a mighty Progreſs, if he had not died at a Time when it needed his Protection moſt: But, after his Death, the 4 *Mandarins*, who had the Regency of the new Emperor in his Minority, order'd this Father, with 3 of his Companions, to be put in Priſon, burnt their Books, Beads and Medals, and whatever carry'd a Face of Religion: Neverleſs, the Churches were ſpared (except ſuch as were built in the Maritime Provinces, which were commanded with the Towns to be deſtroy'd, becauſe they were an Harbour for a famous Pyrate in carrying on a War againſt the Emperor) and the Flock had more mild Uſage. Thoſe famous Confeſſors were brought before all the Seats of Judgment in *China*, and Father *Adam*, who a little before had been the Oracle of the Court, was firſt condemned to be ſtrangled, and then to be hack'd in 10000 Pieces; but God ſeem'd to ſpeak ſo loud in favour of his Innocency, by a terrible Earthquake, a Fire that conſumed a great part of the Court, and divers other Prodigies, that they ſet him at Liberty, and permitted him to go to his Houſe, where he ſoon after died. The other Miſſionaries remain'd in Baniſhment at *Canton*, *viz.* 3 Dominicans, 1 Franciſcan, and 21 Jeſuits; yet 4 Jeſuits were kept ſtill at Court, and God made uſe of them to ſettle Chriſtianity again in its former Splendor; for firſt to revenge the Innocency of His Servants, He removed the *Mandarins*, who were their greateſt Enemies. *Sony*, the firſt *Mandarin* in the Regency, died within a Month or two: *Soucama*, the 2d, was indicted and ſentenced to a cruel Death, his Goods confiſcated, 6 of his Children beheaded, and the other cut in Pieces, the Puniſhment his Father deſigned for F. *Adam*: *Yam-quam-ſian*, who was the chief Inſtrument of the Perſecution, fared no better; for being made Preſident of the Mathematicks, F. *Verbieſt* accuſed of Ignorance in that Art, and made it ſo plainly appear to the Emperor and Judges, that he loſt his Charge, and was condemn'd to Death, but the Emperor reſpited the Execution, by reaſon of his Age, till God ſmote him with an horrible Ulcer, of which he died.

A Perſecution of the Church.

F. *Adam* ſchaal's Death.

Perſecutors puniſhed.

After his Death F. *Verbieſt* had the Care of the Mathematicks committed to him, and by his Intereſt the Chriſtians were recalled to their Churches, but forbidden to build new ones, or to labour after further Converſions. The Memory of F. *Adam* was mightily reſpected at Court, his Anceſtors made noble and conſiderable Sums, appointed by the Emperor to build him a *Mauſoleum*.

F. *Verbieſt's* Intereſt at Court.

This Peace being ſettled in the Church, the Miſſionaries ſet themſelves to recover the Loſs Hell had made. Several Friars began to preach, and new Converſions were made daily, notwithſtanding the Prohibition; and though the Emperor was inform'd of it, yet he being ſatisfied that the Miſſionaries were good Men, and practiſed what they taught, that they were his Friends, and Enemies to all Rebellions againſt him, he was not pleaſed to take Notice of them. But that which was a particular Obligation to the Emperor was F. *Verbieſt's* Service in *Ouſanguei's* Rebellion, who taught his Workmen to caſt ſuch light, but ſtrong Cannon, as were portable in the worſt Ways, and were a Means to kill and defeat the Arch-Rebel and his Accomplices. After this Victory the Emperor's Favour appear'd ſo plain to the Chriſtians, that the Heathens themſelves invited them to convert them. They ſent to F. *Verbieſt* for Paſtors from every Place; *Tartary*, the Kingdom of *Corea*, the Provinces of *China* preſs him to ſuccour them: A precious Opportunity to have carry'd on the Work of God proſperouſly; but it was retarded by the Differences between the ſacred Congregations, who claim'd it as their Privilege to ſend Vicars Apoſtolical into the Eaſt, and the King of *Portugal*, who pretended it to be his Right to name all the Biſhops there. This Contention ſtopt the Zeal of the Miſſionaries a while, but at length the ſacred Congregation ſent over the Biſhop of *Eleliopolis*, with ſome *French* Eccleſiaſticks, who immediately upon their Arrival put a new Life into the Miſſionaries there, who acknowledged his Authority, and took an Oath to him. This was Matter of great Joy to the Biſhop, and now all Things were made ready to till the Lord's Vineyard; but God Almighty was ſatisfied with his good Intentions, and took him to himſelf a few Months after his Arrival, to the great Grief and Surprize of the Faithful. This Loſs was no ſooner heard at *Rome*, but the ſacred Congregation ſent 2 other Biſhops to ſupply his Place, under the Title of Vicars Apoſtolical. The firſt was M. *d'Argolis*, an *Italian*, of the Order of St. *Francis*, a Perſon noted for his excellent Vertues and Knowledge. This wiſe Prelate being arrived in *China*, very much contributed to the Comfort of the Faithful, and Converſion of the Heathen by his ſweet Temper. He viſited the Provinces under his Care, conſecrated Prieſts, confirm'd and taught the People, and united all Mens Affections in Chriſt. The 2d was M. *de Baſilee*, a *Chineſe*, educated by ſome *Franciſcans*, but taking on him the Order of St. *Dominick*, when he was only a Miſſionary, he had an ardent Zeal for the Converſion of his Country, and during the Perſecution of F. *Adam* he was the main Support of the Chriſtian Religion in all the Provinces, which he travell'd thro' and ſtrengthen'd in the Faith. When he was conſecrated Biſhop, he perform'd all his Duties perfectly well, and the Holy See ſo far approved of his Conduct, as to allow him to chuſe his Succeſſor. He named F. *de Laniſſa*, his Vicar-General, and ſoon after fell ſick at *Nankim*, and died full of happy Viſions of his approaching Happineſs. He was the firſt Prieſt, firſt Monk, and firſt Biſhop that ever *China* gave to Chriſtianity, and his Memory ought ever to be reſpected for his Labour and Merits for Religion. Beſides this, the Pope honour'd Mr. *Maigrot* and Mr. *Pin*, 2 Doctors of the *Sorbon*, with the Titles of Vicars Apoſtolical, and they are diligent and zealous to follow the Intentions of the Holy See, but the Want of Miſſionaries kept the Converſion of *China* uncompleat. To ſupply this Defect ſome zealous Perſons have endeavoured to ſettle ſome Miſſions in *China*, but could never compaſs their Deſigns. *Lewis* the Great, being zealous for the Eſtabliſhing of the Goſpel, ſent 6 Jeſuits into *China* (of whom F. *Le Comte* was one) who found the Harveſt plentiful, but almoſt deſtitute of Workmen; yet have done this Good, that they have removed all the former Lets and Impediments which aroſe from the Differences between the Pope and King of *Portugal*, and by their Example have encouraged other Miſſionaries to follow them, and endeavour the compleat Converſion of *China*, whoſe Labours God Almighty bleſs.

Mr. *Maigrot* and Mr. *Pin* Vicars Apoſtolical in *China*.

In the 2d Letter to F. *de la Chaize*, Confeſſor to the *French* King, *Lewis Le Comte* gives an Account of the Succeſs and Labours of the *French* King's Miſſionaries, and ſays, That 2 of them, F. *Garbillon* and F. *Bouvet*, were detain'd at Court, where F. *Garbillon* was employ'd with Prince *Soſan* to make a Peace between the *Muſcovites* and *Tartars*, and managed Matters there with ſuch Prudence, as a Peace was concluded with Satisfaction to both Sides by his Means only, as the Prince told the Emperor. This Character ſtirr'd up the Prince's Curioſity to be acquainted with him; and finding him a very ſenſible Perſon, capable and ſincere, he kept him near his Perſon at the Palace in the Campaign, and in his Progreſs in *Tartary*; yea, he pitch'd upon him for his Tutor in Mathematicks and Philoſophy, together with F. *Bouvet*, whom he likewiſe much eſteem'd; for he has ſuch a Paſſion for Sciences, that he beſtows 2 or 3 Hours every Day upon theſe Studies, and has made ſuch a Progreſs in them, that he hath compoſed a Book of Geometry himſelf, and is able to inſtruct the young Princes his Sons in the moſt difficult Propoſitions of *Euclid*.

F. *Garbillon's* Service at Court.

The Emperor's Love of Sciences.

While theſe 2 Fathers remain'd at Court, where they got ſo much Credit, as to be the Supports of Religion, the reſt were not unſerviceable in the Provinces: F. *Fontency* went to *Nankim*, F. *Viſdelou* took care of the Churches of *Xanſi*, and F. *Le Comte* had the Province of F. *Faber* appointed him at *Xenſi*. How each of them managed their Provinces is not likely to be particularly known to the reſt, and therefore *Le Comte* gives only an Account of his own Labours and the Succeſs of them. He ſays, That the Chriſtians of his Province, tho' they had been deſerted many Years, preſerved much of their firſt Fervency, and to improve them farther, he reduced his Buſineſs to 3 Heads. The firſt was to cheriſh and keep up their Piety by preaching of the Word of God; but above all by particular Exhortations, which are abundantly more profitable and edifying than any thing that is ſpoken in Publick, where the Diſcourſe is often not underſtood, either thro' the Stupidity of the People, or the Preacher's ill Utterance and Pronunciation. But becauſe he could not make ſuch frequent Viſits as were neceſſary, he gave them Godly Books, with which the Miſſionaries have furniſh'd the *Chineſe* upon all Subjects of Divinity. The 2d Method he took to encreaſe the fervent Zeal of the Chriſtians, was Prayer, to which he aſſembled them twice a Day in Publick. They ſung in 2 Choirs with ſuch marvellous Devotion, as that they might be Examples to the *European* Chriſtians. They don't underſtand ſinging by Notes, but have Tunes of their own Compoſure no ways unpleaſant. They are of a Temper that needs ſomething to heighten their Devotion; ſumptuous Ornaments, Singing, Muſical Inſtruments and Ceremonies are taking with them, and thoſe he took Care to procure them, and by theſe Means brought them to a great Conformity to the Goſpel Precepts. They made their Confeſſion every Fortnight, and that with Tears, and in the Evening ſubmitted to ſevere Penance in the Veſtry. They received the Holy Sacrament with a profound Veneration, proſtrating themſelves with Lamentation before the ſacred Myſteries. The ſame Reſpect they paid to Images, Reliques, Medals, Holy Water, and whatever elſe bears the Character of Religion. They ſhew a great Honour to the Virgin *Mary*, whom they call *Chin-Mou*, i. e. The holy Mother, and the Women dedicate all their Churches to her (for they never enter into the Mens Churches, nor the Men into theirs.) But the paſſionate Love they bear to Jeſus Chriſt makes them really devout, and walk worthy of the Profeſſion they have embraced. They continually repeat theſe Words, *Jeſus, the Maſter of Heaven, who ſhed his Blood for us, Jeſus, who died for us, ſave us*: For as it is the Myſtery we moſt carefully inſtruct them in, ſo it is that which they moſt ſtedfaſtly believe. Our Images did at firſt give them Offence, but now they are accuſtom'd to them, that ceaſeth. The Croſs is carry'd publickly in the Streets in Proceſſion, 'tis planted on the Tops of Churches, and painted on the Doors of their Houſes, and on *Good-Friday* the Ceremony of adoring it is no where perform'd with more Adoration than

The Women how instructed.

than in *China*. The Instructions of the *Chinese* Women is much more troublesome than that of Men. They are never visited but in the time of Sickness, nor do they ever visit the Missionaries. They are only to be spoken with in their Churches, in which they meet but once a Fortnight, and may not meet oftener by the Laws of their Country, for fear of Scandal. They almost all confess then, and will receive Instructions with all Humility. They blindly pin their Faith on the Confessor's Sleeve, and tho' it be difficult to bring them off from their ordinary Peccadillo's, yet they do not find it hard to bewail them. They have no notorious Sins almost, and could they be brought to keep Peace in their Domestick Affairs, their Lives would be wonderful innocent. They always apply themselves to Lutiness or Prayer, seeking all Opportunities for the Education of their Children, or for their own Improvement, very scrupulous and nice in the Observation of every Christian Duty, Charity, frequent in Mortifications, and particularly zealous for the Conversion of Idolaters.

The Instruction of Youth.

The Instruction of the Youth is not less troublesome. The most safe and effectual Way of training them up to Religion is under a Christian School-Master, to whom even the Idolaters will send their Children for Cheapness or Nearness, and if there were a good Number of Christian School-Masters that should teach *gratis* in their Cities, it would be the best Means to propagate Religion, and preserve good Manners; but the Missionaries are so far from being able to do this, that they are harn put to it to subsist themselves. They have infinite Toil and Hardship in travelling from Place to Place, and exercising their Ministry to Hearers almost indefatigable; but their Reward is in Heaven only, they meet not with Necessaries on Earth in most Places.

The Conversion of Idolaters, a good Method propounded.

As to the Conversion of Idolaters, they meet with great Difficulties in it. Persons of Quality, and such as would be thought wise, object against the Mysteries of our Faith, the Trinity and Incarnation. A God that could die seems to them, as it did to the *Grecks*, *Foolishness*; but the Existence of God, eternal, supreme, and infinitely just and powerful goes easily down with them; and therefore to convince them, he proposed to them to believe only what Reason, free from Passion, dictates, *viz.* That there is a God, who being infinitely holy, enjoins us to love Vertue, and shun Vice, to obey Princes, to respect our Relations, and love our Neighbours as our selves; That good Men, who are often miserable in this World, enjoy a certain Reward in the next; but on the contrary, wicked Men, who live in sinful Pleasures, are rigorously punished after Death; That Hope and Fear, indeed, are usually the first Motives of Obedience, but nothing but an inflam'd Love of God can make us perfect. These Lessons he bad them practise with a Spirit of Love and Meekness, and worship devoutly the God they acknowledged, begging of Him to reveal those sublime Truths to them, which seem'd above Reason. The most part of the Gentiles, being accustom'd blindly to pursue their Passions, found some Difficulty to embrace this new sort of Life; but those that did submit to it in good Earnest were in a few Days disposed to believe the greatest Mysteries of the Gospel; so true is it that Faith is the Gift of God, and they that seek obtain; for after these Things perform'd, God did pretty often concur miraculously in the Conversion of such as used it; for Christ in a Vision appear'd to some, and strangely influenced the Souls of others to believe and obey. The other Gentiles had several Rubs in their Ways, which kept them from embracing the Gospel heartily; such as these:

The Success of it.

Impediments of Conversion.

1. Restitution of ill gotten Goods.

1. Restitution of ill getten Goods. The Mandarins and Merchants have enrich'd themselves purely by Cozenage and Cheating. The Merchants always sell their Wares at the highest Rate, and never utter good Wares till they are rid of their bad; and tho' their Laws tolerate these Dealings, yet Religion will not allow it. When a Man, who has thus enrich'd himself, comes to the Knowledge of God, he must restore his ill Gains. This they will hardly be brought to do, and when they are press'd to it, will reply; *That they do not cheat by selling dear, for as the Buyer would have their Goods for as little as he can, so may they sell them for as much: 'Tis the Fruit of Industry, and such Profits can be no Violence. When they put off bad Wares, 'tis the Buyer abuses himself, not they, for he sees what he buys.* But supposing that their Goods be ill gotten, they say, How can they in Conscience reduce their Children to Beggary to restore them. Thus they oppose the Truth, and harden themselves in their Practices against it, so hard is it, as our Lord long ago said, for a rich Man to enter into the Kingdom of God. The *Mandarins* also have scarce any Fund to maintain themselves and Families but Injustice; for the Ministers of State and chief Presidents of *Pekin* do under-hand exact great Sums of the Vice-Roys, who to make it good have Recourse to the *Mandarins* of Provinces, and they to reimburse themselves lay a Tax upon their Under-Officers. This Ministry of Injustice gives a mortal Blow to our most holy Faith, and hinders the Establishment of it upon a solid Foundation, because a Christian *Mandarin* ceases to be a Christian if he pillages and robs, and if he doth not, he cannot continue a *Mandarin*: However, we have seen in *China*, as in the primitive Church, some Examples of this Christian Generosity, that counts the Goods of the World as nothing in Hopes that the Kingdom of Heaven will one Day be their Inheritance.

Multitude of Wives.

The 2d Obstacle in the Way of converting the *Chinese* proceeds from the Multitude of Wives, which the Laws of their Country permits them, especially Persons of Quality, who may have as many Concubines as they can keep; for the *Mandarins* by their Condition being debarr'd of all ordinary Divertisements, as Gaming, Hunting, Visits and publick Meetings, are forced to spend all their Leisure Time with their Women, of which they make a *Seraglio*. Now to part with these, as the Christian Laws obliges them, and confine themselves to one Wife, deprives them of all Thoughts of Conversion as soon as it is mention'd, as many Instances have prov'd. The Conversion of Women who are thus engaged is more difficult: They are bought for that purpose, and if they forsake their Master, they may be punish'd as their Slaves, and none dare harbour them; and so if a Wife turn Christian, her Husband that remains an Idolater will sell her to another for a Concubine, so that 'tis almost impossible for them to be Christians. The Missionaries are at their Wits End what Course to take, and can find no other but Prayer to God, who desires the Salvation of all Men, to find out some Way to release them from these Difficulties, and bring them into the true Way of Salvation. God has been pleased to do many Miracles in Cases less necessary, and they hoped He would shew His Power in their Deliverance. But, notwithstanding these great Obstacles to the Conversion of the *Chinese*, God's Blessing, with the Missionaries Diligence, hath gain'd some Ground upon the Idolaters, and there are in *China* above 200 Churches and private Chappels dedicated to the true God, and govern'd by the Ministers of Christ. *Pekin*, *Nankim* and *Macao* have each their particular Bishops, made by the King of *Portugal*; other Provinces are under the Jurisdiction of 3 Apostolick Vicars, F. *de Leonissa*, an *Italian* Franciscan, and Mr. *Maigrot* and Mr. *Pin*, *Frenchmen*, Doctors of the *Sorbon*. There are also 4 of the Seminary of Foreign Missions at *Paris*, 4 Dominicans, 12 or 15 Franciscans, and 3 or 4 of the Order of St. *Augustine*, all *Spaniards*. The Jesuits who founded the Mission are about 40, besides those that are lately come over with the F. F. *Grimolds* and *Spinola*, too few for so great an Empire, unless God would pour out upon them the first Spirit of the Gospel, which in one Apostle was sufficient to convert whole Empires. Not but that the present Missionaries have laboured with Success, for in 5 or 6 Years they have converted above 50000 Idolaters, besides several Thousands of Children, which they baptize in the Streets of *Pekin*. If the Emperor could be prevail'd upon to come over to Christ's Doctrine, he would be accompany'd with the Change of the whole Nation; but for that, if they wait some Ages, their Patience will be sufficiently recompenced whenever it happens. There are scarce any Princes or Ministers of State, and but few *Mandarins* converted; *Not many rich, not many noble are called.* The common People make up the greatest Number of Believers, and the Poor are Jesus's Portion. The main Body of Christians is in the Province of *Nankim*, and more especially in the Territory of *Cham-Hai*; but the Faith is more lively in the Provinces of *Quantum*, *Pekin*, *Xanfi* and *Xensi*. There are as many *Tartars* as *Chinese* Christians, and tho' these latter are more easily converted, yet the former are most couragious in Temptations when converted; they hardly bowe to the Yoke of Christ, but will carry it thro' the sorest Persecutions. Women being rarely seen, are but ignorant, yet innocent and devout. The Churches generally are without Beauty and Ornament, as is usual and necessary in Times of Persecution; yet the Missionaries have raised some tolerable Structures. The Church of *Pekin* is well built, with a neat Stone Frontispiece. Those in *Kiamchen*, *Cham-Hai* and *Foshen*, as also those at *Canton* and some other Places, are as fine as our ordinary Churches in *Europe*; but the Church of *Hamchen* was so very pretty and neat, as deserv'd Admiration, being all over adorn'd with Gildings, Paintings, and curious Pictures, but it now lies in Ashes, and tho' they cannot hope again to be able to raise such another Structure, yet they both hope and pray, that God will rear himself living Temples in the Conversion of new Believers.

Women hardest to be convers. ed.

Two Hundred Churches in *China*.

The Success of the Jesuits Labour.

The Provinces where Christians flourish most.

Their best Churches.

Hitherto the Missionaries have preached the Gospel at their own Perils, the State conniving at it at best, and often persecuting them; but it hath pleased Heaven at length to sweeten their Labours with a late Establishment of the Christian Church upon a solid Foundation: For the Emperor hath at last granted an entire Liberty of Conscience to his Subjects, by allowing in a publick Edict the Christian Faith thro' his whole Empire; the Occasion and Series of it is as follows: F. *Alcala*, a *Spanish* Dominican, and a zealous Missionary in *China*, purchased an House at *Lanki*, a Village of *Chekiam*, and tho' this Settlement was contrary to an Edict made by the *Mandarin* of the Place in 1669, yet he met with no Opposition init, till the Governour, nettled with some indiscreet Words of his Servants, resolved to proceed according to Law against him for preaching a strange Doctrine, and settling in the Empire. The Missionary alledged the Emperor's Favour to some of his Brethren, and that by a publick Edict he had granted them Power to settle where they pleased in his Kingdom, and 'twas for one of them he had bought this House, and lodged only in it till he came. However, this *Mandarin* associating another with him prohibited all Exercise of the Christian Religion in his Government, and treated it in such a despightful Manner, that F. *Intorcetta*, a Missionary of the same Province, thought himself obliged not to dissemble the Affront, and therefore accused him of condemning by his private Authority what the Emperor seemed to allow of to the Governour of the Capital City, desiring him to oblige this Under-Officer to retract his Order. This Letter the Governour dispatched to the *Mandarin*, who so highly resented it, that

Christianity allow'd in *China*, and how effected.

A Quarrel between F. *Alcala* and a Mandarin.

F. *Intorcetta* accuses him to a superior Governour.

that he resolved utterly to destroy the Christian Religion, procuring the Vice-Roy and other *Mandarins* to join with him. The Storm fell upon F. *Intorcetta*; and he was commanded forthwith to avoid the Country, to burn all the Books of his Religion, with the Tables of Printing that hung in his House. F. *Intorcetta* was not at all surprized at the Order, but reply'd, *That he being settled there by the Emperor's express Order, to continue there all his Days, he look'd upon the Vice-Roy's Order to disturb his Tranquility injurious to the Emperor.* The Vice-Roy, surprized at this Answer, durst attempt nothing against his Person, but ordered his inferior *Mandarins* to summon him before their Tribunals, and perplex him without giving him a Moment's Respite. F. *Intorcetta* was sick, and might have deny'd to appear, but being glad of an Occasion to confess Christ, he got himself carried before the Judges, where he was treated civilly, but against the Vice-Roy's, Orders. F. *Intorcetta* seeing the Storm approaching, wrote to the Missionaries at Court to put a Stop to it. The Emperor was in *Tartary* a Hunting, and F. *Gerbillon* was with him. The Letters were carry'd to him, but the Father not judging it convenient to speak of it to the Emperor, procured Prince *Sofan* to write to the Vice-Roy to desire him to stop his Proceedings, as displeasing to the Emperor: But the Vice-Roy, blinded with passion, had no Regard to his Letters, but seiz'd upon several Churches, and bestowed them on the Pagan Priests. He threatned the Father with his Indignation, if he did not abandon his Flock; he caused several Christians to be apprehended, punishing some, and imprisoning others. A Physician who had signaliz'd his Zeal to Religion by going from Door to Door to animate the Christians to Sufferings, tasted deeply of his Anger, being cruelly beat before him; but he endured it with such Patience and Courage, as ravished Admiration from the Beholders, and converted 3 Persons of Quality to the Faith.

The Vice-Roy was much provoked at these Things, but was curb'd from shewing his Resentments by 2 Letters delivered to him from Prince *Sofan*, who in one reproached him for making no Account of his Recommendation, and advised him to deliver the other to F. *Intorcetta*, and so well satisfie him, as that he might testifie the same to him, for which he would give him Thanks in another Letter; but if he did not do it, he would send to him no more. This made the Vice-Roy repent of his former Proceedings, but not thinking it honourable to retreat, much less to sue to the Missionary for his Friendship, whom he had just now treated with so much Disdain, yet fearing Prince *Sofan's* Anger, who was the most powerful Minister at Court, he resolved to stand to what he had done against Christians, and to send his Officers to *Pekin* to purge and clear himself to the Prince. In the *Interim*, F. *Intorcetta* having a secret *Item* of the Letter, the Vice-Roy had received, intimated to the Fathers at Court the small Effect they had produced, who considering the Danger the Church was in, resolved, with Prince *Sofan's* Approbation, to represent their Cause to the Emperor himself, and accordingly came to the Palace, *Dec.* 21. 1691. The Emperor sent some Eunuchs his Confidents, to know what their Business was: The Fathers presently declared to them, 'That they came to remonstrate against the Severity of the Vice-Roy of *Hamchen* 'against both Missionaries and Priests under his Government, 'which they would not have done, would Patience have pacified his Spirit, but since the Mischief encreased daily and 'was remediless, they came to prostrate themselves at the 'Emperor's Feet, as the *Asylum* of oppressed Innocence, humbly beseeching him to grant their Brethren that happy Peace 'in the Provinces, which they enjoy'd under his Protection 'at *Pekin*. The Emperor hearing their Desires had a mind to try their Constancy, and so return'd them no favourable Answer, but they never ceasing to represent their Unhappiness which his Indifference might bring on them, sent an Officer to acquaint them, 'That he did not allow of the Vice-Roy 'of *Hamchen*'s Proceedings, and that he was willing to put an 'End to the present Persecution by a secret Order sent to 'him to make Satisfaction for Mischiefs past, and to secure 'themselves for the future, they should present a Petition, and 'obtain from the Tribunes a favourable Degree for the Mis'sionaries. The Fathers made their humble Acknowledgment to the Emperor, and return'd full of Hopes of happy Success; but fearing to commit their Cause to the *Lipou*, who always declared against the Christian Religion, and knowing that if the Christian Religion were once establish'd by a publick Edict, nothing could disturb it, they chose rather to offer their Petition to the Emperor himself, who was well affected to the Christians for the good Services done by the Missionaries. They offered it first to the Emperor privately, but he finding it not fit to make an Impression upon the Spirit of the *Chinese*, drew up another himself in the *Tartarian* Language, with Liberty given them to alter, or add to it, and this on *Candlemas* Day they delivered to him publickly with the usual Ceremonies, and is to this Effect: 'That on the '9th Month of the Moon having been acquainted by F. *Intor'cetta*, that the Vice-Roy of *Eamchen* had strictly charged the 'Mandarins of his Province to pull down the Temples of the 'Christians, to burn their Printing-Tables, and had declared 'their Doctrine false, and not to be tolerated in the Empire, 'they were seized with Horror and Grief, but knowing his 'Majesty the common Father of the Afflicted, they could not 'forbear to declare their Grief to him; That his Majesty, be'ing a Lover of Truth, had given many Testimonies of his 'Affections to the *European* Missionaries, which to require 'they had perform'd many acceptable Services to his Majesty, 'and maintained a constant Loyalty to him, which are the 'undoubted Proof of the true Religion; That since his Ma'jesty vouchsafed to employ them, and put such Confidence 'in them, they humbly implored, that he would take their 'Cause in Hand, and if his Majesty, after full Information 'of their Carriage, does really find that they are innocent, 'he would let all the Empire understand by a publick Edict, 'what Judgment he has formed to himself of their Morals 'and Doctrine, which they would expect with Fear and en'tire Submission. In the 30th Year of the Reign of *Chambi*, the 10th Day of the 12th Month of the Moon.

The Emperor received this Petition very graciously, and sent it on the 18th Day of the same to the Court of *Rites*, with an Order to examine it, and make a Report of it as soon as they could. There happen'd to be a Vacation of the Courts of Judicature at that time, so that the *Lipou* did not return their Answer till the 18th Day of the first Month, and then it was contrary to the Emperor's Intentions, *viz.* 'That they 'were to stick close to such former Edicts of the Parliaments 'and their Courts, as prohibited upon grievous Penalties the 'natural Subjects of *China*, to entertain the new Doctrine of 'the *Europeans*; yet that the Church of *Hamchen* should be 'preserved, and the *Mandarins* of that Province should not 'confound the Christian Religion with the seditious Sects of '*China*. The Emperor was troubled at this Decree, and threw it aside some Days in his Closet, to see whether the *Mandarins* of the *Lipou* would revoke it, but finding them obstinate, he was afraid to provoke such turbulent Spirits, and so resolved to sign it, tho' against his Will. This Action threw the Fathers into great Consternation and Grief, which they expressed in the most passionate Terms to the Emperor's Officer; one *Chao*, a Gentleman of his Bed-Chamber, not omitting to upbraid the Emperor with deserting them, who had been so serviceable to him. This the Gentleman, who was not a little affected himself at their Tears, represented so fully to the Emperor, that he said, *Let them know I love them, and will not forsake them.*

While the Missionaries were thus involved in Trouble, the Vice-Roy of *Hamchen* triumphed in his Success, and cast about him to lay new Measures for their Ruin. He dispersed the Copies of the Decree up and down the Provinces, with severer Orders than ever against the Christians, and at last petitioned the Emperor to extirpate them; but this Request came too late: Prince *Sofan* being prevail'd upon by the Earnest Solicitations of the Fathers, became a zealous Advocate to the Emperor for the Christians, and having set before him the Zeal and Devotion of the Fathers to his Service, and shewed, that they have made no Account of their Lives to accomplish his Pleasure, and that their Doctrine was not more wholsome in it self than beneficial to the Government, he obtained of the Emperor to write a Letter to the *Calaos*, their Assessors, and all the *Tartarian Mandarins* of *Lipou*, to this Effect: 'That whereas the *Europeans* in his Court had for a 'long time been Directors of the Mathematicks, and in the 'Civil Wars had cast him some Cannon, which did him ef'fectual Service against the Rebels, and besides, their Law 'is not seditious, it seemed good to him to consider their 'Merit and Toil, and permit their Religion, allowing all 'Persons that will to go into their Churches, and make 'publick Profession of their Worship, and therefore it is his 'Will and Pleasure, that all and several the Edicts that hither'to have been published against it, by and with the Advice 'and Council of our Tribunals, shall at present be torn and 'burnt, ordering the Ministers of State, and *Tartarian Man'darins* of the Sovereign Court of Rites to examine the 'Matter, and return him their Advice with speed. This Letter was delivered to the Court in the Presence of Prince *Sofan*, who was a *Calao* of it, as was agreed on between him and the Emperor, and tho' he was no Christian, he spake so fully and pathetically for them, both as Men and Professors of Religion, how great Services they had done for the Empire, which 'twould be Ingratitude not to require by giving Permission to their Religion at least, which is so pure and holy, and so much beyond that which is practised by the *Lamas* of *Tartary*, and *Bonze's* of *China*, yea, the *Mahometans* themselves, which yet are tolerated: 'It is not (says he) the Reli'gion which commands Children to honour and obey their 'Parents, Subjects to be faithful to their Governours, Ser'vants exactly to fulfil the Wills of their Masters, which 'forbids to steal, cozen, kill, nay, not to covet any thing 'that is your Neighbour's; which abhors Perjury, Calumny, 'Lying and Falsehood; that inspires Men with Modesty, 'Simplicity, Uprightness and Temperance, that forbids e'very Vice, and commands and counsels every Vertue, and 'can you boggle to approve so holy and rational a Religion? The Emperor being informed of their Debates, convoked all the *Tartarian* and *Chinese* Ministers of State to him, were the former Debates being resumed, they at length came to this Resolution, That a Law should be enacted in Favour of the Christians, which was drawn up in form of a Petition, and presented to the Emperor in the Sense following, *viz.* 'Ilcon'pansi, Subject to your Majesty, President to the Sovereign Tri'bunal of Rites, and Chief of several other Orders, with his 'Assessors, presents to your Majesty this humble Petition: 'We have seriously examined what any ways relates to the 'Europeans, whom the Fame of your singular Prudence has 'attracted to pass the vast Ocean hither. Since they have li'ved among us they have merited our Esteem by their signal 'Services in Foreign and Civil Wars, by their composing curi'ous Books, and their sincere Affection to the Common'wealth, in which they have lived peaceably without exciting 'Commotions, or fomenting Differences, their Doctrine ha-

Their Petition to the *Lipou*, framed by the Emperor.

'having no Affinity with those Sects, that molest the Empire. Wherefore as we do neither hinder the *Lamas* of *Tartary*, nor *Bonze's* of *China* to have Temples, or offer Incense to their Pagods, much less can we with any Reason restrain the *Europeans* from having their respective Churches to preach their Religion publickly. We therefore judge it meet and expedient, that all the Temples dedicated to the Lord of Heaven, in what Place soever they be, ought to be preserved, and that all Persons, who would honour this God may enter into them, and worship Him according to the Manner of the Christians, and that none for the Time to come presume to oppose it. Done in the 30th Year of the Reign of *Cham-hi*, the 3d Day of the 2d Month of the Moon. Signed by the President, Assessors, *Calaos*, and their General Officers and *Mandarins*.

The Law ratified and published by the Emperor.

The Emperor received this Decree with inexpressible Joy, and ratifying it forthwith, dispatched a Copy of it to the Fathers, sealed with the Seal of the Empire, to be kept for ever in the Archives of their House, and sometime after caused it to be published thro' the whole Empire, and the Supreme Tribunal of Rites sent it to the principal Officers, commanding them to receive it with profound Respect, and execute it punctually.

So soon as F. *Intorcetta* heard of what had passed at *Pekin*, he departed for the Court, to give the Emperor Thanks in his own and his Brethrens Name. The Emperor received him with great Affection, and caused him to be conducted back by F. *Thomas*, *Mandarin* of the Mathematicks, who was received at *Hamcheu* with joyful Acclamations, and finding the Christian Church ruin'd in a publick Conflagration, F. *Thomas* desired the Vice-Roy to build him a new one, giving him to understand, that the Emperor expected it from him. This *Mandarin* was intolerably vexed at the ill Success of his Enterprize, but was quite beside himself to think, that he must now settle him, that he sought all Means to banish; yet, like a wise Man, he dissembled the Matter, and to comply with the Time, allowed the Missionary one of the finest Houses in the City, till he could rebuild the ancient College. Nor did the Christian at *Hamcheu* triumph only at this new Edict for Liberty of Conscience, but all the Churches of the Empire; and at *Macoa* they kept a solemn Holy-day, which they celebrated with as much Devotion as Mirth; for, indeed, it is no less than a great Miracle, which God has wrought in the midst of the Earth, to settle the true Religion in a Nation so much every way averse to it. Since the Publication of this famous Edict the *Chinese* run in Crouds to be baptized, the *Mandarins* build Churches, a Prince of the Blood hath embrac'd the Faith, and the Emperor has erected a Church in his Palace, and allows the Ministers of the Gospel near his Person, and it may be a Means to compleat their Work in his Conversion.

The Thankfulness and Joy of the Christians for this Edict.

The good Effects of it.

While F. *Le Comte* remained in *China*, he had Occasion to pass to the Coast of *Coromandel*, where, and in his Passage, he made Observations upon the most remarkable Things. At *Borneo*, one of the Isles of *Synda*, is found in the Woods a sort of Beast, called, *The Savage-Man*, whose Shape, Stature, Countenance, Arms, Legs, and other Members of his Body are so like ours, that could he speak, he might deserve the Name of a Man, as well as many Barbarians in *Africk*. He is endued with extraordinary Strength, walks upon 2 Legs, and is so swift of Foot, that 'tis hard to out-run him. People of Quality course him, as we do Stags; and this sort of Hunting the King delights in: His Skin is all hairy, his Eyes are sunk into his Head, he has a stern Countenance, and a tann'd Face. His other Lineaments are pretty proportionable, but harsh and thickned by the Sun. This Account proceeds from the Inhabitants of the Isle, but wants further Confirmation. In the Straits of *Molacca*, he saw an Ape, that might almost render the former Story credible: It walk'd upon the Hind-Feet and used the Fore-Feet as Arms: Its Visage was near as well favoured as the Peoples about the *Cape of Good Hope*. Its Body was covered with white, black, or gray Wool: It cries exactly like a Child, and will express its Passions as lively as a dumb Man. They embrace and kiss such Persons as they love. They make a Noise with their Feet as Children do for Joy, or Anger. They are 4 Foot high, but extreamly nimble, and will vault upon the Tackling of a Ship like Rope-Dancers. They'll hang by one Arm, and than on a sudden turn round a Rope like a Wheel: They'll run full speed upon a Rope, and with equal Swiftness run back again: There is no Posture but they'll imitate: They'll bend like a Bow, rowl like a Bowl, hang by their Hands, Teeth, Feet, &c. as their Fancy prompts them, and which is most strange, leap from Rope to Rope, at 30, nay, 50 Foot Distance. He also saw Camelions, which are a sort of Lizzard, 8 or 10 Inches in Length. They do not live upon the Air alone, as some Naturalists have asserted, for they eat, and that very greedily: 'Tis true, being of a moist and cold Temper, they'll fast many Days, but at last they'll dwindle away and die. Their Eyes, Feet, Head and Belly are exceeding big. It is slow in its Motions; and had not Nature endued it with a Tongue of a particular Frame to catch Flies, and other small Animals, it must starve: The Tongue is round and thick at least a Foot long, and it darts it out with a marvellous Slight. It is so viscous that whatever it touches, it holds: Its Body is covered with a very fine Skin which is of a changeable Colour, according to the Passions that agitate it. In Joy it is of an Emerald Green mixt with Orange, etch'd with little gray and black Strokes, Choler makes it duskish and lived, Fear pale, and of a faded Yellow. Sometimes these Colours and many more are mixed together, so that Nature affords not a finer Variety of shadowing, nor the finest Pictures more sweet Drawing.

A strange Beast, call'd, *The Savage-Man*.

Strange Apes.

Camelions.

They eat.

Of many Colours, and why.

At *Pontichery* he saw an Animal, called, *Chieri-Marron*, which takes after the Dog, Wolf and Fox almost equally: It is of an indifferent bigness, the Hair gray and reddish; it hath short taper'd Ears, a sharp Snout, long Legs and Tail, a slender well-shaped Body. It cries just like an Infant, and is so voracious, that if it be pinched with Hunger, it will break into Houses in the Night, and fall upon People. Another sort he saw, called, *The Mangoure*, which is like our Wezel, save that the Body is longer and bigger, Legs shorter, Snout slenderer, and Eye quicker and wilder: It is very familiar, and will fawn and play with a Man like a Dog, but snarls and is very furious when it eats: It loves Hen-eggs, and has pretty Tricks to crack them: It hunts Rats, Mice and Serpents, which it seizes so cunningly on the Head, that it receives no Hurt from them. Camelions at the Sight of them, are seized with such a mortal Fear, that they become as flat as a Flounder, whereas at the Sight of a Cat, or Dog, they'll swell and be enraged. *India* hath abundance of Serpents of all Sizes; some have such Variety of Colours, that nothing can be more delightful to the Eye; others are of a Triangular Form; others have no Tail, but have 2 Heads at each End, and while the one hath the Use of its Organs, the other seems dead, and this each hath 6 Months in its turn. There are Flies of such a lively Yellow, so polish'd and shining, that no Gilding can come near it: Some are so light, that the Air seems set on fire with them in the Night, and being light on Trees, they look like Fireworks. The white Pismires are very famous as much for their mischievous, as natural Properties. They are exceeding small and white, and multiply in *Infinitum*. If they get into an House, nothing but the black Pismires can drive them out. They have such sharp Teeth, or rather Saliva, that they'll pierce thro' the greatest Bails of Silk, Cloth, Stuffs and Wool, yea, eat Cabinets and Cubboards, and spoil Copper and Silver. In *Siam* Grashoppers are the Fruit of a Tree, which produces a kind of green Filiments, which in time are metamorphiz'd into Grashoppers. There are Fish, whose Blood is as hot as a Man's, and others breathe in the Air like Terrestrial Animals, flie like Birds, croak like Toads, and bark like Dogs: Some have Heads like Men, which are called, *Mermaids*, others are poisonous, and if they strike their Fins into the Fisher-men, infallibly lame them.

The Chieri-Marron.

The Mangoure.

Serpents.

Flies.

White Pismires.

Grashoppers.

Strange Fish.

Other Wonders of the Sea might be mentioned, but since there is scarce any thing that comes out of it so valuable as Pearl, he gives such a Description of the Birth, Nature and Fishing of it, as may be depended upon, and is as follows:

All Men almost know that Pearl is engendred in a sort of Oister, found in the *Indies*, between Cape *Comerin*, and the Channel *de la Croux*; from whence it takes the Name of the Fishery. This sort of Fishing is very chargeable, and therefore, before they engage in it, they make a Trial of what Profit they may hope for by taking some of the Oisters up first, which if they prove fair and big, and in good Numbers, they begin about the 15th of *March*. When the Day is come, the whole Fleet, which consists sometimes of 800, and sometimes 3000 Barks, puts out to Sea as far as 7, 8, or 10 Fathom Water, to the Place, where they judge is most copious Fishing. The Crew of each Bark is usually 50 or 60 Mariners, of which 20 are Divers, and the rest their Assistants. Having cast Anchor, the Divers go to work; every one of them fastens under his Belly a good big Stone of 6 Inches Diameter, and a Foot long, cut Arch-wise, to apply it close to his Body, and another to his Feet, to carry him thro' the Waves: With him he carries a Fork of Iron to pull the Oisters from the Rocks, and a Net like a Sack to put the Oisters in: Being at the Bottom, they hastily snatch up the Oisters (for they can't stay above half an Hour at most, and few so long) and when they have filled their Sacks, are drawn up by a Rope. At what Depth soever they go, 'tis as light in the Water, as upon Land, and they sometimes see monstrous Fish, which have devoured some of them. Some will bring up 500 Oisters at a Pull, but others not above 50, or 100. Some of the Divers, when they are come up, will rest themselves, but others do not require it, being accustomed to it. The Oisters, when unloaded, are cast into Pits of Sand dug on purpose, and there lie till the Rain, Wind, or Sun forces them to open of themselves, which soon kills them, and the Meat growing dry, the Pearls come out easily: The Oisters are outwardly like others, but within more like Silver, and more glistering; the largest are as big as a Man's Hand, and very delicate Meat. The Pearls lie scattered here and there in the whole Substance of the Oister, some bigger and some less. The Oister is often set thick with them, but there are in one Oister seldom more than 2 of any tolerable Bigness. They are naturally white, more or less according to the Quality of the Mother. The yellow, and black are rare, and of no Value. The Pearl is of several Forms, pointed like a Pear, oval, round, full of Angles, Barroque, *i. e.* flat on one Side and round on the other, and generally of all sorts of Figures. The best Pearl is found here, for it is always white, and will never turn yellow or pale, as other Pearl will. The Gain of this Fishing is thus distributed: Every Diver pays 6 Crowns to the *Dutch*. One Day in 8 is for the Skipper, a 3d part of what is taken besides, is for the Assistants, and the Diver has all the rest. The People of the Coast, called, *Paravas*, have the Privilege of the Fishing for their Money, tho' the *Dutch* will sometimes rob them of all. It continues 3 whole Months.

VOL. II. LIB. III.

Dr. *Edward Brown's* TRAVELS INTO Divers Parts of Europe;

VIZ.

Hungaria, Bulgaria, Macedonia, Theſſaly, Auſtria, Styria, Carinthia, Carniola, and *Friuli*; through a great part of *Germany,* and the *Low Countries*; through *Marca Treviſana,* and *Lombardy,* on both ſides the *Po.* With Obſervations on the *Mines, Baths,* and *Mineral Waters,* in all thoſe Parts, *&c.*

A General Deſcription of HUNGARY.

HAving elſewhere given a particular Account of the Excellency of *Hungary,* in reſpect of its Mines, Baths, and Mineral Waters, I will only add in this place, that beſides theſe Advantages, it may boaſt of another; which is of its Rivers, in which perhaps it excels any other Country in *Europe.*

The River *Tiſſe.* On the East-ſide it has that Noble River *Tibiſcus,* or the *Theyſſe,* ariſing at the foot of the *Carpathian* Mountain, in the Country of *Maromorus,* and being increas'd by the Waters of the River *Mariſcus,* or *Mariſa,* and of ſeveral others, joins its Current with the *Danube* between *Waradin,* St. *Peter,* and *Belgrade.* This River carries vaſt Quantities of Stone Salt, from the Salt Mines of *Hungary* and *Tranſilvania,* and ſo by the *Danube* to all places as far as *Presburgh;* (it being not permitted to be carried higher, leſt it ſhould obſtruct the Sale of the *Auſtrian* Salt.) a conſiderable quantity of the ſaid Salt being carried down the *Danube,* and ſo by the River *Morava* into *Servia,* and other adjacent Countries.

The River *Rab.* On the Weſt-ſide is the River *Rab* (*Arabo*) which has its riſe in *Styria,* and being in its paſſage augmented by the Waters of the *Lauffnitz, Pinca, Ganez,* and other Rivers, falls into the *Danube* near *Raab* or *Javarinum.* The late Defeat of the Turks at St. *Gothard,* near this River, has rendred its Name famous to Poſterity.

The River *Drave.* Upon the South-ſide are the two conſiderable Rivers, the *Dravus* or *Drave,* and the *Savus* or *Save.* The firſt has its Source in the Country of *Saltzburgh,* (part of the ancient *Noricum*) and after a Courſe of 300 Miles through *Carinthia* and *Hungary,* exonerates it ſelf into the *Danube,* near *Erdod,* or *Teutoburgum.* At its entrance into *Hungary,* it is joyn'd by the long River *Mur*; but a great way before that, even near its Source, is a conſiderable River.

The River *Save.* The *Save,* the ſecond Noble River on that ſide, has its firſt Spring in *Carinthia,* and being augmented by the acceſſion of many other Rivers, after a Courſe of 300 Miles, joyns with the *Danube* near *Belgrade.* It is a very goodly Stream even at *Crainburgh* (*Carnodunum*), a goodly Town, not far diſtant from the Head-Spring; which is ſo conſiderably enlarged afterwards, that it contains divers remarkable Iſlands, as that of *Metubaris,* on the Weſt-ſide of *Sirmium,* and that of *Seſſeck* (*Segeſtica*), near *Zagabia,* on which anciently was built a ſtrong Fortreſs, unto which the *Romans* uſed to carry their Proviſions, and other Neceſſaries from *Aquileia,* and ſo by Land to *Neuportus,* for the uſe of their Forces in theſe Provinces. Into the fertile Plains betwixt theſe two Rivers, *viz.* the *Drave* and the *Save, Solyman the Magnificent* retired from before *Vienna,* and ſo further to *Belgrade.*

On the North-ſide of *Hungary* are the Rivers ariſing from the *Carpathian* Hills, which are the Boundaries betwixt that Kingdom and *Poland*; *viz.* The River *Gran,* which falls into the *Danube* over-againſt *Gran,* or *Strigonium*; the River *Vagus,* or *Waag,* which joyns with the *Danube* near *Comorrah*; it is generally conceiv'd to equal the *Po* in *Italy*; this I am ſure of, that at *Frieſtadt* (above 50 Miles before it runs into the *Danube*) it is already a conſiderable Stream, and has a long Bridge over it; and another very near to its Source, at *Trenſchin*, a handſome Town, famous for 32 Springs of Hot and Mineral Waters. The Rivers *Gran* and *Waag.*

Beſides theſe, that great and noted River the *Danube,* The *Danube.* paſſes quite through *Hungary,* not any one Province having ſo large a ſhare of this River, as that Kingdom: For taking this River *Danube* from the City of *Ulm,* in *Suabia* (where it begins to be navigable) it paſſes by *Ingolſtadt, Ratisbon, Straubing, Paſſau, Lintz,* and *Vienna,* unto *Presburgh*; from whence it continues its Courſe for at leaſt 300 Miles through *Hungary,* before it comes to *Belgrade.* Not to mention here its ſmoother paſſage along the Shores of *Servia, Bulgaria, Wallachia,* and *Moldavia,* and its diviſion into many Mouths, by which after it has receiv'd into its Channel above 60 great Rivers, and by a modeſt Computation, kept its Courſe for 1500 Miles, it exonerates into the *Euxine,* or *Black Sea*; thence it is viſible, that in reſpect of its different parts, it might well be mention'd by a double Name by the Geographers, *viz.* by that of *Danubius,* and *Iſter. Strabo* aſcribes that Name unto it below its Cataract, or Water-fall, near *Axiopolis,* in the inferiour *Meſia,* or *Bulgaria*; whereas *Appian,* and moſt modern Authors, begin it at its Confluence with the *Save,* near *Belgrade.*

Besides these large Rivers, it has divers others, *Fluvii non ignobiles*, as *Pliny* stiles them, *viz.* The *Sarvizza*, or *Orpanus*, arising near *Esperies* (*Vesprinium*), and passing by *Stulweissenburgh* (*Alba Regalis*), falls into the *Danube*. The River *Walpo*, or *Vulpanus*, which has its rise near a Town of the same Name; we pass'd over it by *Walcovar*, and the River *Bosneth*, or *Bacunthus*, which exonerates it self into the *Save* not far from old *Sirmium*. Most of these great Rivers are covered with long Bridges. The Bridge of Boats over the *Danube*, betwixt *Strigonium* and *Barchan*, is the first upon this River after you come from *Vienna*. I saw also the Ruines of a Stone-bridge, upon the Shore of St. *Andrew's* Island, by *Virovichitz*; but the *Turks* now-a-days neglect those Bridges, instead of which they make use of Bridges of Boats, which they find more useful, and contrive so conveniently, that they may with ease open a passage for Vessels that come that way.

Bridges over the Rivers of *Hungary*.

Such a Bridge of Boats is betwixt *Buda* and *Pest*, over the *Danube*, being above half a Mile long; and if *Sigismund* had lived to effect his Design of building a Stone-Bridge in that place, no Bridge in *Europe* could, in all probability, have compared with it.

Bridge of Boats at *Buda*.

Calocza, formerly an Arch-Bishop's See, has also a Bridge; and near *Wiskovar* is another over the River *Walpo*. But the Bridge of *Esseck* (anciently *Musa*), built partly over the *Drave*, and partly over the low marshy Grounds and Fens, justly challenges the precedency before all the rest: It is five Miles long, with Towers upon it at each quarter of a Mile, being handsomely railed on both sides, and sustain'd by large Piles of Wood, nine or ten in a rank for each Arch. Count *Nicholas Serini* burnt that part of it which was built over the *Drave*, in the last *Turkish* War, instead of which the *Turks* have laid a Bridge of Boats a little below the other; which I pass'd 1669. Here it was the unfortunate *Hungarian* K. *Lewis* engaged with the *Turks* under *Soliman*, which cost him his Life. In ancient times there were likewise many Bridges over that part of the *Danube*, known generally by the Name of *Ister*. *Darius* King of *Persia* made a Bridge of Boats over that Mouth of the *Ister* call'd *Ostium Sacrum*: And according to *Nicephorus*, *Constantine* built a Stone-Bridge over it; but that admirable Bridge built by the Emperor *Adrian* (if we may give Credit to *Dion* the Historian) surpass'd all the rest: Some of its Ruines are to this Day to be seen near *Severin*, about 20 *Hungarian* Leagues from *Belgrade*. It consisted of 20 Piles of square Stone of 100 Foot high, besides the Foundation of 60 Foot broad, the distance betwixt each of them being 170 Foot; and joyn'd by Arches with this Inscription:

The Bridge of *Esseck*.

Fig. I

The Bridge of *Adrian*.

PROVIDENTIA AUG.
VERE PONTIFICIS VIRTUS ROMANA
QUID NON DOMAT? SUB JUGUM ECCE?
RAPITUR ET DANUBIUS.

And for an everlasting Memorial, many Coins were stamp'd in Silver with this Inscription, *DANUVIUS*.

Not any River, that I know of, has such large and well-peopled Islands as the *Danube*; as the Isle of St. *Andrew's*, betwixt *Vicegrad* and *Vacia*: Another lies a little below *Buda*, against the West-side of which stands *Adom*, 40 Miles long, and containing many Villages; another opposite to *Mohatz*, and another at the Confluence of the *Drave* and the *Danube*, and another new one near *Belgrade*, where 40 Years ago there were not the least Footsteps of an Island to be seen: And if the River *Leyta* be the Boundary of *Austria*, the Isle of *Schutz* (*Insula Cituorum*), excels all the others, being well-peopled, and full of good Villages, besides divers considerable Towns, such as *Comorah*, *Semarien*, &c. Another thing is observable in the *Danube*, that no River whatever, at such a distance from its Mouth, can boast of such considerable Naval Engagements as this; the Emperor keeping his Gallies at *Vienna*, *Presburgh*, and *Comorah*; as the *Turks* do theirs at *Strigenium*, *Buda*, *Belgrade*, &c.

Isles of the *Danube*.

It seems not a little surprising, when we read, That *Mahomet* at the Siege of *Belgrade*, appear'd upon the *Danube* with 200 Gallies, and other arm'd Vessels, which were so smartly engag'd by the Christian Fleet, that besides what was taken, the *Turks* were forc'd to set their own Vessels on fire, to prevent their falling into the hands of the Enemy.

Turk's History.

The Christians had a Fleet of 24 Gallies, and 80 other arm'd Vessels, besides Tenders and Ships of Burthen, at the Siege of *Buda*: And when *Solyman the Magnificent* lay before *Vienna*, the Imperial Admiral, *Wolfgang Hodder*, did a signal Piece of Service with his Vessels; for coming out of *Presburgh*, he sunk the *Turkish* Vessels, which carried the heavy Cannon, intended for the Battering of the Walls.

Hungary is also furnish'd with divers considerable Lakes, as the Lake *Balaton*, or *Platsee*, as they call it (the *Volcæa* of the Ancients) extending a great length betwixt *Esperies* and the River *Drave*, being guarded with several Forts, which have proved of great use against the Incursions of the *Turks*.

The Lakes of *Hungary*.

The *Newsidler* Sea, being seven *German* Leagues long, and three broad, having borrow'd its Name from the adjacent Town of *Newsidel*, a handsome place, situate upon a Hill, with a small square Castle. This is the same mentioned by *Pliny*, under the Name of *Peiso*; and the modern *Hungarians* call it *Terseu*, lying just half way betwixt *Vienna* and *Sabaric*.

The Vastness of *Hungary*.

The vast Plain of *Pampus*, in *Paraguay*, in *America*, is famous for its extent, being 2000 Miles long; I remember that famous Sea-Captain, Mr. *Narborough* told me, That there is all low Land from the *Plate* River, to the middle of the Streights of *Magellan*. The great Plains of *Muscovy* and *Poland*, are also famous throughout *Europe*; however, these are intermix'd with Trees, and sometimes whole Woods, whereas the Plains of *Hungary* are clear and open; and if compared with our *English* Plains, as of *Salisbury*, *Lincoln*, and *Newmarket*, exceed them as far as a full-grown Man does a Child; such are the Plains of *Austria* from *Vienne* to Mount *Simmaren*, upon the Frontiers of *Styria*. I my self travell'd from *Vienna* to *Belgrade*, through one continued Plain, for 400 Miles, without any Eminencies, except one inconsiderable Wood near *Bacne* and *Shilberg*, beyond *Datis*: And this Plain taken from its first beginning, *viz.* at Mount *Kalenburgh* (*Cetius*), two *German* Leagues Eastward from *Vienna*, and so beyond *Belgrade*, along the North-side of the *Danube*, or the very Frontiers of *Wallachia*, exceeds by much that renown'd Passage from *Lahor* to *Agra*, in the *Indies*. 'Tis true, *Upper Hungary* has good store of Woods and Hills, yet are these intermingled with large Plains. The plainness of *Hungary* proves a considerable Conveniency for Travellers, who travel in open Chariots, carrying two Men besides the Charioteer, drawn by two or three, and sometimes four Horses a-breast.

Hungary has more large Cities upon the *Danube*, than any other Province; for among the ten considerable Cities which are seated from *Ulm* unto *Belgrade*, four, and those very large ones, belong to *Hungary*, viz. *Presburgh*, *Strigonium* or *Gran*, *Buda*, and *Belgrade*; unto which if you add *Pest*, it makes up the fifth.

Plenty of Fish.

These Rivers and Lakes of this Country, furnish them with vast Quantities of Fish: The River *Theysse* is so famous for its plenty of Fish, that they have a common Saying, *That one part in three consists of Fish*. And the *Budziack* which falls into the *Theysse* near *Tokay*, is so full of Fish, that the Country People say, *It smells of Fish*; being to be understood of the dry Summer Season, when its Waters are very low; tho' (as I was credibly inform'd by a certain Officer) it is 30 Fathoms broad, and 8 deep; but being of this Figure V, he told me, it could not be well fish'd with Nets. The *Danube* also affords a plentiful share of Fishes, as *Trouts*, *Perches*, *Carps*, the largest and finest I ever met with; and besides many others, a certain Fish call'd *Coppen*, or *Capito*; a *Biscurne*, a kind of *Lamprey*, a *Grundel*, or spotted kind of *Cobites*, with six Beards, two short, and four longer; another Fish exceeding in bigness a Pike, call'd *Schyden*, the *Silurus Gesnier*, and at certain Seasons great numbers of *Husones*, call'd by them *Hausins*, which are sometimes twenty Foot long, a delicious Fish not unlike a *Sturgeon*. There are set Fishing-places, and peculiar Store-Houses for that use upon this River, the highest thereof is above *Comorrah*, in the Isle of *Schutz*; but the greatest plenty of Fish is near *Kilia* in *Wallachia*, where they take and salt many sorts of Fish coming out of the *Euxine* Sea, and send them into the adjacent Countries.

These Rivers afford also great plenty of Water-Fowl in the Winter, and among the rest *Pelicans*, but I never saw any Swans upon the *Danube*.

Fertility of *Hungary*.

The Land here affords the same plenty of Provisions of all sorts, but especially of Bread and Wine, their Bread being as good as any in *Europe*, made light by kneading for a considerable time; and that so cheap, that you may buy as much here for Two-pence, as we generally do for Twelve-pence in *England*; the same being to be observed in the *Turkish* Dominions in these parts.

Wines.

Their Grapes are both large, and of a luscious Flavour, among which those of *Virovichitz*, near *Vacia*, excel the rest; their Vines are very noble, witness those of *Tockay*, which are in great request; and the pleasant and rich Wines of *Sirmia*, in the Southern Parts of *Hungary*; the Vines of this Province having been planted first by the Emperor *Probus*, near Mount *Almus*, or *Argentaro*. At *Vienna* are no less than thirty sorts of Wines to be sold. Neither

ther are the *Hungarians* neglectful in improving their Grounds by Husbandry. I remember that in *February* I saw every Night great Fires in the Country, occasion'd by the burning of the Stubble and old Grass, which rendred the Ground more fertile against the next Season. Instead of our Barns, or Hay, and Corn-stacks, they use deep and spacious Caves under Ground, whither they retire also with their Families, in case of a sudden Inroad from the *Turks* or *Tartars*.

Venison. They have vast plenty of Hares and Deer, as also of all sorts of Poultry, Partridges, Pheasants, &c. vast store of Sheep, having in some places long spiral Horns, and long curled Wool; of Oxen such prodigious numbers, that according to Computation they send to *Germany*, *Italy*, and other parts, above 100000 yearly. They have also good store of Bouffles, which are very useful to them; especially in ploughing some stiff Grounds. Neither do they want Horses, some of which are pretty large, but generally small, tho' exceeding swift; I saw above 1000 of them belonging to the Village of *Lower Sene*, or *Senia*, near *Comorrah*.

Cattle.

Language. Their Language is peculiar to themselves; I heard a Minister praying and preaching in a Church at *Bitchka*, and tho' he that was with me, was very well vers'd in the *Sclavonian*, *German*, *Turkish*, Vulgar *Greek* and *Italian*, yet could he not find the least affinity in it, with any of these before-mention'd Languages. The same we observed in the *Albanian* Language, in the Northern part of *Epirus*, and West of *Macedonia*, where indeed the *Sclavonian* is used by some, but their own Language in common Conversation among themselves, could not be understood by the best Linguists, both *Christians* and *Turks*, that travell'd along with us. Thus, in some parts of *Hungary*, the *Sclavonian* is much in use; I remember that at *Freistadt* (call'd *Colgotz* by the *Hungarians*) I heard them preach in *Sclavonian* in the Church of the Town, but the *Franciscans* preach'd in *Hungarian*. This remoteness of their Language from others, makes them much addicted to foreign Languages, especially the *Latin*, which most of the Gentry and Soldiery speak fluently enough, and there is scarce a Coachman, or Foot-man, but what understands as much of it as will serve him to be understood; this makes the *Latin* Tongue very useful through all *Hungary* and *Transilvania*; but beyond *Belgrade* the *Sclavonian* is the universal Language; it being certain that you may travel with the *German* and *Sclavonian* from *Hamburgh* to the Frontiers of *Tartary* and *Constantinople* it self; the *Sclavonian* being generally spoken in *Servia*, *Bulgaria*, *Romania*, and part of *Macedonia*, besides in many other parts; so that a Man may make shift to pass with this Language from the *Adriatick* Shore in *Dalmatia*, unto the *Tartarian Ocean*. It

Learning. is scarce to be suppos'd, that in a Country so near unto, and so much exposed to the Violences of a barbarous Neighbour, I mean the *Turks*, there should be any Seminaries of Learning, there being no University in those parts beyond *Vienna*; and tho' of old they have had many learned Men, yet had these their Education in Foreign Parts, as had of old St. *Jerom*, and St. *Martin*; and those Persons of Quality in *Hungary*, who intend to breed up their Children to Learning, send them now-a-days to *Vienna*, *Breslau*, *Prague*, and some other Universities in *Germany*. At present there is a *Gymnasium*, or small University at *Schemnitz*. The *Hungarians* boast however of their once so famous Library of *Buda*, founded by their King *Matthias Corvinus*, the Son of *Hunniades*, about 200 Years ago, consisting of several Thousands of Books, and among them many *Greek* and *Latin* MSS. not to be purchased; part of it was carried off into *Turkey*, after *Solyman* had surprized that City, and the choicest thereof procured afterwards for the Imperial Library at *Vienna*, when *Cuspinianus* was Keeper thereof; many of these Books being mark'd with the Arms of *Corvinus*, *viz. a Crow bearing a Golden Ring in his Beak*; these, with the succeeding Additions of *Busbequius*, *Wolfgangus*, *Lazius*, *Fugger*, &c. together with the choicest Manuscripts brought thither by *Petrus Lambecius*, the present Library-Keeper, from the *Ambrasian Library* near *Inspruck*, are part of the 80000 Volumes mentioned in the Imperial Library; of which I had the Favour not only to see the rarest Manuscripts, and other Rarities, but also to have divers of the best Books to my Lodgings; and at my coming away, the said learned Person presented me with a Catalogue of some hundreds of *Alchymical* Manuscripts, with an Offer to have any of them brought to *England*, or to be transcribed at *Vienna*. There were lately about 400 Books (the Remnants of the *Corvinian* Library) left at *Buda*, but carelessly kept by the *Turks*, and were consumed in the late Fire that happen'd there 1669.

The Hungarian Crown. The *Hungarians* have a most profound Veneration for their Crown, which, they tell you, was sent to their King *Stephen* by Pope *Benedict* VIII. being admonish'd by an *Angelical Apparition* to send it to *Stephen*, and not to *Miscu* the then King of *Poland*, his Competitor: Hence it is, that they have always been so careful to preserve it, as thinking the Fate of the Kingdom to depend on the Possession or Fate of it; formerly it was kept in the Castle of *Vicegrad*, but at present in that of *Presburgh*. This Crown has also a most peculiar Figure, being a very low Crown, with a Cross upon it, enclosed with four turnings up like Leaves, one whereof is as large as two of the others. As it is a hard matter to get sight of the Original, so I was fain to be contented with the sight of the Model thereof, in the Treasury of the present Emperor *Leopold*, exactly made after the Fashion of the *Hungarian* Crown of Gold, and beset richly with precious Stones, perhaps richer than the Original.

Tho' the *Hungarians* want neither Inclination nor Abilities to Learning, yet have they generally been most addicted to Martial Exploits, even to the Clergy, witness that unfortunate Battle of their King *Lewis* near *Mohatz*, in which six Bishops were slain with the King.

Some are of Opinion, that the famous Poet *Ovid* being recall'd from his Banishment at *Tomos*, near the *Euxine* Sea, died at *Sabaria* in *Hungary*, in his return home; where they say, his Tomb was found, with this Epitaph made by himself:

Hic situs est vates quem Divi Cæsaris ira,
Augusti *Patria* cedere jussit humo.
Sæpe miser voluit patriis succumbere terris,
Sed frustra, hunc illi fata dedere locum.

Vide Fig. 3.

In *Hungary* I also first observed the *Pyrrhical Saltation*, or Warlike Way of Dancing, which the *Heydukes* perform by dancing with naked Swords in their hands, advancing, brandishing, and clashing the same, turning, winding, elevating, and depressing their Bodies with singular Activity, singing at the same time to their Measures, after the manner of the *Greeks*.

Are a Warlike Nation. The great Deeds of *Attila*, King of this Country, and his numerous Armies, together with that memorable Battle fought against the *Roman* General *Ætius* (who was a *Mysian* or *Servian* by Birth), in which 200000 were slain, is sufficiently famous in ancient Histories; and how far they extended afterwards their Conquests over their Neighbours, is testified by the Banners carried at the Coronation of their Kings, *viz.* that of *Hungary*, *Dalmatia*, *Croatia*, *Sclavonia*, *Galitia*, *Russia*, *Servia*, *Bulgaria*, *Polonia*, and *Ludomiria*; and it must be confess'd to the everlasting Honour of the *Hungarians*, that of all other Nations, they have put the longest stop to the Victorious Arms of the *Turks*; and had it not been for their intestine Divisions, which the *Turks* have known to improve to their advantage, it is more than probable the *Ottomans* would never have been able to penetrate so deep into this Country as they have done; notwithstanding which, a very considerable part thereof remains to this Day under the Emperor's Jurisdiction as King of *Hungary*, *viz.* Almost all *Upper Hungary*, from *Presburgh* unto *Tockay* and *Zatmar*; and in the *Lower Hungary*, there are still in the possession of the Christians (besides divers other places of note), the three strong Bulwarks of Christendom, *viz. Raab*, *Comerrah*, and *Leopoldstadt*, of which I took a full view, the last being erected since the loss of *Newhausel*, and fortified after the same manner. It is seated on the West-side of the River *Waag* opposite to *Freistadt*; its Fortifications, which were begun 1665, consist of six regular *Bastions* and *Ravelins*, and were not quite finished 1669.

See Fortifications.

These Quarters are famous in ancient Histories for the Presence, Birth, Death, and great Actions, of many *Roman* Emperors; not to speak here of *Trajan*, *Caracalla*, *Galienus*, *Constantius*, and others; the Emperors *Aurelianus*, *Probus*, *Gratianus*, and *Maximianus*, had *Sirmium* for their Birth-places; and *Claudius Gothicus* dy'd in or near it.

Jovianus, and *Valentinianus*, were *Pannonians* by Birth, and *Ingenuus*, Governour of *Pannonia*, was saluted Emperor by the *Mœsian* Legions, as was *Vetranio* in the same Country. When *Photinus* was Bishop of *Sirmium*, a General Council was held in that place.

The *Roman* Armies being so frequent in this Country, no doubt but they brought abundance of their Copper, Silver, and Gold Coin hither, of which I obtained a good number at *Petronel*, or old *Carnuntum* in *Pannonia*, and with many more at *Sene*, or *Senia*, near the *Danube*. An *Armenian* Merchant with whom I lodged at *Belgrade*, furnish'd me with a good quantity of *Roman* Coins at my return, which he had got at old *Buda*, or *Sicambria*, at old *Sirmium*, in the Country now call'd *Schremnia*, and at *Mursa*, or *Essek*.

Near *Deva*, *Lysimachus* King of *Macedon* and *Thrace*, is suppos'd to have kept his Court, near which that unparallell'd Mass of ancient Golden Coins was found, under the Ruines of an ancient Castle: For a strong Current of Water having been forced that way by long continued Rains, which washed away the Rubbish that had covered those Golden Medals; and the glance of this costly Metal having drawn thither many of the neighbouring Peasants, they discovered these Medals, weighing two and three Crowns a piece, having on one side the Image of *Lysimachus*, and on the other side a *Victory*; under these Medals they also found a Golden Serpent, which General *Castalde* sent unto *Ferdinand*, who had also 1000 of these Medals, besides 300 *Castalde* had for his share; of which there were taken up, (after the Peasants had taken up before a vast quantity) to the value of 10000 *l.* So that there was scarce a Man found hereabouts but what had some of them, so infinite was the Sum: This Castle was supposed to have been sometimes the Residence of King *Lysimachus*, and this Coin remained here from that time; it being a received Custom among the Ancients, for such as buried their Treasure, to place Serpents there, in token of a faithful Keeper. Among other Medals, there were also found two Medals of Gold, one of *Ninus*, the other of *Semiramis*, which were presented to the Emperor *Charles* the Fifth.

See Monsieur du Fresne.

As I pass'd through the old *Roman* Towns, the Inhabitants brought me divers sorts of old Coins, which they term *Heathen-Money*; and in *Bosnia* and *Servia*, the *Armenians* drive a great Trade with them, and send them by the way of *Ragusa* into *Italy*. Among other Coins I found one of Copper pretty frequent here, but not easily found in other parts. It was a Coin of the Emperor *Julius Philippus*, having on one side, the Head of *Philippus*, with this Inscription; IMP. C. M. JUL. PHILIPPUS. AUG. and on the reverse a Woman between a Lion and a Bull, with this Inscription; P. M. S. COL. VIM. AN. VII. which may be: *Provinciæ Mœsiæ Superioris Colonia Viminacium Annona Septimo data*; *Viminacium* being a *Roman* Colony in *Mœsia Superiour* (now *Servia*) supposed to be *Singidunum* or *Semderin* upon the *Danube*. At the Mouth of the River *Morava* or *Marosh*. The Lion and Bull seem to declare the fitness of the Soil for Agriculture, and the Warlick Temper of the People, and by these two Animals sitting peaceably together, the Prudence of *Philippus*. *Annona Septima*, questionless intimated the seventh distribution of Corn by *Philippus*, the conducting of which was committed to the *Legio* XVI. *Frumentaria*.

In Figure II. you see the Habit of an *Hungarian*, which for its Conveniency, especially in Warlike Exercises on Horse-back, is made use of by a King of the neighbouring Nations, as the *Croatians*, *Sclavonians*, and the *Turks* themselves, living near the Frontiers tho' otherwise very nice in this point.

The *Hungarians* delight generally in Blue, Yellow, Green, and Purple Cloth, Black being a Colour rarely to be met with here, the Priests themselves being clad in long Purple Garments. Two sorts of Weapons are most common among the *Hungarians*, viz. a kind of Iron Mace, call'd *Catshan* by them, with a round Iron Head, with Furrows in it, and spaces cut away to render it the more light, as you see it in the preceeding Figure; the other they call *Balta*, being a kind of a Hatchet, with a Head somewhat like a Hammer, but broader, and at the end makes the shape of the Letter *Delta*, as you see it here.

A Journey from Vienna *in* Austria *to* Larissa, *in* Thessaly.

HAving past'd the Winter at *Vienna*, I took a view of the Copper, Gold and Silver Mines of *Hungary*, and not long after made a second *Tour* into *Italy*, passing thro' *Austria*, *Styria*, *Carinthia*, *Carniola* and *Friuli* to *Venice*, and after my return to *Vienna*, met with a fair opportunity to see the *Grand Seignior*'s Court, which then, and a considerable time before, resided at the ancient and famous City of *Larissa* in *Thessaly*. As I don't pretend to give you the Names of all places thro' which I past'd, so on the other hand you will find mentioned some which are not to be found in Maps, at least not in any that ever I met with. Between *Vienna* and *Presburgh*, the first place worth my peculiar Observation, was the Town of *Petronel* and *Haymburg* Hill and Castle: The first is supposed to be the old *Carnuntum*, one of the strong holds of the ancient *Pannonians*, who 170 Years before our Saviour's Birth bravely repulsed the *Romans* here, but were forc'd to submit to the Power of *Augustus*, who made it a *Roman* Colony, and the Station of the *Legio* XIV. *Gemina*, and of the *Classis Istrica*: and by degrees arrived to that Pitch of Greatness, that it became the Capital City of all *Pannonia Superior*, comprehending all that Tract on the South Bank of the River *Danube*, wherein now are *Haymburgh*, *Dutch Altenburgh* and *Petronelli*: Here I met with variety of Medals, Inscriptions, and the Ruins of a most noble Aqueduct, and the remnants of a stately Fabrick, which I thought might have belong'd to a Temple of *Janus*, but is generally suppos'd to have been a Triumphal Arch, erected in memory of a Victory obtain'd by *Tiberius*, in the ninth Year of our Saviour, over the *Pannonians* and *Dalmatians*. (a) *Petrus Lambecius*, has, besides other Antiquities of this place, given a draught of the one side thereof, and of the back part I took a draught my self, as it is express'd in the next following Cut. In this place it was that the Emperor *Antoninus Philosophus*, when engaged in a War with the *Marcomanni* or *Moravians*, resided for three Years and dy'd at *Vienna* (or *Vindobona*:) And here *Severus* was elected Emperor by the *German* Legions. But this great City was laid desolate by *Attila* the *Hunn*, there being nothing remaining now where the old *Carnuntum* stood, but some ruinous Foundations of the Houses and Streets, scarce discoverable by the Eye.

Petronel.

(a) In the second part of his description of the Imperial Library.

Of *Roman* Coins, there have been, and still are, found such quantities, that even the Peasants bring them to sale, of whom I bought a good number; and I remember, that Mr. *Donallan* an *Irish* Gentleman, my fellow Traveller, as we were viewing the Ruins of the ancient Foundations, struck by chance a Silver Chain, with his Foot out of the Earth.

Presburgh, *Posonium* and *Pisonium*, is pleasantly seated on the North side of the *Danube*, 10 *German* Leagues to the East of *Vienna*, now the Capital City of *Hungary*, under the Emperor's jurisdiction, and since the surprising of *Buda* by the *Turks*, the place of Convention of the Estates of that Kingdom, and since the loss of *Gran* (*Strigonium*) the Metropolitan City. Its Castle, is very noble and stately built of white Stone, on the top of a Hill, where is now kept the so much esteem'd *Hungarian* Crown; the Garden of the Arch-bishop is exceeding fair, the *Walks*, *Grotto's*, *Labyrinths*, and *Fishponds*, very noble, and the Figure of *Jeronymo*, well worth the Observation of a Traveller. In the Cathedral Church is interr'd the Body of St. *Johannes Eleemosynarius*, Bishop of *Alexandria*. Part of this Church is in the possession of the *Jesuits*, the *Lutherans* have likewise a handsome Church here.

Presburgh.

Raab or *Javrinum*, a strong Frontier City, is seated at the Confluence of the Rivers, *Raab*, the *Rabnits*, and the *Danube*. It has two Bridges, one laid over a double Ditch, leading towards *Austria*, and the other towards *Stulweissenburg* or (*Alba Regalis*.) Its Fortification consists of seven Bastions and four Cavaliers or Mounts. (1) The Castle *Bastion*, upon which stands the Governour's Palace. (2) The *Water Bastion*, on the side of the *Danube*. (3) The *Bastion of the Holy Hill*. (4) The *Middle Bastion*, to the East on the Land side. (5) The *New Bastion*. (6) The *Imperial Bastion*; and the (7) The *Hungarian Bastion*, facing the River *Raab*. Here the *Turkish* Governour was kill'd when the Christians surpriz'd this City. It lies in an open and plain Country, there being no Eminency near it, except a small Hill, which is undermin'd, ready to be blown up in case of an approach of an Enemy, for which reason also a spy Tower is built at some distance, to give timely notice in case of need of an approaching Enemy. *Sinan Bassa* the *Turkish* General, under the Reign of *Achmet* III. after having lost a vast number of Men before this place, and 12000 in an assault, took it by composition, by the Treachery of Count *Hardeck* the Governour, who paid for it with his Head. But in a few Years after was recover'd by the Christians, who surpriz'd it in the Night time, under the Conduct of Count *Swartzenburgh*, and Count *Palfi*, who put all the *Turks* to the Sword. At *Raab* and *Comorrah*, we were shown divers sorts of Warlike Instruments, viz. a *Morning-Star*, as they call it, being a Club set round with Spikes; us'd in the Defence of Breaches, and in assaulting of Towns: *Earthen-Pots*, fill'd with stinking and combustible Materials, to throw in among the Enemy: A *Lehn Brader*, or Plank, set with Hooks, to be fix'd to the out-side of the Works, cover'd slightly with Earth; A *Mess Kugel*, or kind of

Raab.

Hand

Hand-Granadoe: *A Spaniſh Ritter* or *Cheval de Friſe*, to be faſtned in the Earth, to keep off the Horſe, being provided with long Iron Spikes on all ſides. At this place the *Turkiſh Chiauſes* or Meſſengers muſt ſtay to receive their Diſpatches, the Court of *Vienna* being much peſter'd with them before that Order, being ſent continually with ſome inſignificant Meſſage or other from the Governours of the *Turkiſh* Frontier Places, for the preſents ſake, which they expect at their departure.

Comorrah. *Comorrah* or *Gomorrah*, *Crumenum* or *Comaronium*, is a large and ſtrongly fortify'd place, ſeated at the East end of the Iſle of *Schuez*, looking over the *Danube* and *Waag*. The ſtrongeſt Fort is call'd the *Tortoiſe* from its Figure. After *Sinan Baſſa* had, as we told you, made himſelf Maſter of *Raab*, he was alſo trying his Fortune againſt this Town; but being repulſed with great ſlaughter in all his Attacks, he was for trying the fidelity of the Governour, the *Baron Brown*, unto whom he ſent 5 *Turks*, under a pretence of a Parley, with very advantageous Offers; but this brave Man, tho' ſorely wounded, having firſt given them the hearing, cauſed four of them to have their Heads cut off, which he put upon long Pikes upon the Bulwarks, and ſent back the fifth with this Meſſage; That he was miſtaken in his Perſon, if he judged of him by the Treachery of Count *Hardeck*; and that he might reſt aſſur'd, he would live and die in the defence of the place committed to his Charge by the Emperour. In the innermoſt Caſtle of *Comorrah*, I ſaw three very ancient Tombs, brought thither formerly from *Senia*, a place of antiquity, not far off, two whereof having Inſcriptions not to be met with in [a] *Gruter*, I thought fit to inſert here.

(a) In his Inſcriptions.

On one of them:

MEMORIAE JULIAE EMERITAE QUAE VIXIT AN ℔ VALERIA MASCLENIA FILIAE PIISSIMAE.

And on the Cover
D. M.

The Inſcription of another was this:
MUAL VALERIANI LEG IIII F L VIXIT AN XLII ET MUALUL PIOE Q PUBL. FIL VIXIT AN VIII SIM CONDITIS ULPIA PARATIANE MARITO ET ULPIA VALERIA FILIA H. REDESTS.

D. M.

And on the Cover this following:

ITAAMTPIETTTXEIMETATIATPOC

The third Tomb, was of the ſame Figure, but without any Inſcription.

Of ſome other places, thro' which I paſs'd alſo the Year before, I ſhall ſpeak only *en paſſant* here.

Newhawſel. *Newhawſel*, call'd *Vywar* by the *Hungarians*, is ſituate by the River *Nitra*, not far from *Nitria*, a ſtrong place, taken by Count *Zoucbes*, in the late Wars. *Newhawſel* is a regular Fortification of ſix Baſtions, in the form of a Star. After Count *Forchatz*, the Governour thereof, had raſhly engaged with the *Turks* at *Barcban*, theſe laid ſiege to this place, and after a ſtout defence (being repulſed in ſix Storms) made themſelves Maſters of it by Capitulation; tho' it is generally believ'd, That if the Viſier had not ſpent his Time and Men in this Siege, he might have put moſt of the Emperor's hereditary Countries into a great Conſternation, whereas the Emperours Auxiliaries being join'd by that time, the *Turks* receiv'd a ſignal Diſgrace near St. *Goddard*, the loſs of which Battle procur'd a ſpeedy Peace. The *Turkiſh Baſſa* lives now in the Palace, formerly belonging to the Arch-biſhops of *Presburgh*.

Sene or *Senia*, a place of antiquity, but now only a Village; is remarkable for nothing but its Antiquities, which we found there now and then. Here, by the Favour of the *Byra*, or Judge of the place, I got a *Roman* or *Heathen* Key, as they call it, and ſeveral ſorts of Coins, ſome of Gold, and ſome *Intaglia's*, whereof I preſented ſome to *Petrus Lambecius*. The Inhabitants will have its name to have been anciently *Apollonium*, but without any good ground. In our way betwixt *Raab* and *Datis*, we paſs'd in ſight of *Martinbergh*, a ſtrong and handſome Town, ſeated upon a Hill. *Datis Tata* or *Theodata*, 12 *Engliſh* Miles from *Comorrah*, has ſcarce any thing remarkable, except its Caſtle, and ſome natural Baths near it. But to return into the Road; we were row'd from *Comorrah* in a Saick of 24 Oars, the *Hungarians* rowing on one, and the *Germans* on the other ſide; thus paſſing by *Sene*, *Neſmil*, and *Rodwan*, we came to *Motch*, the frontier place, where we were to ſtay for the *Turkiſh* Convoy, which being ready in the Morning, their Officers went aſhoar firſt, and next our *Veyda* or *Voyvod*, with the Interpreter, and chiefeſt of the Company, with a ſlow pace, and at meeting, ſaluted one another by ſhaking of Hands together; then delivering our Boat to the *Turks*, they faſtned it to their Saick, and ſent one into ours to ſteer it. At parting they ſaluted the Chriſtians with one Gun, and ſo with 18 Oars row'd down the *Danube*, we carrying the *Eagle* in our Flag, and they, the *Double Sword*, *Star* and *Half-Moon*. The *Turkiſh Saick*, having brought us to *Gran*, ſet our Boat aſhoar, and ſo left us; the Governour took no notice of us; but being reprimanded upon that account by an *Aga*, who came from *Newhawſel* with four Troops of Horſe, we were ſoon diſpatch'd.

Gran. The City of *Gran*, *Strigonium*, or *Oſtrogon*, is ſituate on the S. ſide of the *Danube*, near its Confluence with the River *Gran*; it is divided into the upper and lower Town, each of which has its peculiar Walls, that of the Lower Town, commanding the *Danube*. The Hill of St. *Thomas*, which overlooks the place, is alſo fortified with a Wall. Here are natural Baths of a moderate heat. This was the Metropolitan City of *Hungary*, which gave birth to St. *Stephen*, their firſt Chriſtian King, and King *Stephen* IIId, lies entomb'd here. This place has endur'd many remarkable Sieges, having been often taken and retaken: It yielded in 1683, to the Duke of *Lorrain*. Oppoſite to it is *Barcban*, being join'd to it by a Bridge of Boats.

Vicegrade. From hence we paſs'd to *Vicegrade* or *Vizzegrade*, having two Caſtles, the upper Caſtle being ſeated upon a high Rock, where formerly the Crown of *Hungary* was kept. The lower Caſtle has been a fair Structure. Here are alſo to be ſeen the Ruins of an ancient Fabrick of Arches of ſquare Stone. This place, after it had been a conſiderable time in the Hands of the *Turks*, was ſurrender'd to the Duke of *Lorrain* in 1684. Juſt oppoſite to *Vicegrade* lies *Maroz*, where there is a goodly Church, the Chriſtians living pretty well at eaſe here, under the *Turks*, becauſe of its voluntary Surrender to them. Below this place we ſaw the large Iſland of St. *Andrew* in the *Danube*, and ſome ruins of Stone upon the Shoar of the Iſle, which the *Turks* told us were the Remnants of a Stone-Bridge.

Vacia. Below this, paſſing by *Virchiviz*, famous for its large and noble Grapes, we came to *Vacia*, formerly an Epiſcopal See, which has now two *Moſques* and one Chriſtian Church. It was taken by the *Turks* 1541. and regain'd by the Duke of *Lorrain* 1684, after a ſignal overthrow given the *Turks* near that place, but being not tenible by reaſon of ſome adjacent Hills, was quitted the ſame Year in Autumn.

Buda. Here, having changed again our Convoy, we came to *Buda*, formerly the Capital City and ordinary Reſidence of the *Hungarian* Kings, and at preſent of a *Turkiſh Vizier*, who has divers *Baſhas* under his juriſdiction. This City is of a large Circumference, pleaſantly ſeated upon the *Danube*, divided into the *Upper* and *Lower-Town*; wherein are to be ſeen the Remnants of divers magnificent Structures, built by the ancient *Hungarian* Kings, and eſpecially *Matthias Corvinus*, in whoſe Palace the *Vizier* now reſides. This had anciently three moſt admirable Statues of Braſs, of *Hercules*, *Apollo* and *Diana*, at its Entrance, which were by *Solyman* caſt into great Guns; the whole Palace in all other Reſpects not approaching to its ancient Glory; however here are divers handſome *Moſques* and *Caravanſera's*. On the top of St. *Gerard's* Hill is a Fort, which overlooks the Town and Country. But what *Buda* has moſt to boaſt of now-a-days, are its natural Baths, eſteemed the nobleſt in all *Europe*, both for the largeneſs of its Springs, and the Magnificence of its Buildings; for as negligent as the *Turks* are in their private Houſes, ſo ſumptuous are they in their Publick Structures, as their *Caravanſera's*, *Moſques*, *Bridges*, but eſpecially their *Baths*, bathing being in great requeſt among the *Turks*. There are here in all 8 Baths, of which I took a view during my ſtay in this City, *viz.* Three towards the E. and S. E. part of the City, in the way to *Conſtantinople*, and five towards the Weſt end of the Town, in the way to *Old Offen* and *Gran*. The (1) is a large open Bath, at the Foot of a Rocky Hill call'd *Purgatory*. The (2) has a *Cupulo* on the top, ſtands near the ſame Hill, but more into the Town. The (3) they call the *Bath of the Green Pillars* (tho' now they are red) over againſt a

The Baths of Buda.

Caravanſera.

Caravanſera: The Spring is very hot, yet uſeful without the addition of cold Water; it contains a petrefying Juice, which is to be diſcover'd on the ſides of the Bath, and its Spouts, where it leaves a Gummy Stone behind it; and the Vapours of the Bath coagulated on the *Cupolo*, the Irons reaching from one Column to another, and on the Capitals of the Pillars, form long Stones like Icicles, which you ſee hanging to all theſe places. The Bath is of a Circular Figure, ſet about with large Pillars ſupporting the Cupulo, which has divers Openings, for the free paſſage of the Exhalations, notwithſtanding which, the Bath continues always as hot as a Stove. The Water is let out every Night after the Women have done bathing. The Baths on the Weſt end are (1) *Tactelli*, *i. e.* the *Table Bath*, being but ſmall, the Water whitiſh, and of a ſulphurous ſmell, they both drink of, and bath in it; what is drunk, is receiv'd from a Spout conveyed into the Bath; I gave a piece of five *Sols* to a *Turk*, who holding it under the Spout, to let the Water fall upon it, and rubbing it in the mean time with his Fingers, did gild it for me in half a Minute. The (2) is *Barat Degrimeni* or the *Bath of the Powder Mill*, ariſing in an open Pond near the High-way, and its Water being mix'd with thoſe of the Pond, makes one part of it of a whitiſh Colour, and clear in another, as likewiſe cold and hot in ſeveral parts; being conveyed croſs the High-way into a Powder-Mill, it becomes uſeful in making of Gun-powder, whence it got its name. The (3) is *Cuzzoculege*, the *Little Bath*, or the *Bath of the Saint*, being kept by *Turkiſh* Monks. The Water near the Spring-head is ſo hot, as not to be fit for uſe, but being conveyed thro' one Bath into another, becomes tolerable. The Water differs neither in Smell, Taſt nor Colour from common Water, being without the leaſt Sediment, except that the Sides of the Bathing-Room are cover'd with a green ſpongy Subſtance. The (4) is call'd *Caplia*, a noble Structure, of an Octogonal Figure, with a very handſome Bath in the middle, ſurrounded with a Trench of Water to bath the Feet in: On each ſide it has a Niche, wherein is a Fountain. In the Anti-Chamber, where the Cloaths are left, is alſo a fair Fountain, with a Stone Baſon; the Water of this Bath is alſo very hot, and not without a petrefying Juice. The (5th) is the Bath of *Vekibey*, the nobleſt of all the reſt, having a ſpacious Anti-Chamber; the Bathing room is alſo very capacious, high arch'd, and advanc'd with one great *Cupolo* in the Middle, juſt over the great round Bath, beſides four leſſer ones at the four Corners, over as many private Bathing Rooms, where the *Turks* take off the Hair of their Bodies with *Pſilothrum*, mix'd with Soap, except their Beards. The middle *Cupolo* is ſupported by 12 Pillars, betwixt eight whereof are Fountains of hot Water, and between the reſt, places to ſit down, where the Barbers and Bath Men attend. In each of theſe places are two Stone Ciſterns, one for cold and the other for hot Water, to be mix'd as every one thinks fit, the Water being not to be us'd without the addition of cold Water: For the reſt, it has a ſtrong ſulphurous ſmell, and contains a petrefying Juice. The Mornings are appointed for the Men to bath in, and the Afternoons for the Women.

How they bath at *Buda*.

If you have a mind to bath, you are brought into the Anti-Chamber of the Bath, where being furniſh'd with a Cloth and Apron by thoſe that attend, you lay by your Cloaths, and ſo enter the *Great Bath*, where ſitting down on the ſide or between the Pillars near a Fountain, you are well rubb'd, with your Hands and Arms ſtretch'd out, by the Barber, after which you bath. If you pleaſe, or the Cuſtom of your Country requires it, you may have your Head ſhav'd, and your Beard alſo, except the upper Lip; next the Barber rubs your Breaſt, Back, Arms and Legs with a Hair Cloth, either ſitting or lying upon your Belly, then having waſhed your Head with Soap, and thrown cold Water upon you all over the Body, you walk in the Steem of the Bath for ſome time. This

Buda.

City is generally call'd *Offen* by the *Germans*; ſome trace the Original of this City, as far as to a Brother of the famous *Attila*, call'd *Buda*. And to confeſs the truth, the ſituation of this place upon the Banks of the *Danube*, where it gathers its Water in one entire Channel, and that upon an eaſie aſcent of riſing Hills, from whence there is a proſpect out of many of the Creeks croſs the *Danube*, into a beautiful Country, and of the City of *Peſt*; ſo excellent a ſituation, I ſay, added to the advantage of its Hot Springs, might well invite the Conquering *Huns*, to prefer this place, for the building of a City, before all their other Conquered Countries. The City of *Buda* was the ordinary Reſidence of the *Hungarian* Kings, till it was conquer'd by *Solyman* the *Magnificent*, 13th *Auguſt*, 1541. There is another place call'd old *Offen*, ſuppoſed to be that ancient *Sicambria*, where the *Sicambrian* Souldiers had their quarters in the time of the *Romans*. Here ſome Antiquities and Inſcriptions have been diſcover'd formerly.

Upon the Eaſt ſide of the *Danube*, directly oppoſite to *Buda* ſtands *Peſt*, in a Plain, of a Quadrangular Figure. *Peſt*. This City imparts its Name to the whole County, or *Comitatus Peſthienſis* (*Hungary* being divided into Counties like *England*) and is join'd to *Buda* by a Bridge of Boats above half a Mile in length.

Habit of the Turkiſh Women.

I was ſomething ſurpriz'd at firſt, when I ſaw the *Turkiſh* Women wear long Breeches, reaching almoſt down to their Feet. Over theſe they wear their Smocks, and over theſe a kind of a long Garment; their Head-dreſs covers their Faces, except the Eyes, almoſt like our Penitents. Whilſt we ſtaid at *Buda*, we took a view of one of the *Turkiſh* Convents, where we were entertain'd in a large Room, not unlike a Chapel, with Melons, and ſome other Fruit, by the Monks. The Superiour call'd *Julpapa*, *i. e.* Father *of the Roſe*, having a Girdle about his middle, emboſſed before with a white Stone call'd *Galactites* or *Milk-Stone*, bigger than the Palm of a Hand. They have a ſuperſtitious opinion, that *Mahomet* turn'd a whole River of *Arabia* into a kind of Stone. From the Houſe where we lodged, we had a fair proſpect of the *Danube*, and were often viſited by divers *Chiauſes* (*Turkiſh* Meſſengers.) The Maſter of the Houſe being a *Raſcian*, was thought to hold a ſecret Correſpondence with a *Franciſcan* Fryar of *Peſt*, and with ſome other Perſons of note at *Comorrah*, *Raab*, and *Vienna*; we were alſo very civilly entertain'd by *Mortizan Ephendi*, who had been in the Quality of Envoy Extraordinary at the Court of *Vienna*, and would needs have me ſit upon a Stool, brought in for that purpoſe, being ſenſible that their way of ſitting croſs-legg'd would not be very agreeable to me; among divers other queſtions, he asked me, what was the King of *Poland*'s Name, and when I told him it was *Michael Wiſnowitski*, he reply'd, *Michael* is a good Name, it is the Name of the greateſt Saint in Heaven, except *Mary*.

They leave Buda.

From *Buda* we travelled by Land to the Eaſt, and paſſing by *Ham Zabbi Palanka* and by *Erzin* came to *Adom*, call'd *Tzan Kurteran*, i. e. *Anima liberata*, by the *Turks*; which Name was given it by *Solyman* the Magnificent, becauſe here he made the firſt halt with his Army, after his retreat from *Vienna*; hence we came to *Pentele* or *Pentelen Palanka*, which ſome are of opinion to be the old *Potentiana*, where the *Huns* were overthrown by *Macrinus* and *Tetricus*, the two *Roman* Generals. Some will have this to have hapned near *Adom*. From hence we went on to *Fedwar* in ſight of *Colocza*, ſeated on the other ſide of the *Danube* in the Road to *Temeſwar*, and ſo further by *Pax*; or *Paxi*, to *Tona*, the old *Altinum* or *Altinium*, *Tona*. near which the *Huns* fought a ſecond Battle, and routed the *Romans* with the loſs of 40000 Men on their ſide. It is inhabited by *Hungarians* and *Raſcians*, who are often at variance together. Thence we came to *Zeni Palanke*, where we paſs'd the River *Savizza* (or the *Urpanus*) which ariſes near *Eſperies*, and paſſing by *Stulweiſſenburgh* (*Alba Regalis*) joins its Current below it with the *Danube*. From thence, by *Setzwar* to *Boroſeck*, and ſo to *Setz*, a large Town, near which we ſaw the ruins of an old Caſtle upon a Hill encloſed with Paliſadoes. Here is a new *Caravanſera*. Hence we went on to *Mohatz*, but before we came to this place, paſſing by a ſmall Bridge over the Brook *Curaſſe*, we took a view of the place where the unfortunate *Hungarian*, King *Lewis*, after the loſs of the Battle near *Mohatz*, fought 29 *Octo.* 1526. was *Mohatz.* plunged in the Flight with his Horſe in the Mud, and miſerably periſhed. His Body being diſcover'd by *Cotriſcus*, who was near him when he was drowned, to the *Hungarians*, it was taken up and buried at *Alba Regalis*, the place of Sepulture of the *Hungarian* Kings. Near this place we met with a *Caravan* of 200 Perſons under a Guard of *Janizaries*, and frequently upon the Road we ſaw numerous droves of Oxen driving towards *Vienna*, belonging to the Eaſtern Company there, who as they have the *Monopoly* of Oxen in that City, ſo they have liberty to buy them in the *Grand Seignior*'s Dominions. The ſame Day we ſaw the City of *Five Churches* (*Quinque Eccleſiæ*) *Zigeth.* and *Zigeth*, to the right of us. This laſt is a very ſtrong place, ſituate at the ſide of a Fen, in which there is an Iſle and beyond it a Caſtle. This place is famous for the unparallell'd Reſiſtance made here by Count *Serini*, againſt the *Turks*; for, after having been forc'd out of the Town, he retir'd into the Iſle, and from thence to the Caſtle, where after having repulſed the *Turks* in ſeveral aſſaults, he ſallied out with 24 Men (all that were left) and were all ſlain by the *Turks*.

From

From hence we pass'd on by *Barinowar Darda*, or *Draza*, to *Esseck*, or *Ossek*, supposed to be the old *Mursa*, or at least very near it. Its Situation is very low, the Streets being paved with Timber-Trees laid Cross-wise; upon one side of the Gate, you see some Remnants of an old *Roman* Inscription, *M. ÆLIAN*, &c. and on the other side a Maid's Head cut in Stone. Here you see also an uncommon Dial, brought hither from *Serinwar*; and the largest Piece of Ordnance that ever I saw in those Parts, not lying upon Carriages, but upon Bodies of Trees. But what surpasses all the rest, is the famous Bridge of *Esseck*, built of Wood, partly over the River *Drave*, partly over the adjacent Marshes; being five Miles long, and railed in on both sides, and defended by certain Towers at every quarter of a Mile's distance. But of this elsewhere. It being the greatest Passage from *Servia*, and other of the Grand Seignior's Dominions into *Hungary*.

Habit of the Turkish Women.

The Bridge of *Essick*.

Count *Nicholas Serini*, to hinder the Supplies from coming to the Grand Vizier's Army, burn'd that part of the Bridge which was laid over the River *Drave* (which was Rebuilt since), and in his return also set fire to *Five Churches*, which lies to the West of *Esseck*.

From hence we travell'd to *Valcowar*, where there is a goodly Bridge of *Wood* over the *Walpo* (*Valpanus*), a River affording great plenty of Fish, upon which to the West stands also the Town of *Walpo*; then by *Sotzin Palanko*, and *Towarnick*, or *Tabornick*, to *Netrcovitza*, a large Town near a Lake, and so to *Simonovitz*, leaving to the right of us (at a good distance) the so famous ancient *Sirmium*, a place scarce worth taking notice of now, except for its Antiquity, of which something before. The Country hereabouts is call'd *Schremnia*; but that part extending nearer to the *Drave*, *Bossga*.

* *Vide* Fig. 4. Habitations under ground

* In this Country many Families, nay the Inhabitants of whole Villages, have their Habitations under Ground, like the *Troglodytes*, and the subterraneous Nations about *Ægypt*. We saw some Wells near them where they draw their Water like our Brewers, they no sooner got sight of us, but retired to their Caves, their Dogs by their Barking having given them timely notice of our approach. We alighted to take a View of the Houses of these poor Christians, which we found tolerably well contrived within, divided by Partitions with wooden Chimnies, and a Window at one end a little above Ground: All things were neatly kept, tho' but poorly, after the fashion of those Parts. Their Speech we found to be a Dialect of the *Sclavonian*.

We continued our Journey between the *Danube* and the *Save*; we came to *Zemlin* upon the *Danube*, and from its Castle had a fair prospect of *Belgrade*; whither we pass'd from hence by Water.

Belgrade.

Belgrade, *Taurunum*, *Alba Græca*, or *Greek-Weissenburgh*, or *Nandor Alba*, as it is call'd by the *Hungarians*, is a large, strong, populous, and trading City in *Servia*, or *Mœsia* Superiour, seated at the very Confluence of the River *Save*, and the *Danube*, the first being to the West, and the other to the North.

Turbidus & vivens flavescit Iser arena.

The *Danube* is very broad here, and its Current so rapid, that it seems to cut off that of the *Save*, as the *Rhesne* doth the *Seine*, near *Lyons* in *France*. The Water of the *Danube* seems more yellow and troubled, and that of the *Save* greenish and clear. At the very Mouth of the *Save* is an Isle, made there of the setling of the Sands of both Streams, about 35 Years ago, which is now full of Wood.

As we entred *Belgrade*, I pass'd by the Water Castle, and afterwards by the Upper Castle, both large, and strengthned with divers Towers. The chiefest Trading Streets are covered over Head, to keep off the Sun and Rain. The Shops are no bigger than Taylors Shopboards, and very low, the Shop-People setting upon them as our Taylors do, and selling their Wares to the Chapmen, who remain without, and seldom enter the Shop. There are besides these at *Belgrade*, two large *Bezastens*, or Places where the best Commodities are sold, they are built cross-wise like the old Cathedrals, with Walks within, like to those of the Old Exchange above Stairs. They have also two Exchanges built of Stone, with two Rows of Pillars over one another, but were almost fill'd up with Merchandises.

The Grand Vizier had lately built a stately *Caravansera*, at his own Cost, with a Fountain in the Court, and just by a Mosque with a Fountain before it; this being the first I ever saw with-inside. He had also built a College for young Students, one of which I saw in a green Garment, with a Four-corner'd Turbant on his Head: I observed also great Numbers of Sepulchres near *Belgrade*. We lodged at an *Armenian* Merchants House, where we were well accommodated, and our Master conducted us to several other *Armenians*, who had very fair Houses, and entertain'd us with *Coffee*, *Sherbet*, and very good Wines of the neighbouring Country. There are few Trading People, in those Places where the *Armenians* don't live; they have a Church at *Belgrade*, and seem to be more fair-dealing than the *Greeks* and *Jews*.

Belgrade is a place of great Trade; its Situation at the Conflux of the *Danube* and *Save*, and the River *Theysse* falling into the *Danube* near it, as the River *Drave* does not far from it, and the *Morava*, or *Marsh*, not far below it: All this, I say, together with the advantage of a very fruitful adjacent Country, through which the *Danube* passes towards the *Euxine* Sea, is sufficient to make *Belgrade* one of the most flourishing Cities in *Europe*, were it in the hands of a People that knew how to improve all these advantages. This City was formerly the main Bulwark of *Hungary*, which has several times stemm'd the Current of the *Turkish* Victories, witness the Disgrace received here by *Mahomet the Great*; but was at last taken by *Solyman the Magnificent*, 1521.

They leave Belgrade.

After we had left *Belgrade*, we continued our Journey through *Servia*, and passing by a very high Hill call'd *Havilleck* to the West of us (where we saw the Ruines of an old Monastery), we came to *Hissirgick* near the *Danube*, tho' our Maps place it at a good distance from it. Here we bid Adieu to the *Danube*, at a place where it had run already from *Ulm* in *Suabia*, where it begins to be navigable about 900 Miles, besides what is to be accounted for from its first Source thither, and has several hundreds of Miles to run, before it discharges it self into the *Euxine* Sea.

The next place we came to was *Collar*, not far from *Semandria*, an old *Roman* Colony, but now an inconsiderable place. From hence to *Hassan Bassa Palanka*, about 40 *English* Miles from *Belgrade*, where we found a Lion worrying a Wolf in Stone, a very ancient Piece.

* *Vide* Fig. 5. Habit of the Bulgarian Women.

* Coming afterwards to *Baditzna*, we saw several *Bulgarian* Women, whose Dress seem'd to us very odd: For they wear a kind of Canopy upon their Heads, set about as well as their Foreheads, with all sorts of Foreign Money; we also bestow'd some Pieces upon them, as an addition to their Ornaments.

Much in the same manner have I seen some *Grecian* Women attired, their Foreheads being cover'd richly with Duckats of Gold, and Pearl; but their Head-Dress was not raised so high.

We pass'd forward for *Jagodna* pleasantly seated in a most delightful Country; and in a few Hours after we had left it, turning off to the South, we saw to the right of us, on the side of a Hill, the Tomb of a *Turkish* Saint, about four Yards long, and a square covered place near it; our *Chiaus* having performed his Devotion here, we went forward through great Woods by *Cisslick*, where there is a *Caravansera*, but we thought it more safe for us to refresh our selves, and our Horses, at an adjacent Farm-House, belonging to a Merchant of *Belgrade*. Hence we travell'd all Night to the *Morava*, or *Moschius* (the *Marsh*), the chief River of this Country, arising in the Mountains in two Streams, the one call'd *Morava di Bulgaria*; the other, *Morava di Servia*; and uniting afterwards in one Channel, falls into the *Danube* at *Zendecir*, or *Singidunum*, opposite to the *Rascian* Shore. We happening to pass this River in a place where it was very broad, deep, and rapid, the *Chiaus* betook himself to his Prayers; and after the danger was over, it put me in mind of the rapid River *Varus*, on the Confines of *Provence* and *Italy*, which when I pass'd on Horseback, two Men were forc'd to go on the lower side of me, to keep my Horse from being carried downwards by the violence of the Current. By this River the Commodities of *Servia* and *Bulgaria*, are carried into the *Danube*, and from thence to other places; as on the other hand, Salt, and divers other Commodities of the product of *Austria* and *Hungary*, are brought up against the Current of the same River.

Near this River *Hunniades* surprized the *Turkish* Camp by Moon-light, with 10000 Horse, with the Slaughter of 30000 Men, and 4000 taken Prisoners.

At last we came to *Hali Jahisar*, or *Cruschovatz*, a place of note in *Bulgaria*, having a handsome Church, with two fair Towers. From hence we continued our Journey for a whole Day through Hills and Forests, and came at Night to *Procupie*, supposed by some to be the old *Villa Procopiana*; the *Turks* call it *Urchup*. We lodged here this Night at a Merchant's House of *Ragusa*, where we met with very good Accommodation. Here we met with a *Roman Catholick* Monk, who spoke *Latin* (a rarity in those parts) and one of their Physicians, whose Knowledge went no further than the Composition of some ordinary Simples; his way was to offer his Service to the People every Morning in the Market-place.

Cruschovatz.

From

Leſcen. From hence we travell'd to *Leſcen*, or *Leſcovia*, a Town ſeated upon the River *Lyperitza*, which may well be call'd the *Maander of Maſia*, having ſo many various Windings betwixt the Hills, that in leſs than twelve Hours time we paſs'd it ninety times. This put me in mind of the *Italian* River *Tare*, which I paſs'd forty times betwixt *Parma* and *Fornove*. I found nothing worth taking notice of here, except an ancient large Tower, but without any Inſcription. We were alſo much diverted with the great Concourſe of People, which was met together on account of a great Fair, kept in an Encloſure near the place.

Part of Mount Hæmus. We continued our Journey the next Day over the Mountain *Cliſſura* (one of the Branches of Mount *Hæmus*) where our Eyes were ſurprized with the brightneſs of the Rocks, which conſiſting of *Muſcovia* Glaſs, made a pleaſing glittering ſhow; like that mentioned by * *Olearius*, of *Lapis Specularis*, betwixt *Permeras* and *Schamachia*, which ſhined like Diamonds. We deſcended through a narrow rocky way, by the ſtrong Caſtle of *Kowowotz*, or *Golobotz*, which brought us to *Urania*, a ſtrong Paſs with a Caſtle at the foot of the Mount *Cliſſura*, commanding that paſſage.

Travels into Perſia.

The whole Ridge of Hills, which extends betwixt *Servia* and *Macedonia*, is a part of Mount *Hæmus*, which under divers Names reach from the *Adriatick* to the *Euxine* Sea; and viſiting of ſeveral paſſages which *Philip* King of *Macedon* took care to ſhut up, to ſecure himſelf againſt the neighbouring Nations; ſome affirm, That from the middle Peaks of Mount *Hæmus*, there is a Proſpect both to the *Adriatick* and *Euxine* Seas. But King *Philip*, who made trial of it, found himſelf diſappointed in his Expectations, and ſo was I; for being upon one of thoſe high Mountains, but ſomewhat nearer to the *Adriatick* Sea, I found that the Mountains of *Albania* cut off the Proſpect on that ſide.

From hence we went forward to *Comonavo*, where there is ſtill a *Greek* Monaſtery on the ſide of the Hills, and ſo to *Kaplanlih* or *Tygres* Town; then to *Kuprulih*, or *Bridge-Town*, having a good Bridge over a conſiderable River call'd *Pſinia*. It was caſually ſet on fire before we left it, and a great part of it burn'd.

From hence we travell'd by the way of *Isbar* to *Pyrlipe*, firſt paſſing the high and craggy Mountains of *Pyrlipe* in *Macedonia*, which gliſter like the *Cliſſura*, and probably contains beſides the *Muſcovia* Glaſs, ſome Minerals. There we ſaw maſſy Stones lie upon maſſy Stones, without the leaſt Earth about them; and upon a high Ridge or Rock, many Steeples high, a very ſtrong Caſtle, belonging formerly to *Marco Crellowitz*, a famous Man in thoſe parts.

After this, paſſing through a plain Country, we came to a large pleaſant and well-peopled Town of *Macedonia* call'd *Monaſter*, or *Turki*, where great Preparations were making for the Reception of the *Sultana*, who was to lie in here; where I afterwards heard, ſhe was delivered of a Daughter, who lived not long.

Monaſter.

From hence we went on to *Filurina* and *Eccliſſo Verboni*, where are plentiful Springs of Mineral Waters: But as we were deſcending the Hill which leads to the Town, we had ſight of that noted Mount *Olympus*, tho' Seventy Miles off; and to the left of us, of the two Lakes of *Petriski* and *Uſtrova*, one whereof, as they ſay, was made by the removing of great Stones out of the ſide of the Hills, whereby vent being given to the ſubterraneous Waters, they broke out into the adjacent Plains. Coming to *Foribugia*, we quitted again the Plains, and paſs'd over high Rocks to *Sariggiole*, built partly upon a Hill, partly in the Plain; the firſt being inhabited by Chriſtians, and this lower part by *Turks*: Upon one of the adjacent Rocks ſtands a Caſtle. Not far from this place we went through a Paſſage cut through the Rocks, like a Gate, through which alſo paſſes a Rivulet; this Paſs commanding the Acceſs of this Country, which put me in mind of the Paſſage of *La Chiuſa*, in the *Julian Alps*, betwixt *Venſone* and *Ponteva*, which is ſhut up by the *Venetians* every Night. We paſs'd alſo by a Hill of a fine Red Earth, whereof they make Veſſels much eſteem'd in thoſe Parts; we proceeded over very dangerous Rocks, in narrow hanging ways, with dreadful Precipices on one ſide, where the Carkaſſes of Horſes, which were tumbled down, gave us ſufficient warning to be upon our guard. Afterwards we ſaw the Mount *Olympus* to our left, till we come to *Aleſſone*, or *Aleſſon*, a place of note, where the *Greeks* have a Monaſtery, belonging to thoſe of the Order of St. *Baſil*; the Building whereof was a quite different kind from that we had ſeen before.

Sariggiole.

From hence paſſing a River, we entred a pleaſant Plain of five Miles long, with divers Towns in it; and afterwards over a Hill, a Branch of the Mount *Olympus*, on the top whereof we ſaw an Old Man beating the Drum, to give notice, that the Paſſages on both ſides were free from Robbers. We deſcried from thence into the Plains of *Theſſaly*; and turning to the left, paſs'd over the River *Pharibus*, which comes from under a Rocky Mountain, not in ſmall Springs, but in one continued Channel, and taking its Courſe through the Vineyards and Corn-fields to *Tornovo*, runs into *Ariſſa*, of which we ſhall ſay more anon.

In our return we left the Road about *Kaplanlih*, taking that of *Skopia* (the *Scupi* of *Ptolemy*) call'd *Uſcopia* by the *Turks*, being a large and trading City. It is ſeated on the Frontiers of *Maſia* and *Macedonia*, at the foot of Mount *Orbelus*, upon the Rivers *Vardar* or *Axius*; in a pleaſant fertile Country intermix'd with Hills and Plains. It was formerly an Arch-Biſhop's See: Above 700 Tanners live here, who make moſt excellent Leather. There are divers handſome Sepulchral Monuments, and fair Houſes here, as that of the *Cadih*, and of the *Emir*, or one of *Mahomet's* Kindred, whoſe Father was in great Veneration in theſe parts. In the Court-Yard of the Houſe of *Emir*, you ſee a Fountain built like an old Caſtle with Towers, out of the tops whereof ſprings the Water. The Floor in their beſt Houſes are generally covered with Carpets, and the Roofs divided into Triangles, and divers other Shops, well painted, and richly gilt, but without any Figures of Animals or Vegetables. The *Bezaſtan*, or chief Market-place here, is covered with Lead, and the trading Streets with Wood; it contains a ſo a conſiderable number of *Turkiſh* Moſques. The moſt ſplendid of all ſtands upon a Hill, having a ſpacious Portico, ſuſtain'd by four Marble Pillars; near it is an Arch, with a Brook running under it, which ſeems to be an ancient Piece; as alſo a large Stone (being part of a Pillar with this Inſcription, *S H A N C.* Not far without the City you ſee a moſt Noble Aqueduct of Stone, from one Hill to another, over the interjacent Valley: It has about 200 Arches, and is a Noble Piece of Antiquity.

Skopia.

The Country hereabouts has been the Field of Great Actions in the *Roman* times; here * *Regillianus* did ſuch mighty Feats, that he deſerved a Triumph. Hereabouts ſtood alſo *Parœcopolis*, and *Ulpianum*. This City drives a conſiderable Trade with *Belgrade* and *Salonichi*, (*Theſſalonica.*)

* See Trebellius Pollio.

The *Sanziack* of *Servia* is under the Juriſdiction of the *Beglerbeg* of *Rumelia*, or *Greece*; as our Geographers generally mention this place as a very conſiderable one, ſo I thought fit to give a more particular Account of it.

From hence we went on to *Catſharich*, a Fortreſs commanding the paſſage of the Hills, and travelling on reach'd the Plains of *Coſſova* in *Bulgaria*, known for the Great Actions perform'd here; tho' not much exceeding *Lincoln Heath*. Some take it to be the *Campus Merulæ*. Here it was that *Lazarus* Deſpot of *Servia*, at the Head of 500000 Men (the greateſt Chriſtian Army that ever was brought into the Field) was worſted by *Amurath*, and he ſlain in the Field; nor was he ſurviv'd long by *Amurath*, who viewing the dead Bodies, was ſtabb'd by *Michael Cobilowitz*, a Chriſtian Soldier, left for dead in the Field; whence this part, to this Day, is call'd, *The Field of the Sepulchre*, where a Monument is erected to the Memory of *Amurath*.

In theſe Plains alſo *Hunniades* engaged three Days ſucceſſively againſt *Mahomet*, but being very unequal in Forces, was put to the Rout at laſt.

We travell'd on to *Preſtina*, a goodly Town; but the Plague being there, we took a Gypſie for our Guide, who conducted us through a fruitful Country, but very ill peopled, and were much refreſhed with the fair Carnations that grew by the way. On the right hand we ſaw a Bath, which we found arched within; the Water had a red Sediment, and a petrefying Juice, as might be ſeen by the grey Stone it had produc'd. It is not above two Leagues from *Bellachorque*, or *Curſumde*, which has a Convent with an old Church near it, with two handſome Towers.

From hence paſſing over the Hill *Jeſnebaz*, we came to *Eſhelleck*, betwixt the two Channels of the River *Marſh*, and thence by a Caſtle upon a Hill, near which is a Convent famous in thoſe parts for the Sepulchres of *Kenez Lazarus*, and of St. *Romanus*, whoſe Bodies were interred here. But it is time to return to *Ariſſa*.

A Deſcription of Ariſſa, *and* Theſſaly.

Larissa. *LARISSA*, the Capital City of *Theſſaly*, ſeated by the River *Peneus* (the moſt conſiderable of this Country) has to the North the famous Mount *Olympus*, and to the South part of the Plains of *Theſſaly*, being inhabited by *Chriſtians*, *Turks*, and *Jews*, the firſt of which have divers Churches

Churches here; it has also divers fair *Mosques* and *Turkish Moschees*. Fig 6. Its Situation is very pleasant, on a rising Ground, on the upper part whereof stands the Grand Seignior's Palace, having large jetting Windows on all four sides, to give the freer passage to the Air; here the Grand Seignior had kept his Court for several Years, to be nearer to *Candia*, and for the Conveniency of Hunting and Hawking; he staid there for some Months after we came away, and then removed to *Salonichi*, and afterwards to *Belgrade*. It is now an Arch-Bishop's See, having divers Suffragan Bishops under it. We went into the Cathedral of *St. Achilleus*, where we saw the Reverend Father *Dionysius* (who was then Arch-Bishop), standing in his Throne in his Episcopal Habit, and his Crosier in his hand. The Summer being very hot 1669, the Grand Seignior retreated for two Months to the Mount *Olympus*, to enjoy the fresh Air, whence he had a prospect of part of the *Ægean* Sea: This Removal proved destructive to a great many People, who being obliged to attend the Court, and over-heated by the ascending of so high a Mountain, were so struck with the sudden alteration of the cold Air, that they dy'd soon after, especially such as had, in their Heat and Thirst, drunk of a certain Spring of a whitish colour, who were immediately seized with a coldness at their Stomachs, and died in three or four Days after. Of Horses and Camels there also died a great number, and the Sultan himself was ill for several Days; he kill'd one of his best Horses there, by forcing him up a cragged Peak call'd *Pythagon*, or *Kissagon*, where scarce any Body durst follow him; and had he not been with-held by the Prayers of his best Friends, he would have leap'd over a Fissure or Cleft in the Rocks.

Mount Olympus.

The ancient *Greeks* (the best Romancers in the World, especially when they speak of their own Country), will have *Olympus* to reach beyond the Clouds, and therefore have assign'd *Jupiter*, and the Gods, their Residence thereabout: I am sure I saw Clouds above it; and to me, some parts of the *Alps* appear'd much higher; and in *September* there appear'd no Snow upon the *Olympus*, whereas the highest Peaks of the *Alps*, *Pyrenean*, and *Carpathian* Mountains, besides several others in *Europe*, are never without it; upon which *Olympus* also had a considerable share upon the first Rain that fell hereabouts; it being well known, that when it Rains in the Valleys, it Snows upon those and all other high Mountains.

I saw, as I told you, the *Olympus* at 70 Miles distance, and it consists not of one high rising Peak, as some describe it, but is a long Ridge of Mountains, extending a great way in length: Its extent from East to West makes the Inhabitants at the foot of the North and South sides as sensible of the difference of the Air, as if they lived in a very different Climate; which makes good the Words of *Lucan*:

Nec metuens imi Boream *habitator* Olympi,
Lucentem totis ignarat noctibus Arcton.

Paulus Æmylius, the *Roman* Consul, surprized King *Perseus*, by marching about this Hill along the Sea-side. At the Siege of *Larissa*, by *Antiochus*, *Appius Claudius* by making Fires on divers places of *Olympus*, so terrify'd the King, that he left the place, and the Consul *Martius* found means to bring his whole Army over this great Mountain. See Liv. l. 5. & 7.

Larissa has been frequently visited by divers famous Princes; King *Philip* of *Macedon*, the last of that Name, kept his Residence here for a considerable time. Whether *Xerxes* honour'd this place with his Presence, when his Army march'd through *Thessaly* towards *Thermopylæ*, the Histories of those times don't mention; but certain it is, that *Philip*, the Father of *Alexander* the Great, having form'd his Design against *Greece*, took the City of *Larissa* upon the River *Peneus*, and afterwards made good use of the *Thessalian* Horse against the *Greeks*. Before the Battle of *Pharsalia*, *Scipio* was quarter'd here with a Legion; and this was the first place of the retreat of *Pompey*, after his Overthrow; according to *Lucan*: Polyæn. See Cæsar's Com.

Vidit prima fuæ sortis Larissa *ruinæ*
Nobile, nec vilium fatis caput.

And going down the River, went out to Sea in a Boat, and was taken in by a great Ship ready to set Sail.

The River *Peneus* arises from Mount *Pindus*, which running by *Larissa*, and being augmented in her passage by divers other Rivers of *Thessaly*, exonerates it self into the *Sinus Thermaicus*, a Gulf of *Salonichi*, passing by the famous Vally of *Tempe*, and running between Mount *Olympus* and *Ossa*, into the Sea. Over this River, which (according to the Description of *Homer*) has a very clear Stream and Bottom, is a handsome Stone-Bridge, supported by nine Arches, with holes or passages in the solid parts betwixt the Arches, to afford a passage to the Water, when the Water rises high by the Floods. The City being then crowded with People, by reason of the Grand Seignior's Residence here, many of the *Turks* had set up their Tents in the lower Grounds near the River; they coming not within a Yard of the Ground, and so afford a free passage to the Air.

The nearest Port of Note unto *Larissa*, is that of *Volo* (the old *Pagasa*), in the *Sinus Pagasicus*, or Gulf of *Armiro*; not far from whence stood the ancient *Argos Pelasgicum*, from whence the *Argonauts* set sail for *Colchos*; by this way the Grand Seignior receives his Intelligence from *Candia*, and his *Asiatick* and *African* Dominions. Near the Promontory *Sepias* (not far from hence) *Xerxes* lost 500 Ships, by a Tempest from the East. Argos Pelasgicum.

As the Grand Seignior went often abroad a Shooting and Hawking, attended by a great number of his Huntsmen, Faulconers, and others, and went often to the great Mosque, so I had often the opportunity of seeing him; among the rest I took once a full view of him, as he was coming out of the Palace to go to the said Mosque: Before the Palace I saw several very fine Horses richly accoutred, which were rode by some of his Attendants in the Court-Yard, till he looking out of the Window, made a Sign to let them know which he would make use of; he no sooner appear'd without, but he was receiv'd with great Acclamations, and very low Reverences, both near and at a distance; the Streets were made clean, and a Janizary placed at every corner, to remove any thing which might be in the way. The Chiauses lead the Van on Horseback, these were follow'd by 24 Persons of Quality on Foot; on each side of his Horse walk'd two Janizaries, with large spreading white Feathers of a Fathom high, fastned to their Caps; and these shaking as they walk'd along, were high enough both for Shade and Fan his Face. After him follow'd many very fine lead Horses, and divers Persons carrying Cushions and Pillows to the Mosque. The Grand Seignior.

The Grand Seignior was then scarce 30 Years of Age, well proportion'd, but somewhat short-neck'd, inclining to fatness, of a sallow Complexion. For the rest, he is of a strong Constitution, delights in hard Riding; his Countenance is somewhat stern, yet would he invite with a kind Look People to approach him. I heard of no Physician of note he had about him; but the Grand Vizier had taken several Christian Surgeons along with him to *Candia*.

The Caimachan, or Deputy Vizier, had the chief management of Affairs of State, in the absence of *Acimet* the Prime Vizier. I went with *Osman*, *Chiaus*, to see his Palace, which was a fine Structure; where I heard ten Men playing all at once in a high Room, upon large Wind-Instruments, which they do at certain Hours every Day, making a very loud, yet not unpleasant Noise.

The Sultana was at the same time at *Larissa*, by Birth a *Candiot*, and much belov'd by the Grand Seignior; she was but low of Stature, and somewhat mark'd with the Small-Pox; being then big with Child, great Preparations were made for her Delivery at *Monaster*, a pleasant Town in *Macedonia*, the Roads being then a plaining, and the Hills laying level, with broad Bridges over the Rivers, for her more convenient passage thither. The Grand Seignior's Son, who was with her there, was then six Years of Age.

I heard at divers times the *Turks* sing their usual Songs, and among the rest, one concerning that famous *Jewish* Impostor, *Sabata Sevi*, whom *Cussum Bassa* forced to turn *Turk*. This *Cussum Bassa* is a Man of great Reputation at the *Ottoman* Court, and much valued for his Skill in Physick (a thing not much known in *Turkey*). He was formerly Vizier of *Buda*, and is now Vizier of *Erzrum*, upon the Frontiers of *Georgia* and *Persia*, and married to one of the Grand Seignior's Sisters. Of *Padre Ottomanno*, a *Dominican* Friar, whom I had seen at *Turin*, and who was thought to be the Grand Seignior's Brother, I could learn nothing here.

The Wintering of that vast Army of *Xerxes* under *Mardonius*, is an undeniable Testimony of the Fertility of *Thessaly*, which continues to this Day; for notwithstanding the vast Concourse of People, occasioned by the Sultan's Residence here, every thing was so cheap, that one might Dine at a Victualling-House, with roasted and boil'd, and Sherbet, for Six-pence a Head; and an Officer arm'd with a Club, with 24 of his Followers, kept the Streets so quiet, that not the least Disturbance was to be heard of there in the Night-time. Fruitfulness of Thessaly

The hot Weather which happen'd in *September* 1669, occasioned frequent Fevers and Agues in those parts, as about the same time other parts of *Europe* were much infected with Quartan Agues. It being then their Vintage, I tasted of their Must, or new Wine; and I observed that some of the zealous *Turks*, who would not drink Wine, yet would take a plentiful Draught of this with a great deal of eagerness. During the hot Season, we us'd frequently to visit the Barber, who perform'd his Business very well, and would trim every Man according to his Country Fashion. The *Greeks* always leave a bare place of the bigness of a Crown-piece, on the top of their Heads, round which they let grow the Hair to the breadth of two Inches, and shave all the rest of their Head.

The *Croatian* shaves his Head on one side, and on the other lets his Hair grow as long as it will.

The *Hungarian* keeps only a Fore-top, all the rest being shaved all over the Head.

The *Polanders* don't shave their Heads, but keep their Hair cut so as it comes down to the middle of the Forehead, and the middle of the Ears.

The *Turk* shaves his whole Head, leaving only a Lock upon his Crown.

The *Franks* wear their Hair long, without shaving their Heads, but to give no offence to the *Turks*, generally turn up their Hair under their Caps; but the *Greek* Priests keep and wear their Hair long.

The Party to be shaved sits low, so that the Barber, who lays on much Soap, takes of much Hair at once, and finishes the whole Business in a few Strokes. A Vessel of Water, with a Cock, hangs commonly over the Head of those that are to be shaved, so that the Barber lets out the Water upon them as he pleases. I saw accidentally in one of the Barbers Shops of *Larissa*, an ancient Noble Monument, or Tomb-stone, of a Jasper-green Colour, through the top-stone of which the Barber had caused a hole to be made to serve him for a Cistern.

In the Market-place sit certain Money-changers, who exchanged our Duckats, and Rix-Dolars, into Medines, Aspers, and five Sols Pieces, of which great plenty is to be found in those parts. All the Trading Streets were covered with Wood; their Shops were generally small, but well enough provided, the Shopkeeper sitting like a Taylor, and selling his Wares to the Buyers, who commonly remain standing in the Street: Such Commodities as are not to be had in the Shops, are cry'd about the Streets by a Man on Horseback, who at the same time tells the People what Price they are to be sold at.

I had been much pleased with the sight of divers Stables of Christian Princes, as that of the *French* King's, the Vice-Roys of *Naples*, the Electors of *Saxony* at *Dresden*, and that of Count *Wallenstein*'s at *Prague*; but for Horses, I must confess none of these can compare to those I saw at *Larissa*, being chosen from among the best of the *Turkish* Empire, so richly equipp'd with most stately Saddles and Bridles set with precious Stones, and so tractable, that I could not but be surprized thereat. I saw among the rest some *Tartarian* Horses, valued chiefly for their hardiness and swiftness, being for the rest unsightly.

The Turkish Horses.

Some of the best *Greek* Merchants are well versed in the *Italian* Tongue, which is preferr'd here before either *Latin* or *French*. The *Jews* of *Macedonia*, *Servia*, and *Bulgaria*, commonly speak *Spanish*; and those of *Hungary High-Dutch*.

At our being there the Season was so dry, that even the greatest Rivers are very low, and the small ones quite dry, except one. I took notice of about seven Miles on this side *Tornovo*, which did flow plentifully with one continued Channel from under the Rocks. This general Drought however of the Country, put me in mind of the Deluge which happen'd in the time of *Deucalion* King of *Thessaly* (as sometimes we are apt to remember things by contrary's), when by the stopping of the Current of the River *Peneus* (into which most of the others run), the whole Country of *Thessaly*, which is plain, and enclos'd on all sides by Hills, was laid under Water for a whole Winter: I know some who are of Opinion, that whole *Thessaly* was, in most ancient times under Water, till the Mountains *Ossa* and *Olympus* being torn asunder by a violent Earthquake, the River *Peneus* forced its passage that way, by *Tempe*, into the Sea.

The Deluge of Deucalion.

I remember, that as we were travelling in *Macedonia*, our Chiaus told me, that within a few Days I should see *French-men* in those parts; meaning the *Thessalians*, the Country People wearing narrow brim'd Hats, like the *French* Hats lately in fashion.

The *Thessalians* had always the Reputation of being Warlike, and are accounted so to this Day, among the *Turks*; this Country having been very famous in ancient times, not only for the Battles fought in the Plains of *Thessaly*, but also for its having produced many great and worthy Persons; and *Hippocrates*, the Father of Physicians, lived and practised here, and died about *Larissa*, being buried betwixt that place and *Gyrton*.

The *Thessalians* are generally well made, very black Hair and Eyes, with a fresh sanguine Complexion; and their Women are much celebrated, among Strangers, for their Beauty; the *Macedonians*, who inhabit a Hilly Country, being of a much tougher Complexion; and the *Moreans*, or ancient *Peloponnesians*, who live more to the South, inclining unto a Swarthiness.

The Country abounds in Horses, and have the largest Buffles in all *Greece*, except those of *Santa Maura* in *Epirus*. They have also plenty of fine yellow and black Tortoises, which are good Meat; but the *Turks* use to laugh at the Christians, for eating them, when they had such plenty of Mutton, and all sorts of Fowl. This Country also produces very large and most delicious Figs, and the best tasted Water-Melons that ever I met with; as likewise Pomegranates, Oranges, Limons, Citrons, and Vines, which grow low here like those of *Montpellier*, and tho' not supported bear large Branches, and Grapes as big as our Damascens, and of a most luscious taste. The Wine of the Country is rich, but has a Resinous tang.

This Country of Turky.

Its Fruit &c.

The Tobacco they plant, they esteem beyond what is brought from other parts, being stronger and more pungent. Their Fields are cover'd with *Sesamum*, and Cotton-Trees, tho' but low, make a glorious show; as also with Almond and Olive-Trees; the *Greeks* pickle their Olives ripe, whereas ours are all green. The Gourds in the Hedges, with their large yellow Flowers, and the divers sorts of green Thorns, and *Sempervirent* Oaks, make the ways exceeding pleasant. The *Ilex Coccifera*, and *Chermes Berry*, or the Excretion serving for dying and making the Confection of *Alchermes*, is very plentiful in this Country. The high Hills produce *Asclepias*, and *Helleborus*; and the stony Plains *Carduus Globosus*, *Cystus*, Lavender, Sweet Marjoram, Rosemary, and other sweet-scented Plants. The *Platanus*, or Plain-Tree, grows very fair and lofty in *Macedonia*.

They use a great deal of Garlick in their Dishes, and their Onions exceed ours, not only very far in bigness, but also in taste; being sharp, and pleasantly pungent upon the Tongue, without any offensive Smell; they agreed very well with my Stomach, tho' I never us'd to eat Onions before. They are used here at most Collations; the *Turkish Chiaus*, who had travell'd almost through all the *Turkish* Dominions, told me, that the Onions of *Egypt* only, exceeded those of *Thessaly* in goodness; which was the first time I really understood that passage in the Scripture, of the *Israelites* longing after the Onions of *Egypt*. They have also a Fruit call'd *Patlejan*, or *Melanzan* (*mala insana*) between a Melon and a Cucumber, out of which they take the Seed, and after having fill'd the Concavities with the Meat of Sausages, they pare and boil them, which makes a very good Dish.

The Foreign Ministers which attended the Grand Seignior's Court at *Larissa*, were the Imperial Resident, and the Ambassadors of *Ragusa* and *Wallachia*; those Ambassadors that reside at *Constantinople* chiefly on account of Trade, being not obliged to follow the Court. The Imperial Resident having got leave of the Sultan (by reason of the great Concourse of People at *Larissa*) to chuse which of the neighbouring Towns he pleased for his Residence, he pitch'd upon *Tornovo*, a large and pleasant City of *Thessaly*, twenty Miles to the Westward of *Larissa* near the Hills, where most of the Inhabitants are Christians, they having eighteen *Greek* Churches here, whereas the *Turks* had no more than three Mosques. The chief Churches I took notice of were, the Cathedral of St. *Stephen*, the Church of St. *Demetrius*, of *Cosmus*, and *Damianus*, of the Nativity of the Blessed Virgin, of St. *Elias* (with a Monastery adjoining to it, the Habit of the Monks being represented in the next Draught) of St. *Anastasius*, of the Twelve Apostles, of St. *Nicholas* (with a Convent also) and of St. *Anthony* the Hermite. The Bishop hereof is a Suffragan to the Arch-Bishop of *Larissa*.

Foreign Ministers at Larissa.

* Before I travell'd into these Parts, I could never conceive that the *Eastern Countries* contained such vast numbers of *Greek* Christians as are to be found in *Grecia*, and the *Greek* Islands; in the *Turkish* Parts of *Dalmatia* and *Croatia*, in *Rascia*, *Bosnia*, *Servia*, *Thrace*, *Sagora*, *Bulgaria*, *Persia*, *Bessarabia*, *Cossackia*, *Podolia*, *Moldavia*, and *Wallachia*; besides the vast Dominions under the Jurisdiction of the Czar of *Muscovy*: Which put me in mind of what a certain learned Author says upon that Head, *viz.* *That if a true Computation were made of the* Greek *Christians in* Europe, *they would far exceed those of the* Roman *Religion.*

* *Vide* Sig. Brerewood's Enquiries.

The

The Font or Basin in the *Greek* Churches is generally made of plain Stone, and plac'd immediately upon the Floor of the Church, which seems to be done for conveniencies sake, they being not contented with sprinkling of Water upon the Child's Head; but the Priest, having first bless'd the Water, and dipp'd the Crucifix into it three times, takes the naked Child by one Arm, and putting it into the Font up to the Waist, with the other Hand laves the Water thrice over his Head; which that it has been the ancient Custom among them, may easily be gather'd from what is related of the Emperor *Constantine* VI, *Constantinus Sextus, dictus Copronymus, quod Infans dum baptizaretur aquam sacram ventris solutione maculasset*; The dipping of the naked Body in Water being apt to move it. Some of their Children I saw baptiz'd before the Navel string was fain off.

The Fields round this place were full of Vines, Sesamum and Cotton Trees. The Emperor's Resident, named *Signore di Casa nova* lived here in great splendour, with a retinue of 30 Persons, some Christians and some *Turks*, and has two *Janizaries* attending at his Gate. He was a *Milanese* by birth, much addicted to Study, civil and courteous, but reserved. The Ambassadour of *Ragusa* had made a choice of the same Town for his Residence; but they never visited one another, by reason that the *Ragusan* being here in the quality of an Ambassadour, would not give the precedency to the other, who had only the Character of a Resident; which sometimes gave occasion of Laughter to the *Germans*; who look upon the *Ragusans* no otherwise than Vassals. And here I must not pass by in silence the many Civilities I received of a certain *Greek* Merchant of *Tornovo*, named *Demetrius*, who entertain'd us with a great deal of freedom at his House, at divers times, and brought his two Daughters to bid us welcom; whom we saluted after the Custom of our own Country. They were well attired after the *Greek* fashion, with their Hair braided and hanging down their Back; their Shooes and Slippers painted, and (which something surprized us) their Nails colour'd with red, by a certain Tincture drawn with Water and Wine, out of the Leaves of a certain Plant call'd *Cnà* or *Alcanna*, brought out of *Arabia* and *Ægypt* and much used in *Turky*, where some colour the Mains and Tails of Horses with it. The *Gracians* of *Scio*, who wear Gloves (also are rarely here) do also with this Tincture colour their Gloves upon those parts that touch their Nails. It must be confess'd, that the *Gracian* Countries bear now-a-days a quite different Face from what they have been in ancient times; the many Incursions of barbarous Nations, and the late Conquest by the *Turks*, having laid desolate many great and once famous Cities, and exchanged the Names of the rest, not leaving even the ancient Names of the Rivers, which generally are beyond the fate of Towns. Thus the Rivers of *Macedonia*, the *Axius*, *Erigonus* and *Aliacmon*, which I pass'd, have now Names, which have not the least affinity to those of former Ages. The famous River *Peneus* has under-gone the same fate as well as *Apidanus*, *Enipeus*, and others that join their Waters with it. *Larissa* is call'd *Jeni-Sahar* by the *Turks*; and *Thessaly*, *Comenolitari*.

Hands and Feet of a reddish Colour, with *Cnà*, and some of the Women colour the Extremities of their Hair also.

We were in no small danger of being robb'd as we travell'd from *Belgrade* into *Servia* by three Horse-men, who coming up with us discharg'd their Pistols; had it not been for our *Chiaus*, who knowing them to be *Spahies*, shew'd them his Feather, bidding me to discharge at the same time my Pistol, to let them know that we were not unprovided, whereupon they left us.

Caravansera's, or publick Inns, built by Benefactors for the lodging of Travellers upon the Road, we seldom made use of, the Rooms being very spacious; we were but a few in company, and not fitted for places where we must provide every thing our self; and therefore private Houses were much more convenient for us; besides, that the situation of those *Caravansera's* is often time such, as not to be secure against the Insults of Robbers, which are too frequent in those parts, tho' punish'd with the greatest severity; for which reason in most dangerous Passages Drummers are appointed, who by the beating of the Drum give notice to Travellers, that the Roads are safe.

Way of Accommodation in Travelling.

However in the main, we had sufficient good Accommodation for Travelling, for from *Comorrah* our Boat was towed by a *Saick* of 24 Oars, till we came to the *Turkish* Frontier Town, where meeting with the *Turkish* Convoy, our Boat was fasten'd to their *Saick* with 18 Oars, till we came to *Buda*, from whence we were carried in open Chariots, with two, three or four Horses a-breast, and that very swiftly, thro' a very pleasant Country, to *Belgrade*; here we were mounted on good sure footed Horses, which would carry one safely twenty Miles in a Stage. They are very free, tender mouth'd and tractable; which made the Owners not well pleased with our Spurs, seldom used by the *Turks*. They have generally a lighter and lesser Shooe than our Horses. Most of these Countries abound in good Horses, which are very fleet; but they never dock them, looking upon a long Tail as a great ornament in a Horse, which they will handsomly make up.

The *Bassa* of *Temeswar* presented *Ragotzi* with a Horse, which he slighting, cut off the Horses Ears, Main and Tail, and so sent him back again; which the *Bassa* took for such an affront, that he did not desist till he brought about the ruin of *Ragotzi*.

They dont feed them out of high Mangers or Racks; but lay their Hay before them almost even with the Ground.

In the *Caravansera's* they tie the Horses to Rings, fastned to the side of a long place, a little elevated, upon which the Travellers sleep as they can, their Hay being laid somewhat lower at the Feet, whereon the Horses feed.

They plough generally with Oxen and Buffelo's, and have great variety of Ploughs and Carts, some whereof I saw in *Macedonia* to have Wheels of solid Wood, in the whole piece, perhaps the better to undo and resist the rough and ragged ways of a rocky Country. We observed among the People in general, that they will be much oblig'd with a small Present, such as Knives, Scissors and other Toys; nay, we gave sometimes a Glove to one and the fellow to another, which they took very kindly. Thus the *Bulgarian* Women would be well pleased with a small piece of Silver Foreign Coin, and put it as an ornament to their Head-dress, tho' they had others of much more value there before.

Danger from Wolves and Dogs.

In our Journey about the Mountains of *Servia*, we were in great danger from Wolves, especially in the Woods, where they would come very near us in the Night time, so that we were forc'd to keep close together, and keep our Fire-Arms in readiness: Neither were the Dogs less troublesome; for no sooner came we near a Town or left it, but they would either meet or follow us at a considerable distance, and with barking and biting our Horses Legs, be very offensive to us. I remember that at my coming to *Comorrah*, which happened to be about midnight, we were so closely pursued by the Dogs, which were shut out of Doors on purpose, that we were forc'd to look for shelter in the Guard House.

The fear the poor Christians live in in these parts, cannot but move us greatly to compassion, where we saw them retreat to the Woods, at the first sight of us, to avoid us, which made us many times ride after them, to undeceive them.

Miserable condition of the Captives.

But the miserable condition of the Slaves and Captives is almost beyond expressing, especially if you consider the variety of their hard fate, and the odd Chances that reduce them into this miserable state; some by Treachery, some by chance of War, others being stole

Some Occurrences and Observations in this Journey.

IT seems to be one of the greatest Delights that attends travelling, to behold a different face of things in Habits, Diet, Manners, Customs and Language: Of this we had our full share after we had travelled a Days Journey beyond *Raab* and *Comorrah*; for before we reach'd *Buda*, we enter'd upon so different a course of life, especially as to Habit and Manners (which with some small alteration, continues to the utmost part of *Asia*, viz. *China*) that we thought our selves in a manner in a new World. Tho' we were provided with good Passes, and had taken all other imaginable Care for our security, yet we were not without fear from the *Hussars*, who knowing all the By-ways, commonly rob all they meet with as far as the Bridge of *Esseck*; neither were we in less fear of the *Gypsies*, who are noted here for their Robberies; tho' they live in the Towns of *Hungaria*, *Servia*, *Bulgaria*, *Macedonia* (and some also in *Thessaly*) by labour and handy-craft Trades. They are generally supposed to have their original from the Frontiers of *Wallachia*. They have a way of colouring their

Danger from Robbers.

by the *Tartars*; among all which, those who belong to the *Grand Seignior* seems to be in the worst condition, as being past all hopes of being redeem'd or exchanged. Of these I met with one at *Egribugia* in *Macedonia*, who, tho' he had a Tole-Table place at the Post-House, yet was quite dejected upon that account. In *Thessaly* I met with an *Hungarian*, who being taken at the Battle of *Barcian*, first served a *Turk*, and afterwards was sold to a *Jew*, with whom he endur'd great hardship; but being at last sold to an *Armenian*, he behaved himself so well, that his Master gave him his Freedom, and coming to *Larissa*, was entertain'd in the Imperial Resident's Service. He was a very worthy Person, who had retain'd his Christianity among all these Changes of Fortune. He spoke *Hungarian*, *Sclavonian*, *Turkish*, *Armenian*, and *Latin*, and notwithstanding his slavish Condition, had been so curious as to take the draught of many Monasteries, Abby's, Mosques, and other considerable Buildings in *Armenia*, *Persia* and *Turky*, which he shew'd me. The *Turks* make their peculiar Observation upon the Captives of several Nations; Thus they say, a *Russian* makes the best Galley Slave, a *Georgian* a good Courtier, and an *Albanian* a good Counsellor, &c. I remember that the first time I went to have a sight of the *Grand Seignior*, *Osman Chiaus* kept backwards; having ask'd him the Reason, he answer'd, *I take no great pleasure in coming too near him* As the *Turks* are commonly buried near the High-ways, Tombs and Sepulchres are met with every where here, but are not very splendid, consisting only of a Stone at the Head, and another at the Foot, some of which are two, three or four Yards high; some have a Turbant cut upon the Stone at the Head, some also set up two Pillars of Stone, and sometimes raise the Sepulchres after the *European* fashion, placing two Pillars upon them, one at the Head and the other at the Feet. Of these I saw several at *Scopia*; but their best way is to erect a Pavillion, supported by four Pillars.

Turk's Sepulchres.

As we travelled thro' *Servia*, I saw to the South of *Jagodna*, on the side of a Hill, a *Turkish* Tomb of four Yards long, which the *Chiaus* told me was the Tomb of one of their Saints. As I could scarce conceive that the length of a Man should extend to that height, so it put me in mind of what I once heard Mr. *Wood* say upon this account, *viz.* That he had seen divers Graves in the Southern parts of *America* of four Yards in length, and having never met with an *American* that came near that height, he had the curiosity to have one of the Sepulchres opened from one end to the other, wherein he found a Man and a Woman so plac'd, that the Womans Head lay at the Man's Feet, and consequently requir'd a Grave of four Yards long. I thought I might without the least hazard relate this upon the Credit of a Person, who has given sufficient Proofs of his Ingenuity to the World, by his accurate Maps of the Streights of *Magellan*, its Islands, and the Coast from the *Plate River* to *Baldivia* in the South Sea. In our Travels in these parts, we met after with *Turkish* Fairs, which are kept in some large Ground, enclosed and divided into Streets, where you may furnish your self with all manner of things, not to be seen in the Western Parts, and have Musick enough at a cheap rate, which, tho' none of the best, yet serves to pass away the time pleasantly enough. We had the good Fortune in all this Journey to light upon more than one place infected with the Plagues, *viz.* at *Prestina*, in the Plains of *Cossova*, which made us make what hast we could thence to a *Gypsies* House, among the Hills, where we met with a good accommodation. The *Turks* were very well pleased to see me take out my Pocket-Book, to write down such Observations as I had opportunity to make, and were much taken with my writing so quick, with a Pen made of a Goose Quill, whereas theirs are made of a Reed, wherewith they will write very well upon smooth Paper.

Defects of our Maps.

I would often, as occasion serv'd, look into such Maps as I had brought along with me; whereat the *Chiaus* smiling said, There is but little dependance to be had on Maps, for they don't mention many great Towns, and those they do often not rightly plac'd. We *Chiauses* added he, who spend our Days in travelling, take notice of all places, and know their *Turkish* names, are the best Map makers; and I must confess, that in several Particulars I was convinced, he spoke nothing but the truth; For I found the Maps of *Hungary* not exact, and those of *Servia*, *Bulgaria*, *Macedonia*, and *Thessaly*, very imperfect: In *Upper Hungaria* many Towns were omitted, and as many ill placed; in the *Lower* also not a few. The *Danube* seems to take too great a Circumference to the S. W. before the *Theysse* falls into it: In *Servia* I found *Hissargick* placed a good way from the *Danube*, which runs just by it. *Procupia* or *Urchoop*, and *Lescou* or *Leskovia*, considerable Towns (the last upon the River *Lipenizza*) I found quite left out, as likewise *Kaplanly* or *Tygrest Town*; in *Macedonia*, *Kuprusly* or *Bridge-Town*, *Uranla*, *Pyrlipe*, *Comenava*, *Ecciffo Verbeni*, as also the Lake of *Petsiski*; and the Towns of *Ostrova*, *Egribugia*, *Sariggiole*, and *Sarvizza*, and the River *Injecora* near it; thus I found neither *Alessio* nor *Ternova*, tho' one of the most considerable Cities in *Thessaly*; and to confess the truth, he that travels into *Macedonia*, will never be able to square the true situations of Towns and Rivers to their Positions and Descriptions in Maps, not excepting those that have been very lately published of *Greece*. It was one of my chiefest Pleasures in this Journey to converse with *Chiauses*, who have (if they are come to any age) seen much of the Conversation of the World in their Travels, and consequently are good Company, and can give a good account of things. *Osman Chiaus*, who was our Conductor, and then of about 50 Years of age, spoke three Languages, *viz.* The *Turkish*, *Sclavonian*, and *Italian*, a brave honest Fellow, who had travelled thro' the greatest part of the Grand Seignior's Dominions, and proving old had seated himself at *Buda* as a *Chiaus* to the Vizier: he took a very obliging fare-well of me at *Buda*, conducting me without the Gates, with many a Dios and hearty Wishes of a happy return into my own native Country; and I must speak well in honour of the *Turks*, that in all my Journey, I met with very civil usage from them; I never came into a Room where the *Turks* were sitting, but they would give the first Salute and desiring me to sit down, offer some Coffee or Tobacco, except that now and then the Boys, and some few of the scum of the People would call us Haired Infidels; The worst Language I ever receiv'd was from a *Jew* at *Larisse*, whom I had employ'd to buy some things, but had it not been for the Grand Seignior's Residence in that City, some of the *Turks* that were present, would have taught him better manners. I found the *Turks* much addicted to taking of *Tobacco* in those parts; they carried it in little Bags by their sides, and us'd to take it in Pipes of an Ell long, made of Reed, with an Earthen Bowl at the end, laying one end on the Ground and the other in their Mouths. I was not much us'd to Tobacco, yet out of complaisance, I would now and then take a Pipe with them after their manner, which by reason of the length of the Pipe, I found cool, and less disturbing. I was also much taken with the neatness and cleanliness of the *Turks*, and with their washing of their Feet, Hands and Faces; I used to be mightily pleas'd to see our *Chiaus*, at the sight of a Spring or clear Water, alight and wash himself. He was very curious in winding up his Turbant every Morning, and combing of his Beard; nay, they are so nice, that they carry a Pitcher with Water, with them to the House of Office; when they make Water, they rest upon one Knee, stretching out the other Leg.

Some good qualities of the Turks.

Justice is a Vertue much encourag'd in *Turkey*; of this we had an Instance in our return at *Egribugia* in *Macedonia*; for coming to *Sariggiole*, we met by the way with a *Turkish Aga*, who having a numerous attendance, had taken up all the Horses at *Egribugia*, so that not being likely to be supplied, we resolved to continue our Journey upon the same Horses to another Stage, finding our Horses strong, and capable enough to travel thro' the Plains we were to pass: But we were scarce got without *Egribugia*, when we were stopt and carry'd by the Post-Master of the place, before the Cadish or Judge. He alledg'd against us, that he being the *Grand Seignior's* Servant, who had given him a certain Allowance for every Horse he provided, we were injurious to him in passing thro' the Town without taking Horses from him; for which he desir'd reparation. We found the *Cadish* sitting upon a Carpet in a ruminating posture, leaning his Elbow upon four or five Folio Books; he commanded his Servants to give us each a Dish of Coffee, and asking what we had to say in our defence, the *Chiaus* urged, that we were going upon very urgent Business, had the *Chaimacham's* Letters, and were employ'd from the *Grand Seignior* to the Emperor of *Germany*; and that he was the *Chiaus* to the Vizier of *Buda*, whither he was to conduct us. Upon mature deliberation the Cadish said, *The Chiaus must not be stopp'd in his Journey, nor the Post-Master uncensider'd*, and so calling for the Post-Master's Book, took his Pen, and set down a *Sultanine* to be allowed him in his Accounts to the *Tefterdar* or Treasurer, and so wish'd us a good Journey.

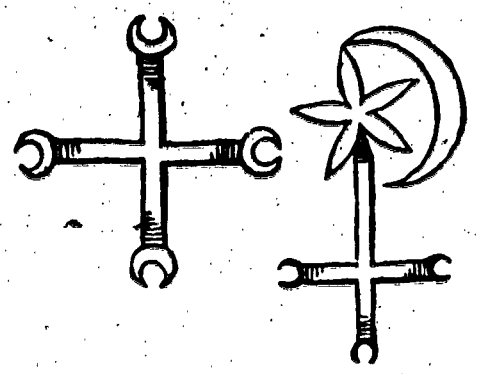
An instance of Turkish Justice.

The *Turks*, as it seems, make use of a maxime contrary to that of *Augustus*, who thought fit to put some limit unto the *Roman* Empire, whereas their chief aim is to enlarge their Dominions by new Conquests; unto which their

their hardy Education, ſober courſe of life, and unlimited obedience to their Prince, ſeems to encourage them: Certain it is, that their aim is beyond *Hungary*; and I have heard ſome *Turks* of note often ſay, we muſt try our Fortunes again before *Vienna*; where the Star and Half-Moon remain to this Day, upon the Steeple of the Cathedral Church of St. *Stephen*, above the Croſs; and I could not without a great deal of grief, take notice of a particular Croſs (not known to our Heralds) lunated after this manner, to be ſeen in many frontier places, whereby the Inhabitants, as they teſtify their Chriſtianity by the Croſs, ſo they acknowledge the *Turkiſh* Soveraignty by the Half-Moons.

It ſome good qualities of the Turks.

See the Original, p. 54.



The firſt is the Croſs ſet over the Churches in the Country, which pay contribution to the *Turks* in *Hungary*.
The ſecond is the Star and Half-Moon, upon the Steeple of St. *Stephens* Church at *Vienna*.

A Journey from Comorrah *or* Gomorrah, *to the* Mine-Towns *in* Hungary, *and from thence to* Vienna.

HAving ſatisfy'd my curioſity at and about *Comorrah*, I purſued my former reſolution of taking a Journey to the Copper, Silver, and Gold Mines of *Hungary*; and being unwilling to take ſo long a Journey as to *Presburg* again, to bring me into the ordinary Road, towards them, I pitch'd upon a nearer, tho' not much frequented Paſſage; taking therefore my way along the North ſhoar of the Iſle of *Scutz*, till I came to the Confluence of the River *Waag* and *Danube*, I paſs'd over to *Guta*, a Fortification rais'd ſince the late War in a marſhy Ground, between a branch of the *Danube*, the *Waag*, and the *Swartz*, within a Mile of *Newhauſel*, which we plainly ſaw from the Steeple of the Church of *Guta*. It had then a Fort of 130 Men, commanded by an experienc'd and brave Officer, call'd Mr. *Matthias Fruhwurdt*. Their boats in which they will paſs the greateſt Rivers, are only one piece of Wood hollowed out.

From hence we went on by way of *Forchutz* to *Schella*, where is another Fort to hinder the incurſions of the *Turks* and *Tartars*, and about half a Mile from this place is a certain concavity in the Earth, which burns like *Solfaterra* near *Naples*; and ſo forwards to *Schinta*, a large Fort, which commands the River and the adjacent Country. It conſiſts of four Baſtions, and has a Tower in the middle. At the Gate hangs a great Rib, a Thigh-bone and a Tooth, which, they ſay, belonged to a Gyant, but I judge them to be of an Elephant. We came afterwards to *Leopoldſtadt*, a regular Fortification of ſix Baſtions, where the young Count *de Zonches* then commanded. Not far from hence, paſſing the Rivers, we came to *Frieſtadt*, a handſome large Town, but lately ruined by the *Turks*. I took a draught here of the Caſtle and Palace belonging to Count *Forchutz*, which was a goodly Structure.

The *Lutheran* School had been lately ruined by the *Turks*. They pay a yearly Tribute of four pence a Head, whether of Men, Women, Children, Sheep, Oxen or Horſes: They are much inured to hardſhip, and their Women rarely marry above once. Bathing and Sweating naked in Stoves, with their Feet in warm Water, is much uſed here, as alſo Cupping and Scarifications. There were only 12 Friars left in the Convent of the *Franciſcans*, the *Roman* Chriſtians having ſcarce any other Prieſts but Monks hereabouts. About 14 *Engliſh* Miles from hence is *Bance*, which has 15 Baths in a low Ground near the River, three of which are ſpoil'd by the *Waag*, which has there tranſgreſs'd its ordinary bounds. About 20 Years ago there were likewiſe hot Baths on the other ſide of the River, but theſe are likewiſe ſwallowed up by the overflowing of the River. The Water of theſe Baths caſts out a white ſediment, and tinges Copper and Silver in an inſtant as black as Ink. Not far off is a Quarry of Stone and divers Chalk Veins, which being of all ſorts of Colours except Green, and curiouſly mix'd or marbled, was very pleaſing to the Eye.

Hot Baths near *Bance*.

It being the 18th of *March*, the cold weather hinder'd us from bathing in ſo open a place, tho' we ſaw divers Women and Children in them, and then our Charioteer bathed himſelf in one of them at mid-night.

March the 21ſt, ſome Muſqueteers having been ſent us by Count *Zouches* for our Guard, we continued our Journey, and paſſing by *Ripnich*, a Caſtle at *Docatzi*, belonging to Baron *Berrini*, came the ſame Night to *Topolchan*, a Town upon the River *Nitra*, great part whereof had been conſumed by fire in the laſt Wars. At *Bellitz* (a Mile hence) are likewiſe hot Baths. We paſs'd the next Day by *Cleſch*, and thro' a great Wood by *Hochwiſe*, inhabited by *Germans*, and came to *Sernowitz*, ſituate upon the River *Gran*, having a Caſtle built upon a Rock. It is tributary to the *Turks*.

March the 25th, we paſs'd the River *Gran* in the Morning, and travelling among the Hills, came to *Hodritz*, by which runs a rapid Stream, of great uſe to move the Engines employed in the pounding, waſhing and melting of Silver Ore.

Hence we travell'd over a Mountain call'd *Hell*, and ſo to *Schemnitz*, which claims the precedency for Higneſs before all the other Mine-Towns in *Hungary*, and where a great quantity of Silver Ore is digged every Day. It is a well built Town, moſt of the Inhabitants being Lutherans, who have three very handſome Churches here. It has alſo three Caſtles. (1) The *Old Caſtle* in the Town, where there is all ſorts of Wind-Muſick at ſix in the Morning, at twelve at Noon, and at ſix at Night. (2) The *New-Caſtle*, built by a Lady, in a place where the Gibbet formerly ſtood. (3) On a high Peak, where a continual Guard is kept, to diſcover the approach of an Enemy, in which caſe the ſignal is given by the diſcharge of a Culverin. The Country being very hilly, the Streets muſt needs be very uneven. Hereabouts are very good Mines, among which theſe are the moſt remarkable: The *Windſchacht-Mine*, the *Trinity*, that of St. *Benedict*, St. *John*, St. *Matthias*, and another call'd the *Three Kings*; but the *Windſchacht* and the *Trinity* are the beſt and moſt wrought. The *Trinity-Mine* is at leaſt 70 Fathoms deep, built and kept open with under-work, at a vaſt expence, the greateſt part of it being in an earthy Soil. The Ore is very rich, and generally blue, cover'd with a white Clay, which gives the Streams where they work it a milky Tincture, and is that ſubſtance (as I ſuppoſe) commonly known by the name of *Lac Lunæ*, or the Milk of the Silver. Some of theſe Veins run to the North, and other rich Veins to the N. E. If two Veins happen to croſs one another, they count it lucky; ſo that the Veins of Ore keep not the ſame point even in the ſame Mine; but as they have no certain way to know where they are, or which way they run, ſo they muſt proceed by gueſs, and perſevere in their labour, till they light upon the Veins. They don't make uſe of the *Virgula divina*, or forked Hazel-ſtick to direct them (as they do in the Silver Mine at *Priburgh* in *Miſnia*) but dig on, according as they judge it moſt likely to ſucceed. They ſhew'd me one place, where they had digged ſix Years together, when afterwards they found the Vein of Ore but two Fathom diſtant from the place where they firſt began; and they ſhew'd me another place, where they digg'd 12 Years before they found the Vein, which prov'd ſo rich, that in a ſhort time they were very well paid their Charges. I went ſo far into this Mine, that I paſs'd quite under a Hill, and came out on the other ſide.

Hungarian Mines.

Trinity-Mine.

I deſcended alſo into the *Windſchacht-Mine* as far as the Water would permit me, by 300 large Steps or Stairs of a Ladder; deep in the Earth I ſaw a large Wheel of 36 Foot Diameter, turn'd by the fall of ſubterraneous Waters; by the help of this Wheel, divers Engines are moved, which pump out the Water from the bottom of the Mine up to the Concavity, where this Wheel is fix'd. The Water which turns the Wheel, does not fall lower into the Mine, but is convey'd thro' a *Cuniculus*, or a ſubterraneous Paſſage made for that Purpoſe, together with the Water pumped from the deepeſt part of the Mine, to the Foot of a Hill, where it exonerates it ſelf into the Valley. Beſides this Wheel, there is another above ground, which lies Horizontally, turned by twelve Horſes, which alſo ſerves to pump part of the Water out

The *Windſchacht-Mine*.

of

of this Mine. I was told, that no less than 200 Men were employed in all the works belonging to this Mine. I found some places of this Mine very cold, and others so hot, that I was forc'd to open my Cloaths, which were only Linen before: It being always hot where they work, they work eight hours naked, if they can hold it so long, and then rest eight hours. They shew'd me a place, where six or seven Persons were stifled by a damp; to prevent which for the future, they have placed a Tube there, the like they have over all Doors and Passages where they intend to dig for a great space, and have no passage thro', whereby they let in, or let out the Air, or carried about according as the Miners under ground ought to be ventilated. The blackish Ore is generally the richest, much of it is mix'd with a shining yellow Marchasite, which if not in too great a quantity, is very welcome, because it renders the Ore fluid, and easy to be melted; but if this is found in too great a proportion, they are of opinion that it preys upon the Silver in the Mine, and in the Furnace over-volatilizing it, and whilst it is a melting carries it upwards with the Smoak; for which reason they call it the Robber. There is also frequently found a red Substance growing to the Ore, call'd Cinnabar of Silver, which grinded with Oil, makes a Vermilion equal to, if not surpassing the common Cinnabar made by sublimation.

Marchasite.

Cinnabar.

These Mines also produce *Crystals*, *Amethists*, and *Ametrists like* mixtures, sometimes in the clefts of the Rocks, sometimes near or join'd to the Ore; as also a natural crystallized Vitriol, particularly in a Mine in *Pesold's Hill*. There is also great variety in the Silver Ore, in respect of its richness, or proportion of the Silver: A hundred weight of some Ore yields not above half an Ounce of Silver, sometimes two Ounces, three, four, five, even unto twenty Ounces; what is richer is very rare, tho' some have been found to hold half Silver, and I my self have seen some so rich as to be cut with a Knife.

Great difference in the Silver Ore.

To discover the richness of the Ore, a certain Officer is appointed, whom they call the *Probierer* (Essay-Master) which he does in this manner. They bring to him a Specimen of each sort of Ore digg'd out of the Mine, of all which sorts he takes an equal quantity, and (the Ore being first dry'd, burn'd and pounded,) adds to all an equal proportion of Lead, melts and purifies them, and then by exact Scales, takes notice of the proportion between the Ore contained in it, of which he gives an exact account to the Work-men employ'd in the great melting Furnaces; who, according to his report, add or diminish the quantities of those substances, which are to be mix'd with the Ores, to melt them in the melting Furnaces; as for instance, to a *Centen*, or 10000 Pound weight of Silver Ore; a hundred pounds weight or a *Centen* of which contains two Ounces and a half of Silver, they add forty *Centen* of *Leich* (which is Ore pounded and washed) 200 *Centens* of Iron-Stone, which is not Iron Ore, but a Stone found in those Hills of a liver Colour (perhaps the *Lapis Hæmatites*) a certain quantity of *Kis* (a sort of *Pyrites*) in proportion as there is a greater or less quantity of Marchasite mix'd with the Ore, and of the *Slecken* as much as they think fit. This last is nothing else but the Scum taken off from the top of the Pan, into which the Metals run, and is a substance made out of the former mentioned, by fusion.

How it is melted.

Whatsoever is melted in the melting Furnace, is let out thro' a hole at the bottom thereof into the Pan, fastned in the Earth before it; and thus expos'd, it acquires, as it cools, a hard Scum, Dross or Cake, which being continually taken away, the remaining Metal becomes purer; unto this they add Lead, which carries all the Silver down to the bottom, and after some time the melted Metal is taken out, and afterwards melted again in the driving Furnace, where the Lead, or what else remain'd mix'd with the Silver, is driven off by the blowing of two great Bellows; and runs over from the melted Silver in form of *Litharge of Silver*; but that which comes last, being longest in the Fire, turns red, and is call'd *Litharge of Gold*, tho' both be driven from the same Metal.

Litharge.

Most of the *Schemnitz* Silver-Ore, contains some Gold: This they separate after the Silver is melted, by granulating it, and afterwards dissolving it in *Aqua fortis* made out of a peculiar Vitriol, prepared at *Chremnitz*, whereby the Gold is left at the bottom, and is melted afterwards, and the *Aqua fortis* being separated from the Silver by distillation, serves again for the same use. But it is time to recoil, for fear of entangling my self too far in a Business, the accurate Description of which would require entire large Volumes, as well as those of *Misnia*, so exactly described by (a) *Agricola*. *Lemnius* in his works of his Minerals, are also worth reading, and *Lazarus Ercker* has given a very nice account of the principal Ores and other Mineral Bodies. But after all, it must be confess'd, that there are few places in the World to be compared with this, where Art and Nature strive to shew their utmost force, to procure riches.

How they separate the Gold from the Silver.

(a) *De re Metallica & Fossilibus*

The Emperor *Rudolphus* being a great Encourager of Mines, they work to this Day much after the same manner, except that many of their Engines and Instruments are much improv'd since. It seems to be somewhat odd, yet is nevertheless very true, that in a place where every Week a vast quantity of Silver is digg'd up, and carried away by Cart-Loads, I could not meet with one pure Silver Piece. This happen'd to me at *Schemnitz*; for being desirous to see what alteration divers of those Mineral Waters in that Country would make upon Metals, I would fain have had a piece of pure Silver, which, however the whole Town was not able to furnish me withal; the current Money of the Country being all mix'd with Copper, so that I was forced to borrow some Silver Crosses and Medals, to try the intended experiment.

Near unto *Schemnitz* (where old *Schemnitz* stood) I saw a high perpendicular Rock, part of which from the top to the bottom is of a shining Blue Colour, with some Green and Yellow spots, which appear'd so beautiful to the Eye, as if it had been one entire Mass of *Lapis Lazuli*, finely polish'd: I was not a little surpriz'd at the sight thereof, and should have been more, had I not heard before a certain *Spaniard* tell me, who had lived a considerable time in the *West-Indies*; That there is a Rock like this near the Silver Mines of *Peru*.

At *Glass-Hitten* (about seven *English* Miles from *Schemnitz*) there was formerly a rich Gold-Mine, but is lost ever since the inroad made by the *Transylvanian* Prince *Bethlem Gabor* into those parts, when the Inhabitants flying away, the Entrance was stopp'd up, and has not been known since. The Owner thereof has however thought fit to leave some Directions and certain Marks behind him, whereby in time the same might be discover'd again; with the Figures of his Instruments upon the Barks of the Trees; which Instruments having already been found by digging, thus much is intimated, That where they find a Stone on which a Face is carved, they are near the Entrance of this rich Gold-Mine; and to open the passage into it, they are only to remove a certain part of the Rock thereabouts, which was made use of by the Owner, to stop up the Entrance into the Mine.

A rich Gold Mine lost.

Glass-Hitten, is also a place very well known and much frequented by reason of its natural Hot Baths, of which five are conveniently built with handsome Steps into them, and cover'd with fair and lofty Roofs. The Springs are very transparent, having a red and green Sediment; the Wood and Seats under Water, being cover'd with a stony Substance, and Silver is gilt by being left in them. But that call'd the *Sweating-Bath* excels the rest, its Spring being drain'd thro' a Hill before they issue forth into the Bath; at one end of which is a Cave, into which you ascend by several Steps, which being heated by the *Thermæ*, like a Stove, by choosing your Seat either higher or lower, you may enjoy either a more remiss or intense degree of Sweating at pleasure. The sides of this Stove as well as those of the Bath, by the continual exhalations of the hot Springs, are cover'd with a red, white and green Substance.

The Baths of Glass-Hitten.

Whilst I was bathing my self in the largest of these Baths, a certain Fellow who was shewing divers active tricks to the Men and Women that were then in the Bath, gave me a satisfactory Account concerning several questions I ask'd him about the natural Vitriol, which he told me was to be found in divers Mines hereabouts, crystalliz'd in Lumps, and fit for use; but especially in a certain Mine near *Schemnitz*, now given over by reason of the Earths falling in, in several places. About two or three Days after he came to me at *Schemnitz*, and having brought along with him, Lamps, and Mine-mens Habits for me and two more, we went together into the Mine, where he shew'd me the Vitriol shooting upon the Stones and Earth, nay, upon the Floor and sides of the Passages, in the same manner as it does in the Pans, and about the Sticks, not hanging from the top like to Ice-icles, as I have seen it in several places before.

Natural Vitriol in a Mine.

Glass-Hitten belongs to the Earl of *Lippey*, of whose Family was the famous *Polycarpus Precopius Becanus*, who being sent by the Arch-bishop of *Presburgh*, to investigate the Curiosities of these Countries, died before his Observations came to light.

Eisenbach, not above four *English* Miles from hence, and about six from *Schemnitz*, has also hot Baths, with a red

Eisenbach.

red Sediment, and containing a considerable quantity of petrefying Juice, as may be seen by the Timber on the sides of the Bath, some of the lowermost of which, near the Water, were quite turn'd into Stone; it bears the Spout thro' which the Spring was convey'd into the Bath, being under Water, tho' of Wood, yet not in the least changed, the reason of which must be ascrib'd to the volatile particles of these Waters, which are carried immediately upwards with their exhalations. I remember that in the Bath of the Green Pillars at *Buda*, these Vapours condensed by the high *Cupola* built over it, and on the Irons extended from one Column to another, and on the Capitals of the Pillars were formed into long Stones like Ice-icles, hanging in all those places, such as I have observed in subterraneous Grotto's, and especially in *England* in *Wookey-hole* in *Somersetshire*, and *Peters-hole* in *Derby-shire*. This is evident from the Sulphurous Parts contained in these Waters, which however are not discoverable, if you either boil or evaporate the Bath-Water, as being carried away together with the Steam, and nothing is more common than to see the Sulphur of the hot Water stick on many places over the Bath. I perfectly remember, that leaning one Day over the Ballisters of the Lower Bath at *Baden*, I found my Buttons, which were of Plate, tinged by the sulphureous Particles, of a fair Gold Colour, tho' at a good distance from the Water. This Accident did tempt me to the trial of another Experiment *viz.* I took care to hang some Money at one or two Foot distance, which was colour'd likewise in less than a Minute, which made me conclude, that its petrefying quality consisted chiefly in its volatile Particles. I brought away with me several pieces of this petrefied Water of five or six Inches diameter.

But to return to *Eisenbach*; It has in all three Baths, two of which are conveniently built, the third made by the Water let out of the former, is call'd the *Snake-Bath*, from the number of Snakes coming into it immediately after it is fill'd with these Waters.

March the 30th, I set out from *Schemnitz*, and taking my way from *Glasi-Hitten* and *Apfelsdorff* (where the Arch-bishop of *Presburgh* has a Palace) I afterwards pass'd the River *Gran*, and travelling among the Mountains, I saw certain Entrenchments cast up from one ridge of the Mountains to the other, to defend themselves against any sudden Incursions; then following the Traces of the same yellow Silver, which owes its Colour to the Ore which it washes above, we came to *Chremnitz*, standing very high, especially the Church of St. *John*, at some distance from it, which is reckon'd to stand upon the highest Ground in *Hungary*. The Town is but small, but the Suburbs of a pretty large compass. As the Mine here is the oldest so it is the richest in Gold of all the seven in these parts, which are, *Schemnitz*, *Chremnitz*, *Newsol*, *Koningsbergh*, *Bochuntz*, *Liberen* and *Tiin*.

Chremnitz.

The Mines of *Chremnitz.*

The Gold Mine of *Chremnitz* has been work'd in near 1000 Years, being nine or ten *English* Miles in length. It has one *Cuniculus* or Horizontal Passage, call'd the *Erbstall* of 800 Fathoms in length, its depth being at least 170 Fathoms; into which they do not descend by Ladders, but are let down in certain Seats of Leather, broad and conveniently contriv'd, fastned to the end of a Cable, by the gentle turning of a Wheel, to which the other end of the Cable is fastned. This Mine has six perpendicular Schachts, Shafts or Pits, (1) That of *Rudolphus*, (2) of Queen *Anne*, (3) *Ferdinand*, (4) *Matthias*, (5) the *Windschacht*, and (6) *Leopold*. I went into the Mine by the first, 108 Fathom deep, and after many Hours stay there, was drawn out again by *Leopold's* Schacht or Pit, in a streight Line above 150 Fathoms, a height surpassing that of the Pyramids by a third part. It was kept up on all sides with fair Trees, laid upon one another from the bottom to the top, in the same manner as all the other Mines are here, that have no Rock on all sides. Most of the Veins run to the North and East, and they work towards one, two or three, as they call it in the Miners Language, who direct themselves under-ground by a kind of Compass, not of 32 Points (as is used at Sea) but by one distinguish'd into 24, which they divide into twice twelve as we do our Days.

The Gold Ore is sometimes white, some of it black, some red and some yellow, but the white with black spots is accounted the best, as likewise the Ore next to the black Veins. As this Ore is not rich enough to be made trial of in small parcels, to investigate the proportion of the Gold it contains, so they take another way for the proof thereof; by pounding a considerable quantity, and washing it in a small River running by the Town; which being branch'd out into divers artificial Channels, runs over the Ore continually, and thus washing away the Earthy part from the Metalline, becomes thereby tinged below the Town (after its passage over so much Ore) with a dark yellow Colour, the same with the Earth over which it runs. This is manifest at *Christmass*, *Easter*, and *Whitsuntide*, on each of which Feasts, the Miners ceasing from their ordinary works in the Mines for two Days together, the River flows as clear below as it does above the Town. There have been pieces of pure Gold found in this Mine, of which I have seen some in the Emperors, and Elector of *Saxony's* Repositories, one of the breadth of the Palm of my Hand, others somewhat less; but these are rarities. The Yellow Earth of the Grounds about *Chremnitz*, but especially of the Hills to the Town are not without Gold, which is the reason that a great part of one of those Hills is quite digg'd away, the Earth having been wash'd and managed in the same manner, as the pounded Ore, not without good profit. *Matthias Dollinger*, the Surveyor of the Mine at *Chremnitz* (who entertain'd me very obligingly) has of late found out a certain Engine to pound the Ore much finer than it was before, by which means they now obtain a considerable quantity of Gold out of that Ore, which otherwise would have yielded none.

There are certain Passages in this Mine, cut thro' the Rock, which being long disused, the sides which were formerly spacious enough to carry the Ore thro', being now so near one another, that we were scarce able to pass.

How they carry the Ore from one Passage to another, or to the Pit.

Their way of conveying the Ore from place to place, or to the bottom of the Pit (from whence it is drawn up) is performed by a certain Chest they call the Dog; It is higher behind than before, and runs upon four Wheels, having a Tongue of Iron at the bottom, which being fitted into a Channel of Wood, cut in the middle of the bottom of each Passage, cannot deviate thence, so that a little Boy runs with 300 or 400 pounds weight of Ore in the Chariot before him, without any light, thro' those dark Passages, with great swiftness, and coming out, turns out the Ore upon the Ground, and so back again thro' the same way he came.

How they carry the Ore from the Mines.

They make use of another Engine or Chest, altogether like this, except that instead of an Iron Tongue, it has four Rowlers, besides the four Wheels; with this they carry the Ore from the Mouth of the Mine, or down the Hills to the *Buchwerke* (as they call it) where it is pounded and washed. The way being laid all along with Fir-Trees, and so contriv'd, that the Rowlers must needs rowl upon the Fir-Trees, without being able to over-turn or run out of the Way, so as to be managed by a Child, and sometimes a Dog, there passing scarce a Week but that betwixt 300 and 400 of the Chariots, containing each 400 weight of Ore, are carried down thus to every *Buchwerke*. There were then in this Mine two very pernicious Damps, besides others that were less dangerous: One was in a *Schacht*, *Shaft*, Pit or *Puteus*, the other in a *Stall* as they call it, or Passage, or *Cuniculus*; no Lamp would burn in them for any time, and so long as they did, the Miners would venture to stay there, but as soon as they went out they were drawn up again; they find these Vapours more pestiferous, where the Water is very high; but that in the *Cuniculus* they were in good hopes to correct by perflation, and digging another passage into it. They told me that at one time they lost 28 Men in four several Passages, *viz.* seven in each *Cuniculus*; At the first sinking of *Leopold's Schacht* or Pit, they were extreamly troubled with pernicious Damps, which they qualify'd in this manner: They fix'd a Tube reaching from the top to the bottom of the Pit, but this not answering altogether their Expectations, they were oblig'd to have recourse to another Invention, *viz.* by stopping the Pit by means of a broad flat Board, which covered all the sides of it, except where the Tube was, and so forc'd out all the Air in the Pit thro' the Tube, which they were forc'd often to repeat till they made divers other Passages into it, whereby the Air is render'd wholsome enough; for as I was drawn up thro' it, I found not the least difficulty in breathing.

Altermans Fore-stall or *Cuniculus*, 500 Fathoms long, was, by the carelessness of a Boy, wiping the Snuff of his Lamp upon the Wood, burn'd 1642. and 50 Men smothered in it; they were all afterwards taken up, except one, whose whole Body seem'd to be consum'd by the corrosiveness of the Waters of the Mine; there remaining nothing but his Cloaths.

Vitriol in this Mine.

This Mine also contains red, white, blue and green Vitriol and Vitriolate Waters. There is also in this Mine a certain Substance adhering to the Gold Ore, and consisting of small pointed parts like Needles, of a purple Colour, and shining, the Mother of it being yellow like Brimstone, they give it the Name of *Antimony* of Gold.

Divers

Divers sorts of Crystals are also found here, and among them some yellow ones.

A Vitriol Mine.

Near the Gold-Mine in the same Hills, is a Vitriol Mine at least 80 Fathoms deep; containing a red, and sometimes greenish Ore or Earth. This they infuse in Water for three Days, and then pouring it off, boil it for seven Days successively in Leaden Cauldrons till it is coagulated to a white thick Substance, which being reduc'd to a Calx in a Furnace, they keep for the making of *Aqua Fortis*, or the *separating Water* used at *Schemnitz*. Where they pound the Gold Ore, a Foundation of Wood is laid at least three Yards deep, upon which they spread the Ore. Over this are 24 Beams covered at the bottom with Iron, for the better grinding of the Ore, which is always covered with Water, and the Work continued Day and Night without intermission, they making use of Firr, or some other resinous Wood, instead of Candles.

How they wash and pound the Gold Ore.

This Grinding, as I told you, is perform'd by the 24 Beams, moved by 4 Wheels, *viz.* 6 Beams by each Wheel; the latter, which runs from the pounded one, being let into little Pots or Cisterns, perhaps 7 or 8 one after another, and at last into a very large one, of perhaps half an Acre of Ground; which after it is well settled, is let out.

The pounded Gold Ore they call *Slich*, among which they account that the richest, which is neareſt to the Beams, where it is first pounded: Then they take the *Slich* washed so long, as perhaps in a Hundred Pound Weight there may be half an Ounce, or perhaps an Ounce of Gold and Silver, two thirds whereof are generally Gold, (the *Chremnitz* Ore being rarely without some mixture of Silver; as the best of the *Schemnitz* Silver Ore contains, for the most part, an eighth part in proportion of the Silver;) to this *Slich* they add Lime-stone, and slacken and melt them together in the Melting-Furnace. This Melting produces that they call *Lech*, which *Lech* being burn'd with Charcoal to render it more porous, is then call'd *Roſt*.

How they melt it.

This *Roſt* they mix with Sand, and melt it again in the Melting-Furnace, then let it out into the Pan, and proceed as in the melting of Silver.

Another way of washing and separating the Gold Ore.

Among divers other ways they have to separate the Gold from the pounded Ore, they have one perform'd by the means of Lead; *viz.* The pounded Ore being well wash'd, they lay it in Powder upon Cloths, so that by the easie descending of the Water over it, and their continual stirring it, the earthy parts are wash'd away, the heavier and metalline remaining on the Cloth.

In the same manner they proceed with Sheep-skins and Wool, being placed where the Rivulets come either from the Works, or the Hills. The Cloths in which the Ore is thus setled, they wash in several Tubs, and the Water, after it setling poured off from its Sediment; this Sediment being again washed divers times, and stirr'd up in several Vessels; they at last sprinkle Quicksilver upon it, and knead it well together for two Hours; then washing it again in a wooden Vessel (after they have first separated good part of it, which the Quicksilver touches not, by striking the Vessel against their Legs) they reduce the mixture of Gold and Quicksilver into an *Amalgama*. After this, having separated again the Quicksilver, by straining it through a coarse Cloth first, and afterwards through a fine. They put the remaining Mass upon a perforated Plate, which they set over a deep Pan placed in the Earth, in the bottom of which is a good quantity of Quicksilver; over this Pan and Plate they lute a Cover, and making a Charcoal Fire upon it, force the Quicksilver, as yet remaining with the Gold, downwards to the rest in the bottom of the Pan, and afterwards taking out the Gold, purifie it once more in the Fire.

Having pass'd several Days at *Chremnitz*, I travell'd forward to *Newsol*; and as I pass'd over the Hills on the East-side of *Chremnitz*, upon the top of one of them, I saw a vast Stone, or Rock alone, near the high Road; these Hills being for the most part cover'd with Wood, which are of great Service to the Gold Mine.

Quicksilver Mines.

Passing on further, we came in sight of the Village of *Lila*, near which are the Quicksilver Hills. From hence we came to the River *Gran*, upon which *Newsol* stands, which has a handsome wooden Bridge over the River, and a handsome Row of Piles cross the River to stop the Wood, which about ten Miles higher is thrown into the River, and without any further labour, by the force of the Current, carried down to *Newsol*, for the burning, melting, casting, and hammering the Copper, in that Copper-Mine.

Newsol.

Newsol is a goodly Town, having a spacious Piazza, at the upper end of which stands a fair Tower. The Church, which stands within the Castle, is covered with Copper, and within it are many carved Figures of Wood and Stone Relicks; which this [illegible] yet are preserved by the *Lutherans*, who are in possession of this Church: the same being to be observed in most other ancient *Lutheran* Churches.

The Copper Mines.

All about this Town are the richest Copper-Mines in all *Hungary*; but the Copper is so strongly united to the Stone, as the Copper Ore of this Mine is burnt and melted fourteen times, before it produces Copper fit for use. The first melting is performed with certain Stone they call *Flus-stein*, and its own Dross, and with *Kis*, or a sort of *Pyrites*. Then it is carried to the *Roſt-hearth*, as they term it, being [illegible] or Heaps of Billets, upon which it is laid, [illegible] being set a-fire underneath, the Ore is burnt in [illegible] call'd *Roſt*; which being repeated thus seven or eight times, it is then melted again in the Melting-Furnace, and so two Furnaces more at *Mismills*, and twice more at the Hammer.

Note the Copper is separated from the Ore.

This *Kis* is brought hither from *Pesina*, which melted is used in the melting of Silver.

Mismills.

At *Mismills*, not far from hence, they have a way of getting a certain Quantity of Silver out of the Copper, by adding Lead to it whilst it is a melting, after which they take out the melted Metals together in Spoons or Iron Dishes. After it is cold, they give it a quick Fire again as it lies upon cross Bars, until the Silver and Lead melts and falls through. The Copper after by many reiterated Meltings it is made fit for use, is cut in pieces by very large pointed Hammers, moved by Mills, and afterwards formed into Plates, with other flat and round Hammers.

The Surveyor of the Works of *Newsol*, did not only entertain me with a Present of Wine and Fowls, but also gave me a Letter to the Governour of the Copper-Mine of *Herrn-grundt*.

Herrn-grundt.

This is a small Town seated very high betwixt two Hills, about an *Hungarian* Mile from *Newsol*; he found the high Lands thereabouts all covered with Snow, whereas in the Valleys betwixt this place and *Newsol* we met with none: We felt the Air very piercing at the entrance of this Mine, being only in our Miners Habits, which consists only of a Linen Coat and Drawers, a stiff round Cap, like the Crown of a Hat, a Leather Apron turn'd behind, and two pieces of Leather fastned to the Knees, to defend them against striking upon the Rocks, or the fall of any Earth upon them. But within the Mine it was warm enough.

I pass'd into this Mine through a *Cuniculus* call'd *Tachstoln*, and visited most of the remarkable places in it; you descend into it by certain Trees set upright, with deep Notches cut into them, to rest the Foot upon. As this Mine lies very high in the Hill, so they are not troubled with Water, but often with Dust, and sometimes with very pernicious Damps: In one place they shew'd me how they had remedy'd a very pestiferous Damp, by blowing a vast Pair of Bellows for several Days together: But what is most observable, is, that those Damps are not only to be found in those parts of the Mines where it is full of Earth and Clay, but also where it is rocky; I saw one place where there had been a very bad Damp, surrounded on all sides with so hard a Rock, that they had been forced to open their way with Gunpowder ram'd into long Holes, and so blown up; for it is to be known, that a great part of this Mine is within the Rock, where consequently they need no Timber to keep it up, as they are forced to do in those passages, that have either Earth on both sides, or Rock on one, and Earth on the other side. The passages of this Mine are neither horizontal, nor near to a perpendicular, but moderately inclining up and down, having many large Cavities within. In one place where we descended, we found the passage stopp'd by some Earth lately fall'n in; but one of our Guides finding the Earth yet loose, without more adoe digged his way through, and notwithstanding the Earth fell continually upon him got through, tho' a great heap of Earth tumbled after him, which they soon carried off with their Engines call'd *Dogs*, and so clear'd the passage.

This Mine has very large Veins, such as they call *Cumulace*, and the Ore is very rich, a hundred Pound Weight of Ore yielding commonly twenty Pounds of Copper, sometimes thirty, forty, fifty, and even to sixty in the Hundred; but a great part of it is firmly united to the Rock; nay, in many places the Rock and Ore are one continued Stone, with this difference only, that one part of it will yield Copper, the other none; which is distinguish'd only by the Colour, and that at first sight, the Copper Ore being for the most part either yellow or black, the yellow being pure Copper Ore; whereas the black contains also a proportion of Silver.

This Mineral produces white, green, and blue Vitriol, and a red clear transparent; as also a green Sediment of a [illegible] green [illegible]

green Water, call'd *Berg-Grün*, us'd by Painters. Here are also found Stones of a beautiful green and blue Colour, and one sort upon which *Turcoises* have been found, and therefore call'd the *Mother of Turcois*.

But above all the rest, there are two Springs of *Vitriolate Water* here (call'd the new and the old *Ziment*) which turn Iron into Copper, and consequently deserve our peculiar Observation. These Springs lie very deep in the Mine, and commonly the Iron laid in it, is turn'd into good Copper in fourteen Days time; with this further advantage, that the worst useless Iron is turn'd into the purest Copper, much exceeding in goodness that of the Ore, which must run through many Fires before it is rendred useful, whereas this made by the Vitriolate Springs, is very malleable, and easily melted; for I my self have melted it, without the addition of any other Substance: I took a good quantity of this Copper out of the old *Ziment*, and among the rest a piece of Copper of the figure of a Heart, which had been laid in it eleven or twelve Days before, having the same figure, but as perfectly Iron then, as it is Copper at this Day. Some will not allow this to be a Transmutation of one Metal into another, but that this Water being saturated with the *Vitriolum Veneris*, and meeting with a Body so apt to receive it, as the *Mars*, or Iron, it deposes *Venus*, who immediately insinuating her self into *Mars*, precipitates his Substance, and in lieu thereof substitutes her own Body. But this Opinion is sufficiently contradicted by Experience: For tho' in the changing of Iron into Copper, many parts are separated, and lie at the bottom of the *Ziment*, yet the same melted produces no Iron, but an excellent Copper, as I found it by my own Experience. I have since seen such a kind of Transmutation attempted by Art, and not without good success.

After having taken a full view of the Mine, I was reconducted to the Surveyor's House, who entertain'd me very handsomely, presented me with a Chain of Copper transmuted in those Springs; and among other Curiosities shew'd me an exact Map of this Mine, with most curious Delineations of all its Passages, with a Scale to measure the Distances of the Places in the Mine; which for its extent, number of People, and admirable order, might well be compared to a considerable subterraneous City. I saw him take some Copper Ore, which being well heated and cast into common Water, made it like the Natural Baths which arise near these Hills.

At parting we drank out of a Cup made of this transmuted Iron, gilt over, having a rich piece of Silver Ore fastned in the middle of it, with this Inscription engraven on the outside: ☉

Eisen ware ich, Kupfer bin ich
Silberg trag ich, Goldt bedeckt mich. i. e.

Copper I am, but Iron was of old;
Silver I carry, cover'd am with Gold.

The yearly Profit arising to the Emperor from his Mines, is computed at 120000 *l.* Sterling. But if more of those Vitriol Springs should be discovered (as some have already been at *Zolnock*, and other places near the *Carpathian* Hills) the same wou'd be considerably increased. But if the like Springs saturated with the Vitriol of Silver, should be discovered near the Silver Mines, and the same by a skilful Artist improved to the best advantage, the Profit likely to arise from such a Transmutation would amount to an immense Sum.

From *Herrn-grundt* we travell'd to *Stubn*, about twenty *English* Miles from *Newsol*, and fourteen from *Chremnitz*. Here we saw, near a Brook, several hot Baths, highly esteem'd, and much frequented; the Water is very transparent, of a sulphurous Smell, with a green Sediment; it colours the Wood over it green and black, but does not change the colour of Metals so soon as most others; I left Money in it a whole Night, which I found but faintly coloured.

There are Seven Baths here:

(1.) The Noble-man's Bath. (2.) The Gentleman's. (3.) The Country-man's. (4.) The Country-woman's. (5.) The Beggar's Bath. (6.) For such as are infected with the *French* Disease. (7.) The Gypsies Bath.

They are much of the same degree of heat as the King's Bath in *England*, in a fine Plain surrounded with Mountains, those to the East being the same, which on the other side are so rich in Metals.

From *Stubn* we went on to *Boinitz*, crossing the River *Nitras*, and leaving *Privitz*, a large Town, to the left of us. At *Boinitz* are also five natural Baths, of a very gentle heat, covered all of them under one large Roof. Into the Nobleman's Bath you descend on all sides by strong Stairs, the other four being of Wood, but handsomely built.

From hence we continued our Journey to *Wisslenitz*, 14 *English* Miles, and the next Day to *Trenschin*, which they count four *Hungarian*, or 28 *English* Miles, which took us up a whole long Days Journey.

Trenschin is a very handsome City upon the River *Wag*, having a goodly wooden Bridge over that River, and a fair Piazza. The Jesuits Church is a goodly Structure, and the Castle (belonging to Count *Fellenjoy*), seated very high; about a Mile from the City are two choice Baths, and the Country hereabouts affords divers good Springs of Mineral Waters. Here it was that we met with Count *Rothall*, who being then on his way to *Eperies* in Upper *Hungary*, to treat in the Quality of the Emperor's Commissioner, with those of *Abesi* Prince of *Transylvania*: I engaged some of his Attendants to make an enquiry into the Salt Mines there, of which they afterwards gave me the following Account. About two *Eng.* Miles from the said City of *Eperies*, is a famous Salt Mine 180 Fathoms deep; for the most part in an earthy, and not a rocky Ground. Salt Mine near *Eperies*.

The Miners descend it first by Ropes, and afterwards by Ladders. The Salt Veins are so large, that entire pieces have been found of 10000 Pound Weight, which they commonly here cut into long square Pieces of two Foot in length, and one in thickness; which afterwards is grounded betwixt two Stones.

Tho' the Mine be cold and moist, yet is the Salt not easily dissolved: Notwithstanding which great part of the Water of the Mines is so much impregnated with Salt, that when boil'd, it affords a bluish Salt, which the Country People give to their Cattle.

The Colour of the Stone Salt of this Mine is somewhat inclining to a grey; but when grounded to Powder is very white, and consists of pointed Parts, or Fossets. Another sort of Salt there is also, which consists of Squares and Tables; and they have a third sort with long Shoots. There is also some difference in the Colour of the Salt of this Mine, some of which is grossly mix'd with the Earth participating much of its Colour; and even that which is as pure as Crystal, does as often receive divers Tinctures: I saw once in the middle of a Crystal Salt, with long Shoots a delicate blue. And at the Count of *Rothal*'s a large Piece of a transparent yellow; some Pieces are so clear and so hard, that they carve them into divers Shapes and Figures like Crystal. Of all these sorts I brought some Pieces along with me to *England*.

But it is time to take our Farewel of the Mines, and to return to our Journey; which we continued near to the River *Wag*, to *Novo Mesto*; and the next Day to *Tirnaw*, seated in a Plain. The following Day we reach'd the *Danube*, and took up our Quarters that Night at *Presburgh*, (of which we have spoken before.) Here passing the *Danube* in two Ferry-Boats, we travell'd by *Hainburg* Tower, by *Haimberg* Hill, by the Town of *Haimberg*, by *Regelsbrun*, *Vscher*, and *Sweenet*, to *Vienna*.

We observed in those Countries in Upper *Hungary* thro' which we pass'd, things to have a quite different Face from that of *Austria*, and from what in all likelyhood they have been formerly; most of them having been subject to the Ravages of the *Turks* and *Tartars* in the last War, and some of them being forced even now to pay a yearly Tribute to the *Turks*. The Inhabitants thereof live so meanly, that they scarce afford themselves necessary Furniture for their Houses. Even in those Countries under the Emperor's Jurisdiction, many of the Inhabitants, being either *Lutherans* or *Calvinists*, and in constant fear from the *Roman* Clergy, are but little satisfied in their Condition.

Formerly almost all the Mine-Towns were inhabited by *Lutherans*, but now the Officers are all *Roman Catholicks*. And at *Schemnitz*, one of the *Lutheran* Churches was taken from them. And we were inform'd, that Count *Palfi* had enjoyn'd all his *Lutheran* Tenants, at and about *Boinitz*, either to change their Religion, or to quit their Houses and Lands.

You meet also in divers places of *Hungary* with *Anabaptists*; and near the Frontiers of *Transylvania*, with *Unitarians*. Even the *Roman Catholick Hungarians* are not a little jealous of the *Germans*, and the Court of *Vienna*; because they think them preferr'd before them, and that their Privileges are not well maintain'd.

A Journey from Vienna to Styria, Carinthia, Carniola, Friuli, into the strange Lake of Zirchnitz, to the Quick-silver Mines at Idria, and to other remarkable Places in the Alps.

HAving during my stay at *Vienna* taken a view of divers places about that City, *Newgebau*, *Calenberg*, *Closter*, *Newbough*, *Itzing*, *Baden*, *Laxamburg*, *Newsidler-See*, with others; and made a Journey to *Venice* on Horseback, for the better conveniency of staying at a place, or going out of the Road at pleasure.

Baden. The first place of Note we saw was *Baden*, four *German* Leagues from *Vienna*, a walled Town, seated near a Branch of Mount *Cetius*, the common Boundary of *Noricum* and *Pannonia*. Near the City passes a River call'd *Swechet*, which about a *German* League from *Vienna* falls into the *Danube*. It has three Churches, that of the *Austin* Friars, of *our Lady*, and St. *Stephen*. But what makes this place most remarkable, are its nine Baths, two whereof are within the Town, five without the Wall, and two beyond the before-mentioned Rivulet.

Its Baths. The *Duke's Bath* being the chiefest and largest, is 20 Foot square, in the middle of a House of the same Figure built over it: The Vapours pass through a wooden Tunnel at the top; but the Water is carried in at one corner of the Bath, near the bottom, by wooden Pipes, under the Town-Wall from the Spring-head, which rises not far thence to the Westward.

The Springs of all the other Baths are conveyed unto them through holes of the Plancher, they being on all sides cover'd with Wainscot of Firr. The Water is generally transparent, inclining something to a blue, and makes the Skin appear pale, like the Smoak of Brimstone; It turns Metals black in a few Minutes, except Gold (the Colour of which it heightens), but the Coin of the Country (which is a mixture of Copper and Silver), it turns in an instant from a white, into a dark yellow, which however soon after turns black. The Water gives a delicious green Colour to the Plants it washes, and sometimes leaves a Scum upon them, of a Purple mix'd with white. Near the Spring-head it has a great resemblance to the Sulphur River betwixt *Tivoli* and *Rome*, but its Scent is not so nauseous, nor does it incrustate its Banks. This Spring-head is worth the Observation of a curious Traveller, in regard it rises under a Rocky Hill, into which is cut an arched passage of forty Yards length, through which I pass'd, and found it as hot as a Stove, occasioned by the hot Spring-Water running under it, (like that of *Tritola* and *Baja*) the greatest part of this Cave being incrustated on the tops with a white Substance, which towards the entrance becomes harder and strong. I had some of the Pipes which conveys the Bath-Water opened; and from the upper part of these Pipes took off a good quantity of Powder-like Flower of Brimstone sublimated; whereas nothing like it was heard in the lowermost parts of the same Pipes. I dropp'd *Oleum Sulphuris per Campanam*, into this Water, which it received without the least agitation: But the *Oleum Tartari per deliquium* dropp'd into it, caused an ebullition, as in the making of *Tartar Vitriolate*.

The (2d) Bath within the Wall is call'd, *Our Lady's Bath*, being about 12 Foot broad, and 24 in length, and one end of it under a Church of the same name. This seems to be more impregnated with Sulphur than the rest, and is more blue, leaving a yellow Flower upon the Boards, as the rest do a white.

The (3d) is the *New Bath*, without the Gate.

The (4th) the *Jews Bath*, having a Partition in the middle, to separate the Men from the Women.

The (5th) St. *John's Bath*, of a Triangular Figure.

The (6th) the *Beggars Bath*; so shallow, that they are forced to be drawn in it.

The (7th) is the *Bath of the Holy Cross*, about two Fathoms square, intended for the Clergy.

The (8th) St. *Peter's Bath*, being greener than the rest.

The (9th) is the *Sower Bath*, set about with Stone Balasters, with a fair *Cupolo* and Lanthorn on the top. The Water of it is very transparent, and will colour Money black without touching it; but if once cold, will not change the colour of Metals altho' they be boil'd in it. The hottest of these Baths have not the Heat of the Queen's Bath in *England*. They use no Guides here, but direct themselves with a short turn'd Staff.

A Captain in the Emperor's Service presented me with a *Gempskugel*; which is said to be an Excrescency upon the Liver of a *Rupicapra*, or wild Goat, in the Mountains of *Tyrol*, unto which they attribute a signal Vertue in the Diseases of the Liver, malignant Fevers, and the Plague it self. The Soldiers of these parts make great account of it, as being possess'd with an Opinion, that it renders them invulnerable for two Hours after they have taken it.

From hence I travell'd on to *Newstadt*, one of the most considerable Cities of *Austria*: It is of a square Figure, having a Piazza in the middle, two sides whereof are arched; it has four Gates, three whereof are to be seen from the Piazza. St. *James's* Church has two Steeples in the Front. The Emperor has a large square Castle here, having a Tower on each Corner, which as well as the greatest part of the Town, is to be seen at a great distance, its Situation being in a low marshy Ground encompass'd with a Ditch and a double Wall. Here Count *Peter Serini*, and *Frangipani*, the Heads of the late Rebellion in *Hungary*, were beheaded. *Newstadt.*

From hence we went on through the Plains towards Mount *Simeren* (part of Mount *Cetius*), upon the top whereof you see a great heap of Stones, which make the Boundary betwixt *Austria* and *Styria*; the ascent of it is very rocky, and so steep, that 24 Horses, or Oxen, are scarce able to draw up a Coach.

In our way we pass'd by *Newkirckel*, where is a Chapel with a little red Pinnacle, built, as they say, by an *English* King; and lodged that Night at *Schorwien*, or *Schadwien*, a strong Town, situate upon the passage leading up to the Rocks betwixt the Hills; the Houses on the sides of the Rocks being inaccessible but from the top. This Town having the Mountain on both sides, and being shut up with a Gate at each end, is therefore by some stiled *Claustra Austriæ*; and a small Brook coming down from the Hills, passes under the Wall of it. From hence we travell'd to *Mehrzuschlag*, where they beat out Iron into Bars: From thence passing by a swift Rivulet call'd *Mur*, to *Keimburg*, and by a Castle belonging to the Family of *Stubnberg*, one of the most ancient in *Germany*, came to *Prug*, or *Muripens*, a well built Town, with a fair Piazza, seated upon the River *Mur*, or *Muer*, a swift large River, but not navigable. There is another Town of the same Name upon the River *Leyta*, call'd *Prug* upon the *Leyta* for distinction's sake. *Schadwien.* *Prug.*

We went on from hence to *Luheim*, where the Staple of Iron is; and thence to *Kriselfeldt* and *Judenburg*, along the River *Mur*. The next Day to *Hundtesmark* and *Neymark*, and so to *Freisach*, supposed by some to have been *Virunum*, and by others *Vaccorum*, in sight of *Altenhofn*, the Castle of *Irrowitz*, and the Castle of *Torrenburg*, which belongs to the Arch-Bishop of *Salzburg*.

From hence we travell'd to St. *Veit*, or St. *Faitls*, (*Vitopolis*), formerly the Capital City of *Carinthia*, seated at the Confluence of the two Rivers *Glen* and *Wunich*, encompass'd with a Wall; it has six Churches, and a handsome Piazza, in which stands a Noble Fountain, the Bason being of white Marble cut out of one Stone, five Fathom in Circumference, which was brought hither from *Saal*, or *Zolfeldt*, a place near it, abounding with *Roman* Antiquities.

In sight of this City are four considerable Hills, *viz.* that of St. *Veit*, St. *Ulrick*, St. *Laurence*, and St. *Helena*, with a Chapel upon each of them, to all which, upon a certain Day in the Year, the Inhabitants for thirty *English* Miles about, come on Pilgrimage on foot. We had here the Diversion of a *Latin* Comedy at the *Franciscans* Convent; it being then in *May*, we found the higher Hills covered with Snow, whereas the lower were very green, and full of Fir and Larch-Trees. Many of the Inhabitants here are troubled with hard Tumors in their Throats, some as big as their Heads (*Strumatici*), which they are fain to cover in cold Weather, when they are much discolour'd. There is an Hospital without the City for those, as well as some others that are Blind, Dumb, and Changelings. We observed however, that the better sort of People, who use a good Diet, were seldom troubled with this Distemper; tho' else their Throats have exceeded in bigness those I saw before in the *Alpine* Parts of *Savoy*.

From hence we continued our Journey to *Saal*, or *Solic*, an ancient *Roman* Colony, mentioned in the Map of *Wolfgangus Lazius*, by the Name of *Colonia Soluensis*, with a Field near it call'd *Ager Soluensis*, or *Zolfelds*; a place noted for *Roman* Antiquities, many of which have been carried away into other parts. Here I saw that so much celebrated Piece of Antiquity of the King's Chairs; being of Stone, set together in the form of two Elbow-Chairs, turn'd back to back. Upon three of the Stones are Inscriptions, which appear to be much more ancient than the *Solic.*

Fabrick

Fabrick of the Chair. At the installing of the Duke of *Carinthia* (whether a King or Emperor) either he or his Representatives sits in that part of the Chair which faces the East, a Peasant sitting at the same time in the other part to the West. Among other Ceremonies, the Peasant rising up, presents the Duke with a fat and lean Ox; The Duke being obliged to return the fat one and keep the lean one, receives afterwards a gentle box on the Ear, from the same Peasant, the instalment is thus concluded. The Church of *Saai* having had the good Fortune to escape the fury of the Barbarous Nations, is very ancient; and on the Walls has many old *Roman* Antiquities of *Basso relievo*, taken first out of *Zolfelde*. Among many others I took particular notice of these following. *A Chariot drawn by two Horses. A Chariot with a Man in it. A Woolf licking of Fruit fall'n from a Tree.* Hector *drawn behind* Achilles *his Chariot about* Troy. *Four very fair Heads unto the middle. Two Wolves, each holding a Horn and a Cup between them, out of which shoots a Vine, with Leaves and Grapes*, this is over the Porch; within the Porch is a *Cupid holding of a bunch of Grapes*; Romulus *and* Remus *sucking of a Woolf*. Two Figures over the Crucifix by St. *Christopher*, with some others, all which, as I told you, were brought hither from *Zolfelde*, where I also saw many Inscriptions; one upon a Stone on the South side of the Church was this:

Roman Antiquities.

HERCVLI. E
EPONAE. AVG.
PROSALVTE. IMP.
CAES. M. AVR.
ANTONINI. PII FE.
LICIS. INVICTI.

As also divers *Roman* Coins of Copper and Silver found in these parts. I brought away a Golden Medal of *Trajan*.

We went from thence to *Clagenfurt* (the ancient *Claudia*) now the Capital City of *Carinthia*, being a handsome four square Town, fortify'd with a strong Wall, and a broad Rampart, having a Bastion, and one in the middle of each Courtain. Its Streets are very regular; and the *Piazza* in the middle, being adorned with a Marble Column, and a Statue of the Virgin *Mary* upon it, as also with a Statue of the Emperor, and, what exceeds all the rest, with a most noble Fountain in the Center, over which is a Dragon of a prodigious size, made out of one Stone, *Hercules* with his Club standing before it: This was likewise brought from *Zolfelde*. These Mountainous parts afford three noble massy Fountains, *viz.* those two of St. *Veit* and *Clagenfurt*, and that of *Salzburg* of white Marble. *Clagenfurt* being at that time full of Souldiers, we were very civilly entertain'd by divers of the Officers, but more especially by Count *Lesley*, their Commander in chief, who carried me in his Barge thro' an artificial streight Channel into the *Werd Sea*, or Lake of *Clagenfurt*, to a Country Seat call'd *Loretto*, most pleasantly seated; having a Chapel belonging to it, built in imitation of that of *Loretto* in *Italy*, which I found exactly conformable to the Original.

Clagenfurt.

Fish.

From *Clagenfurt*, we turned to the South, and after 6 or 7 *English* Miles, pass'd the River *Dravus* over two wooden Bridges, with an a Island in the middle; and within two Hours after entring among the Hills at a place call'd *Hammer* (where the Iron is beat out) continued my Journey towards the high and great Mountain of *Luibel*. Soon after we saw our selves arriv'd by the oddest Desert of Rocks that can well be imagined, with a great *Cascata* or Water-fall, which having worn out the Rocks underneath, appears at first sight to be artificial. The ascent is very surprising, being enclosed with Walls, turning backwards and forwards, to the very Pinnacle of this great Mountain *Luibel*, part of the *Carnick Alpes*, dividing *Carinthia* and *Carniola*. Coming up as high as the steep Rocks and Peaks would let us, we were amaz'd to see our Guide lead us side-ways thro' a made way into a passage cut quite thro' the Mountain, like the famous *Grotto* of *Pausilipo* by *Naples*. It has a Roof of Wood work in the middle, which is continued into the *Carniolian* side. The Roof of this Passage is very high, its length 156 Yards, and four Yards in breadth, affording daily Passages for Country Carriages and Carts. Having never heard or read of this surprising Passage, I at first imagined it to be some old *Roman* Work, till I was credibly informed, that it was much later, there being formerly no passage into *Carniola* this way, but by going about a great way by *Villach*. In ascending this high Mountain, being infested with much Rain, and a fierce Storm, till we came to the highest part of it, I had the opportunity to see the Clouds descend, and after it was past, to ascend again so high, as to get over part of the Mountain, and a Stream of them pass'd thro' the Rocky Passage out of *Carniola* to the *Carinthian* side, directly contrary to our way, who came out of *Carinthia* into *Carniola*. As we reached this *Grotto* by a continual ascent, so no sooner were we got thro' it, but we descended by degrees, first to St. *Anna*, two *English* Miles downward, next to *Newstattel*, six or seven Miles lower, and so descending still till we came to *Crainburg* (the old *Carnodunum*) a goodly Town, seated upon the River *Save*, from whence thro' a very pleasant Plain four *German* Leagues long, we came to *Labach* (*Lubiana*) the Capital City of *Carniola*, thro' which runs the River of the same Name, which afterwards exonerates it self into the *Save*. This is a very handsom City, its Castle, which is situate upon a Hill, overlooking two large Valleys to the N. and S. but being commanded by another Hill, that lies near it, its Fortifications are neglected of late Years. Mr. *Tosh* a *Scotch* Apothecary in this City, shew'd me divers curious Minerals of those parts.

Mount Luibel.

A Passage through the Mountain.

Labach.

Labach is supposed to be the ancient *Nauportus*, so famous for the landing of the *Argonauts*, who setting out from *Argos Pelasgicum* in *Thessaly*, sail'd to *Colchos*, on the East side of the *Euxine Sea*; but being pursued by the Vessels of the King of *Colchos*, steer'd their Courses Northward to the Mouth of the *Danube*, and passing up that River, till they came to the Confluence of that River with the *Save*, they went up the River *Save*, and so the River *Labach*, till they landed at this place call'd anciently *Nauportus*, from whence they return'd by the way of the *Adriatick-Sea* into *Greece*. So that in my Travels I had been near the place of their setting out in *Thessaly*, and at their landing place in *Carniola*.

From *Labach* we travelled towards the *Zirchnitzer-See*, or that famous and most surprising Lake of *Zirchnitz*, having the Marshes on our right, and the Hills on our left Hand, till we came to *Brunnitze*, and then passing over them, we reach'd *Zirchnitz*, a Town scarce containing 300 Houses, but which has given its Name to that stupendious adjacent Lake: Here having receiv'd the necessary Directions and Accommodations at the Hands of the Judge of the place, for viewing of the Lakes, we went to *Seedorff*, a Village about half a Mile nearer the Lake, and thence to *Niderdorff*, where we took Boat, and spent sometime in taking an exact view of the Lake.

The Lake of Zirchnitz.

This Lake is about nine or ten *English* Miles long and half as broad, enclosed with Hills at some distance, and to the South side with the *Birnbaumer* Forest, of a great extent, and well stor'd with Deers, Wild-Boars, Foxes Wolves and Bears.

What makes this Lake most remarkable, or rather surprising is, that every Year in some part of the Month of *June*, the Water thereof descends thro' certain holes at the bottom, under ground; and in the Month of *September*, returns by the same ways, with a speedy ascent, rising up to the height of a Pike, and so covering the Ground again. Whilst the Water remains under ground, the Earth produces very speedily good store of Grass, yielding Food for Cattle in the Winter, and during that time, you may see the Hares, Deer, and other Wild-Beasts resort thither from the adjacent Forrests, of which great numbers are then taken by the Country People. The Lake affords vast plenty of Fish, tho' the Lake as well as part of the adjacent Country being a Lordship belonging to the Prince of *Eckenberg*, the Country are not allow'd the liberty of Fishing, except upon the going down of the Water, when they take vast numbers of them, by intercepting their passage as they are going along with the Water under ground. As far as I was able to learn, this Lake brings not up any unknown Fish at the return of the Waters, but only such as went down, and are found in most other Lakes, such as Carp, Tench, Eels, the which having spawn'd before they go down, the Fry has about three Months growth when they are brought up again.

The Water in this Lake is of a very different depth, being in some places not above four foot, and not far thence perhaps 20 Yards, so that the Ground being as it were divided into small Hills and Valleys, the Fishermen have given peculiar Names to seven of them, which in the *Sclavonian* (the Country Language), are, *Vodanas*, *Resbetu*, *Sitarza*, *Ribishkiama*, *Nakuishu*, *Levishe*, *Kottel*. I my self pass'd over five of the aforementioned Valleys, and saw a remarkable Stone call'd the *Fishers Stone*, because by its appearance, they guess when the Water will begin to retreat under ground; as also by a peculiar Hill, which being higher than the rest, becomes a pleasant Island at the return of the Water. Upon the most

exact enquiry I could make, I could not find that this Lake had fail'd one Year to descend and ascend again; or how long it was since this property had first been observed, so that it seems more than probable, that this Lake does not owe its rise to any Earth-quake, but has been the same from all Antiquity, and if my Conjecture fails me not, is the *Lugea Palus* of *Strabo*, who notwithstanding this, as well as all the other ancient Geographers, make not the least mention of this surprising Quality.

Rivers near this Lake.

The nearest part of the Sea unto this Lake, is the *Sinus Terg stinus*, and *Sinus Flanaticus*, or the Gulph of *Triste*, and the Gulph of *Quevero*; at within a few Miles distance, divers considerable Rivers have their Scources, as the *Labach*, the *Corcoras* or *Gurk*, the *Colapis* or *Culp*, which falls into the *Savus*, and the *Vijao* or *amnis frigidus*, which runs into *Lisenso* by *Goritia*, besides divers others.

I observed the Ground about this Lake very hollow, and full of Caverns; the like I took notice of in divers other parts of *Carniola*, not unlike unto *Elden* Hole in *Darbyshire*, and if we may give credit to what several of the best Persons at *Zirchnitz* assur'd us, the Prince of *Eckenberg* had the Curiosity to go into one of those Caverns, and came out again upon the side of a Hill.

A natural subterraneous Passage.

Being upon my departure, I was in some doubt, whether I should go unto *Triste* (*Tergestum*) a Sea Port in the *Adriatick-Sea*, belonging to the Emperor, and thence by Ship to *Venice*; but having a great Curiosity to see the famous Quick-Silver Mine at *Idria* in the Country of *Goritia*, I went from *Zirchnitz* to *Loveeq*, and passing thro' the Mountainous parts of that Country, came to *Idria*, enclosed with Hills on all sides, a River of the same Name running just by it; which is stiled by *Leandro Alberti*, *superbissimo fiumed' Idria*, tho' it was very small and shallow then, and after great Rains, scarce has Water enough to carry down the Fir-Trees, and other Wood made use of in the Mines, for building and fuel, which being cast into the Water, above this place, are stopp'd by some Piles set cross the River, as we observed in the River *Gran* near *Newsol*.

The River *Idria*.

The Quick-Silver Mines at *Idria*.

The only thing that makes this Town worth taking notice of, are the adjacent Quick-Silver Mines; the entrance into which being somewhat low in the Town it self, this makes them somewhat subject to Water floods, to empty which, they are provided with excellent Engines, and other Devices; the deepest part of the Mine from its entrance, is betwixt 120 and 130 Fathoms.

Two sorts of Quick Silver.

This Mine affords two sorts of Quick-Silver; one call'd the Virgin Quick-silver, the other the plain Quick-silver. They call Virgin Quick-Silver that, which discovers it self without the assistance of Fire, and is either found in the Earth or Ore naturally as it is, or falls in small drops, or sometimes streams out in a considerable quantity down into the Mine. Thus seven Years before they had such a Stream coming from the Earth, which at first was as small as a common Thread, and afterwards as big as a good Pack-Thread, but did not continue for above two or three Days. They also reckon that sort of Quick-Silver, Virgin Mercury, which is separated by Water in a Sieve first, and afterwards in a long Trough with small holes at one end, without the help of any Fire.

Plain Quick-silver is call'd that, which being not at first perceivable to the Eye, is forced by Fire either out of the Ore or native Cinnabar of Mercury, which they dig out of this Mine. The Ore is of a dark brown Colour mix'd with red, but the best is a hard Stone, which before they put into the Fire, is first grosly powder'd and work'd by the Sieve, to separate the Virgin Quick-Silver if any be found in it. The Quick-Silver Ore of this Mine is the richest of all that ever I saw, for it generally contains half Quick-silver, and in two parts of Ore one part of Quick-silver, and sometimes in three parts of Ore two parts of Quick-Silver. I descended this Mine by the Pit of St. *Agatha*, by Ladders, and came up again by that of St. *Barbara*; an ascent of 639 Staves or 89 Fathoms. I saw the Laboratory, where the Quick-silver is separated by the force of Fire, 16000 Retorts of Iron, each of which costs a Crown at the Iron Furnaces in *Carinthia*. They employ at once 800 Retorts, with as many Recipients, for the drawing over the Quick-Silver in 16 Furnaces, 50 Retorts in each, *viz.* 25 on a side, 12 above and 13 below of each side.

The Laboratory for the separation of Quick-Silver.

June the 12th, 1669. When I was there I saw them carry away into foreign Parts 40 Saumes of Quick-silver, each Saume containing 315 pound weight, to the value of 4000 Ducats; it is carried upon Horses Backs, two small Barrels upon each Horse.

In the Castle I saw 3000 Saumes of Quick-silver at once, all made up in double Leather, and in another House, as much of the best Ore as could be separated in two Years time, unless they should have more than ordinary plenty of Wood coming down by the Rains; tho' by reason of the high Hills about them, it snows oftner here than it Rains.

The Town and Castle of *Idria*.

It is a Custom for all the Strangers who come into the Castle of *Idria*, to have their Names set down in a Register-Book kept for that purpose, with the Names of their Native Country. In the large Catalogue thereof, we met but with few *English* Mens Names, and of late Years only with Mr. *Evelyn* and Mr. *Pope*'s Names, with their Companies, who after their return, had their Observations inserted in the Philosophical Transactions. As the better sort of the Inhabitants of this Town generally speak five Languages, *viz.* the *Friulian*, *Sclavonian*, *German*, *Latin* and *Italian* (besides that some also speak *French*) so it is very fit for the reception of Strangers.

Goritia.

From *Idria* we pass'd the *Swartzenberg* or Black-Mountain, and descending 10 Miles thro' a stony Country, came to *Adelshini*, and so to *Goritia* (the old *Noreja*) the chief City of the Country of *Goritia*, pleasantly seated, over-looking a fair Plain to the South. The Imperial Governour resides in the Castle, having a Guard to attend his Person. As we were travelling in the Night time, we had sometimes about us a great number of large Gloe-worms, which put in Papers, gave a dim light, and in some places in the Plains the Air was full of flaming Flies. There is abundance of that neat kind of Acer, whereof Violins and other Musical Instruments are made, as well in those parts as in *Carinthia*, and the Arch-bishoprick of *Saltbury* or *Saltzburg*, where they make Trenchers and Tables of it, and sell them at a cheap rate; I brought some of the fair broad Leaves from thence.

Leaving *Goritia*, I pass'd the River *Soncius* or *Lisenzo*, which rising near the Hills, exonerates it self into the *Adriatick* Sea, famous for the death of *Odoacer*, who was slain near it in a Battle by *Theoderick* King of the *Goths*, and the Inroad of the *Turks* made hereabouts, 1477, under the Reign of *Mahomet* the *Great*; after which, travelling thro' the Meadows, we came unto the strong City of *Palma Nova*, built since by the *Venetians* to prevent the like Incursions. All this long Circuit till within a Mile of *Palma Nova*, we travelled thro' the Emperor's Dominions, which are much larger than generally apprehended, and as I have sooner or later seen the greatest part of them, I can't but think him a great and powerful Prince, he being in possession of all *Austria*, *Styria*, *Carinthia*, *Carniola*, part of *Croatia*, *Istria* and *Friuli*, part of *Alsatia*, *Tyrol*, *Bohemia*, *Moravia*, *Silesia*, part of *Lusatia*, and a considerable part of *Hungary*.

Palma Nova.

Palma Nova in *Friuli*, is the largest regular Fortification I ever met with in my Travels, having nine Bastions, bearing the Names of as many noble *Venetians*; on each Courtain there are two Cavalliers, the Rampart is much higher than the Wall, and the Ditch 30 Paces broad and 12 deep; being kept dry to render the Town more healthful, but may be fill'd in case of necessity. It has three Gates; viz. *Porta Maritima*, *Porta di Cividal*, and *Porta di Udine*. The three Bastions *Foscarini*, *Savorgnan*, and *Grimani*, lies betwixt the *Porta Maritima* and the *Porta di Udine*; those three call'd *Barbara*, *Dona* and *Monte*, betwixt the *Porta di Udine* and *Porta di Cividal*, as those of *Garzoni*, *Contarini* and *Villa Chiara* are betwixt the *Porta di Cividal* and the *Porta Maritima*. Each of these Gates were then covering with a very fair Half Moon. In the middle of the City is a Sexangular *Piazza*, from whence there is a fair prospect to the three Gates, and six Streets quite thro' the Town. In the Center of it is fix'd a Strandard over a Triple Well, the Front of the Cathedral facing the *Piazza*, which is also beautify'd with divers Statues: and a finely gilt Obelisk. There is in the middle of the Bridge an artificial Draw-Bridge, so contriv'd, that upon the approach of any Force, the Sentinel by touching only an Iron, can draw it up.

I have in my Travels made observation of divers kind of well-contriv'd Draw-bridges, amongst all which none pleased me better than those of *Amsterdam*, which part in the middle, so that the Mast-head or Break-water of the Ship bearing against it, opens it, and affords a free passage to the Vessel without any other help. The *Venetians* have made a Channel from *Palma Nova* to the Sea, capable of Vessels of good burthen. This Fortification which was begun by the *Venetians* 1594, is esteem'd here one of the choicest in *Europe*, having been contriv'd by the advice of all the best Engineers.

From

From *Palma Nova* I continued my Journey to *Maran* St. *Vito*, a *Venetian* Port in *Friuli*, where taking a *Feluca* we sail'd along the shoar of *Friuli* or *Patria*, and passing by *Porto di Tajamento* came to *Caborle*, in which Isle there is a Church dedicated to the *Virgin Mary*, seated upon the very brink of the Sea-shoar, yet said, never to be overflown by the Sea.

The Author arrives at Venice.

Hence passing by *Livenza* (where the Sea formerly came up as high as *Opitergium*) and afterwards by *Porto di Piave*, I entred *Venice* by the *Porto de Castelli*, and passing by the *Carthusians* landed at the *Piazza* of St. *Mark*, I found this great City in extream combustion, by reason of the dangerous condition of *Candia*, which was soon after surrender'd to the *Turks*. The Season proved here so violent hot at that time, that some of our *English* Sea Captains told me they had seldom felt it so hot betwixt the *Tropicks*.

Lands Pass.

As I had formerly taken a view of *Rome*, *Naples*, *Florence*, *Padoa*, and several others of the Chief Cities of *Italy*, I spent but a short time at *Venice* in reviewing what I thought worth taking notice of, and so prepared for my return to *Vienna*. Accordingly taking Boat at *Venice*, I landed at *Mestre*, a pretty little Town, and extreamly conveniently situated and accommodated for such as intend to travel into *Germany* by the way of *Tyrol* or into *Austria*, thro' *Friuli*. From hence travelling for 10 Miles thro' very delightful Plains, I came to *Treviso* (*Tarvisium*) which imparts its name to the Circumjacent Country, call'd *La Marca Trevigiana*; the whole City being for the rest adorned with fair Houses, noble Churches, and many Towers and Fountains. The River *Sile* which runs thro' it, exonerates its self into the Sea betwixt *Mestre* and *Murano*. This City abounds in good Vines and Fruit, and was a chief Seat of the *Lombards*, till after having run various Fortunes, it was united to the State of *Venice*, 1388. It boasts of an early Conversion to the Christian Faith by *Prosdocimus* a Follower of St. *Peter*.

Treviso

Eight Miles from hence stood the ancient City of *Altinum*, founded by *Antenor* and destroyed by *Attila* King of the *Huns*.

From *Treviso* I travell'd to *Lovadina*, crossing the great River *Piave*, *Plavis* or *Anassus*, which arising among the Mountains, passes by the City of *Belluna* and *Feltre*, thence further to *Concian* or *Coniglian*, and so to *Sacille* or *Sacillum*, formerly a Bishops See, under the Patriarch of *Aquileja*, a very pleasant place, seated upon the River *Livenza* or *Liquentia*, which after it has pass'd by *Motta*, falls into the Gulph of *Venice*.

The River Livenza.

From hence travelling with the Assistance of a Guide thro' the Plains, I came to *Spilembergo*, where I was forc'd to take another Guide to conduct me cross the swift River *Tajamento* or *Tiliaventum*, the greatest River in *Friuli*, having its rise in the *Julian Alps*, and from thence running thro' a plain Country (which it often overflows) falls into the *Adriatick* Sea.

Palma Nova.

Not far from *Spilimbergo*, I cross'd a most remarkable artificial Channel, call'd *La Brentella*, being 16 Miles in length, and made by the *Venetians*, for the more convenient conveyance of the Wood from the Mountains to their Glass-Houses at *Muran*. Both the sides and bottom are lined with a good Stone, the bottom being round.

Then I pass'd in sight of St. *Daniel*, seated upon a Hill near *Hospitaletto* and so to *Vensone*, situate at the Entrance of the Hills, formerly the utmost Frontier Town of the *Venetians*; thence by the way of *Rejuta* to *La Chiusa*, remarkable for the streight Passage of the *Alps*, being guarded and shut up by the *Venetians* every Night.

From this place I went on to *Ponteba* or *Ponte Fella*, upon the River *Fella*, the most nice Boundary betwixt the *Venetian* and Emperours Dominions on this side, that can be seen; the *Italians* subject to the *Venetians* living on one side of the Bridge, and the *Germans* under the Imperial Jurisdiction on the other side; each of them following in their manner of Living, Furniture and Cloathing, their own Country Fashion; The Bridge it self is half *Italian*, half *German*, that on the *Venetian* side being of Stone, as the other part is made of great Trees, laid over after the *German* way of making Bridges.

After I had been entertain'd with many strange Stories by the Inhabitants concerning the Snow and its Effects in those Mountains, I travell'd on by *Tervis* and *Tirl*, unto *Villach* or *Villack*, a goodly City, and one of the best of *Carinthia*. I took a view of the natural Baths, which were not above an *English* Mile from it at the Foot of a Hill, being two clear Sulphurous Baths, of a gentle heat, and having an acid pleasant taste. The bottom was not plancher'd, but hath its natural Spring and Settlement; they are pretty large, with Stairs to descend into them, and little wooden Rooms to bath in, with Shirts and Drawers as in *Austria*.

The Bath of Villach.

Near this place is the Lake call'd the *Offiacker See* from *Offiack*, a Town seated on the side of it, being one of the most considerable Lakes in *Carinthia*, which has also divers others, as the *White Lak*, the *Millstatter*, the *Werd* and *Forchten* Lake. The first of these does not only produce great quantities of Fish, but also great plenty of *Offiacker* Nuts, of which the Country People make Bread; which upon strict examination, I found to be no other than very large Seeds of *Tribulus Aquaticus*, or Water *Gallthorps*.

From *Villach* I soon came to the *Werd See*, or the Lake of *Clagenfurte*, and travelling along it on my right-Hand till I came to *Clagenfurte*, went on thence to St. *Veit*, where meeting with Mr. *Donellan*, he gave me (pursuant to my former Desire) an Account of the great Lead-Mines of *Bleyberg* in Upper *Carinthia*, which have been work'd 1100 Years. The *Cuniculus* of this Mine call'd *Federnus Stollen*, is 110 Fathoms deep in the Earth, surrounded with high Hills, the melted Snow whereof rowling down into the Spring, does often considerable damages.

The Lead-Mines of Bleyberg.

Among divers other Natural Curiosities, he presented me with a rich, large, fair piece of Natural *Cinabar*, found in the *Crewalds* or Forrest of Ore, two *German* Leagues from St. *Veit*, in the Lordship of *Costerwitz*, where great quantities have been found in it some Years ago, especially in a Brook running from the Hill, but is rarely to be found now, except they dig for it.

From St. *Veit* I travell'd by *Friesach* (which formerly had a Gold Mine) and thence by *Newmark*, *Hundtsmark*, *Peltsolz*, *Knittelfeldt*, *Luilm*, *Pug*, *Keimberg*, *Mehrz-u-Schlag*, *Schidtwin*, *Newkircke*, *Newstadt*, *Solinaw*, *Traskirckel*, and *Newdorff* to *Wien*.

I made this Journey from *Venice* to *Vienna*, of about 350 *Italian* Miles alone upon one Horse, and notwithstanding I travell'd thro' four divers Nations, speaking as many different Languages, I met not with the least disturbance or hindrance upon the Road, but generally met with tolerable good accommodation at a cheap rate, the People of these parts being plain and honest, handy and very serviceable to the Emperor. I met with no *Jews* in this Journey (a thing otherwise very common in *Germany*) because they were prohibited in *Styria* and banish'd *Carinthia*, tho' at the same time they were tolerated in *Austria*.

The Observations of the Author.

The Description of *Vienna* being reserved for another time, when I shall describe my Journey from the *Low-Countries* to *Vienna*, and thence thro' *Moravia*, *Bohemia*, *Misnia* and *Saxony* to *Hamburg*; I thought fit to be satisfy'd at this time with giving some account of places less known in *Pannonia*, *Dacia*, *Mœsia*, *Graecia*, *Noricum*, and *Illyricum*, of which I have chiefly treated in this Work.

In my Travels thro' *Hungary* and some other Provinces under the Imperial Jurisdiction, I observed divers Errors committed by the continent Geographers. *Belgrade* is commonly placed in *Hungary*, whereas in a strict sense it lies beyond it in *Servia* or *Mœsia* Superiour. It may be perhaps allow'd that St. *Jerome* was a *Pannonian*, but that (strictly taken) makes him no *Hungarian*; for he being born in *Stridon*, now conceived to be *Stredon* or *Streyna*, seated on the West side of the River *Mur*, before it joins with the *Drave*, he was a Native of *Styria*.

Pliny makes the course of the *Save* One hundred and fifty Miles, which if taken from the Sea course is scarce the one half of it.

Strabo affirms, that the River *Save* falls into the *Drave*, whereas the *Save* which falls into the *Danube* at *Belgrade*, is at least a hundred Miles from it.

Vicinus Nauporto fluvius est Corcora, qui merces accipit, hic in Savum influit, Savus in Dravum. Lib. 7.

The distance *Strabo* makes betwixt *Aquileja* and *Nauportus* or *Labach* of fifty Miles, tho' somewhat short, yet may be reconciled; but the distance betwixt *Tergestum* or *Trieste* and the *Danube*, which he makes of One thousand two hundred Furlongs, or One hundred and fifty Miles, is far short, even unto the nearest part of the *Danube*, which can be no less than Two hundred and fifty Miles. But as the Ancients were much mistaken in the true Course of the *Danube*, one branch of which they conceive to have fall'n into the Adriatick Sea, this Mistake admits of a favourable Construction.

I making this Journey in the hottest Season of the Year, the heat was exceeding troublesome in the Plains of *Friuli* and *Austria*, whereas I found it sufficiently moderate at the same time in the *Alps*, where the Country was pleasant and green, whilst all the Grass was burnt up in *Austria* by the Sun, tho' *Austria* lay more Northern than either

either *Styria* or *Carinthia*, nothing being more commonly observed in Travelling than the Temperature of the Air, as to Heat and Cold, to be sometimes more different in one Mile, than in ten Degrees of Latitude. Nothing more common than to be ready to frieze on the top of a high Mountain, and in an Hour's time after to be scorch'd by the heat of the Sun-beams in the Valley: It is that makes Travellers complain of the Cold of the Hills, even in that hot Country of *Arabia*; and those that have made far distant Voyages, are sufficiently convinced with what ease some have pass'd the Seas, whilst others have been expos'd to great Hardships, by the Inclemency of the Climate, tho' under the same Degree of Latitude.

An Account of several Travels through a great Part of Germany: (1.) *From* Norwich *to* Cologne. (2.) *From* Cologne *to* Vienna. *And* (3) *From* Vienna *to* Hamburgh. (4) *From* Cologne *to* London. *Treating also of the Mines, Baths, and other Curiosities of those Parts Illustrated with Sculptures By* Edward Brown, *Fellow of the* London College of Physicians, *and of the* Royal Society.

Travels from Norwich *to* Cologne. *By Dr.* Brown.

I Went in the Year 1668, from *Norwich* to *Yarmouth*, a Sea-Port in the County of *Norfolk*, at the entrance of the River *Hierus*, or *Yare*: Where being furnish'd with Letters of Recommendation by Sir *James Johnson* to *Amsterdam*, *Francfort*, *Venice*, and *Vienna*, I embark'd the 14th of *August* in *Yarmouth* Road aboard the *Angel* Ketch, Burthen 55 Tuns; and set sail for *Rotterdam*, steering our Course E. and by S. and E. S. E. It was not long before we discovered *Goree* Steeple, and immediately after the *Briel*, situate at the entrance of the River *Mosa*, or the *Maese*; which having its rise in the Mountains of *Vauge*, or *Vaugesus*, passes by *Verdun*, *Dinant*, *Namur*, *Liege*, *Maestricht*, *Ruremond*, *Venlo*, and several other places, and here exonerates it self into the Ocean.

In our passage up the River we saw many goodly Villages, the most noted of which were *Maeseland-Sluice*, *Schiedam*, and *Delfts-Heaven*; and came ashore about Six in the Evening at *Rotterdam*.

Here I had sight of two of the largest Men of War belonging to *Holland*, *viz.* the *Crane*, and the *Wassenaer*; the last of which was built in lieu of that, in which Admiral *Opdam* was blown up, as he was engaged against his Royal Highness the Duke of *York*.

A Description of *Rotterdam*

The Points of the Keys of this City are very fair, and the Channels, which extend into the very Centre of it, so large and deep, as to be capable of receiving Ships of great Burthen. It is very populous, the Houses well built, and the Streets very clean. The Organs of the great Church, the Tower, and the Monument of Mons. *De Wit*, the Statue of *Erasmus* upon the Bridge, and some other Curiosities, are worth the Observation of a Traveller. It being then Fair-time, we saw some Drolls acted, and some Rarities, *viz.* Lions, Leopards, and among the rest a Woman of seven Foot high.

Of *Delft*.

From *Rotterdam* we pass'd forward to *Delft*, passing by the Powder-House (a goodly Structure at some distance from the City). The Piazza of *Delft* is very large, the Town-House fronting it at one, and the new Church with its high Steeple at the other end. This Church is famous for the Tomb of *William* of *Nassaw*, Prince of *Orange*, together with his Wife and Son, Prince *Maurice*, whose Statue is in Armour, with his Dog lying at his Feet, with four Obelisks supported by ten Marble Pillars: It stands in the middle of the Isle.

The old Church contains the Tomb of the famous *Van Tromp* carved on the Walls, his Effigies lying upon a Cannon, surrounded with Arms and Trophies.

In another Church we were shewn the Monument of Admiral *Hein*, who took the *Spanish* Plate Fleet: And in a large House, in a Wall, the Marks of some of the Bullets, by which Prince *William* was murthered, 1584.

The *Hague*.

The *Hague* is celebrated for being the ancient Residence of the Counts of *Holland*, and now of the States General; it is about three *English* Miles from *Delft*. It has a very fair Piazza, many well built Houses; and the Pall-mall, the Wood, and the Park, are very beautiful places; but what surpasses all, is the Way from hence to *Scheveling*, which is paved with Brick for three Miles, with several Rows of Trees on both sides, as far as to the Steeple of *Scheveling*.

The City of *Leyden* (nine Miles distant from the *Hague*), may for its neatness compare with any in *Europe*, its Streets being beautified with goodly Houses, and large Channels on both sides: Its Fortifications are after the modern way. One of the chiefest Antiquities of *Leyden*, is what they call the *Hengist Castle*, or the *Berg*), from its Founder *Hengist* the *Saxon*. On the top, into which we went by very handsome Stairs, we saw a very fair Arbour, a Labyrinth and Well, and at the bottom is a very good House of Entertainment. But what surpasses this, are the Ruines of an ancient Fortress not far from this City, at the Village call'd *Catwick*, upon the Sea, known by the Name of *Arx Britannica*; which being built by *Caligula*, and afterwards ruin'd by the *Normans*, was overwhelm'd by the Sea at last; yet not so, but that at certain times, when the Sea is very low, its Ruines have been plainly discovered, and some Antiquities been found, with this Inscription: *Ex. Ger. Inf. ex Germania Inferiori*. The Stadt-house has a very fair Front towards the Street. In the Anatomy-Hall you see many Skeletons, of a Whale, a Horse, Deer, Cow, Cat, and Fox, and two Legs of an Elephant, besides those of Men and Women, some Muscles preserved, and one entire Body with the Skin and Flesh.

Leyden.

The Physick-Garden is none of the largest, but well stor'd with Plants of all sorts. Near it stands the College where the Publick Lectures are kept every Day, and under it is the Printing-House of the University.

In the Stadt-house, in the Apartment of the Burgermasters, I saw a most curious Piece done by *Lucas van Leyden*, representing the Day of Judgment. Near the same place is also shewn the Table of that famous Taylor, *John* of *Leyden*, upon which he used to work, before he took upon him the Trade of a Reformer, and came to be King of the *Anabaptists* in *Germany*.

Haerlem.

From *Leyden* I travell'd to *Harlem*, seven *Dutch* Leagues (or twenty one *English* Miles) thence. Its Situation is very pleasant, among Groves of Trees. The great Church surpasses for its bigness all others in *Holland*, and is full of remarkable Inscriptions. The Pictures of all the Earls of *Holland*, in the Prince's House, are very good Pieces; and in the Summer-House of the Garden is that of *Laurence Coster*, a Citizen of this place, whom they make the first Inventer of Printing; whereas others ascribe the same to a certain *German*, named *John Gottenberg*. In the other Rooms you see several excellent Pieces of Paintings of *Heemskerk* and *Golzius*; but those of *Cornelius* of *Harlem* exceed the rest, especially his History of *Herod*'s killing the Children; his Feast of the Gods, in which *Vulcan*'s Foot is esteemed most; and his Collation of a Nun and a Monk.

On

On the other side you see a Picture of a Ship with Saws, in Memory of the glorious Action done by those of this Town, who under the Reign of *Frederick Barbarossa*, fighting against the *Saracens*, took *Damiata*, entring the Port by means of Saws fastned to the Keels of their Ships, which cut the Chains of the Harbour.

Here is also an Hospital for 60 Aged Persons, and another for the Sick, both very handsome and cleanly kept. Here I observed the first time their way of Whipping Malefactors with Rods: They tie their Hands stretch'd upward as high as they can, to a Post erected upon a Scaffold, with an Iron Round their Waste, and so give them as many Stripes as are allotted them by their Judges.

The Lake near *Harlem*, call'd the *Harlem Meere*, is above twenty Miles long.

A Description of *Amsterdam*.

The next place to *Harlem* is the City of *Amsterdam*, famous throughout the World for its Riches, Trade, Shipping, fair Streets, and magnificent Buildings. Its Situation is upon the River *Ye*, being formerly the Seat only of a few Fisher-men; but being favour'd in time with the Title of a City, by the Earls of *Holland*, was strengthned with a Wall 1470, against those of *Utrecht*; and many Years after, by the Emperor *Maximilian*, honour'd with the Imperial Crown over their Arms, which are three Crosses on a Pale. It is almost incredible how this City is increased of late Years, being now encompass'd with a new Wall, and large Ditch, after the Modern way of Fortifications. The new Streets especially are very spacious, and watered with large Channels. The River *Amstel* (from whence it has borrow'd its Name) also passes through it, being let in under a very handsome Bridge of eleven Arches, and twenty six Paces broad, which makes part of the Wall. This whole vast Body is built upon Piles of Timber driven into the Earth close to one another, the Foundation of the Tower over-against St. *Catherine*'s Church, being said to consist of 6334 great Trees; and I my self was an Eye-witness of the vast number of Trees I saw them drive into the Foundations, where the *East-India* House was to be enlarged; and at another place, where they were laying the Foundation of a *Lutheran* Church.

Its Fortifications.

Town-house.

The noblest Structure of all this Country, and one of the finest in *Europe*, is their Stadt-house, built of Free-stone, 110 Paces in Front (in which it exceeds St. *Peter*'s Church at *Rome*), and 81 Paces deep. At its very entrance, on the right Hand, you see the Hall where Malefactors receive their Sentence; the Marble Statues here hanging down their Heads, as if grieved at what was pronounced. All the Floors are covered with Marble, and the Roofs finely carved, painted, and gilt; *Atlas* bearing a Globe upon his Shoulders, stands on the top of it. The Globe is of Copper of ten Foot Diameter, and exceeds, as far as ever I heard, or saw, any Ball or Globe of this nature. That of St. *Peter*'s Church at *Rome*, and that of *Florence*, being less; and such as I have seen upon any of the *Turkish* Mosques, don't come near this in bigness; nay, the largest of those three famous Balls at *Moscow*, are, according to the Report of those that have seen it, inferiour to this. But for the better Account of this great Structure, I will refer my self to a Treatise in Folio, with Figures, giving a particular Description of all its Curiosities.

Exchange.

The Exchange of *Amsterdam* is very fair, exceeding large, and frequented by an incredible number of People. Most of their Churches are goodly Edifices. The Partition with Ballisters of Brass in the new Church are truly noble; and the Carvings of the Pulpit exceed the rest.

The Tombs of *Van Huise* and *Heemskerk*, in the old Church, are very well worth a curious Traveller's Observation: The last of these two has rendred himself famous by his successful Expeditions in the *East-Indies*, after their first Settlement there, by the way of the Cape of *Good Hope*, after they had found the *North Passage* by *Nova Zembla* impracticable.

Their House of Correction is also worth observation; having at its Entrance two Lions bridled with this Inscription:

Virtutis est domare quæ cuncti pavent.

A proper Emblem for the purpose it was intended, *viz.* to bridle the Insolencies of such as are riotous in the Streets, or commit Disorders, and the Extravagancies of the Sons of Citizens, who are past the Government of their Masters and Parents. They are employed in gaining their Bread by rasping *Brasil* Wood; and if they refuse to perform their Task, and become incorrigible by Blows, they (as we were told) put them in a large Cistern, with a Pump by them, and so letting in the Water upon them, force them to work bravely for their Life.

Publick Structures.

Their *Spin-huis* is intended for the Correction of young Women, such as live loosely, or are taken in the Streets, and other suspicious Places: Sometimes the Citizens send their Daughters hither for Chastisement, and these have Chambers allotted them; I saw above 100 Women in one large Room, some of which were very well dress'd.

In the Hospital for Children are 600 Orphans, well educated and look'd after.

The *Dolhuis* is like our *Bedlam*, intended for Delirious Persons.

The *Gast-huis*, an Hospital for the Sick; as the *Mannen-house* is an Hospital for Old Men.

They have besides this, a laudable Custom throughout all *Holland*; which is, that upon the Appointment of any Meeting at a Tavern, or any other occation, certain Forfeitures are put into a Box kept in all Publick Houses, for the use of the Poor, which is the Reason that scarce ever any Beggars are seen in the Streets.

East-India-House.

Their *East-India*-House contains an incredible Store of Spices, and other *Indian* Commodities.

Their Admiralty-House, where they keep their Stores for Shipping, is surrounded with Water for its greater security, and near it lie 72 Men of War. On the top of this House (as most of note of this City), is a Cistern for the Reception of Rain-Water, to supply the defect of Spring-Water, which is very scarce here.

At the entrance of the Gate, we saw the entire Body of a Man preserved from Corruption, enclosed to the Waste in a Canoe, made of Fish-skin, so closely sewed together, that no Water could get in.

The chiefest Streets of *Amsterdam* are, the *Harlem-Street*, the *Cingel*, *Princes Graft*, *Kaisers Graft*, and *Heeren Graft*, as also the *New Island*. Among other Rarities I saw here a Globe, the Workmanship of *Vinghoones*, betwixt six and seven Foot Diameter; it was all of Copper, and very well painted, with all the new Discoveries made 1641, at 42 Degr. S. Lat. and 170 Longit. those towards the N. W. of *Japan*, about *Nova Zembla*, the *Tartarian* Sea, beyond the Streights of *Vogats*, viz. *New Holland*, *West Friesland*, &c. Tho' most of those Discoveries are contradicted by *Martiniere*, who made a Voyage into those Parts 1653, from *Copenhagen*, especially as to the true Position of *Zembla*, its consistency to the Continent, the length of the Streights of *Vogats* (which they make ten, but be 35 *Dutch* Leagues), and a passage through it into the *Tartarian* Ocean.

I had the Curiosity to take a Prospect of the City from the Steeple of the Church, which by reason of the uneveness of the Houses, did not appear altogether so beautiful as those of *Italy*, which are flat on the top. Every Day at Eleven a Clock in the Forenoon, there is very good Musick at the Stadt house, being the Gift of the Earl of *Leicester*. The Chimes, of which there is a Sett in most Steeples here, make also a very agreeable Harmony.

Among other Persons of Note, I got into the Acquaintance of Dr. *Ruish*, who shew'd me many Curiosities in Anatomy; such as the Skeletons of Children, and Fœtus's of all Ages very neatly done; the Lymphatick Vessels preserved, with all the Valves; all the Vessels of the Liver separated from the fleshy part; many Muscles dissected, and whole Bodies kept entire, without the least signs of Corruption.

Dr. *Swammerdam* shew'd me several of his Experiments, according to his Treatise *De Respiratione*, with a Collection of many Insects. *Glauber*, the noted Chymist, gave me a sight of his Laboratory. And *Blasius*, famous for his Observations upon *Vslingius*, gave me many Marks of his Civility.

Jews of *Amsterdam*.

It is to be observed, that the Jews live at *Amsterdam* in more Splendor than in any other part of the World, being provided with magnificent Houses, and a very fair Synagogue, and have among them Persons of Learning, and endowed with other good Qualifications; some of them having lived under the Notion of Christians in other places. There was one *Juda Lee*, who had a Model of the Temple of *Solomon*, the Fort of the Temple, the Tabernacle, and many other Curiosities of that nature.

I also saw the Ceremony of the Circumcision of a *Jewish* Child; they thrust a Probe betwixt the *Glans* and *Præputium*, and dilating it so, that both the inward and outward Skin be drawn forward, by a certain Instrument they hold the Skin close to the Instrument; the remaining Skin being put back immediately, the Blood stopp'd, and the Plaister apply'd: All there present singing all the while, that the Cries of the Infant may be the less heard.

I pass'd

I pass'd from *Amsterdam* to *Utrecht* in seven Hours, in one of their *Token Schuyts*, or large Boats, drawn by Horses, through the artificial Channels which are made for this purpose in most of the Provinces, as well of *Holland* as of the *Low Countries*.

Utrecht. *Utrecht*, (anciently *Antonina*, and afterwards *Ultrajectum*), the Capital City of the Province of the same Name, is very large, and handsomely built. It has been an Episcopal See for near these thousand Years: Its first Bishop was *Willebald*, an *English-man*; whose Successors grew so potent in process of time, that they waged War against the Earls of *Holland*. It was made an University 1636. The great Church has three Steeples one above the other, from whence I took a full view of the circumjacent Country, which is very plain, and so populous, that there are no less than 51 walled Towns, to any of which you may go in a Day's Journey thence. Here is also an *English* Church, in the middle of which is a Pillar, the Foundation of which was laid upon Bulls Hides, 1099, with the Picture of a Bull with this Inscription:

Accipe Posteritas quod per tua secula narres,
Taurinis cutibus fundo solidata columna est.

The Library belonging to this Church, has divers old Manuscripts, and among the rest, a Bible in six Volumes, painted and gilded after a very ancient way. The two *German* Idols, bestowed upon this place by the Emperor *Henry* IV. are worth taking notice of for their Antiquity's sake: As also a Horn said to be made of a Tooth. I saw also three Sea-Unicorns Horns (being an Animal in the Northern Seas), one of which being tipp'd with Silver, serv'd for a Drinking-Cup. They were about five Foot long; tho' the King of *Denmark* has two that were taken near *Nova Zembla*, that have ten Foot in length: This King's Father had so many of them, that he bestowed above 100 of them for the making of a magnificent Throne. I my self have seen some fifteen Foot long, and a Walking-Staff, a Scepter, Scabbard for a Sword, and other Curiosities made of the Teeth of this Animal; but could never be convinced of its Effects against Poyson, or any contagious Distemper, tho' I have given it frequently, and in very great quantities.

Here I had also the Honour to see Dr. *Cyprianus ab Oesterga*, Dr. *Regius*, *Voetius*, the only Member left alive of the Synod of *Dort*; but unfortunately miss'd the sight of the famous *Anna Maria Skurman*, she being gone into the Country, yet had the good Fortune to see her Picture, drawn by her own Hand, with this Inscription:

Cernitis hic picti nostros in Imagine vultus,
Si negat ars formam gratia vestra dabit.

In the Painters Hall of this City are very good Pieces of Painting, many Heads done by *Van Colen* and *Tuart*; some Landskips of *Softleven*, and very good *Turkish* Habits, by *Vander Meer*.

The Market-place, or Piazza, is a very fair one, into which abutt some long Streets; but the Pall-mall without the Town, with five Rows of very tall and fair Trees on each side, surpasses for pleasantness all the rest.

I travell'd from *Utrecht*, in two Hours, to *Vianen*, and crossing the River *Leck* to *Vianen*, where there is nothing remarkable, besides the House and Gardens of Count *Brederode*, accounted the Noblest Family in *Holland*, as that of *Wassenger* is the most ancient, and that of *Egmont* the richest. A certain Mount belonging to this Garden, makes part of the Rampart of the place. The Statues of the Twelve *Cæsars*, of *Alistede*, with some Pyramids, Partitions, and Paintings, are Ornaments to a Travellers Curiosity.

Hence I pass'd by Boat through the Country of *Arkel*, and came the same Night to *Gorcum*, a City situate near the three Rivers, the *Linge*, the *Waal*, and the *Maese*: It has a pretty handsome Market-place, and a Church with a very high Steeple. The Fortifications are of Earth, and over the Water-Gate you see this Inscription:

Civitas in quâ maximè Cives legitimè parent, & in pace beata, & bello invicta. 1642.

Which Inscription seem'd to have been fulfill'd 1672, when the powerful Army of *Lewis* XIV. King of *France*, who conquered thirty Cities in one Campaign, did not extend their Conquests beyond this place.

Worcum. From *Gorcum* I went to *Worcum*, on the other side of the River, and so by the Castle of *Loevestein*, famous for the Imprisonment of *Barneveit*; which since that time has given that Name to the whole Party, which is generally call'd in *Holland* the *Loevestein* Faction.

Passing further up the *Maese*, we came the next Day to *Hertogen Bosche*, having left *Prove* on the left, and *Heusden* on the right hand. This City call'd by some *Sylva Ducis*, *Boisleduc*, and *Buldue*, is a well fortified City, situate upon the River *Dessa*, or *Dese*, which joins its Waters two Leagues below this place with the *Maese*, being one of the chiefest Frontiers belonging to the United Provinces on that side, and strong both by Art and Nature. Its Avenues are only Causeways made through the Marshes, with various turnings, commanded by six small Forts; besides which, the Town is both commanded and defended by a Citadel, consisting of five regular Bastions, each Curtain being 84 Paces long, the Faces of each Bastion 63, and the Flank or Neck 24. The Market-place here is triangular.

In the Cathedral (which is dedicated to St. *John*) are many of the painted Arms of the Knights of the Golden Fleece, and on the upper Stalls an Inscription containing a short Account of the first Institution of this Order, by *Philip* Sir-named the *Good*, Duke of *Burgundy*, *Lorrain*, and *Brabant*. It was made an Episcopal See 1559, and taken by the *Dutch* from the *Spaniards* 1628.

From hence we pursued our Journey through a plain and sandy Country to *Breda*, a City situated upon the River *Merck*. It is very well fortified, with a large Ditch round the Counterscarp, and a Ravelin betwixt each Bastion, joined to the Rampart with-inside of the Ditch; besides a good number of Half-moons and Horn-works, and a Parapet strengthned with a double Row of Elms. This place belongs to the Prince of *Orange*: The *Spaniards* took it in the beginning of the Low Country Wars; but the *Dutch* not long after surprized it, by putting 80 armed Men in a Boat covered with Turf, who thus entred the Castle.

It was retaken by the *Spaniards*, 1625; and afterwards regained again by *Frederick Henry* Prince of *Orange*. It has a very fair Church, in which are many goodly Tombs; and among the rest those of *Engelbert* Count of *Nassaw*, with his Family; of the Heer *Van Horn*, and his three Wives; and of *Henry* Earl of *Nassaw*, who being the Founder of the Castle of *Breda*, his Armour is supported by four Warriours upon their Knees. The Gardens, Gallery, Walks, and Dials belonging to this Castle, are worth a Traveller's Observation.

From *Breda* we travell'd by Land to St. *Gertruydenberg*, the utmost Frontier Place of the *Dutch* on the North-side of *Brabant*. It is of no great extent, but abounds in Fish, which are catch'd in a kind of a Lake call'd the *Heart*, made so by the falling into it of the *Maese*, and divers other Rivers. You see here a very fair Church, and the Ruines of a large Steeple.

We pass'd hence over a large Water, which had overflow'd the circumjacent Country, and drown'd 22 Parishes, and passing by the ancient Tower call'd *Marvey* House, came to *Dort*, or *Dordracum*. This City, which is seated in the Waves of those great Lakes made by the *Maese* and the *Waal*, is reckoned the chief Town of *South Holland*, as having the Privilege of the Mint, and the Staple for *Rhenish* Wine, and *English* Cloth, who have two Churches here, as the *French* have one. The great Church has a Steeple of 312 Steps high: I took a View of the Apartment where the Synod of *Dort* had been held 1011; which was a very fair one, and had an extraordinary agreeable Prospect into the Country. The large round-bellied Vessels which stand betwixt this City and *Cologne*, intermix'd with long *Liege*-Boats, afford an odd Spectacle to Strangers.

I embark'd in a Vessel bound for the Isle of *Walcheren*, and sailing by most of the Island of *Zealand*, and in sight of the Towns of *Williamstadt*, *Zirickzee*, *Tergoes*, &c. we came ashore at *Ter-Vere*, where there is a convenient Harbour. It has a fair long Market-place. The *Scotch* have had a Factory here for above 200 Years; over-against it you see a Steeple, the remainder of a goodly Town, which has been swallow'd up by the Sea.

From hence to *Middleburg* the way is paved with a kind of small hard Brick; the same being to be observed in many places also in *Holland*.

The City of *Middleburg* is seated in the very Centre of the Isle of *Walachria*, being very well built, spacious and populous, being the 4th Chamber, or Port, of the *East-India* Company; *Amsterdam* being in the first rank, *Rotterdam* the second, and *Flushing* the third. There is a broad Water within the compass of the Town, from whence is cut a Channel, which carries Vessels to the Sea. It is very well fortified, and beautified with many fair Churches, and other Publick and Private Structures. The new Church is of an Octogonal Figure, with a Cupolo, the Steeple of the old Church is famous for its height, the Town-House considerable for its old Statues, and the

Piazza

Piazza of a circular Figure. The Country round about it being cover'd with fruitful Gardens and Orchards. The *Zealanders* are generally great Lovers of the Family of *Orange*. Hence I went to *Flushingen*, a strong and good Sea-port Town, strengthen'd with Stone Walls towards the Sea, and Mud-works to the Land-side. This being one of the first places the *Netherlands* took from the *Spaniards* 1572, the same was together with *Rammaken* and the *Briel*, made a Cautionary to Queen *Elizabeth*, 1585, and restored again to the United Provinces 1616, by King *James* the I. The Mouth of the Harbour is surrounded with Piles and Posts driven into the Ground, and these again are secur'd by Rushes, Flags and Reeds, staked down, intermix'd with Osiers and Hurdles, to break the force of the Water. The Stadt-House is a goodly Structure, standing in the Market-place, and affords a fair prospect into the Front, which is adorned with three rows of Pillars, one above the other; the lower-most Row being of the *Dorick*, the second of the *Ionick*, and the uppermost of the *Corinthian* Order, on the top of which is a Gallery, from thence you may discover Ships at a great distance at Sea. We saw here many Ships, and among them some Men of War of a considerable bigness. The Women in the Isle of *Walcheren* are clad for the most part in red Cloth, and wear Straw-Hats. If a Man happen to die here, a great bundle is laid at the Door, if a Child a little one, if a Male, it is put on the right side, if a Female on the left. When a Woman is deliver'd, they give notice of what Sex the Child is of to the Neighbourhood, by tying a piece of Lawne to the Rapper of the Door, made up into the shape of a Puppet, and representing the Sex of the new-born Child.

Of Flushingen.

I returned to *Middleburgh* by Land, where I embark'd again, and passing down the River by the Fort *Rammaken*, entered the River *Schelde*, and sailing up, pass'd the Fort *Frederick Henrick*, and so to the Fort *Lillo*, where we were forc'd to stay till our Ship was searched. Just opposite to the last of these two Forts, on the other side of the River is the Fort call'd *Liefgens hoek*, and on the other side another call'd *de la Croix*, the last belonging to the *Hollanders*; The *Spanish* Forts to defend those Frontiers are, The *Philip*, the *Pearl*, and the *Mary*.

The River *Scaldis* or *Schelde*, mentioned by *Cæsar*, has its rise in the Country of *Vermandois*, and passing by *Cambras*, *Valenciennes*, *Tornay*, *Dornick*, *Oudenard*, *Ghent*, *Rupelmond* and *Antwerp*, divides it self afterwards into two Channels, whereof the Southern is call'd the *Hont* (*Dog*), the other taking its course from *Bergen-op-Zoom*, exonerates its self into the Sea, betwixt the Isles of *Zealand*.

The River Schelde.

The next Day we continued our Voyage upon the *Schelde*, and arrived safely at *Antwerp*. This City is of a large extent; its Walls, which are very broad, with divers rows of Trees upon them, being faced with Brick and Free-stones, after the modern way, tho' the Bastions are none of the largest, but the Ditch is very broad and deep. The Cittadel is accounted one of the best Fortifications of five Bastions, in those parts, being very well lin'd with Brick and Stones, and commanding the City, the River and the adjacent Country. There is also another Fort near the *Schelde*. The Exchange of *Antwerp* is supported by 36 Pillars, each being carved a different way. It stands in the middle of four Streets, which lead unto it, from four different sides. The *Meer* the most remarkable Street of the City, has the Water running under it, and here the Coaches meet to take the *Tour-à-la-mode*; at one end of it you see a large Brass Crucifix, placed upon a Pedestal of Marble. The *Jesuits* Church here, exceeds for magnificence any that ever I met with out of *Italy*. The Front is a noble piece of Architecture, having the Statue of *Ignatius Loyola* on the top. The Roof is for the most part painted by *Rubens* and *Van Dyke*; the Carving is most excellent, and the Flower Work done by *Segers* a *Jesuit*. It has a very handsome Library, kept in four Chambers, the Founder of which was *Godfrid Houtappel*, whose Tomb, with his Wife and Children, is to be seen in a Chapel on the South side of the Church. The *Carmelite* Church is famous for the large Statue of Silver of the Virgin *Mary*. The Church *of our blessed Lady* is the biggest, and the Steeple the noblest and one of the best built in the World, being 459 Foot high. This Church abounds also in many curious pieces of Paintings, and among the rest, there is one highly esteem'd, done by *Quintin*, who being at first a Smith, made that curious Iron Work of the Wall before the West Door; but afterwards, to gain his Mistress, turned Painter, and became famous in this Art. His Head you see cut in Stone near the Church Door, with this Inscription:

The City of Antwerp.

Connubialis amor de Mulcibre fecit Apellem.

I took also a view of the Abby of St. *Michael*, seated upon the River *Schelde*; among other Rarities I saw here a Glass, which represented the Pictures of our Saviour and the Virgin *Mary*, collected from the putting together of divers other Heads: One being represented from a certain Picture, which contained no less than 13 Faces, and the other from one of 12. That of the Virgin *Mary* had this Inscription:

Diva nites variis expressa Maria Figuris.

In this Abby, which contains 63 Monks, I saw also the Tomb of a Countess of *Brabant*, who was drowned, and her Statue. Near the Wharf-gate, you see the Church of St. *Walburgis*, an *English* Saint. The Town-house of *Antwerp* is a goodly Structure, that belonging formerly to the Eastern Merchants very magnificent and large, but run to ruin of late; here were preserved several sorts of Musical Instruments, not known, much less understood now-a-days. The *Hessen* House has been none of the worst in former time. The Water which they make use of in Brewing, is conveyed hither from *Hercteal*, at least 30 Miles, by means of a peculiar Channel. This City produces also many great Collections of Pictures, and some of the best Miniature, done by *Gonsol*; of that kind I saw one curious piece, done by 35 several Masters.

I went from *Antwerp* to *Brussels* by Water, but was fain to change Boat five times, by reason of the many Locks and Sluces, the Country about *Brussels* being 200 Foot higher than about *Antw*... There is a place call'd *Fontaine*, about five Miles from *Brussels*, where three Rivers cross one another, and one of them is carried over a Bridge. The Market place of *Brussels* is an oblong square, having the Town-house at one end, and opposite to it the Royal Palace, near which the Counts of *Egmont* and *Horne* were beheaded. On the top of the Town-house you see the Statue of St. *Michael*, the Patron of this City, in Brass. In the Church of the *Carmelites*, the Altar is a very noble piece, and near unto the Church stands a Statue of a pissing Boy, which serves instead of a continual Conduit. We also took a view of the Armory, which was well furnish'd formerly, but has now only some few Remains, such as the Armour of *Charles* V. of the Duke *d' Alva*, of the Cardinal *Infanta*, and some few others, and divers Bucklers curiously wrought; the Sword of *Charles* V. wherewith he us'd to make the Knights of the *Golden Fleece*; and some Banners taken at the Battel of *Pavia* from *Francis*. Before the Court of the Palace stand five Brass Statues, and on one of the Towers, a Bird pierc'd with an Arrow, in memory of the Shot which the *Infanta Isabella* made, when with an Arrow she kill'd a Bird. The Park has very pleasant Walks, set with Trees, and intermingled with Grotto's, Fountains and Water-works; one piece comes near to *Frascati*, imitating the sound of all musical Instruments, by a kind of perpetual motion. But what is most surprising in this Park is the Echo, which makes ten or twelve distinct Replies. The Church of St. *Gudula* claims the preference for bigness; and two Chapels here are worth the Travellers Observation; in one of which is presented the Host, which bled when stabb'd by the *Jews*. The *Dominican* Church is famous chiefly for the Monuments of the Duke and Dutchess of *Cleve*, in *Corinthian* Brass. The *Begennes*, or Pious Maids (a kind of Nuns) of which there are near 800 at *Brussels*, have also a very fair Church, which is milk-white, and lately built: The *English* have also a Nunnery here. There were at that time above 360 Houses shut up, infected with the Plague, and marked with this Token,

Brussels.

The Armory.

The Park.

†
IHS

which made me hasten away, so that after I had dined at the Fish-Tavern (noted for its many Pictures) I returned to *Antwerp*, and travelling, the 4th *October*, thro' an open Country, I took up my quarters that Night at *Molin bruste*, and entring the Country of *Liege* the 5th, arriv'd the 6th at *Maestricht*, a strong City, situated upon the *Maes*, four Leagues below *Liege*. It is chiefly considerable for its Out-works, the Wall it self being old. To remedy the inconveniency arising to the Town from an adjacent Hill on the S. E. side, they have made a Horn-work within a Musket-shot of it, and a high Bastion answering to it, covers the Town. Under this

Maestricht.

Hill is one of the best Quarries of Stone in the World. On the other side of the *Mass* is a Suburb call'd the *Wicke*, rather stronger than *Maestricht*, unto which it is join'd by a Bridge of nine Arches. The Country on that side is flat: The Houses of *Maestricht* are none of the handsomest; yet is the Town-house a goodly Structure, standing in one of the Piazzas; in another Piazza stands the Great Church. This Town was taken by the *Spaniards* 1632. *October* the 7th, I pass'd thro' *Gallop*, and came the same Night to *Aken*, *Aix la Chapelle*, or *Aquisgranum*, famous chiefly for its hot Baths, of which more hereafter. From hence I pursued my Journey towards *Juliers*, but being late we pass'd by it, leaving it to the right. Not far from this City runs a shallow but swift River, call'd the *Roer*, at the Confluence of which with the *Mass* is *Roermonde*, the Capital City of the *Spanish Gelderlands*, seated upon a rising Ground. From *Juliers* I travell'd to *Cologne*, where I arriv'd the 10th of *October* 1668.

A Journey from *Cologne* to *Vienna*.

A Description of the City of Cologne.

Cologne, *Cöllen*, or *Colonia Agrippina*, anciently the Chief Seat of the *Ubii*, who first of all inhabited the Country of *Bergues*, were infested by the *Germans*, and imploring the Protection of the *Romans*, were by them placed on the other side of the *Rhine*, and settled in this place by *Agrippa* Lord Lieutenant of *Gallia*, and was afterwards named *Colonia Agrippina*, in honour of *Agrippina*, Daughter of *Germanicus*, and Wife of *Claudius*, whose Birth-place it was. It may for its extent vie, with any City of *Germany*, and is fortified to the Land-side with two high Walls and two deep Trenches, and beautified with several rows of pleasant Trees, and secur'd on the side of the *Rhine* by a Wall of Stone; but its greatest strength consists in some Out-works, Half-moons and Ravelins. The chief Streets are broad, and pav'd with broad Stones. *Maternus*, who was present at the Conquest of *Arles*, was their Bishop at least 1350 Years since. Great part of the Town is taken up with Churches and Monasteries, most of which are very well endowed, there being to most of the Houses of the Canons and Prebends, large Gardens and Vineyards. The Church of St. *Kunibald* lies on the North side of the Town, but the Convent of the *Dominicans*, is a very fair modern Structure. The *Jesuits* Church is full of rich Ornaments; and that dedicated to St *Gereon* (who was martyred thereabouts in the time of *Maximianus*) contains above 1000 Saints Heads and has another Church near the Quire. In the Convent of the *Carmelites*, the Treaty of Peace, 1673, was held, which took no effect: In the Church of St. *Ursula* you see her Tomb, and those of 11000 Virgins slain by the *Huns*. The Tomb of *Ursula* has this Inscription:

S. pudicam Sanctæ Ursulæ indicio Columbæ detectum.

Upon many of these Tombs were old Crosses and Lamps. The Church is also full of the Bones and Heads of Martyrs. The Cathedral of St. *Peter* is a large Structure, but remains unfinished. Within the Body of the Church are four rows of Pillars, and the Quire is very high and handsomly built; behind it are supposed to be the Tombs of the three Wise Men of the East, or the Kings of *Arabia*, commonly call'd the three Kings of *Cologne*; *Melchior*, who as they say offer'd Gold, *Gaspar*, Frankincense, and *Balthasar* Myrrhe. They relate that their Bodies were first translated to *Constantinople*, by *Helena*, the Mother of *Constantine* the *Great*; from thence to *Milan* by *Eustorgius* their Bishop, whence they were remov'd above 500 years ago, viz. 1164 to *Cologne*, by *Reinold*, Bishop of this Diocese. All the Canons of this Church must be Noblemen. Upon one of the Ruins in the Street you see a Tomb made of one Stone, of which kind many more are to be met with in other places of this City. Of these I saw a great number at *Arles* in *Provence*. The Town House is a goodly Structure; on the Front of which is a Man in *Basso relievo*, engag'd with a Lion, who, as they relate, was a Burger-master of that City, who having exasperated the Clergy against him, upon some Difference, they sent in a Lion upon him, whom he slew upon the spot. The Elector of *Cologne*, who is also their Archbishop, has two Palaces here, but by mutual agreement, is not to stay above three Days at a time here. It is a free imperial City, notwithstanding which, it does homage to the Elector in these following Words: *We the free Citizens of Cologne, promise to be faithful and favourable to the Arch-bishop, as long as he preserves our Rights and Honour, and the ancient Privileges of Us, our Wives, and Children, and of our City of Cologne.* The Inhabitants are generally *Roman Catholicks*, and the City, by reason of the vast number of Convents, Churches, and Reliques, is titled the *Rome of Germany*. However the *Lutherans* have a Church within the Precinct of the Walls, and the *Calvinists* another at *Mulheim* about two Miles below it on the other side of the *Rhine*. Just opposite to *Cologne* is the Village of the *Deutz*, inhabited chiefly by *Jews*. They speak but a kind of odd *High-Dutch*, but to recompence this, the *Latin* and *French* are much in use here: It was made an University 1388, and has four very good Hospitals, one for young and old Persons that are infirm, and another for the Sick. After we left *Cologne*, we were drawn up the *Rhine* by Horses, and lodged the same Night at a small Village, near which *Julius Cæsar* made his Bridge over the *Rhine*. We came the next Day to *Bona*, the ordinary residence of the Elector of *Cologne*. It was formerly call'd *Castra Bonnensia*, as being the Station of the sixth Legion in Winter, in the time of *Tacitus*. The Archbishop's Palace is a noble Edifice, having a Chamber a good way into the *Rhine*. We took our Quarters this Night at the Foot of one of the seven Hills, near the *Rhine*, most of which have old ruined Castles upon them. On the 15th we pass'd by a very pleasant Island, with a Convent in it, we saw also the Convent at *Remagen*, built upon a Rock, and fortify'd with divers round Towers, and came the 16th in the Morning to *Andernach* or *Antenacum*, one of the *Roman* Fortresses upon the *Rhine*. These are some that affirm that this was the Birth-place of *Caligula*, and that *Valentinian* was buried near it. There are divers Mineral Springs hereabouts. The City is only fortified with an old Wall: The Water passage being grown tedious to by this time, we hired a Coach to *Coblentz*, and passing thro' a very agreeable Country, planted with Wallnut Trees, and in sight of two of the Elector of *Treves*'s Country Houses, we cross'd the River *Mosselle*, over a very fine Bridge, sustain'd by thirteen Arches, built 1344, by Archbishop *Baldwin*. We went immediately to the Convent of the *Dominicans*, very agreeably seated upon the very Banks of the *Rhine*; the Prior of which being in our Company, he would needs keep us with him all Night, and entertain'd us with a handsome Supper, and excellent *Mosselle* Wine.

Coblentz or *Confluentia*, from its situation at the Confluence of the *Rhine* and *Mosselle*, which make two sides of it, the third being a goodly Fortification, after the modern way, from one River to the other, which makes it of a triangular Figure. It has an old Wall within the near Works, and is under the Jurisdiction of the Elector and Archbishop of *Treves*, as is likewise in the Castle of *Hermanstein* (*Hermanni sterna*) by some call'd *Ehrenbreitstein*, built just over against it on the other side of the *Rhine*, being join'd to *Coblentz* by a long Bridge. At the Foot of a Rock just underneath this Castle, you see a very noble Palace belonging to the Elector, having two very large Wings, and a Fort with five Pavillions, facing the *Rhine*. Not far from *Coblentz*, the *Carthusians* have a Convent pleasantly seated upon a Hill.

October the 17th, we continued our Voyage upon the *Rhine* to *Boppart*, a wall'd Town upon the Western Bank, an ancient Fortress of the *Romans*, known by the Name of *Bodobriga*.

The 18th, we dined at St. *Goar*, a place situate upon the River, under the Jurisdiction of the *Landgrave* of *Hesse*, who has a Castle here. On the out-side of the Wall of the Town is fastned a collar of Brass, given as they say, by *Charles* V. It is the Custom that such Strangers as come ashoar here, must put their Knees into this collar, when they are ask'd, *Whether they will be sprinkled with Water, or Drink, or Wine?* If they are for the Wine, they must give an Entertainment of Wine to the Company. The Queen of *Sweden* passing by that way not many Years before that, had presented them with a great Silver Cup, which they commonly drink out of. We took up our Quarters that Night at *Wesel*, seated betwixt the River and a high Hill. In the Market-place they shew the print of St. *Hubert*'s Horse's Foot in Free-Stone.

The 19, we pursued our Voyage to *Bacharach* (*Bacchi aræ*) famous for its excellent Wines; under the Elector *Palatin*'s Jurisdiction.

Hence we pass'd by a very old Castle, situate upon a Rock in the middle of the *Rhine*, call'd *Pfaltz*, because hither formerly the Princesses *Palatines* were sent to be brought

brought to bed. The next Day we pass'd along with a rapid Stream, which is very dangerous thereabouts, by reason of the many Rocks that lie under water; and a little above it we had a full sight of a round Tower, on a Rock in the *Rhine*, commonly call'd *Mouse-Tower*, built by *Hatto*, Archbishop of *Mentz*, who, as they relate, having at a time of general scarcity, invited a great number of Poor, to present them with some Corn, but instead of relieving them, set fire to the Barn in which they were enclosed, and whilst they made lamentable Cries, he said, *Hear how the Mice crap.* Soon after, being persecuted with Rats and Mice to that degree, that he was not able to abide in his Palace, he built this round Tower in the *Rhine*, to avoid them, but being also prosecuted thither by the Mice, he miserably ended his Days there.

The Mouse-Tower.

Not far above it, upon the Western Bank, you see the Town of *Bing* or *Bingium*, an ancient *Roman* Fortress upon the *Rhine*, at the Conflux of that River and the *Nævus* or *Naw*, over the last of which is a very goodly Stone Bridge. It belongs to the Elector of *Mayence*. From *Bing* we set forward for *Mayence*, and in our way at *Rudesheim* in the *Rhine* (so famous for the excellency of the Wine) we were shew'd a Boy, whose Hair was as thick and woolly as any of the *African* Moors, but of a whitish Colour; I took some of the Hair along with me.

Mentz, or *Mayence*, *Moguntia*, by the *Latins*, is situate just below the Confluence of the two Rivers, the *Main*, and *Rhine*, over against it; extending in length towards the River, and well stor'd with goodly Monasteries, Churches, and publick Buildings; but the Streets are narrow, and the private Houses built after an antick Fashion; the Country round it is extreamly fertile. It was made an Univerlity 1486. or according to others, 1461. *Mayence* also claims the invention of Printing, but may rather be said to have brought it to perfection. This place is famous for the defeat of the *Roman* Legions, under *Varus*, by the *Germans*, which happened near it. *Gustave Adolph*, the victorious King of *Sweden*, made his publick Entry here, 1631. in great magnificence, and laid two Bridges, one over the *Main*, the other over the *Rhine*, the first of which is taken away since, but the other remains in the same station. The Elector of *Mayence* is the first in rank of the *Electoral College*, which has his place at the Emperor's right Hand, in all publick Assemblies.

The Elector's Territories.

But his Territories are not suitable to his Dignity here, far less than those of *Cologne* and *Treves*, besides, that they lie scattering in the *Palatinate* and *Franconia*. However his seizing the City of *Erfurdt* has been no small addition to his Power; where he has built a Citadel on St. *Peters-hill*, being an in-let into *Touringia*.

The City of Frankfort.

From *Mayence* we continued our Voyage up the *Maine* to *Franckfort*, an imperial City, call'd *Trajectum ad Mœnum*, because the *Franks* used to pass and repass here, whilst they made War upon the *Gauls*, and to distinguish it from *Frankfurt* upon the *Oder*, an University belonging to the Elector of *Brandenburgh*. The City is very large, divided into two separate Bodies by the River, the lesser of which is call'd *Saxon-House*, join'd to the other by a fair Stone-Bridge, supported by 12 or 13 Arches. The advantage of the River *Main*, which passes by *Bamberg*, *Schweinfurt*, *Wurtzburg*, and other places, and is join'd by the River *Tauber*, and others of less note; together with its running into the *Rhine*, renders this City very commodious for Traffick, as may be seen at the time of the two great Marts kept there every year, in *March* and *September*, when there is an incredible concourse of People of all Nations, who buy and sell their commodities, but especially Horses and Books, tho' at other times the Book-sellers have but little business here. But what makes this City most famous is the Election of the Emperor, which by the *Golden Bull* is instituted to be made here. For the rest, it is well fortify'd, and inhabited for the most part by *Lutherans*.

In *Saxon-house* is a Palace, belonging to the Knights of the *Teutonick Order*, which is a Sanctuary for Debtors and Criminals, yet only for fourteen Days. Abundance of *Jews* live in, and frequent this place, they are distinguish'd from the Christians by their Habits, which is a Ruff for the old ones, and a Bonnet for the younger sort, and a peculiar Head-dress for their Women.

The Collegiate Church, dedicated to St. *Bartholomew*, is built of a old Stone, has a very high Steeple, and is very large; but what makes it most considerable is, that many Emperors have been crown'd here. The whole City is beautified with several fine Fountains, and many good Houses.

We continued our Journey by Land from *Franckfort* thro' the *Bergstraet*, and passing by *Darmstadt* (belonging to the House of *Hesse Darmstadt*) travelled thro' a very fruitful Country, full of Wall-nut Trees, Vines, Corn, and Tobacco in some places. Coming to *Heidelberg*, we pass'd the River *Neccar* or *Necarus*, arising in the *Sylva Martiana* or *Black Forest*, and continuing its Current thro' the Duke of *Wittenberg*, joins its Waters with the *Rhine* at *Manheim*. It passes by *Sultz*, *Tubingen*, *Stutgard*, *Hailbrun*, *Heidelberg*, and divers other goodly Cities.

A description of Heidelberg.

As for the City of *Heidelberg* (commonly the residence of the Elector *Palatines*) its situation is betwixt a River and a ridge of Hills, extending from East to West, which makes it unfit for a regular Fortification. It was made an University, 1346; It was taken by the *Spaniards* 1620. when the famous Library that was preserved there in the Great Church, was carried to *Rome*, and added to the *Vatican* Library, where I saw it 1664 on one side of the Gallery, opposite to that of the Duke of *Urbin*'s. This Church as well as that of St. *Peter*, contains many beautiful Monuments of the *Palatine* Family and other Persons of note. The *French* have a Church here as well as the *Lutherans*, the last of which is call'd the *Church of Providence*, and the Elector, tho' a *Calvinist*, laid the first Stone of it.

Its Library.

The Town-House is remarkable for its Clock, which has divers Motions, and represents several Figures of Men fighting, of a Cock, &c. when it strikes. The Elector's Stables are near the River side, but one half of them has been ruined in the last *German* Wars, as well as the Statutes, that were on the outside of the Cattle, which being seated upon an eminency above the Town, has among other things a very large Tower, formerly call'd *Trutzkayser* or *Defiance to the Emperor*, the name of which is since changed into that of the *Star-fort*. Near it is a beautiful Garden, adorn'd with Grotto's, Caves and Water-works. But the most remarkable of all are the Cellars, well stored with Vessels of Wine, of a more than ordinary size, among which, that commonly call'd the *Tun of Heidelberg*, surpasses the rest, kept in a peculiar Celair, adjoining to the others, and built 1064. containing near 200 Tuns; Instead of Hoops it is made with large Knee Timber, like the Ribs of a Ship, well carved and painted, and supported by Pedestals likewise carved. On one side is a Stair-case 43 Steps high, leading up into the Gallery on the top of this great Vessel.

Castle.

Great Tun.

There is a certain solitary place not above a Mile from *Heidelberg*, where you see three very fine Springs come forth out of the Mountain, and after they have fill'd five Ponds, and passed thro' three Cascates or Falls, carry so strong a Stream thro' the adjacent Plains, that they turn four Mills within a small distance of one another. It is call'd the *Wolfs Fountain*, from a certain Princess, who, as they say, was torn to pieces near this place by a Wolf.

At *Heidelberg*, I was visited by two *English-men*, Mr. *Villers* and *Timothy Middleton*. These belonged to a certain Monastery call'd *Lobenfeldt*, possess'd formerly by the *Jesuits*, but bestowed since upon the *English*, who to the number of 100, leaving their Native Country, 1661, setled themselves with their Families in this Convent, a few Miles from *Heidelberg*. They call'd themselves *Christian Jews*, maintain'd a community of many things, did not cut nor shave their Beards, and observed many other Ceremonies enjoin'd in the Old Testament. Their Head was then one Mr. *Poole* of *Norwich*.

Whilst I tarried at *Heidelberg*, I took a turn to *Spires*, and afterwards to *Manheim*. The first (supposed to be *Urbs Nemetum* of the antients) is situate in a Plain near the Western Banks of the *Rhine*. The *Swedes* in the last *German* Wars demolish'd its Fortifications.

Spires.

The Episcopal See is under the jurisdiction of the Archbishop of *Mayence*; it is well built, and has divers good Churches. In the Cathedral, which is beautified with 4 large Towers, the *Roman Catholicks*, *Lutherans* and *Calvinists* preach in their turns at different hours. It is very populous, by reason of the vast concourse of People which attend the Law Suits here. The Imperial Chamber, which was by *Maximilian*, establish'd at *Worms*, being since removed to *Spires*, in which, not only private Causes, but also the Differences betwixt the Princes of the Empire, are determin'd without appeal.

The Imperial Chamber here.

Manheim, lies at the conflux of the *Rhine* and *Neccar*, which from a Village, is in a few Years encreas'd to a goodly Town, with large fair Streets, being wall'd about and defended by a very strong Castle or Fortress. I saw the Model of a Palace the Elector designs to build here, and in that part which is already built, are divers very good Pictures, and among the rest, a Landskip, with the History of the *Swiss* Confederacy.

Manheim.

In our way from *Heidelberg* towards *Nurenberg*, we travell'd along the *Neccar* in Rocky Ways to *Mospach*; the second to *Foxberg*, where we saw nothing but an old Castle; and the same Day came to *Morkenthal*, or *Mergetheim*, the Residence of the Grand Masters of the *Teutonick* Order. It is a very well built Town, with a handsome Piazza, which has a Fountain in the Centre, and a Statue of one of the Grand Masters of this Order, with a long *Corridore* from the Palace.

Mergetheim, the Residence of the Master of the *Teutonick* Order.

This Order took its rise under the Emperor *Frederick* I. who in his Expedition against the Holy Land, being accompany'd by many Gentlemen of *Germany*, in emulation of the Knights Templers, entred into an Order, which being approved by Pope *Celestine* III. they waged afterwards War against the Pagans inhabiting *Prussia* and *Livonia*, and subdued them; of which they remain'd Masters, till they were at first divested of these Countries by the *Poles*, and afterwards by the *Swedes*; so that there is nothing remaining now of this Order, but a few Commanderies in *Germany*.

They wear a plain black Cross on a white Mantle; and the Dignity of Grand Master (who takes place of all the Bishops), is generally bestow'd upon one of the first Rank among the Princes of *Germany*.

As we pass'd by *Lauterbach*, we saw a Church, a very noble Structure on the top of a high Hill, where the Pilgrims perform their Devotions, in great numbers.

Rotenberg

The next place we came to was *Rotenberg*, an Imperial City, situate near the Head-Spring of the River *Tauber*; which after it has pass'd by *Rottingen*, and *Landen*, falls into the *Main* near *Wertheim*. Some have liken'd this City to *Jerusalem*, by reason of its many Towers, and Situation upon divers Hilly Places. We lodged that Night at *Burgperner*, and passing the next Day by *Schantzbach*, came before Night to *Nurenberg*.

Nurenberg

This City may very well claim the Prerogative of being the fairest of all *Germany*; most of the Houses being built of Free-stone, very lofty, and many of them painted on the outside, and adorned with gilded Balls on the top; they are generally six or seven Stories high; and tho' the City is at a good distance from any navigable River, and situate in a Barren Country, yet is it very populous, the Industry of the Inhabitants being such, as to be accounted the best Artificers in *Germany*, in Steel, Brass, Ivory, and Wood.

Its Churches.

The three chief Churches are the *Hospital Church*, but lately built; that of St. *Lawrence*, which is famous for its bigness, with two Steeples in the Front; and that of St. *Sebald*, which excels the rest. Here you see a wooden Crucifix so well carved, as to be valued at an excessive rate: Without the Church is another of black Wood. In short, as the *Lutheran* Religion is exercised here in its full pomp, so this stately Church, and especially the Pulpit, which is excellently carved and gilt, may challenge one of the first places among those of that Religion. Every Morning half an Hour is spent in this Church in reading certain passages out of the Scripture by the Priest, or else he preaches to the People.

The Senate-House.

The Senate-House is worth the Curiosity of any Traveller; the Hall is very spacious, and the Chambers lofty and adorn'd with many good Pictures, the Floor being paved with Stones gilt, and intermix'd with divers colours. In one of these Chambers you see the Picture of most of the Great Persons of *Germany*, that were entertain'd in the Halls; another of the Three Brothers of *Saxony*; an Elephant painted to the Life; a Piece of St. *John*, another of St. *Mark*, and two more of St. *Peter* and St. *Paul*, both done by *Albert Durer*; but that of *Adam* and *Eve*, by the same Hand, exceeds all the rest, with this Inscription:

Albertus Durer Almanus faciebat post Virginis partum, 1507.

There is also another very rare Piece, of St. *Luke* drawing the Picture of our Saviour, and the Virgin *Mary*. As you enter the Shambles, you see a large Ox carved in Wood, and painted over, with this Inscription:

Omnia licebent ortus sui que incrementa, sed ecce
Quem cernis, nunquam Bos fuit hic, Vitulus.

The Castle of *Nurenberg* is seated upon a Hill. The Emperor's Picture, his Chapel, a very fine Well, and divers other Pictures of the Electors, are very remarkable. They shew'd us also the Armour of *Hebbele van Gailingben*, a famous Sorcerer in those parts, and the Print of his Horse's Feet in the Wall of the Castle; from whence, as they tell you, he leap'd with his Horse over the Town-Ditch.

They were then busie in making a new Fountain; I must confess, that the Brass Statues intended for it, were excellent Pieces: The Sea-Horses were of a very large size, and the Sea-Nymphs exceeded the ordinary stature of Women; the Statue of *Neptune*, design'd to be set on the top, was above ten Foot high.

The small River *Pegnitz* passes through the City, near which are several Stone-Bridges; below it, it joins with the River *Rednitz*, which joins its Waters with the *Maine* at *Bamberg*, which last falls afterwards into the *Rhine*. The River *Rednitz* has its rise at *Weissenburg*, at no great distance from the River *Altmul*, which falls into the *Danube* not far from *Ratisbon*.

This Conveniency induced *Charles the Great* to endeavour a Communication betwixt the *Rhine* and the *Danube*, but after he had advanced about two *German* Leagues in this Work, his Warlike Employments, and some other Difficulties, made him give over this Design.

Altorff an University.

Not above four Leagues from *Nurenburg*, is *Altorff*, a Town under their Jurisdiction, made an University in 1623. They have here a very handsome Physick-Garden, containing above 2000 Plants. The Anatomy-School is not very large, yet has several Skeletons, of a Hart, of a Horse, of a Man, and of a Bear, bigger than a Horse; besides some very ancient Pictures, as that of *Moses*, and of a *Ninivite*. Dr. *Wagenseyl* (whose Brother travell'd with me from *Heidelburg*), Professor of the Law and History, shew'd me also a good Collection of his own, of Rarities and Coins, which he himself had gather'd in his Travels through *Europe*. In the University-Library I saw a fair *Hortus Eystetensis*, and *Tournefort*'s Collection of Plants, by his own Hands.

Leaving *Nurenburg*, we pass'd through *Newmark* in the *Upper Palatinate*, belonging to the Elector of *Bavaria*; and the next Day by the way of *Heinman*, (subject to the Duke of *Newburg*), to *Ratisbon*, anciently call'd *Augusta Tiberii*, and *Colonia Quartanorum*, from the Fourth *Italick* Legion, which had their Quarters assign'd them here, as being the chief place belonging to the *Romans* on those Frontiers. Some are of Opinion, that *Tiberius* setled a Colony here in the Year of our Saviour's Passion; but it owes its chief Increase to the Emperor *Arnulphus*. Near it falls the River *Regen* into the *Danube*, whence the *Germans* have given it the Name of *Regensburg*. It has a Bridge of Wood below the Town, and another of Stone, the fairest that is to be seen upon the *Danube*, being supported by fifteen Arches. It is an Imperial City, and tolerably well fortified, and has many goodly Buildings, both private and publick. The Cathedral of St. *Peter* is a very fair Edifice, on the South-side of which you see the Picture of St. *Peter* in a Boat, and on the opposite side the Apostle's first Mission. In the Piazza stands a little, but very near Church; the Convent of St. *Paul*, another of St. *Emerammus*, Bishop of *Ratisbon*, and a celebrated Saint in those parts: *Albertus Magnus*, who was also Bishop of *Ratisbon*, has made no small addition to its Fame. But that which is the chief Glory of this place, is the Diet, or General Assembly of the States of the Empire, which is not to be call'd together in any other place but here. Upon this occation the Vice-Marshal is obliged to take care that Lodgings be provided for the Persons that are to appear there; that Provisions may be brought thither in plenty, and sold at a set rate; that the place of the Assembly be adorned suitable to so great an Occasion, and the Publick Safety be not violated.

In this place I entred the famous River the *Danube*, which beginning to be navigable in *Suabia*, passes by *Donawert*, *Neuburg*, and *Ingolstadt*; 'tis increased by the River *Licus*, or *Leck*; by which the Commodities of the famous City of *Augsburg*, are transported into it. From *Regensburg* we pass'd the first Day to *Thonawsteyn* (*Danube-stone*) where is a Castle seated upon a high Rock, and thence to *Pfeter*, famous among the Ancients, by the Name of *Vetera Castra*, now an inconsiderable place.

The Boats made use of upon the *Danube*, are generally flat-bottom'd, and broad at the Head and Stern; there is an Apartment for Passengers in the middle, and they have very large Rudders, the better to command the Boats where the Current is swift.

The next Day we pass'd by *Straubing*, a wall'd Town belonging to the Elector of *Bavaria*, and the same Afternoon by *Swartz*, where we saw a Church upon a Hill, much frequented by Pilgrims; we lodg'd that Night at *Deckendorff*, near which the River *Iser*, or *Isara*, after having pass'd by *Landshut*, *Frising*, and *Munchen* (the ordinary Residence of the Elector of *Bavaria*) falls into the *Danube*.

Passaw.

Thursday being *November* the 15th, we pass'd by *Wilshoven* to *Passaw*, *Passovia*, or *Boiodurum*, a goodly City in the lower *Bavaria*, formerly known by the Name of *Castra Batava* among the *Romans*, who had setled a Colony there. It is composed of three Towns, *viz.* *Ilstadt*, *Passaw*,

saw, and *Inſtadt*, and ſeated at the meeting of the three Rivers, the *Inne*, the *Danube*, and the *Iltz*. It has divers very fair Churches, amongſt which that of St. *Stephen* excels the reſt. The Biſhop's Reſidence is a ſtrong Caſtle built upon a Hill, his Revenues are very conſiderable, part of which ariſe from the Baths of the great Lead-Mine at *Bleyberg* in *Carinthia*. It was not many Years ago almoſt laid in Aſhes, by an accidental Fire, and as moſt of the Streets have been rebuilt ſince after the *Italian* manner, ſo this City may now juſtly claim to be inſerted in the number of the ten conſiderable Cities upon the *Danube*, viz. *Ulm*, *Ingolſtadt*, *Ratisbon*, *Paſſaw*, *Linтz*, *Vienna*, *Preſburg*, *Strigonium*, *Buda*, and *Belgrade*; the eight laſt of which I had the opportunity to ſee, before the end of my Journey.

Biſhop's

Juſt by a Wall, oppoſite to the Great Church at *Paſſaw*, you ſee a very large Head cut in Stone, the Mouth being two Spans wide, and the reſt proportionable. In the River *Iltz*, which comes from the North, they find abundance of Pearls: And the Noble River *Inne* or *Oenus*, coming from the South, and paſſing by *Inſprug*, is augmented bo the River *Seltz* (upon which ſtands the City of *Saltzburg*) exonerates it ſelf with great force into the *Danube*, being the largeſt River that hitherto has join'd that River. The River *Inne* ariſes among the *Alps*, in the Country of *Tyrol*.

Linтz.

The Sixteenth we arrived at *Linтz*, the Capital City of the lower *Auſtria*, not ſo much conſiderable for its bigneſs as neatneſs, the Houſes, or the whole Town, being built of a white Free-ſtone, and the Market-place very ſpacious and handſome. The Caſtle lies upon a Hill, and is fortify'd after the modern way. It has a Bridge alſo over the *Danube*. When *Solyman* beſieged *Vienna*, this was the Rendezvous of the Imperial Army. It was beſieged by 40000 Peaſants in *Ferdinand* II. time; but relieved by *Pappenheim*. Somewhat below *Linтz*, the River *Draun*, which ariſes out of the *Gemunder Sea* (or *Lacus Felicis*), joins its Current with the *Danube*.

Enns.

The 17th we paſs'd by *Embs*, or *Aniſie*, ſituate upon the River *Aniſius*, or *Onaſus*, which ariſing near the Frontiers of the Country of *Saltzburg*, and being augmented by the River *Saltza*, upon which ſtands *Maria Cell*, noted for the great Pilgrimages, divides the higher and lower *Auſtria*, and exonerates it ſelf into the *Danube*. Hereabouts ſtood the ancient *Lauriacum*, a *Roman* Gariſon, where a great many *Roman* Coins and Antiquities were found. On the North-ſide of the *Danube* we ſaw a Seat of the Earl of *Leichtenſtein*, near the Village of *Gretin*. Not far below this Village are 2 dangerous Paſſages in the *Danube* *, call'd the *Strudel*, and the *Wurbel*: The firſt is a place where the River being forced among the Rocks, ſome under, ſome above Water, the Waves are broken, and render the Current rapid and troubleſome, it requiring a great deal of Skill to paſs through the Ledges of the Rocks, eſpecially when it is low Water. The ſecond is a kind of Whirlpool, where the Current being forcibly repell'd by a great Rock, turns round with great violence. Here by on the top of a craggy Rock, you ſee a large Croſs, and at the foot a Chapel, dedicated to St. *Nicholas*, who being look'd upon as Patron and Protector of ſuch as have paſs'd ſafely this way, a Boat comes thence to receive ſuch Preſents as the Paſſengers are willing to give.

* Vide Fig 10.

A Cataract (or Waterfall) a Whirlpool.

We took up our Lodgings this Night at *Ips*, *Ipſium*, or *Ibiſſa*, on the South-ſide of the *Danube*; oppoſite to which is *Beſenbeug*, or *Ubium Ptolemæi*. Two *German* Leagues below *Ips*, lies *Pechlarn*, believed by ſome to be the old *Arlape*, where the River *Erlaph* falls into the *Danube*. A Mile and half lower you ſee *Melcke*, *Nomale*, or *Mea Dioceſis*; formerly the Reſidence of the Marqueſſes of *Auſtria*, which was afterwards removed firſt to *Leopold*, and afterwards to *Vienna*. The City is built along the South-ſide of the River; the Monaſtery of the *Benedictines*, which challenges the Prerogative before all others in *Auſtria*, is ſeated upon a high Hill; it has very great Endowments, and many Monuments of great Perſonages, and among the reſt the Tomb of St. *Colman*. We dined at *Steyn*, where is a goodly Bridge over the *Danube*. Near to this lies *Crembs*, a wall'd Town; and on the oppoſite ſide *Mautern*; not far from whence is the rich Monaſtery call'd *Kerwein*. A little beyond it, the River *Traiſin*, or *Tragiſama*, comes from the South. Afterward we paſs'd by the famous Town of St. *Pold*, or St. *Hippolitus*; and taking up our Quarters that Night at St. *Eldorff*, went the next Day by *Thuln*, *Stockeran*, and *Cloiſter Neuburg*, and ſo came ſafely to *Vienna*.

The Deſcription of VIENNA.

VIENNA, call'd *Wien* by the *Germans*, and *Beach* by the *Turks*, is the Capital City of all *Auſtria*, ſituate at 43 Degr. 20 Min. Latitude, differing not much from the Latitude of *Paris*; having been for a conſiderable time the Seat of the Arch-Dukes of *Auſtria*, and of the *German* Emperors. According to ancient Geographers, this City belonged to *Pannonia* Superiour; the Limits of *Pannonia* extending as far as *Kalemberg*, or *Mons Cetius*, about ſix Miles to the Weſtward of *Vienna*; beyond which all that lies more Weſtward, betwixt that Mountain and the River *Inne*, or *Oenus*, which falls into the *Danube* at *Paſſaw*, was anciently known by the Name of *Noricum*. Vienna.

The *Romans* call'd it *Vindebona*, where, according to *Lambecius*, the *Claſſis Iſtria*, and the Tenth *German* Legion had their Stations: The Shore on this ſide of the *Danube*, where the *Ripa Romana*, was beſet with Gariſons at *Carnuntum*, or *Petronel*, *Viſhmund*, or *Aquinoctium*; *Eberſdorff*, or *Ala Nova*, *Melck*, or *Nomale*, *Arlape*, or *Pechlarn*, *Lentia*, or *Linтz*, in the ſame manner as they had their Stations at *Cologne*, *Bon*, *Mayence*, and other places upon the *Rhine*.

Several of the *Roman* Emperors, and above all the reſt, *Marcus Antoninus Philoſophus*, have made themſelves famous by their Great Actions againſt the *Marcomanni* and *Quadi*; the laſt of which, after he had routed theſe Nations, fell ſick at *Carnuntum* or *Petronel*, and died at *Vindebona* now *Vienna*, ſituate upon the South Shore of the *Danube*: Which is queſtionleſs the reaſon, that at ſeveral times, but eſpecially 1662, many *Roman* Antiquities have been found hereabouts; the laſt was a kind of Coffin containing hard Earth and Bones, with a ſmall Gold Coin, a Glaſs Urn in a Braſs Caſe, an Iron Knife like thoſe uſed anciently about Sacrifices; a little Roll of pure Gold, cloſed with a Golden Cover at both ends, with an Inſcription of ſtrange Characters; which according to *Lambecius*'s Opinion, were old *Pannonian Characters*: Not far from the Monument it ſelf, which was under the Foundation of a Wall not far from the old Palace, they found a Head in Braſs, a *Patera*, Lamps, Lachrymatories, and other Veſſels of the ſame Metal, and a Copper Coin of *Antoninus Caracalla*. Some Antiquities found here.

This City is not ſeated upon the Head-Channel of the *Danube*, but only upon a Branch thereof, of which there are ſeveral who make divers ſmall Iſlands. The River *Wien* (which has imparted its Name to the place) paſſes by the Eaſt-part of the City, and below it falls into the *Danube*: Upon Floods it often does conſiderable miſchief to the City, tho' at other times it is ſo ſhallow and narrow, that one may ſtep over it: It divides part of the Suburbs from the Body of the City, the firſt of which are very ſpacious, and full of fair Houſes, Gardens, Walks, and other Conveniencies. The River *Wien*.

The Body of the City it ſelf is that which is well fortified, being ſeparated from the Suburbs by a fair *Eſplanade*, yet this deſcending in an open Ground for 300 Paces. Its Fortifications are after the modern way, compos'd of ten Baſtions to the Land-ſide, and a very deep Ditch, which tho' it be kept continually dry, for fear the Water ſhould damnifie the Cellars, which are very deep here, yet can they let the *Danube* into it at pleaſure. It has two Baſtions towards the Water, on the North-ſide of the Town. The Baſtions are very large, the whole Fortification of a great breadth well fac'd with Brick, and edged with Free-ſtone. Beſides which it has an old inward Wall, built formerly with the Ranſome of our King *Richard* I. who was detain'd Priſoner there, in his return from the *Holy War*. Its Fortifications.

The whole Circumference of Suburbs and all, takes up a great Tract of Ground; but the Fortifications of the Body of the City don't exceed three *Engliſh* Miles in compaſs, but is exceeding populous, nothing being more delightful than to ſee *Turks*, *Tartars*, *Greeks*, *Tranſilvanians*, *Sclavonians*, *Hungarians*, *Croatians*, *Spaniards*, *Italians*, *French*, *Germans*, *Polanders*, all in their proper Habits. It has ſix Gates, *viz.* 1. The *Stuben* Gate to the Eaſt. 2. The *Carinthian* Gate to the South. 3. The *Caſtle* Gate. 4. The *Scotch* Gate. 5. The *New Gate*. And, 6. The *Red Tower* Gate, to the Northward, leading to the Bridge over the *Danube*; beſides which there is a Port by the Emperor's Palace, towards the Water-ſide: There is a certain Nunnery in the Town call'd *Himmel Port*, or the *Gate of Heaven*. The five firſt of theſe Gates are vaulted through the Town-Wall, with convenient Draw-Bridges to paſs the Ditch. The ſixth is a paſſage under a Tower, towards Gates.

the

the Bridge of the *Danube*: For as that River runs hereabouts through a low Country, it divides it self into seven small Channels, which are join'd by as many Bridges made of many thousand Trees laid close to one another. There is a very remarkable Bridge at *Vienna* call'd the *High-Bridge*, made by the crossing of two Streets by equal Angles; but the Ground in one Street being equal in height to the tops of the Houses of the other, they have been forced to build a Bridge or Arch in the lowermost Street, to let the upper pass over it.

Bridges of *Vienna*.

For the rest, the Houses here are well built of Stone, for the most part six Stories high, and flat roofed after the *Italian* manner; the Streets are of a middle size, neither broad nor narrow: Their Cellars are worth a curious Traveller's Observation; in some of them I found four Cellars one under another, well arched, with two Pair of Stairs to go into them. In some I observed an open space in the middle of each Roof, for the reception of the Air, and from the lowest a *Tube*, to convey the Air into it out of the Street, much after the same manner as they do in the Mines.

In Cellars.

I can't here pass by the Encomium *Æneas Sylvius* gives of *Vienna*; viz. *That it has Palaces fit for Kings, and Churches which* Italy *may admire*: Which is much better verified now-a-days. For the Imperial Palace is a truly Noble Structure, and excellently well furnish'd; it has two Courts, one very large, the other of a less compass, where the Emperor's Lodgings are. Over the Gate you see no other Inscription but the five Vowels in Capital Letters, *viz.* *A, E, I, O, U*; which some have interpreted thus: *Austriæ Est Imperare Orbi Universo*; tho' I am apt to imagine, that this is not the true sence of these Letters. There is besides the two before-mentioned Courts, another small one, where are the Lodgings of the Pages; whereof I took notice of a large rough *Jaspis* Stone, of about nine Foot Diameter, which lay unregarded upon the Ground, tho' a little piece that was polished, shew'd that it was full of beautiful yellow, red, black, and white Veins: It was a Present of the Arch-Bishop of *Saltzburg*, in whose Territories are Noble Quarries, and Stones of divers sorts. Next to this the Palace of the Count *de Draun*, and that of Count *Rothal*, lately built; with several others, are very considerable.

Imperial Palace.

Churches and Convents

Neither is this City destitute of noble Churches, and rich Convents; as for instance: Those of the *Carmelites*, of the *Franciscans*, of the *Benedictines*, and of St. *Nicholas*: In the Church of the last I saw the Tombs of Count *Strozzi* and Cardinal *Harrach*. The Convent of the *Dominicans* is a very fair Structure: The Church of the *Austin* Friars is very large, and has in the middle a Chapel, the Model of which was taken from the *Holy House of Loretto*; the top of it being adorn'd with many Colours taken from the *Turks* and *Tartars*; many of which were not square, but Escutcheon-wise, some full of Circles, with Half-moons within them.

The *Jesuites Colleges* are all very fair and spacious here; the Front of their *College* which faces the Piazza, has a Statue, or *Column of Copper*, belonging to it, which stands in the Centre of the Market-place, resting upon a Pedestal of white Stone, with four Angels with Escutcheons, and the blessed Virgin on the top *: It has also divers Inscriptions, by which the Emperor dedicates *Austria* to her Patronage and Protection.

* Vide Fig. 11.

When I came into the *Scotch Convent*, it raised no small curiosity in me to know how the *Scotch* became so considerable here, till I was inform'd, that *Vienna* had been many Ages ago a Receptacle of the *Scots*, in their Pilgrimages to *Jerusalem*; and that *Colman*, a Saint in high Veneration in those parts, was not only a *Scotch-man*, but also descended of the Blood Royal of *Scotland*, and barbarously murthered by the Peasants at *Stockerau*, four *German* Miles from *Vienna*; who hung his Body on a Tree, where it remained uncorrupted a Year and half, and after many Miracles was buried at *Stockerau*, and from thence removed first to *Melk*, and afterwards into *Hungary*, where it was preserved for a long time after at *Alba Regalis*, or *Stulweissenburg*.

The Church of St. *Peter* is highly esteem'd for its Antiquity, being the oldest of the City, and built in the same place where stood before the Altar dedicated to *Domitian*, call'd *Ara Flaviana*.

Among other Curiosities I saw this Inscription upon the Monument of the Learned *Wolfgangus Lazius*:

Magnifico Nobili Clarissimo atque summâ eruditione ornatissimo viro Domino Wolfgango Lazio Vien. *Philosophiæ atque Medicinæ Doctori & Professori Primario, Celeberrimi Archigymnasii* Viennensis *Rectori & Superintendenti* Cæsareo, *& ejusdem Sacræ* Cæsareæ *Majest.* Ferdinandi *Sanctissimæ memoriæ Consiliario & Historico Peritissimo defuncto Anno Domini* MDLXXXVI.

The Emperor *Maximilian*, and his Empress, as also the Empress *Mary*, Spouse to *Ferdinand* the Third, are interr'd in the Church of the *Capuchins*; which Order not admitting of any thing that is magnificent, their Tombs have but little resemblance to their Greatness.

But in the Cathedral of St. *Stephen* are many sumptuous Monuments of Princes, and other Great Persons: It is a very noble Fabrick, but none of the highest, by reason of the Paintings of the Glass Windows; it is covered only with Tiles of Wood, yet makes no ill shew. But what is most worth observation, is the Steeple and Spire, being high, large, strong, and nobly built: It has on the top, instead of a Weather-cock, a Cross under a Star and Half-moon, well gilded. This Star and Half-moon, was, as they relate, put upon this Spire by Order of *Soyman the Magnificent*, who when he had besieged the City, offered them to spare this Steeple, provided they would set upon the top the *Turkish* Arms *viz.* the Half-moon and Star; which the Citizens comply'd with. This Spire has the largest Crockets I ever saw, being above a Yard long, and adorned with Foliage Work. The Steeple is accounted 405 Foot high: I went up half way by 338 Steps; whence I could see the *Hamburger* Hill, near *Presburg*, and the Course of the *Danube* through a great part of *Austria*.

The Cathedral.

In the Room where I was, they had wooden Hammers, which they make use of from *Good-Friday* till *Easter-Sunday*, the use of Bells being forbidden during the time our Saviour was in the Grave *.

* See Fig. 12. Note, In the left Hand Corner of the top of the Steeple was a Globe, down from which hung a Chain with a Ball at it.

Near one of the Doors of the Church is a Stone fix'd into the Wall, which they believe to be one of those wherewith St. *Stephen* was stoned to Death: It looks like a Pebble, and is very smooth, by the frequent rubbing of the People, who touch it with their Fingers when they go to Church.

I was shewn another Stone, which they said, was one of those that kill'd St. *Stephen* in St. *Saturnine*'s Church, at *Tholouse* in *France*. Besides many Monuments of Great Personages, which are in the Church of St. *Stephen*. There are also divers Tombs of Men famous for their Learning, as of *Joh. Faber*, Bishop of *Vienna*; *Joh. Cuspinianus*, and *Sebastianus Tenguaglius*, the last of which according to the Inscription, was versed in fifteen Languages.

The University of *Vienna* may also challenge the preference before most others, in respect of its Antiquity, the number of Students, their Accommodations and Privileges. *Albertus* the Third is reputed the first Founder of it, above 300 Years ago; who distinguish'd the Students into four several Divisions or Nations, each of which, besides the General Constitutions, had their peculiar Rules and Privileges; they were the Classis of the *Austrians*, of the Nations of the *Rhine*, of the *Hungarians* and *Saxons*.

The University.

To the *Austrian* Division belonged those of *Friul* and *Trent*, all *Italy*, and the other Provinces beyond the Mountains.

Under the Nations of the *Rhine* were comprehended the *Suevians*, *Alsatians*, *Franconians*, *Hessians*, and the other Provinces, *viz.* *France*, *Spain*, *Navarre*, *Holland*, and *Brabant*.

To the third Class of the *Hungarians*, are the *Hungarians*, *Bohemians*, *Moravians*, *Sclavonians*, and all that use the *Sclavonian* Tongue, as also the *Germans*.

To the Class of the *Saxon* Nation, belong the *Saxons*, *Westphalians*, *Thuringians*, *Misnians*, *Brandenburgers*, *Prussians*, *Livonians*, *Lusatians*, *Pomeranians*, with the *Ultramarine* Kingdoms of *England*, *Scotland*, *Ireland*, *Sweden*, *Norway*, and *Denmark*.

As in these several Divisions all Nations of *Europe* are comprehended; so it must be confess'd, that there are in this Univerfity Students of many Nations, who sometimes when any Differences arise among themselves, stand up each for their respective Divisions; but are sure to unite together, if any Contentions happen betwixt the Students and the Citizens, or Jews.

As for their Natural Philosophy, they have not yet attain'd to our new way of explaining Matters, by Corpuscular Motions, and Experimental Philosophy; tho' some of them were very inquisitive after our Royal Society, as well here as at *Altorff*; and I have been solicited even from *Cassovia* in Upper *Hungary*, to send the Transactions of our Society thither: A manifest sign, that if they were once lead into the Path of our Modern Philosophy, they would without all question follow our Footsteps. For the rest they are well versed here in Languages, History, and Antiquity.

I remember I was present here at a Publick Anatomy-Lecture of a Woman, which lasted nineteen Days; perform'd by Dr. *Wolffregel*, a Learned Physician. I observed the *Pyramidal* Muscles, to be very plain and large,

and

and the *Uterus* of a size larger than ordinary; the *Carnilago Ensiformis* was double, and the Lungs very black. The Motions of the Eye were very nicely shewn by an artificial Eye of Ivory, and another of Pasteboard, contrived and made by himself; and after the Dissection of the Muscles of the *Pharynx*, *Larynx*, *Os Hyoides*, and the Tongue, he reduced them with an admirable dexterity into their proper places, to discover their natural Position.

The Anatomy-Theatre was capable of holding a hundred Persons.

This University has, among other Privileges, the Power of Life and Death, in respect of their own Members.

But what gives the greatest Lustre to this famous City is the Residence of the Emperor *Leopold*, born 1638. His eldest Brother *Ferdinand*, King of the *Romans*, dying before his Father *Ferdinand* III. *Leopold* succeeded in the Empire, and married *Margaretta* Infanta of *Spain*, the Daughter of *Philip* IV. He is the Darling of his People, and equally beloved both by the Soldiery and Clergy.

The present Emperor Leopold.

He is of a grave, but graceful Aspect, and has the long Chin, and remarkable Lip, belonging to the Family of *Austria*. He is well versed in the *German*, *Italian*, *Spanish*, and *Latin* Languages; and as he takes delight in reading, sometimes for several Hours together, so he is always forward in countenancing of Learned Men. He also delights in Musick, and frequently composes himself; which makes not only all the Church-men, and others, encourage Musick and Musicians, but also the Emperor himself, has excellent Musick, both Vocal and Instrumental, in his Palace, and some of his own Compositions are play'd in his private Chapel, where always eight or ten Pages of the Emperor, Earl's Sons, serve at the Altar, with white Torches in their Hands, whilst divers Eunuchs are singing.

Addicted to Musick.

A Lover of Hunting.

His Recreations abroad consist chiefly in Hunting, especially the Wild Boar. The young Nobility used to encounter a Wild Boar, sometimes a single Person alone, but since the unfortunate Accident that happened to Count *Nicholas Serini*, who was kill'd by one of those Creatures, the Hunts-men are always at hand, when the Boar is at a Bay, that the Emperor, or others there present, may the more safely kill it

There are great numbers of these Creatures hereabouts, their Meat being a common Dish at *Vienna*, and of a delicious taste; for they feed upon Acorns, Beach-mast, and Chesnuts, and upon the Sprouts of Broom, Juniper, and Shrubs, and upon the Roots of Fern; they will sometimes leave the Forests, and range in the Corn-fields and Vineyards. It is the Hunts-man's Business to keep a watchful Eye over them; and they are so skilful in that Game, that by the tread of their Feet, and the casting their Hind-feet out of the Track of their Fore-feet, they will tell you, whether it be a wild Swine, or tame Hog; nay, whether it be Male or Female, Young or Old, Lean or Fat, &c.

His Stables.

The Emperor, as he is a good Huntsman, so he takes a great delight in Horses: He has a very fine Stable fill'd with all manag'd Horses, brought thither from *Turkey*, *Tartary*, *Poland*, *Transylvania*, *Germany*, *Bohemia*, *Hungary*, and *Naples*.

Militia.

It was something surprising to me, to find in an Inland City so considerable Magazines of Naval Stores, as I found at *Vienna*: These are employ'd upon the *Danube* against the *Turks*; being a kind of Gallies, carrying great Guns, and a considerable number of Soldiers, besides Sea-men. They are laid up behind one of the Bastions of the City, and some of them are kept at *Raab* and *Comorra*.

His Court.

The Imperial Court is composed of many wise Counsellors, great Generals, and most refined Courtiers.

Eusebius Wenceslaus, Duke of *Sagan*, Prince *Lobkowitz*, was then Lord High Steward, and chief Minister and Favourite of the Emperor; he being the Person who first discovered the late *Hungarian* Revolt, for which Count *Peter Serini*, and *Nadasti*, paid with their Heads.

Henry William, Count *Stalhemberg*, Lord Marshal of the Court.

John Maximilian, Count *Lamberg*, Lord Chamberlain, who has near a hundred Gentlemen of the Bed-Chamber under him, all Barons and Counts: They wear a Golden Key upon the Breast, as the Grooms of the Bed-Chamber wear one of Steel: Two of each attend every Night.

Gundakerus, Count *Dietrichstein*, Master of the Horse.

Count *Zinzendorff*, chief Hunts-Master.

The Count of *Roorsberg*, chief Falconer, who has twelve others under him.

The Count *de Paar*, Postmaster-General.

Leopoldus Wilhelmus, Marquess of *Baden*, Captain of a hundred *Harsiriers*, who are a kind of a Horse-Guard of the Emperor's Body, arm'd with Pistols and Carabines, without the City; but within, the Foot carry Launces and Javelins with broad Points.

Francis Austin, Count *Wallenstein*, Captain of a hundred of the Emperor's Foot-Guard of his Body.

Sixty Pages, most of them Counts and Barons.

Raymund Count *de Montecuculi*, who has signaliz'd himself in *Poland*, *Hungary*, and *Germany*; the Emperor's General, President of the Council of War.

Next to him was Count *Soucies*, a Native of *Rochel*; and his Son Governour of *Leopolstadt*.

Count *Lesly*, Nephew to Count *Lesly*, who was sent in the Quality of Ambassador to the Port from the Emperor, is also look'd upon as one of the best Commanders the Emperor has: Besides a great many other brave Officers, who have shewn their Conduct and Valour upon a thousand occasions; that tho' the Emperor never takes the Field in Person, yet has he been very successful in his Wars, especially against the *Turks*.

The Courts of both the Empresses are fill'd with Persons of great worth.

Among the Clergy, and Men of Learning (of which the Emperor is a great Lover), the *Jesuites*, *Moelner*, and *Breecabella*, are the chiefest. And to sum up all it is certain, that *Vienna* is the most likely place for any Foreigner, whether Soldier or Scholar, to make his Fortune, provided he be of the *Roman Catholick* Religion.

The Imperial Library.

It will perhaps be surprising to some, when they understand, that upon the utmost Border of the Learned Part of *Europe*, the Emperor is Master of a Library, which, according to their Opinion, both for the Number and Value of Books, gives way to no other Library in *Europe*. The worst is, that the Receptacle is not suitable to so vast a Treasure; for tho' it is divided into eight spacious Rooms, in which the Shelves stand so close, that there is scarce an easie passage left betwixt them, yet are many Books fain to lie upon the Ground.

The Manuscripts have their peculiar places, distinct from the Printed Books, and are divided into six different Classes, *viz. Theological*, *Juridical*, *Medicinal*, *Philosophical*, *Historical*, and *Philological*. The Manuscripts of *Hebrew*, *Syriack*, *Arabick*, *Turkish*, *Armenian*, *Æthiopick*, and *Chinese* Books, are without Comparison the best Collection that is to be found.

The choicest Books of which this Library is composed (which has been collecting ever since the time of *Maximilian* the First), are:

The famous Library of *Buda*, of *Matthias Corvinus*, Son to *Hunniades*.

The choice Library of *Wolfgangus Lazius*. As also 3000 Books of *Johannes Sambucus*.

Augerius Busbequius, made a considerable Addition to the rest; and in his two *Turkey* Embassies, bought a great many choice *Greek* Manuscripts at *Constantinople*, which are mark'd thus with his own Hand, *Aug. de Busbeck. emit. Constantinopoli*.

There was also a considerable number added out of the Library of the Learned *Johannes Cuspinianus*, the Emperor's Library-Keeper: And the noted Libraries, and Mathematical Instruments of *Tycho Brahe*, *Kepler*, and *Gassendus*, were purchased for it.

But the greatest Addition of all, was made by that Noble Library of Count *Fugger*, which consisting of 16000 Volumes, was purchased by *Ferdinand* the Third. Besides which, the Learned *Peter Lambecius*, the present Library-Keeper, Historiographer, and Counsellor of the Emperor, has brought hither the choicest Books out of the Library of *Inspruck*; and he himself is Master of a most excellent Library of his own; which will in time be added to the Imperial Library. I had it from his own Mouth, that there were then at least 80000 Volumes in this Library, which are encreased by the accession of other Books, which are purchased, especially in the *Turkish* Dominions, where the Emperor keeping a constant Resident, no Opportunity is let slip to buy up any good *Greek* Manuscripts in their Convents. I remember my self, that when I was at *Larissa* in *Thessaly*, the Resident, Seignior *de Casa Nova*, was continually enquiring after *Greek* Books in their Monasteries, the present Emperor sparing no Cost to purchase them; and were it only for the number of Books it is certain, that by the Right the Emperor has of having two Books of whatever is Printed in *Germany*, this Library might soon increase to a vast number.

Consists of 80000 Vol.

As *Lambecius* gave me a thousand Obligations upon all Occasions, so he was so kind, as to give me a sight of all the rarest Copies in this Library, among a vast number of which, I took an Account of the following:

Its best Manuscripts.

A Letter in the *Chinese* and *Tartarian* Language, from the present Emperor of *China*, unto the present Emperor *Leopold*, weaved in a very fine Roll.

Another

Another Roll written in an unknown Character, but most resembling the *Greek*.

A Book in the *Runick* Language.

A very fair Manuscript of *Ptolemy*, the Maps coloured.

A true Copy of *Livy*, the most ancient Manuscript extant, a thousand Years old, in very large Letters, without distinction of Words or Sentences, brought hither from the *Inspruck* Library.

A very fair Manuscript in *Greek* of *Dioscorides*, 1100 Years old, in large Characters, without Distinctions of Words or Accents; the Plants finely painted: With the Pictures of *Dioscorides*, *Galen*, and some other noted Physicians.

Two Books of Geometrical Propositions, demonstrated in the *Chinese* Language; whereof one with Pictures.

An old *Greek* Manuscript in great Letters, without distinction of Words or Accents.

A *Greek* Manuscript 1300 Years old, of the Book of *Genesis*, without Stops, or Accents. It contains forty eight Draughts in Miniature, or Water-colours, relating to the Habits of the Ancients, to the Manner of their Feasting, as their Postures at Meals, Attendance of Servants, and Musick. Among other things, the Execution of *Pharaoh*'s Baker, is worth observation, his Head being thrust thro' a forked Piece of Wood, and his Hands ty'd behind him.

A Book of Painting in Miniature, by *Albert Durer*; and a Sphere with a Globe within it, carved and painted by the same Hand.

A Book of *Michael Angelo*; wherein, besides many Rarities in *Architecture*, all the Paintings and Designs of the *Belvedere* are seen in little.

A very fair Alchoran in *Arabick*, with the *Turkish* Explication interlined betwixt it.

A Bible in the *Coptick* and *Persian* Languages.

Luther's one Bible, with many Notes, written by his own Hand.

A fair *Greek* Manuscript of the New Testament, written with Golden Letters upon Purple 1500 Years ago.

A Magical Glass of the Emperor *Rudolphus*, whereby to see Apparitions of Spirits.

Sixteen thousand Pieces of ancient *Greek*, *Roman*, and *Gothick* Medals and Coins, in Gold, Silver, and Copper. They pretend to have two Copper Coins of the Emperor *Marcus Otho*.

Being willing to add a few Drops to this Ocean, I presented some Coins, Intaglia's, and Inscriptions, not to be found in *Gruterus*'s Great Work: Which I met with in the furthest part of the Emperor's Dominions; which being shew'd to his Imperial Majesty by Mr. *Lambecius*, he was so well pleas'd with them, that he not only permitted me the use of what Books I desired, but also granted me a free Pass, in *Latin*, thro' the Empire, exempting my Goods from being search'd; which is no small conveniency, in a Country where a Traveller is to pass through so many different Jurisdictions.

After I had taken a full View of this Library, I thought I could not bestow my time better than in visiting also the Repository, or Collection of Rarities of many succeeding Emperors; in viewing of which I spent several Hours; but fully to set down all the rich and magnificent Curiosities I saw here, is much beyond the compass of this Treatise, (the Catalogue which is kept of them, taking up a large Volume in Folio;) so I will content my self with mentioning only a few of the best out of a great many, from whence the Reader may be able to give a Judgment of the rest.

The whole is divided into Fourteen Cases, or Cupboards.

Collection of Rarities of the Emperor.

1. Contains many curious Vessels turn'd out of Ivory, Cups of Amber; Spoons, and other Vessels, of Mother of Pearl, divers fine Works of Coral, a Galley of Ivory, and two Cups, one turn'd by the present Emperor's own Hand; the other by *Ferdinand* III. Several Cups of the Rhinoceror's Horn.

In the 2. An Elephant with a Castle, and many other Rarities of Workmanship on his Back. Two fine Pillars, all of Ivory, with variety of *Bosso Relievo*, and other Varieties in Ivory. A Picture in Oil of *Ganymede*, by *Corregio*.

In the 3. An Old Man's Head in Oil, by *Albert Durer*; vast variety of Watches and Clockwork; a fine *Centaur* in Silver.

The 4. Also contains Watches and Clocks; a triumphant *Chariot*; a *Turk* of Quality with his Attendance; a Landskip and a *Cupid*, by *Corregio*.

In the 5. Are divers curious Works of Filegrane, brought from *Spain* and the *Indies*; and a Bason of Agate finely wrought.

The 6. Contains an excellent Collection of *Intaglia*, and old *Roman Stones*, of inestimable Value for their workmanship and bigness. A large Agate, on which is wrought the Victory of *Augustus Cæsar* over the *Dalmatians* and *Pannonians*; it is five Inches long, and four broad, of a very high value; besides several Heads and Figures cut in Onyx's, Shells, and Sardonyx's; and a *Chain* with the Head of the whole *Austrian* Family.

In the 7. Divers Pieces of Mother of Pearl, curiously wrought. The Head of *Maximilian* I. in Plaister-work, with a Lock of his own Hair, and the Twelve *Cæsars* Heads. Another Head, excellently well done in Oil, by *Hans van Ach*.

In the 8. A Vessel made of one Piece of *Chrystal* of a Yard and a half high. An Urn. Several Hands, with other *Chrystal* Works.

The 9. Has a very noble Ewer of *Chrystal*, and another noble Vessel; many curious *Crosses*, and other Varieties.

The 10. Containing five rich *Crowns*; the Imperial *Crown* adorned with precious Jewels, and a large blue Sapphire on the top. A Model of the *Crown* wherewith the Emperor's are crown'd, much exceeding in Value the Original. A *Paragon Diamond*, weighing 17 *Carats*. Divers very large Rubies. A Scepter made of Unicorn's Horn, set with precious Stone. A Locket made of very large Diamonds. A most magnificent *Scepter*, *Globe*, *Cross*, and *Crown*, valued at 200000 Crowns. An Opal as big as a Hand, as it came out of the Mine, with many other very fine Opals, and a very large Emerauld.

In the 11. A Golden Bason, used at the Baptism of the *Austrian* Family. Divers Golden Scepters, Scimeters, Knives, and other Presents from the *Ottoman Court*. Three rich Dog-collars, sent from *England* with this Mark ꝺCꝺC. A great Piece of pure Gold of the bigness of a Hand, as it came out of the Mine. Another Piece of Gold Ore, where you see the pure Gold shooting forth upon a white Stone; besides divers other Basons of Gold, and Vessels of Coral.

In the 12. Great store of Vessels of *Jaspis*, *Agate*, *Lapis Lazuli*, *Oriental Granates*, *Cups* of *Onyx* and *Sardonyx*, one very great one of an *Amethyst*, and divers very large ones of *Lapis Nephriticus*.

In the 13. Are divers Flowers made out of precious Stones. A large high Vessel of *Bohemian Topaz*. A *Cup* made of an *Hungarian* Diamond. A Piece of Ambergriece of the bigness of a Man's Hand. A very fine *Jaspis* Stone. A large *Agate* Stone on the outside, and a Bed of large *Amethysts* naturally in it in the middle, which is look'd upon as a great Rarity.

In the 14. Are many noble Chrysolytes, Jacynths, Oriental Granates, Beryls, or Aquamarines. A very rich Smaragdus, or Emerauld, or a Cup out of that Stone; three great ones having been already taken out, valued at 300000 Crowns. Great store of Gold Vessels, and rare Figures in Coral; Turkish Knives, Gauntlets, &c. fine Wax-works, large Bezoar-stones; a Golden Medal of the Emperor's Arms, worth 1000 *l.* Sterl. a Cup said to be taken out of *Solomon*'s Temple; a most curious Bason and Ewer of carved Ivory; King *Philip* II. of *Spain* in Diamond Armour, set in Gold; a curious Picture of an Old Man courting a Young Woman, with this Motto:

Artium Annulum ne gestato.

A very fine Crucifix of Pearl; the Buff-coat of *Gustavus Adolphus* King of *Sweden*, in which he was kill'd near *Lutzen*; all the Gospel written and painted; the Head of King *Charles* I. King of *England*, in Marble; Priests Garments set all over with Pearls; an inestimable Agate Dish, betwixt three and four Spans Diameter, in which you see in natural Characters *XRISOS*. Unto which may be subjoyn'd that most magnificent Chain of Pearl taken from Count *Teckley* in the late *Hungarian* War, as I have been inform'd since.

One Day I had the curiosity to walk up the Hill, which lies two *English* Miles from *Vienna*, from whence I had a full prospect of the City and circumjacent Country, as far as to the Mountains of *Styria*, covered with Snow; and in my return took a view of the Empress Dowager's House without the Town, call'd *La Favorita*.

Gardens of Rudolphus.

Two *English* Miles to the East of *Vienna*, are the Gardens of *Rudolphus* the Second, which are somewhat ruinous now. It hath an inward and outward Garden, the inward being about 200 Paces square, much of the same bigness as the *Place Royal* at *Paris*. It has a Cloister supported by 40 Pillars of white Stone on each side; and is covered with Copper, as are also the Pavilions.

The Tombe of Antenor

Here are also certain Buildings here, where they keep Lions, Tigers and other Wild-Beasts, which breed here. Some say that *Solyman* the Magnificent pitch'd his own Tent in this place, when he besieged *Vienna*.

At two or three Miles distance from *Vienna*, is a place call'd *Arnols*, whither many *Devotees* go on Pilgrimage, especially in Lent, with heavy Crosses on their Shoulders. Here you see a House, the Model of which is taken after the Holy Sepulchre of *Jerusalem*, with a very curious Copy of the Picture of our Saviour and the Virgin *Mary*, at full length; The first is exactly six Foot high, the last two or three Fingers breadth lower. They are done after the Original in St. *John de Lateran* at *Rome*. I saw one Day the Emperor and Empress go thither on Foot, the ways being very dusty, and were follow'd by the greatest part of the Court. Somewhat nearer to the City, is another place call'd *Iezing*, likewise much celebrated for Devotion. In the Road from *Vienna* to it, the twelve Stations of the Cross are marked out in the same manner, as is observed in the *Via Dolorosa*, near *Jerusalem*, in memory of our Saviour's going to the Mount *Calvary*. The Emperour has a very fine Park just by *Vienna*, with a House of Pleasure in it: I also took a view of *Lauenburg*, a House of retreat, also belonging to the Emperour; it is an old Structure, and not very large; There is also a Summer-House there, built in the middle of a Pond, and an eight-square Building in the Marsh, from whence they see frequently fly at the Wild Beasts. Over the Emperour's Palace Gate you see a Rib and Jaw-bone of an extraordinary size, which they told me were the Bones of a Heathen Maid, but appear'd to me more like the Bones of an Elephant.

An old place of Devotion.

A remarkable place of Devotion.

Lauenburg, a Pleasure-House of the Emperours.

From this place I took a progress to *Mannersdorff*, situate near the River *Leyta*; this place is famous for the *Bath*, call'd the *Wild bath*, over the Spring of which is built a Church: The Water being only Luke-warm, they boil it, and so bath in Tubs: That being judged best from what sticks to the sides of the Copper when it is a boiling; it seems to be impregnanted with *Sulphur*, *Salt-peter* and *Chalk*: The Water leaves a *Turquois* colour upon the Stones, and the Vapours which condense and adhere to the Roof and sides give it a tincture of Gold colour. The Physicians of *Vienna* have publish'd a Treatise in *High-dutch*, of this Bath.

The Bath call'd the Wild Bath.

From hence I went to the *Newsidler-see*, or *Lake*, which is three *German* Leagues broad, and seven long, a considerable Lake in those parts, abounding in Fish, and being encompass'd with a great number of small Towns and Villages. It has got its name from *Newsiedle*, a considerable Town, situated on the North side of it, with a Square and Castle upon a Hill. Near this place is a black Earth, of which they make *Salt-peter*. Afterwards I proceeded four *English* Miles up the *Danube*, to the famous Quarry of *Altenburg*. The Beds or Rows of the Stones, don't lie Horizontally, but elevated to the North, yet follow the shape of the Hill in their situation. I found here a Substance between a Clay and a Stone, call'd by them *Liverstone*, upon many of which you see the Figures of Trees and Leaves, but not so plain as in those of *Florence*.

The *Neusidler Lake*.

The Quarry at *Altenburg*.

I past'd by *Cloister-Newburgh*, a Town belonging to a rich Monastery of the same Name. Upon one of the Peaks of *Calenbergh*, before-mentioned, live certain *Hermites*, call'd *Camaldulenses*, a very severe order, living upon nothing but Herbs and Roots. Near their Cells they had paved the Ground with those figured Stones.

It being now near *December*, the branches of the *Danube* were frozen over, and the Ground being cover'd with Snow, afforded good pastime for the Ladies, who at this Season, take their Recreations in handsome Sledges in divers shapes, viz. *Griffins*, *Tigers*, *Swans*, *Dolphins*, *Scallop Shells*, &c. In one of those Machines the Lady is seated and richly attired in Velvet, lined with rich Furs, adorned with Laces and Jewels, and Velvet Caps lined with Sables. The Sledge is drawn by one Horse, adorned with Plumes, Ribbonds, and Bells; and as this pastime is commonly performed in the Night time; the Foot-men ride on Horse-back with Torches, the Gentlemen sitting on the Sledge, behind the Lady, to guide the Horse.

The Sledges used at *Vienna*, in the Winter time.

Christmas, they celebrate here much after the same manner as in *Italy*. On *Christmas-day* the Emperor dines in publick, having a very splendent attendance.

Their Christmas follies.

Upon St. *Stephen*'s Day, he went to the Cathedral, where he kneeled upon the Altar, and kiss'd the Place whereon the *Hostia* had lain.

On Twelfth-day they celebrated at Court the old Custom of chooling King and Queen, and the lot falling upon Count *Leslie* to be King, the Emperor laid the Cloth, and the Empress fill'd out the Wine.

Not long before *Christmas*, I saw the Solemnity of the Marriage of Count *Serau*, with a natural Daughter of *Philip* IV. King of *Spain*, where I could not but be surprized at the splendour, in which the Ladies appear'd upon this occasion.

Not long after I saw also a very splendid Funeral, the Corps of Count *Dreun*, which was brought from *Italy*, being interr'd in the *Dominican* Church, and a very sumptuous *Castrum Doloris* was raised, set round with a vast number of Wax Torches and Candles.

During my stay at *Vienna*, the Election for a King of *Poland* being at hand, after the voluntary Abdication of King *Casimir*, there pass'd daily Messengers thro' *Vienna*. The *Czar* of *Muscovy*'s Son, the Duke of *Newburg*, and the Prince of *Lorrain*, were Competitors for the Crown, but the *Poles* thought fit to pitch upon *Michael Wisnowitski*, a Native of *Poland*, for their King.

I saw also at the same time at *Vienna*, the *Spanish* Ambassadour, *Don Balthasar de la Cueva*; the Pope's *Nuncio* was *Carlo Caraffa*. Besides which, the *Venetians* had their Ambassadour at *Vienna*, who sollicited Succours for *Candia*, which the *Turkish* Envoy opposed with all his might.

Much about the same time came an Ambassadour from the *Cham* of the *Crim Tartars*, named *Cha Gagi Aga*, who presented the Emperor with divers very fine *Tartarian* Horses, in return of which he was regaled by the Emperour with some Plates, and a Silver Bason and Ewer, and a very fine Watch for the *Cham*. They were lusty, strong limb'd Fellows, but very course, their Habit, long furr'd Vests and Caps.

An Embassy of *Crim Tartars*.

They took a vast quantity of Tobacco in very long Pipes.

Among the *Greeks*, who trade and live at *Vienna*, I was chiefly acquainted with three considerable Persons; one was an Abbot, who had been forc'd to quit his Convent for fear of the *Turks*; another, who call'd himself *Constantina Cantacuzenos*, being descended of the Royal Blood of the *Cantacuzeni*; the third was a *Greek* Priest, named *Jeremiah*, who having travelled in quest of a young Man, taken by an *Algerine*, and retaken by an *English* Ship, thro' *Italy*, *France*, *Germany*, the *Low Countries* and *England*, had retained a most peculiar kindness for the *English*, who he said had treated him more courteously than any other Nation.

The Country about *Vienna* is so fertile in all things, that People live here in great plenty; and if any scarcity should happen, the *Danube* supplies them from remoter parts. *Hungary*, *Italy*, and *Germany*, furnish them with such Varieties of Wine, that you may drink 30 several sorts of Wine at *Vienna*; neither are they destitute of good Beer. *Hallstadt* in *Austria* affords them Salt, from whence the Emperour draws a vast revenue. Sheep and Oxen, they have in great plenty themselves, yet are they supplied with the last out of *Hungary* and the *Grand Seignior*'s Dominions. Wild Boars Meat is a great Dish with them, their Fat being as delicious here, as that of our Venison. Neither do they want Hares, Rabbets, Partridges, Pheasants, a Fowl call'd in *Latin Gallina Corylorum*, &c.

Plenty at *Vienna*.

The *Danube* furnishes them with vast plenty of Fish, such as *Carps*, *Trouts*, *Tenches*, *Pikes*, *Eels*, *Lampreys* of all sorts, *White Fish*, and large *Crevisses*, besides divers Fish † not known to us. Here you meet with the Fish call'd *Scheiden*, the *Silurus Gesneri*, which exceeds the *Pike*, *Salmon*, nay, any of our River Fish in bigness; but the biggest of all are the *Hausons*, call'd *Husones*, by *Joinston*, being sometimes 20 Foot long. Some will have this to be the Fish named *Anacetus* by *Elian*, which he says is catch'd in the *Ister*. I saw them busy in fishing for them in the Isle of *Schutz*, between *Presburgh* and *Comorea*, for they seldom come up higher, it being supposed that they come out of the *Euxine-sea*. They are not unlike the Sturgeon in taste, and they eat them both fresh and pickl'd. It is full of Gristles, having a hollow nervous chord down the Back, which when dried, they use instead of a Whip. When they fish for them, they blow a Horn or Trumpet. *Venice* furnishes *Vienna* with Oysters, pickl'd Sturgeon, and other pickl'd Fish, with Red-Herrings, Oranges, Limons, and other Fruits. They are much disposed to jolity in this City; nothing more common than to see them dancing and fencing for Prizes on Holy-days, and spending their time in merry-making, which made me wonder that they have not a Company of Players belonging to them.

Fish near *Vienna*.

Fig. 13.

Their way of executing Criminals is commonly done by cutting off their Heads; tho' in cases of high Treason, they first cut off the Right Hand, the Executioner strikes off the Head with one Foreblow. I remember I saw

saw one executed in this manner, and no sooner was the Head separated from the Body, but a Man ran speedily to catch the Blood, which gushed out of the Neck, which he drank, and then ran as fast as he could: They look upon this as a Remedy against the *Falling Sickness*. I had heard of something like this in *Germany* before, and I well remember, that *Celsus* tells us, that in his time, some Epileptical Persons used to drink the Blood of the Gladiatours, yet most Physicians exclaimed against this Remedy, and I did not stay long enough here to learn the effects of it.

At *Presburg*, they have an odd way of Execution, (which is also in use at *Metz*).

They have an Engine framed in the shape of a Maid, which the Criminal Person is obliged to salute; but at the second Salute, she embraces him, and cuts him thro' the middle.

Their manner of living.

It must be confess'd that the Winters are very sharp here, but the rigour of it is much mitigated by their sleeping betwixt two Feather-beds, and the Stoves they make use of to warm their Rooms, as well here, as in most other parts of *Germany* and the Northern Countries.

The Citizens of *Vienna* are generally well clad, and wear Furs very much, and the Women Bonnets, which they wear upon their Heads, are both lined and faced with some Fur or other.

The Climate is very healthful, yet have they an Epidemical Disease, call'd *Colica Austriaca*, among them, which is very difficult to be cured.

Colica Austriaca.

In the Court and City they speak very good *German*, but the Country People speak somewhat thick, and have a different tone, and divers odd Words.

I saw a certain trick, performed at *Vienna*, which at first sight somewhat surprised me, *viz.* A middle siz'd Man laid upon his Back, had a heavy Anvil fix'd upon his Breast, upon which two lusty Fellows with great Hammers, gave at least a hundred blows, till they had cut an Iron Horse-shoe, about half an Inch thick, asunder.

No other Religion but the *Roman Catholick* is permitted the publick exercise of Religious Worship here; the *Protestants* being obliged to go to Church as far as *Presburgh*, forty Miles from hence; for which reason a Coach goes thither every Day, besides the convenience of the Passage by the *Danube*; the exercise of the *Protestant* Worship being strictly forbid here, ever since the Battle of *Prague*, the same being permitted before, in the Church of the *Holy Ghost* at first and afterwards at *Arnolds*, not above an *English* Mile from *Vienna*.

The Jews of Vienna.

In this City are abundance of *Jews*, but have their distinct Habitations on the other side of the Water. They are indeed permitted to traffick in a certain Street in the Day time, but must leave the City before Night. They have frequent broils with the other Inhabitants, and especially with the Students. Whilst I was there, these last assaulted the Jews Town, where divers were kill'd on both sides; the consequence of which was, that many of the Jews were to be banish'd against a certain Day. The Empress being then with Child, they presented her with a Silver Cradle, but as she was their declared Enemy, she would not accept of it, and it was chiefly by her means, that afterwards they were banisht, not only out of *Vienna*, but also out of all *Austria*; for as they were useful on one side, for the sale or exchange of many things, and used to furnish the Officers with Accoutrements and other Necessaries fit for the Regiments, so on the other hand, they spoil'd the trade of the Citizens, and were accused of having a secret correspondence with the *Turks*.

The *Jewish* Physicians pretend to more than ordinary skill in Urines, which makes the common People resort to them, and to look upon their Predictions as Oracles.

A Journey from Vienna in Austria to Hamburgh.

BEing now resolved to take my leave of *Vienna*, in order to my Journey for *Prague*, I took a place in the Coach, which goes thither in six Days in the Summer, and eight in the Winter. We pass'd over the great Bridge upon the *Danube* near the Chapel of St. *Bridget*. After we had pass'd the River, we enter'd that part of *Austria*, which lieth betwixt the *Danube* and the River *Theya*, we travelled in sight of *Corneuburgh*, seated near the Hill *Bisamberg*, which lies opposite to *Calenbergh*.

Hence we came to *Stockerau*, famous for the death of St. *Colman*: It is seated at the conflux of the River *Mida* and the *Danube*.

From thence by the way of *Gunterstorf* to *Koldorff*, which (tho' on the other side of the River *Thera*) is reckoned the first Village of *Moravia*, and so further to *Znaim*.

It is observable, that in this part of *Austria*, which extends along the North side of the *Danube*, believed to be inhabited in former Ages by the *Marcomanni* and *Quadi*, there are not any Towns of note; the *Romans* having had their Stations and Colonies on the South side of that River. Yet is the Country well inhabited and full of Villages.

I came in sight of one of the chiefest places (as I pass'd down the *Danube*) call'd *Crembs* or *Cremona Austriæ*. *Znaim*, is a goodly place upon the River *Theya*; the common boundary betwixt *Moravia* and *Austria*, which joining its Waters at last with the River *Mark*, thereby opens it self a passage into the *Danube*. This Town is the fourth in rank among those of *Moravia*; *Olmutz*, *Brun*, and *Iglaw*, being the other three.

We continued our Journey from hence over *Unterskirken*, *Paulitz*, and *Moravian Budwesse* to *Zimmaw*, and taking our way thro' *Bynitz*, came to *Iglaw*, upon the River *Iglaw*, a place pleasantly situate upon a Hill, on the Frontiers of *Bohemia*.

Iglaw.

Its Fortifications are very strong, after the modern way, especially on one side, and the Market-place is one of the largest I ever met with.

Moravia is a very plentiful and pleasant Country, being irrigated by divers Rivers, among which the *Mora* or *Marck*, is the chiefest; it arises on the North side, and passing thro' the whole extent of the Country, falls into the *Danube* near *Presburgh*. The other Rivers of note are, the *Theya* or *Theyssa*, the *Swarta*, the *Schwitta*, which run into the River *Marck*.

Rivers of Moravia.

After we left *Iglaw*, we enter'd *Bohemia*, the first place we came to being call'd *Stecken*; thence to *Tauchin Broda*, near the River *Saczua*, and so further thro' *Haberne* to *Janikaw*, famous for the Battle which was fought there, the 24th of *February*, 1643. betwixt the *Imperialists* and *Swedes*; the first had the better of it at the beginning, but falling to plundering, were defeated by the *Swedes*. In this Town I happened to meet with a Gentleman, who lived at *Schaclitz*, not far from the *Risgebergh*, or *Mountain of Giants*, situate near the Head Spring of the River *Albes* or *Elbe*; I was curious to enquire of him, what he knew concerning the pretended Spirit of *Ribenzhal*, which they say infests that Country, but I could get nothing from him that was satisfactory; all what he told me amounting to no more, than, that he verily believed there was such a Spirit, but that he had not done any harm these twelve Years last past. I have heard divers such Reports among the Mountains and Mines of *Germany*. Thus they talk of Spirits in the Silver Mines of *Brunswick*, and in the Tin-Mines of the *Slackenwalde*, in *Bohemia*.

From *Janikaw*, we continued our Journey to *Czaslaw*, the chief City in the Circle of that Name. This is reputed the Burying place of *Ziska*, the famous *Bohemian* General, who forced the Emperor *Sigismund* to quit that Kingdom.

From *Czaslaw*, we came to *Guttenberg*, about 12 *English* Miles from *Prague*, a very considerable Town, near the River *Elbe*, and famous for the Silver Mines about it. There are in all about 30 of them, but as the Hills hereabouts are not very high, so the Mines are not so deep as those in *Hungary*, and in some other places of *Germany*; however some are almost 70 or 80 Fathoms, and have been wrought at these 700 Years. I went into one of them which was first digged, call'd the *Cutten-Hill* (*Cutten* signifying a Mans Garment) which has got its name as they say from a Monk, who found a Silver Tree there, and thereby gave occasion for the digging of this Mine, which is no more than 19 Fathom deep: the chief Vein of the Ore, which is about a Foot broad, runneth South. It contains both Silver and Copper, of the first, a hundred Weight about an Ounce, of the last, eight, nine, ten, or more Ounces; tho' some Ore contains eight or nine Ounces of Silver the hundred-weight. When they meet with a blew Earth in digging, they are in some hopes of good Ore.

Silver Mines.

From hence we pass'd thro' *Colline*, and so by the way of *Bohemian Broda* (to distinguish it from the *Teutonick Broda*) came to *Prague*, the capital City, and formerly the Residence of the Kings of *Bohemia*. I soon perceived

The Jews of Prague.

even

even at a distance, that the Walls of the Town enclosed a larger Tract of Ground, than [illegible] in Germany; but considerable abatements are to be allowed for the wide spaces and Hills, which are compass'd within them.

Description of Prague. It is situate upon the *Moldaw*, a large rapid River, having its source in the South part of *Bohemia*, and before it comes to *Prague*, being augmented by the River *Sasawa* and the *Berna*, and to the North of *Prague*, by the River *Egra*, at last exonerates it self into the *Elbe*. This great body is divided into three Cities, *viz.* the *Old*, the *New*, and the *Lesser City*.

Old Prague. The *Old Town* is seated on the East side of the River *Moldaw*, being the most populous place of the three; and considerable for the University, which first established here, and frequented by a vast number of Students, this being the only one of the whole Kingdom, tho' it is not comparable now to what it has been in former Ages. If we may believe *Lewis du May*, there were, 1409. when *John Huss* was Rector, above 40000 Students there; and it is credibly reported among them, That when the Emperour *Charles* the IV. (the Founder of this University) would have retrenched some of their Privileges, 24000 Students left the Town in one Week, and not long after 16000 more. This part of the Town has also several Colleges and Monasteries, and among the rest the *Jesuits*, a very handsome one.

The University.

New Prague. The *New Town* is of a very large extent, encompassing the *Old Town*, together with the River, being divided from it by a Ditch, into which they can let the River. The *Irish* have a Convent of *Franciscans* here, and the Jesuits have began to lay the Foundation of a noble College. They were then busie in making some Bastions, and a Citadel for the defence of the Town, but are not finish'd.

The Lesser Prague. The *Lesser Prague*, seated on the West side of the River *Muldau*. It is far beyond the *Old Town* in pleasantness and good Structures, being join'd to it by a very strong Stone Bridge, of fixteen great Arches, the whole Fabrick being 1700 Foot long, and 35 broad, with two high Gates, under two large Towers at each end. Part of this Town is built upon a rising Ground, on the top of which stands *Herrs-hir*, or *Upper-Prague*, where the Emperour has a Summer-house, and a most magnificent Palace. In this part of the City is also the Cathedral Church of St. *Veit*, containing many ancient Monuments of great Personages. Most of the Houses of the Nobility are also in this part; among which the Garden and Palace of *Colorado*, excels for its neatness, but is not very large. But the Palace of Count *Wallenstein*, afterwards Duke of *Friedland*, General of the Emperour *Ferdinand* the II. Armies, is a very stately Structure, being built upon the Ruins of at least 100 Houses, which were pull'd down for that purpose: The Hall is a very lofty and spacious Room, and the Garden exceeding beautiful, on one side of which you see the place where they used to manage his Horses, with a noble Fish Pond near it: On the other side you see the *Aviary*, beautify'd with Trees and a Garden; the Model being taken from the *Aviary* of Prince *Doria* at *Genoa*. But what is most surprising are the large Stables, where you see a Marble Pillar betwixt each Horse; every Horse having a Rack of Steel and a Manger of Marble, fix'd in a nich of the Wall: Over the Head of each Horse you behold his Picture, as big as the Life, with his Name under it. Thus a certain Bay Horse was named *Monte d' Oro*, a Mare *Bella donna*, but his beloved Horse's name was *Mas Querido*.

The current Language of *Bohemia* is a dialect of *Sclavonian*, tho' all the Persons of Quality here, and not a few of the Inhabitants both in the City and Country, speak very good *High-Dutch*.

The *Lesser Prague* was surpriz'd by the *Swedish* General, *Koningsmark*, in the long *German* War, who carried off an incredible Booty.

The Jews of Prague. A certain part of *Prague* being inhabited by *Jews*, is thence call'd the *Jews Town*. They are here in great numbers, and deal chiefly in Jewels, and especially in those Stones, that are found in the Mines of *Bohemia*. I bought some *Bohemian Topazes*, very well cut, of them, at the rate of 7 or 8 Crowns.

John Huss and *Jerome* of *Prague*, who endeavoured a Reformation in those parts 800 Years before *Luther*, are not as yet forgotten among the *Bohemians*, who keep Silver Medals to the Memory of these two Great Men; upon which account I can't pass by in silence, what *Æneas Sylvius*, or Pope *Pius* II. says of them two, *viz.* *That John was more in Years and of greater Authority, but Jerome excelled in Eloquence and Learning; That they faced Death with an unparallel'd Constancy, and were singing Hymns in the midst of the Flames.* He adds, *That of the old Philosophers suffer'd Death with so courageous a Temper, as these the Flames.*

As the same Author has made a comparison betwixt the City of *Florence* and *Prague*, so I can't forbear to give you my observations upon this Head, which I made my self, both from the top of the *Dome* at *Florence*, and from the Cathedral of St. *Veit*, on the Hill of the *Lesser Town*. I found *Prague* to comprehend a much larger compass, and more populous than *Florence*. The Streets of the first are much longer; and the Windows of the Palace being of very fine Glass, made a much better show than the ragged Paper Windows of *Florence*. The River *Arno*, which passes thro' this last, bears not the least comparison with the *Muldau* at *Prague*, and the great Stone Bridge over this River, bears a full proportion to, if not exceeds, not only one, but all the four Bridges of *Florence*.

The Emperours Palace also upon the Hill, is a very noble Structure. On the other hand it must be confess'd, That the Cathedral of *Florence*, built of black and white Marble; the Chapel of St. *Lawrence*, and the Great Dukes *Gallery* and *Rarities*, exceed any thing I saw at *Prague*.

Upon the *White Hill* near *Prague*, was, 1620. *November* the 8th, fought the famous Battle betwixt the Armies of the Emperour *Ferdinand* II. and *Frederick* Elector *Palatine*, in which the latter was routed.

The Winter coming on apace, I would not go by Water to *Hamburg*, by the way of the *Muldau*, which near *Melnick*, falls into the *Elbe*, so, that being obliged to travel by Land, I left *Prague* and the *Muldau*, to the right, and pass'd thro' *Zagethal*, *Weverne*, and *Budin* to *Labasitz* upon the *Elbe*.

After having cross'd the River *Egra* (which arising near the City of the same Name, falls afterwards into the *Elbe*) I came by the Castle of *Warrestone* (*Kriegstein*) seated upon a high Rock, thence to *Aussig*, a small City, and so by the way of *Nolendorff*, and over the Mount *Knipsberg*, came to the Frontiers of *Misnia*; taking our way thro' *Peterswald*, *Hellendorff* and *Kisdel*, near the last of which are Iron Mines and Iron Works. Having spent nine Days by Coach, from *Iglaw*, on the Confines of *Moravia*, to this place, not reckoning my stay at *Prague*, which is computed to be 200 *English* Miles, the Ways being very bad in some places, especially in the Winter Season.

As we were going forward toward *Dresden*, I took a view of the *Bohemian* Rocks behind us, in the Forest of *Bohemia*, which resembled at a distance, the Ruins of an old Wall; but could not be convinced of what most Geographers have told us of *Bohemia*, That it is enclosed in a great Forest, tho' it is not to be disowned, but that both within the Country, and in some parts near the borders, there are considerable Woods, believed to be part of the old *Sylva Hercinia*, or *Hercinian Forest*.

The *Bohemians* have been at all times a stout and warlike Nation; and tho' the common People are somewhat rough hew'd, the Gentry are very obliging and polite.

They abound in lusty and strong Horses, but since their unfortunate revolt, they have lost most of their Privileges, and many thousand Families have quitted the Kingdom.

Dresden. We continued our Journey thro' *Misnia* to *Dresden*, one of the most remarkable places in all *Germany*, being the Residence of the Electors of *Saxony* upon the *Elbe*, over which is a stately Bridge supported by 17 Arches.

Its Fortifications. The Fortifications of the City are very strong, after the modern way; the Bastions faced with Stone, surrounded in some places with a double Ditch. It has three Gates.

The things most worth a Travellor's Observation here are, The *Italian* Garden in the Suburbs, the *Hunting-House* in the *Old Town* beyond the River, and the Electoral Palace, with the House for Wild Beasts, Stables and *Arsenal*.

The Elector's Palace. The Hall in the Electors Palace is very spacious, and chiefly remarkable for the many Draughts of Cities, Pictures of Giants, and the Habits of divers Nations, very well done.

Chamber of Rarities. But what is most surprising of all, is the Collection of Rarities, divided into several Chambers. The first contains all manner of Mechanical Instruments for Handy-crafts Men, made very artificially. In the other Chambers, these following things are most worth taking notice of: A Tube-Glass, four Ells long; divers artificial Works of Coral: Towls and Caps made but of Mother of Pearl; Castles of Gold and Mother of Pearl; A Cup made of a Stone taken out of an Oxes Stomach, of a Foot long; a Stone as big as a Fist, taken out of a Horse, resembling a *Bezoar-stone*; some very pure Ore

out of the Mines of *Freiberg*; a natural Crosis of the same Ore; 121 Heads carved on a Cherry-Stone; a Chrystal Cabinet, sold by *Oliver Cromwell*; *Charles* the II. King of *England*, on Horse-back, carved out of Iron; King *Charles* the I. Head; an Organ of Glass; several unpolish'd *Topazes*, ten Inches Diameter; a Cup made of a *Topaze*; several Emralds, an Inch in Diameter, as they grow in the Rock.

Figures of Fishes in Stones, the Stones dark colour'd, the Fish of a Gold colour; two large fine pieces of pure Gold Ore; a White Hart as big as a natural one, made of the filings and shavings of Harts-horn.

Another Chamber contains all manner of Mathematical Instruments, and a Library of Mathematical Books and Maps; an Unicorns Horn, which they affirm to be of a *Land Unicorn*, because it is neither wreathed nor hollow.

The most remarkable Pictures among a great number, are, The Siege of *Jerusalem*, by *Colier*, valued at a high rate; two Nuns, by *Lucas van Leyden*, A Picture of Dr. *Luther*. Here is also a rowling Bullet, to demonstrate a perpetual Motion.

Of Clock Works you see a vast variety: A Cuckow singing, a Horse-man riding, a Ship under sail, an Old Woman walking, a *Centaur* running and shooting, and a Crab crawling or creeping upon a Table; all done by Clock-work, to the great Amazement of the Spectators.

The Stables. In the Stables, and Chambers thereunto belonging, you see a noble Stable full of Horses, each Horse eating out of a Rack of Iron, and Manger of Copper. Near unto them is a curious Fountain and Pond, surrounded with Ballisters, where the Horses are watered; a long Walk arched, and painted with most curious Horses, over which is a Gallery, with the Pictures of all the Dukes and Electors of *Saxony*, in their Electoral Robes and Military Habits; two Beds of Marble; a Horse-man of Silver, bringing a cup of Wine in his Hand, moved by a Spring; a pair of very fine Pistols, with the Stories of the *Old* and *New Testament* upon them; A Glass Gun; a Gun, which discharges forty times without being charged again; a Lock without a Cock.

Another Chamber has many rich Sleds and Accoutrements, made use of in the Winter time, upon the Snow. A White Bears Skin stuffed; Tigers and Lions Skins; A *Cassowares* Skin; very fine Armour for Men and Horses; a Picture of a *Laplander*; a *Lapland Magick Drum*; a Chamber full of all sorts of curious Hunting Tackle and Arms.

The *Arsenal* is an oblong Square, a Building containing near 400 Brass pieces of Ordnance; Of Musquets and other Arms a great quantity; divers Silver Coats of Male, &c.

Hunting House. Bear-garden. In the Hunting-house in the *Old Town*, are maintained fifteen Bears; Fountains and Ponds are made here for the conveniency of washing themselves, in which the Bears much delight. Round the Pond you see high ragged Trees or Posts set up, where the Bears climb up and down, and Scaffolds on the top, where they sun and dry themselves after they have been sporting in the Water.

The Horn Gallery here, is also worth taking notice of; Out of which you pass thro' three Chambers, one painted with all sorts of Hunting, the second with Fowl, and the third, with all kinds of Wild Beasts.

In the House where the Wild Beasts are kept, was a *Marian*, a four legg'd Beast, which hangs on the Bows of Trees by the Tail. A Wild Mountain Cat of an extraordinary size; five Young Bears; five old Black Bears; the Feet, Head and Neck, longer than those of the black, but not so thick; two Lions, and ten Lionesses.

Italian Garden. The *Italian Garden* and *Summer House* in the Suburbs, contained two noble Obelisks, two gallant Fountains, and Theater and good Landskip: They were built by two of the Electoral *Eunuchs*.

It is not many Years ago since *Dresden* has been made a City.

The Revenues of the Elector of *Saxony* are very considerable, arising chiefly from his Impositions upon Commodities, Excises upon Beer and Silver Mines.

The chief Church of *Dresden* is very fair. They are reputed to speak the best *High Dutch* here, and throughout all *Misnia*; a pleasant, fruitful and populous Country.

Freiberg. After I left *Dresden*, my Curiosity led me to *Freiberg*, noted for many considerable Mines, which are within two *English* Miles of the place.

The Mines hereabouts. Among those I took particular notice of three; One call'd *Upon the high Hill*, the deepest in those parts, being 77 of theirs or 208 of our Fathoms deep, which depth exceeded any of the Mines I ever saw in *Hungary*.

The second Mine I saw was call'd the *Prince of Heaven*, which not many Years ago, produced an Ore so rich, that 100 Pounds weight afforded 130 marks of Silver, or 65 Pounds in the hundred; but it is a constant Observation among the Miners, that where the Veins are richest and purest, they are thinnest, and generally not above the breadth of two Inches: The Ore as it generally runs, affords not one Ounce and a half of Silver in the Pound, and they work it if it holds not above half an Ounce. Which may seem somewhat strange to those who know not; that even in the Silver Mines of *Peru* and *Chili*, they will work the Silver Ore, which affords not above four or five Ounces, and the rich Ore in the celebrated Mines of *Potosi*, does commonly not produce above ten or twelve Ounces of Silver; tho' this Hill alone, if we may credit *Alberto Alonso*, has produced in Silver since it has been dug, betwixt 400 and 500 Millions of Pieces of Eight.

They have here several ways of opening the Ore to prepare it for melting; as by Lead, and a kind of Silver Ore which holds Lead.

The Sulphur Ore also which is found here, does, after its calcination, prove no small addition towards the melting of Metals; as likewise the *Schlich*, or pounded and washed Ore, and the *Slacken*, being the dross, or sediment, or Scum, taken out of the *Vortiegel* (*Pan*) which received the melted Minerals, let out into it at the bottom of the melting Furnace.

Their *Treibsheerth* or *Furnace of separating*, where the *Litharge* is driven which I saw here, is more like that described in *Agricola*, than those I saw in *Hungary*. Some of the Litharge is green: They wash the purest Ore, and such as is mix'd with Stones or Spars; and they have this peculiar here, That before they melt the Ore in the Melting Furnace, they burn the pounded and washed Ore on the *Roasting Hearth*, as they term it.

They make great work of the *Virgula divina* or *Forked Hazel*, * to find out the Silver Ore, or any other Treasure. I never saw them make use of it in the Mines of *Hungary*, where I was, but I took particular notice of the manner how they use it here; but as the same is amply described in some Books, and the same is better seen than represented at a distance, I will not enlarge further upon that subject. * *Virgula divina.*

The third Mine I visited was call'd the *Neckbreaker*, about 80 of our Fathoms deep: The Ore, it produces either Copper and Silver, or Silver and Lead, and sometimes all three; but they work only for Silver. I found the Mines cold as far as the Air could penetrate, but otherwise warm enough. Where they are at the deepest, they are full of damps; but that which troubles them most, is the Dust, which settles upon the Lungs and Stomachs of the Miners; They have excellent Engines to prevent the inconveniencies arising from the Water.

Here is also a rich Sulphur Ore, hard and stony, that withred spots being deemed the best. This is melted in a peculiar Furnace, to separate it from the Ore; some of which yields three pound of Sulphur out of 100 weight of Ore, which as it melteth, runs out of the Furnace into Water, or the Exhalations of the Ore are condensed in *Brimstone*, by the coldness of the surface of the Water, placed to receive it. It is purified again, by melting it once more. Some of this Brimstone Ore holds Silver, some Copper, but in small quantities.

The Remnants, after Sulphur is separated from the Ore, is reserved for a double use; either for the melting of Silver, or the making of *Vitriol*. In the first case, a certain proportion of it is cast into the Melting Furnace of the Silver, which, as the Miners term it, renders it the more fluid.

How they make Vitriol. In the making of *Vitriol* or *Copperose*, they take the Ore from which the Brimstone has been separated, and burn it over again, or let it continue to burn in the open Air, then putting it into a large Vessel, pour as much Water upon it as is requisite to imbibe the *Vitriol*, which Water being afterwards boiled to a certain consistency, is let out into Coolers, where the purest part of the Vitriol adheres to Sticks set in for that purpose, the rest setting at the sides and the bottom. It is observable, that the Ore, after it is deprived of its *Vitriol*, has not the least Vertue left in opening the Metals, and rendring of them fluid.

A description of the City of Freiberg. The City of *Freiberg* it self is of a circular Figure, surrounded with strong Walls; Its Streets are handsome, and so is the Market-place. The Elector's Palace is a very goodly Structure; it has five Gates. But what exceeds all the rest, is the Church of St. *Peters*, famous for the Monuments of many of the Ducal Family; among which, that of *Maurice*, Duke and Elector of *Saxony*, excels all the rest, being accounted the noblest in *Germany*, raised three Piles high of black Marble, with many fair Statues

The Tombs of the Electors.

Statues about it in Alabaster, and white Marble, which is the reason, that when this Town was surrender'd *October* the 5th, 1682, to the Emperialists, the Elector of *Saxony* paid 80000 Crowns to save the Tombs of his Predecessors, and the Robes, Jewels, Rings and other Ensigns of Honour, that were buried with them.

There were certain Vaults and subterraneous Passages from the Mines into the City, which are said to have been discover'd first 1189, since which time the Silver Mines at *Schneebergh*, *Annebergh* and *Joachims Dale*, have been found, *viz.* 1526.

After having taken a view of what I thought most curious in and about *Freiberg*, I travell'd by the way of *Waltheim* and *Coldick* to *Leipsick*, seated upon the River *Elster*, which having its source in *Voyteland*, passes by this City, and afterwards falls into the River *Sala*.

Leipsick.

It is a very rich and trading place, celebrated for its three Marts or Fairs every Year, when there is a great resort of Merchants from all parts. The Houses are generally stately Buildings, being for the most part six or seven Stories high. It has a Castle, but neither this nor the Town are well fortified.

The Church of St. *Nicholas* has the reputation of being one of the finest *Lutheran* Churches within.

This City is famous for three Battles fought near it in our Age; the (1) betwixt *Gustavus Adolphus*, King of *Sweden*, and Count *Tilly*, the Imperial General, 1631, in which the last were routed. The (2) some Years after, betwixt *Torstenson* the *Swedish*, and Arch-duke *Leopold William*, the Imperial General. The (3) about a League and a half from hence, near *Lutzen*, fought between the beforementioned King of *Sweden*, and *Wallenstein* Duke of *Friedland*, the Imperial General, in which the *Swedes* were again victorious, notwithstanding their King was slain before the beginning of the Battle, as he was going to take a view of the posture of the Enemy.

Virgula divina.

Its University.

There is also a good University at *Leipsick*, erected there whilst the Troubles were on foot in *Bohemia*, with the *Hussites*, when 2000 *German* Souldiers came hither at once from *Prague*.

From *Leipsick* I directed my Journey to *Magdeburg*, thro' a plain Country, betwixt the River *Sala* and *Elbe*, thro' *Landsbergh*, and near to *Petersdorff*, and so by the way of *Kochten* (the Residence of the Prince of *Anhalt*) to *Caln*, situate upon the River *Sala*, not far before it falls into the *Elbe*.

The Fichtelbergh.

Hereabouts is the *Fichtelbergh*, much celebrated for the Mines, Baths and Mineral Waters near it (of which *Bruschius* has given us a full description) and for those of four Rivers, running to the four different Quarters of the World, *viz.* The *Main* to the West, the *Nab* or *Nabus* to the South, the *Æger* to the East, and the *Sala* to the North, which four Rivers afterwards join their Stream with the three Capital Rivers of *Germany*, the *Danube*, the *Rhine* and the *Elbe*.

Magdeburgh.

Hence we pass'd thro' *Saltz* (noted for its Salt-springs) to *Magdeburgh*, seated upon the River *Elbe*. This City, which was in former Ages the Metropolitan City of *Germany*, but now under the Jurisdiction of the Elector of *Brandenburg*, is of a very large circumference, but scarce half built, since it was destroyed by *Tilly*, the Imperial General, who put 36000 Persons there to the Sword. The Cathedral Church is a very fair Structure, built after the Model of our *English* Churches; by the Emperour *Otho* I. and his Empress *Editha*, the Daughter of our *English* King *Edmund*. Her Effigies in Stone, stands still in the Church, with eighteen Casks of Gold by her, which she gave thereto.

The *Lutheran* Churches are very handsome here, and their Jesuits very fine, as indeed they are in all other places where that Religion flourishes.

How they make Vinegar.

In the Cathedral Church of St. *Maurice*, I saw the Statue of the five Wise Virgins smiling, and the five Foolish Virgins lamenting, which were not ill done. Among the rest they shew'd several odd Relicks, *viz.* The Bason in which Pilate wash'd his Hands; and the Ladder whereon the Cock crow'd, after the denial of St. *Peter* of our Saviour.

A description of the City of Freiberg.

Among the Ruins of the Cloister of the *Austin Friars*, are still remaining *Luthers* Chamber, his Bedstead, and his Table; Upon the Door are certain *German* Verses, which translated into *English* are to this purpose:

> Luther *did lodge within this little Room,*
> *When first he did into the Cloister come;*
> *In memory whereof we still do keep*
> *The Bedstead upon which he us'd to sleep.*

At *Magdeburgh* I began to be sensible that I had left behind me the true purity of the *German* Language, for here you begin to hear another Dialect, generally call'd the *Lower Saxon Language*, spoken in all the *Northern* parts of *Germany*, at *Hamburg*, *Lubeck*, and other Cities in those parts. However People of fashion converse in *High Dutch*, and their Sermons are generally held, and Books written in the same Language.

The Turnaments of Germany.

The City of *Magdeburgh* is highly celebrated in *Germany*, as having been the first where the most famous Turnaments were instituted, in the Year 638, by the Emperor *Henry*, sirnamed the *Fowler*. The condition of these Turnaments or Exercises of Chivalry were, That none but of the ancient Nobility, no Bastard, no Usurper, no body attainted of High Treason, no Oppressour of Widows and Orphans, none born of Parents, whereof one was of ignoble extraction, no Heretick or Murderer, Coward, or who had given real offence to Ladies in Word or Deed, should be admitted into the List, and not above one of a Family at a time. Princes were to come attended with four Squires, Counts and Barons with three, a Knight with two, and a Gentelman with one. He that was desirous to enter the Lists, appear'd at the Presidents Lodgings, where his Name and Quality being registred in the presence of 3 *Heralds*, the Champion deliver'd unto them his Helmet and Sword, and after Confession entred the List, attended according to his Quality. Their Horses were to be without defect, their Furniture according to the rules prescribed for that purpose, and the Saddles without any rising behind or before. Having performed all manner of Exercises, they expected the sentence from the Judges, and he who had obtained the Prize, received it from the Hand of some Lady, or from the Prince that gave it.

But after these Pastimes had continued for some Ages, the same were aboliss'd upon very weighty Considerations, these Exercises having caused no small emulation among the Nobility, so that at the 23d Turnament, held at *Darmstadt*, 1473, this animosity rise to such a height between the Gentlemen of *Franconia* and those of *Hesse*, that seventeen of the former and nine of the latter remained dead upon the spot.

The Winter now coming on apace, I hastned my way to *Hamburg*, which I performed in the Stage Coach in four Days, taking our way through the Elector of *Brandenburgh* and the Dukes of *Lunenburgh*'s Territories. In this Road I took notice of many small Mounts of Earth, the ancient burial Monuments of Great Commanders; (which are also found in *England*) and sometimes rows of great Stones (not unlike those described in *Worm. Antiq. Dan.*) and in one place I saw three great massy Stones in the middle, in a large square, enclosed by other large Stones, set up on end.

Hamburgh.

The City of *Hamburgh* one of the greatest, richest, and perhaps the most populous Cities of *Germany*, is seated in a Plain, being well fortified after the modern way, yet are their works not faced with Stone.

Its Gates.

But the Territories belonging to it are of no great extent. It is divided into the *Old* and *New Town*; It has five Gates; The *Stone-gate*, which leads to *Lubeck*; the *Dike-gate*; the *Grass-Brook Gate*; The *Dome-Grate*, and the *Ellern* or *Altenaw* Gate, leading to *Altenaw*, a Town belonging to the King of *Denmark*. Their Buildings are very handsome, with very fine Entrances, and spacious Halls. The Senate House is a Noble Structure, beautified with the Statues of the nine Worthies.

Exchange.

The Exchange was then enlarging: It is celebrated for its fair Churches, and noble Steeples cover'd with Copper. The Church of St. *Catharine* has a noble Front, and round the Steeple you see a Crown well gilt. The Steeple of St. *Nicholas* is supported by great Globes gilt. The other great Churches are, the *Dome* or *Cathedral* Church, St. *Peter's*, St. *James's*, the Great and Less, St. *Michaels*, Churches in the *New Town*, besides several lesser ones, as of St. *Gertrude*, St. *John's*, St. *Mary Magdalen*, the *Holy Ghost*, the *Blue Coat Hospital Church*, and St. *Georges* in the Suburbs.

Churches.

Rivers.

The River or rather Lake call'd *Alster*, passes thro' it into the *Elbe*, which is just beyond the Town, join'd by another small River call'd the *Bilde*. The Tide passes daily twice thro' most of the great Streets, thro' Channels, tho' the City lies 18 Leagues distant from the Mouth of the *Elbe*.

As it is excellently well situate for Trading, so it abounds in Shipping; for besides its passage into the Ocean, it is but an easie Day's Journey from *Lubeck* on the *Baltick-Sea*, besides, that by the River *Elbe*, they carry on their commerce by Water with a great part of *Germany*, even as far as *Bohemia*. The conveniency of Trade drives many Foreign Merchants thither, among which the *English Company* enjoys great Privileges; it being computed that they vent there about 100000 Pounds worth of our Woollen Manufactory.

I left

I left *Hamburgh* the 10th of *December*, when embarking in an *Engliſh* Veſſel, we got that Day to *Stade*, upon the River *Zwingh*, which near it falls into the *Elbe*. It belongs now to the King of *Sweden*; and here it was the *Engliſh* Merchants reſided for ſome time, upon ſome diſcontent with the *Hamburgers*.

The Author's Voyage to London.

December the 11th, we paſs'd *Gluckſtadt*, ſeated upon the *Holſatian* ſhoar, and belonging to the King of *Denmark*: We caſt Anchor that Night at the Mouth of the River *Oaſt*, which ariſing in the Dutchy of *Bremen*, falls into the *Elbe*, a Mile from *Brunſbuttel*, on the oppoſite ſide of the *Holſatian* ſhoar.

December the 12th, we paſs'd *Cook*'s *Haven*, in hopes to reach the Sea that Night, but being becalmed at three in the Afternoon, were forced to caſt our Anchor again, between *Thick ſand* to the North, and *Newark* to the South, near a Light-houſe.

December the 13th, the ſtrong Wind forced us back to *Cook*'s *Haven*. I took the opportunity to go aſhoar, and took a view of the Caſtle, which belongs to the City of *Hamburgh*. It is a ſquare Fort with a double Ditch, and at high Tide, ſome Veſſels come up the Channel, which reaches up to the Fort, but at low Water it is dry. Both the Town and Caſtle are call'd *Reutzbuttel*, being not far from the *Lands-end*, and the Governour thereof, is always one of the Senate.

Within three Days after we ſet ſail again with a brisk N. E. Wind, for *England*, and ſcarce were we come out of the Mouth of the *Elbe*, but we got ſight of a certain ſmall Ille, belonging to the Duke of *Holſtein Gottorp*, call'd the *Holy Land*, which as it is very high, ſo it is a ſafe direction for Ships, eſpecially thoſe that come from Sea, without which they would be often at a loſs, by reaſon of the lowneſs of the ſhoar, near that Rivers Mouth. This Iſland, which is very ſmall, is reputed to have about 2000 Inhabitants, who live for the moſt part upon Fiſhing, and carrying Lobſters and other Sea-fiſh to *Hamburgh*, *London*, and *Quinborough*. We choſe the Main Sea that Night, but the next Day made nearer to the Shoar, and ſail'd in ſight of *Amelandt* and *Schelling*: and in the Evening diſcover'd the Lights at the *Vly* and *Texel*.

The next Day, having a fair Wind, we took down our Sails in the Evening, for fear of coming too near the *Engliſh* Shear in the Night time, and the next Morning diſcovered the *Northforeland*, and came the ſame Day to an Anchor in *Margaret* Road, and came ſafely aſhoar on *Chriſtmaſs* Day.

Now I muſt confeſs, that after I had taken ſo full a view of *Germany*, I found it quite different from the conceptions I had made of it my ſelf. For to ſpeak firſt of its Rivers, they are ſo noble and great, that they excel thoſe of *Italy* and *France*, it being certain that the *Po*, the *Arno*, *Garigliano*, and other Rivers of *Italy*, bear not the leaſt Proportion to them; and tho' *France* has four great Rivers, *viz.* The *Loire*, the *Seine*, the *Rhoſne*, and *Garonne*, as well has *Germany* has the *Danube*, the *Rhine*, the *Elbe*, and the *Weſer*, yet has *France* none that can come in compariſon with the *Danube* and *Rhine*. 'Tis true, *France* has many brave Cities and Seaports, yet does not come up in number of its Cities to *Germany*, and I much queſtion, whether it has any trading places, that exceed *Hamburgh*, *Lubeck*, *Dantzick*, *Bremen*, &c. Beſides which, the whole Country is full of Populous Towns, great Villages, ſtrong Caſtles, ſeats of Perſons of Quality, delicious Plains, Foreſts, and pleaſant Woods. Nay *Germany*, affords even under Ground, Mines of Gold, Silver, Copper, Iron, Tin, Lead, Quick-Silver, Antimony, Coal, Salt, Sulphur, Cádmia, &c. and it is full of the beſt Artificers, to work in them.

Add to this the eaſie converſation of the People, who are great lovers of Strangers, and honeſt in their dealing: The Women are generally well complexioned, of a ſober behaviour, faithful to their Husbands, and good Houſe Wives.

Beſides, that *Germany* affords an inexhauſtible ſtock of Men, they being naturally fruitful, they being not exhauſted by long Sea-Voyages and Engagements; and by Colonies ſent into far diſtant Countries; the only conſumption of Men they have being in the Wars; and if they have none at home, they will ſeek for it abroad, they being generally inclined to martial exploits; and Perſons of Qualty are always averſe to Trafficking.

To conclude, When I conſider the preſent condition of *Germany*, their great and populous Cities, with the ſtrength of their Fortifications, and the vaſt number of their publick and private magnificent Structures, and their civilized manner of living in them, and compare all this with the Character *Tacitus* gives of the ancient *Germans*, That they lived poorly, ſcattered, without Towns or Villages, ignorant of all Arts, and ſuch like, I can't but be pleaſed with the Expreſſion of a certain learned Perſon, tho' long ago, upon this Subject, That, if *Arioviſtus* and the other great Men of *Germany*, of thoſe times, ſhould ariſe out of their Graves, and take a full view of their Native Country, they would fancy themſelves to be in another World, and never acknowledge this for their own Country.

A Journey from Colen *in* Germany *to* London.

SEveral Gentlemen who accompanied their Excellencies the Lords Embaſſadours and Plenipotentiaries from his *Britannick* Majeſty to the Treaty of Peace at *Cologne*, 1673. having a curioſity to view ſome of the neighbouring Territories, but eſpecially the *Spra*, the Baths of *Aken*, &c. we ſet out the fourth of *July* from *Cologne*, towards *Juliers*, and upon the Road, overtook my Lord *Peterborough*, who was then returning from *Italy*, having been ſent to *Modena*, to bring over her Highneſs the preſent Dutcheſs of *York*.

We dined at a ſmall but wall'd Town, call'd *Berkem* (which ſome will have to be *Tiberiacum*) where being detain'd for ſome Hours to accommode an unlucky accident, that had befallen one of our Servants, who accidentally ſhot an Officers Horſe, we continued our Journey towards evening, thro' the Woods, and took up our Quarters at a place call'd the *Stone Street*, and the next Morning came to *Juliers*, ſeated upon the River *Roer*. It is ſmall but very ancient, being ſuppoſed to have been founded by *Julius Cæſar*, being called *Juliacum* by the *Romans*. It is very well fortified, its Streets are ſtrait, and the Houſes of Brick and well built. The Cittadel is fortified with four regular Baſtions, and the Piazza is very fair and ſpacious. Within the Cittadel is the Prince's Palace, this place being formerly the Seat of the Dukes of *Juliers*, before this Country was united with *Cleve*, the laſt of which, together with the Country of *Mark*, is in the Poſſeſſion of the Elector of *Brandenburgh*, as the Dukedoms of *Gulick* or *Juliers* and *Berg*, are under the juriſdiction of the Dukes of *Newburgh*.

Juliers.

Hence we continued our Journey to *Aken*, where we arrived the 5th of *July*. It is five Leagues diſtant from *Juliers* call'd in *Latin Aquiſgranum*, and by the *French Aix la Chapelle*, from a certain Chapel in the great Church, much frequented by Pilgrims. It owes its riſe to a certain noble *Roman* named *Granus*, who in the Year 53. coming into *Gallia Belgica*, diſcover'd ſome of the hot Springs, that are to be ſeen here to this Day; and built a Structure there after the manner of the *Roman Baths*, part of which the Inhabitants ſhew even now to Strangers, under the name of *Turris Grani*, being a very old Tower, at the Eaſt end of the Town Houſe, tho' the manner of its Building ſeems to contradict what they tell you of its Antiquity. Certain it is, that theſe Baths were named *Aquis Granis*, from its firſt diſcoverer, and the Town of *Aquiſgranum* flouriſh'd, till the ſame was laid waſt by *Attila* King of the *Huns*: It happened that *Charles* the Great riding a hunting that way 40 Years after, his Horſes Foot ſtruck into one of thoſe hot Springs, and he taking notice at the ſame time, of the Ruins of the ancient Buildings, was ſo much delighted with the place, that he gave immediate Orders for the repairing of thoſe Baths, built a Royal Palace near it, and order'd, that the King of the *Romans* ſhould be crown'd here with an *Iron Crown*, as they were with a Silver one at *Milan*, and one of Gold at *Rome*: He alſo built the Collegiate Church, dedicated to the Virgin *Mary*; and the old or inward Wall of the City; And thus the City continued in a flouriſhing condition, till 882. when the *Normans* laid the whole Town and the Emperour's Palace in aſhes, ſince which time, tho' it was rebuilt, yet has it ſuffer'd conſiderable Loſſes by Fire, as in the Years 1146, 1224, 1236 and 1656. in the laſt of which, twenty Churches and Chapels, and 5000 Houſes were burnt.

Aken.

The Town-houſe is a noble Structure, of Free Stone, three Stories high, beautified with the Statues of the Emperours; The firſt and ſecond Storie is taken up with Chambers, but the higheſt of all is one entire Hall, 162 Foot long and 60 broad; where the Emperours keep their Coronation Feaſts: The Roof reſts upon four Pillars, thro' the concavities of which, the Smoak of all the Chimnies of the whole Building is conveyed away.

The Town Houſe.

For

For the rest, this Hall has divers rare pieces of Paintings, done by *Amisaga*, among which, that of the Resurrection, and another representing *Charles the Great*, giving the Charter to the City of *Aken*, are valued at a very high rate.

In the midst of the Market-place, directly opposite to the Town House, is a stately Fountain, remarkable both for its largeness, and workmanship, performed by a famous Artist *Gerard Coris*. It has four Springs, which running continually, empty themselves from above into a large Copper Cistern, of 30 Foot Diameter, whence it is again conveyed by six Pipes, into a Stone Cistern below, whence it is distributed thro' the Town.

A Statue of *Charles the Great*.

On the top of the Fountain, you see a large Brass Statue gilt over, of *Charles the Great*, in Armour, turning his Face towards *Germany*, and round the edges of the Brass Cistern, this following Inscription.

Hic aquis per Granum *Principem quendam* Romanum, Neronis & Agrippæ *fratrem inventis, calidorum fontium* Thermæ, *à Principio constructæ. Pestem verò per D.* Carolum *Magnum Imp. constituto ut locus hic sit caput & regni sedes trans* Alpes, *renovatæ sunt, quibus* Thermis *hic gelidus fons influxit olim quem nunc domum hoc æneo vase illustravit S. P. Q.* Aquisgranensis, *Anno Domini*, 1620.

In Churches.

The Church of our Lady, built by the said Emperour, is of a very odd Figure. The Steeple on the West end, has divers Pyramids about it, and a very large Globe and a Cross on the top.

From hence much higher than the Church, you see a Gallery, supported by a large Arch, reaching to the Cupolo, near the middle of the Church: At the East end there is another small Turret.

But the inside of the Church is very sumptuously adorned with Marble Pillars of several sorts, with Brass Pillars, gilded Statues, Brass Doors and Partitions, and much *Mosaick* work.

In the very middle of the Church (where formerly stood the Tomb of *Charles the Great*) hangs a Crown of a very large size, a Present of the Emperour *Frederick*; It is of Silver and Brass gilt, adorned with 16 little Towers, and 48 Silver Statues of a Foot high, and 32 lesser ones; Betwixt these stand 48 Candlesticks, in which they set up Candles upon their Festivals. I have seen several of those Crowns at *Colgne* and other places in the old Churches. The *Greeks* also have something like them, on which they hang the Pictures of their Saints, and the *Turks* hang in their Mosques their Lamps on Circles.

It was *Frederick*, who removed the Body of *Charles the Great*, and buried it again, part of it under the Altar of the Quire, in a Silver Copper, and the other part near the Wall of the Old Building, which he covered with the same Tomb Stone it had before, supposed by some to have been taken first of all from the Tomb of *Julius Cæsar*; being of white Marble, with the Figure of *Proserpina* upon it. At the removal of the Tomb of *Charles the Great*, many Relicks and Rarities were taken out of his Tomb, presented to him in his life time, by *Aron* King of *Persia*, and the Patriarch of *Constantinople*, and others which are to be seen here to this Day. In this Church you see also the Monuments of the Emperour *Otho* I. in black Marble; under whose name the Elector of *Germany* hath his first rise about the year 1000.

Mines near *Aken*.

Near to *Aken* are found divers sorts of Minerals; Lead Ore, Sulphur and Vitriol Stone, Iron, Coal, and *Lapis Calaminaris*, or *Calmey*, as they call it.

When they are to make Brass, they take 100 Weight of it, 28 Pound of *Swedish* Copper, and the melted dross or *Schlacken*, as they term them, of both; of the last, they put first a certain quantity into very large *Crucibles*, and afterwards the Calmey and Copper, after they have stood in the Melting Furnace twelve Hours, they put eight Crucibles into one, and let what will run over, the metalick part sinking to the bottom; afterwards they cast it into Plates, in a Frame made of Stone, and bordered with Iron Bars.

A Description of the several Baths of *Aken*.

The hot Baths are much celebrated throughout *Europe*: Within the inward Wall are three, *viz.* The *Emperour's Bath*, the *Little Bath*, and St. *Quirinus* his *Bath*.

The first is in the same place, and the self same Spring, in which *Charles the Great* used to take so much delight, and to swim in it with his Nobles, sometimes 100 at a time: It is now divided into five Rooms, and the *Lesser Bath*, which is also taken out of it, into three more. These are reckoned to be *Nitro-Sulphureous*, and the Springs so hot, that they must let them cool twelve Hours, before they can use them. I saw in one of the Wells of these hot Springs, Brimstone of an Inch thick, Saltpeter and other petrefied Substances taken out. Besides these, there are without the inward Wall, but pretty near it, several other Baths, but not so hot as the former, being accounted *Sulphureo-nitrous*. Their smell is offensive to the Nostrils, and the Water not very clear. The first is St. *Cornelius's Bath*, (2) the *Rose Bath*, named after the Builder thereof, (3) The *Compus* or *Poor Man's Bath*; and another Fountain of warm Water, drunk frequently for Chronical Diseases.

There is a certain Bath, not above a Furlong from the City, named *Borset* or *Porcetum*, from the great number of Wild Boars found thereabouts formerly. Here are 28 Baths of Stone, fed by hot Springs on both sides of a little Rivulet; each of these Baths had commonly 50 Tuns of Water, which is very transparent and pleasant, having no ill smell; they are hotter than those within the City, which is the reason that they not only cool them 18 Hours, before they make use of them, but also stir the Water continually with a Wooden Instrument, pierced with many holes. They are for the most part square, about five or six Yards over, and are divided into fourteen Houses, each of which has two Baths: The (1) is call'd the *Lady's Bath*, (2) the *Snake*, (3) and (4) the *Sword*, (5) the *Golden Mill*, (6) the *Fool*, (7) the *Cock*, (8) the *Great Bath*, (9) the *Fountain*, (10) the *Crab*, (11) the *World Inverted*, (12) the *Glass*, (13) the *Angel*, and (14) the *Rose*. There is also another call'd the *Poor Man's Bath*; near it, in the open Air, and in the Street, another Fountain or Spring, as hot as any I have seen. It is further observable, that near those hot Springs in the City, are many cold ones, whereby the heat of the former might be much temperated, and those Baths, without any vast charge, made the most delightful in the World.

The Mines near *Limburgh*.

From *Aken* we went to *Limburgh*, to take a view of the Mine of *Lapis Calaminaris*, thereabouts, just over against the Castle of *Einenbergh*. I found this Mine about 18 Fathom deep, of an Oval Figure, and open like a *Chalk Mine*. The best *Calmey* they dig out of the deepest part from betwixt the Rocks, and were then digging in a very good *Vein* of eleven or twelve Foot thick. The Colour of this was of a dark yellow inclining to red, with some Veins of natural Brimstone. As the Veins of the *Lapis Calaminaris*, were dug very large, so they were dug over one anothers Head, making their works in the form of a pair of Stairs, one throwing up what the other digs below him, and so upward. Some of the Stone is brown inclining to black. The Engines belonging to this Mine are, (1) An *Over-shot Wheel*, in the Earth, designed for the moving of the Pumps; this is placed on one side of the Mine, and a passage cut out thence to the bottom of the Mine, by which it is drained. There is also another Passage or *Cuniculus*, cut thro' from the place where the Wheel is turn'd, which lets out of the Water which turns the Wheel, and conveys also the Waters which come from the Mine into an adjacent Valley. (2) The washing of the *Ore Stone*, which is done by letting the Water run over and stirring it. (3) The Manner of calcining the Ore (all our *Lapis Calaminaris* being calcined). They lay Faggots in a very handsome order, in a compass of about 40 or 50 Yards Diameter. Upon these they lay Char-coal very close, till they raise the whole a Yard from the Ground; then they lay ranks of the largest *Calmey Stones*, and the smaller by degrees; which done, they set fire to the bottom, which calcinates the Ore.

The City of *Limburgh*.

The City of *Limburgh* is seated upon a high Rock, surrounded almost with a River at the bottom. The Passage into the Town is upon the edge of a Rock on the North side: and the Town Gate, (over which stands the Governour's House) extends from one side of the Rock to the other, facing the Passage, which is of very difficult Access.

The *Spaa*.

In the Afternoon we travell'd to *Spaa*, a very fine Village in the Forest of *Ardenna*, situate in a bottom, enclosed with Hills, and to the N. with craggy Mountains, which makes it much exposed to sudden Water Floods. The Waters are not only drunk here upon the spot, but also transported into far distant places, sealed up in Bottles. Our Host told us, that he often sent them into *Spain*, and that he had at that time above 30000 Bottles empty, which he was to fill the next fittest Season, which is either the hottest time of the Summer, when it is very dry, or the hardest Frost in Winter.

A Description of its Mineral Springs.

The Mineral Fountains chiefly in request here, are call'd, *Geronster*, *Sweinere*, *Tomelet*, and *Pohunt*.

Geronster is in the midst of a thick Wood, about two *English* Miles to the South of *Spaa*; being the best kept, and built up with Stone, with a Pavillion over it, resting upon four Stone Pillars. There is a green Plat, cleared

The Town House.

ed from the Wood just by it, and a little edifice, for the Patients to warm themselves in, in the working or in cold weather. This Spring has a strong sulphureous Smell, and causes vomiting in some, but Works by Urine chiefly, as do all the rest. The Sediment at the bottom of the Well is light blue, but without of a dirt Colour. There is another such Spring in the same Wood, but is not built.

Saviniere, the second Spring, lies as far to the East, being built in the shape of a Tower, but the Waters are not so strong as the former.

There is also here another Fountain much of the same nature, but believed to be a peculiar remedy against the Gravel and Stone.

(a) In his *Spadacrene.*

The third is call'd *Tonnelet*, arising in a Meadow, and done up with Stone. (a) *Henricus Van Heers*, says, it contains more nitre than the rest, and is very cold in the Mouth and Stomach.

The fourth of these Springs, which is in the middle of the Village, is call'd *Pohunt*. This is the Fountain which supplies most of the Foreign Parts with Water, unless some other be desired; and is beautified with very good Stone Work, by the Bishop of *Liege* (under whose Jurisdiction it is) with this Inscription.

Obstructum reserat, durum terit, humida siccat
Debile fortificat, si tamen arte bibis.

From the *Spaa*, we took a turn to *Franchimont*, and passing thro' a Wood, came to an old Castle, near which are very good Sulphur and Vitriol Works, both in the same *Ore*; which I presume may be two of the principal Ingredients in the *Spaa Waters*.

We saw here how they cast the Brimstone into great Vessels, the clearest and purest part remaining upon the top and middle, and the thick drossy part settling and adhering to the bottom and sides, which commonly goes under the Name of *Sulphur Vivum*, after which, they did cast it into Rolls. Near it is a great heap of the burnt *Pyrites*, from whence the Sulphur has been drawn, and the dross of the Vitriol, which fermenting in time, grows hot and burns at last without intermission, appearing at a distance like a burning Hill.

From *Spaa*, we cross'd over to *Frapont*, a Village upon the *Ura*, or *Ourte*, from whence we went down that River in Boats, having a very pleasant prospect of variety of green Hills, and part of the Forest of *Ardenna*, and passing 30 or 40 small Water Falls in Boats made for that purpose, entred the pleasant River *Vesa*, or *Wesdert*, which carried us into the *Maes* near *Liege*, by their Inhabitants call'd *Luick*, and by the *Latines*, *Leodium*, or *Augusta Eburonum*. Many are of opinion, that it was in the Valley near this City, where the two *Roman Legions* under *Sabinus* and *Cotta*, were destroyed by *Ambiorix*, General of the *Eburones* in *Cæsar*'s time. Its situation is upon the *Maes*, which dividing here into two Branches, makes divers small Islands; and as the other small Rivers are join'd hereabouts with the *Maes*, this affords great plenty of Fish to the Inhabitants of this City, which is very populous. *Liege.*

Its Churches are fair, and most of the Convents stately built, and have great Revenues, in which it exceeds most other places in those parts.

The Bishop's Palace. The Bishops Palace is a very noble Structure. The Cathedral is dedicated to St. *Lambert*, Bishop of *Maestricht*, from whence the Body of that Saint, and the Bishop's See, were together translated to *Liege*. The Church is built of a red Stone, and has abundance of good Carving about it. The Canons of this Church are very rich and powerful.

Churches. Among the Parish Churches, those of St. *John* and of St. *Servasius* excel the rest, as among the Abbies, that of St. *James* within, and that of St. *Laurence* without the Town.

The *English Jesuits* have also a College here, with handsome Gardens, as also an *English* Nunnery. In the Church of the *Williamites*, you see the Burying place of Sir *John Mandeville*, our Country Man.

Chimes and Bells. Their Bells and Chimes are suitable to the fairness of their Churches. The Cathedral has eight great Bells, and twelve lesser, and one of them requires 24 Men to ring it. In the Church of St. *Paul*, of *S. Lawrence*, and the *Crossed Friars*, they have also very good Chimes. Here is also an University very famous in former ages. Their Speech here and at the *Spaa*, is commonly call'd *Roman*, being a kind of obsolete *French* mix'd with corrupt *Latin*, yet many here speak good *French*. They have here some Vineyards, but the Wine is very small; and some Quarries of Stone; they also abound in Pit-coal, and have some Mines, the Pumps of which are worth making notice of, being moved by Wheels at a considerable distance thence, being continued by certain Wood Work, moving backward and forward continually. The Cittadel is very strong, and built upon a Hill; 1649 upon occasion of some Differences betwixt the Bishop and the City, which cost the *Burgermaster*, *James Hennes* his Head.

It has very handsome Bridges, that over the *Maes* being very broad, and sustain'd by very large Arches.

Going from *Liege* to *Maestricht* by Water, we pass'd by the Castle of *Argentau*, seated upon a high Rock on the right side of the River, and afterwards by *Navagne*, a strong Fort on the *Maes*, belonging both to the *Spaniards*; and not long after came to *Maestricht*. This Town being lately taken by the *French*, they had a Garrison of 10000 Men in all, and we saw in the Market place about 200 Field-pieces. We were shew'd a Draught of all the Works, Approaches, and Attacks by Colonel *Storff*, and saw also the Half-Moon, which the Duke of *Monmouth* retook, after the *French* had been several times beaten out of it. It had a great many Out-works *Maestricht.*

The famous Quarries of Stones near it. Not above a quarter of a Mile from *Maestricht*, is that noble Quarry of Stone, which may compare with any in the World, far exceeding the Cave of *Custoza* or *Cubola*, betwixt *Padoua* and *Vincenza*, which is reckoned 700 Fathoms long, and 500 broad. We went into it and found the Roof very high and lofty, sustain'd by Pillars which were numberless, for two Miles under ground, resembling the intricate *Labyrinth*, and yet uniform in all its parts, the Floor being all in a level, and the Roof very near of the same height in all places. We came out again not far from a certain Convent, upon the very Banks of the River.

The next Day some of our Company returned by *Aken* to *Cologne*, and I with the rest of our Company, went back to *Liege*, to take the Conveniency of the Coach for *Brussels*.

Tongres. After we had left *Liege*, we pass'd by *Tongres* or *Tungrorum oppidum*, which for its Antiquity, challenges the preference before any in those parts, being a strong place, before the coming of *Cæsar* into *Gaul*, and being made afterwards a *Roman* Station, grew so powerful, that *Attila*, the King of the *Huns*, destroyed 100 Churches here, being then a Bishops See, which was 498. removed to *Maestricht*. Here are to be seen many old Coins and other Antiquities, and amongst the rest the Ruins of an old Chapel, said to have been built by St. *Maternus*, a Disciple of St. *Peter*.

We lodged the next Night at St. *Truyen*, and dined the Day after at *Tilmont*, upon the River *Geet*, a City formerly of great note in *Brabant*, but decayed long ago. Near the Walls of this place are three remarkable Sepulchral Eminencies, reputed to be the ancient Tombs of great Commanders. We saw many more of them hereabouts, as we pass'd thro' the Country.

Louvain. We reach'd *Louvain*, in the Evening: It is an ancient City of *Brabant*, of a pleasant situation upon the River *Dela*: Its Circuit is reckoned to be four *English* Miles, but as there are many Hills, Gardens, nay whole Fields in the Town, so it is very delightful, but scarce defensible. Its Buildings both private and publick, but especially the Convents and Churches, are good Edifices; among which the noble Church of St. *Peter*, the Convent of the *Carthusians*, the Hospital and Senate-house, excels the rest.

Its University. Its University is famous thro' all *Europe*, they account its beginning from the Year 926, but its true establishment must be deferr'd to 1425. when *John* IV. Duke of *Brabant*, endowed it, and *Pope Martin* confirm'd it. This University is under the Tuition of a Rector, who is in great Authority here; it has produced a great number of learned Men. There are no less than 43 Colleges in it, the four chiefest are call'd *Lilium*, *Falco*, *Castrum*, *Porcus*. *Goropius Becanus*, a native of *Brussels*, makes its situation to exceed all other Universities of *Italy*, *France*, *Spain*, and *Germany*, upon which head I will only add, That as *Oxford* may compare with it for its pleasant Situation, so neither the Buildings of their Colleges, nor their Endowments, can stand in Competition with those of our Universities.

From this place to *Brussels*, we travell'd for the most part within sight of the high Steeple of St. *Rombald's* Church at *Mechlin*; and thence, taking our way over *Antwerp*, we pass'd thro' a fruitful plain Country, well planted with Trees, to *Ghent*, or *Gandavum*.

Ghent. This City is not only the biggest in *Flanders* and the *Low Countries*, but also claims a rank among the largest of *Europe*, but is of late Years not a little decreased from its former Greatness. It has many fair Convents, and the *Jesuits* deserves to be reckoned among the best.

The

The *English* Nuns have also a Convent here. The Cathedral is a noble Building, and the Steeple very high: The Market places are all fair and large, and in one of them you see a noble gilded Statue of *Charles* V. Emperor, and King of *Spain*, who was born here. The Houses are generally well built, and the Streets very clean: As the Inhabitants have often been guilty of Sedition, so it was they that first put the *Spaniards* upon the Invention of building Cittadels, this being the first that was erected in *Europe*, and that by *Charles* V. It is but a small Circuit, and the Bastions of no extraordinary size; so, that tho' it be regular, yet does it not come near to the Perfection of many that have been built of late Years.

The Statue of *Charles* the Great.

Bruges. We continued our Journey from *Ghent* by water to *Bruges* (20 *English* Miles from thence) a very fair and large City, and once a place of considerable Trade, being not above three Leagues from the Sea. It is pretty well fortified, but the Works are of Earth only; the Ditches very deep. It has a considerable number of Convents, and artificial Cuts on all sides, to facilitate the Passage thither by Water, among which, that leading to *Ostend*, is now designed to be made capable of carrying Ships of a considerable burthen up to the City.

Ostend. *Ostend*, (the only Sea-port besides *Newport* the *Spaniards* are Masters of in *Flanders*) is not above ten *English* Miles from *Bruges*, seated upon the Sea-shoar: As this is the most considerable Harbour of the two, so the *Spaniards* have almost let the Sea in, round the Town of late, and are now enlarging the Harbour, and by means of a great Lock or Receptacle of Water, are endeavouring to carry over their Ships into a Canal, leading from *Ostend* to *Bruges*, which if well finish'd, would be of great Advantage to the Commerce of the *Low-Countries*. The Situation of the Town is low, yet are the Streets broad, straight and uniform.

Newport. We travell'd from *Ostend* to *Newport*, along the Sea-shore: This is also but low built, but the Streets are fair and large; we saw a great number of small Ships in the Harbour. Near this place it was, where the *English* twice have signalized their Valour in our age; The first time at the Battle of *Newport*, fought 1604. betwixt *Archduke Albert* and Count *Maurice*, wherein the *Spaniards* were put to the rout, and the Honour of the Day was chiefly attributed to the Valour of the *English* under Sir *Francis Vere*: And the second time at the Battle fought not far from hence, at a place call'd the *Sandhils*, betwixt part of the *English* and *French* Army, that had besieged *Dunkirk*, and the *Spanish* Forces which came to its relief, in which the latter likewise lost the Day.

Gravelin. We set sail from *Newport* for *England*, but the Wind proving so very strong against us, we were forced to put in at *Gravelin*, (where there is only one Wooden Fort now above the Water-mark) having in our Passage had the opportunity of observing the vast multitude of Sand-banks, which lay scattered all along the Coast.

Dunkirk. Coming to *Dunkirk*, we found it considerably encreased from what it had been a few Years before, the King of *France* (who knows the consequence of this place) having spared no Money or any thing else, that might render it almost impregnable. The Cittadel begun then by the *English*, whilst they were Masters of it, was then very near finish'd, having on one side the Sea, on the other the Haven, and to the Land side the *Downs*. They had then also begun divers great Works, without the old Fortification of the Town, encompassing so large a piece of Ground, as makes the place near as big again as it was before. In this part are the *English* Nunnery, and most of their best Buildings. Were the Harbour as deep as it is large, it might be compared to some of the best upon the Ocean, but as it is dry at low Water, and there are a great many Sands at its entrance, it is not capable of receiving Ships of any great bulk.

Graveling. We went from *Dunkirk* to *Graveling*, which has good Fortifications, but of Earth only; a goodly Church, broad Streets, but low Houses, and but ill inhabited.

From hence I travell'd to *Calais*, where taking the conveniency of the Pacquet Boat in the Morning, we sail'd in a few Hours to *Dover*, and arrived safely the same night in *London*.

A Journey from Venice *to* Genoa.

HAving some few Years since travell'd thro' the Countries betwixt *Venice* and *Genoa*, where I had the opportunity of making peculiar Observations, not only of their fruitfulness, but also of many rare Antiquities, as everlasting Monuments of the many remarkable Actions performed in former Ages in these parts. The grateful remembrance of those Varieties, could not but induce me to lay hold of the Opportunity of this second Impression to annex this short account.

From *Venice* we travell'd to *Padua* by Water, up the River *Brent*, having many Summer Seats and Palaces on both sides. We entred the River near *Lizafusina*, five Miles from *Venice*, where formerly Vessels used to be carried into the River by an Engine, the *Venetians* having many Years ago stopp'd up the Mouth of the *Brenta*, for fear, that by the continual descent of the Water, the Channel might be quite exhausted, or at least rendred unserviceable; but of late they have contrived four large *Sostegni* or Locks *viz.* at *Stra*, *Dolo*, *Mira* and *Moranzan*, by which the Vessels are brought in between two Gates, and the Water let in or out, according as occasion requires.

Padua. The Key or Landing place at *Padua*, is faced for a considerable space along the River side with Stone Steps, as in most Cities of the *Low Countries*. The outward Wall is well fortified after the modern way, the Rivers *Brenta* and *Bacchiglione*, serving for a Ditch. The inward Wall has scarce any thing remarkable, except the Antiquity of its Name, being call'd *Antenor*'s Wall, after its Founder. This Wall enclos'd a far less space of Ground than the former, *Padua* having (like *Aix la Chapelle*) one Town within another.

Its Antiquity. *Padua* or *Patavium*, places its Origin as far as the Destruction of *Troy*, which that it was the Opinion of the ancient Writers, is evident among others out of *Livy*, who in the very beginning, makes this the Foundation Stone of his History. That *Antenor*, after the taking of *Troy*, brought a considerable number of the *Heneti*, lately driven out of *Paphlagonia*, to the bottom of the *Adriatick* Gulph, and having driven out the *Eugenians*, who inhabited between the Sea and the *Alpes*, setled a Colony of the *Trojans* and *Heneti* in those Countries.

Martial addressing himself to *Flaccus*, a *Padoan* Poet, calls him,

Flacce Antenorei spes & Alumne Lari.

And *Virgil* introduces *Venus*, thus expostulating with *Jupiter*.

Quem das finem, Rex magne, malorum?
Antenor potuit, mediis elapsus Achivis,
Illyricos penetrare sinus, atque intima tutus
Regna Liburnorum, & fontem superare Timavi;
Unde per ora novem vasti cum murmure montis
It mare præruptum, & pelago premit arva sonanti:
Hic tamen ille urbem Patavi, sedesque locavit
Teucrorum, & genti nomen dedit, armaque fixit.

In most ancient times, Navigation being but then in its infancy, the Mariners, who were not forward to go without sight of Land, if possibly they could avoid it; *Antenor*, who was obliged to keep along the Coast of *Peloponnesus* and *Epirus*, and so by the *Illyrian* and *Liburnian* Shoars, which are very unsafe by reason of the many small Bays, fill'd with many Rocks and small Islands, whereas had they cross'd over the *Italian* Coast, they might have made a much better and more pleasant Voyage, along an even, bold Shoar.

The Inhabitants of *Padua* are to this Day so much delighted with the thoughts of the supposed Founder, that they preserve still the Tomb of *Antenor*, which at present is to be seen near the Church of St. *Lawrence*; and in all their publick Shows, they will scarce ever neglect to introduce something of the ancient *Troy* and its Heroes. I saw here a Wooden Horse of about twenty Foot high, which they kept in remembrance of the famous old *Trojan* Horse, tho' in its bulk it did not approach to the Original.

Padua had of ancient times the reputation of adhering to the *Roman* Interest, in their Wars against the *Galli Senones*, the *Umbrians*, *Boians*, *Insubres*, *Cimbrians* and *Carthaginians*, till it was destroyed by Fire and Sword by *Attila*, King of the *Huns*, and being afterwards rebuilt by *Narses*, General to the Emperour *Justinian*; it was

forced to undergo the same fate a second time, by the fury of the *Langobard* Princes. The *Padouans* ow'd their Second Restauration to the Emperor *Charles* the *Great*, so that for some Ages they not only flourished, but also grew very powerful, having under their jurisdiction, *Vicenza*, *Verona*, *Trent*, *Treviso*, *Feltre*, *Belluno*, *Ceneda*, with many other places, till at last the *Venetians* 2405 having found means to size upon this City, and having kill'd *Francisco Novello*, their Governour, and his Son of the Family of the *Carraresi*, (who had ruled there for many Years before) secured themselves in the Possession thereof, which they maintain to this Day.

Its Buildings. *Padoua* has many noble Structures both publick and private, most of its Streets having very fair Portico's or Cloisters on each side, to serve as a defence against the Sun and Rain, like our Houses in the Piazza of *Covent Garden*; many of their private Houses are painted on the out side in *Fresco*, and their Churches very stately built and well adorned. The Cathedral Church is a large Structure, in the middle of the City, in which lies interr'd the Body of *Berta*, Empress to the Emperor *Henry* IV. who bestowed such considerable Endowments upon it, that its Yearly Revenues does amount now to 160000 Crowns *per Annum*. In this Church are preserved, (besides the Monuments of many eminent Persons) the Body of St. *Daniel*, of Cardinal *Pileo da Pratta*, and of Cardinal *Francisco Zabarella*.

St. Anthony's Church. The Church of S. *Anthony* of *Padoua*, is famous for the many Pilgrimages made thither, the Exquisite Design, artificial carving in Marble, and the stately Quire with all its rich Ornaments, renders it a very compleat piece of Workmanship: It has no less than six Cupola's, which make up the Cover of the Church, being cover'd on the top with Lead: But the Chapel of St. *Anthony* has a rich and most noble Roof, sustain'd by twelve Marble Pillars, betwixt each of which you see the Miracles of this Saint, whose Body is interr'd under the Altar, upon which stand seven Statues made by that famous Statuary of *Padoua*, *Titian Aspetti*, and behind the Altar there is a most excellent *Basso relievo*, done by *Sansovinus*, *Tullius Lombardus* and *Campagna Veronensis*. The Chapel of St. *Felix*, is directly opposite to that of St. *Anthony*, his Tomb, of coloured Marble, is very artificially wrought, and the whole beautified with Paintings, done by the famous *Giotto*.

The Relicks shown here, are the Tongue and Chin of St. *Anthony*; a Cloth dipp'd in our Saviour's Blood; three Thorns of his Crown; and a piece of Wood of the Holy Cross; some of the Hair and Milk of the Virgin *Mary*, and some of the Blood of St. *Francis*. Just before the Front of this Church, you see a noble Brass Statue on Horse-back, representing that great *Venetian* General *Gattemela*.

The Convent and Church of Benedictins. As the Convent of the Black Fryars of St. *Benedict* is not inferiour to any in *Italy*, so their Church, dedicated to St. *Giustina* (a Virgin Martyr under *Maximianus*, and the Daughter of *Vitaliene*, of this City) may compare with most in *Europe*. In this Church, (built by *Palladio*) there are preserved (as they say) the Body of St. *Luke* the Evangelist, of St. *Matthias* the Apostle; of two of the Innocent Children; of *Prosdocimus* the first Bishop of *Padoua*, who converted these Countries to the Christian Faith; of *Maxentius* the second Bishop, and of St. *Giustina*. In a very fair Burying place on the South side of the Church, you see a round old red Marble Stone, upon which they tell you, many Martyrs Heads were cut off; and near it a curious white Marble Well, call'd the *Martyrs Well*, whither the People flock in heaps to perform their Devotions. The Front of this Church looks into a spacious place, call'd *Prato della Valle*, where the Gentlemen take the *Tour-ala-mode* in the Evenings in their Coaches.

The Church of St. *Austin*, a very handsome Structure, is built in the same place, where in ancient times stood the Temples of *Juno*: It contains several Tombs of the Family of *Carrara*, of *Charlotta*, Daughter to *James* King of *Cyprus*, and of the noted Philosopher *Petrus Aponensis*.

Il Ponte Molino, where are no less than thirty Water Mills, and the *Castello delle munitioni*, are worth a curious Traveller's observation. *La Corte del Capitanio*, formerly the Palace of the *Carraresi*, is another Structure, and the *Palazzo della Ragione*, where they keep their Courts of Justice, very spacious, beautiful, and artificially built of Marble, with rows of Pillars without, and adorned within with Heads and Inscriptions for many eminent Persons of this City. Its length is 256 Foot, and the breadth 86, having no Pillar or any other support in the middle.

The University of *Padoua*, acknowledges the Emperor *Frederick* II. for its Founder 1220. The Schools, which are handsome and large, are built in one Quadrangle, with a double row of Pillars, one above and one below; here is also a very fair Anatomical Theatre. The Physicians Garden is spacious, wall'd in, and well stor'd with Plants. The Prefects thereof, have been Men of great Fame, as *Aloysius Cadella*, *Aloysius Anguillara*, *Melchior Guilandinus*, *Jacobus Antonius Cortusus*, *Prosper Alpinus* and *Johannes Vesslingius*. Its University.

The *Arena*, or ancient Amphitheater of *Padoua*, is one of the most remarkable Antiquities that can be seen; the *Arena*, and the whole *Podium*, being preserved entire and free, but of the Arches some Remnants are only to be seen backwards in the Gardens of that noble Palace, the Front whereof looks directly into the open Amphitheater; this Palace, which is a portion of an Oval Figure, being built at one end of it, so, as that the whole *Area* or *Arena*, serves for a Court to it, the Entrance whereof being directly at the end opposite to the Houses; The noblest Court-yard that can be beheld with Eyes, as being the spacious Plain or *Arena* of an Ancient *Roman* Amphitheater, and the Wall thereof, an high entire noble *Podium*, the like perhaps the World can't produce any where else at this Day; for, to confess the truth, of all the Ruins and Remainders of twelve ancient Amphitheaters, which I have seen, there is not one that can compare with this. The Amphitheater at *Doue* in *Poictou*, which is cut out of the Rock, is not near so large; besides, that part of the bottom being fill'd up, the *Podium* and its Beauty is not so apparent to the Eye; the same defect being also to be observed in that of *Nizza*, near the River *Varus*, and that at *Puzzuolo*; and that at *Nismes* being fill'd with Houses, the upper Seats are only visible; and as for the Amphitheaters of *Bourdeaux*, *Xaintes*, *Arles*, *Garigliano*, that at *Rome*, near the Church of St. *Croce* in *Gierusalemme*, and several others, are so much ruined, that nothing of this kind is to be expected. Nay, even about the *Arena* at *Verona*, and the great *Colosseo*, or *Domitian's* Amphitheater at *Rome*, the Ground is now so high, that the *Podium* is either buried, or at least much disfigured. But as the *Padoua* Amphitheater can boast of its entire *Arena*, so it is wanting in all the rest; so that he who now-a-days desires to form to himself a true *Idea* of these noble ancient Structures, must see many, and by joining them together, make the best estimate he can, of the Figure, Proportion and Dimensions of these old *Roman* Structures. The Amphitheater of Padoua.

The Walls of *Padoua* afford a most pleasing Prospect into a plain Country, to the N. E. and S. and of the *Euganean* Hills to the W. which have great rarity of Plants, and a great number of Vipers. A few Miles hence are the hot Baths of *Abano*, and the Mineral Waters of *Monte Ortone*; but what most delighted us, was the Country Seat of the Marquis of *Obizzi*, a well designed Structure, accommodated with a good Armory, a Theater for Plays, handsome Stables, and a Tennis Court, and adorned with noble Painting, both within and without, by that great Master *Paulo Veronese*.

According to the Computation of the *Padouans*, their City had then stood, since its first Foundation, 3785 Years.

From *Padoua* we travell'd for 18 Miles thro' a fertile Country to *Vicenza*, a place well worth the Observation of Travellers. Here the famous Architect *Palladius* has shown his utmost skill in the *Rotunda*, in imitation of the *Pantheon* at *Rome*, in the Altar, and other Structures of this place. The two Arches, one near the Gate, behind which there is a noble ascent to St. *Maria del Monte*, and another in *Campo Martio*, are also very remarkable. The *Piazza della Signiora*, where the Nobility and Gentry (of which there is a great number here) meet in the Evenings, is the most beautiful and spacious place, much beautified by that noble Front of the *Palazzo della Ragione*, of the *Capitania's* Palace, and the Buildings of the *Monte della Pieta*, where Money is lent to the Poor without Interest. In this Piazza they also perform the Exercises of Tilting and Turnaments. Vicenza.

Most of the Inhabitants of this City subsist upon Silk-weaving, but it is of a considerable strength, by reason of the several Hills near it.

The Annual Revenue of the Bishoprick of *Vicenza*, is reckoned worth 12000 Ducats. In the Cathedral are, besides other Reliques, kept the Bodies of *Carpophorus* and *Leontius*, Martyrs of this place: But the Thorn, said to be one of our Saviour's Crown, given by St. *Lewis* King of *France*, to *Bartholomew Briganza*, a Native and Bishop of *Vicenza*, is preserved in the Church of St. *Corona*, belonging to the *Dominicans*.

The City of *Vicenza* or *Vincentia*, stands upon the River *Bacchiglione*, is watered by the *Rerone*, or *Erotinus*, and has, besides the two little Brooks call'd *Astichello* and *Seriola*,

Seriola near it, which proves no small addition to its pleasant and convenient Situation. The General opinion is, that it was foundod by the *Galli Senones*, under the Reign of *Tarquinius Priscus*, tho' not a few Authors deduce its Origin from the ancient *Tuscans*, who were driven out by the *Gauls*. These having yielded to the *Romans*, it remain'd in their Possession till *Attila* plundered it. Afterwards it fell into the Hands of the *Ostrogoths*, and after them of the *Lombards*, till *Desiderius*, the last King of the *Lombardian* Race, being taken Prisoner by *Charles the Great*, his Successours enjoy'd the Possession thereof, till at last it set up for a free City; but being afterwards taken and burnt by the Emperor *Frederick*, they had several Masters, the *Padouans*, the *Veronese*, and at last *Giovanni Galeazzo Visconte*, the first Duke of *Milan*, whose Relict the Dutchess *Catharine* having, after her Husband's death, absolved them from their Allegiance, the *Vicentines*, after various Deliberations, whether they should unite with the *Switzers*, or submit to the Protection of the *Venetians*, chose the last, which is the reason that they enjoy greater Immunities than any of the other Cities under the *Venetian* Jurisdiction in those parts.

Verona. Leaving *Vicenza*, we travell'd to *Verona*, a fair, ancient, large, and populous City, six Miles in compass; pleasantly situate upon the River *Aiche*, or *Etsche*, *Athesis*, *Adige*, or *Adice*, and well built, having many handsome Churches, and stately Convents, besides many other publick and private Buildings. It is now strongly fortified by the *Venetians* with large Bastions, and defended by three Castles, two upon the Hill, and one by the River side.

The Adige. The *Athesis*, or *Adige*, is a noble River, which having its Scource among the high *Rhætian Alps*, and passing thro' the *Vallis Venusta*, and so by *Trent*, with various Windings runs thro' the City of *Verona*, and after having pass'd the Fens of the *Po*, exonerates it self into the *Adriatick Sea*. *Hermannus Cruserius*, *Gulielmus Xylander*, the Bishop of *Auxerres*, and divers other Translaters of *Plutarch*, are of opinion, that the *Cimbrians* made their irruption by the sides of this River, and that *Catulus* lay encamp'd along this River, to stop their further Progress; nay, some make mention of a Triumphal Arch erected at *Verona*, in honour of *Caius Marius*, after his Victory obtain'd over the *Cimbrians*: They say, that *Catulus* the Consul, and Collegue, with *Caius Marius*, finding it dangerous to defend the Passages of the *Alps* against the *Cimbrians*, posted himself near the River *Adige* or *Athesis*, where having strongly entrenched himself on both sides of the River, he order'd a Bridge to be made to maintain a Free Communication with his Forces; but the *Cimbrians*, to shew their Strength and Courage, marched naked thro' the Ice and Snow, and climbing for sports sake, up to the top of the Mountains, would with their broad Shields laid under their Bodies, slide down thence, and when they had pitch'd their Camp at a small distance from the River, pull'd up, Giant like, the Roots of great Trees. and throwing in heaps of Earth, and vast pieces of Rocks, to turn the Course of the River, *Plutarch.* and having at last found means to beat down the *Roman* Bridge, by huge massy Floats, the *Roman* Souldiers left their Camp and fled. But notwithstanding this circumstantial Account, it is doubted by many, whether they entred *Italy* by the sides of this River; for *Plutarch* himself does not call that River near which the *Cimbrians* did these Feats, the *Athesis*, but τὸν Ἄτισιν ποταμὸν, the River *Atiso* or *Tosa*, which is far distant from any part of the *Athesis*, and arising in the *Alps*, falls into the *Lago Maggiore*, or *Lacus Verbanus*, being next to the River *Lesia* or *Lestis*, which passing by *Vercelli*, falls afterwards into the *Po*. Add to this, that when *Becrix*, King of the *Cimbrians*, challeng'd the *Roman* General, to appoint the time and place for a Battel, *Caius Marius* sent them word, that in three Days after he would meet them in the Plains of *Vercelli*, where they might determine the matter in an open Field, and where he gave a fatal overthrow to one of the greatest Armies that ever invaded *Italy*. This seems to be sufficient to shew that this vast swarm of *Cimbrians*, or at least the greatest part of them entred *Italy*, by the way of Mount *Sampion* or *Mons Sempronius*, where the River *Atiso* takes its rise; besides, that the Description given by *Plutarch* of their sliding down such high Precipices, does not so well agree with the Passage into *Italy* by *Trent*, as with the terrible Account given us by Mr. *Raymund*, and Mr. *Lassels*, of the ill Passage betwixt *Briga* and *Domo*, over Mount *Sampion*.

By which way the *Cimbrians* entred *Italy*.

The four beautiful Bridges of *Verona* are no less Ornaments than the River *Adige* is a conveniency to this City: *Verona*, tho' esteem'd very ancient, yet is to this Day ignorant as to its Founder, or the exact time of its first rise: Certain it is, that *Verona* was a place of good Strength, in the time of the Civil Wars of the *Romans*; for it sided with *Cæsar* against *Pompey*, with *Augustus* against *M. Anthony*, with *Vitellius* against *Vespasian*, and long after defended it self bravely against *Constantine*. The Emperor *Galienus* knowing the importance of this place, by reason of its situation in the Jaws of the *Alps*, commanded its Fortifications to be strengthned with great care.

Theodoric Amalus, that great King of the *Goths*, much amplified and adorned it afterwards; and the Emperor *Charles the Great*, and his Son *Pipin*, made it the chief City of *Italy*.

In latter times *Albertus Scaliger*, brother to *Mastinus Scaliger*, the first Soveraign Lord of *Verona*, enlarged and fortified *Verona*, unto which the *Venetians* have added large Bastions, faced with Brick. A short Description of *Verona*.

For the rest, this City is both convenient and beautiful; the Piazza is a stately Oblong Square, the Streets spacious, and part of the Town built upon a Plain, part upon Hills, affords a more delightful prospect at a distance, not unlike *Lyons* in *France*. It has many goodly Structures; among which, the Palace and Gardens of Count *Augustin Giusto*, deserves particularly to be remembred; in this I saw the Aloe Plant in Stem and Seed, the Stalk being twenty Foot high.

The Churches are generally very beautiful, but that of St. *Anastasius* exceeds the rest; the Cathedral, and several others are very ancient. This City having received the Christian Faith 70 Years after Christ, under St. *Euprepius*, their first Bishop. St. *Zeno* was their eighth Bishop; and *Peter Martyr* was a Native of *Verona*. Its Buildings.

Besides these religious Men, famous for their Piety, they have had many others, who have been living Ornaments to their Native City: One of the first is that excellent Poet C. *Valerius Catullus*, mentioned by *Ovid*. Illustrious Men Natives of this City.

Mantua Virgilio gaudet, Verona Catullo.

And by *Martial*;

Tantum magna suo debet Verona Catullo,
Quantum parva suo Mantua Virgilio.

C. *Cornelius Nepos*, that most excellent Historian, was born in the Territories of *Verona*.

C. *Æmilius Macer*, another good Poet, under the Reign of *Augustus*, was also a Native of this City according to *Ovid*:

Sæpe suas volucres legit mihi grandior Ævo,
Quæque nocet serpens, quæ juvat herba, Macer.

Next to him comes *Lucius Vitruvius*, a great Architect, whose Statue among others, is to be seen over the Court of this City. The noted *Marcus Vitruvius*, was a *Roman* by birth.

Caius Plinius Secundus, was likewise an honour to this City, and of later Days, many learned Men have either been born or lived here, as *Torello Sarayna*, and *Onuphrius Panvinius*, who have wrote the Antiquities of their own City, *Feronymus*, *Fracastorius*, *Joannes Baptista Montanus*, *Antonius Fumanellus*, *Alexander Benedictus*, *Gabriel Zerbus*, *Joannes Arculanus*, *Guarinus*, *Joannes Antonius Pantheus*, *Joannes Baptista Bagolinus*, and the famous Lady *Isota Nagarola*, who among other Treatises, writ a Dialogue concerning the Fall of *Adam* and *Eve*, and which of them sinned first.

The Emperor *Philippus* was slain at *Verona* by his own Souldiers: The Emperor *Valentinian*, after he had made his Brother *Valens*, Partner with him in the Empire, staid a while in this City, and *Theodorick* the great King of the *Goths* resided here for a considerable time. *Placidia* the Daughter of *Valentinian* III. lived here the latter part of her Days, died here, and was buried in the Church of St. *Stephen*, this being formerly their Cathedral Church, in which are interr'd Twenty one Bishops of *Verona*, forty Martyrs, and four of the Innocent Children.

But we must proceed also to other things, which are no small addition to the glory of this City; among which the *Lacus Benacus*, or *Lago di Garda*, is none of the least, which stretching it self from *Peschiera* in the South, 35 *Italian* Miles to the North, is in some places fourteen Miles broad, and by reason of the various Winds blowing from the neighbouring Hills, rough like the Sea (a). In this Lake the *Venetians* performed a notable Exploit, when they brought their Galleys out of the *Adriatick* Sea, hither, and engaged in a Naval Combat against *Philip Visconte*, General of the *Milan* Forces. The Lake *di Garda*.

(a) *Fluctibus & fremitu assurgens, Benace, marino.*

Upon the side of this Lake are divers goodly Towns and Villages, as *Lacisium*, *Bardolinum*, noted for the well tasted *Bardolin* Figs; *Garda*, which gives its name to the Lake; *Malleseenum*, *Ripa*, *Tusculanum*, where are to be seen to this Day, some ruins of the old *Benacus*, which gave the ancient name to this Lake; *Maternum*, *Salodium*, *Desentianum*, a populous place, *Pischeria*, thro' which passes the River *Mincius*, as also the Remnants of the ancient *Sirmio*, upon a neck of Land, jetting into the Lake, where formerly stood the delightful *Villa* of *Catullus*.

Peninsularum Sirmio, Insularumque
Ocelle, &c.

Besides Eels, and Trouts, and other Fish, this Lake has a Fish peculiar to it self, call'd *Capitone*, which will not easily live or thrive in any other place. Near this Lake the *Alemans*, who had made an irruption with 200000 Men into *Italy*, were totally overthrown, by the Emperor *Flavius Claudius*; his Successour *Monte-Baldo*, or *Monte Baldus*, is look'd upon as the most considerable of all the *Alps*, for Plants and Medicinal Herbs; and the *Calderian* Baths are an additional Convenience to the City of *Verona*.

The Origin and various Fortune of *Verona*.

It is stiled *Verona Nobilis*, and *Verona Attica*, and doubtless its Origin is very ancient; for among the Cities which *Justin* says were built by the ancient *Gauls*, *Verona* is one, and *Livy* says expressly, that the *Gauls* settled themselves in those places where *Brescia* and *Verona* stand at present. But the modern *Italian* Writers, out of a natural Aversion they have to all tramontane Nations, positively assert, that those Cities were built long before that time, by the ancient *Tuscans*, and that *Verona* got its name from *Vera*, a noble *Tuscan*, its Founder; tho' they allow at the same time, that they were afterwards possess'd and enlarged by the *Gauls*. It remained for a considerable time afterwards under the *Roman* Jurisdiction, till its being taken and sacked by *Attila*, and being afterwards with the rest of *Italy*, conquer'd by *Theodorick*, King of the *Goths*, it remain'd in their Possession, till *Totiles* and *Tyas*, the last of the *Gothick* Kings in *Italy*, being routed and slain by *Narses*, General of the Emperour *Justinian*, they returned under the Imperial Jurisdiction, but did not continue so long; for *Narses* being disobliged by the Empress *Sophia*, who caused him to be recall'd, invited *Alboinus*, the valiant King of the *Lombards* out of *Pannonia* into *Italy*, who having made himself Master of all the Country, known formerly by the Name of *Gallia Cisalpina*, laid the Foundation of the Kingdom of the *Lombards* in *Italy*, which continued 200 Years; After which, being expell'd by *Charles* the *Great*, *Pitin*, and the *Berengarii* placed their Royal Seats here, till under the Reign of *Otho* I. it became a free City. Then *Ezzelin* the Tyrant, lorded it over them for some time, and next to him, the ancient Family of the *Scaligers*, who for 200 Years had lived in this City with great repute, and were at last advanced to the Soveraignty thereof, which they maintain'd for betwixt 200 and 300 Years longer, till *Antonio*, the last of that Family that raign'd here, was driven out by *Giovanni Galeazzo Visconte*, first Duke of *Milan*. After him came *Francisco di Carrara*, and at last the *Venetians*, who were however expell'd thence again by the Emperour *Maximilian*; but in Conclusion, in the Year 1517. the City of *Verona*, by a voluntary Agreement, surrendred it self entirely to the *Venetians*, under whose Government, they continue to this Day.

The Amphitheater at *Verona*.

But what is most worth the Curiosity of a Traveller, is that most noble piece of Antiquity in *Verona*, the ancient *Roman* Amphitheater, the most entire within side of any now standing, and one of the first rank for bigness, when it was first built, being a most glorious Building, beyond what can be imagin'd, and most surprising to the Eye sight: I have here inserted a draught of it, as it may be supposed to have appear'd whilst it was entire; which if it had then been divided into two parts, and one half removed from its Bases, the inside of the other half would have represented it self in this manner*; at present they call it the *Arene*, but in ancient times was named *Amphitheatrum*, and sometimes also *Cavea*.

* Fig. 16.

Prud.

Quid pulvis Caveæ semper funebris, & ille
Amphitheatralis spectacula tristia pompæ?

The Altar.

A, Is the Altar in the middle of the *Arena*, in the Center of the Amphitheater, dedicated to *Diana Scythica*, to *Saturn* or *Mars*, blood thirsty Deities, or to *Jupiter Latiaris* or *Stygius*.

The Arena.

B, B, B, Is the *Arena*, or *Area*, the Sandy Floor of the Amphitheater, where the Combats were perform'd, being cover'd with Sand, the better to suck up the Blood, to keep the Ground from being slippery under-foot, which sometimes they turned or raked away. Sometimes they used Stone-dust instead of Sand; and the Emperours *Caligula* and *Nero*, had the *Arena* strowed with Vermilion and Gold Dust, or rather with a Mineral resembling the Colour of Gold. The *Arena* is of an Oval Figure, which I found 90 of my Paces long, two of my Paces making five Foot, which agrees with the Measure of Monsieur *Desgodetz* and *John Caretus*, the Printer of the Antiquities of *Verona*, who makes it 224 Foot long, and 135 broad; but I found the *Arena* of *Domitian*'s Amphitheater at *Rome*, 150 of my Paces long, which makes 375 Foot.

The *Arena* is encompass'd with a Wall of 13 or 14 Foot high, in which are many *Portula's*, or small Gates.

C, C, C, leading into the Dens, from whence the wild Beasts were let out into the *Arena*, and after the Fights were ended, such as were left alive, used to be driven back into their Dens, by several Wheels and Engines (a). Neither let it seem strange, that the source of the *Rota* and *Axis*, which is able to remove any thing, should have the same effect upon the Wild Beasts; something of this nature (tho' with a considerable improvement) is now-a-day practised at *Florence*, where I have seen a Man put within a monstrous Green-Dragon, moved upon Wheels, which running with Violence upon the Wild Beasts, forces them back, and if they happen sometimes to tarry and stare upon this dreadful Engine, the Man within thrusts two lighted Torches out of the Dragon's Eyes, which certainly drives them back into their Dens. In ancient times, when they were hunting or baiting the Lions, they made use of great Oval Shields, covering their whole Bodies, and thus advanced unseen against the Lion: and if the Lion happened to push forward (as sometimes he would do) and overthrow the Huntsman, he laid safe enough upon the Ground under his Shield, the Lion being satisfied by leaping upon, and pawing the Shield. In what request these Diversions were among the old *Romans*, is manifest from the painting of this hunting of Lions, lately found in the Sepulchres of the *Nasonian* Family, in the *Campania di Roma*; in another part of which Sepulchre, is painted also the manner of hunting of *Tygers*, being performed by divers Huntsmen, holding their Shields close together, and so bearing up against the Beast, whilst one of them wounded it with his Launce, often over the Shield; sometimes they put a Lookinglass in a Wood, which the Tyger spying, comes to it, and whilst he is admiring himself, a Huntsman kills him from above with a Javelin. These Dens are now best to be seen in the Amphitheaters of *Nizza*, *Arles*, and *Doué*.

(a) Seneca, *Curricula verso tarentinæ versata facit Leonem rapit in Cavea.*

D, D, The uppermost part or top of the before-mentioned Wall, makes what they call'd the *Podium*, behind which the first row of Seats begins; This part of the Amphitheater being richly gilt, and adorned with the Figures of Victory and other Statues, the same were so contrived, as to cast out perfumed Liquors, to be-sprinkle the Knights and Senators; upon the Out-side of the *Podium*, were fastned Nets and loose Rowlers, which turning upon an *Axis*, prevented the climbing up of the Wild Beasts. The Podium.

E, Is what they call'd the *Suggestum Imperatoris*, or the Imperial Throne, being a Box, built on purpose for the Emperour to see thro' Lattices, or have the fore-part open upon the *Podium*; *Julius Cæsar* having been the first Author of it, this Throne, and the placing the Statue among the Kings, was (according to *Suetonius*) interpreted by some to his prejudice. And when afterwards the Emperour *Trajan*, had these lowest Seats made plain and equal, as at first, he was highly applauded by the People, when they saw him in Person, sitting equally with the rest of the Nobility. *Suggestum Imperatoris.*

The Seats of the Amphitheater at *Verona*, were at first 45 in number, but three of the lowest Rows being now under Ground, there remain now visible 42 Stone Seats, each of them half a Yard high. The Seats.

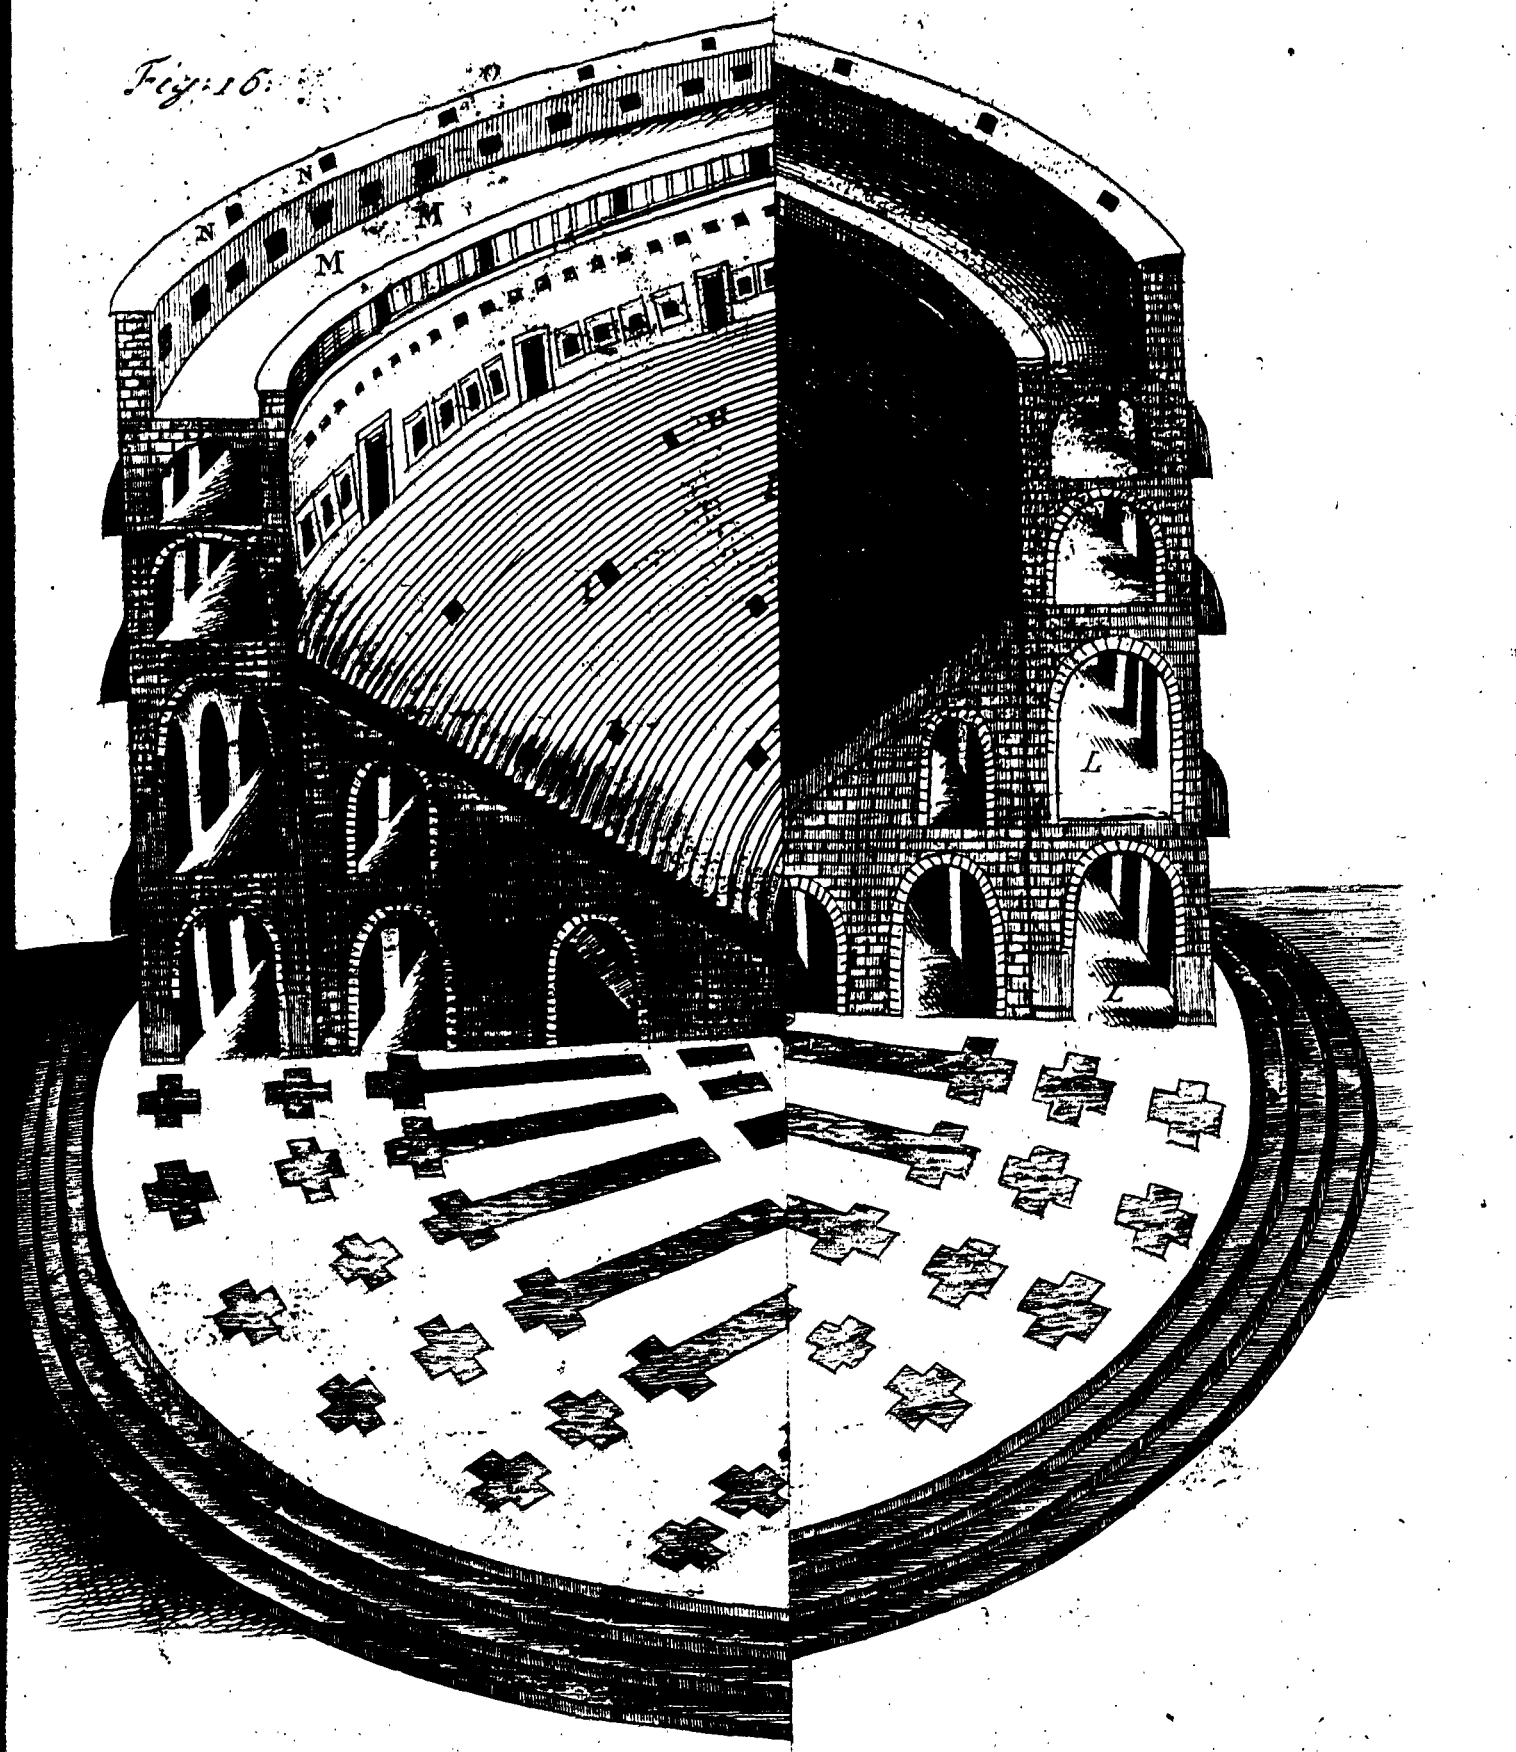
F, F, are the lower Seats of the Senators and Vestal Virgins, call'd *Orchestra*, the last of which the Emperour *Nero* allotted Seats here, in imitation of the Virgins devoted to the Goddess *Ceres*, who used to appear at the *Olympian* Games.

G, G, Are the *Equestria*, or the middle Seats for the *Roman* Knights and Gentlemen; Officers being appointed on purpose to place every one in his due rank; these were call'd *Designatores* and *Tribuni voluptatum*.

H, H, Are the *Popularia*, or Seats for the Common People of both Sexes, the Women being sometimes so eager after this Diversion, that they would bring Chairs and Stools to set upon the top of all, and in the *Portico's* and Gallery above.

I, I, I, are the *Vomitoria*, or square Doors, thro' which the Spectators came crowding in to take their Places; For, as the Amphitheaters were capable of containing a vast number of People (that of *Titus* at *Rome*, being able to receive 80000 Persons) it was requisite *Vomitoria.*

Fig. 16.



with Water) or in a Building made for that purpose, call'd *Naumachia*, or perhaps artificial Channels or Ponds. The Naval Combat exhibited by the Emperour *Claudius* on the *Lacus Fucinus*, a Day's Journey from *Rome*, is sufficiently famous in History, where both Fleets saluted him with an *Ave Cæsar, morituri te salutant.*

nites) the Emperor himself could sometimes not forbear crying out, *Well play'd fair Lady.* That they fought after the manner of the *Samnites*, is evident from *Juvenal*'s Words, when he says, *How creditable a thing it would be for a Man to cry out at a Sale of his Wife's Goods, Who gives most for my Wife's Boots? Who bids Money for*

being cover'd with Sand, the better to ſuck up the Blood, to keep the Ground from being ſlippery under-foot, which ſometimes they turned or raked away. Sometimes they uſed Stone-duſt inſtead of Sand; and the Emperours *Caligula* and *Nero*, had the *Arena* ſtrowed with Vermilion

and Gallery above.

I, *I*, *I*, are the *Vomitoria*, or ſquare Doors, thro' *Vomitoria.* which the Spectators came crowding in to take their Places; For, as the Amphitheaters were capable of containing a vaſt number of People (that of *Titus* at *Rome*, being able to receive 80000 Perſons) it was requiſite

Fig. 17. The Origin of the Amphitheaters.

These most magnificent [illegible] by the *Romans* for the diversion of the People, with Shows and Fighting; these Fights being either betwixt Beasts and Beasts, Men and Beasts, or between Men and Men. The Fights betwixt Beasts and Beasts, are still continued by the Gentlemen of *Verona* in this Amphitheater, which at present is still capable of holding 24000 Persons conveniently; the Seats remaining being very carefully preserved. But these Sports were pursued with much more eagerness by the Ancient *Romans*, who made it their Business to have strange Beasts brought from all parts of the known World, to fight in these Amphitheaters. The Engagements betwixt Men and Beasts were for the most part perform'd by Slaves, Captives and Condemn'd Criminals, tho' some Persons of note would sometimes enter the List upon this account, and therefore were justly stiled *Bestiarii*. The Story of *Androcus* is sufficiently known, who being to fight with a Lion in the *Arena*, he fawn'd upon him, because he had some Years before pull'd a Splinter out of the Paw of the same Lion, whence arise the Proverb, That the Lion was the Man's Host, and the Man the Lion's Chirurgeon. The Fights between Men and Men, are of divers kinds; sometimes they fought on Horse-back, and were call'd *Andabatæ*, sometimes in Chariots, as the *Essedarii*, sometimes in Vessels, either in the *Arena* (which was fill'd with Water) or in a Building made for that purpose, call'd *Naumachia*, or perhaps artificial Channels or Ponds. The Naval Combat exhibited by the Emperour *Claudius* on the *Lacus Fucinus*, a Day's Journey from *Rome*, is sufficiently famous in History, where both Fleets saluted him with an *Ave Cæsar, morituri te salutant.*

[illegible] with the *Retiarii*, who coming up to them with their Nets, would sing, *Non te peto, piscem peto, quid me fugis, Galle?*

Another sort of Gladiators were the *Samnites*, armed with Shields, flat and broad on the end towards their Breast, and nearer towards the Shoulder with a Breast-plate, a Helmet, upon the Crest a Feather, and a Boot upon their left Leg, as they are described by *Livy*. *Samnites.*

There were also *Dimachæri*, who fought with two Swords, and *Laquearii*, who fought with Sword and Halter. *Dimachæri. Laquearii.*

The *Meridiani* were a desperate kind of Fellows, who coming in about Noon when the Spectators were dismiss'd, engaged one another, without any Order, Art or Armour. *Meridiani.*

But what will appear more surprising, is, that even the Female Sex, was not exempted from these rude Exercises; for they would pick out the handsomest young Women that could be found, who were put to the *Lanista* or Fencing Master, to be instructed in the Art of Fighting; those who were put to the *Lanista* in the most severe way, being bound to be burn'd, whip'd, and fall by the Sword. When one of these Young Women fought in the *Arena*, with her Golden Shield and Plumb of Feathers in her Crest (for they were arm'd after the manner of *Samnites*) the Emperor himself could sometimes not forbear crying out, *Well play'd fair Lady.* That they fought after the manner of the *Samnites*, is evident from *Juvenal's* Words, when he says, *How creditable a thing it would be for a Man to cry out at a Sale of his Wife's Goods, Who gives most for my Wife's Boots? Who bids Money* Women Gladiators.

Amphitheater, where the Combats were perform'd, being cover'd with Sand, the better to ſuck up the Blood, to keep the Ground from being ſlippery under-foot, which ſometimes they turned or raked away. Sometimes they uſed Stone-duſt inſtead of Sand; and the Emperours *Caligula* and *Nero*, had the *Arena* ſtrowed with Vermilion and Gallery above.

I, I, I, are the *Vomitoria*, or ſquare Doors, thro' which the Spectators came crowding in to take their Places; For, as the Amphitheaters were capable of containing a vaſt number of People (that of *Titus* at *Rome*, being able to receive 80000 Perſons) it was requiſite *Vomitoria.*

quiſite that a ſuitable number of Doors ſhould be allowed for the convenient coming in and going out of the Spectators. In every ninth and tenth row of Seats in the Amphitheater, there are rows of *Vomitoria* or Doors, every one at an equal diſtance from one another, 18 in a row, making in all 72 different Entrances, unto every one of which belongs a peculiar Stair-caſe, coming out from within the Arches, which ſupport the Amphitheater, beſides all other Stairs, and Paſſages, and Aſcents within, from one Story to another, which is ſufficient to demonſtrate the vaſtneſs of theſe extraordinary Buildings.

L, L, L, are the Rows of Arches within, built round the Amphitheater to ſupport the Seats, and Upper-buildings.

The *Canaculum.*

M, M, Is the *Canaculum* or Upper-Gallery, built for Strength and Ornaments ſake; hither they uſed to retire, and refreſh themſelves with walking. This part is found only in the Amphitheaters of the firſt Rank; and there is but a ſlender part of it remaining in this, moſt of it being thrown down by an Earthquake 1103.

N, N, N, Are the Holes left in the outward Wall of the Amphitheater, to ſtick Maſts into, for the more convenient faſtning of theſe Ropes, Sails and Curtains, to keep off the Sun-Beams from the Spectators, firſt introduced by *Q. Catullus*, which *Julius Cæſar* afterwards cauſed to be made of Silk of divers Colours; and *Nero* had his own Picture embroidred in them, repreſenting *Apollo* in the Chariot of the Sun, with the Stars of Gold round about him.

The Out-ſide of the Amphitheater.

Tho' at preſent there be but a ſlender Portion remaining of the out-ſide of the Amphitheater at *Verona*, *viz.* as much as between *O* and *P*, yet conſidering the Uniformity of theſe Structures, it is ſufficient to ſhew, that it was no leſs ſplendid than the inſide, being all of Marble 120 Foot high, and conſiſted of three rows of Pillars and Arches, one over another, which opened into ſpacious Walks and Portico's within, quite round the Building, and above theſe three Rows of Arches, there was a handſome Wall, with Windows over each Arch, and Pilaſters over every Pillar beneath; each Row conſiſted of 72 Arches and as many Pillars, of a great height; the upper Row is ſuppoſed to have been adorned with excellent Statues.

The out-ſide of the Amphitheater at *Niſmes* being the moſt entire of any now ſtanding, I thought fit to inſert the Draught thereof here; but as that of *Verona* has three rows of Pillars and a Wall above them, this at *Niſmes* has no more than two Rows on the out-ſide, and the Seats within reach to the top of it, and it hath no Galleries above. For the more natural and convenient repreſentation of Naval Combats in this Amphitheater of *Niſmes*, the great *Pont du Guard* was built, which ſupporting an Aquæduct, paſſing from one Mountain to another, was ſufficient to ſupply it with as much Water as they had occaſion for, which being one of the moſt noble *Roman* Antiquities remaining in *Europe*, I have alſo inſerted the draught thereof *.

* Fig. 17. The Origin of the Amphitheaters.

Theſe moſt magnificent Structures were firſt raiſed by the *Romans* for the diverſion of the People, with Shows and Fighting; theſe Fights being either betwixt Beaſts and Beaſts, Men and Beaſts, or between Men and Men. The Fights betwixt Beaſts and Beaſts, are ſtill continued by the Gentlemen of *Verona* in this Amphitheater, which at preſent is ſtill capable of holding 24000 Perſons conveniently; the Seats remaining being very carefully preſerved. But theſe Sports were purſued with much more eagerneſs by the Ancient *Romans*, who made it their Buſineſs to have ſtrange Beaſts brought from all parts of the known World, to fight in theſe Amphitheaters. The Engagements betwixt Men and Beaſts were for the moſt part perform'd by Slaves, Captives and Condemn'd Criminals, tho' ſome Perſons of note would ſometimes enter the Liſt upon this account, and therefore were juſtly ſtiled *Beſtiarii*. The Story of *Androtus* is ſufficiently known, who being to fight with a Lion in the *Arena*, he fawn'd upon him, becauſe he had ſome Years before pull'd a Splinter out of the Paw of the ſame Lion, whence ariſe the Proverb, That the Lion was the Man's Hoſt, and the Man the Lion's Chirurgeon. The Fights between Men and Men, are of divers kinds; ſometimes they fought on Horſe-back, and were call'd *Andabatæ*, ſometimes in Chariots, as the *Eſſedarii*, ſometimes in Veſſels, either in the *Arena* (which was fill'd with Water) or in a Building made for that purpoſe, call'd *Naumachia*, or perhaps artificial Channels or Ponds. The Naval Combat exhibited by the Emperour *Claudius* on the *Lacus Fucinus*, a Day's Journey from *Rome*, is ſufficiently famous in Hiſtory, where both Fleets ſaluted him with an *Ave Cæſar, morituri te ſalutant.*

But their moſt general way of Fighting in the Amphitheaters, was performed by the Gladiators on Foot, and theſe were likewiſe of divers ſorts. The Gladiators.

The *Retiarii*, with a Trident in one Hand, and holding a Net in the other, endeavoured to enſnare their Enemies, which if they miſs'd of, they retreated ſwiftly, till they could recover themſelves, and ſo renew'd the Engagement. Their manner of fighting, is exactly deſcribed by *Juvenal* (a). Theſe Gladiators fighting without Armour, only in a ſhort Coat and bare fac'd, the People were much delighted in obſerving the Convulſions in their Limbs, and the Alterations of their Colour and Features in their Dying Agonies. *Retiarii.* (a) *Sat.* 8.

I ſaw the Statue of a dying Gladiator in *Ludoviſi's* Garden at *Rome*, ſo naturally repreſented, that it might well compare with the Figures of the moſt celebrated Statuaries in any Age, it being judged fit to be put in the firſt Rank, with the Works of *Plydias* and *Praxitcles*, and eſteem'd at the ſame rate, with that moſt admirable Statue of *Pyramus* in the ſame Garden, and the *Farneſes Hercules*, made by *Glycon*, the famous *Greek* and old *Ægyptian Terme*. Nay, the moſt beautiful Statues of *Antinous*, and *Apollo Pythian* in *Belvedere* (the Garden of the *Vatican*) are not at this Day preferr'd before it; nor that exquiſite Figure of *Venus*, in the Palace of the *Medici*; Nay, even the *Grecian* Statue of Peace, and the *Greek Shepherdeſs*, that holds up her Garments to ſee her due Proportions, are not aſham'd to be rank'd with this Gladiator, who by the beſt Artiſts, is held in the ſame eſteem with *Farneſe's* Bull, and the inimitable *Laocoon* and his Sons, the Joint Work of the three famous antient Maſters, *Ageſander*, *Polydore* and *Athenodore*. Antient noble Statues preſerved in *Rome.*

The *Retiarii*, acknowledging *Neptune* for their Patron, were generally engaged with the *Secutores*, who were Followers of *Vulcan*, Fire and Water being Contraries not to be reconciled. The *Secutores* guarded themſelves with a Shield which they carried high, to defend their Heads againſt the Nets of their Adverſaries, being, for the reſt, armed with a Spear or long Sword: Five *Retiarii's* having thrown down their Arms and yielded to as many of the *Secutores*, the Emperor *Caligula* commanded theſe laſt to kill the *Retiarii*, which they did to the laſt Man, who out of deſpair, taking up his Trident kill'd all the five *Secutores*. The *Secutores.*

Another ſort of *Gladiators*, were thoſe call'd *Threces* or *Thraces*, who were arm'd with a ſmall *Parmula*, or *Thracian* Shield, and ſtrong broad Swords, turning upwards like the preſent *Turkiſh* Cymeters; they derived their Cuſtom and manner of Fighting from the *Thracians*, who, according to *Herodote*, uſed to fight with the ſame Weapons for Prizes, at the Funerals and Tombs of their Great Men; theſe fought either againſt one another, or againſt the Gladiators. *Threces* or *Thraces.*

The *Myrmillones*, were a ſort of Sword Players, fighting after the manner of the *Gauls*, covering themſelves with an Oval Shield, armed with a Helmet, having a Fiſh for a Creſt; they would attack their Enemies with great Activity, or run at them with their pointed Swords: They engaged often with the *Thraces*, and ſometimes with the *Retiarii*, who coming up to them with their Nets, would ſing, *Non te peto, piſcem peto, quid me fugis, Galle?* *Myrmillones.*

Another ſort of Gladiators were the *Samnites*, armed with Shields, flat and broad on the end towards their Breaſt, and nearer towards the Shoulder with a Breaſt-plate, a Helmet, upon the Creſt a Feather, and a Boot upon their left Leg, as they are deſcribed by *Livy*. *Samnites.*

There were alſo *Dimachæri*, who fought with two Swords, and *Laqueærii*, who fought with Sword and Halter. *Dimachæri. Laqueærii.*

The *Meridiani* were a deſperate kind of Fellows, who coming in about Noon when the Spectators were diſmiſs'd, engaged one another, without any Order, Art or Armour. *Meridiani.*

But what will appear more ſurpriſing, is, that even the Female Sex, was not exempted from theſe rude Exerciſes; for they would pick out the handſomeſt young Women that could be found, who were put to the *Laniſta* or Fencing Maſter, to be inſtructed in the Art of Fighting; thoſe who were put to the *Laniſta* in the moſt ſevere way, being bound to be burn'd, whip'd, and fall by the Sword. When one of theſe Young Women fought in the *Arena*, with her Golden Shield and Plumb of Feathers in her Creſt (for they were arm'd after the manner of *Samnites*) the Emperor himſelf could ſometimes not forbear crying out, *Well play'd fair Lady.* That they fought after the manner of the *Samnites*, is evident from *Juvenal's* Words, when he ſays, *How creditable a thing it would be for a Man to cry out at a Sale of his Wife's Goods, Who gives moſt for my Wife's Boots? Who bids Money for* Women Gladiators.

for her Coʃelet, Helmet and Gauntlets? The Emperor *Domitian* would make the Gladiators fight in the Night time, not ſparing even his Dwarfs, that were to engage one another.

Mantua. But it is time to turn to more pleaſing Objects: Leaving *Verona* in the Morning, we purſued our Journey thro' a moſt pleaſant plain Country, for 24 Miles to *Mantua*; a City moſt pleaſantly ſituate in a Lake, like *Mexico* in *America*. This Lake, which is about five Miles long, is made by the opening of the River *Mincius* or *Mincio*, which has a low Current, and ſometimes ſpreads *See Virgil.* it ſelf over the adjacent Countries. It riſes in the Lake *di Garda*, and falls into the *Po*, being full of Reeds, eſpecially near *Mantua*. The Avenues of *Mantua* are ſtrong and broad, Cauſeways of 500 or 600 Paces, made croſs the Lake, having Draw-Bridges at each end; the *Ponte di St. Georgio*, thro' which we entred, hath a covered Bridge for a good ſpace together, and no Tower in the middle; the *Ponte de Molini*, has 12 Mills in the Arches, call'd the Twelve Apoſtles. The Streets are ſpacious, ſtrait and well kept. It has eight Gates, 18 Pariſh Churches, 40 Convents. The Cathedral is built after the deſign of *Giulio Romano*, the Roof being Painted with Gold and *Azure*; in this Church lies the Body of St. *Anſelm*, Biſhop of St. *Luca*, as the Body of St. *Longinus* the Martyr, is preſerved in St. *Andrew's* Church, together with ſome drops of our Saviour's Blood, ſaid to be brought hither by that Holy Man. The Duke's Palace is very magnificent: There are three Suburbs, *Porto Fonteze*, *Borgo di St. Georgio*, and *Il Te*. Beſides which the Duke has divers noble Country Seats, as that of *Marmirola*, in the way to *Verona*, *La Favorita*, upon the ſide of the Lake, having 100 Rooms. *La Virgiliana*, ſo call'd from its ſituation near to the Village of *Pereta*, anciently call'd *Andes*, the Birth-place of *Virgil*. The Palace *del Te*, lies at no great diſtance from one of the Gates; its artificial Roof is chiefly remarkable, ſo contrived that it makes a double Whiſpering place; I had ſeen ſeveral Whiſpering places before, as at *Padoua*, *Montpellier*, but theſe being ſingle ones, proceed from this Rule, That the Angle of Incidence, is always equal to the Angle of Reflection, and the whole top of the Room ſo proportion'd, as to reflect all to one Point, that came from another oppoſite to it; but theſe are much beyond them, being contrived with a double Croſs each, which makes a large, double, croſs Whiſpering Place.

Its Origin. About 60 Years before the *Trojan* War with the City of *Thebes*, having been deſtroyed by the *Greeks*, *Manetho* the great *Theban* Sorcereſs, fled firſt into *Aſia*, and thence to *Italy*, to *Tyberinus* King of the *Tuſcans*, by whom ſhe had a Son *Oenus*, who paſſing the *Appennines* and the *Po*, built this City, and call'd it after his Mothers Name. The *Tuſcans* were driven out by the *Galli Cenomani*, and theſe being overthrown by the *Romans*, *Mantua* continued under the Weſtern Emperours, till *Otho* II, gave it to *Tedaldo* Count of *Canoſſa*. In proceſs of time, the Family of the *Bonacolſi*, became Maſters of this City, and maintain'd themſelves therein, till *Paſſavino*, the laſt of that Race, was 1328. ſlain in the Market-place by the People, under the Conduct of *Ludovico di Gonzaga*, the firſt Lord of *Mantua* of the ſame Family, that now reigns.

The Po. From *Mantua*, we went forward towards the River *Eridanus*, *Padus*, or *Po*, which ariſing from Mount *Viſo* or *Mons Veſulus*, (the higheſt among the *Alps* towards *France*) and falling down in divers Chanels at firſt, unites at the Foot of the Mountain, where being ſwallow'd up under Ground, riſes again about two Miles after, and paſſing with a ſwift Courſe thro' *Lombardy*, and being encreaſed by 30 other Rivers, exonerates it ſelf by divers Mouths into the *Adriatick* Sea. This being the largeſt River in *Italy*, the *Latin* Poets have extoll'd it beyond the greateſt Rivers upon Earth, tho' there are many Rivers in all the four parts of the World, that far exceed it. We paſs'd the River *Po* by a peculiar Contrivance; for they tie Ropes to the tops of high Poplars, or high Poſts, placed on purpoſe, on each ſide of the River, and upon a line ty'd to them, put a running Pulley, to which they fix another long Rope, and the Boat being faſtned to the further end of the ſame Rope, by ſteering the Boat obliquely croſs the River, the force of the ſtream makes the Pully run from one ſide to another.

Ovid. Faſtis.

Sine remigis ictu,
Concava trajecto Cymba rudente vehit.

Next we came to *Guaſtalla*, a handſome but ſmall Town, under its own Duke of the ſame Name; It was formerly a conſiderable place, witneſs, the two general Councils held here, under Pope *Urban* II, and Pope *Paſcal* II. From *Guaſtalla* we travell'd by the way of *Gualtea* to *Berzello*, *Brixellum*; a ſtrong compact Town, upon the Banks of the *Po*, well fortified after the modern way, an old *Roman* place. It has about 3000 or 4000 Inhabitants now, and a good Garriſon belonging to the Duke of *Modena*, it being a frontier place betwixt *Milan*, *Mantua* and *Parma*. From *Berzello* (having croſs'd the River *Nicia* or *Lenza*) we ſoon came to *Parma*. The Dukedom of *Parma* is encloſed betwixt the *Appennine* Mountains and ſeveral Rivers, being a Country affording great plenty of excellent Wine, Fruits and Cattle, the beſt Cheeſe in *Italy*, and great ſtore of Cheſtnuts and *Tartufali Truffes*, *Tubera terra*, Roots without Stems or Plants; theſe they find out by the ſmell of Pigs, and are eſteem'd here a Provocative: beſides which, it has *Parma.* ſome Copper and Silver Mines, and very fine Wool. The City of *Parma* was anciently inhabited by the *Tuſcans*, then by the *Boii*, who were ſucceeded by the *Romans*, who ſent a Colony thither 182 Years before our Saviour's Nativity, and another in the time of *Auguſtus*, upon the declining of the *Roman* Empire. It was ſubject ſometimes to the *Venetians*, ſometimes to *Milan*, till being conquer'd by Pope *Julius* II. it was given by *Paul* III. to his Son *Petro Luigi Farneſe*, about 135 Years ſince, in whoſe Family it continues to this Day. The ſituation of this City is very airy and pleaſant; the Houſes are low, but the Streets broad; the River *Parma* runs betwixt the City and the Suburbs, both which are well fortified. Over the River are three Bridges; the Duke's Palace is noble, and the Gardens, Grotto's, Water-works, &c. worth ſeeing. The Lodgings are furniſh'd with many rare Pictures. The Cathedral is a ſtately Structure: In the *Capuchins* Church you ſee the Tomb of *Alexander Farneſe* Duke of *Parma*, one of the greateſt Generals of his time, and his Dutcheſs, *Mary* of *Portugal*. The Church of St. *John* is a moſt exquiſite and beautiful piece of Architecture, adorned with the Paintings of thoſe great Maſters, *Corregio* and *Parmegiana*. The adjoining *Benedictine* Convent is, perhaps, one of the largeſt and beſt of that Order.

Berzello.

From *Parma*, we travell'd 10 Miles to *Fornovo*, ſeated upon the ſwift River *Taro*, which with a winding and ſwift Current, runs about the Plains, before it falls into the *Po*. As ſoon as we were entred the Valley of *Taro*, in which this River runs, we were forced to travel on the ſides of the Hills, and ſo croſs the River above 40 times, till we paſs'd by *Borgo di Valle*, when turning more to the right Hand, we aſcended the *Appennine* Mountains. *Borgo di Valle*, is ſeated on the ſides of the Hills, at the upper end of this Valley, where the Duke of *Parma* keeps a Garriſon. The *Appennine* is a ridge of Mountains of ſeveral 100 Miles, beginning at the *Alps*, and extending from one end of *Italy* to the other, as far as *Reggio* or *Rhegium*, upon the *Sicilian* Sea, and being in ſome places 100 Miles broad, render *Italy* a Mountainous Country, which is the reaſon they generally travel into *Italy* on Horſe-back, or upon Mules; and were it not for *Campania Felix*, and the Plains betwixt the *Alps* and *Appennine*, the *gleba Italæ* would ſcarce deſerve the Character it has. The *Appennines* are generally more cloudy than other Hills or Mountains, for I have travell'd for many Days together upon the *Appennines*, with the Clouds continually either about us, or a little over or below us, the reflection of which affords a very delightful proſpect from the Hills into the Valleys. Many of the *Appennine* Peaks are very high, and covered with Snow, ſome are Rocky, but moſt earthy and full of Clay, which imparts a brown Tincture to the *Tyber*, and other Rivers that run thro' them, which ſome retain for two Miles after they are fall'n into the Gulph of *Venice*. The Hill we then paſs'd over, was call'd the *Mountain of the Holy Croſs* (different from that in the South part of *France*, in the Maritime *Alps*) being not rocky but all green, ſo that we deſcended with a great deal of delight a great part of the way upon the Graſs, till we reached the Sea-ſide in the Evening, formerly call'd *Segeſta*, at preſent *Seſtri di Levante*, to diſtinguiſh it from *Seſtri di Ponente*, betwixt *Genoa* and *Savona*; for the whole *Genoeſe* Coaſt being divided into Eaſt and Weſt, that extending from *Genoa* towards *Legborn*, they call *La Riviera di Levante*; and that betwixt *Genoa* and *Pavence*, *La Riviera di Ponente*. We hired a *Feluca* at *Seſtri*, and paſſing by *Porto Fin*, and keeping all along within half a Mile of the Shoar, came to *Genoa*, entring betwixt the New Mole on the Right hand, and the Old Mole and Watch Tower on the Left; and went aſhoar near the Foot of the New Mole.

MADE IN A

Journey thro' Part of the *Low-Countries*; *GERMANY*, *ITALY*, and *FRANCE*.

By Mr. JOHN RAY, Fellow of the *Royal-Society*.

Calais. WE went in the Packet-Boat *April* 18th, 1663. from *Dover* to *Calais*, formerly belonging to the *English*, and since to the *Spaniards*, and soon after surrendred to the *French*, 1598. Its situation is very advantageous, and the Fortifications of Earth, with a deep Ditch and Cittadel to the Land-side. It exceeds *Dover* in bigness, and the Market-place is a very spacious square; the Government of the place being administer'd by a Major and four Aldermen.

Gravelingen. *April* the 21st, We continued our Journey by the way of *Graveling* to *Dunkirk*; the first is a place but indifferently built and peopled; seated in a watery Country, and enclosed with a good number of Out-works and broad Ditches: The second may be compared for its extent to *Cambridge*, being very populous and well fortified. It is one of the four Port-Towns of *Flanders*.

Dunkirk. We travell'd along the Sea-shore from hence to *Ostend*, taking our way by *Newport*: This last is another of the *Flemish* Ports, having a capacious and secure Harbour, but will admit of no Ships of any great burthen; the Streets are broad and uniform, but the Houses are low, and of Timber. *Ostend* is another of the Harbours of *Flanders*, considerable both for its Strength and Conveniency; being both very capacious and secure against the Violence of the Winds, and capable of receiving Ships of good burthen; The Buildings are likewise but low here, yet pretty uniform, and the Streets regular and streight, being built all at once, after the famous Siege of three Years, before it could be taken by the *Spaniards*.

Newport.

Ostend.

Sluys. *Sluys*, is another Sea-port Town of this Country, but under the Jurisdiction of the United Provinces; Its Harbour exceeds all the before-mentioned for its capacity.

April the 24th, Having taken us places in the Treek-boat, bound for *Bruges*, and drawn by Horses, we came about a League and a half from *Ostend*, to one of those Locks (call'd *Sostegni* by the *Italians*) which are generally made at a great Declivity of a Fall of Water, to keep up the Water, to render a River navigable, which either wants Water, or has too steep a Descent. Such there are in *Guilford* River in *Surrey* in *England*. The *Bruges.* City of *Bruges* is about four Leagues distant from *Ostend*; well built, and of a great Circumference, having been formerly a very considerable City for Trade. Here, when we saw pieces of Linen fastned to the Ring of the Doors, where Women were lying-in; it puts us in mind of what *Erasmus* had taken notice of upon this Head in his (a) Colliquies. But what delighted us much more, was (a) *Peregrin. Fig.* 1. a certain Engine made use of here, for the drawing up of Water in great quantities for the use of the City. This is perform'd by means of a Chain, unto which are fastned Cylindrical Buckets of Iron; the Chain being round in form of a Wheel-band, and put over a large *Axis*, deeply furrowed, from whence hanging down into the Well below it, and being turn'd about by the *Axis*, the descending Buckets having their Mouths downward, take up the Water as they pass thro' the Well, which afterwards ascending with their Mouths upwards (yet a little inclining from the Chain outward) they carry up to the *Axis*, to which as soon as they are come, they must, by reason of their Position, turn it out into a Trough placed lower than the *Axis*, by which it is conveyed into a Cistern, and thence by Pipes thro' the City. The deep Furrows in the *Axis* are made to hold up the Buckets, without which, the Chain would be apt to slip back, by reason of the weight of the ascending Buckets. I have seen a many of this kind in *France*, *Spain* and *Italy*. This City has but 7 Parish Churches, but Convents in a great number: In the Church dedicated to *Our Lady*, you see the Monument of *Charles*, sirnamed the *Hardy*, Duke of *Burgundy*, who (as the *French* Inscription tells you) was slain in the Battle of *Nancy*, 1476. and his Body translated thence by the Emperor *Charles* V. We saw here a very tall Fellow, and well-shap'd; from his middle Fingers and to his Elbows was 25 Inches, the length of his Hand to the Wrist 11 Inches, his middle Finger 7 Inches, and the rest of his Limbs proportionable: He was afterwards shown in *England*.

According to *Boetius* of this place, (a Native) certain subterraneous Woods are digg'd up 10 or 12 Ells deep in the Earth, with the Trunks, Boughs, and Leaves so exactly apparent, that the several kinds of them may be easily distinguish'd. The like I have been inform'd, are found in *Friesland* and about *Groningen*, especially in the fenny Ground, where they dig for Turves. In *England* they are call'd *Moss-Wood*, and are likewise found in moorish and boggy Grounds: It is very probable, that in most ancient times, before all Records of Antiquity, these places were Woods on the Continent, and being overwhelm'd by the Sea, continued under water, till the Rivers and Floods brought thither so much Earth and Mudd, as by degrees cover'd these Trees, and rejoin'd them to the Continent. As for the Seas often encroaching upon the Continent, it is manifest on our Coast of *Suffolk* about *Dunwich*; there being very ancient Records, which mention a certain Wood a Mile and a half to the East of *Dunwich*, which is now a great way into the Sea. And, as to what concerns the filling up of such places, I have some Reasons to believe, that if not all, at least a great part of the *Low-Countries* have been thus gain'd from the Sea. I remember that, (a) *Varenius* mentions, that at the sinking of a Well in *Amsterdam*, of 100 Foot deep, they met with a Floor of Sand and Cockle-shells, a convincing Argument that the bottom of the Sea lay so deep there in former Ages, and that in process of time, these hundred Foot of Earth were accumulated and brought thither, by some considerable River or other, which exonerated the Sands which its Stream had wash'd from the high Grounds hereabours. Of this we have divers other Instances in the Flats about *Venice*, and in the *Camarg*, or the Isle of the River *Rhosne*, near *Aix* in *Provence*,

(a) In his Geograph.

Provence, where (as we were credibly informed) the Watch-Tower had been three times removed nearer to the Sea, within the memory of some Men: by reason of the Accession of Land on that side. Some object concerning the Trees digg'd up in *England*, that they being generally taken for Firrs (a Tree that never grows well in *England*) this Argument will not hold in respect of our Country; but till we are better convinced that the Trees they speak of are really Fir Trees, the Solution of this Objection meets with no great Difficulty.

Ghent. We travelled, *April* the 27th, by water, from *Bruges* to *Ghent*, a City encompassing a great Tract of Ground, but scarce half built. It has only 7 Parish Churches, but 55 Religious Houses.

From hence we continued our Journey *April* the 30th, to *Brussels*, by the way of *Alost* (a fortified Town) the *Brussels.* first being the Capital City of *Brabant*, and the Residence of the Governours of the *Spanish Netherlands*. The Inhabitants here, as well as in divers other Cities of the *Low-Countries*, have Dogs to draw their little Wheel-Barrows or Carts, in which they sell Fruits and other small Commodities.

May the 2d, we came to *Louvain*, a City which for its *Louvain.* Circuit exceeds that of *Ghent* by three Rods, but contains like that, abundance of void Ground, and that but indifferently built; The Town-house, which is very stately, being the only Structure worth mentioning here. It has 43 Colleges, the Names of which, with their Founders, you may see in the following Catalogue.

Its Colleges.

1. *Magnum* sive *Majus Theologicum* erectum *per Ludovicum Rockium, Patricium Lovaniensem* & (2.) *Minus, Anno* 1562.
3. *Juris Utriusq;* vulgò *Baccalaureorum*, 1483. per *Robertum à Lacu Gandensem.*
4. St. *Donatiani*, 1414. *Juris studiosis fundatum ab Antonio Haveron.*
5. *Standonicum*, 1490. *à Joanne Standock, Mechliensi, Doctore Sorbonico.*
6. *Atrebatense* 1505. *à Nicolao Rutherio Luxemburgensi.*
7. *Winkelianum*, 1505. *per Joh. Winkelium & ejus filium Medicum Doctorem*, 1554.
8. *Houterlæum*, 1511. *per Henricum de Houterlen.*
9. *Busleidianum* alias *Trilingue, per Hieronymum Busleidium Luxemburgensem*, 1517.
10. *Pontificium*, 1522. *per Adrianum* VI. *Ultrajectinum.*
11. *Sabaudiæ*, 1548, *per Eustachium Chapuys, Sabaudum.*
12. St. *Annæ*, 1553. *per Nicolaum Goblet, Bovinensem.*
13. *Druitianum*, 1559. *per Michaelem Druitium.*
14. *Van Dale*, 1565. *per Petrum Van dale Antwerpiensem, J. U. Dr.*
15. *Viglianum* alias *Frisonum* 1568. *per Viglium ab Aytta Frisium.*
16. *Præmonstratense*, 1571. *per Carolum vander Linden, Parcensem, Ægidium Heyns, Averbodiensem & Michaelem Malenum, Ninoviensem, Abbates.*
17. *Cranendonck*, 1574. *per Marcellum Cranendonck.*
18. *Divæi*, 1576. *per Greg. Divæum, Bruxellensem.*
19. *Brugelianum, unicum Medicorum; à Petro Brugelio Med. Dr.*
20. *Seminarium Regium*, 1579. *per Philippum* II. *Hispanorum, R.*
21. *Pelsianum*, 1574. *per Joh. Pels Westphalum.*
22. *Montense*, 1596. *per Joh. de Bievena, Montensem, J. U. Dr.*
23. *Seminarium Leodiense*, 1605. *per Ernestum Ducem Bavariæ & Episcopum Leodiensem.*
24. St. *Willebrodi, alias Sylvæ Ducense*, 1625. *per Nicolaum Zoesium Episc. Sylvæduc.*
25. *Bayanum sive Reyorum, per Michaelem du Bay, Theologum & Jacobum du Bay hujus è fratre nepotem, & deniq; hujus nepotem Ægidium*, 1614.
26. *Divæ Pulcheriæ*, 1616 *per divisionem cujusdam Fundationis, Universitatis Colonienſis.*
27. *Ordinis Teutonici*, 1617. *per Edmundum Huyn, ab Anstenraedt Ord. Teut. Equite.*
28. *Canonicorum Regularum, St. Augustini*, 1618.
29. *Mylianum sive Luxenburgense*, 1619. *per Joh. Mylium Luxenburgensem, J. U. Dr.*
30. *Hybernicum*, 1623. *per Eugen. Matthæi, Archi-Episcop. Dublinensem.*
31. *Alnense*, 1626. *per Edmundum Feweret.*
32. *Floreffiense*, 1626. *per Joh. Roberts Ord. Floreff, Præsulem.*
33. *Joh. Malderi, Episc. Antverpiensis*, 1633.
34. *Franciſc. Hovii*, 1633.
35. *Minimorum, pro Religiosis, Ord. St. Franciſci de Paula*, 1639.
36. *Beggardorum, pro* Religiosis sui Ord. 1640.
37. *Collegium St. Michaelis*, 1649. *per Laurentium Zoesium.*

Sequuntur quatuor *Pædagogia*, liberalibus artibus & Philosophiæ dicata.

38. *Lilium*, fundatum, 1493.
39. *Falco*, 1488.
40. *Castrum.*
41. *Porcus per Joh: Widoc.*
42. *Vaulxiano* sive *Gandense*, 1593. *per Franciscum Newland Gandensem.* &
43. *Scholæ PP. Augustinianorum*, 1612.

The Students are distinguish'd by their Habits, according to their Professions, the Divines wearing constantly Gowns and square Caps, which the rest were not obliged to, except at publick Exercises; yet are none allowed to wear Swords in the City. In the four *Pædagogies*, Philosophy is only taught by two Professours; the first whereof is stiled *Primarius*, the other *Secundarius*. The first reads in the Morning, from half an Hour after six till half an Hour after seven, and from ten till eleven a Clock. The other in the Afternoon, from half an Hour after One, till half an Hour after Two; and from half an Hour after Four, till half an Hour after Five. They take the Professours Lectures (which are divided into *Dictata* or *Theses*, and Propositions, and *Annotata*, or Objections and Solutions) in certain Note-Books. For the rest, the Gentlemen Students are placed in a peculiar Form, call'd *Scamnum nobilium.* As soon as the Students come to the *Students.* University, they must enter their Names, with the President of their College; every time they are absent from a Lecture, they pay a Penny, for each time of absence from a publick Exercise, three Pence, and if they miss when they are to perform a publick Exercise themselves, twenty Pence. The Professours of each *Pædagogy* chuse every Year twelve (which must be of two Years standing) of their best Scholars; these 48, after they have been publickly examined, twelve out of their number are selected to be *Burses*, and to have their Lodgings, Diet and good Stipend in what College each of them pleases, and to choose what Profession they like best, out of these commonly the Professours are chosen. Their Degrees here are that of *Batchelour, Licentiate* and *Doctor.* After two Years standing in Divinity, they may be created Batchelors or *Baccalaurei currentes*, and at one more *Baccalaurei formati*, and can't be *Licentiates* till seven Years after; these immediately after their Creation, are reputed Gentlemen, and have liberty to choose a Coat of Arms. Doctors are seldom made till they are 50 Years of Age, unless they have given more than ordinary Proof of their Ability.

May the 4th, We took a Walk for half a Mile from *Louvain*, to take a view of the D. of *Aresschot*'s Palace, and the Convent of the *Celestines* adjoining to it; by the way, we found among the Corn the *Caryophyllus arvensis umbelliferus* and *Alsine foliis hederaceis Rutæ modo divisis.*

At *Louvain*, we also saw three things we had not met with before, *viz.* Storks, Women Porters, and Troopers begging on Horse-back.

May the 5th, Leaving *Louvain*, we travell'd to *Mechlin* (*Malines*) a very neat place, being the Seat of an *Mechlin. Malines.* Archbishop, and bearing the Title of one of the 17 Provinces under the name of the *Lordship of Mechlen*, tho' it has not above nine Villages under its Jurisdiction. The Inhabitants are much addicted to Manufactories; and among the rest, there are three whole Streets full of Tanners.

We continued the same Day our Journey to *Antwerp*. *Antwerp.* by Boat, which by some is compared to *Florence*, but exceeds it in my opinion, for beauty. It is encompass'd with Fortifications of Earth, faced with Free-Stone, of a considerable thickness, and a broad and deep Ditch, which together, with its situation in a low and level (a) *Dr. Brown's Travels.* Ground, makes it very strong. The (a) Citadel built by the Duke of *Alva*, is of a Pentagonal Figure. The Houses are generally lofty, and of Brick; the Chapel of the Jesuits very rich and stately; and the Steeple of St. *Mary*'s Church a curious piece of Architecture, as is also the Town-house. Our *Royal Exchange* of *London*, was built after that of *Antwerp*, but the Copy much exceeds the Original; this City being much fain off from its Traffick since the vast increase of Wealth in the United Provinces. *Plantin*'s Printing-House is the best of that kind I ever met with. Among other Curiosities I saw in the Garden of one *Francis van Steerbeck* a Priest, many rare Plants, *viz. Lentiscus, Pistacia, Spiræa Theophrasti, Barba Jovis frutex, Cerasus nana, Amygdalus nana, Althæa montis*

montis Olbii in Gallo-provincia, Morus fructu albo, Jasminum hederaceum, Lycium, Rosa sine spinis, Capparis leguminosa sive Fabago, Convolvulus heptaphyllus, Acanthus aculeatus, Esula rara Venetorum, Petroselinum Macedonicum, Daucus Creticus verus, Convolvulus Althææ folio, Thapsia latifolia, Ephemerum Matthioli, Pistolochia Virginiana, Pyrethrum verum, Auricula ursi folio & flore Boraginis, Sandalida Cretica, Sandariffæ species, Telephium legitimum Antiquorum, Gnaphalium Americanum flore luteo pleno, Spartum marinum, Laurus Alexandrina, Absinthium arborescens, Lilium Alle-bregum majus, Geranium tuberosum, Hellebori albines Spicas, Centaurium majus Helenii folio & Scolymi folio, Coralloides, Urtica fatua Virginiana, Campanula Damascena latescens flore purpureo & albo.

May the 15th, We embark'd aboard a small Vessel at *Lillo* Fort, upon the *Schelde*, three Leagues below *Antwerp*, belonging to the United Provinces: Having a favourable Wind and Tide, we made 54 *English* Miles, and arrived before Sun-set at *Middleburgh*, the Capital City of the Province of *Zealand*: In our Passage we saw several Sea Calves upon the Sands. This City is seated in the very Center of the Isle of *Walchria* (whence it got its Name) being of a large compass, well fortified, populous and wealthy. It has a Channel reaching from the Town thro' that part of the Isle which looks towards *Antwerp*, which being capable of receiving Ships of great burthen, the same are brought into the very Streets of the City. It has about 20 Churches, the *Lutherans*, *French Protestants*, *Anabaptists* and *Jews*, having also the publick Exercise of their Religious Worship allowed them here. *Middelburgh.*

We took a walk hence to *Flushing*, of about three *English* Miles; It is neither so large nor so handsomly built as *Middleburgh*, the Streets being much narrower; but the convenience and goodness of its Harbour, together with its Strength and Riches, makes it very considerable. *Flushingen.*

May the 19th, We took another walk to the *Ter-Vere*, about the same distance from *Middleburgh* to the North; it does not come near to *Flushingen* in bigness, yet has two very good Harbours, and several Wharfs and Keys: As we pass'd along, we found the Banks of the Sea-shoar cover'd with a kind of Matting of Rushes or Flags, staked down as high as the Tide commonly rises, to prevent their being wash'd away by the strength of the Current. *Ter Vere.*

May the 20th, We pass'd in a Boat from *Middleburgh* to *Bergen-op-Zoom*; and in our way by the strong Fort call'd *Rammeken*, situate at the entrance of the Channel leading to *Middleburgh*, a place remarkable for its Fortifications, which are strengthned by many Half Moons, Horn-works, &c. *Bergen-op-Zoom.*

May the 21st, We travelled to *Breda*, eight Hours from *Bergen*, which makes about 24 *English* Miles; it being the Custom of the *Dutch* to measure their Miles by ours. This place stands in competition with most of those Parts for its Strength, Bigness, and number of Inhabitants, being enclosed by very good Fortifications, and two broad Ditches, one of which is always fill'd with Water. It belongs to the Prince of *Orange*, whose Palace and Castle is to be seen here. *Breda.*

May the 22d, We continued our Journey by the way of *Gertrudenburgh* (a small but well fortified place, belonging to the *Dutch*) to *Dort* or *Dodrecht*, a City rich, populous and large, and for its Buildings, to be compar'd with *Antwerp* it self; the Streets being very neatly pav'd (as in all other Cities of *Holland*) with Stone in the middle, and on each side with a peculiar kind of yellow Brick, set edge ways. The *English* enjoy great Privileges here, and have two Churches, whereas the *French* have but one. We saw the Room in the *Gunners Hall*, in which the Synod held in this City 1621. was assembled, the Seats thereof being still preserved. *Dort.*

May the 23d. We pass'd in one of their *Treckschuits* or Boats drawn by Horses, to *Rotterdam* in five Hours. This City is of a Triangular Figure, and near to *Amstendam*, stands in competition with all the other Cities of the United Provinces, not excepting *Leyden* it self, having been considerably augmented of late, by the addition of many new Streets; Not far from St. *Lawrence*'s Church, you see a small House, which having given birth to the Learned *Erasmus*, his Pictures is set over the Door, with this Distich on one side of it: *Rotterdam.*

Ædibus his ortus tenuibus Roterodamus Erasmus
Artibus ingenuis, religione, fide.

And another thus:

Fatalis series nobis non invidit Erasmum,
At Desiderium, tollere non potuit.

His Statue in Brass stands in the great Market-place, with a Book of the same Metal in his Hand. As the Inhabitants of *Rotterdam* enjoy the conveniency of a very good Harbour, so the Ships of very great burthen are carried into the very Streets, so they addict themselves chiefly to Sea-traffick. Their Civil Government is administer'd by a President, four Burgermasters, and 24 *Aldermen* or *Senators*, which they call the *Vroetshap*: These continue in their Stations during life, choose all the publick Officers out of their own number, and if any one dies, have the Privilege of chooling another in his room; so that the Government here, as well as in other Cities of the United Provinces, is a kind of *Aristocracy*, with this difference only, that in some, the number of those who compose this *Vroetshap* is more, in others less.

May the 25th, We went into one of their *Treckschuits*, which go every Hour in the Day from hence to *Delft*, where we arrived in two Hours. This City is also very large, with fair Streets and Water-Channels in them, as most other places in *Holland*. The *Stadthouse* is a goodly Structure, and the Old and New Churches are very large; In the middle of the Quire of the last of these, you see the sumptuous Tomb of *William* Earl of *Nassaw*, Prince of *Orange*, who was assassinated by the *Spaniards*, as this following Inscription tells you: *Delft.* The Tomb of Prince *William* of *Nassaw* and *Van Tromp.*

D. O. M.
Et
Æternæ memoriæ
Gulielmi Nassovii,
Supremi Arausionensium Principis,
Patr. Patr.
Qui Belgii fortunis suas posthabuit,
Et suorum
Validissimos exercitus ære plurimum privato
Bis conscripsit, bis induxit;
Ordinum auspiciis Hispaniæ tyrannidem propulit:
Veræ religionis cultum, avitas patriæ leges
Revocavit, restituit:
Ipsam denique libertatem tantum non assertam
Mauritio Principi,
Paternæ virtutis hæredi, filio,
Stabiliendam reliquit;

Non domuit, non terruit;
Sed empto percussore fraude, nefanda
Sustulit.
Fœderat. Belg. Provinc.
Perenne memor. monum.
Fec.

In the Quire of the Old Church is the Tomb of the famous *Van Trump* with this Inscription:

Æternæ Memoriæ,
Qui Batavos, qui virtutem ac verum laborem amas, Lege ac lege.
Batavæ gentis decus, virtutis bellicæ fulmen hic jacet, qui vivus nunquam jacuit, & imperatorem stantem debere mori suo exemplo docuit; Amor civium, hostium terror, Oceani stupor, Martinus Harperti Trompius: *Quo nimirum plures continentur laudes, quam hic lapis capit sane angustior; Ex cui Schola Oriens & Occidens, mare materia triumphorum, Universus Orbis theatrum gloriæ fuit: Prædonum certa pernicies, commercii fulix assertor, familiaritate utilis non vilis, postquam navibus ac militibus, durum genus, paterno & cum efficacia benigno rexit imperio, post L. prælia, quorum Dux fuit aut pars magna, post insignes, supra fidem, victorias, post summos, infra meritum, honores, tandem bello Anglico, nautum non victor, certe invictus, X Aug. Anno Æræ Christianæ M.D.C.L.IV. Ætat. LVI. vivere ac vincere desiit. Fœderati Belgii Patres Heroi optime merito M.P.*

Over his Arms was written the following Distich.

Urbs (a) Phœbi cineres jactat, sed ciconiæ (b) honores
Ingreditur quoties egreditusque; mari.

(a) i. e. Delphi.
(b) Phœbi nimirum seu Solis.

One Mr. *Mees* an Apothecary of that City had a fine *Museum* of natural and artificial Rarities, and among the rest, the *Dens Hippopotami* (tho' I question whether there be such an Animal) the Horns of the *Hirtus Bezoardicus*, and the *Cornua & pedes Alces*, call'd the *Elk* in *English*, the same I suppose, which in *New-England* and *Virginia*, is call'd *Moose*, a Species of Deer of a tall and large size, the Horns being without Brow-Antlers, but only a broad Palm of several Snags upon it. I saw one of these Horns at *Leyden*, at Mr. *Hotey*'s an Apothecary, that weighed 25 Pounds;

Pounds, and the Skin of an *Elk* stuft, in the *Great Duke* of *Florence*'s Gallery. In the Anatomical Theatre we also saw many Rarities, too many to be inserted here. *Delft* is famous for its Earthen Ware, which is made in great plenty here, in imitation of the true *China* Ware.

The Government is administer'd by a *Prætor* or *Schout*, two *Burgermesters*, seven *Eschevins*, and forty *Senators*, which they call also the *Vroetschap*.

Hagus. *May* the 28th, We pass'd by Water, in less than an Hours time, to the *Hague*, being rather a Village than a City, and not enclosed with Walls or any thing else; but for the fairness of its Streets and beautiful Houses, and number of People, may challenge the preference before many goodly Cities. The Grove which is near it, is exceeding pleasant, and here I first saw the *Monophyllum* grow wild, as I found at *Scheveling*, a Village on the Sea-side, near the *Hague*, a *species* of *Spartum maritimum*, much larger than our *English* kind.

Lausdun. Whilst we were at the *Hague*, we took the opportunity of viewing the Burial place of a certain Lady of *Zealand*, in the Church of *Lausdun*, a Village about five or six *English* Miles from the *Hague*, who as the Inscription tells you, was *Margaret* the Wife of *Herman*, Earl of *Hennenbergh*, and Daughter of *Florentius*, Earl of *Holland* and *Zealand*, and Sister to *William* King of the *Romans*, &c. This Lady being about 40 Years of Age, and meeting with a poor Woman that had two Twins in her Arms, told her that she must have been dishonest to her Husband, as not believing that two Children could be begot at once; at which the poor Woman being highly concern'd, wish'd that she might bring forth as many Children at a Birth, as there were Days in the Year; which was fulfilled 1276, when at one birth she was brought to bed of 365 Children of both Sexes, who were baptiz'd by *Guido*, a Suffragan of *Utrecht*, in two Brass Basons, the Sons having the name of *John*, and the Daughters that of *Elizabeth* given them; and soon after died all in one Day, as did also the Mother, and were buried in this Church of the Village of *Lausdun*. This Inscription is to be seen in *Latin*, over the two Basons in which, they say, these Children were baptiz'd, and beneath it also this following Distinchon:

A memorable Story.

En tibi monstrosum nimis & memorabile factum,
Quale nec à mundi conditione datum.

Leyden. *May* the 31st, we went in one of their Passage-boats in three Hours from hence to *Leyden*, being next to *Amsterdam*, the largest City in *Holland*. The great Church of St. *Peter* contains many Monuments of learned Men, and in the *French* Church is also to be seen among others, that of *Joseph Scaliger*. The Schools for publick Lectures is a Structure of three Stories high, of Brick, having two Rooms on a Floor; the two lowermost being assign'd for Divinity and Physick; middlemost for Law and Philosophy; and the uppermost contains the Printing-House, known by the Name of *Officina Elzeviriana*. Every Year a Catalogue is printed in *Latin*, and affixed to the School Gates, containing the names of the Professours, and what publick Lecture each of them is to keep the Year following. Behind the School Yard is the Physick Garden, which encloses about an Acre of Ground in the Square, and has a considerable number of exotick Plants; the Catalogues of which are also frequently publish'd here. They have no more than two Colleges here, in the nature of Hospitals, for the Sustinence of poor Scholars, the rest of the Students living upon their own Purse, without any Gowns or Caps, but walk the Streets with their Swords, and appear in the Schools, and perform their Exercises in them, with their Heads uncover'd. Those that have a mind to be Members of the University, apply themselves to the *Rector Magnificus* (resembling the Vice-Chancellour of our University) who enters them into the Book, and gives them them a Seal, by which they are freed from paying of Excise, yet under a certain limitation. Besides the publick Lectures, each of the Professours allot certain Hours for reading in private (which they call *Collegia*) for which the Auditors pay a certain Gratuity. Degrees (of which they have only those of *Master of Arts* and of Doctors) are conferr'd here, without the least respect to the standing of the Candidates. He that is to commence in any Faculty, proposes only certain Theses upon a selected Subject in print, which he is obliged to maintain against all Opponents, every one having the liberty (after leave ask'd from the Professour that presides) to oppose the Candidate. Each of these Professours have a Sallery of betwixt 200 and 300*l. per annum* allowed them. Besides the University, there is a great deal of Woollen Cloth made in this City. For the rest, the Houses are very well built, with very steep Roofs on purpose to cast the Rain Water into certain Cisterns, wherein it is preserved for use. Its Streets are for the most part very broad, large, and streight, furnish'd with Water Chanels. In the Night time certain Watch Men go about the Streets, and making a noise with a Rapper, tell every Hour what time of Night it is. In the Anatomical Theatre, we saw many Skeletons of Men and Beasts, and among other Rarities, a Box, containing the Skeleton of a certain Head of an *Indian* Creature; half a Stag's, half a Hogs-head; many leaves of the *Bethle*, not unlike the great *Satyrion* Leaf; an *Ant-Bear*; and in the Library, the Manuscripts of *Joseph Scaliger*. *Leyden* is enclosed with a good Earthen Wall, and a Ditch, which being surrounded by divers rows of Lime-Trees, make very pleasant Walks.

The University.

See Brown's Travels.

Scevenhuse. Before we parted from *Leyden*, we took a turn to a Village call'd *Scevenhuse*, about four Leagues thence, to view a very pleasant Grove near it, excellently well stor'd with Wild Fowl, such as *Scholfers*, call'd *Shags* in *England*, being not unlike *Cormorants*, but somewhat less; we were much surprised to see them build upon Trees. *Lopelaers*, call'd *Plateæ* and *Pelicani* by *Gesner*, some call them *Spoonbills* in *England*. *Quacks*, call'd *Night-Ravens* by the *Germans*, because they always make a noise in the Night time, and *Reyers* or *Herons*; Besides which, this Wood affords vast numbers of *Ravens*, *Wood-Pidgeons* and *Turtle Doves*. By the way, we took notice of *Lysimachia lutea flore globoso*, and the *Arum sive Dracunculus* growing in the Ditches. All the Grounds betwixt this Village and *Leyden*, are low, fenny, and full of Pools. We saw the Country People hereabouts busied in making of Turf: They take with a kind of Hoop-net, fastned to a Pole, the Mud up from the bottom of a standing Pool, wherewith having laden a Boat, they throw this Mud with long Shovels on an even piece of Ground, making of it a Bed of an equal bigness as near as they can guess; this, after it has lain long enough to dry, they tread with pieces of Boards fastned to their Feet, to make it close and smooth; then they cut the whole Bed with a Spade into pieces of the bigness of a Brick, and pile them up in Stacks or Ranks, so that one may see thro' them, to give a free Passage to the Air and Wind, to dry them further, and afterwards are laid up in Barns, the sides of which being made up with wooden Bars at some distance from one another, to make them fit for firing.

The manner of making Turf.

Harlem. *June* the 6th, We continued our Journey in one of the Boats that go from this place to *Harlem*, where we arrived in four Hours; being a populous, long, strong and pleasant City; provided with very fair Chanels in divers of its Streets: It has most delightful natural Groves on that side where it looks towards *Leyden*; In the Garden of the Prince's House is a Summer-house, where you see the Picture of *Laurence Coster*, in a furr'd Gown, holding the Letter A in his Hand, with this Inscription over it:

M. S. *Viro Consulari*, Laurentio Costero *Harlemensi alteri Cadmo, & Artis Typographicæ circa Annum Domini* MCCCCXXXX, *Inventori primo.*

The Statue and Inscription which was on his House in the Market-place, are no more to be seen now, the House being sold. The chief Trade in this City is in weaving of Silks, Damasks, Velvets, Satins, Linen Cloths, &c. The Sea Coast near *Harlem*, and all *North Holland*, are covered against the Sea with green Downs.

Amsteldam *June* the 8th, We went hence in two Hours by Boat to *Amsteldam*, where we met at the Gate no more than two Souldiers, one without, the other within: This City, as it is the biggest of all the Low-Countries, so for Riches and Traffick, may compare with any in *Europe*. At that time I look'd upon the extent of it to be the same with *Venice*, and consequently less by one half than *London*, but as they were then busied in enclosing a very large Tract of Ground with a strong Wall and deep Ditch (which I hear is since fill'd up with stately Houses) it will bid fair for being numbred among those of the first rank for bigness. The chief publick Buildings here are, The *Stadthouse*, a most magnificent square Pile of Buildings, fac'd without with Free-stone; the Foundation of which, as they told us, cost 100000*l.* sterling, the Structure being built upon 13659 great Piles or Trees driven into the Ground. The Exchange a large Oblong Square, frequented by a vast number of all Nations. The *Admiralty-House* a goodly Structure, with fair Rooms. The *Magazine* and divers *Hospitals* and *Houses of Correction*. In this City is also a publick School, in which are kept Lectures in divers faculties, by six Professours, especially in

See Dr. Brown's Travels.

Its publick Structures.

in the Summer time. The number of *Jews*, who are richer here than in any other place, is computed to amount to 20000: In this City are also tolerated most other Religions (not excepting the Roman Catholick) but none, except those of the establish'd Religion, are permitted to erect any Steeples upon their Churches, or to make use of Bells for the assembling of the Congregation. In that stately Structure, call'd the *New Church*, you see a very fair Monument, erected to the memory of *John van Galen*, with this Inscription:

Generosissimo Heroi
Johanni à Galen
Essensi
Ob res fortiter & feliciter gestas, sexies uno anno, Dunkirkanorum navem captam, & à Barbaris opima spolia reportata, Ordinum Classi in Mari Mediterraneo Praefectus, memorabili prælio ad Livornam, Deo auxiliante, Anglorum navibus capsis, fugatis, & incendio deletis, commercium cum dicti maris accolis restituit, idibus Martii, Anno M.DC.LIII. *Et uno pede truncatus, nono post victoriam die, annos natus* LVIII. *obiit, ut in secula per gloriam viveret.*
Illustriss. & Praepotent. Foederati Belgii
Ordinum decreto,
Nob. & Pot. Senatus Archithalass.
Qui est Amstelodami
M. H. P.

Its Government.

The Pulpit of this Church is valued at 1000*l.* sterling, and there are 24 establish'd Ministers belonging to this City.

The Government is administer'd here by the *Prætor* or *Schout*, four *Burgermasters*, nine *Eschevins*, and 36 Counsellors or Senators, which they call the *Vroetshop*. The *Prætor* has the first place upon the Bench of the *Eschevins*: He is elected by the *Burgermasters* (with the approbation of the *Vroetshop*) for three Years, but may be continued in his Office from time to time: He cannot aspire to this Dignity unless he has been a Free-man seven Years. His Business is to make Laws in Conjunction with the *Burgermasters* and *Eschevins*, to apprehend and imprison Criminals, and he presides as Lord Chief Justice in Civil as well as Criminal Causes; and with the approbation of the *Burgermasters* and *Eschevins*, determines the Matters before them, and pronounces Sentence against Criminals, and sees it put in execution. In other Cities the *Prætor*'s Concern reaches no farther than to apprehend and prosecute Malefactors. The whole number of *Burgermasters* consists of twelve, but four only are regent at a time, which is a Year; they must be forty Years of age at least. For, every Year, the *Burgermasters* that have been *Eschevins*, choose by the majority of Votes, three out of the twelve to be Regents, which three selected out of the four that reigned the Year before, a fourth, who tenders them the Oath, and officiates as President the first three Months. The remaining eight *Burgermasters* are employ'd in divers other great Offices, such as Treasurers, Masters of Hospitals, one to be sent in the Quality of Deputy, to the Assembly of the States in the *Hague*, one for a Member of the Council of the Admiralty of *Amsterdam*, &c. The Office of the *Burgermaster's Regent*, is, to take care of the Government and Peace of the whole City, to determine Differences between private Persons, to be surveyors of the Fortifications, Streets, and Publick Buildings. If one of the twelve *Burgermasters* happen to die, it belongs to the *Vroetshop* to chuse another. When the *Eschevins* are to be elected, the *Vroetshop* proposes 14 Persons, out of which the *Burgermasters* select seven; but one condition is, that they must not be near of kin either to the *Schout*, or any of the *Burgermasters Regent*. Unto those seven, the *New* and *Old Burgermasters*, together with the newly elected *Eschevins*, do, by the majority of Voices, add two out of the number of the *Eschevins* chosen the last Year, which two for that Year have the first and second Rank among the *Eschevins*, who are Judges both in Civil and Criminal Causes. The Council of 36, or *Vroetshop* continue in their places for life, and as often as one of that College dies, the rest chuse another in his place, but no body under 25 Years of Age is admitted into this Council. They not only, as we told you, have the power of presenting the 14 Persons out of whom the *Eschevins* are chosen, but are also call'd together by the *Burgermasters*, when any thing of great moment is to be debated or resolved upon; so that the Supreme Power seems chiefly to be lodged in them. Not many Years ago, according to the Constitution of this City, no Body could be *Burgermaster*, unless his Father had been a Free-man a Year and six Weeks before he was born; but now any one who will pay 500 Gilders, may be made a Free Man, and after seven Years, is qualified to be made a *Burgermaster*; but such as don't aspire to this Dignity, may be made a Free Man for 50 Gilders a Man. The City Trained-Bands, did then consist of 54 Companies, divided into four Regiments, of eleven Companies each, 150 Men in a Company, which amounted to 8250. Two Companies are drawn out every Night to guard the City.

June the 10th, We prosecuted our Journey to *Utrecht*, by the ordinary Passage Boat, where we arrived in six hours. This is the Capital City of the Province of the same name; a large place, surrounded with a good Earthen Wall and deep Ditch; but its Streets are not comparable for neatness and cleanness to those of the Province of *Holland*, tho' the Water Channels are also conveyed thro' several Streets. The University here, was establish'd by the States General, 1636; The Professors of which, as well as those of *Leyden*, publish a yearly Printed Catalogue of their Names and intended Lectures. For the administration of the Government, they have an *Upper* and *Lower Schout* and four *Burgermasters*, whereof two are new chosen every Year. *Utrecht.*

Hence we pass'd by Boat to *Vianen*, a place for refuge, belonging to the Lord of *Brederode*. We saw here a certain Engine, for the weaving of Tape by the motion of many Shuttles at a time. *Vianen.*

We continued our Journey the same Day thro' *Leerdam* (about three Hours distant from *Vianen*) and the 19th *June*, thro *Asperen*, below which we cross'd the River *Wale* or *Vahalis* in a Ferry-boat, and came to a very pleasant wall'd Town, call'd *Bommel*, seated in an Island; a small distance hence we ferried over the *Muese*, and passing in sight of two strong Forts near the River side, one call'd *Crevecœur*, and the other *Engelen*, came in four Hours to *Hertogenbosch*, *Sylva Ducis*, or *Bois-le-duc*, as the *French* call it. *Leerdam. Asperen. Bommel.*

As this City is seated upon a kind of a Hill, surrounded with Fenns of a great extent, the greatest part of which was then (and is generally so) covered with Water, we pass'd upon Causeways, and thro' a Water, and over two Draw-bridges, before we entred the Town. Besides which, it being strengthned by a good Wall and deep Ditch, and defended by a regular Citadel, this, with its situation, seems to render it impregnable, yet has it been taken in the late Wars. In the Quire of the Church of St. *John*, are to be seen the Arms of many of the Knights of the *Golden Fleece*, and over the upper Stalls an Inscription in *French*, importing, That *Philip*, sirnamed the *Good*, Duke of *Burgundy*, *Lorrain* and *Brabant*, had, 1429. instituted in the City of *Bruges*, a Company of Honourable Knights, unto whom he had given the name of *Knights of the Golden Fleece*, limiting their number to 24. Their Chief to be the Duke of *Burgundy*, or Supreme Lord of the *Low-Countries* for the time being. The Houses here are for the most part covered with Boards on the out-side; the Marshes about it produce great store of Wild Fowl, and the sandy gravelly Banks the *Herniaria hirsuta*. *Hertogenbosch.*

June the 20th, We travell'd in a kind of Wagon in six Hours to *Eindhoven*, and thence in four Hours more to *Haumont*, being both small, but wall'd Towns; the last of which belongs to the Bishop of *Liege*.

June the 21st, We travell'd for three Hours thro' Heaths to *Bry*, a small wall'd Town, and afterwards ascending the Hills, had a full view of *Maestricht*, and the River *Maese*, where we arriv'd that Evening after seven Hours riding. It is a strong, well fortify'd City, strengthned with very good Out-works. The Magistracy here are half *Protestants*, and half *Romanists*, and of the last are the greatest part of the Inhabitants; tho' the *Dutch* Protestants have also three Churches, and the *English* and *French* one, which they use by turns. The *Catholicks* have twenty Convents here; and are allowed the publick Exercise of their Religion. Most of the old Houses are of the same stamp with those of *Hertogenbosch*, but many new Brick-houses have been built of late Years. They were then also building a very goodly square Structure, intended for their Town House. The River *Maese*, which divides the City into two parts, is join'd to both by a large Stone Bridge, sustain'd by nine Arches, and the lesser part on the other side is call'd the *Wick*, being not inferiour in strength to the other part. *Bry. Maestricht.*

The Manners and Customs of the Dutch.

As to what relates to the common People of *Holland*, it must be confess'd they are a surly and ill bred Generation, which is the Reason that no Strangers that know the Country will deal with Inn-keepers, Wagoners, Boatmen, Porters, and such like, without bargaining beforehand. The Men are generally very large boned and bulky, and these, as well as the Women, are constantly eating as they travel. At their Common Entertainments, a

Sallad commonly leads the Van, a kind of stew'd Meat is the main part of the Dinner, and it concludes with some boil'd and butter'd Herbs. The chief Food of the ordinary People is Codfish and pickled Herrings, which they cure better than the *English*. In the publick Houses, you commonly meet with smoaked Beef, cut in thin slices, good Bread and Butter, and four or five sorts of Cheeses. Their strong drink (they call it *Dick* beer, and very properly, for it seldom is clear) is sold for three Pence a Quart; the dearness of which arises partly from the heavy Excise laid upon this, as well as all other Belly Commodities; partly from the plenty of Money in those Provinces, which makes Land to be sold here at betwixt 30 and 40 Years purchase. Most of their Beds are made close like Cabbins, both narrow and short, and yet you pay an excessive rate for them in the Inns. Their Houses are kept exceeding neat, even to the out-side of Pots and Pothooks, nay, the very Tiles of the Pent-Houses; yet has it been observable, that in dressing their Meats, they are not so clean and curious as the *English*. They use Organs in most of their Churches; collect Money for the Poor in Sermon-time, with a Purse fastned to a Stick, and a Bell hanging to it. The Psalms to be sung are set down upon Slates hung to the Walls of the Church for that purpose. They seldom travel on Horse-back, but generally in Waggons, some cover'd, others not, but most by Water; and this on Sundays as well as on other Days. Beggars are very seldom seen in *Holland*, notwithstanding its vast multitude of People, this Province containing no less than 24 Wall'd Towns and Cities, six of which (besides *Amsterdam*) are bigger than any in *England*, except *London*. And upon this occasion, I can't but give you the Heads of some Observations made by *Francis Bacon* Esq; who was in *Holland* with my Lord Ambassadour *Holles*.

Bacon's Remarks upon the Dutch.

There is, says he, a continual Watch kept upon the Steeples, in all the Cities of the *United Provinces*: The Differences arising among Boats Men and Waggoners, who shall go first, are decided by casting a Die. They gather the Rain Water by Pipes from the Houses and preserve it in Cisterns, as they do at *Venice*. The *Dutch* stand much in awe of their Superiours, because Justice is done here without delay. They are strangely addicted to Novelties, and mightily taken with any thing that is gay. They are extreamly greedy of Lucre, yet very just in their Bargains. The knowledge how to get Money, is what they esteem above all other things, and scarce ever apply themselves to any thing besides that and Politicks, in which they are generally well versed; the meanest of them being qualified by his Birth-right to become a *Burgermaster*. They fight bravely at Sea, tho' naturally they are of a phlegmatick temper, and consequently not fit for brave Exploits by Land. They allow of Liberty of Religion, but keep a watchful Eye over them to secure the publick Peace; which is the Reason that it is more difficult to hatch a Plot here, than in other parts, tho' at the same time, the people say and print almost what they please, the same being included within the general Notion of Liberty. Most of them have little Sense of Honour or Generosity, being guided meerly by the Prospect of Advantage or Interest. They don't prosecute Murder with so much violence as Theft. The *Dutch* are always careful to solemnize any great Action done by them, with all the publick Marks of Honour and Rejoicings, to imprint into the common People an Idea of the Ability and Wisdom of their Governours; which is the reason they frequently erect Monuments to those who have deserved well of the Commonwealth. The ordinary sort of Women (if not all) seem to be more pleas'd with obscene Discourses than the *English* or *French*: They have also the reputation of making not so severe an account of Chastity before Marriage, but of being very faithful to their Husbands. Even the better sort of Women are not backward of admitting Men, tho' of very little Acquaintance to a Salute; and kissing passes current here, not only at parting and upon Returns, but also in Frolicks and familiar Conversation. Most Women here are Privy to all the Actions of their Husbands, who seldom undertake any thing without their Knowledge and Approbation. They have abundance of Chiming in their Cities, and vast multitudes of Storks building their Nests upon the tops of the Chimnies. This however is not only observable in *Holland*, but also at *Louvain*, and in other Towns of the King of *Spain*'s Dominions, as well as in divers places belonging to Soveraign Princes in *Germany*, which contradicts that commonly received opinion, That those Birds never builds their Nests, but in Commonwealths.

June the 22d, We went from *Maestricht* to *Liege*, four Leagues distant. As we pass'd up the Hills, we observed at some distance from *Maestricht*, an arched Passage into a Vault, but being by the wet Season prevented from taking a view of it ourselves, I will here give you the Sense of (a) our *Royal Society* concerning it. This Quarry, says they, lies within a Cannon shot of *Maestricht*, being cover'd with 25 Fathoms of Rock or Earth; in length along the River towards *Liege* being of some Miles; and having one Entry near the River side, Carts can, with a great deal of ease, unload the Stones upon the Banks of the River; the Quarry within lying parallel to the Horizon or Level, and very little elevated above the River. After you have entred the Vault with Torches, it affords a most surprizing prospect to the Beholders, who see here some thousands of square Pillars in spacious level Walks, generally 20 Foot (and some more) high, so regularly wrought, that one would imagine, that the whole was designed for one of the Subterraneous Palaces of the ancient *Roman* Emperors; whereas the whole is no more than the Effect of the Quarriers, who come here to get Stone. This noble Quarry has another remarkable use serving the People for a retreating place, when Armies are marching that way, as being able to hold 40000 Men, who by reason of the many Pillars and Labyrinths, are able to defend themselves with their Fire Arms, against any Power that may attack them.

(a) *Transact.* Numb. 6. P. 2051.

See Dr. *Brown's* Travels.

Further upon the Downs, we observed three or four more of those Passages, and came before Night to *Liege*, a City, tho' very large, yet for Beauty and Riches, not comparable to those of *Holland*; the Houses being cover'd on the sides either with Boards or Clay, and the Streets narrow and very ill kept. The River *Maese*, divides it self, and runs thro' the River in two or three Branches, which are join'd by several Bridges. It is however very pleasantly situated, but surrounded with Hills, on one of which stands the Cittadel, the sides of those Hills being cover'd with Orchards and Vineyards. Provisions are very cheap here, and the People very courteous: The Women are not so fair as in *Holland*, and do a great deal of drudgery. They have Coal Pits near the Town, some of which are 150 Yards deep. The Cathedral Church, dedicated to St. *Lambert*, has 60 *Canonicos majores*, who must be all of noble extraction, except that they admit a few Men of learning among them. These elect the Bishop of *Liege*. Besides these, there belongs to it twelve *Canonici Mediocres*, and twelve more stiled *minores sive puræ Mensæ*. The three States of this Dioceſs, composed of the *Clergy*, *Gentry* and *Commons*, have a considerable share in the Government: No Tax being to be imposed, or other matters of great weight to be transacted without their approbation. This City is fill'd up with Religious Houses; In the *English Jesuits* College Garden, we saw divers Dials, the Invention of the ingenious *Franciscus Lucas*, and in the Cloister of the *Williamites*, without the Walls, the Tomb-stone of our Country Man Sr. *John Mandeville*, with this Inscription:

Liege.

HIC JACET VIR NOBILIS DNS JOES DE MANDEVILLE AL' DICTUS AD BARBAM MILES DNS DE CAPDI NATUS DE ANGLIA, MEDICINE PROFESSOR, DEVOTISSIMUS ORATOR, ET BONORUM LARGISSIMUS PAUPERIBUS EROGATOR, QUI TOTO QUASI ORBE LUSTRATO, LEODII DIEM VITE SUE CLAUSIT EXTREMUM ANNO DNI M°. CCC°. LXXI°. MENSIS NOVEMBRIS DIE XVII.

On the same Tomb-stone was also to be seen the Figure of an armed Man, treading on a Lion, with a forked Beard, and his Hand lift upwards in a Blessing Posture, with these Words going out of his Mouth, *VOS QUI PASEIS SOR MI POUR L' AMOUR DEU PRETES POR MI.* Which being old *French*, signifies, *You that pass over me, for the love of God pray for me.*

We left *Liege* the 26th of *June*, and travelling for seven Hours over hilly and rocky places, arrived at the *Spaa*, a pleasant little wall'd place, situate in a deep Valley. It is very well built, by reason of the concourse of many Strangers here, for the drinking of Mineral Waters; of which there are four several Springs. In the adjacent Woods and the Rocks, I met with the following rare Plants, rarely seen to grow wild, *viz. Asclepias flore albo, Polygonatum minus, Cynanchum majus, Rapunculus spicatus, Campanula persicifolia, Sideritis flore pallido similis Ledano segetum.*

The Spaa.

See Dr. *Brown's* Travels.

We pursued our Journey *June* the 28th, to *Aken*, taking our way thro' *Limburgh*, three Hours from the *Spaa*, a place of great strength for its situation, being situate on the side of very difficult access, but it has but one Street, and the Houses only of Wood. *Aken* or *Aix-la-Chapelle*,

Limburgh.

Aken.

Chapelle, as the *French* call it, to distinguish it from *Aix* in *Provence*, is a large and strong place, and a free Imperial City, being strengthned by a double Wall, and adorned with no less than 30 Churches. The Chair wherein the Emperor sits when he is crowned here, has its sides of Ivory, and they say, that the bottom is made of a piece of Wood belonging to *Noah's* Ark. The Government of this City is administred by a Major, two *Burgermasters*, 14 *Eschevins*, and 120 Counsellors. The Major has the Presidence among the *Eschevins*, is put in the by Duke of *Juliers*, and continues in his place for life, *or quam diu se bene gesserit*. The *Burgrimasters* are elected by the majority of the Companies of the City; and administer this Office two Years, a new one being chosen every Year. The *Eschevins* officiate in the quality of Judges, during life, another being chosen in the place of him who dies. The Councellors are also chosen by the several Companies, of which there are 14 or 15. The Territories belonging to this City are very large, comprehending near 200 Villages, enclosed on all sides with Mountains; which producing abundance of *Lapis Calaminaris*, this is employed here in great quantity, to turn Copper into Brass. But what renders this Town most famous are the *Mineral hot Baths*, some of which are within, the rest without the Town, at a Village call'd *Borcet*; These latter both in heat, and plenty of Water, much exceeds ours in *England*, being so hot, that one may boil an Egg in them. Their taste was saltish, and they were used both inwardly and outwardly. One Day as we were walking to *Borcet*, we saw a certain Pool, whose Waters were luke-warm, by reason of a small stream of one of the Springs of the hot Baths passing thro' it; They told us that it bred very good Fish, but that they were fain to put them into cold Water for two Months, before they eat them. Of the Nature, different Kinds, Ingredients and Uses of those Baths, both within and without the City, *Francis Blondel*, M. D. has treated at large in his Epistolar Discourse, published in *French*.

See Dr. *Brem.*

Of the *Lapis Calaminaris* Mines as well as the Baths of *Aken*, see Dr. *Brem's* Travels

From *Aken* we continued our Journey to *Juliers*, five Hours thence; a small but neat City, the Houses low, but of Brick, the Streets are somewhat narrow, yet it has a fair Market-place. Its Fortifications are considerable, but the Citadel (in which is the Ducal Palace, a stately Structure) may compare for Beauty, Bigness, and Strength, with any of *Europe*. The chief Employment of the Inhabitants here, is the making of Malt.

Juliers.

June the 30th, We went hence towards *Cologne*, and passing thro' *Bercheim*, a little wall'd Town, met by the High-ways, among the Woods and Hedges, with *Mezereon Germanicum*, *Mollugo montana latifolia ramosa*, *Pulmonaria maculosa*, *Galeopsis sive Urtica incers flore purpurascente majore*, *folio non maculato*, and among the Corn, with *Vaccaria Germ.*

Cologne, dignified with the Title of an Archbishoprick, is a free Imperial City, and perhaps the biggest in all *Germany*, in which however are excluded 300 Acres, planted with Vines, besides many other void spaces. The middle part of the City is very well built, having two very handsome Market-places: The Walls are lofty and of Stone, with two deep Trenches and divers Out-works. In the Cathedral of St. *Peter* are preserved the Bodies of the three Wise Men, that came to bring their Offrings to our Saviour, enclosed in a Chest of Gold. The number of the *Canons Nobles* belonging to this Church, consists of 54, besides eight *Canons Presbyters*; these 62 in conjunction with the Dean (who has two Voices) and two *Burgermasters Regent* (who have four Voices) of this City, choose the Archbishop. The Government of the City is in the Hands of six *Burgermasters*, seven *Eschevins*, and 150 Councellors; they all continue during life; but of the first, two are only Regents at a time, for a Year: The *Eschevins* are chosen by the Archbishop, as the Councellors are by the Companies of the City, and fifty only are in Power yearly, so that it returns to the same Persons every third Year. If a *Burgermaster* dies, the Councellors have power to choose another in his room. The Inhabitants are generally *Roman Catholicks*, yet have the *Lutherans* a Church within the Walls, but the *Calvinists* are obliged to go to Church on the other side of the *Rhine*.

Cologne.

At *Cologne* we took a Boat, drawn by Men, which carried us up the *Rhine* to *Vdich*, an inconsiderable Village; hereabouts we found among the Corn, *Delphinium flore purpuro-caruleo vulgare*, and *Nigella arvensis*; and in the barren Grounds adjoining to the River *Struthus citrina Germanica latiore folio*.

Next Morning we pass'd by *Bunn* upon the same River, the ordinary residence of the Electors of *Cologne*; and lodged at Night at a poor Town call'd *Brisacq*.

Bunn.

July the 6th, We pass'd by *Rhineck* to our right, and came to *Andernach*, over against which is the Castle of *Hammerstein*, belonging to the Elector of *Treves*. Further we pass'd betwixt two Castles, belonging to the Earl of *Wied*, that on the right hand being seated upon a high Rock, with a Cloister adjoining to it. Two Leagues from *Andernach*, we pass'd by *Singen*, and the same night came to *Coblentz*.

Andernach.

This City, which is the most considerable belonging to the Archbishop of *Treves*, is call'd in *Latin Confluentes*, from its situation at the Conflux of the Rivers the *Mosselle* and the *Rhine*. Over the first of which is a Bridge here of 13 Arches, as there is over the *Rhine*, a Bridge of Boats to the strong Castle of *Hermanstein*, situate upon a Rock, with a very sumptuous Palace below it, belonging to the same Archbishop. Not far from *Coblentz*, are the Mineral Springs, near *Helfenstein* Castle, of which kind there are several in those parts, as for instance, one at *Anthony's-Slona*, four Hours from *Andernach*, and another at *Zwalbach*, four Miles from *Frankfort*, they are generally drank mix'd with Wine, unto which they give a pleasant taste and purging quality, but I did not observe in them, what the beforementioned Dr. *Blondel* affirms, that they smoak, or are hot when they are mix'd with Wine.

Coblentz.

July the 7th, We pass'd by several Castles and small Places upon the *Rhine*, as the Town and Castle of *Lodestein* on the left, and *Capelle* on the right hand; next the small Town of *Rens* and *Brombach*, *Boppart* on the same side, and the Castle of *Bornholm* on the left.

Taking up our Quarters in the Village of *Hertznach*, we came, *July* the 8th, in the Morning to St. *Goer*, a pretty small Town, under the Jurisdiction of the *Lantgrave* of *Hessen*, who has a very handsome Castle here, built upon a Rock. The Magistrates and most of the Inhabitants are *Calvinists*, yet have the *Lutherans* as well as the *Catholicks*, each their Church. Just opposite to St. *Goer*, you see the Town and Castle of *Wellnich*, and further to the right, the Town and Castle of *Wesel*, under the Jurisdiction of the Elector of *Treves*, and higher up on the left hand, the Town and Castle of *Cub*, the latter upon a Rock belonging to the Elector *Palatine*. The next place of any note we came to was *Baccharach*, a wall'd Town, adorned with many Towers, famous for the goodness of its Wine, as is likewise a certain Tract of Ground about *Rüngaw*, a Town near *Mayence*. Our Boat-men paid Toll in this as well as several other places upon the *Rhine*.

St. Goer.

We pass'd the same Day in sight of divers mean Towns and Villages, and *July* the 9th, by *Aspithouse* Castle, and immediately after by the *Mouse-Tower*, built in a little Island of the *Rhine*. Further up the River on the right hand we left *Bing*, a tolerable good Town, and passing by *Rhodes*, *Gison*, *Elvelds* and *Wallop*, to the left hand, arrived the same Night at *Mayence*.

Bing.

From *Cologne* as far as to the Village of *Vidich*, the River is very broad, but thence up to the *Mouse-Tower*, much narrower, by reason of the many Hills and Rocks on both sides, some of which are cover'd with Woods, others with Vines and Orchards. The Vines are ty'd to Stacks much lower than those we use in our Hop Gardens. In the Corn Fields, Meadows, Rocks, Woods and Sands near the River side, we found the following Plants, rarely found to grow wild in other places, viz. *Gentiana cruciata*, *Chamædrys spuria angustifolia*, *Chondrilla juncea*, *Chamædrys laciniatis foliis*, *Lychnis sylvestris caliculis striatis*, *Perficaria siliquosa*, *Genistella montana Germanica*, *Genistella aculeata*, *Buphthalmum vulgare*, *Fraxinella Cardamino impatiens*, *Uberis*, *Millefolium nobile*, *Digitalis lutea magno flore*, *Caucalis albis floribus*, *Saxifraga Venetorum*, *Esula major*, and divers others. Near the City of *Mayence* we found the *Sea-gilly-flower*, call'd by *Casp. Bauhine Caryophyllus montanus major flore globoso*, *Caryophyllus graminco folio minimus*, *Caryophyllus arvensis umbelliferus*, *Heliotropium majus*, *Prunella flore majore & Prunella foliis dissectis*, &c.

Plants between *Cologne* and *Mayence.*

The City of *Mayence* is very large and well fortified, but the Houses are very old, the Streets narrow and ill paved: The Cathedral of St. *Martin's* has 24 Canons all of Noble Blood, who choose the Archbishop. The Arms of this Archbishoprick is a Wheel, which they derive from *Willigesus*, a *Saxon*, their first Archbishop, who being a Wheelwright's Son, gave this Wheel for his Arms. Near this place, the River *Maine* joining its Current with the *Rhine*, we went up the first of these two Rivers in a Boat, and passing by *Rudsheim*, a goodly Fort on the Right-hand, belonging to the *Landgrave* of *Hesse Darmstadt*, and another wall'd Town call'd *Hocha* to the left, arrived the 13th of *July* at *Frankfort*, five Leagues distant from *Mayence*.

Mayence.

This City is very rich and populous, and not unhandsomly built, tho' most of the Houses are of Timber: Its Fortifications, which consists in divers strong Bastions

Frankfort.

and

and a deep Ditch, are very considerable and well kept: The River *Maine* dividing this City into two parts, that which lies opposite to *Frankfort*, is call'd *Saxonhousen*, which are joined by a very noble Stone Bridge, sustain'd by 14 Arches. In the great Market-place are three noble Fountains. The Emperours are now-a-days chosen here in the Senate-house, and crown'd in the Church of St. *Bartholomew*.

The Golden Bull.

I had the good fortune to get sight of the *Aurea Bulla* or *Golden Bull*, of the Emperour *Charles* IV. which instead of a Seal had a large Golden Medal hanging on it, with the Effigies of *Charles* IV. on one side, with this Inscription, *Carolus quartus, divinâ favente clementiâ, Romanorum Imperator semp. Aug.* on the Reverse the City of *Rome*, and underneath *Aurea Roma*, and round it this Verse, *Roma caput mundi regit orbi frena rotundi*. The Government of this City is in the hands of a *Prætor*, 12 *Burgermasters*, 14 *Eschevins*, and 42 Councellors. The whole Senate is divided into three *Scamna*, (1) *Sabinorum*, (2) *Literatorum*, and (3) *Opificum*: When a place happens to be vacant in the Bench of the *Eschevins*, the same is supplied out of the second Bench of the *Literatorum*; but the *Scamnum Opificum* rises no higher. The Senate has the Power of chooſing Yearly two *Burgermasters* out of their own number. The *Jews*, of which there are great numbers here, have their peculiar quarters assign'd them, from whence they dare not stir in the Night time; they wear a piece of yellow Cloth to distinguish them from other people. The Magistracy and most of the Inhabitants are *Lutherans*, unto whom belong five Churches. Yet have the *Romans* the free Exercise of their Religion here, and are possess'd of two Convents for Men and one for Women; but the *Calvinists* have their Church a good way from the Town; The *English* Church, first establish'd here under the Reign of Q. *Mary*, is fain much to decay, as well as the *English* House, which is turned into a Store-house. In the Country hereabouts, which is exceeding pleasant, we found growing wild, *Gramen amoris dictum*, & *Ischemon vulgare*, *Portulaca sylvestris*, and in the Hedges, the *Alsine baccifera*, which I met with no where else in all my Travels.

July the 17th, we took place in the Post-coach going to *Frankenthal*; we had scarce left *Francfort* half an Hour, when we travell'd all that Day, for three *German* Leagues, thro' Pine-woods, and lodged that Night at the Village of *Geirsheim*.

Worms.

July the 18th, We ferried over the *Rhine* at *Kernsheim*, and at six Leagues end came to *Worms*, a large and ancient City, but much decayed from its former flourishing condition. The Canons of the Cathedral (who are 20 in number) choose the Bishop. The Government of the City is in the Hands of the *Lutherans*.

Franckenthal.

From hence we came, after an Hour's travelling, to *Francke thal*, a place chiefly considerable for its strength, being situate in a Level near the *Rhine*, and provided with good Walls and Out-works. It is under the Jurisdiction of the Elector *Palatine*; and has three Churches, one *High-Dutch*, another *Low-Dutch*, and the third *French*.

July the 20th, We travell'd along the Banks of the *Rhine*, by the way of *Obersheim* to *Spires*, two Leagues and a half distant from *Franckenthal*.

Spires.

Spires, tho' dignified with the Title of a Bishoprick, yet is an Imperial City, under the Government of its own Magistrates. The Houses here are generally large, but not very convenient, and of Wood: The chief, if not the only thing, that makes this place considerable, is the *Imperial Chamber*, which is kept here, consisting of an Imperial President and 36 Assessors, besides three other Presidents, chosen by the Emperor out of the Delegates; Each of the Electors, as well as of the ten Circles, sending two Delegates or Assessors. There is such another Chamber belonging to the Imperial Court at *Vienna*, either of which (without any appeal from one to the other) determining Controversies arising betwixt the Princes and States of the Empire, and betwixt them and their Subjects in some Cases; But the Elector *Palatine* enjoys the Prerogative, *Jus non appellandi*.

The Imperial Chamber.

July the 21st, we pass'd the *Rhine* to *Manheim*, seated upon the very conflux of the *Rhine* and *Neckar*, It belongs to the Elector *Palatine*, being strongly fortified, and now strengthning by a new Citadel, which was almost finish'd. Who was the Founder of this City, you will see out of the Inscription over the *Neckar Gate*,

Manheim.

Quod felix faxit Jehova,
Federicus III. *Elector*
Palatinus Rheni, Dux Baveriæ,
E exteri Pago Manhemio
Ad Rheni Necrique confluvium
Justâ spatiorum dimensione
Nobilem Urbem molitus,
Vallo, fossâ, muro clausit,
Portam bonis civibus aperuit,
Anno Domini M. DC. X.

From hence we continued our Journey to *Heidelberg*, where we pass'd over the *Neckar* into the City by a wooden Bridge, covered over with a *Testum* to preserve the Timber. *Heidelbergh*, is not very large, but a neat and populous City, the Capital of the whole *Palatinate* and Residence of its Princes; the Houses are only of Wood, but handsomly built; it is seated at the Foot of a Hill, on the right side of the River *Neckar*, and is divided into five different Jurisdictions, independent from one another, (1) *Aulica*, under which are all the Princes and Noble Men; the Marital of the Court sits here as President, (2) *Cancellaria*, unto which belong all Councellors, and other Officers of the Courts, Advocates, Doctors, &c. (3) *Bellica*, for the Souldiers where the General presides, (4) *Academica*, for the Students, the *Rector Magnificus* for the time being, is their President, and (5) *Civica* for the Citizens. The Members of each of these Jurisdictions are not obliged to appear before any other Court but their own. The City is also divided into four Wards, under the Government of a *Prætor* and *Burgemaster*.

Heidelberg.

Its Castle.

About the middle of the ascent of the Hill call'd *Koningsthal*, stands the Royal Palace, a large and stately Structure, enclosed with a Wall and deep Ditch, hewn out of the Rock, which they may fill with Water when they please; here the Prince keeps his Court. According to the Inscription in *High-Dutch* upon the Gate, it was begun to be built by *Lewis* V. 1519. but several pieces have been added since, whereof one is call'd the *English Building*. In a Cellar under one of the Towers belonging to this Castle stood the famous great *Tun of Heidelbergh*, containing 132 Fudders, one of which is equal to four of our Hogsheads; But this Tun is taken to pieces of late and a new one building, which is to contain 150 Fudders or 600 Hogsheads. We were invited to dine in the Palace, where we observed every thing to be done with a great deal of regularity, and after Dinner the Elector was pleased to shew us the Curiosities of his Closet, and among the rest, a Purse made of *Alumen plumosum*, which being made red hot, received not the least harm, but appear'd the same it was before, after it was cool'd. Two Unicorn's Horns of eight or ten Foot long, wreathed, and hollow to the top (being the Horns of a certain Fish, and not a Quadruped, as the ancients vainly imagined!) An Imperial Crown and Globe, belonging to the Emperour *Rupertus* (who was of this Family) richly beset with precious Stones: A choice Collection of ancient and modern Coins and Medals; and among the rest a Copper *Swedish Doller* of the bigness of a square Trencher, with the King's Arms and Effigies stampt at the four corners. The Great Church (which formerly contained the famous Library of this place) as also that of the *Franciscans*, have divers very noble Monuments of the Princes of this Family, as that of St. *Peter* shews many fair Monuments of Learned Persons.

And great Tun.

The University of *Heidelbergh*, was founded 1346. and has three or four Colleges, for the Subsistance of poor Scholars. The whole management of it is committed to the *Academical Senate*, composed of 16 Professours *viz*, three for Divinity, four for the Law, three for Physick, and six Philosophers, but no more than four of them sit in the Senate, for fear they should make too strong a party. If a Professour dies, the Senate presents two Persons to the Prince, out of whom he chooses one. The Senate also chooses every Year a *Rector magnificentissimus*, a Honorary Title, not unlike that of Chancellour of our University, as their *Rector Magnificus*, the chief of the Senate is equivalent to Vice-Chancellour; besides which, they elect two or four more Officers out of their own number, to manage the concerns of the University. The Senate has his own Jurisdiction, and an unlimited Power in Criminal Cases, extending to life and death, the Prince reserving to himself only the Prerogative of Pardoning after Sentence past. In Philosophy they have no other Degrees but Masters, and those but few of late Years; In *Law* and *Medicine* they create both *Licentiates* and *Doctors*; and in Divinity, *Batchelors*, *Licentiates*, and *Doctors*. They have not the least regard to the standing of the Candidates, all they have to do being to undergo two Examinations, one of which is call'd the *Examen tentatorium*, before the Faculty, in which he is to commence, and in the presence of the *Rector Magnificus*; the second the *Examen rigorosum*, before the whole body of the Professours and the *Rector Magnificus*. After all this, he is to hold

The University.

hold a publick Diſputation *ſub Præſide*, to make a Lecture in his own Faculty, and a Speech. The Ceremony is performed with a great deal of Pomp, and concludes with a ſumptuous Feaſt, at which are preſent all the Profeſſors, and ſometimes the Prince in Perſon, or elſe he ſends the Court Marſhal to repreſent his Perſon, which is the reaſon that oftentimes when the Candidates have not very ſtrong Purſes, two or three join to ſave charges. Here alſo the Profeſſors publiſh a publick annual Catalogue of their Names and intended publick Lectures.

The Elector Palatine is abſolute in his Dominions, having alſo the Supremacy in Eccleſiaſtical Affairs, which formerly belonged to the Biſhop of *Spiers*, but ſince the Reformation the Eccleſiaſtical Juriſdiction has been annexed to the Soveraignty: He being the univerſal Patron of all vacant Benefices, tho' he permits the Eccleſiaſtical Council (compoſed of two Clergy-men and two Laymen) to repreſent unto him two, out of which he chooſes one. The generality of the Palatinate are of the Reformed Religion; and divided into three *Præfectures* (the biggeſt of which is ſubdivided into leſs) each of which has an Inſpector, who is one of the Paſtors of that *Præfecture*, and differs not from the other in Rank or Power, but have a larger Sallery. Each conſiderable Town has alſo a peculiar *Præfecture*, or Presbytery: Thus that of *Heidelbergh* is compoſed of five Miniſters of that City, two Deputies from each of the before-mentioned Juriſdictions, except the *Aulica*, and two from each of the four Wards of the City, making in all 21; in which the Lay-men have equal Voices with the Miniſters, theſe enjoying no other Prerogative in this point, than that one of them preſides always in his turn. They can't inflict any Church Cenſure, unleſs it be to make the Tranſgreſſours make a publick Confeſſion at the Church Door, and to promiſe Amendment, the reſt being left to the Determination of the Civil Magiſtrates. As the Elector is Univerſal Patron, ſo he is Maſter of all the Tithes, which for Conveniency's ſake, he allows to ſome Miniſters in certain places, but provides certain Salaries for the reſt out of the Church Revenues.

July the 25th, We hired a Coach, which was to carry us in three Days to *Strasburgh*: We had ſcarce travell'd three Leagues, but we paſs'd in ſight of the Fortreſs of *Philipsburgh*, ſeated in a Level near the *Rhine*; A League further we paſs'd thro' *Graffe*, and lodged that Night at the Village of *Linknom*. *Philipsburgh.*

July the 26th, After a Journey of four Leagues, we baited at *Raſpach*, two Leagues further thro' *Stolhoven*, and a League more thro' *Lichtenaw*, all inconſiderable places, we lodged that Night at the Village call'd *Sertz*.

July the 27th, we croſs'd the *Rhine*, over a Bridge laid over the two Channels of the *Rhine*, made of Firr-Trees laid cloſe together inſtead of Boats; and ſoon after came to *Strasburgh*. In our Journey thither, we ſaw abundance of *Indian* Wheat planted, as alſo ſome *Lathyrus ſativus*, and *Carthamus*, or baſtard Saffron. The *Battaria*, *Solidago*, and *Saracenica*, are wild hereabouts, and in the adjacent Meadows of *Strasburgh*, *Carduus Pratenſis*, *Tragi*, &c.

Strasburgh, is a free Imperial City, rich and populous, of a great Circumference, and well fortified with Walls and regular Out-works. It is governed by two Councils, one conſiſting of 71, in which are ſix *Burgermaſters*, as many *Stadtmaſters*, 15 *Patres Patriæ*, and 13 ſelected out of the *Militia*. The greater Council is compoſed of 300 Citizens, choſen by the ſeveral Companies of the City. The Women are generally handſome; and the Inhabitants *Lutherans*, tho' the *Roman Catholicks* have alſo a Church and four Convents, two for Men and two for Women. The Reformed have their Church at ſome diſtance out the Town. It is an Epiſcopal See; the Biſhop has a Palace in the City, but is not allowed to ſtay there above three Days at a time, but may continue in an Inn foreight Days together. The Armory or Arſenal here, may compare with any in *Germany*, and is not much inferiour to any other I ſaw elſewhere. The publick Granaries, Store-houſes, and Wine Cellars are alſo worth ſeeing. The *Dome* or Cathedral Church is a noble Structure, with a pair of folding Doors of Braſs at the Weſt end. Here is the famous Clock deſcribed by ſeveral Authors, which is a piece of moſt excellent Workmanſhip, made by a Citizen of this place, named *Iſaac Habrecht*. But what is moſt remarkable, is the Steeple, the higheſt that ever I met with, and curiouſly built of carved Stone; having 662 Steps from the bottom to the top; we went up 640 Steps to a place they call the Crown, from whence we took a view of the circumjacent Country at a great diſtance. *Strasburgh.*

About ten Hours diſtant from *Strasburgh*, towards the ſide of *Stutgard*, are very good acid mineral Springs, the Waters whereof they drink here, and in the other circumjacent Cities with Wine. In this, as well as other Imperial Cities in thoſe parts, the Inhabitants, but eſpecially the Women, adhere ſtill to an odd way of dreſſing, which yet is very different from one another, each having their peculiar Habits. Mineral Springs.

July the 31ſt, We continued our Journey towards *Baſil*, paſſing the ſame Day thro' the Village of *Tivelſheim*, and *Auguſt* the 1ſt, thro' *Markleſheim*, and two Leagues thence in ſight of the ſtrong Town and Fortreſs of *Briſack*, ſeated upon a Rock, and lodged that Night at *Lodeſheim*. *Briſack.*

Auguſt the 2d, After a League and a half riding, we arrived at *Baſil*, a large and noble City, well built of Stone, the Houſes very high, and painted for the moſt part on the out ſide. It is divided by the River *Rhine* into two parts (that on the North ſide being call'd *Little Baſil*) join'd together by a Bridge ſuſtained by 14 Arches. The chiefeſt Ornaments of this populous and rich City, are its Fountains, of which it has above 300. It is one of the thirteen *Swiſs Cantons*, its Territories comprehending above 100 Villages. The Biſhop of *Baden* has not the leaſt Juriſdiction in the Town, being not ſuffer'd to lodge here one Night, but keeps his Reſidence at *Broudint*. The Government here is adminiſtred by a greater and leſſer Council; the laſt conſiſts of 64 Perſons, choſen by the 15 Companies, and the greater of all the Magiſtrates and the leſſer Council. The Univerſity of this place was founded by Pope *Pius* II. in which are ſeventeen Profeſſors, three of Divinity, three of Law, three of Phyſick, and eight in Philoſophy and Literature. They keep their Lectures every Day in the Week in Term-time, except *Thurſdays* and *Saturdays*, but have very ſmall Salleries. The Eccleſiaſtical Government is in the Hands of three Profeſſors of Divinity, four *Scholarchæ*, and the Miniſters. The Senate has the Power of nominating three Perſons to any vacant Benefice, out of whom the Miniſters chooſe one; In the City theſe Miniſters live upon their yearly Salleries; but in the Country they have half Tythes and the other half in Money. The Miniſters here are at liberty to change their Profeſſion and become Laymen, whenever they pleaſe. They are of the Reformed Religion, as are all the other Proteſtant Cantons. *Baſil.*

Eraſmus lived part of his latter Days, and ended his life in this City; his Monument, which is of Marble, on the North ſide of the Communion Table in the Great Church, being to be ſeen to this Day. He was the Founder of a College in *Baſil*, for 20 Students of Divinity (in which number are however comprehended the Bedel and a School Maſter) ten of whom are to be natives of *Baſil*; they may ſtay there as long as they continue unmarried, tho' the Magiſtrates have a Power to command any one of them thence, if they think it convenient. They are under the Over-ſight of a Regent, without whoſe leave none of them dare ſtay out of the College one Night. In the ſame Church where *Eraſmus* lies interr'd is alſo his Library, commonly call'd *Bibliotheca Amberbachiana*, becauſe *Eraſmus* gave it by his laſt Will to one Mr. *Amberbach*. I ſaw the ſaid Teſtament written with his own Hand in half a Sheet of Paper, bearing date 12 *Feb.* 1536. In this Library are alſo divers very curious pieces of Paintings, done by that famous Maſter, *Holbenius*, a Native of this City; Some Diplomata of the Pope to *Eraſmus*, his Seal and Ring, a fine Gold Medal ſent to him by the King of *Poland*, beſides divers other good Coins and Medals, both ancient and modern; Three *Rappers* of Copper (worth about a Farthing a piece) turned into Gold, as they ſay, by that famous Alchymiſt *Leonhard Turnitius*, who tranſmuted the famous Nail of *Florence*; ſeveral ancient *Entaglie*; ſome Manuſcripts of *Amberbach*, containing the Antiquities of *Auguſta Rauracorum*, anciently a great City, but now turn'd into a Village, *Augſt* near *Baſil*. The Profeſſors and Miniſters wear Ruffs and a kind of Caps painted like Sugar-Loaves (in which they are imitated by the graver ſort of the Inhabitants) and Gowns which reach juſt below their Knees. The Women wear their Petti-coats very ſhort, and Caps not unlike the young Scholars at *Cambridge*, with a Tin Girdle. We took alſo a view of the *Muſeum* of Dr. *Platerus*, where we met with many both natural and artificial Curioſities of Minerals, Stones, Metals, Animals preſerved, &c. The famous Phanatick *David George* ended his Days in this City. We found divers Plants growing wild about *Baſil*, the chief of which were, *Scrophularia*, *Ruta canina dicta*, and *Paſſerina Tragi*, among the Corn, *Phalangium parvo flore ramoſius*, *Blitum minus album*, among the Hedges *Cymbularia Italica hederacea*, on the Town Walls near the *Strasburgh* Gate, *Stube major caliculis non ſplendentibus*, in the Grounds betwixt *Frankenthal* and *Baſil*, *Polium montanum*. *Eraſmus.*

montanum Lavendulæ folio, Consolidâ media Genevensis & Cheiranthi Marrubii seu Thymelæa minor Cordi. But of these and other Plants growing about *Basil*, see *C. Bauhini Catalogus Plantarum.*

We went hence, *August* the 10th, towards *Zurick*, and in our way about a *German* League from *Basil*, pass'd thro' *Augst*, supposed by *Ambachius* to be the ancient *Augusta Rauracorum* of the *Romans*, where we saw the Ruins of an Amphitheater. We travelled afterwards in sight of a wall'd Town upon the *Rhine*, and many Hills cover'd with wild Fir-trees, and passing thro' *Bruck*, a pretty handsome well built, but small Town, lodged the same Night at the *Baths* of *Baden*, about six *German* Leagues distant from *Basil*; here we first got sight of a small green *Tree-Frogs*. These hot Baths, about 60 in number, are not above half an *English* Mile from *Baden*, a City seated upon the River *Limagus*, on the side of a Hill, famous for the general Meetings of the *Swiss Cantons* here. *Baden.*

From hence we continued our Journey *August* the 11th, along the *Limagus* on one, and very fair Vineyards on the other side, to *Zurick*, another City belonging to the *Swiss Cantons*, scarce so big, but more populous than *Baden*. Its Fortification is extraordinary pleasant, near the *Zurick-Sea* or *Lake*, being divided by the River *Limagus* (which owes its rise to this *Lake*) into two parts, which are join'd together by two Bridges, one of which is for Foot-Passengers, the other for Carriages, and very broad. The Houses here, tho' of Timber and Clay, yet are well built, handsomly painted, and lofty; the Streets indeed are none of the broadest, but very well paved, and the whole body of the City enclosed with a strong Wall and many Out-works of Earth, after the modern way; the River *Sele* (which below this City falls into the *Limagus*.) serving for a *Ditch* on the South side. The Inhabitants, which are Protestants, are much addicted to Traffick, and generally rich. What is worth a Traveller's Curiosity here is, the colour of the Water of the *Zurick-Sea*, which is of a green Colour approaching near the Sea-water, tho' it has not the least brackish taste, unto which this Colour is ascribed in the Sea-water. Finding afterwards the Water of the Rivers and Lakes near the *Alps* of the same Colour, we could not attribute it to any other cause, but the melted Snow of those Mountains, wherewith they are (at least the higher parts of them) covered for six Months in the Year, which containing a nitrous Salt, may be sufficient to give the Water this Colour, tho' not to affect our taste. The Government of this City is administred by two Councils, *viz. The Greater* and *the Lesser*. The last is composed of 50 Members, to wit, 24 Tribunes, chosen by the twelve Tribes or Companies of the City, two out of each: These they call the *Twelvers*, because twelve of them have only their share in the Government at a time; twelve Senators, *viz.* one out of each Company, chosen by the *Lesser Council*, as *Simler* tells us, but according to our Information, by the *Great Council*, six Members more taken indifferently out of the Commonalty, and those likewise chosen by the *Great Council*, as we were credibly told, but according to *Simler*, by the *Lesser*; four Tribunes and two Senators chosen from among the Gentlemen, and two *Burgermasters* elected by the *Great Council* of 200. Half this Council governs by turns, and that part which rule, is stiled *Concilium novum*, or the *New Council*, as that which goes out is call'd *Concilium vetus*, or the *Old Council*: yet if any Decree be to be made, the same is dated in the presence of both, for which reason the whole 50 meet once a Week; For the rest, one half of this Council is chosen every half Year, *viz.* at *Midsummer* and *Christmas*, and as the *Concilium vetus* goes out, it chooses the *Concilium novum*, composed for the most part of the same Persons that were chosen before. The whole Council of 50 determines Civil Actions (tho' *Simler* says, no more than eight selected out of their number) as the new Council judges in Criminal Cases alone. The *Greater Council* is composed of 200 Persons, *viz.* 12 out of each Tribe, making in all 44, 18 chosen by the Gentlemen, from among themselves, 24 Twelvers, four *Tribuni nobilium*, two *Senatores nobilium*, the six before mentioned chosen by the great Council out of the People. These choose Governours (call'd by them *Landvoghts*) and are always consulted withal upon any Emergency, concerning the whole Commonwealth. They also chuse four *Proconsuls* out of the 24 Masters of the Companies; and two Treasurers, either out of the number of the twelve Senators, or of the twelve *Tribunes* of the *New Council*. *Zurick.* *The Zurick Sea.* *Its Government.*

August the 12th, In our way from *Zurick* to *Schaffhausen* we pass'd by a Cataract or Water-fall of the *Rhine*, which is so dangerous for the many Rocks that lay under Water, that the Vessels must unload here, and by the way found the *Orobus sylvaticus purpureus vernus*, the *Hepatica nobilis*, and *Ulmaria major sive Barba capri* growing wild.

The City of *Schaffhausen* is situate upon the River *Rhine*, over which is a Bridge, half of Wood, half of Stone, and some most of the Houses, very well built; especially in the two great Capital Streets, which are handsomly paved. The Citizens of this place, as well as of *Zurick*, wear constantly Swords: Those of the first being divided into 12 Companies, each of these elect two *Tribuni Plebis*, and these 24 make up the *Lesser Council*, having each a yearly allowance of 52 *Florens*, and nine measures of Corn. *Schaffhausen.*

The *Great Council* is composed out of those 24, and 60 more, to wit, five chosen out of each of the *Tribes*. These elect every Year two *Burgermasters*, two Treasurers, one Proconsul, and one *Ædilis*, but for the most part the same Persons: A Father and Son, or two Brothers, can't be chosen at the same time into this Council.

From hence we travelled to *Constance*, *August* the 13th, a free Imperial City, situate in a fair Plain near the *Rhine*, at the end of the *Boden Sea*, or *Lake* of *Constance*, known anciently under the names of *Lacus Brigantinus*, and *Lacus Acronius*, over which is laid a very long Bridge, part of Wood, part of Stone: The Streets here are very regular and handsome, and the Buildings of Stone. But what makes this place most famous, is the Council that was held here, 1417. in which the Doctrine of *John Hus* was rejected, and he condemned to the Fire. It is very strong by its situation, having the Lake on one, and the Fens on the other side, but its Fortifications are very old and inconsiderable. In our way thither we met with the *Hormirum Laucum glutinosum, sive Colus Jovis*; and in the Woods among the Mountains, the *Pyrola folio mucronato serrato, Pseudoasphodelus Alpinus, Anonymus flore Coluteæ, & Sonchus cæruleus latifolius.* *Constance.*

August the 15th, we pass'd over the Lake in a Boat, to the City of *Lindaw* (in sight of the strong Town of *Oberlingen*) situate in the middle of the Lake, and surrounded by its Waters on all sides, being join'd to the Continent by a Bridge of 290 Paces long, one half of which is of Stone, the other, *viz.* that to the Town-side, of Wood, so that it may be taken down in case of necessity. This place, besides its natural strength, by reason of its situation, is fortified with strong Bulwarks, and Stakes driven into the Ground to prevent the approach of any Boats. It is generally handsomly built, and the Streets are adorned with Fountains, yet are these last not so spacious, neither their Buildings so lofty as at *Constance*: It has on one side a double Wall, betwixt which is enclosed a large space of Ground, planted with Vines, which produce commonly, as we were told, about 300 *English* Hogsheads *per annum*. They have eight Villages belonging to their Jurisdiction. In the Mountains and Woods hereabouts we found *Erica procumbens herbacea, Scabiosa latifolia flore rubro, Gentiana Asclepiadis folio.* In the lower Grounds, *Ulmaria major sive Barba Capri, & Lactuca montana purpuro-cærulea Major* C. B. and *Pneumonanthe*; Near the Banks of a small River exonerating itself into the *Lake Myrica sive altera Clus.* and *Gratiola vulgaris.* *Lindaw*

August the 17th, Taking Post-Horses at *Constance*, in order to our Journey to *Munchen*; we changed our Horses at *Lindaw*, an Imperial City, two *German* Leagues thence; at *Laykirk*, another Imperial City, two Leagues further; at *Memmingen*, both for strength and its bigness, one of the chiefest of the Circle of *Suchia*, and dignified with the Title of a free Imperial City, and at *Mundelheim*, where we lodged that Night. *Memmingen*

From hence we travell'd to *Landsbergh*, four Leagues further, a very fair Town, with a handsome Fountain in the Market-place. After which, without meeting with any considerable Town, we pass'd by the Lake of *Ammerse*, in sight of the *Alps*, to *Munchen*. *Landsbergh.*

This being a strong and well fortified City, and the ordinary Residence of the Electors of *Bavaria*, no Strangers are permitted to enter the Gates without the consent of the Governour: (a) *Cluver* is not in the wrong of it, when he calls this City, the fairest of all *Germany*, the splendour and beauty of its Buildings, both publick and private, especially of the Electoral Palace (which may compare with any in *Europe*) and of divers magnificent Churches and Convents, being such as surpasses any thing in *Germany* for its bigness, its Streets being the broadest and most regular I have met with any where. Among other Varieties you see in the Electoral Gardens, a vast number of *Aloe* Trees (for such they must be call'd by reason of the bigness of their Stalks, which shoot up in one Year) the like perhaps all *Europe* can't produce in number both for their Stalks and Flower. There we also met with a Convent of *English* Nuns, and found in their Churches *Munchen*

(a) In his Geograph.

Pews

Pews and Seats, as is customary in *England*, whereas otherwise, the *Romanists* make use only in their Sermons of Moveable Chairs and Benches, and clear the Churches so soon as Sermon is over.

We took a turn from hence to *Augsburgh*, and passing by the Abby of *Bernardines* call'd *Pruck*, and the little Town of *Fridbergh*, arrived there the 21st of *August*.

Augsburgh This is a goodly and strong City, seated upon the River *Lech*, being about eight *English* Miles in compass: Its Houses are well built, its Streets fair, and beautified with many Fountains. Its Armory consists of 12 Rooms, not inferiour to that of *Strasburgh*, as its Town-house may challenge the second rank next to that of *Amsterdam*; The upper Room especially being very remarkable for its loftiness, spaciousness, gilding and paintings, in which it exceeds any I have seen yet. The Inhabitants are partly *Romanists*, partly *Lutherans*, but the last are double the number of the first, tho' these are in possession of 7 Convents here, among which one of *English*; some *Calvinists* there are here, but few. It is a free Imperial City, under the Jurisdiction of its own Magistrates; but seems somewhat decayed of late Years, the number of its Inhabitants being scarce proportionable to its bigness; In the Plains near *Augsburgh*, leading to *Munchen*, we saw many rare Plants, viz. *Tithymalus verrucosus*, *Trifolium pratense album Fuchii sive mas* J. B. *Pseudo-asphodelus Alpinus* C. B. *Thlaspi clypeatum asperifolium seu biscutatum*; *Horminum sylv. latifolium* Germ. *Phalangium flore parvo non ramosum* C. B. *Carlina herbariorum* Lob. *Gentianella Autumnalis flore cæruleo quinquefolio, calyce pentagono grandi.* Floris tubus è calyce non eminet, sed folia tantùm expandantur supra margines calycis, ut in Caryophyllis. *Gentianella species minima flore unico cæruleo Elegantissimo Linum sylvestre latifolium caule viscoso, flore rubro*, C.B. fortè. Folia habet acuminata, pilosa, modicè lata, nervis quinque per longitudinem decurrentibus, longitudine foliorum Lini: flos quinquefolius, coloris incarnati, sanguineis lineolis striatus; radix lignosa est; *Cirsii seu cardui duæ species*; Priori flos *Cirsii nostri Anglicani, flori simillimus*, & in uno caule plerunq; unicus, folio pallidè viridia, profunde laciniata, & spinulis horrid acuminata, instar Cardui viarum vulgarissimi: Alteri, quæ jam defloruerat, folia viridia, non laciniata, breviora, & latiora quam præcedenti, in ambitu spinosa, & Hyoseris masculi foliis similia, *Saxifraga Venetorum*, *Daucus montanus Apii folio, flore luteo.* Another sort of umbelliferous Plant, not unlike the *Caucalis Peucedani folio, Lotus siliquosa lutea Monspeliensis*, I. B. near the River *Lech*, as also the *Bellis cærulea Monspeliaca*, Germ. *Doryenio congener planta*; *Thalictrum angustissimo folio.* In the sandy Grounds near the City, *Rhamnus primus Dioscoridis*; and in the stony places *Caryophyllus gramineo folio minimus*; besides many more we had taken notice of in other places.

August the 28th, We left *Augsburgh*, and travelling three Days out of our way in order to take a view of the famous City of *Nurembergh*, we cross'd the *Danube* the first Day, about six Leagues from *Augsburgh*, at a place call'd *Donawert*, belonging to the Elector of *Bavaria*, *Donawert.* where there is a wooden Bridge over that River.

The 29th, We pass'd thro' *Manheim* and *Papenheim*, two pretty wall'd Towns, and having made five *German* Leagues that Day, lodged at *Weissenbergh*, an Imperial City, inhabited by *Lutherans*; near which is also a strong Fort upon a Hill, belonging to the Marquess of *Anspach*, a *Lutheran* Prince.

Weissenbergh. The 30th, We pass'd thro' a small Town call'd *Pleinfelde*, and after a Journey of 3 Leagues further, close by another little wall'd Town call'd *Rotte*, and so, after two Hours riding more, arrived at *Nurenburgh*, which we no sooner got sight of, but we highly applauded the Epithet *Nuremb.* *Cluverius* bestowed upon it, when he stiles it *Germanicarum superbissimum*, it being beyond all question, that for its Buildings, which are very stately, it exceeds all, and for its bigness may compare with any of *Germany*; and were its Houses, which are all of Free-stone, as uniform as the Buildings generally are in the *Low-Countries*, would even out-vie them for beauty, besides, that under its Dominions, are at least 100 Towns and Villages. 'Tis true, the Ground where it is situated is very barren, and the River upon which it stands but very small, and not Navigable; notwithstanding which, by the Industry of the Inhabitants, who are generally very excellent in all sorts of handicrafts Works, this City is very rich and populous. They are generally *Lutherans*, and their Churches more adorned and beautified after the fashion of the *Romanists*, than ever we saw in any other place, where this Religion is profess'd. The *Roman Catholicks* have one Church allowed them, but the *Reformed* none. Their great Market-place, and the Town-house, are worth a Traveller's Observation; it is fortified with a good Wall and Ditches: Their Senate and whole Government is said to approach near to that of the *Venetians*, being for the rest a free Imperial City. The Plants we met with in our way hither, especially near *Papenheim*, were *Caryophyllus flore tenuissimè dissecto* C. B. Near *Weissenbergh*, *Draba lutea siliquis strictissimis* C. B. *Gentianula lanugine ad singulorum foliorum laciniæ donata, flore quadripartito*, J. B. *Buglossum angustifolium*, *Cytisus Gesneri cum floris spicatis* J. B. and another Plant not unlike our *Meadow Saxifrage*, but larger.

Septemb. the 3d, We set out from *Nurenbergh*, towards *Ratisbon*, and came to *Alterff*, a Town and University under the Jurisdiction of *Nurenbergh*. It has a very good Physick Garden, the Catalogue of the Plants contained therein, as well as another of what Plants grow wild hereabouts, the World stands indebted for to Dr. *Maurice Hoffman*. Over the Cloister of the College, in which are maintained 36 Students, at the Charge of the City of *Nurenbergh*, you see an Inscription in *Latin*, giving a short Account of the Foundation of this University and College, *viz.* That the said College was founded by the Senate of *Nurenbergh*, 1575. under the Reign of the Emperor *Maximilian* II. that 1578, under the Reign of *Rudolph* II. a *Gymnasium* was establish'd here, which 1633. under the Reign of the Emperor *Ferdinand* II. was dignified with the Title and Privileges of an University. *Alterff.* See Dr. *Brown's* Travels.

Dr. *Hoffman* shew'd us divers *Cornua Ammonis*, or Serpent-Stones, besides many Cockle and Mussel-shells found near *Alterff*, of which we also saw some the next Day in our way to *Nies-Marke*; upon which Occasion I can't forbear to give, by way of digression, a brief account (1) in what places they are found, (2) the different Opinions concerning them. In *England* those petrefied Shells are found at *Whitby* or *Whitebay*, in the North riding of *York-shire*; At *Huntley-Nabb*, more Northward on the same Coast; At *Alderley* in *Glocester-shire*; At *Cainsham* in *Somerset-shire*, not far from *Alderley*; At *Farnham* in *Surrey*; At *Richmond* in *York-shire*; besides in divers other places, as for instance, at *Lyme* in *Dorset-shire*, *Adderbury* in *Oxford-shire*, at *Brickworth* in *Northampton-shire*, about *Daventry*, *Wendlam* in *Hartford-shire*, *Shuckborough* in *Warwick-shire*, nay, even the *Peak* of *Darby-shire*. Besides these petrefied Shells, other congenerous Bodies are found in several parts of *England*, *viz.* The *Star-Stones*, call'd by some *Astroites*, *Lapis Stellaris*, and *Stella Judaica*. (2) St. *Cuthbert's* Beads or *Trochites*, and the *Capstone*, or *Echinites*, call'd *Lapides Brontiæ* by some, and considering that Sharks are often taken upon our Coast, it is a wonder that no *Glossopetræ* should be found in *England*. As for the *Star-Stones* (so call'd from their five Angles resembling so many Rays) they are found at *Shuckborough* in *Warwick-shire*, at *Cassington* near *Glocester*, and *Beauvoir* Castle in *Lincolnshire*. The *Trochites* are to be met with on the Western Shore of the *Holy Island*, and in the Chinks of some Stones found in the bottom of the Channel of the River *Tees*, the common Boundary betwixt *York-shire* and the Bishoprick of *Durham*; these are of a rotund Figure, and not angular like the former. The *Echinites* or *Brontiæ*, are found in divers places of *England* of several magnitudes and shape, and beyond Sea, at *Brescia* in *Lombardy*, upon the Banks of the River *Tanaro* in *Piedmont*, four Miles below *Aste*, but especially in the Isle of *Maltha*, where are also many *Glossopetræ*, resembling *Sharks* Teeth petrefied. As for these last (a) *Boetius* says, they are found near *Deventer*, in the Province of *Overyssel*, and in *Germany* in the *Alum-Mines* near *Lunenburgh*. (b) *Goropius Becanus* tells us, that they were digg'd up in the Ditches of *Antwerp*, and are found in great numbers on a Hill near *Aix la Chapelle* in *Germany*, which he uses as an Argument that they can't be real *Sharks Teeth* petrefied. *Georg. Agricola* affirms, that the petrefied Cockles, and other Sea-Shells, are found in the Stone Quarries of *Galgenbergh*, and in those beyond Mount *Maurice*, in the Bishoprick of *Hildesheim* in *Germany*. (2) At *Alfeld*, a Town of *Saxony*. (3) At *Hanover*, in the Lime-Pits, and near the Village of *Lindaw*. (4) In a Village call'd *Ralschlyts*, near the Rivulet of *Trebitia* in *Misnia*. (5) At a place call'd the *Rose-Garden* in *Prussia*. (6) Near the Castle of *Spangenbergh* in *Hassia*. (7) In a Mountain of *Italy* near *Verona*. (8) On the Banks of the River *Elsa*; and (according to *Pausanias*) in the Quarries near *Megara*, and they are also found in *Thessaly*, *Macedonia*, and the Mountains of *Calabria*. *Bernardus Palissius* says, that those petrefied Shells are found in *France*, near the Suburb of St. *Martial* near *Paris*. In the Mountain of the Forest of *Arden*, but especially about *Sedan*; in the Provinces of *Valois*, *Xantogne* and *Champaign*, and in the Mountains near *Soissons*. In what places petrefied Cockle shells are found.

(a) L. 2.

(b) L. 3. Orig. Antwerp.

Johannes de Lact, tells us also of a Rock near *Dijon* in *Burgundy*, and speaks much of the Fields about *Sauvignac*, upon this account. Besides the beforementioned places of *Italy*, they are found in the Mountain of *Nicani*, in the *Modenese*, and in a Channel of a Rivulet near *Udine* in *Friuli*; *Goropius Becanus* names, *Limburgh*, *Liege*, *Namur*, *Tournay*, and divers other places in the *Low-Countries*: Besides all which before-mentioned places, there is not the least question, but that, if strict Observations were made in the other parts of the World, the same might be discovered there as well as in *Europe*.

Divers Opinions concerning them.

We will now proceed to give you a short hint of the divers Opinions maintained concerning them.

The first Opinion, and which was generally received among the Ancients, was, That they were originally the natural Bones or Shells of living Creatures, bred in the Sea, which by Deluges, Inundations, Earthquakes, or other such like means, being cast up into those places, which being fill'd with Clay, and some petrefying Water or Substance, were in tract of time, hardned into the same shape and figures they bore before; this Opinion they back by divers Experiments, as the finding of a petrefied Pearl, bearing Shell in *Tuscany*, with the Pearl yet sticking to the Shell; Of a piece of the greater Sea-nacre (*Pinna marina*) in which the silk-like Substance within the Shell being consumed, the colour of that Substance remained in the Clay that had fill'd the Shell. Another Experiment is, that about the City of *Volterra*, there are many Beds of Earth not stony, but full of true Cockle-shells, which have not undergone the least alteration, tho' they have lain there at least 3000 Years, from whence they would evince, that *Tuscany* was in former Ages cover'd by the Sea, and consequently so might those other Countries in which those petrefied Shells are found. Against this Opinion are two considerable Objections, not easily to be resolved.

The first is, that at this rate, the whole Body of the Earth must once have been covered with Water, since these petrefied Shells are found at a vast distance from the Sea, nay even upon the very tops of the *Alps*. Some pretend to answer this by the general deluge; but as that proceeded from the Rains, these were more likely to carry off into the Seas those Shells than to bring them in. What some argue from the Words of the Scripture (*The Fountains of the deep were broken up*) will also not answer the point; for supposing that by the breaking in of the Rivers and Seas, those Shells were brought, the same must of necessity have been scattered indifferently over the whole Surface of the Earth. Others are for solving this Difficulty, by referring the same to some particular Inundations, alledging, That those places where they are found now, might in most ancient times, have been low places, which by Earthquakes, have been raised up to Mountains; but as this perhaps may take place in respect of some inconsiderable Eminencies or Hills, it is not applicable to those Mountainous Bulks, such as the *Alps*, *Pyrenees*, *Apennines*, it being evident from the most ancient Records, that tho' the Face of the Earth may have undergone some change, yet the same Mountains, Islands, Promontories, Rivers and Lakes of any note, are still remaining, without any removal in their ancient Stations.

The second Objection against the first Opinion is, That among all these petrefied Cockles or Shells, there are many sorts, not to be found any where now; nay, some go further, that among all our Shell-Fishes, there is none found like those petrefied Shells; unto which, if it be answered, that those *Species* are lost, it is a thing which will scarce be admitted by many, for tho' it might be granted, that some few *Species* were lost, yet seems it next to an impossibility, that a whole *Genus*, of which there were so many Species scattered in so many far distant places from one another, should be utterly extinct. As for instance, of the *Serpentine* Stones or *Cornua Ammonis*, I have my self seen at least six several Species, and some of them of a Foot Diameter, being much beyond the bigness of any Shell-Fish now living in our Seas. Hence it is that many of our modern Naturalists have attributed these Bodies to the effects of a plastic Power in the Earth, and that they are produced and framed after the same manner as precious Stones, Crystals, and coagulated Salts, by shooting up into divers Figures. What makes for their Opinion is, That in the Earth are found many figured Stones, such as the *Lapides Lyncurii*, *Belemnites*, *Lapides Judaici*, *Trochites*, and others, which have not the least resemblance to any Shells, Bones, Roots or Fruits; to salve up which, no other recourse is to be had, than to the before-mentioned loss of those Species out of the World. I can't but mention upon this Occasion, what I was told by a very creditable Person, *viz.* That he had seen a Stone resembling a Cockle-shell, found in the Stomach of an Ox, which if it be admitted, there is not the least doubt, but that the like may be progenerated in Quarries and other places. These two different Opinions, have given occasion to a third, *viz.* That some of these Shells have been really petrefied, and that others are really Stones formed by some Plastic Power in the Earth, imitating the others in their Shapes and Figures. But as these seemed rather a shift than a dissolution of the Objections to be made against either of the two former Opinions, I am inclinable to adhere to the first, as seeming to me more consonant to the nature of the thing, tho' at the same time I should be very glad to hear the Objections made against it, more solidly answered than they have been hitherto. The Academical Senate of *Alterff* was composed at that time of 13 Professors, three in Divinity, as many in Law, two in Physick, and five in Philosophy, who publish every Year a printed Catalogue of the Lectures they intend to keep the next ensuing Year.

September the 4th, We set out from *Alterff* for *Ratisbone*, and passing thro' *Nieumarkt* and *Heinmaw*, two little wall'd Towns, came to *Ratisbone* the 5th at Night, by a fair Bridge built here over the *Danube*. This City, which had got its Name from the River *Regen*, which here joins its Current with the *Danube*, is very large and well built, with Stone Houses, the Roofs of which are flattish after the *Italian* manner. It is well fortified, but the Streets somewhat narrow. As it is an Imperial City, it is under the Government of its own Magistrates; who as well as the greatest part of the Inhabitants, are *Lutherans*, tho' their Bishop is of the *Romish* Religion, who have some Convents here, and a College of *Jesuits*. It is chiefly famous for, and its chief Glory is, the Imperial Diet, which is usually held here. On the Rocks on the other side of the River, a little below *Ratisbone*, we found the following Plants (not to mention many of the rarer sort found in *England*); The *Asclepias flore albo*. *Daucus montanus Apii folio major* C. B. *Apium montanum nigrum* J. B. *Caucalis Peucedani folio* Germ. having a fine Leaf, a small Root, red Stalks, and an Umbel of white Flowers, producing small round Seeds, with Purple *Apices*; *Daucus montanus Apii folio, flore luteo*, as I take it, having winged Leaves like the *Bipennella*, but larger, the several Wings being as large as the entire Leaf of the said *Bipennella*; a large Root, but not hot upon the Tongue as the *Burnet-saxifrages* are; the Stalk runs up to a Man's height, the Seeds round, streight, and covered with a hoary down, reddish towards the top, and of a hot taste. *Tithymalus verrucosus* J. B. *Scabe major caliculis non splendentibus* C. B. *Hepaticum trifolium* Lob. *Flammula Jovis*, *Cerinthe major flore luteo*, *Fraxinellæ*, *Cytisus supinus sylvest. Ratisbonensis*, *flor. luteo ad exortum foliorum prodeuntibus* Cat. Aldrdorf. *Cytisus Gesneri cui flores spicati* J. B. *Euphrasia pratensis lutea* C. B. this we found near *Heinmaw*; *Phalangium ramosum*; *Chamædrys vulgaris & Cham. foliis laciniatis*; *Aster montanus luteus hirsuto salicis folio*; *Aster Austriacus* 4 Clus. i. e. Linaria aurea *Tragi*; *Aster Atticus Italorum flore purpureo* Park. *Oxyacantha* sive *Berberis*; *Bugula cærulea Alpina*, *Orobanche minor floribus purpureis* sive *ramosa*, in the Corn-fields, *Chondrilla cærulea*, J. B. *Folia habet laciniata, glabra, glauca*; *Flores*, longis insident pediculis dilutè cærulei ad ruborem inclinantes. *Securidaca dumetorum major flore vario, siliquis articulatis* C. B. *Veronica supina facie Teucrii pratensis*, both very common in *Germany*, *Lepidium annuum*, growing among the Radishes; and *Fœnum Græcum*, which I suppose was sown.

Ratisbone.

September the 11th, We took Boat for *Vienne*, and past'd on the Left-hand of the River, by a Village and stony Castle on the Hill call'd *Thomastein*, and in three Leagues and a half below *Ratisbone*, in sight of the Castle of *Wert*, seated at the Conflux of the River *Wisent*, and the *Danube*, belonging to the Bishop of *Ratisbone*, we took up our Quarters one *German* League and a half thence, at *Straubing*, a handsome wall'd Town, belonging to the Elector of *Bavaria*.

Straubing.

September the 12th, In the Morning we past'd by *Pogen*, and four Leagues belong *Straubing*, under a wooden Bridge laid over the *Danube*, somewhat lower we saw the small City of *Dreckendorf*, belonging to the Elector of *Bavaria*, and having past'd by the Mouth of the River *Iser*, and in sight of *Osterhoven* on our Left-hand, and the Castle of *Hilkersbergh* on the same side, we lodged that Night at a little wall'd *Bavaria* Town call'd *Vilshoven*.

September the 13th, We came to *Passaw* or *Passovia*, four Leagues distant from *Vilshoven*, a City considerable for its strength, bigness, and goodly Buildings, the last of which were very near all consumed by Fire, about nine Months before our arrival. It is under the Jurisdiction of the Arch-duke of *Inspruck*, situate at the Confluence

Passaw.

Confluence of the Rivers *In* and the *Danube*, over the first of which is a Bridge to the Town of *Inſtadt*. Below *Paſſaw* the *Danube* being ſtreighned by Hills and Rocks on both ſides, begins to run with a much ſwifter ſtream than before; ſeven Leagues below *Paſſaw*, paſſing by the Caſtle of *Newhouſe*, we took up our Lodgings the ſame Night at the Village of *Aſh*, on the right-ſide of the River.

September the 14th, Paſſing thro' an open Country on both ſides, for four Leagues together, we came to *Linez*, a City neatly built after the *Italian* fashion, with a ſquare ſpacious Piazza, adorned with two noble Fountains, the Imperial Palace ſtanding upon a riſing Ground, from whence you have a fair proſpect of the *Danube* and circumjacent Country. Three Leagues below it we paſs'd by a very fine Village call'd *Mathauſen*, and in ſight of the City of *Inez*, ſeated on our Right-hand upon the River *Ens*; ſeven Leagues below *Linez*, the Country begins to be hilly again on both ſides of the *Danube*. Whereabouts is the Caſtle of the Elector of *Lichtenſtein*, near a Village call'd *Greine*; a little below which place we paſs'd a kind of Cataract, the Current being nearly encloſed betwixt the Rocks on both ſides, and rendred boiſtrous by thoſe under Water; and ſomething lower a Whirl-pool, made there by the jetting out of Rocks into the River. Afterwards, paſſing by a ſmall Town call'd *Ips*, we lodged that Night at the Village of *Morpach*, about 11 *German* Leagues from *Linez*.

Linz.

Ratisbone.

September the 15th, Early in the Morning, we paſs'd in ſight of the rich Convent call'd *Melk*, on our Right-hand, and about ſix Leagues further the Seat of the Earl of *Dietrichſtein* on our left, within ſight of the rich Abby of *Ketwein*, famous for its ſtony ſituation, and the brave Reſiſtance it made againſt the *Swedes*. Nine Leagues from our laſt Night's Lodging, we paſs'd under a wooden Bridge, near the City of *Stein*, not far from whence we came to *Krembs*, a very handſome, ſtrong, and well built City, ſeated at the Foot of a Hill. From hence, being an open Country, the Channel of the River begun to be much broader. Six Leagues below *Krembs* we paſs'd by a ſmall City call'd *Deuln*, and in ſight of the Caſtle of *Greitenſtein*, ſituate upon a Hill at ſome diſtance from the River on the Left-hand, and the City of *Cornburgh*. Hereabouts and afterwards, we ſaw abundance of Mills in Boats, the Wheels lying betwixt two Boats, which being placed at a convenient diſtance from one another, ſo that the Stream being by degrees ſtreighned betwixt the Boats, forces the Wheel to turn. One of the Boats is with Chains or ſtrong Cables faſtned to the Bank. Within one League and a half of *Vienna*, we paſs'd by the noble and rich Abby call'd *Cloiſter Newburg*, with a little wall'd Town of the ſame Name belonging to it, and having by the ſwiftneſs of the Current, made nineteen *German* Leagues that Day, arrived at *Vienna*.

Krembs.

This City, which in proportion for its bigneſs, is the moſt populous we had ſeen yet in our Travels; is the Capital City of *Auſtria*, and the ordinary Reſidence of the Emperor; ſeated upon the *Danube*, tho' it got its Name from the River *Wien*, which below it, *viz.* on the Eaſt ſide, falls into the former. The Body of the City is not above four or five *Engliſh* Miles in compaſs, but the Suburbs are very ſpacious, ſome of the Houſes of which were then lately pull'd down, upon the approach of the *Turks* towards *Presburgh* (not above 40 *Engliſh* Miles from thence) after the taking of *Newheuſel*. *Vienna* has a moſt regular Fortification, the Wall being of Earth, but very high and thick, faced with Bricks, ſtrengthned by a broad and deep Ditch, and defended by many Half-moons and Horn-works. The Houſes are very lofty and well built, with flat Roofs after the *Italian* way: The Markets very well ſtored with Proviſions; but the Streets none of the broadeſt. The Emperor's Palace, the Cathedral, and divers other publick Buildings are very magnificent. The Emperour himſelf is low of Stature, of a very dark Complexion, black Hair, and thin viſaged, with a thick hanging Under-lip, not unlike his Effigies on his Coin. In the Market we firſt met here with the Fruit of *Sorbus legitima*, with Tortoiſes, which they ſell for ſix Pence a piece, and are found here in Muddy places; and here we alſo ſaw the *Silurus* or *Shear-fiſh*, the biggeſt of all freſh Water-fiſh I ever ſaw, ſome of them weighing near 100 Pound. The Plants we met with hereabouts were, *Ombrychis ſpicata floro purpureo*, *Pſyllium vulgare*; *Kali ſpinoſum*, tho' at ſo great a diſtance from the Sea. *Scabioſa foliis diſſectis, flore albo* Cluſ. *Doryenio congener*; *Marrubium album anguſtifolium peregrinum* C. B. In the Iſle of the *Danube* near *Vienna*, *Ariſtolochia Clematitis & Solanum veſicarium ſive Alkekengi*.

Vienna.

See Dr. Brown's Travels.

September the 24th, We took Coach for *Venice*, and lodged that Night at a great Village call'd *Trayskirk*, four Leagues thence, by the way we ſaw great ſtore of *Abſinthium Auſtriacum tenuifolium*, Cluſ.

Trayskirk.

The 24th, After we had travelled four Leagues, we came to *Newſtadt*, (*Neapolis Auſtriaca*) a pretty ſtrong ſquare Town, well built, but of no great extent; having a fair Market-place, and very regular Streets. At three of the Corners it is defended by ſo many Baſtions, but on the fourth it has a Caſtle. Near this place I met with the *Aſperula cærulea*. After we had travell'd two Leagues beyond *Newſtadt*, we began to enter among the Hills, and lodged that Night at *Glocknitz*, four Leagues from *Newſtadt*.

Newſtadt.

The 26th, We had ſcarce made two Leagues, when coming to the Village of *Shadwin*, our Coach-man hired ten Oxen (which were ready at hand for that purpoſe) to draw the Coach up the ſteep Hills, which are the common Boundaries betwixt *Auſtria* and *Stiria*. Among theſe Mountains we found, *Libanotis Theophraſti minor* Park. *Cyclamen autumnale*, of two ſorts; *Tuſſilago Alpina folio rotundo*; a kind of ſmall *Trachelium*, I never met with in any other place; a ſmall ſort of *Muſcus clavatus*, its Leaves like *Juniper*: *Larix* in abundance; *Lyſimachia lutea in alis foliorum florens*; a kind of *Glaux*, with a rough Cod, beſides many others we had ſeen in thoſe parts before. In the ſhady Lakes we found much of the *Muſcus denticulatus major*, and in the watery Grounds *Alſine muſcoſa* J. B.

After we had travell'd for ſome time among the Hills, we paſs'd thro' *Mertzſuchlag*, a ſmall City ſeated upon the River *Mur* (where we ſaw many Mills) and afterwards thro' *Langenwang* and *Kriegla*, each of which have a Caſtle built on Hills. We croſs'd the River near the laſt, and paſſing thro' a pleaſant Valley ſurrounded with woody Mountains, lodged that Night at the Village of *Kimberg*, ſix long *German* Leagues from *Glocknitz*.

The 27th, We continued our Journey thro' the ſame Valley, thro' the Valley of *Kapfuberg*, in ſight of divers Villages, Caſtles, and Country-Seats, ſeated upon the ſides of the Hills, and at three Leagues end came to the City call'd *Pruck an der Mure*, i. e. *Pons Muræ*, a pretty place, defended by a Wall; having a ſpacious Market-place; The Inhabitants trade much in Iron work. Here we paſs'd the River *Mure* twice, and after we had left *Lewben*, paſs'd over a Hill, and ſo following the Courſe of the River among the Mountains, lodged that Night at the Village call'd St. *Michael*. Hereabouts it was we ſaw many Men and Women with large Tumors hanging down under their Chins and Throats, ſome of which were ſingle, ſome double, call'd in *Latin*, *Bronchocele*, and by ſome *Engliſh* the *Bavarian Pokes*. This it ſeems is a Diſeaſe natural, and of old belonging to the *Alpine* Inhabitants *Quis tumidum guttur miretur in Alpibus?* Tho' the *Griſons* inhabiting the higheſt parts of theſe Mountains, are either not at all, or at leaſt not near ſo much ſubject to this Diſtemper. Some attribute the ſource of this Evil to the Snow-water which comes from the *Alps*; others to the virulent Mercurial Particles of Streams, which are mix'd with theſe Waters; but as this Diſtemper is not frequently among other Nations inhabiting Mountainous Countries, where the Snow lies as long as here, nay, where their Waters are nothing elſe but melted Snow, neither among the *Hungarians* and *Tranſylvanians* (where they abound in Minerals, and eſpecially in Mercury) we had better ſuſpend our judgment, till ſome ingenious Phyſician, belonging to thoſe Countries, ſhall aſſign us the true cauſe and cure of this Diſtemper. We alſo ſaw more Idiots and delirious Perſons here than any where elſe, which indeed I attributed chiefly to the venomous and malignant Mercurial Vapours, which will beyond all queſtion, affect the Brains and Nerves, as is obvious in Gold-ſmiths, Gilders, Miners and Painters; tho' they generally aſſign the uſe of Snow-water, and of the vaſt quantity of Cabbage, which is their daily Food here, as the Origin of thoſe Evils.

Pruck or the Mure.

Lewben.

The 28th, We continued our Journey for three Leagues along the River *Mure* to *Knittlefield*, a ſmall City, and then paſſing thro' a Valley in ſight of divers Noble Mens Seats and Caſtles, lodged that Night at the Village of St. *Georgio*, upon the *Mure*, four Leagues from *Knittlefield*.

Knittlefield.

The 29th, We continued our Journey along the River *Mure*, thro' the ſame Valley, as far as *Newmarket* four Leagues from St. *Georgio*, and following the Tract of another River, which near *Volckmarck*, falls into the River *Drave*, we paſs'd thro' *Freiſach*, a conſiderable City in thoſe parts, ſeated in a little Valley betwixt high Hills, and after a League's travelling further lodged at *Heirt* in *Carinthia*.

Freiſach.

The 30th, For three *German* Leagues after, we travell'd still thro' rocky Valleys as far as St. *Veit*, where the Emperour has a Mint-house: Three Leagues further we came to *Vilkircken*, a Town of note, but was quite ruined by an accidental Fire three Years before.

October the 1st, We pass'd over rugged Rocks and Mountains all along the Lake *Ostsukersea*, at the further end of which the Earl of *Dietrichstein* has a strong Castle built upon a Hill. After that, passing thro' a pleasant Vally, we cross'd the River *Drave*, which begins to be
Villach. navigable here, and washes the Walls of *Villach*, a Town of note in this Country, three Leagues from *Vilkirck*. At some distance from *Villach* we pass'd the River *Guile*, which joins its Current with the *Drave*. Hence we travell'd again over very rocky Mountains to *Orlesteina*, where we lodged that Night.

October the 2d, We travell'd on for two Leagues thro' the Mountains to *Klein Tarvis*, and thence to the River *Timent*, which exonerates it self into the *Adriatick-Sea*, and took up our quarters that Night at *Pontieba*, the last
Pontieba. place in the Emperour's Territories, part of it being subject to the Emperour, from whence it is call'd *Pontieba Imperiale*, as that part which belongs to the *Venetians* is thence call'd *Pontieba Veneta*; here we were obliged to take a Bill of Health. Betwixt this place and *Klein Tarvis* observing several Herds of Goats following the Goat-herds like Dogs, this put us in mind of what our Savi-
a) *John* 10.4. our says, (a) *And he goeth before his sheep, and they follow him, for they know his Voice*; which proves that the same was usual in those Days in *Judea*.

October the 3d, We pass'd the River *Timent* by a Bridge, which here parts *Carinthia* from *Friuli*. About a *German* League thence, we came to a small Fort, call'd *Clausen*, where they stopped us till we delivered our Bill of Health. As we travell'd on along the River, we saw many Timber Trees floating down the Stream, which being fell'd in the *Alps*, are brought to the next Rivulet or Brook, and when the next strong Rain Shower falls, forced down in-
Venfonga. to the greater Rivers. We pass'd the same Day thro' *Venfonga*, a pretty little City, and lodged the same Night at the Village of *Hospitaletto*.

October the 4th, Quitting the Mountains, we entred
Limonia. the Plains of *Friuli*, and passing by *Limonia*, situate at the Foot of the Mountains, and some Leagues further thro' St. *Daniele*; after which we forded the River *Timent* in several places, tho' in time of Rain, or when the melted Snow comes down from the Mountains, it is a considerable breadth: The first time we had pass'd the
Spilimberg. River we came to *Spilimberg*, seated upon a Cliff, where we saw Cloisters under the Houses on both sides of the Streets (a thing common in *Lombardy*) and after ten *Italian* Miles further travelling, took up our Lodgings in the Village of St. *Avogio*.

October the 5th, We travell'd on for ten Miles to a
Sarile. wall'd Town call'd *Saribe*, encompass'd by the River *Livenza*, which here divides it self into two Branches. We travelled on for two *German* Leagues, and lodged at
Conegliano. *Conegliano*, a small City, seated on a Ridge of a Hill. Whilst we travell'd in *Italy*, we met scarce with any wheaten Bread, that which we used, being made of *Sorghum*, a certain Grain, the Blade whereof grows seven or eight Foot high, of the thickness of a Finger, bearing a large Panicle on the top, the Seed being bigger than Wheat, of a dusky Colour.

October the 6th, A *German* League from hence we ferried over the River *Anaxus* (*Piave*,) and ten *Italian* Miles further came to the large and famous City of *Tre-*
Trevis. *viso*, the Capital of the Province call'd *Marca Trevisana*: Hence we continued our Journey thro' a fertile Country to *Mestre*, a small place, seated near the *Lagune*, or Flats about *Venice*, which are dry at low, but covered with Water at high Tide. From whence we pass'd in a Boat to *Venice*. In our Passage thro' the Mountains we found divers Plants we had not seen before, as *Quinquefolium album majus caulescens* C. B. *Quinquefolium album majus alterum* C. B. *Teucrium Alpinum Cisti flore*; *Epidendrum vulgare*; *Linaria purpurea parva* J. B. Among the Rocks on the *Italian* side of *Pontieba*, *Ledum Alpinum hirsutum* C. B. *Ledum Alpinum hirsutum minus*; *Auricula ursi*, *Sedum ferratum alterum foliis longis angustis*; *Sedum Alpinum minimum*, *foliis cinereis*, *flore candido* J. B. *Siler montanum*, &c. On the tops of the Mountains, *Helleborus niger verus*; in the Rivulet of *Friuli*, *Scabiosa argentea angustifolia*; and in most Rivers and Ditches in *Italy*, the *Galega*. Throughout the greatest part of *Friuli*, the *Marca Trevisana*, and *Lombardy* we saw the Corn-fields planted with Trees as thick as our Orchards, against each Tree being planted a Vine, the Branches of which draw from Tree to Tree in rows, and make a kind of a Hedge; their Soil being so rich, that it suffices both for the production of Corn and Grapes, the Trees not giving the least hindrance to the Corn, either by their droppings or shadow, because little Rain falls here in the Summer, and the Leaves keep off the scorching heat of the Sun, which notwithstanding this suffices to bring it to maturity. This part of *Italy* has for its fertility justly deserved the name of the *Garden* of *Europe*.

The famous City of *Venice* is built upon divers little *Venice.* Islands in the middle of certain Shallows, surrounded by the Sea; call'd by them *Lagune*: These *Lagune* are separated from the Gulph of *Venice* by a certain Land-bank (which they call the *Lido*) being about 38 or 40 Miles in extent, and resembling the space contained in a bent Bow, the first being the Continent, and the String the *The Lido.* *Lido*. *Venice* it self is at an equal distance (*viz.* of five Miles) from each: The *Lido* serves as a Fence against the Violence of the Sea, and has five or seven In-lets or small Harbours, two only being capable of receiving Vessels of any great burthen, *viz.* those of *Malamocco* and *Lio*. Nor far from the *Lagune* most of the considerable Rivers of *Italy* exonerate themselves into the Gulph, viz. *Padus* the *Po*, *Atheſis* or *Adige*, *Meduacus major* or *Brenta*, *Meduacus Minor* or *Bacchiglione*, *Tilliaventum* or *Tajamento*, *Liquentia* or *Livenza*, *Silis* or *Sile*, *Anassus* or *Piave*; and these carrying along with them a vast quantity of Earth, may in time fill up the *Lagune*; for *Giannotti* tells us, that in ancient times the City of *Venice* was ten Miles from the Continent *Oriago* (*Ora lacus*) then lying upon the Shoar of the *Lagune*, which now is five Miles from *Fusina*, where they take Boat for *Venice*.

The first Origin of *Venice* must be traced as far as the *Its Origin.* irruption of the *Huns* into *Italy*, under *Attila*, when many of the best Families of *Italy* fled for shelter into these Islands, and at last erected here a noble City. Certain it is that this City has maintained its Soveraignty undefiled these 1200 Years, tho' it be not strengthned by any Fortification, but what the Sea affords it, no great Ships being able to approach nearer it, than the Harbour of *Malamocco*; those Inlets where small Vessels may pass, being defended by strong Forts, besides, that the Channels are so difficult to pass, that none but their own Pilots dare venture upon them.

The Circumference of *Venice* (taking in the *Giudecha*) is of about eight *Italian* Miles, being divided into two parts by the *Grand Canal*, which passes thro' the middle of it in the form of the Letter S. Each side is subdivided into three Wards, call'd by them *Sestieri*, viz. *Castello*, St. *Marco*, and *Canarejo*, on one side, and *San Paolo*, *Santa Croce* and *Dorso duro* on the other side. In the whole it contains 70 or 72 Parishes, and 67 Convents, according to a Survey taken in the Year 1581. according to which *The Number of People.* there were then in the City, of Noble Men 1843, Women 1659, Boys 1420, Girls 1230; Of common Citizens, Men 2117, Women 1936, Boys 1708, Girls 1418; Servants 3732, Maids 5753; Of Artizans, Men 32887, Women 31617, Boys 22765, Girls 18227; Of Beggars, Men 75, Women 112, Monks 945, Nuns 2508, Priests 516, Poor of the Hospital 1290, Jews 1043. The Sum total of which amounts to 134871. *Sansovinus* makes the number of Souls in his time to have been 180000, in which I suppose he comprehends the Suburb of *Muran*, and some other small Islands. Some of our Modern Writers have increased this number to 300000, but without much probability, nothing being more common than to aggrandize the number of Inhabitants of great Cities; thus I have heard them say frequently, that in *Paris* there is a Million and a half of People, whereas there is scarce half a Million.

The whole City is by small Channels divided into ma- *Channels and Bridges.* ny Islands, by which you convey your self and Goods by Boats from one place to another, there being no use of Carts, Horses, Coaches, Litters, or Asses here, except that they employ now and then Porters in the Alleys, which run a-cross the City for the Passage on Foot, for the conveniency of which 450 Bridges are built cross the Channels, of one Arch each, and most of Stone. The Bridge call'd *Ponte di Rialto*, and is built over the *Grand Canal*, excels all the rest. The number of Boats for the convenience of carriage in the Canal, some make them amount to 10000, some to 12000, some to 15000.

Government.

The Buildings here are generally lofty and beautiful, especially those along the *Grand Canal*, and the Noble-Men's Palaces, which tho' not very spacious, yet are very handsomly contrived; they all stand upon Piles of Wood, like the Houses of *Amsterdam*.

The Arsenal of *Venice* has above two Miles in Circum- *The Arsenal.* ference, containing a great store of all manner of Warlike Provisions, 20000 Pieces of great and small Cannon, and Arms for 250000 Men. Here they build and lay up their Galleys (of which, as they say, they have 200)

and

and among the rest the *Bucentaure*, in which the Duke of *Venice* every Year espouses the Sea at three Miles distance from the City, by casting thereinto a Ring, with these Words, *I espouse thee in token of perpetual dominion*. In this Arsenal are maintained at the Charge of the Publick, 1550 Work-men of all sorts, such as Ship-wrights, Carpenters, Smiths, Founders, &c.

The publick Structures of *Venice*, as the Piazza of St. *Mark*, and the Church of St. *Mark*, the Treasury and Tower of St. *Mark*, the Ducal Palace, the Chamber of the *Great Council*, Theaters for their *Operas*, the *Ponte di Rialto*, with the publick Halls, Schools, Mint-houses, Pillars, Statues, and other remarkable pieces of this kind, I will not pretend to give a description of here, the same having been exactly described by *Sansovinus*, *Lassels*, and other modern Travellers.

This City, according to its Epithet, *Venice the Rich*, did once surpass in Wealth, all the other Cities of *Europe*, and not without reason, till the Passage to the *East-Indies* by the *Cape* of *Good Hope* was discovered, at which time they were not only almost the Sole Masters of the *East-India* Trade (which Commodities they brought from *Alexandria* in *Egypt*) but were also in possession of all *Lombardy* and *Friuli*, of *Istria* and *Dalmatia* on the Continent, besides the Isles of *Cyprus* and *Candia*, *Zant*, *Cephalonia* and *Corfu*; besides several other Isles in the *Archipelago*: But since the loss of that Trade, and their heavy Wars with the *Turks* (in which they lost *Cyprus* and *Candia*) their publick Treasure has not been so well stored as before; yet are the Inhabitants, who never have been subject to any ravages or change of Government, very rich, and the Government remains still in possession of these following Dominions, viz. (1) The *Dogado*, in which is the City of *Venice*, (2) the City and Territories of *Padua*, (3) of *Vicenza*, (4) of *Verona*, (5) of *Brescia*, (6) of *Bergamo*, (7) of *Crema*, (8) *Marca Trevisana*, under which are comprehended the Territories and Cities of *Feltre* and *Belluno*, (9) *Friuli*, (10) *Istria*, (11) the Territory of *Rovigo*, formerly belonging to the Duke of *Ferrara*; the whole extending 250 Miles in length, and 125 in breadth. Out of *Italy* they are possess'd of part of *Dalmatia*, the Islands of *Zant*, *Cephalonia* and *Corfu*, besides some others of less note. We were credibly informed, that the ordinary annual Revenue of the whole Republick amounted to 5320000 *Venetian* Ducats, one of their Ducats being somewhat less than a *French* Crown: Of which *Venice* produces 1400000 yearly, *Brescia* 1000000, *Padua* 140000, *Vicenza* 200000, *Verona* 230000, *Bergamo* 140000, *Crema* 100000, *Rovigo* 70000, *Istria* 150000, *Il Friuli* 100000, *La Marca Trevisana* 190000, *Gli stati di mare* 450000, *La Zecca* 150000.

Its Riches.

Revenues.

Venice abounds in Provisions of all sorts, especially in Fish and Water-fowl; except fresh Water, which must be brought from the Land, and their rain Water they preserve in Cisterns. The Air of *Venice* is very sharp in Winter, by reason of its vicinity to the *Alps*. This City is famous for the best Treacle, for Paper, Turpentine, Needle-work Laces, Sope, Courtezans, and above all for the best both drinking and looking-Glasses; these are made at *Muran*, a Town of three Miles in circuit, in an Isle a Mile distant from *Venice*.

Women of any Fashion are kept in great restraint here, seldom appearing abroad, except it be at Church, when they are sure to have an old Woman for their Guardian. Their Daughters they put at seven or eight Years of Age into some Nunnery, where they are educated, and seldom stir from thence till they are married, the Suiters themselves being permitted no more than to look at them thro' the Grate of the Cloister, without speaking.

The Government of *Venice* is *Aristocratical*, in respect to the whole, the common People having not the least share in the Government, but in reference of the Nobility, may rather be call'd *Democratical*, every one pretending to his share in it, the *Doge* or *Duke* being no more than an empty Title, without any Princely Authority. The whole Administration of the Government is in the *Great Council*, the *Senate* or *Council of Pregadi*, the *Colledge*, the *Council of Ten*, and the *Signoria*; besides several other Magistrates for the administration of Justice; all which, together with their Method of choosing by Lot and other ways of transacting publick Affairs, are particularly described by *Contarini Giannotti*, and *Sansovinus*.

Government.

The Procurators of St. *Mark*; tho' not to be numbered among those who have the Administration of the Republick, yet are in great reputation in this City, this Dignity continuing for life, and since its first establishment, there having been but few Dukes, but what were Procurators of St. *Mark*. In ancient times there was but one Procurator of St. *Mark*, whose business was to provide for the Church of St. *Mark* and the Treasure thereunto belonging, which encreasing by degrees one more was added, and 1290 a third, and not long after a fourth, till their number was encreased to six, and afterwards 1423 to nine, and 1509 to fifteen.

The Gentlemen of *Venice* wear, whilst they are in Town, black Gowns, with narrow Sleeves and Caps, without which they never appear abroad. The principal Diversion here, as well of the Gentlemen as others of the principal Inhabitants, is to walk in the Piazza of St. *Mark*, that side next to the Great Council Chamber, being appropriated peculiarly to the Gentlemen. I told you before, that none, except the Gentlemen have any share in the Government, tho' there be no Law to exclude any from the greatest Office. But as the Interest of the Nobility is a sufficient Bar against them, so those that aspire to any Dignity in the Commonwealth, must purchase the same at a very dear rate; there having been no less than 80 Families received into the Number of the noble *Venetians* since the War with the *Turks* in *Candia*, each of which paid 100000 Ducats for his honour.

Here we saw first the little *Diabolus in carcere*, as some call it, being no more than an *icuncula* or Glass-bubble, put into a Cylindrical Glass-tube full of Water, the Bubble having in the heavier end of it a little hole of such a poise, as just to keep it swimming upon the Water; the Glass-tube being stopt at one end, they clap their Hand to the Mouth of the Tube, and so pressing down the Air upon the Superficies of the Water, the same a course presses upon the Air in the Bubble, which giving way makes room for the Water to enter thro' the hole in the Bubble, which becoming heavier sinks to the bottom, but upon the removal of the Hand, the Air in the Bubble by its elastic Power expanding it self, forces out the Water, and ascends again; so, that in proportioning the Force, they can make it descend or ascend, as much or as little as they please. For the further elucidation of which, I will refer my self to Dr. *Cornelius* of *Naples* his *Progymnasmata Physica*, in his Epistle *de Circumpulsione Platonica*.

Among other Curiosities we saw here a Boy, who by bending his Head betwixt his Leggs to the Ground, charged his Belly with Wind, and afterwards discharged it at pleasure. A certain noble *Venetian* also shew'd us a noble Fulminating Powder, not much inferiour to the *Aurum fulminans*, of which he gave us the following Receipt. R. Salt of Tartar one part, of common Brimstone two parts, and Salt-Peter three parts; beat them fine and mix them well: This Powder put into an Iron Vessel or Pan, and held over the Fire, as soon as it melts, will explode almost with as much noise as the Fulminating Powder of Gold.

The same Gentleman also introduced us to a place where we saw the whole manner of making *Venice* Soap, which is accounted as good as *Castile* Soap. The whole Composition is made of Oil of Olives, and a certain Lee: the last they make thus, Take of the Ashes of the Herb *Kali*, known in *England* by the Name of *Beriglia*, two thirds; of *Kelp*, *i. e.* the Ashes of the ordinary Sea-wrack one third; these being beaten with a Mallet into small pieces, and well mingled, are grinded to Powder in a Mill, not unlike our Cider Mills, and being sifted afterwards, they mix some slacked Lime with the Powder, and make it up into Pellets, which they put into Troughs, and pounding Sea-water upon it (fresh Water does as well) make the *Lixivium* or Lee. The Chauldrons wherein they boil their Soap are very large, the bottoms of Copper, but the side made of Stone, bound about with Iron Hoops, and enclosed in a wooden Case. One third part of those Chauldrons they fill with Oil, and the remaining part with the Lee, then putting fire under it, let it boil continually till the Oil be all boil'd away, still filling up the defect of the Lee as it boils away; by which means part of the Oil uniting it self with the Salt of the Lee, rises up to the top in form of a Scum, which condensing by the coolness of the Air, produces that which we call Soap. The Tryal they make of the strength of the *Lixivium* is, when an Egg will swim in it. The Craft or Soap they take from the Surface of the Liquor, they spread upon a Floor, whereupon Lime Dust is strowed (to hinder the Soap from sticking to it) then smooth it, and let it dry in a bed of about the thickness of a good Brick. This when dry'd, they cut in lesser Pieces, and having cleansed them by paring the adhering Impurities, seal them with a Seal.

How *Venice* Soap is made.

N. B. That *Beriglia* alone would make the Soap too soft, as the *Kelp* alone would render it too brittle. The green Colour (of which the *Germans* are very fond) is given it by putting a certain quantity of Juice of Beet into the Chauldron, with the Oil and Lee.

Paduay

Padua. *Padua*, watered by the two Rivers *Brenta* and *Bacchilio*, is of great Antiquity, and if we credit *Livy*, (who was born here) owes its Foundation to *Antenor*, after the Destruction of *Troy*, which is also confirmed, not only by (a) *Virgil*, but also by *Martial*, when he addresses himself to *Valerius Flaccus*, a Poet, and a Native of *Padua*, in these Words, *Antenorei spes & alumne lari.* Notwithstanding which, some will have the City of *Altinum* to be founded by *Antenor*, and *Padua* by *Paravius*, a King of *Veneti*.

(a) 1 Æn.

This City, after having born its share in the Devastations made by the *Huns* and *Lombards*, and having obtain'd its Liberty under the Emperour *Otho* I. was governed by its own Magistrates, till *Ezzelinus* the Tyrant, and not many Years after the *Carraresi* lorded it over them, and at last 1405. fell under the *Venetian* Jurisdiction. It is surrounded by two Walls, the first is call'd to this Day *Antenor's* Wall, (tho' of a far later make) being about three Miles in Circumference, the outward comprehending with all its Fortifications and Ditches, a Compass of six Miles, built by the *Venetians*, at the time of the League of *Cambray*, as may be seen by the *Latin* Inscription over the Gate of *All-Saints*.

Hanc antiquissimam urbem literarum omnium Asylum, cujus agrum fertilitatis semen natura esse voluit, Antenor condidit: Senatus autem Venetus his belli propugnaculis ornavit, Leonardo Lauredano Duce Venetorum invictissimo, cujus Principatus varias fortunæ vices excipiens quàm gloriosè superavit.

However this City is neither rich nor populous in proportion to its bigness, containing according to my Opinion not above 30000 Souls, tho some say 38000. There is a large and fertile Plain belonging to this City, so that their Bread is both very cheap and good, according to the *Italian* Proverb, *That Bread of* Padua, *Wine of* Vicenza, *Tripe of* Treviso, *and* Courtezans *of* Venice, *are the best in their kind.* No Trees are allowed to be planted within a Mile of its Fortifications, the Ground, which they call the *Waste*, being preserved for Corn, for as there is little Ground near this place for pasturage, Milk is excessive dear here. For the Use of the Poor, they make Bread of *Indian* Wheat, and of *Sorgum*.

It has several goodly publick Structures, as the *Palazzo della Ragione*, or Town-hall, where the Courts of Justice are kept; being 256 Foot long and 86 broad, unto which you ascend by many Steps, having Shops underneath it; some will have this to be the largest Room in *Europe*, tho' according to our Eye-sight, we thought it not quite so big as *Westminster-hall*, (2) The publick Schools, (3) The Church of St. *Anthony*, call'd the *Santo*, (4) The Church of St. *Justina*, with the Convent of *Benedictines*, (5) The Passage of the *Arena* or *Amphitheater*, (6) The Magazine of Corn and Ammunition, (7) The *Ponte molino*, where there are about 30 Mills together, upon the River *Brenta*, (8) The Palace of the *Capitaneo*, (9) *Antenor's Tomb*, as they would make us believe, for the particular Description of which, I refer my self to *Schottus* and others. There is one remarkable Building here near the *Domo* call'd *Mons pietatis*, where they tell you a stock of Money of 40000 Crowns is kept for the use of such poor People, as have occation to borrow Money upon Pawns, for which if the Sum be small, they pay no interest, if it be considerable, they allow only five *per Cent.* which defrays the Charges of the Clerks and other Attendance, the Superplus, if any be, being destributed among the Poor, the Bank always remaining entire. The like Foundations are in many other Cities of *Italy*.

Its publick Structures.

Its University.

But what renders this City most famous is its University, which acknowledges the Emperour *Frederick* II. for its Founder, *Anno* 1220. for a compleat Account of which, I will recommend to the Reader the *Gymnasium Patavinum* of *Thomasinus*. Such is the outragious Temper of the Students here, that no Inhabitant or Stranger dare appear in the Streets in the Night time, which if they happen to do, and meet with a Troop of those nocturnal Vagabonds, they cry to them, Who goes there? and if they answer, they bid them turn back, which if they don't instantly, they must expect to be saluted with their Pistols or Fire-locks they carry with them; nay, nothing is more common, than if two Parties of those Students happen to meet in the Streets, they retire behind the Posts of the Portico's or Cloisters, which are on both sides, and so let fly at one another.

The Physick Garden is well stored with Simples, but its Fame is chiefly owing to those excellent Men which have had the management of it, as *Aloysius Mundella*, *Aloysius Anguillara*, *Melchior Guilandinus*, *Jacobus Antonius Cortusus*, *Prosper Alpinus*, and *Joannes Veslingius*, the Epitaph of the last I found on his Tomb in St. *Anthony's* Church.

Joanni Veslingio Mindano,
Equiti,

Naturæ verique scrutatori solertissimo, qui sapientiæ
Atque exoticarum stirpium studio Ægypto peragratâ,
Ab Veneto Senatu *rei herbariæ*
Et corporum Sectioni præfectus, cum Latinitatis
Et Græcæ eruditionis cultum multis artibus circumfudit;
Ut illic naturæ latentis pompam æmularetur;
Hîc spectaculi diritatem oratione deliniret,
Ut quantum oculi paterentur, tantum sibi placerent aures:
Ad extremum laboribus fractus,
Dum miseræ plebi gratuitam operam commodat,
Noxio contactu publicæ saluti vitam impendit.
XXX *Mensis* Aug. Ann. Chr. M. DC. XLIX.
Æt. LI.

In the Dormitory of the Convent of the *Dominicans*, they shew'd us the Cell of *Albertus Magnus*, with an Inscription of certain Monkish Distichs over the Door.

The Government of *Padua* is administer'd by a *Podesta* or Major, and a *Capitaneo*, the first for Civil the second for Military Affairs. They are both sent by the *Venetians*.

From *Padua* we took a turn to *Albano* (anciently *Aponæ*) five Miles hence, to take a view of the hot Springs there, which arising in a rocky hillock, consisting of a Porous Stone, furnish such plenty of Water, that one of them drives an over-shot Mill; (a) and by reason of the porosity of the Rock and the Salt it contains, washes off certain small Particles of the Stone, which by degrees it lets fall again, and precipitates to the bottom of the Channels thro' which it runs, so that they pick abundance of Stone of a dark grey Colour off the Mill Wheel every Month. The Water is so hot, that in one of those Springs the Inhabitants frequently scald their Hogs, to get off the Hair; being full of a white Salt, which coagulates upon the Surface of the Water. The Waters of *Albano* are used only for bathing.

The hot Springs of Albano.

(a) As at Perrot in Derbyshire, Wigton in Somersetshire, and other such like places.

February the 3d. We continued our Journey to *Vicenza*, a City not quite so big, but more populous than *Padua*, its compass being no more than four Miles, but containing betwixt 30 and 40 thousand Souls. It is seated upon the River *Bacchilio*, and watered by the *Retro* or *Eretenus*, as also by two Rivulets call'd *Astichello* and *Seriola*, but is of no great Strength, being surrounded only by a Brick-wall. It is much inhabited by the Nobility and Gentry, of which there are said to be above 200 Families here. I will not pretend to give an exact account here of the several changes of their Government, referring my self as to this point to *Schottus* and *Leander Albertus*. I will only add, that after they had recovered their Liberty, they submitted voluntarily to the Protection of the *Venetians*, which is the reason they enjoy greater Privileges than any of the neighbouring Cities. The Theater of the Academy, call'd the *Olympic*, is a very neat Structure, the Inhabitants live chiefly upon Silkworms and winding, twisting and dying of Silks. Their Wines hereabouts are both rich and agreeable, especially that they call *Dolce & Piccante*.

Vicenza.

Hence we travell'd six Miles to the famous Cave of *Custoza*, being (according to *Joh. Georgius Trissinus*, who measured it) 650 Perches, or 4000 Foot long, and 490 Perches or 3000 Foot broad, and about three Miles in Circumference. The whole seems to be nothing else but a Cave left from the digging of Stones, as *Trissinus* has very well observed, it being certain that the ancient Buildings of *Padua* and *Vicenza* are of the same Stone, and the Roof of this Cave is at distances, sometimes greater, and sometimes lesser, supported by above 1000 huge Pillars of the Quarry, of three Perches square; besides, that to this Day, you see great square pieces of Stone, cut round about, and the Tracks of Cart Wheels, whereas there has been no Cart there in the memory of Man. We saw great numbers of Bats clinging to the Roof and Sides of the Cave, and some standing Waters, with a kind of Fish or rather Insect in them, call'd by them *Squillæ Venetianæ*, tho' they properly were the same call'd by the Naturalists *Pulices murini*, or *aquatici*, i. e. *Sea-fleas* or *Water-fleas*.

The Cave of Custoza.

In the same Village we also got sight of the famous Vemiduct belonging to a Noble Man of *Vicenza*, named *Trideneus*, contrived for the coolness of his Palace, during the heat of the Summer; To effect which, Channels are cut thro' the Rock, from a spacious high-roof'd Grot, to the Palace; so that when they intend to let in the cool Air, they shut up the Gate at the Cave, and by opening a Door

Door at the end of the Channel, which conveys the *fresco* into the Rooms of the Palace, each of which has a certain Conduit and hole to receive it.

Verona. From *Vicenza* we went to *Verona*, seated upon the River *Athesis* or *Adige*, which being very broad here, has a very handsome Stone Bridge built over it, being reckoned amongst the faireſt of *Europe*, besides three lesser ones. Its Circumference (without the Suburbs) is seven Miles, and is very populous and strong both by Nature and Art, being defended by good Bastions, Towers, and deep Ditches water'd by the *Adige*, besides which, it is strengthned by three Forts. We saw here among other things, the Collections of Rarities of an Apothecary named *Mapheus Casanus*, consisting of many *Ægyptian* Idols, petrefied Shells, Coins, and Medals, and among the last, a *Maximilian* and *Diocleſian*, with this Inscription on the reverse; *Veronæ Amphitheatrum*.

Another we saw of *Muscardo*, a Gentleman of *Verona*, who had good store of Lachrymal Urns and Lamps, Shells and Fruits petrefied, Ores and Gems, but especially of *Roman* Medals, among which he shew'd us an *Otho* of Gold, telling us at the same time, that those of Brass were all spurious. But a Description of this Collection being already published in *Italian*, I will not insist upon the further Particulars thereof, no more than of the *Museum* of *Mario Sala*, an Apothecary here, which contains only certain Remnants of the Collection of *Calceolarius*, published long ago.

The Amphitheatre of *Verona* is a Structure worth a curious Traveller's Observation, being both stately and spacious, and in outward appearance, not inferiour either for beauty or capaciousneſs, to that of *Titus* at *Rome*. Of the outward Wall is left only a small piece, from whence you may make an estimate of the whole. But the Remainder of the other Buildings is kept in very good repair; the *Arena* being 34 Perches (each of which is something more than six Foot) long, and 22 broad; surrounded by 42 Rows of Stone Benches, raised above one another, in the nature of Steps, capable of containing 23000 Persons. For the more ample Description of which, I will refer my self to *Schottus* (a), *Torellus Saraina*, a *Veronese*, and (b) *Lipsius*. This City as well as *Padua* and *Vicenza*, after many changes of Government, was at last forced to submit to the *Venetians*. Here are excellent white Wines, especially that they call *Garganico*. The Air is very serene and healthy, but sharp in the Winter, by reason of the Vicinity of the Mountains, amongst which *Baldus* has got the greatest Reputation, not so much for the variety of the Simples that grow there (for the *Alps* are not inferiour in that point) but chiefly by the Industry of the *Paduan* Herbarists, who, but especially *John Pona*, an Apothecary here, have obliged the World with a perfect Catalogue hereof. Near *Verona* is the Lake *Lago di Garda* (*Lacus Benacus*) which affords great quantities of Fish, but especially Trouts of divers kinds, some of which were a Foot long.

(a) In his Antiquity of Verona. (b) De Amphitheatralib.

Lago di Garda.

Mantua. We travell'd from *Verona* to *Mantua*, *February* the 9th, being 24 Miles, thro' divers goodly Villages, but not any Towns of note: Six Miles on this side of *Mantua*, we saw the Duke's Palace at *Marmirola*, a neat Structure, and well furnished with Pictures, and adorned with Statues. This City it self is very ancient, and strong by its situation, being seated in the middle of a Lake, and well fortified. Its compass is about four Miles, but is not populous in proportion of its bigness, scarce containing above 50000 Souls; it has no less than eight Gates. A little way from this City is a Country Seat, belonging to the Duke call'd *Palazzo del Te*, wherein you see a square Room, the Roof arched in the nature of a *Cupolo*, call'd the *Giants-hall*, in which, if two Persons stand in the opposite Corners, one having his Ear to the Wall, may hear what the other whispers, with his Face to the Corner; which he that stands in the middle or in the corner of the same side of the Room, shall not hear. They told us the Duke of *Parma* had such another Contrivance in his Palace of *Caprarola*, but our Whispering place in the Cathedral of *Gloceſter* is of a different nature. *Virgil*, the great *Latin* Poet, was born at *Andes* (now *Petula*) a Village near *Mantua*. Here are two Academies of *Virtuosi*, call'd the *Accesi* and *Timidi*. This City, after many changes of Government, was at last brought under subjection, 1328, by *Lewis Gongaza*, by the favour of the common People, from whom the present Duke is descended, this Title being conferr'd upon *Frederick Gongaza* 1530. by the Emperour *Sigismund* IV. The Revenue of the Duke is about 400000 or 386000 Crowns a Year, but as the Expences of the Dukes have exceeded their Incomes, they are much indebted to the *Venetians*. The common People have this peculiar here, That their Children have an equal share in their Parents Estates, especially such as are personal: A Widow, after the death of her Husband, takes her Dowry back with her; but if she dies first, the same is divided share and share alike among her Children: If she dies without issue, one half of her Dowry falls to her Husband, the other to her next kindred. If a Woman has Children by a former Husband, and marries another, and has likewise Children by him, one half of her Dowry goes to the Children of the first Marriage, the other half to those of the second.

Ferrara.

Taking Boat here for *Ferrara*, we pass'd by the way of the Lake into the Channel of the River *Mincio* (which coming out of the *Lake de Garde*, near a strong Fort of the *Venetians* call'd *Peschiera*, and coming to *Mantua*, (spreads it self into a Lake of five Miles in length) and at 16 Miles end, coming to a Bridge and Sluice at a place call'd *Governo*, entred the River *Po*, and passing down the Stream, came by *Ostia*, ten Miles from *Governo*, and ten Miles farther by *Massa*, both on the Left-hand, and seven Miles lower to *Stellata*, a large Village belonging to the Pope: Eight Miles lower we came to *Il Ponte*, where leaving the *Po*, we pass'd thro' an artificial Channel of four Miles long to the very Gates of *Ferrara*; A City considerable both for its bigness and strength; it being reputed for its bigness, the strongest in all *Italy*; being not only defended by strong Fortifications, and a deep Ditch, but seated also in a fenny Level. It was formerly under the Jurisdiction of its own Dukes, but now under the Papal Jurisdiction. From hence we went by Boat towards *Bologna*, and having shifted our Boat 17 Miles from *Ferrara*, at a place call'd *Mal-Albergo*, reached another Channel, viz. *Rhenus Bononiensis*, and passing thro' nine Locks, arrived at *Bologna*, distant by Water from *Ferrara* 45 Miles, the greatest part of the Country betwixt those two places being Fenny, not unlike the Isle of *Ely* in *England*.

Bologna.

The City of *Bologna* it self is seven or eight Miles in circumference, of a rotund Figure, the Houses not very lofty, but adorned with fair Portico's, on each side of them Streets. Many of their Houses, tho' not promising much on the out-side, yet being very neat and convenient within: Its Inhabitants are computed to be 80000 Souls. The Sausages, Wash-balls, and little Dogs of *Bologna*, are famous all over *Italy* and other parts. Their chief Trade is in Silk, and they have the most convenient Engines for winding and twisting of it, that ever I saw. The University of *Bologna*, for its antiquity, may compare with any in *Europe*, being chiefly famous for the Study of the Law, tho' it has a great number of Professors also in other Faculties, as may be seen by their yearly printed Catalogue of such several Lectures, as each of them is to keep the next following Year. Here we had the opportunity of seeing the ancient Exercise of Tilting, Tilting, still practised here in the Carnaval time: Those who enter the Lists, are mounted on Horse-back, and armed Cap-a-pee, adorned with Plumes, and Scarfs, with Launces in their Hands, wherewith they run at one another a full gallop, aiming at one particular part of the Body; he that hits nearest to it, carrying the Prize. We saw several Launces broken, but no body was either hurt or dismounted.

Tilting.

Dr. *Ovidio Montalbano*, one of the Professors here, shew'd us the *Museum* of *Aldrovandus*, left as a Legacy to this City, and kept in the Cardinal Legates Palace. What delighted us most, were ten Volumes of the Pictures of Plants, and six more of Birds, Fishes, and other Beasts, drawn in Water Colours. The same Person also introduced us to *Jacobus Zenoni*, an Apothecary, and very curious Herbarist; who among other Rarities shew'd us three pieces of Rock Crystal with some drops of Water, enclosed in the middle of them, as might plainly be discovered by the motion of the Crystals: In his Garden we made observation of the following Plants; *Arundo nastos* sive *farcta*, in rivis Rheni Bononiensis; *Solanum Americanum fructu molli*. Eyst. *Geranium triste*, Cornuti: *Scammonea Syriaca*; *Polytrichum Alpinum inciso folio, costâ viridi*; *Convolvulus Althææ folio non inciso*; *Pentaphyllum lucidum folio hirsuto*, ab ipso inventum propè Rhenum Bononiensem; *Malva Alpina folio laciniata*; *Jacobæa folio Betonicæ*, n. d. *Abrotanum fœmina inodorum*; *Bardana de Congo*, *Helleborus niger trifolius spinosus*, *Cyclamen Baldense folio rotundo*, *flore odorato*; *Thlaspi folio Sampsuchi*; item *folio sedi*; *Daucus Creticus verus*; *Stachys Cretica Salviæ folio*; *Clematis Smilaci Asperæ similis*, *verum non aspera*, *Clematis tetraphylla Americana*, *Malvæ folio Betonicæ*, ab ipso inventa; *Labrum Veneris altissimum Indicum*, *Eruca Tanaceti folio*, *Genista Alpina* sive *Spartium*. Col. *Adianthum nigrum ramosum Canadense* Cornut. *Chamædryos spuriæ species* ab ipso inventa propè *Rhenum Bononiensem*; besides many others, which had not yet put forth, it being early in the Spring.

The

The same Day we gave a visit to the famous Chymist *Giuseppi Buccmi*, who shew'd us the Effects of the *Phosphorus*, a Composition, which if exposed for some time to the Air, and afterwards put into a dark place, will appear like a burning Coal for some time, till by degrees its light begins to slacken, and quite vanishes at last, till it be exposed again to the Air. The Crude Stone which he shew'd us was like a kind of Sparre, which, as he told us, acquired this quality by being calcinated in a small Furnace, the pieces of Stone being laid upon an Iron Grate over a Wood fire; but whatever he told us, we could not make some of those Stones, which he sold us, shine, tho' we calcinated them exactly according to his Directions. The *Phosphorus* does by degrees entirely lose its shining quality, as we found by experience, in those we brought along with us. Hereabouts, and all along in *Lombardy*, we saw in flower the *Aconitum hyemale*, known otherwise by the Name of *Anemone Bononiensium*.

The shining Stone.

Castel Franco. Modena.

February the 22d, We continued our Journey towards *Modena*, by the way of *Castel Franco*, a strong Castle, belonging to the Pope, upon the Frontiers of *Modena*, about 20 Miles distant from *Bologna*, a place of no great extent, but very populous, being the Dukes usual Residence, and tolerably well fortified with a thick Wall, a broad Ditch, and some Out-works. In this place as well as at *Padua*, *Bologna*, and other places of *Lombardy*, we observed the Houses very well built of Brick, but not high, and the Streets cloistred on both sides, which seems to intimate, that this was the manner of Building of the *Goths* or *Lombards*, who settled in those parts. The Duke's Palace is no large Structure, but very neat within, the Rooms being nicely gilt, and adorned with Hangings and Pictures of the best Masters. What most delighted us was the Chamber of Rarities, Jewels, ancient and modern Coins and Medals, ancient and modern Entaglia's, curious pieces of turn'd Works, dried Plants pasted upon Boards whitened with Cerus; and a very fine Collection of Designs of the best Painters. We saw also a Human Head petrefied; a Hen's Egg, having the Figure of the Sun on one side; Moss included in a piece of Crystal; Silver in another; and a Fly in a piece of Amber, &c. The ordinary Revenues of the Duke of *Modena*, are computed to 350000 Crowns *per Annum*, his Expences not amounting to above half the Sum. About 28 Miles from *Modena*, near *Paiuli* Castle, issues out of a Mountain, a Spring of *Petroleum*; and in another Mountain call'd *Monte Niceni*, are found abundance of petrefied Cockles and other Shells.

Reggio.

February the 24th, We set out from *Modena* for *Parma*, and at seven Miles, having forded the River *Secchio*, and pass'd by a small, but strong Town call'd *Rubiera*, on the Left-hand, after a Journey of eight Miles further, came to the City of *Reggio*, being of equal bigness and strength with *Modena*, and belonging to the same Duke, whose Title is Duke of *Modena* and *Reggio*. This last being built more at length than the former, makes a fairer shew at a distance, having one long and one broad Street. Here are very good Sculptors and Artizans in carving of Ivory and Wood, for which, this Town is celebrated throughout *Italy*.

Parma.

Ten Miles further, passing thro' a long Bridge over the River *Lenza*, we entred the Territories of *Parma*, and five Miles more, brought us to the Gates of the City of *Parma*, which exceeds *Modena* in bigness, having broad Streets, but no Portico's.

Placenza.

February the 26, In our way to *Placenza*, we ferried at six Miles distance from *Parma*, over the River *Taro*, and nine Miles farther, came to a Town call'd St. *Donin*, and eight Miles beyond this, to a little Town call'd *Fiorenzuola*, near which, passing the River *Arta*, we came, after twelve Miles travelling, to *Placenza*. This City is well fortified, and defended by a strong Castle; in bigness it is equal to *Parma*, but its Buildings not so fair. The Dukes Revenues are computed to be 400000 Crowns *per Annum*, tho' some say 500000; he being, besides *Parma* and *Placenza*, Master of the Dukedom of *Castro*, and the Country of *Ronciglione*.

Crema.

The 27th, We took Horse for *Crema*, and passing thro' *Castigno* in the *Milanese*, and two Miles further, ferrying over the River *Adda*, and two Miles thence the River *Serio* (which falls into the *Adda*) we came to *Crema*, a Frontier City, belonging to the *Venetians*, about 13 Miles from *Placenza*, of no large extent, but well fortified; its situation being in a Plain near the River *Serio*.

Romin.

The 29th, We continued our Journey, and passing thro' *Osanengo*, three Miles from *Crema*, and by the Castle of *Romanengo*, belonging to the *Spaniards*, came to *Soncin*, a considerable place in the *Milanese*: Not far hence we ferried over the River *Oy* (*Ollius*) and two Miles further, rode close by a small Town call'd *L'orzi nuovi*, but well fortified, under the *Venetian* Jurisdiction. Two Miles further we pass'd a great Village call'd *L'orzi Vecchii*, and several others of note, and so came to *Brescia*, which is 30 Miles from *Crema*. The Country hereabouts was well planted with Flax, very populous, and the Fields fenced with Hedges like our *English* Enclosures.

L'orzi nuovi.

The City of *Brescia*, is not altogether so big as *Verona*, but better inhabited, its Streets being regular and spacious, with Bricks set edge ways on both sides (as the Cities in *Holland* are) as are also the Streets of *Parma*, *Placenza* and *Crema*. It has a double Wall, the exteriour of which is very strong, and encompass'd with a good Ditch, besides a Castle standing on a rocky Hill, which both defends and commands the Town. The Mountains hereabours afford very good Iron and Copper Ore, and the Inhabitants are accounted great Masters in Iron Works, but especially in making of Guns, which are in great esteem all over *Italy*; as is also the Cheese of *Brescia*. As they abound in fruitful Valleys, so their Markets are excellently well stored with Provisions. The Territories of this City extend in length, from *Mosa* near *Mantua* to *Dialengo*, in the upper end of *Val Camonica*, 100 Miles, and in breadth, from *Lago di Garda* to *L'orzi nuovi* 50 Miles, being full of Towns and large Villages. This City, like many others of *Italy*, has undergone the fate of many changes of Government, during the intestine Broils of the two famous Factions of the *Guelphs* and *Gibellines*; after which, it fell to the share of the Dukes of *Milan*, till 1426. they submitted to the Protection of the *Venetians*. On the sides of the Hill where the Castle stands, we found Serpent Stones, or *Cornua Ammonis*, and divers other petrefied Shells.

Brescia.

Its Citadel

March the 2d, We continued our Journey thro' the Villages of *Hospitaletto*, *Cokai* and *Palazzuol*, the last of which is seated upon the Banks on both sides of the River *Ollio*.

As we were travelling on to *Bergamo*, we had a full view of the *Alps*. This City is considerable both for its bigness and strength, being situate on the side of a Hill, encompass'd by strong Walls and a broad Ditch, but without Water: The Castle, tho' none of the biggest, yet is very strong by its situation. Without the Walls are five large Suburbs, call'd St. *Leonardo*, at the bottom of the Hill, inhabited chiefly by Merchants, the Suburbs of St. *Anthony*, St. *Catharine*, St. *Thomas*, and that of St. *Godard*. In the Church of the *Austin* Friars, we saw the Monument of *Ambrose Calepine*, the Author of the famous Dictionary. Over his Cell in the Cloister was a *Latin* Inscription, intimating, That he was a Native of *Bergamo*, and a Monk of this Convent, and that he died here, 1511, in the 71 Year of his Age. This City has also been subject to various Changes: They first submitted to the *Venetians*, 1428; but were 1509, forced to acknowledge the Sovereignty of the *French*, after they had made themselves Masters of *Milan*; but these being expell'd thence three Years after, it remained under the Jurisdiction of the then Duke of *Milan*, *Maximilian Sforza*, from whom it however revolted soon after to the *Venetians*, but was forced to return to its former Obedience, till at last the *Venetians* got once more in possession of it, 1516. and remain Masters of it ever since. They are governed by a Major, a Military Commander, Chamberlain, and Governour of the Castle sent hither from *Venice*. *Bergamo* is of so great reputation among the *Italians*, that by way of Proverb they say, *If* Bergamo *stood in a Plain, it would be a fairer City than* Milan. From hence we went on Horse-back to *Calcnica*, a Village seated upon the River *Adda*, in the *Milanese*, whence we went by Water to *Milan*.

Bergamo.

Novara. Vercelli.

Turin.

This City, which is one of the four Cities of the first Rank in *Italy* (*Rome*, *Venice* and *Naples*, being the other three) is also surnamed *la Grande*, from its bigness, having ten Miles in circumference, and approaching to a circular Figure. It contains 11 Collegiate Churches, 71 Parishes, 30 Monasteries for Monks, 36 for Nuns, eight of Regular Canons, the number of Inhabitants are said to be 300000, but this last is somewhat too large. Provisions are here all so cheap and plentiful, that the *Italians* have made it into a Proverb, *That they eat well only at* Milan. The Cathedral here challenges the second place after that of St. *Peter's* at *Rome*, both for bigness and sumptuousness; being 250 Cubits long, and 130 broad, and of a proportionable height; but the *Grand Hospital* justly claims the preference before all others in *Europe*, for its magnificent Structure and bigness. Among other Courts, it has a Square surrounded with a double Portico, one below the other above stairs. Its Revenues are yearly 50000 Crowns, out of which are maintained 4000 poor and infirm Persons. The Monasteries and Churches here are beautified with many Pictures and Statues of the

Milan.

best Masters, and stored with excessive rich Church Ornaments, for which I will refer my self to *Schottus*, and others. The *Bibliotheca Ambrosiana*, founded by Cardinal *Borromeo*, is a goodly Edifice, stored with goodly Books, unto which strangers as well as the Inhabitants, have a free access. But the College call'd *Hermathenæum*, is a truly noble Building, the Court being adorned with a double row of Cloisters, one above the other, with double Pillars each; the lowermost of the *Ionic*, the uppermost of the *Tuscan* Order.

Its Cittadel

The Cittadel of *Milan*, either for its bigness or strength, may also compare with any in *Europe*. The ancient Castle has been twice enlarged, first by the *French*, who taking in a considerable piece of Ground, encompass'd it with a very thick and high Wall, and a deep Ditch; from hence you have a fair Prospect of the whole City and circumjacent Country, as well as those Fortifications added by the *Spaniards*, being of a Pentagonal Figure, with a Bastion at each Angle, and a Half-moon between every two Bastions. *Schottus* says, that the Compass of the whole Fortifications (not including the Trenches) is 1600 Paces. We were told, that within the Castle, they have a Water-mill driven by a Spring, which arises within the Circumference of the Castle.

March the 6th, We saw the Collection of Rarities of *Manfredus Septalius*, Son to *Ludovicus Septalius*, the noted Physician, and among other things, divers Looking-glasses, which by natural Reflection, did multiply the Object, almost in infinite; A plain Glass, with spherical Portuberances, which represented the Objects as often multiplied, as there were Portuberances, and another Looking-glass of the same kind; several concave burning Glasses of Metal; several *Automata* and Clocks, among which, two of a Cylindrical Figure, moved without Weight or Spring, only by being placed upon an enclining Plain; so that their Motion proceeded from their own weight; besides many other Curiosities both natural and artificial, for the Description of which, I will refer my Reader to the Catalogue thereof, published by the Owner himself. There are great Artists in this City in working and engraving Chrystals, and other Glasses and Stones. Their way of polishing is perform'd by a Brass-wheel, upon which the Powder of *Smiris* mix'd with Water is put, and to smooth it, they use the Powder of (a) *Sasse-mort*, as they call it, which is a heavy pebble Stone, which by lying in the Water, dies by degrees, first degenerating into a light Pumice, and at last crumbling to Dust. They told us for truth, that most Stones by lying long in the Water, will die in this manner, except the clear pellucid Pebbles.

(a) i. e. Dead Stone.

March the 10th, We began our Journey towards *Turin*, along the Bank of the River *Navilio*, and leaving *Biagrassa*, a small Town to our left, we lodged at *Bufalora*, 22 Miles from *Milan*. By the way among the Hedges, we found *Fumaria bulbosa flore purpureo & albo*, in flower, and *Aristolochia rotunda*.

Novara Vercelli.

The 11th, We continued our Journey over *Novara*, a strong place belonging to the *Spaniards*, to *Vercelli*, under the Duke of *Savoy*'s Jurisdiction; a large place but neither strong nor populous 20 Miles from our last Night's Lodging.

The 12th, We travelled 18 Miles as far as *Sian*; and the 13th, being stop'd by the Floods, were constrained to stay at eight Miles length at *Chivas*; and the 14th passing by many Waters, and after we had ferried over at *Orco* and *Stura*, arrived at *Turin*.

Turin.

This City, known to the Ancients by the name of *Augusta Taurinorum*, and seated upon the River *Po*, is of no great extent, but very populous, this being the ordinary Residence of the Dukes of *Savoy*. The old Buildings are but very indifferent, but one new Street, and several other Houses of late date, are handsome and uniform. The Piazza is in the midst of the Street, being a large Square, with a lofty Cloister on each side: And at one end of it another Piazza, fronting the Duke's Palace, which is not yet finished. The Cittadel has five Bastions. Here we met with some of the Protestants of the Valleys of *Lucern* and *Angrona*, who had lately obtain'd Liberty of Conscience from the Duke. They told us, that being about 15000 Souls, they inhabited 14 or 15 Villages only, their fighting Men (who amounted not to above 2000) being divided into 14 Companies, under as many Captains, and that they had kill'd above 500 of the Duke's People in the last War, with the loss only of 40 or 50 of their own. They are the only Protestants in *Italy*, having maintained the Purity of their Religion, for above these 1200 Years. Here is also an University, which challenges the first Introduction of Printing into *Italy*. As the plain Country about *Turin* is very fruitful, so all Provisions are very plentiful and cheap here; it being certain that *Piemont*, for plenty of Corn, Cattle, Wine, Fruit, Hemp, and Flax, may compare with the best in *Italy*; and the Inhabitants apply themselves more to Husbandry than Traffick; which according to *Leti*'s Observations, makes them live generally well, and none excessive rich. The Duke's Revenue, if we may believe the same Author, amounts to 1800000 Crowns; of which *Piemont* alone produces 1400000. His Possessions in *Italy*, are, besides the Principality of *Piemont*, the two *Marquisates* of *Saluzzes* and *Asti*, the Dukedom of *Aosta*, and the Countries of *Nizza* and *Vercelli*. There are three very handsome Palaces belonging to the Duke near the City, call'd the *Venery*, *Millefiore*, and *Valentine*. The first Invention of oil'd Cloth is attributed to *Giacomo Marigi*, a Citizen of *Turin*.

March the 17th, Having provided our selves with a good Guide, we set out from *Turin* from *Genoa*, where we arrived in three Days after. Not above a Mile below *Turin* we cross'd the *Po* (which begins to be navigable here) by a Bridge; and after a Mile's travelling along the River, we ascended the Hills, under which the River has a very difficult ascent. In the Woods near the foot of the Mountains, and in the Woods on the Mountains, as also in the Ditches we pass'd by, I observed growing wild (a) *Dens caninus flore purpureo* Ger. *Leucoium Bulbosum vulgare* C. B. *Dentaria aphyllos* Clus. five *Arbutum Cordi. Doronicum vulgare* J. B. *Hepatica Trifolium* Lob. *Hyacinthus botryodes* 2 Clus. About five Miles from *Turin*, we pass'd thro' a large Town call'd *Chier*, and four Miles further, thro' another call'd *Villa nova*, and lodged that Night at *Asti*, 20 Miles from *Turin*, a large Town, but much decayed.

(a) i. e. Dogs Tooth Violet, common Bulbous Violet, the greater Toothwort, common Leopards Bane, the noble Liverwort, and the lesser Grape-Hyacinth.

The 18th, We travell'd as far as *Nove*, a goodly Town, under the *Genoese*, 27 *Piemont* Miles from *Asti* (which I believe may make 35 of ours). All along the Banks of the River *Tanar*, about four Miles from *Asti*, we found under the high Sands or Banks, abundance of Oisters, Scallops, Cockles, and other Shells petrefied; and among the rest the *Antales*, *Belemnites*, and other rare Stones. In the Corn-fields we met with (b) *Ornithogalum luteum* C. B. in flower. We pass'd this Day thro' two large Villages, call'd *Non* and *Felizan*, and so to *Alexandria*, a large and strong Town, but meanly built. The River *Tanar* divides it self into two parts, which are join'd together by a goodly Bridge of Brick-work; and thence to *Nove*.

(b) Yellow Star of *Bethlehem*. This has been found also in the Woods near *Gretta* Bridge in the North riding of *Yorkshire* in *England*.

The 19th, We travell'd from hence for 30 Miles together all over Mountains: After the first six Miles travelling, we came to a pretty wall'd Town, within a strong Castle call'd *Gavi*, and six Miles further to another goodly place call'd *Voltagio*; from whence, by a continued ascent of seven or eight Miles, we reached the top of a very high Hill; whence we had a full prospect both of *Genoa* and the Sea, whither we travell'd by a continual descent, meeting about 500 or 600 Asses and Mules, with Burthens on their Backs, by the way. Betwixt *Gavi* and *Voltagio*, we observed near the Road side *Dens caninus flore albo*; and on the Mountains from *Gavi* to *Genoa*, *Stœchas citrina altera tenuifolia sive Italica* J. B. *Psyllium majus semper virens & sedi minoris species flore albo quadrifolio*, now in flower; *Parasites flore albo*, on the side of the Mountain, about six Miles from *Voltagio*, towards *Genoa* side: *Erica arborescens Monspelliensis flore purpurascente ramulis ternis*, J. B. This last we met with near the Road from *Gavi* to *Genoa*, growing as tall here as the Broom, but is less near *Monpellier*.

Genoa.

March the 20th, We took a view of *Genoa*, which deservedly has got the Epithet of *Superba* among the *Italians*, by reason of its most magnificent Buildings, especially those of the *New-Street*, which contains not above ten Palaces, so stately and large, that the meanest of them is fit for the Entertainment of a great Prince and his Retinue. The Streets, which are somewhat narrow, seem to be no small blemish to the loftiness of their Buildings, but the scarcity of Ground, and defending themselves against the heat of the Sun, in the Streets, has put them upon this Expedient, which is frequently observed in many other ancient Towns of *Italy*, and *Gallia Narbonensis*. *Genoa*, as it lies under the Mountains, exposed to the South, being extreamly subject to scorching heats in the Summer, which however furnishes them with plenty of Oranges, Olives, and other Fruits. Its Figure is like a Crescent, fortified to the Land-side with a double Wall. The exterior taking in a great Tract of Ground, and extending to the top of the Mountains, which together with a Mole to secure their Harbour, has cost a prodigious Sum of Money, and is scarce to be parallell'd. The Inhabitants seem to bear but a slender proportion to the fair shew of their Buildings, they being very insolent, faithless, and uncivil to Strangers,

which verifies the old *Italian* Proverb of *Genoa*, viz. That it has, *Mountains without Trees, a Sea without Fish, Men without Faith, and Women without Shame.* Their chief Manufactory is in Silks and Velvets.

Their Government is administer'd by a Duke, who is changed every two Years, by two Colleges, one of the *Governatori*, the other of the *Procuratori*, 12 of the first, and eight of the last, who are all Elected; (3) by a greater Council of 400; (4) a lesser Council of 100; (5) A *Seminary* of 120 for the two *Collegia*. The chief Administration of publick Affairs, lies in the two Colleges of *Governatori* and *Procuratori*, who are the Senate and Privy Council of the Commonwealth, and are chosen twice a Year, *viz.* about the middle of *June* and the middle of *December*. The Society of St. *George* is a Company of Bankers, incorporated, who lend Money to the Publick, and others, upon good Security. They chuse Yearly eight Protectors, who manage the Affairs of their whole Company.

The publick Revenue of *Genoa*, is reckoned at 1200000 Crowns *per Annum*. There are in this City many private Persons vastly rich.

Upon the Cliffs near the *Pharos*, or Watch-Tower, we found these Plants, *Trifolium luteum luminosum* Ger. *Jacobæa marina* Ger. *Conyza major Monspelensis odorata* J. B. *Alaternus*; *Carduus galactites* J. B. *Thymum vulgare rigidius folio cinereo* J. B. *Geranium folio Alceæ*, C. B. *Thlaspi Alysson dictum maritimum* C. B. *Lotus Libyca Dalechampii*; *Lotus pentaphyllos siliquosus villosus* C. B. *Smilax aspera*; *Adianthus sive Capillus Veneris* J. B. *Hyoscyamus albus* Park. Hæc species circa *Genuam* habet folia breviora, viridiora, rotundiora, minus laciniata, quam vulgaris niger, florem minorem, in nonnullis totum luteum, in aliis planis, fundo obscure purpureo. On the Walls we saw Stock-Gilly-Flowers growing in abundance, but whether wild, or from some scattered Seeds, I will not determine; as also the *Globulæ Montispessulanum*, and *Genista Hispanica*, on the Eastern Rocks of the City. Upon the Sea we saw many Sea-balls, or round Lumps of *Festuca*, supposed to be cast out of Fishes Stomachs.

April the 2d, We pass'd in a Boat from *Genoa* to *Porto Venere*, and thence cross'd the Bay of *Spezzia* to *Lerici*, where taking Post-horses, we rode to *Sarzana*, a strong frontier Town, belonging to the *Genoeses*, and lodged that Night at *Massa*, a small City, but dignified with the Title of a Principality, the Duke thereof being likewise Lord of *Carrara*. His chief Revenues come from the Marble Quarries. He is of the *Genoese* Family of the *Cybo's*

April the 3th, We travell'd thro' a boggy Valley near the Foot of the Mountains, a kind of a desolate Country, as far as *Luca*: In this Journey we took notice of the the following Plants, *Scrophularia Urticæ folio* C. B. *Orchis macrophylla* Col. *Moly parvum caule triangulo*, between *Massa* and *Sarzana*, *Narcissus Medioluteus polyanthos* Ger. in Flower, among the Corn. On the sides of the Mountains, between *Massa* and *Luca*, *Antirrhinum flore luteo* C. B. *Tithymalus dendroides* J. B. *Lenticscus*, *Anagyris sive Laburnum*; *Colutea Vesicaria*, *Colutea Scorpioides*, *Ruta silvestris major*, J. B. *Laurus vulgaris*; *Teucrium*: In the Ditches and shady places, *Aristolochia Asarum latifolium* Clus. and *Aristolochia longa*; a sort of *Dentaria Aphyllos*, with a purple Flower; covering the Ground almost like Housleek, having scarce any Stalk. *Lychnis serrata folio angustissimo, flore rubello*, among Flax. *Ornithogalum vulgare* Ger. among the Corn *Cyclamen vernum*, in flower, among the Shrubs on the Hill's sides. *Myrtus minor vulgaris*; *Philyrea angustifolia*; *Philyrea* 3 Clus.. *Genista Hispanica* Ger. Upon the descent of the Mountains, four Miles from *Luca*, *Hesperis sylvestris latifolia flore albo parvo* Park. A kind of *Alsine hirsuta myosotis*, with a large Flower. A Shrub not unlike the *Guajacum Patavinum*, a kind of *Thlaspi monospermos*, with a white Flower. *Sedum minus semine stellato*; an *Sedum echinatum flore luteo* J. B. *Alsine foliis hederaceis*, *Rutæ modo divisis* Lob. *Anemone tuberosa radice* Ger. in Flower. Near *Porto Venere* we saw *Alsine folio crassо*.

Luca, contains not above 30 Miles in circuit, but is very populous for its bigness, the ease of the Government drawing thither abundance of People. Its situation is very pleasant, in a delightful Valley; and its Fortifications and Out-works strong and kept in good repair. The Buildings are fair, and their Churches, tho' not very large, yet neat and well kept. The Inhabitants, both of the City and Country very courteous, and withal so careful to preserve their Liberty, that they omit nothing which they think may contribute to maintain it. Their Women here are not kept so strict as in other parts of *Italy*, being allowed to walk abroad with a reasonable share of Freedom: They are generally handsome enough, and in their Dress affect to follow the *French*. The Administration of the Government is by the Great Council of 160, chosen every Year from among the Nobility (the rest having no share therein) these must be 25 Years old at least, nine *Anziani* and a *Gonfaloniere*, these last are chosen a-new every two Months, and are stiled the *Signioria*, the *Gonfaloniere* being their Head, but no more than by his Title. The City is divided into three Wards, call'd *Terzieri*, each of which has its Arms or Banner, call'd *Gonfalone*, whence the name *Gonfaloniere*: On the Corners of each Street these Arms are painted, with the Name of the Ward it belongs to, and what Bulwark they are to defend, in case of a sudden Attack. The Council chuses three *Anziani* out of each of those Wards. Their Revenue is computed at 100000 Crowns yearly. Hereabouts grow the best Olives in *Italy*.

The City of *Pisa*, formerly a rich and populous Commonwealth, is since its coming under the *Florentine* Yoak, become poor and almost desolate, notwithstanding all the Endeavours of the Great Dukes of *Florence*, who have erected an University, founded an Order of Knighthood, and built an Exchange there, for the Encouragement of the Inhabitants. Its Situation, which is in a fenny Ground, upon the River *Arnus*, renders its Air very unwholsome and obnoxious to Strangers. What we thought worth our peculiar Observation here, were (1) St. *Stephen*'s Church, dedicated to the Order of that Name, founded here by *Cosmus*, the first Great Duke of *Tuscany*. (2) The College for Students in Law and Philosophy (formerly the House of *Barbalus*) founded by the Great Duke *Ferdinand*, 1596. (3) The Cathedral, being a most magnificent Structure of Marble, the Doors of Brass, curiously engraven, a double Isle on each side of the Nave, and two Rows of Marble Pillars, beautified with stately Altars, and select Pieces of Painting, the sides hung with red Velvet, and the Roof richly gilded. On each side of the high Altar, you see a Picture, and under each of them an Inscription, giving a short Account of two notable Adventures of this City, which are expressed there.

I. *Templum hoc, ut auctæ potentiæ ac religionis insigne monumentum posteris extaret, Pisani ex Saracenorum spoliis captâ Panormo ædificatum, ac Sanctorum reliquiis è Palæstina usque advectis auctum, Gelasius II. P. M. solenni pompa consecravit*, An. Dom. M. C. XIX.

II. Pascale II. P. M. *autore, Pisani classe* 300 *triremium Petro Arch. Pis. Duce Baleares Insulas, profligatis Saracenis in ditionem redigunt, Christianoque nomini adjungunt; captâ regiâ Conjuge ac filio præclaram victoriam illustri pioque triumpho exornarunt* A. D. 1115.

4. The *Baptisterium*, in the Center of which you see a very noble Font of Marble, into which, like a Ciftern, the Water runs continually; the Pulpit is also of Marble, with most curious carved Work. (5) The *Campo Santo*, or Burying-place, being an oblong Square, enclosed with a broad Portico, well painted, and paved with Grave-stones: The Earth which makes up this Church-yard, is said to be brought from the Holy Land, and to consume Bodies in 48 Hours. (6) The Steeple, a round Tower, of a great height, seeming to encline so much to one side, as if it were ready to fall, which some attribute to the Contrivance of the Builder, others to a Defect in the Building. (7) The *Aqueduct*, which conveys the Water from the Mountains for five Miles into the City, by 5000 Arches, being begun by *Cosmus* and finished by *Ferdinand* I. great Dukes of *Florence*: This Water, for its goodness, is carried in Flasks to *Legborn*, (8) The Physick-garden, then but slenderly provided with Plants.

We took Boat here for *Legborn* (the *Portus Liburnus* of the Ancients) about twelve Miles hence. This Town is not very stately nor large, the Houses being but low, yet pretty uniform, and the Streets regular, with a large Piazza in the middle: It is strongly fortified on the Land side, and since the Great Duke has made it a free Port, much encreased in Traffick and Riches: Its convenient Situation for the Levant Trade having drawn thither great numbers of Strangers, and especially *Jews*, of the last of which there are computed to be above 5000. Before it was so well inhabited, it was reputed a very unhealthful place, by reason of its Situation in a fenny Level, without Mountain, or as much as a Hillock within five Miles of it, but since that time, the Multitude of Fires, and the Industry of the Inhabitants, have, by draining those Marshy Grounds, rendred the Air as agreeable here, as in most parts of *Italy*.

The

The Harbour within the Mole is but ſmall, but this Defect is compenſated by the goodneſs of the Road without, where there is ſafe Anchorage for Ships. Near the Harbour ſtands a moſt magnificent Statue of the Great Duke *Ferdinand* I. the Pedeſtal of which being, as it was, ſuſtained by four Braſs Statues of chained Slaves, of a gigantick Stature. The Great Dukes often reſide here in Lent, by reaſon of the great plenty and cheapneſs of Fiſh, tho' all other Proviſions are here at a dear rate. We ſaw many Work-men here employed in filling of *Marking-ſtones*, call'd in *Latin*, *Lapis galactites & morochthus*, by the *Italians*, *Pietra Lattaria*; they are found at *Monte negro*, five Miles from *Leghorn*; of the Duſt and Filings of which Stone, they make Powder for Hair.

Plants about Leghorn.

The following Plants we took notice of about *Leghorn*, *Kali geniculatum majus*, in the Marſhes near the Sea. *Abſinthium Scriphium Gallicum*, *Polium montanum album* C. B. *Medica doliata ſpinoſa*, *Medica cochlenta Spinoſa*, *Medica marina*, on the Sands. *Caltha arvenſis* C. B. *Hyacinthus paluſtris vernus*, *floſculis fimbriatis albis*; *Hyacinthus comoſus* Ger. *Lathyrus flore coccineo*; *Vicia luteo flore ſilveſtris*. *Ochrus ſive ervilia* Dod. theſe three laſt among the Corn, as alſo *Gladiolus Narbonenſis* Lob. *Telephium ſcorpioides* Anguill. in arenoſis. *Phyteuma Monſpelienſium*; *Cichorium pratenſe veſicarium* Col. *Medica Scutellata* J. B. *Iris humilis violacea latifolia*, & eadem *flore albo*, in rupibus ad mare. *Herniaria hirſuta*, *Allii ſpecies*, an *Ampelopraſſum*? *Ferrum equinum* Lob. *Orchis macrophylles* Col. *Trifolium fragiferum ſive Veſicarium*, *floribus nitidis rubellis floſculis velut in umbella parva diſpoſitis*, *Chryſanthemum Bellidis folio* Hort. Pat. inter ſegetes. *Buphthalmum Cotulæ folio* C. B. an *Chryſanthem. Valentinum* Cluſii? *Anthyllis leguminoſa flo. purpureo*. *Cruciata minima muralis* Col. *Peplus minor* J. B. *Ageratum ſive Balſamita mas*: A ſort of *Draba* with a white Flower. *Hieracium perfoliatum*; beſides divers which we had ſeen in other places; as that ſort of *Dorycnium* which *J. Bauhinus* calls *Trifolium album rectum hirſutum valdè*, *Carduus Chryſanthemus Narbonenſis*, call'd by *Lobel Eryngium luteum Monſpelienſium*, *Heliotropium majus*, *Carduus ſolſtitialis* Ger. *Cichorium pratenſe verrucarium* in arvis paſſim; *Blattaria flore luteo*; *Convolvulus minimus ſpicifolius* Lob. *Meliſſa ſilveſtris hirſutior minus odorata*, *Dorycnio congener planta*; *Raphanus monoſpermon*; *Ammi vulgare*; *Paſſerina Tragi*; *Sideritis vulgaris*; *Aſter luteus foliis ad florem rigidis*; *Stœbe major caliculis non ſplendentibus*. Betwixt *Piſa* and *Leghorn*, we found *Leucoium bulboſum majus polyanthemum* Ger. in the Marſhes near *Piſa*, *Ariſtolochia clematitis*, *Aſter conyzoides* nobis dictus; *Aſparagus altilis*: *Gramen ſupinum aculeatum* J. B. Beſides which, we ſaw ſeveral that grow wild alſo in *England*, but not frequently, ſuch as *Leucoium marinum majus folio ſinuato*; *Orchis fuciflora galeâ & alis herbidis*; *Hyacinthus ſtellaris vernus minor*, and many others.

We embarked at *Leghorn*, a-board a *Dutch* Veſſel, bound for *Naples*, but the Wind being very various, we ſpent five Days in this Voyage. Our Maſter of the Ship, told us, that it was a general Obſervation here, for the Wind to blow Eaſt in the Forenoon, from the Land, and in the Afternoon, Weſterly from the Sea. We alſo made this Obſervation, That the Wind generally was quite laid with Sun-ſet, and we had generally but little about Sun-riſing. In our return from *Meſſina* to *Naples*, and thence to *Leghorn*, we found the Wind contrary, for the moſt part, which according to the Sea-mens Saying, is commonly ſo here in the Summer. We further obſerved, that the Wind did follow the Courſe of the Sun, it proving generally pretty well for us in the Morning, but in the Afternoon againſt us, the Land being to the Eaſt of us, which confirmed us in what our Captain had told us. He alſo aſſured us, that when they are to make a Voyage from *Holland* to the *Weſt-Indies*, they ſail up as high as the South of *Africk*, as the place whither they are bound in the *Weſt-Indies* lies; and then ſteer their Courſe Weſtward, the Wind blowing conſtantly from the Eaſt, and the Sea running the ſame way; whereas, when they return, they go round the Bay of *Mexico*, far to the North, and ſo paſs over to *Europe*, which, if true, much ſtrengthens the Opinion of the Diurnal Motion of the Earth.

Naples.

The City of *Naples*, extending in form of a Creſcent along the Sea-ſide, under the Hills, reſembling in form, that of *Genoa*, except, that it is much larger, and more populous; for, tho' the Circumference of its Walls, it exceeds not above ſeven *Italian* Miles, yet has it very ſpacious Suburbs. The Houſes here are generally lofty and goodly Structures, of Stone, flat roof'd, and covered with a certain Plaſter, which keeps out the Rain to admiration. Its Situation is ſo far to the South, and that under Hills, would make the Heat exceſſive here, were it not for the conſtant Breezes of Wind about Noon-tide, which ſo cool the Air, that, except two or three Days, we found the Weather temperate enough, even at our return, which was in *June*, when it rain'd very hard there ſeveral times, tho' they look'd upon it as extraordinary: For want of Rain, they have a way of cooling the Streets every Day, by drawing thro' them a Tun, with Water, in a Cart, which has many holes in it. The Dialect of the common People here, is far different from the *Tuſcane*, and not very intelligible. Proviſions, but eſpecially Fruit, is very cheap here, and among the reſt, we ſaw the *Cucurbita anguina*, *Cucumis anguinus*, *Mala inſana*, and *Limoncelle*, ſold in the Market. All the *Neapolitans*, and generally the *Italians*, drink their Wine and Water ſnowed, by putting the Veſſels in which the Wine is, into another full of Snow or Ice, which is the reaſon, that it is not only ſold in Stalls all over the Town, but they carry alſo ſmall Barrels, with Snow Water on their Backs, crying, *Snowed or Iced Water to be ſold*.

Beltranus (a) tells us, that there are 160 Religious Houſes of all ſorts in *Naples*, *viz.* 121. for Monks, and 39 for Women, which maintain 12421 Perſons. This City is defended, or rather bridled, by four Caſtles, *viz*, by the *Caſtle d' Ovo*, built on a Rock in the Sea, with an artificial Cauſeway leading to it; The *Caſtle St. Elmo*, ſeated on a Hill above the City; *Caſtle nove*, for the ſecurity of the Harbour and Galleys, which lie near it; and the *Torrione di Carmine*, being only a Tower belonging to a Convent of the *Carmelites*, but famous for its having ſerved as a retreat to the Rebels, under *Maſſaniello*.

a) Deſcript. Neap. Its Caſtles.

Churches and Convents.

Naples is famous for the beauty of its Churches, they being generally very ſumptuous, ſome of them not only paved with Marble, but alſo the Walls covered with it. Of all things that ever I ſaw of this nature, I never met with any thing that exceeds the Convent of the *Carthuſians*, adjoining to the Caſtle of St. *Elmo*, having a ſpacious ſquare Court, with the fineſt Cloiſter round it that ever was ſeen. The Pillars, as well as the Pavement of the *Portico's*, are of Marble of divers Colours, ſo curiouſly wrought and poliſh'd, and nearly kept, that it can't but ſurpriſe thoſe that behold it. The Granary of *Naples* is alſo worth the Obſervation of a curious Travellor, both for its Extent and Conveniencies: they told us that there was generally laid up as much Corn, as would ſuffice the whole City for ſeveral Years, in caſe of Neceſſity; and that the Bakers of *Naples* are obliged to buy 25000 *Tomoli* (Buſhels) of Corn out of it every Month, at a certain rate, which indeed exhauſts the price of Bread, but makes room for the laying up of new Corn, which is every Day turned in the Store-houſe, by a great number of Men kept for that Purpoſe.

Its Provinces.

The whole Kingdom of *Naples* is divided into twelve Provinces; the Nobility is diſtinguiſhed into five *Seggi* or Societies, that of *Capua*, *Nido*, *Montagna*, *Porta*, and *Porta nova*; compoſed of 87 Princes, 122 Dukes, 159 Marqueſſes, and ſeven Earls. It has in all 20 Archbiſhopricks; and 122 Biſhopricks (to 30 of which the King of *Spain* only nominates;) and 148 Cities. (1) The Province of *Terra di lavoro*, (the ancient *Campania felix*) has 14 Cities, among which *Capua*, *Gaeta*, *Pozzuoli*, and *Vico Equenſe*, are the chiefeſt. (2) *Principato Citra*, containing 18 Cities; among them, *Campagna*, *Capri*, in the Iſle *Capreæ*, famous for the Retirement of *Tiberius Cæſar*, *Cappaccia*, *Laurino*, &c. (3) *Principato ultra*, which has 14 Cities, as *Beneveno*, *Avellino*, St. *Angelo de Lombardi*, *Monte marano*, &c. (4) *Baſilicata*, containing 11 Cities, as *Lavello*, *Policaſtro*, *Venoſa*, *Monte peloſo*, &c. (5) *Calabria Citra*, which has 12, as *Manſea*, *Paola*, *Montalto*, St. *Marco*, &c. (6) *Calabria Ultra*, 16, as *Reggio* (the Ancients *Rhegium*) *Belicaſtro*, *Montilene*, *Melito*, *Nicoterra*, &c. (7) *Terra d' Otranto*, 14, as *Gallipoli*, *Brindiſi*, *Otranto* (the ancient *Hydruntum*) *Caſtro*, &c. (8) *Terra di Bari*, 16, as *Andria*, *Barletta*, a very ſtrong place, *Biſeglia*, *Polignano* or *Puignano*. (9) *Abruzzo Citra*, has five only, *viz.* *Chieti*, *Sulmona*, *Benevento*, *Borrelle*, and *Ortona*. (10) *Abruzzo Ultra*, has alſo no more than five, *viz.* *Aquila*, *Atri*, *Campli*, *Civita di Penna*, and *Teramo*. (11) *Contado di Moliſi*, has four, *viz.* *Bojano Guardia*, *Alferes*, *Iſernia*, and *Trivento*. (12) *Capitanata*, contains 13, as *Monte St. Angelo*, *Aſcoli*, *Lucera*, *Sancto Severo*, *Manfredonia*, &c. Among this great number of Cities, are many which can't compare with the beſt ſort of our Villages in *England*.

Hearth Money is a cuſtomary Tax in the Kingdom of *Naples*, each Hearth paying 15 Carolines (about ſeven Shillings *Engliſh*) to the King, except the *Sclavonians*, who pay but 11 Carolines a Year, the whole Tax, deducting

ducting what is to be abated for privileged places, amounts to 6554873 Ducats and 6 Carolines *per An.* The Tax with the Feudatories pay yearly, instead of Personal Services, amounts to 120568 Ducats, besides several other Excises and Taxes, the whole Revenue then amounting yearly to 2996937 Ducats, three Carolines, and 14 Grains.

The Philosophical Academy

We had the Curiosity to visit the Philosophic Academy of *Virtuosi* at one of their Meetings, which was then every *Wednesday*; in the Palace of the noble Marquess *Arena*, a truly courteous and obliging Person; there were not above 15 or 16 of the Members present, but triple the number of other Persons. They shew'd an Experiment of the Waters ascending above its Level, in slender Tubes, upon which, after they had discoursed a while, three of the Society made an Harangue each had studied on purpose, upon a certain Subject, upon which some Arguments having been given *pro* and *con*, they concluded the Meeting. I must confess that I was not a little surprised to see such a Company of Learned Men, in a place, where I was of opinion, they would scarce allow a reasonable Latitude of Judgment; and I must give them their due, that they were not only well acquainted with the best and most refined Authors of the immediately preceding Age, such as *Galileus à Galileo*, *Des Cartes*, *Gassendus*, *Harvey*, *Verulam*, &c. but also with those surviving in the present Age, as Mr. *Boyle*, Sir *George Ent*, Dr. *Glisson*, Dr. *Willis*, Dr. *Wharton*, Mr. *Hobbs*, Mr. *Hook*, Monsieur *Pecquet*, &c.

Pozzuolo

April the 24th, We went by Water to *Pozzuolo* (the Ancients *Puteoli*) where the Country People brought us abundance of Shells, dry'd *Hippocampi*, ancient Medals and *Entaglia*, nay, printed Glass to sell, which they said, they had raked out of the Sea. Near this place you see many Arches of Stone (13 Peers) reaching a good way into the Sea, which has given birth to that Opinion, that these are the Remnants of the beginning of *Caligula*'s Bridge over the Bay, and that from the Extremity of this Pile to *Baiæ*, the rest of the Bridge was made up of Vessels fastned together, and kept by Anchors on both sides. But to me, this seems to be the Ruins of a Mole or Peer, intended for the security of the Harbour, because upon every Peer, is to be seen a great Stone perforated, and jetting out to tie Vessels unto. Certain it is, as well from the manner of its Arches, as from the Bricks, that it was an ancient *Roman* Work.

Baiæ. The Baths of *Tritoli.*

From hence we pass'd cross the Gulph to *Baiæ*, to describe the Antiquities of which place, would require a Volume alone, for which reason we will refer the Reader to such, both *Latin* and *English* Authors, as have given us a full Description of them. I will content my self with giving you some Account of the Grots or sweating places, call'd by them *Bagne* (Baths) *de Tritoli*.

This is a strait and long Passage, like a long Entry, the upper part whereof is so hot, that should a Man walk long upright, he must be stifled by the hot Vapours which fill the upper part of this Vault, whereas the lower part is passable enough, so that every one is obliged to stoop. What I observed chiefly upon this Head was, that the lower part of the Vault, as far as it is tolerably cool, was covered on the sides with a very solid Stone, whereas the upper part was an unctuous, friable kind of Clay or Plaster; and what is more observable is, that at the very partition of the Stones and the Clay, on the sides of the Bath, the difference of the Degrees of Heat is very perceivable; so that where you find the Clay reach lower, you must rule the Inclination of your Body accordingly. We found a watery Vapour contained in these Sulphureous Steams, as was sufficiently manifest from the Drops, which notwithstanding the great heat, were condensed on the sides of the Vault.

The Cinder Mountain.

In our return from thence we took a view of the *New Mountain*, call'd by some *Monte di Cenere* (Cinder Mountain) raised by an Earthquake 1538 *September* the 29th, its whole Altitude being now about 100 Foot Perpendicular (tho' *Stephanus Pighius* makes it much higher and larger.) We were told that it produced nothing, yet we found *Myrtle*, *Mastick* Trees, and some other Shrubs there. It is composed of a spongy Earth, which makes a great sound if you stamp hard. By the same Earthquake the *Lacus Lucrinus* was fill'd up with Stones and Earth, and turned into a fenny Meadow. As we were coming back from *Pozzuolo*, we viewed also the Mountain call'd *Solfatara* (anciently *Campi Phlegræi*) which burns continually. On the very top of it is a very large excavated hole, of an Oval Figure, 1500 Foot long, and 1000 broad, where is the Burning; besides which, there are divers other holes, which convey the Smoak as out of a Furnace. Out of those Vents I gathered a kind of *Flores Sulphuris*, and *Sal Armoniac*, which stuck to the Mouths of those Holes, and thrusting a Sword into them, or any other Iron, you will find it all bedewed with drops of Water, an evident sign, that there is a considerable share of Water mixed with those fiery Exhalations; and what confirmed me the more in this Opinion, was, that those *Flores* would not burn or melt, by reason of the heterogeneous Particles mixed with them. The Inhabitants have a way of separating them from the Brimstone, which lies as thick as a Crust all over the Mountain. As you walk you hear the Earth give a sound every step you make, as it were hollow underneath; and what is more, if every thing be quiet, you may hear the very boiling and bubbling of the Minerals or other Liquors.

The Mountain *Solfatara.*

About five Miles distant from *Naples*, is the so much famed Mount *Vesuvius*, where we found the Ground all about the sides of it covered with Cinders and Porous Stones, which had been cast thus far during the Conflagration: We also perceived great Channels, such as are commonly left after strong and sudden Floods, which they told us were the Effects of the Waters, which at the time of burning, are thrown out of the Mountain. We found some *Acetosa ovilla* near the top, and a little lower *Colutea Scorpioides*, and some Shrubs of *Poplar*. It was very steep, jetting up to the top, where is a vast hollow Pit, of a Mile in compass, occasioned by the breaking out of the fiery Substance, at several times, with great violence. We observed also some small Vents or Passages for the Smoak, but were scarce considerable enough to threaten an Eruption.

Vesuvius.

We also took a view of the *Grotto di Cane* (Dogs Cave) near the Lake of *Agnano*: It is both narrow and short, and (whatever some have been pleased to tell the World) you may go into it, and continue there for a long time, without any prejudice, some of us staying at the further end of it, above an Hour; because the Vapour (whether Sulphureous or Arsenical) ascending not above a Foot above the Ground, which you may perceive plainly by the heat in your Feet and Legs, so that if you bend your Head towards the Ground, you will be immediately sensible of a smell like burning Brimstone, which seizing your Head, makes you stagger, and may stifle one. We took a Dog, and holding his Nose down near the Ground, almost kill'd him, then throwing him into the Lake to recover him (which is the general opinion it will) we found him too weak to swim, and so was drowned. We try'd the same Experiment with a Puller, which was kill'd immediately, and afterwards with a Frog, which likewise did not live long; and last of all with a Serpent, which did not hold out above half an Hour. If you hold a Candle below the part where the Vapours are, it is extinguished immediately. I am of opinion, that many more such Grots might be digged hereabouts.

Addita.

As we were going to this Grot, we pass'd thro' the artificial Passage or Vault, thro' Mount *Pausilipus*, performed by one *Cocceius*, in 15 Days. We judged it about half an *English* Mile long, tho' some will have it as long again. Where it is lowest, which is in the middle, it is 12 Foot high, and broad enough for two Carts to pass conveniently by one another. As it is so dark in the middle (no light coming in but at the two ends) that no body can see one another, so those that pass thro' it, cry always *Alla marina*, if they go to the Sea-side, and *Alla Montagna*, if they go towards the Country, so that each taking the Left-hand, they prevent the running upon one another.

The Hole thro' the Mount *Pausilipus.*

The Plants we thought fit to take particular notice of were, *Trifolium corniculatum incanum maritimum majus*; *Lotus siliquâ Ornithopodii*; *Medica orbiculata minor*; *Medica dolicea spinosa*; *Jacea purpurea maritima capitulo spinoso Neapolitana*; *Rhamnus primus* Clus. *Stœchas citrina altera tenuifolia sive Italica* J. B. *Linaria odorata*. *Monspessulana*, *Medica marina*; among the Sands near the Sea side. On the Rocks about *Puteoli* and *Baiæ*, *Cytisus incanus siliquis falcatis*; *Acanthus sativus*, *Laurus Tinus cæruleâ baccâ*; *Acacia altera trifolia* Ger. *Gnaphalium maritimum*; *Sonchus Creticus foliis laciniatis* C. B. *Chrysanthemi Cretici duæ autores differentiæ*; *Faba Veterum foliis serratis*. *Moly parvum caule triangulo*; *Centaureum luteum novum* Col. *Cerinthe minor flore luteo*; *Lychnis sylvestris hirta*. Lob. *Lychnis montana viscosa alba latifolia* C. B. *Gramen tremulum maximum*; *Lagopus maximus* Ger. On and about the Mountain *Vesuvius*, *Helianthemum flore maculoso* Col. *Trifolium stellatum* C. B. *Vicia seu Lathyrus gramineo folio flore coccineo*; *Colutea Scorpioides*; *Lotus arbor*; *Arbutus*; *Linaria graminea floribus congestis purpureis*; *Linaria purpurea magna* J. B. *Genista Hispanica*. By the way, as you go up from the City to the Convent of the *Camaldulenses*, *Marrubium Chymistarum* Lob. *Aristolochia rotunda*, *Orobus sylvaticus Vicia foliis* C. B. *Laurus*, *Chrysanthemum Bellidis*

plants near *Naples.*

Plants growing about *Messina.*

foile

folio, Digitalis lutea vel pallida parvo flore C. B. *Hemionitis multifida, Horminum luteum glutinosum, sive Colus Fœvis; Trifolium bituminosum,* of which you see abundance both in *Sicily* and *Italy*. *Cytisus hirsutus* J. B. whole Woods of *Chesnuts*; *Genista Hispanica*; *Celutea tum vesicaria tum scorpioides*; *Ferula* Lob. *Genista tinctoria Hispanica*; *Vicia floribus pallide luteis amplissimis*; *Aster montanus luteus Salicis glabro folio*; *Millefolium odoratum*; *Hesperis sylvestris latifolia flo. albo parvo* Park. *Androsæmum fœtidum sive Tragium*; *Speculum Veneris majus*; *Pancratium* Lob. near the Sea-shore about *Naples*. *Lotus corniculata siliquis singularibus vel binis, tenuis* J. B. *Tribulus terrestris copiosissime*; *Hyoscyamus albus*; *Juncus cyperoides Maritimus* Ad. Lob. frequently in the sandy Grounds near the Sea-shoar, both in *Sicily* and *Italy*. *Mala insana Italis Melongena*, sold at *Naples* in the Herb-Market; as likewise *Cucumis flexuosus anguinus, Cucumeres*, call'd otherwise *Citrulli*, after the *Italians*. Melones aquatici *cucumere*; *Cucurbita anguina*; Lob. *Malus Limonia fructu parvo*, the *Messineses* and *Neapolitans* call them *Limoncelles*; fructus rarò habet nucleos.

We observed the Fish-boats out at Sea with Lights at one end, to draw the Fish after it, and so they strike them with a Mole-spear.

April the 29th, We continued our Voyage in the same Vessel, that had brought us hither, to *Sicily*, and arrived *May* the second at *Messina*: We sail'd by the *Æolides* or *Vulcaniæ insulæ*, two of which, viz. *Stromboli* and *Vulcano*, do still burn; we saw the first all in flames as we pass'd by in the Night time. It being no easie matter to make the Mouth of the Streight, by the *Faro* of *Messina*, by reason of the Current, which is very violent here, sometimes running towards *Calabria*, sometimes towards *Sicily*; Our Master was forced to hire a Pilot for ten Pieces of Eight, who conducted us.

Æolides.

Messina.

The Harbour of *Messina* it self is very good, being enclosed by the City it self on one side, and on the other by a neck of Land. As the Houses along the Sea-side are loftily built of Stone, they make a goodly show at a distance, but are but indifferent within, and the Streets narrow and ill paved, which verifies the *Italian* Proverb, *At* Messina *you have Dust, Fleas and Whores in plenty*. This City stands in competition with *Palermo*, both pretending to the Title of being the *Metropolis* of *Sicily*, which is the Reason that the *Viceroy* resides 18 Months in each, during his Government. The *Messinese* boast of great Privileges granted by *Charles* V. the Emperour, and pretend to the Monopoly of Silk, which was indeed formerly vended at *Messina*, but the *Palermitans* having got a considerable share of that Trade into their own Hands since, this causes great Jealousies between those two great Cities, which affects the whole Kingdom, some taking part with one, and some with the other of those two Cities. The Inhabitants of *Messina* are none of the most polish'd, haughty in their Conversation, and very much subject to Rebellion. The *Spaniards* are in possession of four Castles in and about the City, and the *Messinese* of as many; for the rest, the City Gates are open at all times. The Government of this City is administred by six Persons, whom they call *Jurats*, four of which are chosen out of the Gentry, and two out of the common Citizens. Their Government is annual, and tho' the first have the Majority of Votes, yet can they transact nothing of moment, without the Consent of the others; tho' the *Spaniards* have taken care to reduce their Authority into such narrow Bounds, that there is no great occasion of Contest among them upon this score.

Plants growing about *Messina.*

Of Plants we found here on the Baich or Languet of Land, between the Haven of *Messina* and the *Fretum Siculum*, *Peucedanum majus Italicum*; *Linaria angustifolia flore luteo, vulgæ persimilis*; *Sideritis verticillis spinosis* J. B. *Fœnugræco sylvestri Tragi in quibusdam accedens planta* J. B. Some call this Plant *Vicia Sesamacea Apula*; I think it might be fitly titled *Glaux peregrina annua*; *Vicia maritima multiflora alba, Messanensis nobis dicta*; *Spina Solstitialis flore conniveute, capitulis sessilibus*; An Solstitialis minor Apula *Col? Thlaspi clypeatum hieracifolium majus* Park. *Trifolium stellatum* C. B. *Polygonum niveum*; *Securidaca siliquis planis dentatis* Ger. *Trifolium capitulis globosis sine pediculis caulibus adnexis*; *In Anglia* hanc speciem nuper invenimus. *Gramen tremulum maximum*; *Melilotus Messanensis procumbens, foliculis, staticantibus, per maturitatem, rugosis, subalatis, spicæ florum brevior, verum seminibus grandioribus quam Melilotus vulgaris*: *Agilops Narbonensis* Lob. *Graminis Alopecuroidis nova species*: *Ornithopodium majus*; *Ammi vulgare*; *Cynosurum sylvestre alterum Dioscoridis Italorum* Lob. *Syringochium majus* Ger.

In other places, especially on the Hills above the City, *Ricinus sive Palma Christi* in the Hedges plentifully, both here and in other places of *Sicily*. *Tordylium*

sive Seseli Creticum minus Park. *Convolvulus Althææ folio*; *Alsine folio oblongo serrato, flore cæruleo* J. B. *Valeriana Mexicana*; *Arbutus*; *Sonchus lanatus* Dalechampii; *Geranium cicutæ folio, acutangulissimâ* C. B. *Lupinus sylvestris flore cæruleo*; *Lupinus flore luteo*; *Senecionis an Chrysanthemi species folio Bellidis*; *Calix* Senecionis calicem exactè refert, verùm *Flos* circulum habet foliorum in margine ad modum Jacobææ; Plantula tenera est, radicem habens fibrosam, folia Bellidis. *Lychnis parva, folio angusto, flore rubello*. Ab aliis facile distinguitur, quòd calix floris longus sit & gracilis, ipsáque florum petala ad unguem propè fissa velut Alsines. *Trifolium halicacabum sive vesicarium* J. B. *Hedysarum clypeatum* Ger. *flore purpureo & albo*; *Trifolium bituminosum*, ubique; *Lotus siliquâ quadratâ* Ger. *Gladiolus Narbonensis* Lob. *Medica orbiculata lævis major & minor. Medica fructu ovali echinato*; *Scorpioides Bupleuri folio* Ger. *Anagyris fœtida*; *Cratægonon seu Euphrasia erecta flore luteo magno*; *Radix* huic non simplex sed surculosa, annua. *Caulis* erectus cubitalis aut etiam altior, quadratus, nonnihil lanuginosus. *Folia* plerunque ex adverso bina, longa, angusta, rariùs dentata, & omnino foliis Cratægoni Euphrosynes facie similia. Spica *florum* in summo congesta, quadrata, lanuginosa & nonnihil etiam viscida. *Flores* lutei, ampli, cucullati, figurâ florum Ladani segetum.

Cratægonon erectum flore vario ex albo & purpureo; Priori simillimum est, & in eo præcipuè differt, quòd non sit adeò procerum, quòd caules & aliquando etiam margines foliorum rubeant, quòd flores minores sint & coloris diversi; cuculli v. g. rubent, Labia medio albent, ad margines rubore diluuntur. Possent hæ plantæ ad Cristas galli reduci; nos in catalogo ad Melampyra retulimus. *Holosteum Plantaginis simile* J. B. *Gramen dactylon geminâ spicâ*; *Asphodelus major ramosus flore albo* J. B. *Aster luteus foliis ad florem rigidis* C. B. *Trachelium parvum, folio Bellidis subrotundo, Radix* ei alba, simplex, lignosa, annua. *Caulis* erectus, striatus. *Folia* alternatim posita, subrotunda, sine pediculis caulibus adnexa. *Flores* Trachelii. *Trifolium album rectum hirsutum valdè* J. B. Dorycnii species; *Medica orbiculata fructu circa margines dentato*, an Medica coronata Cherleri *J. B. Lychnis ad Pseudomelanthium accedens, glabra ferè. Radice* nititur albâ, lignosâ, unde & planta annua esse videtur. *Caulis* nunc simplex ab eadem radice exurgit, nunc multiplex, vel saltem ab imo statim ramosus, pro ratione soli in quo nascitur, geniculatus. *Folia* ad genicula ex adverso bina, viridia, longa, angusta, Graminis leucanthemi foliis nonnihil similia, raris pilis hirsuta. *Flores* in summitatibus caulis & ramorum pediculis longis insident, quinquefolii pallidè purpurei, vice staminum in medio habentes calicem è quinque foliolis in summo bifidis compositum, ut Lychnidis sylvestris flores. *Perianthium* seu calix floris striatus velut Pseudomelanthii. Semina nondum maturuerant. *Absinthium arborescens*; *Paronychia sive Alsines folia incana* J. B. *Androsæmum fœtidum* Park. i. e. *Tragium*; *Acanthus sativus*; *Sedum medium flore albo, apicibus staminum luteis*; *Ferula* Lob. *Thapsia latifolia Hispanica* Park. *latifolia* P. Castello in Catal. Messanensi. *Hyssopus sylvat. Halymus* Lob. propè Pharon Messan. abundat, item in arenosis ad maris litus, versus meridiem, *Agnus castus* ibidem; *Oleander*, ad aquarum rivulos frequens; *Serbus vulgaris domestica*; *Myrtus angustifolia*; *Thymelæa* Ger. *Hieracium calice barbato* Col. *Chondrilla saxatilis viscosa caule* [illegible] Col. *Aceteſa Cymi folio Neapolitana*, [illegible] Col. ubique in Sicilia; *Scrophularia Rutæ canina dicta*; *Linaria altera botryodes montana* Col. frequens in montosis; *Asteris species, an Bacchâris* Col? *Daucii* 3 *Dioscoridis* Col. *Carduus Chrysanthemus Narbonensis* Ger. *Cardum chrysanthemus* Dod. *Carlina sylvestris vulgaris* Clus. *Psyllium vulgare*; *Kali majus semine cochleato*; *Lotus arbor*; *Cotinus Chamæmespilo similis*; *Valeriana rubra* Dod. *Delphinium sylvestre*; *Antirrhinum luteum* Ger. *Colutea scorpioides*; *Chrysocome capitulis conglobatis* Ger. *Alsine folio crassiore* P. Castel. *Lanaria sive Struthium Dioscoridis Imperato* J. B. upon the Rocks. *Botrys vulgaris*; *Marrhubium album fœtidum* P. Castel. *Acarna flore purpureo-rubente patulo* C. B. i. e. *leucographus semifolius Messanensis* P. Castel. *Cerinthe flo. pallidè luteo*; *Chondrilla viminea* Lob. *Cicer sativum*; Plurimæ *Astragali, Lathyri & Viciæ* species, quas tempore exclusionis satis accuratè distinximus; *Cymbalaria Italica*; *Cucumis asininus*: quæ & hîc & plu-

ribus

ribus *Italiæ, Melitæ, Siciliaque* locis ruderatis frequens occurrit. *Hyoscyamus albus major & minor*, which sort only we found in *Italy* and *Sicily*; *Juncus acutus maritimus capitulis rotundis* C. B. *Scæbe Salamantica prima Clusii* Park. *Caucalis maritima supina echinato magno fructu*; Ad maris litus ubique tam in *Sicilia* quàm in *Italia*, *Nigella arvensis*; *Oxys lutea* Ger. *Reseda major flore albo*; *Rhamnus salicis folio*, i. e. *Oleaster Germanicus Cordi*, ut vult P. Castel. *Satureia S. Juliani* Ger. *Scrophularia urticæ folio*; *Linaria pusilla procumbens latifolia, flore albo, rictu luteo. Radix* huic simplex quidem, verùm multis fibris majusculis stipata, sublutea, annua. *Cauliculi* exinde emergunt plures infirmi, rotundi, glauci. *Folia* Polygoni foliorum figurâ sed minora, glauca, nunc bina ex adverso, nunc terna, & interdum etiam quaterna simul ad eundem exortum, & proinde ramuli nunc singuli, nunc bini, nunc terni simul. *Flores* longis pedicellis subnixi, albi, rictu luteo, calcaribus tenuibus longissimis; pars illa floris quæ erigitur, in medio fissa in duas velut auriculas dividitur. Florem quinque circumstant foliola viridia pro calice. Postquam flos evanuit pediculus ejus deorsum incurvatur. *Vasculum seminale* rotundum apparet, Anagallidis vasculo simile; Verùm si curiosè spectetur, duos habet lobos seminibus repletos pusillis, rufis. Frequens est *Messanæ* in vineis & hortis. Quam primùm semen maturescit vasculum seminale dehiscit, adeò ut difficile sit ejus semina colligere. *Hyssopoides major flore grandiore*; *Melissæ quædam species* non deser. *Tithymalus arboreus*; *Tithymalus folio longo glauco, caule rubro, seminibus verrucosis*; *Teucrium arborescens lucidum*; *Iberis Cardamantica*; *Alaternus*; *Elatine flore cæruleo*; *Cyperus paniculis squamosis*; which I take to have been *Tràs*, but we regarded not the Root of it. *Anthyllis leguminosa flore rubro*; *Erica ramulis per intervalla ternis*; *Chamæcistus annuus flore luteo*; *Urtica Romana*, passim; *Securidaca minor* Ad. *Lagopus altera angustifolia* Lob. *Coronopus foliis acutis in margine dentatis.*

May the 5th, We hired a *Feluca* to carry us to, and bring us back from *Maltha.*

Catania. *May* the 6th, We sail'd with a brisk Gale as far as *Catanea*, 60 Miles beyond *Messina*, a little Town, having nothing considerable in it, but two or three good Convents.

May the 7th, We made 40 Miles to *Syracusa*, and sail'd in sight of *Augusta*, famous for the goodness of its Wines.

Syracusa. The small City of *Syracusa*, as it now is, is only part of the ancient *Syracusa*, call'd Νῆσος, being but indifferently built and slenderly inhabited, but very well fortified to the Land-side, by the *Knights Hospitallers* after they had been expell'd *Rhodes* by the *Turks*; but *Charles* V. thought it more expedient to bestow a Settlement upon them in the Isle of *Maltha*. About two Miles from the present City, you see the Ruins of the ancient *Syracusæ*, and among the rest, the Remnants of an Amphitheater.

The Grot call'd *Dionysius his Ear.* We were also shown the Grot, commonly call'd *Dionysius his Ear*, being cut out of the side of a high Cliff, it is high roof'd, but not long, and goes a little winding. In our return from *Maltha*, we took a view of one of the Burying-places, or Catacombs of the Ancients, of which there are divers here and in *Maltha*. This belonged to St. *Anthony*'s Church, and consisted of many vaulted Walks cut out of the Rock, having on each Hand other Vaults, at right angles with them, the Floors of which were about two Foot higher, than the Floor of the main Walk, hewn into Troughs or *Loculi*, wherein they used to depositе their dead Bodies: In some of those were 20 *Loculi*, more or less. At certain Intervals, you come to round Rooms or Halls in the main Walks, where several of them meet together, so that the whole being of a great extent, might contain many thousands of dead Bodies.

Capo Passaro. *May* the 8th, The Wind being contrary, we rowed as far as *Capo Passaro*, 40 Miles from *Syracusa*, call'd *Promontorium Pachynum*, by the Ancients. Upon the very utmost point of Land, stood formerly a small Castle, which being not long ago took off by the Sea, stands now in a small Island. The strong Wind obliging us to tarry here two Days, we spent part of our time in looking after Plants, of which this little Island afforded great variety, *viz.*

Its Plants. *Lotus siliquâ quadrata* Ger. *Lotus siliquis Ornithopodii*; *Lotus edulis Creticus* Park. forte *Lotopisum belli*, which we found also about *Naples*, tho' it be not mentioned there. *Lentiscus Chamærrhiphes sive palma minor*; *Limonium folio sinuato* Ger. *Chrysanthemum Creticum* Ger. *Aster luteus folio ad florem rigidis* C. B. *Medica magna turbinata* J. B. *Auricula muris* Camerarii, *Medica doliata spinosa*; *Gnaphalium roseum* Park. *Hedysarum clypeatum minus flore purpureo*; *Onobrychis fructu echinato minor* C. B. Flores huic parvi, purpurei, semen grande. *Trifolium halicacebum sive vesicarium*; *Asphodelus major ramosus flore albo*; *Asph. luteus sive hasta regia*; *Asph. minor* Clus. *Echium procumbens flore parvo, cæruleo*; *ornithogalum spicatum* Ger. *Facea lutea capite spinoso*; *Carduus lacteus peregrinus* Cam. *an potius Silybum majus annuum* Park? *Carduus galactites* J. B. *Teucrium Baticum* Ger. *Tragopogon perenne foliis angustis, incanis, floribus dilute cæruleis*; an potius *Scorzonera dicenda? Sanamunda tertia* Clus. *Anonis viscosa, spinis carens lutea major* C. B. *Convolvulus cæruleus minor, folio oblongo* Ger. *Ammi vulgare & foliis magis incisis*; *Meda orbiculata major* J. B. *Tordylium majus*; *Scorpioides Bupleuri folio*; *Crithmum spinosum sive Pastinaca marina*; *Passerina* Lob. *Aparine semine Coriandri Saccharato*; *Trifolium stellatum* C. B. *Cerinthe flore luteo*; *Melissa peregrina flore albo, Cortex* ramulorum antiquiorum (caules enim perennant) cinereus, juniorum ruber. *Caules* quadrati. *Folia* bina ex adverso, quàm Melissæ minora, pediculis satis longis subnixa. *Flores* cucullati albi, cum aliqua tamen ruboris mixtura. *Vascula* seminalia qualia Moluccæ lævis ferè, excepto quòd in quinque lacinias dividantur, duabus inferiùs, tribus superiùs sitis. *Semina* itidem qualia Moluccæ. Odor plantæ gravis. *Nigella arvensis*; *Sysirynchium majus*; *Limonium parvum Narbonense oleæfolium*; *Cichorea spinosa Cretica* Ponæ; *Daucus lucidus*; *Asparagus petræus sive corruda*; *Tragos sive Uva marina major herbariorum* Lob. *Beta Cretica spinosa* Park. *Trifolium capitulis glomeratis, glomerulis spinosis*; *Linum sylvestre cæruleum*; *Calcha arvensis*; *Atractylis*; *Cruciata minima muralis* Col. *Coronopus foliis acutis in margine dentatis*, i. e. *Plantagini affinis*; *Bibinella Siciliæ herbula*, J. B. *Malva flo. carneo minore*; *Ex radice* alba simplici plures emittit *caules* humi procumbentes, hirsutos, superna parte rubentes. *Folia* ima subrotunda, longis pediculis annexa; quæ in caulibus sunt in tres aut quinque lacinias dissecta, hirsuta & circa margines crenata. *Flores* parvi, quinquefolii, carnei. *Semina* qualia malvæ vulgaris; *Alaternus*; *Phillyrea latifolia seu serrata secunda* Clus. *Glaux peregrina annua*; *Iva moschata Monspeliensium*; *Asparagus sylvest. spinosus* Clus. *Sedum minus luteum ramulis reflexis*; *Geranium procumbens Althææ folio.*

May the 10th, We put to Sea again, but the contrary Winds forcing us back to *puzzallu*, we rowed six Miles further to the South, and put into a small Harbour call'd *Punto Cerciolo*, where being detained for three Days (having no other shelter than two or three miserable Huts, no other Beds than old Straw, and for our Food, the Flesh of some Tortoises) we had leisure enough to search the neighbouring Country for Plants, of which we found *Panax Herculium majus* Ger. *Cinara sylvestris* Ger. *Ruta sylvestris*; *Limonium elegans Rauwolfii*; *Beta Cretica spinosa* Park. *Medica orbiculata fructu minore*; *Med. orbiculata elegans, fructu circum oras rugoso*; *Hypericum foliis parvis crispis seu sinuatis*; *Perfoliata angustifolia montana* Col. *Siliqua arbor seu Panis St. Johannis*; *Medica marina*; *Anonis lutea parva procumbens.* In arenosis nascitur *radice* albâ, longâ, simplici, fibris nunc paucioribus nunc pluribus & majoribus donatâ; *Folia* ei parva, tripartitò divisa, pediculis nullis, verùm duæ inferiores partes cauli adjacent ut in Lotis fit, ac proinde hæc planta eodem modo trifolia est quo Loti quinquefoliæ. Quinetiam folia saturè viridia sunt, in margine eleganter dentata, alternatim posita. *Flores* lutei Anonidis vulgaris. *Siliquæ* breves, tumidæ, subrotundæ, duobus intus ordinibus seminum figura lienis præditorum. In arenosis maris litoribus circa Siciliam frequens, v. g. propè Cataneam, circa Promontorium *Pachynum* & hoc in loco. *Cistus mas 4 folio oblongo albido* J. B. *Lotus flore luteo, corniculis articulatis. Radix* ei simplex alba, in nonnullis tamen plantis ima parte in fibras spargitur. *Caulículi* plures in terram procumbentes. *Folia* glauca, pentaphylla si auriculas ad caulem hinc indè appositas adnumeres. *Flores* parvi, lutei, Trifolii corniculati sed minores, ad nodos nunc singuli nunc bini & interdum etiam terni. *Siliquæ* graciles, longæ, contortæ in spiram seu corniculatæ, articulatæ, *semina* oblonga in singulis internodiis continentes. *Caucalis maritima* J. B. *Smyrnium Creticum*; *Gladiolus Narbonensis*; *Polium montanum album*; *Saxifragia Venetorum* Ad. *Psyllium vulgare*; *Acanthium Illyricum*; *Telephium scorpioides* Anguillaræ: *Tragos sive uva marina major* J. B. *Opuntia marina*, in litus rejecta, besides many others observed in other places.

How they take Tortoises. *May* the 13th, The Wind being become favourable, carried us soon over to *Maltha*. In our passage, we saw the Sea-men take several Tortoises, which when they see floating upon the Water at a distance, they approach them in Boats, with as little noise as possibly they can, and so either catch them with their Hands, or turn them upon their

their backs, when they are eaſily catch'd, being not able either to turn or move themſelves. They are of opinion, that the Tortoiſe, while he floats thus upon the Surface of the Water, is a-ſleep, which appears not altogether improbable.

Barnacle-ſhells upon the Tortoiſes.

We obſerved in one of thoſe Tortoiſes, two great bunches of *Barnacle-ſhells*, as they are commonly call'd, growing on his Back: The fabulous Opinion of *Meyerus* and others, of Birds breeding in them, is not worth mentioning, theſe pretended Barnacles, ſaid to be bred in them, being hatch'd of Eggs of their own laying, like other Birds, is being certain out of *Pontanus*, that the *Dutch* in their third Voyage, for the Diſcovery of the North-paſſage to *China*, at 80 Degrees 11 Min. North Latitude, did find two Iſlands, in which they found many of thoſe Geeſe hatching their Eggs: Theſe Bunches or Shells, are no more than a kind of *Balanus marinus*, which never undergo any change, but that they encreaſe in bigneſs, as other Shells do.

But before we leave *Sicily*, it is fit I ſhould mention what Plants we found about *Catania* and *Syracuſa*. About *Catania*, *Scammonea Monſpeliaca affinis* Park. *Plumbago Plinii*, *Agnus Caſtus*, *Cruciata marina*, *Anonis marina procumbens flore luteo*, jam deſcripta; *Sedum minimum non acre totum rubrum, flore hexaphyllo purpureo*. Upon Mount *Ætna*, *Tragacantha* C. B. towards the top of the Mountain we obſerved *Berberry-trees* growing plentifully, a rare ſhrub in hot Countries, and which we did not find in any other place, either in *Italy* or *Sicily*; nay, a common Gooſe-berry-buſh is accounted a rarity at *Meſſina*. About *Syracuſa*, *Thymum Cretcum* Ger. *Origanum flore albo, capitulis ſquammatis rotundis*; *Verbaſcum* 4 Matthioli. The ſame kind of *Meliſſa* we ſaw about *Meſſina*, *Teucrium Beticum*, *Jacea lutea capitulis ſpinoſis*, *Lagopus quadam procumbens ſpicâ longiore*, *Anonis purpurea minima ſupina non ſpinoſa*, &c.

Malta.

The Iſle of *Malta* is about 20 Miles long, 12 broad, and 60 in circumference; its diſtance from the utmoſt point of the Land of *Sicily*, on that ſide, about 60 Miles; from the Cape of *Calipia* (the Ancients *Promontorium Mercurii*) the neareſt Point of the African Continent 200 Miles, and from the *Italian Cape* of *Spartivento* 190, ſo that in reſpect of its Vicinity, it ought rather to be accounted part of *Europe* than *Africk*, tho' the Native Inhabitants, ſpeak a kind of *Moreſco* or *Arabic*.

The old City of this Iſland, ſituate near its Center, hath 35 Deg. 15 Min. North Lat. the longeſt Day there being about 14 Hours 52 Min. and this I ſpeak upon the credit of the learned *Johannes Franciſcus Abela*, who being a Native of this Iſle, has made the moſt exact Obſervations thereof, that can be, as may be ſeen in his *Malta illuſtrata*, publiſhed in *Italian*, 1646. being not Ignorant, that ſuch Authors as would have this Iſle to be part of *Africk*, place it much nearer to the *Barbary* Coaſt, and conſequently allow it a leſs Latitude. The ſhalloweſs of the Soil here being not above two Foot above the Rocks, and the loweſs of its Situation not far above the Level of the Water, ſeems to intimate, That in moſt ancient times, it was one entire large Rock, which being by degrees covered with Earth, produced this Iſland; what confirms one in this Opinion, is the vaſt number of Shells, Sharks-teeth, and other Cockles petrefied, which are found even in the remoteſt part of the Iſland. Yet notwithſtanding this ſhalloweſs of the Earth above the Rocks, this Iſland has always been celebrated for its Fertility, according to *Ovid. Faſt.*

Its Soil.

Fertilis eſt Melite ſterili vicina Cyrenæ
Inſula.

But this muſt not be apply'd to Corn, their Wheat being very thin and rare here, and the Barley, of which the common People make their Bread, not ſufficient for their uſe, wherewith they are ſupply'd as well as with Wheat from *Sicily*.

Its Products.

The Products of *Malta* are *Cumin-ſeed*, of which they ſell yearly 3000 *Cantares*, each of which is equivalent to 116 Pounds *Engliſh* weight: *Anniſe-ſeed*, of which they tranſport yearly about 1000 *Cantares*, they ſell thoſe Seeds at 7, 8, or 9 Crowns the *Cantare*: Of Cotten-wool (*Goſſipium* in *Latin*) they export in the huſk yearly, 12000 *Cantares*.

Our before-mentioned Author tells us, that of late they have applied themſelves to the planting of *Indigo* with good ſucceſs. He alſo ſpeaks of a certain Excreſcency growing on the Rock call'd *St. Maria el Aabia*, and other Rocks on the North-ſide of the Iſland, call'd *Vorella* by the Inhabitants, which being cleanſed with a certain Liquor (he names not) and mix'd with ſome Ingredients, is dried in the Sun, and produces a good Carnation dye. This kind of Maſs, call'd *Renkerig* in *Wales*, and *Cork* or *Arcel* in *England*, is gathered and uſed for the ſame purpoſes in *Wales* and the North of *England*.

The breed of the *Catuli Meliteæ*, or little Dogs of *Malta* is quite loſt; but their Cats are much eſteem'd now. The Roſes and Honey of *Malta* may contend for goodneſs with any in the World, and ſome are of opinion, that it got the name of *Melita* from the *Greek* Word Μελι, ſignifying Honey.

As the Air is very ſerene here, ſo the People are long liv'd and healthful. It rains not much here, yet ſufficient to feed their Springs, of which they have a good number about the middle of the Iſle.

The Original of Springs.

Our before-mentioned Author ſufficiently proves, that thoſe Springs owe their Original to Rain Water, becauſe they are found at the Foot of little porous rocky Hills, or a chalky Earth, call'd *Giorgolena*, which imbibes, and afterwards lets out again the Rain. This Opinion ſeems to me very probable, becauſe in all the Obſervations I ever could make even on the higheſt Hill in *England* and Wales, I never found any Spring breaking out on, or near the top of a Mountain, but that there was Earth enough to feed it; nor are they ever to be ſeen in Plains, unleſs ſome Hills are near to feed them. (2) Many Springs quite fail in dry Seaſons, and moſt of them conſiderably abate. (3) in Clay Grounds, which ſoaks little or no Water in, few Springs are found, whereas in ſandy, rocky and gravelly Grounds, into which the Water has an eaſie admittance, you ſeldom fail of them. The Arguments uſed by thoſe who would have Springs receive their Supplies from the Seas, have not given ſufficient Proofs of the aſcent of the Water to the tops of the Mountains, to contradict ours: And thoſe who attribute the Original of Springs to the Watery Vapours, elevated by the ſubterraneous Fires, muſt firſt prove the ſame to be ſo intenſe as to be able to elevate thoſe Vapours at ſo prodigious a height, and thro' ſo thick a Coat of Earth. Mr. *Hook*'s Argument, *viz.* That the Salt-water, by reaſon of its preponderancy, forces up the freſh Water as high above the Surface of the Sea, as the tops of the Mountains are, before it comes to an *æquilibrium*, would certainly be to be preferr'd before the reſt, could he as eaſily move continued cloſe Channels from the bottom of the Sea, to the tops of the Mountains.

Ebbing and flowing Wells.

The Objection made from the ebbing and flowing Wells, is of no great ſtreſs againſt our Aſſertion, it being certain, that none of all thoſe Flowing Wells that ever I ſaw, follow the Motion of the Sea, but ebb and flow two or three times, and ſometimes oftner, every Hour; excepting one I ſaw in *Wales*, which is not above ¼ of a Mile from the Sea, in a ſandy Ground, which obſerves the due flux and reflux of the Tide, but is no running Water, which makes me ſhrewdly ſuſpect what has been written of thoſe Wells, which being at a good diſtance from the Sea, are ſaid to follow its Motions.

The Harbour of Malta.

But to return to *Malta*: It has a commodious and ſecure double Harbour, the ſame being ſeparated by a ſmall Point or Neck of Land, of about 1500 Canes (each of which contains 10 Palms of *Roman* Meaſure) long, and 380 broad upon which the new City is built. That on the *Weſtern* ſide is call'd ſimply the Harbour 1800 Canes long, containing ſeveral ſmall creeks. That on the *Eaſt* ſide call'd *Marſa moſcetto*, not inferiour in bigneſs to the other, having within its compaſs a little Iſle, where is the Hoſpital, near which, Ships that come from infected places, keep their *Quarentine*.

The City Valetta.

The New City, call'd *Valetta*, conſiſts of 20 Streets, eighe of which extend in length, and twelve in breadth, all very ſtreight, but not paved, as lying upon a ſolid Rock: All the uniformity they want, being their unevenneſs, which is unavoidable upon rocky Grounds. The Houſes are built of Stone, flat roofs, and covered with a kind of Plaiſter, which is ſufficient to keep out the Water, in places where it rains ſo little. Theſe Houſes are rather commodious than lofty; and they put their Beds in the Summer time, upon the Roofs of them, for the conveniency of the cool Air, as they do frequently in the Eaſtern Countries. According to a ſurvey taken 1632. the number of Houſes was 1891. and of Inhabitants 10744. which is conſiderably encreaſed ſince. Over one of the Gates leading to the Land-ſide, call'd *Porta Reale*, is an Inſcription, intimating, That the City of *Valetta* was founded the 28th of *March*, 1566. by *John de Valetta*, Great Maſter of the Order, and named after him.

Its Fortifications are accounted impregnable, and would have required an incredible Sum of Money, had they not Stronger hand; and Slaves to work; for beſides the

inward

inward double Walls, the Out-works comprehend a great space of void Ground, sufficient to receive the Country People, in case of an Invasion from an Enemy: All the Walls, Bastions, and other Works are vaulted. There is a Market kept here every Morning, well furnished with all sorts of Provisions, at a reasonable rate.

St. John Baptist's Church. The chief Buildings belonging to this City are, The Church dedicated to St. *John Baptist*, the Patron of this Order, containing many well beautified and richly gilt Chapels and Altar-pieces. Here are the Tombs of the Great Masters, since they were possess'd of this Island.

The Castle St. Elmo. The Castle of St. *Elmo*, which stood here before the City, at the very point of the Cape, is very strong, but not large; on the top of it is a constant Watch kept, who by setting up a Flag, lesser or bigger, according to the bulk of the Vessel they see approach the Coast, give notice thereof to the City; if there be two or three, they set up as many Flags as they discover Vessels, and always place them to the W. S. N. or E. according as the Ships come from one or other of those Quarters. This Castle is also a kind of Prison of State, for such Knights as are to be kept under restraint. Just before it you see certain Caves hew'd out of the Rocks, in the shape of a *Cupola*, with narrow Entrances on the top, where they keep as much Corn as will suffice the City for a Twelve-month; here they also keep their stores of Oil, Wines, and other Necessaries.

The Halls of the divers Nations. This Order being composed of eight several Nations, viz. *French*, *Italians*, *Germans*, *English*, *Provencals*, *Auvergnois*, *Castilians* and *Aragonians*, these have each their *Alberghi* or Halls, being fair Structures or Colleges, in each of which is a publick Hall, for the Knights of each Nation, to dine and sup in, when they please; or to have their share sent to their homes, or wherever they think fit. The Head or Master of each of those Halls or *Alberghi's*, is *Grand Prior* of his Nation, of the Great Cross (*Gran Croce* they term it) and a Member of the Privy Council, being distinguished from the rest by a large white Cross, embroidred of Silk, upon their Breasts. The *Alberghi* of the *English* Nation, is at present only a piece of Ground, enclosed with a Wall, which, as we were told, some of the Citizens would have bought to build upon, but were not permitted to do it.

The Armory. The Armory within the Great Master's Palace, is worth a Travellor's Observation, consisting of two Rooms, the largest of which (call'd the Hall) is the fairest and biggest that ever I saw of that kind. Both Rooms contain Arms for 30000 Men, curiously kept.

Hospital. The Hospital a goodly Structure, where the sick Persons are served by a certain number of Knights appointed for that purpose, according to their Institution, their very name being *Knights Hospitallers*. We saw them serve the Meat thus, The Meat being brought into the middle of a large Room, where many of the sick lay; one of the Knights read the Names of the Sick, one after another, out of the Physicians Bill, prescribing each Person his peculiar Diet; as he read a Name, the Cook took what was appropriated to him, whose Name was read, and dishing it up, delivered it to one of the Knights, who carried it to the Bed side, where stood a Stool ready covered with a Napkin, with Bread and Salt upon it. If any of the Order falls sick, he is obliged to be here, and two Knights are appointed to attend him.

Palace of the Grand Master. The Palace of the Great Master, has its peculiar Apartments for Winter and Summer: His Stable is worth seeing, having 40 or 50 great Horses, besides Saddle and Coach-horses, a considerable number, considering the scarcity of Horses here.

The Slaves Prison. The Prison for the Slaves, is a large square Building; here all the Slaves are obliged to lodge at Night, as long as the Galleys are abroad, but when they are come home, those belonging to private Persons, may stay at their Masters House. At our time there were 2000 belonging to the Order, and 200 to private Persons, besides those that were abroad in the Galleys.

The Isola, or Invincible City. Besides the *New City*, there are three large Boroughs, separated from the first only by the breadth of the Harbour. (1) The *Isola* (as they call it) or the Borough of *Senglea*, with the Fort call'd St. *Michael*, is built upon a small *Peninsula*, made by two Creeks of the Great Harbour; it has 994 Houses, and 4050 Souls. It has got the name of *Città invitta*, or the Invincible City, ever since the *Turks* were baffled before it, 1565. The (2) the *Burgo del Castello à mare*, being likewise built on a little Neck of Land, made by two Creeks of the same Harbour; on the utmost point of which, stands the Castle of St. *Angelo*, separated from the Town by a broad Chanel, cut thro' the Neck of Land, for its greater strength. This Borough contains about 782 Houses, and 3063 Souls, having got the surname of *Vittoriosa*, from its brave defence it made against the *Turks*, 1565. Betwixt these two Boroughs lie constantly the Galleys and other Vessels, for the greater security of which, they close it with an Iron Chain, in time of danger. (3) *Birmula*, is rather a Suburb of the first, yet contains 642 Houses, and 2778 Souls.

The Victorious City.

The Old City. *May* the 25th, We took a *Tour* into the Country, and passing thro' two large Villages, we came to the *Old City*, call'd anciently *Melite*, after the Island; now *Città notabile*, formerly a great and populous City, but contains at present, not above 569 Houses, and 2620 Souls, most of the Inhabitants having settled themselves in the *New City* of *Valetta*. Here we saw St. *Paul's Pillar* (as they call it) where he preach'd; and if you will believe them, his Voice was heard all over the Isle, as also the Grot of St. *Paul*, where is dug that white Earth out of a small Cave, call'd by them *Terra di S. Paolo*, and generally *Terra sigillata Melitensis*, unto which they attribute a singular quality against all Poisons and Infections, which, they say, it was endued with upon occasion of the Viper's fastning to St. *Paul's* Arm: They further tell you, That the said Grot retains its Dimensions, tho' a considerable quantity of earth be taken out there every Year.

The Terra sigillata.

From hence we went to a Country-house of the Grand Masters, which was a neat Palace, built in form of a Castle, surrounded with Gardens and Orchards, with good Water-works, and Fruits of all sorts, lying at the bottom of a little Hill, on which the Castle stands, and almost enclosed with Rocks.

The Inhabitants of Malta. To say something of *Maltha* in general: This Isle has been inhabited by many Nations, and after changing Masters, has generally followed the fate of *Sicily*, being in former Times, not strong enough to defend it self, tho' now-a-days it would find work for a great Prince. The most ancient Inhabitants, mentioned by *Homer*, were the *Phæaces*, who being expell'd by the *Phœnicians*, these were forced to make way for the *Græcians*. After this, tho' it changed Masters, yet the Inhabitants remained in their Possessions, under the *Carthaginians* first, and then the *Romans*. These being forced thence by the *Goths*, these were driven out again by the *Eastern* Emperours. Next the *Saracens* having made themselves Masters of it, were expell'd by the *Normans*, and these again by the *Suevia* or *German* Nation; these were succeeded by the *French*, *Aragonians*, and *Spaniards*, till the *Knights Hospitallers* got into the Possession of it; the History of which may fully be read in the before-mentioned *Abela*. This Isle is very populous in proportion of its bigness, containing betwixt 30 and 40 Villages, or rather Towns for their bigness, 26 Parish Churches, besides those of the Isle of *Gozo*. They reckon to have 25000 Men able to bear Arms, but in this, I believe they speak a little at large.

Their Language. The Modern Language of the Country, is a kind of corrupt *Arabic* or *Moresco*, introduced questionless by the *Saracens*, their ancient Language having questionless been a mixture of *Greek* and *Punic*: However the *Italian* is much in vogue here now, that and the *Latin* being used only in the Court of *Maltha*.

The Great Master Prince of the Isle. The *Great Master* of the Order, is the supream Head or Prince of *Maltha*, which was bestowed upon them with *Gozo*, and some other small adjacent Isles, by the Emperour *Charles* V. 1530, after they were expell'd *Rhodes* by the *Turks*. They live here under a very easie Government, which makes the Inhabitants appear generally in a flourishing Condition, and very courteous to Strangers. When the *Great Master* appears abroad, he is attended by some Knights, and two or three Pages, of which he has 24. All the Knights of the Order are uncover'd in the presence of the *Great Master*, except those of the *Great Cross*. All the Knights must be of Noble or Gentile Extraction, for three or four Descents, notwithstanding which, there is not the least Difference observed betwixt them in respect of their Birth or Quality, they knowing of no other Precedency (than the Seniority of their Admission into the Order). The *Great Master* is habited in a black short Gown, with hanging Sleeves: When the Knights are at home, they chuse what Dress they like best, but when aboard the Galleys, are dress'd in the proper Habit of their Order.

At our time, there were betwixt 3000 and 4000 of them, most of which reside in the City, except when they are upon Duty aboard the Galleys. The Name of the *Grand Master*, was *Nicholas Cotoner*, a *Majorcan* by birth; He was the 18th since they were in the Possession of this Isle.

Five

The Isle of Gozo.

Five Miles to the West of *Maltha* lies the Isle of *Gozo*, known under the Name of *Gaudos* to the Ancients, being 12 Miles long, 6 broad, and 30 in circuit. Its Soil is fruitful of Wheat, not unlike that of *Sicily*, and well cultivated, tho' it be somewhat mountainous. Of fresh Springs, and those excellent good ones, it has great store. Before the *Turks* laid it desolate, and carried away 6000 Persons into slavery, 1565. it was much more populous than it now is, yet is computed to contain about 3000 Persons, and 500 Houses. In the narrow Streight betwixt *Maltha* and the Isle of *Gozo*, lies another small Island, call'd *Comino* now-a-days, but anciently *Hephestia* (as *Cluver* will have it:) It has not above five Miles in circumference, but is well cultivated. For the better security of this Isle, and the Channel betwixt it and *Gozo*, the Great Master *Aloysius de Wignacourt* ordered a Fort to be built opposite to another Fort, on the other side of the Streight, in the Isle of *Gozo*.

Petrefied Shells of *Maltha*.

We have told you before, that abundance of all sorts of petrefied Cochles and Fish-bones, were to be found in the Isle of *Maltha*, among which, we will only mention such here, as are either not at all, or at least very seldom found in *England*. (1) The *Glossopetræ*, call'd *Serpents Tongues* by the *Maltheſe*, which are nothing else but Sharks-Teeth, of divers shapes and sizes. (2) The Vertebres of Thornbacks, and some other Cartilaginous Fishes. (3) *Catsheads* (as they are call'd from their resemblance to a little Skull). (4) *Serpents Eyes* of divers Figures and Colours, most generally red, not unlike those commonly call'd Toad-stones, the exteriour Superficies which is shining, being a Segment of a Sphærical. Of these I have seen whole Lumps cemented together, Dr. *Schonefeld* and Dr. *Merret* have demonstrated to the World, that the *Toadstone* is nothing else but the Jaw-tooth of the Fish call'd *Lupus marinus*; and I am apt to imagine, that the Serpents Eyes, have either the same, or like original. (5) *Serpents Teeth*, these are long, small, streight Stones, with a smooth superficies. (6) *Serpents Eggs*, being much like the preceeding, but not streight. (7) *Baculi S. Pauli*, resembling small snagg'd Sticks. (8) *Petrefied Lentils*, resembling that Pulse in colour, figure and bigness.

Few Plants I observed here, but what I had met with before in *Italy* and *Sicily*, viz. *Cucumis asininus*; *Hypericum tormentosum*; *Consolida regalis peregrina flore parvo* J. B. *Cardum lacteus peregrinus* Cam. Trees are a kind of rarity in this Island. The defect of Fewel, they supply of late with Sea-wrack, prepared after a peculiar manner, of which see *Abela*.

Here was first observed the Custom of slitting up the Nostrils of the Asses, which being naturally streight, does not admit a sufficient Passage of so much Air, as is requisite for the refreshment of their Bodies, whilst they are travelling in those hot Countries.

I don't mention the *Catacombs*, or Burning Places under-ground, of which there be many in *Maltha*, having given you a Description of them before, when we spake of *Syracuse* in *Sicily*.

Neither will I much insist upon what the common People here assert for a positive Proof, That this Isle neither produces nor nourishes any Serpent, or other venomous Creatures, which they say, St. *Paul* obtained by his Prayers, after the Viper fastning to his Hand, because *Abela* makes no mention of it: But this I was made sensible of to my cost, that the Gnats bite more violently here, than in any other place that I ever was in before.

Ætna.

In our return from *Maltha* to *Messina*, we stay'd a Day at *Catanea*, and there took Horses and a Guide to bring us up Mount *Ætna* (now call'd *Mon Gibello*) the top of which is reckoned 30 Miles from *Catanea*, and is one continued ascent; the Grounds thro' which we pass'd being very fertile, well cultivated and inhabited, the Cinders which are cast out by the Mountain; being instead of Dung, (after it is dissolv'd by the Weather) which fattens and cherishes the Soil. We advanced as far as where the Snow lies, which reached all up to the top, we could go no farther, however we were near enough to observe, that the very Top or Pinnacle of the Mountain, was surrounded with a Ring of Snow, but had no Snow it self.

Some Observations concerning *Sicily*.

As to the *Sicilians*, they have not undeservedly got the Reputation of being uncivil and rude to Strangers; and the *Banditti* or Highway-men, are so frequent, that there is very unsafe travelling here; the worst is, that they are not contented with robbing you of all you have about you, but carry you away into the Mountains, nor set you at liberty, till you have pay'd what Ransome they think fit to impose upon you.

They have some peculiar Laws and Customs not easily met with in other places. If you carry above the Value of ten Crowns in Money out of the Country, it is forfeited if found out; the best is, that a little Money makes the Custom-house Officers, to let Strangers pass unsearch'd. No Calves are permitted to be kill'd in this Island, for that you see no Veal at the Tables of the *Sicilians*, tho' at *Maltha*, (whither they carry it by stealth) is enough of it. No body ought to take above the weight of an Ounce of Silver, without weighing of it. No young Person under age, must enter or travel in *Sicily*, without peculiar Licence. To carry Pocket-Pistols about one, is a Capital Crime, tho' long Guns are not only allow'd, but also carried almost by every body: The Reason of which is, That by the first, a Person may be assassinated, before he can be upon his guard.

After our return to *Messina*, we took Boat, *May* the 27th, over the *Fretum*, to take a view of the ancient *Regium*, (*Rhegio*) which now makes but a very mean Appearance, having scarce any thing to boast of, except some Gardens, which indeed afford them great plenty of the best sort of Fruits: Here is also abundance of Bricks made, being reckoned the best in *Italy* and *Sicily*. They shew'd us a small fragment of St. *Paul*'s Pillar that burned, and told us so many Stories of it, that we were sooner aweary of hearing than they of telling. Regium.

The manner of taking the Sword-fish.

May the 29th, We went in a Boat as far as *Scylla*, to see the fishing of the Sword-fish: They place certain Fellows on the Cliffs near the Sea side (*Huers* our *English* Fisher-men call them) these either by a Signal, if they are out of hearing, or else by their Voice, give notice to the Fishing-boats, whereabouts they espy the Fish: These make what hast they can towards the place, whither they were directed, and placing one of the Boat's Crew on the top of the Mast (which have little steps made for that purpose) he gives from time to time, direction to those at the Oars, whither to take their course, according to the different Motions of the Fish. Being come near enough to him, they strike him with a Harpoon, and the Fish being wounded, swims up and down, till being spent with the loss of Blood, they draw him into the Boat. The Harpoon Iron is fastned to a Pole, the Point being sharp, with Beards on each side, like a Barbed Arrow, so jointed, that they go easily in, but resist the the drawing of them out. The *Messineſe* looking upon this Fish as a singular Dainty, buy it at the rate of six Pence *per* Pound, at first coming in. In *May* and the beginning of *June*, they are catch'd on the Coast of *Calabria*, and towards the latter end of *June*, come over to the *Sicilian* Coast, and are taken near *Messina* till *August*.

As there are no Rocks near the *Fare*, they are obliged to place their *Huers* on the top of a very high Mast, set up in a large Boat or *Brigantine*.

They have in the beginning of *June*, a yearly Festival, call'd the *Feast of our Lady of the Letter*, which is celebrated with more than ordinary Solemnity; for a whole Week together, all the Houses being illuminated with Candles, Wax Tapers, Lanthorns, &c. all the Night long. They call it the *Festival of our Lady of the Letter*, because it is celebrated in memory of a Letter, pretended to be written to them, by the *Virgin Mary* in *Greek*; of which they shew you the *Latin* Copy (the Original being lost) which runs thus.

Maria virgo Joachim filia Dei humillima, Christi Jesu Crucifixi mater, ex tribu Juda, stirpe David Messanensibus omnibus salutem & Dei patris omnipotentis benedictionem.

Vos omnes fide magna legatos ac nuncios per publicum documentum ad nos misisse constat: Filium nostrum Dei genitum Deum & hominem esse fatemini; & in cœlum post suam resurrectionem ascendisse, Pauli Apostoli electi prædicatione mediante viam veritatis agnoscentes. Ob quod vos & ipsam civitatem benedicimus, cujus perpetuam protectricem nos esse volumus. Anno Filii nostri XII. Indict. I. III Nonas Junii, Luna XXVII, Feria V. Ex Hierosolymis Maria virgo quæ supra hoc chirographum approbavit.

June the 6th, We took a *Feluca* at *Messina* for *Naples*, and lodged the first Night at a small Town call'd *Tropia*, in *Calabria*, 60 Miles distant from *Messina*. Upon the Rocks near the Town, we found *Zizyphus sive Jujuba sylvest.* Park. *Conyza minor hirta* Ger. *Andrachnum fœtidum* Park. i. e. *Tragium*; not to mention others we had seen before in *Sicily*.

The 7th, Lodging at St. *Lucido*, we met there also with the wild *Jujubes*.

The 8th, We took up our Quarters at *Porto Nicole*, a small Creek near *Scalea*, which is strengthned by a Castle

Near these two places we found the common *Cypress*-tree; *Lamium peregrinum sive Scutellaria* C. B. *Rosmarinum vulgare*, for quantity, found among the Rocks; *Sabina baccifera*, call'd otherwise *Cedrus Lycia retusa* Bellonii; *Chondrilla rara purpurea*, *Crupina Belgarum dicta* Park. *Meum alterum Italicum aniburiam* J. B. *Caryophyllus maximus ruber*; the largest and fairest flower'd wild Pink or Gilly-flower, that ever I saw; on the Rocks near *Scalea*, *Caryophyllus gramineo folio minimus*; A sort of small *Scorzonera* or Goats-beard; *Facea incana, tenuiter laciniata, capitulis Faceæ nigræ vulgaris*; *Valeriana quædam supina sergyllifolia*, n. d. This we saw afterwards by *Joan. Mario Ferro*, an Apothecary at *Venice*, who call'd it *Periclymenum*. *Myrtus communis Italica* C. B. *Auricula ursi*, a Plant which commonly delights in colder places, especially in the *Alps*. *Cistus postica*, Lob. not to mention others we found before in *Italy*. Here I also saw that Species of *Campanula*, unto which I have given the surname of *minor, folio rotundo, flore cæruleo pentagono grandi*, having a Leaf like to the common *Campanula minor rotundifolia*, sometimes hairy, sometimes smooth. *Agnus castus* grows plentifully among the Sands near the Sea-shore.

The 9th, We lodged at *Chiupo*, and the 10th, came to *Salerno*, where having quitted our Boat, we stayed the 11th. This City, which is dignified with the Title of an Episcopal See, is at present, very inconsiderable, having neither University nor *Schola illustris*, as far as we could learn. The only thing worth our Observation here, was the Monument of *Hildebrand* (Pope *Gregory* VII.) who rendred himself famous by introducing Celibacy among the Priests, and his opposition to the Emperour. This is to be seen in the Cathedral of St. *Matthew*, in the Porch of which you see many *Roman* Grave-stones, with ancient Inscriptions. *Salerno.*

Plants about *Salerno.*

The Plants we took notice of hereabouts, were *Barba Jovis frutex*, among the Rocks; *Satureia durior* J. B. *Laurus Tinus cæruleâ baccâ* Lob. *Cytisus glaber siliquâ latâ* J. B. among the Rocks; this Plant I never saw growing wild in any other place beyond the Seas: *Colutea minima sive Coronilla* Ger. *Melissa sylvestris hirsutior & minus odorata Echium majus & asperius flore albo* C. B. *Thlaspi Candiæ* Ger. *Lamium peregrinum sive Scutellaria*; *Sorbus domestica* Lob. Peucedani facie pusilla planta *Lob. Lotus arbor*; *Staphilodendron*; *Colus Jovis*: besides many others we had observed before in *Italy* and *Sicily*. Hereabouts is the Mount call'd *Monte Angelo*, famous for the variety of Plants, but we had no time to search it.

The 12th, We travell'd from *Salerno* by Land to *Naples*, and pass'd that Day thro' *La Cava* and *Nocera*, both Episcopal Sees, and *Scafata*, *Torre d'Annunciata*, *Torre di Greco*.

The 13th, We embarked at *Naples* for *Leghorn*, and the first Day advanced no farther than five Miles, to *Nisita*, a small Isle in the Mouth of the Bay of *Pozzuolo*; but the second Day reach'd *Sperlonga*, a little short of *Terracina* (anciently *Anxur*) 60 Miles.

The 3d Day, We pass'd in sight of the *Monte Circello*, (or *Promontorium Circeum*) having got its name from the noted Enchantress *Circe*, who, as it is said, dwelt here: The Cape extends a great way into the Sea. About two Leagues from the Point of this Cape, directly against it, we observed a great number of certain Insects, very like the *Cicadæ*, such as we never met with before; our Ship's Crew call'd them *Grange*. The *Cicada* is commonly in our *English* Schools, rendred in *English* by *Grashopper*, whereas the same is a quite different Insect, of a rounder and shorter Body, sitting upon Trees, and making a much greater noise than the *Grashopper*, which ought properly be call'd in *Latin Locusta*. The *Cicadæ* are frequent in the hot Countries, but seldom to be seen on this side of the *Alps*. We lodged this Night at *Astura*, where we saw the Ruins of an ancient Town, and of the Foundations of certain Buildings in the Water. *Cicada.*

Not far thence, we pass'd the fourth Day, the new Town of *Antio*, and a Mile distant thence, we saw vast Ruines of the old Town, and of a great Mole belonging to the Harbour. We stay'd this Night at St. *Michael*, a small Town not far from *Ostia*, near the Mouth of the River *Tiber*.

The 5th Day, We sail'd with a fair Gale, to St. *Stefano*, not far from *Orbitello*, passing in sight of *Civita Vecchia*, and *Porto Hercole*, compassing *Monte Argentorato*.

The 6th Day, Being overtaken by a *Borasco*, or storm of Thunder and Lightning, we rowed 18 or 20 Miles to a little Creek, under the Tower of *Calo di Furno*. On the Sea-shore we saw those *Opercula concharum*, which by some Naturalists, are taken for Stones, and call'd *Umbilici marini*, by the *Italians S. Lucies Eyes*.

The 7th Day, We reached the Isle of *Troia*, and the Wind turning against us, we took shelter in a small Creek near the Tower of *Lo Molino*.

The 8th Day, Passing in sight of *Piombino* (a City subject to a Prince of the same name) *Populonia P. Barreto*, *S. Vincentio*, *Castagneto*, and *Vada*, lodged at the Tower of *Castiglione*.

The 9th Day, The Sea was very rough, it having blown hard all the Night before, yet we got safely into *Leghorn* by noon.

The Plants we saw in this Voyage were, *Rosmarinum vulgare*, *Cedrus Lycia folio retuso* Bellonii; *Barba Jovis frutex*, on the Rocks near the Sea-side, *Cruciata marina* in abundance, on the Sands of *Astura*. *Thlaspi capsulis sublongis incanum* J. B. ibid. *Cicherium verrucarium sive Zacynthe*, near the Mouth of the *Tiber* and about St. *Stefano*. *Lotus siliquosa lanea Monspeliensis* J. B. and another sort of *Lotus*, with a longer and slenderer end. *Aristolochia Clematitis*, a semper-virent shrub, with a Leaf like *Oleander*; *Terebinthus*, *Paliurus*, *Thlaspi biscutatum*, *Ambrosia vulgaris*, which we found no where else in all our travels. *Cirsii quædam species* near St. *Stephano*; *Chamærrhiphes sive Palma humilis* about *Orbitello*, and on the Rocks of *Hetruria*. *Draba quædam siliquosa foliis longis angustis incanis*, *Euphrasia pratensis lutea*; *Phillyrea angustifolia*, among the Hills and Rocks near the Sea-side. *Phillyrea serrata* 2 Clus. *Colutea minima sive Coronilla* Ger. on the Rocks near the Tower of *Castiglione*.

Florence, surnamed *The Fair*, answers its Character by the beauty of its Buildings, tho' in my opinion, were it not for the great number of Stone Palaces (such as the Great Dukes, the *Palazzo de Pitti*, of the *Strozzi*, *Salviati* and others) *Antwerp*, and divers other Cities in the Low-Countries, might challenge the Precedency in this Point: For, tho its Streets are well paved with broad Stones, like those of *Lucca* and *Cologne* in *Germany*; yet are they very narrow (to keep off the scorching heat of the Sun) and the Paper Windows much shattered in many places, are no small disgrace to the beauty of this City. The River *Arno* runs thro' the middle of it, over which are built four Stone Bridges, among which, the *Ponte Vecchio* or *Old Bridge*, has Gold-smiths Shops on both sides. Its whole circumference is said to be six *Italian* Miles, but of this, the Duke's Palace and Gardens, take up at least one sixth part, besides some hundreds of Acres made into Vineyards. It has 44 Parishes, including the 12 Priorates. The number of Inhabitants is computed by some 85000 Souls, by others 90000, nay 100000; but in my opinion they speak too large. We were told that it had 56 Nunneries, and 24 Convents of Monks, and 37 Hospitals, one of which, *viz.* the *Orphanotrophium* has 70000 Crowns yearly revenue, and maintains 900 Persons. *Florence.*

The chief strength of this City consists in its three Castles, among which, that on the South side has a good Garison, and an Armory furnished with Arms for 30000 Men. Another is a Fort in the Great Duke's Gardens: The third we viewed not.

The Churches of *Florence*, if not in all other respects, at least in point of Architecture, are most excellent; the Cathedral of St. *Maria Florida*, being accounted the most exquisite piece that ever was made, especially for the Pillars which support the Nave or Body of the Church, which stand at such a distance from one another, and are so slender, that they don't obscure the Isles, and afford a fair prospect at once of the whole Church. The Cupolo (the first and the Pattern of all the rest) both for its compass and height, exceeds all in *Italy*, except that of St. *Peters* at *Rome*. The Quire, which is of an Octogonal Figure, is under this Cupolo. The Walls of the Church, are covered on the out-side with Marble, cut into small pieces, and chequer'd of divers Colours. Within the Church beyond the Quire, you see four Inscriptions, (1) Concerning the building of the Church, the Foundation of which was laid 1280. The (2) concerning its Consecration, by Pope *Eugene* IV. 25 *March*, 1436. The (3) concerning the Union of the *Greek* and *Roman* Churches, under the said Pope *Eugene* IV. 1438. The (4) intimates the removal of the Body of St. *Zenobius* from St. *Lawrence*'s Church hither, by Archbishop *Andrea*, his Successour. In the same Church I also saw the Monuments of *Marsilius Ficinus*, and of *Giotto*, a famous Architect, who first revived Painting in *Italy*, as also of *Philip Brunelleschi*, another noted Architect, who design'd the Cupolo of this Church, and that of St. *Lawrence*'s. On the N. Wall of this Church is to be seen, the Picture of an *English* Knight on Horse-back, named *Joh. Acutus*, which makes some think his name to have been Sir *John Sharp*, tho' others would have his name to be Sir *John Hawkwood*, because *Guicciardin* calls him *Aucutus*, and describes him as a great and valiant Captain. Here also you see on a Table, the Picture of a famous *Italian* Poet, named *Dante*, a Native of *Florence*, but living in exile, was buried at *Ravenna*. Churches of *Florence.* The Cathedral.

In

The Church of St. Croce.

In the Church of St. *Croce* is to be seen the Monument of that great man *Michael Angelo Buonarota*, the famous Architect, Sculptor and Painter; under his Effigies is a Coffin, and under that three Statues sitting (of most excellent Workmanship) signifying Painting, Sculpture and Architecture, with this Inscription below,

Michaeli Angelo Bonarotio,
E vetusta Simoniorum familia,
Sculptori, Pictori & Architecto,
Famâ omnibus notissimo.

Leonardus patruo amantissimo & de se optimè merito translatis Româ ejus ossibus, atque in hoc templo Major. suor. Sepulchro conditis, cohortante Serenissi. Cosmo Med. magno Etruriæ Duce P. C. Anno Sal. MDLXX.

The Church of the Annuntiata.

In the Church of the *Annunciata* you see the Monument of another great Artist, named *John Bologna*, in a Chapel behind the Choir, built by himself, with the following Inscription:

Johannes Bologna Belga, Mediceorum PP. nobilis alumnus, Picturâ, Sculpturâ & Architecturâ clarus, virtute notus, moribus & Pietate insignis Sacellum Deo, Sep. sibi cunctisque Belgis earundem artium cultoribus P. An. Dom. CIↃ IↃ IC.

Of St. Mark.

In the Church of St. *Mark* is the following small Inscription, on the Tomb of the famous *Johannes Picus Mirandulanus:*

Johannes jacet hîc Mirandula, cætera nôrunt
Et Tagus & Ganges, forsan & Antipodes.
Ob. An. Sal. MCCCCLXXXXIV. vixit An. XXXII.

In the Cloyster of St. *Lawrence*, by the Church Door, we also saw the Monument of *Paulus Jovius*, with a Latin Inscription upon it. In the *Baptisterium*, or Church of St. *John*, of an octagonal Figure, is generally suppos'd to have been anciently a Temple of *Mars*; it has three pair of Brass Doors excellently well cast, and engraven with most curious Figures in *mezo relievo*. Here you see a fair Tomb erected to the Memory of Pope *John* XXIII. who was depos'd in the Council of *Constance*, with this Inscription:

Of St. John.

Joannes quondam Papa XXIIIus obiit Florentiæ Anno Domini MCCCCXVIIII. XI *Kalendas Januarii.*

The Church and Chappel of St. Lawrence.

The Church of St. *Lawrence* contains the Tombs of several of the *Great Duke*'s Family, and to this Church belongs the famous Chappel of St. *Lawrence*, which, when finish'd, 'tis suppos'd, will prove the most magnificent and rich Structure (for its bigness) in the World, the insides of the Walls being laid over not with Marble, but with Stones much exceeding it, such as Jasper of several kinds and colours, Agate, *Lapis Lazuli*, Touchstone, &c. which being all neatly polish'd, and inlaid, and wrought into various Figures, make a most glorious shew. This Chappel is an Octagon, the Roof of which is a spacious *Cupulo*: One side of this Octagon is left void hitherto, being reserv'd for a most magnificent Altar, on the opposite of which is the Door, the rest of the Sides being reserv'd for the Statues and Monuments of such as have been *Grand Dukes*; the first, beginning on the left hand of the Door, being intended (as we suppos'd) for *Alexander*, who was only Duke of *Florence*, was not yet made up; the rest have their respective Names set over their Effigies, each of which stands in a Nich, some of Stone, some of Brass, and underneath a Coffin or Cushion, with a Ducal Crown lying upon it, with the following Inscriptions in this order:

Franciscus Mag. Dux Etruriæ II. vixit ann. XLVI.
ob. XIX. *Octob.* M. D. LXXXVII.
Cosmus Mag. Dux Etruriæ II. *vixit ann.* LV.
ob. XI. Kal. Maii M. D. LXXXXIV.
Ferdinandus Mag. Dux Etrur. III. *vixit ann.* LX.
ob. VII. *Id. Febr.* CIↃ IↃ CIX.
Cosmus Mag. Dux Etrur. IV. *vixit ann.* XXX.
ob. XXVIII. *Febr.* CIↃ IↃ CXX.

There is one side remaining for *Ferdinand* II. the fifth *Great Duke*, who died since our departure; the present *Great Duke*'s Name being *Cosmus* III.

Betwixt the Tombs of each *Great Duke* are the Arms of two of the chief Cities under their Jurisdiction. There are so great a number of Towers, Pillars, Fountains and Statues of Brass and Stone, and most excellent Pictures, at *Florence*, that I will not pretend to enter upon a particular Description of them here, contenting my self with mentioning only the two *Statuæ equestres* in Brass, much greater than the life; one of *Cosmus* I. upon the great *Piazza*; the other of *Ferdinand* I. in the *Piazza* of the *Annunciata*; and so proceed to give you a short account of the Great Duke's Gallery in the Palace, a very handsom Structure, having the Stables below, under ground, and above them fair Portico's to walk in, over which are the Shops of all the Artificers that are imploy'd by the Great Duke, above which is that they properly call the Gallery, where in a Walk free for any man to come into, you see many ancient, and some modern Statues; and round about on each side of the Walk, the Pictures of Princes and other great persons. Here we saw, among the rest, the Pictures of Queen *Elizabeth*, King *James*, *Oliver Cromwell*, and of the before-mention'd *Johannes Acutus*.

The Great Duke's Gallery.

The Rarities which we saw here were preserv'd in four Closets, the chiefest of which were, a very large terrestrial Globe, and a *Sphæra armillaris* bigger than that; several Stone Tables curiously inlaid with Fragments of precious Stones of various colours, representing Flowers, Fruits, Birds, Beasts and Insects, so naturally, that the best Masters of *Europe* could scarce have drawn them more exactly to the life. One of those Tables the richest I ever saw, was set with many Rubies and Pearls, and valued at 100000 *Florence Scudi*, (a *Scudi* here being somewhat more than an *English* Crown;) divers very excellent Cabinets, the best of which being valued at 500000 *Scudi*, was beset with Gems of the first magnitude; a Pearl of an enormous greatness, but not perfectly round; with several Topazes about the bigness of Walnuts; large Rubies and Emeralds, besides other Stones of less value, &c. Here they also shew'd us the Nail, half of Gold, half Iron, part of which they pretend was transmuted by *Tournhausserus*, an Alchymist of *Basil*, into Gold, but the Iron and Gold was so coursely join'd, that it easily discover'd the Imposture. Besides many ancient *Roman* Idols and Lamps of divers shapes, and Pictures and Statues made by the best Masters.

His Armoury.

In the Great Duke's Armoury we took notice of the Armours of many great persons, and, among the rest, of a Headpiece pretended to have belong'd to *Hannibal*, having many *Moresco* Characters engraven on it; *Scanderbeg*'s Sword, the Hair of a Horse's Mane seven yards long, and the Skin of the Horse stuffed up; a long Gun and a Pistol, the Barrels whereof were of beaten Gold; several curious round Bucklers, on one of which was painted a *Medusa*'s Head, by *Michael Angelo*, valued at a high rate; *Italian* Locks for Women; a Thong cut out of the Hide of a Buffle, 250 yards long; a great many *Turkish* Arms, &c.

The *Argenteria* or Wardrobe contains 12 Cupboards, full of rich Plate; one is fill'd with all sorts of Vessels of beaten Gold; another has an Altar of Gold, (as they told us) set with Diamonds and other precious Stones, with this Inscription in capital Letters made up of Rubies, *Cosmus II, Dei gratia magnus Dux Etruriæ ex voto.*

If I should enter upon a description of the *Great Duke*'s Palace, with its Gardens, variety of Trees, Fruits, Shrubs, Walks, Fountains, Waterworks, &c. it would require a Treatise by it self; the choice Plants we took notice of *in transitu* were, *Dictamnus Creticus, Quamoclit Indorum*; *Tragoriganum*; *Stramonium peregrinum* Ger. i. e. *pomo spinoso rotundo*; *Pisum cordatum, Balsamina cucumerina, Chamærhiphes*, &c.

In the Duke's *Theriotrophium* we saw a *Lion*, *Tiger*, *Leopard*, *Bear*, *Wolf*, *Porcupine*, *Wild Boar*; the Snout of the last being longer than those of tame Hogs, the Ears not quite so long, of a black colour, as were the Feet and Tail, the rest of the Body being of a grisly or Iron-grey colour, which is constantly the same; it being observ'd, that most of the wild Animals, whether Birds or Beasts, keep to the same colour.

Most of the Palaces of *Florence* are built *à la maniera rustica*, as the *Italians* call it, that is to say, of rough hewn Stones, not smooth, but even protuberating above the Superficies of the Wall: For the rest, this City is rather in a decaying than an encreasing condition, in respect, I mean, of what it has been formerly, proceeding partly from the great decay of their Silken Trade with *France*, as also from the heavy Impositions laid upon them by the *Great Duke*, who, being absolute, receives the Tenth of every House of its yearly value, as well as the Tenth of what Lands or Houses are sold; 8 *per Cent.* of the Portion of all Women that are married; 2 *per Cent.* out of every Law-suit, according to the proportion of the Sum sued for; for every young Heifer that is sold, a Crown; and all other Provisions, even to the very Eggs, an Excise

Revenues of the Great Duke.

in proportion: nay, he farms the Monopoly of fine Bread (call'd *Pane di bocca*) to the Baker, who furnishes his Table, and pays 1000 *Scudi* yearly: besides these Impositions, as they render the generality of the Inhabitants very poor; (there having not been a new House built here in 40 Years) so it makes the Prince very powerful, whose ordinary Revenue is computed at One million and a half, and by some Two millions of Crowns *per annum*; whereas his annual Expences do not amount to above half the Money, being very thrifty in his Court, keeping his Servants at Board-Wages, and being at a set Rate with his Cook, Baker, &c. one of their chief Maxims of State being to amass great Treasures; for which reason the late Great Duke would often say of our King *Charles* the First, That want of Money ruin'd him.

Very few Gentlemen here, but what sell their own Wines by retail; not within doors, but by the means of a hole made in the Cellar-Wall, where they take in and return the Flasks or other Vessels: Instead of a Signpost, they hang out pieces of broken Flasks at their Palace Gates. Notwithstanding this, they look upon it as a great disparagement to breed up their Children to the Profession of Physick, but as for Trading, it is so well look'd upon here, that from the Great Duke himself to those of the lowest rank, they apply themselves to it.

Besides that they call the *Old State*, comprehending the Territories of *Florence* and *Pisa*, and the *New State*, comprehending the Territory of *Siena*, (for the last of which he owes Fealty to *Spain*) the Great Duke is Master of part of the Isle of *Elba* (likewise a Fief of *Spain*) part of *Graffignana*, purchas'd from the Marquesses of *Malaspina*; the Earldom of St. *Fiora*, bought of the *Strozzi*; the Marquisate of *Scanzano*, and the Earldom of *Pitigliano* and *Sorano*, once belonging to the *Ursini*; and some other small places which he holds from the Emperour, as he is Feudatary to the Pope; for *Radicofani* in *Tuscany*, and *Borgo san Sepulchro* in *Umbria*.

He has generally the reputation of securing his Fortresses in a better condition than any other Prince in *Europe*, for the defence of which he maintains, in time of Peace, 4000 or 5000 Men in constant Pay. The Guard of his Body are *Germans*. They have a kind of Race at *Florence*, especially in the Summer time, when a certain number of the swiftest Horses are let loose, and so run full speed thro' one of the Streets, (which thence is call'd *Corso*) without their Riders. To make them run, they fasten small pieces of Leather stuck with Pricks upon their Backs.

The Ecclesiastical Revenue in all the Duke's Territories did, according to a Survey taken thereof 1645, amount to 765000 *Scudi* or Crowns *per annum*.

It is a constant practice, among the Gentlemen as well as Citizens, of any note here, to put out their Daughters a boarding in the Nunneries as soon as they come to the eighth or tenth Year of age, they looking upon this as the cheapest and securest way to educate them till they are married.

Plants about *Florence*. The Plants we took notice of about *Florence* were, *Cardum chrysanthemum Nabonensis* Ger. *Acarna flore purpuro rubente patulo* C. B. *Echium majus & asperius flore albo* C. B. *Cardum solstitiale* Ger. *Atractylis*; *Conyza major Monspeliensis odorata* J. B. *Galega*; *Scrophularia*. *Ruta canina dicta*; *Lotus pentaphyllos siliquosus, villosus* C.B. *Aster luteus folio ad florem rigido* C. B. *Iberis* J. B.

The red *Florence* Wine (deeper than ordinary Claret) is a Wine much esteem'd both in *Italy* and elsewhere; it acquires this deep-red Tincture by the letting it stand longer than ordinary upon the Husks or *Vinacea*, the interiour pulp of the Grape being white.

Sept. 1. we set out again from *Florence* towards *Rome*, and passing thro' *Castiano*, eight miles from thence, after we had travel'd four miles further, left the ordinary Road leading to *Siena*, (as being the longest) rode thro' St. *Buco*, to a poor wall'd Town call'd St. *Donato*, fifteen miles from *Florence*, and fourteen from *Siena*, whither we continued our Journey by the way of *Castellina di Campi*, and had a prospect of *Siena* ten miles before we came at it, the Country hereabouts, as well as all over *Tuscany*, being mountainous and barren.

Siena (being about four miles in compass) is a very fair City, the Piazza of which resembling the Figure of a Cockle-shell, is adorn'd with goodly Buildings; The Cathedral is a most magnificent Structure of Marble, with a most stately Front, and adorn'd within with the Heads of all the Popes, placed in the Wall, round about the Church; some part (*viz.* about the Front part) of this Church is pav'd with Marble inlaid, or rather a most curious Piece of *Mosaick* Work, containing part of the History of the Bible, done by *Micherino Sanese*: If it had been finish'd according to the first Project, it would have exceeded any thing of that kind in the World; as, the painting of the Library Walls in this Church, containing the History of *Æneas Sylvius*, afterwards Pope *Pius* II; half by the hand of *Perugino*, and half by *Raphael Urbin*, is one of the best that ever I saw in my life, being as lively now, as if it had been done but a few days before. From the Tower call'd *Torre di mangio*, we took a full prospect of the whole City, which is of a triangular figure, and encloses a great many Gardens and Vineyards within its Walls: It is situate upon a Hill, which, together with the Pavement of the Streets, (which is of Brick set edgeways, as they do in *Holland*) keeps them very clean, and affords them this further conveniency, that having good Cellars, they make little use of Snow or Ice to cool their Drink. There is a Room in the Palace of the *Podesta*, the Roof and Walls whereof are so excellently painted by *Micherino Sanese*, that the same is valued more than the whole Palace besides. This place is pretty much frequented by Strangers, by reason of its temperate situation, in the Summer time; and as the Inhabitants speak the *Italian* in its purity, so they are very obliging to Travellers, and all manner of Provisions are at a reasonable rate here. *Siena*.

Sept. 23. we left *Siena*, and passing thro' *Lucignano*, *Buon Convento* and *Torniori*, came to St. *Quiricho*, (St. *Cyriaci oppidum*) whereabouts I met with abundance of Lavender-cotton. Hence we rode unto *Radicofani*, thirty four miles from *Siena*, situate upon a high Hill, and provided with a Garrison of 300 Men, being a well-fortified Frontier Town of the Great Duke. In this days Journey we saw great plenty of *Absinthium Romanum* Cæs. between St. *Quiricho* and *Radicofani* *Cynara sylv.* and two other Species of Thistle, one I guess'd to be *Carduus tormentosus* Lob. the other I knew not; *Acarna flore purpureo rubente patulo*; *Veronica spicata cærulea*; *Winter Savory*; *Aster luteus Linariæ folio*; *Colchicum*, all over the Pastures. *St. Quirico*. *Radicofani*.

Sept. 4. we continued our Journey from hence to *Viterbo*, being 38 miles; and we had scarce travel'd ten miles, when we pass'd over a small River near a place call'd *Ponte Argentino*, which on this side is the common Border of the Pope's and the Great Duke's Territories; and travelling on four miles further, came to *Aquapendente*, a large old Town, so call'd from its situation upon the top of an Hill, from whence the Water falls down perpendicularly. We observ'd all the Villages and Towns of this Country to be built on Hills, as I suppose, for coolness sake: And no sooner were we enter'd the Ecclesiastical Territories, but found the Fields full of Trees, intermix'd with pleasant and fruitful Valleys, whereas all that part of the Great Duke's Country thro' which we past'd was very craggy, without Trees, and appear'd to us very barren. From *Aquapendente* we went on to *Lorenzo*, a small place at the edge of the Lake of *Bolsena*, (anciently of *Volsinii*;) and travelling for five miles along the Lake, came to *Bolsena*, and thence mounted up to *Monte Fiascone*, where having refresh'd our selves with that most excellent Wine that grows here, we travel'd for eight miles, thro' a fertile Plain to *Viterbo*, a Town very spacious, and well situated, but indifferently built; we observ'd only two or three handsom Fountains, and one Tomb of Pope *John* XXI. in the Dome or Cathedral. The hot Springs hereabouts we had not time to take a view of. *Aquapendente*. *Monte Fiascone*. *Viterbo*.

From *Viterbo* we travel'd, *Sept.* 5, thro' *Ronciglione*, (a pretty place belonging to the State of *Castro*) to *Baccano*, being 22 miles. In the Woods of the Mountains near *Viterbo*, we met with these following rare Plants, *viz.*

Carduus

Cardnus globosus Ger. *Viola matronalis*; *Cassia poetica* Lob. *Cerrus minore glande* Ger. *Orobus sylvaticus vicia folio* C.B. *Cyclaminus folio anguloso* J.B. in great plenty in all the Woods between *Viterbo* and *Rome*: *Mespilus vulgaris*; *Hesperis sylvestris latifolia, flore parvo albo* Park. *Thlaspi Candia* Ger. *Lamium sambucaria dictum*; *Sorbus*; *Linaria major purpurea*; *Blattaria lutea*; *Cytisus cortice cinereo aut albido, siliquis hirsutis*. What this Plant is rightly call'd by the *Botanists*, I can't absolutely determine. *Plumbago Plinii* in great plenty at *Bolsena*, and on the high Roads about *Rome*: *Polygonum vel Linifolia per terram sparsa flore Scorpioidis* J.B. *Helleborus niger hortensis flore viridi* J.B. in vepretis mentosis passim.

Sept. 6. we went forward, travelling that day 16 miles, to *Rome*: We ascended a Mountain not far from *Baccano*, from whence having a large prospect of the *Campania* of *Rome*, being cover'd all over with a thick Mist, appear'd to us at a distance like a huge Lake. About 3 miles on this side of *Rome* we saw an ancient Monument they call'd the Sepulchre of *Nero*, the like we had met with before at *Modena*. About a mile short of *Rome*, passing over the *Tiber* by the *Ponte Molle*, (the ancient *Pons Milvius*) came upon the *Via Flaminia*, a well-pav'd straight way, having on both sides many Country Houses and Gardens, which brought us to the *Porta del Popolo*, one of the Gates of *Rome*.

Ponte Molle.

So many Authors having imploy'd their learned pains in the description of *Rome*, both ancient and modern, I shall be very brief in the following Account of it.

Rome.

The Antiquities worth the Observation of the Curious, are chiefly the Ruins and Remainders of *Pagan Temples*, *Theatres* and *Amphitheatres*, *Circi*, *Baths*, *Aqueducts*, *Obelisks*, *Triumphal Arches*, *Pillars*, *Fora*, *Mausolæa*, *Statues*, *Altar* and *Grave-stones*, and other Stones, with their Inscriptions; *Medals*, *Entaglie* or *Gems* engraven with Figures, *Sacrificing Vessels* and *Instruments*, *Sepulchral Urns*, *Lachrymal Urns*, *Ancient Lamps*, *Weights*, *Rings*, &c.

Among the ancient Temples, which are still entire, we have remaining some part of them: 1. The *Pantheon*, commonly call'd *Rotunda*, from its circular figure, now dedicated to the Virgin *Mary* and *All-Saints*, is 144 foot high, and as many broad, the Roof being vaulted in form of a *Cupola*, having no other Light but that it receives thro' a round hole on the top, of 9 foot diameter. Its Porch consisted of 16 tall and massive Pillars of speckl'd Marble, call'd Oriental Granite, each Pillar having but one Stone, of which there are only 13 remaining now. Upon the Architrave of this Portico you see these words inserted in very large Letters:

The Pantheon of Rome.

M. AGRIPPA L. F. COS. TERTIUM FECIT

And underneath it, in lesser Characters:

IMP. CÆS. L. SEPTIMIUS. SEVERUS. PIUS. PERTINAX. ARABICUS. ADIABENICUS. PARTHICUS. MAXIMUS. PONTIF. MAX. TRIB. POT. XI, COS. III. P. P. PROCOS. ET IMP. CÆS. M. AURELIUS. ANTONINUS. PIUS. FOELIX AUG. TRIB. POTEST. V. COS. PROCOS. PANTHEUM. VETUSTATE. CORRUPTUM. CUM. OMNI. CULTU. RESTITUERUNT.

This Temple was cover'd with Copper, till Pope *Urban* the Eighth remov'd it thence, and to appease the grumbling of the People, order'd the four famous wreath'd Pillars and Canopy of the high Altar in St. *Peter's* Church, to be made of it; the *Clavi trabales*, or Nails which fastned the Tiles of the *Portico*, weighing no less than 2800 pounds, out of which was cast a great Cannon, which is still to be seen in the Castle of St. *Angelo*, with this Inscription, *Ex clavis trabalibus Porticus Agrippæ*, and the Figure of one of those Nails engraven upon it. The whole Body of this Temple remains entire, being despoil'd only of its Ornaments and Statues, among which was the famous *Minerva* of *Phidias*. After its first building, it had seven Steps upwards, which surrounded the whole Structure, whereas now you must descend eleven Steps to go into it; a convincing Proof that a great part of the ancient *Rome* is involv'd in Rubbish under ground. Those that shew'd us the Church were very careful to tell us, That the Lintel and Side-posts of the great Door of this Church (which indeed is exceeding large in all its dimensions) were all of one entire Stone; which we thought fit rather to believe, than to give our selves the trouble of examining it. In this Church is to be seen the Tomb of that great Architect and Painter *Raphael Urbin*, with this following Epitaph:

Raphaeli Sanctio Joan. F. Urbinat.
Pictori eminentiss. Veterumque æmulo,
Cujus spirantes propè imagines si
Contemplere, naturæ atque artis fœdus
Facilè inspexeris.
Julii II & Leonis X Pontt. maxx. picturæ
Et Architect. operibus gloriam auxit.
V. A. XXXVII integer integros.
Quo die natus est eo esse desiit,
VII. Id. Aprilis MDXX.
Hic situs est Raphael, timuit quo sospite vinci
Rerum magna parens, & moriente mori.

2. *Templum Fortunæ virilis*, or the Temple of the *Moon*, as some will have it, but rather of the *Sun* and *Jupiter*, now call'd S. *Maria Ægyptiaca*, where the *Armenians* have their Service.

3. The Temple of the *Sun*, or of *Vesta*, as some affirm, or as others, *Templum Herculis Victoris*, standing not far from the precedent, *viz.* by the *Tiber* side, near the broken Bridge, and is now call'd *La Madonna del Sole*, or St. *Stefano alle carozze*; a small round Structure, with a Gallery of streight Pillars round about it: It receives its Light like the *Pantheon*, thro' a hole on the top. These two last remain entire.

4. *Templum Dianæ Aventinæ*, now call'd St. *Sabino*, is very large twelve strait Pillars on each side, dividing the Nave from the Isles.

5. *Templum Herculis Aventini*, now the Church of St. *Alexius* and *Bonifacius*, near the former, on the top of Mount *Aventine*.

6. *Templum Jani quadrifrontis*, in the Cow-market.

7. The *Temple* of *Concord*, or rather its Remainders, being only a *Portico* sustain'd by two great Marble Pillars of one Stone, at the foot of the *Mons Capitolinus*.

8. The Temple of *Saturn*, now St. *Adriani's* Church, the Frontispiece of which is only the remainder of the ancient Temple; it stands near *Severus's* Arch, at the foot of the Capitol.

9. The Temple of *Antonine* and *Faustina*, now St. *Lorenzo in Miranda*; of this remains entire the *Portico*, with its Inscription, and some of the Walls built of massy Stones, the Marble Pillars which support the *Portico* having a grain lying one way, do cleave like Wood.

10. The Temple of *Romulus* and *Remus*, since dedicated to St. *Cosmo* and *Damiano*, has scarce any thing remaining of its ancient Structure.

11. *Templum Isidis & Serapidis sive Solis & Lunæ*, now St. *Maria nuova*; the few Ruins remaining of the old Church are behind the Cloyster, the present Church being no part of it, neither standing in the same place.

12. The *Temple of Peace*, the Founder of which was *Vespasian*, exceeded all the other ancient Temples of *Rome* in bigness, as may be seen by the Foundation, the Ruins of which may easily be distinguish'd; for the rest, there are no more than part of three Arches left standing: The strait Pillar set up before the Church of St. *Maria Maggiore* (the greatest of one entire Stone now in *Rome*) was taken hence, being one of the eight which supported the *Nave* or Body of this Temple.

13. *Templum Jovis Statoris*, three Pillars now to be seen in the *Campo vaccino* were part of this Temple.

14. *Templum Jovis tonantis*; of this three Pillars, for the most part under ground, are suppos'd to be part; on the Architrave whereof are to be seen these Letters ESTITUER, on the left hand of the *Clivus*, as you go from *Severus's* Arch to the Capitol.

15. The Temple of *Faunus*, now call'd St. *Stefano rotundo*, from its circular Figure: This large Structure is sustain'd by two concentrical Circles of Pillars, the outermost Pillars being less than the innermost, the first containing 44 Pillars, and the other exactly half the number; besides that, the Pillars of the inner Circle stand at the same distance from one another as those in the outer.

16. *Templum Herculis Callaici*, now *Galluzo*, of a diagonal figure, its Roof being a *Cupola* not much less than that of the *Pantheon*; it has two Doors directly opposite one to another, and on both sides betwixt them eight Niches for Statues.

17. *Templum Bacchi extra portam Piam*, now the Church of St. *Costanza*, without the Walls: This is also a round Structure, having a concentrical Circle of twelve Pillars of a less circumference within. Here you see an ancient Monument of Porphyry, resembling a large Chest, having a Stone to cover it; it is curiously engraven with Branches of Trees, Boys treading of Grapes, of Birds, &c. In several places of the Roof are Pictures of Bunches of Grapes, and other things belonging to Vintage, but the freshness of the Colours and rudeness of the Figures makes me

me suspect them to be no *Roman* Workmanship. They call this the Monument of *Bacchus*.

18. The Temple of the Sun; of this there remains only some great Marble Stones in the Gardens of the *Columna's*, some of them curiously engraven.

19. The Temple of *Romulus* and *Remus*, now dedicated to St. *Theodore*; it is of a circular figure, into which you descend by Steps, like as into the *Pantheon*.

Theatres and Amphitheatres. Of the ancient *Roman Theatres* and *Amphitheatres* there are remaining only some small Footsteps of the *Amphitheatre* of *Statilius Taurus*, near the Church of St. *Croce* in *Gierusalemme*, and some part of the Walls of the *Theatre* of *Marcellus*, upon which the Palace of the *Savelli* is built: But of the *Amphitheatre* of *Titus* (now call'd the *Coliseo*) very great Ruins are to be seen to this day, being round without, and of an oval figure within: It was capable of containing conveniently 85000 Persons.

The Circi. Of *Circi* there are only some slender Remnants of that of *Antoninus Caracalla*, without the City, and of the *Circus maximus*, of which you may just discern the Figure. Of the *Circus Agonalis* (now the *Piazza Navona*) and of the *Circus* of *Nero* in *Campo Vaticano*; as likewise of the *Circus Flaminius*, nothing is left but their bare Names.

Baths. Of *Roman Baths* very considerable Ruins are to be seen, *viz.* of those of *Diocletian*, which had Seats for 3200 persons to bath without seeing one another; of *Antoninus Caracalla*, which had 1600 Seats all of polish'd Marble; the *Therms* of *Titus*, of *Agrippa* near the *Pantheon*, of *Constantine* near St. *Sylvesters*, of *Nero* near St. *Eustachius*'s Church, of *Paulus Æmilius* at the foot of *Monte Cavallo*, call'd *Magnanapoli*; besides many others, of which scarce any Footsteps are to be seen now.

Aqueducts. Among the ancient *Aqueducts* of *Rome*, there are only four that have something remaining now, *viz.* the *Aqua Martia*, conducted 37 miles; the *Aqua Claudia*, brought 35; and the *Aqua Appia* and *Aqua Virginis*, both brought 8 miles; the last of which being repair'd by Pope *Nicholas* V. is us'd now-a-days, and known by the Name of *Fonte di Trivio*. Besides those, there are two new *Aqueducts* built by late Popes, of which the following Inscriptions will give you a satisfactory account.

I.

This Work cost 200000 Crowns.

Sixtus V. Pont. max. Picenus
Aquam ex agro Columnæ
Viâ Prænest. sinistrorsum
Multarum collectione venarum
Ductu sinuoso à receptaculo
Mill. XX. à Capite XXII.
Adduxit:
Felicémque de nomine
Ant. Pont. dixit.
Capite anno I. absolvit III.
MDLXXXVII.

II.

Paulus V. Pontifex maximus aquam in agro Bracciánensi salubérrimis è fontibus collectam, veteribus aquæ Alsiatinæ ductibus restitutis novisque additis XXXV ab Urbe milliario duxit, Anno Domini MDCXII. Pontificatus sui septimo.

Obelisks. There are eleven Obelisks remaining, but we took notice only of nine: 1. That which anciently stood in the *Circus maximus*, but being broken, was by *Sixtus* V. set handsomly together, and placed upon a fine Pedestal in the *Piazza* within the Gate call'd *Porta del Popolo*, having on each side an Inscription, and two ancient ones on the opposite sides in the same words.

Imp. Cæsar Divi F.
Augustus
Pontifex maximus
Imp. XII. Cos. XI. Trib. Pot. XIV
Ægypto in potestatem
Populi Romani redacta.
Soli donum dedit.

On the other two sides are two modern Inscriptions; on one this:

Sixtus V Pont. max.
Obeliscum hunc
A Cæsare Aug. Soli
In Circo max. rictu
Dicatum impio,
Miserandâ ruinâ
Fractum obrutumque
Erui, transferri,
Formæ suæ reddi,
Crucique invictiss.
Dedicari jussit.
A. MDLXXXIX. Pont. IV.

On the other this:

Ante Sacram
Illius ædem
Augustior
Lætiorque surgo
Cujus ex utero
Virginalis
Aug. imperante
Sol Justitiæ
Exortus est.

It is engraven on each side with three rows of Hieroglyphicks.

2. The Obelisk which now stands in the *Piazza* before St. *Peter's* Church, was taken out of the *Circus* of *Caligula* and *Nero*, and at the charge of Pope *Sixtus* V. placed hither; as were also those of St. *Maria maggiore* and St. *Joh. Lateran.* This Obelisk is 72 foot high, besides the Pedestal, in all 108: It has no Hieroglyphicks upon it. Of the manner of its removal, a peculiar Treatise is written; as the four modern Inscriptions on the Pedestal, and the ancient one on the Obelisk it self, may be seen in *Roma antica & moderna.*

3. That of St. *John Lateran*, having three rows or files of *Hieroglyphicks* on each side of it; this is 112 foot high, besides the Base, where it is 9½ feet thick one way, and 8 foot the other. It is the greatest Obelisk in *Rome*: From the following Inscription it appears by whom it was brought to *Rome*, and set up.

Fl. Constantius Aug. Constantini Aug. F. Obeliscum à patre loco suo motum, diuque Alexandriæ jacentem trecentorum remigum impositum navi mirandæ vastitatis per mare, Tiberimque magnis molibus Romam convectum in circo maximo ponendum curavit S. P. Q. R. D. D.

4. That of St. *Maria maggiore*, without Hieroglyphicks, and much lesser than any of the former, was remov'd hither out of the *Mausolæum* of *Augustus*.

5. That of the *Piazza Navona*, taken out of the *Circus* of *Caracalla*, by Pope *Innocent* X: It has but one row of Hieroglyphicks, and much less than the last mention'd: Of this *Athanas. Kircher* has written a whole Treatise.

6. That of St. *Maburo*, near the Jesuits Church, is only a piece of the top of an Obelisk, placed upon four rude Stones; it has some Hieroglyphicks.

7. That in the Garden of *de Medicis* is also no more than a piece of the top of an Obelisk, full of Hieroglyphicks, placed upon a Base, without an Inscription.

8. That in the Garden of the *Mattei* is but very small, and broken in two pieces; the uppermost has to the top some Hieroglyphicks, but the lower piece none.

9. In the Court of the Palace of the Prince of *Palestrina* you see an Obelisk lying upon the Ground, broken in three pieces, with Hieroglyphicks; it seems to have been much longer.

10. *Roma antica* makes mention of an Obelisk standing at the foot of the Stairs in the Palace of the *Ursini*, in the *Campo di fiore*, but we did not see it.

11. We were also credibly inform'd, that an Obelisk bigger than any of those erected already in *Rome*, and suppos'd to be entire, was lying under a row of Houses in the *Campus Martius*.

Among all these Obelisks, those that are engraven with Hieroglyphicks are of the same kind of Stone, *viz.* of a hard Marble of a mingled colour, red and white, which in so many Ages has not undergone the least alteration by the Weather: their Figure is taper-wise, lessening by degrees from the Basis to the Center, yet so as that they don't terminate in a point; but when they are come to that degree, as to be too small to have any Hieroglyphicks engraven upon them, the tops are made in the form of an obtuse Pyramid. 'Tis the general Opinion, and not without a great deal of probability, that the Hieroglyphicks upon these Obelisks, from the bottom to the top, are by degrees greater and greater, which makes the uppermost appear of the same bigness with the lowermost.

Triumphal Arches. Of *Triumphal Arches* are yet remaining that of *Septimius Severus*, that of *Titus Vespasian*, that of *Constantine* the Great, that erected in honour of *Antoninus*, *Septimius Severus* his Son, and that of *Gallienus* and *Salonina*, call'd the Arch of St. *Vito*. We could not find out the Arch in the *Via Flaminia* call'd *Arco di Portugallo*, in *Roma antica*, where you may see the Inscriptions and places of those Arches.

Pillars. There are four *Pillars* yet remaining, (not reckoning those belonging to Temples) *viz.* the *Columna milliaria*, which anciently stood in the *Forum Romanum* in the center of the City, this being the Mark from whence they us'd to count their Miles, by a certain Stone set up at every Mile's end, this Statue being, toward the top, mark'd with the Letter I, of a considerable bigness, as the second Stone at the first Mile's end was mark'd with II, and so further; so that *ad secundum lapidem* signified at one Mile's distance from this Pillar, *ad tertium* two, and so on. It is of no considerable bigness, and now placed on one side of the *Area* of the Capitol.

The *Columna rostrata* in the *Forum Romanum*, erected to *C. Duilius*, in memory of the Victory he obtain'd over the *Carthaginians* at Sea; the old and long Inscription, which

which was much defaced, is supply'd in many places.

The *Column* of *Trajan*, of white Marble, which remains standing ever since its first establishment, being 128 foot high, and the Base 12; within it you ascend to the top by a pair of winding Stairs of 192 Steps, having 44 small Windows to give light; the whole Fabrick is compos'd of no more than 24 entire Stones, each Stone having 8 Steps. An *Helical Area* compasses the Pillar from top to bottom, in manner of a Screw, on which are carv'd the Actions of *Trajan* in his Expedition against the *Dacians*. The Pedestal, which was buried under ground, was laid open again by Pope *Paul* III, and has the following Inscription.

S. P. Q. R.

Imp. Cæsari Divi Nervæ F. Nervæ Trajano Aug. Germ. Dacico, Pont. maximo, Trib. Potest XVI. Imp. VI. Cos. VI. PP. ad declarandum quantæ altitudinis mons & locus tantis operibus sit egestus.

The *Column* of *Antoninus*, much like the former, is 175 foot high, has 206 Steps within, and 56 small Windows: Being miserably broken and defaced, Pope *Sixtus* V. mended and restor'd it.

Vid. Roma Antiq.

There are but two *Mausolæa* remaining, *viz.* that of *Augustus*, and the *Moles* of *Adrian*, now call'd the Castle of St. *Angelo*.

Mausolea.

Of *Statues*, the Palaces and Gardens in and about *Rome* can shew more than all *Europe* besides: Among these, the most taken notice of are, the *Equestris Statua* of *M. Aurelius Antoninus Pius* in Brass, now standing in the *Area* of the Capitol; the two Statues of Stone, of two Horses with Men by them, now to be seen in the *Mons Quirinalis*, whence it got the Name of *Monte Cavallo*. The Statues of *Laocoon*, the Trunk of *Hercules* and of *Cleopatra*, in the Pope's Garden, call'd *Belvedere*. That noted Statue of the Bull in the D. of *Parma*'s Palace, call'd *Il Toro di Farnese*. The incomparable Statue of *Venus*, in the D. of *Tuscany*'s Garden, the Work of *Apollodorus* the *Athenian*. *Venus verecunda*; *Marsyas* hung up by the Hands; the Wrestlers; the Country-man who discover'd *Catiline*'s Conspiracy, in a sitting posture, with a Wooden-knife in his Hand; all to be seen in the same Gardens. The Statue of *Meleager*, in the Palace of the *Pichini*; the Statue of *Pasquin*, whereon they usually fasten their Libels; the Statue of a Fellow plucking a Thorn out of his Foot, in the Capitol; the Statue of the she-Wolf giving suck to *Romulus* and *Remus*, in Brass, look'd upon as the most ancient in *Rome*; the Gladiator, of white Marble, in the *Villa Borghese*, valued at a very high rate, the Copy of which in Brass is to be seen at *Hampton-Court*; two Statues representing Friendship, in the *Villa Ludovisia*.

Statues.

Altar-stones, Grave-stones, and other Stones with Inscriptions, of those there is vast variety all over the City.

Stones, Medals, Engelia and Urns.

And of ancient Medals and *Entagliæ*, there are dug up daily, which are sold in the Shops and Stalls in the Market-places, and great numbers of them are preserv'd in the Collections of the *Virtuosi*; where, as well as in the Gardens and Palaces of Persons of Quality, you may see great quantities of Sepulchral Urns of divers shapes and bigness, some of Stone, others of Earth.

Among the Antiquaries of *Rome*, who have considerable Collections of these before-mention'd things, as well as of sacrificing Vessels and Instruments, Lachrymal Urns, ancient Lamps, Rings, *Fibulæ*, *Tesseræ hospitalitatis*, Weights, &c. *Leonardus Augustinus*, the then Pope's Antiquary, and *John Petro Bellori*, deserve to be prefer'd before the rest; that worthy and ingenious Gentleman, Cavalier *Carlo Antonio del Pozzo*, shew'd us 20 Volumes in Folio, containing the Figures of most of the Antiquities in and about *Rome*, drawn by the hand with great exactness; and among the rest we took notice of the *crepundia veterum*, being nothing else but little Images of Earth resembling Children, Apes, Hares, &c. found in Urns. Of Weights, we saw some in the Collection of *Leonardus Augustinus*; made of a dark-red Stone well polish'd, of the shape of a *Holland* Cheese, of divers magnitudes, mark'd on one side with the number of ounces or pounds it contain'd: Of these Weights I saw two as big as a large *Holland* Cheese, in the Church of St. *Maria in Cosmedin*, call'd *Schola Græca*, and two more in the Church of St. *Maria in Trastevere*, of which they have a Tradition, That they us'd to tie them to the Martyrs Feet, to stretch and torment them: In the last mention'd Collection, we saw also a Medal, with the Figure of a *Tatus* on one side, and this Inscription on the other; *Qui ludit orbem det quod satis sit*: The *Fritillus* or Dice-box of the Ancients, like ours; the *Strigiles*; a Medal that us'd to be hung about the Slaves Necks, having on one side the Figure of a she-Wolf giving suck to *Romulus* and *Remus*, and on the other, in three concentrical Circles, these words, *Tene me ne fugiam, & revoca me in foro Trajani purpuretica ad Pascasium Dominum meum*. A Drinking Glass like a *Priapus*, of which the Poet, *Vitreo bibit ille Priapo*. The ancient *Roman* Timbrel, not unlike our modern ones.

Rome has about 13 miles in circumference, but did to us appear not to be so populous as *Venice*, *Milan* or *Naples*, as comprehending a great deal of waste ground; the number of its Inhabitants are generally believ'd to be 120000 Souls, without the Strangers, of which there are great numbers here; it extends now-adays below the Hills into the Valley by the River side, being generally well built, the Streets streight, and beautified with many Palaces, Monasteries and Churches, of which, they say, there are above 300. Provisions for the Belly are not so cheap here as at *Florence* or *Naples*, yet have they great plenty of them, and those exceeding good, their Beef being not inferiour to ours in *England*. Before they kill their Beasts, they hunt them, as we do our Bulls. Their sucking Veal they prefer before all of that kind in *Europe*; and their Kid or *Capretto*, and Pork, is also excellent good Meat; but their Mutton is both tough and dry. For tame Fowl they may compare with any part of *Europe*, both in quantity and goodness, *viz.* *Hens*, *Capons*, *Turkies*, *tame Pigeons*, &c. Geese they have in no great plenty, but wild Fowl is very cheap, and that of the best sort, such as Partridges, of two kinds, the common and red-legg'd ones, Woodcocks, Snipes, Duck and Mallard, Wigeon, Teal, Quails, Plover, &c. besides what is sold in the *Small-bird Market*, of Thrushes, Blackbirds, Larks, &c. nay, even Robin-red-breasts, Finches, Wagtails, Grays, &c. Besides these before mention'd, you may see sometimes in the Poulterers Shops to be sold, *Cranes*, *wild Geese*, *Shell-drakes*, *Avosetta*, *Water Hens*, *Bogandeis*, and even such Birds as are not eaten in *England*, as Kites, Buzzards, Spar-hawks, Kestrels, Jays, Magpies and Woodpeckers. Neither are they in any want either of Sea or River Fish; tho' they be sold at a dearer rate than Flesh: Of Fresh-water Fish, Pike, Carp, Tench, Trout, Eels, Barble, Chevin and Dace, are the most frequent; I don't remember I ever saw a Perch at *Rome*. Of Sea-fish they have the *Mullus antiquorum*, now call'd *Triglia*, call'd *Rouge* by the *French*, from its colour; in *Cornwall* we call them *Surmullet*: *Spiegole*, or the *Lupus marinus*, a Fish not known in *England*; *Orate*, Gilt-heads; *Cephali*, the *Mugil* of the Ancients, we call it a *Mullet* in English; *Sarde*, or the Sprat; Conger, or Lamprey; Sole, Plaise, and others of the flat kind; *Merluzzo's*, we call them Hakes; sometimes small Sturgeons, Dog-fish, as also *Tuny* and *Sword-fish*.

A description of *Rome*.

Its Provision.

Wild Boar and other Venison you scarce ever miss in the Market, but their wild Deer (or *Capreole*) is generally very lean: Sometimes you meet also with Porcupine to be sold.

Oranges and Lemons are very cheap here, but large Pears and Apples very dear, being sold by weight all over *Italy*.

Their Bread is both very cheap and good, and light, tho' they use no Yeast to raise it.

Of Wines they have greater variety than in any other place of *Italy*; as *Greco*, *Lagrimo* of *Naples*, *Languedoc*; Wine of *Syracusa* and *Augusta* in *Sicily*, *Orvietano*, *Fensano*, *Monte Pulciano*, *di Monte fiascone*, *Castelli*, *Romano* and *Allano*, which is more frequently us'd than all the rest. Most of their Wines are sweet (which they call *Abboccati*) and so strong bodied, that they will bear half Water. Rough Wines they call *Asciuti*, tho' none of theirs are so harsh as our Clarets or *Florence* red Wines, which are also to be had here. Their Olives, tho' small, are excellent good and sweet; of Walnuts, Hazlenuts, and such other Fruits as are frequent among us, great plenty; but their Apples and Pears excel all the rest for goodness.

Rome is also noted for divers Commodities and Manufactures; as, the best Viol and Lute-strings in *Europe*, perfum'd Gloves, Combs made of Buffels Horns, Womens Fans, Vitriol, Essences; and as for Musick and Pictures of the best Masters, *Rome* may deservedly challenge the Preference before all other places in *Europe*. At one time Cavalier *Barberini* was the most noted and the only excellent Sculptor here, and *Pietro de Cortona* the most eminent Painter.

The *Ville* or County-Seats of the Princes and other Persons of Quality of *Rome*, for Flower-Gardens, Groves, cut Hedges of Cypress, *Alaternus*, Laurel, Bay, *Phillerea*, *Laurus tinus*, and other *semper-virent* Plants, close and open Walks, most excellent Orchards of Fruit-trees, Labyrinths, Fountains, Waterworks, Statues, Bird-cages, and other Ornaments, but especially in their bigness, (some being 3 or 4 miles in compass) exceed most of the Gardens of any Princes in *Christendom*; the chief of those, (1.) The *Villa Borghese*, esteem'd the best of all about

Country Seats.

Rome,

Rome, tho' inferiour in bigneſs to the (2.) *Villa Pamphylia*, which lies on the *Janiculum*, without St. *Pancrat's* Gate, being 4 miles in compaſs. (3.) The *Villa Ludovisia*, belonging to Prince *Ludovisio*. (4.) The Pope's Garden, call'd *Belvedere*, at the Vatican. (5.) The Pope's Garden at *Monte Cavello*. (6.) The *Villa de Medici*, or the Great Duke's Garden. (7.) The Garden of *Mondalto*. (8.) The Garden of the *Matthei*. Each of theſe have their little Pillars, beautified with moſt excellent Statues, *bassi relievi*, Pictures and other Curiosities, for the deſcription of which I refer my ſelf to Mr. *Laſſels* and others; neither will I pretend to enlarge upon their publick Structures, but can't altogether paſs by in ſilence the Church of St. *Peter*, being, in my Opinion, the moſt ſumptuous and magnificent Structure that ever was placed upon the face of the Earth, exceeding in all its dimenſions the moſt famous Temples of the Ancients, being 520 foot long, and 385 broad, according to *Laſſel*; which tho' it be not ſo long as St. *Paul's* at *London*, yet as it is much broader, ſo this renders it more regular and proportionable to its length. The *Cupola* is of that ſtupendious height and compaſs (having the ſame diameter as that of the *Rotunda*) which ſuſtaining on the top a very large Lanthorn, encompaſs'd with great Stone Pillars, this renders it the boldeſt and moſt ſtupendious piece of Architecture the World ever beheld. The Roof is arch'd and divided into ſpacious Squares or Panes like Wainſcot, the Ribs and tranſverſe Borders terminating thoſe Pannels, being richly gilt, and the *area* of each Square fill'd up with a large gilt Roſe. The oval Portico encompaſſes a large *area* before the Church conſiſting of four rows of great Stone Pillars, ſo cloſe together, that at a diſtance they reſemble a Grove of large Trees. To be ſhort, the lofty Porch to which you aſcend out of this *area* by 24 Steps: the covering of ſome part of the Walls with Marble finely poliſh'd, the excellent Statues, magnificent Altars, moſt curious Pictures, and other Ornaments, render this Church the moſt majeſtick and moſt admirable Pile of Building in the Univerſe.

The Church of St. *Peter*.

Freſcati. Whilſt we ſtaid at *Rome*, we took a *Tour* to *Freſcati*, twelve *Italian* miles thence, anciently call'd *Tuſculum*, where *Cicero* had a Country-houſe, of which they ſhew as yet ſome remnants: At preſent it is famous for three *Villa's*, *viz.* that of the *Borgheſe*, with its Palace call'd *Monâragone*; the *Villa Aldobrandina* or *Belvedere*, belonging to Prince *Pamphilio*, and the *Ville Ludoviſie*; all which for Walks, Groves, Labyrinths, and other Ornaments, may compare with the beſt near *Rome*; and for Waterfalls and other Waterworks, exceed them. That which pleas'd us moſt, (having never ſeen the like before) was the imitation of a Tempeſt, with a Storm of Thunder and Rain, which artificial Thunder they call *Girandola*.

Tivoli We alſo took a view of *Tivoli*, the Ancients *Tibur*, 18 miles from *Rome*; how much *Horace* delighted in this place, is evident out of his Verſes, *Tibur Argeo poſitum colono, Sit meæ ſedes utinam ſenectæ, Sit modus laſſo maris & viarum militiæque.* Its ſituation is, as well as *Freſcati*, on the brow of a Hill overlooking the *Campania* of *Rome*. Here are to be ſeen the Ruins of divers ancient Temples and other Structures, and a remarkable Waterfall of the River *Aniene* or *Teverone*. And the *Villa* of *Eſte*, for its Gardens, Orchards, Walks, Groves, the *Girandola* and other Waterworks, may compare with thoſe of *Freſcati*. Not above five miles from *Tivoli*, we paſs'd over the Sulphur River, the Water whereof we found of a blewiſh colour, and nauſeous ſmell, not unlike to that of our Sulphur Well at *Knaresburgh* in *Yorkshire*; the Chanel in which it runs is encruſted with a whitiſh kind of friable ſtony matter, which being congeal'd in many places in the ſhape of Sugar-plums, they call *Confetti de Tivoli*, and ſell them in whole Boxes full at *Rome*. About *Freſcati* we ſaw growing wild abundance of *Styrax arbor*, which we found no where elſe beyond the Seas.

The *Campagna* of *Rome* is generally very fertile, but being marſhy, and full of ſtanding Pools, the unwholſomneſs of the Air makes that Country but ill inhabited.

One thing more we obſerv'd very well worth mentioning during our ſtay at *Rome*, *viz.* that the Water the Servants brought us in froſty weather to wash our Hands, was ſo hot, that we thought it had been warm'd on purpoſe by the Fire; which Phænomenon having been denied by many of our modern Philoſophers, who were not ſatisfied with the *Antiperiſtaſis* of the Ancients, and yet could not give ſufficient reaſon for it, we thought fit to be ſatisfied of the truth of it, by making an ocular inſpection into the Fountain it ſelf, the Water whereof we found of an equal heat with what was brought us.

For the reſt, the frequent Rains that fall hereabouts make in ſome meaſure amends for the exceſſive drought and heat of the Summer: And as *Rome* has ſufficient wherewithal to entertain People of all tempers, ſo it is a place well fitted for the reception of Strangers.

As for the Inhabitants, they approach now-adays, in their Furnitures and ſome of their Manners and Cuſtoms, more to the *Engliſh* than any of the *Italians* beſides.

To enlarge here upon the Court of *Rome*, the Eccleſiaſtical State and Government, with that of their Churches and Ceremonies, &c. as it would require an entire Volume, ſo without inſiſting any further upon thoſe particulars, we will proceed in the account of our Journey.

They leave *Rome*. *Jan.* 24. 1664. We left *Rome*, and taking our way towards *Venice* along the *Via Flaminia*, paſs'd the *Tiber* again by the *Ponte Molle* (*Pons Milvius*) and at 7 miles diſtance from *Rome*, thro' a ſmall Village call'd *Prima porta*, which ſome ſuppoſe to have been the ancient Boundary of the City on that ſide. From thence we travel'd 8 miles further, to *Caſtel nuovo*, where we took up our Lodgings. All this Afternoon we kept along the *Tiber*, upon the *Via Flaminia*, which reaches as far as *Rimini*, and is all along pav'd with broad Flints and Pebbles, having on each ſide a Border of Stone, and in that Border, at every ſecond or third pace, a Stone ſtanding above the level of the Border. In the Fields, as we paſs'd along, we found abundance of Vernal Crocuſes in Flower.

Prima Porta. *Via Flaminia.*

Jan. 25. We continued our Journey to *Arignano* or *Ariano*, 8 miles, where leaving the *Via Flaminia*, we rode round a high Hill, for 9 miles, to a little Town call'd *Civita Caſtellana*, now ſtanding on a Hill, not far from whence we had a proſpect of the Duke of *Parma*'s Palace of *Caprarola*, which ſeem'd to be no more than two or three miles off, but was, as they told us, at leaſt ten or twelve diſtant.

Civita Caſtellana. *Caprarola.*

After we had travel'd 4 miles further, we paſs'd the *Tiber* a little below *Borgetto*, over a Bridge call'd *Ponte Felice*, begun by Pope *Sixtus* V, and finiſh'd by *Urban* VIII. At a ſmall diſtance from the River ſide we paſs'd under the little Town of *Magliano*, built on the top of a Hill, and travelling for 4 miles along the Bank of the River, came to *Otricoli*, now ſtanding upon a Hill, tho' the Ruins which remain ſhew the ancient *Ocricoli* to have extended, at leaſt for ſome part, to the River.

Ponte Felice. *Otricoli.*

From hence we rode, for five miles, over mountainous and rocky ways, and a mile before we reach'd *Narni*, upon the brink of a moſt dreadful Precipice, extending along the River *Nera*'s ſide. *Narni* (the *Nequinum* of the Ancients) has borrow'd its Name from the River *Nar*, which paſſes below that ſteep Rock, upon the ridge whereof this City is built: It was formerly a *Roman* Colony, and none of the leaſt conſiderable ones, but is now very poor and mean. Here you ſee the Braſs Statue erected in memory of *Gattamelata*, the famous *Venetian* General, on Horſeback, who was a Native of this place. Near it you ſee the Ruins of vaſt Stone Arches, which ſome would have to be the remnants of a Bridge, others of an Aquæduct over the River from one Mountain to another.

Narni.

Jan. 26. We travel'd thence thro' a very delightful and fertile Valley environ'd with Mountains, and well cultivated, to *Terni*, anciently *Interamna*, from its ſituation, a neat little City, in the Piazza of which ſtands a Church which ſeems to have been an ancient Temple. About 4 miles further is the famous Waterfall from the Lake *di Pie di Luco*. Beyond *Terni*, at the further end of this Valley, and on the circumjacent Hills, we ſaw whole Foreſts of Olive-trees, and the Country People buſie in gathering them.

From *Terni* we paſs'd over the Mountains to *Trivura*, and thence deſcended to *Spoleto*, the Capital of *Umbria*, thence call'd *Ducato Spoletana*: The Walls of this City are of conſiderable extent, and the Houſes well built: Hereabouts are to be ſeen the Ruins of many ancient Buildings.

Spoleto.

From hence we paſs'd thro' a moſt ſpacious and pleaſant Valley encles'd with Mountains in the form of an Amphitheatre, the Valley being planted with Trees and Vines after the manner of *Lombardy*, and the circumjacent Hills full of little Towns and Houſes. About 4 miles ſhort of *Foligno*, we paſs'd under *Trevi*, a little Town, ſeated on a round Hill.

Trevi.

Foligno (*Fulginium*) is a very pleaſant and handſome Town, famous chiefly for Confectioners and good Sweetmeats. Beyond it, at the extremity of the Valley of *Spoleto*, we ſaw ſuch another plantation of Olive-trees as before.

Foligno.

Jan. 27. We aſcended from *Foligno* to a Mountain, by a way cut out of the Rock, having a terrible Precipice on our left, and below a Valley ſurrounded with high and ſteep Hills, into which falls a ſmall River call'd *Date*, which

which drives some Paper-Mills. After we had thus travel'd four or five Miles, we reach'd the top of the *Appennine*, the Mountains round about us being cover'd with Snow: On the top of the Mountain we came into a small Plain, having a little Lake or Pool near a Village call'd *Col fiorito*, a very delightful place in the Summer. No sooner had we pass'd this Plain, but we began to descend, and passing thro' the Village of *Serravalle*, situate at the entrance of a narrow Valley 14 miles from *Foligno*, we continued our Journey thro' the Mountains, and lodg'd at *Valcimarra*.

Col fiorito.

Valcimarra.

Jan. 28. We travel'd thro' *Tolentino*, 9 miles from *Valcimarra*, a pretty little place, famous chiefly for being the Birth-place of that great Critick in the Greek, *Franciscus Philelphus*, who was the first Inventer of the word *stapes*, for Stirrops, which had before no word in Latin.

Tolentino.

From hence we rode on ten miles to *Macerata*, a large, fair and populous City, the capital of the *Marca Anconitana*, and usual Residence of the Cardinal Legate. From hence we travel'd thro' *Recanati* (a pretty Town, situate on the ridge of a Hill three miles from *Loretto*) to *Loretto*. At *Recanati* we saw a Statue in Brass of the Virgin *Mary* in *basso relievo*, with a Table having an Inscription upon it giving Thanks to her, that she was pleas'd to settle her House in the Territory of this City.

Macerata.

Loretto it self is no more than a small City, seated upon a Hill, consisting only of one Street within the Walls, and such another without, which makes the Suburb: The Church and College of the Canons stand at one end of the Street; and before the Church is a small Piazza, having a Cloyster on one side, where the Canons have their Lodgings. In the midst of the Piazza you see a very fair Fountain, and just before the Church Door a Brass Statue of *Sixtus* V. in a sitting posture, with an Inscription intimating, that it was he who gave a Bishop and the Title of a City to *Loretto*. All the Doors of this Church are of Brass cast, with several Histories engraven upon them. The Church is built in form of a Cross, with a *Cupola* in the middle, directly under which you see standing the *Santa Casa* or *holy House*, enclos'd in a Case of white *Parian* Marble, curiously engraven with Figures in *basso relievo*, representing several Histories, done by the best Sculptors then living, the full description of which may be seen in *Tursellinus*'s History. The Walls of the House it self (the Roof being remov'd) are made of a peculiar kind of Stone (as they would perswade the World) resembling Bricks both in their colour and figure, but to be found only about *Nazareth*, and no where else; which if they could prove to be true, would be the best Argument to verifie their Assertion concerning the transportation of this House from thence; but, in my Opinion, they are nothing else but real Bricks. But to let the Reader know what Arguments they make use of to perswade the World of the Verity of it, I will here insert the whole Relation of it, made by themselves, which being translated into thirteen Languages, and hung up in the Church, written on as many Tables, runs thus in English;

Loretto.

Ave Domina Angelorum.

The miraculous Origin and Translation of the Church of our Lady of Loretto.

The Church of *Loretto* was a Chamber of the Blessed Virgin nigh *Jerusalem*, in which she was born and bred, and saluted by the Angel, and therein conceiv'd and brought up her Son *Jesus* to the age of twelve Years. This Chamber, after the Ascension of our Saviour, was by the Apostles consecrated into a Church, in honour of the B. Lady: and S. *Luke* made a Picture to her, likewise extant therein to be seen at this very day. It was frequented with great Devotion by the People of the Country where it stood, whilst they were Catholicks; but when, leaving the Faith of Christ, they follow'd the Sect of *Mahomet*, the Angels took it and carried it into *Sclavonia*, and placed it by a Town call'd *Flumen*, where not being had in due reverence, they again transported it over the Sea, to a Wood in the Territory of *Recanati*, belonging to a Noble Woman call'd *Loretta*, from whence it took the name of our Lady of *Loretto*; and thence again they carried it, by reason of the many Robberies committed, to a Mountain of two Brothers in the said Territory: and from thence finally, in respect of their disagreement about the Gifts and Offerings, to the common Highway not far distant, where it now remains without Foundation, famous for many Signs, Graces and Miracles; whereat the Inhabitants of *Recanati*, who often came to see it, much wondering, environ'd it with a strong and thick Wall; yet could no man tell whence it came originally, till in the Year 1296. the B.V. appear'd in his sleep to a holy devout man, to whom she reveal'd it, and he divulg'd it to others of Authority in this Province, who determining forthwith to try the truth of the Vision, resolv'd to chuse sixteen Men of Credit, who to that effect should go all together to the City of *Nazareth*, as they did, carrying with them the Measures of this Church, and comparing therewith the Foundation's Remnant, they found them wholly agreeable; and in a Wall there by engraven, That it stood there, and had left the place. Which done, they presently returning back, publish'd the Premisses to be true; and from that time forward it hath been certainly known, that this Church was the Chamber of the Virgin *Mary*: to which Christians began then, and have ever since had a great Devotion, for that in it daily she hath done and doth many and many Miracles. One *Frere Paul de Sylva*, an Eremite of great Sanctity, who liv'd in a Cottage nigh unto this Church, whither daily he went to Mattins, said, That for ten Years space, on the 8th of *September*, two hours before day, he saw a Light descend from Heaven upon it, which he said was the B. V. who there shew'd her self on the Feast of her Nativity. In confirmation of all which, two virtuous Men of the City of *Recanati* divers times declar'd unto the Prefect of *Terreman* and Governor of the 'forementioned Church, as followeth: The one, call'd *Paul Renaiduci*, avouch'd, That his Grandfather saw when the Angels brought it over the Sea, placed it in the 'forementioned Wood, and had often visited it there: the other, call'd *Francis Prior*, in like sort affirm'd, That his Grandfather's Grandfather being 120 Years old, had also much frequented it in the same place; and for further proof that it had been there, he reported, That his Grandfather's Grandfather had a House nigh unto it, wherein he dwelt; and that in his time it was carried by the Angels from thence to the Mountain of the two Brothers, where they placed it as aforesaid.

By order of the right Reverend Monsignor *Vincent Cassal* of *Bologna*, Governour of this holy place, under protection of the most Reverend Cardinal *Moroni*.

I *Robert Codrington*, Priest of the Society of *Jesus* in the Year 1634. have faithfully translated the Premisses out of the Latin Original hanging in the said Church.

To the honour of the ever-glorious Virgin.

The Treasury of this Church is of an inestimable value for Jewels, Precious Stones, Gold and Silver Vessels, *tabulæ votivæ*, Altar-cloths, Copes, Vests, &c. for which, and the Vessels and Plate in the House it self, I refer my self to Mr. *Lessi*'s Voyage: The Earthen Pots in the Apothecaries Shop, painted by *Raphael Urbino*, and the great Wine-Cellars, are worth a curious Traveller's Observation.

From *Loretto* we travel'd, *Jan.* 30th, to *Ancona*, a populous City much frequented by Merchants, by reason of the conveniency of its Harbour; which formerly was the best in all the Gulph, but is much decay'd of late. Here we took particular notice of the Ruins of the Stones which secur'd the ancient Port, where you see that renown'd triumphal Arch of white *Parian* Marble, erected to *Trajan* by order of the Senate: The Stones are of a vast bigness, and inscribed thus:

Ancona.

Imp. Cæsari. Divi. Nervæ. F. Nervæ. Trajano. Optimo. Aug. Germanic. Daci. Co. Pont. Max. Tr. Pot. XIX. Imp. IX. Cos. VI. PP. providentissimo. Principi. Senatus. P. Q. R. Quòd. accessum. Italiæ. hoc. etiam. addito. ex. pecunia. sua. portu. cutiorem. navigantibus reddiderit.

On the right side is inscribed, *Plotinæ Aug. Conjug. Aug.* and on the left side, *Divæ. Marcianæ. Sorori. Aug.*

The *Statua equestris* of *Trajan*, which formerly stood on the top of this Arch, is remov'd thence, and set up over the Gate of the Exchange. Besides which, their Playhouse, the Cathedral dedicated to St. *Cyriacus*; and the Citadel, are things worth observation. Here we were also entertain'd with a Dish of Shellfish, of a very pleasant taste, call'd *Pholades* in Latin, because they live in holes within a soft kind of Stone, or rather hard Clay, which being found in great plenty at Sea, if expos'd to the Air, becomes in time a perfect Stone for hardness. The *Italians* call these Stones *Balle di Sasso*, and the Fish *Ballani* or *Dactyli de mare*.

Jan. 31. We continued our Journey along the Sea-coast for 20 miles, to *Sinigaglia*, (anciently *Sena Gallicæ*) a small

Sinigaglia.

a small Harbour for Barges, but well fortified. From hence we still pass'd along the Sea-shore for 15 miles further to *Fano*, (anciently *Fanum Fortunæ*) a large and well fortified City: Here is a triumphal Arch erected in honour of *Augustus*, which being somewhat broken and defaced, they have in the Wall by set a Model of it, as it was entire, with the following Inscription: *Effigies arcûs ab Augusto erecti, posteaque ex parte diruti bello Pii II. contra Fanenses*; Anno MCCCCLXIII.

Fano.

DIVO AUGUSTO PIO CONSTANTINO PATRI DOMINORUM.
IMP. CÆS. DIVI F. AUGUSTUS PONTIFEX MAXIMUS COS. XIII TRIBUNITIA POTEST XXXI IMP. XXVI PATER PATRIÆ MURUM DEDIT.
CURANTE L. TURCIO SECUNDO APRONIANI PRÆF. URB. FIL. ASTERIO V. C. CORR. FLAM. ET PICENI.

Here was the ancient Temple of *Fortune*, now the Church of the *Augustine* Fryers, the Brass Statue of *Fortune*, which was there ador'd, being now standing in the Palace. The City is govern'd by a Senate, consisting of 70 Gentlemen, chang'd every third or fourth Year, but the Governour of the Pope cunningly directs all matters of moment. This City is by some accounted the best situated of any in *Italy*.

Febr. 1. We continued our Journey seven miles along the Shore to *Pesaro*, a very fine City, with a stately Piazza surrounded with fair Buildings, and many Stones with ancient Inscriptions. The Harbour is almost choak'd up, but the Castle and Fortifications in tolerable good repair. We saw it only *in transitu*. From hence crossing the Country, we pass'd thro' the Village of *Catolica*, ten miles from *Pesaro*, and from thence went along the Sea-shore for the most part, till within two or three miles of *Rimini*, (which is fifteen miles from *Catolica*) when leaving the Shore, we took the *Via Flaminia*. The City of *Rimini* is but low built, but neat, with very regular strait Streets. Within the Walls of it, we pass'd under a high Stone Arch erected to *Tiberius*, or (according to *Schottus*) to *Augustus Cæsar*; the Inscription was much defac'd. In the Piazza they shew'd us the Stone on which *Cæsar* stood when he made his Speech to the Souldiers when he was preparing to march to *Rome*; these modern Inscriptions are engraven upon it:

Pesaro.

Rimini.

C. Cæsar Dict. Rubicone superato civili bell. commilit. suos hîc in foro Ar. adlocut.
Suggestum hunc vetustate collapsum Coss. Ariminensium Novembri & Decembr. MDV. Restit.

In another Piazza stands a Brass Statue of Pope *Paul* V. It being then Carnival time, we saw the Gentlemen here diverting themselves with tilting, but they did not run at one another, but at a Puppet of Straw, which they call *Bamboccio*.

St. Marino. *Febr.* 2. We made a small excursion to St. *Marino*, a little City and Commonwealth seated on the top of a very high Hill, about ten miles from *Rimini*, the Inhabitants boasting, That they have maintain'd their Liberty uncorrupted for above 1000 Years. All its Territories are included in one Mountain about three miles in length, and nine or ten in circumference, containing four Villages, viz. *Serravalle*, *Fietano*, *Monte Giardino*, and *Fiorentino*; about eight Corn-mills upon the little River *Canova*, and two Powder-mills. The Arms of this petty Commonwealth are, three Towers upon a Mountain, with this Motto underneath, *Libertas perpetua*. The Suburb of St. *Marin* is at the foot of the same Hill whereupon the City is built; here they keep a weekly Market every *Wednesday*, especially for Swine, of which sometimes 5000 are sold in a day, they paying no more than 6 *d.* Toll for every Drove, whether large or small. Besides, these weekly Markets, they have four great Fairs every Year, the chiefest of which is on St. *Bartholomew's* Day, where prodigious quantities of Cattle is sold, to the no small disgust of some of the neighbouring Princes, whose Customs are considerably impair'd thereby. At this Fair they keep a general muster of all their Forces. From this Suburb up to the City are two Ascents, the one pretty easie, and winding about to the furthermost Gate, by which Coaches may upon an occasion get up; the other leading to the nearer Gate, being very steep. The City is wall'd on one side, the other lying at the brow of a Precipice, being defended by three Towers in a row; and the Hill, even on that side where the Wall stands, is so steep, that it is inaccessible, except by the Ascents; neither are there any Hills near it, except what are much lower than that whereon the City stands. The Streets of the City are narrow, and their Houses but meanly built; they have two Cloysters within the Walls, one belonging to the Discalcate *Franciscans*, the other to the Nuns of the Order of St. *Clara*, and in the Suburb a Convent of the *Capuchines*; besides that, the *Servitæ* have a very fair Monastery not above a mile from the City, which has its own Bishop, and has always a Protector at *Rome*, who at present is Cardinal *Barberini*, whom they sometimes present with some Cheeses and *Muscatella* Wine, which grows very well hereabouts, and is in great esteem with the *Italian* Nobility. They have no Cows, but Goats and Sheep in abundance. Their Government is administred by a Council of 45, which they call *Corpo di Prencipe*; of these 15 are Gentlemen, (of which they have about 20 Families) 15 Artisans and 15 Countrymen, who continue for their Lives, and when one dies, another is chosen in his stead, by two thirds of the Votes; in the place of a Gentleman, a Gentleman, and so with the rest. But enough of this petty State.

Febr. 3. we left *Rimini*, and taking our way to *Ravenna*, pass'd that renown'd Bridge over the River *Rimino*, begun by *Augustus*, but brought to perfection by *Tiberius*, the Stones of which, they say, are join'd together without any Cement: Certain it is, that the sides of it are of vast Stones as high as the Borders, and of a proportionable breadth, without any Mortar or other Cement betwixt them that I could see: It has a large Inscription, intimating when and by whom it was built. About 15 miles from *Rimini* we pass'd thro' *Cesenatico*, and 15 miles further thro' *Cervia*, seated among the Seas, a poor City, having nothing to boast on but the Title of an Archbishop's See. All the way from *Cervia*, till within two or three miles of *Ravenna*, we travel'd near a vast Pinewood on the right hand of us, it is call'd *Pigneda*, and, if we may credit *Schottus*, bears Fruit enough to serve all *Italy*.

The Bridge over Rimino.

Cervia.

Ravenna.

The City of *Ravenna* lies enclos'd betwixt two Rivers, *viz.* the *Bedesis* and *Montone*, one running on one, and the second on the other side. It is of a great circumference, but meanly built: it has five Gates, and an old Castle of Brick, and three fair Convents, *viz.* the *Classe*, belonging to the *Monachi Classenses*; the second call'd the *Porto* from its being dedicated to St. *Maria Portuensis*, belonging to the *Canonici regulares Lateranenses*; and the third to the *Benedictine* Monks, dedicated to St. *Vitale*, the Church of the last being a double Octagon, the one concentrical to and enclos'd within the other; they say it was built by *Justinian*. These Monks shew'd us also two Marble Pillars, adding, That the *Venetians* had offer'd their weight in Silver for them: they were produced at first by an heap of small Flints or Pebbles united into one body by a Cement petrefied as hard as the Flints themselves, and capable of poliure, which Cement, it is probable, might be the Sediment of the same Stones mixt with a Fluid, and separated from thence. I have seen the like in the Library at *Zurick*, and at *Verona*, in our Ladies Chapel, in the Garden of Signior *Horatio Giusti*. To the same Convent also belongs the little round Church (call'd the *Rotunda*) of the Virgin *Mary*, a quarter of a mile without the City, the Roof whereof being fourteen ordinary paces in diameter, yet is made of one Stone, having in the midst a round hole to let in the light: Upon the top of this Church stood in former Ages the Monument of *Theodoricus* a *Gothick* King, of Porphyry, who is suppos'd to have built it; this Monument is as yet to be seen in the Wall of the Monastery of the *Succolanti* or Discalceate *Franciscans*, with this Inscription:

Vos hoc Porphyriacum el. Theodorici Gettor, imp, cineres in Rotundæ apice recondens, huc Petro Donato Cæsio Narnien. præsule favente transtulit ad perennem memoriam Sapientes Reip. Ravi. PP. C. MDLXIII.

This Convent is one of the fairest I ever met with belonging to this Order; and their Church dedicated to St. *Apollinaris* is remarkable, both for the double row of Marble Pillars brought from *Constantinople* by *Theodoricus*, and the ancient *Mosaick* Work in the Walls. Of the same *Mosaick* Work we saw the Figures of the Archbishops of *Ravenna* in the Cathedral, eleven of them having a Dove standing upon their Heads, being chosen, as they say, by a Dove alighting upon their Heads, if we will credit *Schottus*. Not far from the Convent of the *Franciscans* you see the Arch erected in memory of the famous Poet *Dante*, with his Effigies under it, and two Inscriptions in Latin Verse underneath, said to have been made by himself, but so slenderly done, that had he not compos'd better in *Italian*, he could scarce have challeng'd a place among the famous Poets. This City has scarce anything

to boast of now but its Antiquity, being very ill Peopled, ill serv'd with Fish, notwithstanding its vicinity to the Sea, ill provided with Inns, and worse with good Water, which verifies the old Saying of the Poet, *Sit cisterna mihi quam vinea malo Ravennæ*, the Water being all brackish.

In this Journey from *Rome* to *Venice* we were very sensible of difference of the temperature of the Air on both sides of the *Appennine* Mountains, being very temperate and warm on the other side, whereas on this side we found it as cold and raw as it is in Winter with us, which that it proceeded not from any sudden change of Weather, we were sufficiently assur'd of, not only by the Enquiry we made, but also from that we found Snow lying here in many places in the low Grounds, which was melted even on the Hills of the other side before our coming away: The true reason of it, I think, is to be attributed to the heighth of this ridge of Mountains, which reaching beyond the lower Region of the Air, where the Sun-beams are reflected, hinders the mixture of the warm Southerly and Western Air with the cold Northerly and Eastern Air, and also stops the free passage of the Southerly and Western Winds on one hand, which would carry the warm Vapours into the other part, as on the other hand they prevent the cold Northern and Eastern Winds from temperating the heat beyond these Mountains; in the same manner as some Travellers relate of a certain ridge of Mountains in the *East-Indies*, on the one side whereof it is Summer when it is Winter on the other side.

Febr. 5. we travel'd from *Ravenna* along the Bank of the River *Montone*, (which runs thro' a fertile and level Country like *Lombardy* with a swift stream) till within four or five miles of *Faenza*, which is twenty long miles from *Ravenna*.

Faenza. *Faenza* is a little (but neat) City, surrounded with a strong Brick Wall, but somewhat out of repair now: it is famous for the best Earthen Ware made in *Italy*. On St. *Thomas*'s Day yearly all the Gentlemen meet, to chuse Magistrates for the ensuing Year, *viz.* 9 Senators and a President (whom they stile Prior) for every Month, so that they have 12 several Senates throughout the Year.

From hence we travel'd ten miles to *Imola*, half a mile short of which we ferried over the River *Senio*. *Imola* (*Forum Cornelii*) is not so big as *Faenza*, yet has a fair Piazza with a Cloyster on one side.

Bologna. From hence we continued our Journey upon the *Via Æmilia* to *Bologna*, *Febr.* 6. Hereabouts they have a way of boiling their Wines, to keep them the better: the first, which they call *Vin Cotto*, appear'd to us much stronger than the other which they call *Vin Crudo*.

Ferrara. *Febr.* 7. taking the *Florentine* Procaccio's Boat to *Venice*, we pass'd thro' 9 *Sostegni* or Locks to *Mal Albergo*, where we shifted our Boat, going down from a higher to a lower Channel, which brought us to *Ferrara*, 45 miles distant from *Bologna*. From *Ferrara* we were tow'd by a Horse thro' an artificial Channel as far as *Ponte*, where entring the River *Po*, we chang'd our Boat again, and were row'd down the stream 27 miles to *Corbola*, where entring the *Venetian* Territories, we were oblig'd once more to change our Boat, in order to take a *Venetian* Boat. We had scarce gone two or three miles further down the *Po*, when striking into a Channel to the left, we pass'd a Sluce near *Loreo*, and proceeding 15 miles further, pass'd near to *Chioza* a large place built among the *Lagune*, and *Palestrina*, standing upon the *Lido*, entring into the *Lagune* at the Haven of *Malamocco*, and arriv'd at *Venice*, *Febr.* 9. of which we have given you an account already.

Chioza.

March 13. we set out from *Venice*, on our Journey to *Geneva*, taking our way thro' *Rhætia* and *Switzerland*. To *Mestre* we went 7 miles by Boat, from thence 12 miles further by Coach to *Treviso*, where taking Horse, we spent two days and a half in travelling to *Trent*, being 80 miles. The first day, after 12 miles riding, we pass'd thro' *C. Franco*, and thence thro' a fair champian Country to *Bassano*, a handsom City upon the River *Brenta*, where lives abundance of Silk-weavers.

Treviso. *C. Franco.* *Bassano.*

No sooner were we past *Bassano*, but we came among the Mountains extending for 14 miles along the River side: We lodg'd that Night at *Pont Sigismund*. The second day we still kept along the Bank of the River, and about 2 miles from *Pont Sigismund* pass'd thro' a Gate, where we paid the first Duty to the D. of *Inspruck*: At this Pass we saw, hewn out of the Rock, a small Castle call'd *Caudo*, unto which there is no Avenues, both the Soldiers that keep Garison there, and their Provisions, being drawn up by Ropes and Pullies; it has a Fountain of fresh Water in it, and belongs to the Archduke of *Inspruck*, tho' the *Venetian* Territories extend 4 or 5 miles beyond it.

Caudo.

After having travel'd 16 miles further, we came to a small Town call'd *Borgo*; and 13 miles more, to a rich and populous Borough call'd *Perzine*, not above 5 miles on this side *Trent*. Upon the River *Brenta* we saw divers Saw-mills, and abundance of Timber floating down the streams; and as soon as we enter'd the Mountains we found Stoves instead of Chimneys. The Plants we took notice of by the way were, *Erica Pannonica* J. Clus. in flower, on the side of the Rocks; *Flumina bulbosa*; *Leucoium bulbosum vulgare*, C. B. & *Leuc. bulbosum minus triphyllon* J. B.

Trent. *March* 16. we got to *Trent* in very good time, a little (but handsom) City, seated upon the River *Athesis* or *Adda*, at the foot of the Mountains which almost surround it, were it not for the Valley where the River runs. It belongs to the Archduke of *Inspruck*, but the Inhabitants speak *Italian*. Near the North Door of the Cathedral is the Monument of *Matthiolus*, having several Inscriptions, and among the rest the following Distich.

Saxa quidem absumit tempus, sed tempore nunquam
Interitura tua est gloria Matthiole.

On the Front of the Quire is to be seen the following Inscription, giving a short account of the Council held in this City:

Sacrosanctum postremum Oecumenicum generale Concilium fuit in hac celeberrima civitate celebratum; & quidem sub Papa *Paulo* III, Anno MDXLV, 31 Decembris pro felice inchoatione fuit facta Processio generalis per totam Urbem, ab Ecclesia Sanctissimæ Trinitatis ad hanc Ecclesiam Cathedralem; quâ finitâ primus Cardinalis Præsidens, qui postea fuit Papa *Julius* III, [prout etiam alter Card. Præsidens fuit Papa *Marcellus* II. nominatus] in hoc loco eminentiore, tunc magis amplo, ad celebrandum Concilium & Sessiones faciendas deputario, ad altare S. & Gloriosissimi martyris *Vigilii* hujus Ecclesiæ patroni celebravit missam de Spiritu S. Ac reliquis cæremoniis peractis fuerunt sub D. *Paulo* III. celebratæ octo publicæ Sessiones cum decretis, & aliæ tres ob vastam pestem in hac Urbe grassantem *Bononiæ*, ubi nihil fuit decretum, Anno MDXLVII. Postea cessante peste & bellis fuit reductum hoc Concilium, & in hoc eodem loco fuerunt sub Papa *Julio* III. celebratæ aliæ publicæ sex Sessiones cum Decretis Annis 1551, 1552, quibus interfuerunt tres Serenissimi Principes Ecclesiastici, S. R. I. Electores Archiepiscopi, *Moguntinus*, *Trevirensis*, *Colonienssis*, 1 Die Septemb. 1551. hanc Urbem ingressi; prout etiam Serenissimus Elector Brandenburgensis duos oratores hic ablegavit. Demum sub Papa *Pio* IV. Anno 1561 & 1563 fuerunt celebratæ ultimæ novem publicæ Sessiones cum Decretis in Ecclesia S. *Mariæ* majoris hujus urbis, istius Ecclesiæ Reverendissimo Capitulo incorporata, sicuti etiam Ecclesia S. Petri. Et nihilominus ad pedes Sanctissimi Crucifixi tum in hoc loco existentis & nunc alio translati pro Decretorum corroboratione semper fuerunt publicata omnia, dicti Concilii Decreta. Interfuerant sub dictis summis Pontificibus celebrationi Cardinales Legati 13, inter quos *Christophorus Madrucius*; non Legati 4, inter quos *Ludovicus Madrucius*: Oratores Principum totius Europæ 29: Patriarchæ 3: Archiepiscopi 33: inter quos Archiepiscopus Rossanienssis, qui postea fuit *Urbanus* 7 nominatus: Episcopi 233: Abbates 18: Generales ordinum 12: Theologiæ Doctores 148: Procuratores 18: Officiales Concilii 3: Cantores 9: Notarii 4: Cursores Papæ 2.

Sacrosancto Spiritui S. omnium Conciliorum directori sacratissima Die Pentecostes, Anno 1639. dicatum.

Here are no other remarkable Churches or publick Buildings

The Inclinations, Manners and Customs of the *Italians*.

The *Italians* are generally very industrious and patient in whatever they undertake, their Temper being a *medium* betwixt the fastuous Gravity of a *Spaniard*, and the Levity of a *Frenchman*. They are very faithful to their Friends, and scarce ever forgetful of an Obligation; not easily provok'd, and careful to avoid all Occasions of Quarrel; very observing in the Punctilio's of Civility, even to an excess; they not easily contract familiarity with Strangers, but when once well acquainted with them, their Conversation is very obliging and profitable, most of them, not excepting even the meaner sort, being addicted to Politick Studies, which makes them very desirous of Liberty.

Of Pictures, Statues and Musick they are fond to such a degree, that they will purchase them at any rate; and are so much addicted to their own Language, that they even neglect the *Latin*; and for the *Greek*, it seems

to be quite laid aside among them. They are very temperate in their Diet, eating more Herbs than Flesh; and seldom drink Wine without Water, and that seldom to any excess. During the space of 18 Months that I staid in *Italy*, I saw only one *Italian* drunk. The *Italians* in general, but especially the meaner sort, are very frugal and sparing, even those of the first rank, spending the greatest part of their Revenues in building of Palaces, and beautifying them with Pictures, Statues, Gardens and Walks; in great Retinues and splendid Equipages, more than in Housekeeping, commonly giving Board-wages to their Servants; and the inferiour Gentry affect nothing so much, than to appear with all possible splendor abroad, tho' they deny themselves many things at home. As the *Italian* Nobility and Gentry live for the most part in great Cities, this makes them so splendid, rich and well built; tho' most of their Palaces have more of stateliness than conveniency in them. Their Houses are for the most part of Stone, and high Roof'd, which makes them warm in Winter, and cool in the Summer, by reason of the largeness of their Windows, which, in those places where they are of Paper, are not very suitable to the magnificence of their Houses.

Among the Nobility of *Italy* (especially the *Venetians*) a certain Custom has been introduc'd, that if there be a numerous Issue of Sons belonging to a Family, one only marries, the eldest, if he pleases; if not, as they can agree the point among themselves; the rest make shift with Concubines.

There are very few Cities or Towns of note in *Italy*, but what have Societies of *Virtuosi*, whose business is, at their Assemblies, to exercise themselves in Rhetorick, Morality, or other curious Questions: Most of these assume certain conceited Names, and take a suitable Coat of Arms; as for instance, the Society of *Bergamo* stile themselves *Eccitati*, their *impreſe* being the Picture of the Morning: Of those Academies there are three in *Rome*, as many at *Padua*, and as many at *Bologna*; two in *Venice*, two at *Naples*, and two at *Luca*; and thus in the other Cities.

The *Italians* commonly wear black or dark-colour'd Clothes, in the Fashion of which they imitate the *French*, yet not very hastily, tho' the Subjects of *Spain* also frequently appear in a *Spanish* Dress.

Their Vices. As for their Vices, they are generally taxed for three; (1.) *Revenge*, unto which they are addicted to such a degree, that nothing but the Death of those who have injur'd them will satisfie them; which they will procure by poysoning, assassinating, or any other way: This seems so firmly rooted among them, that the Mothers will keep the Weapons wherewith their Husbands were murther'd, and shew them to their Children, to excite them to Revenge.

(2.) *Lust*, unto which they are inclin'd with such Violence, that to avoid worse consequences, publick Harlots are allow'd in all great Cities. I will not charge them with Masculine Venery, as having not sufficient ground for it.

(3.) *Jealousie* they are so possess'd with, that they lock up their Wives upon the least frivolous Pretences: Hence it is that to salute the Wife of an *Italian*, or to call the Husband Cuckold, is a Crime not to be expiated, but with Death. The poor Ladies at this rate had a most uncomfortable Life, not being permitted to stir abroad, except to Church, and then not without certain she-Guardians; notwithstanding all which, they often find means to deceive both the Guardian and the Husband, and satisfie themselves in spight of all their Jealousie.

To those three Vices I might add *Swearing*, were it not so common among them, not excepting the Priests and Monks, that I am of opinion they account it no Sin, or at least no Vice.

The *Italians* have a general Custom to sleep every day in the Afternoon, from two till four, during the Summer season.

Charity. But among those Vices, I ought not to pass by in silence one peculiar Virtue, which is their *Charity*: There are many Cities in *Italy* which have Hospitals, for the entertainment of poor Travellers for three days *gratis*, unto whom a piece of Money is given besides at their departure. They have also Hospitals for the reception of all such Children as shall be brought thither without exception, an Officer being appointed on purpose, who upon the ringing of the Bell, takes the Child immediately out of the Grate into which it was put, (being so small as to admit only a Child that is very young) and having ask'd the Party that brought it, whether it has been baptiz'd, puts it out to nurse.

At *Rome*, *Venice*, and in divers other Cities of *Italy*, they have also certain Confraternities of charitable Persons, who by a voluntary Contribution raise Money among themselves yearly, which is bestow'd upon poor Maids, to help them to Husbands, and to enable them to furnish their Houses, and to begin the World withal.

Some Observations about their Diet. They eat in *Lombardy* a kind of subterraneous Mushrome call'd *Tartufale*, i. e. *Tubera Terræ*, by the English *Trubs*, and the French *Truffes*: it is accounted an incentive of Lust. They also eat Snails serv'd up in their Shells with Pepper and Oyl; Frogs fry'd, and serv'd up with Oyl; their Flesh looks white, after they are skin'd and ready for frying: Land Tortoises, which they prefer before Sea Tortoises. They use also in their Diet divers sorts of Shell-fish, which we either have not, or at least eat not; as Purples, Periwinkles of all sorts, *Patellæ* or Limpets, Sea-Urchins and Sea-Tortoises.

Upon all their Dishes, even not excepting their Flesh, they grate Cheese, which they think gives it a relish.

The Kernels of roasted Chesnuts they serve up with Juice of Lemon and Sugar. At *Bononia* they make Cakes of the flower of grinded Chesnuts, which, as well as common roasted Chesnuts, is the common Diet of the poor Peasants.

They feed also upon all sorts of Small-birds, such as *Wrens*, *Stares*, *Titmice*, *Butcher-birds*; and divers sorts of great ones, which are never eaten in *England*, such as *Magpies*, *Jays*, *Woodpeckers*, *Jack-daws*, nay, even *Kites* and *Hawks*.

For Salleting they use the young shoots of *Selleri* (sweet *Smallage*) with Oyl and Pepper; and so they eat *Fennel* and *Artichokes* raw: Besides, in most of their Sallets they mingle Rocket (*Racketta*, as they call it) and *curl'd Endive*, which being kept all the Winter, excels *Lettuce* it self.

The Fruits in request among the *Italians*, and not used in *England*, are, *Jujubes* green, *l'Azarole* being the Fruit of the *Mespilus Aronia*, of a pleasant sharp taste, both Fruit and Tree exactly like the common Hawthorn, but bigger; *Services* or *Sorbes*, of the bigness of small Pears, those that grow with us being the Fruit of the *Sorbus torminalis*; *Green Figs*, both white and blewish, most delicious Fruit when full ripe; the Husks or Cods of *Carobs*, call'd *Siliqua dulcis* in Latin; *Love-Apples*; *Mad-Apples*, both raw and pickled; *Water-Melons*; several sorts of Gourds, as *Cucurbita lagenaria* and *Cucurbita fluxuosa sive anguina*; *Cucumis anguinus*, &c.

In their Disserts they serve up *Pin-kernels*, *green Almonds*, and a kind of Sweetmeat made of Mustard and Sugar.

They don't care to drink Wine without Snow or Ice, even in the middle of Winter.

In the Kingdoms of *Naples* and *Sicily* they make a kind of Cheese call'd *Caseo di cavallo*, i.e. Horse-cheese, for what reason I can't tell; they told us they were made of Bufflers Milk, which I much question, considering they are not well stor'd with those Beasts; however, these Cheeses are of a very good taste, tho' neither fat nor strong.

The *Italians* don't compute their Hours from 12 to 12, as we do, but from 1 to 24, beginning at Sun-set, which being a movable term, is much more troublesom than ours, which are fix'd.

Tho' the *Italians* have a Proverb, *That* Italy *is the Garden of the World*, and continually boast of their *Italia gleba*, yet if you except *Lombardy*, *Campania felix*, and some few other places, the rest is mountainous and barren enough.

Bufflers are very common in *Italy*, which they make use of in all respects as we do our Oxen; but being somewhat unruly, they tame them by putting in Rings thro their Noses, wherewith they guide them, as our Bear-wards do the Bears.

For Insects, the most remarkable sorts, which we have not in *England*, are, 1. The *Cicada* before-mention'd. 2. The flying *Glow-worms*, being nothing else but the Males of the common creeping or unwinged Glow-worm. 3. *Scorpions*, which sting not in *Italy*, and if they do, it is not venomous. 4. *Tarantula's*, being a large sort of Spiders, the biting whereof is suppos'd to put People into Phrenetick Fits, enforcing them to dance to the Musick, by which means they are cured, this Exercise causing an evacuation of the venomous Humour by Sweat. 5. *Cimici*, as the *Italians* call them, and *Punaise* by the *French*; we *English* call them *Chinches* or *Wall-lice*, raising heats by their biting in the Skin, and harbouring in the Wood of the Bedsteads, Straw and Bolsters; when bruised, they emit a nauseous smell: We have of these Insects in some places of *England*, but not many.

March 28. we left *Trent* to continue our Journey to *Coira* or *Clur*, in the Country of the *Grisons*, call'd in Latin *Curia*.

Curia Rhætorum. We passed thro' the Valley where the River *Adda* runs, and every 5 miles thro' a large Village, and at Night lodged in a little Town called *Brunsole.*

Bolzan. Maran. The 19th we passed thro' *Bolzan*, a Town as big as *Trent*, and ten miles further thro' *Maran*, another large Town; that Night we lodged at the Village of *Revelgnd.*

Cleurn. The 20th we continued our Journey by the way of *Latourn*, *Slach*, *Schlanders*, and *Malez*, all places of note, and coming to a pretty large Walled Town called *Cleurn*, there struck off to the left hand among the Mountains, to the Village of *Tavers*, where we lodged.

The 21st we rode on to *Monastero*, the first place in the Country of the *Grisons*, and stopt at *Cherf*, a Village at the foot of the Mountains. In this Country the People use a peculiar Language they call *Romansch*, i. e. *Lingua Romana*, which comes nearer to the *Spanish* than *Italian*, tho' distinct from both; besides which, they generally speak both *Italian* and *High Dutch*. We found the Country cover'd with Snow, they being oblig'd to Winter their Cattle here for six Months in the Year, tho' they assur'd us, that hereabouts the Snow did not lie all the Summer, even not on the tops of the highest Mountains. They use Stoves, to defend themselves against the cold; and they told us, that they catch'd hereabouts great store of *Chamois* or *Gemis* (*Rupicapræ*) among the high Hills; and we saw abundance of the Horns of those Creatures stuck up in their Houses. They also meet here now and then with Bears and Wolves, but not many. The Men wear Ruffs and bushy Beards, and the generality of the People appear'd to us very honest and civil. Their Houses are strongly built of Stone, with little Windows. Fortifications they have none, trusting either to their own Courage, or to the Poverty of their Country, which is not inviting enough to draw the Arms of the neighbouring Princes that way.

March 22. we passed the Mountain of *Bufalora* in seven or eight hours: In the top of the Mountain, half way betwixt *Cherf* and *Zernez*, is an Inn called *Furno.* From *Zernez* we rode thro' the Valley of the higher *Engadine*, thro' the Village of *Zuez*, and several other Villages, taking up our Quarters at *Ponte.*

Of the Grisons. The *Grisons* are divided into three Leagues, each of these being subdivided in *Communes*, which have each several Villages, some more, some less: The *Lega Grisa* has 19 *Communes*; the *Lega della casa Dio* 21; the *Lega Dieci Dritture* 10. Each *Commune* has its chief annual Magistrate, (whom in some places they call *Maestrale*, in some places *Landamman*) and a certain number of Assessors or Judges, call'd *Truæder*, by them. Each Village chuses its Judges by majority of Votes, every Inhabitant (even not excepting the Servants) above the age of sixteen having their Suffrages. These Magistrates are chang'd every two Years, but confirm'd every Year, and may be deposed by the People. The executive Power and chief management of publick Affairs is lodged in the *Maestrale* or *Landamman*, who assembles the *Truæder.* Every two Years they have two General Diets, one at *Michaelmas* Day, when they chuse Governours of places; the second at St. *John Baptist*'s Day, when they take an account of all their Officers. To these Diets each *Commune* sends its Commissioners, some one, some two, who are to act according to the Instructions given them. Each League has its Head or Chief; as for instance, the Burgomaster of *Coira* is always Head of the League *della casa di Dio.* From the Diet lies an Appeal to the Communities. The *Grisons* pay no manner of Taxes; the County of *Chiavenna* and the *Valtoline* in *Italy* are subject to them, whither they used to send two Bailiffs before *Plurs* was destroy'd by the falling in of an adjacent Mountain, now they send but one to *Chiavenna*; these are called *Commissario's.* The *Valtoline* is divided into six Districts or *Præfecturæ*, each of which has its peculiar Governour sent thither by the *Grisons*; their Names are, *Tirano*, *Tellio*, *Sondric*, *Morbegno* and *Trevona.* The People of the *Valtoline* and of the Country of *Chiavenna*, pay no other Taxes but only for the maintenance of their Governours.

See Simler, in Rep. Helvet.

March 24. we left *Ponte*, and travel'd over a very high Mountain, in very bad Weather, it snowing so exceedingly, that we were scarce able to open our Eyes; yet by the way we took notice, that the People living among those cold Mountains were of a more swarthy complexion than those below.

Coira or Chira. *March* 25. we came to *Coira*, the capital City of the *Grisons*, standing upon a River which falls into the *Rhine* about half a mile below it. It is encompass'd with Mountains, except on that side where the *Rhine* passes thro' a pleasant Valley of very good Meadows and Pasture-grounds. The Inhabitants of *Coira* are Protestants, except the Bishop and 24 Canons, who have no share in the Government of the Town, the form of which is much like to that of *Zurich* and *Basil*; the Citizens being divided into five Companies, each of which chuses fourteen Senators, which composes the Great Council of 70: The same are chosen commonly again every Year on St. *Martin*'s Day. The lesser Council consists of certain Members of the *Great Council*, *viz.* five out of each Company chosen every Year, and five Masters of the Companies for the last Year, making up the number of 30. This Council, with the Burgomaster regent, (whom they call *Statthought*) judge in criminal Causes, as Actions of Debt are determin'd by the five Masters of the Companies, and ten Members of the Council of 30. But from them an Appeal lies to the lesser Council. *Vid. Simler.*

In the Mountainous Pastures hereabouts we found *Crocus vernus flore albo, & flo. cæruleo, & flo. ex albo & cæruleo variegato; Hepatica nobilis ubique; Leucoium bulbosum Tab. & Ornithogalum flore luteo.* The *Grisons* have besides *Coira* two Towns more, *viz.* *Mayfield* and *Eylandts*: Some of their Communities are *Romanists*, some *Protestants*, but most of the last, the number of which is computed to 17000 fighting men.

Walenstadt. *March* 29. we went from *Coira* to *Walenstadt*, seated upon a small Lake called the *Wallenstatter-Sea*: This, as well as *Sargans*, thro' which we passed, are *Voghtia's* of the seven Cantons.

Glaris. The 30th we ferried over the Lake to *Wisen*, and from thence travel'd to *Glaris*, one of the thirteen *Swiss Cantons*: Here they shew'd us the Horns of the *Ibex*, (which they call *Steinbuck*) not unlike, but somewhat longer than Goats Horns; they told us, that they were found in *Wallisland* and the Archbishoprick of *Saltzburgh* in *Germany*; but of the before-mentioned *Rupicapræ* or *Gimpses* and *Mures Alpini majores*, called *Marmottoes*, they have great store, as well as of the *Merulæ torquatæ* and *Merulæ aquaticæ*; of the *Urogallus*, or *Cocks of the Wood*, and the *Lagopus* a white Bird like a Partridge, feathered down to the very Claws; but of these they have greater plenty among the *Grisons.* The Inhabitants of the two Cantons of *Glaris* and *Appenzel* are mixt, two thirds *Protestants* and one third *Romans*; for the rest, the difference of the Government of the several *Swiss Cantons* may be reduced under three Heads; the first, of those who have no Cities, where the supream Power is lodged in the People, *viz.* *Uri*, *Suits*, *Underwalden*, *Zug*, *Glaris* and *Appenzel*; the second of those which have Cities, that were subject formerly to Princes, where the form is Aristocratical, as *Bern*, *Lucern*, *Friburg* and *Solothurn*; the third of these, which have Cities which were always free, where there is a mixture of both, being divided into certain Companies, by whom the Magistrates are chosen yearly, of this Order are *Zurich*, *Basil* and *Schaffhauss.*

Rupicapræ. *The Ibex.*

Glaris. The Canton of *Glaris* is divided into 15 *Districts*, some of which elect five, others six Counsellors, some more, others less, which make up the Senate or Council of 60, two parts whereof are *Protestants*, and the rest *Romans.* The Soveraignty is lodged in the People, who meet every Year on the last *Sunday* in *April*, (all Males above sixteen Years of age having their Votes) to chuse by the majority of Suffrages, 1. the *Landamman.* 2. the *Stadthalter*, or his Lieutenant. 3. a Treasurer. 4. a Standard-bearer. 5. the head Captain, and in time of War a Lieutenant. 6. the head Enlign. 7. three Secretaries. 8. the Apparitor: each of which has his particular station and share allotted in the Government, with such Persons as are joyned with them in Commission, for the further elucidation of which, I will refer my self to Mr. *Simler*, in his *Rep. Helvetiarum.*

The Territory of *Glaris* is about 24 English miles long, the number of Freemen, of both Religions, about 2500. In the Cantons of *Basil*, *Zurich*, *Bern*, *Lucern*, *Schaffhausse*, *Tiburg* and *Solœurn*, the Citizens are only Freemen, the Inhabitants of the open Country being Subjects under the Government of Bailiffs, who in some places govern two, in others three, in others six Years. But in those Cantons which have no Cities, each Countryman is a Freeman, as far as they belong to their respective Cantons, for they have also their Subjects govern'd by Bailiffs.

Einsidle. *April* 1. we travelled from *Glaris* thro' *Nafels*, and divers other Villages near the *Lake of Zurich*, and after an hours riding ascended a high Mountain, where we found the Ground cover'd with Snow, and here found the famous Monastery of the *Benedictine* Fryers, call'd *Einsidle*, where is the Image of our Lady, who has a peculiar Chappel consecrated to her, visited by many Pilgrims: This Abby is under the Jurisdiction of those of *Switz*, unto which place we came *April* the 2d, being no

Switz.

more

more than a Village, but comparable to a goodly Town; its Government is the same with *Glaris*, being divided into six Quarters, each of which chuses ten Senators, which composes the Senate, consisting of sixty Persons. Their Officers are also the same as at *Glaris*. This Canton, as every one of the rest, sends two *Messi* or Deputies to the General Diet at *Baden*, of which the *Landamman* is generally one.

Altorf. *April* 3. After we had travel'd three miles along the Lake to *Brunen*, we embark'd for *Altorf*, and having spent three hours more in our passage, had a mile further to *Altorf*, there being no travelling from *Switz* to *Altorf*, unless you will take a compass about 60 miles. It is larger than *Switz*, and has a pretty Church and a Monastery belonging to the *Capuchins*. Here they told us the Story of *William Tell* and the *Lantvogt*, (this Canton of *Uri* being the first that set it self at liberty) the Statue of the first we saw on the top of a Pillar, over one of their Fountains, with his Crossbow on his Shoulder, leading his Son by the Hand, and at some distance a Tower, on which were painted the several passages of this Story.

The Government is the same with *Switz*, the number of Senators and manner of election the same, except that they have a Master of the Artillery, and 6 Proctors or Councellors besides.

April 4. we return'd to the Lake of *Lucern*, and went by Water within an hours travelling of *Stantz*, the chief *Underwalden* Village of *Underwalden*, where we lodg'd. Here is a very fair Church, and two Convents, one for the *Capuchins*, and one of Nuns. In this place, and at *Altorf*, *Switz*, *Lucern*, &c. we saw in the Church yards Crosses of Wood and Iron upon the Graves, on some of which hung a little Copper Kettle with holy Water, and many Women coming, with bunches of Herbs in their Hands, which they dipt in the Kettle, and sprinkled the Water upon the Graves.

This Canton is divided in *Oberwald* and *Underwald*; the capital Village of the first being *Stanner*, as *Stantz* is of the latter. The lower is govern'd by 60 Senators, chosen by 11 Communities, some more, some less. Their Officers and Elections the same as in *Switz* and *Uri*, (every Male of 14 Years having a Vote in both) except that here they change their *Lendamman* every Year. *Oberwald* has its own *Landamman*, Officers, &c. so that they seem to be two distinct Cantons, were it not that they send but two Deputies to the General Diet at *Baden*.

These three Cantons of *Uri*, *Switz* and *Underwalden* have no Corn-fields or Vineyards, but only Pasture-Grounds, being supplied with Wines from *Italy*, which is very dear here.

The People are generally very honest and good-natur'd, and keep their Houses very clean, but are much given to eating and drinking.

Lucern. *April* 5. we travel'd to *Lucern*, crossing part of the Lake. It is a very polite City, pleasantly situate upon the Lake of the same name, and divided in two parts by a River, which arising from the Lake, is cover'd here with three Bridges, one for Carts and Horses, the other two for foot Passengers, cover'd with a Roof, one being near a quarter of a mile long; besides which, it has a fourth Bridge cover'd like the other, but longer, leading to the Church. The great Church, which stands without the Wall, is a very lofty Structure, over the Western Door of which is the biggest Organ that ever I saw, the hollow of the greater Pipes being capacious enough for a Man to creep into. They told us, that their Great Council consisted of 136, who continue in Office during Life, and when one dies, the rest chuse another in his place. It has two Presidents, whom they call *Sculteti*, who also continue for Life, but preside in their turns every other Year. For their manner of chusing these Senators and other Officers, I will refer my self to * *Simler*. All the Inhabitants of the Territories belonging to this City are Subjects, and divided into 19 or 20 *Præfecturæ*, but they pay no more than five *Batz*, or a Hen a man *per annum* to the Governour.

* *Rep. Helv.*

Zug. From *Lucern* we travel'd, *April* the 6th, fifteen miles to *Zug*, (*Tugium* in Latin) seated at the side of a small Lake, but it is less by one half than *Lucern*. The Government here is Popular, like those of *Uri*, *Switz* and *Underwalden*; but besides the City, the three *Communes* of *Bery*, *Merisinguen* and *Baar* have a share in the Government. Their Magistrates, Officers and Elections the same as in *Uri* and *Switz*. To the General Diet the City sends one, and the three *Communes* the other Deputy. The nomination of the *Landvogts* or Governours in the Country belongs once to the City and twice to the Communities.

The Lake of *Zug* (if you may believe the Inhabitants) has greater variety of Fish than any other of *Switzerland*; those they named to us were, *Eels*, *Carps*, *Perches*, *Trouts*, *Salmons*; which is very strange, by reason of its great distance from the Sea; *Esch*, call'd *Grayling* in English, *Trisea* of the *Eelpout*, *Pikes* (of which we saw one weighing thirty pound) *White-fish* or *Alcrlin*, which is taken also in the Lake of *Bala* in *Merionethshire* in *Wales*, and is call'd there *Guiniad*; and in *Huls-water* near *Pereth* in *Cumberland*, and there call'd *Schelley*; *Hasster*, a Fish I take to be the same with our *Charre* in *Winandermere* in *Westmerland*, and the *Torgoch* of *North Wales*; *Balla*; *Nase*, (call'd *Nasus* by Naturalists) *Breams*, *Crevises*, &c. and many more. In the shadowy Lakes about *Santz* and *Zug*, we found *Anblatum Cordi*, or *Dentaria aphyllos*.

From *Zug* we rode *April* 7. in five hours to *Zurich*, of which we have given an account before.

April 13. we travel'd thence four good leagues, to *Mellingen*, a free Town, not far from *Baden*, and passing *Mellingen.* thro' *Lensburgh*, lodg'd at *Arauw*, a considerable Town *Arauw.* upon the River *Aar*, four short leagues from *Mellingen*.

The 14th we pass'd thro' no considerable place till we came to *Solorurn*, nine leagues from *Arauw*, which, tho' *Solotarn.* the Head of a Canton, is not considerable, either for it strength or bigness.

April 15. taking a circumference out of the ordinary Road to *Geneva*, we took a view of *Bern*, six hours riding from *Solotarn*.

Bern is a very handsom City, tho' the Houses be not *Bern.* very high, yet well built of Stone. The chief Street, which is very long, has Cloysters on both sides; it lies stretched out in length upon a Hill, resembling a Peninsula, being almost encompass'd by the River, that side where it is not being strongly fortified with Bastions and Outworks. The Founder of this City, as also of *Friburg* in *Switzerland*, and of *Friburg* in *Brisgoia*, was *Berchtoldus* Duke of *Zerin*, unto whom they have erected a Monument in the great Church, one of the least Stone Fabricks in all *Switzerland*.

The Territories of this City are of such an extent, as to comprehend one third part of all the Country of the *Swiss*, being divided into sixty Bailyages, besides four others they have in common with *Friburg*. The *Landvogts* or Bailiffs continue in their stations for six Years, which makes them very rich without exacting upon the People. They keep here five or six Bears in a Pit, which are often climbing up and down the Fir-trees that grow in the Pit. The Arms of *Bern* is a Bear, alluding perhaps to their Name, this City being the first that coin'd the Money call'd *Batze*, (signifying a Bear's Paw) from the figure of a Bear stampt upon it, which was afterwards imitated by all the rest of the Cantons.

April 17. we travel'd from *Bern* to *Friburg*, a very *Friburg.* handsom City, and likewise the Head of a Canton; its situation is much the same as *Bern*, upon a Hill, almost surrounded with a River, and encompass'd with Hills, except on that side where it is coherent to the Land.

April 18. we travel'd from *Friburg* thro' *Maulton* to *Lausanna*, a great Town, and an Universiry; and *April* *Lausanna.* the 19th continued our Journey by the way of *Morges*, *Rolle* and *Nion*, considerable Towns upon the Lake of *Geneva* and *Verfoy*, a small place on the Lake near *Geneva*, belonging to the *French*, and came the same day to *Geneva*, where we staid for three months.

The Governments of *Solotarn*, *Bern* and *Friburg* are much the same as that of *Lucern*. In *Solotarn* the Great Council consists of 115, the lesser 35; if one of this happens to die, the 34 remaining chuse another out of the 115, and his place is supplied out of the Citizens. In *Bern*, the greater Council is compos'd of 200, and the lesser of 42. In *Friburg* the greater Council is of 200, likewise, and the lesser of 24. All these Cities have two *Scouts* or Consuls, who rule every other Year each in his turn. He that desires a more ample account of the Government of these and all other *Helvetick* Cities, may consult *Simler de Rep. Helvet.* Each of the Protestant Cantons acknowledge a certain Saint for their Patron, whose Image they stamp upon the reverse of their Money. The Protestant Cantons are, *Zurich*, *Bern*, *Basil*, *Schaffhausse*, and part of *Glaris* and *Appenzel*. That which breeds frequent intestine Differences among the *Swiss*, is the business of the common Bailiwicks; for the Popish Cantons being more in number than the Protestants, they send Bailiffs to those places twice to the Protestants once, who are often oppress and injur'd by the Popish Bailiffs, and the *Switzers* being very jealous on both sides in their Religion, *hinc illæ lachrymæ*. On the other hand, the Protestant Cantons, tho' fewer in number, yet are the more powerful,

powerful, and are poſſeſs'd of the beſt Grounds, the *Bernese* alone being ſaid to be able to raiſe 100000 Men, and leave enough at home to cultivate the Ground. All the Cantons of *Switzerland* coin Money, except *Appenzel*, *Underwald* and *Glaris*. The *Swiſs* are generally a very honeſt ſort of People, and very kind to Strangers, and are very neat in their Houſes. Betwixt *Zurich* and *Mellingen* we ſaw abundance of *Gooſeberries* in the Hedges, and in ſome places *Barberries*; in the Woods and Hedges great plenty of *Sigillum Salamonis* and *Herba Sarâ*: On the Mountains near *Zurich*, *Anonymus flore luteo*. Betwixt *Arcum* and *Soleurn*, on the Hill ſides, *Helleboraſter maximus* and *Chriſtophoriana*, as alſo *Fumaria bulboſa* in the ſhady Lanes.

Geneva

Geneva is very well ſeated, at the lower end of the Lake of *Geneva*, (*facim Lemanus*) or *Geaffer Sea*, as the *Germans* call it, upon a Hill reſpecting the Lake. The River *Rhoſne* (*Rhodanus*) divides it in two parts, which are join'd again by two Wooden Bridges, one of which has Houſes on both ſides, like *London* Bridge, but very low. The two principal Streets are, the lower Street, extending along the River and Lakes ſide, and the great Street running up the Hill. It has lately been well fortified with Works of Earth. It is very populous in reſpect of its bigneſs, containing 30000 Souls. St. *Peter's* Church, formerly the Cathedral, is a goodly Structure, where is a ſtately Monument for the Duke of *Rohan*. Their Territories being but very ſmall, the Inhabitants live by their Induſtry and Traffick, and Proviſions of all ſorts are very cheap here, eſpecially Milk-meats, the neighbouring Mountains furniſhing them with plenty of Food for their Cattle; for the tops of *Jura*, *Saleve* and other high Mountains of *Savoy*, *Dauphine* and the *Alps*, which are bare of Wood, put forth very good Graſs about mid-*May*, after the Snow is melted. The Men of the circumjacent Countries, at that time, drive up their Cattle to Paſture for three months, living ſcattering in Sheds and Dairy-huts erected for that purpoſe, whilſt their Wives take care of their Families at home.

The temperature of the Air of *Geneva* in reſpect of heat and cold, is much the ſame with *England*, without either extream. The City is well govern'd, and Vice ſuppreſs'd, tho' they uſe divers Sports and Exerciſes on *Sundays*.

Our ſtay at *Geneva* happening in the proper ſeaſon for Simpling, we can't omit to give the Reader a Catalogue here of what Plants we met with in the neighbouring Mountains and Fields: Such as are native of *England* are in the *Roman* letter.

Iterum in monte Thuiri.

Pilosella minore flore, hirsutior & elatior non repens J. B. *Astragalus quidam montanus vel Onobrychis alia* J. B. *Caryophyllus sylvestris quædam species*, flore purpureo odorato, foliis glaucis. *Caryophyllus flore tenuissimè dissecto* C. B. *Solidago Saracenica*; *Silex montanum*; *Pulsatilla alba* J. B. *Lunaria major siliquâ longiore* J. B. *Hieracium latifolium montanum Genevcese folio Conyzæ majoris Monspessulanæ* J. B. Ad latera montis. *Caryophyllus montanus tenuifolius Lini flore*. Radix ei lignosa, vivax: Cauliculi ex eadem radice plurimi ut in caryophyllis, lignosi, cortice cinereo tecti, [vetustiores intelligo] geniculis crebris intercepti. Ad singula geniculæ ramulorum hornotinorum folia ex adverso bina Tunicæ minimæ vel Spergulæ purpureæ, angusta, graminea. Cauliculi in ramulos divisi, inferiùs ferè glabri, supernè hirsuti, in summitatibus suis flores gestant amplos in pediculis longis hirsutis, albos, pentapetalos, striatos, Lini floribus similes; foliis quippe compositos subrotundis, & minimè bifidis cujusmodi solent esse Alsines & Lychnidum, non tamen caducos ut in Lino, stamina continentes plurima herbacea seu luteola. Vasculum seminale longiusculum, crassum. Floret circa finem Junii & Julii initio. *Pseudo-stachys Alpina* C. B. *Ranunculus tenuifolius montanus luteus* J. B. *Bellis Alpina major rigido folio* C. B. Salix pumila latifolia folio utrinque glabro, supernè autem splendente. Ramos per terram spargit minimi digiti crassitudine, annosos cortice glauco, juniores virente præditos, in plurimos surculos, divisos, adeò ut terram cooperiant. Folia in ramulis crebra alternatim posita, pediculis brevibus fulta, parva, ex rotunditate acuminata, utrinque glabra, supernè saturo virore splendentia, nervosa, unciam plerunque rariùs sesquunciam longa. Julos profert creberrimos, breviusculos, è pluribus vasculis seminalibus in acutum apicem ex latiori basi paulatim fastigiatis compositos. In altissimis jugis montis Juræ. *Veronica Saxatilis parva caulibus nudis*. Eodem modo repit & in vastos dividitur cæspites quo Cotyledon Matthioli, aut Sedum serratum. *Folia* ei Veronicæ parva, subrotunda, hirsuta; ad margines serrata. Caules eodem modo exurgunt quo in Phyllo Dalechampii thelygono; duorum trium ve digitorum altitudine, rotundi, foliis destituti. Flores in summo 5, 6 aut etiam plures Chamædryos spuriæ aut Veronicæ, cærulei, quadrifolii. Vascula seminalia magna Thlaspeos aut Veronicæ vulgaris repentis. *Sedum minimum montanum non acre flore purpurascente parvo*. Radix ei alba, tenuis, nec ultra annum (ut mihi visum est) vivax, pluribus fibris capillata. Caulis nunc simplex, nunc plures, semipalmares, erecti, rotundi, rubentes, foliis vestiti creberrimis, circumcirca nullo ordine positis, crassis, teretibus fere, apicibus obtusis, rubentibus. Flores in summis caulibus velut in umbellas digesti, exigui, pentapetali, vix se pandentes. Florum petala acuta, purpurascentia, linea per medium saturationis purpuræ decurrente. Vascula seminalia quinquepartita, stellata.

In pratis, pascuis, satis, collibus, dumetis, aggeribus, alveis, muris, viis publicis, & alibi circa urbem.

Thlaspi oleraceum Tab. *Campanula Persicifolia*, in dumetis. *Chamædrys foliis laciniatis*; *Mezereon Germanicum*; *Christophoriana*; Eryngium campestre; Sigillum Solomonis; Lilium convallium; Chamæpitys; *Uva ursi*; *Rhamnus secundus* Clus. In arenosis ad Rhodanum. Aria Theophrasti; Berberis; Thlaspi minus quibusdam, aliis Alysson minus *J. B.* passim. *Rapunculus spicatus* C. B. in dumetis. *Pulmonaria maculosa* Lob. *ibid.* *Sinapi Genevense sylvestre* J. B. In muris ad pontem *Arvæ* flu. *Pentaphyllum parvum hirsutum* J. B. *Saponaria minor quibusdam* J. B. *Tanacetum inodorum* Clus. *Typha minor* J. B. in saliceto non longè à ponte *Arvæ* flu. *Trifolium pratense album à Fuchsio depictum sive mas* J. B. *Tithymalus cyparissias* J. B. In agris sicciosibus ad aggeres ubique. Tithymalus platyphyllos Fuchsii J. B. *Psyllium majus erectum*, in arenosis propè fluvium *Arvæ*. *Lysimachia siliquosa speciosa angustifolia* J. B. In alveo flu. *Arvæ*. *Scrophularia Ruta canina dicta*, ibidem & copiosè. *Chamædrys vulgaris*; Abrotanum campestre; *Phyteuma Monspelliensium*, J. B. *Pereclymenum rectum fructu rubro & nigro* J. B. In sepibus & dumetis. *Betonica coronaria sive Caryophyllus sylvestris vulgatissimus* J. B. in pratis. *Gelidrychum sylvestre vulgò, sive sylvestris Schlaræa purpureo cæruleove magno* J. B. Orchis galeâ & alis ferè cinereis *J. B.* Orchis myodes; Orchis fuciflora galeâ & alis herbidis; In aggeribus sylvosis utraque & copiosè. *Asclepias flore albo*; *Tamarix Germanica, sive minor fruticosa* J. B. Ad *Arvæ* fluvium. *Polemonium petræum* Gesneri; Ad *Rhodani* ripas, ingue ipsis urbis muris. *Crista galli utraque mas & fœmina* J. B. in pratis. *Lotus siliquosa lutea Monspelliensis* J. B. *Chamæmelum vulgare amarum* J. B. inter segetes. *Chamæbalanus leguminosa sive Terræ glandes*; in vineis & seget; extra portam *S. Gervasii*. *Lathyrus flore vario ex coccineo & albo*, inter segetes: *Rosa rubello flore simplici non spinosa* J. B. in collibus. *Gramen cyperoides exiguum seminibus bullatis*; *Melampyrum multis sive Triticum vaccinum*, J. B. inter segetes. Melampyrum cristatum *J. B.* *Asphodelus bulbosus Dodonæi, sive Ornithogalum spicatum flo. virente* J. B. inter segetes. *Orchis magna latis foliis, galeâ fuscâ vel nigricante* J. B. Ad latus sylvosi cujusdam collis propè montem *Saleve*. *Thlaspi umbellatum arvense amarum* J. B. In arvis non procul à *Thuiri* copiosè. *Allium umbelliferum pratense* J. B. *Rapistrum monospermon*, in aggeribus fossarum. *Campanula rotundifolia minima* J. B. in glareosis ad fluv. *Arvæ*. *Rosa sylvestris rubella parvo fructu* J. B. in collibus & dumetis copiosissimè. *Medica major erectior floribus purpurascentibus* J. B. scritur aliquibus in locis ad pabulum jumentorum. Rubia erecta quadrifolia *J. B.* *Melilotus quinta Tragi* J. B. *i. e.* Securidaca flo. vario siliquis articularis: *Blattaria flo. albo & luteo*, ad vias. *Chamædrys spuria angustifolia* J. B. in dumetis. *Pilosella minor folio angustiore, minùs piloso, repens* J. B. *Hyacinthus maximus botryodes, comâ cæruleâ* J. B. inter segetes passim. Thlaspi minus, juxta *S. Gervasii*, in muris. *Sedum parvum folio circinato, flore albo* J. B. in muris. *Heliotropium majus*. Ad ripas fl. *Arvæ*. Stachys *Fuchsii*; ad vias. *Cynoglossum minus* J. B. in ruderatis & ad vias. Cardiaca, *ibid.* Lathyrus siliquâ hirsutâ *J. B.* inter segetes circa *Champo*. *Atractylis*, juxta vias propè urbem. *Saxifragia Veterum*, in collibus ad *Arvam* fl. *Anonis lutea non spinosa, Dalechampii Natrix* J. B. juxta fl. *Arvæ*. *Armenia prolifera* Ger. Ad vias passim. *Orobus sive Ervum multis*, inter segetes non longè ab oppido *Fay*. *Lathyrus angulosa semine* J. B. Hujus duæ varietates circa Genevam seruntur, alia flore albo, alia flore dilutè cæruleo & striato. *Conyza media Monspelliensis, quibusdam Asteris Attici genus folio glabro rigido* J. B. *Tragorchis minor flore fuligineo* J. B. In pascuis quibusdam trans *Rhodanum*. *Sedum echinatum vel stellatum flore albo* J. B. in muscosis scopium aggeribus. *Allium Sparocephalum purpurascens*. *Bulbus* ei simplex albus velut parvæ cepæ. *Folia* fistulosa, glauca tria quatuórve. *Caulis* dodrantalis, in cacumine *flores* gestans in orbiculare ferè capitulum conglobatos, è membranaceo purpurascente involucro, striato, in duas carinas dehiscente erumpentes. *Flosculi* singulares brevibus pediculis nixi, sex foliolis constant longiusculis, acuminatis, pallide purpureis, saturatiore linea purpureâ per medium decurrente, staminа sex brevia cum apiculis purpureis occultantes. Floret initio Julii: in arenosis ad *Rhodanum* fluv. *Gramen cum panicula multi rubente* J. B. Besides these which we found out, *J. Bauhine* observ'd some few

few others, which we had not the hap to meet withal, viz. *Carduus pratensis Tragi*, in monte *Thuiri*: *Eryngium Alpinum latis foliis, magno capite oblongo cæruleo*, ibid. *Ledum Alpinum minus hirsutum*, ibid. *Galega montana Dalechampii*, ibid. *Lapathum folio acuto Alpinum*. ibid.

Lions. From *Geneva* we travel'd to *Lions*, the second City in *France* for bigness, goodly Buildings, Traffick, Riches, and the number of People; but being hurried out of *France* beyond expectation, by the King's Declaration, before we could finish a third part of our intended Travels in this Country, we will content our selves with mentioning only the Names of the chief places thro' which we pass'd, and what Plants we met with in those places, where we tarried till our return into *England*. Betwixt *Geneva* and *Lions* we took notice only of two Plants, which were Strangers to us, viz. *Valeriana rubra angustifolia* J. B. about *Mantua*, a Town of *Savoy*; and *Anchusa lutea*, in some barren Fields, a days Journey short of *Lions*.

Grenble La grand Chartreuse. *July* 25. we continued our Journey from hence to *Grenoble*, and thence to the *grand Chartreuse*: By the way, but especially upon the Mountains near this Convent, we saw many Plants we had not met with before, viz. *Linariæ aliquatenus similis folia Bellidis* J. B. In some Fields about 5 or 6 leagues from *Lions*, in the way to *Grenoble*, *Catanance Dalechampii folio Cyani, flore Coronopi* J. B. On the sides of the Mountains about half a league above *Grenoble*, in the way to the *grand Chartreuse*, *Melampyro affinis Parietaria cærulea quorundam* J. B. *ibid.* in sylvosis. In the Mountains about the Cloyster, *Sambucus racemosa*; *Circæa minima* Col. *Helleborus niger* Lob. Trachelium majus Belgarum; Radix Rhodia, copiosissimè; *Gentianella Alpina verna magno flore*; *Pulsatilla alba* J. B. *Solidago Saracenica*; *Periclymenum rectum fructu nigro* Park. *Xylosteum Allobrogicum* i. e. *Periclymenum rectum fructo rubro* Ger. *Chamæmespilus Gesneri*; *Imperatoria vulgaris*; *Sonchus cæruleus latifolius* J. B. *Nerium Alpinum quibusdam, aliis Ledum glabrum* J. B. *Auricula ursi*; *Vittorialis longa*; *Trifolium Alpinum argenteum* Park. *Helleborus niger Caniculæ folio minor*. Park. Pedicularis sive Crista galli montana; *Radix* ei simplex, alba, paucis fibris donata, magnitudine & figurâ radicis Tragopogi, nisi quòd longior sit, sapore non ingrato nucis Avellanæ paulò amariore. *Folia* ad radicem panca [unum aut duo] alata, ex pluribus pinnarum conjugationibus Filicis ferè in modum composita, inferiùs hirsuta, in acutum definentia, pallide viridia. Singulæ pinnæ ad margines serratæ Cristæ galli vulgaris folia bene imitantur. *Caulis* ab eadem radice singularis, dodrantalis aut pedalis, rotundus, firmus, nonnihil hirsutus, intus concavus, in summitate gestans spicam palmarem florum densè stipatorum, pallidè luteorum, *Cristæ galli* similium, nisi quòd vix sese aperiant, è calice ventricoso pentagono emergentium, pediculis nullis. In calice latet vasculum seminale turbinatum seminibus minutis rotundis repletum. Unum habet hæc planta in caule folium infra Spicam: in ipsa Spica ad singulos flores singula folia.

Hominum seu *Pseudo-stachys quædam Alpina*. *Radice* nititur oblique actâ, multis fibris præditâ. *Folia* longis pediculis hirsutis insident hirsuta & ipsa, rugosa, urticæ similia, circa margines serrata vel dentata denticulis majoribus. *Caules* pedales hirsuti, medullâ farcti, striati & quodammodo quadrati, plerunque duobus, interdum uno duntaxat foliorum pari vestiti: *Folia* quæ in caule iis quæ ad radicem similia, sed minora, & brevioribus pediculis (ut in hoc genus plantis solenne est) fulta. In summitate caulium *spicæ* breves compactæ, Betonicæ æmulæ. *Flosculi* galeati, lutei, è calicibus in 5 molliores spinulas terminatis exeunt. Julii 17 jam penè defloruerat.

Asteri montano purpureo similis J. B. *Radix* ei satis crassa, obliqua, intus nonnihil lutea, sapore acriusculo, fibris aliquot donata. *Folia* ad radicem plura, longa, angusta, figurâ ferè Polemonii petræ *Gesneri*, saturo virore splendentia, ad latera nonnihil pilosa, neque dentata neque serrata. *Caules* semipedales aut dodrantales, surrecti, foliis vestiri alternatim positis, iis quæ ad radicem similibus, ramosi, singulis ramulis florem sustinentibus Bellidis minoris, nisi quòd limbus seu corona foliorum radiatorum in margine minoribus brevioribusque foliolis constet colore purparascente prædictis, interiores à flosculi qui fundum floris componunt inter viridem quasi & luteum colorem ambigunt. In ascensu montium *Julii* 17 florentem inveni, & *Bellidem Alpinam ramosam flore purpurascente* denominavi.

Pyrenaica folio alato. Radix ei alba, obliqua, repens, fibris longis crebris firmata. *Caules* exigit cubitales, rotundos, inanes, brevi & vix perceptibili lanugine præditos, *foliis* crebris alternatim positis vestitos. *Folia* alata 4 aut 5 pinnarum conjugationibus constant; singulæ pinnæ circa margines dentatæ, & subinde etiam altius incisæ. *Flores* in summitate caulis velut in umbella, albi & Ptarmicæ vulgaris vel potius Ablinthii albi umbelliferi floribus omnino similes. Nullus in hac planta vel odor vel sapor insignis: initio guttanti subamara videtur. In sylvis montosis *Junio* floret. *Bellis cærulea caule nudo* C. B. Hæc à Globularia vulgari Monspel. omnino specie diversa est.

Pentaphyllum argenteum Alpinum flore albo. Radicem non observavi. *Folia* quinquepartita reliquorum hujus generis more, exigua, lanugine molli argentea utrinque canentia, in extremitatibus duntaxat crenata. *Caules* ex eadem radice plures, pariter villosi, infirmi, foliis duobus tribusve tripartito ut plurimùm divisis vestiti; quæ appendicibus duabus caulem amplectuntur, *flores* in summitate sustinentes duos vel tres pentapetalos, albos, cum numerosis intus staminulis purpureis apicibus ornatis. Vice styli congeries & velut fasciculus quidam filamentorum. *Calyx* (ut in reliquis hujus generis) 10 foliolis hirsutis constat, quinque nimirum latioribus, quinque angustioribus alternatim positis: Est hoc Pentaphyllum foliis infernè, & supernè incanis *J. B.*

Muscum Alpinus flore insigni dilutè rubente J. B. Hæc planta rectiùs meo judicio Caryophyllus aut Lychnis inscriberetur.

Cerinthe quorundam major, versicolore flore J. B. Perennis esse videtur hæc planta; foliis est maculosis, *floribus* purpurascentibus pentagonis; *seminibus* reliquis sui generis minoribus, cum planta ipsa omnium maxima sit.

Alsine minima Alpina flore albo majore.

Hypericum nummulariæ folio, C. B.

Planta quædam umbellifera Pimpinellæ similis, quam describere nescio quomodo omisi.

Orange. From *Grenoble* we pass'd on to *Orange*; by the way we observ'd *Echinopus minor* J. B. in great plenty all over *Gallia Narbonensis*; *Facea cum spinosis capitulis purpurea tenuifolia* J. B. *Thymum vulg. rigidius folio cinereo*, in the fenny Grounds; *Pulegium cervinum*, by the *Rhosne* side at *Pont S. Esprit*; *Lavendula major sive vulgaris* Park. *Dentellaria Rondeletii*; *Acanthium Illyricum*; *Chondrilla viscosa caule ramoso*, Col. *Echii sive Anchusæ* quædam species *flore cæruleo*, An *Lycopsis*?

Avignon. From *Orange* we travel'd to *Avignon*, where we saw whole Fields sown with *Fœnum Burgundiacum*: and besides those Plants we had seen near *Orange*, *Paliurus*, *Cistus Ledon Monspelliensium*, *Cistus fœmina folio Salviæ*, *Malus granata*; quæ per totam Galliam Narbonensem frequentissima est; *Catanance Dalechampii flore cyani folio Coronopi* J. B. *Helianthemum tenuifolium glabrum flore luteo* J. B. *Helianthemum flore albo, folio angusto hirsuto* J. B. *Fœniculum tortuosum* J. B. *Millefolium odoratum*; *Millefolium tomentosum luteum* J. B. *Stœchas citrina tenuifolia Narbonensis* J. B. *Capparis*; *Ilex coccifera*; *Genista Hispanica*; *Buxus*; *Cucumis asininus*; *Aspalathus* 2. *Monspelliensis*, and many others which grow also about *Montpellier*.

Nismes. The next place we came to was *Nismes*, where, besides those we saw about *Avignon*, (most of which also grow here) we took notice of *Thlaspi siliculatum asperum hieracifolium & majus* C. B. *Psyllium semper virens*, *Camphorata Monspelliensium*, *Trifolium bituminosum*; *Ruta sylvestris*, *Peganium Narbonensium*; *Tithymalus serratus*; *Lotus arbor*; *Convolvulus spicæfolius*; *Plumbago Plinii*; *Scabiosa montana calidarum regionum* Lob. *Tithymalus characias Amygdaloides*; Papaver corniculatum luteum; *Clematis sive Flammula repens* C. B. *Phyteuma Monspelliensium*; *Sideritis verticillis spinosis*; *Alkekengi*; *Clematis daphnoides major*; *Lepidium vulgare*; *Chondrilla viscosa caule ramosissimo*, Col. Et quod nusquam alibi hactenus invenerim, *Abrotanum fœmina foliis Ericæ* sive *Unguentaria Luterianorum*.

Montpellier. From *Nismes* we travel'd to *Montpellier*, where staying all the Autumn and part of the Winter, we had time enough (tho' in an improper season) to observe the following Plants.

Absinthium Scriphium Narbonense Park. Ad mare. *Acarna flore purpureo ruente parvo* C. B in aggeribus. *Acarna major caule foliato* C. B. in arvis non procul à *Miravalle*: Juxta vias eundo à *Montpelio* ad *Pedenarium*. *Alsine oblongo folio serrato, flore cæruleo* J. B. in muris. *Althæa frutescens folio rotundiore incano* C. B. in scopulis non longe à specu *Frontignano*. *Alyssum montis Ceti*, &c. Lob. in Promontorio *Ceti*; vidimus etiam in montibus prope oppidum *S. Chamas* in Galloprovincia. *Anchusa angustifolia* C. B. in collibus juxta *Castelneuf* & *aux Garigues*. *Anchusa Montspeliaca* C. B. in colle arenoso non longe à *Castelneuf* versus *Grammontium* lucum. *Androsace* Matth. in fundo stagni Volcarum *Estang* dicto copiosissime. *Aristolochia Pistolochia dicta*; in arvis quibusdam *aux Garigues* copiosè. *Anonis pusilla frutescens Cherleri* J. B. in collibus sicciosibus. *Asphodelus Monspeliensibus* J. B. in collibus propè *Castelneuf* aliisque, oppido vicinis. *Aristolochia Saracenica*

Ger. in vineis, fossis & aggeribus frequens. *Aspalathus 2 Monspelliensis* J. B. in collibus petrosis abunde. *Aster conyzoides odoratus luteus* hort. Eyst. ad viarum aggeres variis in locis. *Bellis cærulea Monspeliaca. Buplevrum folio rigido* C. B. In sylva *Grammontia* & sylva propè *Selneuf. Buplevrum angustifolium*; in locis saxosis non longè à *Bouconet. Caltha simplici flore*, in agris frequens. *Carduus bulbosus Monspelliensis, sive Acanthus sylvestris quibusdam foliis laciniatis* J. B. in pratis circa Monspelium passim. *Carduus chrysanthemus Hispanicus* Clus. Viâ inter S. *Lupian* & *Pedenatium*, & alibi propè urbem. *Carduus lanceolatus ferocior* J. B. Propè montem *Lupi. Carduus solstitialis*, ubique fere. Chamelæa tricoccos; *Chamæpitys sive Iva moschata Monspelliensium* J. B. in collibus saxosis. *Chondrilla lutea* J. B. in aggeribus ipsius urbis. *Cistus mas 4folio oblongo albido* J. B. *Cistus Ledon Monspeliensium* J. B. *Cistus fœmina* Ger. Omnes hæ species in collibus & sylvis frequentes. *Clematis sive Flammula repens* C. B. in saxosis collibus & arvis arenosis. *Convolvulus spicifolius* Park. *Conyza maritima cærulea* an *Jacobæa quædam?* Circa *Peroul. Coris cærulea maritima* C. B. in arenosis ad mare præsertim. *Cyanus pulchro semine Centaurii majoris* J. B. i. e. Crupina Belgarum *Lob.* in collibus propè flu. *Ladum* juxta *Castelneuf. Cyperus paniculâ sparsâ speciosâ* J. B. in pratis propè *Bouconetum* & *Castrum novum. Doricnyum Monspelliense* J. B. in aggeribus sepium frequens. *Echinopus minor* J. B. i. e. Carduus cæruleus sphærocephalus minor C. B. in collibus & ad vias passim. *Erica arborescens Monspelliensis, flore purpurascente, ramulis ternis* J. B. in luco *Grammontio. Erica arborescens floribus luteolis vel herbaceis nitidissimis* J. B. ibid. *Ferula* Lob. *Fœniculum tortuosum*. passim. *Geranium folio Althææ* C. B. juxta munitiones arcis, non procul à nivis reconditorio. *Geranium cicutæ folio, acu longissimâ* C. B. ad agrorum margines & in aggeribus. *Gingidium umbellâ longâ*, in prato quodam juxta viam quæ *Frontignanam* ducit copiosè. *Gnaphalium ad Stœchadem citrinam accedens*, juxta flu. *Ladum. Gramen minimum Dalechampii* J. B. in vineis, vere primo floret. *Gramen parvum pulchrum paniculâ compressâ nigricante* J. B. in aquosis. *Hedypnois Monspessulana sive Dens leonis Monspessulanus* J. B. in aggeribus terrenis passim. *Helianthemum tenuifolium glabrum flore luteo* J. B. in collibus ardioribus passim. *Helianthemum flore alba folio angusto hirsuto* J. B. in collibus *Castro-novo* vicinis & alibi. *Herba Doria* Lob. Ad *Ladum* amnem copiosè. *Herniaria glabra*, in prato quodam juxta lucum *Grammont. Hieracium parvum hirtum caule aphyllo* J. B. in arenosis collibus propè *Sellam novam* & alibi passim. *Holosteum Plantagini simile* J. B. in aggere quodam inter urbem & *Ladum* amnem. *Hypericum tomentosum* J. B. in humidioribus circa *Selneuf* & alibi. *Ilex coccifera*, in collibus saxosis. *Jacea cum spinosis capitulis purpurea tenuifolia* J. B. passim. *Jacea montana capite magno Strobili* J. B. in collibus juxta *Castelneuf, Selneuf*, &c. *Jacea lutea capite spinoso* C. B. satis frequens in pascuis & collibus. *Kali majus semine cochleato* Ger. In litoribus maris & salsis palustribus. *Lathyrus major Narbonensis angustifolius* J. B. in collibus quos *Garigues* vocant. *Leucoium maritimum angust folium*, in lingua illa inter stagnum Volcarum *Estang* dictum & mare. *Linum marinum luteum*, ad in pratis circa *Sellam novam, Castrum novam*, itémque ad mare. *Linaria lutea parva annua* J. B. in summitate montis Lupi. *Lotus siliquosa lutea Monspelliensis* J. B. in collibus & pascuis. *Marrubium nigrum longifolium*, i. e. *Herba venti* Monspelliensium, in aggeribus & ad vias. *Moly moschatum capillaceo folio* C. B. propè sylvam non longè à *Selneuf*; & in collibus quos *Garigues* vocant. *Orobus receptus beberiorum* Lob. in agris passim. *Peucedanum vulgare*, prope sylvam *Grammontium. Phyllon arrhenogonon & thelygonon* J. B. in aggeribus fossarum & præcipue secus fluvios. *Phyteuma*, passim. *Polemonium sive Trifolium fruticans* Ger. in sepibus vulgatiss. *Prunella angustifolia* J. B. *Pulegium cervinum angustifolium* J. B. in locis ubi per hyemem aquæ stagnârant. *Polygoni quædam species erecta*, an *Arenaria* J. B? Ad agrorum margines. *Rhus folio Ulmi* C. B. in collibus prope *Castelneuf* copiosè. *Rhus myrtifolia Monspeliaca*; ad sæpes, præcipue verò ad ripas *Ladi* amnis. *Rubia maritima*, in lingua illa inter *Estang* & mare. *Scammonea Monspeliaca foliis rotundioribus* C. B. ad mare propè *Peraux, villam novam*, &c. *Scorpioides siliqua compositâ hispidâ*, in aggeribus munitionum. *Securidaca genus triphyllon* J. B. in collibus propè *Castelneuf. Sideritis Monspessulana* J. B. propè patibulum, *aux Garigues*, &c. *Sideritidis genus verticillis spinosis* J. B. in agris copiosè. *Sinapi echinatum* J. B. inter segetes. *Smilax aspera* J. B. ad sepes passim. *Sonchus laniechus Dalechampii* J. B. *Sonchus affinis Terracrepolæ*, in pascuis. *Stœchas Arabica*, in *Grammontia* sylva copiosè & in sylva prope *Selneuf. Stœchas citrina tenuifolia Narbonensis* J. B. passim. *Stœchadi citrinæ affinis capitulis parvis rarisquamosis, in pappos evanescentibus* J. B. in fissuris rupium juxta *Castelneuf* & alibi. *Tamarix major sive arborea Narbonensis* J. B. ad mare copiosè. *Telephium scorpioides* J. B. circa *Castelneuf. Thlaspi clypeatum serpylli folio* C. B. *Thlaspi fruticosum spinosum* C. B. in rupibus in summa parte montis *Lupi. Thlaspi umbellatum tenuiter diviso folio amarum Narbonense* J. B. in arvis prope patibulum & alibi. *Thymum vulgare rigidius folio cinereo* J. B. in aridioribus passim. *Tragos sive Uva marina minor*, ad mare copiosè. *Tribulus terrestris*, in agris passim. *Trifolium argentatum flor. luteis* J. B. in collibus prope *Castelneuf* & alibi in agro *Monspeliaco. Trifolium hæmorrhoidale* seu *Lotus Libyca Dalechampii*, ad ripas *Ladi* amnis. *Trifolium stellatum purpureum*, circa patibulum & alibi. *Valeriana rubra angustifolia* C. B. in rupibus montis *Lupi. Verbascum sylvestre Monspelliense flore luteo hiante* J. B. in collibus saxosis. *Vinca pervinca major*. Ad sepes.

The City of *Montpellier* is seated upon a Hill in the midst of a rocky Country, its compass being somewhat larger than *Geneva*, but not so populous, the number of its Inhabitants being computed not to be above 25000 Souls, two thirds of which are *Roman Catholicks*, the rest *Protestants*, who have two Churches here. The Houses of this City are for the most part of Free-stone, and well built, but the Streets are very narrow, crooked, irregular and intricate, neither has it any large Market-place. There were then above 130 Apothecaries Shops here, who live for the most part upon the sale of *Cyprus powder, Sweet-bags, Cassolets, Treacle, Confectio Alkermes & Hyacinthi* and *Hungary-water*, being nothing but common Spirit of Wine, in which Rosemary-flowers are macerated and afterwards distill'd from the Flowers. Their Wines hereabouts are very strong, but their Vineyards of dwarf Vines without any support.

At *Montpellier* the best Verdegreece (*Viride æris*) is made in the following manner: They take Grape-stalks well cleansed from the Raisins and from all filth, then putting a certain quantity of the best red Wine in the bottom of a Pot, they set Sticks across a little above the Wine, and upon them lay a quantity of Grape-stalks first also drench'd in Wine, and let them stand thus fifteen days, less or more. These Grape-stalks they put again in the bottom of an earthen Vessel of the best red Wine that begins to sowre, to the quantity of about two or three inches depth; somewhat above the Wine they set Sticks cross the Pot, then take little Plates of Copper; they lay upon the cross Sticks first a layer of the prepar'd Grape-stalks, then a layer of Copper Plates, and so alternatively S.S.S. till the Pot be full, leaving a hole all along for the Vapour of the Wine to ascend. The Pot being fill'd, they cover it, and putting it in a Cellar, after five or six days turn the Copper Plates, and so letting it alone four or five days longer, the *Verdegreece* comes in eight or ten days. This done, they take out the Plates, and laying them six or seven on a heap, put them in a Trough, and sprinkling the edges of them with the same Wine for three or four days, they next press them for four or five days, and last of all scrape off the *Verdegreece* with Knives, and moulding it with a little Wine dry it and sell it. The same Plates are used again as before.

How Verdegreece is made.

Here also we saw the whitening of Wax: They melt Bees-wax in a great Cauldron, of which they cast a Mould of Wood the figure of a Sugar-loaf, first dipt in the slime of Snails made by beating Snails and Shells together in a Mortar, which is perform'd in the same manner as we make our Candles by dipping. Having smoothed it a little with their Hands, they take off, after it is quite cold, from the Mould in form of Cones, which being put in ranks singly in a Garden, supported by Canes or Sticks crossing one another, they set Pots with Water near them, wherewith they sprinkle the Wax six or seven times a day in the Summer, and three or four times at other seasons. In fourteen days the upper end of these Cones being become white, they turn them, so that commonly in a months time they are white all over; then they melt the Wax again in earthen Pans, and run it so melted thro' the Neb of a tin Pot into Water, whilst a man works it into round figures like spiral Wreaths or *Corollæ*, which being order'd as before, in the Garden, till they become entirely white, they melt into great pieces for sale. The form once besmear'd with the Mucilage of Snails, will last dipping many times.

How Wax is whitened.

Montpellier is also famous for the best *Confectio Alkermes*, which grain grows hereabouts in great plenty: Concerning the manner of the preparation of this grain for the Confection, see the *Philosophical Transactions*, Numb. 20. p. 362. and *Dr. Lister's* Letters in the said *Transactions*.

Confectio Alkermes.

At *Montpellier* we also took notice of the manner of making Oyl of Olive: They take Olives, either fresh gather'd or laid in heaps for some time, these being ground like our Apples for Cyder, they put in round thin Baskets made of *Spartum* like Frails, with a round hole in top

the top, but both top and bottom clapping together, so that, when press'd, they look like a round Cake: Half a score or more of these Baskets they fill'd with the bruised Olives, they put one upon another in a Press, and letting down the Press-beam, thus squeeze them; then winding up the Beam, they take out the Baskets, and having put into each a good quantity of scalding Water, and shaking the Baskets, they put them again into the Press and squeeze them as before: This second Operation they repeat again, the Oyl with the Water running out into Vessels which receive it, the Water with the Sediments settling to the bottom, and the Oyl swimming on the top, which is taken off with a Copper Dish, like those we take Cream off with from the Milk. They told us, that in *Provence* they spread their Olives for thirty days upon the ground to dry, which makes their Oyl better than that of *Languedoc*.

The Olives when gather'd are very bitter, notwithstanding which the Oyl is very sweet: The like is to be observ'd in bitter Almonds. The Olives, when they come to maturity, turn black, and are of an ungrateful taste; these afford the most Oyl, but when press'd green, the best; which are also pickled only with Salt and Water, and sent abroad.

A boiling Fountain.

Near *Peroul*, about a league from *Montpellier*, we saw a Fountain wherein the Water did bubble as if it boil'd; and what was further observable, is, that if you dug a hole any where near it, and pour'd Water in it, it would bubble like the Spring; which must be attributed to a certain Vapour ascending out of the Earth, like that which has been observ'd in Mr. *Hawkley*'s Ground about a mile from *Wigan* in *Lancashire*, which Vapour, by the application of a lighted Candle, catches fire; but this Experiment we did not try at *Peroul*.

From *Montpellier* we took a Tour to *Frontignan*, three miles distant from the *Estang*, which gives name to the famous Muscate Wine. The Country lies open to the Sun, the Sea being to the North on the Land-side, enclos'd with a ridge of Hills like a Bow, touching the Sea at each end; the whole like a Theatre, in the *Arena* of which, on the sides of the Hills, grows the *Muscadine* Grape. In this space are two other little Towns, *Miraval* and *Vich*; which last has a Spring of acid Vitriolick Waters much used hereabouts, but are not so strong as our Spaw Waters.

How raisins are made.

At *Frontignan* and some other places we saw the way of making of Raisins (*uvæ passæ.*) They chuse the fairest Bunches, and having snipt off the faulty Grapes with a pair of Scissars, they tie two Bunches together with a String; these they dip into a boiling Lye (*Lixivium*) not for above half a minute, and then taking them out again, wash them in cold Water, and hang them upon wooden Poles for two or three days in the shade to dry, and afterwards expose them to the Sun, taking them in in the night-time or rainy weather. *Cyprianus Eichovius* says, that in *Spain* they make Raisins thus: The *Raisins of the Sun*, of a blew colour, are prepar'd by letting them hang on the Vine, where they are dried by degrees by the heat of the Sun, and afterwards gather'd; but before they are quite ripe, they cut the foot-stalk of the Bunch they design'd for that purpose half asunder, to prevent part of the radical moisture from being convey'd to the Grapes. Their *Baker Raisins* they make as they do in *France*, by dipping them into Lye made of the cuttings of the Vines burnt to ashes, and afterwards spread them upon the Floor, to be dry'd in the Sun. After the same manner they dry their Figs, after they have dipt them in Lye made of the Branches or Cuttings of Figtrees; but I don't question but that the Lye made of the ashes of any indifferent Wood would do as well, as we see it done in *France*.

Baths of Balaruch.

We also took a view of the hot Waters at *Balleruch* near *Frontignan*, being then in the beginning of *September*, the Water was luke-warm, but they told us it was hot in the Winter: The Water thereof is not above two flight-shots from the *Estang*, and tasts very brackish, whether from the nearness of the Sea or from some Salt-mines, I will not determine, tho' I am apt to incline to the last.

A Spring of Petroleum.

At *Gabian*, a days Journey from *Montpellier*, in the way to *Beziers*, is a Spring of *Petroleum*, black, burning like Oyl, and of a strong pungent scent, issuing out from among the Rocks all the Year long, but most in Summer. They gather it with Ladles, and putting it into a Barrel, separate the Water from the Oyl, by letting the first out by means of a Spigot.

How they make Salt.

Upon the Coast of the *Mediterranean*, as at *Berre* near *Martegue* in *Provence*, at *Messina* in *Sicily*, they make Salt of the Sea-water, by letting the Water into a large shallow Plain, there being well heated, they run it into several shallow Beds, like the Beds of a Garden; this being dry'd up by the Sun, they let in more, and so repeat it three or four times, till the Salt remain in the Receptacles three fingers thick, when they take it out, and heap it on little Hills. See the *Philosophical Transactions*, Numb. 51. *p.* 1025.

Since I have mention'd *Martegue*, I will add a word or two out of Mr. *Willoughby*'s Notes concerning the preparation of the *Botargo*. Near this place they take abundance of Mullets (*Mugiles*) in their *Burdigos*, being certain Enclosures of Reeds in the Shallows: The male Mullets are call'd *Allettans*, because they shed the Milt (*Lac piscium*); the females *Botar*, of the Rows or Spawn of which the *Botargo* is made. This Spawn they take out entire, and after they have cover'd it all over with Salt, for four or five hours press it a little between two Boards or Stones, then wash it, and let it dry fourteen days in the Sun, taking it in at night. The Preparation of Botargo.

Decemb. 2. we made an Excursion from *Montpellier* into *Provence*. The chiefest Towns we took notice of were, 1. *Lunel*, four leagues from *Montpellier*. 2. *Arles*, seated upon the *Rhosne*, once the head of the Kingdom of *Arelate*. Beyond it, in the way to *Marseilles*, we pass'd thro' a large Plain cover'd with Stones, call'd hence *les Champs pierreux*, anciently *Campi lapidei*. 3. St. *Chamas*, a large Borough standing upon a ridge, and a narrow Hill on each side, perforated like *Pausilypus*. Among the Rocks here I found *Seseli Æthiopicum fruticosum*, *Alyssum montis Ceti*, *Coris Monspessulana*, *Ruta sylvestris minor*, *Colutea caule Genistæ fungoso* J. B. and abundance of *Genista spinosa*, or our common Furze, near the way sides. Arles.

4. *Marseilles*, an ancient populous and well-built City, with large Stone Houses, but the Streets narrow; it is reckon'd to contain 120000 Souls. The Harbour is very secure and commodious, having a narrow entrance, but capacious within to contain 500 Ships, but none of above 600 Tons. On the Rocks near this place I found *Valeriana rubra* Dod. *Carduus geraldises* J. B. By the Sea-side, *Tragacantha Massiliensium*, *Aster luteus supinus* J. B. *Tithymalus myrsinites angustifolius*, *Coronopus Massiliensis* Lob. 5. *Bausset*. 6. *Olliole*, two little Towns; and 7. *Thoulon*, a place of no great circumference, but very strong, being the best Harbour the *French* are Masters of in the *Mediterranean*, the Bay being capable of the greatest Ships, which may ride here with safety. Marseilles. Thoulon.

How they prepare Capers.

At *Thoulon* they make holes in their Stone Walls near the ground, and there plant Capers, the fruit whereof they prepare thus: They gather the Buds or Blossoms of the Flowers before they be explicated, these they lay thin spread in the shade for three or four hours to wither, and so to prevent the opening of the Flower; then putting them into a Vessel, they pour Vinegar upon them, and let it stand cover'd nine days, then they take them out, and press them gently, and putting on fresh Vinegar, let them stand nine days again; this done the third time, they put them up in Barrels with Vinegar; some mix Salt with the Vinegar, which keeps their colour and taste for three Years.

Near *Bausset* I found plenty of *Myrtle* in the Hedges; near *Olliole*, *Acanthus sativus*; *Althæa frutescens folio rotundiore incano* C. B. *Fumaria minor sive tenuifolia surrecta* J. B. *Acacia trifolia*; *Teucrium vulgare*; *Arisarum latifolium*; *Chrysocome* Ger.

8. St. *Maximine*, near which you see the famous Grot of *Mary Magdalen*, call'd St. *Baulme*. 9. *Aix*, anciently *Aquæ Sextiæ*, from the hot Baths; it is a very neat City, having goodly Houses, broad Streets, and handsom Piazza's. 10. *Selogne*, *Salonia*. In the Cordeliers Church lies buried the famous *French* Astrologer *Nostradamus*, and in the Church Wall you see a Stone with an Inscription to his memory. Aix.

D. M. *Clariss. ossa M. Nostradami unius omnium mortalium judicio digni, cujus penè divino calamo totius orbis ex astrorum influxu futuri eventus conscriberentur. Vixit an.* 62. *m.* 6. *d.* 10. *Obiit Salo*: MDLXVI. *Quietem posteri ne invidete. Anna Pontia Gemella Salonia conjugi optimo* V. F.

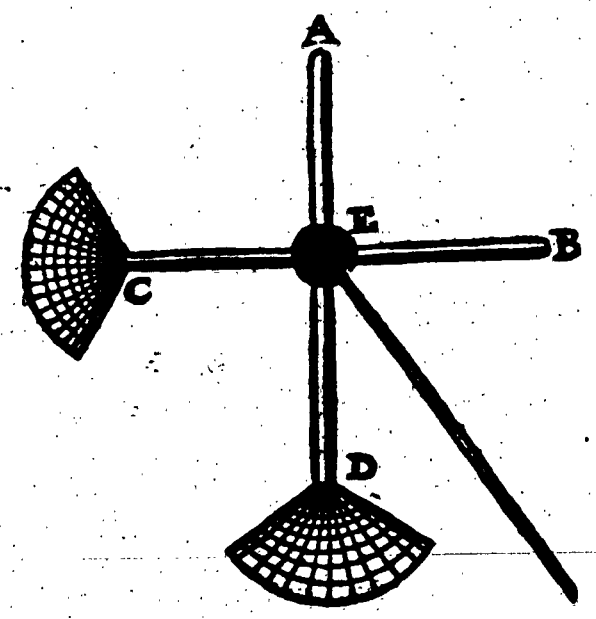
11. *Aiguemortes*, a small but strong place, in the Fens, near the Sea, six leagues from *Montpellier*. From hence we return'd to *Lions*, where taking a Messenger for *Paris*, we continued our Journey from thence to *Calais*, and so cross'd the Sea to *Dover*, where we first began our Journey.

A Relation of a VOYAGE MADE THROUGH A Great Part of SPAIN, BY FRANCIS WILLUGHBY, Esq; CONTAINING The Chief OBSERVABLES he met with there: Collected out of his NOTES.

August 31. 1664. we left *Bagnols*, in the County of *Roussillon*, being the last or furthest Town belonging to the *French*, and at about three fourths of a leagues distance came to a great Stone erected here for a Boundary between *France* and *Spain*; and passing very bad way among desolate Mountains, after many hours riding, we came to *Lansa*, the first Town of the King of *Spain*'s Countrey. All along these Mountains grew Rosemary, common Furze or Gorse, and *Agnus castus* of two sorts, the one with a carnous, the other with a blue Flower. From *Lansa* we went on the same day as far as *Cau de Creux*, five leagues or twenty English miles from *Bagnols*. Among these Mountains we met with no Brooks, and scarce any Water.

Sept. 1. we intended to have seen the Coral-fishing here, but the windy weather hindred us. The Sea must be very calm and smooth, else it is impossible for them to fish for it. It grows downward (as the Urinators told us) under the hollow Rocks, and not upwards as Trees. I believe rather that it grows indifferently either upwards or downwards, according to the situation of the Rocks.

The Engine they use to get it is a great Cross of Wood, A B C D, that at the middle E hath a huge Weight of Lead made fast to it, and at each end A B C D, a round



Net: To the Lead at E is fastned a long Rope. They go out in little Boats, and let down this Cross, and when they have found a Rock at the bottom of the Sea, he that manages the Rope thrusts it into the hollows, getting in one or two of the Legs, and if there be any Coral, it entangles in the Nets at the end of the Cross, by which it is torn off and brought up. The natural colour of the Coral, while it is alive and growing to the Rocks, is a pale carnous; but when the Scurf (which answers to the Bark in Trees) is rubbed off, it is red. The Coral that dies or is broken off from the Rocks, loses that carnous Scurf or Bark in the Sea, and becomes red, though sometimes it gets a greenish white Rust. They say it is fifty years before it comes to its full growth: but that, I conceive, is an ungrounded Conjecture. They sometimes, but very rarely, find Branches of three or four pounds weight: it rots, dies, grows light, worm-eaten and full of holes like Wood; they all affirm'd it to be hard, and not soft, as it grows under Water, contrary to the current Tradition of the Ancients, *Mollis fuit herba sub undis*. I believe the outward Scurf or Bark may be soft, it easily crumbling off afterwards, which might give occasion to the Fable. They told us, that a piece of Coral (having the carnous Scurf upon it) wetted, is just the same as when it is first taken out of the Sea. The best Coral, rude as it is found, is worth a Pistole the pound, or two or three Pieces of eight; polish'd and wrought into Beads, Bracelets, &c. at *Marseilles* it is sold for thirty, forty, and sometimes sixty Sols (*i. e.* so many Pence) the ounce. They find here white Coral also, but very rarely.

Near *C. de Creux*, upon the Mountains, they find a kind of *Selenites*, which may be cut or slit into very thin Plates, like the common *Muscovy*-glass.

Upon the Shore are thrown up *Conchæ veneres* of several sorts and magnitudes, and other small Shells of affinity to them, which they call *Porcellane*: These they put in the Juice of Lemons or Citrons, and set them out in an open Bottle all night. The Dew mingling with the acid Juice, dissolves the Porcellane. This Liquor they use for a Cosmetick.

They catch Fish about *C. de Creux*, as at *Naples*, by hanging a Fire-brand or other light at the end of the Boat, which entices the Fish into the Nets.

This day we pass'd by *Rosas*, a strong Garison, *Castillon*, *Villa sacra*, and lay at *Figera*.

Sept. 2. we pass'd *Crispia*, *Basalon*, *Argelagues*, St. *Ja*— and lay at *Castel-foulet*, five leagues: All the way we observ'd abundance of Pomegranate-trees: *C. Foulet* is a small Garison.

Sept. 3. We passed by *Aulot*, where we saw a Bufalore, of which there are divers in that Town: It is a Hole or Cave, out of which continually issues a cool Air; they keep Bottles of Wine, Fruit, &c. in a little House built over the Cave; the Wine here kept drinks as cool as if it were kept in Ice or Snow: They say that it is the Water running and falling down under the Ground that makes these *Spiracula*, which is not unlikely. They are all on the left side of the River, as you go to *Vich*, and none on the right. This day also we passed *Rhoda*, and lay at *Vich*, 7 leagues.

Sept. 4. We went to the Hill where the Amethysts or Violet-stones are found, distant two leagues from *Vich*, call'd

call'd *S. Sigmiont*. On the top of the Hill is an hermitage and place of Devotion, where S. *Sigmiont* a *Burgundian* King did Penance. The Amethysts are found lower in the side of the Hill, Viscount *Jacque* is Lord of the Soil, and whoever opens a Mine, pays him a Pistol and a half *per mensem*. They find the Stones by following a Vein of reddish or black Earth, or a Vein in the Rock so colour'd. They are all hexangular, and pointed like Crystal. There are of three sorts, the best are the blackest or deepest Violet. 2. Others are almost quite white. 3. Some, but very rarely, are found tinctur'd with yellow: They sometimes stick a great many together to the Rock, like the *Bristow*-diamonds, but those are never good; the best are found loose in the chinks of the Rock, in a fat yellowish or reddish Earth: They scrape out this earth with long narrow Knives that enter into the chinks, and then crumble it in pieces with their Fingers, to feel for the Stones: They are afterwards ground and polish'd upon leaden Moulds, after the same manner as Crystal is. First they use the dust of *Smiril* or Emery, and at last of *Tripoli*. All along the way to this Hill we saw abundance of *Arbutus* and *Rhus coriariorum* call'd *Rhondo*. In this Countrey they use not bark of Oak to tan their Leather, as we do, but the leaves and branches of this Shrub, which they first bruise with a perpendicular Stone, and then mingle with Water, and heating the Water lukewarm, steep the Skins in it three or four days. In these Mountains are also found Emeralds, Gold and other sorts of Minerals and Stones, but it doth not turn to account to search for them. Topazes are found in a Lake call'd the Lake of *Silles*, not far from S. *Colomna* near *Girona*: They find them upon the Shore of the Lake.

Sept. 5. At *Vich* there is a great Market-place, and a Church at a Covent, said to have been built by *Charlemagne*, when he had discomfited the *Saracens*, and driven them out of *Catalonia*. This night we lodg'd at *Moia*, having travel'd only three leagues.

6. We rode within sight of *Montserret*, broken at the top into Rocks standing like the Teeth of a Saw, from whence it took its name. There is a Chapel of our Lady, a place of great Devotion. This night we lodg'd at *Casa della pobla*, a single Inn, 5 leagues.

7. We came to *Cardona*, two leagues. All the way as we rode, the Rocks and Stones were full of round holes, just like those in the Stones at *Ancona*, in which the *Pholades* harbour; and there is no question but these holes have been made by some Animal before the Stones were hardned.

8. We view'd the Mountain of Salt, where were three Officers, one to weigh the Salt, another to receive Money, and the third to keep Accounts: The Revenue of this Salt amounts yearly to about 30000 Pieces of eight; for every Quintal, that is 104 pounds, they pay ten Reals of two Sous to a Real. The Salt is hard, and transparent like Crystal, and when powder'd fine, as white as Snow; they hew it out with Axes and Mattocks, and make Chaplets, Boxes, &c. of it: They say there is no end of it, but that it reaches to the center of the Earth. Near the place where they work, there are two Caves within the Rock of Salt, to the end of one of which they never durst venture to go.

Not far from this there is another Mountain of Salt, where the Salt sticks to the Rocks, and is most of it tinctur'd with red: Of this red Salt they make broad Plates like Tiles, which they call *Ruggiola*; these they heat before the Fire, but never put them into it, and use them to take away Aches, strengthen the Stomach, keep the Feet warm, &c. well heated on both sides, they will keep warm for 24 hours. Amongst this red Salt there is a kind of *Selenitis*, (which some call Ising-glass, and the Italians *Gesso*, from the Latin word *Gypsum*, signifying Chalk, because when burnt it is turn'd into a white *calx*) which naturally roches into Parallelipipedums of the figure of a Lozenge; of which sort of Stones many are found in several places of our Nation. About these Mountains of Salt grows great plenty of *Halimus* and *Limonium*.

Cordona is a Dukedom containing three or four Villages besides the Town: The Duke thereof is one of the richest Grandees of *Spain*, having three Dukedoms, four Marquisates, two Earldoms, &c. the Name of his Family is *Folke*. He lives for the most part at *Madrid*, but sends every three Years a Governor. The King of *Spain* hath nothing at all to do with this City; and the Duke never imposes any Taxes, but hath only all the Tithes of the Corn, Wine, &c. There is a Council of 36 chang'd every Year, and he that hath been of the Council must wait three Years before he can be chosen again: The last thing the Council does, is to chuse a new Council for the Year following. This new Council is divided into four Ranks, not equally, but as the old Council shall think fit; and their Names are put into four Boxes, out of every Box a Child takes out one to be Consul: He that is drawn out of the first Box is the first Consul, and so in order. Near the Town is a Castle, and in the Castle a Tower, said to be built by *Charlemagne*. Every Duke hath an Oath given him by the Consuls, wherein is an Article, that he must reside in the Castle, which is never kept.

We passed thro' *Kalah*, and lay at a single Inn a league and an half further, four leagues and an half distant from *Cardona*. *Sept.* 9.

We passed thro' S *Columba*, *Reccafort*, and lay at *Sireall*, five leagues and an half. 10.

We passed by *Pobla*, a famous ancient Monastery, about two leagues distant from *Sireall*. In the Church there are a great many Monuments; they told us, that thirteen Queens and seven Kings lay interr'd there. Then we passed *Praves*, and lay that night at *Coulnouvil*, 5 leagues. All over *Catalonia* they reckon a league two hours, and make account that four *Catalonian* leagues are equal to six *French*. We heard that there were Amethysts also found about *Praves*. 11.

We passed by *Falset*, two leagues from *Coulnouville*, where there are a great many Lead-mines; the Oar is very rich, and they melt it just as it is taken out of the Mine, without bearing it to powder. They sell the Oar for 40 *Reals* of *Ardit* the Quintal, a Quintal being 122 pounds: Five Quintals of Oar usually yield four Quintals of Lead. This Town, and the Mines about it, belong to the Duke of *Cardona*. They told us, that the Vein of Metal lay always East and West: The best and finest of this Oar they grind to powder, and thereof make Varnish to lead earthen Pots and Vessels with, sprinkling the Powder upon the Pots. This night we lay at *Tivisa*, four leagues. 12.

We passed *Venu-felet*, *Tivians*, and lodg'd at *Tortosa*, six leagues. All along the way we saw a great deal of *Palma humilis Hispanica non spinosa*; the Fruit grew up in bunches out of the ground, like the Berries of *Arum*, and was not much bigger; those that were ripe were of a reddish colour, of an oblong figure, and divided into four quarters: those that were less ripe were yellowish; the Skin and Pulp very thin, and did but just serve to cover the Stone: It hath the smell and taste of Dates: The Stones, being broken, are not at all hollow, but have a hard white Kernel or Pearl within them. We observ'd also abundance of *Garoffus*, (as they call it) i. e. *Caroba* sive *Siliqua dulcis*, the Cods whereof they give their Mules instead of Provender. The *Spanish* Soldiers, at the Siege of *Barcellona*, had nothing but these *Siliquæ* and Water to live upon. All over *Catalonia* the People are generally poor; they use neither Glass nor Paper in their Windows, but only Shuts of Wood. 12.

Tortosa is a very poor and desolate Town. There is a Bridge of Boats over the River *Iberus*, now call'd *Ebro*, in sight of which we rode all along from *Tivisa* hither. At *Tortosa* they were wont to make Saltsellars, Mortars, Bowls, Beads, &c. of a kind of Marble of a mingled colour, red and yellow, found near the Town, which they call *Jasper*, and of another greenish Marble spotted with black, brought from *Genoa*.

We went to the Jasper-mine about two miles from the Town, with one of the chief Workmen: We saw there vast Pillars hewn out and wrought for a Church in *Palermo*. He told us, that all the Veins of Marble, Jasper, &c. went from East to West; that they saw'd these Stones to make Tables, &c. with only Water and Sand; that when there was not enough red in the Stone, they made little holes, and set in red Stones: that the Cement they used for all Stones in Mosaick Works was made of one half Mastich, and one half Greek Pitch: that in building they joyn'd the Stones together with ordinary Lime, but on the outside they fill'd up the chinks with a Cement made of the Powder of the Jasper mingled with Sulphur and *Mangra*; to make it more white, they put in more Sulphur, to make it more red, they put in more *Mangra*. The Jasper was hew'd out with Chizzels and Hammers, just as Stone in our Stone-pits; it is afterwards polish'd with Armoril, *i. e.* the Powder they use to polish Armour with, and to give it a lustre, so that one may see his Face in it, with the Powder of the Cinders of the best Tin. 15.

This day we set out towards *Valence*, passing the *Ebro* by the Bridge of Boats, and lodg'd at *Galera*, a small Village two leagues distant from *Tortosa*.

We pass'd by *Tregera*, whereabouts seem'd to be the ruins of an old *Roman* way, *Mattheau*, *Salsandail*, and lay at *Lescova*, 7 leagues. Near *Lescova* we found store of *Oleander* with a red Flower. 16.

We

Sept. 17. We passed *Cabanes*, *Peblettа*, *Buriol*, *Villa real*, *Annules*, 7 leagues. This Journey we saw a great many Rivers quite dried up, and for above a month together had scarce any Rain; that little that was, always came just from the Sea.

18. We passed *Chinces*, *Almenare*, *Monfuedere* (*an Saguntum?*) *Massa-mogril*, *Albalade*, and arriv'd at *Valence*, 7 leagues. Near *Valence* the Country is very populous and well cultivated. Abundance of Mulberry-trees are planted in rows all the Fields over. As we passed thro' the Market-place at *Valence*, all the People houted at us, and threw Parings of Melons, *&c.* on our Cloaks. It seems they are not used to see Strangers and Travellers there: this was the first place in *Spain* where we were search'd: In this City is an University; I heard a Professor read Logick. The Scholars are sufficiently insolent, and very disputatious: One of them ask'd me, *Quid est Ens universale?* and whether I was of *Thomas Aquinas*'s Opinion: another, *Quid est Genus?* None of them understood any thing of the new Philosophy, or had so much as heard of it. None of the new Books are to be found in any of their Booksellers Shops: In a word, the University of *Valence* is just where our Universities were 100 years ago.

In the Kingdom of *Valence* the King of *Spain* is not absolute; but to impose Taxes, raise Soldiers, *&c.* he must have the consent of the three Estates, *i.e.* 1. the Clergy; 2. the Nobility; 3. the Cities and Villages; and if one of these refuse to consent, nothing can be done. These three Estates have six Deputies, two for each, who are chang'd every third Year. Of the two for the Cities, one is for the City of *Valentia*, and the other for all the rest. Each City chusing a Syndick, one is taken by lot to be a Deputy: The six Deputies have the care and government of the Militia; upon any urgent occasion the Deputies must assemble the three Estates, *i.e.* the chief of the Clergy, the Nobility, and the Syndicks of the Cities.

The City of *Valence* is govern'd by six Jurats or Consuls; they are taken by lot out of six Urns or Burses, two out of each: In the first Urn are the Names of all the better sort of Nobility that have the title of *Dons*; in the second Urn, the Names of the lower rank of Nobility, that have not the title of *Don*; in the third, the Names of all rich Citizens that are not Gentlemen; they must have at least 400 Crowns yearly Rent, besides what their Wives bring. Besides these, there is a Rationel and two Syndicks chang'd every third Year; six Advocates for their Lives, and forty Plebeians chang'd yearly. The City being divided into fifteen Trades or Companies, each Company chuses two, which make thirty; the other ten are chosen, two by the Rationel, and eight by the six Jurats and two Syndicks, each chusing one. Of all these Officers, and the forty Plebeians, consists the Senate, but nothing can be done, unless there be 29 of the Plebeians present at least. There is also, 1. a Judge for Criminal Causes, taken by turns out of the three Urns, and chang'd yearly: He hath an Advocate to assist him, who is chang'd yearly, but so that all the Advocates in the City have the place by turns; and a Lieutenant Criminel, taken by lot out of the forty Plebeians. 2. A *Mustafa*, who has the care of all kind of Victuals, Corn, Weights, Measures, *&c.* He is taken by lot out of the three Burses, as the criminal Judge is, and hath also a Lieutenant out of the 40. Moreover, there is a Judge for civil Causes, taken out of the three Burses, who has an Advocate like the criminal Judge, but he cannot decide Causes of above fifteen Crowns.

The University is govern'd by the Town, who every third year chuse a *Rector* that must be a Canon. The other Officers are, a Beadle, a Sergeant, and a Puntadore, who is to take notice when any Professor fails to read. There are eight *Præpositi* in this University, four for Divinity, two for the Canon Law, and two for the Civil Law; who have each 500 Crowns yearly. There are also four Readers for Philosophy, seven for Physick, one for the Greek Tongue, one for the Hebrew, and two for the Mathematicks. These have but small Stipends, but all their Scholars that come to hear their Lectures pay somewhat yearly. If a Professor promote three rich Scholars, that are able to pay the Fees, to any Degree, he may promote a fourth, that is poor, for nothing: The Degrees are the same with those in our Universities, *viz.* 1. Batchelour, after they have finish'd a course in Philosophy, which Degree costs about 12 crowns. 2. Master of Arts, which costs 80. 3. Batchelour in Divinity, Law or Physick, which costs 16. 4. Doctor, which costs 150. They may be Masters of Arts presently after they are Batchelours, if they will, and in like manner Doctors: In the Markets at *Valence* and all *Spain* over, they divide both their Hens and Chickens into pieces and sell them by quarters: They make great Vessels of Goats-Skins to put Wine and Oyl in, and lesser Bottles, which they call *Boto's*. The Women paint, laying it on so thick, as if one daub'd *Minium* upon a Wall. No Garison nor Soldiers here.

We set out from *Valence*, and passing by *Masanasse*, *Cafareggi* and *Beilla*, lodg'd at *Mussafes*, 3 leagues. Coming out of *Valence*, we were fain to give Money at three places to avoid searching. *Sept.* 24.

We passed *Cullera*, where we ferried over a great River call'd *Xucar*, and lay at *Gandia*. There is a College and an University, as appears by this Inscription upon the Wall of the College: 25.

Sanctus Franciscus à Borgia, Dux Gandiæ 4, Præpositus generalis Societatis Jesu 3 hoc Collegium & hanc Universitatem à fundamentis erexit A. D. 1546.

At *Cullera* the Wine first began to be sweet, and three leagues off, at *Gandia*, the Plantation of Sugar-canes began. Q. Whether the nature of the Soil, that was fit to nourish the Sugar-canes, did not also contribute to the sweetness of the Grapes? At *Gandia* we first found Raisins of the Sun (as they are call'd in *England*) in *Spain* they call this kind *Pansa*, and they seem to be the *Duracine* of the Ancients: they are all white, round, and have a tougher Skin than other Grapes; they gather them when fully ripe, and dip them in a boiling *Lixivium* of Water and Ashes, just dipping them in, and taking them out again, and then dry them upon Boards in the Sun, taking them in by night or in foul weather. The name Raisin comes from *Racemus*. Figs are dried just as they are gather'd, not being dipt into any *Lixivium*.

I went to *Olives*, where, and at *Gandia*, are the Engines for Sugar-works, the best are at *Olite*. By the way we saw the Sugar-canes growing in several places; they are planted in low wet grounds well mucked and dressed; divided into beds or hillocks and furrows. They cut the Canes close to the Roots in *November* and *December*, and cutting off the slender Tops, which afford no good Juice, keep them under ground till *March*, and then prick them into these hillocks or beds: Out of every *talea*, or cut, shoot four, five or six Canes, which will be ripe the next *December*. The knots or joints of the Cane at the bottom are very close together, scarce an inch asunder, but upwards the distance is more, as the Cane grows slenderer: Within is a white Pulp or Pith, full of Sap, sweet as Honey: They sell them at *Gandia* to eat, and cutting them into pieces just in the middle between two knots, suck the pieces at both ends. To make Sugar, after the Canes are cleansed from the tops and leaves, and cut into pieces, they are first bruised either with a perpendicular Stone running round, as Apples to make Cyder, or *Olives* to make Oyl, or between two Axes strongly capped with Iron, horizontally placed, and turned contrary ways, and then pressed as Grapes or Olives are. The Juice thus pressed out, is boil'd in three several Cauldrons, one after another; in the third Cauldron it becomes thick and black, and is then put into conical Pots, which at the bottom have a little hole stopt only with course and foul Sugar; Mr. *Ligon* saith, with Plantane Leaves: These Pots are cover'd, when full, with a Cake of Paste made of a kind of Earth call'd in Spanish *Gritto*, and found near Olives, which is good to take spots out of Clothes, which Cap or Cover sinks as the Sugar sinks. [Mr. *Swift* told me, that the Clay they use with us is Tobacco-pipe-clay, or very like it, and that the Water in the Clay served to wash down and carry away the *Molasses*, at least the Clay helps the separation and precipitation of it] These conical Pots are put into other Pots, into which, by the hole at the *Vertex*, the Juice dreins down thro' the course Sugar at the bottom. It dreins so for five or six months, in which time the Sugar in the conical Pots grows hard and white, all the Juice being either drunk up by the Lute, or run out by the hole at the *Vertex*: This Juice is boil'd again so long as it is good for any thing, but at last it makes only a foul red Sugar, that will never be better. The conical loaves of Sugar, after they are taken out, are set to drein over the same Pots for fourteen or fifteen days. To make the Sugar more white, they must boil it again, but about one sixth is lost every time. A pound of Sugar of 12 ounces is sold at *Olives* for three *Sous* and a half; refined, for five or six *Sous*. The Sugar-juice is strain'd thro' Strainers of Linen, as it is put out of one Cauldron into another: They take it out of the first and second Cauldrons so soon as it begins to boil, but in the third Cauldron they let it boil till the Scum rises, and then take it off, only the Scum, with a Scummer, and put it into a long Trough to cool, and when it is cool, put it into the conical Pots. One Scum rises after another in the third Cauldron: the Scum, when it is taken off, 26

off, is white, but turns to a black Liquor in the Trough. They never refine the Sugar more than three or four times: they uſe for the refining of it Whites of Eggs, putting in two or three dozen into a Cauldron: they uſe but one Cauldron for refining. When it is refin'd, it grows white and hard in nine or ten days. The Juice boil'd up, is eaten with Bread toſted, as Honey: the Juice of the refin'd Sugar is much better than the firſt Juice. The Duke of *Gandia* ſends Preſents of this refin'd Juice to the Queen of *Spain*. When they refine it, they put in a little Water into the Cauldrons to diſſolve it the better. But for a more exact deſcription of the whole proceſs of the Sugar works, I refer to *Piſo*, in his Natural Hiſtory of *Braſil*, and *Ligon*, in his Deſcription of the *Barbados*. The Sugar of *Olives* is better than the Sugar of *Gandia*. At *Motril* in *Granada* they alſo make a great deal of Sugar.

About *Valence*, *Gandia*, &c. the Earth is always wrought, and never lies fallow or idle; they reckon five *Raccolta's* or Crops in one Year; 1. Of Mulberry-leaves for Silk. 2. Wheat and other *European* Grain. 3. *Daſi*, i. e. *Maiz* or *Indian* Wheat. 4. Grapes. 5. Olives; and 6. at *Gandia* Sugar-canes. After the Wheat is cut, they preſently ſow the *Indian* Wheat. They complain'd, that lately, for a great many Years together, they had very bad *Raccolta's* for want of Rain, which had almoſt ruin'd *Spain*.

Sept. 27. We paſſed *Benegana*, and lay at *Chativer*, ſix leagues and a half. *Chativer* is an ancient Town of the *Moors*, and was once head of one of their little Kingdoms. About a league from the Town began a very remarkable Aquæduct, made by the *Moors*; it was juſt over a River along the ſide of a Hill, in moſt places not above a yard or two under ground, and had a great many Funnels juſt like the tops of Chimneys, to give vent, and let out the Water when there ſhould be too much. The tops of theſe Funnels were made of a red Clay and Pebble Stones. The Water came almoſt to the top in all of them, but run over but in one.

28. We paſſed in ſight of *Monteſa*, a Caſtle belonging to the Knights of *Monteſa*, that wear a red Croſs; *Ortenente*, and lodg'd at *Bechert*, ſix leagues.

29. Near *Alicant*, among the Mountains, there is a very good breed of Falcons. In the Plains near *Alicant* grows abundance of *Gramen ſpartum Plinii ſive ſportularum Officinarum* J. B. *i. e.* Matweed, of which the Frails wherein they put Raiſins and other Fruit are made: This in *Spain* they call *Spar*, at *Marſeilles*, *Auffe*. The Women hereabout gather abundance of this, and ſteep it in Sea-water till it be well ſoftned; then they dry it, and carry it by Sea to *Marſeilles*, where they ſell it at eight *eſcus* the Milliere: Every Milliere conſiſts of ten Packieres, every Packiere of an hundred Manado's or handfuls. Of this they make Cables for Ships, Baskets, *&c.* In this days Journey we ſaw a great many Fountains cover'd with long Arches, to hinder them from being dried up. We paſſed *Elda*, *Novelda*, *Aſpe*, *Clavillente*, *Albitella*, and lay at *Orivola*, eleven leagues.

30. We came to *Murcia*, four leagues. Near *Orivola* (which City is an Epiſcopal See) we obſerv'd many Turpentine-trees, ſome in flower, and ſome with ripe Berries. Near *Elda* they dig up a ſort of *Selenite*, which they burn and put into Wine to clarifie it. About a league from *Orivola* began the Kingdom of *Murcia*: two leagues from *Orivola* we were fain to give Money to avoid ſearching. *Murcia*, which gives denomination to this Kingdom, is a pitiful deſolate Town. The Fiſh-market here is ſhut up in a Cage or Grate, as at *Genoa*, the People crowding about it, and thruſting in their Baskets as there.

October 1. We travel'd thro' a miſerable deſolate Countrey to *Mula*, ſeven leagues.

2. We paſſed thro' *Caravacca*, where they drive a great trade of making little Croſſes of Silver, Braſs, Wood, *&c.* After that Pilgrims, Travellers, *&c.* have bought them, they carry them to the Caſtle to touch them by a famous Croſs, which according to their fabulous Legend deſcended miraculouſly from Heaven, which, forſooth, infuſes a wonderful virtue into them. We lay this night at an odd Houſe four leagues off *Caravacca*, having travel'd in all ten leagues.

3. We paſſed by *Venta nova*, and came to *Hueſca*, eight leagues. At *Hueſca* we firſt ſaw a yellowiſh Whitewine like Sack. The Kingdom of *Granada* began about four leagues before we came to *Hueſca*. The Town of *Hueſca* belongs to the Duke of *Alva*.

4. We paſſed by *Baſa*, and reſted at *Venta*, eight leagues.

5. We travel'd to *Guadix*, an Epiſcopal See, and ancient *Roman*-Colony. Upon the Gates we took notice of this Inſcription:

Recipit Colonia Accitana Gemellenſis provincia caput primas omnium Hiſpaniarum fidem Chriſti Jeſu, reſectis idolis, evangelizantibus ſanctis Torcato & ſocis, Anno ſalutis 70, Pontificatus S. Petri 37, Imperii Neronis 13. Urbi Accis patrono ſuo ſanctiſſimo D. D. 1593. Honorati ſunt Amici tui Deus. Colonia Accitana.

We travel'd to *Granada*, ſix leagues diſtant from *Duſnot*, where we lodg'd the night before. Here we ſaw the Caſtle call'd *La Lhambra*, the Seat of the Kings of *Granada*. Within the Walls of the Caſtle live abundance of People, which dare not live in the City for Debt or other cauſes. There is a fair Palace begun by *Charles* V. and yet unfiniſh'd: the outſide of it is ſquare, but it is round within, having two rows of Cloyſters one above another, round about the Court. Adjoyning to this is the ancient Palace of the Kings of *Granada*: within there is all the ſame kind of Moreſco-work wrought in Mortar and Stone, with Gold and Painting. The Cloyſters are ſupported by long ſlender Pillars. In this Palace is an octagonal Chamber vaulted at the top, with eight Doors, one in every ſide. If one ſtand in one Angle, and whiſper to another that ſtands in the Angle diametrically oppoſite, the Voice is convey'd as in the whiſpering-place at *Glouceſter*: but if you ſtand in an Angle that is not diametrically oppoſite, you hear nothing. The reaſon of the conveying the Voice is the Vault above, and the Corners being ſtreightned into a very ſharp Angle or Channel. In *Granada* are two great Market-places, one call'd *Pleſſa nova*, the other *de Villa Rambla*. In the great Church are two Monuments, one for *Ferdinand* and *Iſabella*, with this Inſcription:

Mahometicæ ſectæ proſtratores, Hæreticæ pervicaciæ exſtinctores; Fernandus Aragonum & Heliſabetha Caſtellæ, vir & uxor unanimes, Catholici appellati marmoreo clauduntur hoc tumulo.

The other is of *Philippus* I. and *Joanna*, Daughter and Heir of *Ferdinand* and *Iſabella*, without an Inſcription. In the River *Daro*, that runs by *Granada*, they find Gold among the Sand. In the Mountains of *Sierra nevada* near *Granada*, are ſaid to be divers ſorts of Minerals, which are not at all look'd after. Near *Motril*, at the *Cape di Gatto*, there is a Mine of Granates cover'd with the Sea. They are pointed as Amethyſts and Cryſtal, but the beſt come from *Africa*.

We ſaw that day *Monte Sacro*, a place within half a league of the Town, of great Devotion. In *Caſtile*, *Granada*, &c. the greater Cities have a *Corregidore*, and the leſſer an *Alcayde*, who adminiſter Juſtice, and are appointed and ſent by the King to govern the Towns. All over the Kingdom of *Caſtile* they eat Fleſh upon Saturdays, and obſerve only Fridays.

12. We left *Granada*, and paſſing by *Santa Fede*, travel'd to *Lotta*, eight leagues.

13. At *Lotta* we were troubled with Soldiers that came from the Frontiers of *Portugal* to take up their Winter Quarters: there had been of this Party 2600, but this Summer at *Alcantara* they were reduc'd to 900, the reſt being ſlain, or dead of Diſeaſes. We paſſed this day by *Archidona*, *Lalameda*, *Laranda*, and lay at *Pedrera*, ten leagues.

14. We paſſed by *Oſſuna*, *la Pobla*, and lay at *Elazabal*, ten leagues. This Countrey was the beſt we ſaw ſince we came into *Spain*, the Land being for the moſt part well planted and cultivated.

15. We paſſed by *Gandula*, and arriv'd at *Sevil*, ſeven leagues. Between *Gandula* and *Sevil* there are abundance of Olive-trees: Here we firſt ſaw the greater ſort of Olives, which are uſually eaten in *England* for a Sallet, call'd the great *Spaniſh* Olive; all that we had ſeen in *Italy* or in *Spain* before being of the leſſer ſort. Here is a brave Aquæduct of Brick, which conveys Water from *Carmona*, ſix leagues diſtant: under the Arches there are *Scalæ Hiſtes*, as at the Aquæduct of *Piſa*. The Galeons bring nothing home from the *Weſt-Indies* but Plate, the Merchants Ships are loaden with Leather, Cocao, Sugar, *Lana di Vigonna*, &c. Of the Cocao-Nut they make *Chocolate* thus; firſt they roſt the Berries to get off the Huſk, then pound the Kernels to powder, and to every *Miliao* (*i. e.* three pound and a half) of powder they add and mingle two pound of Sugar, twelve Vanilla's, a little Pimentone or Guiny-pepper, (which is uſed by the *Spaniards* only) and a little *Acchiote* to give a colour; but theſe two laſt may be omitted; they melt the Sugar, and then mingle all well together, and work it up either in Rolls or Loaves.

April

Sevil hath of late decay'd very much, and doth continually decay more and more, the Trading being most remov'd to *Cales*, the reason whereof is, because they pay about 27 *per Cent.* for all Merchandizes at *Sevil*, and but 4 or 5 *per Cent.* at *Cales*. The chief places to be seen in *Sevil* are, 1. the great Church; 2. the King's or Assistant's Palace; 3. the Archbishop's Palace; 4. the Steeple of the great Church, like St. *Mark*'s Tower at *Venice*, which you ascend almost to the top without Stairs, by gently-inclining Plains; 5. the *Franciscan* Covent; 6. The *Longa*, where the Merchants meet about the Affairs of the Flote; 7. the Convent of *Nostredame del Peuple*; 8. the Bridge of Boats over the *Guadalquivir*, *i.e.* the River *Bætis*, the Town on the other side this River is call'd *Triana*; 9. the Inquisition or Castle of *Triana*, just over the Bridge; 10. an old Tower call'd *Torre d'Oro*, where St. *Ferdinand* that recover'd *Sevil* kept Money made of Leather; 11. the Aquæduct; 12. the old Palace and Garden of the *Moors*. Near the Bridge, along the River side, they come every night with their Coaches to take the *fresco*. In the great Church, between two Altars, are three Monuments for St. *Ferdinand* the wife, his Wife *Beatrice*, and his Son *Alphonsus*: The same Epitaph in Hebrew, Arabick, Greek, and Latin.

Hic jacet illustrissimus Rex Ferdinandus Castelliæ & Toleti, Legionis, Galliciæ, Sibiliæ, Cordubæ, Murciæ & Jaheni, qui totam Hispaniam conquisivit, fidelissimus, veracissimus, constantissimum, justissimus, strenuissimus, detentissimus, liberalissimus, patientissimus, piissimus, humillimus, in timore & servitio Dei efficacissimus; qui construxit & exterminavit penitus hostium suorum proterviam; qui sublimavit & exaltavit omnes amicos suos, qui civitatem Hispalem quæ caput est & metropolis totius Hispaniæ de manibus eripuit paganorum, & cultui restituit Christiano; ubi solvens naturæ debitum ad Dominum transmigravit ultima die Maii, Anno ab incarnatione Domini 1252.

In the same Church is *Fernandus Columbus*, *Christopher Columbus*'s Son, buried, with this Epitaph:

Aqui jace el mucho magnifico signor Don Hernando Colon. el quel expleo y gasto toda su vida y facenda en aumento di las Letras y en juntar y perpetuar en esta cividad todos los libros di todas las scientiæ qui in su tempo hallo y en ridurlos à quatro libros segun estan à qui senalados. Fallescio en esta cividad à 12 di Julio 1532. *An. de su edad* 50 *an.* 10 *menses & 14 dies. Fue Hyio del valeroso & memorabile Signor Don Christophoro Colon. primiero Admirante qui descubrio las Indias y nuevo mundo, en vida di los Catholicos Reys Don Fernando y Donna Isabella di gloriosa memoria, à onze de Octobre dy mill quatrocentos y noventa, y dos annos, y partio del puerto de Palos à descubrirlas con tres Carabelas y noventa personas di tres de Agosto ..... innes ..... y bolvio a Castilla con la victoria à quattro di Marzo del anno siguente, y torno despues otras dos vezes à poblar lequale scubrio, y al fin fallescio à Valladolid à vente de Mayo de mill y quinccentos y seys annos, Rogad al Senior por elus.*

Chocolate is sold at *Sevil* for something more than a Piece of Eight the pound. Vanillas, which they mingle with the Cocao to make Chocolate, for a *Real di Plato*. Acchiote, which they mingle with the other Ingredients to give a colour, is made of a kind of red Earth brought from *New Spain*, wrought up into Cakes, it is sold for a *Real di Plato* the ounce. All the Oyl and Wine they have in the *West-Indies* goes from *Spain*, they not being permitted to plant Vines or Olive-trees, that they may always have a dependance upon *Spain*. At and near *Sevil* we paid two *Reals de quarto* a Bed; Bread, Wine, Flesh, and all other Commodities excessive dear, excepting only Olives and Pomegranates, which were better here than in any other part of *Spain*. There had lately been a great Plague in *Sevil*, which had very much depopulated and impoverish'd, indeed almost ruin'd, the City.

Octob. 23. I set out from *Sevil* towards *Madrid*: the first day we travel'd to *Carmona*, where the Aquæduct 'forementionⁿd begins, six leagues; in all which way we saw no Houses, but a great many Aloe-trees.

24. We passed *Les fontes*, and lay at *Ecija*, a great Town of above 20000 Inhabitants. Between *Carmona* and *Ecija* is a very good Countrey, abundance of Corn and Olive-trees. *Ossuna* is within four leagues of *Ecija*, where the Duke of *Ossuna* hath a Palace. We travel'd this day nine leagues.

25. We passed over the River *Xenil*, that runs into *Guadalquivir*, baited at *Arrasith*, and lodg'd at *Cordova*, eight leagues. About a league from *Cordova* we passed another little River that runs into *Guadalquivir*. Before we enter'd *Cordova*, we rode over a great Stone Bridge that here crosses the *Guadalquivir*. In the middle of the Bridge stands a Statue erected to the Angel *Raphael* with this Inscription:

Beatissimo Raphaeli Angelorum proceri, custodi suo vigilantissimo, qui ante annos 300 *sub Paschali antistite, populum peste depopulante se medicum tantæ cladis futurum prædixit, qui subinde Anno* 1578, *venerabili Presbytero Andreæ de Cos Roelas S. S. M. M. exuviæ evulgavit, & tandem præfecit Cordubensium tutelam sibi à Deo demum datam. Quare ut justa gratitudo diu stares S. P. Q. Cordubensis hanc lapideam statuam cautus & pius erexit, mulctâ procuratione Domini Josephi de Valdeana & Herera & Domini Gundisalvi de Cea & Rios Senatorum, Pontifice Innocente X, Hispan. rege Philippo IV, Episcopo Domino Fratre Petro de Tapia, Prætore Domino Alphonso de flores & monte negro: Anno* 1651.

The most considerable places in *Cordova* are, 1. the Bishop's Palace: 2. the *Cavallerisca*, where the King keeps a great many Horses: 3. the Ruins of *Almanzor*'s Palace, the last King of the Moors: 4. *Plassa di Corridera*: 5. the Church of the *Augustine* Friers: 6. the great Church, which was anciently a Mosque; it is large, but very low, supported by a great many rows of Pillars in a Quadrate Order, sixteen rows one way, and thirty another; upon many of the Pillars are Moors Heads carv'd in the Stone, and one or two with Turbants on. In the middle of this Church is the great Chapel, where are several Bishops interr'd. In one of the Chapels that is now dedicated to St. *Peter*, in the Moors time was kept a Thigh of *Mahomet*: Round about the Cornish of this Chapel, and that part of the Church next it, is an Arabick Inscription. The People complain grievously, that *Cordova* is quite ruin'd and undone by Gabels and Taxes.

We left *Cordova*, and after a league or two riding, entred the *Sierra Morena*, a miserable, desolate, mountainous Countrey, and lodg'd at a little Village call'd *Adamus*, six leagues. *Octob.* 27.

28. We travel'd all day thro' the *Sierra Morena*, and lay at a Village call'd *La ecruisille*, nine leagues.

29. In this days Journey we saw abundance of Galls upon the *Ilices*, which were of like bigness, figure, colour, consistency and other accidents with those that grow upon Oaks. This day we first met with red Wine again, which they call *Vino tinto*. We got safe out of *Sierra Morena*, and came to *Alm-dovar del campo*, a great Lougar, nine leagues. About the middle of *Sierra Morena* are the Bounds of *Castilia nova* and *Andaluzia*.

30. We passed by *Caraquel*, *Ciudad real*, and lay at *Malegon*, ten leagues. Between *Malagon* and *Ciudad real* we passed over the River *Anas*, now call'd *Guadiana*, which was there but a little Brook. In this days Journey we met with a great many great flocks of Sheep and Goats going towards the *Sierra Morena* out of *Castile*; it being the Custom all Summer to feed their Sheep upon the Mountains of *Castile*, and in Winter in the *Sierra Morena*.

31. We passed by the Ruins of an Aquæduct about four leagues from *Malagon*, then *Tocnas*, a good big Lougar, and lay at *Origas*, ten leagues.

Novem. 1. We passed thro' *Toledo*, and lay at *Esquivias*, eleven leagues. As soon as ever we passed the *Sierra Morena*, we felt a great change of weather, the warm Air that comes from *Africk* and the *Mediterranean* Sea being stopt by the interposition of the Mountains. This day there was here a hard Frost, and pretty thick Ice. The most considerable things in *Toledo* are, 1. The Bridge over *Tagus* consisting of but two Arches, one great one, and one little one. 2. The Shambles, where, notwithstanding the coldness of the day, I saw abundance of Flies, which confutes the Story, that there is but one great Fly there all the Year. 3. The great Church, where there are many Monuments of Bishops, but without Inscriptions; in the *Capella maggior* lie interr'd two Kings, and in the *Capella de los Reys* four Kings. 4. The King's Palace. 5. The Ruins of a famous Engine to raise up Water to the King's Palace; there is so little of it remaining, that it is impossible thence to find out all the contrivance and intrigue of it.

Between *Toledo* and *Madrid* the Countrey is very populous, and the Soil very good. All along the Road from *Sevil* to *Madrid* the common fare is Rabbets, red-legg'd Partridges, and Eggs, which are sufficiently dear.

2. We arriv'd at *Madrid*; six leagues near the Town we passed over the River *Xarama*. *Madrid* is very populous, well built with good Brick Houses, many having Glass Win-

Windows, which is worth the noting, because you shall scarce see any in all *Spain* besides. The Streets are very foul and nasty. There is one very fair Piazza or Market-place, encompass'd round with tall and uniform Houses, having five rows of Balconies one above another, and underneath Portico's or Cloysters quite round. The chief things to be seen in *Madrid* are, 1. the Prison; 2. the Piazza just now mention'd; 3. the King's Chapel; 4. Palaces of several Noblemen, as that of the Duke of *Alva*, that of the Duke of *Medina de los Turres*, &c. 5. the King's Palace, where there is the King's *Cavallerisca*, and the Queens *Cavallerisca*; 6. a great Piazza before the Palace, where are abundance of Coaches always attending; 7. the English College of *Theatines*; 8. *Il retiro*; out of the Town the *Escurial* and *El Pardo*.

Novem. 5. I set out from *Madrid* for Port S. *Sebastian*; we passed within sight of the *Escurial* and *El Pardo*, and lay that night at St. *Augustin*, six leagues.

6. We passed *Butrago*, and lay at *Samoserra*, all the way a barren, miserable, mountainous Countrey, 11 leagues.

7. We passed *Freccdille*, and lay at *Aranda*, having crossed the River *Durius* or *Duero*, 11 leagues.

8. We passed *Babalon* and *Lerma*, where is a Convent of *Dominican* Friers, and a Palace of the Duke of *Lerma*'s, and came that night to *Burgos*, 12 leagues. The most considerable things in *Burgos* are, 1. the Bridge over the River *Relarzon*; 2. the Gate at the end of the Bridge, where are the Statues of *Charles* V, of *Jarus Calvus*, of *Diego Porcellero*, of *Fernandez Gonsales*, of *Numio Pasures*, of *Don Carlotte*, all famous men of *Burgos*; 3. the Market-place; 4. the great Church, in which are a great many Monuments of Bishops and Canons, two great Monuments of *Pedro Fernando di Velasco*, Constable of *Castile*, and his Wife *Mencia di Mendoza*, Countess of *Haro*. This night we lodg'd at *Quintora-vides*, five leagues.

10. We passed by *Pancorva*, a place very famous for good Water; *Miranda*, a great Town, where there is a good Bridge over the River *Iberus*; and after that we passed over two other Rivers, *Baias* and *Sadurra*, and lay at *Erminian*, eleven leagues. At *Miranda* there is a great Market for Wheat.

11. We travel'd to *Vittoria*. Over one of the Gates is the Statue of King *Bamba*, and inscrib'd in golden Letters, *Hæc est victoria quæ vincit*; four leagues. *Vittoria* is the chief City of a little Countrey call'd *Alaba*. We passed this day by *Salines*, the first Town of *Guipuscoa*, and lay at *Æscuria*, nine leagues. In *Guipuscoa* they pay no Taxes or other Duties to the King, without the consent of the Countrey. The whole Province is more commonly call'd *Provincia* than *Guipuscoa*; it is canton'd out into a great many Corporations and Villages, every one of which send one, two or three Representatives to the general meeting, when there is any publick business. All Offices are annual, and chosen diversly, according to the differing Customs of the Towns; the chief Officer in each Town to determine all civil and criminal Causes, is the *Alcalda*, but from him they may appeal to the Governor of the Province, sent by the King every third Year, and from the Governor to the King's Council at *Valladolid*. Next to the *Alcaida* are two *Regidores*, to look after the prices of all Commodities; a *Bolser* for the Treasury; a *Medino* for the Prison, *Argezils* or Serjeants, &c. They boast, that they are the Walls of *Spain*, and therefore have many Privileges. *Guipuscoa* is under the Bishop of *Pampelona*. In *Guipuscoa* and *Biscay* they have a peculiar Language of their own, and therefore send their Children to School to learn *Spanish*, (which they call *Romance*) as we do ours to learn *Latin*. The Searchers having hindred us, we were forc'd to travel a great way in the night. We were lighted by *Tias* or *Teas*, which burnt as well, and gave as good a light as Torches: When they went out, they tossed them up and down in their hands, which kindled them again. These *Teas* (so call'd doubtless from the Latin word *teda*) are very commonly used in this Countrey, and are nothing else but Bastions of Wood hack'd and cleft, (but so as the pieces hang together) and afterwards soundly dried in an Oven or Chimney. Along the middle they use to cleave them almost quite asunder. They are made of several sorts of Wood, of *Robla*, i. e. Oak, *Aiga*, i. e. but the best of *Avellanc*, i. e. Hazel. *I wonder much at this, unless they have some way of preparing the Wood, by steeping it in Oyl or other inflamable matter. The tædæ of the Ancients were made only of the Trunks of old and sappy Pines.*

12. We passed by *Mondragone*, where there is a *Fabrica* of Arms for the King, *Oniate*, *Legaspa*, *Villa real*, and lay at *Villa franca*; seven leagues. We left S. *Adrian*, which is the ordinary Road, a little on our left hand. This Countrey is very populous and well wooded, all the Hills being cover'd with Oaks. They use no Ploughs, but turn over the Ground with Tridents of Iron, four or five of them working together, and thrusting in their Tridents all together, turn up a yard or two of Earth at a time, which they afterwards dress and level like Beds in a Garden. The People are something better condition'd than the *Spaniards*, richer, and far more populous; 1. because there is a better Government and greater Liberty; 2. there is abundance of Wood and Iron; 3. more Rain than in other parts of *Spain*.

We passed *Telsa*, and arriv'd this night at S. *Sebastian*, Nov. 13. having travel'd eight leagues. The most observable things in S. *Sebastian* are, 1. the Walls and Guns; 2. a great Convent of *Dominican* Friers, in which there is a famous pair of stone Stairs, each Step being of one entire Stone, and supported only on one side; 3. the Haven. The Government of S. *Sebastian* consists of a great Council of all that have one or more Houses, and are married, but none can bear Office unless he have two Houses; of these there is not above 150 or 200, tho' the Town be very populous, containing about 24000 Souls. Once in a Year all the Names of this 150 or 200 are put into an Urn, and a Child takes out eight to be Electors; every one of these eight chuses his Man: the old Magistrates that are just then going out, divide these eight that the Electors have chosen into four pairs, fitting them as well as they can, *v. g.* an old man and a young together, *&c.* These four pairs are put into an Urn; the first pair that are drawn out are the two *Alcalda's* for that year; the second pair, the two Deputy *Alcalda's*; the third pair, the two *Regidores*; the fourth pair, the two Deputy *Regidores*. In much the same manner they chuse two Jurats, one Syndick or Attourney-general, one Treasurer, *&c.* all these Officers make a lesser Senate; but in businesses of importance the whole number meets. There is no distinction of *Nobiles* and *Plebeii*, but all that are descended from *Guipuscoans*, that are married and have one House, are in a capacity to be Electors; all that have two Houses, to be Magistrates. The Jurats Places are most desir'd, there being a great many Ecclesiastical Preferments belonging to the Town, the disposition whereof when they come to be vacant is in them, who usually bestow them upon their Relations and Friends.

14. Every Winter there are several Whales caught upon this Coast, they coming hither in Winter and frequenting here, as they do upon the Coast of *Groenland* in Summer: they catch them by striking them with a Harping-iron, after the same manner as they do Sword-fish upon the Coast of *Calabria* and *Sicily*. Abundance of Cyder made about St. *Sebastian* and *Bayonne*.

From St. *Sebastian* I travel'd thro' *Oregna*, *Irun*, on the left hand of which is *Fontarabia*, a strong Fort just on the Frontiers of *Spain*. About a league and half from *Irun* is the River that parts *France* and *Spain*. In the middle of this River is an Island where the Kings of *France* and *Spain* met, when *Lewis* XIV, the present King, married *Philip* the Fourth's Daughter. The Island was divided just in the middle, and a House built, so that at the Table where they sate to eat, the King of *France* sate in *France*, and the King of *Spain* in *Spain*.

Spain is in many places, not to say most, very thin of People, and almost desolate. The causes are, 1. a bad Religion; 2. the tyrannical Inquisition; 3. the multitude of Whores; 4. the barrenness of the Soil; 5. the wretched lazines of the People, very like the *Welsh* and *Irish*, walking slowly, and always cumbred with a great Cloak and long Sword: 6. the expulsion of the *Jews* and *Moors*, the first of which were planted there by the Emperour *Adrian*, and the latter by the *Caliphs*, after the Conquest of *Spain*: 7. Wars and Plantations. In all the Towns, especially in the South and West parts of *Spain*, a great many Ruins of Houses to be seen. Within a quarter of a league of the Town you begin to see Ground plough'd, else all a wild Countrey, and nothing but Rosemary, Cistus, Juniper, Lavender, Broom, Lentiscus, *&c.* growing in the Fields and on the Hills. Little or no Hay any where in *Spain*, they feeding their Mules and Horses with Straw: At least one half of *Spain* is mountainous.

The *Spaniards* are not so abstinent as most People take them to be, eating the best they can get, and freely enough if it be at another man's cost; and in Inns never refusing Partridges, Quails, *&c.* for the dearness, if they have but Money. Laziness and Sloth makes them poor, and Poverty makes them pinch their Bellies and fare hardly. They seldom mingle Water with Wine, it being a common Saying among them, *Vino puro & puro*, tho' all over *Spain* the Wine is very hot and strong. They delight much in *Pimentone*, i. e. Guiny-pepper, and mingle it with all their Sauces. In roasting of Meat they never use Dripping-pans, but draw the Coals just under the Meat,

which, tho' it be not so cleanly, yet is the quicker and more thrifty way for saving of fewel. They tear Rabbets in sunder with their hands when they are almost roasted, and stew them in a Pot with Water and *Pimentone*. To roast Bread, they throw it upon the Coals. They long and ask for every thing they see, to avoid which, a Merchant that travel'd with me was wont to put in something into his Victuals which they did not love. They take Tobacco much in Snuff, and if one take out a Box of Snuff, he must give some to all the Company. The best Person in the Company at Table cuts and tears the Meat in pieces, and gives to every one his share.

They are most impertinently inquisitive, whence you come? whither you go? what business you have, *&c.* most horribly rude, insolent and imperious; uncivil to Strangers, asking them, What do you come into our Countrey for? we do not go into yours. [This is to be understood of the middle and inferiour sort of People, many of the Gentry being very civil and well-bred.] Their Children are the most unmannerly and ill-bred of any in the World. The Sons of *French* Fathers and *Spanish* Women, when they are grown up, often turn their Fathers out of doors, having many Privileges above them for being born in *Spain*. They are extremely given to lying; *Almuzzo's*, and such kind of Fellows, not to be believ'd or entrusted in any thing they promise.

They ride altogether upon Mules, and carry their Portmanteau's before them, for fear they should be lost or stoln from behind them; they lie between a high Pummel of the Saddle and an Iron Hook. Instead of Stirrops, Persons of Quality use great Clogs of Wood, of the shape of Shoes, without Heels. They cut away the Mule's Hair close to the Skin under the Saddles and Portmanteau's, to avoid galling. Of this bastard-breed of Animals the males are usually bigger than the females. Q. Whether the reason be, that they are always bred of a Mare and an he-Ass? 2. They piss very often. Q. Whether the reason be the sharpness of their Urine, or the smallness of their Bladder? 3. They piss almost always when they go thro' Water. 4. They shooe them with Shooes a great deal broader than their Feet, to prevent, I suppose, the breaking of their Hoofs. Under the Mouths of their Mules of burthen they usually hang a Net with Provender in it. These Beasts are better at climbing of Mountains than Horses, have a greater Courage to endure long and hard travel, and besides, are maintain'd with less charge.

The *Spaniards* seldom ride alone, but stay for a *Troppa*, as they do for a Caravan in *Arabia*. The common phrases or forms of salutation when they meet or pass by one another, are, *Garda Dios vostes*, i. e. *vos autres*, [God defend you] *A Dios* [adieu] *Vaga con Dios* [God go along with you.] When they are angry, *Cornuto*, i. e. Cuckold is the first word, and sometimes *Cornutissimo*. When they speak to their Mules, or Boys they send of Errands, they say, *Anda Cornuto*, [Go Cuckold.] When they refuse a Courtesie, or complement to drink first, go first, or the like, they say, *Non per vitâ mea*, [No, by my life] At any thing strange or ridiculous they cry out, *Cuerpo di Dios*, or *di Cristo*, [Body of God, or Body of Christ.] When they call to one to make him hear, instead of *Escoutes* in French, or *Senti* in Italian, they cry, *O—yes*, as our Cryers do in *England*. When they put off a Beggar, not giving him an Alms, they say, *Vostes perdonné*, [Good friend, pardon (*or* excuse) me.]

As for their Religion, the *Spaniards* are the most orthodox and rigid *Romanists* in the World, it being a Saying among them, *Faltando in uno punto à Dios*, [If you leave the Church in one Punctilio, God be with you, you must needs be damn'd.] All over *Spain* there are abundance of pitiful wooden Crosses, set up in the middle of heaps of Stone. Under all the Pictures of the Virgin *Mary* is written, *Concebida sin peccado originale*, i. e. *Conceiv'd without original Sin*. At the *Ave Maria*-Bell they all fall down upon their Knees; whereas in other Countries they are contented only to pluck off their Hats. When they have done their Devotions, as also after their Meals, when they take away, and when they go to Bed, they say, *Sea lodato il sanctissimo Sacramento*, [Praised be the most holy Sacrament.]

For Fornication and Impurity, they are the worst of all Nations, at least in *Europe*; almost all the Inns in *Andalusia*, *Castile*, *Granada*, *Murcia*, &c. having Whores who dress the Meat, and do all the business: they are to be hired at a very cheap rate: It were a shame, to mention their impudence, lewdness, and immodest behaviours and practices. In *Catalonia*, *Cuipuscoa*, and some other places, they are not so bad.

They are so lazy, that in their Shops they will say they have not a Commodity, rather than take pains to look for it: Not to be hired to carry a Portmanteau, go of an Errand, *&c.* but at an excessive rate. Mercers never tie up any thing they sell, and if they allow Paper, they only rudely mumble up the Commodities in it. Of their fantastical and ridiculous Pride, and that too in the extremest Poverty, all the World rings. If there be any Imployment that you would set them about, which they think themselves too good for, they presently say, *Send for a French-man*. Indeed the *French* do almost all the Work in *Spain*. All the best Shops are kept by French-men, the best Workmen in every kind are French, and, I believe, near one fourth or one fifth part of the People in *Spain* are of that Nation: I have heard some Travellers say, that should the King of *France* recal all his Subjects out of *Spain*, the *Spaniards* would hazard to be all starv'd to death.

Bread is very scarce and very dear in many places of *Spain*, because of the barrenness of the Soil and want of Rain; but chiefly because of the Sloth of the People, in letting a great deal of Ground lie untill'd, and in not taking the pains to fetch Corn and Bread from those places where there is plenty: So that in a days Journey the price of Bread will be trebled, and in another days journey fall as much again. This Summer there was a tumult at *Madrid*; the poor People gathering about the King's Palace, cried out, *Let the King live, but let the ill Government die; let Exactors die*, &c. just as they did at *Naples*, in the Rebellion under *Massanello*; upon which the King sent to all the Towns about for Bread-corn, and in two or three days Bread was very plentiful and cheap. The *Spanish* Bread is commended for the best of the World; and well it may be, if, as we have heard, they pick their Wheat grain by grain.

At my being at *Madrid* there was an Engineer there sent by the Emperour, that had invented a Plough, call'd by the *Spaniards* a *Sembrador*, to sow Corn at equal distances, and one Grain in a hole; the description whereof hath been since publish'd in the *Philosophical Transactions*.

In all kind of good Learning the *Spaniards* are behind the rest of *Europe*, understanding nothing at all but a little of the old wrangling Philosophy and School Divinity.

The People are much discontented all over *Spain*, complaining of Taxes, evil Counsellors, *&c.* but they have a good Opinion of, and are generally well-affected to their King, whose Intentions, they say, are very good.

As for their Habit and Dress, in that they are to be commended, that they are constant to the same Fashions, tho' they be not the most convenient that might be devised: To change for the better, I think it rather commendable than blame-worthy; but to change out of meer levity, or an apish imitation of others, is foolish and unreasonable. They wear great Hats with broad Crowns, and the top broader than the bottom. Their Hair most commonly, but especially when they travel, they tie up in a knot behind, and sometimes braid like Women. Their Bands lie upon black Collars just of the same bigness, or a little bigger; they are joyn'd to the Collar, and they put on Collar and Band together. They wear very much Cambrick Half-shirts, and have their Sleeves open before and behind both Winter and Summer: they have great Skirts upon their Doublets: their Breeches are very streight and close to their Thighs, and button'd down on each side, and reach a little lower than the Knee. They wear very slight-wrought black Silk-stockins, that the white Linnen-stockins which they wear underneath may be seen thro' them. Their Shoes just fit for their Feet, very light and thin, with low Heels. Over their Doublets they wear a close Coat or Jerkin, with open Sleeves like the Doublet, and for the most part with hanging Sleeves like Childrens, yet never reaching lower than their Skirts; a very long Sword, and a short Dagger hanging just behind them, and at last, over all, a Cloak with a great Cape. The Women wear great Vardingales, standing so far out on each side, that to enter in at an ordinary Door, they are fain to go side-ways: When they go abroad, they are cover'd with a Veil of black, having only a hole left for one Eye. The poor People wear Shoes made of Packthread.

The most noble Sport in *Spain* is the *Jeu de Taureau*, or Bull-fighting, practis'd at *Valencia*, *Madrid*, &c. at *Madrid* three times a year, where, in the Market-place, a brave Don on Horseback, and a great many Pages on foot, fight with a wild Bull: when one Bull is kill'd or much wounded, they turn in another: Seldom but some of the Pages are kill'd. And with these cruel and bloody Spectacles the People are much delighted, as were the *Romans* of old, in the time of Heathenism.

Mr.

Mr. LASSEL's Voyages INTO ITALY.

BEfore I enter upon a particular Account of my five Voyages thro' *Italy*, it will, in my Opinion, be not beyond our ſcope to ſpeak ſomething in general of this Country, its Inhabitants, their Manners, Cuſtoms, Riches, &c.

The Fertility of Italy. *Italy* ſeems in Fertility to challenge the precedency before all others, eſpecially that part which is call'd *Lombardy* and *Campania felix*, where *Ceres* and *Bacchus* ſeem to endeavour to outvie one another in filling the Barns and Cellars; whilſt the other parts afford vaſt numbers of Olive, Orange and Lemon-trees, beſides Rice, *Turky* Wheat, and many other excellent Fruits. Even their moſt barren Mountains produce vaſt ſtore of the beſt Marble, as the innumerable Groves of Mulberry-trees to be met with in many parts of *Italy*, and the Silk-worms, furniſh them with what ſometimes may ſatisfie their Neceſſity, but often their Pride. *Lombardy* is ſo rich in Paſturage and Cattle, that their Cheeſes in bigneſs exceed moſt that ever I ſaw, and for goodneſs may compare with the *Parmeſan*. In ſhort, the Surface of the *Italian* Ground is ſo cover'd with many rich Vegetables, out of which they diſtil their Eſſences, Perfumes, and odoriferous Waters, that the ordinary Barbers and Laundreſſes are lavish of them. In fine, it abounds in all ſorts of Proviſions, both for Neceſſity and Pleaſure: I have ſeen whole Cartloads of Veniſon and wild Boars brought at once into the Market at *Rome*, and 60 Hares at a time at *Florence*.

Objection againſt Italy. I knew ſome exclaim againſt the heat of the *Italian* Air, as peſtiferous, and not very agreeable to our Conſtitutions, unto which they attribute the *Catarrhs* of *Genoa*, the *Milaneſe Gout*, the *Falling-ſickneſs* of *Florence*, *Fevers* of *Rome*, *Hemerrhoids* of *Venice*, &c. But beſides that, the ſame might be applicable to many other Countries, as the *Conſumption* of *Portugal*, the *Kingsevil* in *Spain*, &c. when I reflect, that the happy Conſtitution of their Climate fills their Cellars with above thirty ſorts of different Wines, and their Markets with moſt wholſom Herbs and excellent Fruits; when I conſider how its benign Influence has ſtor'd *Italy* with ſo many great Men, both for Peace and War, I can't but be of opinion, that the warm Sun, which hath ſo kindly temper'd the *Italian* Wits, ought to be look'd upon as the greateſt Bleſſing beſtow'd upon *Italy* beyond other Countries.

Anſwer'd.

The Italian Wits. It is in this Country that the moſt celebrated Philoſophers, *Pliny*, *Cato*, and *Seneca*, flouriſh'd, as well as the great Orators *Cicero*, *Hortenſius*, *Portius*, *Latro*, *Gimius*, *Gallio*, *Milius*, *Fuſcus* and *Antonius*; the famous Hiſtorians *Livy*, *Tacitus*, *Valerius Maximus*, *Saluſt*; the moſt admirable Poets *Virgil*, *Lucretius*, *Ovid*, *Catullus*, *Tibullus* and *Propertius*; the noted Satyriſts *Horace*, *Juvenal* and *Perſius*; and renown'd Comedians *Plautus* and *Terence*. The laſt Ages have furniſh'd us with *Thomas Aquinas*, *Bellarmin* and *Baronius* in Divinity; in Oratory, with *Pamgarolus*, *Menzini*, *Varchi* and *Loredano*; in Hiſtory, with *Guicciardine*, *Bentivoglio*, *Davila* and *Strada*. *Ficinus* and *Cardan* have been her Philoſophers, as *Taſſo*, *Sanazarius Marino*, *Petrarch* and *Guarini* were her Poets. She juſtly boaſts of *Brunalleſchi*, *Palladio* and *Fontana* for Architects and Statuaries; of *Oliverio* and *Berini*, for their Excellency in Sculpture: and as for Painting, the famous *Raphael*, *Michael Angelo*, *Titian* and *Sarto* may juſtly challenge the precedency before any others in *Europe*.

Its ancient and modern Captains. It would be much beyond the ſcope of a Traveller, ſo much as to pretend to enumerate thoſe valiant ancient Heroes this Country produc'd, it being ſufficient to remember upon this head, that without ſuch a prodigious ſtock of great and valiant Captains, *Rome* could never have aſcended to that Pinacle of Glory, as ſo juſtly to deſerve the Title of *Miſtreſs of the World*. I cannot here forbear to add, that if the ancient *Italians* had their *Scipio*, *Duilius*, *Marius* and *Cæſar*, the modern *Italians* may juſtly boaſt of their *Alexander Farneſe*, their *Andrea Doria*, their *Caſtruccio*, and their *Spinola*.

Its ancient State. *Italy* was in ancient times divided into ſeveral Kingdoms and Republicks, until they all became ſubject to the City of *Rome*, the Empire of which arriv'd not to its higheſt pitch till under the Reign of *Auguſtus*, and began to decline conſiderably in the Fifth Century, when the *Goths*, *Lombards*, *French*, *Normans*, *Saracens*, *Germans*, and other Nations, in their turn, got their ſhare in this noble Countrey. 'Tis true, the Emperour *Juſtinian* did, under the Conduct of *Belliſarius* and *Narſus*, his Generals, recover part of it, and erected an Exarchate in the City of *Ravenna*; but being forc'd to ſubmit again to the *Lombards*, theſe founded their Kingdoms in *Gallia Ciſalpina*, which continued till 774, when being utterly extirpated by *Charles* the Great, he gave part of its Territories to the See of *Rome*.

In the 9th, 10th and 11th Centuries the *Moors* made frequent Inroads into *Italy*, having made themſelves Maſters of the Iſle of *Sicily*, till they were drove out by the *Normans*, 1058. After which ſometimes the *French*, ſometimes the *Spaniards*, play'd the Lords in *Italy*, till by degrees their Princes maintain'd their Soveraignties againſt them, and ſince that time are at liberty to act according to their own Intereſt, which is generally link'd with the Pope or the Emperour.

The Italian Humour. As for the Humor of the *Italians*, being much inclin'd to Melancholy, it may be ſaid to be a happy mixture betwixt the inſulting Gravity of a *Spaniard*, and unſettled Levity of a *Frenchman*. They have both ſtrong Fancies and ſolid Judgments, which makes them good Oratours, Politicians and Engineers. They are great Lovers of their Families, for the advancement of which they will neither be ſparing in their Advice nor Purſes. As for their Diet, they are very frugal in that point, Sobriety in eating and drinking being one of their chief Virtues, practis'd here almoſt to an exceſs, they looking upon it as one of the greateſt Affronts that can be given, to be call'd a Drunkard, notwithſtanding the Temptation of ſo many excellent Wines their Countrey affords.

They are ſomething addicted to Vain-glory; hence it is that they aſſume to themſelves the glorious Names of the ancient *Romans*, ſuch as *Camillo*, *Scipione*, *Julio*, *Mario*, *Pompeo*, which perhaps is one reaſon why they are ſo over-jealous of their Wives; but recede much from the true Valour of their Anceſtors in this point, that they will neither forgive an Injury, nor eaſily take Revenge in the open Field.

Their Manners. In their Manners they are generally very commendable. They never will give the leaſt occaſion of affronting a Stranger, let them appear in what Garb or Condition they pleaſe; and tho' they don't eaſily admit them into familiarity with them, yet they do treat them with extraordinary Civility, avoiding even the leaſt occaſions that might diſguſt them; and among themſelves even the greateſt Familiarity never makes them in the leaſt recede from the ſtricteſt Rules of Civility: Hence it is that they are very careful in interrupting one another in Diſcourſe, never whiſper, nor talk a foreign Language not underſtood by the Company; and Back-biting is conſider'd among them as one of the moſt enormous Vices that can be nam'd: And Satyrical Jeſts are very ſparingly made uſe of in Company. For the reſt, they are very modeſt in their Apparel, following the *French* Mode in their Dreſs, but not over-haſtily, their greateſt ambition of this kind conſiſting in a ſplendid Equipage, ſuch as Coaches, Horſes, Liveries, &c. for the reſt they are frugal to an exceſs,

ceſs, it being frequent for Princes and Cardinals, when they are preſented with Sweetmeats or Fowls, to have them ſold to the Confectioner, Poulterer, &c.

Their Ceremonies. In point of Ceremony they are nice to the higheſt Punctilio, there being ſcarce an *Italian* of any tolerable condition, but knows how to receive, place, ſtile and reconduct a Perſon even of the higheſt rank; tho', in my opinion, in the Titles they beſtow upon one another they are ſomething ridiculous, it being common, even among School-boys, to call one another *Voſtra Signioria*, and they frequently ſtile a Mechanick *Signior multo, magnifico*, &c. I don't remember that ever I heard two *Italian* Women ſcold publickly, or Man and Wife quarrel in words, except once, which was done in a very low tone.

Their peculiar Cuſtoms. Among their peculiar Cuſtoms, this is one, that they ſeldom ſee their Brides till they come before the Pariſh Prieſt to be joyn'd together: They keep Children bare-headed till they are five years old to inure them to hardſhip; the Women go bare-headed Winter and Summer at home, and the Men wear nothing but a little *Calotte*: The Women alſo waſh their Hair with a certain Waſh, to make it yellow, a colour much admir'd here among Ladies. After the Men return home, they throw by their Clothes, and put on a grey looſe Coat, or *Surtout*, without which they never dine or ſup, and ſometimes give to their Gueſt ſuch Coats and Caps before they ſit down to Dinner, where the beſt Meats are always ſerv'd firſt, and commonly end with Pottage. Their Drink they generally preſent upon a *Sottocoppa* (Standiſh) of Silver, with three or four ſtrait-neck'd Glaſſes upon it full of divers ſorts of Wines and Waters, and one empty Glaſs, to pour in what quantity of Wine or Water you pleaſe. At great Feaſts certain Carvers attend, who carving the Meat at a Side-table, give it to the Waiters, to be carried to the Gueſts, every one of whom has the ſame part, *viz.* a Leg and a Wing of a Fowl. The Carvers as well as Gueſts never touch the Meat, but with their Knives and Forks.

To travel with Fire-arms here is very troubleſome, for no body being permitted to carry them in wall'd Towns, for fear of Aſſaſſinations, Travellers are oblig'd to leave them at the Gates. Another trouble is, the taking of Bills of Health from one City to another, without which you muſt not expect admittance.

Their Hours they count from Sun-ſet to Sun-ſet again, which they divide into 24 hours. They have a Cuſtom of calling one another much by their Chriſtian Names, as *Signior Franceſco, Signior Jacomo*, &c. ſo that you may be acquainted a good while with an *Italian* before you know his Sirname. If Perſons of Quality intend to viſit one another, they are ſure always to ſend a Servant before-hand to give notice thereof, that they may not ſurprize one another unawares. You ſeldom ſee Men and Women together in the ſame Coach, not even Husbands and Wives: If two Perſons of great Quality meet in their Coaches, they ſtop, and after having complimented one another, go on their way; yet ſo, that he who is ſuperiour in quality moves firſt with his Coach: Thus if a private Perſon meets one of the chiefeſt quality, either on foot or in a Coach, he ſalutes him by ſtanding ſtill till he is paſs'd by.

Their Riches. Their Riches are ſo apparent to every body's Eyes, in their Palaces, Churches, Monaſteries, Gardens and Furnitures, that it needs no further Enquiry into; but the *Sacriſty* of *Loretto*, the Duke of *Florence*'s Gallery, and the *Treaſury* of *Venice*, ſurpaſs all the reſt. Of the Riches of the *Italian* Princes we ſhall have occaſion to ſpeak hereafter.

As the *Italians* are more addicted to building of fine Houſes, excellent Paintings, Orchards, Gardens, and fine Equipages, than to Houſe-keeping, ſo they delight moſt in living in Cities; this makes them ſo great, fine, and well built. They have in many of theſe Cities Hoſpitals for the entertainment of Pilgrims and poor Travellers for a certain time; as alſo ſome Hoſpitals for the reception of ſuch Children as are expos'd by their Parents immediately after they are born.

Their manner of eating. The Meat being generally ſomewhat lean and dry, they make it worſe, by their roaſting it till it is ready to drop from the Spit. Frogs fry'd and ſerv'd up with Oyl, is a great Diſh with them; but at *Venice* and *Florence* they only eat the Loins and hind-Legs. Snails boil'd and ſerv'd up with Oyl and Pepper, in their Shells, is alſo a common Diſh. They eat not only all manner of Small-birds, as *Wrens, Titmouſe*, &c. but alſo *Magpies, Jackdaws*, nay, *Kites* and *Hawks*. Their Fruits are excellent, but they are fond of *Water-melons* and green *Almonds* before all the reſt; as alſo of Pine-kernels. They uſe alſo frequently a kind of Sweetmeat of Muſtard and Sugar. The uſe of Snow and Ice is never neglected with them both Winter and Summer.

Their Vices. The moſt capital Vice peculiar to the *Italians*, is, their moſt extravagant Revenge, to accompliſh which they make uſe of all treacherous means, tho' never ſo black; and if prevented in their deſigns, will be ſure not fail to embrace the next opportunity to put it in execution, tho' they have engag'd to pardon the Offence. Neither does their raging Luſt, both natural and unnatural, admit of the leaſt Excuſe, of which their unaccountable Jealouſie is the unhappy effect, ſo that the poor Women lead a miſerable life here. Swearing and Curſing is ſo common here, that the Prieſts and Monks don't refrain from it.

Language. The modern *Italian* is a mixture of corrupted *Latin*, *Gothick*, *Vendalick* and *Lombard* Languages; the moſt polite Dialect is in *Tuſcany*, which muſt however be underſtood of their Writing, and not of their Pronunciation, which does not approach to the nicety of that of *Rome*, but is harſh; hence the *Italian* Proverb, *Lingua Toſcana in bocca Romana*. In *Savoy* and *Piedmont* they ſpeak for the moſt part *French*.

Religion. Their Religion is the *Roman Catholick*, with excluſion of all others, except that a few *Jews* are tolerated in trading places; and the Proteſtant *Vaudois* inhabiting the Valleys of *Piedmont*, to the number of 15000, have maintain'd the Purity of their Religion above 1200 years. But let this ſuffice for a general Account of *Italy*; I will now proceed to give you a particular Account of what Obſervations I have made in Five ſeveral Voyages thro' it.

The ſeveral ways to Italy. There are five ſeveral Ways by which *Engliſhmen* commonly travel into *Italy*, *viz.* by the way of *Flanders* and *Germany*, to *Trent* or *Trevis*, and ſo to *Venice*: Or elſe thro' *France*, to *Marſeilles*, and thence to *Genoa* by Sea: Or elſe by Land from *Lyons* thro' the *Swiſs* Countrey, that of the *Griſons* and the *Valteline*, to *Breſcia*: Or elſe from *Lyons* thro' the *Valeſians*, over Mount *Sampion*, and by the *Lago Maggiore*, to *Milan*: Or, in fine, over *Lyons* and Mount *Cenis*, to *Turin*. I having travel'd all theſe five, I will give you a ſhort Account of them all; tho' I prefer the laſt, both for its nearneſs and conveniency.

The Author's firſt Voyage into Italy. My firſt Voyage was from *England* to *Dunkirk*, from thence thro' *Furnes, Newport, Oſtend, Bruges, Ghent, Bruſſels, Louvain, Liege, Cologne, Mayence, Frankfort*, to *Munichen*, thence by the way of *Augsburg* and *Inſpruck* to *Trent*, the Inlet into the *Treviſo* Territories, belonging to the *Venetians*.

His ſecond Voyage. In my ſecond Voyage I took the way of *France*, and over *Paris* to *Lyons*: In the way I took notice of that moſt pleaſant Country Seat of Monſieur *Eſſolin*, call'd *Yſſone*, being much celebrated for its moſt curious Water-works, which being ſupply'd from a ſmall Brook running near the Houſe, is receiv'd into a Canal of Free-ſtone as long as the Houſe, made in the form of a Ship, and from thence convey'd thro' a vaſt number of Pipes into all the Offices of the Houſe, and into the Gardens.

Fontainbleau. From *Yſſone* we came to *Fountainbleau*, that famous Royal Palace of *France*, the chief delight of K. *Henry* IV, being large enough to lodge four Kings, with their Courts. The Court of *Cheval Blanc* is a fine Square of Buildings, but low, being intended only for the Lodgings of the inferiour Servants. The Oval Court is a goodly Structure, but very old. The Roofs of the King and Queens Lodgings are richly gilt. The Gallery of the *Stags-heads*, as well as the Gallery of *Romances*, are ſtately Rooms, the laſt being highly eſteem'd for its Paintings. The *Hall of the Conference*, whence the Cardinal *du Perron*, in the preſence of K. *Henry* IV, and many learned men of both Religions, diſputed with Monſieur *Pleſſis Mornay*. The Hall of Masks, and the Lodgings of Madam *Gabrielle*, with her Picture over the Chimney, repreſenting *Diana* in her hunting Garb, are very fine Rooms. It has two Chapels, one an old and very mean one, the other both neat and ſtately, built by *Lewis* XIII, on occaſion of a *Spaniſh* Ambaſſador's coming thither to view the Palace, (as I was inform'd by a *French* Biſhop) who ſtopping at the Chapel-door to perform his Devotion, ask'd whether this were the *Caſa di Dios*, or God's Houſe? and being anſwer'd it was, turn'd back immediately, ſaying, *I care for ſeeing no more*. Near the Houſe are handſom Mails, and divers moſt excellent Fiſh-ponds, in which, as well as in the Moat about the Houſe, are Carps ſaid to be 100 Years old, which perhaps may not ſeem fabulous to thoſe who give credit to *Columella, de re Ruſt.* ſpeaking of a Fiſh in *Cæſar*'s Fiſh-pond near *Puteolum*, which was ſixty Years old; and what *Geſner* relates

relates of a certain Fish-pond near *Hailprun* in *Swabia*, where, in 1497, a Fish was catch'd with a Brass Ring at his Gills, in which were engraven these words, *I am the first Fish which* Frederick *II, Governour of the World, put into this Pond the 5th of* October, 1203. which if true, this Fish liv'd 260 years.

In our way from *Fountainbleau* to *Lyons*, I met with an old Inscription, in Letters of Gold, upon a wooden Fabrick a mile on this side *Montargis*, importing, that the *English* had been forc'd to raise the Siege of *Montargis*, by reason of great and sudden Rain and Inundations.

Montargis. Coming to *Montargis*, a pleasant Town, the chief of the *Gastinois*, we saw in the Wall of the Castle, painted, the History of the Dog that kill'd the Murtherer of his Master.

From hence to *Briare*, remarkable for the Channel that joyns the *Loire* and *Seine*: from thence to *Cosne la Charite Pougues, Neures, Moulins, la Palisse, Roanne*, where the *Loire* begins to be navigable, and so over *Terrara* Hills to *Lyons*.

Lyons. *Lyons* may, both for Riches and Greatness, compare with the best of *France*, its situation upon the Rivers *Saone* and *Rhosne* (*Araris* and *Rhodanus*) drawing thither a great Traffick both from *Germany* and *Italy*. The Dean and Prebends of the Cathedral of St. *John* are all dignified with the Titles of *Counts*, and must be of noble Extraction of four descents. The Canons officiate on solemn days in Miters like Bishops, and sing the Office without Book, Organ, or any other Musick. This Church has also a Clock much cry'd up for a rare Piece; the Archbishop thereof is Primate of *Gaul*. The new *Town-house*, built of *Its Town-house.* fine white Stone, seems to imitate that of *Amsterdam*, the *Staircase* and *Hall* above are very well worth a Traveller's Observation, the first for its Contrivance, the other for its Painting. The Jesuite's College, with its Library; the Convent of the *Carthusians*; the Paintings in *Minimes* Sachristy; the Remnants of an ancient Aquæduct upon the Hill; the *Mail*, and delightful Walk of *Belle Cour*; the *Charite*, a noble Structure, compos'd of nine Courts, where 1500 poor People are kept at work; the Castle of *Pierre Ancise*, built upon a Rock; and *Nostre Dame de Fourier*, standing upon an high Hill, affording a pleasant prospect of the whole City, are also worth taking notice of: and the rare Cabinet of Monsieur *Servier*, fill'd with most curious Mathematical Inventions and Mechanick Experiments, ought not to be pass'd by in silence. Here you see divers sorts of Dials, several sorts of Bridges of an easie carriage, to transport an Army over Rivers; a rare Engine to throw Granades into besieg'd Towns; a way how to change Dining-rooms three or four times, with their Tables, the Seats and Guests being by the motion of a Wheel transported sitting from one Room into another, and so into three or four more: the *Desk-Dial*, and the *Dial of the Planets*, the first whereof throws up a little Ivory Ball without intermission, and thereby sheweth the hour of the Day; the other represents the Days of the Week, by several Figures of the Planets in Ivory; with many other such-like Curiosities.

Vienne. At *Lyons* I embark'd in a small cover'd Boat, and with a swift current went down the *Rhosne* to *Vienne*, where *Pontius Pilate* (banish'd hither) put an end to his Life, by throwing himself from a high Tower. The Cathedral, dedicated to God, has neither Pictures nor Hangings, being otherwise a fair Structure.

Hence I travel'd to *Tournon*, *Valence* in *Dauphine*, and thence to *Pont S. Esprit*, famous for its long Bridge of 33 *Avignon.* Arches, and so to *Avignon*, the capital City of a small Country belonging to the Pope, which being formerly purchas'd of *Jane* Queen of *Naples*, and Countess of *Avignon*, has serv'd divers Popes for a place of retreat during the Troubles of *Italy*, which lasted 70 years, after which *Gregory* XI. return'd to *Rome*. *Avignon* is always govern'd by a Vice-Legate, sent thither by the Pope. The most remarkable things here are, the Cathedral, with divers Tombs of Popes; the Church of St. *Didier*, with the Tomb of *Petrus Damianus*; the Church of the *Celestins*, with the Chapel and Tomb of Cardinal *Peter* of *Luxemburg*; the Convents of the *Carthusians* and *Dominicans*; in the first you see abundance of good Painting, and in the last the true original Picture of St. *Vincentius Ferrerius*: The *Cordeliers* Church is famous chiefly for its wideness, without being supported by any Pillars, and the Tomb of Madam *Laura*, the Poetical Mistress of *Petrarch*. Besides which, this City is encompass'd by a most noble Freestone Wall, and adorn'd with an admirable Bridge, many handsom Palaces and curious Gardens. Their Trade consists chiefly in Silk-stuffs, perfum'd Gloves, Ribbons and fine Paper, the Inhabitants being very nice in their Clothes.

From hence we went by land to *Aix* in *Provence*, an *Aix.* University and Parliament Town, and the Seat of an Archbishop.

From *Aix* we travel'd to *Marseilles*, a most ancient *Marseilles.* Town upon the Mediterranean Sea, built 633 years before our Saviour's Nativity, and in ancient times compar'd with *Athens* for Learning, being now chiefly famous for its convenient Harbour. Being oblig'd to stay here eight days for the return of two *Genoese* Gallies, that had brought an Ambassador into *France*, I spent most of this time in taking a view of that famous place of Devotion call'd *La Sainte Beaume*, where St. *Mary Magdalen* liv'd *See Baron. Ann. 35.* a penitential life among the Mountains and Desarts, after she had been assur'd of her Pardon by our Saviour himself.

Not far from St. *Beaume* stands the Town of St. *Maximin*, famous chiefly for the Church of St. *Maximin*, which contains the Relicks of St. *Mary Magdalen*, as, her Head in a Crystal Case enchased in Gold, her Body in a gilt Chasse, besides several other things of great value.

I embark'd at *Marseilles* in the aforesaid Gallies, thinking them much safer than the ordinary Felucca's or small Boats) and passing in sight of *Thoulon*, *Nice*, *Antibo*, *Monaco*, *Savona*, arriv'd in nine days at *Genoa*.

My third Voyage was likewise by the way of *Paris* to *Lyons*, but after that, thro' *Geneva* and the Country of the *Swiss*.

From *Lyons* I passed over the great Hill call'd *Grand* The Author's *Credo*, thro' *Nantua*, situate upon a Lake, and thence in 3d Voyage. two days to *Geneva*, seated upon the Confines of *Savoy*, *France* and *Germany*. Here I saw in the Quire of the *Geneva.* Church of St. *Peter*, (the ancient Cathedral of the Bishops here) the Figures of the twelve Prophets on one side, and of the twelve Apostles on the other; as also the Tomb of the Duke of *Bouillon*, General of a body of *Germans*, who were defeated near this place by the Duke of *Guise*. From the top of this Church you have a fair prospect upon the Lake, and from the Steeple you can see into six Principalities, *viz.* their own, *France*, *Savoy*, *Switzerland*, the *Valteline*, and the *Franche Conte*. Their Arsenal is but small, yet well stor'd with defensive Arms; and here they shew you the Ladders of the *Savoyards*, who attempting to scale the Town, were taken and beheaded immediately. The ancient Government of this City was under the Jurisdiction of their Bishop, who had some dependance on the Duke of *Savoy*, but since the Reformation it is turn'd into a Commonwealth, govern'd by *Calvinists*; however, the Bishop retains his Title, and the Chapter its Revenues, which lie in *Savoy*; both the Bishop and Chapter reside at *Anssy* in *Savoy*. St. *Francis de Sales* was Bishop of this See.

From *Geneva* I travel'd towards *Switzerland*, all-along The Lake of the Lake as far as *Lausanna*: This Lake is certainly the *Geneva.* fairest I ever met with in my Travels, exceeding either the *Lago maggiore*, the Lake of *Como*, the Lakes of *Zurich* and *Wallenstadt*, that of *Isee*, that of *Murat*, and even the Lake *di Guarda*: It is near fifty miles long, and in some places eight broad.

Lausanna is a Town of *Switzerland*, under the Juris- *Lausanna.* diction of the Canton of *Bern*. The ancient Cathedral is a noble Structure, having its own Bishop formerly, but now in the hands of those of the Reformed Communion: The Person that shew'd us the Church told us, that pursuant to the Records of that Church, Mass had been said in it above 1300 Years ago.

As we travel'd along from *Lausanna* towards *Soleur* or *Solothurn*, we passed sometimes thro' the Territories of *Bern*, sometimes thro' those of the Canton of *Friburgh*, sometimes thro' a Protestant, and not long after thro' a Popish Village, who nevertheless live very neighbourly together; those of the Canton of *Friburgh* being distinguish'd by a Cross, as the rest were by a high Flag with the Picture of a Bear, intimating that they belong'd to *Bern*.

Soleur is the chief City of a Canton, a neat place, in- *Soleur.* habited by *Roman Catholicks*: Here the *French* Ambassadour to the *Swiss Cantons* keeps his ordinary Residence, as the *Spanish* Ambassadour generally does at *Lucerna*. Certain golden Letters upon the Clock make this place the next, as to its antiquity, to *Treves*, which, according to *Æneas Sylvius*, was built 1300 Years before *Rome*. Some *See Petr. Rumpoldum.* Chronologers refer its first foundation to the 2030 Year after the Creation of the World.

From hence I travel'd to *Murat*, a small Town, famous *Murat.* for the Battle fought here betwixt the Duke of *Burgundy* and the *Swiss*, in which the first being overthrown, he sav'd himself by swimming with his Horse cross the Lake of *Murat*, which is two miles broad. In the high Road,

Road, at some small distance from the Town, you see to this day a great Chapel, containing the Bones of the slain *Burgundians*, with an Inscription concerning the time and circumstances of this Overthrow.

Zurich. From *Murat* I went to *Zurich*, the head City of a Canton of the same name, being very pleasantly seated upon a Lake: The Inhabitants are *Calvinists*: Their Arsenal is well stor'd with Cannon and Arms of all sorts. Their great Library was shewn us by a Woman. The Wheels whereby the Water is drawn up out of the Lake and convey'd thro' the Town, are worth taking notice of: But what appear'd the greatest Novelty to us was, the publick great *Drinking-Hall*, where we saw certain Tables for Persons of several Trades, each with its peculiar Sign, as for that of the Shoemakers a *Last*, for that of the Sadlers a *Saddle*, &c. Every day, at two a clock in the Afternoon, the great Bell rings, (to put them in mind of their time of meeting) as gravely as if they were calling People to their Devotions.

See Rast Travels.

Hence I pass'd by Water (a whole days Journey) upon the Lake to *Coire* or *Cear*, passing under a wooden Bridge laid quite cross the Lake for two miles, being maintain'd at the cost of the King of *Spain*, for the more convenient passage of his Recruits raised in this Country.

A long Bridge.

Coire. *Coire* is the chief City of the *Grisons*, inhabited by *Calvinists*, yet suffer the Bishop, with the Clergy and some others belonging to the great Church, to live quietly within the Precincts belonging to the Cloyster of that Church; where, among other Relicks, they shewed me the Head (cochased in Silver) of our ancient *British* King *Lucius*, who planted Christianity here.

In a little Town of the *Grisons*, called *Herberga*, the Mayor of the Town, an ancient man, shew'd me a Cheese, which he assured me was 100 years old.

The Valtoline. From the *Grisons* I travel'd thro' the *Valtoline*, a Country subject to the *Grisons*, notwithstanding their difference in Religion, those of the *Valtoline* being *Roman Catholicks* and the *Grisons Calvinists*. These two Countries are divided by the great Hill *Berlino*, over which I passed to the little Borough of *Poschiavo*, and thence to our Ladies of *Tirano*, a very fair Church, with a good Inn near it. Sometimes when the Snow lies very high, Travellers are forced to pass the Hill of *Splug*, instead of that of *Berlino*.

Mount Berlino and Splug.

From our Ladies of *Tirano*, I passed Mount *Aurigo*, and thence towards the Lake of *Wallenstadt*, which, as well as that of *Iseo*, having passed in a Boat, entred the Territories of *Brescia*, belonging to the State of *Venice*.

The Author's 4th Voyage. In my fourth Voyage into *Italy*, I took again the way over *Lyons* to *Geneva*, where leaving the Lake to the left, and passing along the Frontiers of *Savoy*, I came through the Village of *Bonneville* to St. *Maurice*, the first Town on this side of the Country of the *Valesians*, being so called from the great Valley they inhabit, of about four days Journey, besides the Hills, which are two more. The Town of St. *Maurice* has yet its Name from St. *Maurice*, the Commander in chief of the *Theban* Legion, who together with the said Legion was martyr'd here for the Christian Faith. Most of the Towns and Villages are built on the sides of Hills, their Houses are very low and dark, some of them without Windows; the Inhabitants profess the *Roman* Religion, are an honest plain sort of People; they wear short Hair on their Heads, and long Beards, their Dress being after a very ancient Fashion, which they not easily alter: Both Men and Women are very bulky, which put me in mind of Cardinal *Bentivoglio's* Saying of the *Swissers*, viz. *That they were made for the Alps, and the Alps for them.* I observ'd abundance of natural Fools here. They are able to assemble 40000 Men in case of necessity, under their known Commanders, who are generally Innkeepers and such-like, who serve well enough for the defence of their inaccessible Passages, they being neither ambitious nor rich enough to engage in an offensive War.

The Valesians

Sion. From St. *Maurice* I travel'd on to *Sion*, (*Sedunum*) the chief Town of this Country, seated in the center of it, and the Residence of its Bishop and Prince; his Court and Attendance is very slender, among a People who are not addicted to Vanity, and has no Guards but the Honesty and Love of his Subjects.

From hence I passed on by the way of *Lucia*, to the Village of *Brige*, seated at the foot of very high Hills; here having rested our selves and Horses all night at the best Inn, (the Master whereof was a Colonel) we began to ascend the Hills on Horseback for three hours, but advancing higher up towards the steep of the Mount *Sampion*, (one of the highest in *Italy*) we were glad to go on foot, tho' we found it tolerable passable at that time, being in *October*, which at other times is much more difficult. Having spent an hour in crawling to the top of the Mountain, we had two hours more riding to the Village and Inn of *Sampion*, where meeting but with slender Entertainment, we paid for our Dinner, tho' we eat but little, and so bestow'd the rest of the day in descending *Sampion* to *Devedra*. To give you a particular Description of the turnings and windings about Hills, upon a narrow way artificially made out of the sides of those Hills, sometimes jutting out as if they had been plaister'd to them, were to renew the trouble I had in passing them, the Precipices being such, that the least slip makes one fall but once for all one's life-time: So that by letting our Horses go loose, with the Bridle upon their Necks, and making a Man go before each Horse, (lest they should jumble one another down) we arriv'd safely at *Devedra* that night; next morning we set forward for *Domodoscela*, a little Frontier Garison Town of the *Milanese*; from hence we passed through a pleasant plain Country, to the Village of *Marguzzi*, seated upon the *Lago maggiore*, (the ancient *Lacus Verbanus*) where bargaining with the Boat-men to carry us in one day to *Sesto*, and that out of reach of all the Castles, to avoid being troubled with the Searchers, we accordingly came safe to *Sesto* that night, where taking Coach the next day, we dined at *Civita Castellanza*, and arriv'd in good time at *Milan*.

Mount Sampion.

My fifth Voyage I made into *Italy* was still from *Lyons*, but by the way of Mount *Cenis* to *Turin*, the ordinary Post-Road. Taking Horse at *Lyons*, we passed through *Verpillier*, *La Tour du Pin*, *Beauvoysin*, (the Bridge whereof parts *France* and *Savoy*) and in two days came to the foot of Mount *Aiguebellet*, the Threshold of the *Alps*, having all the shapes, windings and turnings of the *Alps*, so that it may be compar'd to Mount *Cenis*, as a lusty Man to a Gyant.

The Author's 5th Voyage.

Mount Aiguebellet.

We had no sooner passed this Hill, and through the very Clouds, but we came to *Chambery*, the capital City of *Savoy*, where we happen'd to see the most solemn Entrance which the Duke made for his new Spouse, the third Daughter of the Duke of *Orleans*, which was perform'd with incredible magnificence.

Chambery.

The next day after we travel'd on to *Montmelian*, a strong Castle, situate upon a high Rock overlooking the River *Isere*, and commanding the narrow passage betwixt the Hills, being provided with a strong Garison and suitable Ammunition. They also shew'd us their deep Well for fresh Water, in the midst of a high Rock.

Montmelian.

From *Montmelian* we pass'd thro' very rough ways to *Aiguebelle*, St. *John Morian*, St. *Michael*, and at last to *Lasneburgh*, seated at the foot of Mount *Cenis*, the highest of all the Hills I passed over in my several Voyages into *Italy*, or out of it, to wit, *Sampion*, *Berlino*, *Splug*, and St. *Godard*.

Lasneburgh.

This Mount *Cenis* being the common Boundary betwixt *Savoy* and *Italy*, I will here begin my Description of *Italy*, what has been said hitherto being only an account of the several Ways into it.

Italy *described, in a Voyage thither.*

HAving rested all night at *Lasneburgh*, at the foot of Mount *Cenis*, (*Cinisium*) we agreed with the Chair-men, for a Pistole for every man, to carry us up and down the Hill, and over the Plain, all the way to *Novalese*, being ten miles, *viz.* four miles in going up the Hill, four miles upon the Plain, and two miles more upon the descent to *Novalese*. Accordingly we began to ascend immediately after we had left our Inn at *Lasneburgh*, and having passed by *Ramassa*, were, after two hours labour, carried by our Chair-men to the top of the Hill, and soon after to the Posthouse and the little Hospital upon the Plain; thence passing by the Chapel of the *Transis*, (where are buried such as are found frozen to death in the Snow) we came to the *great Cross* and *Tavern*, where we began to descend, and came about noon to *Novalese*.

Mount Cenis.

Novalese.

We had no sooner dined, but mounting on Horseback, arriv'd the same night at *Susa*, (anciently *Segusium*) one of the Gates of *Italy*; its strength consisting wholly in its Castle, which being built upon a Rock close to the Town, commands the whole passage betwixt the Mountains, known by the name of *le pas de Suse*. Here begins *Piedmont*.

Susa.

From

From *Susa* we travel'd to St. *Ambrose*, and passing by a fine Palace of the Duke's, call'd *Rivolta*, came the same night to *Turin*, (the ancient *Augusta Taurinorum*) seated in a Plain near the foot of the Hills, upon the Banks of the River *Po*, which here begins to be navigable.

Turin.

The River Po.

Turin is now the Seat of one of the greatest Princes in *Italy*, *viz.* of the Duke of *Savoy* and Prince of *Piedmont*, being descended from *Siguardo*, the ancient King of *Saxony*, who liv'd in the Year of Christ 636, and consequently the House of *Savoy* has in an uninterrupted series of Princes preserv'd it self for above a thousand Years, since which time five Emperours and four Kings have issued out of this House. Formerly the Dukes of *Savoy* used to keep their Court at *Chambery*, or at *Bourg en Bresse*, (now under the *French* Jurisdiction, upon exchange with the Marquisate of *Saluzzo*) *Amadeo* V. Duke of *Savoy*, having first transfer'd his Residence to *Turin*.

The Family of Savoy.

Its Greatness

The number of his Subjects are said to amount to 1800000 Souls; his Yearly Revenue to a million of Crowns, and the whole extent of his Territories to 200 Miles in length, and 50 in breadth.

The City of *Turin* it self is seated in a fat Soil, being almost square, with four Gates, and a Citadel with five Bastions to it. It is an University, and its Markets are well furnish'd with Provisions. In the Cathedral is kept the holy *Syndon*, wherein, they say, our Saviour's Body was buried, in a Chapel over the Altar. The late Dutchess *Christiana* had begun to build a Chapel of black Marble, adorn'd with stately Pillars of the same, but was not quite finish'd when I passed that way.

The Ducal Palace.

The Duke's new Palace is a very noble Structure, having a stately Court before it, and a noble Piazza, with a large handsom Street leading to it. The Dutchesses Cabinet, and the curious *Bathing-place* above, are hung with the original Pictures, in little, of all the great Ladies in *Europe*, into which the Dutchess can convey her self up out of her Bed-chamber, by a Pulley and a Swing. The Stair-case is very noble; and in the old Gallery you see the Pictures of the *Princes* and *Princesses* of the House of *Savoy*, with the Marble Statues of the ancient Emperours and Philosophers. The *New Street* runs from the *Palace* to the *Piazza Reale*, which is very finely built, like our *Covent-garden*, and inhabited by Noblemen. The Church of the *Austin Friers*, which stands in it, being a very neat and well-contriv'd Fabrick. And the *Capucins* Church, without the Town, appears to be above the rate of that Order; its situation being upon a Hill, I had from hence a fair prospect of the City and adjacent Country. About three miles without the City is the Duke's Country-house, call'd *la Venery Royale*; I saw the Court all set round with *Stags-heads*, and many good Pictures in the Chambers; but what delighted me most, were the Pictures of the Duke, his Mother, his Sisters, and other Ladies on Horseback, drawn in a hunting garb, in the Hall.

About a mile on the other side of the Town, stands the old Dutchesses House, call'd *la Valentine*, seated most pleasantly upon the Banks of the *Po*; it has most curious Paintings of Flower-works and other rare pieces. Among the rest, they shew'd us four Pictures representing the four Elements; as, all the *Birds* that live in the Air, the *Beasts* that dwell upon Earth, the *Fishes* and *Shells* nourish'd in the Water, and all things belonging to the Fire, every thing expres'd in its natural shape and colour.

Leaving *Turin*, we also left the ordinary Road leading to *Milan*, by the way of *Vercelli* and *Novara*, two strong Frontier Towns, to avoid two Armies that lay in the way, and taking our course lower, came by the way of *Alpare* to *Savona*, (anciently call'd *Sabatia* or *Sabacium*) seated upon the Mediterranean Sea, or, as they call it, upon the *Riviera di Genoa*, within sight of *Genoa*, yet 25 miles off. To the Land-side it is defended by the *Apennine Hills*, and towards the Sea by regular Fortifications: Great part of it was destroy'd by Lightning, 1648, which striking into a Tower where the Gunpowder was kept, blew up above 200 of the best Houses, besides others. It is famous for the interview of two great Kings here, *viz.* *Lewis* XII. of *France*, and *Ferdinand* King of *Naples*. Of this City were the two Popes, *Julius* II. and *Sixtus* IV. both of the House of *Roveri*; and two Cardinals, *Peter* and *Raphael Riarii*.

Vercelli and Nova.

Savona.

At *Savona* we imbark'd in a Felucca, and sowing along the shore, (call'd by them *la Riviera di Genoa*) came to *Genoa* it self: All the way we were surpriz'd with a continual row of such stately Country-boats and Villages, that had we not had all along a full sight of *Genoa* it self, we should have taken some of them for it.

Genoa.

Genoa challenges deservedly to be plac'd not only among the Cities of the first rank in *Italy*, but also among those seated on the Mediterranean Sea; standing on the side of a Hill, and thus rising by degrees, it appears to the Sea-side like an Amphitheatre, being commonly call'd *Genua la superba*, from its magnificent Buildings: Formerly it had no other defence on the Land-side than the Marble Hills that encompassed it, but forty Years ago it was fortified with a new Wall six miles in compass, which yet was finish'd in eighteen months.

Their Harbour was also very unsafe formerly, but since they have rid their hands of the *French*, they have render'd it both safe and commodious, by a most stupendious Mole crossing almost the whole Bay, at the end of which stands the *Pharos*, upon a little Rock, with a Lanthorn upon it, to guide the Ships.

As for the City it self, it affords a most beautiful sight, most of the Houses being well painted on the outside, very lofty and high, adorn'd on the top with open Galleries, where the Women sit together at work, and where they also dry their Hair after they have wash'd it with a certain Wash to make it yellow.

The Streets are very narrow, which makes Coaches much out of fashion here, instead of which they make use of Chairs and Litters: However, the *Strada nova* (new Street) surpasses, for neatness and proportion, all that ever I saw, if it had breadth enough to hold out at the same rate a little longer. In this Street is nothing but Palaces, as fine as Marble and Painting can make them.

The great Church of St. *Lawrence* is the Cathedral of the Archbishop, being a vast Structure of white and black Marble intermingled. In a Chapel opposite to the Pulpit is an authentick Relick of St. *John Baptist*, under the Altar; and a great Dish of one Emerauld, in which, as they say, our Saviour eat the *Paschal Lamb*: The Relick of St. *John Baptist* is positively asserted as such by *Baronius*; but as for the Dish, neither he nor any other Author has made mention of it; and *Beda* says, that the Dish in which our Saviour eat the *Paschal Lamb* was of Silver.

The Church of the *Annunciata* is not yet finish'd, the Roof is all gilt, and excellently painted; all the Altars round the Church are cheeked with the finest Marble Pillars, and adorn'd with Pictures; and the two rows of vast Pillars, which sets out the Roof, are of the best white and red Marble.

The *Jesuits* Church, dedicated to St. *Ambrosio*, is all cover'd with Marble, and the Roof richly gilt; it wants a little length for want of room, being near the *Doge's* Palace; and the Church of St. *Cyro*, belonging to the *Theatins*, makes a most graceful show with its double row of white Marble Pillars.

Palaces.

The Palaces are generally very sumptuous here, especially in the *Strada nova*, among which also that of the Prince *d'Oria* excels, being built upon white round Marble Pillars, which support its Galleries, which lead into noble Rooms.

I saw also the two Palaces of the *Signora i Balbi*, in the Street of the *Annunciata*, in the one whereof (on the left hand) I was shewn, among other things, a Looking-glass valued at 60000 Crowns, the Frame of it all Silver, set thick with a thousand little Figures arm'd like *Cupids*. The round Pillars which support the Porch of the Palace, and the *Giuochi di acqua* in the Garden, are highly worth taking notice of.

The Doges Palace, and the Armoury

The Palace of their biennial *Doge* has twelve most excellent white Marble Statues, representing many great Men of this Town who have done considerable Service to the Commonwealth. In the Armoury are Arms for 30000 Men, and among them the Armour of the *Genoese Amazons*, who behaved themselves so gallantly in the War in the *Holy Land*. But what surpriz'd me most was, the stately Suburb call'd *San Pietro in Arena*, where for a mile together you see nothing but most stately Country Seats, adorn'd with Marble Statues, Gardens, Arbours, Grottoes, Ponds, Fountains, high Walks sustain'd by Marble Pillars, &c. among which the Villa's and Palaces of *Hieronymo Negro*, and that of the *Imperiali*, excel the rest.

The Suburb of St. Pietro in Arena.

The Villa of the Duke d'Oria.

In our return from the Suburb of St. *Pietro* in *Arena*, we took a view of the *Villa* or Palace of the Duke *d'Oria*, seated near the Sea-side, its Gardens facing the Sea, being built upon three rows of white Marble Rails, supported by white Marble Pillars, which ascending by degrees, affords so beautiful a sight towards the Sea, as can't but be surprizing to Travellers who pass that way to *Genoa*. In the midst of this Garden you see that admirable Fountain of *Neptune*, representing the true looks of the great *Andrea d'Oria*, the *Neptune* of the *Ligurian* Sea, who deliver'd his Country from Slavery. All along one side of this Garden stands an Iron Cage of one hundred paces long, at such a height that it contains abundance of Lawrel and other Trees, for the diversion of a

vast

vast number enclos'd in this Cage together with the Trees. The Palace it self is most richly furnish'd, and stor'd with many Curiosities: In the Wardrobe we saw among divers rare Silver Tables, one which weighed 24000 pound weight.

The Government of Genoa. The Government of *Genoa* is *Democratical*, the administration whereof is committed to a *Duke*, chosen every two Year, and eight Senators or Councellors, who live in the same Palace with him; but the main Foundation of the Government is laid upon the Shoulders of the *Great Council*, consisting of four hundred persons, chosen indifferently out of all the Families of the Town, who are to be consulted in all Affairs of moment. Formerly, as I told you, the *Genoese* were under the *French* Jurisdiction, till they were set free by *Andrea d'Oria*; for which reason, and their constant correspondence with the *Milanese*, they much incline to the *Spaniards*, even in their Humour and Apparel: Hence you shall see here broad Hats without Hatbands, broad Leather Girdles, narrow Breeches, with long-wasted Doublets and Hanging-sleeves worn by the Men, after the *Spanish* Mode; and the great Ladies here imitate the *Donna's* of *Spain* in their Whalebone Fardingals, (call'd *Guardinfanta's* or *Child-preservers*) which make them appear almost as broad as they are long.

Their Interest. Fashions.

Riches. As to the publick Revenue, it is computed at no more than One million and two hundred thousand Crowns, and consequently not near so considerable as that of *Venice*, but their particular Men much exceed the *Venetians* in Riches, they being generally great Bankers; besides that, they drive a vast trade in *Taffaties*, *Velvets*, *Sattins*, Needlework, and other rich Commodities.

Strength. Formerly the *Genoeses* worsted the *Pisani*, made themselves Masters of the Isle of *Corsica*, an hundred miles distant from it, which being a Kingdom, they got by it the title of *Serenissima*, and a close *Regal Crown* over their Coat of Arms: They also sent considerable Succours to *Godfrey of Bullen*, in his Conquest of *Hierusalem*, whence upon the very *Area* of the holy Sepulchre in *Hierusalem*, are written these words, *Præpotens Genuensium præsidium*; but now-adays they are scarce in a condition to make an offensive War: So the *Apennines* on the one side, with their new Wall, and their strong Fortification towards the Sea, together with fourteen Gallies and twenty Men of War, and thirty thousand Men, which they are able to raise in case of necessity, seem to be sufficient for their defence.

Their Learned Men. *Bankers* being in more request here than *learned Men*, they have not been so well furnish'd with them as some other places of *Italy*; yet have they also had their learned *Baptista Fregosus* or *Fulgosus*, *Justinianus*, *Balus*, *Mascardi*, and *Christopher Columbus*.

The Church of *Rome* stand also indebted to *Genoa* for three Popes, *viz.* *Adrian* the Fifth, *Innocent* the Fourth, and *Innocent* the Eighth.

Here is also an Academy of Wits, call'd the *Addormentati*. He that desires to know more of *Genoa*, may consult *Augustinus Justinianus*.

After a stay of six days at *Genoa*, we set forwards thence to *Milan*, four little days Journey.

In another Voyage I made from *Genoa* to *Turin*, by the way of *Montferrat*, I saw by the way of *Novi* (of which more anon) *Trino Cassale*, one of the strongest places in all *Italy*, and *Alexandria della Paglia*, a strong place seated upon the *Po*.

Cassale. Alexandria.

But at this time leaving *Genoa*, we passed thro' *San Pietro d'Arena*, and by the *Carthusians* Monastery, over the *Apennines*, and the next day about noon came to *Novi*, a little but strong Town, belonging to the *Genoese*, on the Frontiers of *Milan*, about twelve miles distant from *Tortona*, the first City on that side in the *Milanese*. The Frontiers being at that time somewhat unsafe, by reason of the *Banditti*, the Governour of *Novi* allow'd us a Convoy of eight or ten Horsemen to be our Guard, but these, upon enquiry, we found to be the *Banditti* themselves, who being banish'd the *Genoese* Territories, had only two months allow'd them every Year to come into Frontier Towns. This did not a little surprize us at first, but relying upon the Governour's Parole, who told us they were the safest and surest Guards he could give us, we went on unconcern'd; and being conducted by them past all danger, gave them three Pistoles for their pains; and passing over a little River on Horseback, entred the *Milanese*, and the same night came to *Tortona*.

Novi.

Pavia. Ticinum. From hence we travel'd the next day to *Pavia*, once the Seat of twelve Kings of the *Longobards*, seated upon the River *Ticinus*, from whence it has borrow'd its Latin Name. The University here was either founded or furnish'd with Readers at first, or by Readers of the University of *Oxford*. The two chiefest Colleges are, that of *Pius* V. and that of St. *Charles Borromeus*. In the Cathedral lies interred the Body of *Santi*, a holy Bishop of this place, who was Contemporary to St. *Borromeus*.

Near this Cathedral, in the *Piazza*, stands an *Equestre Statua* of Brass, which some will have to be the Statue of *Constantine* the great, but others (with more probability) of *Antonius Pius*: It was brought hither from *Ravenna*, after the Conquest of that place.

In the Church of the *Austin* Monks lies interred the Body of that great Father of the Church St. *Austin*, being brought hither out of *Sardinia* by *Luitprandus* King of the *Longobards*. The new Tomb in the *Sacristy* is most artificially carv'd, of white Marble, with historical Figures, representing the most remarkable Actions of St. *Austin*.

In the same Church we saw the Tomb of *Severinus Boetius*; and in the Cloyster of the Convent of the same Friers, the Monuments of two *Englishmen* of quality, *viz.* the Duke of *Suffolk*, and an *English* Bishop call'd *Parker*, of the *Morley*.

In the *Franciscans* Church lies interred the famous Jurisconsult *Baldus*. Here also they shew you the Chapel where the Bones of the *Frenchmen* kill'd in the Battle of *Pavia* are kept.

Ennodius Ticinensis and *Lanfrancus* Archbishop of *Canterbury* were Natives of *Pavia*, the History of which you may read in *Antonio Spelta* and *Sacco*.

From hence we continued our Journey to *Milan*, twenty miles off, and in our way stopt at the Monastery of the *Carthusians*, famous for the Battle that was fought near it 1525, on St. *Matthia's* Day, betwixt the Emperour *Charles* V. and *Francis* King of *France*, wherein the last was taken Prisoner, and his Forces put to the rout, because he had, not long before, sent a great part of his Army to *Naples*. The *French* King was conducted to this Monastery, where, after having heard Mass, he dined, and was serv'd by three Generals of the Enemy's Army, *Launoy*, *Bourbon*, and the *Marquis del Vasto*, and afterwards carried into *Spain*.

The Battle of Pavia.

As for the Monastery of the *Carthusians*, it justly deserves to be rank'd among the best of *Italy*, as well as the Church, tho' built *à la Tedesca*, the Frontispiece of which is adorn'd with many Heads and Figures of white Marble: The Chapels within are very remarkable for their Paintings, and the Tabernacle esteem'd worth eighty thousand Crowns: But that which exceeds all the rest, is the most sumptuous Monument of their Founder *John Galeazzo Visconti* Duke of *Milan*, standing a little without the Quire, with the *cumbent Statues* of *Ludovico Moro*, the last Duke of *Milan* and his Spouse, lying under the other. In the Sacristy they shew'd us, among other Riches and Curiosities, a Back of an Altar of Ivory, cut into historical Figures.

The Carthusians. The Cathedral.

Thence we came to *Milan*, firnam'd the *Great*, and not undeservedly, being ten miles in compass within the Walls; it has ten Gates, two hundred Churches, and about three hundred thousand Inhabitants: It was anciently call'd *Altera Roma*, being the capital City of the Duchy of *Milan*, which from North to South is a hundred miles long, and contains four hundred Towns: It is call'd *Milano quasi Midland*, as being an Inland City, without the conveniency of so much as one River running in it, which defect is in some measure recompensed by two Channels cut out of the *Ticine* and the *Adda*. It has (like other great Cities) suffer'd much by War, having been no less than forty times attempted, and twenty times taken. This City is so stor'd with Gentry and Nobility, that I remember I saw, upon a private festival day, above a hundred Gentlemens Coaches at one Church; and as for Artisans, as Goldsmiths, Armourers, Gunsmiths, Weavers, Silk-stockingmakers, Refiners of Gold, such as work in Crystal, and many others, they are almost innumerable.

The City of Milan. The great Hospital. The Library.

In the Church of St. *Ambrose* (where that Father refused entrance to the Emperour *Theodosius*) lieth the Body of St. *Ambrose*, under the high Altar; as also the Bodies of *Gervasius* and *Protasius*, two primitive Saints. In this Church also you see, upon a high round Pillar, a brazen Serpent, like that erected by *Moses* in the Desart.

The Church and Tomb of St. Ambrose.

Near unto this Church of St. *Ambrose* is a little Chapel where St. *Augustin*, with his little *Adeodatus* and his Friend *Alippius*, were initiated by the holy Baptism; as is evident from the words over the Altar. They relate, that as St. *Ambrose* and St. *Augustin* (after they were become Christians) were going in procession to the before-mention'd great Church, made the Hymn *Te Deum* as they went, one making one Verse, the other another. On the other side of the same Church stands another little Chapel, built (as they say) upon the same place where St. *Augustin* was converted by a Voice which said to him, *Tolle lege, Tolle lege.*

Adjoyn-

Adjoyning to the Church of St. *Ambrose* is a most stately Monastery, with two curious Cloysters built upon round Pillars: Both the Church and Monastery belong to the *Cistertian Monks*.

The Church of St. *Victor*, with the double Cloysters of the Monastery built upon round Pillars, belonging to the *Olivetan Fathers*, is a neat Structure; and the most admirable Piece of St. *George*'s killing the Dragon, done by *Raphael Urbin*, worth the Curiosity of a Traveller.

In the Church of St. *Nazarius* you see the most noble Tombs of the *Trivultii*.

They shew you, in the Church of St. *Enstorgius*, the *Arca*, an ancient Tomb, under which were laid the Bodies of the three *Magi* of the *East*, who came to adore our Saviour at *Bethlehem*, and whose Bodies are said to have been carried hence to *Cologne* in *Germany*.

The Church of St. *Lawrence* is built after that of St. *Sophia* in *Constantinople*, and contains the Body of *Placidia*, the Sister of the Emperour *Honorius*.

In the Church of St. *Mark* the Fall of *Simon Magus* from the Skies is an excellent Piece; as is likewise that of the last Supper, in the Church of the *Passion*, done by *Christopher Cilio*. The Church of St. *Celso* has divers rare Pictures of *Raphael*'s hand, in the Sacristy: And the Churches of the *Jesuits* and *Theatins* are very fair Structures.

The Cathedral.

However, the *Domo* or Cathedral surpasses the rest, in the midst of which, near the Quire, lieth the Body of St. *Charles Borromeus* in a Vault, turn'd since into a Chapel, open at the top, and enclos'd by low Rails: The inside of it was richly hung, and upon the Altar lieth the Body of St. *Charles* at length, in a Crystal Coffin, made of divers great Squares of Crystal, thro' which (the wooden Case being open'd) we could see all the Body lying along in his Episcopal Robes, the Face, Head and Feet being only to be seen, and tho Nose and Lips shrunk and parch'd. His original Picture is to be seen at the entrance below into this Chapel, with his most remarkable Actions hung up in Painting round about the Church, in the very Roof of which, just over the high Altar, is preserv'd one of the Nails of our Saviour's Cross: Before it always burn certain Lamps, to shew the People where this Relick is kept. The Church it self, for solid Work, may justly claim the second place among the Churches of *Italy*, being built all of white Marble, with Isles and Pillars, each Pillar valued at ten thousand Crowns, and there are one hundred and sixty of these Pillars, not crusted over (like most of the fine Churches in *Italy*) but of massy white Marble. Besides which, there are placed six hundred white Marble Statues round the outside, each of which is esteem'd at a thousand Crowns; among which those of St. *Bartholomew* and of *Adam*, of the hand of *Christopher Cilio*, excel the rest. The length of this Church is said to be two hundred and fifty cubits long: The Frontispiece is not yet finish'd, no more than the Steeple, the last of which was however advanc'd so far, as to afford a most glorious shew, from the top of the City and circumjacent Country of *Milan*.

The great Hospital.

The great *Hospital* is a Quadrangle, built upon Arches and round Pillars; the place where the Sick are, is made cross-wise, in the middle of which stands an open Altar, so that the sick people may hear Divine Service from their Beds. Its Revenues are very great, above four thousand persons being daily maintain'd in it: St. *Charles* gave at once an Inheritance of 25000 Crowns to it.

The noble *Seminary*, and the College of the *Swissers*, both stately Structures, are also the Gift of the said St. *Charles*.

The Library.

The *Lazzaretto* is of a vast bulk, comprehending 1800 Yards in compass, built just without the Walls, for the use of those infected with the Plague; it contains 365 Chambers, and in the midst of the Square of this great Court stands a round Chapel, cover'd at the top, but open on all sides, so that the People from their Chambers may hear Divine Service said by the Priest.

The *Bibliotheca Ambrosiana*, begun by St. *Charles*, continued by his Nephew Cardinal *Frederico Borromeo*, and since encreased by the accession of *Vincentius Pinelli*'s Books, (redeem'd from the *Turks*) has this before most other Libraries of *Italy*, that it allows all comers and goers to read what Books they please; whereas all the others will scarce admit of being well look'd upon.

Behind the Library stands the Gallery, furnish'd with many Original Pictures of the best Masters of *Europe*, and divers most excellent Copies, as the four Pieces of the four Elements, copied after those I saw in the Palace of *La Valentine* near *Turin*. But the greatest Rarity here, as well as of the Library, is the Manuscript of *Alberto Durer*, valued at above three hundred pounds.

The *Dominicans* Library is also worth seeing, but much more their *Refectory*, by reason of its exquisite Piece in Painting of the *last Supper*, the Work of *Laurentius Vincius*.

The Monastery call'd the *Gratie* may be numbred among the best of *Europe*; and the Picture of Christ crown'd with Thorns, by *Titian*, in their Church, ought not to be passed by in silence, no more than the most curious Cabinet of the Canon *Setali*; which containing great variety of natural and artificial Curiosities, it will suffice to mention some few of them here, *viz.* great numbers of *Burning-glasses*, yet not *Convex*; a Bird without Feet, call'd *Apodes* by *Aristotle*; the Stone of *Asbestos*, the Thread whereof drawn, is incombustible. A vast quantity of ancient Medals of Silver, Gold and Brass. Many wooden things, Fruits and *Fungi*, petrified without changing their natural forms. Many most curious Clocks. A little round Cabinet, flat above like a Child's Drum, cover'd with a smooth Glass, upon which small Coaches or Ships (having some Iron in the bottom) being placed, a Load-stone, mov'd by a certain Wheel within, makes the Coaches and Ships appear to go to and fro without any visible assistance. A piece of a Thunderbolt, which the Canon himself told us he had cut out of a man's Thigh stricken with it: Besides many other rich things of Coral, Jewels, Stones, Pictures, Crystals, little Infants in Wax, and many other Rarities.

Monastery of *Gratie*.

Palaces in *Milan*.

Among the Palaces of *Milan*, that of the Governour is rather bulky than curious, being able to lodge whole Regiments: But the Palace of *Marini* is very noble, and that of the Archbishop very fair. At the entrance of the Palace of the *Borromei* I saw the Motto of St. *Charles*, (who was of this Family) *HUMILITAS*. The Palaces of the *Visconti*, of the *Sforze*, of the *Trivultii*, and several others, are also worth taking notice of.

The Castle or Citadel here, situate on the back of the Town, challenges a rank among the first and best of *Europe*, being guarded commonly by five hundred natural *Spaniards*, under the command of a Governour of their own, independant from the Governour of *Milan*; its whole compass being a mile and a half, it has rather the resemblance of a City than a Castle, being adorn'd within with divers large Streets, fair Houses and Palaces for the chief Commanders, a goodly *Piazza*, neat Shops, five Fountains not to be dried up, a Mill, Hospital, and Church, with ten Chaplains and a Curate belonging to it. Its Fortifications consist of six Royal Bastions and divers regular Outworks, and a triple Ditch, provided with Cannon and Ammunition sufficient for a long and vigorous defence.

The Academy of Wits.

Here is also an *Academy of Wits*, who stile themselves *Nescosti*, i. e. *hidden men*: The most famous Men of this Town for Learning have been *Valerius Maximus*, *Alciatus*, *Decius*, *Jason*, *Cardan*, *Panigarola*, *Paulus Aretius*, *Bonacina*, and *Ferrarius*, who liv'd lately at *Padua*. This City has produced two other noted men, *viz.* *Uberto Crucio* and *Gulielmo Pusierula*; the first for his strength of Body, the other for his natural Wit: *Uberto* was so strong, that he could take a Horse laden with Corn upon his Back, and stop a Horse in his full gallop. *Gulielmo* did, without the least assistance of Learning except his first Grammar Rudiments, by the natural strength of his Wit, resolve the most nice Law-Questions, and give such decisions in point of Law, as were past the amendment of the greatest Lawyers.

The ordinary Revenues of the Dutchy of *Milan* are computed at two millions four hundred thousand Crowns *per annum*.

The History of *Milan* may be read in *Corio*, *Ripamontius*, *Scipio Barbero*, and *Paulo Morigi*.

Having spent six days at *Milan*, we took Horse for *Bologna*, a Journey of six days, and in our way took a view of *Marignano*, *Lodi*, *Piacenza*, *Parma*, *Reggio*, *Modena* and Fort *Urbano*.

Marignano.

Marignano is a small Town, about ten miles from *Milan*, and from thence to *Lodi* is a most pleasant way. Near to this Town 16000 *Swiss* were defeated, by *Francis* I. the *French* King, and *Ludovicus Sforza* Duke of *Milan* taken Prisoner.

Lodi.

Lodi is a frontier Town on the *Venetian* side, wash'd by the River *Adda*. It got its Name from being built upon or near the Ruins of the old *Lodi*, call'd anciently *Laus Pompeia*. This place affords Cheeses of a vast bigness, a Gentleman of this Town having four Cheeses made weighing five hundred pound weight each. Their Ground affords Hay three times a Year.

Piacenza.

Piacenza or *Pleasance*, belonging to the Duke of *Parma*, has got its Name from its most pleasant situation in a most fertile Country along the *Po* and *Trebia*, near the last of which the *Romans* under *Sempronius* were overthrown by *Han-*

Hannibal. The most remarkable thing here is, the *Equestrian Statue* in Brass, in the Market-place, of *Alexander Farnese*; the old Fountain made by *Augustus Cæsar*; the exquisite Picture in the Church of the *Benedictins* (done by *Raphael*) just behind the Altar; as also the Churches of the *Dominicans*, and the *Canon Regulars*, are very well worth seeing. Notwithstanding the fertility of their Pasture-grounds hereabouts, and the plenty they afford, I saw here a piece of thriftiness, used by the Gentlewomen of this City, *viz.* to be drawn by two Oxen yoked together in their Coaches, to their Country-houses near the Town. The History of *Piacenza* may be read in *Umberto Locati*.

Parma. The City of *Parma* likewise belongs to the Duke of the same name, of the House of *Farnese*, being three miles in compass, the River *Parma* running thro' it, over which is built a handsom Stone Bridge. The Country round about being extreamly fertile, has given a great reputation to the *Parmesan* Cheeses. The Duke's Palace, with its Gardens, Fountains, a stately Theatre for Opera's, his rich Coaches and Stables, are worth the sight of a Traveller. The Cathedral is remarkable chiefly for its Cupola, painted by the most excellent *Correggio*, as the Church of the *Capucins* is for the Tomb of that most famous Hero *Alexander Farnese*. *The Duke's Palace.*

The Revenues of the Duke of *Parma* are said to be six hundred thousand Crowns *per annum*. The *Academy of Wits* of this place stile themselves the *Innominati*.

The two famous Painters, *Correggio* and *Parmigiano*, were Natives of this City, the History of which may be seen in *Bonaventura Arrighi*.

Reggio. From hence we went unto *Reggio*, a Town under the Jurisdiction of the Duke of *Modena*. It has a neat Cathedral, and *Guido Pancirola*, Cardinal *Tosco* and *Castelvetro* were born here.

Modena. *Modena* is the ordinary Residence of the Duke of that Name; it is a goodly Town, which by its high Steeple discovers it self at a considerable distance; its Citadel lies upon a level with the City. The Duke is of the Family of *Este*, but not of the true Line. Cardinal *Sadoletus*, *Carolus Sigonius*, and *Gabriel Falopius* were born here.

Modena is famous in *Italy* for the best Visards for Masquerades; and the Duke's yearly Revenue computed at three hundred thousand Crowns.

Fort Urban. From thence, passing the River, we came soon to the Fortress of *Urban*, (so call'd from Pope *Urban* VIII. its Founder) situate upon the Frontiers of the Ecclesiastical State, from whence, by the way of *Castel Franco*, (anciently *Forum Gallorum*) we came in good time to *Bologna*.

Bologna. *Bologna* is one of the largest and fairest Cities of *Italy*, and the chief University for Law: It's commonly stiled *Bologna la grassa*, from the fertile Soil in which it lies, in the very center of *Lombardy*, anciently call'd *Gallia Cisalpina*, and in middling Ages *Romagnola*.

As for the City it self, it is very curiously built, for the most part upon Arches, like the *Covent-garden* in *London*, its whole circumference being about five miles. The Pope sends hither a *Legate à latere*, for the administration of the Government, in lieu of which they send an Ambassadour to *Rome*, who resides there constantly, by a peculiar Privilege reserv'd to themselves, with many others, at the time of their voluntary submission under the Papal Jurisdiction. *Their Government and Privileges.*

I spent here six days, in which I took a view of all the remarkable things here, and among the rest, of the Church and Convent of the *Dominicans*, in the first of which is the Tomb, of white Marble carv'd with curious Figures, of St. *Dominick*, the Founder of that Order. Here also they shew you a Manuscript of the Bible, written upon Parchment by *Esdras* himself, (says *Leandro Alberto*) as also a Lamp sent hither by some new-converted *Indians*; a most curious piece of Workmanship. The Quire behind the high Altar is very remarkable for its Seats of rare *Mosaick* Work, of colour'd Wood inlaid into Figures representing the *Old* and *New Testaments*, with such Art, that the Emperour *Charles* V, when this Quire was shewn him, did with the point of his Dagger try whether it were inlaid or painted, the piece which he then pick'd out never being put in since.

The Convent of the *Dominicans* may for Beauty vie with any in *Europe*, in which are maintain'd no less than 150 Friers.

The Nunnery of *Corpus Christi*, of the Order of St. *Clara*, is famous for the Body of *Beata Catherina di Bologna*, a Nun of this Convent: I saw her Body sitting upright in a Chair in her Nuns Habit, the Face and Feet being plainly to be seen, but black and dried up.

Out of the Gate is the pleasant Street where the Coaches make the *Tour à la mode* in the Summer Evenings. From hence turning to the left hand, you see that noble Convent of the *Olivetan Fathers* call'd St. *Michael* in *Bosco*, from the Hill upon which it is built; you have a most agreeable prospect of the City and circumjacent Country. The Oval Court is painted by divers of the best Masters of *Europe*; and I found the *Dormitory* one of the fairest I ever met with in all my Travels.

To be short, the rare row of Pillars, and Portico towards the Street, of the Convent of the *Franciscans*; the two vast Courts, or double Cloyster, built upon Galleries above, in the Monastery of St. *Salvatore*, and the Monasteries of the *Servits*; that of the *Augustines* and *Carmelites*, are so artificially and nobly built, that I much question whether, for fair Monasteries, any City in *Europe* is comparable to *Bologna*.

I took also a view of the Church of St. *Petronio*, at the end of the great Piazza; and considering that at this time I found the same Scaffolds there, and the same knocking and working I had seen 21 years before, when I passed this way, without any great visible improvement, I began to be of *Leandro Alberto's* Opinion, who writ a hundred Years ago, That he believ'd *it would not be finish'd, but with the World*. In this Church *Charles* V. was created Emperour by Pope *Clement* VIII. The Cathedral also is not above half finish'd. *St. Petronio's Church.*

The new Church of St. *Paul* has a most beautiful high Altar, as that of *Giovanni in Monte* boasts of that most excellent Picture of St. *Cecily*, done by *Raphael Urbin*. The *Jesuits* Church, as also that of St. *Stephen*, and that of the *Passion*, also deserve to be taken notice of.

In the Palace of the Pope's Legate I was shewn two or three hundred Manuscripts, all of the Hand-writing of *Aldrovandus*, being Collections and Notes taken out of the best Authors, which had furnish'd him with his Materials for his six great Volumes since in print. He liv'd till he was 83 years old.

The *Spanish* College founded by Cardinal *Albernozzo* is a very handsom Structure, into which none being to be received but natural *Spaniards*, (except the Chaplains) and those to be Doctors of Law before they can be admitted. The intention of this Foundation was, questionless, to encourage the *Spaniards* to learn the Language and Custom of the Country here, and to perfect themselves in the study of the Law, the better to qualifie themselves to fill up the Vacancies in the Courts of Judicature in the *Milanese* and Kingdoms of *Naples* and *Sicily*. They have an annual Revenue of twelve thousand Crowns, keep two Coaches, and live very nobly. Hence it is that in this College you see the Pictures of many great persons, who have been Members of this College; and that of Cardinal *Albernozzo*, their noble Founder, in the Church. *The Spanish College.*

In the center of *Bologna* you see two Towers, one high and streight, call'd *De gli Asinelli*; the other low and bending, call'd *La Carissenda*: They would perswade us that this last was built so, by a peculiar piece of Workmanship; but, I think, its lowness is a sufficient Argument that the Architect finding it going on awry, thought it his best way to desist. *Two Towers.*

The Houses of *Bologna* being generally very fair Buildings, with their Doors and Gates commonly open into the Streets in the Summer season, these afford a very delightful prospect of their Courts, Porches and Gardens behind them to the Eye, and a most delicious smell of Jessomin, Orange, and other Flowers to the Nostrils. The best Palaces here are those of *Malvezzi*, *Campeggi*, *Pepoli*, *Fechinetti*, *Cospi*, &c. and these being well fill'd with Nobility and Gentry, the same afford a most glorious shew in their Coaches, in the *Corso* or Street where the *Tour à la mode* is made in the Evenings. *Their Houses.*

Their chief Trade here consists in Silks, Velvets, Olives, Leather-bottles, Gellies, Washballs, and little Dogs for Ladies. Of Provisions they have great plenty here, witness their *Salsicci* only, which are a *Regale* for a Prince. *Their Trade.*

They have also an *Academy of Wits*, known by the name of *Gli Otiosi*, or *Idle men*: From hence (I suppose) came forth these three excellent modern Authors of this City, *viz.* Cardinal *Bentivoglio*, the Marquess of *Malvezzi* and *John Baptista Manzini*; unto whom may also be added *Leandro Alberti*.

For the particular History of *Bologna*, I will refer my self to *Bartholomeo Galeotti* and *Giovanni Garzo*.

Having thus taken a full view of *Bologna*, and provided our selves with a *Bill of Health*, we got on Horseback, and in two days got to *Florence*. We found our first days Journey, by *Pianora*, *Loiano*, *Scarpo*, *l'Azino*, *Pietra Mala*, and over the *Apennines*, very tedious, but were towards night diverted with the sight of a Fire at two miles distance, which often appears here, especially in cloudy weather; I saw it plainly for an hour together of the same bigness, like *The Aire kindled.*

like the glowing of a Furnace, of a perfect round form, and not pyramidical, as other Flames are: The Country People call'd this fixed Meteor *La Bocca d'Inferno*, or *The Mouth of Hell*; the sight of which something allay'd the troublesomness of our Journey till we came to *Fiorenzuola*, where having passed the night, we went on the next morning by *Scarperia* and *Il Ponte*, and came in good time to *Florence*.

Fiorenzuola.

Florence.

Some Authors are of opinion that this City was built by *Sylla*'s Soldiers, (upon whom he had bestow'd this tract of Ground for their Services) at the joyning of the two Rivers *Arno* and *Munio*, and from thence gave it the name of *Fluentia* (as *Colleney* in *Germany* is nam'd *Confluentia* upon the same account) and that it was afterwards call'd *Florentia*, by reason of the flourishing condition of its Soil, as also from the flourishing Wits of the Inhabitants, who were in such esteem among the *Romans*, that they us'd to send their Children into *Tuscany* to be instructed in Learning and Religion.

St. Lawrence's Chapel.

During my stay at *Florence*, I took notice of the most remarkable things here, *viz.* the Chapel of St. *Lawrence*, which when finish'd, will be one of the best Pieces that Eyes can behold, the Sides, as well as the Roof, being to be cover'd with Jasper, *Lapis Lazuli*, and other precious Stones above the rate of Marble; and so finely polish'd, that Art seems to exceed the Materials. In the Niches which are round about the Chapel are to be plac'd the Statues (of Brass gilt) of all the Great Dukes in their Robes, and under each a Tomb, with a Cushion and Ducal Crown upon it; and between each of these Tombs, the several Arms blazon'd by precious Stones of the chief Cities under the Great Duke's Jurisdiction. It's above sixty Years since it was first begun, and yet only the Tomb of *Ferdinand* II. is perfectly finish'd, tho' above sixty Men are kept at work every day. The Cushion upon his Tomb is valued alone at sixty thousand Crowns; from whence you may guess at the rest. The Altar and Tabernacle are kept in the Great Duke's Gallery till the Chapel be finish'd.

The Church of St. Lawrence.

The Church of St. *Lawrence*, unto which this Chapel belongs, tho' not approaching in magnificence to it, yet is a very stately Building, design'd by *Brunelleschi*, the Roof whereof being supported by a double row of stately Pillars; and the Picture painted on the said Roof, over the Quire, representing the Day of Judgment, a rare Piece, done by *Pontorno*; as are the curious Pictures of St. *Anne* and our Blessed Lady in *chiaro è obscuro*. The two *Brazen Pulpits* wrought into historical Figures, are most artificial pieces, by *Donatello*. In the new Sacrifty (intended for the before-mention'd fine Chapel) the Bodies of the Princes of the Family of the *Medices* are deposited, till the Chapel be compleated: But that which is most surprizing, are four most excellent Statues, made by *Michael Angelo*, representing the *Day*, the *Night*, *Aurora* and the *Evening*, that of the *Night* being cried up for the rarest Piece that ever was made. In the midst of this Church, just before the high Altar, is interr'd *Cosmus*, sirnamed *Pater Patriæ*, he that first raised the *Medicean* Family. The Statue of *Paulus Jovius* the Historian, stands in the Cloyster joyning to the Church; and near it, you go up Stairs to the *Bibliotheca Laurentiana*, containing many rare Manuscripts, a Catalogue whereof, as well as of the Books, is printed *Amsterdam*, 1622, 8vo.

The Library

The Great Duke's famous Gallery in the old Palace is a very handsom Pile of Building, and in it a vast number of curious Pictures and Marble Statues of the *Medicean* Family, and Princes as well as other great men, famous either for Learning or Valour. Among the Statues I remember that of *Leda*, of *Diana*, of *Bacchus*, of *Hercules*, of *Scipio Africanus* in Brass, dress'd in the Habit of the ancient *Romans*; the Heads of *Cicero* and *Seneca*, that of *Michael Angelo Bonarota* in Brass, (of his own making) and the Head of *Brutus* the Murtherer of *Cæsar*, begun, but left unfinish'd, by the same *Michael Angelo*, the reason whereof the Sculptor himself has express'd in the following Distich underneath it:

M. *Dum Bruti effigiem Sculptor de marmore ducit,* A.
B. *In mentem sceleris Venit, & abstinuit.* F.

The four corner-Letters intimating, *Michael Angelus Bonarota Fecit.* Among the Pictures, I took notice of the following, renown'd for their Valour, *viz.* of *Hannibal*, of *Scipio* that vanquish'd him, of *Pyrrhus*, *Scanderbeg*, *Venerius*, *Alexander Farnese*, *Cortesius*, *Magellan*, *Andrea d'Oria*, *Gaston de Foix*, the Duke of *Alva*, *Anne de Montmorancy*, *Eccelino* the *Paduan* Tyrant, and many other brave Heroes. Among the Learned Men I observ'd the Pictures of these *Italians*, viz. *Petrarch*, *Ariosto*, *Joannes Casa*, *Poggio*, *Machiavel*, *Guicciardine*, *Jovio*, *Sannazario*, *Bocacchio*, *Platina*, *Brunelleschi*, *Michael Angelo*, *Raphael Urbin*, *Columbus*, *Americus*, and of *Galileo*, with many others.

The Armoury

From hence we passed into the Armoury, being three or four Chambers filled with exotick Curiosities, as with the Armour of many great persons, most curious Cymetars, Scabbards, Caps, Saddles, and abundance of *Turkish* Furniture set with *Turquoises*; a Fowling-piece, with a thick Barrel of Gold, valued at 1500 Pistoles; five Pistol-barrels set together, to be put into a Hat, and to be discharg'd at an Enemy as you salute him, whence they call them *Buona notte*; another Pistol with eighteen Barrels, to be us'd for defence in a Room; a little Brass Cannon, to be taken to pieces, and to be carried with ease upon the highest Steeple; the King of *Sweden*'s Cornet, taken in *Germany*; a Staff of white Cane, (once belonging to the Dukes of *Urbin*) on which are engraven in black the History of the *Apocalypsis*.

From the Armoury we were conducted into five Cabiners full of Precious Jewels, Pictures, and innumerable other Curiosities.

The first Cabinet.

In the first, in the middle of the Room, hangs a rare branch'd Candlestick of Amber; a Table of polish'd Stones of several colours inlaid into Birds and Flowers; the Head of *Tiberius Cæsar* in one *Turky* Stone as big as a Pullet's Egg; several little old Pagan Idols, &c.

The second Cabinet.

In the second Cabinet stand the two great Globes, made in the same Room; a Table of polish'd Stones representing a Town in *Bohemia*, with many other Figures, and having in the middle a natural Tree petrified, retaining the colour of Wood, and bright like the rest of the polish'd Stone. Some Statues in Porphyry of three or four Great Dukes, &c.

The third Cabinet.

In the third Cabinet they shew'd us another Table of polish'd Stones, representing the City and Harbour of *Leghorn*; a very large Ebony Cabinet set with precious Stones on the outside, and with the History of the holy Scripture, curiously done in miniature in divers little squares of rich Stones; on the top is a Clock, made in *Germany*, which no body dares to mend since it has been out of order. Within the Cabinet the whole Passion of our Saviour is most artificially cut by *Michael Angelo*, in Ivory, as they say, but I suppose it to be in white Wax; and our Saviour with his twelve Apostles in yellow Amber, the Heads being of white Amber. This Ebony Cabinet was the Present of the Elector of *Bavaria*, and valued at eighty thousand Crowns. We also saw here the Pictures of *Adam* and *Eve*, by *Alberto Darer*, valued at fifteen hundred Crowns; and the Original *Venus* of *Titian*, with many other Originals, and other foreign Curiosities.

The fourth Cabinet.

The fourth Cabinet, being a large Room call'd *Il Tribuno*, contains richer things than the rest, the Walls being cover'd with original Pictures of the best Masters of the World: Here you see the St. *John Baptist*, as also that of *Leo* X. with the two Cardinals *Julio Medici* and *Rossi* behind him, done by *Raphael*; that of *Southwel*, K. *Henry* VIII's Privy-Councellor, by *Hans Holbein*; that of our Lady, with our Saviour in her Arms, by *Andrea del Sarto*; and the Picture of Cardinal *Bentivoglio*, by *Vandike*; besides divers most curious pieces of Miniature. Here is also to be seen the famous Nail, half Iron half Gold, and two Shells of Mother of Pearl, with two Pearls sticking to them, as they grow naturally; two pieces of Emerauld Rock, one imperfect, the other quite finish'd and green: The two Cupboards within the Wall here contain great variety of fine Cups and Vessels of Crystal, Agate, *Lapis Lazuli*, and such-like curious pieces, valued at two hundred thousand Crowns. But what surpasses all, is the great Ebony Cabinet, valued at five hundred thousand Crowns, being full of ancient Gold, Silver and Brass Medals within, and set without with precious Stones, among the rest with a *Saphir* as broad as a Twenty-shilling piece, and half an inch thick; a Ruby as large as the former; an Emerauld valued no less than the others, and a Pearl of the bigness of an ordinary Walnut; not to speak of other lesser Stones, such as Diamonds, &c. Here also is the Table made of inlaid Work of precious Stones, as *Pearls*, *Rubies*, *Saphires*, *Cornelian*, *Emeraulds*, *Lapis Lazuli*, &c. done so artificially, that the Birds and Flowers are represented in their natural shapes and colours, as if they were painted; and in the center of it you see the Great Duke's Arms in precious Stones; they tell you that thirty Men were imploy'd in the making it for fifteen Years successively, and that it cost an hundred thousand Crowns.

The fifth Cabinet.

The fifth and furthermost Cabiner of this Gallery contains the Altar and Tabernacle before mention'd, belonging to the Chapel of St. *Lawrence*; the whole composure of which Altar and Tabernacle being for its curious Crystal

stal Pillars, with their *Capitelli* of Gold, the vast variety of precious Stones, with the uncommon contexture of other polish'd Stones, and many other curious inlaid Figures in the *Antipendium*, the most exact composure of Ingenuity and Riches that I ever met with, I will rather admire than pretend to describe.

The *Argentaria*. From hence being led thro' another quarter of the Palace, into the Great Duke's *Argentaria*, a great square Room, having twelve Cupboards as high as the Room it self, full of Plate of all sorts. In the first Cupboard we feasted our Eyes with a whole Service of Dishes, Plates, Spoons, Knives, Forks, and other Vessels of beaten Gold; a Bason and Ewre of the same Metal set thick with *Turquoises*; divers small Cabinets set with Gold and precious Stones; a *Turkish* Cymetar with a Scabbard and Handle of Gold, and beset with Diamonds and other Stones; two Swords with Hilts of Gold, beset with precious Stones, and a Dagger of the same richness. In another Cupboard we saw vast variety of Plate of all kinds; in another a Bridle and Saddle with Stirrops of Gold, set thick with *Turquoises*, Diamonds, Pearls, &c. In another Cupboard four large Silver Bed-posts, enamel'd in divers places: In another a very rich *Antipendium* for an Altar, all of beaten Gold, with the Picture of *Cosmus* II. in the middle of it, done most nicely in enamel'd Work, and his Ducal Crown set richly with Diamonds; and above it, all along the *Antipendium*, you see the following Inscription in letters compos'd of many Rubies, each being two fingers long:

COSMUS II. DEI GRATIA MAGNUS DUX ETRURIÆ EX VOTO.

In another Cupboard we saw the Foot of an *Elan*, and a Vizard cover'd with *Turquoises*, &c.

The great Hall. From this place we descended into the Hall, a very spacious Room, where the Country People dance every *Midsummer-day* before the Great Duke, and from thence came into the long *Corridor* or close Gallery, which runs from the new Palace to the old, over the River, and over the tops of Houses, which brought us into the new Palace call'd *Palazzo di Pitti*, because it was begun by *Luca Pitti*, but afterwards bought by the Mother of *Cosmus* II. and carried on to that perfection you now see it in, being one of the fairest Palaces of *Europe*, tho' it is not quite finish'd. The Design is to be a perfect Roman H, with double Rooms on all sides. The Front, unto which you ascend from the Street, has 22 great Windows in a row, all alike, and all of them cheek'd up on either side with fine Stone Pillars. This Palace, as well as most others in *Florence*, is built *à la maniera rustica*, as the *Italians* call it, viz. of rough-hewn Stones, not laid smooth, but advancing a little one over the other. Entring into the Palace, you see a fair Court, at the end of which stands a Fountain with a large Cistern, in which they keep Fish: The Court is square, being open only on that side towards the Garden, where it is also enclos'd by a Terrass of Stone, the top whereof is upon the same level with the ground of the Garden. Beyond this Terrass you see a delicious, fine, green spot of Ground level with the first Story of the Palace, being half encompass'd by a Demi-circle of Laurel-trees, under which are six rows of Stone Seats rising one above the other, (like those in the old Amphitheatres) capable of containing two thousand persons sitting, with conveniency for the Nobility and Gentry to behold the Exercises of the young Noblemen, perform'd here in the presence of the Great Duke and his Court, who look at them from the Windows of the Palace. The rest of the Garden is adorn'd with most curious Walks, affording a pleasant Shade, and overlooking the Town and Country, divers spacious Ponds, a great number of curious Statues of Marble and Stone, many Fountains, a rare Ice-house and cool Cellar, where the melting Ice dropping upon the Pipes of Wine, make the Liquor cool beyond whatever I could meet with in any Cellar before or since.

The long *Corridor*.

The new Palace.

The Garden.

The Duke's Lodgings. From the Garden we ascended into the *Great Duke's* Lodgings, which we found very magnificent both in the Building and Furniture, some of them being finely painted above the Hangings by *Pietro di Cortona*, the best Painter now living; others staying for his return from *Rome*. In one Chamber we saw a rare piece of Painting, representing *Seleucus* surrendring to *Antiochus* his only Son (who languish'd for love of his Mother-in-law) his Queen *Stratonica*. In the Chamber of Audience we were shewn a Suit of Hangings valued at 150000 Crowns, the ground being of Cloth of Gold, embroider'd with Birds, Beasts, Flowers, Trees, Rivers, Landskips, &c. in Silk and Silver; and in the Duke's Bedchamber we saw divers most curious *Thermometers* or Weather-glasses. The Apartment of Prince *Leopold* the Great Duke's Brother, containeth the best collection of Pictures that ever I saw, all Originals, by the best hands, as *Titian*, *Raphael*, *Michael Angelo*, *Andrea del Sarto*, &c. but that of *Raphael* excels the rest.

From another Room we could see thro' sixteen Lodging Rooms at once, belonging to the Prince, Son to the Great Duke, to Cardinal *John Carlo*, Prince *Matthias* and Prince *Leopold*, (all three Brothers of the Great Duke) and by most special favour got sight of the Great Duke's noted Diamond, which he keeps under Lock and Key himself; it is without question the finest in *Europe*, almost an inch thick, and weighing 138 carats. I shew'd the weight and thickness thereof to a great Jeweller of *Lyons*, named Mr. *Simonet*, who told me, that according to its right computation it was worth richly a hundred thousand Crowns betwixt Jeweller and Jeweller, and a hundred and fifty thousand Crowns betwixt Prince and Prince.

The *Augustins* Church. Coming from the *New Palace*, we soon fell upon the *Augustins* Church, a beautiful Structure, design'd by *Brunelleschi*; the Tabernacle and high Altar (one of the best in *Italy*) having cost an hundred thousand Crowns. Behind the said Altar is a rare piece of *Allori*, representing the Woman (with all possible marks of confusion in her Face) catch'd in Adultery, and receiving the absolution from our Saviour's hands.

The Piazza. From hence passing over the Bridge (where you see four white Marble Statues representing the four Seasons of the Year) which brought us into the *Piazza* of the *Gran Duca*, we saw here the *Equestrian Statua* of *Cosmus the Great* in *Bronze*, with his chief Actions in the *Pedestal* of the same Metal; and at the corner of the *Old Palace*, in this *Piazza*, a noble Fountain, with a *Neptune*, *Triton* and *Nereides*. Near the Gates of the same Palace stand the two Statues of *David* and *Hercules*, both of a Gygantick stature, the first the Work of *Michael Angelo*, the second of *Bandinelli*. The Statues of *Perseus* in Brass; the Rape of the *Sabins* in Marble, and that of *Judith* in Brass, in the Portico hard by, are also esteem'd most excellent pieces.

Looking up from the *Piazza* to the top of the Palace, I took notice of a high Tower thereupon, being a hundred and fifty yards high from the ground, without any other support than the Wall and top of the Palace, this being the chiefest of the three wonderful Towers among the *Florentines*, one whereof, they say, stands in the Air, which is this; another in the Water, viz. the *Fanal* of *Leghorn*; and the third in the Earth, to wit, the *Campanile* of *Florence*, the Foundations whereof are very deep in the ground.

The Church of St. Mark. As we came from the *Piazza* towards the *Domo* or *Cathedral*, we saw in our way a square flat Church, adorn'd with Statues on the outside, call'd St. *Michael*'s Church: The choicest among these Statues are, that of St. *Matthew* in Brass, and that of St. *Thomas*, of the same Metal, touching our Saviour's side, with a great deal of diffidence in his looks, done by *Andrea Verrocchio*: That of St. *Peter*, and that of St. *George*, are both of Marble; the first being highly valued for its Drapery, the other standing in competition with the best in *Rome*: That of St. *Mark* is highly valued for its honest countenance, and upon that score much applauded by *Michael Angelo* himself.

The Cathedral Soon after we came to the *Domo*, perhaps the finest Church in *Italy* at the time of its building, its Architecture being one of the most compleat (*a la maniera rustica*) that ever was design'd, being contriv'd by *Arrolfo di Lapo* a *Dutchman*. It was anciently known by the name of St. *Reparata* Church, but has since got the name of St. *Maria Florida*. Its outside is certainly the neatest and fairest that can well be seen, being cover'd with red, white and black Marble, but only with Plaister-work within; and the Pillars are of a dark-colour'd Freestone. But what is most remarkable in this Church, is the *Cupola* on the top of it, made by *Brunelleschi* a *Florentine*, which being the first in *Europe*, and consequently the original Pattern of that of St. *Peter*'s at *Rome* it self, and many others, deserves the greater admiration. It is from the ground below it to the top of the Lantern no less than 202 *Braccie* or small yards high; the strait passage from the top of the *Cupola* to the round Ball of Brass, is 36 yards high; the Ball it self has four diameter, capable of holding four and twenty men, and the Cross at the top of this Ball eight yards long: The strait passage up to the Ball is made in form of a round Chimney, of white Marble with holes on both sides, and Steps of Brass cross those holes, for the conveniency of climbing up by Hand and Foot thro' this passage, which is very smooth and well kept.

Having from the top of this *Cupola* taken a view of the City of *Florence* and the most delightful circumjacent Villa's, we descended into the inside of the Church, which we found three hundred foot long long, from the great Door

Door to the Quire, and thence to the end near two hundred more. The Quire, which is round, ſtands perpendicularly under the *Cupola*, and is of the ſame bigneſs. The high Altar ſtanding in the Quire is plain, like in moſt other ancient Cathedrals, adorn'd with a moſt excellent Statue of a dead Jeſus, in Marble, made by *Bandinelli*. On the Roof of the *Cupola* are repreſented in painting, Heaven, Hell and Purgatory, done by *Georgio Vaſari* and *Taddeo Zuccheri*. Neither muſt the moſt exquiſite Statues of *Adam* and *Eve* behind the Altar (the Work of *Bandinelli*) be paſs'd by in ſilence. Near the Door of the Sacriſty you ſee an Inſcription concerning the General Council of *Florence*, where, as they ſay, the Re-union of the Latin and Greek Church was effected: The golden *Diploma* of this Union, written both in Greek and Latin, and ſubſcrib'd unto by the hands of Pope *Eugenius* IV. and Cardinals on one ſide, and *Paleologus* the *Conſtantinopolitan* Emperour, with the Patriarch of *Conſtantinople* and the Greek Biſhops (except only *Marcus Epheſinus*) on the other ſide, beſides many of the *Armenians*, *Ethiopians*, *Georgians* and *Jacobites*, unto which are put the Leaden Seal of the Pope, and the Golden Seal of the ſaid Emperour; is preſerv'd among the Records of *Bologna*. This Church contains alſo (beſides the Statues of divers Saints, formerly Archbiſhops here) the Tombs of many famous perſons, as of *Marſilius Ficinus*, of *Dante* the *Florentine* Poet, with his true Picture; of *Joannes Acutius* an *Engliſh* Knight, and Commander in chief of the *Piſani*, as the ancient Gothick Letters upon the Wall under his Picture on Horſeback intimate. His Picture is alſo preſerv'd in the Great Duke's Gallery. In this Church you ſee alſo the Tomb of *Brunelleſchi*, the Architect of the *Cupola* of this Church; and that of *Giotto*, who built the fine *Campanile* or Steeple of *Florence*; as likewiſe of *Cimabue*, who firſt reviv'd Painting in *Italy*.

See Lamar. Anno. Deſcription of Italy.

The Council of Florence.

Near the Cathedral ſtands the *Campanile* or high Steeple of *Florence*, being one hundred and fifty *Braccie* or little Yards high, and half as deep in the Ground. It is flat on the top, but cover'd all over with fine poliſh'd Marble, and great variety of Marble Pillars and Statues, among the laſt of which, that of the *Zuccone* or *Blind-man* (the Work of *Donatello*) excels the reſt. But what is moſt ſurprizing, is, that notwithſtanding the curioſity of this Steeple, not the leaſt part thereof has periſh'd in above three hundred years time.

The Baptiſterium.

Not far hence ſtands the *Baptiſterium*, or round Church of St. *John*, where all the Children of *Florence* are baptized. It is chiefly famous for its three pair of Braſs Doors moſt artificially caſt or wrought into hiſtorical Figures of both Teſtaments, the Work of *Laurentius Cion*, who ſpent fifty years in making them: That pair which looks towards the *Domo* was valued at ſo high a rate by that great Maſter *Michael Angelo*, that he us'd to ſay, they were fit to ſtand at the entrance of *Paradiſe*. In this Church you ſee the Statue of *Mary Magdalen*, a moſt excellent piece of *Donatello*; and that neat Tomb of *Baltaſſar Coſſa*, afterwards Pope *John* XXIV, who being depoſed, died at *Florence* in *John Medices*'s Houſe, and making *Coſmus Medices* (afterwards ſtiled *Pater Patriæ*) his Heir; he by his vaſt Wealth laid the foundation of the *Medicean* Family. And here I can't paſs by in ſilence a ſmall round Pillar, ſtanding in the *Piazza* near the *Baptiſtery*, with the figure of a Tree in Iron nail'd to it, and an Inſcription engraven upon it, importing, that a certain Elm-tree, which anciently ſtood in this ſame place, being accidentally touch'd by the Hearſe of *Zenobius*, the Tree budded forth green Leaves, tho' in the month of *January*.

The Church of St. Mark.

In the Church of St. *Mark*, belonging to the *Dominicans*, is to be ſeen the Tomb of St. *Antoninus*, (once Archbiſhop of *Florence*, and a Monk of this Order) under the Altar; as alſo the moſt exquiſite Picture of St. *Mark*, done by *Bartholomeo del Frati*, juſt oppoſite to the great Door, on the left hand of which, as you enter, is the Tomb of *Picus Mirandula*; and near it, upon an Altar, two Angels painted playing upon Muſical Inſtruments, eſteem'd the rareſt pieces in painting that can be ſeen, done by *Bartholomeo del Frati*.

The Annunciata.

Turning from hence to the left, we ſoon came to the *Annunciata*, where we ſaw the curious Picture of Faith and Charity over the Arch in the open Porch built upon Pillars, done not above nineteen Years before by *Jacomo Pontormo*, highly applauded by *Michael Angelo*. The little Court before the Church-door is painted all about in *freſco*, by the beſt hands, the Pieces done by *Andrea del Sarto* (whoſe Head in white Marble you ſee here in the Wall) exceeding the reſt: And in the Cloyſter, over the Door that goes into the Church, you ſee upon the Wall a moſt curious piece, done by the ſame *del Sarto*, repreſenting the Virgin *Mary*, with our Saviour upon one Knee, and *Joſeph* riding upon a Sack full ſtuff'd, and reading in a Book: This Piece, call'd *La Madonna del Sacco*, got ſuch Reputation to *Andrea*, that *Vaſari* declar'd often, he had never ſeen any thing like it; and *Michael Angelo* talking one day in *Rome* with *Raphael Urbin* concerning painting, ſaid, *There is a little fellow* (meaning *Andrea*) *in Florence, who, had he been put upon matters of the ſame conſequence as thoſe he has been, would make thee ſweat again.* Certain it is that *Urbin*, *Andrea*, and *del Sarto* are, by the *Virtuoſi* of *Italy*, almoſt eſteem'd at an equal rate; the firſt being moſt excellent in *Colours*, the ſecond in *Deſign*, and the laſt in *Relievo*, to make them appear natural, and riſing up like living Fleſh.

Within the Church we ſaw the curious Silver Altar, behind which, upon the Wall, is kept the Picture of the *Annunciation*; the little Picture of our Saviour of a foot and a half long: On the outſide of the Tabernacle is alſo a rare Piece, of *del Sarto*'s hand. In this Church you ſee alſo the Tomb, of Marble, of the famous Sculptor *Baccio Bandinelli*, with his own and his Wives Pictures engraven in Marble by himſelf. Behind the Quire is the Tomb of another celebrated Sculptor, to wit, of *Joannes di Bologna*, as ſeveral of his curious Works in *Florence* ſufficiently teſtifie.

Santa Croce.

From the Church of the *Annunciata*, paſſing by the Statue of Braſs of great Duke *Ferdinand*, in the *Piazza* before this Church, we went to that call'd *Santa Croce*, belonging to the *Frati Minori*, is both high and large, but ſomewhat dark, being fill'd on all ſides with many Altars check'd with round Pillars, and beautified with rare Pictures. In the white Marble Pulpit are engraven the moſt memorable Tranſactions of St. *Francis*, in *Baſſo relievo*. Near a little Door behind this Pulpit is the Tomb of *Michael Angelo*, the greateſt *Painter*, the moſt curious *Sculptor*, and the greateſt *Architect* of his time. Hence you ſee under his Picture three Statues of Women, ſignifying *Architecture*, *Painting* and *Sculpture*, with the Inſtruments belonging to their reſpective Profeſſions in their hands. In the midſt of the ſame Church lies interr'd the Body of an *Engliſh* Biſhop, call'd *Cromer*, who had been here in the quality of Ambaſſadour from *England*, perhaps in the time of the Council of *Florence*; his Arms were three Cats Argent in a Sable Field.

The neat and well-painted Chapel of the *Nicolini*, adorn'd with divers excellent Statues, is to be ſeen on the left hand, at the very end of this Church.

The Abbey of the Benedictins.

Near this Church ſtands the Abbey of the *Benedictins*, in the Church whereof is to be ſeen the Tomb of Count *Hugo*, a famous *German* Nobleman, who govern'd *Tuſcany* under the Emperour *Otho* III. The occaſion of founding this Abbey, and many other Monaſteries, by the ſaid *Hugo*, is every Year (viz. on St. *Tecla*'s Day) publickly told here at large by ſome one or other of the beſt Wits of the Academy of *Crusca*.

The Church of St. Maria Novella.

In the Church of St. *Maria Novella*, belonging alſo to the *Benedictins*, the above-mention'd Council of *Florence* was held. Among divers good Pictures and fine Tombs, that of *Joſeph* Patriarch of *Conſtantinople* excels all the reſt.

Returning thence by the River-ſide, we paſs'd by the high Pillar having the Statue of Juſtice in Porphyry ſtanding upon it; of which a certain Gentleman ſaid, that it was too high placed for poor men to reach it; and another made this obſervation, that it ſtood with his Back turn'd towards the Courts of Juſtice, which are not far thence.

Poggio Imperiale.

We now thinking it high time to take a turn without the Town, we went to the *Poggio Imperiale*, a Villa belonging to the Great Dutcheſs, not above a mile from the City, having great ſtore of rare Pictures. In one Gallery we ſaw the original Pictures of divers Princes of the Houſe of *Auſtria*, and of the Houſe *de Medices*, and of other Princes their Allies. In the other Rooms were to be ſeen (among a great number of others) the *Venus* of *Titian*, tho' I believe this to be only a Copy; the admirable St. *Hierom*, of *Alberto Durco*; a *Magdalen* by *Raphael*; a St. *John Baptiſt* by *Caravagio*, and an *Adam* and *Eve* by *Durco*; another moſt ſurprizing piece, of the Virgin *Mary*, with our dead Saviour upon her Knees, St. *John* the *Evangeliſt* and three other perſons ſtanding or kneeling by, with tears in their Eyes, and moſt dejected Countenances; a piece of *Pietro Erugino*; the Picture of the Aſſumption of our Lady in the Chapel, by *del Sarto*.

The little Apartment call'd the *Great Dutcheſſes Oratory*, for its well-poliſh'd Marble Walls inlaid with curious Flower-works, is certainly the neateſt Cloſet I ever ſaw; and the little pleaſant Grotto, and the Statue of *Adam* made by *Michael Angelo*, deſerve alſo to be mention'd in this place.

Another time we took a view of the Great Duke's Villa ſix miles from *Florence*, call'd *Pratolino*, the Gardens whereof

whereof, with its most excellent Grotto, Fountains, Waterworks, Walks, Groves, &c. are all upon the side of a Hill. The *Grotto* of *Cupid*, and the Fountain of the *Tritons*, as well as those Springs among the Lawrel-trees, wet you soundly as you walk along; and in the Grotto under the Stairs you see many *Guiochi d'Aqua*, as they call them; as that of *Pan* playing upon his Bagpipe, of an Angel sounding a Trumpet, several Mills, and the *Saracens* Head spouting out Water; *Galatea* coming out of her *Ghotto* in a Sea-chariot with two Nymphs, and after having swam a while upon the Water, returns into the same Door: A round Table capable of holding twelve or fifteen persons, with a Fountain playing constantly in the midst of it: The *Samaritan* Woman coming to fill her Buckets with Water, and then returning back again. You see also Smiths knocking, Birds chirping, and Mills grinding, all done by Water, which sets these Engines at work. The neat Bathing-place, the Pillar of petrified Water, and large Pond before the House, with the huge Gyant, within whose Thigh is a Grotto of Water call'd the *Grotto* of *Thetis*, are also highly worth taking notice of.

Lampeggio. We also took a view of the Villa of Prince *Matthias*, call'd *Lampeggio*, about five miles from *Florence*, where we saw most curious Pictures, especially Battels, of the hand of *Tempesta*; a most rare Cabinet of Coral and enamel'd work; a neat Armoury, and divers other pieces of Curiosity.

The Stables, and Menagerie of Wild Beasts. In our return to the Town we saw the Great Duke's Stables, well stor'd with fine Horses; and near to the Stables the Garden, where the wild Beasts are kept in their Dens, from whence they can be brought out into a fair Court to fight, which when it is over, they are frightned into their Dens again, by a certain Engine in the shape of a Dragon, moving upon Wheels, with a Man within the concavity of it, holding out lighted Torches at the Eyes.

See *Brown's Travels.*

I had also the opportunity of being present at divers of their Festines, which all the Noblemen keep during the Winter, when every one in his turn invites the chief (married) Ladies of the Town, to spend the Winter Evenings in playing at Cards. At this time all comers and goers, of both Sexes, that are of any garb, are admitted, the Doors being set open in eight or ten Chambers going out of one another, with a square Table in each, holding about eight persons, as many Chairs, two Silver Candlesticks with Wax Lights, besides many other Lights all about the Room. The Company being come, they sit down to play, a Gentleman sitting between every Lady, the Women being as fine as Jewels and Clothes can make them, and any Gentleman being allow'd to stand behind them and see with what decency they play, and for how little, there being a great Room fitted on purpose, with a long Table, below Stairs, for such Gamesters as have a mind to play only for Moneys sake. There is also a side-Chamber open for Gentlemen to refresh themselves in, with Wine standing in Snow, with Limonade and cooling Drinks, which they also offer to the Ladies.

Their Sports. As the *Florentines* have for a considerable time enjoy'd the fruits of Peace, so they are much addicted to Recreations: They have in the Winter a certain Play call'd *Giuocho di Calcio*, much like our Football, but that they play it with their Hands. Every night, from *Epiphany* till *Lent*, they divert themselves with their *Principi di Calcio*, which being a thing peculiar to *Florence*, deserves to be mention'd here.

They divide themselves into two Companies, viz. the *red* and the *green*, each of which chuses a Prince, some Gentleman of a good Estate; these Princes being chosen, lodge for the time in some considerable House, elect Officers, keep their Courts, give Audience to one another's Ambassadours, complain of one another's Subjects, give Orders for settling their affairs, hear the Complaints of their Subjects, jeer one another in their Embassies, and after Redress demanded and refused, proclaim War. During these Transactions, in which they spend their Winter Evenings, the Secretaries of State (two of their best Wits) read each before his respective Prince, divers Bills for regulating Abuses, and many Petitions and Advices upon that subject, taking this opportunity to jeer the Abuses of the Town with a prodigious deal of Wit. Thus having passed on their time till the Carneval, both Princes appoint a Battel at *Calcio*, to be fought in the *Piazza* of *Santa Croce*, where both Princes, with their Attendance, being come at the appointed time, richly apparel'd, on Horseback, distinguish'd by their green and red Scarfs about their Arms, they make their several Cavalcades before the Great Duke's Scaffold, and then alighting from their Horses, they enter, with their sumptuous train of young Gentlemen and rich Liveries, the List under the sound of Trumpets; and having laid their Standards at the Great Duke's Feet before his Scaffold, the Ball or Ballan is thrown in the midst among them, which they manage to and fro with excessive nimbleness and skill, and sometimes stand to it so close, that they don't come off without cuffs, but no man must resent afterwards what passes in the Lists, upon pain of Death. In fine, that side which can strike the Ball first over the Rails of the other side gets the day, and running to the Standards, carry them off. The whole is concluded at night by a Ball at Court, which the Prince of the conquering party gives to some Ladies, and where all his chief Officers dance alone with the Ladies, none else being admitted to that Honour this night.

Besides these Diversions, they have constantly once a week a Ball at Court, from *Twelfth-day* till *Lent*, where all the married Ladies of the Town are invited by a Ticket.

Their Opera's are also acted with singular Art about this time; and they have their running at the Ring, or at the *Fanchin*, for a piece of plate. In the Summer-time they have their set dancing days, their frequent *Corsi di Palio*, or running of Horses for Prizes, before their Prince, who thinks it his Interest to divert the minds of his Subjects by these Diversions from entring into Cabals against the State.

The Court of *Florence*. As for the Court of *Florence*, it is one of the best of *Italy*. The noble Palaces, the numerous train of noble Officers and Gentlemen, with a good number of Pages, Palfreniers, Guards of *Swiss*, &c. make it appear very splendid; but the greatest Ornament of this Court was the Duke's person, whose extraordinary Civility in admitting of the Visits of Strangers, if they be of any condition, makes this Court very agreeable to all. He not only entertain'd us with a great deal of good Discourse in his Apartment, but also sent us a *Regalo* of the best Meats and Wines to our Lodgings. The Name of this Family is *Medices*, which has given no less than four Popes to the Church, and two Queens to *France*, and is originally descended from *Athens*, but being grown considerably during the Republick of *Florence*, was first raised to a more than ordinary pitch of greatness by *Cosmus Medices*, who having bestow'd part of his vast Wealth in publick and private Buildings, and lending Money to the poor Citizens, did thereby raise a strong Faction against him, which prevailing, they clapt him up in Prison, with an intent to take away his Life; but being, by the means of a vast present, escap'd out of Prison, retir'd to *Venice*, from whence having been recall'd not long after, he was not only restor'd to his former station, but also dignified by the common people with the Title of *Pater Patriæ*, which at last got the Soveraignty into his Family, the Government of *Florence* being now Monarchical and Despotical, where the Great Duke's Will is instead of a Law. This State has at present twenty Episcopal Cities, five hundred walled Towns, twelve Gallies, and about twenty Ships of War. As for the Inhabitants, the happiness of their Climate has made them naturally ingenious, as their good management has stor'd them with Riches, the Nobility and Gentry here thinking it no disparagement to their Quality to exercise their Stock by trafficking, by which means they often purchase considerable Offices for their Children, and make them rise now and then to high Dignities.

The Inhabitants.

The Yearly Revenue of the Great Duke is computed at a million and a half *Piastri*, each Piaster being something more than our Crowns; besides his Jewels, Forfeitures, and *Datii*; which last are a considerable addition to his Revenue.

His Interest being with the *Austrian* Family, he consequently stands well with the *Spaniards*, yet so, as to maintain a good correspondence with *France*, it being his Interest to be against a War in *Italy*, as having a great deal to lose.

The Language of *Florence* is the purest in *Italy*, but this is in their Books, for they speak much in the Throat. The Academy of Wits, call'd the *Crusca*, has contributed much to the enriching of this Language with a great number of choice words, by their famous Dictionary, call'd from them the *Crusca*, which could not be brought to perfection in less than forty Years.

The Language.

The Learned Men of this City in latter times are, *Marsilius Ficinus*, *Dante*, *Petrarch*, *Guicciardine*, *Poggio*, *Vespucius*, *Accursius*, *Michael Angelo*, *Joc. Casa*, *Nectantus*, *Galileo*, *Doni*, *Luigi*, *Alemanni*, and others. The History of *Florence* may be read in *Giovanni Villani*, *Matthæo Villani*, *Scipione Ammirato*, and in the Life of *Gran Cosmo*.

Having thus far satisfied our Curiosity in taking a full view of fair *Florence*, we resolv'd to make an excursive Voyage for the same purpose to *Leghorn*, by the way of *Pistoia*, *Lucca* and *Pisa*.

Pistoia

Pistoia is a very ancient City, having nothing remarkable in it now, but that Pope *Clemens* IX, of the ancient Family of the *Rospigliosi*, was born here; it being for the rest, either by its nearness to *Florence*, or by its Civil Distractions, reduc'd to a very ruinous condition.

Pistoia.

As for *Lucca*, it is a very pretty little Commonwealth, seated within the Territories of the Great Duke of *Florence*, govern'd by a *Confaloniero*, and a Council of its own, consisting of one hundred and sixty persons chosen out of the Citizens every Year. The Town, which is three miles in circumference, and is fortified with eleven Bastions faced with Brick, surrounded with a broad Ditch, and encompass'd with Trees, has altogether the resemblance of one of the *Dutch* Cities, and is computed to contain about thirty thousand Souls in its circuit, and to have about five hundred thousand *French* Livres for its Annual Revenue. The Arsenal contains thirty thousand Musquets, eight thousand Pikes, and two thousand pieces of Armour, besides good store of great Artillery.

Lucca.

Its Strength.

Churches.

The Cathedral here is dedicated to St. *Martin*, the Bishop whereof has all the Ensigns of an Archbishop, and the Canons in the Quire appear with Miters like Bishops. The *Confalonier* resides, during his Charge, in the Town-house. In the Church of St. *Frediano*, belonging to the *Canon Regulars*, you see the Tomb of St. *Richard* King of *England*, who died there in his Pilgrimage to *Rome*. In the *Augustins* Church they shew you a hole where the Earth open'd to swallow up a blasphemous Gamester.

Pope *Lucius* III. was a Native of *Lucca*, as were the brave *Castruccio*, and the learned *Pagninus*, a great Hebrecian.

Camagior, Viareggia, Montignose, Castiglione, and *Minuciano*, are also under the Jurisdiction of this small Republick.

From *Lucca* we travel'd ten miles further to *Pisa*, once the Head of a most flourishing Commonwealth, but since subject to the *Florentines*. Its situation in a very bad Air makes it but ill inhabited now.

Pisa.

The *Domo* or Cathedral, built *à la maniera Tedescha*, (introduc'd by the *Germans*) is a very neat Structure, its three brazen Doors being full of excellent Figures in *basso relievo*, near which you see a Tower, so artificially contriv'd, that it seems to be falling; and on the other side of it is the *Campo Santo*, a Square cloyster'd about with two Cloysters, but excellently well painted, having got its Name from the Holy Earth brought from *Jerusalem* by fifty Gallies belonging once to this Republick, 1224, of which they made this Square.

The Cathedral and beaning Tower.

Here also we saw divers good Colleges, but few Students, a handsom Library, and a Physick-Garden.

Here the Order of St. *Stephen* (the only in *Florence*) have their Residence, the Knights whereof wear a red Sattin Cross upon their Cloaks; their Profession is to fight against the *Turks*; they have a very goodly House, wherein they live in common, and have a sufficient maintenance. Their Church is remarkable for its *Facciata*, of white Marble, and a multitude of *Turkish* Ensigns within it; and in their Treasury they shew'd us a great Buckler all of Pearl and Diamonds, taken formerly in the Battel against the *Turks*. In their Records they preserve the Names of all such Knights as have done considerable Services against the Infidels, to excite others to follow their laudable Examples. They are at liberty to marry, but most of 'em prefer a single life before it. At *Pisa* were call'd two Councils, one 1409, the other 1511.

From *Pisa* travelling thro' a pleasant Forrest, we came to *Leghorn*, (*Portus Liburnus*) the only Harbour belonging to the Great Duke of *Florence*; it is of no large extent, but perhaps the neatest Seaport Town that may be seen; and very populous since the unwholsomness of the Air, occasion'd by the circumjacent Seas, has been corrected, by dreining and conveying the Waters thereof into a cut Chanel which reaches from hence to *Pisa*, and carries Boats of a good burthen. Within the compass of the great Haven is a lesser one, for the Gallies: The first is secur'd by a Mole, and a Lantern with seven Lights. The Statue of *Ferdinand* I. in Marble, with four *Slaves* in *bronze* (who would have row'd away in a Galley) at his Feet; the Greek Church, the Castle, the Gunpowder Tower in the Sea, the *Jews* Synagogue, and lastly, the two Windmills here, (rare things in *Italy*) are worth a Stranger's observation.

Leghorn.

As good Bargains are prefer'd in this place before good Books, so there is no *Academy of Wits*, or any other Record of Learned Men of it.

From hence we return'd to *Florence*, where having rested our Horses two days, we set out for *Rome*; and passing three miles beyond *Florence*, under a Monastery of the *Carthusians* seated upon a round Hill, and thro' St. *Cassian* lodg'd at night at *Poggio-bonzi*, a little Town, famous only for the making of perfum'd Snuff of which the *Italians* and *Spaniards* are very fond, and the next day by Noon reach'd *Siena*, now the second City in the *Florentine*, and once the Head of a considerable Commonwealth, till it was forc'd to submit to the *Florentines*, 1555. It has got its Latin Name (*Sena*) from the *Galli Senones*, who coming with *Brennus* into *Italy*, were the Founders thereof. Its Streets are neatly pav'd with Bricks set edge-way, and the wholsomness of the Air, fruitfulness of the Soil, and sociableness of the Inhabitants, makes this place much frequented by Strangers in the Summer-time.

Poggi Bonzi.

Siena.

The Cathedral here, built *à la Tedescha*, of black and white Marble both without and within, is one of the neatest Buildings in all *Italy*; its Frontispice being most curiously carv'd, and beautified with many Statues; the only defect it has being the smallness of the *Piazza*, which robs it of part of its Grace. In the inside, immediately under the Roof, you see the Heads of all the Popes in white Marble; but what is its chief Ornament is the Floor or Pavement, of Marble inlaid with Figures of Marble of divers sorts and colours, which making the shadows, produce such a kind of most curious Mosick Work, as no body hitherto has had boldness enough to attempt to imitate, or to finish that part of it which remains undone. It was begun by *Duccio Senese*, and carried on by *Dominico Beccafumi*, or, as some say, by *Marchesini*, but left unfinish'd. That part which they shew'd us uncover'd (it being all cover'd with Boards) represented the History of *Abraham* going to sacrifice his Son *Isaac*, and that of the *Maccabees*. Turning to the left within the Church, you see the Library, rarely painted in *fresco*, by *Pietro Perugino*, *Raphael's* Master, representing the Actions of *Æneas Sylvius*, afterwards Pope *Pius* II. And in the same Chapel you see the Statues of the Popes *Alexander* III, *Pius* II, *Paulus* IV, and of *Alexander* VI, all Natives of *Siena*. The Chapel here, erected in memory of St. *Katherine* of *Siena*; the great Hospital; the Palace of *Pius* II, of the Family of *Piccolomini*; the great Piazza; the Pillar with the Wolf of Brass upon it; the Marble Pillar near the Gate as you come from *Florence*, with the *Imperial* and *Portuguese* Arms upon it, (erected in memory of the Marriage celebrated here, betwixt the Emperour and *Eleanora* of *Portugal*, in the presence of *Æneas Sylvius* then Archbishop here) are worth the Curiosity of a Traveller.

The Cathedral.

Library.

The Academy of Wits of this place have given themselves the illustrious Title of *Gli Intronati*, for what reason I know not.

Academy.

In this place was held the General Council, consisting of 130 Bishops, call'd by Pope *Nicholas* III. St. *Bernardin* the Reformer of the *Minorites*, St. *Katherine*, and *Bernus Columbanus*, the Founder of the Order of the *Feuillans*, were of this place; as also *Alexander* III, of the Family of the *Bandinelli*; *Pius* II, of the *Piccolomini*; *Paulus* V, of the House of *Borghesi*; and *Alexander* VII, of that of *Chisi*, all four Popes. *Ambrosius Politi* and *Adrianus Petri*; the first whereof has render'd himself famous by his Writings against *Luther*, the other by his *Dictionary*; were both Natives of *Siena*, the History whereof may be seen in *Orlando Malavolto*.

Council.

From hence we continued our Journey thro' *Buon Convento*, *Torrenieri*, and St. *Quiricke*, to *Radicofani*, a strong Castle built by *Desiderius* King of the *Longobards*, upon a high Hill, being now the last place under the Jurisdiction of the *Florentines* on this side. Having taken our Dinner here, we went on to lodge at *Aquapendente*, about twelve miles off, the first Town belonging to the Ecclesiastical State, seated upon a Hill, and of late years dignified with the Title of a Bishop's Seat, which was transfer'd thither from *Castro*, after its demolishment by the Pope's Order.

Aquapendente.

From hence passing thro' St. *Lorenzo*, we came no long after to *Bolsena*, (*Urbs Volsinensium*) where the famous Miracle was wrought, 1263, which gave occasion to Pope *Urban* IV. to institute the Feast of *Corpus Christi*, as may be seen in *Leandro Alberti* and *Onuphrius Panvinus*, in his Life of Pope *Urban* IV. We travel'd on along the Lake of *Bolsena*, in the midst of which is a small Isle, wherein *Amalasuinta* Queen of the *Ostrogoths* is said to have been murther'd by her next Kindred.

After we had passed for a considerable time along this Lake, we entred a Wood call'd anciently *Lucus Vulsinensium*, and now *Bosco Helerno*, formerly a dangerous Passage because of the Banditti, before they were extirpated out of the Ecclesiastical State by Pope *Sixtus* V, by promising a Pardon, and a Recompence of some hundred Crowns for the Head of every Banditti that should be brought.

No.

Montefiascone No sooner had we pass'd this Wood, but we reach'd *Montefiascone*, seated upon a Hill, and a Bishop's Seat, but chiefly famous for its excellent *Muscatello* Wine.

In a Church here, at the foot of the Hill, you see the following Inscription,

Propter E S T, E S T,
Herus meus mortuus est.

upon the Tomb of a certain *Dutchman*, who drank himself to death here, it being his custom to send always one of his Servants before to try the best Wines in the Inns, and to mark such Inns as had the best Wines with the word *E S T*.

It was here also that *Camillus* shew'd his Generosity at the Siege of *Phalisium* (the ancient Name of this place) when he caus'd the Schoolmaster, who would have betray'd the Town to him, to be whipt back by his own Schoolboys.

Viterbo. From thence descending the Hill, we came to *Viterbo*, an Episcopal Seat in a very wholsom Air, with most excellent Fountains; it was ruin'd by the two Factions of the *Gatti* and *Maganesi*.

In the Cathedral and the *Franciscans* Church you see the Tombs of several Popes; and in the last, the Body of St. *Rosa* entire.

The *Academy of Wits* here call themselves *Gli Ostinati*, from their perseverance in their Studies.

A mile beyond *Viterbo* you see the Church and Convent call'd *Madonna del Querco*; and a mile further, a very fine Country-Seat.

Caprarola. Being on our own Horses, we made a small Excursion to *Caprarola*, a stately Palace belonging to the Duke of *Parma*, being accounted one of the best in all *Italy* for the excellency of its Architecture. Its situation is upon the side of a Hill, from whence you have a prospect of *Rome*, tho' about two and thirty miles off. Its form is a Pentagone without, but circular within, and the Chambers all square, well proportion'd, and most curiously painted, by *Pietro Orbista*. Here is the noted Whispering-chamber, where four Men standing each in one of the four corners of the Room, with their Faces to the Wall, may hear distinctly what any of them says with a very low tone, whereas nothing can be heard by those that are in the midst of the same Room. The Kitchin all of one Stone; the low Cave with the Pillar in it cut out of a Rock, and supporting the whole Pavement of the round Court, which lets light into this Cave; the Gardens on the Hill side, with its curious Waterworks, Grotto's, &c. but especially the curious Wine-cellar under the great Terrass before the House, deserve the particular Observation of a curious Traveller.

From *Caprarola* returning into the Road at *Monterosa*, we passed by *Bacano* and the *Hosteria del Storto*, and reach'd *Rome* the same night. All the way from *Monterosa*, near to the Gates of *Rome*, was anciently in the possession of the *Veientes*.

Near to *Bacan* you see a Lake, whence arises the River *Varca*, (anciently *Cremera*) near unto which happened that famous Engagement, in which three hundred *Fabii* were slain by the *Veientes*, there remaining none alive of that whole Family, except one little Boy incapable of bearing Arms, from whom descended *Fabius Maximus*, the first that check'd the Courier of *Hannibal's* Victories. It was hereabouts also that the ancient City of *Veii* stood, which, after having resisted the *Romans* for ten Years successively, was taken at last by *Camillus*, and was of such consequence, that after the *Gauls* had destroy'd *Rome*, it was debated in the Senate, whether they should not leave *Rome* and fix themselves at *Veii*.

The River *Varca*.

Veii.

Sext. Pol. Mar. l. 1. c. 1.

Coming within twelve miles of *Rome*, we saw the *Cupola* of St. *Peter's* Church, and a few hours after passing by an old Tomb, commonly call'd *Nero's* Tomb, and over the *Ponte Molo*, entred *Rome* by the *Via Flaminia* and *Porta del Populo*.

AN

AN ITALIAN Voyage: OR, A Compleat Journey thro' ITALY.

PART II.

By *RICHARD LASSELS.*

WE were no sooner settled in a House, but we began to satisfie our own Curiosity, with taking a satisfactory view of a City, who once was stiled, and that truly, the *Mistress of the World*. But not to insist at present upon her ancient Titles, whilst yet in the possession of the Pagans, it will not be beyond our purpose to set down the Reasons why *Rome* has, among all the other Cities of *Italy*, (which commonly are distinguish'd by peculiar sirnames) obtain'd the Name of *Roma la Santa*, i. e. *Rome the holy*.

Why Rome is stiled the holy

Its having been the Seat of St. *Peter* and his Successors, to the number of 240 and odd Popes; its being sanctified by the Preaching and Blood of the two Apostles, of St. *Peter* and St. *Paul*, and with the Blood of many other Martyrs, whose Bodies lay interr'd here; but above all, its having been so instrumental in the Conversion of many Nations of *Europe* to the Christian Religion: All these, I say, being Prerogatives belonging in a peculiar manner to *Rome*, may sufficiently entitle this City to its holy Epithete: And to accomplish the rest, the most singular Charity that is practis'd daily in *Rome*, beyond any other place that ever I saw in the World, seems to establish its Title beyond all contradiction.

Regular acts of Charity at Rome.

If we cast our Eyes upon the Hospitals in *Rome*, it must be confess'd by all, that there is scarce any Evil of the Body, but what may meet with its Remedy here. Here Pilgrims find their Tables ready cover'd for their reception; young unmarried Women, Sustenance and Portions till they are married or otherwise dispos'd; expos'd Infants are carefully maintain'd, Fools and Madmen well entertain'd, poor People provided with Food and Remedies, and even the Gentlemen reduc'd to a low condition, with a great deal of tenderness look'd after in peculiar places erected for that purpose.

The *Apothecary's Shop* founded by Cardinal *Francis Barberin*, has a yearly Revenue of 12000 Crowns, for the use of the poor sick People.

The *Hospital* of the *Holy Trinity* has been known to treat, in the Year of *Jubile*, five hundred thousand Pilgrims, and about fifteen thousand in a day. Most Nations may find here the Consolation of meeting with *Hospitals* of their own: Thus the *English* College was formerly an Hospital for the *English*; that of the *Anima* is for the *Germans*; that of St. *Lewis* for the *French*; that of St. *Jacomo* for the *Spaniards*; that of St. *Anthony de Padua* for the *Portuguese*; that of St. *Julian* for the *Flemmings*; that of St. *Ambrose* for the *Lombards*; that of St. *Ivo* for the *Britans*; that of St. *Hierom* for the *Illyrians*; that of St. *Maria Egyptiaca* for the *Armenians*; that of St. *Stephen* for the *Hungarians*; and that of St. *Stanislaus* for the *Poles*; besides a great number of others, there being scarce any Generation of Artisans in *Rome*, but what have their peculiar Hospital.

Hospitals for most Nations at Rome.

In the Church of the twelve Apostles are yearly chosen twelve Noblemen and one Prelate, (whom they stile their *Prior*) these search all the corners of *Rome* for poor Men, who perhaps are asham'd to expose themselves by begging in publick. It is very well known what Sum the Popes commonly allow yearly for charitable uses, in which he is imitated by many of the Cardinals, who contribute liberally towards the maintenance of indigent persons: By the Books of Accounts of Cardinal *Montalto* it was found, that he had given away above 107000 Crowns to the Poor.

They take no less care to remedy the Distempers and Inconveniencies of the Mind, for which reason you see so many Libraries, Colleges, Monasteries, and devout Societies here. Not to speak here of the Libraries belonging to the Religious Houses, and the incomparable Library of the *Vatican*, (of which more hereafter) those of Cardinal *Barberin*, of the Duke of *Altemps*, that of *Sapienza*, and that of the *Augustins*, are undeniable Instances of their singular care in this kind, the two last being open and free to all Gentlemen every day. And as to Colleges and Seminaries for the education of Youth, here is such a vast number of them, that there is scarce a Nation but what has one belonging to it.

Libraries.

Colleges.

Neither ought the *Monasteries* for the restraining of *Lust* and other Worldly Extravagancies, be pass'd by in silence. The breeding up of young Girls in a virtuous way, the House erected for the retirement of such Women as live at variance with their Husbands, and the Convent of penitent Whores, in order to the recalling them from their lewd Courses, are the highest Acts of Charity that can be imagin'd. Even the Lawyers of *Rome* make peculiar profession of Charity, a certain Society meeting every week to carry on the just Causes of the Poor at their own charge. The Priests of the Oratory make it their business to make up Breaches in Families, and preach every day four times in the *Chiesa Nova*, for the instruction of the Inhabitants, as the Pope allows a peculiar Preacher to preach every *Saturday* to the *Jews*, and provides for them in the Hospital of the *Catechumens* till they are well instructed. The Fathers of the *Agonizants* assist those struggling with Death, as the Society call'd *la Compagnia di Morti* give their pious assistance to condemn'd Criminals, and bury the dead. Add to this the *Schola pia* of *Rome*, manag'd by a Society of *Religious Fathers*, who teach the Youth only the first Rudiments of Grammar *gratis*, in order to fit them for the *Jesuits Schools*. They are clad like the *Jesuits*, except that they go barefoot in Sandals.

Monasteries and Convents.

Charitable Actions.

Such variety of charitable Actions being sufficient to entitle *Rome* to the Name of *Holy*, we will now take a view of it, and begin with the *Ponte Angelo*.

This Bridge was anciently call'd *Pons Elius*, and is now beautified with most curious Iron-work and twelve Marble Statues, set up by Pope *Clement* IX. From hence looking down on the left hand into the River, you see the Ruins of the famous *Triumphal Bridge*, because over it the ancient *Romans* passed in triumph to the Capitol, having this peculiar Privilege annexed to it, that no *Rusticks* or ordinary fellows should pass over it.

Ponte Angelo.

At the end of *Ponte Angelo* is the Castle call'd *Moles Adriani* formerly, being the place of Burial of the Emperor *Adrian*; it was then a vast round Stone Tower, divided into three Stories, growing lesser and lesser to the top, on which stood the Brass gilt *Pine-Apple*, now to be seen

in the Garden of *Belvedere*; it had round about in the Wall vast Marble Pillars, and many Statues, which were broke down by the Soldiers of *Belisarius*, the better to defend themselves against the *Goths*; it has got the name of St. *Angelo* ever since St. *Gregory*, in a Procession. During the Plague, we saw an Angel sheathing his Sword upon the top of the *Mole*, from the Bridge below it, which therefore was likewise its Name from this Miracle. The Popes *Boniface* VIII, *Alexander* IV, and *Urban* VIII have since taken care to have it fortified with five regular Bastions, and allotted a suitable Train of Artillery for its defence; which stood in good stead to Pope *Clement* VII, who retir'd thither from the *Vatican*, thro' the long Gallery, which runs from the Palace to this Castle, to avoid the fury of the *Germain* Soldiers, many of which were *Lutherans*. Here are divers pieces of Cannon, made of the Brass taken out of the *Pantheon*. This Castle serves also for a Prison of State: Here are kept five millions, laid up by Pope *Sixtus* V. the Papal triple Crown call'd *Regni*, and the Records of the Pope.

See Ray's Travels.

Hence going towards St. *Peter's* Church, we saw the Church of the *Carmelites*, call'd St. *Maria Transpontina*; and in a Chapel on the left hand as you enter, two Stone Pillars enchased in Wood, to which (they say) St. *Peter* and *Paul* were tied, when they were whipt before their Execution, according to the *Roman* Custom. Here you see also the Head of St. *Basil* the *Greek*, and a curious Picture of St. *Barbara*.

St. *Maria Transpontina*.

From hence we came to the Palace formerly belonging to the *English* Ambassadors, near the Pope's Palace, but given to *Campegi*, the Pope's Legate in *England*, by King *Henry* VIII, it now belongs to the Cardinal *Colonna*.

The *English* Palace.

Opposite to it you see a curious Fountain in a small Piazza, with a little Church adjoyning to it, call'd St. *Jacomo Scozza Cavalli*, where they shew you two Stones, that on the right hand of the Altar being that upon which *Abraham* would have sacrificed his Son *Isaac*; that on the left side, under another Altar, being the Stone on which our Saviour stood when he was presented in the Temple.

From hence you soon enter the Piazza of St. *Peter*, built all about with a stately Stone Portico, supported by four rows of noble round Pillars. This Portico, which is of an oval figure, (enclosing the whole Piazza before St. *Peter's* Church, which is capable of holding two hundred thousand Men) can be no less than half a mile in circumference, the most stately thing I ever beheld in my life; it was begun by Pope *Alexander* VII, and one half of it is quite finish'd.

The Portico of the Piazza of St. *Peter*.

In the midst of the Piazza stands that noted *Guglia* or *Egyptian* Obelisk brought in ancient times to *Rome*, and dedicated to *Augustus Cæsar* and *Tiberius*, as the Inscription tells you. It was taken out of the *Circus* of *Nero*, and placed here by the famous Architect of *Como*, *Dominico Fontano*, at the charge of *Sixtus* V. The whole *Guglie* is of one Stone of speckled Marble without Hieroglyphicks, and is (including the Basis, which is not of the same Stone) 108 foot high: It is supported by four Brass Lions gilt, and has at the top a Cross of Brass fixt upon three Mountains, with a Star over them, (the Arms of *Sixtus* V. his Name being *Montalto*) within the Cross is enclos'd a piece of our Saviour's Cross: The whole *Guglia* is said to weigh 956148 pound weight, and is to have on each side most curious Fountains, one whereof is to be seen there already, and throws up a great quantity of Water.

The Obelisk before the Church.

Out of the Piazza you ascend by twenty four Marble Steps, as long as the Frontispiece of the Church is wide, to the Church of St. *Peter*, these Stairs being the same as belong'd to the old St. *Peter's* Church, leading up to the Frontispiece it self, which has five Doors, and consequently as many Inlets into the Porch. These Doors are cheek'd with large round Pillars of Stone 24 foot in circumference, and 86 in height; these support the Architrave, over which is the Balcony where the Pope is crown'd, and from whence he imparts his Benediction on *Easter-day*. Over this Lodge or Balcony runs a row of Rails, on which stand thirteen vast Statues of Stone, *viz.* of our Saviour and his twelve Apostles.

The Steps and Frontispiece of St. *Peter's* Church.

As you enter the Porch, you are surpriz'd with the sight of a great number of Marble Pillars, and of a most rich gilt Roof, but, above all, with its height, length and breadth, its height being 134 foot, its length 289, and the breadth 44.

The Porch.

Directly opposite to the five Doors of the Porch stand the five Doors of the Church it self, one whereof, which is call'd *Porta Santta*, is open only in the Jubilee Year, the others are open every day; and the two principal ones, cover'd with Brass, being thirteen foot wide and forty five high, are known by the Name of *Valvæ St. Petri*, because the Pope's Bulls are affix'd here at the time of their publication. You see engraven in them the crowning of the Emperour *Sigismund*, the Union of the *Greek* and *Latin* Churches, with some other memorable Actions of Pope *Eugene* IV.

The Church doors, and *Porta Santta*.

Valvæ S. Petri

The inside of this Church is built cross-wise, 520 foot long, and 385 broad; so that in spaciousness it surpasses all the famous Temples of Antiquity, *Solomon's* Temple being but 60 cubits long; that of *Ephesus*, dedicated to *Diana*, 425 foot, and the length of the Great Mosque at *Fez* being 150 cubits.

The inside of St. *Peter's* Church.

The vaulted Roof of this noble Church is divided into great squares, each of which is almost fill'd with a large gilt Rose; it is supported by vast Stone Pillars of a square form, each 185 foot in compass, and 40 distant from one another. The *Capitelli* are most curious Workmanship, of the *Corinthian* Order, joyn'd to one another by Arches, and one continued *Cornice*, over which you see in Stone the Statues of several moral Virtues. That side of them wherewith they face the body of the Church, is to be cover'd with white Marble, with two rows of Niches in them for great Brass Statues gilt. The other sides are already over-crusted with a kind of reddish Marble, and adorn'd with the Heads of the primitive martyr'd Popes, held up by two Angels, and the Pigeon of *Innocent* X. (who made this decoration) all of white Marble, and in *mezzo relievo*. Behind these Pillars is a large Isle or Passage, behind which you see many fair Chapels flanking the Church, each having a small *Cupola* of its own.

The Roof.

In the midst of this vast Structure is mounted the great *Cupola*, supported by four Pilasters or vast Pillars, which make the four corners of the Cross of the Church. It is as large in compass as the *Pantheon*, i.e. one hundred and seventy paces, as may be seen by a circle of Marble in the Pavement which surrounds the Altar of St. *Peter*, perpendicularly under the circle of the *Cupola*, which is within most curiously painted with Pictures in *Mosaick* Work representing the Heavens. This *Cupola*, the boldest piece of Architecture the World ever beheld, was the effect of the Liberality of Pope *Sixtus* V. The four square Pilasters which support it are square Pillars 120 foot in compass each, and capable of Stairs within them, and large Sacristies above, for the preservation of the Relicks kept there, *viz.* the print of our Saviour's Face in the Handkerchief of St. *Veronica*; a piece of the holy Cross; the top of the Lance wherewith our Saviour's side was pierced; and the Head of St. *Andrew* the Apostle. In these four Pillars you see Niches, in which are placed four vast white Marble Statues: Under that where the Relick of the Handkerchief is, is the Statue of St. *Veronica*; under that where the piece of the holy Cross is kept, the Statue of St. *Helen*; under that containing the top of the Lance, the Statue of *Longinus*; and under St. *Andrew's* Head, the Statue of St. *Andrew*.

The *Cupola*.

Perpendicularly under the very center of the *Cupola*, stand the truly great or high Altar, both for its matter and form; the Altar it self stands over the Tomb of St. *Peter*, half whose Body, together with half of St. *Paul's*, lies buried here, the other half of their Bodies in St. *Paul's* Church. A stately Canopy of Brass, wrought about the edge with Vallances, and a Fringe of the same Metal gilt, is supported by four curious Brass Pillars: Over the Altar, and upon the corners of the Canopy, stand four large Angels of Brass gilt; and in the midst of it, very high, you see a Globe of Brass gilt, with a fine Cross upon it of the same Metal. These four Pillars are (according to the measure I took of them my self) of the thickness of three ordinary Men; they are Serpentine in form, wreath'd about with Vines all of Brass, and beautified with little Angels hanging and climbing on the Branches, interspers'd with Bees, (relating to Pope *Urban's* Arms, who made them.) Each of these Pillars is fifty foot high, and weighs 25000 pound weight.

The high Altar, and St. *Peter's* Tomb.

Behind this Altar (I mean in reference to him that stands at the Altar) stands the Confession of St. *Peter*, which had got its Name because the places where the Bodies of Martyrs were kept was in primitive times call'd *Confessio*, and in the *Greek* Church *Martyrium*, the words *Confessor* and *Martyr* being often taken for one and the same thing; so that by reason that this place contains half the Body of St. *Peter*, it is thence call'd *The Confession of St. Peter*. It is built like a Cave, open above, rail'd in with Rails, so low that the People may kneeling look over them to the Iron Grate, behind which the Tomb of St. *Peter* stands, directly under the Altar, for these Rails enclose, in form of a demicircle, the Altar from one corner to the other. It has a double pair of open Stairs, of about twelve Steps each, for those who officiate, and two little half-doors leading to these Stairs. I remember that in the bottom of the same Doors, which are about the high Altar of St. *Paul's* Church, where the other half of St. *Peter*

The Sacristy of St. *Peter*.

The Grate under the Altar

and

and St. *Paul*'s Bodies are interr'd, I saw the words *Limina Apostolorum* written, which makes me conceive that these little Doors, and the Steps about the Altar, are properly the *Limina Apostolorum*; tho' I am not ignorant that the Steps at the entrance of the great Door of the Church are by divers learned Authors dignified with that Title, and that to visit the *Limina Apostolorum* (unto which Bishops are oblig'd by the Canon Law) implies as much as to visit St. *Peter*'s Church.

Chapels of the Church.

The whole Church is on the inside encompass'd with twenty six Chapels, call'd anciently *Cubicula*, and their Chaplains *Cubicularii*, whence arose the Title of *Cubicularius S. Petri*. Each of these Chapels has something rare or remarkable: In one of them is always reserv'd the Sacrament, for the use of Pilgrims who have a mind to communicate in St. *Peter*'s Church.

In the Chapel of St. *Gregory Nazianzen* lies the Body of that Saint, as in the Chapel of the Canons does the Body of St. *Chrysostom*. In the Chapel call'd the *Clementina* is interr'd the Body of Pope *Gregory* the Great, who sent *Augustin*, *Justus*, *Melitus*, and divers other Monks, to convert the *English* to the Christian Faith. In a Chapel at the further end of the Church you see St. *Peter*'s Chair, held up by four Doctors of the Church cast in Brass; this Chair being of Wood, and almost consum'd by age, Pope *Alexander* VII. got it enchas'd very curiously, and set up here. In another Chapel is to be seen the Crucifix made three hundred Years ago, by the famous *Pietro Cavallino*; and in another, the History of St. *Leo*'s meeting *Attila* without *Rome*, artificially cut in white Marble.

The Bodies of Saints interr'd in this Church are, those of St. *Simon*, of St. *Jude*, of St. *Petronilla*, of St. *Processus*, of *Martinianus*, and of the ten first Popes after St. *Peter*. The Tombs above-ground in the Church are, that of *Sixtus* IV, *Paulus* III, *Urban* VIII, *Leo* XI, *Innocent* VIII, *Gregory* XIII, *Innocent* X, and of the famous Countess *Matilde*, whose Body was translated hither from *Mantua* by Pope *Urban* VIII, 1633.

Near the before-mention'd *Confession* of St. *Peter* you see a very old brazen Statue of St. *Peter*, in a sitting posture, lifting up his Hands as if he were giving his Blessing, and holding his right Foot out a little to be kiss'd: And over the Holy-water Bason, on the left hand as you come into the Church, is fastned unto the Wall an ancient Inscription, intimating, that the square Stone upon which you see this Inscription is the same upon which the Bodies of St. *Peter* and St. *Paul* were divided, when half of their Bodies were buried here, and the other half in St. *Paul*'s Church, by St. *Sylvester*.

The Pictures.

The chief Pictures to be seen in this Church are, that of St. *Michael* in *Mosaick* Work, the Design of Cavalier *Giosseppe*; as likewise the Design of the *Mosaick* Work in the *Cupola*; that of St. *John* the Evangelist, and St. *Luke*, under the *Cupola*, done by *Giovanni de Vecli*; the Picture of St. *Peter* curing the lame man, by *Ludovico da Civoli*; that of the Fall of *Simon Magus*, by *Vanni* of *Siena*; that of St. *Peter* with *Ananias* lying dead at his Feet, done by Cavalier *Rancalli*; that of the Altar of St. *Gregory*, by *Andrea Sacco Romano*; that of the Creation of the World, by *Pietro Berettino de Cortona*; that of *Medica fidei*, by *Lanfranco*.

The Sacristy of St. Peter.

By particular permission from the person who has the Keys of the Sacristy of St. *Peter*, I had the opportunity of taking a view of the many Relicks richly enchas'd in Gold and Silver; of the Church Plate of a great value, as, many Calices of massy Gold set with precious Stones, vast Silver Candlesticks, with a Crucifix of the same Metal, so heavy that a Man could scarce lift them, &c.

Here they also shew you an ancient Picture of St. *Peter* and St. *Paul* set in a Silver Frame, which St. *Sylvester* shew'd to *Constantine* the Great *, to confirm him in his Vision; it is very ancient, and the Faces scarce perceivable.

* See Baronius.

In the same Sacristy I saw another Picture nail'd up very high on the Wall, which, they say, was made with Fingers instead of a Pencil, by *N. Carpi*.

The Grott under the Church.

From the Sacristy I went down into the Grott of the Church: Here I saw the Tomb of St. *Peter*, with an Altar upon it, at which any Bishop or Priest may say Mass; abundance of old Statues placed in small Chapels and the Wall of this Grott, belonging formerly to the old Church of St. *Peter*, which sheweth the antiquity of Pictures in Churches: The Tomb of *Adrian* IV, the only *English* Pope; that of the Emperor *Otho* in a Shrine of Porphyry; the Tombstone of *Charlotte* of *Luzignan*, Queen of *Jerusalem*, *Cyprus* and *Armenia*, who having been forc'd out of her Dominions by her Bastard-Brother, came to and died at *Rome* in the time of *Sixtus* IV. It was she that first entitul'd the Dukes of *Savoy* to the Title of *Royal Highness*, by bequeathing to the then Duke of *Savoy*, her Brother-in-law, the Kingdom of *Cyprus*. There are several other Tombs of Popes and Cardinals in this Grott.

Being desirous to take an entire view of every thing belonging to this prodigious Structure, I ascended by a very fair Stair-case to the Terrass over the Balcony, where I had the satisfaction not only to see the thirteen Statues of our Saviour and his twelve Apostles near hand, being above eighteen foot high, but also the small *Cupola's* belonging to the two inside Chapels of the Church; thence mounting somewhat higher, I took a view of that rare piece of Workmanship the great *Cupola*, both within and without. It must be confess'd, without flattery, that the Stairs by which you ascend to it; the double Vault in it, with the Stairs betwixt these two Vaults; the Lantern on the *Cupola*; the small Stairs in one of the Pillars of the Lantern, leading up to the Ball; the streight neck of the passage into the Ball, with the Ball it self, shew this *Cupola* to be the most perfect Fabrick in the World. The Ball it self, of Brass gilt, is spacious enough within to contain thirty-men, upon which you see a great Cross gilt. We had from this *Cupola* a most compleat view of *Rome*, and the Church of St. *Peter* underneath us. To sum up all, this Church may very well pass for the eighth Wonder of the World, all its parts being Master-pieces, the Pictures, Originals and Statues perfect Models: For, till the Year 1654, (when the accounts were summ'd up) it had cost forty millions of Crowns, and in the building of it, the most famous Architects of the World have strove to outvie one another, *viz. Sangallo*, *Bramante*, *Baldassare*, *Buonarota*, *Giacomo della Porta*, *Giovani Fontane*, *Carlo Maderno*, and Cavalier *Bernino*: And for the maintenance of this stately Fabrick, it has a yearly Revenue of above twenty thousand pounds.

The Vatican.

Not far from St. *Peter*'s Church stands the *Vatican*, a Palace where the Popes usually reside in the Winter, the Curiosities of which I will rather mention than pretend to describe, as requiring a great Volume by it self.

Sala Regia

From the Church of St. *Peter* you ascend by a noble pair of Stairs, able to hold ten men a-breast, into the great Hall or *Sala Regia*, where the Pope gives Audience to Foreign Ambassadors: It is adorn'd with most curious Pictures, all at length: The Representation of the Emperour *Frederick* kissing the Pope's Foot, is of the hand of *Gioseppe del Salviati Garfagnino*; that of *Coligni*, that of the Pope condemning Heresie, and his return from *Avignon*, by *Georgio Vasseria*; that of *Charles* the Great signing the Instrument of the Donation, of the hand of *Taddeo Zuccare*; and the Battel of *Lepanto*, by *Donato Formello*.

The Pope's Chapel.

This great Hall has at each end a Chapel, viz. the *Paulina* and the *Sixta*; in the first you see a curious piece of *Michael Angelo*, representing the crucifying of St. *Peter*; and the Roof is most exquisitely done by *Federico Zuccari*, but much defac'd by the Smoak of the Candles.

The Chapel of *Sixto* is that where the Pope holds *Capella* upon certain days, in the presence of all the Cardinals, when it is hung with a most precious Suit of Hangings, in which are wrought with Gold and Silk the Acts of St. *Peter* and St. *Paul*, the Design of *Raphael Urbin*. At one end of this Chapel you see that famous piece of *Michael Angelo*, representing the last Judgment, painted upon the Wall.

The Pope's Sacristy.

Behind this Chapel is the Popes Sacristy, a place but rarely seen by Strangers, being always under the keeping of a Prelate, who must be an *Augustin* Frier and a Bishop, and call'd *Maestro Sacrista*, mention'd in ancient Authors under the Name of *Camerarius*. Here I saw such abundance of most precious Church-Ornaments for the Pope's use, that it will be sufficient to mention only some of them; as, the Cope of Pope *Sylvester*, thirteen hundred years old; the most curious Chasuble of Cloth of Tissue, with the Figures of ministring the seven Sacraments embroider'd in it with Silk and Gold, the Gift of our K. *Henry* VIII. This *Thomas* Earl of *Arundel*, late Lord Marshal of *England*, got leave to have painted out. The most rich Suits for Priest, Deacon and Sub-deacon, to be used in high Mass, cover'd all over with eight hundred pounds weight of Pearl, the Gift of *Sebastian* King of *Portugal*, these being the first Pearl that came out of the *Indies*.

St. Laurence's Head.

Here I saw also near at hand the Head of St. *Laurence* thro a Crystal; a piece of the Sponge in which they gave Gall to our Saviour; the *Camisia* of St. *Prisca*, a Saint martyr'd fourteen hundred years ago; a Crucifix, in which you see, under a Crystal, a piece of the holy Cross, with the Passion of our Saviour painted on it; a Thorn of our Saviour's thorny Crown; a Cross set with Diamonds and Pearls; and a large Ring, which the Pope wears in solemn Functions, and is set with a Sapphire and four large Pearls; a Crucifix cover'd with Pearl and precious Stones; the Pope's *Pallium*, which he wears upon

most solemn occasions; the golden Pipe thro' which the Pope takes the consecrated Wine upon great days; divers rich Chalices, but more precious for their Workmanship than the Jewels that cover them; the grand golden Chalice, in which the Cardinals cast their written Votes when they chuse a Pope; the five Triple Crowns, call'd *Regni*, four whereof are set with precious Stones and Pearls of a vast value, kept ordinarily in the Castle of St. *Angelo*; two Mitres as rich as the Crowns, and the Book of the Gospel painted in Miniature, by that great Master *Giulio Glovi*.

From hence I was led thro' the great Hall, into an adjacent large Room, where the Pope washes the Feet of thirteen Pilgrims upon *Maundy Thursday*, every one having besides this a large golden Medal, another of Silver, and four Pistoles besides.

Raphael's Library. Out of this Room I was conducted into the open Gallery in the second Lodge, there being three such Galleries, where I saw the most curious representations of the whole History of the Bible, in painting; that of the Creation; that where *Adam* sows; that where the Sheep drink: *Jacob's* Ladder; that of Christ's Last Supper with his Disciples; that of *Moses*, are all of the hand of *Raphael Urbin*; the Deluge, and adoration of the golden Calf are done by *Raphael* and *Dorgo*; that where *Josue* commands the Sun to stand still; and that of *Bersabe*, by *Picrino del Vega*; the Chariot, and some others, by *Caravagio*: *Moses* striking the Rock; the Judgment of *Solomon*, with some others, by *Julio Romano*: The Baptism of Christ, with divers others, by *Pellegrino da Modena*. But because in all these Pictures *Raphael Urbin* gave either the design or some touches, this Gallery has got the name of *Raphael's Gallery*.

The best design'd Piece in the World. From this Gallery I pass'd thro' a very spacious Room, where the Victory of *Constantine* over *Maxentius* is so curiously painted on the Wall by *Raphael*, that Monsr. *Poussin*, a most excellent Painter, judg'd it, for the design, the rarest piece of the World. In the adjacent Rooms I saw divers other pieces of the same hand; as, that of Pope *Leo* meeting *Attila*; that of St. *Peter* in prison; that of *Æneas* carrying his Father *Anchises*, &c. the History of *Heliodorus*, being a piece of *Julio Romano Raphael's* Scholar.

From hence ascending into the highest open Gallery, I there saw many Geographical Maps painted by *Antonio da Varese*, and the Roof likewise excellently, by *Pomerancio*, *Paris Romen*, and *Bronzini*, all great Masters.

Thence descending, I saw the *Sala Clementina*, a noble Room, for the most curious Perspectives in the Roof and in one of the corners, and then pass'd thro' the Pope's Lodging-chambers, richly hung with Damask Hanging in the Summer, and with Velvet in the Winter. In this Bedchamber I saw a Picture painted upon a white transparent Stone three inches thick, which yet, if held against the Sun, shews the Picture on both sides, representing our Lady with our Saviour in her Arms.

Thence passing thro' the great Room with a richly-gilt Roof, where the Pope treats great Princes, and thro' the old Apartment of *Pius* V, we saw that most curious piece of Perspective over the Door of the long Room leading to the Gallery of Maps, which at first looking it seems to represent some Types of the blessed Sacrament out of the Old Testament; but if you stand directly under it, looking upwards, you see all contracted in the figure of a Chalice and Host over it. So going on, you come into

The Gallery of Maps. the Gallery of Maps of *Italy*, painted upon the Walls on both sides, by a certain *Flemming* nam'd *Paulus Brillus*, representing most distinctly every State, Province, City, River, Village, Castle, even to the Highways of *Italy*, with the places where any memorable Battels have been fought, either in ancient or modern times.

The Gallery of the Conclave. The Gallery leading to the *Belvedere*, where the Conclave is kept, and where fifty or sixty Cardinals have two Chambers each, ought not quite to be pass'd by in silence, as being an evident demonstration of the vastness of the Palace, of which it is only a part, the whole circuit of the Palace containing, as they assur'd me, Fifteen thousand Rooms.

In the middle of this Gallery you see a Door, which brings you into that famous *Vatican* Library, which, besides the Church-Records, contains the choicest Manuscripts in the holy Languages, a description of which being given to the World by *Angelus Rocca* in Latin, and *Muzius Pansa* in Italian, might well induce me to supersede the giving any further account thereof, were it not for the satisfaction of some of our Countrymen, who perhaps are not very well vers'd in either of these Languages.

The Vatican Library. First of all you enter into a Room fill'd with Desks for twelve Writers, who are allotted an annual stipend for copying of Books so many hours a days; and round about the Room you see the Pictures of all the Cardinals that have been Library-keepers here since *Sixtus* V's time. Thence you come into the Library it self, a vast spacious Room, supported by large square Pillars, about which are many Presses and Cupboards, to preserve the Manuscripts from Mice and Rats. On the Wall on the right hand you see painted in *fresco* the General Councils, with the Bible in the midst lying open upon a Throne, and with the order and precedency observ'd in them; with divers other remarkable passages in Ecclesiastical History. On the opposite side are painted all the Libraries mention'd by the most ancient Authors; and upon the Pillars the Figures of the first Inventers and chief Promoters of Learning. This Room spreads at the further end into two Wings on each hand, both which are fill'd with most excellent Books, both Manuscripts and printed; the chief of them, as they were shew'd me by Mr. *Holsten*, the then Library-keeper, were these;

A large *Hebrew* Bible, too heavy for any man to carry. *Rare Books.*

A most ancient Copy of the *Greek* Translation of the *Septuagints*, after which the Bible, both at *Rome* and *London*, have been printed.

The *Acts of the Apostles* in *Greek*, written in golden Letters.

The Gospel, written by St. *Chrysostom's* own Hand.

An *Hebrew* Bible, written on Rolls of Parchment pasted together at the ends; whence the word *Volumen*.

A small Book written on the Bark of a Tree.

Certain ancient Roman Table-books.

A *China*-wooden Table-book, in which they write with a pointed Steel.

Another *China* Book written in Hieroglyphicks, and folded up in many folds: Our *Purchas* has both printed and decipher'd it.

Polidore Virgil's History of *England*, of his own Hand-writing.

An old *Latin* Sermon-book, in the margine whereof St. *Thomas* of *Aquin* has written several Notes with his own Hand.

An old *Virgil*, with the Figures of the History.

An old *Terence*, written twelve hundred Years ago, which *Politan* testifies by his own Hand-writing in the inside of the Cover of the Book, to be the most ancient he ever saw.

The Annals of *Baronius*, written by his own Hand.

The Quotations out of the ancient Fathers, collected from the best Copies by the learned Cardinal *Sirleto*, during the Council of *Trent*, and sent by him weekly by the Post from *Rome* to *Trent*; they make in all six Volumes.

King *Henry* the Eighth's amatory Letters to *Ann Bolen* his Mistress, some in *English*, some in *French*. That these are of his own hand-writing, is evident from two Verses written with the King's own Hand, by which he dedicated his Book written against *Luther* to Pope *Leo* X, which got him the Title of *Defender of the Faith*. They are in Latin, and written with his own Hand in the Frontispiece of the Book.

Here is also to be seen the exquisite Library of the Duke of *Urbin*, which he bequeath'd to that of the *Vatican*; in which, among many other curious Manuscripts, written on parchment, and some painted in *miniature*, I saw one which had painted in the margin (by an excellent hand) all the Insects in their proper shapes and colours. *The Duke of Urbin's Library.*

Just opposite to this, but in the same Room, I saw the *Heidelberg* Library sent to *Rome* by the Elector of *Bavaria*, after the expulsion of *Frederick* Elector Palatine of the *Rhine*. Among other rare pieces, they shew'd me a Book of Designs done by the said Elector himself.

In the great Room of this Library there is an Iron Door, which brings you into a retiring Room, where are kept the Records of the Church, the Keeper of which was formerly call'd *Chartularius* in the Latin Church, and *Chartophylax* by the Greeks. *The Keeper of the Church Records.*

I was also shewn many Letters of Princes, and persons of eminent rank, written with their own hands; as, of St. *Charles Borromeus* to Cardinal *Sirleto*; of *Mary* Queen of *England*; King *Philip* her Husband, stiling himself King of *Spain*, *England*, and *France*; of *Francis* I. King of *France*; of *Margaret* of *Parma*, Governess of the Low Countries when they revolted; of President *Vargas*, a much better Politician than Latinist, as is apparent from his Answer to the Petition of the Doctors of *Louvain*, *Non curamus vestros privilegios. Mali fecerunt templa; boni nihil fecerunt contra: Ergo debent omnes patibulari.* *Bad Latin.*

Just as I was going out of the Library, I saw near the Door the Statue of *Hippolytus* Bishop of *Portua* fourteen hundred years ago, sitting in a Chair of Stone, upon which is cut in Greek Letters the ancient Canon *Paschalis*, which *Scaliger* and others have illustrated with their Animadversions.

From

Belvedere. From the Library we pass'd thro' the long Gallery of the Conclave, into the Pope's Gardens call'd *Belvedere*, well stor'd with Orange-trees, pleasant Walks, and curious Fountains, and among the rest a rare Spring, form'd in the nature of a Ship, of Iron. Here you see also the great Pine-apple of Brass gilt, (anciently belonging to the *Moles Adriani*) being twice as high as a Man can reach, and of such a circumference, that three Men cannot grasp it: And near it, the two great Peacocks of Brass gilt, about three or four yards long, which formerly stood upon the Tomb of *Scipio Africanus*.

The great Pine-apple, & two Peacocks.

From hence they conducted us to the *Belvedere* of *Mascbere*, being a square Court planted with Orange-trees, in the Walks whereof are large Niches with Leaves to them of Wood, where the most select Statues of the World are kept under Lock and Key; whence *Michael Angelo* used to call this place his Study. The most choice Statues here are, that of the River *Nile*, and that of the *Tybur*, both in cumbent postures; that of *Antinus*, the Favourite of the Emperour *Adrian*, of the best Oriental Marble; that of *Cleopatra*; that of *Venus* coming out of a Bath; that of the Emperour *Commodus*; those of *Laocoon* and his Sons, the first whereof is accounted the most exquisite piece of Sculpture that can be made. In the middle Court stands a Trunk, without Hands, Arms, or Legs, which, by a piece of a Lyon's Skin remaining, appears to be of *Hercules*, is so excellent a piece, that *Michael Angelo* used to say, he had learnt more out of this remnant of a Statue, than out of all the whole ones in the World.

Statues.

The Armoury.

From hence passing thro' the great Garden of the *Belvedere*, we saw there abundance of Exotick Trees, delicious Fountains, most delightful Walks, and vast variety of Grotts and Waterworks; and in our return thro' the *Vatican*, the Pope's Armoury, containing Arms for thirty thousand Men, neatly kept.

The Hospital of S. Spirito. Returning from the *Vatican* by St. *Peter's*, and leaving the Palace of St. *Officio* on the right, I soon came to the Hospital of St. *Spirito*, one of the fairest in *Europe*, both in respect of its Bigness, Usefulness and Revenues, having above a thousand Beds, a Prelate for its Governour, abundance of Priests, Physicians, Officers and Attendants, with a yearly Revenue of 70000 Crowns. It contains also a kind of Monastery separate from the rest for five hundred Girls; and peculiar Apartments and Entertainment are allotted for such unfortunate Gentlemen as are fit Objects of Charity; this was the Gift of Pope *Urban* the Eighth.

Towards the Street you see a Grate, with a Turn in it, where in the night-time little Infants may be put in by their Mothers: She that brings the Child rings only a Bell whose Rope hangs without the Grate, whereupon an Officer appointed for that purpose takes the Child out of the Turn, and having ask'd whether it be baptiz'd, carries it immediately to a Nurse, of which there are always some at hand in the Womens Apartment; here they are afterwards educated till they are fit for Trades, Marriage or Monasteries. *Constantine* the Great was the first who founded Hospitals for expos'd Children.

S. Onofrio's Church. From hence I went to *Onofrio's* Church, upon the Hill, famous only for the Tomb and Picture of that great Poet *Torquato Tasso*.

Coming down again long the *Longara*, I saw on the right hand the Palace of the Duke of *Salviati*, and on the left the Villa of *Chisi*, now call'd the Garden of *Farnese*.

S. Onofrio's Tomb.

Over against the Garden of the last Palace is that of Queen *Christian* of *Sweden*, having, besides a great many curious Hangings of Gold and Silk, a most noble Collection of Original Pictures, by the best Masters in *Europe*; among these, that of Sir *Thomas Moor*, done by *Hans Holbain*, is counted a most excellent piece.

Q. Christina's Palace.

As I passed on the *Longara*, I came to the *Porta Septimiana*, so call'd from the *Thermæ* built here by *Septimius Severus*, and thence up the Hill to St. *Pancreas* Gate, and the Church dedicated to that Saint, now in the possession of the discalceated Carmelites: Under it is the *Cæmiterium Calepodii*, the burial-place of many Martyrs. Here was also buried *Crescentius* the Tyrant.

St. Pancras Church.

The Villa Pamphylia. Hard by is the *Villa Pamphylia*, seated very high. The best *Pictures* here are, St. *Peter's* Crucifixion, and the Conversion of St. *Paul*, done by *Michael Angelo*; but the representation of the Beasts entring *Noah's* Ark is a most exquisite piece of painting. Among the Statues, the wrestling of *Jacob* with the Angel, in white Marble; that of *Seneca*; the *Busto* of *Innocent* X. of Porphyry, and his Head in Brass, are very remarkable.

The Fountain of Paul V. As we were returning into the Town by the same way we came, I took particular notice of that noble Fountain made by *Paul* V, which being furnish'd with Water by a most stately *Aquæduct*, from the Lake of *Bracciano*, (at least thirty miles off) afterwards carries its Waters, by the means of many other Fountains, quite through the City.

Not far from thence you see the Convent of *Franciscans*, upon a Hill call'd St. *Pietro Montorio*, because St. *Peter* was crucified with his Head downwards, in that place of the Court where you now see a round Chapel. The Picture in the Church, before the high Altar, representing our Saviour's Transfiguration, was the last and best piece of that great Master *Raphael Urbin*, which upon his Death-bed he commanded to be set at his Feet after his death: The two Marble Statues of St. *Peter* and St. *Paul*, by the hand of *Michael Angel*, are most excellent pieces. In this Chapel lies interr'd the Body of the Earl of *Tyron*, who in Queen *Elizabeth's* time fled hither from *Ireland*. The Hill upon which this Church stands was anciently call'd *Janiculus*, upon which was buried *Statius* the Poet, and at the foot of it *Numa Pompilius*.

Janiculus.

Near the foot of it I saw the Church and Convent of the *Scala*, possess'd by the discalceated *Carmelites*. They shew'd me in a little Chapel within the Convent the Foot of St. *Theresa*, enclos'd in a Crystal.

Scala.

Not far thence stands St. *Maria Transtevere*, the first Church built in *Rome*, in the same place where formerly stood the *Taberna Meritoriæ*, where the maim'd Soldiers us'd to receive their daily allouments. The Roof is finely gilt, and two rows of most beautiful Marble Pillars do support the whole Fabrick. Under the high Altar they shew you the place where Oyl issued out a little before our Saviour's Birth. Here you see also the Tombs of the learned Cardinal *Hosius*, who assisted at the Council of *Trent*, and Cardinal *Campegius*, the Pope's Legate in *England*, under the Reign of *Henry* the Eighth. The Stone which was tied about the Neck of Pope *Calixtus*, when he was thrown into a Well; as also several great round Stones, which were hung to the Feet of the Martyrs when they were to be tormented.

Near it is the Convent of the *Franciscans*, call'd *Francesco in ripa grande*, where is to be seen the Lodging-room of St. *Francis* during his abode in *Rome*, the same being since turn'd into a Chapel. The Picture of Piety, done by *Caraccio*, is a most exquisite piece.

All along the *Ripa grande* I saw in the River the Barks which bring all sorts of Commodities from *Leghorn*, *Civita Vecchia*, *Naples*, &c. to *Rome*.

From thence going to St. *Cecilia's* Church, (but it was where her House stood) I saw the Tomb of this Saint, under the high Altar, with her Statue in a cumbent posture, cover'd with Veils stain'd with Blood, just as her Body was found in *Clement* the Eighth's time. Cardinal *Sfondrati* beautified this Altar with the Silver Lamps that are constantly burning before this Tomb. Just at the coming in of this Church are shewn to this day the Stones in which St. *Cecilia* was shut up to be stifled in her own House, which not succeeding, she was beheaded. These Stoves being yet entire, are a sure Pattern of the ancient Stoves. In the Perch of the same Church is to be seen the Tomb of one *Adam*, an *English* Bishop of *London*, and Cardinal, who died in *Rome*, 1397, with the following Inscription:

St. Cecilia's Tomb.

Cardinal's Tomb.

Artibus iste pater famosus in cunctis Adam
Theologus summus, Cardinalisque erat
Anglia cui patriam, titulum dedit ista Beatæ
Ædes Cæciliæ, mors quæ suprema Polum.

For Fair.

The neat Church of St. *Chrysogonus*, repair'd not long ago by Cardinal *Burgese*, stands not far from hence: The four Pillars of the high Altar seem to be a mixture of Sand and Crystal petrified. Near the great Door, on the Wall on the left hand, is the Tombstone of one *Rice* Archbishop of *York*, and Cardinal of this Church.

From hence passing over the *Transtevere*, I went to the Isle of St. *Bartholomew*, in which stands an Hospital, and the Convent of the *Franciscans*, in whose Church is the Tomb of Porphyry (under the high Altar) of the Apostle St. *Bartholomew*. This Isle was formerly known by the name of *Insula Tiberina*, being made by the Corn, which after the ejection of *Tarquin* the proud) was pluck'd up by the Roots, and thrown into the River.

From this Isle I pass'd over the *Bridge of four Heads*, (anciently call'd *Pons Fabricius*) which joyns the Isle to the City. Looking down into the River on the right hand, I espied the *Pons Sublicius*, famous for the brave defence made there by *Horatius Cocles*, till it was cut down after him. It got its Name from the Latin word *Sublica*, signifying Beams of Wood, but was afterwards built of Stone by *Æmilius*. It was this Bridge from whence the Emperour *Heliogabalus* was thrown into the *Tybur*, with a Stone about his Neck.

So

The Jewry.

So soon as you come over the Bridge, you see on the left hand the great Back-door of the *Jewry*, which is lock'd up every night, the *Jews* who have their Habitations here being all confin'd to this corner of the City. They meet in their Synagogues (which they call Schools) every *Saturday*, to sing and pray, which I found them to perform in a very indecent manner, with their Hats on, and without the least Ceremony of lifting up their Eyes or bending their Knees. I once was present at a Circumcision, which appear'd to be extreamly painful to the Child.

Returning from the *Jewry*, thro' the before-mention'd Back-gate, I saw to the left the Palace of Prince *Savelli*, built upon the Ruins of the Theatre of *Marcellus*, the Founder whereof was *Augustus*, capable of holding eighty thousand persons at once.

From hence going forward, I saw the most ancient Church call'd St. *Maria in Cosmedin*, or in *Schola Græca*, where St. *Austin* (before his Conversion) us'd to keep his Lessons of Rhetorick. In the Porch you see a great round Stone, cut into the Face of a Man, with an excessive wide Mouth, call'd *La Bacca della verita*, which I am apt to believe serv'd formerly for a Gutter-spout to some ancient Fabrick.

S. Maria Egyptiaca.

The next Church to this, is call'd St. *Maria Egyptiaca* (anciently the Temple dedicated to the *Sun* and *Jupiter*.) It is adorn'd with most artificial chanel'd Pillars, and belongs to the *Armenians*, as well as the adjoyning Hospital for the reception of the Catholick *Armenian* Pilgrims, who celebrate Mass here (by the Pope's permission) after their own Rite.

St. Stephen's Church.

On the further side of the great *Piazza* you see St. *Stephen*'s Church, surrounded with chanel'd Pillars, anciently known by the name of *Juno Matutina*, i. e. the *Morning Juno*, or *Alba Dea*, the *Break of Day Goddess*. This Church stands upon the River-side, and near it the great Sink of *Rome*, call'd *Cloaca maxima*, discharges it self into the *Tyber*, being one of the most noble Monuments of ancient *Rome*, built all of Freestone, and arch'd on the top by *Tarquinius Priscus*: it was of that bigness, that a large Cart might pass thro' it with ease, having many Springs running into it.

Passing from hence along the River-side, by the foot of the Mount *Aventin*, I saw on my left hand the Chapel belonging to the *Malthese* Knights, near which place (if we may credit our Antiquaries) stood the ancient Temple of *Bona Dea*; and on the inside of this Hill, the Den of *Cacus*, as also the *Scalæ Gemoniæ*, down which Criminals were tumbled into the River.

The Temple of Bona Dea, Cacus's Den, and the Scalæ Gemoniæ.

As you go up the Hill, you see St. *Alexius*'s Church, and in it the wooden Stairs under which this Saint lodg'd secretly seventeen Years. His Body, together with that of St. *Boniface* the Martyr, lies interr'd under the high Altar.

St. Sabina's Church.

Near it, upon the same Hill, is St. *Sabina*'s Church, whither the Pope comes every *Ashwednesday* in a solemn Cavalcade: and upon this Hill stood the ancient Temple of Liberty, and the *Armilustrium* of the *Romans*.

Mons Testaceus.

Coming down the said Hill, towards St. *Paul*'s Gate, I saw to the right the Hill call'd *Mons Testaccius*, compos'd of the broken Pots thrown there in the time of the *Romans* by the Potters, being half a mile in compass, and an hundred and sixty foot high. Near the Gate of St. *Paul* we saw the Tomb of *Caius Cestius*, of the finest white Marble, like an *Egyptian Pyramid*, the most entire piece of *Roman* Antiquity. This *Cestius* was *Septemvir Epulonum*, *i. e.* one of the seven call'd *Epulones* by the *Romans*, who us'd to devour the Banquets set before the Gods in their *Lectisternia* in the Temple of *Jupiter Capitolinus*.

Cestius his Tomb.

St. Paul's Church.

Hence passing thro' St. *Paul*'s Gate, (the ancient *Porta Tergemina* and *Porta Ostiensis*) I went to St. *Paul*'s Church, a little mile from the Town. As I went along, I saw a little Chapel on the left hand, built on the place where St. *Peter* and St. *Paul* took their leaves of one another before they suffer'd Martyrdom.

The Church of St. *Paul* was built by *Constantine* the Great, in the same place where *Lucina* a *Roman* Lady buried the Body of St. *Paul*. It is built cross-wise, and the Body of it 477 foot long, and 258 broad; a hundred round Marble Pillars (taken out of the Baths of *Antonius*) set in four ranks, supporting the whole Fabrick: Besides which, this vast Church is without any decoration or Chapels, except at the one end of it near the great Door, where these words are engrav'd upon an Altar,

Hic inventum est caput S. Pauli.

The high Altar.

The high Altar has a Canopy of Stone like a Tabernacle, supported by four Pillars of Porphyry, and adorn'd with many Statues: Under this Altar are entomb'd the half of the Bodies of St. *Peter* and St. *Paul*, according to the Inscription upon the side of the Altar,

Sub hoc altari requiescunt gloriosa corpora Apostolorum Petri & Pauli pro mediocate.

Behind the Altar stands the Confession of St. *Paul*, in all respects like that of St. *Peter* before mention'd. Underneath the little half-doors leading to the Steps of the Altar, are these words in golden Letters, *Limina Apostolorum*, which makes me conjecture (as I alledg'd before) that this place was anciently call'd the *Limina Apostolorum*, and not the Church-door.

The old Arch in the top of the Roof is remarkable for a most ancient piece of *Mosaick* Work, representing our Saviour in the midst of the four and twenty Elders of the *Apocalypse*. It was made about twelve hundred years ago, in the time of St. *Leo* the Great, at the charge of *Placidia Galla*, (Daughter of *Theodosius*, and Sister of *Honorius*) according to the two Verses on that Arch:

Placidiæ pia mens operis decus omne reportat,
Gaudet Pontificis studio splendere Leonis.

Remarkable things.

The other remarkable things in this Church are, the miraculous Crucifix which spoke to St. *Bridget*; the Chapel and Tabernacle of the B. *Sacrament*, with the rare Pictures by the hand of Cavalier *Lanfranco*; the Picture of the Altar of St. *Stephen*, made by a Lady of *Bologna* call'd *Lavinia Pontana*: Of Relicks, the Head of the *Samaritan* Woman converted by our Saviour; the Arm of St. *Anne*, Mother of the Virgin *Mary*; and the Chair of St. *Paul*.

From this Church going to the *Tre Fontane*, above a mile and a half off, I pass'd in my way over the place where St. *Zeno* and ten thousand Christians were martyr'd at once, under the Reign of *Diocletian*. At the *Tre Fontane* I saw three Churches standing, within the place anciently call'd *ad Aquas Salvias*; the first is the Church of St. *Vincent* and *Anastase*, because of the Head of St. *Anastasius* sent to Pope *Honorius* by the Emperour *Heraclius*, 627, kept here. The second is a little round Church on the right hand, where you see the famous Picture of St. *Bernard*'s *Extasis*, and under it a Vault of a mile under ground, where many of the Bodies martyr'd with *Zeno* are buried. In the third place stands the little Church of the *Tre Fontane*, so call'd, because St. *Paul* was beheaded there, and where his Head jump'd thrice, three Fountains gush'd out. Upon the Altar on the left hand is to be seen that most exquisite piece of St. *Peter*'s Crucifixion, done by *Guido Rheni*; and on the other side a little Block (within an Iron Grate) upon which, they say, St. *Paul*'s Head was cut off.

The Annunciata.

From hence crossing the Fields, we saw the Church of the *Annunciata*, one of the nine Churches of *Rome*, visited by Pilgrims; and from thence to the Church of St. *Sebastian*, one of the seven Churches. The Tomb of St. *Sebastian* is under an Altar on the left hand; and underneath the Vault where Pope *Stephen* was beheaded in his own Seat of Stone, and where the Bodies of St. *Peter* and St. *Paul* were kept conceal'd for many years.

The Catacombs.

From this Church you go into the Catacombs, which run thence many miles under ground. Of these there were several in the primitive times, call'd by divers names, viz. *Arenaria*, *Cryptæ*, *Arcæ*, *Concilia Martyrum*, *Poliandria*, but most generally *Cæmiteria* or *Dormetoria*, because here were deposited the Bodies of Martyrs, *qui obdormiverunt in Domino*; and among all these *Cæmiteria*, that of *Calixtus* was of the greatest extent. In these Catacombs it was that, during the ten Persecutions of the Christians, the Believers us'd to exercise their acts of Religion and Devotion in private, to hear Mass in little Chapels, administer the Sacrament, bury the dead Martyrs, preach, hold Conferences, and even celebrate Councils. I took at divers times a view of several parts of these Catacombs, with a good Guide with Wax Lights, (Torches being too stifling) the Streets whereof, under ground, were cut out with Mens Hands and Mattocks, about the height of a Man, and no broader than for two Men to meet: The sides of these Alleys are full of holes of a Man's length, sometimes two or three rows one over another, in which they us'd to bury their Martyrs and Confessors; and that Posterity might be sensible which of them were Martyrs, which Confessors, they us'd to engrave upon the Stones which immur'd them, or upon one of the Bricks, a Palm Branch for a Martyr, and the words *Pro christo* in cyphers for a Confessor. Their Records tell us, that during the ten Persecutions, no less than a hundred and seventy thousand Martyrs were buried in this *Cæmiterium* or *Calixtus*, and among them nineteen Popes Martyrs. As you descend into them from the Church of St. *Sebastian*, you

see

see certain words over the Door, intimating, that St. *Hierome*, in *Ezek.* c. 40. (according to his own confession) us'd every *Sunday* and Holiday (during his stay in *Rome*) to go into these Catacombs.

Capo di Bove. Near the Church of St. *Sebastian* is the place call'd *Capo di Bove*, a considerable Structure in the *Via Appia*, faced about with Marble Stones: It was the Sepulchre of *Metella*, the Wife of the rich *Crassus*: It has since got the Name of *Capo di Bove*, from the Oxheads cut in Marble which compose the Cornice that was about the top of the *Moles*. The Walls are above eight ells thick.

The Pretorium. Hard by this stand the Ruins of the *Pretorium*, the Quarters of the *Pretorian* Bands, where the Emperour lodg'd, at some distance from the Town, to avoid all occasion of Tumults, and for the conveniency of exercising these Troops in the *Circus* of *Caracalla*, which is hard by.

The Circus of Caracalla. This *Circus* owes its Name to the Emperour *Caracalla* its Founder, being the most entire of all the ancient *Circi* in *Rome*; for in this you see plainly where the *Carceres* or Starting-place was; where the *Meta*, where the *Guglia*, and the Walls yet show its length and compass. In the center of it formerly stood that *Guglia* which is now to be seen in the midst of *Piazza Navona*; I saw it lie here broken in three pieces, and neglected, till the Earl of *Arundel*, the late Lord Marshal of *England*, having bid a Sum of Money for it, the *Romans* began to consider of the matter, and Cavalier *Bernini* found means to joyn it so neatly together, that it now stands streight upon a most curious Basis in the very heart of *Rome*.

Near this *Circus* you see an old round Temple, with another little Anti-temple adjoyning to it, thro' which you go into the other: perhaps this was the *Temple of Honour*, into which there was no passage but thro' the *Temple of Virtue*: certain it is, that anciently these two Temples stood near the *Porta Carpena*, (now St. *Sebastian's* Gate) as these two do.

An Echo. Not far from this old Temple is an *Eccho*, which (the Inhabitants tell you) would repeat a whole Verse out of *Virgil*, but I could hear no more than the two last words of a Sentence.

In our return from St. *Sebastians* to the City, we pass'd in sight of a small Chapel call'd *Domine quo vadis*, and formerly St. *Maria ad passus*; it is call'd *Domine quo vadis*, because St. *Peter* flying out of the Prison of *Rome*, our Saviour appear'd to him in this place, and being ask'd by *Peter*, *Domine quo vadis?* i. e. *Lord, whither go you?* he answer'd, *Vado Romam ut ibi iterum crucifigar*, i. e. *I am going to* Rome, *to be crucified again*; which *Peter* understanding rightly, return'd to *Rome* again, and was there crucified. In the middle of the Chapel they shew you the prints of our Saviour's Feet in a white Marble Stone cover'd with an Iron Grate.

Passing thro' the Gate of St. *Sebastian*, we came strait to the Church of St. *Nereus* and *Achilleus*, whereof *Barenius* was Cardinal. The Tombs of the two Saints are under the high Altar.

St. Sixt. Over against this Church is the Monastery and Church of S. *Sisto*, in an unwholsome place call'd anciently the *Piscina Publica*, where the people us'd to wash themselves. Here St. *Dominic* had his Habitation; and in the Church are to be seen the Tombs of St. *Sixtus*, *Lucius*, *Lucianus*, *Sotherus*, and *Zepherinus*, Popes and Martyrs; and the glorious Picture of S. *Vincentius Ferrerius*.

Hence going towards the *Porta Latina*, we saw the Church where St. *John* the Evangelist was boil'd in a Cauldron of Oyl; and following the Walls of the City, came to St. *John Lateran's* Church.

St. John Lateran's Church. This Church is, according to the Inscription of the Architrave over the Porch of the Church, and the Bull of *Gregory* XI, the Pope's Cathedral, and the Mother of all other Churches *Orbis & Urbis*, not excepting St. *Peter's* it self: *Constantine* the Great was the Founder of it, upon Mount *Coelius*, and dedicated to our Saviour; whence it is stiled by some *Basilica Constantina*, by others *Basilica Salvatoris*; sometimes *Basilica* St. *Joannis*, from its being near the two Chapels dedicated to the two St. *Johns*, in the Baptistery of *Constantine*: sometimes *Basilica* St. *Joannis in Laterano*, its Foundation being laid upon the place where *Plautius Lateranus* had a noble Garden, which was seiz'd upon by *Nero*, after he had kill'd the Master: Upon this occasion it is to be observ'd, that all the great Churches of *Rome* are call'd *Basilica*.

In this Church of St. *John Lateran* the Pope takes possession of his Papal Dignity, after having been consecrated Bishop (if he were none before) in St. *Peter's* Church. Hence it is that the consecration of Bishops and Priests, Confirmations, Baptisms of *Jews*, and other Episcopal Functions of the Diocess of *Rome*, are perform'd here, and the Clergy thereof have the precedency before those of all other Churches in publick Processions, and to carry two Crucifixes before them. Here are also entomb'd the Heads of St. *Peter* and St. *Paul*.

The Roof of this Church is most richly gilt, and the inside of the body of the Church renew'd by the command of Pope *Innocent* X. The Painting cross the Church from the Organs to the Altar of the B. Sacrament, representing the chief actions of *Constantine* the Great, are most exquisitely done, especially the Figures about the Chariot of the Emperour, by *Bellardino*. The Ascension of our Saviour is of the hand of Cavalier *Giosippe*; as the Apparition of our Saviour, that of Mount *Soracte*, and that over against *Constantine's* Baptism, are done by *Paris Romano*; and that of *Constantine's* Baptism, by *Ricelli*. The Picture of our Saviour in the *Tribuno* or *Abside*, was the first Picture that appear'd publickly in *Rome*. Besides this, there are several other rare pieces in *Mosaick* Work in the vaulted *Tribuno*, and some Symbolical Representations relating to our Saviour's Life, and more especially to his Passion, a thing much used in the ancient Churches.

Within the highest Altar is enclos'd the most ancient Wooden Altar, upon which St. *Peter* himself and the first Popes used to say Mass during the ten Christian Persecutions: It was placed here by St. *Sylvester*, and order'd, That none should say Mass at this Altar but the Pope, or, in case of his indisposition, some Cardinal authoriz'd by an Apostolical Brief to be affix'd to one of the four Pillars of the said Altar; over which is erected a noble Tabernacle of Marble, supported by four Pillars: This Tabernacle serves not only for a Canopy to the Altar, but also for an *Area* to the Heads of St. *Peter* and St. *Paul*, which are shewn on Holidays thro' an Iron Grate. *St. Peter's and St. Paul's Heads.*

The Altar of the Blessed Sacrament has a most curious Tabernacle of noble polish'd Stones, with four Brass gilt Pillars fifteen foot high. Over this Altar is preserv'd the Table it self upon which our Saviour eat the Paschal Lamb. The Tomb of Brass of Pope *Urban* V, and that of *Alexander* III, are most noble pieces; and the Tomb of *Laurentius Valla*, a learned *Roman*, and Canon of this Church, the first Restorer of the purity of the Latin Language, corrupted by the barbarous *Goths* in *Italy*. Upon the Architrave of the Porch of this Church you see the following Inscription in *Gothick* Letters.

Dogmate Papali datur ac simul Imperiali,
Quod sim cunctarum Mater & Caput Ecclesiarum.

The pierced Chair of *Porphyry*, which is placed near the great Door of this Church when the Pope takes possession of his Office, is kept in the Cloyster of this Church. In this Chair the Pope is set for some time, and at his rising from it again the Quire sings this Verse of *Psal.* 112. *Suscitat de pulvere egenum & de stercore erigit pauperem*: These words and the pierced Chair being to put the Pope in mind of his human Frailties amidst the glorious acclamations of the people. The Adversaries of the *Roman* Church have put a quite different Interpretation upon it, alledging, That this pierced Chair was intended for the discovery of the Sex, to prevent the inconveniencies of another Pope *Joan*; tho' it be past all contradiction, that this Story of the pretended Female Pope is a meer Fiction, invented by *Martinus Polonus* and others of the Emperour's Faction, to render the Pope's party (then at variance with them) odious to the World. Not to mention, that the circumstances of this Story render it altogether suspected, if not improbable, to unbyass'd persons, how is it possible that so refin'd a Nation as the *Italians* should be so grosly impos'd upon in so nice a point as this, and that the *Greek* Church, then at variance with the *Roman* Church, should not have objected the same to them, by way of retaliation for upbraiding them with an Eunuch Patriarch; and that *Anastasius Bibliothecarius*, who writ within thirty years after, should not make the least mention thereof in his Lives of the Popes: Add to this, that the most learned of the Adversaries of the *Roman* Church, as Mr. *Blondel*, (who has writ a Treatise on purpose to shew the nullity of this fabulous Invention) Mons. *Seravius*, *Samuel Bochart*, and several other Protestants, have been convinc'd of and acknowledg'd the Falsity of this Story. *The Story of Pope Joan a Fable.*

We went out at the little Back-door of this Church to the Baptistery of *Constantine*, the first *Christian* Emperour. It is of a circular figure, in the center whereof stands the Font in which the said Emperour was baptiz'd by Pope *Sylvester*, being enclos'd with two Rails of Marble, and adorn'd with twelve great pillars of Porphyry, which support the painted Vault or Roof over the Font, unto which you descend by four Steps. Upon the Walls of this round Chapel are painted in *fresco*, the Vision of *Constantine*, of the Cross in the Air; his *Victory* over *Maxentius*; his Baptism, and other memorable actions of his Life. *The Bapt. of Constantine.*

On

The *Scala Sancta.*

On the other side of St. *John Lateran*'s Church you see the *Scala Sancta* and the *Sancta Sanctorum*: The first has got its Name from the twenty eight white Marble Stairs, six foot long, up which our Saviour was led to *Pilate*'s House. Upon some of these are plainly to be distinguish'd the places where the precious Blood of our Saviour had fallen, for which reason they are cover'd with Grates of Brass; they are kept in such reverence, that none ascends them but upon their Knees; of which I have seen many instances, during the Jubilee, in persons of Quality of both Sexes. These Stairs were sent to *Constantine* the Great, by his Mother Queen *Helen*, from *Jerusalem*.

The *Sancta Sanctorum.*

At the top of these Stairs is a Chapel call'd *Sancta Sanctorum*, from its holy Relicks, as the Inscription over the Altar testifies;

Non est in toto Sanctior Orbe locus.

Upon this Altar is kept the famous Picture of our Saviour, drawn half-ways, representing him about thirteen Years old, about a foot and a half long, said to have been begun by St *Luke*, and finish'd by an Angel: It is beset all round about with Jewels of a considerable value. Under the Altar is entomb'd the Body of St. *Anastasius*, and the Heads of St. *Agnes* and *Praxedes*, with other Relicks, are kept here. In former times (according to their Records) the Prepuce or Fore-skin of our Saviour was also kept here; but at the time of the sacking of *Rome* by *Bourbon*, one of the Soldiers seiz'd upon it, but not being able to rest, left it in a Village call'd *Calcata*, about fifteen miles from *Rome*, where I saw it at the House of the Count *d'Anguillara*, encles'd in a Crystal Case, whereof the said Count keeps one Key, and the Parish Priest another.

Triclinium Leonis.

Not far from the *Scala Sancta* you see a notable piece of Christian Antiquity call'd *Triclinium Leonis*, a Picture of *Mosaick* Work of our Saviour resuscitated, holding out a Book to his Disciples, with these words written in it, *Pax vobis*, which was caus'd to be made eight hundred years ago by *Leo*, as an Emblem of his return to *Rome*, whence he had been chas'd by his Enemies. Upon a Pillar on the right hand our Saviour is painted sitting upon a Throne, giving with his right hand the Keys of the Church to St. *Peter*, and with his left the Imperial Standard to *Constantine* the Great. On the opposite Pillar to the left hand you see represented, in *Mosaick* Work, St. *Peter* sitting in a Chair, giving the Pontifical Stole to Pope *Leo* III. with his right hand, and with his left the Imperial Standard to *Charlemagne*, who had restor'd Pope *Leo* to his Seat again.

In our return passing by St. *John Lateran*'s Church, and by the Pope's Palace built by *Sixtus* V. we saw the great *Guglia*, which anciently stood in the *Circus maximus*, being by *Constantine* the Great brought thither from *Alexandria*; its height is above a hundred foot.

In a large Room adjoyning to the Church stands the Statue in *bronze* of the *French* King *Henry* IV, erected by the Canons of St. *John Lateran*'s, to shew their Gratitude for having restor'd ten thousand crowns *per annum* to that Church, due to it in *France*.

St. *John Lateran*'s Hospital.

In the Hospital of this Church the Sick are attended with so much care, that persons of Quality, in their Sickness, often prefer this place before their own homes.

St. *Stephano Rotondo.*

Keeping along the Wall of the old *Aquaduct* of *Claudius*, we took a view of the Church upon the Mount *Cælius*, call'd St. *Stephano Rotondo*, belonging to the Seminarists of the *German* College: The Martyrdoms of most of the ancient Martyrs, with the several Instruments us'd upon that occasion, are to be seen painted upon the Walls.

Over against this Church stands another, call'd St. *Maria della Navicella*, from a little Boat of Stone standing before it, being the Vow of certain Mariners. It was anciently call'd *Dominica*, or *in Ciricca*.

The Villa *Mattei.*

Not far hence is the Villa or Country-house of the Duke *Matthei*, crusted over on the outside with most curious *anticaglie*, and well stor'd within with rare Statues, as, the Heads of *Brutus* and *Porcio* in one Stone; the Statues of *Cleopatra*, of *Hercules*, of three Boys asleep, and hugging one another; the Head of *Cicero*, a most exquisite piece; the Statue of M. *Aurelius*; a Table of precious Stones. In another House (looking towards St. *Sisto*) stands that incomparable Statue of *Andromeda* (white Marble) expos'd to the Sea-monster, by the hand of *Oliviero*; that of *Apollo* fleaing *Marsias*, likewise of white Marble; the Satyr plucking a Thorn out of his Foot: not to mention the curious Alleys, Waterworks, Grotto's, &c.

The *Amphitheatre.*

From hence we went to the old *Amphitheatre*, call'd now the *Coliseo*, from a certain *Colossean* Statue that stood in it. This being one of the most curious pieces of Antiquity of *Rome*, (as being compos'd of Stone of a most prodigious bulk) was begun by *Vespasian* and finish'd by *Domitian*. It is of a circular figure without, and oval within, adorn'd on the outside with Pillars of the three Orders, great Arches below, and open Galleries above, for the conveniency of letting the people go out and in without crowding; within it had Stone Steps leading up to the top, which was set round with Statues: Underneath were the Caves of the wild Beasts, whence they were let loose to fight, sometimes against one another, sometimes against condemn'd Christians. *Nero* order'd the Christians to be clad in Lyons and Bears-skins, and thus to engage with these wild Beasts. Sometimes the Gladiators fought against one another, and even the noble *Romans* would sometimes engage in these Combats.

Meta Sudans.

Near this *Amphitheatre* you see a great heap of Rubbish of Brick, being the Remnants of the ancient noble Fountain call'd *Meta Sudans*, built for the conveniency of the Spectators that came to see the Sports in the *Arena* of the *Amphitheatre*; it was faced with Marble, and adorn'd with a Brass Statue of *Jupiter*.

Near it stands the Triumphal Arch of *Constantine* the Great, erected in memory of his Victory over *Maxentius* the Tyrant, with these words upon it, *Liberatori Urbis, Fundatori Quietis*. It's all of white Marble, with many most curious Statues (which are now headless) and with Histories in *bassi relievi*.

St. *Gregory*'s Church.

From hence passing by the Church of St. *John* and *Paul*, we went to St. *Gregory*'s Church, which being built on the place where his House stood formerly, we saw the Table where this holy man entertain'd (in recompence of his charitable Hospitality) an Angel and the Lord of Angels for his Guests. In one of the Chapels of this Church stands a most curious white Marble Statue of St. *Gregory*, in his Pontifical Robes, the Gift of Cardinal *Beronius*.

In a certain Cave in the Garden belonging to the Convent of St. *Gregory*, we saw some paintings on the Wall of the old times of *Pagan Rome*, most miserably done, and considerable for nothing but their antiquity.

The Baths of *Antonius.*

Afterwards I took a view of the *Thermæ*, or Baths of *Antonius*, of that bigness, that *Ammianus Marcellinus* speaking of this and other *Roman* Baths, stiles them, *Lavacra in modum provinciarum exstructa*; and in the *Excerpta Olympiadori* it is said, that these Baths of *Antonius* had no less than sixteen hundred Seats of polish'd Marble, for as many persons to bath in apart; nay, some of these Bathing-places were pav'd with Silver, and furnish'd with Water by Pipes of the same Metal, and adorn'd with Statues, Pictures, and precious Stones: Now these Baths serve the *Roman* Seminarists for their diversion.

In our way thence passing betwixt the Mount *Aventin* and the Mount *Palatin*, we set sight of the place where formerly stood the *Circus Maximus*, being the largest of all the *Circi* in *Rome*; *Tarquinius Priscus* was the first Founder of it, and *Julius Cæsar* and *Augustus* encreas'd it to that bigness, which was three stades in length, and four acres in breadth, (each *Roman* stade being 625 foot, or 125 paces) and *Trajan* and *Heliogabalus* caus'd it to be beautified with Statues and Pillars: it had three Galleries, one for the Senators, the second for the Gentlemen, and the third for the common people, all which could conveniently contain one hundred and fifty thousand persons. It was also adorn'd with two great Obelisks, *viz.* with that now standing before the *Porta del Populo*, and that before St. *John Lateran*'s Church. Underneath this Building were certain vaulted Rooms, call'd *Fornices*, where the lewd Women us'd to expose their Bodies for Money, whence the word *Fornication* had its derivation.

The Ruins of the Imperial Palace.

Passing forward towards the Church of St. *George*, we saw on the right hand the Ruins of the Imperial Palace call'd *Palazzo Maggiore*, which extended almost all over the *Palatin* Hill. By the way we also took a view of the Church of St. *Anastasius*, which was anciently the Temple of *Neptune*, and thence to the square Temple, suppos'd to have been the Temple of *Janus Quadrifrons*: certain it is that it has four Doors, and twelve Niches, on each side of the square outside; the Doors representing the four Seasons of the Year, and the twelve Niches the twelve Months of the Year. Some are of opinion, that this was only a Porch or Lodge belonging to that Temple.

St. *George*'s Church.

Coming to St. *George*'s Church, we saw a curious Marble Arch richly engraven adjoyning to it, erected by the Company of Goldsmiths to *Severus* and *M. Aurelius*. The Water of the *Tyber* came formerly up very near to this Church, this Creek being then call'd *Velabrum*, because they sometimes made use of a small Sail there, as they were crossing the River in their small Ferry-boats.

From hence we went to the round Church of St. *Theodore* in the *Foro Boario*, which was anciently the Temple of

of *Romulus* and *Remus*, erected in the same place where they were expos'd and nourish'd by a she-Wolf.

The Vestal Virgins.

Not far thence we saw the Hospital of our *Lady of Consolation*, once the Temple of *Vesta*, where the *Vestal Virgins* kept the eternal Fire, and upon that score had peculiar Privileges granted them; but if they hapned to lose their Virginity, they were buried alive in a deep Vault made for that purpose.

The Temple of Jupiter Stator.

From thence going to the *Campo Vaccino*, we saw three Pillars of a most admirable Structure, anciently belonging to the Temple of *Jupiter Stator*, built by *Romulus*, in memory of his Battel against the *Sabins*, when his men being ready to fly, he implor'd *Jupiter* in these words, *Siste fœdam fugam*, whereupon his Soldiers keeping their ground, he built this Temple pursuant to his Vow. Just by these three Pillars you see the Church of St. *Maria Liberatrice*, the reason of which Name is to be seen in a long Writing in the Church, and in *Baronius*'s Annals.

Mæta Sudans.

Hard by was the famous *Lacus Curtii*, a Pool of pestiferous Water, which, the Oracle said, could not be stopt up, but by casting the most precious thing in *Rome* into it; the Ladies and Noblemen having thrown in what was most valuable to them without effect, *Curtius*, a gallant young Patrician, judging that nothing was more precious than a brave Man, leapt into it on Horseback, and thus sacrificing himself for the publick good, the hole clos'd.

See Tit. Liv.

Farneses Gardens.

Then turning to the right hand, we came to the Garden of the *Farneses*, upon the Mount *Palatin*, on the upper part of which formerly stood the Imperial Palace, but on the skirts thereof the Temples of the Goddesses *Feaver* and *Viriplaca*, and *Catalin* and *Cicero*'s Houses. The Scholars of the *English* College in *Rome* have now a kind of Vineyard upon part of this Hill, where they divert themselves. The high Walks in the *Farneses* Gardens are very remarkable for their prospect into the place where the *Circus Maximus* stood in ancient times.

Titus's Arch.

Going on in the same Tract, on the right hand, we came to the Triumphal Arch erected to *Titus*, in memory of his Victory over the *Jews*; here you see in *mezzo relievo* the said Emperour in his triumphant Chariot engraven, and on the other side the holy Candlestick of the Temple of *Jerusalem*, the Ark of Alliance, and the Table of the Law, brought by the said Emperour from *Jerusalem*. This is the most triumphal Arch in *Rome*, and stood in the *Via Sacra*.

The Church of St. Francesca Romanda

Turning off again towards the *Campo Vaccino*, we came to the Church of St. *Francesca Romana*, of St. *Maria nuova*, where we saw the Tomb of that Saint in Brass gilt, set up by *Innocent* X. The History of the Pope's return to *Rome* from *Avignon* is cut here in Marble upon an Altar; and to this Church belongs a most fine suit of Hangings, the Gift of the Sister of Pope *Innocent* X. Near it you see the Remnants of the *old Temple of Peace*, once the most stately of all the *Roman* Temples; as, the Pillar, which now

The Temple of Peace.

stands before St. *Mary Majors* great Door, (formerly belonging to this Temple) which two hundred foot large and three hundred long sufficiently shews: *Vespasian* was the Founder of it, by whom it was adorn'd with the Spoils brought from *Jerusalem* by *Titus*. Behind it is a fine Garden, formerly belonging to Cardinal *Pio*.

Passing over the *Campo Vaccino*, on the right hand we saw the round Church, dedicated to St. *Cosmus* and St. *Damian*, formerly the Temple of *Castor* and *Pollux*. The

The Temple of Castor and Pollux.

Mosaick Work in the Roof of the Tribune is very remarkable for its symbolical Figures.

The Temple of Faustina.

Going on the same way, we saw the Church of St. *Lorenzo in Miranda*, once a Temple dedicated to the Empress *Faustina*, by her Husband *Antonius*. The Porch is worth a Traveller's observation, by reason of its huge Marble Pillars.

The Temple of Saturn.

A little further is the Church of St. *Andriano*, dedicated to *Saturn*, who having first taught the *Italians* the use and coining of Money, the *Romans* had their publick Treasure in this Temple, and their Mint near it.

The Church of St. *Martinas*, formerly the Temple of *Mars* the Revenger, is remarkable only for the Tomb of that Saint, standing in a low Chapel. Just before it stands

The triumphal Arch of Severus.

the noble triumphal Arch of Marble of *Septimius Severus*, curiously engraven in *mezzo relievo*, tho' one half of it is buried under ground, and the other part much defaced by the length of time.

Going on a little further, upon the Hill-side, we saw the little Church of St. *Joseph*; and in a deep Cave underneath, the ancient Prison call'd *Tullianum*, into which St. *Peter* and St. *Paul* were shut up; and in the lowermost Dungeon, where St. *Peter* baptiz'd *Processus* and *Martinianus*, his two Keepers, (with divers others) the Fountain which miraculously sprung up for that purpose at that time, and continues here ever since.

This *Forum* was anciently famous for many other Buildings; as, the *Comitium* (or publick place of assembly) in which stood the Tribunal where the *Prætor* sate in the *Cella Curulis* or Ivory Chair, administring Justice. In this *Comitium* stood the Statue of *Horatius Cocles*, and of *Pythagoras* and *Alcibiades*. In the same *Forum* stood the *Rostra* (or Pulpit made of the brazen Prows of the Ships taken from the *Antiates*) where the *Roman* Orators us'd to plead. Behind it stood the Tomb of *Romulus*, and before the Tomb of *Faustus* the Foster-father of *Romulus*.

Hence going up to the Capitol by the Coach-way, I saw upon the side of the Hill the Pillars once belonging to the Temple of *Concord*, erected by *Camillus*, and three other Pillars neatly wrought, which were part of the Temple dedicated by *Augustus* to *Jupiter* the Thunderer, after having narrowly escap'd a Thunderclap, which kill'd his Chairman.

The Capitol.

The Capitol got its Name from the Latin word *Caput*, *i. e.* a Head, a Man's Head being found here underground when they were laying the Foundation of the Temple of *Jupiter Capitolinus*, portending, that this City should one day be the head of the World. The first thing I took notice of, was the highest part of this Hill, call'd anciently *Rupes Tarpeia*, being of no very difficult access; it looks down towards the Theatre of *Marcellus*. Thence returning back to the *Piazza* of the Capitol, I delighted my

The Equestrian Statue of M. Antonius.

Eyes with that miraculous *Statua Equestris* of *Marcus Aurelius*, a great Philosopher and great Emperour, being the noblest Statue in the World, once gilt, but now appearing all to be plain Brass. Near this Statue stand two *Colossean* Statues, whence spring forth two Rivers, one representing the *Nile*, and the other the *Tyger*: Over them you see standing a Statue not unlike *Pallas*, representing *Rome*, the Face of white Marble, and the Garments of Porphyry. Here I saw also the Trophies of *Marius*, cut

The Trophies of Marius.

anciently in Stone; and the two great Statues of *Constantine* the Great, in white Marble, with the Horses; as also the little Stone Pillar, with a large Brass Ball upon it, call'd the *Miliarium*, because from thence the Romans us'd to count their miles to any part of the Empire. It stood anciently in the *Forum Romanorum*, and was erected there by *Augustus*.

Entring into the Palace of the *Conservatorio* or *Senatore*, I saw there the *Statues* of *Julius Cæsar* and *Augustus*; and in a little Court a Marble Table set in the out-wall, the marks of the Roman measures; and the Feet, Hands, Thighs and Head of Marble, scatter'd in this Court, of the great *Colossus* of *Apollo*, order'd to be made by *Lucullus*; that most exquisite Statue of a Lyon tearing a Horse; the Tomb of *Mamea* and *Alexander Severus* her *Son*, with the Rape of the *Sabines* upon it, in *basso relievo*; and a little *Egyptian* Idol set up high over the said Tomb; as also the Head of the Emperour *Commodus* in Brass, with a Hand of the same.

At the Stairs foot leading up into the Chambers, you see the *Colonna rostrata*, a Marble pillar of twelve foot high, cover'd with stems of Ships cut in Marble, with an Inscription on the *Basis* in very old scurvy Latin, intimating, that this Pillar was erected in memory of a Naval Victory obtain'd by *Duillius* against the *Carthaginians*, an evident sign that the ancient *Romans* took more pride in glorious Actions than in refin'd Words.

Going up about ten Steps, I entred into a little Court, the Walls whereof were cover'd all over with Marble, and four rare pieces of *M. Aurelius*'s Triumph cut in 'em; the first represented him in his triumphant Chariot, the second offering his Sacrifices, the third giving his Largesses to the People, and the fourth, the Presents offer'd to him by the *Romans*. The Emperour's Chariot has got new Wheels, and the Horses new Shoes and Feet, the rest being all the same it was made at first.

M. Aurelius his Triumph.

Mounting up higher the same Stairs, I saw an old Brass Plate nail'd up, in which the *Roman* Laws of the ten Tables were written. Then entring into the Chambers and great Hall, I took particular notice of the Statues of *Alexander Farnese* Duke of *Parma*, and *M. Antonius Colonna*, the Pope's General in the Battel of *Lepanto*, and of *Don John d'Austria*. Upon the Walls were painted in *fresco* the Rape of the *Sabins*, the Combat of the *Tergimini Fratres*, betwixt the *Horatii* and *Curatii*; *Scevola* holding his Hand over the burning Coals; *Cocles* descending the Bridge; *Scipio* and *Hannibal*, with their Armies, most excellently painted by *Pietro Perugino*; the Picture of *Brutus*, the first Consul, commanding the death of his Son; that of the *Tarquins*, and that of the Conquest of the *Sabins*, are also very bold pieces. In the Chambers I saw the Statues of *Caius Marius*; of *Hercules*, in Brass, whilst yet a Lad; of *Junius Brutus*, likewise Brass; the Heads of *Diogenes*, *Plato* and *Socrates* in Marble; the Statues of *Cicero*, *Virgil* and *Plato*; the Statue in Brass of the

Wolf that gave suck to *Romulus* and *Remus*: But what exceeds all the rest is, the brazen Statue of a young Fellow picking a Thorn out of his Foot, who being a Foot-post, and having Letters of great concern to carry to the Senate, would not stop by the way to pull out the Thorn that stuck in his Foot, but having deliver'd his Letters, (which was done with prodigious haste, as appear'd by the date) he began to pick out his Thorn in the presence of the full Senate, in the same posture as is express'd in this Statue, which was erected in the Capitol by the command of the Senate.

Ara Cœli, or the Temple of *Jupiter Capitolinus*.

Having thus taken a full view of the Capitol, we went into the Church of *Ara Cœli*, adjoyning to the Capitol, upon the same Hill, in the same place where anciently stood the Temple of *Jupiter Capitolinus* or *Jupiter Feretrius*. The Tomb of St. *Helen*, Mother of *Constantine* the Great, is in this Church. Descending from hence by two Marble Stairs, of that breadth that twelve Men may go up at once a-breast, we came to the Jesuits Church and House, call'd the *Casa Professa*. The Church is both large and neat; the Chapels are adorn'd with good Paintings, and the Ornaments of the Vestry exceeding rich. The Picture of St. *Ignatius* is to be seen upon the same Altar, under which lies interr'd the Body of that Saint, the Founder of the Jesuits Order. Near the high Altar is to be seen the Tomb of Cardinal *Bellarmin*. The Chamber of St. *Ignatius* in this House, is since turn'd into a Chapel.

The Jesuites Church.

In our way from hence we took a step into the Palace of St. *Mark*, belonging to the State of *Venice*, the ordinary Residence of the *Venetian* Ambassadours. Thence going towards the Mount *Quirinal*, now call'd *Monte Cavallo*, and passing thro' that part of the Town anciently call'd *Forum Trajani*, we took a view of that most stupendious white Marble Pillar, erected there in honour of *Trajan*, and hence call'd *Colonna Trajana*, but never seen by him, because he died in his return from his Expedition against the *Persians*. It is a hundred twenty eight foot high, besides the Pedestal, which is twelve more; and compos'd of twenty four vast stones of Marble, in which are cut the great *Actions* of *Trajan*, especially those against the *Dacians*. Within it you ascend by a hundred eighty five steps up to the top, light being let in by forty small Windows. On the top of this Column were buried the Ashes of that Emperour, in lieu of which *Sixtus* V. order'd a Statue in Brass gilt of St. *Peter* to be set up there.

Going from hence up the Hill, we came to the Palace and Garden of *Aldobrandini*, neatly adorn'd with Statues and Pictures: Those I took most notice of were, an old Picture of the *Pagan* times, representing a Marriage of the ancient *Romans*; this being accounted the most ancient Picture in *Rome*, a Copy thereof is preserv'd in the House of the Brother of Cavalier *Pozzo*, near St. *Andrea della Valle*. Here I saw also the true Picture of *Martin Luther*; and in the Chapel a St. *Sebastian*, by *Raphael*. Upon the Stairs stood a Statue of a Man hanging by the Hands, with great Stones at his Feet, a Torment much practis'd by the *Pagans* upon the Christians; with many other curious Pictures and Statues.

The Palace of *Aldobrandini*.

The next Palace we came to in our way, is the Palace of Cardinal *Mazzarini*, in the Garden whereof is to be seen that most noted Picture of the *Aurora*, done by *Guido Rheni*. In the Court of this Palace the best Riding-masters of *Rome* teach their Scholars to ride their great Horses, but are much inferiour to the Masters of *France*. Hard by this Palace stand the Pope's Stables, where we saw all the Genets presented to the Pope since his exaltation to the Papal Dignity, by the King of *Spain*, for the Kingdom of *Naples*, the rest being all Coach-horses.

The Pope's Stables.

We soon came to the Piazza of *Monte Cavallo*, so call'd from the two famous Horses of Marble, with each a Man to hold him, presented to *Nero* by *Tiridates* King of *Armenia*. On the Pedestal of one of them are written, *Opus Phidiæ*; under the other, *Opus Praxitelis*; these two Horses and Men being suppos'd to be made by these two great Sculptors of *Greece*, to represent *Bucephalus* and *Alexander* the Great. Upon this Hill, which was anciently call'd *Mons Quirinalis*, stood the Baths of *Constantine* the Great, some remnants of which are yet to be seen in the Garden of *Colonna*, adjoyning to the Wall of this Piazza. Opposite to these Horses stands the *Pope*'s Palace, where he commonly resides in Summer, a noble Structure, with stately Rooms: The Gardens are very delightful, adorn'd with curious Walks, admirable Grotto's, and fine Waterworks, among which is an Organ, playing without being touch'd by any Fingers. Over against the Back-door of the Garden stands the Novitiate of the Jesuits, with a fine new Church, and delicious Gardens belonging to it.

The Pope's Summer Palace.

St. *Sylvester's* Church.

In our return thence we took a transitory view of St. *Sylvester*'s Church, over against *Mazzarina*'s Palace, belonging to the *Theatins*; and of the Tomb of Cardinal *Bentivoglio*, which is in this Church.

From hence passing thro' a private Street to St. *Agatha*'s Church, in the *Saburra*, near the foot of the *Quirinal* Hill, we saw there the Tomb of St. *Agatha*, entomb'd under the Altar, and before the Door of the Church certain ancient Statues representing little Boys in the habit of a *Prætexta*, a Dress belonging to Noblemens Children.

Passing on forwards by the Church of *Madonna del monte*, we ascended the Hill to St. *Peter's advincula*, where we saw that noted Statue of *Moses* of white Marble, in a sitting posture at the Tomb of *Julius* II. a rare piece of *Michael Angelo*. Near unto the Church-door you see an Altar, with the Statue of *S. Sebastian*; and in the *Sacristy*, the Chains wherewith *S. Peter* was fetter'd, and which have given the name of *St. Peter ad vincula* to this Church.

St. Croce in Jerusalem.

St. Bar. in Appul.

The next Church is, St. *Maria in monte*. In a Vault underneath it two Councils were held by St. *Sylvester* during the persecutions of the Christians, as the words upon the stairs leading into the Vault and *Baronius* testifie. It is said also, that in this place the first publick Exercise of the Christian Religion was made.

The Church of St. *Praxedes* is next to this, where you see a low round Pillar of speckled Marble, enclos'd in an Iron Grate, the same at which our Saviour was whipt: The Inscription over the Door of the Chapel tells you, that this Pillar was brought hither from *Jerusalem* four hundred years ago, by Cardinal *Colonna*. In another Chapel is a most curious Picture of the descent of our Saviour from the Cross, done by *Gnido*.

The Pillar on which our Saviour was whipt.

Thence we took a turn to St. *Maria maggiore*, a Church so call'd, because it is the biggest of all the Churches dedicated to our Lady in *Rome*. It is built upon Mount *Esquilin*, upon the same place which by a singular Miracle was cover'd with Snow on the Fifth of *August*, the History of which is known by the Feast in the Calendar call'd St. *Maria ad Nives*, and is represented in old Mosaick Pictures on the Wall, over the Pillars that support the Roof. The things I chiefly took notice of here were, the Tomb of *Patritius*, of Porphyry, near the great Door, the Founder of this Church; and the fine Roof, gilt with the first Gold that was brought out of the *West Indies*; the Mosaick Pictures all along the Church, representing the History of the Old and New Testament, and of the Foundation of this Church; the Tomb of an Ambassadour of *Congo*, over against the Brass Statue of *Paul* V. Under the high Altar lies interr'd the Body of St. *Matthias* the Apostle, whose Head is to be seen upon the Altar, in a Crystal, upon St. *Matthias* Day.

St. Bibiana's Church.

St. Lawrence's Church w. th. ou the Walls.

In a little back Court is a very quick and sharp Eccho, in a Well.

The Chapel of *Sixtus* V.

The Chapel of *Sixtus* V. the Work of *Domenico Fontana*, is said to have cost seven hundred thousand crowns: The chief actions of *Sixtus* V. and *Pius* V. are cut in white Marble round this Chapel; and in a side Altar on the left hand are interr'd the Ashes of St. *Jerome*, near our Saviour's Crib, which is here enchas'd in Crystal in a low Chapel, under the high Altar of this Chapel, and shewn publickly every Christmas-day: the Brass Tabernacle, held up by four Angels, of the same Metal, with one hand, and each with a Torch in the other hand, is a most curious piece of Workmanship.

The holy Crib of our Saviour.

St. Antonio.

The Chapel of *Paul* V.

Opposite to this stands the Chapel of *Paul* V. very like the former in all respects, except that the high Altar stands not in the middle, but at the end of it, being a most rare piece, both for its Workmanship and Materials; for the Back of this Altar is supported by four large Pillars of polish'd Jasper, the Bases and Capitols whereof are of Brass gilt, the Back of the Altar being all of *Lapis Lazuli*, or Oriental blue Azure-stone, and in the midst of it a little Nich, wherein is plac'd the *Picture* of our Lady with our Saviour in her Arms, made by St. *Luke*. The Nich is enclos'd by a row of precious Stones of great value, and shut up with two half-Doors of two entire Agate stones, each of them two foot long and a foot broad: The *Picture* it self being very old, and placed very high, is not well to be seen, as to the Lineaments of the Face, unless (as I did) you hold a Wax Taper at the end of a long pole. This is the same *Picture* which St. *Gregory* the Great carried a thousand years ago in procession on *Easter-day*, when he saw over the *Molos Adriani* an Angel sheathing his Sword, upon which the Plague ceased in *Rome*. The *Cupola* of this Chapel is finely painted by *Guido Rheni* of *Bologna*, and the sides of the Walls cover'd with white Marble cut in *mezzo relievo*, representing the *chief Actions* of *Clement* VIII. and *Paul* V. whose Statues are also to be seen here of white Marble.

The Picture of our Lady by St. Luke.

St. Prudentiana's Church.

See Baronius.

St. Vitale.

Without the Church stand two great Pillars, at each end one, *viz.* an *Egyptian Guglia* or Pyramid with Hieroglyphicks, and the other a Pillar found among the Ruins of the *Temple of Peace*: It is of a great heighth, having the

the Statues of our Saviour and the Blessed Virgin upon it, of Brass gilt.

From hence we came to the Church of St. *Vito* and *Modesto*, near the Ruins of the Triumphal Arch of the Emperour *Galienus*, on the top whereof you see nail'd certain great Keys, belonging formerly to the City of *Tusculum* (now *Frescate*) in remembrance of a Victory over that Town five hundred years ago, under the Pope *Honorius* V.

A little further we saw the Church of St. *Eusebio*, erected upon the Ruins of the Baths of the Emperour *Gordiano*. Near unto this Church were found the Trophies of *Marius*, mention'd before when we spoke of the Capitol.

St. Croce in Jerusalem. At last we reach'd St. *Croce* in *Ferusalem*, one of the seven Churches of *Rome*, and built by *Constantine* the Great, near the City Walls, at the end of *Mons Calius*, having got its Name from the Earth of Mount *Calvary*, which was brought hither from *Jerusalem*. Not far from it appear certain remnants of the Temple of *Venus* and *Cupid*, ruin'd by the said Emperour, to build this Church in lieu thereof. The Painting in the Tribune or Roof of the Choir, representing the exaltation of the Cross, seems to be of the hand of *Pietro Perugino*, a famous Painter, before *Raphael* rais'd that Art to its highest pitch. In the Sacristy are shewn three pieces of the holy Cross, one of the Nails of that Cross, two Thorns of our Saviour's Crown of Thorns, a great piece of the Title of the Cross, a Finger of St. *Thomas* the Apostle, and one of the thirty pieces of Money for which our Saviour's was sold by *Judas*.

See Bar. in Anpal.

St. Bibiana's Church. Hard by is the Church of St. *Bibiana*, in the same place anciently call'd *Ursa Pileata*, from a Statue of a Bear with a Hat on, that stood there. Some good Painting is to be seen in this Church of *Campelli* and *Pietro Cortonese*, and the Statue of *Bibiana* by *Bernini*. Here is also the Churchyard call'd *Inter duas lauros*.

St. Lawrence's Church w th-out the Walls. Going forward, we pass'd thro' St. *Lawrence*'s Gate to the Church call'd St. *Laurenzo furori delle mura*, to distinguish it from some others dedicated to that Saint within the Walls: It acknowledges *Constantine* the Great for its Founder, who order'd it to be built upon the *Cœmiterium* of St. *Ciriace*, in the *Via Tiburtina*, being one of the seven Churches of *Rome*, and one of the five *Patriarchal Churches*, and consequently not Titular of any Cardinal.

Under the high Altar is the Tomb of St. *Lawrence*, and behind the said Altar the Stone upon which stood the Gridiron upon which St. *Lawrence* was broil'd, cover'd with a great Glass. Under the Church are certain Vaults or Catacombs, where the Saints us'd to be buried in primitive times; and in the Roof of the Church are cut these following words in large wooden Letters,

Quam clarificata est Hierosolyma Stephano, tam illustris facta est Roma Laurentio.

being a certain passage in the Sermon of St. *Leo*, upon the Feast of St. *Lawrence*.

S. Antonio. In our return into the Town we cast our Eyes upon St. *Anthonys* Church and Hospital, hard by St. *Maria maggiore*. The Pillar with a Cross upon it before the Church was erected in memory of the Conversion of *Henry* IV. King of *France*.

St. Pudentiana's Church. See Bernino. Behind St. *Maria Maggiore* stands the Church of St. *Pudentiana*, in the most ancient Street call'd *Vicus Patricius*, built upon the self-same place where anciently stood the House of *Pudens*, a Senator, and Father of *Pudentiana*, and where St. *Peter* lodg'd at his first coming to *Rome*, the Father and his two Daughters *Pudentiana* and *Praxedes*, being by him converted to the Christian Faith; the Well of the first, into which she us'd to put the Relicks of many Martyrs, being to be seen here to this day, as likewise the wooden Altar upon which St. *Peter* said Mass there. The two Marble Statues of our Saviour and St. *Peter* are excellent pieces; and the fine Chapel of the *Caetani*, with the Back of the Altar, in white Marble, most curiously engraven in a *basso relievo*, representing the adoration of the *Magi*, is of the hand of *Olivieri*. Near the high Altar you see the Picture of *Pudens*, in his Senator's Garb.

Thence we went to St. *Lorenzo* in *Panisperna*, built upon the same place where stood formerly the Palace of the Emperour *Decius*, by whose command St. *Lawrence* was broil'd here upon a Gridiron, whose Martyrdom you see painted in *fresco* on the Wall of the Church. The Bodies of St. *Bridget* a *Scottish* holy Virgin, and of Cardinal *Sirletus*, are interr'd here.

St. Vitale. From hence passing thro' a by Street all along the foot of *Monte Cavallo*, we came to the Church of St. *Vitalis*, adjoyning to the Garden of the Jesuits Novitiate. It's said that in this place stood the ancient Temple of *Romulus* or *Quirinus*, built by the Senate after *Proculus* had depos'd that *Romulus* had appear'd to him after his death, and bid him tell the *Romans*, that he would be worship'd under the Name of *Quirinus*.

Thence we came to the *Quatro Fontane*, or four Fountains, standing at the meeting of as many Streets. They spout forth out of Statues in a cumbent posture, made here by *Lepidus*; and so further to St. *Maria della Vittoria*, owing its Name to the Victory obtain'd by the Imperialists at the Battel of *Prague*, the Colours and Standards taken upon that occasion being hung round about this Church. In one of these Colours over the Door were cross Keys wrought, Cardinals Caps, Mitres, Priests Caps, &c. turn'd topsie turvy, with this Motto, *Extinguentur*. It has divers fine Chapels, the Picture of St. *Teresa* wounded by a *Seraphin*, done by *Bernini*; in a Chapel on the left hand is a most curious piece. In the Hall of the Convent is painted the Battel of *Prague*; and in the Sacristy is to be seen a Sepulchre of our Saviour, most curiously wrought in Ivory. At the entrance of this Church stands the great Fountain call'd *Fontana felice*, where the Aqueduct of *Sixtus* V. exonerates it self into a large Stone Cistern, which furnishes a considerable part of the City with Water.

The Garden of *Montalto*. Not far from hence is the Garden of *Montalto*, one of the best in *Rome*. At the very entrance stands a round Table of a blewish Stone, having the Arms of the House of *Montalto* engraven upon it, and underneath a low Iron Pump, which is no sooner press'd down with the Foot of the Gardener, but the Water spouts forth on all sides.

In the little Palace near the Gate is a wooden Organ, which gives no ungrateful sound; and besides many Pictures and Statues of the Family of *Montalto*, the Picture of an Engagement betwixt *David* and *Goliah*, turning upon a Frame, shews you both the foresides and backsides of these two Combatants. Here you see divers curious Urns; the true *Busto* of *Sixtus* V, a Tabernacle of rich Stones, a *Picture* in Stones of divers colours, which, held one way, represents only a Bunch of Herbs, but turn'd another way, represents a Man's Head and Face; and to make up the rest, a curious Library, over the Door whereof, on the inside, you see these words, *Medicina animi*. The Gardens are full of most curious Waterworks and delightful Walks.

The Baths of *Diocletian*. The Church and Convent of the *Carthusians*, built upon the Ruins of the Baths of *Diocletian*, are not far from hence, for the building of which forty thousand Christians were imploy'd by this Emperour and his Associate *Maximian*.

The Pope's Granaries. From hence we went to the Pope's Granaries, vast Structures two stories high, and always stor'd with Wheat, to supply the City; many Officers are appointed for the management thereof, and abundance of Labourers imploy'd daily in turning the Wheat, and by the smelling at the end of them, can tell whether the Grain begins to moisten. These Granaries are also built upon the Ruins of the Baths of *Diocletian*.

The Church of St. *Agnes*. Passing hence thro' the *Porta Pia*, (not far off) we went for a mile to St. *Agnes*'s Church, where the Body of this Saint lies entomb'd under the Altar, who suffer'd Martyrdom at fifteen years of age.

Hard by it you see another Church dedicated to S. *Constantia*, another holy Virgin, and that famous Tomb known generally by the name of *Bacchus*'s Tomb, but erroneously, it being the Tomb of St. *Constantia*, curiously cut in *basso relievo*: the *Area* or Chest, being of one Porphyry-stone of six foot long, and above half a foot thick.

The Villa of *Borgheses*. Thence crossing the Fields, we came to the Villa of the *Borgheses*, (a little half-mile from the Town) the largest of any about *Rome*, and beautified with Walks, Fishponds, Bird-cages, Thickets of Trees, many Fountains, Wetting-spouts, Statues, Grotto's, Banqueting-places, and a very fair Park of Deer. The Statues in the noble Palace are so exquisite and many in number, that they have furnish'd sufficient matter for a whole Volume in 8vo, unto which I refer the Reader. This Palace is enclos'd on both sides by a Demi-circle of Statues, and the Wall thereof cover'd with many old Marble pieces of Antiquity; as, that of *Curtius*, of *Europa* and *Jupiter*, &c. In the great Hall you see the Statue of *Diana* in Oriental Alabaster, which was reverenc'd as a Deity by *Augustus Cæsar* himself; and two very large *Pictures*, one representing a publick Cavalcade of the Pope, the other a Cavalcade of the Grand Signior. In an adjacent Room stands the Statue of a bold ancient Gladiator, who alone fought against twenty, and being mortally wounded, discovers, even dying, his fierceness by his threatning looks. In another Room below you see the Statue of *Seneca*, of black Stone like Jett, bleeding to death; the Statue of *Daphne* pursued by *Apollo*, and she stiffening into a Tree, the Work of *Bernini*; the Statue of *Æneas* with his Father on his Back, the first very brawny, bold and strong, the other lean and timorous; as also that

that of *David* slinging at *Goliah* with terrible Frowns in his Countenance, both by the hand of Cavalier *Bernini*. In one of the Chambers above is the Head, in *Profile*, of *Alexander* the Great, in Marble; and in another Chamber, a great Elbow-Chair, which locketh fast any man that is set in it. Here I saw also some Toys and Clockworks for the diversion of young People.

In our return from this Villa, by the Back-door leading to the *Porta del populo*, we took a transitory view of the Church of *Madonna del populo*, much beautified by *Alexander* the Seventh. Here you see that famous Statue of *Jonas*, made by the direction of *Raphael Urbin*; and in a Chapel near the Gospel-side of the high Altar, a most curious Picture, done by *Guido Rheni*. The ancient Tomb of *Nero* stood where you see now the high Altar of this Church.

Turning afterwards to the left, to the *Piazza di Spagna*, we pass'd by the great *Guglia* or *Egyptian Pyramid*, carv'd all over with Hieroglyphicks, which stands at the head of three Steps. Going on a little further, we saw the Greek Church and College, their Ceremonies, and heard them singing of Mass after the Greek manner, tho' they are in Communion with the *Roman* Church, this Seminary being intended for the education of Missionaries, to be sent in Missions into their own Country.

The Greek College.

From hence keeping still to the left hand, and ascending to the top of the Hill by the Coach-way, we took a view of the Great Duke of *Florence*'s Villa, its curious Gardens and Fountains, three vast Marble Vessels, and a world of Statues, both in the Palace and long Gallery; the most remarkable were, that of the two Gladiators wrestling; that of the Clown whetting his Sithe, and hearing *Cataline*'s Conspiracy (one of the finest pieces in *Rome*) and that of *Cupid* and *Venus*.

The Great Duke's Villa.

Crossing the Street here as we were coming out of the Back-door, we soon came to the Back-door of the Villa *Ludovisia*, belonging to the Prince of that Name, seated upon a rising Ground, in a most excellent Air: It has two Houses, both most curiously furnish'd with many Rarities; in that near the Back-door we took particular notice of these following; a most excellent Picture of the B. Virgin *Mary*, by *Guido Rheni*; a rich Cabinet, with the Picture of *Gregory* XV. in a *Cameo*, and other rich Stones adorning it; a little Closet full of Rarities, such as a Skin of a *Hydra* with seven Necks, a petrified *Fungus*, the true Picture of *Francis* I. King of *France*, and his Physician *Lorenzo Vinci*, &c. In another Room, the Heads of *Gregory* the Fifteenth and Cardinal *Ludovisio* his Nephew, in white Marble: a Room full of curious Glasses: Upon the Staircase you see a most exquisite piece of a little *Cupid* so burthen'd with Arrows, that another little *Cupid* is forc'd to sustain them behind. But what surpasses all the other Curiosities here, is the most magnificent Bedstead in one of the Chambers, valued at an hundred thousand crowns, the four Posts being of Oriental polish'd Jasper, the rest of other rich Stones, the Head exceeding all the rest, especially in the middle, where the Arms of the House of *Ludovisio* are most artificially set in rich Stones of divers colours. This House is surrounded with Fountains, Waterworks, and shady Walks.

The Villa *Ludovisia*.

The first House.

From hence crossing the Garden, we went to the other House, where, in the several Chambers, we were shewn these following Curiosities; two old Gladiators, in Stone, sitting down; a St. *Francis*, a *Lucretia*, a *Judith*, and a Conversion of St. *Paul*, all four painted by *Guido Rheni*; with divers other Pieces of *Titian*, *Raphael*, *Michael Angelo*, *Caraccio*, and others; a most curious Head of *Scipio* the *African*; the Head of *Seneca* in *busto*; divers rich inlaid Tables of Stone; two *Apollo*'s of white Marble; the Statue of a dying Gladiator; the Body of a petrified Man. In another Chamber you see a most curious Clock made in *Germany*, but has not gone since it came to *Rome*, none of the Clockmakers here daring to venture upon the mending of it. In another Chamber, a new Statue of white Marble, representing the Rape of *Proserpina*, by *Bernini*. In another, the most exquisite Statue of *Cestius Marius*, killing himself with his Dagger at the sight of his dead Daughter, who had kill'd her self to avoid the Lust of the Emperour. In the long Gallery we saw the Statues of *Junius Brutus*, of *Nero*, *Domitian*, &c. But what surpass'd all the rest, was, the Head of *Olympias*, (Mother of *Alexander* the Great) in *basso relievo*, and in a Frame.

The second House.

From this Villa we went to the Church of the *Capuchins*, opposite to the great Door thereof, where, on the left hand, we saw the Tomb of St. *Felice*, a Lay-brother of this Order, famous for his Sanctity; as also the Tomb-stone of Cardinal *Antonio Barberino*, Brother to Pope *Urban* VIII, who having been long a *Capuchin*, was hardly prevail'd upon by his Brother's command to accept of the Cardinals Cap: Upon his Tomb-stone you see only this Inscription,

The Capuchins.

Hic jacet umbra, cinis, nihil.

This Cardinal, and Cardinal *Mazat*, made by *Clement* the Eighth, are the only Cardinals of the *Capuchins* Order.

Directly opposite to the *Capuchins* stands the Palace of the *Barberini*, now in the possession of the Prince of *Palestrina*, of that Family, being one of the finest Palaces of *Rome* for its noblenes, most curious situation on the side of a Hill, for its two neat Staircases, the noble pieces of Painting on the Roof of the great Hall, by *Pietro di Cortona*, the rare Gallery full of Pictures and Statues, stately Apartments, and lastly, for that most exquisite Library of Cardinal *Francesci Barberino*.

Palazzo Barberini.

Hence (in our way to the *Minims* of *Trinita di Monte*) we view'd in *transitu* a little Church of *Spanish Augustine* Friers, call'd St. *Ildefonso*, beautified with a goodly high Altar, side-Chapels, a curious *Cupola*, and neat Quire, tho' it be the least Church in *Rome*.

The Church of St. *Ildefonso* the least in *Rome*.

Then coming to the *Minims* of *Trinita di Monte*, belonging to *France*, and St. *Francis* of *Paula*'s Order, founded by *Lewis* XI. King of *France*, we found it one of the best scituated of all in the City, which may be overlook'd from thence at one piece. In the Church we took notice of the Assumption of our Lady, painted by *Zuccary*; that of our Saviour's taking down from the Cross, by *Raphael*; the appearing of our Saviour to St. *Mary Magdalen*, by *Julio Romano*, *Raphael*'s Scholar. In the Dormitory of this noble Convent you see a most curious Perspective of St. *Francis* of *Paula*, and a rare Sun-dial.

From hence going down into the *Piazza di Spagna*, we took notice there of the *Ship-Fountain*, which in Summer-time spouts forth its Waters all over the *Piazza*, to cool it. In this *Piazza* is the Palace where the *Spanish* Ambassadours keep their ordinary Residence in *Rome*, and at one end of it, the College *de progaganda Fide*, founded by *Urban* the Eighth, for the maintenance and education of young Students of the Eastern Countries, even to the *Indians* and *Ethiopians*, to qualifie them for Missions into their Native Countries, for the conversion of the poor Infidels in those remote parts of the World.

Piazza di Spagna.

Next we steer'd our course towards the *Piazza* of the *Fontana de Trevi*, where in our way we saw divers noble Palaces of Cardinals near the *Monte Cavallo*. The Fountain of *Treve* emits three different Streams out of its three Mouths, being for the rest, as yet, unfinish'd.

Fontana di Trevi.

Advancing nearer the foot of the *Monte Cavallo*, we took a transitory view of the College of the *Maronites*, and in their Church heard them singing Mass in their own Language and Rites: They use the *Arabick* Tongue, and have been in Union with the *Roman* Church these five hundred Years.

The College of the *Maronites*.

Thence we went to the Church built by *Constantine* the Great, in honour of the twelve Apostles, in memory of whom the said Emperour himself carried twelve Baskets upon his Shoulders when the Foundation was laid. Here lie interr'd St. *Philip* and *James*, two Apostles; and the *Piazza* before the Church is adorn'd with four stately Palaces, *viz.* that of the Prince *Colonna*, that of Cardinal *Chisi*, that of Cardinal *Sforza*, and that of Signior *Muli*.

From hence we took a turn into the *Corso*, the finest Street in *Rome*, so call'd from the Races that are run there in Carnival time, by Horses against Horses, *Jews* against *Jews*, or Boys against Boys. In this Street also the Masquerades divert themselves in Carnival time, when the other wise grave *Italians* vent their Humors according to their respective Inclinations; thus you see some represent Doctors of Law, and disputing with one another in pure Railery; another rides on a Mule, in the habit of a Physician; another cries, *A Secret against Mice*, and carries a Cat under his Cloak; Persons of great Quality are drawn in *Carro's* with four Horses abreast, with Pageants and a great train of Trumpets and Horsemen, whilst some Dukes and Princes appear on foot, and pelt those in the *Carro's* and Windows with Sugarplums. But what diverted me most was, a certain *Italian*, who being dress'd half like a *Spaniard* and the other half like a *Frenchman*, made a most lively representation of these two *Antipathetical* Nations. All these Diversions are perform'd with all imaginable decency, no body being allow'd to carry a Sword or any other Arms, nor to appear mask'd after it is dark, nor to make any scurrilous Reflections, for which reason certain Serjeants ride up and down the *Corso* to see a most exact *decorum* observ'd, and to prevent any Disturbances.

The *Corso*.

As in this Street Persons of Quality make the *Tour à la mode* in their Coaches, so it is upon that score that several fine

Some Palaces in the *Corso*.

fine Palaces are built in it. In the Palace of Signior *Vitelleschi* are no less than ten spacious Rooms on a Floor, adorn'd with most curious Pictures and Statues; among the last; that of *Cincinnatus* and *Brutus* are the most remarkable, that of *Brutus* being defac'd by special order from the Senate, the very marks of the punches of the Halberts are plainly seen to this day. Near it stands the Palace of Prince *Pamphylio*, exceeding in Riches and Furniture any other in *Rome*, or perhaps in *Italy*: The other Palaces in the *Corso* are, that of Prince *Carboniano*, that of Cardinal *Franciotti*, that of *Don Augustino Chisi*, that of Prince *Ludovisio*, and that of the Duke of *Caetani*.

The Churches in the *Corso* are, that of St. *Maria* in *Via Lata*, near the Palace of Prince *Pamphylio*, an ancient Church, said to have been built where St. *Paul* lodg'd at his first coming to *Rome*, and that St. *Luke* wrote the *Acts of the Apostles* in the Oratory here. The Church of St. *Marcello*, in the same Street, was built on the same place where anciently stood the Temple of the *Egyptian* Goddess *Isis*, destroy'd by the command of *Tiberius*. Behind the Church stands the Oratory of the holy Crucifix, in which Society many Noble Persons of *Rome* have entred themselves. Here is most excellent Musick, and one of the best Preachers in *Rome*, to be heard every *Friday* in *Lent*.

S. Carlo in Corso.

The next is the Church of St. *Carlo* in *Corso*, belonging to the *Milanese*; here the Heart of St. *Charles Borromeo* is preserv'd in a Crystal.

S. Jacomo di gl'Incurabili.

In this Street is also that neat round Church of St. *Jacomo de gl'Incurabili*, belonging to the Hospital, where such as are afflicted with incurable Diseases are maintain'd.

The Convent of Penitent Whores.

And lastly, the Church and Convent of the *Penitent Whores*, where such as truly repent of their former bad course of life are receiv'd and maintain'd, and pass away the remainder of their days in Penances and Austerities, their Faces being always veil'd, and no Man, except their Confessor and Physician, permitted to speak with them.

Behind this Convent stands the Church of St. *Sylvestro in capite*; so call'd from the miraculous Picture of our Saviour's Head and Face, which our Saviour made himself, and sent to *Abagarus* King of *Edessa*.

The Column of Antonin.

From thence returning thro' the *Corso*, we took a full view of the great Pillar of the Emperour *M. Aurelius Antoninus*, built by him in honour of his Father *Antonius Pius*: It is built in the same manner as that of *Trajan* before mention'd, of white Marble, engraven without with a *basso relievo* from top to bottom, representing the chief actions of *M. Aurelius*; its height is a hundred seventy five foot, having two hundred and six Steps which lead up to the top, and fifty six little Windows to let in the light. This great Pillar is compos'd of no more than twenty eight Marble Stones. The *Basri relievi* being much defac'd by age, printed Cuts are to be sold of them in *Rome*, containing the Atchievements of that Emperour against the *Armenians*, *Parthians*, *Germans*, *Vandals* and *Sarmats*. Upon the top of this Column the Statue of St. *Paul*, in Brass gilt, was set by command of *Sixtus* V, from whence I had a prospect of *Rome* and its seven Hills, *viz.* the *Capitolin* Hill, the *Palatin* Hill, the *Aventin* Hill, the *Celian* Hill, the *Esquiline* Hill, the *Viminal* and the *Quirinal* Hills. Unto these seven ancient Hills of *Rome* were added three others, *viz.* the *Janicule* Hill, the *Vatican* Hill, and the *Pincian* Hill, now call'd *Montrinita*.

The 7 Hills.

The Pazzarella.

From this Pillar we went to the *Pazzorella*, or Madhouse, and thence to the *Piazza di Pietra*, to take a view of that row of stately Pillars which adorn'd the *Basilica* of the Emperour *Antoninus*, who had his Palace and *Forum* here.

The Roman College.

Thence passing thro' divers little Streets, we came to the *Roman* College of the Jesuits, a goodly Structure, and conveniently situated. Here we saw the Schools and Gallery of the famous *Athanasius Kerkerius*, full of Curiosities Mathematical, Mechanical and Hydraulical; but it falls, in my opinion, far short of Signior *Settala*'s Gallery in *Milan*, and Monsieur *Servier*'s at *Lyons*. Here is also a fair Library, but kept under Locks and Keys. The Church belonging to this College is design'd to be a noble Structure, but is not above half built, for want of Money.

La Minerva.

Hence we steer'd our course towards *la Minerva*, a Convent of the *Dominicans*, being built upon the place where anciently stood the Temple of *Minerva*, whence also this Church is call'd S. *Maria supra Minervam*. It is full of neat Tombs, as those of *Leo* X. and *Clement* VI. both Popes, of the House of *Medices*, the Work of *Baccio Bandinelli*: The Tombs of the two Cardinals, *Pimentelli* and *Morona*, who had been thirteen times *Legatus à latere*, and the Pope's Legate in the Council of *Trent*. Here is to be seen a Tomb of a certain Lady of the Family of the *Raggi*, a curious piece of Workmanship, the black Marble being laid upon another-colour'd Marble, and both upon a round Pillar. That exquisite Statue of our Saviour, of white Marble, on the Gospel-side of the high Altar, is the Work of *Michael Angelo*.

In the Sacristy of this Church you see the Chapel of *Katherine* of *Siena*, transfer'd hither by Cardinal *Antonio Barberino* from *Siena*; her Body lies interr'd under the Altar of the *Rosary* in this Church.

S. Andrea della Valle.

From *la Minerva* we took a turn to St. *Andrea della Valle*, a goodly Church possess'd by the *Theatins*, and built upon the same place where formerly stood the Theatre of *Pompey*, and in later times the Palace of *Piccolemini*, for which reason perhaps *Pius* II. and *Pius* III. both Popes of this Family, are buried here. The rare Painting in the Cupola was done by the hand of Cavalier *Lanfrenco*, as the three corners under the Cupola, and the Tribune, are by *Domenichini*. To be short, it is one of the neatest Churches of *Rome*, being of the Architecture of *Maderno*. In the Street before this Church liv'd, not long ago, that most ingenious Roman Traveller *Pietro della Valle*, who has oblig'd the World with three entire Volumes in Quarto of his Travels: He had spent considerable Sums of Money in purchasing all sorts of Rarities, which are kept still in his House.

And behind the Church liv'd, at my first coming to *Rome*, another *Virtuoso*, Cavalier *Pozzo*, who shew'd me his curious Pictures, Medals, *Bassi relievi*, Books, and other Rarities, which he had painted, copied and design'd with vast expence.

The Palace of Mattei.

Taking a view *en passant* of the many rare Pictures in the Palace of the Duke of *Matthei*, and passing by S. *Carlo in Catenari*, a neat round Church, we went to the *Cancellaria*, a Palace built of the Stones of the *Coliseo*, by Cardinal *Riani*, where we saw the Gallery of Pictures of Cardinal *Barberin*. This Palace overlooks a Collegiate Church call'd St. *Lorenzo in Damaso*, under the high Altar whereof is entomb'd the Body of St. *Damasus* a Pope, and the rare paintings on the Walls represent the History of St. *Lawrence*.

Lorenzo in Damaso.

The Palace of Farnese.

Near this Church stands the Palace of *Farnese*, belonging to the Duke of *Parma*, having a most noble *Piazza*, with two stately Fountains before it, and no Houses adjoyning to it. It is built in form of a Square, having in the midst of each Square a great Door leading into the Court. This Court is built upon Arches and Pillars, with a fine Gallery round it, leading into the several Apartments. In this Court stands that noted Statue of *Hercules* leaning upon his Club, the Work of *Glyco* an *Athenian*, as the Greek Inscription intimates, but one Leg is modern; it was found in the Baths of *Antoninus Caracalla*.

Opposite to it is another Statue of *Hercules*, which being a Copy only of the former, don't come near it in goodness. The Statues of the two *Flora's*, of the two Gladiators, and divers others, are also excellent pieces.

Upon the great Staircase leading into the Gallery, we saw the most exquisite Statue of a Boy and Dolphin; and at the entrance of the great Hall, the Statues of two *Parthian* Kings; and within it, the rare Statue of *Alexander Farnesi* Duke of *Parma*, trampling upon two prostrate Statues, *viz.* *Heresie* and *Rebellion*, whilst Fame crowns him: They are all four of white Marble, and of one entire Stone. In the same Hall, the excellent Statues of *Charity* and *Plenty*, in cumbent postures, are worth the curious Traveller's Observation, being the fellows of those two Statues which are to be seen at the Tomb of *Paul* III. (the first Raiser of this Family) in St. *Peter*'s Church. And round about the same Hall you see many Statues of Gladiators in different postures, with their Swords upon their guard. In this neat Apartment are painted several of the most memorable Actions of *Paul* III, by *Salviati* and *Frederico Zuccari*; as also the Picture of *Luther* disputing with *Cajetan*; the Picture of the four Latin Fathers of the Church of St. *Jerome*, St. *Ambrose*, St. *Augustin* and St. *Gregory*, are of the hand of *Perdonini*. In another Room we saw a good number of ancient *Statues* of *Philosophers* and *Poets*, as, *Euripides*, *Plato*, *Possidonius*, *Zeno*, *Seneca*, *Diogenes*, *Bacchus*, *Meleager* and others; and in another Apartment, abundance of rare Pictures done by the choicest hands: The rare Gallery of Statues, with the most exquisite painting on the Roof, by *Hanibal Carraccio*, representing the Loves of the Heathen Gods and Goddesses, is look'd upon as one of the best in *Rome*, if not in all *Europe*; the printed Cuts thereof being admirably done, and sold in the Stationers Shops in this City. The admirable Statue of *Apollo*, in a Flint-stone, stands in the same Gallery. The Library here has, besides many curious Books, many exquisite pieces of *miniature*, and rare pieces of *Raphael* and *Titian*, and several Designs of *Raphael* and *Michael Angelo*.

Then

Then mounting up higher, we saw in the Chambers there many rare Pictures, and lesser Statues; and in the long Gallery above, several excellent pieces of *Caraccio*; and in the adjacent Rooms, many ancient Curiosities, as, an ancient piece of Painting, done fifteen hundred years ago, found in *Adrian's* Villa; another ancient Picture representing *Eugene* IV. in his Study, and St. *Bernard* standing by him; a curious Design of *Vassari*, representing a Town in *Flanders* taken by *Alexander Farnesi*; a true Picture of *Michael Angelo*; a *Venus* of *Michael Angelo*; a small old Picture of our Lady and St. *John Baptist*, in Mosaick Work; a Crucifix of Ivory, made by *Michael Angelo*; a Model of a Bridge thrown over the *Scheld*, when *Alexander Farnesi* took *Antwerp*; with many other Curiosities, too many to be inserted here.

The famous Bull. In a little back Court you see the famous *Toro*, a Statue of a large Bull, to whose Horns a Rope being tied at one end, and at the other end of it a Woman's Hair, two strong Fellows are endeavouring to push the Bull and Woman from a Promontory into the Sea: This Bull, the two Fellows, the Woman, a little Boy, and a Dog, are all cut out of one Marble Stone.

Over against the Palace of *Farnesi* stands the House of Signior *Pighini*, where we saw two Statues, the one of *Venus*, the other of *Adonis*, both very ancient ones, for which the Earl of *Arundel*, late Lord Marshal of *England*, offer'd twelve thousand crowns, but could not have 'em. In the Palace of Cardinal *Spada* we also had sight of many rare Pictures.

The Hospital of the Trinity. Thence passing *Ponte Sisto*, we went to the Hospital of the Trinity, where Pilgrims are treated handsomly for three days.

Returning thence, we took a view of St. *Girolamo della Charita*, a Church and House of Priests (most Gentlemen) living in Community at their own expence. The first Founder of this Society was *Philip Neri*, who liv'd thirty years among them. Upon the high Altar of the Church is a rare Picture of St. *Jerome*.

The English College. Near it stands the *English* College, formerly an *English* Hospital, built by *English* Merchants. *Alan*, the last *English* Cardinal, lies interr'd in this Church.

From hence we took a turn to the *Chiesa Nuova*, belonging to the Priests of the Oratory, one of the neatest Churches in *Rome*, it being most richly gilt, and the Roof painted by *Pietro di Cortona*. St. *Philip Neri's* Chapel (the Instituter of this Society) is very neat, and placed on the Gospel-side of the high Altar, where you see his true Picture, done by *Guido Reni*; and in a lower Chapel under this Altar, you see his Body laid in an Iron Chest. On the other side of the high Altar, within the Rails, lies entomb'd the Body of *Cæsar Baronius*, once a Priest of this House, and afterwards made Cardinal (not without reluctancy) by Pope *Clement* III, as a just Reward for his Services, in having maintain'd the cause of the Church alone against the whole Gang of Centuriators. In the House of these Priests is also to be seen one of the best Libraries of *Rome*; and in their Oratory is every *Sunday* and *Holiday*, in Winter, an excellent sett of Musick, at night.

Cardinal Baronius.

La Pace. Afterwards we took a turn in the Church *de la Pace*, to view the excellent *Pictures* and *Statues*, done by some of the best hands, as *Peruzzi* of *Siena*, *Veseria*, *Lavinia*, a Lady of *Bologna*, *Fontana*, *Genteleschi*, Cavalier *Gioseppe*, *Rossi*, and *Raphael Urbin* himself, who painted the *Prophets* and *Sybils* in the Chapel of *Augustino Chigi*. The Statues of St. *Peter* and St. *Paul* are the Works of *Michael Angelo*.

Pasquin. From hence passing thro' the *Stationers Street*, this brought us to the very center of *Rome*, *viz.* the *Piazzo di Pasquino*, owing its Name to *Pasquin*, where we saw an old broken Statue, of some excellent hand, resembling the above-mention'd Statue of *Hercules* in the *Belvedere*. This Statue standing at the meeting of three or four Streets, and consequently convenient for an escape, they fix their jeering Libels on this Statue, and thus fasten them upon poor *Pasquin*, call'd thence *Pasquinades*, which are answer'd by *Marforius*, another Statue near the Capitol.

S. Pantaleon. Going forward, we came to the Church of St. *Pantaleon*, belonging to the Fathers of the *Scholæ piæ*; it was four hundred years ago a Collegiate Church, possess'd by *English* Priests, as appears by an Inscription upon one of the Bells.

Piazza Navona. Thence we took a turn into the *Piazza Navona*, so call'd by corruption instead of *Piazza d'Agona*, this having anciently been a *Circus* for sports, and known by the name of *Circus Agonalis*, in the center whereof stood a great *Egyptian* Pyramid, adorn'd with Hieroglyphicks; in lieu whereof Pope *Innocent* X. order'd another such Pillar to be set up here, with a fine Fountain issuing forth at the foot of it, with four noble white Marble Statues representing the four parts of the World. In this *Piazza* stands the new Church of St. *Agnes*, built at the charge of Prince *Pamphilio*, whose Palace is near it. In this *Piazza* is also the Palace of the Duke of *Braccino*, of the House of *Orsini*, and that of the Family of *Torres*. S. Agnes's Church

Neither ought the *Spanish* Church of St. *Jacomes* be pass'd by unmention'd, the Picture especially of St. *Diego*, by *Hannibal Caraccio*, being worth any Traveller's observation.

Just over against the Back-door of this Church you see a goodly College for publick Lectures, call'd *Sapienza*, founded by *Eugene* IV, and enlarg'd with handsom Schools and a neat Church by *Urban* VIII, and a goodly Library by *Alexander* VII. In my time Dr. *Hart* and Dr. *Gibbs*, two Englishmen, were Readers there.

From hence going thro' the *Piazza Madama*, by the Great Duke's Palace, we enter'd the Church of St. *Lewis*, belonging to the *French*. Upon one of the pillars on the left hand you see the Picture of that great person Cardinal *Dessat*, a *Frenchman*; and in the middle of the Church lies interr'd an *English* Priest nam'd *Moor*, of the Family of the great Sir *Thomas Moor*, and Heir of that Family, notwithstanding which he embrac'd a religious life, leaving the Estate to his younger Brother. It was he who oblig'd the publick with the Life of Sir *Thomas Moor* in English, and retiring at last to *Rome*, there ended his days. There is also an Hospital belonging to this Church. S. Lewis.

The Tomb of Angelus.

We afterwards took a turn in the Palace of *Justiniani*, where we saw every Room in the House so much clog'd with Statues, some entire, some broken, that one would perswade ones self that the Pagan Gods, after their banishment out of the *Pantheon*, were come hither for shelter; but the true reason is, that the old Prince *Justiniani* dying without Heirs male, bequeath'd this Estate to a certain person, under condition, that not one Statue should be alienated, upon pain of forfeiting the whole. There are however, besides these, Pictures not a few, rare pieces of *Titian* and others of the best Masters of *Europe*, shewn in the Gallery above; as, that most exquisite Picture of St. *John* the Evangelist, by *Raphael Urbin*; and in another Room, that of our Lady and St. *Joseph*, a rare Copy of that so famous Picture in the Cloyster of the *Annunciata* in *Florence*, by the hand of *Andrea del Sarta*. The Palace of Justinian.

From hence passing by the stately Ruins of the Baths of *Alexander Severus*, we came to the Church of *S. Eustachio*, where, by a certain Inscription on a stone in the Porch, it appear'd, that *Alexander* of *Parma* was baptiz'd here with his Brother, being Twins. This Church stands in the same place where *S. Eustachius*, with his Wife *Theopista*, and his two Sons *Agapitus* and *Theopistus*, were put into a brazen Bull by *Trajan*, whom *Eustachius* had serv'd twice as General. S. Eustachio.

Then we took a view of the *Rotunda*, (the *Pantheon* of the Ancients) a bolder piece of Architecture than is perhaps to be met with in any other part. *Sebastian Serlius* a very experienc'd person in Architecture, alledging this as the only Model of accomplish'd Architecture; for as all other Vaulted Fabricks are strengthned by being shut up close at the top in the center thereof, this great massive Vault has a hole there of above three yards diameter, having no Windows, or any other light, but what is let in at the top: it is a hundred and forty foot high, and as many broad, without any pillars to support it: it was formerly cover'd with Tiles of Brass, but now cover'd with flat Stones. All the Pillars belonging to this Church stand in the Porch, where there are no less than thirteen, each fifty three foot high, and six in diameter, all of speckled Marble, the *Capitelli* of these Pillars being the best in *Rome*, of the *Corinthian* Order. Here is to be seen the Tomb of that famous Painter *Raphael Urbin*, with the following Inscription: The Rotunda or Pantheon.

Ille hic est Raphael, *timuit quo sospite vinci.*
Rerum magna parens, & moriente mori.

It was in this Temple the Statue of *Minerva* (so famous in History) made by *Phidias* stood, as also that of *Venus*, in whose Ear hung that incomparable Pearl of *Cleopatra*, which she would have dissolv'd in Vinegar. The Inscription in the Architrave of the Porch tells you, that this Temple was built by *Agrippa*, who had been thrice Consul.

Thence passing thro' the *Campo Marzo*, we saw *en passant* the Church of St. *Lorenzo* in *Lucina*, the greatest Parish Church in *Rome*, and so went forward to the Palace of *Borgheſi*, one of the noblest in the whole City. S. Lorenzo in Lucina. The Palace of Borgheſi

It has a fair prospect of three stories, of a prodigious length, the Gallery which leads into the several Apartments being supported by Arches and Pillars round the Court.

Court. On that side which faces the Piazza are ten or twelve large Rooms, where we took notice of very rich Hangings, and most curious Paintings over them; as, the visit of the Queen of *Saba* to *Solomon*, the Rape of the *Sabins*, &c. a fine Ebony Cabinet, inlaid with Gold and precious Stones, valued at sixty thousand crowns; an exquisite Picture of *Hercules* and *Anteus*; the true Picture of *Raphael*; the Last Supper, by *Titian*. In the little black Gallery of Pictures we were shewn, among others, the Pictures of *Martin Luther*, *Nicholas Machiavel*, and *Cæsar Borgia*; and in the low cool Gallery, many Statues and Pictures, of the Family of the *Borgheſi*: That of *Paul* V, as also the Assumption of our Lady, both in Mosaick Work, are so nicely done, that they can scarce be discerned from painting. Here is also a Terrass, and Garden with Fountains and Waterworks, at the very top of the House. In the aforesaid Gallery is also to be seen the true Picture of *Titian*, and that excellent Crucifix made by *Michael Angelo*, with such an exquisite Art, that some have given it out, he drew it after a crucified Man.

The Tomb of Augustus.

We saw afterwards the *Mausoleum* or Tomb of *Augustus Cæsar*, near St. *Rock*'s Church; it was anciently a noble round Fabrick of white Marble, four stories high, surrounded with Pillars, each story growing lesser and lesser, with green Trees about each story; at the top of all (which was two hundred and fifty cubits high) stood the Statue in Brass of *Augustus*; it is altogether defac'd, there remaining something of its greatness, but scarce any thing of its beauty.

Going from hence, we took a transitory view of the Church of St. *Anthony* of *Padua*, belonging to the *Portugueſe*; and of the Tomb of that famous Canonist and Casuist *Martin Aspelenita*, with his Statue in *busto* over it, who died at *Rome*, having follow'd his Friend *Caranza*, to defend his Cause.

St. Austin's Church.

Not far from this Church, is the Church and Convent of the *Austin* Friers; in the first whereof is to be seen the Tomb of St. *Monica*, Mother of St. *Austin*, and of *Onufrius Panvinus*, a learned Antiquary and Hebrecian of this Convent, where is kept the Library call'd *Bibliotheca Angelica*, the Gift of *Angelus Rocca*, under condition, that it should be open always in the Mornings.

Bibliotheca Angelica.

The German College.

Hard by it stands the Church of St. *Apollinaris*, and the *German* College, the constant meeting-place of the best Singers of *Rome*.

The Palace & Pumps.

Over against it stands the Palace of the Duke of *Altemps*, in the Hall whereof the Triumph of *Bacchus* in *basso relievo* is cut most curiously in Marble, and a certain Town cut in Wood, most exquisitely done, being a very ancient piece. The Picture here of the B. Lady, with her Son in her Arms, done by *Raphael*, is valued at five thousand Pistols; and the Library has divers excellent Manuscripts, and many other good Books. The Chapel belonging to this Palace is very noble, and the Ornaments for the Church-service so rich, that they have cost the Duke above an hundred thousand crowns. The Tomb of Pope St. *Anacles* is made the Altar, and his Head enchas'd in Silver in the Sacristy, set thick with precious Stones.

From hence we went to a neat Church belonging to the *Florentines*, call'd St. *John Florentins*, where I took notice, in one of the Chapels, of the Picture of our Saviour's Resurrection, a rare piece done by *Lanfranc*; whence I return'd to the Bridge of St. *Angelo*, where I had begun to take the Tour about *Rome*, whereof I have given a short account to the Reader, referring my self, for the rest, (which I was forc'd to pass by for method sake) to the Books and Cutts publish'd of the Palaces, Fountains, Statues, and other Antiquities of *Rome*, as much as are remaining of them, it being beyond all question that the greatest part of them have scarce any thing left of them now, except their bare Names; as, the *Cymbourn Marii*, the *Gregostasis*, the *Curia Hostilia*, the golden House of *Nero*, the Theatre of *Pompey*, the Theatre of *Statilius Taurus*, the *Septizonium Severi*, *Mecenas*'s Tower, the *Hippodromus*, the House of *Gordianus*, the *Circus Flaminius*, the *Circus Maximus*, the *Atrium Libertatis*, *Scipio*'s House, the Triumphal Arch of *Augustus Cæsar*, of *Domitian*, &c.

It will now be time to take my leave of *Rome*, which I will do so soon as I have given you a touch concerning the Devotion, Musick, Ceremonies, Shows, Government, and the Inhabitants of it.

Devotion in Rome.

As for the Devotion here, the same is sufficiently discernable in those places where the *Quarante Hore* and Stations are kept, which going all the Year round from one place to another, you shall see the People flock early in the Morning thither, in such vast numbers, that you need not be at any great pains to enquire where the Station is.

Musick.

As for their Musick, it is the best in the World, and of the best kind, *viz.* in Voices, especially in the Pope's Chapel, where they sing without any Organ or other Instrument. The Musick of the *Chiesa Nova* in the Church of St. *Apollinaris*, upon *Cecilia*'s Day in the Church dedicated to that Saint, in the Oratory of St. *Marcello* every *Friday* in *Lent*, at the *Jesuits*, during the *Quarante Hore* in *Shrove-tide*, besides in other Churches upon their Patrons Days, are so delightful to the Ear, that a man who but once feasts his Ears with it, thinks himself well paid for his Journey to *Rome*, were it only upon the account of their Musick.

The Ceremonies.

The Ceremonies I took notice of during my several Voyages were, the Ceremony of the Pope's opening the *Porta Sancta* of St. *Peter*'s Church in the Jubilee Year; the Ceremonies of the Pope's Chapel when he assists there in person, as on *Candlemas-day*, *Palm Sunday*, *Maundy Thursday*, &c. the Pope's washing of thirteen Pilgrims Feet; his singing Mass publickly in St. *Peter*'s Church on St. *Peter*'s Day, and other Festivals: The Ceremony of canonizing Saints, of creating Cardinals, and presenting them with the Caps in publick Consistory: The Ceremony of singing Mass in *Greek*, according to the *Greek* Rites, in the Church of the *Greek* Seminary, upon the Feast of *Epiphany* and St. *Athanasius*'s Day; the Ceremony of baptizing of *Jews*, with divers others; but in all my five Voyages I had the good fortune to miss the Ceremony of a *Sede Vacante*.

Shows Sacred

The Shows I took notice of, both sacred and prophane, were, the Whipping Processions in the Holy Week; the great Procession from St. *Marcello*'s Oratory to St. *Peter*'s Church, upon *Maundy Thursday*, in the holy Year; the Procession of the *Zitelle*, upon our Ladies Day in *Lent*; the Procession of the Priests of the Oratory, upon *Shrove-Tuesday*, to the seven Churches, with five or six thousand persons following them, every one of whom they treat with two hard Eggs a piece, and a slice of *Salsigie*, with Bread and Wine. The Cavalcades of the Pope and Cardinals; the *Spanish* Cavalcade upon St. *Peter*'s Eve, when the *Spanish* Ambassador presents the Gennet and Purse of Gold, &c.

Prophane

Among the prophane Shows I saw the solemn Entries and Cavalcades to Court of Ambassadors, wherein they strive to outvie one another, to honour their respective Masters; their Reception in a publick Consistory, and their Audience of Leave; their most exquisite Opera's, with the stupendious changes of Scenes and Machines, as swelling Rivers, overflowing Lakes, Houses falling on a sudden, whole Towns starting out on a sudden upon the Stage, and such-like; not to mention the excessive Carnival-pomps exhibited by persons of Quality, with vast charge and incredible magnificence.

The Government of the City.

The Government of *Rome* must be consider'd under a double qualification, *viz.* that of the City, and that of the Church; the Government of the City is manag'd by a Governour (a Prelate) appointed by the Pope, unto whom he gives an account weekly of all remarkable Occurrences there. Besides his own Guards, he has a *Barigello*, or Captain of the *Sbirri* or Serjeants, who watch the motions and behaviour of all the Inhabitants, and perform Justice without delay; for the price of every thing being fix'd, and affix'd in all Inns, Taverns, and other publick places, if you are deceiv'd it is your own fault, and you may soon have Redress. I have seen, the last Jubilee Year, the *Sbirri*'s disguis'd in Pilgrims Habits, to mix with the other Pilgrims, to see in what manner Strangers were us'd by their Hosts, and otherwise, and if they found any faulty, they made quick work to carry them to Prison; a thing so common in *Rome*, that there needs not much to give cause for an Imprisonment, as a Knife in a man's Pocket, a dark Lantern, a Sword without License, &c. but a Pocket-pistol is enough to send a Man to the Gallies, besides a good Strapado into the bargain; however, Strangers are not always used with the same severity.

Of the Church.

The Government of the Church is administred partly by the Pope in person, partly in the several Congregations; partly by his Vicar-General, a Cardinal, who has for his Assistant a Vicegerent, who is always a Bishop. Scarce a week passes but a Congregation is held about Church-affairs, unto which are admitted not only the Cardinals, but sometimes also the Bishops and Doctors. Every three weeks a Consistory is held in the presence of the Pope, where the Cardinals consult about all necessary affairs of the Church.

Inhabitants.

The Inhabitants of *Rome* are not now the tenth part in number in comparison of what they were when this City was at its full growth, when it was computed to have no less than three or four millions of People: And it is further observable, that most of the modern Inhabitants are descended from other parts of *Italy* or *Europe*, having been invited thither by the hopes of Preferments or other business. The Nobility it self (except some ancient Fami-

lies

lies of the *Ursini*, *Colonna*, *Favelli*, *Frangepani*, and a few others) trace their original from foreign parts, being descended from such Families of *Popes*, *Princes* and *Cardinals* as were Foreigners before their promotion.

The Author leaves *Rome*.

Having thus satiated my Desires with an entire view of *Rome*, I pursued my Journey thence to *Naples*, and going out of the Gates of St. *John Lateran*, travel'd to *Marino*, a small but neat Town, belonging to Cardinal *Colonna*;

Marino.

thence to *Velletri*, an Episcopal Town, famous in ancient time for the Birth of the Ancestors of *Augustus Cæsar*; Cardinal *Ginetti* has a fine Palace here, and the Statue in Brass of *Urban* VIII. is worth a curious Traveller's observation.

Velletri.

Hence taking our way thro' *Tre Taberne*, where St. *Paul* was met at his first coming to *Rome* by the *Christians* of *Rome* *, and *Peperno*, the Birth-place of *Camilla* the *Amazon*, and *Fossa Nuova*, we came to *Tracina*, (the ancient *Anxur*) formerly the capital City of the *Volscians*, but having scarce any thing remaining now of its ancient splendour, except the Ruins of the Haven adorn'd by *Antonius Pius*, and of an old Temple. It is an Episcopal Town.

Tre Taberne.

* See *Acts* c. 28.

Fossa nuova.

Near this place stood in ancient times the Town of *Anxur*, the Inhabitants whereof, being addicted to the *Pythagorean* Opinion, were devour'd by Serpents, because no body would kill them; as at another time it was ruin'd by Silence, no body daring to speak of the Enemies approach, because they had often been alarm'd with false Reports of that nature, which had produced a severe Edict from their Magistrates not to speak of any such thing.

Anxur.

From *Terracina* passing thro' a Wood of Bay-trees, and an open Gate call'd *Portello*, (the Inlet into the Kingdom of *Naples*) we came, towards Supper-time, to *Fundi*, so call'd from its being built in a low flat ground. It is a very ancient place, tho' it has got a new Face since it was burnt about a hundred and thirty years ago by *Caradin Barbarossa*, who from a Pyrate became to be Admiral to *Solyman*, and afterwards King of *Algiers*, after having perswaded the Inhabitants to shake off the *Spanish* Yoke. This *Caradin* being with his Squadron upon the Mediterranean Sea, and having receiv'd intelligence, that *Julia Gonsaga*, the Widow of *Vespasian Colonna*, (one of the handsom'st Women in the World) liv'd at *Fundi*, he landed some of his Men in the night-time, in hopes of getting this precious Booty into his hands, whom he intended to make a Present of to his Master *Solyman*; but she having escap'd in her Smock, the Pyrate pour'd out his Revenge upon the place, which he laid in ashes, and carried most of the Inhabitants into Slavery.

Fundi.

The *Via Appia.*

From *Fundi* we travel'd on towards *Mola* upon the *Via Appia*, so call'd from *Appius* its Founder, a noble *Roman*, this Cawsey being one of the most convincing Proofs of the ancient *Roman* greatness, for it reach'd from *Rome* to *Brundusium* in the Kingdom of *Naples*, five whole days Journey, being of that breadth, that two Waggons could meet one another with ease, and pav'd all with black Flint-stones, each of which was of that bigness, that two Men could scarce carry one of them, and laid so close together, that they seem'd to be but one entire piece, and have held so these eighteen hundred years, and by the frequent passage of Horses and Mules it is become so bright now, that in a Sunshiny day it shines like Silver at two miles distance. Coming to *Mola*, (the ancient *Formiæ*) I went to take a view of the Tomb of *Cicero*, in a Garden not far thence. I am the rather induc'd to believe this, because it is beyond all question that *Cicero* had a Country Seat in *Formiis*, and that he was going thither in a Litter, when he was overtaken by the way by the Executioners sent by the *Triumviri*, and beheaded *, tho' there is no Inscription upon this Tomb.

* See *Valer. Max.* l. 1. c. 4.

Whilst some of our Company were providing for our Dinner at *Mola*, I went with the rest in a Boat to *Gaeta*, where we arriv'd in a little less than half an hour, and saw the Skeleton of *Charles Bourbon*, Constable of *France*, who being disgusted in his Native Country, serv'd under the Emperour *Charles* V. as one of his Generals, and was at last made Governour of *Milan*; but as he was scaling the Walls of *Rome*, in order to plunder it, he was kill'd by a Musquet Ball, and his Body carried afterwards to *Gaeta*, where you see it standing upright, with his Cloaths, Boots and Spurs on, in a long Box, with this *Spanish* Epitaph upon it:

Gaeta.

Bourbon's Body.

Francia mi dio la leche,
Espagnalos y Ventura,
Roma mi dio la muerte,
Gaeta la Sepoltura.

In English thus:

France *gave me Milk*,
Spain *great Employments gave*,
Rome *gave me Death*,
And here Cæt's *a Grave.*

This Castle, which stands upon a Promontory, overlooks the Town and thirty miles into the Sea; and at one end of the Town, towards the Land-side (the Town being a *Peninsula*) you see a cloven Rock, which (they say) was clo en at our Saviour's death; two long Stairs lead you down into the open gash betwixt these two Mountains. On the very Pinacle of this Promontory is a most ancient Monument of a certain *Roman* named *Manutius Plancus*, with a very old Latin Inscription upon it; but being tir'd, I was unwilling to go up so high to see the said Monument.

The cloven Rock.

This Town was built by *Æneas*, in memory of his Nurse *Caieta*, and was the Birth-place of the famous Cardinal *Caetanus*.

After our return to *Mola*, having taken a view of the Grotto of *Cicero*, we set forward again, and in three hours riding came to the Ferry of *Carigliano*, near which, to our no small surprize, we saw the fair Ruins of an ancient Amphitheatre in an open Field, with the Remnants of an Aquæduct, but upon enquiry found that in this Field had stood the ancient City of *Minturna*, but so ruin'd since, that not one Stone thereof remains in the place where it stood formerly, having been forc'd to undergo the same fate with divers other Cities of *Italy*, as *Luna*, *Populonia*, *Coma*, *Baiæ*, &c. which were turn'd into Corn-fields.

The Ferry of *Carigliano.*

Minturna.

No sooner were we pass'd the River in the Ferry-boat, but we entred the Marshes (call'd the Fens of *Minturna*) where *C. Marius* conceal'd himself, and by his stern Look and Voice frightned the Soldier that was going to kill him, telling him, *Dareſt thou attempt to kill* Marius? and afterward escap'd into *Africa*.

As we were riding along the Meadows, we kept in sight of the Mountain of *Cære*, (the old *Mons Massicus*) noted for its excellent Wines, as well as the adjacent Country, known by the name of *Ager Falernus*, fam'd among the Poets for the most delicious *Vinum Falernum*. At night we lodg'd at St. *Agatha*'s, and the next morning entred into *Campania Felix*, so surnam'd from its wholsom Air and vast plenty of Corn and Wine, whence it has got the name of *Certamen Cereus & Bacchi*, i. e. *the Strife of* Ceres *and* Bacchus, among the Ancients. It was this Country which broke *Hannibal*'s Army.

About Noon we came to *Capua*, a Town two miles distant from the place where stood the famous old City of *Capua*, which stood in competition with *Rome* it self, and demanded, that one of the annual Consuls should reside always there; but of this City scarce any thing remains now, that which now bears its Name having nothing to boast of but a pretty good Castle and River, and an Archbishop's Seat.

Capua.

From hence we pass'd thro' *Aversa*, once a considerable place, most pleasantly seated, before it was ruin'd by *Charles* I. King of *Naples*. In this place it was that *Joan* Queen of *Naples* strangled her Husband *Andreasso*, and was her self soon after serv'd so too in the same place.

Aversa.

From hence we had but eight miles to *Naples*, call'd anciently *Parthenope* from one of the *Syrens*, and since call'd *Neapolis*, i. e. *New City*, because the Inhabitants of *Cuma* having destroy'd *Parthenope*, were afflicted with the Plague, till they rebuilt it, in the Year of the World 1449.

The City of *Naples* is now the Capital of a great Kingdom of the same name, which formerly belong'd to the Emperour, but being conquer'd by the *Saracens*, and afterwards recover'd by Pope *John* X, it since that time acknowledg'd the See of *Rome*, the first that was invested by Pope *Innocent* II. being *Roger* II. a *Norman*, 1130. afterwards the *French* and *Spaniards* have struggled frequently with various Fortune for this Kingdom, till at last it remaineth under the Jurisdiction of the *Spaniards*, who hold it from the Pope, and as an acknowledgment, pay every Year a Purse of Gold and a Gennet. This Kingdom is of vast consequence to *Spain*, for its convenient correspondence with *Sicily*, for the strengthning of the *Spanish* Interest in the Court of *Rome* and all *Italy*, and a yearly Tribute of Four millions of Crowns. This Kingdom being no less than 1500 miles in compass, and 450 broad, it has 20 Archbishops Seats, 125 Bishops Seats, 1500 Boroughs, two millions of Souls, ten Principalities, twenty three Dutchies, thirty Marquisates, fifty four Earldoms, and a thousand Baronies, four hundred whereof are ancient; it can raise a hundred and fifty thousand Foot, and

Naples.

The King-dom of the Emperour.

a hun-

a hundred thousand Horse upon occasion, but its Naval Strength consists only in twenty Gallies. As for the Town it self, as it bears the third rank among the Cities of *Italy* for its bigness, so it may challenge the first for strength and neatness, whence she has got the Sirname of *The Gentile*; for having *Campania* on the Land-side, and the Mediterranean Sea on the other, it enjoys the conveniency of whatever Sea and Land can afford to a place; their Air being accounted so wholsom here, that most of the *Romans* of note had their Seats either in or near it. Its Structures are generally very good, the Streets neatly pav'd, the Palaces well stor'd with Nobility, and the Markets furnish'd with excellent Provisions; the chief Street especially, call'd *Strada di Toleda*, is flank'd with fine Palaces and goodly Houses, and pav'd with Free-stone: Their Houses are generally flat on the top, for the conveniency of taking the cool Evening Air there: The chief Palaces were, that of the Viceroy, that of *Gravina*, *Caraffa*, *Ursino*, *Sulmone*, *Toledo*, &c. The publick places of assembly for the Nobility, according to their respective ranks, are open Walks rail'd in with high Iron Rails.

The City of Naples.

The *Mole* extends a quarter of a mile into the Sea, and has at the end a high Lantern, serving for a Guide to the Ships at Sea, and a delicious Fountain of fresh Water.

The Mole.

The Churches of *Naples* are not inferiour to any in *Italy*; the *Dome*, tho' very old fashion'd, yet has a fine modern Chapel, beautified with brazen Statues and rich Painting: The *Cupola* is painted by *Domenichino*. In the before-mention'd Chapel you see the Tomb of St. *Januarius* Bishop of *Benevento*, whose Blood being kept congeal'd in a Glass, turns liquid as soon as 'tis plac'd near the Head.

In Churches.

On the left hand of this Chapel, without, is interr'd the Body of Pope *Innocent* IV. the Verses upon his Tomb tell you, that he was the first who order'd the red Hats to be worn by the Cardinals. In the Sacristy are kept many Relicks enchas'd in Gold and Silver, and other precious things.

The near Church of the *Annunciata* has a well-gilt and painted Roof and Cupola, and in it they shew you two Infants of *Bethlehem*, one being wounded in the Head, the other in the Body. The adjoyning Hospital maintains two thousand sick and aged persons, besides eight hundred Orphans.

The Annunciata.

Near the Hospital is St. *Peter's* Church, and before it the Altar upon which (according to the Inscription) St. *Peter* said Mass at his first coming to *Naples*.

St. Peter's.

St. *Paul's* Church belongs to the *Theatins*, and when dress'd in its Holiday Hangings, is one of the neatest Churches in all *Italy*, the Roof being very richly gilt and curiously painted.

St. Paul's.

The Tabernacle of the high Altar, and the Tomb of *Beato Caetano*, a holy man of this Order, are both very noble; and the Ornaments in the Sacristy are not inferiour to any Church of *Italy*.

The Jesuits Church here is the finest belonging to that Order in *Italy*, only it is something too broad in proportion of its length; it has both curious Paintings, and Sculptures in Marble; the Altar, tho' not above half finish'd, promises Wonders; and in the Sacristy are to be seen the richest Ornaments and finest Silver Candlesticks that ever I beheld.

The Jesuits Church.

The Church of the *Franciscans*, call'd S. *Maria Nova*, has a gilt Roof, very neat Chapels, and goodly Tombs, among which that of *Lotrecke*, who commanded the *French* Forces in *Naples*, excels the rest.

St. Maria Nova.

The *Dominicans* Church is exceeding handsom, if you see it especially, as I did, in its best Attire, hung with embroider'd Hangings. Here you see the Crucifix which is said to have spoken to St. *Thomas* of *Aquin*, the Doctor of this Order and Country, *Bene de me scripsisti Thoma*. In this Sacristy are preserv'd, in divers Coffins, (cover'd some with white, some with black Velvet) the Bodies of *Alphonso* I. King of *Naples* and *Arragon*; of the unfortunate Queen *Joan*; of an Emperour of *Constantinople*; of *Durazzo*; the Marquess *del Vesto*, with divers, till their Tombs can be made.

The Dominicans Church.

The Church of the *Olivetan* Fathers is a noble Structure, containing the Body of that great Antiquary *Alexander ab Alexandro*. Here also lies interr'd the Body of the brave Marquess *de Piscara*, sirnam'd the *Thunderbolt of War*; the words upon his Tomb deserve to be remember'd in foreign Countries:

The Church of the Olivetans.

Quis jacet hic gelido sub marmore? Maximus ille
Piscator, belli gloria, pacis honos.
Nunquid & hic pisces capit? Non, Ergo quid? Urbes,
Magnanimus reges, oppida, Regna, Duces.
Hic quibus hæc capit Piscator, retibus? Alto
Consilio, intrepido Corde, alacrique manu?
Qui tantum rapuere Ducem? Duo Numina, mors, mors;
Uterque quidnam compulit? Invidia.
Nil nocuere ipsi, vivit nam fama superstes,
Quæ Martem, & mortem vincit, & invidiam.

The Church of St. *John Carbonare* is remarkable chiefly for the noble Tomb of King *Robert*, as the Church of the Nunnery at the foot of the Hill as you go up to the *Carthusians*, is for the most curious Tabernacle upon the Altar, of precious polish'd Stones; it exceeds all others of that kind for richness, except that of *Florence* before mention'd.

Then going up the winding *Hill* to the *Carthusians* Church and Monastery, call'd St. *Martins*, we saw the most stately Fabrick in *Europe* for a Convent, both in prospect of its building and situation, upon a high *Hill*, under the Castle of St. *Elmo*. The whole Quadrangle or Cloyster of this Convent is of most excellent white Marble, pav'd with Marble, and adorn'd round about with a Balluster and white Marble Pillars. From an open Gallery you have here the best prospect in *Europe*, for you have under you the whole City of *Naples*, with its three Castles, the Harbour, Mole, Arsenal and Ships, the most delightful Country round the City, the Mount *Vesuvius*, *Pausilippus*, the Promontories of *Misenum* and *Minerva*, the Isle of *Capreæ*, &c. In the Apartment of the Father *Visitor* we saw many good Rooms. Going from hence to the Church, we found it even to exceed the Cloyster it self, being all of white Marble, and most richly gilt and painted, the Pavement being all of red and white Marble. The Chapels, Pictures, and Pillars are suitable to the rest, and the Sacristy is beyond whatever I saw before; the great Cupboards being of such exquisite Mosaick Wood-work inlaid into Pictures, that it comes very near to that of the *Dominicans* in *Bologna*. Here is a large Silver Crucifix, which (they say) has been making fifteen years; and the *Remonstrance* great Candlesticks and Flowerpots of Silver are most excellent Workmanship.

The Carthusian Monastery.

Then we took a view of the three Castles of *Naples*; that of St. *Elmo*, just by the *Carthusians*, was built by *Charles* V. rather to bridle *Naples* than to defend it self against an Enemy: The Castle *Vovo* acknowledges *William* III. of *Normandy* for its Founder, being built upon a Rock in the Sea, and joyn'd to the Continent by an high Cawsey; it is call'd Castle *Vovo* from its oval figure: The Castle *Nuovo* was built by *Charles* of *Anjou*, design'd King of *Naples*, near the Mole, level with the Town and Sea. These three Castles are guarded by a Garison of natural *Spaniards*.

The Castles.

Hence we took a view of the Markets, especially those of Fruit, which are excellently well furnish'd out of *Campania*, and were it not for the heavy Taxes impos'd by the *Spaniards* upon the *Neapolitans*, *Naples* might perhaps, for Riches and Plenty, compare with any other place in *Europe*; this the *Neapolitans* are so sensible of, that they have sometimes courted even the least opportunity of shaking off the *Spanish* Yoke; as is evident from the Revolt of *Mazanello*, whose true Name being *Thomas Angelus Maja*, a poor Fisherman without Shoe or Stocking, took the *Neapolitans* in a desperate humour, that they obey'd him for ten days no otherwise than if he had been a most absolute Prince.

The Markets.

In *Naples* are two Academies of Wits, one call'd the *Ardenti*, the other the *Otiosi*. Among the learned Men of this Town were, *Statius*, *Sannazarius*, *Alexander ab Alexandro*, and *John Baptist Marini*. *Naples* has also furnish'd the Church with no less than eighteen Popes.

The Academy of Wits.

Having thus taken a full view of the City of *Naples*, we took Guide to see also the burning Mountain of *Vesuvius*, about seven miles from the City. Our Guide being well acquainted with the History of this Mountain, told us, that it had made twenty Eruptions since the beginning of the World, among which that 1631. being the most dreadful, in which he also had had his share, he gave us an exact account thereof, shewing us as we pass'd along the places where, before that time, many noble Vineyards and Corn-fields, many very delightful Villa's and whole Villages had stood, which were altogether, with about two thousand Souls, ruin'd by the Stones thrown out by *Vesuvius*, of which he shew'd us some of a vast bulk; as also a Chanel, where a River of green matter mingled

Mount Vesuvius.

with Brimstone, Allum and Salt-petre, had ran down from the Hill. Of the Eruption it self he gave us the following account; The Hill, after having smoak'd vehemently for some time, burst out into Flames, and cast out such a prodigious quantity of Ashes, that had the Wind stood towards *Naples*, it would have been buried in the Ashes; then it began to make such a thundring noise, as if Heaven and Earth were to be mix'd together, after which follow'd such a prodigious number of vast Stones thrown out by the Mountain, and a River of sulphurous matter running from the top of the Mountain for three miles into the Sea. All which he confirm'd by a certain Inscription upon a fair Marble Stone erected for that purpose not far thence. But being desirous to see the Mountain it self, we made all the haste we could: We came no sooner to the foot of the Hill, but alighting from our Horses, we crawl'd up that steep Hill for a mile together to the middle of the Leg in Ashes; being at last got to the top of it, we peep'd, not without some fear, into the great Concavity from the brink of it, which we found to be like a vast Kettle, much larger than those near *Distington* in the Bishoprick of *Durham*, made by Earthquakes, the Orifice of this being near two miles wide, and near as deep, in the bottom whereof we saw arising a new little Hill out of the hollow of the old one, emitting constantly a thick Smoak, as if in its turn it threatned another Eruption.

See *Baker's Chron.*

Having satisfied our Eyes with the sight of this Chimney of *Hell*, we came much faster down than we went up. He that desires a more ample account of the burning of *Vesuvius*, may consult a Book entitul'd, *De Vesuviano incendio*, written by *Julius Cæsar Recupitus*.

Our Journey to *Puzzuolo*.

We return'd thence to *Naples*, and having taken another Guide, went the next morning to *Bajæ* and *Puzzuoli*. In our way we pass'd by the Castle *Vovo* to *Margelina*, where we saw the Tomb of *Sannazarius* the Poet, in the Church of St. *Maria del Porto*, where once stood the House of the said *Sannazarius*, which he bequeath'd to be turn'd into a Church. The Tomb is adorn'd with Marble Figures, and an Epitaph made by Cardinal *Bembo*:

Sannazarius his Tomb.

Da sacro Cineri flores, hic ille Maroni
Sincerus Musæ proximus, ut tumulo.

Where it is to be observ'd that he changes his true Name, which was *Jacobus Sannazarius*, for that of *Sincerus*, at the request of *Pontanus*, who at the same time assum'd that of *Jovianus*. Near it (*viz.* not far from the entrance of the Grotto of *Pausilippus* in the Gardens of St. *Severino*) stands the Tomb of *Virgil*, cover'd all over with Laurel or Bay-trees. From thence returning on to our way, we found our selves immediately at the entrance of the Grott of *Pausilippus*. This Mountain lying so near *Naples*, and rendring the passage that way extreamly inconvenient for Carriages, it was thought fit to cut a Cartway under ground quite thro' the Mountain, which by some is attributed to *Lucullus*, by others to *Coccejus Nerva*; it is doubtless very ancient, the same being mention'd by *Seneca*.

Virgil's Tomb.

The Grotto of *Pausilippus*.

Coming into the Grott of *Pausilippus*, we found it forty foot high, and broad enough for two large Waggons to pass by one another with conveniency; they reckon it about a mile in length, but I guess'd not quite so much. For the first forty paces we were guided by the light of the wide entrance, but were afterwards left in the dark for a considerable time, till we came to the half-way, where a burning Lamp hanging before the Picture of our Saviour in the B. Virgins Arms afforded us a very agreeable light for some time. The way throughout the Grott is very level, but exceeding dusty, which made us shut both our Eyes and Mouths. The People, in their passage to and fro, know how to avoid one another, notwithstanding the darkness, those coming from *Naples* keeping constantly on the right hand, and returning on the left side; that is, keeping as they go on the Mountain-side, and returning on the Sea-side; which they express by crying out frequently, *à la Montagna*, or *à la Marina*, to give notice whether they come or go.

We were no sooner got out of this dark passage, but glad to open our Eyes and Mouths again, we discours'd upon this Wonder till we came to another call'd the *Grotta del Cane*, i.e. the *Grott of the Dog*.

Grotta del Cane.

This Grott being but three yards within the side of the Hill, a Man may make the Experiment with the Dog without entring into it: If you hold the Head of a Dog with a wooden Fork close to the ground, the Dog begins to cry first, and soon after turns up the white of his Eyes as if he were ready to die, and is no sooner let loose but he recovers; afterwards they take the same Dog, and hold him down till he appears quite dead, then taking him by the Leg, they run immediately with him to the Lake of *Agnano*, about forty paces off, where being thrown in, he soon recovers and comes out himself, the infectious Vapours which had stunn'd the Dog being dissipated by the Water of that Lake. The Pestilential quality of this Grott is easily discover'd in a lighted Torch, which being held a considerable way from the ground, burns very clear, but as it approaches nearer to the ground, burns dimn, till being held close to the ground, it burns blue and goes out quite.

Near it are the Stoves of St. *Gennaro*, the natural sulphureous Vapours whereof cause a sudden Sweat, and are accounted a good Remedy against the *Neapolitan* Disease or *French Pox*.

The Stoves of S. *Gennaro*.

Thence going about the Hill by a narrow way, we came to the Convent of the *Capuchins*, built in the same place where St. *Januarius* was beheaded; and in a little Chapel on the right as you enter the Church, they shew you a Stone with some Blood upon it, upon which he was beheaded.

Afterwards we took a view of the *Sulphatara*, a Pit with Banks all round, about fifteen hundred foot long, and a thousand broad, where you see the Smoak of the burning Sulphur issue from under ground without intermission. As we were riding down into it on Horseback, we found it sound hollow, as if we were riding over a wooden Bridge, and we found divers *Spiraculæ* or Vents through which the Smoak came out like as out of a Furnace. The Potters make their Chymical Vessels out of this Earth.

Hard by the *Sulphatara* you see a Pool of black muddy Water, which always boils, and whatever is thrown into it comes out again boil'd, yet not without some diminution. We were not a little surpriz'd when in our way from *Sulphatara* to *Pazzuolo* we found the Highway smoak as we went along, tho' it did not feel hot under our Horses Feet, till we discover'd certain chinks thro' which the Smoak issued from below, a manifest sign that the ground was on fire underneath.

See *Lunar. Albert.*

Before we reach'd the Town, we pass'd by the Ruins of a fair *Amphitheatre*, and *Cicero*'s Academy.

Coming to *Puzzuolo*, (so call'd from the great number of Springs, or else a *Putore*, from the sulphureous smell) a little Town, we took a Boat immediately to go cross the Creek of the Sea to *Baja*, three miles hence. As we were rowing along, we could not but be surpriz'd at the stupendious Folly of *Caligula*, who built a Bridge from *Puzzuola* to *Baja*, some of the Arches being as yet to be seen on both sides; tho' the nature of the Soil here, which mix'd with Mortar grows solid, nay, even petrifies under Water, might be no small encouragement to this unaccountable Design; *Puteolanus pulvis, si aquam attigit saxum est.* Reaching the other side of the Bay, we came first to the *Mercato di Sebato*, having still some resemblance of a Street with the Ruins of Houses on both sides. Thence going into the *Elizian* Fields, we found them a level common Plat of Ground, without any thing remarkable in it, so that these Fields are much oblig'd for their Fame to the Poets, who have thought fit to fix their Paradise here.

Puzzuoli.

The *Elizian* Fields.

Soon after we got sight of the *Piscini Mirabili*, a large Fabrick under ground, supported by forty or fifty huge square Pillars; its length is a hundred and fifty paces, its breadth forty, and height thirty, being so well vaulted with Stone and Lime, that no Water can penetrate into it: You descend into it by many Steps. On the top of this *Piscini* are still remaining some Stone Spouts, by which they us'd to let in the fresh Water into this subterraneous Reserver for the use of the *Roman* Gallies, who had their station in this Harbour in the Winter; or else for the conveniency of such of the *Romans* as had their Country-seats hereabouts, and did not care to make use of the Water of the Springs of this Bituminous Country.

Baiæ.

In our return we saw, at a distance, the Promontory of *Miscenum*, and the *Mare Mortuum* not far off, and afterwards took a view of the *Cento Camerelle*, so call'd from two Rooms built together like Chambers within one another, to serve for Lodgings to the Slaves on board the Gallies.

Albem.

As we were going to our Boat, we were shewn the place where *Agrippina*, *Nero*'s Mother, was by her Son's order to have been drown'd by a false-bottomb'd Boat, but that failing, was stab'd afterwards. Her Tomb is to be seen to this day near the Shore.

Agrippina's Tomb.

Then taking Boat again, and rowing along by the Ruins of *Marius* and the Villa's of *Cæsar*, we could (it being a clear day) plainly see the Foundations of *Baja*; some Arches, nay, even the very Pavements of the Streets, are under Water. Keeping along the Shore, we came to the Ruins of *Nero*'s Palace, near which we saw a strong

Baiæ.

Fristati.

Castle,

Castle, built *à la moderna* upon a high Hill; and as we were ready to quit our Boat, we put our hands into the Sand under Water, near the shore, which we found to be very hot. The next thing we did after our landing, *Cicero's Baths* was to take a view of *Cicero*'s Baths, a very large Square, having formerly certain Inscriptions upon it in very old Letters, intimating the Names of the Diseases cur'd by these Waters, which were since defac'd by the Physicians, under pretence that they were superstitious Characters.

The Baths of Tritola. Hard by these Baths are those of *Tritola*, where we no sooner were entred into a long *Grotto*, but found our selves immediately put into a Sweat by the violent stifling heat, that met us at the very entrance thereof. Finding the Vapours so choaking, I stoop'd behind my Guide pretty low, and thus was convinc'd of what I had heard them say before, That the nearer the ground, the cooler it is. In the middle of this long Entry is a place fitted for those that have occasion to sweat plentifully; and I was told, that at the further end of the *Grotto* there were *Baths* of a most soveraign vertue; but as I had no occasion for them, I chose rather to believe them than try them.

Lacus Avernus. From hence we had a good large Walk to the *Lacus Avernus*, made by the River *Acheron*, i. e. *sine gaudio*. This Lake having a stinking Air, was anciently observ'd to kill the Birds that flew over it; and at the further end thereof stood the Temple of *Apollo*.

Leaving this Lake on our right hand, we went to the *Grotto* of the *Sybilla Cumæa*, so call'd from the City of *Cumæ*, which stood near it, from whence there was a subterraneous passage into this long *Grotto*, (as there is from *Naples* into that of *Pausilippus*) the dark Entry which strikes out of the long *Grotto* being properly call'd the *Sybils Grotto*, which leads you to the Chamber of the said *Sybil*, and her Baths. This *Sybil* prophesied in a most peculiar manner of the Nativity of our *Saviour*, for which reason *Julian* the *Apostate* order'd her Prophecies to be burnt; as *Ammianus Marcellinus*, a Pagan Historian of those times, has observ'd.

Returning from hence to our Boat, we got sight of a *Mons Nuovo.* great Mountain call'd *Monte Nuovo*, i. e. the *New Mountain*, because it was (on *Michaelmas* night, 1536.) cast up by an Earthquake, and cover'd a great part of the *Lacus Lucrinus*; it is generally reported to be three miles high, but I believe it to be about a good mile in height.

Then taking our Boat again, we return'd first to *Puzzuolo*, and thence at night to *Naples*. The History of *Naples* may be read in a Book call'd *Il Compendio del Historia di Napoli, di Collenuccio*.

They leave Naples. Having seen every thing we thought worth our Observation at *Naples*, we return'd by the same way we came to *Rome*, without any sinister accident, except that one of our Company was not a little molested by the troublesom Customhouse Officers of *Fundi*, who finding more Money about him than was allowable to carry out, would have seiz'd the same, these Customhousers here, as well as in most other places, being very impertinent in their stations, sometimes meeting (at a good distance from their places) Travellers in the open Fields, and not only searching their Pockets, Boots, Breeches, Horses Tails and Feet, but also even to their Shirts; which may serve as a Warning to young Travellers, to be well inform'd of the several Customs of the Countries thro' which they are to pass, to avoid those Inconveniencies which otherwise might ensue.

In another Voyage to *Naples*, in our return to *Rome*, we had a mind to make some small excursive Journeys thro' some places about *Rome*, which had escap'd our view before; as, *Albano*, *Castel Gandulfo*, *Frescati*, and *Tivoli*.

Albano. From *Veletri* we cross'd the Hills to *Albano*, (the *Longa Alba* of the Ancients) now one of the seven Bishops Seats near *Rome*, which are bestow'd upon the eldest Bishop-Cardinals, that they may be always at hand to assist the Pope in all Affairs of moment; the other six being *Porto*, *Ostia*, *Frescati*, *Tivoli*, *Prenestе*, and *Veletri*. There is scarce any thing to be seen in *Albano* but a very old Church and some old Houses, yet is this place famous for its wholsom Air and excellent Wine, being the best that is constantly drank in *Rome*. Near it stands *Castel Gandulfo*, the Pope's Summer-house, pleasantly seated near a Lake and Wood in the *Campania* of *Rome*, within view of the City; it was then unfurnish'd.

Frescati. From hence we took a turn to *Frescati*, (the ancient *Tusculum*) a small Town, but one of the pleasantest in *Europe*, being surrounded, especially on the Hill-side, with many most delightful *Villa's*, *Palaces*, *Gardens*, *Springs* and *shady Walks*. Here it was that *Cato* drew his first breath; here *Lucullus* used to delight himself, and *Cicero* spent much of his time here in Studies, and writing his *Tusculan* Questions. The first thing we took notice of here, was the *Villa Aldobrandina*, call'd also the *Belvedere* of *Frescati*, from its delightful situation on a Hill-side, cover'd with Lawrel-trees, most curious Fountains, *Cascata's*, and other Waterworks: The Water is convey'd to the *Cascata* thro' the Hill, which at the turning of a Cock spouts out of the top of two high twisted Pillars of Stone, mounted upon the head of an high pair of open Stairs, and afterwards falling upon the same Pillars again, follows the winding cut into Chanels and little Gutters, and so warbles round these Pillars till it issues out at the foot of them, and so falling upon the before-mention'd Stairs, covers them all over with a thin gliding Stream. Many other little Fountains being set at work by this Water, the whole Hill is spouting out Water, and filling the circumambient Air with a sweet murmuring noise. The Gardener turning at the same time another Cock above, furnishes such store of Wind and Water to the great *Girandola* below the Stairs, in the *Grotto* of *Atlas*, that it imitates perfectly Thunder, Hail, Rain and Mist. *The Cascata.*

The large Centaure, with a Hunter's Horn at his Mouth, winds it duly and in perfect measure, whilst *Pan* plays on his Mouth-Organ, and the Lyon and Leopard spit with great fury at one another's Faces.

All these Waterworks playing together, make innumerable wetting-places on the Stairs, behind *Pan*, behind the *Centaure*, and many small Spouts under ground on all sides.

Then they shew you the Hall of *Apollo*, which being *The Hall of Apollo.* open'd, you see him sitting upon Mount *Parnassus*, with the nine Muses somewhat lower in a circle, playing all at once harmoniously upon divers Wind-Instruments, an untouch'd Organ underneath the Hill playing all the while a soft Ground to the Muses Instruments, during which Melody a little round hole in the midst of the Room forces out from below so stiff and cool an Air, that it carries a small hollow Ball of Copper a yard high from the ground. Over the Door you see this Distich:

Huc ego migravi Musis comitatus Apollo,
Hic Delphi, *hic* Helicon, *hic mihi* Delos *erit*.

Having an opportunity to take a full view of this *Hydraulick Organ*, I found it to be made and manag'd thus; *A Water Organ.* the Pipes were like those of another Organ, of Lead, and set in a close Frame, with Stops and Touches to them; close by these Stops a Wheel made like a Drum, and as long as the Organ, is turn'd by the force of Water. This Wheel has here and there several pieces of Brass about the thickness of half a Crown piece, and just as broad as the Stops of the Organ, these Brass pieces sticking out just so far as to reach the Stops in turning about, and so press them down as the Organist does with his Fingers, in that distance, as to strike their Note in tune as they turn about leisurely; they produce an agreeable and perfect Harmony, the Wind-pipe which forces out the Ball serving both for Bellows to this Organ and the Instruments of the Muses, and all this by the force of Water.

From hence we went to the Villa of Prince *Ludovisio*, *Villa Ludovisia.* which is hard by: The Gardens are stately, but the House but little. I observ'd in this Palace the Curtains of the Beds to be wrought with little holes of Needle-work, to give a free passage to the Air, yet so as to keep out the Gnatts.

Thence we took a turn to the Villa of Prince *Borghese*, *Monte Dragone.* call'd *Monte Dragone*, from the *Dragon* in his Arms, a mile and a half from the *Belvedere*, all the way being curious Walks of Lawrel-trees. The Palace is both stately and curious, the Rooms finely furnish'd, and fitted both for Summer and Winter Seasons. The Pictures we took notice of here were, the Last Supper, a rare piece of *Alberto Durero*'s hand; the Story of *Polyphemus*, by *Lanfranco*. The Hall below was full of the true Pictures of great Men, famous for Learning and Arms; and this Hall brings you into a little but very neat Garden, adorn'd with fine Waterworks, &c.

From *Frescati* we travel'd to *Tivoli*, an ancient Town *Tivoli.* seated upon a Hill, fifteen miles from *Rome*, and as many from *Frescati*. In the time of the *Romans* it was call'd *Tyber*, and noted for a most delicious place. Here is still *Old Tyber.* to be seen the old Temple, and the House of *Sibylla Tyburtina*: here is also a *Cascata* or Waterfall, made by the *The Waterfall.* River *Anio*, which here falls suddenly down a rocky Precipice: here the Villa of Cardinal *d'Este* is built upon a *Villa d'Este.* rising ground overlooking the *Campania* of *Rome*. The Gardens lie upon the ascent of an Hill, divided into four rows of Gardens, with as many degrees in the descent, with curious *Grotto's*, *Cascata's*, and other Waterworks, supplied with Water from the River *Anio*, which running behind the *Hill*, the Water is convey'd into these Gardens thro' the Rock, which is bor'd for that purpose, and fur-

nishes sufficient Water to the great Fountain of *Leda*; the Stairs cover'd with Water, the Walk two hundred paces long, &c. Here you may feast your Eyes with a perfect representation of the ancient *Rome* in a Perspective, with the *Capitol*, the *Pantheon*, the *Triumphal Arches*, *Circus*, *Theatres*, *Obelisks*, *Mausolea's*, and the *Tyber* it self. Here you see delicious Groves of green Trees in the midst of Winter, and cool *Grotto's* and *Fountains* in the midst of the Summer. Here you divert your self with hearing false Birds chirping upon true Trees, every one according to his own nature, and all of 'em chattering at once at the sight of a false Owl howling in a Tree. Here are most delightful *Grotto's*, among which the *Grotto of Nature*, adorn'd with Nymphs, Shells, Statues, exceeds the rest. The Organs play here without touching; and the fearful *Girandola* of the Dragons thundring out cold Water, affords a most surprizing show. But not to insist further upon those things which I would rather recommend to a Traveller's Eyes than Ears, it is time we return to *Rome*, which we did accordingly; and having once more satiated our selves with a full view of that incomparable City, we took our leave of it, with an intention to return homeward by the way of *Loretto*, to *Venice*.

The *Via Flaminia*.

Accordingly we set out from *Rome* by the *Porta del Popolo*, along the *Via Flaminia*, which reach'd, from *Rome* to *Rimini*, as far almost on this side *Rome* as the *Via Appia* did on the other. It is call'd *Flaminia*, because the Consul *Flaminius* order'd it to be made by his Soldiers in time of Peace, to keep them from idleness. The other part of this Cawsey, from *Rimini* to *Bologna*, being pav'd at the cost of *Æmilius Lepidus*, the Collegue of *Flaminius*, was from him call'd *Via Æmilia*.

Ponte Molo.

We soon came to *Ponte Molo*, (the ancient *Pons Milvius*) about a miles distance from the Gates of *Rome*, near which *Constantine* the Great overthrew *Maxentius* the Tyrant,

The *Tyber*.

forcing many of his Men into the *Tyber*, which I wonder'd to find here of so small a Current, considering the Poets have put it among the Rivers of the first rank.

Narni.

Keeping along the *Via Flaminia*, we pass'd by *Castel Nuovo*, *Civita*, *Castellana*, *Otricoli*, and so to *Narni*, so call'd from the River *Nar*, but anciently known by the Name of *Nequinum*, (wicked Town) because the Inhabitants, being reduc'd to the greatest extremity for want of Provisions, kill'd their Children, Sisters, Mothers and Wives, and at last one another, rather than they would surrender themselves to the Enemy. It is a very ancient Bishop's Seat, the first Bishop whereof was St. *Juvenalis*, whose Body lies interr'd in a curious low Chapel in the Cathedral here. Not far from the Town we saw divers high Arches, belonging formerly to an ancient *Aqueduct*.

Terni.

Hence we went to *Terni*, anciently call'd *Interamina*, from its situation among many little Brooks, now a Bishops Seat, situate in a most pleasant Soil. This was the Birthplace of *Cornelius Tacitus*. The famous *Cascata* or Waterfall four miles from hence, we found far to exceed that of *Tivoli*.

Spoleto.

From *Terni* we travel'd to *Spoleto*, a neat Town, which has imparted its Name to the whole Dutchy of *Spoleto*; the Country hereabouts being anciently call'd *Umbria*; for after the Emperour *Justin* had recall'd *Narses* out of *Italy*, (who and *Basilius* were the last two Consuls) he sent *Longinus* with the Title of *Exarch* in his place, who fixing his Residence in *Ravenna*, govern'd the rest of *Italy* by a certain *Duces* or Dukes, at which time *Spoleto* got its Title among the rest. This City was famous anciently for holding out against the victorious *Hannibal*, after he had overthrown the *Romans* at the Lake of *Thrasimeno* near *Perugia*. It also has given the Name to the most delightful Valley of *Spoleto*, which lies near it, and is above thirty miles in compass, enclos'd with Hills, and those well clad with a good number of brave Towns stor'd with Inhabitants.

The Valley of *Spoleto*.

Foligni.

From hence we went to *Foligni*, (anciently *Folignum*) noted for Confectioners. Near it stands *Assisium*, famous

Assisium.

for St. *Francis*, the Founder of the Order of *Franciscans*; their Convent is very stately, and much visited by Pilgrims. *Montefalco* is celebrated for the miraculous Heart of B. *Clara*.

Montefalco.

Tolentino.

From *Foligni* going up the *Apennins*, we came to *Tolentino*, where we saw the Tomb and Relicks of *Nicholas Tolentinas*. Of this Town was *Philelphus*, a noble Knight, who being desirous to attain to the perfection of the *Greek* Tongue, did not only go in person into *Greece*, but also having married a *Grecian* Lady, for the better improvement thereof, did arrive to that height in the said Language, that he surpass'd the *Grecians* themselves, and entring into a dispute with one *Timotheus*, a Native of *Greece*, about the true signification and accent of a certain word, they came to that height, that they laid their Beards (which they both wore very long and were very fond of) for a Wager; *Philelphus* having got the better of the Lay, caus'd the other's Beard to be shav'd off immediately, tho' he offer'd a good Sum to redeem it. The Statue of this *Philelphus* is to be seen in the Townhouse.

Macerata. *Recanata.*

Hence we came to *Macerata*, a neat Town in the Country of *la Marca*; and thence by the way of *Recanata*, another handsom place in the same Country, to *Loretto*.

Loretto.

As our stay was to be but short here, so we made the best use of our time in viewing this sacred place, which at first was no more than a bare Highway, till the Chamber of our Lady (in which the Angel announced unto her our Saviour's Birth) was translated thither by the Angels, 1294, when the *Turks* and other Infidels had made themselves Masters of the *Holy Land*, which has since been turn'd into a Chapel. For my part, tho' I am sensible that this is no Article of Faith, yet considering with my self the Angels words to the Virgin *Mary*, That *nothing is impossible to God*, I can very easily acquiesce in what, besides this, has been confirm'd by ancient Records, solid Depositions, constant Tradition, and the real Belief of all the Roman Catholick Princes. Add to this, that the Stones of this House are quite different from those used in that Country, that it has no Foundation at all in the Ground, tho' the Walls are of a considerable thickness, and the House of a large bulk. The Paintings of the Walls are very old; And how can it be conceiv'd that the whole Country should not have given the lye to such as first rais'd this Tradition? But to come to the holy House it self: It stands in the middle of a spacious Church, built over it since, for the better conveniency of Peoples Devotions, and immediately it is enclos'd as it were in a fine Case of white Marble, which stands half a foot distance from the House it self, to shew that it was made not so much for a Prop as a Decoration, and to keep off the Hands of the devout Pilgrims, who would have quite defac'd it by this time. This Decoration is surrounded with two rows of white Marble Statues, the Workmanship of *Sansovino*, *Bandinelli*, *San Gallo*, *Monte Lupo*, and other rare Masters of *Italy* in those times. The lowermost row represents the Figures of the ancient Prophets; and the other row above, the Statues of the *Sybils*.

The holy House of Loretto.

As for the Fabrick of this House, it is of a hard red Stone like Bricks, but much harder and bigger than our Bricks; it is very near square, and of the bigness of a reasonable Lodging-Chamber; it has no more than one Window, and had anciently but one Door, tho' it has three now, one on either side, and one behind the Altar, for the Chaplains that look after the Lamps and Lights, which are always burning there. At the upper end of the *House* you see a Silver Altar, (the Gift of *Cosmus* II. Great Duke of *Florence*) where Mass is said from four in the Morning till one in the Afternoon. Before it hangs a Lamp of pure Gold, as great as two Men can well carry, the Gift and Vow of the Senate of *Venice*. On either side of the Walls are fastned two large Branches of massive Gold, made and neatly twisted like *Cornucopia's*, a Present of *Magdalen* of *Austria*, Great Dutchess of *Florence*, as her Arms upon them shew'd us. On the Gospel-side of the Altar you see an old Cupboard within the Wall, with some Earthen Dishes in it, brought hither with the *House*, and believ'd to have been our Saviour's and the B. Virgin's Vessels, for which reason this Cupboard is now adorn'd with a Silver Door, given by a Duke of *Parma*. The Window at the end of this *House* is suppos'd to be the same thro' which entred the Angel when he came to the Virgin *Mary*, to announce the Birth of our Lord; it is now enrich'd with Silver. Round about above hang many Silver Lamps, and the sides of the Walls retain to this day some of the old Paintings, which were there at the time when it was first consecrated into a Chapel in primitive times. They shew'd me by a lighted Candle, that it had no Foundation at the bottom, but stands as if it had been let down upon the Ground out of the Air.

Our B. Lady's Statue.

Immediately behind the Altar you see a great Iron Grate running cross the Chapel, thro' which you may see the Statue of Cedar of our Blessed Lady with her Son in her Arms, said to have been made by St. *Luke*, and brought hither together with the *holy House*, where you see it standing up high in the very further end of the Chapel, its height being about four foot, and adorn'd with a peculiar kind of Veil hung before it, resembling a Womans Garment. These Veils they call *Vesti*, made of divers Colours and Stuffs, but all very rich, that given by the *Infanta Isabella* Governess of *Flanders* being valued at forty thousand Crowns; it has before about six thousand Diamonds set in six rows; all over it is embroider'd with Flowers of small Pearls, with great Pearls on the inside of them, to the number of twenty thousand Pearls in all. Upon the heads of our Saviour and the Virgin *Mary* you see two rich, close, royal Crowns of Diamonds, the Gift of

of *Anne* of *Austria* Queen of *France*, and before the Breast of the Statue a rich Fleece of precious Stones, presented by a Prince of *Transilvania*; the Collar is compos'd of Rubies, Pearls and Diamonds, with a rich Cross hanging at it, all given by Cardinal *Sfondrati*. The Niche in which this Statue is placed is adorn'd with a close row of precious Stones, seventy one in number, which being of divers sorts and lustres, and all very large, compose an *Iris* of several colours. Betwixt the Statue and the Iron Rails or Grate hang twelve Lamps all in a row of massy Gold, of the bigness of a Man's head, one whereof exceeding the rest in curious Workmanship, was the Present of *Sigismund* King of *Poland*; the rest of that part of the Chapel where these Lamps hang being almost cover'd with the rich Presents of great Persons: Those I remember are, the Image of the eldest Son of the Emperour *Ferdinand* III. in Silver, with a Collar of Diamonds about it; an Angel of the same Metal, presenting to our Lady a Child of Gold in Swathing-cloaths upon a Silver Cushion, the Gift of the Queen of *France*, after she was deliver'd of the *Dauphin*, now King *Lewis* XIV; the Picture of the Prince of *Conde* kneeling, a Vow of his Mother at his first going to the Wars; the *Busto* of St. *Barbara* in Silver, set with precious Stones, the Gift of an Arch-Duke of *Austria*; another *Busto* of St. *Girione*, set with rich Stones, the Gift of a Queen of *Bohemia*: the Silver Statue of St. *Ladislaus*, given by *Ladislaus* IV. King of *Poland*: a fine kneeling Stool of Silver, presented by Cardinal *Colonna*, with many other Presents which I am not able to remember. Under this Statue of Our Lady is also to be seen the Chimney (now adorn'd with Silver) which was anciently in this Chamber.

Macerata. *Recanata.* *Loretto.* The holy House of Loretto. Our B. Lady Statue.

The Treasury of Loretto.

Next morning we took a view of the Treasury, (where many other rich Presents are kept) a Room forty paces long and fifteen broad, vaulted and painted like a Chapel over head. The great Cupboards cover'd within with Nets of strong Wire, are on the left hand of this Room, containing the inestimable Treasure: In one of these Cupboards we saw a whole Service for the Altar, Crucifix, Candlesticks, Cruets, Bason and Ewre, and the Foot of the Chalice, all of Amber: in another, such a whole Service of Agate; another such Service of *Lapis Lazuli*, the Gift of Count *Olivarez*; another such Service all of Coral, presented by Arch-Duke *Leopold*: in another such a Service of Crystal; and in another the same Service of Silver, with Flowerpots most curiously wrought, given by *Don Teadeo Barberino*: in another a most stately Crucifix of Ebony, beautified with many exquisite Pictures in miniature, the Gift of Pope *Clement* VIII. In another a Spread-Eagle of Diamonds, given by *Mary* Queen of *Hungary*; two golden Crowns set with Pearls, the Gift of a Queen of *Poland*; a large Crown of Gold enrich'd with great Rubies, given by the Dutchess of *Nevers*: In another a golden Crown and Scepter enamel'd, the Present of *Christian* Queen of *Sweden*, at her first coming into *Italy*: In another, an enamel'd Pigeon, with a Jewel of great value on its Breast, the Gift of Prince *Ludovisio*, a Heart set with Diamonds, with a great Emerauld in the middle, of a very large size, the Gift of *Henry* III. King of *France*, after his return out of *Poland*: In another a very rich three-corner'd Jewel, with the Picture of the Virgin *Mary* in the middle of it, the Present of two *Bohemian* Counts and a Gentleman, *viz.* Count *Martinitz* and Count *Slavata*, and a Gentleman that was Secretary to the last, who being thrown out of a Window at *Prague* by the Fanaticks, fell upon the Ground without receiving the least hurt, the Secretary, who was thrown out last, and falling upon his Master, having craved his Pardon for it; in memory of which three Pillars have been erected before that House in *Prague*, out of which they were thrown. In another Cupboard we were shewn many golden Chains, presented by Generals and other great Men: In another a large Heart of Gold, of the bigness of a Man's Hand, enamel'd with blue, and enrich'd on the outside with these words in pretty big Diamonds, JESUS MARIA, and within it having the Pictures of the B. Virgin on one side, and of the Queen of *England*, *Henrietta Maria*, on the other, the Heart opening into two leaves. In another, a little Heart of Gold, enamel'd and enrich'd with Jewels, the Present of *Christina* Dutchess of *Savoy*, Sister to the aforesaid Queen of *England*, with her own and her Son's Picture in it. In another, the Picture of our Blessed Lady with our Saviour in her Arms, cut in a great Pearl, and set in Gold. In another Cupboard the Picture of the B. Virgin wrought most curiously of *Indian* Feathers of several colours, and cut short as Plush, changing colours as often as you change its situation or your own station. In another, a large *Custodia* of Crystal, the Gift of *Christina* of *Tuscany*. In another, a *Custodia* of *Lapis Lazuli*. In another, a diamond valued at 12000 Crowns, a Present of Prince *d'Oria* of *Genoa*; and another of the same value, the Gift of a *German* Prince. In another, a curious Book of Gold set with Diamonds, the Leaves of Gold, and exquisitely painted in miniature, a Present of a Duke of *Bavaria*. In another, the *Samaritans* Well, of Gold, with Pictures of our Saviour and the *Samaritan* Woman, in Gold also, the Gift of Cardinal *Brancaccio*.

I saw in several other Cupboards such a multitude of other Jewels, as confounded both my Memory and Eyes. In another great Cupboard we were shewn most excellent Church-Ornaments, of very rich Stuffs embroider'd with Silver and Gold, among which was one whole Suit (for the Altar, Priest, Deacon and Subdeacon) cover'd so thick with Embroidery of Pearl, (and those of a very good size) that the Ground of the Stuff could not be discern'd thro' them; these were the Presents of *Katherine Zemousky*, Wife to the Chancellour of *Poland*, valued at a hundred and thirty thousand Crowns.

On the other side of this Room are large Windows, betwixt each of which you see upon long Tables divers *German* Towns of Silver, of curious *German* Work, so exactly wrought, with their Walls, Ramparts, Churches, Steeples, &c. that whosoever has seen these Towns may easily know them again.

This is all that occurrs to my Memory, tho' not one half of what I saw: And going again into the great Church, I saw upon the great Pillars that compose the Isles the History of the *Holy House*, engraven in Stone, and written on Parchment, in a fair Hand in twelve or thirteen several Languages, for the use of Foreigners, and just before the Church-door, the brazen Statue of *Sixtus* the Fifth, and a most noble Fountain.

The Cellar of Loretto.

Afterwards we took a view of the Cellar belonging to the *holy House*, which furnishes with Wine the Governor's House, the Canons, the Churchmen, the College of the *Penitentiaries*, the Convent of the *Capuchins*, the *Seminarists*, the Hospital, and in short all that have any dependance on the Church here; and not only these, but also all the Princes, Cardinals, Bishops, Ambassadors and other great Men, as well as other Pilgrims, as long as they stay here upon Devotion. And considering how many thousand Pilgrims pass'd so frequently that way, it may easily be conjectur'd how vast its Revenues must be, and that it may very well be preferr'd before all the Cellars in *Italy*; for if we may credit *Turselinus*, in his History of *Loretto*, *l.* 3. *c.* 25, there have, betwixt *Easter* and *Whitsuntide*, flock'd thither sometimes five hundred thousand, sometimes six hundred thousand Communicants; and in two days time in *September*, (about the Feast of the Nativity of our B. Lady) there have appear'd two hundred thousand Communicants. The Vessels of this Cellar are vastly large, so as not to be remov'd from thence; they are all hoop'd with Iron, and some of 'em so contriv'd, that they can draw three several sorts of Wine out of one Vessel and the same Tap. When they clean them, they take a piece out of their Broad-sides.

The Apothecary's Shop.

From the Cellar we took a turn to the Apothecary's Shop belonging to the *holy House*, where the most remarkable things we met with were, the great Pots standing round about the great inner Shop, painted by *Raphael Urbin*, and consequently valued at a high rate; witness those four Pots on which are painted the four Evangelists, for the which a *French* Ambassadour offer'd as many Pots of Gold of the same size, but could not obtain 'em: All these Pots were given to the *holy House* by a Duke of *Urbin*, whose Subject *Raphael* was, and for whom he had made them. The History of *Loretto* may be read in *Turselinus*'s History of *Loretto*.

Ancona.

Taking Horse again, we made the best of our way towards *Venice*: The first place we came to was *Ancona*, the capital City of the *Marca*, and one of the best Harbours in the Gulph of *Venice*, corresponding with *Sclavonia*, *Greece*, *Dalmatia*, and divers other Countries, built by the Emperour *Trajan*, whose Triumphal Arch is yet to be seen here: It lies directly upon the Cape, being defended towards the Land-side by a good Castle; the *Mole* extends two hundred paces into the Sea. Here died Pope *Pius* II. and in the Vault of the Cathedral, call'd St. *Ciriaco*'s Church, lie interr'd the Bodies of many Saints.

Senigallia.

From *Ancona* keeping along the Sea-side, we came to *Senegallia*, a neat Town, seated in a most agreeable Air, owing its Name to the *Senones Gallici*; it is a Bishop's Seat, upon the Borders of the ancient *Gallia Cisalpina*.

Fano.

From hence we went to *Fano*, (*Fanum Fortunæ*) so call'd from the Temple of *Fortune* built there in memory of a Battel won by the *Romans* near the River *Metaurus*. Here is also an ancient Triumphal Arch. Near this place *Narsetes* vanquish'd *Totila*. It is now an Episcopal Town.

Hence

Pesaro. Hence we set forward for *Pesaro*, most pleasantly seated near the Sea-side; it is call'd *Pesaurum* in Latin, from the weighing here of the Gold which the *Romans* paid to the *Gauls*. It once belong'd to the Dukes of *Urbin*, but for want of Heirs male it fell to the Church again. At the Bridge of Stone begins the *Marca d'Ancona*. The Figs and the Air of *Pesaro* are thought to be the best in *Italy*.

Cattolica The next place we came to was *Catholica*, a poor Village, having no other presence but its glorious Name, the reason whereof you see express'd in an Inscription upon the Wall of the Chapel, *viz.* That after the conclusion of the Council of *Arimini*, (not far from hence) the Emperour *Constantius*, a profess'd *Arrian*, having stopp'd the passage of most of the Fathers assembled there, till they had complied with the Emperour's Faction of *Arrians*, some of them out of weakness complied with the Emperour's Command, whilst the rest of the Orthodox Fathers found means to get to this little Village, which from thence got the Name of *Catholica*.

Rimini. From this place we travel'd to the aforesaid *Ariminum*, (now *Rimini*) where in the Market-place you see a Stone (now set upon a Pedestal) upon which, they said, *Cæsar* stood when he exhorted his Soldiers to march to *Rome*. Near it, in the same Market-place, stands a round Chapel, noted for a Miracle wrought here by St. *Anthony* of *Padua*, the History whereof is painted round the Chapel, but too long to be related here.

Cesena. Hence passing thro' *Cesena*, an Episcopal Town, we

Forli. came to *Forli*, (*Forum Livii*) another Bishop's Seat. Before we arriv'd at *Cesena*, we saw near a little River-side an ancient Inscription in Stone, which upon an exact view we found to be the exact Decree of the Senate of *Rome*, forbidding, upon pain of High-Treason, any Officer or Soldier to pass the *Rubicon*, which being level'd against *Cæsar* and his Army, we were satisfied that this little River (now call'd *Pistacello*) was the *Rubicon* mention'd in the Decree of the Senate.

Faenza. Leaving *Forli*, we left the way on the left hand leading to *Imola* and *Bologna*, and passing forward came to *Faenza*, a neat Town, but noted for nothing except its Earthen Ware, which is most excellent here. As we were travelling this way in the Night-time, I saw millions of small Flies like Glow-worms, especially in the Corn-fields, carrying a bright light along with them; I catch'd some of them, and found them have their little Lanterns in their Tails; they call them in this Country *Lucciole*, and I suppose them to be the Flies call'd *Cicindelæ* by *Pliny*, and *Lampurida* by *Aristotle*.

Ferrara. We were forced to lodge that night in a small Village, but came the next morning early to *Ferrara*, once the Residence of a Soveraign Prince of the Family of *Este*, but *Alfonso* II. dying without Heirs male, it fell to the Church in *Clement* VIII's time. Its compass is of about four miles, seated in a Plain, and defended by a good Citadel, strong Walls, Ramparts, Bulwarks, and a good Garison; the Streets are handsom, and the Palaces stately, but not very populous: The Cathedral is more remarkable for its Antiquity than any thing else, over against which you see two brazen Statues of the Princes of the House of *Este*, the one sitting, the other on Horseback: Behind these Statues stands the Townhouse. The ancient strong Palace of the Duke is seated in the center of the City, surrounded with a Moat. In the Court within you see the Pictures of all the Dukes of *Ferrara*. Here the Pope's Legate keeps his Residence. The noted Diamond Palace (as it is called here) is built of white Marble without, because the Stones are all cut into sharp points like Diamonds. I expected to have the inside answerable to the outside, but it had nothing but bare Walls.

In the Church of the stately Convent of the *Benedictins* is the Tomb of *Ariosto*, the Author of the Poem call'd *Ariosto's Tomb.* *Orlando Furioso*. The *Carthusians* Church is very neatly built, and well stor'd with good Pictures, as well as the Church and Convent of the *Carmelites*, in whose Library is preserv'd a Manuscript of *John Bacon*, and another of *Thomas Waldensis*, both our Countrymen.

The *Academy of Wits* stile themselves *Gli Elevati*. Of this Town was *Hieronymus Savonarola* and *Baptista Guarini*, the Author of the *Pastor Fido*. The History of *Ferrara* may be read in *Giovanni Baptista Pigna*.

The Weather being fair, we got in two days to *Padua* by Land (most People going in the Winter from *Ferrara* to *Venice* by Sea, by reason of the bad ways.) Passing the *Po* in a Ferry-boat at *Francalino*, we came the same day to *Rovigo*, the first Town under the *Venetian* Jurisdiction on that side; it is built upon the Ruins of the

Rovigo. ancient *Adria*. (whence the *Adriatick* Sea has borrow'd

Adria. its Name) being govern'd by a *Podesta* and *Capitano grande*, as the other Towns of the *Venetian* State. *Celius Rhodiginus* and *Bonifacius Bonifacii*, both Men of Learning, were Natives of this Town.

From hence we came soon to *Padua*, where we embark'd immediately for *Venice* in a *Piotta* or little Barge, and pass'd in view of many stately Country Seats standing upon the River *Brenta*. About five miles short of *Venice*, leaving the Horses that drew our Boat, we rowed thro' the Shallows call'd the *Laguna*, which surround *Venice* on all sides; over these Shallows none but little Vessels can pass, and that by certain Chanels, fortified with Castles, Forts and Chains.

The first Original of *Venice* consisted only in a few *Venice.* Fisher-huts, erected upon little dry spots of Ground in the shallow Seas, into which exonerate themselves seven Rivers, the *Piave*, *Sila*, *Livenza*, *Po*, *Adige*, *Brenta*, and *Tagliamento*. When *Italy* was over-run by the *Goths*, *Huns* and *Visigoths*, many of the better sort of People of *Padua*, and some other parts of *Italy*, sought for shelter among these Cottages, to avoid the Fury of these barbarous Nations; which succeeding according to expectation, they built many Houses, and at last a fine Town here, which in process of time exceeded her Mother *Padua*, being arriv'd to that greatness since, that it may be compar'd with the fairest in *Europe*; whence she has got the Sirname of *Venetia la Ricca*, Venice *the Rich*. Its compass is about eight miles, built in the form of a Lute, having no other defence but the shallow Seas five miles broad. It has also many small Islands near it, some of which serve instead of Suburbs. As instead of *The Gondolas* Streets they have Water-Chanels, so they use no Coaches, but Boats; these they call *Gondola's*, and have about twenty thousand of 'em, which ply at every Wharf; besides that, Persons of Quality have two or three for their own use: These are neat Boats, not unlike our Oars, able to hold six Persons conveniently, cover'd over head with a thick black Cloth, with Windows on both sides: These train up abundance of Seamen for the service of the Republick. Most of the common People pass from one place to another in the Town by little Lanes and Alleys (call'd here *Calle*) and by the Bridges built *Bridges of Venice.* over the Chanels, all of Stone, and of one Arch, reaching from one side of the Street to the other; of these there are above fifteen hundred in *Venice*; the chiefest of these Bridges is that they call *Rialto*, built of white *The Rialto.* Marble, over the *Canal grande*, one of the finest Bridges in *Europe*, by reason of its height, and the extent of one Arch only, upon which it rests, the Chanel being as broad here as a Man can well throw a Stone. Upon this Bridge you see two rows of Shops and small Houses cover'd with Lead. This Bridge cost a hundred and fifty thousand Crowns. The *Canal grande* runs out thro' the middle of the City, being flank'd with stately Houses, among which are two hundred fit to entertain a King. The number of the Inhabitants of this City is computed at a hundred and eighty thousand. It has thirty two Monasteries of Men, twenty eight of Women, and seventy Parish-Churches.

The Government of *Venice* is purely *Aristocratical*, viz. *The Government of Venice.* by the Doge and Nobility, the great Council of two thousand Gentlemen being the Basis of their Government; out of whom are chosen all the other Magistrates, as *Potesta's*, *Generals*, *Capitani*, *Grandi*, *Proveditor Generals*, *Ambassadours*, &c. This great Council assembles in the Doge's Palace, and there vote by *ballotting*, i. e. by putting into a close double Box a little Ball of the bigness of a Button, which being soft, no body can know into which part of the double Box the Ball is cast; every Member of this Council having two of these Balls given him, *viz.* one white, and another red; the first signifying the Affirmative, the other the Negative.

To enter upon a description of all their Magistrates and Officers, *viz.* the *Pregiadi*, the *Savi Grandi*, the *Savi di Terra firma*, the *Savi de gli Ordini*, &c. being a thing beyond our scope, we will only say, something of the *Doge* or Prince, the Head of this Republick.

This Dignity was hereditary till 1032, ever since *The Doge.* which time he is chosen for Life, by the whole Senate; for the manner of chusing him I will refer my self to *Sabellicus*: They generally observe this Rule, that they pitch upon a man pretty well advanced in Years, and one who had been fifteen years Ambassadour in the chief Courts of *Europe*. The Doge is not permitted to go beyond the *Laguna*, or to transact any matter of moment without the Advice of his Privy Councellors, of which there are six chosen out of the best Gentlemen of the City, four of whom must be always present, the Doge having no Authority to execute any thing of consequence without them, tho' they may act without the Doge; and these Councellors propose matters of concern to the *great Council.*

Council. The *Doge* has no more than one Vote in the Senate, but two Voices in the great Council. The *Doge* and these Councellors are call'd *Il Collegio*, with whom are joyn'd (in Cases of great consequence) six *Savi grandi*, five *Savi di Terra firma*, five *Savi de gli Ordini*, and three *Capi de Quaranta Criminali*.

The Habit of the *Doge* has some resemblance to the *Pontifical* Habit: When he appears abroad upon a publick account, they carry before him eight Silver Trumpets, a large Umbrella of Cloth of Tissue, the Cushion, the Chair, the gilt Sword, and a white Wax-Candle carried by a Child. All Letters of State are however written in his Name, and Money coin'd in his Name, the Stamp being S. *Mark*'s Lion. The *Doge* is most generally chosen out of those they call *Procuratori di San Marco*, who are in high esteem here: Formerly there was no more than one *Procurator* of St. *Mark*, whose Office oblig'd him to take care of every thing relating to St. *Mark*'s Church and Treasury, but now there are five and twenty, the Republick having thought fit, since the last War, to dispose of that Dignity for Money.

Its Strength. Their Strength is very considerable, as well as their Possessions, which in *Italy* are as great as the Pope's Dominions, but far greater out of *Italy*; they have fourteen Provinces in *Italy*: The *Venetians* challenge the Dominion over the Gulph of *Venice* in the *Adriatick* Sea; they are also in possession of a large Tract on the Sea-Coast of *Dalmatia*, and of the Isles of *Corfu*, *Cephalonia* and *Zant*. *Candia* or *Creta* do likewise belong to them; and they have a pretension upon the Kingdom of *Cyprus*, the same being bequeath'd to the Republick by *Catherine Cornaro*, 1438, it being left her by her Son before. The whole History may be seen in Pictures in the Palace of *Cornaro*, done by *Paulo Vernese*. The Fortresses the *Venetians* are possess'd of in *Italy* are, *Crema*, *Bergamo*, *Brescia*, *Peschiera*, *Chiesa*, and *Palma Nuova*, the last being one of the best Fortifications in *Europe*, with nine Royal Bastions, eighteen Cavaliers, and broad Ditches. In the Arsenal of *Venice* are always Arms in readiness for a hundred thousand Men. Their ordinary Militia consists of eighty thousand Foot and six thousand Horse, tho' upon occasion they may raise three hundred thousand Men. Their Naval Strength consists in thirty Galleys, and some Men of War.

Their Riches. Their ordinary Revenues, before the late *Turkish* War, was about four millions of Crowns; but since that time they are considerably encreas'd by new Taxes, Forfeitures, &c. besides that, of late Years, they have found out a way of raising vast Sums of Money by receiving their Citizens among the number of the Nobility. Thus in 1646, Fifty rich Families were honour'd with the Title of *Noble Venetians*, each of which paid a hundred thousand Crowns to the State.

Religion. As to their Religion, they are *Roman Catholicks*, and have ever been so since the first beginning of this Republick, which is above twelve hundred Years ago, this City being begun to be built in the same Year that S. *Austin* died.

The Noblemen of Venice. The Observations I made during my stay here were, 1. The Men, who are the most sightly, proper and grave that ever I saw; the Noblemen wear in Town a long black Gown, a black Cap knit with an edging of black Wool about it, in the nature of a Fringe; Perriwigs are forbid here, but their Hair is generally very good, being not press'd so much by their Caps as is done by our Hats. Under their Gowns (which are open before) they wear rich black Suits, with Stockings and Garters, and *Spanish*-Leather Shoes: Thus have I seen daily five hundred Gentlemen (every one fit to be an Ambassadour) walking in the *Piazza* of St. *Mark*, but to my singular regret had not the opportunity to converse with them, because the *Venetian* Noblemen are forbidden, under most severe Penalties, not to converse with any Ambassadours or other foreign Ministers, nay, not even with their Domesticks, or such as have any relation to them, which makes them very shy of Strangers: And it is upon the same score that they allow not their Wives to visit the Ladies of foreign Ambassadours, for fear of creating any suspicion of this kind, and to have their Names put into what they call *Denuncie secrete*, i. e. secret Informations, being certain wide Mouths cut in Marble Stone in the Wall of the Palace, into which are cast secretly Accusations against such Noblemen as they durst not accuse in publick.

The Ladies. 2. The Ladies here being willing to imitate the Men in tallness, wear very high-heel'd Shoes, like Stilts, which being very inconvenient for walking, they commonly rest their Hands or Arms upon the Shoulders of two grave Matrons. As for the unmarried Ladies, they are never to be seen abroad without a disguise at Fairs, or some publick Solemnities, being for the rest advanc'd in the Monasteries till they are married.

St. Mark's. 3. The next thing I took notice of was the Church of St. *Mark* the Evangelist, whose Body (interr'd here) was translated hither from *Alexandria* above eight hundred and fifty years ago, and has been ever since reputed the chief Patron of this State, as his Lion in the Arms of the Republick, and in their Great Seal, sufficiently demonstrates. The Church it self is built *à la Tedesca*, as it is call'd here, and as the best Churches were built in those days; it is neither spacious nor lofty, but very rich, and adorn'd with most excellent *Mosaick* Work and Marble, the Roof and the Walls, a good way down, being most curiously painted with *Mosaick* Histories and Pictures, and the lower parts crusted all over with Marble. In the Vault of the Arch over the Door of the Treasury, are to be seen two old *Mosaick* Pictures, one of St. *Dominick*, the other of St. *Francis*, both before they instituted their respective Orders, yet both in the same Habit as their Religious Men of those Orders wear. The Pavement of this Church is in some places compos'd of vast Marble Stones, with Veins in them resembling the Waves of the Sea, the rest being curiously inlaid with Stones of various colours, in Figures of Flowers, Stars, Birds, Beasts, and such-like. Among these Stones I saw some *Turkey* Stones, which would be of considerable value with us, but are trod upon here. The Roof of the Church is supported by thirty six round Marble Pillars of two foot diameter. The high Altar is a most noble piece of Workmanship, especially the Back thereof, beautified with several rows of little enamel'd Pictures *à la Greca*, set in Gold, and adorn'd with Pearls and precious Stones set betwixt them; this was the Gift of a *Doge* of *Venice*, and brought from *Constantinople*. Behind the high Altar stands the Altar of the B. Sacrament, adorn'd with two transparent round Pillars four yards high; and in the Sacristy hard by, a most admirable Picture of St. *Jerome* in *Mosaick* Work, of which there is abundance more finely done on the Roof. Over the Pillars round about the inside of the Church hang the *Escutchions* of several *Doges*; for when a *Doge* is created, he takes care of three things, (1.) he has his Picture set up in the Hall where the *Great Council* meet; (2.) he has his Arms made in an *Escutcheon*, (sometimes of Silver) which being of a large size, is set up after his death in the Church; (3.) he gives his Picture to be hung up in the *Collegio* or *Pregiadi*.

The Treasury of St. Mark. The Treasury of St. *Mark* is adjoyning to the Church, which is always shewn by two *noble Venetians*, and that not without special Leave: First we saw the *Spiritual Treasury*, which contains the Relicks, and next the *Temporal Treasury* or Jewels; in the first were, a great piece of the holy Cross of about a span in length, the biggest of this kind I ever saw, except that in the holy Chapel in *Paris*. I know that it is objected against us by our Enemies, that there are so many rare pieces of the holy Cross shewn in *Europe*, as would load a Cart, and therefore can't but give this in answer, for the satisfaction of those as have not the opportunity to be so well convinc'd in this point, that of all the Pieces that ever I saw belonging to the *holy Cross*, (and I have seen most in *Europe*) they would not make up two foot of Timber. Here were shewn also a Finger of St. *Mark*, and his Ring with a Stone in it not known to Jewellers: Some of our Saviour's Blood gather'd up in his Passion, with the Earth it was spilt upon: A Thorn of the *holy Crown of Thorns*, and a Nail which nail'd the two pieces of the Cross together; a Finger of St. *Mary Magdalen*; a piece of St. *John Baptist*'s Scull, and of his Habit; a Tooth of St. *Mark*; some of the B. Virgins Hair; an ancient Picture of St. *John Baptist*, enamel'd in Gold; a piece of the white Robe worn by our Saviour when he was scourg'd; an ancient Picture of our B. Lady, which *Constantine* the Great us'd always to carry about him; one of the Stones wherewith St. *Stephen* was ston'd; the Sword of St. *Peter*.

The Spiritual Treasury.

The Temporal Treasury. Hence being led into the *Temporal Treasury*, we saw, first, the twelve golden Crowns, and as many Back and Breast-pieces of the same Metal, all set thick with Pearls of a great value, which twelve young Virgins us'd to wear anciently upon a certain Festival: Next, three great Carbuncles, one whereof is as big as a large Hen-Egg, and weighs six ounces, being valued at two hundred thousand Crowns: Two Crowns of Gold, adorn'd with precious Stones, one representing the Crown of the Kingdom of *Cyprus*, the other of *Candia*: The *Doge*'s Crown, call'd *Il Corno*, from its resemblance to a Horn, sharp and turning at the top; it is set very close, with a row of most precious Stones, each as big as a Hazel-nut, with a

vast

vast Ruby in the front of it, valued at a hundred thousand Crowns, and one of the faireſt Diamonds in *Europe* in the top of it: They ſhew'd us afterwards the *Flower de Luce* of Gold, with a very fine Diamond in it, the Gift of *Henry* III. King of *France*, at his paſſing by *Venice*, in his way from *Poland* to *France*: Two Unicorns Horns, much leſs than that of St. *Denys* in *France*: Two Crucifixes ſet with a vaſt number of Pearls and rich Stones: The great Candleſtick and Thurible of Gold neatly wrought, each as heavy as a man can carry: A large Chalice of Gold, of that bulk, that a man can ſcarce carry it in both hands: A *Sapphire* weighing ten ounces: A Cup as broad and deep as an ordinary Callote, made of one *Turkey* Stone of an inеſtimable value, the Preſent of a King of *Perſia*: A Tankard of a rich *Cameo*, the Handle being curiouſly cut with a Diamond: A ſmall Vaſe of the Roots of an Emerauld; another of *Sardonick*: A large Cup of Agate; another of a *Roman Agate*, finer and more tranſparent than the other: A rich Box of Mother of Pearl.

The Doge's Palace.

Hence we went to the *Doge*'s Palace, adjoyning to the Church of St. *Mark*, where mounting up the Stairs leading into the open Gallery, we ſaw the two noted Statues of Marble repreſenting *Mars* and *Neptune*, at the head of theſe Stairs, under which you ſee theſe words, *Opus Sanſovini*. This open Gallery brought us into many Chambers of Juſtice, the Clerks Offices, and other Rooms; thence mounting up a Story higher, we were ſhewn the *Doge*'s Chamber of Audience, his Antichambers, Dining-rooms, ſeveral Council-chambers, all excellently painted: The great Chamber of the Senate, where they chuſe Officers, and tranſact other matters of the greateſt moment, being not permitted to depart till they have agreed to the matter in hand; it is ſixty paces long, and half as broad, with two thouſand Seats for the Noblemen, who have Authority to ſit here; it is painted on all ſides by the hands of the beſt Painters of *Italy* of that time. Over the *Doge*'s Throne you ſee a moſt excellent piece of Painting of *Tintoret*, repreſenting Heaven; and the great Pictures upon that ſide of the Room which looks into the Court of the Palace, contain the Hiſtory of Pope *Alexander* III. and the Emperour *Frederick Barbaroſſa*. In this and the next adjoyning Room we ſaw alſo the Original Pictures of all the Dukes of *Venice*; and in the other Apartments of this Palace, in the Churches and other Palaces of this City, ſo vaſt a number of, and ſuch excellent pieces of Painting of *Titian*, *Tintoret*, *Bellino*, *Gentile*, *Caſtel*, *Franco*, *Briſſano*, *Paolo Veroneſe*, *Perdenone*, and others, that it muſt be confeſs'd, that in this point *Venice* excels *Rome* it ſelf: *Rodolfi*, who has writ on the Painters of the *Venetian* State, will convince you beyond all diſpute of the truth of this Aſſertion.

The little Arſenal.

From theſe Chambers we were conducted to the *Sala* of the *Conſiglio de Dieci*, (call'd otherwiſe the *little Arſenal*) in the ſame Palace. Here are kept Arms for a thouſand Men, (ready upon all occaſions) the Muſquets ready charg'd, and the Pikes and Swords ſo order'd, that by plucking a String, they fall ready to be taken up in good order, ſo that in leſs than half an hours time a thouſand Men may be ready arm'd to ſally out. This Armoury is intended for the Security of the *Doge* and Senators (whilſt aſſembled) againſt any Treaſonable Deſigns, for which reaſon a Door out of this Room opens into the *Great Council-chamber*, the Keys whereof are always laid near the *Doge* when he is preſent. In this Arſenal is alſo kept the Sword and Arms of the great *Scanderbeg*, Prince of *Albania*, ſo famous for his great Exploits againſt the *Turks*: As for the Sword, it is a broad thin Blade, of a reaſonable length, but light. Here alſo you ſee the Standard of the Doge *Zeni*, who reſtor'd Pope *Alexander* III. with his Sword, Buckler and Helmet. The Standard and Horſe-tail belonging to the *Turks*, taken by a *Frenchman* named *Ciotar*. The Statues of *Ludovico Sforza* Duke of *Milan*, and his Spouſe *Viſconti*. The Head of *Cavare*; and the Head in Braſs of *Venerio*, the *Venetian* General in the Battel of *Lepanto*; as alſo the brazen Head of brave *Bragendino*, flea'd alive by the *Turks* for his Country's Service: The Picture of St. *Juſtina*, in a Caſe, adorn'd with rich Stones: A moſt rich Carpet, wrought with curious Figures, a Preſent of a King of *Perſia* to the Republick: The Habits of two noble *Chineſes* baptiz'd at *Venice*: The Armour of brave *Gatta Mela*, with the Picture of a Cat on his Headpiece: The Armour of forty or fifty *Doges* of *Venice*, who headed their Armies in perſon: The Habit, Buckler and Sword of a King of *Perſia*, adorn'd with precious Stones: The Armour of *Henry* IV. King of *France*, and of the Duke of *Roban*: The compleat Armour of a little Boy of ten years old, found dead in a Battel, fighting for the *Venetians*: *Attila*'s Helmet, and his Horſe's Headpiece: A Cannon ſhooting ſeven Shots at once; and another ſhooting threeſcore, out of ten Barrels: Two Halberts, one ſhooting fourteen Shots, the other ſeven: An Iron Cannon carrying two miles: The Iron Collar of *Carara* the *Paduan* Tyrant, and his Iron Croſsbow; The Devil's Organ, or a Trunk of Leather with ten Piſtol-barrels in it of a foot and a half long, diſpos'd like Organ-pipes, which upon opening of the Lock of the Trunk, diſcharge all at once, ſcattering their Bullets all about a great Room: The Box of *Berrargoes* is much ſuch another Invention here: A Piſtol in a Pocket-book, and ſeveral others in Swords and Daggers. Here we alſo ſaw a moſt curious Tabernacle of Cryſtal; a burning Lamp found in *Antenor*'s Tomb; a Burning-glaſs which burns at half a miles diſtance; an exquiſite Piece of *Adam* and *Eve*, with the Tree and Serpent, cut out of one piece of Wood, by *Alberto Dureo*; and laſt of all, the Picture of King *James* of *England*, the only Picture of any Soveraign Prince to be ſeen here.

From the Quarters of *Mars* we went out of the Palace into the *Piazza* of St. *Mark*, into which the aforeſaid Church and this Palace look, one of the nobleſt of that kind that ever I ſaw; for it runs up from the Sea-ſide along the Palace to the Church of St. *Mark*, whence turning on the left hand, it ſpreads in an open and moſt beautiful place, built all along upon Arches and Marble Pillars, and adorn'd with moſt convenient Lodgings for a vaſt number of perſons of the beſt rank. Here alſo ſtand the Mint and Library. The Walk call'd the *Broglio*, where the noble *Venetians* meet twice a day, is in that part of the *Piazza* which lies under the Palace. At the end of it, near the Sea-ſide, you ſee two Pillars of the fineſt Marble, the one bearing upon it the Image of St. *Theodorus*; the other the Lyon of St. *Mark*, being the two Patrons of this City; theſe two Pillars were the Preſent of a certain *Lombard*, under condition, that it ſhould be lawful for any one to play at Dice here, tho' even they play'd falſe play, without incurring the uſual Penalty. Betwixt theſe two Pillars they commonly execute their Malefactors.

The Piazza of St. Mark.

Directly oppoſite to the Palace ſtands the Mint, in a place call'd *la Zeccha*, whence the golden Coin call'd *Zecchino*, worth about ſeven ſhillings and ſix pence of our Money, has got its Name. Juſt by it is the Library, containing a conſiderable number of valuable Books, and much encreas'd by the Library of *Petrarch* (a Canon of *Padua*) and the Manuſcripts beſtow'd upon it by the Greek Cardinal *Beſſarion*, which coſt him thirty thouſand Crowns.

As we were advancing to that part of the *Piazza* near the Church, we eſpied at the very corner of the Wall of the Church four Porphyry Statues of four Monuments, embracing one another, which they told us were the Statues of four foreign Merchants, who having brought hither moſt of the Jewels we had ſeen in the Treaſury of St. *Mark*, poyſon'd one another out of covetouſneſs, and ſo left the State Heir of all.

Juſt before the Church are erected three tall Maſts, (adorn'd with Flags and Streamers on Holidays) upon ſtately Pedeſtals of Braſs, ſignifying the three nobleſt parts of the *Venetian* Dominions, *viz.* the Kingdoms of *Cyprus* and *Candia*, and the State of *Venice*. In this *Piazza* you ſee alſo a great concourſe of foreign Merchants of all Nations in their own Habits, as *Greeks*, *Armenians*, *Albanians*, *Sclavonians*, *Polonians*, *Jews*, and *Turks*, and towards night Mountebanks, Morris-dancers, and ſuch like, to divert the Mob, and cajole them out of their Money. In this *Piazza* alſo, *viz.* about fifty paces from the Church of St. *Mark*, ſtands the high Steeple of *Venice*, built forty foot ſquare on all ſides, and two hundred thirty ſix high, the top whereof being cover'd with gilt Tiles, makes a glorious ſhew in a Sunſhiny day; and the Foundation is near as deep under ground as 'tis above, a ſurprizing thing, conſidering it is in *Venice*. From the top of it we had a full proſpect at once of *Venice*, and among other things, of the Horſes of Braſs gilt, which ſtood over the Frontiſpiece of the Church of St. *Mark*, the Workmanſhip of *Liſippus* the famous *Grecian* Statuary; they were preſented to *Nero* by *Tiradates* King of *Armenia*, carried from *Rome* to *Conſtantinople* by *Conſtantine* the Great, and thence brought hither.

The Campanile or high Steeple.

From hence we had alſo a view of the great *Arſenal*, (which ſome would have to be three miles in compaſs, (tho' I think it is not near ſo much) which invited us to haſten thither.

The great Arſenal.

Coming to this *Arſenal*, (where we were forc'd to leave our Swords at the Door) ſeated near the Sea-ſide, we were ſurpriz'd at its moſt admirable Oeconomy,

The Fair.

fifteen

fifteen hundred Men being imploy'd daily here in their Works, the Charges whereof amount yearly to above four hundred thousand Crowns, each of these Workmen having Wine allow'd them twice a day, and that very good, tho' mix'd with Water.

After you enter the Arsenal, you see a Well of fresh Water, in which two pieces of Unicorns Horn are fastned into the bottom, to keep it, as they believe, from being poyson'd. Hence we were led thro' all the vast Rooms of this Magazine, each of which for bigness resembled a vast Church; some of these were fill'd with vast Oars, seven Men to an Oar; another with Nails, another with Scales: In one they were making Saltpetre for Gunpowder; in another they were casting Cannons and Mortars; in others they had laid up vast stores of Masts, some of which were worth eighty pounds. Here we saw vast numbers of great Cannons, some whereof were taken from the *Turks*, with *Turkish* words upon 'em. Here we saw the great Cannon buried in *Candia*, full of golden Medals; and the great Cannons cast here, while *Henry* III. King of *France* dined in this Arsenal; with a prodigious number of Cannon Bullets, tho' a great part of their great Artillery was then imploy'd against the *Turks*. In the Rooms above we saw Arms for fifty thousand Men, Arms for twelve Galleys; and in another Room, for fifty Galleys more: Here was also the Suit of Armour of *Scanderbeg*, and of the Doge *Zani*; the Lantern of *Don John d'Austria*'s Ship in the Battel of *Lepanto*; and another belonging to a *Turkish* Galley: The Armour of *Benjamante Theopoli* and his Accomplices, who intended to have assassinated the Senate and the Doge: Some Arms taken in the Battel of *Lepanto*, and from the *Genoeses*; and several other sorts of Arms of a peculiar contrivance. Here we were also shewn a Draught of the Town and Fort of *Cliffa*, and how it was taken by the *Venetians* twenty years before.

The Arsenal.

Going down again to the place where they build and repair their Galleys, we found it a vast square Court, broad three hundred paces in the Square, divided into many Penthouses of fifty paces long; in the midst of it is a Pond or Chanel, where they try the Galleys, and carry them from thence to the Sea. Here it was that they made and equipp'd a Galley whilst *Henry* III. King of *France* dined. They were at that time busie in building of two Galeasses of a vast bulk. Here we saw the old *Bucentoro*, and the new one building; a Galley of State of the *Doge*, used by him upon *Ascension-day*, when he performs the Ceremony of espousing the Sea, as they call it here; it is a noble Galley, gilt without, with gilt Seats, and Wainscotted round about the Deck, a Partition running quite along the Deck with Seats on both sides, with a low Roof, open on all sides to afford a passage to the Air, but to keep out the Sun, all finely painted, capable of holding five hundred Senators, who in their Robes attend the *Doge* at this Ceremony, who sits in the *Puppe*, in a Chair of State, with the Pope's *Nuncio* on the right, and the Patriarch of *Venice* on the left, the Musick being placed behind him.

Bucentoro.

I happen'd to be thrice at *Venice* at this great Sea-Triumph or Feast of the Ascension: About eight a clock in the Morning the Senators in their Sea-robes meet the *Doge* at his Palace, and conduct him to the Sea-side, where embarking in the *Bucentoro*, they weigh Anchor, and the Signal being given by the Captain's Whistle and sounding of Trumpets, they all at once strike with their Oars, (twenty on each side) and thus majestically go on for two miles upon the *Laguna*, being follow'd by a great number of *Piotta's* and *Gondola's* cover'd with rich Canopies, in which are all the foreign Ministers, Noblemen and Strangers of Quality, attended by their Servants in rich Liveries. Coming to the appointed place, the *Doge* throws a Ring into the Sea, without any other Ceremony but saying these words, *Desponsamus te, Mare, in signum perpetui Dominii: We espouse thee, O Sea, as a token of our perpetual Dominion over thee*: So he goes to St. *Nicholas*'s Church in *Lio*, (an Island near *Venice*) whence, after having assisted at high Mass, he returns in the same state to *Venice*, the Evening being spent in a fine Collation he gives to the Senate, and revelling with *Gondola's*, fine Musick, and other Diversions, upon the *Canal* of *Murano*.

The Fair.

The next morning begins the Fair in St. *Mark*'s Place, which lasting ten days, you see all the Gallants of *Venice* appear there with a great deal of splendour, and the young Ladies in a very odd Disguise, with false Noses and little Beards of black Wool, a Disguise they frequently make use of also upon other occasions when they intend to pass undiscover'd.

Another day we went to see the Isle of St. *George major*, and its stately Monastery, Church, Cloyster and Garden; the Church scarce gives place to any in *Venice*, being the Work of the famous Architect *Palladio*; in it we saw a Silver Lamp of that bulk, that two Men could scarce carry it; and a Pillar of Marble over a side-Altar, with the figure of a Crucifix in it discover'd naturally in the Marble at the polishing of it; and in the *Refectory*, that admirable Piece of the Wedding of *Cana* in *Galilee*, by *Guido Reni*.

From hence we went in our *Gondola* to *Procuratore Nani*'s Palace, in another Island beyond St. *George*'s, being richly furnish'd and adorn'd with the Pictures of many modern Princes and Ladies of *France*, *England* and *Germany*, all excellently well painted: But the chief thing worth our peculiar Observation in this Palace was, its Gardens, a thing as rare to be seen in *Venice* as Coaches. The Master of this Palace is the same *Nani* who has oblig'd the World with his most excellent History of *Venice*. The Palace of Nani.

We took at the same time a view of the Convent of the *Capuchins*, which being a Vow of the Senate in time of a Plague, is built more suitable to the Grandeur of the Senate, than to the Simplicity of the *Capuchins*. The Capuchins.

From hence returning to the Town, we came to *Madonna di Salute*, a new round Church, likewise a Vow of the Senate in another Plague-time, which when finish'd will be one of the finest Churches in *Venice*. The Pictures in the Roof are done by *Titian*, as the Picture of a Feast in the Sacristy was by *Tintoret*. Madonna di Salute.

The next we saw was, the Church of the Canon-Regulars call'd *la Carita*, in which Convent Pope *Alexander* III. liv'd privately in the quality of a Chaplain, till he was discover'd by a Pilgrim, and afterwards restor'd by the Senate. Over the Entrance of the Quire you see the Picture of the said *Alexander* III. admitting the Emperour *Frederick* to kiss his Feet. Here is also a very good Picture of the raising of *Lazarus* by our Saviour, by the hand of *Bassan*. La Carita.

Another day we visited the Church of the *Dominicans* call'd St. *Giovanne & Paulo*, where is to be seen the Tomb-stone of the Lord *Henry Aubigni*, second Brother to the Duke of *Lenox* and *Richmond*, who died here in his Travels. Before the Door stands the *Equestris Statua* of Brass gilt, of *Bartholomeo Coleono Bergamensc*, a brave Soldier, to whom (as the Inscription tells you, *Oli militare imperium optime gestum*) the Senate decreed this Statue to be set up. The Tabernacle and Altar of this Church are very noble; the Chapel of St. *Hiacinth*, and the Miracles of this Saint, are of the hand of *Bassan* and *Palmarino*; the Martyrdom of St. *John* and *Paul* is of *Titian*: The Convent also of St. *John* and *Paul* is one of the best in *Italy*. The Church of St. *Salvadore*, a neat Structure, and noted for the Tombs of divers *Doges* and other Persons of Quality. Here are two excellent Pictures, by *Titian*, the first representing the Transfiguration, upon the high Altar; the other upon the right hand of the Wall, of the Annunciation, under which *Titian* wrote these words, *Titianus fecit, fecit*. The Picture here of the Last Supper is done by *Titian*'s Master. On the Epistle side of the high Altar is a little Chapel, over whose Altar is the Tomb of St. *Theodore*, one of the Patrons of this City. S. Giovanni & Paulo. S. Salvadore.

In the Church of St. *Chrysostom*, upon a side-Altar on the left hand, you see the Stone Statues of our Saviour and his twelve Apostles, by the curious hand of *Tullius Lombardus*, whose Statues adorn also St. *Anthony*'s Tomb at *Padua*. St. Chrysostom.

In the Church of the *Apostoli* I saw a rare old Picture of St. *Lucy*; and in that of the Jesuits, the Tomb of St. *Barbara*, a Virgin Martyr.

The Cathedral Church of *Venice* has little considerable in it, except the Tomb of St. *Laurentius Justinianus*, a great Preacher, and the first Patriarch of *Venice*. The Dome.

The Church of St. *Jacomo* was, according to an old Inscription, built twelve hundred Years ago, in the very infancy of *Venice*; it has divers good Pictures of *Lanfrancus* and *Marcus Titianus*, old *Titian*'s Scholar. S. Jacomo.

The 23d of *April*, being St. *George*'s Day, we went to the *Greek* Schismaticks Church, dedicated to St. *George*, and found their Ceremonies little different from the *Catholick Greeks*; their Tenets may be seen in a Book call'd *Acta & Scripta Theologorum Wittenburgensium & Hieremiæ Patriarchæ*; printed at *Wittemberg*, 1584. The Greek Church.

One *Saturday*, after Dinner, we also view'd the *Jews* Synagogue, and among other things observ'd a Rabbin, who look'd like a *Puritan* Minister, make an Homily to his Congregation in *Italian*. Another time we took a turn to *Murano*, where are the famous Glass-houses of The Jews Synagogue.

The Glass-houses of *Murano.*

Venice, whence they are said to vend Two hundred thousand Crowns worth a Year for the use of all *Europe*. I must confess I was extreamly pleas'd, not only with the sight of so many sorts of Drinking-glasses, fitted to the Humour of every Nation, but especially with the Industry of some of the Glass-workmen here, who had made whole Ships with all their Tackling; Organs; Castles, with their Fortifications, Cannons, Gates, Centries, &c. with almost stupendious Art. In *Murano* is also to be seen the Palace of Signior *Camillo Trevisano*, with the rare Gardens after the *Roman* way.

I spent the rest of my time in viewing the well-furnish'd Shops of all sorts and sizes, the *Canale Grande*, and The Palaces. the most celebrated Palaces of *Justiniani*, *Mocenigo*, *Grimani*, *Priuli*, *Contarini*, *Foscoli*, *Loredano*, *Gussoni* and *Cornaro*, to my no small satisfaction, being equally to be admir'd for the richness of their Furniture and Contrivance.

The Men famous for Learning, who have adorn'd this City, I found to have been these; *Laurentius Justinianus*, *Hermolaus Barbarus*, *Petrus Bembus*, *Aloysius*, *Lippomanus*, *Paulus Paruta*, *Baptistus Egnatius*, *Ludovicus Dolce*, *Paulus Manutius*, &c. I had the good fortune to see, during my stay here some Years before, the Ingenious *Loredano*, and Learned Procurator *Nani*. The History of *Venice* may be read in *Andrea Morasini*, *Paolo*, *Partua*, *Sabellico*, *Berdino Tomasino*, *Corido* and *Nani*.

Having thus spent a month at *Venice*, it put me in mind of the Saying of *Socrates* of *Athens*, *viz.* that it was *melior meretrix*, *quam Uxor*; the stinking Cellars and Chanels, the badness of the Water, and moistness of the Air of this City, rendring a long stay inconvenient, if not troublesom, to Foreigners. So leaving these polish'd *Amsterdammers*, I return'd by the way of *Padua*, once *Padua.* the Mother of *Venice*, but now the second in the *Venetian* State, built by *Antenor*. It is a stately spacious Town, but has more Houses than Inhabitants, having been much dispeopled by intestine Divisions and the nearness of *Venice*; it stands in the *Marca Trevigiana*, near the *Eugenian* Hills, in a fertile Plain, fortified with good Walls and Ramparts: The University here is chiefly renown'd for the Study of Physick. The most *Antenor's* remarkable things here are, the Tomb of *Antenor*, with *Tomb.* a *Gothick* Inscription; the publick Schools, call'd *Il Bue*, or an *Ox*; the Physick-Garden: The Body of St. *Anthe-* St. *Anthony's* ny of *Padua* lies entomb'd under the Altar of the open *Tomb.* Chapel, on the left hand of the Church dedicated to that Saint, the said Chapel being beautified with most curious Marble Figures, representing the chief Actions of St. *Anthony*, and twenty seven great Lamps of Silver gilt hang before the said Altar.

Over against this Chapel is such another open Chapel, call'd St. *Felice*, most curiously painted by the famous *Giotto*; and in a side-Chapel on the right hand, the Tomb of brave *Gatta Mela*; the Tomb of *Alexander Contareno*, the *Venetian* General, fastned to a side-Pillar, and the finest cut that ever I saw. The Quire of the Church is all inlaid with Wood; and in the Cloyster of the Convent you see divers Tombs of learned Men: It was hereabouts I saw upon a black Marble Stone these words, *Interiora Thomæ Howardi Comitis Arondeliæ*; *The Bowels of the Earl of* Arundel: This Great Man died at *Padua*. As you come out of this Church, the *Equestris Statua* of the just-now-mention'd *Gatta Mela*; he was nick-nam'd *Gatta* for his watchfulness, his true Name being *Eresino di Narni*.

St. *Justina's* Church and Convent.

The Church and Convent of St. *Justina* are not inferiour to any in *Italy*, the first being built by the great *Palladio*; the Body of this Saint lies interr'd under the high Altar, which is extreamly rich, as well as the Pavement of red and black Marble. The Cupola's are very fine, and the Seats in the Quire adorn'd with the Histories of the Old and New Testament cut in Wood; the Martyrdom of St. *Justina* being painted most curiously over the Abbot's Seat, by *Paolo Veronese*. The Tombs of St. *Luke* the Evangelist, of St. *Matthias*, and of St. *Prosdochimus*, St. *Peter's* Disciple, and first Bishop of *Padua*, are worth a Traveller's Observation. In the Field before this Church is a Fair kept every month, and the Ladies and Gentlemen of the Town take the *Tour à la mode* in their Coaches.

The Cloyster of the Convent is remarkable for its Painting, for the neat Library, and for the Picture of St. *Justina* in the Abbot's Chamber. The Cathedral here is not so considerable for its Fabrick as for its Revenues, which amounting to a hundred thousand Crowns *per ann.* maintain a hundred Clergy-men and other Officers: It has twenty seven Prebends, who are commonly Gentlemen. The Palace of the *Capitano grande* is very beautiful without, and has a most curious Library. The great Hall, call'd *Il Palagio di Ragione*, is a hundred and eighty The great paces long, and forty broad, without any Pillars, with Hall. four large Doors, over each of which stands the Statue of a learned *Paduan*. On the Roof are painted Astronomical Figures; and at one end of it is fix'd a round Stone, with these words upon it, *Lapis opprobrii*, i. e. *the Stone of Disgrace*; upon which whosoever will sit in publick, and declare himself *non solvendo*, can't be imprison'd. At the other end you see *Livy's* Head in white Marble; and out of a Back-door joyning to the Wall of this Hall, *Livy's Busto* in Stone, with this Epitaph under it in Gothick Letters:

Ossa Tui Livii Patavini unius omnium mortalium judicio digni, cujus prope invicto calamo invicti Populi Romani res gestæ conscriberentur.

The Picture of the high Altar in the *Austin Friers* St. *Austins.* Church, and that of St. *John* Baptist in the Sacristy, are of the hand of *Guido Reni*.

Near this Church are to be seen the Ruins of an old *Amphitheatre*, the *Arena* of which is oval, and retains its The *Arena.* ancient Name.

The high Altar in the *Dominicans* Church is very stately; and behind it, in the Quire, the curious Tombs of the *Carari*, once Lords of *Padua*, before they were displaced by the *Venetians*.

In the Church of St. *Francesco Grande* is a fine Altar of white Marble, and the Tombs of *Cavalcante* and *Lengolio* are curious Pieces.

In the little Church of the *Oratorians*, call'd St. *Thomas* of *Canterbury's*, lies interr'd the Lady *Catherine Whitenhall*, in a Vault, cover'd with a white Marble Stone; she St. *Thomas of Canterbury.* was Daughter to the late Earl of *Shrewsbury*, and married to *Thomas Whitenhall* Esquire, who died here in her Travels.

Padua has two Academies of Wits, called *Gli Recovrati* and *Gli Inflammati*. The Learned Men were, *Livy*, *Apponius*, *Paulus* the Jurisconsult, *Sperone Speroni*, *Antonius Querenchus*, *Jacobus Zabarella*; and *Titian* the great Painter. The History of *Padua* is to be read in *Angelo Portinari delle felicitade di* Padua, and in a Book entituled, *Gl'Origin di* Padua.

From *Padua* we set out towards *Milan*, taking our way over *Vicenza*, a Town seated upon the two Rivers *Vicenza.* *Bachilione* and *Rerone*, under the *Venetian* Jurisdiction. The Townhouse and large Piazza, the Palace of Count *Valmarana*, the Triumphal Arch (the Work of *Palladio*) leading into the *Campo Marzo*, where they keep the *Tour à la mode* in Coaches, and in fine, the curious Playhouse, are worth a Traveller's observation.

The Academy of Wits here are call'd *Gl'Olympici*. The History of this place is to be seen in *Jacomo Mazari* and *Alphonso Loschi*.

Hence we went to *Verona*, surnamed *la Nobile*, seated *Verona.* in a most excellent Air upon the River *Addesis*; it belongs to the *Venetians*, and is strengthned by three Castles. The Cathedral here may boast rather of its Antiquity than Stateliness; in it is the Tomb of Pope *Lucius* the Third, with the following Epitaph:

Luca dedit lucem tibi, Luci, Pontificatum
Ostia, Papatum Roma, Verona miri.
Imo Verona dedit tibi Lucii gaudia, Roma
Exilium, turas Ostia, Luca mori.

The other things worth taking notice of here are, the Tomb of *Signori della Scala*, once Lords of this place, from whence *Joseph* and *Julius Scaliger* pretend to be descended.

The rare Picture of St. *George*, in the Convent of St. *George*, by the hand of *Paolo Veronese*; the famous Amphitheatre, are the most entire in *Europe*.

The Academy of Wits of this place stile themselves *Gli Philarmonici*. Their Learned Men were *Zeno Veronensis*, *Cornelius Nepos*, *Pliny* the second, *Catullus*, *Fracastorius*, *Onuphrius*, *Panuinus*, *Paulus Æmilius* the Historian, *Francesco Pona*, *Aloysius Novarinus*, and *Paolo Veronese* that noted Painter.

Upon the Plains of *Verona* was fought the Battel in which *C. Marius* overthrew the *Cimbers*, and another betwixt *Theodoric* and *Odoacer*. The History of *Verona* may be read in *Torello Saraina*, *Girolamo di Corte*, and in the *Antiquitates Veronenses Onufrii Panuini*.

From hence we travel'd towards *Brescia*, by the way of *Peschiera* and *Disenzano*, both seated upon the Lake *Peschiera.* *di Garda*; the first is a regular Fortification with five Bastions, and the last noted for excellent Fish and

Mus-

Muscatello Wine, call'd by them properly *Vino Santo*.

Brescia. *Brescia* is also a strong Town under the *Venetian* Jurisdiction, noted for the best Gunsmiths. Hence we

Crema. took a turn to *Crema* and *Bergamo*, two *Venetian* Towns on the Frontiers of the *Milanese*: *Bergamo* is seated very high, and well fortified. In the *Austin* Friers Church here lies buried *Ambrosius Calepinus*, the Author of the famous Latin Dictionary.

Bergam. From *Bergamo* we travel'd to *Milan*, thro' *Mantua* and *Mirandola*.

Mantua. *Mantua* is the capital City of a Dukedom of the same Name, govern'd by its own Prince, of the House of *Gonsague*. It is seated in the midst of Marshes, not far from the River *Mincio*; The Duke's Palace was formerly, (before this City was surpriz'd by the Imperialists) one of the finest Palaces in *Italy*, having at that time, as I was told, no less than seven changes of rich Hangings for every Room, besides many other Rarities.

Casal. The Town of *Casal*, with its Citadel, is one of the strongest places of all *Italy*. The Duke's Revenues are computed yearly at five hundred thousand Crowns, and he is able to raise fifteen thousand Foot, and two thousand Horse. *Virgil* and the modern Latin Poet *Baptista Mantuanus* were of this place, the History of which may be seen in *Mario Aquicola*.

Mirandola. The Dukedom of *Mirandola* is of no great extent, having got its Name from three Children brought forth at a Birth by *Euridis*, the Daughter of *Constantius* Son to *Constantine* the Great, who being fallen in love with one *Manfred*, fled with him to *Naples*, thence to *Ravenna*, and at last liv'd there for a considerable time amongst the Shepherds, till *Manfred* purchased those Lands, which were afterwards confirm'd to him by the Emperour; and from the Birth of his three Sons, *Picus*, *Pius*, and *Papazzo*, at one time, got the Name of *Mirandola*, or *Miraculous*. The Revenues of the Duke of *Mirandola* are about eighty thousand Crowns yearly.

The most famous Men of this Country was, the great *Joannes Picus Mirandulanus*, whose Life was written by Sir *Thomas Moor*.

From *Mirandola* I pass'd forward over *Parma*, *Piacenza*, *Lodi*, and *Marigno*, to *Milan*, whence taking my way thro' the Country of the *Swiss*, by the Lake of *Como*, and over the Mount of St. *Godart*, came to *Basel*, where taking Boat upon the *Rhine*, I saw *Strasburgh*, *Brisac*, *Spire*, *Philipsburgh*, *Oppenheim*, *Coblentz*, *Harmerstedt*, *Worms*, *Francfort*, *Mayence*, *Cologn*, *Dusseldorp*, *Skinskonce*, *Rat*, *Wesel*, *Arnheim*, &c. and continued my Journey through *Holland* and *Flanders* to *Calais*, whence I pass'd over to *Dover*, into my native Country of *England*.

A NEW VOYAGE TO ITALY,

WITH

A Description of its chief Towns, Churches, Tombs, Libraries, Palaces, Statues and Antiquities.

By *MAXIMILIAN MISSON*, Gent.

Done into English, and adorn'd with Figures, in two Volumes.

VOL. I.

LETTER I.

SIR.

Holland being a low flat Country, like one continued Meadow, we saw, as we approach'd the Shore, the Pinacles of the Steeples and the Trees, as if they were rising out of the Water. The whole Country is cut into Canals and Ditches with incredible Labour, without which the Grounds would be so soak'd with Water, as would render the Country not habitable; whereas now, by the Industry of its Inhabitants, it is the richest and best Peopled in the World, proportionable to its extent: Some make their number amount to Two millions five hundred thousand Souls; some to Two millions in the seven Provinces.

The Cities of *Holland* are generally very neat and beautiful, their Inhabitants sparing no Pains nor Cost to make them appear so, by constantly washing them; and having the insides of their Houses curiously painted; and their Windows are generally of Glass as clear as Crystal: Their cleanliness extends even to their Shops and Stables, which are kept neater here than the best Apartments in some Countries. Their Streets are so clean, that you see the Women walk almost constantly in 'em in their Slippers; and the Canals being on both sides planted with Trees, this affords a most delightful shady passage thro' all the chief Streets of the Cities, and of some of the Towns and Villages.

They have one City of the first rank, twenty of the second, more than thirty of the third, above two hundred large Towns, and eight hundred Villages.

Theſe Canals are alſo very convenient for travelling, which is moſt generally perform'd here in large Boats cover'd againſt the Injuries of the Air, and drawn by Horſes, which go off and bring you to your Journeys end at certain hours; the ſame ſerve for the tranſportation of Commodities from one place to another: And ſome of theſe Canals afford tolerable ſtore of Fiſh.

Notwithſtanding all theſe ſeeming Advantages, there are many things wanting in *Holland*, their ſupplies of Wines, nay, even of Corn, and moſt other things neceſſary for the ſuſtenance of Life, coming from foreign Countries, which makes them be ſtor'd with ſuch a prodigious number of Ships, that ſome have compar'd 'em to all what *Europe* can produce of that kind together. But as on one ſide they are chiefly oblig'd to the Sea for their Riches, ſo on the other hand it proves the occaſion of almoſt irreparable Damages and Deſolations; for tho' they take all poſſible Precautions to maintain their Dams of Earth, and their Mills for the emptying of the Water, yet does ſometimes the impetuoſity of this Watery Element break thro' all theſe Fences, which has coſt at ſeveral times the Lives of ſome millions of People.

Apr. 17 1429 a hundred thouſand People were drown'd about *Dort*.

Another Inconveniency is, the ſudden change of the Weather from heat to cold, a thing not agreeable to thoſe who are not uſed to it. Their Impoſitions are alſo very heavy, which conſequently occaſions a ſcarcity of Victuals, but their plenty of Trade ſeems to make them a ſufficient amends for this Inconveniency.

Rotterdam.

We were not a little ſurpriz'd with the firſt ſight of *Rotterdam*, for its Canals being for the moſt part ſo deep and broad, that they are capable of receiving Veſſels of a great bulk; this affords the moſt agreeable Proſpect of a mixture of Trees, tops of lofty Houſes and Maſts, at a diſtance.

The City of *Rotterdam* has not always been in the ſame flouriſhing condition 'tis in now, which makes it challenge a place among the Cities of the ſecond rank in *Europe*, its Ports being both large and commodious, the City rich, populous and pleaſant, and extreamly flouriſhing; their Storehouſes for the Navy, the Townhouſe and the Bank, are goodly Structures; their Glaſs-houſe (famous thro' all the Seven Provinces) works abundance of little enamel'd Bowls, and ſuch-like Baubles, curiouſly done, which are ſold to the Savages in the *Indies*.

The firſt Statue was erected 1540, of Wood, another of Stone 1657, and this of Braſs, 1622.

There are two *French* Churches here: The Statue of Braſs of *Eraſmus* is fix'd on a Pedeſtal of Marble in the place call'd the *Great Bridge*, ſurrounded with Iron Rails. *Eraſmus* is dreſs'd in his Doctor's Robe, with a Book in his Hand; and near it you ſee the following Diſtich, wrote over the Door of a little Houſe where he was born *Octob.* 27. 1467. but died at *Baſil*, *June* 12. 1536.

Ædibus hic ortus, mundum decoravit Eraſmus
Artibus ingenuis, Religione, Fide.

We made a little excurſive Journey to a ſmall Village call'd *Leekerkeek*, about three leagues from the City, upon the River *Leek*, where the Lord of the Mannor told us that the Salmon-fiſhing (the fifth part whereof only belongs to him) uſed formerly to amount to twenty thouſand Livres and more *per annum* for his ſhare, but that of late years the Salmon having left that River, the Fiſhing (which they are forc'd to continue only to maintain their Right) does not defray the charge.

At the ſame place they ſhew'd us a Woman, who was the Year before brought to bed of ſix Sons at one birth, four of them were baptiz'd, and the eldeſt liv'd four months after.

At the Lord of the Mannor's Houſe we ſaw alſo a Servant-maid nam'd *de la Brato*, who under that Name was muſter'd, and ſerv'd no leſs than ſeven years in the quality of a Muſqueteer.

We were credibly inform'd, that a few years before there died in this place one *Gerard Baſtianſon*, a Fiſherman, who was full eight foot high, and tho' a very lean perſon, weigh'd five hundred weight: The Doors of his Houſe, and his Clothes, which were ſhewn us, confirm'd us in what they told us of his bulk. I am,

Sir,

At *Rotterdam*, *Oct.* 6. 1687, *N. S.*

Yours, &c.

LETTER II.

SIR,

Delft.

THE ordinary Paſſage-boat carried us in two hours from hence to *Delft*, a City that holds the third rank in the Aſſembly of the States of *Holland*. One of the beſt Curioſities they ſhew you in this City is, the Tomb of *William* Prince of *Orange*, aſſaſſinated here by *Balthaſar Gerard*, 1584. The Arſenal, the Townhouſe, the *Stadtholders* Palace, the Grand Place, and the great Hoſpital, with its Gardens, are alſo worth the ſight of a Traveller. The *Canal* betwixt this City and the *Hague* is not above a league in length, in ſight of *Reſwick* and *Voerburgh*, two pleaſant Villages, and adorn'd on both ſides with moſt delightful Summer-ſeats, Walks and Gardens.

Hague.

The *Hague*, being without Gates or Walls, is reckon'd among the Villages, notwithſtanding which, as it enjoys the Privilege of a City, ſo its Grandeur and Beauty deſervedly entitles it to that Name, being beſides this the Reſidence of the Princes of *Orange*, and all the foreign Miniſters, and the place of aſſembly of the *States General*; beſides that, the great concourſe of Foreigners of all ſorts renders the People more obliging and ſociable than in any other place of *Holland*. Add to this, that the Air is very good, the Wood near the Town extreamly delightful, and the Walk from thence to the Village of *Scheveling*, near the Sea-ſide, very diverting. Here they ſhew a Chariot furniſh'd both with Wheels and Sails, which is carried along by the Wind upon the Sea-ſhore, which is both hard and level.

Its Situation.

Its Situation is certainly the moſt pleaſant of any City in *Holland*, having the before-mention'd Wood to the North, moſt fertile Meadows to the South, good Arable Lands to the Eaſt, and the Sea to the Weſt.

The Princes of *Orange* keep their Reſidence in the Palace of the ancient Earls of *Holland*; but that call'd the *Old Court*, where they formerly lodg'd, is much the more regular Structure: But the Houſes of Pleaſure about the *Hague* are generally very beautiful.

We took, among other things, a view of the Church of the Village of *Loſdun*, ſo famous for the two Baſons of Braſs preſerv'd there in memory of the three hundred ſixty five Children of the Counteſs of *Henneberg*, Daughter to *Florent* IV. Earl of *Holland*, that were baptiz'd in them. I ſuppoſe you have heard the Story, how that the ſaid Counteſs having reproach'd a Beggar-woman with having too many Children, the poor Wretch, by way of imprecation, wiſh'd her as many as there were Days in the Year; which being fulfill'd accordingly, they were all chriſtned, (the Boys by the Name of *John*, the Girls *Elizabeth*) and buried in the Church of *Loſdun*. The whole Hiſtory is painted at large in the ſaid Church, on both ends of which the two Baſons are fix'd.

This Story is atteſted by *Eraſmus*, *Vrsinus*, *Goltzius*, and others.

From the *Hague* we went forward to *Leyden*, a place not ſo much frequented by Courtiers and Officers, nor ſo much diſturb'd with Buſineſs and Traffick as the *Hague* and *Rotterdam*, but exceeding charming by its intrinſick Beauty and Quiet, ſo that you ſeem to enjoy the benefit of a Country Life in the midſt of a great City: Its chiefeſt Trade conſiſts in the Woollen Manufactury, which, together with the Univerſity, makes it one of the moſt conſiderable Cities in *Holland*.

Leyden.

The number of Students is commonly 1500.

In the *Anatomy Hall* they ſhew you a great many Skeletons both of Men and Beaſts, abundance of Plants, Fruits, Animals, Arms, Habits, Pictures, Mummies, Urns, Images, &c. and among the reſt the Picture of a *Pruſſian* Peaſant, who having ſwallow'd a large Knife, the ſame (as they tell you) was cut out again of his Stomach, and he liv'd eight Years after.

In the Gallery of the Phyſick-Garden, and the adjoyning Cabinet, call'd the *Indian Cabinet*, we ſaw divers natural Curioſities, among the reſt a wing'd Cat and Ape, the Hand of a Mermaid, a Vegetable *Priapus*, a moſt curious Plant, a Monſter produced from a Hens Egg; a Piece of Money of Paper, made during the Siege of *Leyden* by the *Spaniards*, in 1574, with this Inſcription on one ſide, *Hac libertatis ergo*; on the other, *Pugno pro Patriæ*: an *Eaſt-India* Serpent, on whoſe Skin are to be ſeen ſeveral natural Figures reſembling *Arabick* Characters; beſides a great number of Animals, Inſects, and other things, preſerv'd in Vials fill'd with Spirit of Wine.

Before I take my leave of *Leyden*, I muſt not forget to give you an account of the *Rhine*, which is loſt near its Harbour, where moſt other Rivers are at the largeſt; for

for the *Rhine* dividing it self into two Branches near *Schenkerschonz*, one of 'em takes the Name of the *Wahal*, the other a little above *Arnheim* that of *Yssel*; and continuing its course about seven or eight leagues below that City, as far as *Dorstadt*, is there again subdivided into two other small Chanels, the chiefest whereof takes the Name of the *Leck*; and the other Rivulet, which turns more to the right, retains the Name of the *Rhine*; till coming to *Utrecht*, it emits another Branch, which taking its coarse to the North, is known by the Name of the *Vecht*; and the other continuing its course, by the Name of the *Rhine*, to *Warden*, it at last looses it self in two or three Canals at *Leyden*. The cause of this odd fate of the *Rhine* is attributed to an Earthquake, which throwing part of the *Downs* into the mouth of this River, it having been shut ever since, the Waters of the *Rhine* were driven back, and consequently enlarg'd and deepned the Chanel of the *Leck* as you see it now.

His right Name was John Boccold.

They also shew you here the Shopboard belonging to that noted Taylor call'd *John* of *Leyden*, (where he was born) the chief of the *Anabaptists*.

From hence to *Harlem* is five hours travelling by the Passage-boat, the *Canal* being all-along lined with a great number of Country-seats and Summer-houses.

Harlem is a large and pleasant City, and for its agreeable situation, may challenge the preference before *Leyden*, most of its *Canals* being mix'd with the little River *Sparm*. This City is chiefly famous for the Linnen Manufactury and that of Tape, tho' of late Years they have made also great quantities of Silk-stuffs. The great Church (the largest in all the Seven Provinces) and the Townhouse are stately Structures; and the Wood without the City is a great addition to its pleasant situation.

The Art of Printing invented at Harlem.

Lawrence Coster, who challenges the first Invention of Printing, was a Native of this City; tho' *John Guttenbergh* of *Strasburgh*, and *Conrade* and *Arnold*, two Brothers of *Mayence*, challenge that Honour before him. However, those of *Harlem*, in honour of their Townsman, keep in their Townhouse the first Book that ever was printed, in a Silver Case wrapt in Silk, the keeping whereof is committed to the care of several of the Magistrates; and the Statue of *Lawrence Coster* is to be seen in the same place: This Inscription, with the two following Distichs, are to be seen in golden Letters over the Door of the House where the said *Lawrence Coster* liv'd:

MEMORIÆ SACRUM,
Typographia ars artium omnium Conservatrix, hic primum inventa circa annum 1440.

Vana quid Archetypos & prela Moguntia jactas?
Harlemi *Archetypos prelaque nata scias;*
Extulit hic monstrante Deo, Laurentius *artem*
Dissimulare virum. Dissimulare Deum est.

A Mermaid at Harlem.

Meyer assures us, that 1403. a Mermaid was cast ashore by a Tempest near *Harlem*, who was brought to feed upon Bread and Milk, taught to spin, and liv'd for many Years. *John Gerard* of *Leyden* adds, that she would frequently pull off her Clothes and run towards the Water; and, that her Speech was so confus'd a noise, as not to be understood by any body: She was buried in the Churchyard, because she had learnt to make the sign of the Cross. He speaks this upon the credit of several Persons that had seen her.

It being pretty late, we took Coach at *Harlem*, which Carriage, tho' somewhat uneasie by reason of its not being hung, brought us in an hours time to *Amsterdam*. I am,

Sir,

Amsterdam, Oct. 15. 1687.

Yours, &c.

LETTER III.

Amsterdam.

SInce it would require a long continuance in the City of *Amsterdam* to learn every thing that belongs to it, and a large Volume to describe it all, I will content my self with giving rather a Scheme than a Description of a place which is, beyond all dispute, one of the most beautiful and important Cities in the World; however for its extent it is in no wise to be compar'd to *London*, there being, according to calculation, in *London* about Seven hundred thousand Souls, but in *Amsterdam* not above Two hundred thousand; but for Riches and Trade it may vie with any City in the World, witness their *East-India Company*, which has waged Wars alone against very potent Princes, without any considerable diminution of their Trade.

Their East-India Company founded in 1594.

This City is built upon Piles fix'd in the Marshes on the South side of the River *Y* or *Ye*, which is a Branch of the South Sea: Its Fortifications are not inconsiderable, consisting of many Bastions faced with Brick, surrounded with a Ditch eighty paces broad fill'd with running Water, which, together with the Sluces, by which means they can lay all the circumjacent Country under Water, renders it almost impregnable; besides the ordinary Garison, the Militia or Train'd Bands of the City consist of sixty Companies of a hundred and fifty Men each.

The Townhouse is said to have cost 3 millions.

The Townhouse is a spacious and most magnificent Structure, of hewn Stone; its length is a hundred and ten paces, and its breadth twenty four; it is highly esteem'd for its regular Architecture, tho' most are of opinion that the Foundation cost as much as the Fabrick above ground; however, the Doors which give entrance to this great and splendid Palace seem to be too small, in proportion of the whole, and the Square or place before it is neither neat nor regular.

The New Church.

Coming from thence, you turn to the left hand into the principal Church of the City, formerly dedicated to St. *Catherine*, but now call'd *The New Church*; it is not so large as either of the great Churches at *Leyden* or *Harlem*; for as *Amsterdam* was no more than a poor Village within these five hundred Years, and its condition even in our Age was not comparable to what you see it now, this Church was built answerable to its power. They tell you, that the Pulpit, made of Wood of *Gothick* carving, with its Canopy, cost two hundred thousand Crowns; and the Organs (which are extraordinary fine) at least a hundred thousand Crowns; the Steeple intended to be erected remains imperfect. On the Glass Windows of this Church is painted the History of the Emperour *Maximilian* V, who bestow'd the Imperial Crown upon the Arms of this City. The Tomb of Admiral *de Ruyter*, in this Church, is a fine Piece. The Synagogue of the *Portuguese Jews* is a stately secure Fabrick; but that of the *High-Dutch* is but very indifferent. It is observable, that notwithstanding the Inquisition of *Spain* and *Portugal*, the Agents of both these Crowns at *Amsterdam* were *Jews*.

One of their Houses of Correction is for the young Debauchees, where they are kept to their Tasks, under the Penalty of whipping. There is another such a one for the Whores, who are not treated with the same Severity.

The *Roman Catholicks* enjoy Liberty of Conscience here as in other parts of the Seven Provinces, tho' their number is not near so considerable as some have endeavour'd to perswade us; for I have been inform'd by Persons of Knowledge and Credit, that the *Roman Catholicks*, and all other Sectaries together, don't make a fourth part of *Amsterdam*.

The Beguines instituted in 1207.

In this City remains still a Convent of certain Nuns call'd *Beguines*, compos'd of Maidens and Widows, who have no Children, and who need no other Qualifications to be admitted into this Society than a Testimonial of their good behaviour, and a Competency to live upon either by themselves, or in conjunction with one or more of the Sisters, as they find it most suitable to their purpose. The Convent (which contains about a hundred and thirty Sisters) is built like a little City with a Wall and Ditch about it, within which stands a Church, where they are oblig'd to perform their Devotions at certain hours. They wear an odd black Habit, receive and pay Visits, and quit the Convent when they please.

The Houses of *Amsterdam* being founded upon Piles of Wood, this is the reason they will not allow any Coaches here, except to Physicians and some Strangers of note, instead whereof they make use of a kind of Sleds made like Coaches, but this carriage being but slow, and uneasie, is not generally approv'd of.

We saw at *Amsterdam* a *French* Opera, but wanting both good Machines and Actors, we were not much delighted with it.

Their Musick-houses.

The so much celebrated Musick-houses of *Amsterdam* are publick Houses or Taverns, where young People, of the dregs of the People, come under pretence of dancing, but in effect to pick up lewd Women, who resort thither in great numbers, and to carry them to other convenient Lodgings, these being intended only for their meeting places. They are generally visited by Strangers, out of curiosity.

The

The Exchange of *Amsterdam* is two hundred foot long and a hundred and twenty broad: The Galleries above are supported by forty six Pillars, but are not so spacious nor so many as those over the *London* Exchange.

The Academy, stiled the *Illustrious School*, is also a goodly Structure, divided into several Schools for Divinity, Philosophy, History, Law and Physick.

There are five high Towers in this City, which have each a great Clock, and placed at such a convenient distance, as that the hours of the Day are known all over the Town.

Since my last, I took another turn to *Losduen*, where I observ'd that the Inscription in the Church of this Village differs from the passage relating to this matter found in the Annals, where the Bishop that baptiz'd the three hundred sixty five Children is call'd *Guido*, Suffragan of *Utrecht*; whereas in the Annals he is stiled *William*, Suffragan of *Treves*; but this might be occasion'd by the carelessness of the Transcribers. Above the Inscription you see these two Verses:

Ex tibi monstrosum nimis & memorabile factum
Quale nec à mundi eruditione datum.

And below,

Hæc lege mox animo stupefactus, Lectoralibus.

I am,

Sir,

At *Amsterdam*,
Oct. 20. 1687.

Yours, &c.

LETTER IV.

WE pass'd seven hours upon the Canal betwixt *Amsterdam* and *Utrecht* very pleasantly; leaving on the right hand the old Castle of *Abcaw*, and the Village of the same name, the Boundary of the Province of *Holland* on that side, about three leagues from *Amsterdam*; we no sooner came to *Utrecht*, but found it to recede much of that extream neatness we observ'd in the Province of *Holland*, yet it retains a sufficient share of it.

Utrecht. This City is famous for its Antiquity, its University, and the Union made here 1579, which is the Foundation-stone of the whole Republick. The Steeple of the Cathedral is very high, and the Church contains many Relicks highly valued by the *Roman Catholicks*.

Its Mall. The Mall, and the Walks about it, without the Gates of the City, are infinitely pleasant, being upon that score spar'd by the *French* King's special Command, when his Troops ravag'd all the Country round about. A certain Gentleman of *Utrecht* told me, that there were no less than forty eight Towns within the reach of a days Journey from *Utrecht*, and among 'em thirty three to which you may go, and come back thence the same day. The Country about *Utrecht* has a far different Face from what you see in *Holland*, their Fields being for the most part plough'd Lands enclos'd with strong Hedges.

Zeist. Two hours from *Utrecht* we pass'd in sight of *Zeist*, and of the Castle on the right hand: It is a very handsom Structure, enclos'd with a Ditch full of running Water, adorn'd with Labyrinths, Gardens, Statues, Fountains and other Ornaments, being built not many Years ago by one of the richest Lords of this Country. The Fields betwixt *Rhenen* and *Arnheim* are for the most part planted with Tobacco, propp'd by Stakes; and at *Rhencom*, a Village three hours on this side of *Rhenen*, you see a Stone, the Boundary betwixt the Lordship of *Utrecht* and the Province of *Guelders*.

Arnheim. *Arnheim* has nothing remarkable but its Fortifications. Two hours and a half beyond it we pass'd the *Yssel*, divided into three Branches, near each other; and afterwards continuing our Journey thro' *Doesburgh*, (a little City on that River in the Province of *Zutphen*) we din'd in a poor Village, if Milk with Biscuit may be call'd a Dinner; but the worst is, that our Fare was no better at Night, when we lodg'd at *Ysselburgh*, a small dismantled Town upon the Borders of *Cleves*.

Doesburgh.

Wesel. Between this last place and the City of *Wesel* the Country is sandy, and full of Woods: Its Fortifications are but indifferent, but they are busie at present in erecting a Citadel betwixt this City and the Fort of *Lippe* upon the Bank of the *Rhine*. It is under the Jurisdiction of the Elector of *Brandenburgh*, who, by vertue of a Treaty made with the Duke of *Newburgh*, (now Elector *Palatine*) grants Liberty of Conscience to the *Roman Catholicks*, the same being allow'd reciprocally to the *Protestants* in the Dutchies of *Juliers* and *Berg*, under the Elector *Palatine*'s Jurisdiction. The *Calvinists* have two Churches, the *Lutherans* and *Roman Catholicks* each one Church, for the exercise of their Divine Worship. The *Jews* have likewise a little Synagogue here.

About half an hour beyond *Wesel* we pass'd the River *Lippe*, which joyns its Waters with the *Rhine*, and arriv'd before Night at *Duisburgh*, a City of the same bigness with *Wesel*, but without any Fortifications: It has however an University, but no great concourse of Scholars. The great Church belongs to the *Protestants*, but the *Roman Catholicks* enjoy also the same exercise of their Religion, and have even the liberty of carrying the Host in publick Procession, tho' they refrain from doing it, for fear of giving occasion of Disturbance betwixt them and the *Protestants*. *Duisburgh.*

Not above half a league beyond *Duisburgh* we entred the Country of *Berg*, and in two hours after pass'd thro' the little City of *Keyserwaert*, seated upon the *Rhine*, and very well fortified. *Keyserwaert.*

Hence we continued our Journey to *Dusseldorp*, the Residence of the Electoral Prince *Palatine*. It is much larger and better Peopled than *Duisburgh*, and its Fortifications in a very good state, but has no Suburbs, no more than *Keyserwaert*, I am, *Dusseldorp.*

Sir,

At *Dusseldorp*,
Oct. 23. 1687.

Yours, &c.

LETTER V.

SIR,

THE City of *Cologne* affords a most agreeable Prospect at a distance, by reason of its situation in a plain and level Country, and the vast number of Steeples, which make a most glorious shew. Tho' it be of a vast extent, yet is it surrounded with a Wall, Towers, Bastions, and a dry Ditch. It has twenty four Gates, thirteen to the Land, and eleven on the *Rhine*. It is an Imperial City, govern'd by its own Magistrates, tho' the Archbishop and Elector of that Name has some share both in the Civil and Criminal Jurisdiction, and a Prerogative of pardoning Criminals. The Oath which the Citizens takes to this Prince seems to be a kind of Homage, conceiv'd in these terms; *Cologne.*

We the free Citizens of Cologne *do this day, for ever and for ever, promise to - Archbishop of* Cologne, *to be faithful and favourable to him, as long as he shall preserve, in our Rights and Honour, and in our ancient Privileges, Us, our Wives, our Children, and our City of* Cologne.
So God and his Saints help us.

The Answer of the Archbishop is as follows:

We - by the Grace of God, Archbishop of the holy Church of Cologne, *and Arch-Chancellour of the Empire in* Italy, *to the end that an amicable Confederacy, entire Confidence, and sincere and lasting Peace, may be cultivated betwixt Us and our dear Burgesses of the City of* Cologne, *do make known by these Presents, and promise and declare sincerely, without Fraud, that we do confirm all their Rights and Privileges, written or not written, old or new, within or without the City of* Cologne, *which have been granted to it by the Popes, Emperours, Kings, and Archbishops of* Cologne, *without ever doing any thing to violate the same. In Testimony whereof, &c.*

The whole Chapter of *Cologne* is compos'd of sixty Canons, who must be Dukes or Earls, but the twenty four eldest are the Capitularies. According to the *Golden Bull*, the Electors of *Cologne* us'd to Crown the Emperour, (as the present Emperour was) but these Archbishops not having been Princes for a considerable time, those of *Mayence* have perform'd the same in their stead, and since that, challenge it as a Right.

There live a considerable number of *Protestants* in this City, who have a Church not far thence, in the Territories

rics of the Duke of *Newburgh*, they ſtile them *Gueux* or Beggars to this day, by the ſame Name that was given at *Bruſſels* to the firſt Authors of the Agreement by the Count *de Barlemont*.

The Town-houſe. The Townhouſe is a vaſt Fabrick, after the *Gothick* manner: Here they ſhew you whole Rooms full of Bows, Arrows, Croſsbows, Bucklers, and ſuch ſort of antick Arms. One of theſe Croſsbows was of Whalebone, and twelve foot long, eight inches broad, and four inches thick. From the Tower of this Houſe you have a moſt delightful proſpect of the whole City and circumjacent Country. That part which lies oppoſite to the City, on the other ſide of the River, is chiefly inhabited by the *Jews*, and belongs to the Territories of *Newburgh*. The Cathedral. The Cathedral Church (or rather its beginning) is ſo fine, that 'tis a thouſand pities it ſhould not be brought to perfection. The three Kings of the Eaſt. Here lies entomb'd the three Kings of the Eaſt, that came to worſhip our Saviour, being tranſfer'd hither from *Milan* at the time when *Frederick Barbaroſſa* laid that City deſolate. They tell you of abundance of Miracles wrought by them, and among the reſt, that an exceſſive Dearth having been occaſion'd by a great Drought in *Hungary*, abundance of that Country came hither to implore the aſſiſtance of theſe three Kings, who promiſed them Rain, which following ſoon after in great plenty, the *Hungarians*, in remembrance of this Miracle, come every ſeven Years in a body on Pilgrimage to *Cologne*, where they are entertain'd by the Magiſtrates for fifteen days, in a very handſome Houſe built for that purpoſe.

In the Vaulted Roof of this Church, almoſt over the Chapel that contains theſe precious Relicks, is a hole of three or four foot wide, round the opening of which you ſee theſe words; *Anno* 1404. 30 *Oct. Ventus de nocte flatingens, grandem per tectum lapidem pillit*; i. e. *On the* 30*th of* Octob. 1404, *the Wind blew very hard in the Night, and forc'd a great Stone thro' the Roof*: The Stone is ſtill to be ſeen upon the Floor near this Chapel, they call it the *Devil's Stone*, becauſe they were of opinion that the Devil threw it out of Malice. Over one of the Doors of the ſame Church we ſaw thirty ſix gilt Staves about three foot long each, with this Diſtich under them:

Quot pendere vides beatos ante Epiſcopus armos
Huic Agrippinæ præfuit Eccleſiæ.

Upon enquiry we found that the preſent Elector was then in the 37th Year of his Reign, but could not learn either the true Original or Uſe of this Cuſtom.

St. Urſula's Church. In the Church of St. *Urſula* they ſhew you the Tombs of the eleven thouſand Virgins that were maſſacred by the *Huns* at *Cologne*, in the Year 238, together with this Saint, unto whoſe Memory is dedicated this Church. They tell you, that the Earth in this Church will not admit of any other dead Corps; for an inſtance of which they ſhew you the Tomb of a Daughter of a certain Duke of *Brabant*, who being interr'd there, rais'd up her ſelf, and remaining thus in the Air, they were forc'd to put her in this Tomb, fix'd upon Iron Supporters two or three foot from the ground, againſt one of the Pillars of the Church. In a great Chapel on one ſide of the ſame Church you ſee the Bones of theſe Saints hung up in as decent a manner as you ſee the Swords and Piſtols ranged in the Guard-chamber of *Whitehall*, or in a well-order'd Armoury; theſe Bones have no Ornaments except the Heads, ſome of which are kept in Caſes of Silver, others are cover'd with Stuffs of Gold, and ſome have Bonners or Caps of Cloth of Gold, Velvet, &c. Hence it is that the City of *Cologne* challenges the Title of *Cologne the holy*; and its Arms are, *Argent eleven Flames Gules, with a Chef of the Second, charg'd with three Crowns Or*; the eleven Flames intimating the eleven thouſand Virgins, and the three Crowns the three Kings.

In the Church of the *Maccabees* is a Crucifix with an everlaſting Perriwig on its Head; for tho' the *Hungarian* Pilgrims, at their coming to *Cologne*, do each of 'em cut a Lock of Hair off it, yet has it not been diminiſh'd hitherto.

The Church of the Twelve Apoſtles. At the entrance of the Church of the *Twelve Apoſtles* is to be ſeen a Picture, which is remarkable chiefly for the Story it repreſents: They relate, that a Burghermaſter's Wife of this City being, in 1571, buried in this Church, with a Ring of great value on her Hand, the Sexton made bold to viſit the Grave afterwards for the Ring ſake, but was not a little amaz'd when he found the ſuppoſed dead Lady graſp him by the Hand, which made him retreat with all ſpeed: However, the Lady having made hard ſhift to get out of the Sepulchre, went to her own Houſe, where knocking at the Door, ſhe call'd to a Servant, and related unto him the whole Adventure; but the Servant taking her for a Ghoſt, ran in a fright to recount unto his Maſter what had hapned, who told him; that he would as ſoon believe his Horſes in the Garret; He had no ſooner ſaid theſe words, but a great noiſe being heard in the Garret, the Servant went up, and to his great amazement found ſix Coach-horſes there: By this time the Woman had made ſhift to get in, and by the care of her Servants was ſo well recover'd, that there was no great likelihood of her returning to the Grave for that time; and the Horſes were the next day let down out of the Garret by certain Pullies. They ſhew you to this day, in the ſame Garret, ſeveral wooden Horſes, ſaid to be cover'd with the Skins of the ſame that were ſeen there; and in the Church of the twelve Apoſtles, a great piece of Linen Cloth, which, they ſay, was of this Womans own ſpinning, after her releaſement from the Grave, after which ſhe liv'd ſeven Years. A Woman reviv'd from the dead.

To conclude this Letter, I muſt tell you, that there are ſome Families now in *Cologne* who deduce their Genealogies from the *Roman* Race, that ſettled a Colony here the firſt time. I am,

Sir;

At Cologne, Oct. 26. 1687.

Yours, &c.

LETTER VI.

SIR;

THE Roads betwixt *Cologne* and *Mayence* being then extreamly bad, we choſe to go on upon the *Rhine*: The firſt place we came to was *Bonn*, a ſmall inconſiderable place, the Fortifications whereof lie neglected, and the Electoral Palace of *Cologne* made but a very indifferent appearance. *Bonn.*

As we came nearer to *Andernach*, a Burghermaſter of that place told us, that there were certain Gentlemen belonging to that City who love the Title of *Free Knights*, and enjoy peculiar Privileges. *Andernach* and *Keyſerwaert* have a right of Toll upon the *Rhine*.

Coming to *Coblentz*, we found its ſituation to be upon a Neck of Land made by the *Moſelle*, where it joyns its Current with the *Rhine*, which renders it very agreeable. We were told, that it was very well fortified on the Land-ſide, but near the Water-ſide we ſaw only a ſingle Wall. The Caſtle of *Ehrenbreitſtein*, i. e. *the Rock of Honour*, built juſt over againſt it, upon a riſing ground on the other ſide of the River, is very ſtrong both by Art and Nature, its Foundations being laid upon the Ruins of the old Fort of *Hermanſtein*, the remains whereof are ſeen on one corner only of the ſame Rock, on which the Windmill ſtands. It is always well provided with a good Gariſon, and Ammunition in proportion. The Palace (where the Elector of *Cologne* commonly reſides) is at the foot of the Hill, upon the very bank of the *Rhine*, juſt under the Caſtle. *Coblentz.*

About half a league on this ſide of *Baccharach*, directly over againſt *Coub*, (a Town under the juriſdiction of the Elector *Palatine*) ſtands an old Caſtle in the middle of the *Rhine* call'd *Pfaltz*, whence ſome have deriv'd the Titles of the *Pfaltz* Graves or *Counts Palatines*. *Pfaltz.*

Baccharach is a ſmall City belonging to the Elector *Palatine*, built on the ſide of a Hill, chiefly famous for its excellent Wines that grow thereabouts. We dined with one of the Miniſters of the place, who would needs derive the Etymology of *Baccharach* from *Bachiara*, or the *Altar of Bacchus*; and for a confirmation of his Opinion, told us, that in the ſame Neighbourhood there were four other ancient Towns which ow'd their Name to *Bacchus*, viz. *Steeghach*, which lying on a Hillock, ſignifying as much as *Scala Bacchi*, or the *Ladder of Bacchus*; *Diabach*, i. e. *Digitus Bacchi*, or the *Finger of Bacchus*; *Handbach* or *Mannersbach*, i. e. *Manus Bacchi*, the *Hand of Bacchus*; and *Larch*, i. e. *Laurea Bacchi*, or the *Bays of Bacchus*. *Baccharach.*

Soon after we were paſt *Baccharach*, a furious Tempeſt oblig'd us to ſeek for ſhelter a-ſhore, a little on this ſide *Rudeſheim*. In our way we paſs'd by an old ruin'd Caſtle or ſquare Tower, known by the name of the *Tower of Ratts*, whither, they ſay, a certain Archbiſhop of *Mayence* retreated (its ſituation being on a little Iſle in the *Rhine*) to avoid the Ratts, that devour'd him at laſt. Some look upon it as a Fable, becauſe the old Chronicles of the Country mention different Names and Times when this Accident hapned; but others, who look upon it as a Truth, (as it is generally taken for ſuch hereabouts) alledge in behalf of their Opinion ſeveral Hiſtories The Ratts Tower.

ſtories of this nature related by Authors of an unqueſtionable Authority.

From *Bonn*, as far as *Binghen*, three leagues on this ſide *Mayence*, the *Rhine* carries its current thro' the Mountains, at the foot of which you ſee all the Country on both ſides cover'd with Vineyards interſpers'd with a great number of ſmall Cities, good Villages and Caſtles, of the laſt of which I counted forty ſince I parted from *Cologne*, built for the moſt part upon the aſcents of the Mountains, and ſome on the very points of the Rocks.

Odd Dreſs of the Women in theſe parts.

The Country People in theſe parts, but eſpecially the Women, have a very odd Dreſs; on their Heads they wear little Caps of ſome colour'd Stuff, border'd with an Edging of a different colour, their Hair hanging in Treſſes quite down their Backs. Their Waſtes appear very ſhort, half a foot below which they gird themſelves with a broad Leather Girdle, and underneath it is a thick Roll, which bears up their Petticoats almoſt as high as their Knees.

Mayence.

From *Binghen* to *Mayence* the *Rhine* is very broad: Here you go over a Bridge of Boats, and as ſoon as you enter the City the Electoral Palace preſents it ſelf to your view, a Fabrick of a reddiſh Stone, embelliſh'd with divers Ornaments, wanting neither regularity nor magnificence, tho' built after the *German* faſhion. They told us, that in the middle of the Citadel was to be ſeen a

The Tomb of *Druſus Germanicus.*

wind of a Tower, call'd commonly the *Tomb of Druſus*: 'Tis true, *Druſus Germanicus*, the Brother of *Tiberius*, died in *Germany*, but not near the *Rhine*, and he was buried in the *Campo Martio* at *Rome*, ſo that in all likelihood this was one of the Statues or triumphal Arches erected near the Banks of the *Rhine* to his memory, after the Senate had beſtow'd upon him the Sirname of *Germanicus*.

The Church-Ornaments in which the Elector ſays Maſs, are celebrated for their Riches; and the Canopy under which the Hoſt is carried upon certain Feſtivals in proceſſion, is all cover'd with Pearls.

Every one of the Electors of *Mayence* bears the Arms of his own Family, but he quarters *Gules a Wheel Argent*, which are the Arms of the Electorate, the original of which they deduce from the firſt Elector, who was the Son of a Wheelwright.

In the Cathedral you ſee many magnificent Tombs of the Electors interr'd here. The Chapter conſiſts of forty two, all Gentlemen, twenty four of which are Capitularies. The *Proteſtants* are allow'd Habitations at *Mayence*, but not the exerciſe of their Religion. The City is ſufficiently large, but indifferently Peopled: Neither is the Univerſity in any great eſteem now: However, its ſituation is very pleaſant, in a moſt excellent Country. I ſuppoſe you are not ignorant the Elector of *Mayence* is the firſt among the Eccleſiaſtical Electors, and Dean of the Electoral College. I am,

Sir,

Mayence, Nov. 3. 1687.

Yours, &c.

LETTER VII.

SIR,

AFter having croſs'd the *Rhine* at *Mayence*, we embark'd on the River *Maine* in the ordinary Paſſage-

Frankfort an Imperial City.

Boat, which carried us in one day to *Frankfort*, a City much exceeding *Mayence* in Beauty, Riches, Bigneſs, number of Inhabitants, and Strength, being fortified with eleven Baſtions, which tho' they have ſome defects, yet the ſame is in ſome meaſure repair'd by its ſituation in a flat Country: The Houſes are generally built of the ſame red Stone I mention'd before, or elſe of Wood or Plaiſter cover'd with Slates. The *Maine*, a conſiderable large River, leaves it on the right, and a Stone Bridge of Four hundred paces in length joyns it with *Sakerhauſen*. The Territories of this City are of no great extent: The Senate, as well as the greateſt part of the Inhabitants, are *Lutherans*, tho' the *Roman Catholicks* are poſſeſs'd of the Cathedral Church, where the Ceremony of anointing the Emperour is perform'd; however, they are not allow'd to make any publick Proceſſions. The *Proteſtants*, call'd *Cevinists*, inhabiting here, have a Church at *Bochenheim*, a ſmall hours walk from thence, in the Country of *Hainault*, but are oblig'd to marry and to chriſten their Children in the *Lutheran* Churches.

In the Townhouſe is the Apartment where the Solemnity of the Election of the Emperour is perform'd, and where one of the Originals of the *Golden Bull* is preſerv'd. It is hung only with Tapeſtry, and furniſh'd with ſome Elbow Chairs of black Velvet, and a large Table cover'd with a green Carpet. On one ſide of this Apartment is a Hall where certain Ceremonies are perform'd immediately after the Election, which being over, the Emperour goes from thence to the Church, where he is crown'd.

The *Golden Bull* is a Book in *4to*, of twenty four leaves of Parchment ſtitch'd together, and cover'd with a piece of Vellum, without any further Ornament. The Seal, which is about two inches and a half broad, and cover'd with Gold, is faſtned to it by a String of twiſted Silk of divers colours; upon this Seal, which appears not unlike a Medal, you ſee the Effigies of the Emperour *Charles* IV, ſeated and crown'd, with a Scepter in his right hand, and the Globe in the left, having the Shield of the Empire on his right, and that of *Bohemia* on his left, with this Inſcription round it;

The Golden Bull.

Carolus quartus divinæ favente clementia Romanorum Imperator ſemper Auguſtus.

And on each ſide near the two Scutcheons, *Et Bohemiæ Rex.* On the Reverſe is a Gate of a Caſtle betwixt two Towers, which denotes *Rome*, as is apparent by the following Inſcription about it:

Roma caput Mundi regit orbis fœcina rotundi.

And upon the Gate betwixt theſe two Towers,

Roma aurea.

This Bull, intended to be the Foundation-ſtone of the Empire, was made at *Nurenburgh* by *Charles* IV, with the general conſent of the States in 1356, and contains the manner of the Election of the Emperour and of the King of the *Romans*, as alſo many things relating to the Rank, Aſſemblies, Right, Immunities and Succeſſions of the Electors, and in what manner every one of 'em is to perform his Function. *Frankfort* is by this Bull appointed for the Election of the Emperour, notwithſtanding which *Henry* II. was elected at *Mayence*, and *Henry* III. at *Aix la Chapelle*, and ſome others have been choſen at *Cologne*, *Augsburgh* and *Ratisbon*, not to mention ſeveral other Innovations introduc'd ſince that time, eſpecially in the Treaty of *Weſtphalia*.

At Dr. *Peter's*, who makes the famous Treacle of *Frankfort*, we ſaw many Curioſities, and among the reſt a Stone taken out of a human Body of the bigneſs of a Man's Head, which he bought for 1600 crowns.

There are abundance of *Jews* at *Frankfort*, but are not near ſo rich as thoſe of *Amſterdam*, being uſed in a manner like Drudges here, *viz.* to fetch the Water when any Fire happens to break out in the City; for the reſt, their chief Employment is to go from one Inn to another, to ſell their Commodities to Foreigners.

I need not tell you, that the three annual Fairs of *Frankfort* contribute not a little to its Fame and Riches.

The Univerſity acknowledges for its Founders *Joachim* and *Albert* of *Brandenburgh*, in 1506. I am,

Sir,

Frankfort, Nov. 7. 1687.

Yours, &c.

LETTER VIII.

SIR,

AS we were taking Coach to leave *Frankfort*, we obſerv'd the Coachman to put ſome Salt upon each of his Horſes, which he told us was a never-failing Antidote againſt Witchcraft and other unlucky Accidents.

Having paſſed the *Rhine* at *Gernſoeim*, we entred a Wood, where the Roads prov'd very bad; but after that, for two leagues, till we came to *Worms*, they prov'd exceeding good.

Worms an Imperial City.

The City of *Worms* is ſeated about three or four hundred paces from the left ſide of the *Rhine*, in a moſt fruitful Country, having no other Fortifications but a double Wall:

Vol: 2.

Monsieur Voyage to Jesus

The Mohaldhamma Tran. Prin.

Vol: 2. p: 645.

The Lady of Newburgh. p: 647.

Vol: 2.

Divers Habits of the Women at Ausburgh. p: 648.

The Bridge of Rialto.

A Common Gondelo.

Fig: 6. & 7.

A Lieutenant's

The Doge of Venice.

Vanitas Vanitatum.

Virgil's Tomb.

Fig: 8.

Wall: It is an Imperial City, notwithstanding which the Bishop * has a considerable Authority here; it is not inferiour in bigness to *Frankfort*, but ill Peopled and poor. I saw a House that was sold for a thousand crowns, which had yielded formerly as much annual Rent; and there are so many void places within the compass of the place, that the Vines planted there are computed to produce every year fifteen hundred Fuders of Wine, a Fuder being a Cask that holds no less than two hundred and fifty English Gallons. This Wine is in such high esteem in those parts, that they have turn'd it into a Proverb, and say, *It is sweeter than the Virgins Milk*; whence questionless is also arisen the Custom of presenting it to Persons of Note that travel that way, with some Fish, &c.

* It was formerly an Archbishoprick, till the See was remov'd to *Mayence* by Pope *Zachary*.

Besides that, the *Lutherans* have one Church for their own use here; they preach by turns with the *Romanists* in the *Dominicans* Church, all the rest being in the possession of the *Roman Catholicks*, who don't carry the Host in publick, nor make any Procession, except on the Day after *Easter*. The *Calvinists* have a Church at *Newhausel* in the Palatinate, about half a league from *Worms*, where the *Lutherans* now and then christen their Children, quite contrary to what is practis'd by the *Lutherans* at *Frankfort*.

The Church of St. *Paul*.

The Church of St. *Paul* as well as that of St. *John* are very ancient Structures, the best of the two being built of vast square Stones, in a very irregular manner, with narrow Windows, and Galleries all round the outside just under the Roof; the Walls are twelve foot thick, and seem as if they were not at first design'd for a Church.

The Cathedral.

The Cathedral is both very long and lofty, adorn'd with a Tower on each of the four corners; it is a strong Fabrick, and not without some Ornaments after the *Gothick* way. Over one Door of this Church they shew you the figure of a strange Animal of the bigness of an Ass, with four Heads, one the Head of a Man, the second of an Ox, the third of an Eagle, and the fourth of a Lyon; the two first stand upright, and the two others hang downwards; the right Fore-foot is of a Man, the left of an Ox, and the two hindermost of an Eagle and a Lyon; a Woman sits on the Back of it: The People here tell you very odd Surmises concerning it, but suppose it to be an Hieroglyphick composed of the four Beasts in the Vision of *Ezekiel*, and the Woman to represent the Gospel. Over the Altar of one of the Chapels of the same Church I observ'd a Picture, in which the Virgin receiv'd Christ as he was descending from the Cross, whilst the Angels were carrying the Instruments of his Crucifixion to Heaven.

But the Picture at the entrance of St. *Martin's* Church, just over a movable Altar, is worth the most peculiar observation of a Traveller; it is about five foot square, and in it God the Father is represented on the very top of one corner, from whence he seems to address himself to the Virgin *Mary*, who is on her Knees in the midst of the Picture, holding the Infant Christ by the Feet, and putting his Head into the Hopper of a Mill, which is turn'd by the twelve Apostles hands by the help of a Wheel, assisted by the four just now mention'd Beasts of *Ezekiel*, who give a helping hand on the other side. Hard by the Pope is painted upon his Knees, receiving the Hosts, which fall ready made from the Mill into a golden Chalice or Cup, one whereof he presents to a Cardinal, who gives it to a Bishop, the Bishop to a Priest, and the Priest to a Layman.

There are two publick Meeting-places in this City, one intended for the Senate, where they meet twice a week about matters of State, the other for the Courts of Justice. It was in the first that Dr. *Luther* made his solemn appearance, concerning which they tell you, that the Dr. being much heated with the eagerness of the Dispute, as also by a Fire that was near him, he desir'd a Glass of Wine, which being brought, he forgot to drink it, but being still eager in the pursuit of his Discourse, set it down upon a Bench, where soon after it broke without being touch'd by any body, which made it pass for current that there was some Poyson mix'd with the Wine, which the *Lutherans* were so fully perswaded of, that they broke the Bench on which the Glass stood in pieces, and kept some pieces of it, which are still preserv'd in memory of *Luther's* deliverance.

We also took a view of the House call'd the *Mint*, where, among other Curiosities, they shew'd us a square piece of Parchment in a Frame, upon which there are twelve sorts of Hands written with divers Miniatures, and Draughts rarely well done with a Pen, by one *Thomas Shoevciner*, only with his Feet, he being born without Arms, as the following Inscription testifies:

Mira vides, pedibus juvenis facit omnia recta
Cui parens Mater brachia nulla dedit.

In a spacious Portico belonging to this House you see a vast number of Bones and Horns hanging betwixt the Arches: The first, they say, are the Remnants of Gyants, and the last of the Oxen which drew the Stones wherewith the Cathedral was built. The outside of the House is adorn'd with variety of Pictures, and among the rest with many arm'd Gyants, which in the Inscription underneath are call'd *Vangiones*: That this part of the *Rhine* was inhabited by a sort of People call'd *Vangiones*, is evident from *Tacitus* and others; but how they became Gyants, I am not able to tell.

Frankendal.

But proceeding on our Journey, we pass'd only by *Frankendal*, the Fortifications of which place would not be despisable were they faced with Brick, whereas now they are slop'd too much, by reason of the softness of the Earth, which could not be supported otherwise.

Manheim.

The same Defect belongs, but in a higher degree, to the Fortifications of *Manheim*, both which belong to the Elector *Palatine*, and are not above two hours travel distant from each other; but the last has a considerable advantage by its situation in a flat Country, and its being almost enclosed by the *Neckar* and the *Rhine*. The most remarkable Piece in *Manheim* is the *Temple of Concord*, founded by the Elector *Charles Lewis*, Father of *Charles*, the last of that Race, lately deceased, who being a person of no harsh disposition, especially in matters of Religion, order'd that the *Lutherans* and *Calvinists* should by turns exercise their Divine Worship in this Church; and the present Elector *Palatine*, who is a *Roman Catholick*, has thought fit to joyn the *Romanists* with the others; since which time the Ministers of three different Religions perform each in their turn their religious Service in the *Church of Concord*, so that in three successive Sundays each of the three Ministers has the privilege of beginning first. The Church is not very large, but exceeding neat, the Pulpit common to all three. The *Roman Catholicks*, after they have said Mass, draw a Curtain, and so hide the Altar.

The Temple of Concord.

Manheim was about forty years ago no more than a Village, but owes its encrease to *Frederick* the Father of *Charles Lewis*, who at the same time built and fortified it: The Streets are very streight and regular, and some of 'em planted with Trees, as in *Holland*.

After having passed the *Neckar* at *Manheim*, over a Bridge of Boats, we travel'd for three hours thro' a fertile Plain, extending to the foot of the Mountains of *Heidelburgh*, which by a continued ridge seem'd to intercept our passage, but that the *Neckar* passes thro' a certain opening, and shews you a direct way to *Heidelburgh*, by a cover'd Bridge which brings you to the other side, where this City is seated very pleasantly among the Trees and Rocks.

Heidelburgh was laid waste by the *French* *May* 22. 1693.

The City is neither fine nor well built, most of their Houses being of Wood, tho' they dwell among the Rocks; the Electoral Palace is of hewn Stone, some parts whereof are of good Architecture, but neither of 'em quite finish'd. They have made divers fine Gardens among the Rocks, but at the best they are irregular.

Not long ago the Dutchess of *Orleance*, Sister to the last Elector, and Heiress to part of his Personal Estate, had taken the Furniture of this Palace away, at which time they sold every thing, even to the Wine of the famous Tun of *Heidelburgh*.

The Tun of *Heidelburgh*.

This so much celebrated Tun is thirty one foot long, and twenty one high, unto which you ascend by a pair of Stairs of fifty Steps, to a kind of Platform or Balcony of twenty foot long, enclosed with Rails: The Elector's Arms are placed on the Front of the Tun, and *Bacchus* on the top, attended by Satyrs, Drunkards, and such-like Sparks, and the Vines, Grapes, Glasses and Leather Jacks make a great part of the Ornaments of this Tun, in *basso relievo*. Abundance of Jests and Apothegms relating to the same Subject are also to be seen, in *high Dutch*, on divers parts of this Tun.

The various Chances of War have reduc'd this Country to a poor condition, tho' else naturally very good. All Religions are tolerated, but the Magistrates are generally *Protestants*.

The great Church of this City contains many magnificent Tombs of the *Counts Palatines*, and among the rest that of *Robert* King of the *Romans*, the Founder of the Univer-

University of *Heidelburgh*. You know by what ill Fate this City lost its famous Library, which, in 1622, was transported thence to the *Vatican*. I am,

Sir,

Heidelburgh, Nov. 12, 1687.

Yours, &c.

LETTER IX.

SIR,

WE were scarce two hours riding from *Heidelburgh*, but we met with nothing but with whole Forests of Firr-trees, and a Country so poor and low, that about *Wisloch* and *Sintzheim* you might buy a Wheaten Loaf of eight pound for two pence; and in four days Journey we did not so much as get sight of one considerable Town: One of the best of 'em is *Winsheim*, an Imperial City as well as *Wimphen*, both inhabited by *Lutherans*. What diverted us most in all this Journey was, a meeting of the Magistrates of the little City of *Palemburgh*, which happening to be in the same Inn where we dined, we were well diverted with the sight of twelve or fifteen Peasants, with high-crown'd Hats, cover'd round about with green and yellow Ribbon, with red or blue Vests, Ruffs of black Taffata, their Hair cut round close just below their Ears, and their Beards like those of the *Capuchins*: In this habit we saw them sitting together, with their Elbows resting on a Table, and explaining the Law (after their manner) each with a good Glass of Wine in his hand, every one striving to outdo one another more by the strength of his Voice than the stress of Argument.

Winsheim. *Wimphen.* *Palemburgh.*

It is almost not to be wondred that Drinking should be so current a trade in this Country, considering the temptations they lie under here upon that account, for you buy four great Pots of Wine for a Penny; and if a Passenger happens to ask for a Cup of Wine, they bring him a large Jack, scarce knowing what little measure is.

Wine cheap.

As you travel by degrees from the mountainous Country into the Plains that lead to *Nurenburgh*, the Tobacco and Hops succeed in place of the Vineyards: We had a fair prospect of this beautiful City at a considerable distance, as we were travelling along the Banks of the River *Pegnitz*, which runs from it, but serves only to turn some Mills, whereas without any great difficulty it might be made navigable, and consequently much encrease the Grandeur of this City.

Nurenburgh.

However this Defect does not hinder *Nurenburgh* from being a place of great Trade, great Riches, and well Peopled; and for its bigness it is reputed to be twice as large as *Frankfort* upon the *Meine*, and contains under its Jurisdiction seven other Cities and four hundred and eighty Boroughs and Villages: It has six Gates, two hundred twenty eight large Streets, and a hundred and eighteen Fountains and Wells: Its Fortifications being after the ancient manner, are of no great consideration, its situation in the very heart of *Germany* being its chief Security.

Nurenburgh is a very handsom City, its Houses being generally lofty and strong, of hewn Stone, and many adorn'd with Pictures on the outside, tho' for the rest they are after the *Gothick* manner, and consequently not very regular: Besides this, it has good store of Brass Fountains, one whereof we saw then at the Artificer's House, the Statues of which alone cost seventy thousand crowns. The Streets are broad, clean, and well paved, but not streight. One of the Towers of the Castle bears the name of *Nero's Tower*, whence some would look for the Original of this City as far as *Nero*, whereas 'tis more probable that *Noriberg*, or *Mons Noricorum*, as 'tis call'd in Latin, has its Etymology from the *Norici*, the old Inhabitants of the Country, and *Berg*, i. e. a Mountain.

Its Castle.

The Castle is seated on a high Rock, tho' all the rest of the City be very flat; it is irregular, being built according to the unequal shape of the Rock. They shew'd us a Well which they affirm'd to be sixteen hundred foot deep, and that the Chain of the Bucket weigh'd three thousand pounds.

In one of the Halls of this Castle are to be seen four *Corinthian* Pillars forty five foot high, which were brought from *Rome* by the Devil, upon a challenge which a Monk made him. On the Stones of the Parapet of the Castle they shew you the print of a Horse's Shoe, where they say a Conjurer leap'd over the Ditch.

The Ornaments used at the anointing of the Emperours are preserv'd in the Church of the Hospital; the Diadem of *Charlemain* (call'd also the *Infula*) is of pure Gold, weighing fourteen pound, and cover'd with precious Stones, being not closed on the top as the Imperial Crowns are generally represented, but you must suppose that instead of the Fleurets on Ducal Coronets, you see Plates rounded on the top, which being joyn'd by the sides, make the compass of the Bonnet; of these there are seven, that before exceeding the rest in the lustre of the precious Stones; on the top of all is a Cross, and a Semicircle, supported by the two Head-plates behind, raised above the Bonnet, and joyn'd to the top of the Cross. The Scepter and Globe are of Gold, and the Sword is said to have been brought from Heaven. The Robe of *Charlemain* is of a Violet colour, embroider'd with Pearls, and the Imperial Cloak edg'd with the same, and strew'd with Eagles of Gold and a great number of precious Stones. Here are also the Cope, the Stole, the Breeches embroider'd with Stones, the Stockins, and the Buskins cover'd with Plates of Gold.

Charlemain's Diadem.

Amongst divers other Relicks, they keep in this Church the Iron Head of St. *Longin's* Launce; and because they are not ignorant that the same is shewn in above ten other places in the World, they say all these are Counterfeits, and that theirs was found by St. *Andrew*, and brought from *Antioch*.

Their Arsenal is one of the most renown'd in *Germany*; in the two great Halls (each two hundred and fifty paces long) we saw three hundred pieces of Cannon, and among them many of a very large bore, the biggest whereof carried a Ball of three hundred pounds; but to speak the truth, the rest, being Arms of more antiquity than use, serve only for a Shew.

The Arsenal.

The publick Library is in a Cloyster formerly belonging to the *Dominicans*, and contains, as they say, twenty thousand Volumes; the most ancient Manuscript is of nine hundred years, being a Copy of the Gospels, with the Prayers and Hymns formerly used in the *Greek* Church; the Characters are very different from what is used now: they also shew'd us a Book printed at *Spires* 1446, but it seems as if there had been an Errour in the Cyphers; for at the same time we were shewn another of the Impression of *Faustus* at *Mayence*, in 1459, which had, by way of Advertisement, annex'd to it, *That this Book was not written by the Hand, but was printed by an admirable Secret newly invented.* They keep in this Library many Rarities, but the Cabinet of Mr. *Viati* exceeds 'em in a high measure, it being almost impossible to conceive how a man of a private Fortune could heap together so many things brought from all parts of the World. There is one great Apartment fill'd with the divers Arms of all Countries; from whence you go into another stor'd with excellent Pictures, Medals, curious Works both ancient and modern, Idols, Shells, Plants, Minerals, and other natural Productions. He shew'd us a Wind-Gun, wherewith considerable mischief may be done at a distance, without any noise.

Library. *A Treatise of Predestination.* *The Cabinet of Mr. Viati.*

The Townhouse is a spacious Fabrick, with a beautiful well-proportion'd Front, but no Court before it.

The Townhouse.

From hence we were carried to the publick Cellar, which is two hundred and fifty paces long, and contains twenty thousand middle-siz'd Tuns (they call 'em *Aums*) of Wine, a Provision the *Germans* always take extraordinary care of; for it must be confess'd, that the *Germans* are the most civil and most obliging People in the World, but excessive Drinkers: You scarce enter a House to make a Visit, but before you can speak three words you are saluted with a savoury Collation and large Jacks of Wine; and to refuse a Health, or to leave a drop in your Glass, is a capital Fault, by which means the Cup never stands still; which made the Duke of *Rohan* say pleasantly of the *Germans*, That *they had found out the Perpetual Motion in their Cups beyond all the Mathematicians in the World*: Hence it is that Glasses of all sizes are in so high an esteem with them, that they are ranged in very good order in some of their best Apartments, and make a part of their Ornaments.

The publick Cellar.

Yesterday in the Evening we had the opportunity of seeing part of the celebration of a Wedding: The Bridegroom, attended by his Friends and Kindred, march'd first on foot from a House to the Church, which was not above two hundred paces distant, his future Spouse following soon after, with her Friends, from the same House: Being come into the Church, the Bridegroom sate down with his Relations on one side, and the

A Wedding at Nurenburgh.

Bride

Bride on the other opposite to him; over each of their Heads, against the Wall, being painted the Figure of Death: From thence they both approach'd to the Minister, who stood in the midst of the Choir, who had no sooner perform'd the Ceremony of Copulation, but four or five Trumpets sounded divers Levets from the top of the Steeple, and so the new-married Couple return'd in the same manner and to the same place from whence they came.

The Bridegroom appear'd all in black, with a Cloak trimm'd with Lace, a great Ruff, and a little Crown of Gold Plate-Lace upon his Perriwig; but the Brides Dress is not so easie to be describ'd; the best way to give you an Idea of it, is, to fancy a Head-tire compos'd of Plate-Wire gilt, like a Bob-perriwig, half a foot higher than the Forehead, and frizled out on the sides; these Threads or Wires are so close together, that there is no more distance between them than is just sufficient to fasten to them an infinite number of very small thin Plates of Gold, round, polish'd and bright, which hanging both within and without, wave with the least motion. *The Womans Dress.*

Her Habit was a kind of black Vest with long Skirts, resembling the *Hongrelines* used not long ago in *France*; and the Body of this Cassock, which was cut very short, was cover'd with Gold Lace all over the Seams, as the Skirts were with little close Knots of black Satin Ribbon, and the streight Cuffs reach down below the Wrists. Over this she wore a Neckband of very fine antique Lace, shap'd before like a Man's Band, but ending behind in a point, which reach'd down to the middle of her Back: About her Shoulders she had a Gold Chain like the Collar of some Order; and such another Chain instead of a Girdle. The Petticoat was pretty short, trimm'd towards the bottom with Gold Fringe and black Bone-Lace. We saw this Bride dance at the Wedding with one of the Senators in a great Ruff; and to tell you the whole truth, the Customs I observ'd at this Feast were so very different from ours, that I rather fancied my self in *China* than in *Europe*.

It would be an endless piece of Work, if I should describe to you all the other Habits I saw here, but I will only tell you, that as odd and fantastical as they appear at first sight, they are not unbecoming to agreeable persons.

Artisans of Nurenburgh. *Nurenburgh* can boast of better Artisans, and that in greater numbers than perhaps any City in *Europe*: Some have attributed to them the Invention of Fire-arms, and of Gunpowder, by *Bertold Swartz* a Monk; tho' others would have the same to owe its Origin to the City of *Chioggia* in the *Venetian* State, and others to *Denmark*. But the curious Works of *Nurenburgh* of Wood, Ivory, Alabaster, nay, of Paper and Starch, are famous over all *Europe*. Their Houses are both spacious and neat, and I never saw one Ceiling in all the City, but what had some understetting of curious Joyners-work. They have here a peculiar respect for Horns, with these they adorn even their best Apartments and Chambers.

All the way betwixt *Heidelburgh* and *Nurenburgh* we met with very poor Entertainment, but the Inns of *Nurenburgh* made us an ample amends for it, where, among other things, we had every day a Desert of late Fruit, and after very good Fish.

In the Church of St. *Sebald* you see a wooden Crucifix, which is esteem'd a great Masterpiece; but the Church of St. *Lawrence* exceeds all the rest in bigness. They are both built after the *Gothick* manner, but the last has eight Doors. The great Church-yard is worth the observation of a Traveller, for it has above three thousand Tombs with Epitaphs and Coats of Arms wrought in Brass. The *Jews* are confin'd to a Village near the City, from whence they may come daily into the Town for a small piece of Money, but must return before night. The few *Roman Catholicks* that inhabit here have the privilege of performing their Religious Service in one of the *Lutheran* Churches, at certain hours when their Service is over. The *Calvinists* have their *Church* a league from the City, in the Marquisate of *Anspach*, and baptize their Children in the *Lutheran* Churches. I am,

Sir,

At *Nurenburgh*, *Nov.* 22. 1687.

Yours, &c.

LETTER X.

SIR,

FRom *Nurenburgh* the Roads are very bad and woody till you come towards *Ingolstad*, where you meet with a well-cultivated champaign Country.

Ingolstad (under the Jurisdiction of the Elector of *Bavaria*) is seated upon the *Danube*, of an indifferent bigness and strength, with broad, streight and well-pav'd Streets, and pleasantly situated, but poor and ill Peopled; the Houses are for the most part painted white without. They told us Wonders of their Arsenal, but as they were very coy to shew it, I suppose its fame surpassed its worth, it being generally observable, that things of this nature are seldom kept from the sight of Strangers, unless they be not worth their seeing. *Ingolstad.*

I took notice at *Ingolstad* (as in many other Cities of *Germany*) of certain Vessels of Wood or Brass mounted upon four Wheels, near the Fountains, which are kept to carry Water when any Fire breaks out.

From *Ingolstad* we travel'd to *Newburgh*, a little *City* without any Strength, seated on the right bank of the *Danube*, where this River begins already to be pretty broad and rapid; we pass'd it over a Bridge, which brought us into the *City*, where at our first entry we took a view of the *Castle*, built on a Rock, the Apartments whereof, especially on the ground-floor, are very handsom and convenient, tho' all the Furniture was lately remov'd from thence to the Castle of *Heidelburgh*, there remaining only a Cabinet full of rare Pictures and other curiosities; among the rest I obser.'d a round hard Stone, which weigh'd four pounds, and was found in the Body of a Horse. *Newburgh.*

The Church of the *Jesuits* is the handsom'st in the City, tho' that of St. *Peter* has of late years rendred it self famous by a pretended Miracle that hapned to the *Capuchin, Mark de Avilano*, who made himself so much talk'd of in the *Hungarian* War: This Father coming some years ago to *Newburgh*, and perceiving an old *Nostradame* of Wood in one corner of the Church of St. *Peter*, that was all cover'd with Dust, the good Father prostrated himself before it, and whilst he was offering his fervent Prayers, he cried out on a sudden, *A Miracle!* protesting that the *good Lady* had lifted up her Eyes towards him: The Story, back'd by the Reputation of the Father, soon got such an ascendant upon the Inhabitants, that they went in procession to St. *Peter's* Church, where they took the Statue, and having clean'd and dress'd it in a sumptuous Habit, placed her on the high Altar, where she is visited by a great number of Pilgrims from all parts. *A Miracle in the Church of St. Peter.*

The Country betwixt *Newburgh* and *Augsburgh* is very good and pleasant, except that near the last the Grounds are boggy and barren; notwithstanding which the *Augsburghers* boast their City to be the fairest in all *Germany*, and that even in bigness it exceeds *Nurenburgh* it self, tho' they own it not so well Peopled; besides, tho' their Streets are broader and streighter, their Houses are not near so handsom, few of 'em being built with hewn Stones, but for the most part plaister'd only, and whiten'd without, and sometimes adorn'd with Pictures; however, the Floors of their Apartments are for the most part pav'd with a kind of yellowish Marble, brought thither from *Tyrol*; and their Ceilings are either of curious Joyners-work divided into Compartiments, or of a certain Cement well polish'd, which is very durable; the worst in their Buildings is, that their Chambers have no regular figure, the Stairs which lead to 'em taking away all their Uniformity. *Augsburgh an Imperial City.*

Augsburgh is the Metropolis of *Swabia*; you are not ignorant that *Augustus* sent thither a Colony, and gave it the name of *Augusta Vindelicorum*, from the *Vindelici*, a People inhabiting about the Rivers *Vindo* and *Picus*, (call'd to this day the *Werda* and *Leck*.)

Betwixt the City of *Augsburgh* is seated, to distinguish it from *Augusta Trevirorum, Taurinorum*, &c. but this City having been so often pillag'd, (especially by *Attila*) there are scarce any Remainders of Antiquity to be found here. However, not long since there was dug out here a Pillar of five or six foot high, with the figure of a Pine-apple on the top of it; they also found certain Medals of *Augustus* with such a Pillar on the Reverse: 'Tis very probable that this Pillar was intended to mark out the Boundary of the Empire on that side; for it being a constant Custom among the *Romans* to distinguish the Limits of a new-conquer'd Country by some mark or other distinct from the rest, by something relating more peculiarly to *A piece of Antiquity found here.*

that Country; it is likely that they chose the Pine-apple for this Pillar, because this part of *Germany* abounds in Firr and Pine-trees; and it is perhaps for the same reason that *Augsburgh* bears the Pine-apple in its Arms.

Two Religions at *Augsburgh*.

Tho' the Fortifications of this City are not very considerable, this City has endur'd divers Sieges with a great deal of bravery. The Senate is compos'd of half *Lutherans* and half *Roman Catholicks*, tho' the Bishop has also a considerable sway in the City, who has a Palace in the City, (tho' he resides generally at *Dillingen*) and is Master of the greatest part of the Territories belonging to this City. The *Roman Catholicks* make publick Processions here, and carry the Host thro' the Streets, which the *Lutherans* salute by pulling off their Hats; for as they live in a good correspondence with one another, so they avoid all opportunities of giving Scandal to one another, the Poor of both Religions being maintain'd in one Hospital.

The *Jews* are confin'd to a separate place, and for every hour they stay in the City are oblig'd to pay a Florin.

The Town-house.

The Townhouse is a lofty and spacious square Fabrick, of very fine hewn Stones; the Portal is of Marble, and almost all the Rooms wainscoted and ceil'd with Ash of *Poland*, which looks very fine. The great Hall makes a very noble appearance, being a hundred and ten foot long, fifty eight broad, and fifty two high, with a grave Marble Floor: The Walls are adorn'd with Paintings intermix'd with Emblems and Devices relating to the Government; but the Roof exceeds all the rest, for its singular Beauty, being compos'd of regular Compartments, the Squares and Panels whereof are enrich'd with Sculptures richly gilt, and beautified with curious Pictures and other Ornaments.

The Arsenal is also a very large Structure; the two Halls below are full of Cannon, most of which are of Brass, among the rest there's a Culverine, a six-pounder, of Leather, twenty six foot long; the other Arms are kept above Stairs.

During the Wars of this last Age, the *Augsburghers* us'd to keep frequently their Gates shut, for fear of a Surprize, but for the conveniency of admitting Strangers and others without danger into the City, they contriv'd a secret Gate, which remains still, with all its Locks and Engines, the Design of which is so nicely and well contriv'd, as is too tedious and difficult to describe.

Augsburgh was formerly a City of great Traffick, whilst the Merchandizes from the *Mediterranean* were landed at *Venice*, and from thence by the way of *Augsburgh* dispers'd thro' all *Germany*; but since *Holland* has almost engross'd all that Trade, *Augsburgh* bears its share in the general Loss, as well as *Venice*, *Milan*, *Antwerp*, and many other Cities.

In the Bishop's Palace they shew you the Apartment where the Confession of *Augsburgh* was presented to the Emperour *Charles* V. in 1540, by *Melanchthon* and *Luther*. The Cathedral here has a Gate of Brass, over which are represented several historical passages of the Holy Scripture in *basso relievo*: In the History of the Creation the Virgin *Mary* is represented framing *Eve* out of one of *Adam*'s Ribs.

Curious Clocks and Ivory Work.

The Artisans of *Augsburgh* are not inferiour to those of *Nurenburgh*; nay, they excel them in Clocks and Goldsmiths Work, and in Ivory. They shew'd us here several Clocks valued at fifteen or twenty thousand Crowns a-piece; but the worst is, they are not durable. Their Ivory Work is no less admirable, and among the rest certain Cups hollow'd and well shap'd, with a Ring made of the same piece in turning, which plays betwixt the foot and the bowl of the Cup, without possibility of coming off: Of these there are an hundred, with their Rings in a Pepper-corn of an ordinary size; I have some of 'em. Upon examination I observ'd distinctly the traces of the Tool wherewith they are turn'd, which shews it a pure Work of the Eyes and Hand.

They have another curious Bauble, *viz.* Fleas fastned about the Neck with Chains of Steel, so finely wrought that tho' they are a span long, they are so light that a Flea will lift it up when it leaps. They sell one of these Fleas, with Chain and all, for ten pence.

Odd Dresses at *Augsburgh*.

The variety of Habits is still more conspicuous at *Augsburgh* than at *Nurenburgh*, that affair being so exactly regulated here by the Magistrates, that the difference of Religion and Quality of People is for the most part seen by their Clothes. As for instance: I saw a *Roman Catholick* Merchant's Widow in Mourning for her Husband; she had a christning Kercher well whited and starch'd, with Wings and Corners belonging to this Dress; a black Petticoat, and black Cloak, made like that of a Man, reaching down to her Knees; a great white Veil behind, hanging at the tail of the Kercher down to her Heels, enlarging it self by degrees; a piece of the same Linen with the Kercher four foot long and at least two broad, which is very much starch'd and stretch'd on a square Wire Thread, fastned by the middle of one of its ends, just below the Hips, and covers all the forepart of the Body.

They have found means to turn a branch of the River *Leek* into the City, the Waters whereof are exceeding clear and good. Upon this Chanel stand four or five Towers, on the tops of which are certain Cisterns, which are fill'd by the help of certain Pumps mov'd by Mills, from whence the Water is convey'd into all parts of the City.

I must not forget to tell you, that *Augsburgh* has many Fountains, some of which are not inferiour to the magnificent Fountain of *Nurenburgh*. I am,

Sir,

Augsburgh, *Dec.* 2. 1687.

Yours, &c.

LETTER XI.

SIR,

AS we were leaving *Augsburgh* we took notice upon the Road, that they cover the Vines and Fig-trees hereabouts with Straw or Mats against the cold, which is sharper here than in *England*, tho' they lie more remote from the North. The Country is all upon a level betwixt *Augsburgh* and *Munich*, but none of the best, being full of Woods of Fir-trees.

Munich built in 965.

Munich is a beautiful City, but very indifferently fortified, and scarce half so big as *Augsburgh*, and of no Trade, the chief thing it has to boast of being the Residence of their Prince, and his magnificent Palace.

The Jesuits Library and College.

The first thing we did, was to visit the *Jesuits* Library, of which we had heard wonders, but found it by far not to answer our expectation; and the Library-keeper or his Deputy, who was order'd to shew it us, was so prodigious a Blockhead, that we could scarce imagin there could be so much Ignorance found among those of that Order. However, both their Palace and Church are exceeding fine, and the last very large, high, and lofty roofed; the Vestry is very rich, and among their Relicks they shew a Joynt as big as that of an Elephant, which, they told us, was one of St. *Christopher*'s Joynts of the Back-bone. In the *Austins* Church they have many excellent Pictures; and that of the *Cajetans* is a goodly Structure.

The City of *Munich* bears a Monk in its Arms, which seems to confirm the common Opinion, that it got the Latin Name of *Monacum* or *Monachium* from a Monastery that stood on the place where it was built.

In the Church of *Nostre Dame* is the magnificent Tomb of the Emperour *Lewis* IV. beautified with many Marble and Brass Figures. About ten or twelve steps from the entrance of the great Door of the Church, one of the Stones of the Pavement is mark'd with a double Cross; and if you stand upright upon this Stone, you find the Pillars of the Church so placed, that you can't see one of the Windows of the Church.

The Electoral Palace.

The outside of the Electoral Palace is not answerable to its internal Beauty, tho' at the same time most of its Apartments are not very regular; for this vast Structure being not built by one person, nor at the same time, its Fabrick differs according to the various Fancies of the persons that had the management of the Roof; notwithstanding all which, it is in the whole a very beautiful Fabrick. The great Hall of the Emperour's Apartment is a hundred and eighteen foot long, and fifty two broad; it is a truly-magnificent Apartment, especially in respect of its curious Pictures, which are all *Histories*, the sacred on one side, and the prophane on the other, every *History* having a certain Latin Inscription in Verse, one of the best of which is the Distich annex'd to that of *Susannah*,

Casta Susanna placet, Lucretia cede Susannæ
Tu post, illa mori maluit, ante pudor.

In the little Chapel belonging to the Electoress Apartment, you look almost upon nothing but Gold, Pearls and Gems. Among the Relicks they shew you a piece of Gold Mohair, which they pretend to be part of the Vir-

Virgins Robes. The Parlour of Perſpectives is extreamly fine; but the Hall of Antiquities (they were brought hither from *Rome*) exceeds all the reſt; we counted no leſs than a hundred ninety two Buſts, and four hundred other Pieces here, all highly eſteem'd for their exquiſite Workmanſhip and Antiquity.

The Furniture of this Palace is rich beyond what can be imagin'd, and they told us, that beſides the Tapeſtry in uſe, there were laid up in the Wardrobe to the value of eight millions of Crowns; but here, I am afraid, they overſhoot the mark. The Treaſury contains whole Services of Gold, and many other precious Veſſels, vaſt numbers of Pearls, Diamonds, Rubies, and other precious Stones, beſides an infinite number of rare Pictures, curious Works, Medals, and ſuchlike Rarities; among the reſt is a Cherry-ſtone, upon which you ſee diſtinctly engraven a hundred and forty Heads; and a Boat of Palm-tree Wood turn'd into Stone, with this Inſcription:

Palma fui, capi lapideſcere, cymbala nunc ſum
Si non Neptunus, Navita Bacchus erit.

Wherever you turn your Eyes in this Palace, you ſee nothing but Marble, tho', to unravel this Secret, it is to be known that the ſame is only a certain Compoſition, which they know how to harden and poliſh ſo artificially that it appears like natural Marble. They have divers ſubterraneous Walks or Galleries, leading from the Palace to all the Churches and Convents of the City.

The Arſenal. The Arſenal was at that time almoſt unfurniſh'd, moſt of the beſt Arms and Cannon being carried thence into *Hungary*. They ſhew'd us here the *Grand Vizier*'s Tent, taken in the laſt Battel, which was more remarkable for its bigneſs than its beauty; the Materials were only of painted Callico, with fine Sattin Strings, cover'd with Silk Braid, and the Lozenges of the ſame, placed from one place to another betwixt the Strings.

The Grand Vizier's Tent.

This Country produces no Wine, and as they know no other Religion but the *Roman*, ſo they look upon thoſe of another Perſwaſion more like Monſters than Men. I am,

Sir,

Munich, Dec. 4. 1687.

Yours, &c.

LETTER XII.

SIR,

AFter we had for ſome time travel'd along the Banks of the River *Iſer*, (upon which *Munich* is ſeated) we paſs'd thro' a Foreſt, and coming out thence immediately, diſcover'd the ſnowy tops of the *Alps*, which at a diſtance appear'd like the foaming Waves of a raging Sea: We came the ſame day to a Village call'd *Legrem*, ſeated near a ſmall Lake of freſh Water at the foot of the Mountains; we eat here ſome Fiſh we had never ſeen before. We coaſted along the Mountains for two hours, and by degrees got within the Rocks cover'd with Fir-trees and Snow, being a moſt deſolate place, and deſtitute of Inhabitants, except that near two or three Lakes you meet with a few Fiſhers Hutts, made of the Roots of Fir-trees well joyn'd together, their Boats being made of the ſame Trees hollow'd out.

Mittenwald in the *Alps*. At the Village of *Mittenwald*, three leagues within the Mountains, ſeated in a pleaſant Valley ſurrounded with Rocks, they treated us with ſome Goats-fleſh and Salmon Trouts. Our Hoſt ſhew'd us a certain kind of round Stones of the bigneſs of a Hens Egg, which he aſſur'd us were found in the Stomach of their Goats, and reſembled a ſoft imperfect *Bezoar*; he ask'd ten Crowns a piece for 'em.

We were not gone far from this Village, but we met a troop of Beggars acting the Hiſtory of the Fall; for they had planted a Tree loaden with red Fruit in the way, againſt which you ſee climbing up a little Demi-Devil, whilſt a Girl with long diſhevel'd Hair approacht towards it, and an old Fellow clad in black, with a young Boy clad in white, holding a Sword in his hand, ſtood at a little diſtance.

Within a quarter of an hour after, we paſſed by the Fort *Chernitz*, built betwixt two inacceſſible Rocks, being the common Boundary of *Tyrol*, and in the Biſhoprick of *Freiſingben*, the firſt whereof belongs to the Emperour, the laſt is part of the Country of *Bavaria*.

At Night we came to the Village of *Leefeld*, where is a Convent of *Auſtin* Friers: In their Church they ſhew you two or three pretended Miracles, and among the reſt a chew'd Hoſt, and bloody, in a Repoſitory of Glaſs: They tell you, that a Gentleman nam'd *Milſer*, Lord of the Caſtle of *Schiesburgh*, being ſo vain as to oblige them to give him the great Hoſt, which is only for the uſe of the Clergy, he had no ſooner put it into his Mouth, but it caſt out a Flood of Blood, and at the ſame time his Legs ſunk into the Pavement up to his Knees; they ſhew you the hole to this day in the Pavement near the Altar, and the print of his Hand on one of the Stones of the ſame Altar, where he would have ſupported himſelf.

About two leagues beyond *Leefeld* we began to deſcend into a Valley at leaſt a mile in breadth, adorn'd with divers pretty little Villages, water'd by the River *Ilm*: We paſſed only on the right ſide of it, along the Foot of the Mountain; where, after we had travel'd a league further, they ſhew'd us a ſtreight and craggy Rock, call'd the *Emperour's Rock*, above a hundred fathoms high, (as they aſſur'd us) about three quarters of the height of which we could obſerve a Nich dug, in which ſtood a Crucifix, with a Statue on each ſide: They tell you, that the Emperour *Maximilian* I. being in chaſe of a wild Goat, purſued her to this place, where alighting from his Horſe, he durſt not remount it, but was forc'd to be brought down by the help of Engines.

The Emperour's Rock in the *Alps*.

Inſpruck, a City ſeated upon the River *Ilm*, about two hours beyond the middle of the beforeſaid Valley: Before you enter the City you paſs that River over a Bridge, whence it has got the Name of *Inſpruck*, i. e. *The Bridge of the Ilm*, and *Ænipons* or *Æniponum* in Latin. *Inſpruck*.

The Houſes of *Inſpruck* are very fine, but their Roofs are built after an odd manner, being flat on the top, and the Rafters, inſtead of riſing to a point, are revers'd, ſo that the Rain is gather'd in the middle of the Roof.

The Palace of *Inſpruck*, where the Duke of *Lorrain* then reſided as Governour, is both convenient and large, but neither beautiful nor regular, having been built at divers times. There is one thing particular here, of which I will endeavour to give you the beſt account I can: There ſtands in the middle of the City a Houſe call'd the *Chancery*, the Roof of the Porch of which, they tell you, is cover'd with Plates of Gold, by Archduke *Frederick*, after he return'd from his Exile. I made the beſt Obſervation I could concerning the truth of this Story, and found that the Plates of Braſs were faſtned to the Timber inſtead of Tiles, and that each of theſe Tiles was cover'd with another thin one of another Metal, which if they be not Gold, I am ſure they are gilded; the Roof being about fifteen foot ſquare, it could by calculation not amount to above two hundred thouſand Crowns.

The Chancery

A Roof of Gold.

The twenty eight magnificent Braſs Statues in the Church of the *Cordeliers*, were the Gift of the ſame *Frederick*; they are bigger than the life, and repreſent Emperours, Archdukes, Dukes of *Burgundy*, two Empreſſes, and two Princeſſes, the Names of whom they are not able to tell you.

About half an hour from *Inſpruck*, at the foot of a Mountain ſtands *Amras*, a Country Seat of the Archdukes, being remarkable only for its ſituation and the curioſities they ſhew to Strangers. There is a large Hall fill'd with all ſorts of Arms, which were more curious than uſeful; and among other things, a Launce uſed by Archduke *Ferdinand* in Turnaments. They tell you ſurprizing things of the Strength of this Prince; as for inſtance, That he could ſtop a Coach with ſix Horſes, by taking hold of a Spoke of the Wheel; and would break two Crownpieces joyn'd together. In an adjacent Gallery we ſaw the Effigies of many Princes mounted on their beſt Horſes in Armour, with all the Ornaments uſed in Turnaments; and the Skin of a Serpent fifteen foot long, taken near *Ulm*, upon the Bank of the *Danube*. At the end of this Gallery is an Apartment fill'd with the Spoils and Arms taken from the *Turks*: Here you ſee a *Baſſa* and an *Aga* of the *Janizaries* repreſented on Horſeback, in the ſame magnificent Habits and Harneſſes, embelliſh'd with Gold, Silver, and precious Stones, they had when they were taken.

Curioſities in a Country Seat of the Archdukes of *Inſpruck*.

In another Gallery they ſhew'd us a double rank of Cupboards, joyn'd by the Backs and Sides, extended all along the middle of the Gallery, there being but a little room left to walk on both ſides: The three firſt were full of curious Works of all ſorts, as Alabaſter, Glaſs, Coral and Mother of Pearl; the fourth contain'd Medals and Gold and Silver Coins; the fifth, Veſſels of Porclave and Seal'd Earth; in the ſixth were many rare little

Cabinets

Cabinets richly inlaid, the Drawers whereof were fill'd with Medals and little Curioſities of *Agate* and *Ambergriſe*. Beſides theſe, you ſee here ſeven large Volumes, bound in black Velvet, with Edges and Claſps of Silver, which, inſtead of Leaves, contain'd ſmall Boxes fill'd with a great number of Medals. The ſeventh Cupboard has many very ancient Arms curiouſly wrought; and among the reſt, a Croſsbow with thirty four leſſer Bows within its compaſs, diſcharging as many Arrows at a time. The eighth is fill'd with Animals, Plants, and ſuchlike natural Curioſities; here you ſee a Horn of an Ox of ſix inches diameter. The three following Cupboards are ſtor'd with Works of Ivory, of Wood, and of the Pen; the twelfth with Manuſcripts and rare Books; the thirteenth with Works of Steel, and particularly Padlocks and other Locks of a rare invention: In the fourteenth they ſhew'd us Stones repreſenting Trees, Fruits, Shells, and Animals, all the pure Productions of Nature: In the fifteenth and ſixteenth, all ſorts of Clockwork and Muſical Inſtruments. The ſeventeenth contains a conſiderable quantity of precious Stones unpoliſh'd, and of Metallick and Mineral Oar. The eighteenth, a good number of ſmall Veſſels of precious Materials, and of the rareſt Shells in the World. The nineteenth ſurpaſſes all the reſt in Riches, being fill'd with Veſſels of Gold, Cryſtal, Agate, Chalcedony, Onyx, Cornelian, *Lapis Lazuli*, and other precious Stones, enrich'd with Gold and Diamonds in *baſſo relievo*, and other rare Workmanſhip. The twentieth and laſt contains Antiquities of all ſorts, Sepulchral Lamps, Urns, Idols, &c. and among the reſt, a piece of a Rope about the length of a Hand, which, they tell you, is part of the ſame Rope wherewith *Judas* hang'd himſelf.

On the Walls and Ceiling you ſee an infinite number of other Curioſities, among which the Bow of *Noah* is an admirable piece of Painting, for which, they ſay, the Great Duke of *Tuſcany* offer'd an hundred thouſand Crowns; and in a great Cheſt you ſee a whole Cartload of Medals laid up.

From hence they carried us into the Library, which we found much out of order; and from thence into another Gallery full of Statues, Buſts, and other pieces of Antiquity; beſides a great many other Apartments adorn'd with Pictures of a great value.

At our Inn (the *Golden Hart*) we ſaw a Fellow who would lay his Arm ſtretch'd upon the Ground, upon which a luſty Fellow ſtanding with both his Feet, he lifts him up with the ſame Hand only, and carries him croſs the Room. I am,

Sir;

Inſpruck, *Dec.* 7. 1687.

Yours, &c.

LETTER XIII.

SIR,

ABout a league beyond *Inſpruck* we re-enter'd the Mountains, and by a troubleſom and tedious aſcent of ſeven hours, came late at night to a little Village (not quite at the top of the Mountain) call'd *Gruſs*, i. e. *Salutation*, having got its Name from the meeting of the two illuſtrious Brothers near it, *viz. Charles* V. and his Brother *Ferdinand*, the whole account whereof you find engraven on a Marble Stone two hundred paces from the Village, the exact place where they ſaluted each other at firſt. They treated us at night with ſeveral ſorts of Wildfowl and Veniſon; all the Hares, Foxes and Bears are white here, as well as moſt of their Partridges; they abound alſo in Heathcocks and Hens, Pheaſants, and another kind of large Wildfowl, call'd by them *Schneehahn* or *Snowgoaſe*. All theſe ſorts of Wildfowl have their Feet Velvered about the Claws, with a kind of Furr which is neither Hair nor Feathers, but ſo thick, that the Snow can't penetrate it.

The Salutation of *Charles* the Fifth and *Ferdinand*.

The Wildfowl in the *Alps*.

This Mountain is call'd the *Brennerberg*, i. e. a *burning Hill*, by reaſon of the piercing and burning Winds, which (together with the Thunder and Lightning) reign frequently there in the Summer ſeaſon. Theſe Winds forcing their paſſage thro' the hollowneſs of the neighbouring Mountains, like thro' Pipes, raiſe ſuch various Hurricanes as ſometimes overthrow both Rocks and Trees.

Having travel'd about two hours the next day, we came to the top of the Mountain, where we diſcover'd a remarkable Spring, which diſcharging it ſelf upon a Rock, there ſeparates into two Currents, which ſoon after become conſiderable Rivers, one turning to the South and joyning with the *Ilm* near *Inſpruck*, the other to the North, after it has paſſed *Brixen* and *Bolſano*, diſcharges it ſelf into the *Adige* a little above *Trent*.

A remarkable Spring in the *Alps*.

We dined that day at *Steerzingen*, where we eat the Fleſh of a certain Creature call'd by them *Steinbocks* or *Rock-Goats*, (*Rupæ Capræ*) a Creature betwixt a he-Goat and a Doe, which was moſt excellent Meat.

From hence, the direct way to *Trent* being very rough, we took that over *Brixen*, which is leſs dangerous: We met this day above a hundred Waggons drawn by Oxen, the cloven Feet whereof were ſhod with Iron; they came from the Fair of *Bolſano*. We ſaw alſo in theſe Mountains abundance of ſmall Carts with two Wheels, which the Peaſants draw themſelves, and chiefly make uſe of 'em to fetch Salt from *Hall*, a little City in the Valley of *Inſpruck*; it is made out of Water boil'd into Salt. The Habits of theſe Mountaineers are very odd, ſome wearing green, others yellow, and others blue Hats, and that with ſuch little difference in their Garments, that the Women are ſcarce to be diſcern'd from the Men.

Brixen is a very ſmall City in the Country of *Tyrol*, tho' it is the Reſidence of the Biſhop. They keep their beſt Apartments here in the higheſt Stories, but for what reaſon I know not.

Brixen.

From hence to *Bolſano* is only ſeven hours travelling; but as the Road lies betwixt the River and the high Mountains, if a ſudden Thaw happens to melt the Snow, it rowls down from the Precipices with ſuch violence, that it ſwallows up both Man and Beaſt; whence it is that on the Road you ſee ſo many ſmall Monuments fill'd with the Hiſtories of ſuch as have either eſcap'd narrowly or periſh'd by theſe Accidents; and hence it is that the Churches hereabouts, and eſpecially our Lady of *Newburgh*'s, are almoſt overladen with Preſents.

We were not a little ſurpriz'd when we found the Valley of *Bolſano*, in the middle of the Winter, cover'd with green Willows, Roſes, and Mulberry-trees, the reaſon whereof may be attributed to the ſituation of the Valley, which on all ſides is ſheltred from the Winds.

The Valley of *Bolſano*.

The City of *Bolſano* belongs alſo to the Biſhoprick of *Trent*, but is of a little compaſs; its chief Traffick conſiſts in four Fairs a year, each of which laſts fifteen days, in which they exchange the Commodities brought thither from *Germany* and *Italy*. They ſhew'd us a round hole of three foot diameter in the Roof of the Church, ſurrounded with a Garland of Ribbons of different colours, on which hang a great number of large Wafers: They told us, That an Opera being acted in that Church on *Aſcenſion Day*, the Perſon that repreſented Chriſt was taken up into Heaven thro' this hole.

The City of *Bolſano*.

The Valley of *Bolſano* is full of Vineyards, which produce a Wine much eſteem'd hereabouts, but is not ſo pleaſing to Strangers, by reaſon of its fulſome ſweetneſs.

The Road betwixt *Bolſano* and *Trent* (juſt a days Journey) is planted all along the Valley with Vines, where you ſee, at certain diſtances, little Straw Hutts, ſupported by three high Firr-poles, like a Trevet, from whence they kill the Bears with Fuſees, that come from the Mountains to eat the Grapes.

Trent is much of the ſame bigneſs as *Bolſano*, and ſeated after the ſame manner, on a flat Rock of a kind of red and white Marble, which alſo furniſhes the Materials to their Houſes. This City is ſubject to moſt dangerous Inundations, not only from the overflowing of the River, but alſo from the Brooks of *Levis* and *Ferſapa*, which ſometimes diſgorge themſelves with ſuch impetuoſity from the adjacent Mountains, that they force and rowl great Rocks along with 'em even into the Town.

Trent.

Trent is fortified only with a ſingle Wall, waſh'd by the River *Adige*. The Bridge and Biſhop's Palace are much boaſted of by the Country People, tho' the laſt is both low and but indifferently large. The Biſhop is both a Temporal and Spiritual Lord, and his Territories are of a conſiderable extent. Some place *Tyrol* in *Germany*, others in *Italy*, becauſe the Biſhop is a Prince of the Empire; but the common Language of *Trent* is *Italian*, and the Inhabitants of the Country reckon it part of *Italy*.

In one of the Chapels of the Cathedral they ſhew a Crucifix as big as the Life, which, they ſay, bow'd its Head at the time of the Councils being ſworn and proclaim'd under it, to ſhew its approbation of the Veracity of their Decrees. They add, That no body knows the Materials of which it is compoſed; and for that reaſon would have you believe it was made without Hands. They are building a moſt magnificent Chapel, where it is

The Council of *Trent*.

to

to be placed, this being somewhat dark; they call it the *Holy Crucifix*.

The Church of St. *Mary major*, where this Council sate, is a little Church, built of a kind of base Marble. The Organs here are worth taking notice of, for they not only play'd to us many new Ayres, but also counterfeited the Cries of divers Beasts, beat the Drum, and several other things of this nature, which seem'd to us too gay, in relation to the gravity of such a Council, the History whereof is painted near it.

The little Saint *Simonin*. In the Church of St. *Peter* they shew the Chapel of the little Saint *Simonin*. They tell you, that in 1276. the *Jews* stole their *Simonin*, (or little *Simon*) a Shoemaker's Son, in the 28th month of his age, and after having kill'd the Child in a most cruel manner, to drink the Blood at one of their Feasts, threw his Carcass into a Water-pipe, (which now passes to the House where the thing was committed, and where their Synagogue was at that time) which being thence carried into the River, and found by some Fishermen, the whole business was discover'd, the *Jews* convicted, thirty nine of 'em executed, and the rest for ever banish'd the City. Pope *Sixtus* IV. canoniz'd the Child, which being embalm'd, is now to be seen in a Case upon the Altar of a Chapel dedicated to his memory, with a Knife, Pincers, and four great Iron Needles they made use of in tormenting the Child, and two Silver Goblets, in which they drank the Blood. The same Story is painted at *Frankfort* on the *Main*, under the Bridge Gate. I am,

Sir,

Trent, *Dec.* 13. 1687.

Tours, &c.

LETTER XIV.

SIR,

Rovereto. FRom hence we travel'd on to *Roveredo*, a little City famous for its Trade in Silk, and so on to *Borguetto*, the last Village in the Territory of *Trent*, and to *Ossenigo*, the first belonging to the *Venetians*, a little wooden Cross being the Mark that shews the Boundary of these two States.

On this side of *Roveredo* you travel thro' the *Wood of Roveredo*, as they call it, tho' there is scarce a Shrub to be seen all the way, the Ground being cover'd all along with Rocks, that lie scatter'd up and down, and some distance from one another. It is a dangerous passage for Travellers, as well as the Forest *Vergnara*, between *Ossenigo* and the Fort of *Goardara*, by reason of the multitude of Robbers that frequent these Desart places.

Chiusa. It being too late to reach the Fort *Scluse*, we were forc'd to lodge in the little Village of *Seraino*. The Fort is seated at the foot of a high Rock, the way leading to it being cut out of the craggy Rock which is a Precipice on the back-side, at the bottom whereof the *Adige* runs with a swift current.

After we had passed the Fort, and had coasted for some time the Banks of the said River, which here glides along among the Rocks, we came at last into a vast Plain, which is stony and barren in divers places, tho' in others you see it well planted with Olive and white Mulberry-trees for Silk-worms, as well as with Vines, the last of which are planted at the foot of Cherry-trees and young Elms, and joyn themselves from Tree to Tree.

Having pass'd the *Adige* in a Ferryboat two leagues from *Seraino*, we discover'd soon after the City of *Verona*, where we arriv'd the same day.

Verona. On that side where we entred the Gates, we found a great many void spaces, and the Grass growing in the Streets, which were scarce half pav'd; and tho' the rest is something better, yet generally speaking, it is a poor place, and very indifferently Peopled. The Houses are generally low and unequal, the Balconies for the most part of Wood, and the Streets dirty and for the most part very narrow; however, its situation is infinitely pleasing, and the Air very good. The *Adige* divides it in two parts, which are joyn'd again by four Stone Bridges. *Castles.* The Castle of St. *Peter* being seated upon a rising ground, affords a most admirable prospect of the circumjacent Country. The Fort of St. *Felix* is behind that of St. *Peter*, and both together command the City; the rest of the Fortifications are both irregular and much out of repair.

The Amphitheatre. The Amphitheatre of *Verona* is all destroy'd as to the Front or outward Wall, but the Benches have been kept in tolerable repair; there are forty four of 'em, the circumference of the highest I found five hundred and thirty paces, and of the lowest two hundred and fifty; each Step is a foot and a half high, and twenty six inches broad. At each end of the *Arena*, betwixt the Benches, is a Portal of twenty eight high, by which you may enter out of the Street into the *Arena*; and above each of these Portals, a Balcony of twenty foot long and ten broad, surrounded with Marble Rails.

In the Cathedral, which is a little dark Building, you see the Tomb of Pope *Lucius* III. with this Inscription only:

Ossa Lucii III. Roma pulsus invidia.

St. Zeno's Church. The Church of St *Zeno* at *Verona* acknowledges *Pepin* the Son of *Charlemain* for its Founder; it has most wretched carving on the Frontispiece. On the Portal I took notice of two Birds that, I suppose, were made for Cocks, holding between them a Creature with a long Tail, intended perhaps for a Fox, by which, some believe, is represented *Pepin* and *Charlemain* (two *French-men*) who dispossess'd *Didier* King of the *Lombards*. On the same Portal is another Hieroglyphick, *viz.* a Man on Horseback in *bosso relievo*, over whom the following three Verses are written, in half *Roman* and half *Gothick* Characters:

O Regem stultum, petit infernale tributum,
Moxque paratur equus, quem misit Dæmon iniquus.
Exit aquæ nudus, petit infera non rediturus.

But I could not meet with any body that could give me an interpretation of this Devil's Horse.

Near the Church of St. *Mary the Old* you see many magnificent Tombs of the *Scaligers*, who were Princes of *Verona* before this City was forc'd to submit to the *Venetians*.

Count *Mascardo*'s Cabinet. The Cabinet of Count *Mascardo*, consisting of a Gallery and six Chambers full of Pictures, Books, Rings, Animals, Plants, Metals, monstrous or extravagant Productions of Nature, and the most exquisite Pieces of Art, is so admirable, and their number so great, that even a Catalogue of 'em would fill a good Volume; however, I can't forbear to mention some of 'em, not spoken of before: It has many Instruments and Utensils used in the *Pagan* Sacrifices, and divers Figures of Brass, which they used to hang up in their Temples in remembrance of some signal Deliverance; divers pieces of Workmanship out of the Stone *Amianthos*, or the ἀσβεστος, spun into Thread like Cotton. Here I observ'd also many of those Barks of Trees used among the Ancients before the inventing of Paper; two Trees of black Coral three foot high each; a Hens Egg of this figure (⟝); a Circumcision Knife, used by the *Jews* to those Children that died before the eighth day.

An Italian Burial. We saw also a Funeral at *Verona*, the Body being dress all in black, with a white Linen Cloak, a fine Perriwig upon the Head, and a Hat adorn'd with a Garland of Flowers, was thus laid upon a Quilt, with a Counterpane of flower'd Silk yellow and red, and a Pillow of the same Stuff. It was carried thus open by four Men thro' the Streets, the Company following two by two, and such as were never married wearing Garlands, in imitation of the Ancients, who had their *Corona Pudicitiæ*, or *Garland of Chastity*. One Mr. *Montel*, a *French* Merchant living at *Verona*, gave me an account of a Procession he had often seen, which I can't but give you a short account of; the Story runs thus:

An odd Procession. *Jesus Christ* having a compassion for the Ass he made his entrance upon into *Jerusalem*, gave her a Key to the Fields, where she was to feed quietly all her life-time after; but the Ass, it seems, being tired with her own Country Pasture, had a mind to try those of foreign Countries, and coming to the Sea, the Waves became smooth and solid, so that with little trouble she visited the Isles of *Cyprus*, *Rhodes*, *Candia*, *Malta*, and *Sicily*, and thence coming to the Gulph of *Venice*, staid for some time in the same place where *Venice* was built since, but finding the Air not very healthy, and the Marshy Pastures not sweet enough for her Palate, she march'd up the River *Adige* to *Verona*, where she liv'd and ended her days.

To preserve the Memory of this renown'd Ass, they have put his Relicks into the Belly of an artificial Ass, which

which is kept in the Church of *Nostre Dame* of the Organs, and which is carried two or three times every year, by four Monks of the Convent in Pontifical Habits, in Procession round the City. I am,

Sir,

Verona, Dec. 16. 1687.

Yours, &c.

LETTER XV.

SIR,

AS we travel'd from *Verona* to *Vicenza*, we found the Country very fertile, well cultivated, and generally level; their Trees they plant here chequerwise, on which they raise their Vines. We dined at the little Village *La Terre*, the Boundary betwixt the *Veronese* and *Vicentin* Territories; their Wines are fulsom and sweet; their Bread, tho' made of excellent and white Flower, as heavy as a lump of Earth, for want of good management; and the rest of our Fare was a Dish of grey Pease fry'd in Oil, a thing surprizing enough in so plentiful a Country, when we had better Fare among the Mountains.

Vicenza. *Vicenza* is scarce half so big as *Verona*, and but slenderly fortified with an old Wall. Three or four Rivulets meet near it, but none of 'em are navigable.

Among their Churches, the *Coronata* is finely pav'd and wainscotted; and that of the Religious of St. *Catherine* is noted for three very fine Altars, as the Cathedral is for divers good Pictures.

Their Townhouse, tho' much boasted of by the *Italians*, is but an indifferent Structure, as indeed are many others which pass among them for magnificent Buildings, there being nothing more natural to the *Italians* than to be lavish in their Titles, whence they give frequently the name of a *Palace* to those Structures that would scarce pass for a handsom Country-Gentleman's Seat in other parts; as they often call that a *Chamber of Audience* which in *England* they call a good *Parlour*. Among other Fabricks we saw a little Country Seat belonging to the Marquess of *Capra*, about half a league from the City; it is a square Building, in the midst whereof is the Hall, under a small Dome, having at each Angle of the Square two Chambers and a Closet: It has some good Pictures, and its situation on an Ascent makes it very pleasant.

In our return we look'd upon the Church of our Lady of *Montberic*; the Prior gravely told us, that this Image of our Lady came out of the Earth, in the same place where she now stands, and from whence she is not to be remov'd; for if you will believe him, ten thousand men have been imploy'd to carry her to *Vicenza*, but could not perform that task. The Picture by the hand of *Paul* of *Verona*, in the Dining-room, representing St. *Gregory* at dinner with some Pilgrims, is a most excellent piece. The Ruins of the old Amphitheatre at *Vicenza* are hid under other Buildings. The Theatre which is in the Academy of the *Olympicks* is the Work of the great Architect *Palladio*; as is the Triumphal Arch without the Gates that lead into the Plain call'd the *Field of Mars*, built in imitation of the Ancients.

The Garden of *Valmanara*. The Garden of the Count *Valmanara* is a thing much boasted of among the *Vicentins*; 'tis true, it has a handsom Canal, curious Divisions, Knots and Closets, and a most delightful Alley of Oranges and Citrons, but after all, it wants much of being an accomplish'd piece, suitable to the Inscription over the Garden Gate, which begins thus:

> *Stop, dear Traveller, thou who searchest for rare things and enchanted places, for here thou maist find Satisfaction: Enter into this delicious Garden, and take a full taste of all sorts of Pleasures; the Count* de Valmanara *gives thee leave*, &c.

The Road betwixt *Vicenza* and *Padua* is much the same as betwixt *Verona* and *Vicenza*. We passed the *Tezenza* about an hour after we left *Vicenza*, and the *Brenta* an hour on this side of *Padua*, a large and poor City, seated in the midst of a most fruitful Country, having many void places without Houses, and many Houses without Inhabitants.
